Nine ways to get involved in your coast

1. Check out how the Peninsula’s coast will be managed in the future. The Pagham to East Head Coastal Defence Strategy is on the Environment Agency’s website.

2. Have a look at the websites highlighted in this leaflet and contact the organisations and groups if you want to find out more.

5. Keep an eye on the local press. They regularly cover issues affecting the Peninsula’s coast.

6. Take a look at the specialist websites related to the Peninsula for a local viewpoint.

7. Check out the ideas for a Selsey Coastal Trust, which is trying to find ways for the local community to support the coastal defence work.

8. Each time you’re on the coast, notice whether the beach looks different from your last visit. Some change happens daily, whilst other changes take much longer.

9. Enjoy all that our coast has to offer whilst understanding that it has always been changing and will continue to do so.

Below you will find contact details for organisations concerned with coastal issues in this area. This is not an exhaustive list: Town and Parish Councils are actively involved and you may find details of local residents groups in your area within the main websites.

As this leaflet shows, coastal change can be damaging and expensive, but it can also bring opportunities. But one thing is sure - coastal change happens. So how do we cope with it? Do we try to keep things the same or do we adapt? Who is responsible? And who will pay?

The answers are often complex. Sometimes there is no one responsible for putting it right, and there certainly isn’t always the money.

But understanding who is doing what means you can help in seeking the best solution. We’ve put together some ideas for ways to get involved in the future of your coast...
The Manhood Peninsula, like all coastal places, has its own special identity. Whether you are a resident or visitor you will feel the uniqueness of this landscape, its wildlife, and the seaside way of life.

Get involved! See reverse.

Coastal change can be destructive and stunning. Flooding and erosion are not just to the communities along this dynamic coastline.

Coastal changes can bring opportunities. The coastline of Medmerry will be managed over the next few decades, allowing the land to flood in a controlled way. This will reduce the flood risk to Selsey and preserve habitats and services.

Coastal constructions have changed quite dramatically too. Horedon’s wall also has a very long life, and the land has become mostly managed by the sea. Warden was built in 1912 and has been an important reservoir.

Pagham Harbour is a prime example of change. Once a bustling port, it was destroyed by storms, but was rebuilt by the sea during the 1930s. It has become an important sanctuary.

The Manhood Peninsula coastline has changed more than most. Monitoring changes can be very expensive and in many cases requiring government funding is unlikely. Additional funding will need to be explored and adaptation plans developed.

“In my lifetime I have played cricket, grown onions and caught prawns on the same spot”
