The draft policy does not require improvements to the quality of services such that sustainable choices will be materially more attractive than car use for many local journeys. Without this the Plan's Strategic Objectives cannot be fulfilled and the objectives of the Plan and this policy, read in its own terms, will not be realised, where reduction in private car use is concerned. It is thus ineffective.

Absent measures to make bus services more reliable and more efficient, by insulating them from chronic congestion as far as possible, still further operating resource and therefore costs, will be needed to just to reliably run existing service frequencies, and capacity, as vehicle productivity continues to be more and more adversely affected by chronic delay. This will be further aggravated by increasing incidence of severe unpredictable service breakdown arising from incidents of diverse kinds on the network, especially on or around the A27, including that arising from more regular severe weather events. Longer journey times can only be expected to lead to relative disadvantage of bus services compared to personal car use, entirely contrary to the objectives of national and local policy, including Policy T1. It can also expect to lead to a dampening effect not on car use, but on bus patronage, threatening the ongoing viability of bus services across the plan area.

Section 1 b) of T2 should be modified to read:

"b) Maximise opportunities for the use of sustainable travel modes through provision of direct and efficient access both to either the existing networks or and through providing such new infrastructure or public transport services, as can be credibly expected to reduce reliance on the private car and work towards achieving net zero in greenhouse gas emissions by 2050;"

Section 1 d) of T2 will be ineffective as the location of development is fixed by this plan. We commend the fact that all the strategic allocations are or will be served by regular bus services.

However, the use of public transport services, where available, depends on the relevance and reliability of these services. Furthermore, provision of services without them generating sufficient patronage to support their long-term operation also threatens the sustainability of the plan and its supporting transport strategy. This is especially true of new services such as those intended to serve West of Chichester and Tangmere and East of Chichester Strategic Allocations.

This can only be assured by the plan being supported by specific measures to ensure buses can operate efficiently and reliably on the existing and projected services intended to serve the developments concerned, and also at the same time secure behavioural change from existing development.

To be sound and effective, the policy T2 1 d.) should be changed to read:

"d) Ensure major development is located to proposals and the supporting mitigation measures enable the use delivery of high-quality, reliable and effective public transport to present the most relevant possible choice to access local services and facilities including employment, leisure and education facilities";

The Policy T2 makes no provision for buses, where necessary, to enter and make efficient and safe progress through major development sites. The plan is thus out of conformity with NPPF paragraphs 104-106. It makes no provision to ensure that penetration of bus services is achieved at a suitably early point in the development trajectory, undermining the achievement of the goals of the Plan and this specific policy. As a good example, West of Chichester Phase 1, currently under construction, cannot be served by buses as a strategy to effect interim bus penetration was never made.

Policy T2 1 f.) should therefore be amended to read:

f) Ensure that the layout and design of the site development proposals provides effective penetration of the site by sustainable modes, at all points in the development build-out, including public transport where appropriate; and sufficient space for all vehicles to manoeuvre without compromising the safety of pedestrians and cyclists, the efficiency of bus services, or the ability to provide an appropriate level of landscaping across the site"

Policy T2 3.) regarding Travel Planning depends entirely on its effectiveness on the quality and relative attractiveness of sustainable alternatives over car use. In the absence of efficient frequent, reliable and direct public transport services (or similarly, high quality facilities for active travel, Travel Plans will continue to be the entirely ineffective "tick box" exercises that they generally are today, evidenced by much lower levels of public transport use in most new developments than it seen in nearby established neighbourhoods, as demonstrated broadly by Census data in 2011, 2011 and 2021.

For this policy to be effective an up-to date transport evidence base and strategy, underpinning a series of specified interventions to promote the relevance and effectiveness of all sustainable does including public transport in particular, needs to be put in place.

#### 8. Chapter 9 Infrastructure – Policy I1 Infrastructure provision

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Policy I1 could not expect to be effective without a clear understanding of the effectiveness and costs of a defined series of measures that are laid out in this Plan and its IDP, to mitigate the transport impacts of the development strategy.

Where the Chichester Transport Study is concerned the only meaningful work has focused on the definition and delivery of a range of highways capacity schemes mainly on the A27 around Chichester.

As we have discussed elsewhere the effectiveness of these schemes is insufficient as set out at Tables 8.1 and 8.2 of the Chichester Transport Study 2023. The plan itself admits that the deliverability of this package cannot be afforded by developer contributions alone.

The Chichester Transport Study 2023 does not attempt provide a realistic assessment of costs to deliver these schemes, despite the fact that they have been under evaluation for many years. Nor does it offer any assurance that the schemes are technically achievable. Rather, it states the opposite:

"9.2.3 No investigation has been carried out into specific land ownership details, or into the location details or cost of moving statutory undertakers and utility apparatus within the areas of the scheme. No design assessments were carried out at this stage to ascertain the deliverability of the proposals except where any Health and Safety concerns were raised."

Thus on the grounds of effectiveness, deliverability and affordability, the measures on which the Plan relies must at the very least be considered to involve an exceptionally high level of risk. Since Policy I1 is founded on these assumptions, it cannot be considered effective.

As we set out elsewhere, the Plan has been advanced on the basis that if any additional sustainable transport measures are required, these mitigations should be retroactively considered and defined after adoption of the Plan. In the light of the doubts that are apparent of both the deliverability, affordability and effectiveness of the Chichester Transport strategy this is especially unsatisfactory even if existing baseline conditions were reasonably acceptable.

However, the Chichester Transport Study 2023, as did its predecessors, makes plain that that existing problems are acute, and can rightly be considered "severe" in the sense of NPPF paragraph 111. Waiting to define deliverable affordable alternatives is an entirely inappropriate approach to the local plan transport mitigation strategy. Such an approach also makes it impossible to consider prior to adoption how far the transport impacts of the plan can be cost-

effectively mitigated by alternative means, or whether they are deliverable having regard to technical achievability, land control, development viability, or any combination of the above. Thus, the plan cannot be considered justified, or effective.

Given the mutual dependence of development strategies in Chichester and Arun in particular on these measures this should be seen as crucial of the fulfilment of the Duty to Cooperate.

The remedy for this is ultimately to put in place a suitable transport mitigation strategy following a strategic appraisal of options through review of the LSS. This then must be supplemented by more detailed development specific and localised scheme definition, including, where necessary, bus priority and other measures to support the substantial promotion of the attractiveness of public transport in key bus corridors over private car use. This would then be reflected by costed proposals in the IDP.

Leaving these fundamental weaknesses to one side, even if such a strategy and mitigation package were defined, there is no mention of public transport in the policy even though it is clearly a key part of the policy environment and mitigation strategy for the plan as expressed in the explanatory memorandum for I1, but also at Policies T1 and T2. I1 thus does not effectively support the realisation of the intent of Policies T1 and T2.

Policy I1 iii) should therefore be modified to read:

“(iii) Safeguard the requirements of infrastructure providers, having regard to requirements within and where appropriate across the boundaries of the plan area, including but not limited to:

...

- Highways including specific measures to accommodate improved active travel and public transport level of service and cycle lanes, and...”

At limb v) the Policy expects developers to meet the “in perpetuity costs of operating and maintaining infrastructure”. This shackles development management decisions to developers assuming what are infinite costs – given that “in perpetuity”, read properly, can only mean “without any limit in time”. This means that it is impossible to meet the statutory tests on developer obligations set out in the Community Infrastructure Levy Regulations 2010 (as amended) at Regulation 122, also repeated in NPPF. This policy cannot be lawfully implemented and it is thus ineffective.

In the absence of an up-to-date transport mitigation strategy that is fit for purpose, at the point the Plan is examined these costs of any additional infrastructure are not known in any case. The strategy and its costs, including its affordability and deliverability, are crucial to assessing if the Plan is sound.

Subject to an appropriate defined transport mitigation strategy being arrived at, to be sound, the Policy I1 v) should be modified as follows:

(v) To consider and meet as appropriate the in-perpetuity delivery costs of infrastructure and, where appropriate, improved services, to the point where its long-term operational sustainability is credibly assured from mainstream sources. Where adoption is not envisaged by local authorities, that must include arrangements for its future ongoing management and maintenance;

## 9. Strategic and Area Based Policies

### 9.1. Policy A1 City Centre Development Principles

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Chichester City centre is rightly identified at 10.2 and 10.4 as the commercial and service hub of the District. It is also acknowledged to be the most accessible place in the District by sustainable modes, public transport in particular.

Boosting the vitality of the city centre is something that Stagecoach strongly supports. Irrespective, the enhancement of the commercial and cultural life of the District in the place where these opportunities can be accessed broadly by sustainable modes, is one that has long been at the heart of national planning policy for town centres, reflected in the “town centre first” approach to locating major trip generating uses.

Paragraph 10.5 exposes an unbalanced and unsound preoccupation with aesthetic matters in its approach to the town centre, and far too little to ensuring that the central place function is enhanced through protecting and enhancing the quality of public transport access.

The city is relatively small but at the heart of an extensive hinterland, and thus the role of bus in supporting sustainable access to and enhanced city centre venue is one that needs appropriate recognition and emphasis. It is important to note that a dominant number of key service and facilities such as the General Hospital are relatively close to the city centre.

This directly contributes to driving travel demand into the city, causing congestion. Most importantly, it also makes the task of mitigation simpler, given the impact a suite of active and sustainable measures can have within the same close proximity.

Policy A1 does not provide this. As such, achieving the strategic objectives of the plan is seriously threatened, and the plan is thus not effective.

The Plan needs to ensure that the approach to city centre regeneration maintains and enhances public transport access, interchange and inter-modal connectivity. It also needs to ensure that bus service stopping and interchange facilities are able to address increases in future demand, anticipated by the clear intent expressed elsewhere in the Plan that public transport should be meeting a greater proportion of mobility needs, in a growing district. Achieving this demands an ambitious approach to the location, quality and capacity of bus stop and interchange.

We have been in discussions with the District Council about this, alongside West Sussex County Council, for a very considerable period. Stagecoach has always been keen to help facilitate the Council's aspirations for the city centre, and we continue to hold this intention. However, this cannot be at the expense of a material diminishing of the convenience and fitness-for-purpose of bus stop infrastructure and interchange. Stagecoach has significant concerns that current proposals to remove the bus station and have all bus services operate from the street kerbside, on an inner distributor road with similar or reduced net stop capacity, fall short of promoting attractive, convenient bus access to the central area as a destination.

For the longer term and where the objectives of the draft plan are concerned looking ahead to 2039, they clearly fall short of enhancing the convenience and attractiveness of public transport use. Much less do they make sufficient provision for a material increase in bus frequency, connectivity, and interchange convenience, on which the draft plan explicitly relies. It is vital that the District Council is clear in policy about its objectives for public transport in the city centre. These objectives must also carry sufficient weight when held in tension with other aspirations for the centre and the constraints on achieving them.

For the Plan to be sound, properly effective and compliant with NPPF, the approach to the City centre cannot ignore its role in the provision of sustainable transport service and connectivity.

Policy A1 should therefore be modified to properly reflect this crucial function, on which the vitality of the city centre must increasingly depend if unacceptable impacts on congestion, air quality and amenity are not to arise. This is still more crucial if wider aspirations to secure a more sustainable society and mitigate carbon are to be achieved.

"...This will include provision for development and proposals that:

- Support and strengthen the vitality and viability of the city centre and its role as a shopping/visitor destination, employment centre, public transport hub and a place to live;
- Support and promote facilitate improved access to the city and with increased emphasis on sustainable modes of travel, with particular regard to enhancing the public transport interchange role of the city centre area, in accordance with the transport strategy for the city and..."

9.2. Policy A3 Southern Gateway Development principles Chichester Bus Station, Bus Depot and Basin Road Car Park Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

There has been aspiration to redevelop the bus station and nearby bus depot from many years. Stagecoach has been engaged with detailed discussion with the District Council on this matter over a very extended period. We confirm that these discussions have reached a relatively mature stage, however at the time of writing are not concluded.

Stagecoach recognises and supports in principle the Council's wider aspirations for the "Southern Gateway", and this has governed our approach to the Council to date. We continue to have no "in principle" objection to relocating our administrative, engineering, operational and customer service facilities.

Leaving our proprietary interests entirely to one side, it remains vital that in so doing, the effectiveness, attractiveness and convenience of these facilities is not compromised, as we have outlined in our representations to Policy A1, if wider national and local transport policy, and the local plan strategy itself, are to be effectively achieved.

The depot is crucial infrastructure to support the safe, reliable and legally-compliant operation of Stagecoach bus services over a very extensive area covering the entirety of the District and beyond. Without securing equivalent facilities, that are fit-for-purpose, many of our services would have to cease.

If buses are to provide a greater and more attractive level of service (still more so if they are to be electrified) larger, more capable depot facilities, and city centre bus interchange facilities will be necessary.

Notwithstanding that the bus station and depot sites are leased from the District Council, these leases terminate well

beyond the end of the plan period.

Finding suitable sites for a replacement bus depot in Chichester, in common with all similar localities especially in southern England, is extremely challenging. As a sui generis use, bus depots do not automatically benefit from policy support on land allocated for employment uses. Most bus depots benefit from being legacy assets established under very different economic conditions. That is the case here. The value of a depot site for redevelopment net of demolition and remediation costs, rarely approximates to that able to sustain the acquisition of land in a tight wider employment land market, and the construction of suitable new facilities.

Furthermore, the costs of operating bus services are sensitive to the parasitic costs of vehicle and staff hours and mileage associated with "dead running" to a remote depot location from the operational network. Here, the existing depot site is ideal, and any replacement will unavoidable add ongoing operational costs to the operation that cannot be directly recovered.

We confirm that a replacement depot site has been identified and has in principle been agreed, subject to overcoming issues with the disposition of existing and future structures on the site. However, the site is recognised as not capable of accommodating meaningful operational expansion. This is just one of the most important foundational reasons why a positive transformation of bus productivity needs to be achieved, across the plan area and beyond, to support delivery of greater bus mileage and frequencies with the same level of operational resource. At the time of writing, we are not fully convinced that the proposals for the relocation will be sufficiently fit-for-purpose in the event the above is not achieved. Thus, we must raise a concern that the bus depot site might not be available during the plan period. While there is a strong probability it will be, the certainty surrounding the availability of the site, especially within the first 5 years of the plan, needs to be made transparent.

### 9.3. Policy A4 Southern Gateway - Chichester Bus Station, Bus Depot and Basin Road Car Park Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Regarding the removal of the bus station, without equivalent replacement, Stagecoach has significant concerns. Pressures and conflicts at the current bus station site have been gradually rising for several years, arising from increasing use and the need for additional scheduled vehicle layover periods to reduce the risks of accumulated late running from traffic congestion. Peak passenger volumes have recovered strongly on several routes, however passenger accumulations resulting from more frequent delays and disruption have added substantial further pressure on limited space.

Under current plans, buses and bus passengers will be displaced to bus stops at new locations outside the city centre, along Avenue de Chartres. This road was always intended to be a relatively high-speed traffic route, outside the historic core of the city. The city centre has evolved in the subsequent years to reinforce already strong natural severance, with the highway lying beyond the city walls and the green space along the Lavant. It is a traffic dominated, unsurveyed and unattractive environment, reflecting the intended function of the road as an efficient movement corridor for high traffic volume, and nothing more. Avenue de Chartres is relatively close to the rail station and pedestrian connectivity can be provided at broadly equivalent distance to the current bus station, but again it is unsurveyed and currently unpleasant, lacking natural legibility or any sense of prominence.

We understand kerbside capacity on Avenue de Chartres will be strained even to accommodate current levels of service, with no expansion possible. There is therefore a strong probability that to accommodate more frequencies and key new routes, such as West of Tangmere, East of Chichester and West of Chichester allocations, additional future bus stops must occupy a different location. This makes interchange between routes and rail services substantially challenging and less attractive.

The emerging arrangements risk marginalising public transport and public transport users substantially. This strongly undermines achievement of the wider plan objectives and delivery of a significantly greater role for public transport. If substantial public transport growth is to be accommodated in a growing city and hinterland, as the draft plan anticipates, then a more ambitious strategic approach must be taken. This should plan for additional and improved facilities to accommodate all services predicted to be required, whilst enhancing the passenger experience to ensure meaningful and attractive modal choice.

There is therefore a need for the plan to evidence how these issues will be appropriately resolved, having regard to a suitably ambitious approach that properly supports clear objectives to boost the relevance of public transport. The current policy is weak, unspecific and indifferent to achieving the strategic objectives of the plan, including a transport strategy in support of the plan, and as such it is ineffective.

Policy A3 should therefore be modified to read:

" ...

- Be designed to encourage and facilitate substantial increase in the use of active travel and public transport to, from and through the city centre.

" ..."

In line with the commentary above Policy A4 should also be modified to read:

3. Enhance the public interchange function of the immediate area, the public realm, particularly connections to the railway station and the city centre via South Street, Southgate and Basin Road for pedestrians, cyclists and public transport users, and to National Cycle Route 2 and Route 88 which run close by. Suitable replacement bus stops and layover facilities should be provided to replace those at the bus station in line with reflecting the objectives of the West Sussex Bus Service Improvement Plan, and to facilitate growth to meet the requirements of the plan's development strategy. Routes and crossings should reflect pedestrian desire lines, and public art should be incorporated to create a sense of place;

4. Enhance the public realm, in support of this and wider objectives, incorporating public art and other measures to create a strong and attractive sense of place.

...(renumber remaining points)

#### 9.4. Policy A6 Land West of Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

This is an existing Local Plan allocation. The public transport strategy for the site depends on the delivery of the second phase which Stagecoach notes is the subject of several applications now awaiting review and determination by the Council.

The site represents a compact form of development adjoining the city, as the most sustainable settlement, meeting housing needs close to where they arise, and affording very good opportunities for the use of sustainable modes, especially walking and cycling.

It is vital that a bus service is delivered to serve the site at the earliest potential. This was anticipated to be at the start of Phase 2 and will require the early delivery of the entire length of the spine road between the Old Broyle Road and Westgate and making it available for bus services.

It is not clear if the costs of pump-priming the service mentioned in the draft policy are anticipated to be met by the developer. Without such funding, the service will not be deliverable as years of losses will never credibly be covered from future profit. It is likely that the current wording will be interpreted by the developer as meaning that they have no such obligation binding upon them. Not does policy set out any specification for this service, thus its costs and the basis for securing developer contributions does not exist.

As such any wider transport strategy, that seeks to secure a greater role for the use of public transport, and the aspiration for this allocation cannot demonstrably be met. The policy is ineffective.

Policy A6 should be modified to read:

" ...

10. Make provision to accommodate and secure delivery of for regular bus services linking running through the site to Chichester city centre operating at least every 30 minutes Monday-Saturday, and new and improved cycle and pedestrian routes linking the site with the city,

" ...

#### 9.5. Policy A7 Land at Shopwhyke

Stagecoach Supports

This is an existing Local Plan allocation, largely built-out, that benefits from an existing set of permissions.

The public transport strategy for the site depends on the delivery of effective bus priority at Oving Crossroads. The current recently implemented scheme, undertaken by National Highways, makes no provision for effective bus priority and needs considerable re-evaluation.

The site represents a compact form of development adjoining the city, as the most sustainable settlement, meeting housing needs close to where they arise, and affording very good opportunities for the use of sustainable modes, especially walking and cycling. It lies on a new bus corridor that will shortly be put in place, running to Tangmere via Shopwhyke. The allocation is being significantly consolidated by further development in the immediate vicinity which strongly supports the potential for this new service.

As we explain in our representations for East of Chichester proposed allocation A8, and West of Tangmere Allocation A14, a clear corridor strategy to effect bus priority is needed, that should be delivered in support of that further growth, and that at Tangmere SDL. However this allocation is a near complete commitment and there is no scope through policy regarding this land to effect this outcome.

It is notable that Point 6) of policy A7 makes mention of a bus service. This language reflects the currently adopted Local Plan policy and has underpinned the existing permissions. The failure of any bus service to be delivered demonstrates from first principles that this Policy has been entirely ineffective. It is important that lessons are learned from this in the Local Plan Review.

#### 9.6. Policy A8 Land East of Chichester Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This proposed allocation lies next to unallocated land that is already consented as a departure from the adopted development plan, with 143 units near completion south of Oving Road (20/02471/FUL). Additional land, also unallocated but similarly consented, has now commenced north of Oving Road (88 units under 21/02197/FUL). This and the allocation site consolidates earlier development at Shopwhyke brought forward under the current Local Plan, and allocated again as draft policy A7.

Development at Shopwhyke was brought forward on the basis of a premise that the developer would provide or somehow arrange a bus service, that was reflected in the policies of the current Local Plan. This was secured by an unenforceable condition. No bus service has been provided, as there was inadequate clarity regarding the basis on which the costs of establishing such a service would be met by the developer, and the expectations of policy on the developer. The site does however lie on a logical new bus corridor between Chichester and West of Tangmere along the Oving Road.

In addition, an expectation that modifications to the Oving Crossroads would effect bus advantage have proven false – the arrangements put buses into a similar or longer queue than if they use the route available to general traffic to and from the A27.

Stagecoach strongly supports the principle of bringing this land forward. However, the soundness of the site depends on deliverability of a regular, reliable and direct bus service along the Oving Road, taking advantage of effective bus priority.

Given the failure of existing policy in the adopted Local Plan covering the proposed A7 allocation to deliver a bus service, it is of great concern that there is no draft policy to adequately address the issue. The policy is out of conformity with NPPF paragraph 104-105 in that sustainable modes do not offer realistic choices, much less an attractive one, and as such also does not secure the objectives of national policy nor of the plan itself.

Currently the proposed allocation is not served at all by public transport. Policy needs to ensure there is a policy basis to secure contributions to deliver such a service, which may well take the form of a proportionate contribution to deliver a new service or enhance provision that is put in place between Chichester along the Shopwhyke Road to west of Tangmere.

To become sound Policy A8 must be modified to read:

“  
...  
12. Provide for improved high quality connectivity by sustainable travel modes and focused in particular on a corridor between Chichester city centre and Tangmere along Shopwhyke Road, including new improved cycle and pedestrian routes, and a frequent bus service including linkages with Chichester taking advantage of effective bus priority measures on Oving Road at the A27;  
...”

#### 9.7. Policy A9 Land at Westhampnett/North East Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This land is already allocated and consented as part of the existing 2016 Local Plan. All reserved matters are determined.

The site lies on service 55 between Chichester, Westhampnett and Tangmere. This established service benefits from additional demand from the development at Phase 1. Phase 2 which is currently well underway, does not benefit directly from bus services. However it is a compact and logical form of development where walking and cycling to local facilities and employment is a credible option.

The existing allocation rolls forward policies in the 2015 Local Plan. In so doing it is possible to see which have been effective.

Point 9. regarding bus service and routing has not been effective. In particular the potential for a bus only link between the site and Graylingwell has not been established as policy anticipated. Given congestion around the Portfield area acutely affects public transport this, or alternative methods to secure bus priority over private car use, a clear and

unequivocal policy steer is required.

The lack of an up-to-date transport evidence base is ultimately at the root of these issues. Arguably the policy and allocation can only be made sound once this refreshed evidence base is in place.

However, it is possible that the allocation could be made sound by modification of Policy A9 as follows:

“ ...

9. Make provision for regular, direct and reliable bus services linking the site with Chichester city centre, and new and improved safe and convenient cycle and pedestrian routes linking the site with Chichester city, the South Downs National Park and other strategic developments to the east of Chichester city including Tangmere. These objectives could include exploring the potential for a bus only route require a deliverable scheme to afford bus priority through Portfield, and potentially linking the development with the Graylingwell area through use of a modal filter;

...”

#### 9.8. Policy A10 Land at Maudlin Farm

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing public transport route. It is relatively close to the city and very near substantial centres of employment and services that can be reached by active travel modes, helping damp the demand for car use. It is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services at Portfield and over a wider area. In fact, the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A10 should accordingly be modified to read:

“ ...

5. Provide safe and suitable access points for all users, including a main vehicle access from Old Arundel Road and, subject to further assessment, a secondary vehicle access from Dairy Lane. The development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes;

...”

#### 9.9. Policy A11 Bosham – Land at Highgrove Farm

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Bosham Station. It is relatively close to the city and very near substantial centres of employment and services that can be reached by public transport and cycling, offering strong potential to materially damp the demand for car use.

There are serious risks that development in the A259 corridor west of Chichester could place further demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular to bus services.

Nevertheless, given the potential to effect bus priority on the approaches to Fishbourne Roundabout, it is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this

strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A11 should accordingly be modified to read:

"...

8. Provide safe and suitable access points for all users, including a main vehicle access from the A259. The development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys crossing the A27 at Fishbourne;

9.10. Policy A12 Chidham and Hambrook

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Nutbourne Station. Substantial centres of employment and services that can be reached by public transport and cycling, offering strong potential to materially damp the demand for car use.

There are serious risks that development in the A259 corridor west of Chichester could place further demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular to bus services.

Nevertheless, given the potential to effect bus priority on the approaches to Fishbourne Roundabout, it is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A12 should accordingly be modified to read:

"...

7. Development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys along the A259, crossing the A27 at Fishbourne and where necessary on the approaches to Emsworth;

8. Facilitate improved sustainable travel modes, and new improved cycle and pedestrian routes, including linkages with Chichester city and settlement along the East/West Corridor;

9.11. Policy A13 Southbourne Broad Location for Development

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach agrees unequivocally that Southbourne is a location that could accommodate growth on a strategic scale. It has a substantial range of service available within the settlement, including secondary education. It is well connected by bus and rail service to key destinations, including Chichester, lying to the east and west.

This is one of the few locations identified for growth that represents substantial additional development in a new location to the strategy in the existing Local Plan adopted in 2015. Thus, the transport impacts of development on the substantial scale envisaged at Southbourne are not covered or accommodated by the Chichester Area Transport Strategy that lies behind the existing plan. This demands, from first principles, that substantial further transport mitigation measures are required.

We recognise and endorse fully that the intent of the draft plan for Southbourne as a Broad Location for Development on a strategic scale, includes "Maximising the potential for sustainable travel links through improved public transport, including consideration of opportunities to reduce community severance caused by the railway line as well as the inclusion of cycling and pedestrian routes." (our emphasis).

The existing railway station at Southbourne is served regularly, however, it is not within the power of this plan to improve rail services. It is, however, well within the scope of action of the Local Planning and Highways Authority to work with bus operators to achieve a step change in the journey time, reliability, frequency and connectivity of bus services, and in particular the major corridor operated as service 700 by Stagecoach along the A259 between Havant and Chichester through Southbourne.

Notwithstanding the clear potential for sustainable connectivity in the western A259 corridor, there are very serious risks that development in the A259 corridor west of Chichester will place further significant car-borne demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular bus services, having the opposite effect to that intended: longer, less reliable and less frequent bus services, leading to a spiral of slowly declining use.

These risks, while very serious, look credibly likely to be entirely mitigated subject to carefully conceived and robust specified actions on the local highway network. It is perplexing to us that this potential still has not been identified, as part of a comprehensive "first principles" review of the transport evidence base. In particular given the former trunk status of the A259, there is evident potential to effect bus priority on the A259, including on the approaches to Fishbourne Roundabout.

With appropriate measures, including but not limited to this, to substantially boost the relevance and attractiveness of sustainable travel choices, strategic development at Southbourne could well be made highly sustainable.

In the absence of a refreshed transport strategy and transport evidence base, the draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact, the only reference that is made in Policy is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A12 should accordingly be modified to read:

"...Development should be comprehensively masterplanned to achieve a high-quality design and layout that integrates well with the surrounding built and natural environments to enable a high degree of connectivity with them, particularly for pedestrians and cyclists, and provides good the highest possible quality of access to facilities and sustainable forms of improved public transport services.

...

4. Provide a suitable means of access to the site(s), and securing secure necessary off-site transport infrastructure and service improvements (including highways in particular to the A259 corridor between Emsworth and Chichester) in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development) to promote sustainable transport options prioritising delivery of high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes;

..."

#### 9.12. Policy A14 Land West of Tangmere

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach strongly supports the principle of intensifying the level of development at the Strategic Development Location already identified and allocated West of Tangmere in the existing Local Plan. This serves to consolidate development at a location where effective and attractive public transport choices could be provided. It also conforms closely with the principle expressed in NPPF that the best possible use should be made of land on sites that are judged to be sustainable, or potentially sustainable locations for development.

It must be stressed that the current policy suite for the SDL has to date not brought forward development in this location. We recognise that a Master Plan has been adopted by the Council, and that a planning application (20/02893/OUT) for the full larger quantum of 1300 dwellings proposed in the draft plan has received a resolution to grant by the Council.

However, we are not aware that a sustainable transport strategy has been finalised.

Land West of Tangmere is not served by any existing regular bus services. Rather, an entirely new bus service corridor is anticipated to operate in the near term from Chichester through Tangmere and beyond towards Barnham. This would serve proposed allocations A7, A8 and West of Tangmere (A14) included in the draft Plan.

This is reflected in the language of the explanatory memorandum to Policy A14 at paragraph 10.65:

“Opportunities, in partnership with relevant authorities, to provide improved sustainable public transport routes linking the village with Chichester city, to improve cycle routes to the city, and better transport links to Barnham rail station and the ‘Five Villages’ area in Arun District; and..”

Initiating this service will be costly and will in large measure be funded not by developer contributions, but by DfT monies awarded through the West Sussex Bus Service Improvement Plan. It is crucial this service is both sustainable in the longer term without revenue support, and that the success of the service can be built on by scalable frequency improvements as strategic development comes forward in both Chichester District, and proposed allocations A7 A8 and A14, and in Arun District, in particular at Barnham, Eastergate and Westergate (BEW).

This demands measures to effect safe, direct and swift operation of the service especially within the city centre, where it approaches and crosses the A27 at Oving crossroads and on the eastern fringes of the District east and west of Tangmere. Without these measures, bus journey time and reliability will be severely compromised and the impact of this service to damped car trip demands will be very substantially compromised. No such measures are proposed in the draft plan or its evidence base.

Changes to Oving Crossroads have recently taken place which, amongst other intentions, ostensibly provide bus advantage between Chichester and Shopwhyke. The junction in its current form does not offer material gain in bus journey time, as movements involve a less-direct route towards the city over an increased operating distance, much of which involves passage through heavily congested sections of the A27 and Westhampnett Road. A refreshed transport strategy supporting plan-led growth must revisit this area to secure an effective solution which offers bus customers the fastest and most reliable trip-time to and from the city.

In addition, the extension of public transport connectivity towards BEW and Barnham, including key links to secondary education and a logical railhead for journeys beyond towards Brighton and London as provided at Barnham Station, needs to facilitate bus priority between Tangmere and Nyton – whether using the A27, or preferably avoiding it altogether. There are significant safety concerns associated with the at-grade uncontrolled right-hand A27 exit onto the B2233 Nyton Road at Crockerhill Turn. This movement is also prone to extreme delay owing to the conflict with approaching westbound traffic on the A27, travelling at speed, which has priority. Our concerns with this junction in its current form can be expected to worsen with the increased traffic volumes predicted from new residential developments to the west of the city.

A solution providing a suitable short length of highway available only to sustainable modes, between Tangmere and Easthampnett, could provide a very effective solution to this. This would be deliverable within the scope of the separate proposed allocation at A19 Chichester Business Park, Tangmere. We comment on this separately.

Howsoever effected, a reliable direct and delay-free bus corridor between Barnham, BEW, Tangmere and Chichester could expect to secure very substantial elevation of the relative attractiveness of public transport over car use on the entire corridor and serve to effectively damp growth-related demands on this section of the A27. West of Tangmere, in the longer term, there is evident scope for the route corridor to operate as two branches – one via Shopwhyke and one via Westhampnett, effectively serving all the strategic developments proposed in the plan and transforming wider public transport connectivity to key employment destinations and services within and east of Chichester.

However, in common with all the other proposed allocations, the plan proposes no specific measures to provide, much less improve public transport or other sustainable modes to the site. This leaves the draft plan out of conformity with NPPF, especially paragraphs 104-106. The plan is inadequately evidenced and to the degree that public transport measures are identified and emergent, their successful implementation in the near and longer term will be jeopardised without clear measures to provide a safe as well as efficient bus route towards BEW and the Five Village area within Arun. The Duty to Cooperate is not effectively met and effective cross boundary collaboration on these strategic issues through the review of LSS is not demonstrated, despite the current version which identifies the issues.

To be made sound the LSS Review and a subsequent urgent review of the transport evidence base and strategy needs to take place. The strategic issues are especially critical east of Chichester, in our view.

Notwithstanding this foundational deficiency, to be made sound, Policy A14 should be modified to read:

“... ”

8. Subject to detailed transport assessment, provide primary road access to the site from the slip-road roundabout at the A27/A285 junction to the west of Tangmere providing a spine road link with secondary access from Tangmere Road. Development will be required to provide or fund mitigation for potential off-site traffic impacts through a package of measures in conformity with Policy T1 (Transport Infrastructure) and T2 (Transport and Development) and DfT Circular 01/2022 that maximise the relevance and use of sustainable travel modes, in particular bus services;

9. Make provision for improved sustainable travel modes between Tangmere and Chichester city, in partnership with relevant authorities, including improved direct, seamless safe and reliable and additional bus and cycle routes linking Tangmere with Chichester city, Shopwhyke and Westhampnett. In conjunction with measures in support of Allocation A19, Opportunities should also be explored contributions shall also be sought for providing improving high quality cycling and bus service transport links with the 'Five Villages' area and Barnham rail station in Arun District; and..."

#### 10. Concluding comments

Stagecoach recognises its role as a key stakeholder in the plan, as well as a local employer and corporate citizen. We recognise the primacy of the plan-led system as the mechanism intended to resolve complex challenges, including the proper alignment of transport and spatial planning, which as the National Decarbonisation Strategy for Transport among other policies makes clear, has never been more vital.

In making our representations, we emphasise that we are entirely supportive of the Local Planning Authority and the relevant Highways and Transport Authorities, in their efforts to properly manage the amount and pattern of development to secure vital policy objectives. We recognise that balancing delivery of assessed development needs with a wide variety of other constraints is a very difficult task.

The transport issues faced by the plan are recognised in the draft plan as being serious and long-standing. We believe that there are ways to arrive at a suitable transport mitigation strategy that has regard to wider strategic issues and resolves existing problems in a much more effective way than those pursued to date.

We support the spatial strategy of the plan as it evidently provides the basis to secure the necessary step change in the quality and use of sustainable transport modes, as it explicitly seeks to do. However thus far, there has been insufficient work done to define the measures that will credibly secure these outcomes.

Stagecoach therefore urges the authorities to draw us into the necessary effective ongoing collaborations that is expected by NPPF paragraph 16 and 106; and DfT Circular 01/022, to do this work, prior to, rather than after the submission of the draft plan. We look forward to being approached to initiate this dialogue at the earliest opportunity.

#### Change suggested by respondent:

Policy I1 iii) should therefore be modified to read:

"(iii) Safeguard the requirements of infrastructure providers, having regard to requirements within and where appropriate across the boundaries of the plan area, including but not limited to:

...

- Highways including specific measures to accommodate improved active travel and public transport level of service and..."

At limb v) the Policy expects developers to meet the "in perpetuity costs of operating and maintaining infrastructure". This shackles development management decisions to developers assuming what are infinite costs – given that "in perpetuity", read properly, can only mean "without any limit in time". This means that it is impossible to meet the statutory tests on developer obligations set out in the Community Infrastructure Levy Regulations 2010 (as amended) at Regulation 122, also repeated in NPPF. This policy cannot be lawfully implemented and it is thus ineffective.

In the absence of an up-to-date transport mitigation strategy that is fit for purpose, at the point the Plan is examined these costs of any additional infrastructure are not known in any case. The strategy and its costs, including its affordability and deliverability, are crucial to assessing if the Plan is sound.

Subject to an appropriate defined transport mitigation strategy being arrived at, to be sound, the Policy I1 v) should be modified as follows:

(v) To consider and meet as appropriate the delivery costs of infrastructure and, where appropriate, improved services, to the point where its long-term operational sustainability is credibly assured from mainstream sources. Where adoption is not envisaged by local authorities, that must include arrangements for its ongoing management and maintenance;

**Legally compliant:** Not specified

**Sound:** No

**Comply with duty:** No

**Attachments:**

Chichester Local Plan 2039 Regulation 19 Stagecoach South representations.docx - <https://chichester.oc2.uk/a/skh>

**Object**

**Respondent:** Stagecoach South (Rob Vince) [8141]

**Summary:**

Paragraph 10.5 exposes an unbalanced and unsound preoccupation with aesthetic matters in its approach to the town centre, and far too little to ensuring that the central place function is enhanced through protecting and enhancing the quality of public transport access.

It is important to note that a dominant number of key service and facilities such as the General Hospital are relatively close to the city centre. This directly contributes to driving travel demand into the city, causing congestion. Most importantly, it also makes the task of mitigation simpler, given the impact a suite of active and sustainable measures can have within the same close proximity.

Policy A1 does not provide this. As such, achieving the strategic objectives of the plan is seriously threatened, and the plan is thus not effective.

The Plan needs to ensure that the approach to city centre regeneration maintains and enhances public transport access, interchange and inter-modal connectivity. It also needs to ensure that bus service stopping and interchange facilities are able to address increases in future demand, anticipated by the clear intent expressed elsewhere in the Plan that public transport should be meeting a greater proportion of mobility needs, in a growing district. Achieving this demands an ambitious approach to the location, quality and capacity of bus stop and interchange.

Stagecoach has significant concerns that current proposals to remove the bus station and have all bus services operate from the street kerbside, on an inner distributor road with similar or reduced net stop capacity, fall short of promoting attractive, convenient bus access to the central area as a destination.

For the longer term and where the objectives of the draft plan are concerned looking ahead to 2039, they clearly fall short of enhancing the convenience and attractiveness of public transport use. Much less do they make sufficient provision for a material increase in bus frequency, connectivity, and interchange convenience, on which the draft plan explicitly relies.

**Full text:**

Chichester District Local Plan 2039 – Pre-Submission (Regulation 19) Consultation

**1. Introductory Comments**

Stagecoach South is the main commercial public transport operator across Chichester District. The Company has headquarters in the city, which is also the principal public transport hub for the District and it's rather wider travel-to-work area encompassing much of the Arun District. Our services extend throughout and beyond the District boundaries, as far as Littlehampton, Midhurst, Havant and Portsmouth. The vast majority of services operate on a commercial basis – that is to say, sustained by passenger use and fare revenue, including concessionary reimbursement.

While the role of the railway is significant in much of the District, especially the east-west Coastway line, yet bus services account for more boardings locally than the railway, with Chichester depot services carrying over 3.5m passengers each year.

Unlike bus services in other parts of the country, the local network has recovered strongly after the pandemic with fare-paying passenger numbers over 95% of 2019 levels, albeit with concession patronage somewhat lower. This has helped secure not only a stable but growing bus network even during this period of rapidly rising operational costs, avoiding the need for the service contractions seen in other regions. Indeed, during the second quarter of 2023 Stagecoach will invest £5.5m in brand-new vehicles for high-profile coastal Service 700 – one of the largest vehicle investments for Stagecoach Group this year.

Our services are therefore critical to existing and future local connectivity. As the Plan acknowledges, mobility demands do not respect planning authority boundaries. The role of our services is especially high to settlements in the broad A27 corridor, within the District and beyond. This includes major settlements in Arun District such as Pagham and suburban Bognor Regis, where bus is the only mass public transport option. As the Council is well aware, there is an even higher level and rate of committed development envisaged in these locations in the Arun District Local Plan than in Chichester.

It is already evident to the planning authorities, West Sussex County Council and National Highways, as proprietor of the A27 Trunk Road, that accommodating growing mobility demands across Chichester District and especially around Chichester itself, is becoming increasingly challenging to the point of being seriously problematic.

Stagecoach has a particular interest in this Plan arising from:

- The already clear and highly deleterious impact of congestion affecting our operations and their reliability and attractiveness to the public. The effects of these on the approaches to Chichester, and around the A27 bypass are especially severe. If public transport is to retain its existing role – even before the needs of any meaningful growth both in Chichester and neighbouring authorities is considered, are considered – the Council and the Highways Authority need to arrive at clearly-defined measures to protect buses from chronic delay and the damaging impacts arising from the lack of bus network resilience and customer journey times.
- In connection with the above, the need to properly consider the predictable impacts of committed development in Arun District on the transport network and in particular the operation of bus services. The duty to cooperate on cross-border

strategic matters is not limited merely to accommodating housing requirements.

- The fact that our entire business premises and operational base at Chichester is the subject of allocation for redevelopment within the Plan period. Specifically, this includes our Head Office, the Bus Station as the operational hub of the network and the key interchange for passenger journeys – including those that involve the railway – and the bus depot required to support the entire operation. Notwithstanding many years of discussions, there is as yet no agreed deliverable strategy to replace these facilities either in the Draft Plan or elsewhere.

Stagecoach broadly supports the vision and priorities of the draft plan. In most respects, Stagecoach supports strongly the spatial strategy and the identified site allocations that flow from it, and the evidence.

However, it has serious concerns about the soundness of the plan as proposed for submission, for important regards outlined in this response. These are made in the light of requirements set by the National Planning Policy Framework (NPPF), in particular at paragraphs 15 and 16; 35, 105-109 inclusive and having due regard to the need for allocations to satisfy 110-112 inclusive in due course as development permission is sought; and paragraph 174.

Paragraph 16c) of NPPF makes plain that strategic plans and policies should “be shaped by early, proportionate and effective engagement between plan-makers and communities, local organisations, businesses, infrastructure providers and operators and statutory consultees” (our emphasis). This makes plain that collaborative and ongoing involvement of public transport operators is both necessary, and separate and in addition to the engagement with statutory consultees. This has not taken place.

Para 1.25 of the draft plan states that “the council has engaged constructively, actively and on an ongoing basis with other local authorities and organisations to address key strategic matters.” Despite the requirements in NPPF and contrary to the statement made, Stagecoach has not been approached or involved in a meaningful, collaborative or ongoing way in the preparation of the Plan.

Our main concerns centre around the fact that the plan strategy is neither backed by sufficient transport evidence. Even more importantly, the plan relies on a wholly car-based transport mitigation strategy despite policy stating that this is not the case, and the track record of the existing Local Plan, based on a very similar strategy, that has failed to bring forward meaningful mitigations to date to prevent traffic conditions substantially worsening. There is no support in policy for the achievement of the Strategic Objectives in the Plan. Nor is there definition of any measures in the 2023 Transport Study to make provision for sustainable transport infrastructure or services – much less materially improve them.

Finally, to the extent that updated transport evidence has been provided in the form of the 2023 Chichester Transport Study, arising from updated traffic modelling, it does not support the contention that highways capacity constraints on and around the A27 justify not meeting the objectively-assessed development needs of the area, as the draft plan contends.

## 2. Vision and Strategic Objectives

### 2.1. Issues and Opportunities

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant, proportionate and up to date evidence

Stagecoach recognises the important role of the West Sussex and Greater Brighton Strategic Planning Board which agreed a Local Strategic Statement (LSS2) in early 2016 to identify spatial planning issues across the wider area. This established strategic priorities and policies to guide longer term strategic growth in a coordinated and well considered matter. This institutional framework and the purpose of the LSS is a highly significant one and is at the heart of efforts to properly fulfil the statutory Duty to Co-operate, including with regard to strategic infrastructure issues, as NPPF requires.

Given the long period of time elapsed since the 2018 Reg 18 consultation and the already very clear constraints on strategic infrastructure capacity, it is of great concern to Stagecoach that the LSS2 has not been updated to reflect emerging issues in the intervening period. A review and update of the LSS2 has only just commenced. This includes a study of projected housing and employment needs, transport impact, infrastructure and spatial options to deliver the required development in the period after 2030. This Chichester District draft plan covers a period extending to 2039 – therefore well beyond 2030 and the nominal currency of LSS2.

However, infrastructure needs are pressing today. Stagecoach is presented with severe highway operational problems on a near-daily basis. During the winter of 2022-23 we have, for example, seen key road links impacted for many weeks by acute disruption arising from flood events. Unpredictable, but seemingly more-frequent, exogenous events expose a lack of resilience in the highway network around Chichester and its travel-to-work area. However, serious, chronic, unpredictable delay has been normalised over recent years, with peak-time congestion having quickly returned after the pandemic. The existing development strategy has failed to bring forward measures having any impact on this to date, and key commitments – notably at west of Chichester Phase 2 and at Tangmere – have yet to commence to further aggravate the issue.

We have no confidence in the transport mitigations proposed in the existing Local Plan and LSS2 being sufficiently effective, even if deliverable at all. Indeed, the existing adopted Local Plan does little more than make vague speculations about the sustainable transport measures that might be achievable. The draft local plan review is no different. It has no ambitions at all for sustainable modes and thus, makes no meaningful provision to meet them.

This is especially relevant in light of the fact that the approach to resolving issues on the A27 around Chichester that were anticipated in 2015-16 have fallen away. LSS2 is thus currently inadequate to act as a part of an up-to-date, proportionate, and relevant evidence base for the Plan.

An update of a traffic model lies at the heart of a 2023 Chichester Transport Study. This talks no account of the existing role of non-car modes, nor can it do so. It is unable to properly evaluate the nature of problems or solutions that involve public transport, or for that matter, other sustainable modes.

Therefore, we consider that the combination of committed and additional development needs that must be accommodated over the whole plan period between 2022 and 2039, in both the Chichester and Arun Districts, require a "first principles" review. This must be based on a refreshed transport evidence baseline of no earlier than 2022 – given that the effects of COVID distort 2020-22 – and the transport infrastructure and service requirements to sustainably support those needs.

Key issues – including substantial changes with regards to transport issues and challenges, as well as potential solutions – thus do not form part of the evidence base that steers this plan. Given long term changes in travel patterns, and mode share that took place during COVID, as well as a local and national policy context that seeks to radically reduce and then eliminate transport-related carbon emissions, this is especially problematic.

The specific problems of congestion and network resilience that are evident on the A27 and the approaches to Chichester remain a set of especially difficult problems that disproportionately affect the efficiency, reliability and attractiveness of the bus network, that evidently demand larger-scale strategic responses involving multiple stakeholders, including bus operators.

Where the effects of development on the national Strategic Roads Network (SRN) are concerned, the approach of National Highways to addressing and responding to the mobility needs of development has now substantially changed following the promulgation of the DfT Written Ministerial Statement LTN01/22. This makes it clear that adding highways capacity is no longer the first or only strategy that should be pursued, but one subordinate this to maximising the potential of non-car modes and sustainable travel.

"Effective and ongoing collaboration" on transport matters has not led to solutions being agreed and published for public scrutiny as part of the plan evidence base. Whatever the approach to modelling and "highways improvements" that may be agreed or pending agreement with the County Highways Authority and National Highways, Stagecoach is neither participant or sighted. This is despite the clear requirements set out in NPPF Para 106 b) that "Planning policies should ... be prepared with the active involvement of local highways authorities, other transport infrastructure providers and operators and neighbouring councils, so that strategies and investments for supporting sustainable transport and development patterns are aligned." (our emphasis).

We therefore consider that the Council has failed to comply with the requirements of NPPF paragraph 25 and 26 that "relevant bodies" are involved in plan-making, especially with regard to addressing the needs for infrastructure. Public transport services and the infrastructure that supports its operation and use clearly fall within matters relevant to plan-making. This is explicit in NPPF Chapter 9 and indeed within the plan itself – for example reference to public transport and sustainable modes in the Vision for the plan.

It should be stressed that the Regulation 18 "Preferred Approach" consultation took place in December 2018 – over 4 years ago and prior to COVID, based on LSS2. The inordinate length of time that has elapsed between the Regulation 18 and Regulation 19 stages greatly challenges the LSS2 and other parts of the evidence base, especially as the pause straddles the COVID epidemic. That would include the transport modelling baseline, and key assumptions in any traffic modelling that took place prior to mid-2022, which is a point at which a reasonable "new normal" post-COVID might be considered to have become established. In that period, Arun District has also adopted its own Local Plan development strategy that accommodates an unprecedented quantum of development immediately east and south-east of the District Boundary – creating additional substantial transport impacts directly affecting the A27 and multiple major approaches to Chichester crossing it.

The established mechanism to fulfil the Duty to Co-operate has thus not operated effectively.

The Plan is not founded on a relevant, proportionate and up-to date evidence base and is thus inadequately justified.

## 2.2. Spatial Portrait

The spatial portrait is generally succinct and accurate. However, it makes no mention of road-based public transport, the role of the City as a public transport hub, or the range of bus services that provide local connectivity (Section 2.4 and 2.5). The complete concentration of post-16 education in the City itself as just one example of the peculiarities of

transport demands in the area, is not highlighted, though this has a profound influence on peak time travel demands affecting the most congested parts of the highway network. Among other things, the role of bus services in supporting the educational system of the plan area is very great indeed.

The potential role of bus in addressing the already-severe transport problems of the plan area and beyond seems entirely overlooked. The spatial portrait is thus clearly inadequate and incomplete.

### 2.3. Strategic Objectives

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Chapter 9 of NPPF and paragraphs 104 and 105 in particular require that plans should:

“Transport issues should be considered from the earliest stages of plan-making and development proposals, so that:

- a) the potential impacts of development on transport networks can be addressed;
  - b) opportunities from existing or proposed transport infrastructure, and changing transport technology and usage, are realised – for example in relation to the scale, location or density of development that can be accommodated;
  - c) opportunities to promote walking, cycling and public transport use are identified and pursued;
  - d) the environmental impacts of traffic and transport infrastructure can be identified, assessed and taken into account – including appropriate opportunities for avoiding and mitigating any adverse effects, and for net environmental gains;...
- ...The planning system should actively manage patterns of growth in support of these objectives. Significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. This can help to reduce congestion and emissions, and improve air quality and public health...”

The Strategic Objectives do not conform with NPPF in these foundational requirements adequately, to transparently steer the plan strategy. They should therefore be amended to read:

“Plan to provide local infrastructure to support new development and seek opportunities to address existing identifiable infrastructure problems deficits, such as in particular those relating to the A27 and its junctions and wastewater treatment.”

Paragraph 2.36 states, in the context of the Climate Emergency and the National Trajectory to “Net Zero” that “The council will enable the delivery of infrastructure, jobs, accessible local services and housing for future generations while protecting, conserving and enhancing the historic and natural environment.”  
Naturally, we support this intent.

However, there is no acknowledgement of the role current patterns of transport use contribute to carbon emissions, nor that substantial mode shift is necessary to address sustainably an acute lack of capacity on the local network and the SRN, especially around Chichester. This is especially concerning as the basic conceptual link is not made between the fact that the greatest such problems lie on the A27 corridor and around Chichester, while these are also at the same time present many of the most sustainable locations for development, and where the opportunities to secure much greater use of sustainable modes also exists.

Strategic Objective 7 “Strategic Infrastructure” includes the following statement:

“To work with infrastructure providers to ensure the timely delivery of key infrastructure to support delivery of new development. New development will be supported by sufficient provision of infrastructure to enable the sustainable delivery of the development strategy for the plan area. Key infrastructure to support the Local Plan will include improvements to transport, ...

A sustainable and integrated transport system will be achieved through improvements to walking and cycling networks and links to accessible public transport. Highway improvements will be delivered to mitigate congestion, including measures to mitigate potential impacts on the A27 through a monitor and manage process.”

The latest transport evidence in the Chichester Transport Study makes no pretence to define much less to deliver a “sustainable or integrated” transport system. It is wholly devoted to sustaining current levels of car use across the District, to and through Chichester area.

It is no more than the lightest of touches to the approach taken to supporting the adopted Local Plan, an approach that is already almost 10 years beyond the date of its gestation but has yet to deliver any significant capacity improvement schemes, much less any measures that sustain even current levels of public transport journey times and reliability in the face of increasing congestion – much less any betterment.

Of the six key junctions on the A27 around Chichester, recognised to require significant mitigation given they are saturated for extended periods, five accommodate regular bus services - indeed frequent ones at least every 20 minutes in several cases. The sixth at Oving Road, relates directly to a key corridor where bus services are needed to support strategic growth currently being delivered at Shopwhyke, as well as substantial further growth West of Tangmere

(proposed allocation A14) and "East of Chichester" (A8), south of Shopwhyke Road.

As stated at p12 of the Study Summary "The modelling shows that all the junctions on the A27 Chichester bypass are well over capacity, even before adding in the Local Plan development and with the exception of Portfield Roundabout are actually shown to be over capacity in the base model year (2014) in one or both peaks". This much has indeed been evident for years from delay and periodic even more severe disruption arising to Stagecoach services from the lack of network resilience.

The reassignment of through and local traffic through Chichester to avoid the A27 bypass is an especially serious issue for bus services that penetrate the city. This is leading to consequential saturation of a range of junctions used by buses. Rising delay and unpredictable running times are at the root of our decision to sever the long-established Portsmouth to Littlehampton service in 2023, which will in future no longer run across Chichester, but terminate to provide additional dwell time to mitigate the impacts of congestion.

While this congestion affects all road users including businesses and freight traffic, the effect on scheduled bus services is greatly higher, as such services cannot reassign route to 'beat the queue'. Traffic congestion often encourages greater car use for this reason, in tandem that people are happier to sit for extended periods in their own vehicle on a seamless door-to-door journey than wait at the roadside for a delayed bus making slower progress in lengthy queues.

As the Study admits at para. 1.3.2 "Although, there have been works at the Portfield Roundabout in this timeline, no other mitigation schemes have been completed along the A27 corridor, as such the mitigation schemes defined in this report will also be required to consider the development from this plan period."

In other words, in the 8 years since the current Local Plan was adopted in 2015, there has been minimal progress in delivering the traffic mitigations. There is no clarity at all when any such mitigations will be brought forward. It is hardly surprising then, that traffic conditions have deteriorated. The "predict and provide" transport strategy supporting the current plan has failed.

Despite this, the Draft Local Plan Review proposed to "double down" on exactly this strategy. It represents, like the rest of the evidence base, a "rolling forward" of the current car-based strategy by 9 years, with the lightest of touches to attempt to accommodate car trip demands from a relatively modest additional development quantum.

Nevertheless, the Study requires a global 5% reduction in trip demands arising from unspecified "credible" (paragraph 4.1.2) sustainable transport and travel planning measures. It is unclear why use of non-car modes will see disproportionate growth when no measures are in place to make them more attractive. This 5% increase in use translates to a doubling in the modal share of bus services. There is no evidence nationally, anywhere, that simple ignorance of alternatives to the car is the main barrier to uptake.

The outputs of the 2023 Chichester Area Traffic (SATURN) model are set out at Table 5.1 (am peak) and 5.2 (pm peak) without mitigation. These betray just how seriously compromised the whole network around Chichester is, and will be in future, even with implementation of a mitigation package to increase traffic capacity that is understood to cost between £92m and £164m – and which the Study and the draft plan acknowledge cannot be delivered through developer funding sources alone. Unspecified external funding presumably from HM Treasury through DfT is required.

Even if this provided and the schemes are delivered, Tables 8.1 and 8.2 indicate these will provide minimal relief. The final columns suggest key junctions, including Portfield, Fishbourne Road and Cathedral Way East will remain at well over 100% ratio of flow to capacity (90% is considered the point at which saturation is approached, with the onset of increasing delay above that figure). RFCs in tables 8.1 and 8.2 are some of the highest we have ever seen in a local transport evidence base for a post-mitigation scenario. While the serious potential risk of reassignment across Chichester City is greatly reduced, which is important and welcome given its impact on bus services, Tables 8.1 and 8.2 show the extent of post-mitigation saturation is also egregious, covering a very large number of key links and junctions.

On every measure and criterion, then, including cost deliverability and effectiveness, the revised Transport Strategy falls well short of evidence to suggest the transport impacts of the plan can be properly addressed by this means.

Despite the repeated statements about sustainable modes throughout the draft plan and Chichester Transport Study, only 2 paragraphs at Section 6.2 within the Study are devoted to public transport:

"6.2.7 The funds generated from the parking management schemes, local/nation funding schemes and developer contributions could also be utilised to fund potential public transport enhancements within the city centre including an expansion of the bus priority lane system within Chichester City Centre. This could reduce reliance on the car in the longer term towards sustainable public transport. A park and ride scheme could be incorporated within a bus priority lane network in the future depending on the uptake and successfulness of early bus priority trials.

6.2.8 Chichester City centre has a constrained existing public highway network. Therefore, any proposed dedicated public transport or light transit corridors that could be implemented would be at the expense of existing highway. This could be managed through a time-based system where certain routes are restricted to public transport only during specific times. E.g., peak hours."

There is some very high-level consideration of Park and Ride following this section. None can be considered a serious practical evaluation of consolidating car-borne trips onto bus services, including existing ones, for example local mobility hubs, more frequent bus corridors, delivery of specific bus priorities.

None of the discussion of alternatives to “predicting and providing” for unconstrained traffic growth is rooted in a deliverable evidence base, or proper evaluation of options and specific projects.

To take just one aspect of the few specifics that can be picked out, a workplace parking levy is hypothesised. This would apply only to “offices”, in Chichester city centre (para 6.2.3), without consideration given as to how this could be practically achieved or even that a meaningful amount of office based employment would qualify. Much less is any consideration given to how far focusing a strategy only on office-based workers would actually deliver a particularly significant effect, apart from to create a strong incentive to relocate offices out of the city centre to places out of reach by public transport.

Looking at the Chichester Transport Study 2023 and the draft plan together, there is insufficient evidence that the traffic capacity increase proposed in the 2023 Transport Study is any more affordable or technically deliverable, or likely to be sufficiently effective, than those in the past strategy. The evidence more strongly points to the fact that no highways improvements are identifiable or economically deliverable to meet even short term increases in demand for car-borne mobility on most of the network around Chichester.

There are no published strategies or schemes clearly supporting the contention that the objective of improving sustainable modes is technically achievable or deliverable either. The plan makes generalised assertions that such strategies will be devised and implemented only after serious problems emerge from a shortfall in the car-borne transport strategy.

The reference to “monitor and manage” is undefined and unsubstantiated. There are no outcomes stated, no mechanisms specified and no timescales for action.

Our experience today is that network conditions have reached unacceptable and prejudicial levels of severe unpredictable delay. The saturation of the network is already evident well outside the traditional peaks on key sections of highway and at key junctions. External shocks such as the effects of severe weather are becoming more common, leading to delays so extreme as to justify the description of “gridlock”. The plan does not identify a strategy to effectively address this, in particular by consolidating passenger car trips onto more efficient public transport vehicles. This is unacceptable to Stagecoach.

#### 2.4. Local Plan Vision

Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the broad approach in Plan Vision and in particular that by 2039, the Plan will support and enable greater use of sustainable modes. However, there is no link made between reducing the use of private cars, and the need for a step change in the use of sustainable modes. Without a published transport evidence base it is impossible to establish a suitable sustainable transport strategy to support both carbon reduction and alleviation of the problems arising from acute congestion. Even on a very crude basis, to achieve a meaning mode shift on key approaches to the A27 Chichester Bypass will require more than 20% of existing peak car-borne journeys to transfer to other modes. A 10 percentage point transfer to bus (about half this shift) would imply more than doubling peak hour bus passenger boardings.

The Vision is nothing more than an aspiration, that needs to more definitively aim at key outcomes, for the plan to be effective. The Vision should thus be altered to read:

“Get about easily, safely and conveniently with less reliance on private cars –making the greatest possible use of the rail and enhanced bus network, and with more opportunities for active travel including walking and cycling; to materially reduce dependence on private car use.”

Underpinning the Plan’s spatial strategy, the Vision section goes into more specific detail about key localities in the Plan area.

Regarding Chichester, Paragraph 2.39 states: “The emphasis will be upon consolidating and enhancing the role of Chichester city as the plan area’s main centre, whilst also developing the role of key settlements to its east and west. The focus will be upon creating communities with good access to a range of employment opportunities and affordable housing for young people and families to balance the ageing population.”

This is clearly the appropriate focus for meeting the District’s development needs in a sustainable manner. The city and key settlements to the east and west, are those places already able to make use of relevant public transport services, both rail and bus. Especially within and near the City, walking and cycling can credibly present highly relevant choices. This emphasis clear can be expected to address the requirements of sustainable development set out in NPPF and their

local application set out in the Plans Strategic Objectives.

However, this needs a robust transport strategy, to avoid a further concentration of development and its traffic impacts occurring on or near some of the most chronically congested parts of the highway network. To date, the absence of intervention has strangled the bus network through further marked deterioration in traffic conditions. This by consequence increases the risk of bus delay or cancellation, lengthens journey time and reduces customer confidence in bus as an attractive alternative mode of travel.

In April 2023, Stagecoach is making significant timetables changes to improve operational resilience in and around Chichester. The biggest such change is the severance of the Portsmouth to Littlehampton section of service 700, at Chichester, with buses operating independently to the east and to the west and ending cross-city links. This is planned to reduce the probability of delay but at the cost of additional vehicle resource (circa £200,000 per annum) which could be better spent providing new or enhanced services. We anticipate a small loss of custom as a direct consequence of the change, but have little choice other than to take negative action so as to fulfil our statutory punctuality obligations.

If the Strategic Objectives of the Plan and its Vision are to be achieved, in the way required by NPPF paragraphs 104-105, a properly-evidenced transport mitigation strategy needs to create the conditions where bus journeys are more reliable than car journeys and thus mobility demand switches as far as can be realistically achieved away from car use, to bus use and other more sustainable modes.

Beyond Chichester, the Plan Vision focuses on key localities beyond to the east and west.

To the west of Chichester a focus on growth at Southbourne is justified at paragraph 2.43: "...the aim is to take advantage of the village's good transport links and existing facilities to deliver significant new residential-led development within the broad location for development which will further enhance local facilities and offer opportunities to reinforce and supplement existing public transport, including bus routes."

We agree this is a very significant opportunity. However, if the requirements of NPPF paragraphs 104-105 are to be met, this demands that effective bus priority is delivered on the A259 corridor, especially eastbound at Fishbourne and westbound approaching Emsworth. Without such measures, the growth committed and planned will serve only to further undermine bus journey time and decrease punctuality on the existing 700 service, entirely contrary to the aims of the Vision.

The emphasis on the A259 corridor served by Stagecoach 700 west of Chichester is reinforced at paragraph 2.45 stating that "Between Chichester and Southbourne, the Plan provides for more moderate levels of growth within the parishes of Fishbourne, Bosham and Chidham & Hambrook, ... with opportunities to support and expand existing facilities and for increased use of public transport options". We strongly support the principle, but the Plan must follow through with specific public transport priority measures that facilitate rather than prejudice such an outcome.

East of Chichester the focus is at Tangmere, where the existing allocation for about 1000 dwellings is being uplifted by 300. Paragraph 2.44 justifies this among other things recognising the scope for "...improved and additional bus services and cycleways will provide better connections to Chichester city and east to Barnham and the 'Five Villages' area in Arun District." We unequivocally endorse this conclusion. Realising a "game-changing" level of bus service quality, reliability and frequency east of the city, also serving committed and planned development north and south of Oving Road at Shopwhyke, is equally essential, given that all SRN links and junctions are approaching equal saturation.

The National Bus Strategy has given new focus on partnership with West Sussex County Council to discuss and deliver a significant new bus service between Chichester, Shopwhyke, Tangmere, Eastergate and Barnham, supporting committed development and acting as an initial phase of what ought to be a more ambitious longer-term strategy to support growth beyond 2025 in both Chichester and Arun Districts. For these improved bus services to be both deliverable and effective, robust bus prioritisation is unavoidable. No such measures are proposed in the Plan or its evidence base and we therefore suggest inclusion of plans to facilitate safe and efficient bus operation between Tangmere and Nyton/Eastergate, ideally avoiding the need to join A27 through-traffic entirely.

We welcome the clear recognition that these localities identified for growth, benefit from existing relevant public transport services. The Vision also sets an expectation that bus services in particular should be "enhanced" and "reinforced".

We entirely agree that these opportunities exist, across the broad strategy and strategic allocation proposed by the draft Local Plan. Securing them will be crucial to achieving national and local policy objectives, including the Strategic Objectives. However, to our continuing very great dismay, the Plan goes no further to defining how this will be achieved. As such the Vision is not demonstrable achievable or deliverable.

Accordingly the Plan cannot be considered effective, in the sense of NPPF.

Remedying this, demands specific measures to protect bus services from congestion in the following corridors:

- A259 East of Emsworth
- A259 Fishbourne

- A 259 Via Ravenna/Cathedral Way
- A286 Stockbridge Road north and south of A27
- B2145 Whyke Road/Hunston Road
- A259 Bognor Road, east and west of A27 and extending to the District Boundary
- B2144 Oving Road/Shopwhyke Road east and west of the A27
- A 285 Westhampnett Road/Portfield Way/Stane Street, potentially involving a mode filter at the west end of Stane Street

These must be defined to a sufficient level of detail to assess their effectiveness and deliverability, including costs.

This would then allow West Sussex County Council and Local Transport and Highways Authority, ourselves as the principal bus operator, and where appropriate other organisations that would be directly tasked with delivering the mitigation package, to agree service levels and standards necessary to deliver specified outcomes, including journey times, frequencies, capacity and hours of operation on the network, and also in respect of the strategic allocations and Strategic Locations for Growth.

The agreed mitigations strategy should be set out in an up-to-date Infrastructure Delivery Plan backed by clear funding commitments, including a funding strategy to justify necessary developer contributions.

Where necessary to support evidence of effectiveness and deliverability, clear statements of support, which might include Statements of Common Ground between the LPA, LTA, National Highways and Stagecoach, could be provided.

### 3. Spatial Strategy

#### Stagecoach Supports

Stagecoach well recognises the constraints outlined in the explanatory narrative at the start of Chapter 3.

In particular we strongly endorse that strategy in that it reflects that the best opportunities to meet housing and employment development requirements sustainably clearly exist in and close to Chichester and on the key east-west movement corridor where – subject to effective measures being delivered to make these modes more attractive, efficient and relevant – sustainable modes can credibly provide for a much higher proportion of movement demands, mitigating most effectively the potential traffic impacts of development.

We agree that the Manhood Peninsula suffers serious environmental constraints, but, added to these, public transport and other sustainable modes cannot provide such attractive alternatives, and significant further development risks merely reinforcing already high levels of car use, aggravated by the carbon impacts of the distances involved – something the plan does very little to evaluate, and makes no reference to.

We endorse the conclusion in paragraph 3.24 that significant development in the part of the District north of the National Park is inappropriate. The rationale is principally on landscape and visual character. This exposes a fundamentally biased approach to plan making that has consistently underplays transport accessibility and carbon issues. In fact, the lack of local services and the extended distances that need to be travelled to fully participate in society in this area, with no realistic prospect of public transport offering relevant choices, ought to rule such a strategy out of play on a far less aesthetic and interpretational basis.

#### 3.1. Policy S1 Spatial Development Strategy

##### Stagecoach Supports

The Spatial Strategy flows clearly and logically from the Spatial Portrait, and the opportunities and constraints identifiable across the Plan area. It represents a logical and justified continuation of the existing Local Plan strategy. In particular the spatial strategy maximises the potential for sustainable modes to contribute to meeting a much higher proportion of all the District's mobility and accessibility needs.

#### 3.2. Policy S2 Settlement Hierarchy

##### Stagecoach Supports

The settlement hierarchy clearly reflects the service endowment and potential self-containment of the settlements in the District. In particular, the second tier of settlement hubs includes secondary schools, which are major peak trip generating uses. Service villages, in the main, also benefit from bus services running at least hourly, which can be expected to provide for a degree of mobility for the higher number of trip purposes that cannot be satisfied by walking or cycling within the immediate locality. Thus, a level of development to meet local needs in this tier is relatively sustainable.

There is a quite broad range of settlements in this category. We have concerns that, north of the National Park, the Service Villages have no realistic public transport choice. These include Plaistow/Ifold, Kirdford, Loxwood, and Wisborough Green. Such as exists is typically a 1/bus per day off-peak shoppers service offering up to 90 minutes in Horsham or Guildford and as such any development here even to meet local needs requires each adult to own a car. This contrasts strongly with Service Villages to the south of the National Park, which are greatly more sustainable.

### 4. Climate Change and the Natural Environment

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This section of the plan is extensive and wide ranging, as should be expected.

However, remarkably, there is no acknowledgement whatever of the role of transport in mitigating climate change or its effects, not of the importance of sustainable movement and access being facilitated across the plan area in addressing anthropogenic impacts on the natural world at a more local level.

This exposes very clearly a troubling level of indifference to transport matters in the production of the Plan, which, while nationally quite common, is neither appropriate nor acceptable. The mitigation of transport impacts is not merely a matter speaking to the social and economic aspects of sustainable development. It is crucial to address the causes and effects of climate change that arise from transport, and personal mobility.

This is now well understood and at the centre of national policy, including the National Decarbonisation Strategy for Transport (July 2021) which at Section 5 commits the government to aligning land use planning and transport strategy much more tightly and effectively to mitigate the carbon emissions associated with the current dependence on cars, and the mode mix; but also to reduce travel distances, both increasing the potential relevance and effectiveness of all sustainable modes, and reducing average journey lengths for residual motorised journeys of all kinds.

National statistics show that well over a third of all domestic carbon emissions arise from land-based transport and of these, the vast majority arise from trips of over 10km – outside the range of large scale use of cycling. In fact, the potential of the plan to materially support carbon emissions reduction from within the plan area lies more in the realm of transport than any other policy theme – including emissions mitigation from buildings, which is in any event an aspatial matter and covered by nationally-binding building regulations. By 2025 something like 40% of all the emissions within the plan-area will be transport related.

There is no evidence supplied to support the plan that addresses the transport carbon impacts of the spatial development strategy in a clear manner.

There is no evidence supplied that sets out the effects of potential worsening of congestion on air quality within the plan area, arising entirely from the excess of passenger car movement demands over available and credibly deliverable highway capacity. This is despite the evidence set out and acknowledged in the explanatory memorandum at paragraph 4.130:

“4.130. The council’s Air Quality Action Plan and the West Sussex Transport Plan 2022-2036 both refer to the air quality issues faced by Chichester. There is currently one Air Quality Management Area (AQMA) in the plan area, located at St Pancras, Chichester. AQMAs are designated where air quality exceeds, or is likely to exceed, national air quality standards and objectives. Development within or impacting these areas, or that likely to cause the declaration of any further AQMAs, will be subject to an air quality assessment by the applicant.”

This is a retroactive approach – it is not “planning”, based on evidence.

We are well aware that air quality issues in and of themselves can render allocated sites to be undeliverable: a good example is in the Vale of White Horse, Oxfordshire, where strategic allocations on the A338 and A420 corridors have been held up for years by air quality issues at Marcham and Frilford, in large measure because agreed transport interventions were considered inadequate or undeliverable a very short time after the Plan was examined and adopted.

There is no evidence that shows how the development strategy can effectively mitigate these impacts as well as the further potential impacts that arise from the development strategy. This is exasperating, as there is clear evidence that could be drawn upon to show that that very substantial opportunities exist to:

- Speed buses up and make them more reliable by the delivery of bus priority on most of the key main corridors. Most of these even today operate relatively frequently
- Improve service frequencies and extend hours of operation.
- Secure significant background mode shift to bus as a result, damping pressure on key links and junctions, by consolidating demands on direct more reliable and more frequent bus services.

The spatial development strategy as submitted is in fact, likely to well conform to such additional evidence.

The allocations require substantial additional transport related work and evidence to demonstrate that the opportunities for sustainable transport have been identified and taken up as required by NPPF paragraphs 104-105.

With regards to specific policy, Policy NE22 should be modified to read:

“Development proposals will be permitted where it can be demonstrated that all the following criteria have been addressed:

1. Development is located and designed to minimise traffic generation and congestion through access to by maximising the relevance and attractiveness of sustainable transport modes, including maximising provision of specific demonstrably effective measures to make pedestrian and cycle and public transport routes and networks more direct, more safe, faster and more reliable;...”

## 5. Housing

### 5.1. Policy H1 Meeting Housing Needs

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

The presumption of the planning system is that local planning authorities should seek to meet their objectively assessed development requirements in full. These needs are assessed by a defined Standard Methodology set out in Planning Practice Guidance and elsewhere, that has explicit regard to ensuring that the economic and social effects associated with housing are properly provided for, to avoid exacerbating serious problems that arise from inadequate housing supply.

As a significant local service provider and employer, Stagecoach is concerned that existing issues with housing availability and affordable housing supply are not exacerbated. This has a direct bearing on staff recruitment and retention. It also has an indirect bearing on our cost base.

The existing problems with housing affordability have developed over many decades of undersupply. It should be emphasised that the significant boost to the supply of housing that has been sought by governments over the last 15 years, has only begun to take effect relatively recently in this District. Tackling the problem will require years of consistent attention.

Stagecoach notes that the Council is no longer proposing to meet its identified housing needs in full. Rather than 638/annum the Council is allocating a total that implies an annual delivery rate of 535/annum.

While a number of matters evidently present challenges to the Council in identifying a sustainable development strategy. Paragraph 5.2 indicates that "constraints, particularly the capacity of the A27 has led to the council planning for a housing requirement below the need derived from the standard method..." The blame for being unable to meet housing requirements is thus laid squarely at the door of transport infrastructure and systems.

This conclusion in no way follows from the evidence in the Chichester Transport Study. This, rather, makes the statement that when a higher annualised quantum of 700 dwellings per annum was tested, in the majority of cases the traffic capacity improvement package would perform little differently. To quote the Study:

"5.6.3 The network performance outputs analysed comprising V/C%, Delays (seconds) and Queues (PCU's) suggest that generally the proposed SRN mitigation identified for the Core Scenario, can accommodate in the most part, additional increase in development to 700dpa."

Whether the rest of the local road network is similarly protects is moot.

Irrespective of these results, even if the contention made in the draft plan were true, unlike many other constraints, this is amenable to a suitable effective strategy to address the constraints identified being collaboratively conceived. This is what NPPF expects, as set out in paragraphs 104-106.

Where the A27 is concerned, as part of the SRN, National Highways is now working to a substantially revised approach than that in force at the time to current Local Plan was prepared, or LSS2, or reflected in the Chichester Transport Study. This is set out in DfT WMS 01/22. This document is the policy of the Secretary of State for Transport in relation to the SRN which should be read in conjunction with the National Planning Policy Framework (NPPF). It replaces the policies in the Department for Transport Circular 02/2013 of the same title.

It makes plain that to accommodate additional demands arising from development, National Highways (NHC) expects to meet the requirements of its statutory license in a substantially different manner. With respect to development NHC LTN 01/22 continues to address the tensions between national policy for the environment and carbon mitigation, the ongoing need to substantially boost the supply of housing as well as maintain national economic competitiveness and protect the safety of the public. However, in future, the approach will be to seek first to maximise the impact of demand management measures (reducing the need to travel), and then to accommodate residual additional demands first though maximising the use of sustainable modes, rather than accommodating assumptions about current levels of car dependency and use.

LTN 01/22 much more closely and explicitly aligns with the language of NPPF Chapter 9 paragraphs 104-106. Paragraph 12 states: "New development should be facilitating a reduction in the need to travel by private car and focused on locations that are or can be made sustainable.... Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas." (our emphasis).

It continues at paragraph 13: "where developments are located, how they are designed and how well delivery and public transport services are integrated has a huge impact on people's mode of travel for short journeys. The company will

therefore expect strategic policy-making authorities and community groups responsible for preparing local and neighbourhood plans to only promote development at locations that are or can be made sustainable [footnote 8] and where opportunities to maximise walking, wheeling, cycling, public transport and shared travel have been identified.” (again, our emphasis)

Stagecoach readily confirms that the draft Plan development strategy conforms well to the first limb of this expectation, in terms of the location of development.

Stagecoach considers that the plan and its evidence base conforms poorly to the second in that the specific opportunities to maximise walking, cycling wheeling and public transport are not clearly identified, and defined, and proven to be effective and deliverable.

The current mitigation strategy for the A27 Chichester area, supporting the adopted Local Plan and for which proportionate developer contributions have and continue to be sought, reflects now-superseded DfT Circular 02/2013. As a direct result, it failed completely to identify any significant effective bus priority measures, despite the fact that frequent services already exist on the key corridor concerned, and that one bus journey can remove, fully seated between 72 and 80 single occupancy car journeys from congested links and across key junctions on the A27. Rather, it sought to implement targeted measures to increase the throughflow of general traffic.

We recognise the realisation that this approach, which was already reliant on some tenuous logic, is simply not technically viable, especially where further development needs are anticipated.

National Highways will now pursue an approach with the planning system that “includes moving away from transport planning based on predicting future demand to provide capacity (‘predict and provide’) to planning that sets an outcome communities want to achieve and provides the transport solutions to deliver those outcomes (vision-led approaches including ‘vision and validate,’ ‘decide and provide’ or ‘monitor and manage’). The company will support local authorities in achieving this aim through its engagement with their plan-making and decision-taking stages.” (paragraph 15).

Paragraph 23 is at the fulcrum of assessing and defining transport mitigations to accommodate growth on and near the SRN “Capacity enhancements such as modifications to existing junctions or road widening to facilitate development should be determined on a case-by-case basis. The general principle should be accepted where proposals would include measures to improve community connectivity and public transport accessibility, and this will be weighed against any negative safety, traffic flow, environmental and deliverability considerations, impacts on the permeability and attractiveness of local walking, wheeling and cycling routes, and alternative options to manage down the traffic impact of planned development or improve the local road network as a first preference.” (our emphasis).

However, no material work has been done that seeks to identify if a bold robustly conceived and suitable judiciously-prepared strategy that seeks to consolidate flows on already densely travelled corridor onto improved bus services, driving mode shift through insulating these services preferentially from already serious queuing. This would be likely to have very substantial impacts on all the key junctions on the A27, and potentially, on the A27 itself. The need for an integrated approach between Shoreham and Emsworth within West Sussex paying particular regard to development requirements in both Arun and Chichester Districts naturally lies at the heart of this, and we would expect to be picked up by the LSS3 Review among other things.

However, the locus of the problems and its causes and effects are obviously well enough known to start work on defining solutions within the plan area today. We would expect that this work will be essential if National Highways are to support the Plan, especially now given the terms of Circular 01/2022.

Such work could and should start from a “policy off” position: in other words that the Plan should fully accommodate its needs unless it can be proved that a mitigation strategy for the A27 that is compliant with DfT WMS 01/2022 cannot credibly accommodate resulting capacity demands without unacceptable impacts on the safety and efficient operation of the SRN.

This evidence does not exist. In fact the Chichester Transport Strategy 2023, on which the Council solely relies as its transport evidence base, indicates the opposite at para 5.6.3. This is the case before meaningful measures to secure damping of traffic demands through mode reassignment are even considered.

The exception to this is Portfield and Oving Road, which are among the most problematic areas after mitigation even at the Council’s chosen 535 dwelling/annum scenario (para 5.6.4.-5). The costly capacity mitigation simply cannot deliver enough benefit. It is admitted that WSCC has indicated that it would prefer a solution that places greater reliance on sustainable modes damping car-borne demand. This is entirely the strategy required by NHC to follow LTN 01/22, of course. Despite the fact that “predict and provide has “run out of road” no attempt has been made to examine what such a solution set credibly could look like. This is unsatisfactory and deeply troubling.

At paragraph 5.4 the draft plan points back again at the West Sussex and Greater Brighton Strategic Planning Board and the future work that has been commissioned, but has barely begun, to update the Local Strategic Statement. This work is to inform the preparation of plans that have horizons beyond the end date of the current LSS in 2030 and properly to

meet the Duty to Cooperate. As we said in our response to section 1 of the Plan we fully endorse the conclusion that this is the right mechanism to look at these issues. However, the mechanism has not been effectively applied to the production of this plan. Therefore, the specific evidence that capacity on the A27 in and of itself supports accommodating a lower housing requirement does not exist.

The Plan thus does not conform to NPPF, is not adequately justified and is not effective.

The Plan does not properly meet the statutory Duty to Cooperate.

We will return to this matter in specific representations to Section 7 of the draft plan.

## 5.2. Policy H2 Strategic Locations/Allocations 2021-2039

### Stagecoach Supports

Policy H1 makes plain that the plan, as far as it identifies locations for development has done so in locations that conform with its spatial strategy. All of the strategic allocations to a greater or lesser extent offer clear opportunities to make use of sustainable modes, by virtue of their location. That is not to say that the opportunities to take up these opportunities, and maximise the role of sustainable modes, has been identified, defined and translated properly into the rest of the plan policy suite or Infrastructure Delivery Plan.

As our remaining representations make clear, we support the locations thus far identified as being those that offer the best opportunities to reduce the need to travel, reduce travel distances, and create high quality attractive sustainable travel choices, for both existing residents as well as new ones.

However, the transport impacts of the allocation will individually and cumulatively likely to lead to increasingly severe impacts on the transport network, and on bus services.

Perversely, because these opportunities are not properly identified and secured through the plan and its supporting transport strategy, the opportunities presented by the allocations to secure a substantially more sustainable and lower carbon pattern of movement will not only risk being squandered but may aggravate the wider problems.

## 5.3. Policy H3 Non-strategic Parish Housing Requirements

### Stagecoach Supports

The approach is consistent with the plan's spatial strategy. It generally avoids a dispersal of development to locations likely to be highly car dependent. There is a clear focus on meeting housing needs in the far north-east of the District at the largest and most sustainable settlements, such as Loxwood, Kirdford and Wisborough Green. However, it must be pointed out that public transport availability in this area, provided by the County Council through services it procures, is minimal. These settlements in practice require each adult and child of secondary school age to have access to motorised transport to fully participate in society. This might justify significant measures to secure a boost in the frequency of bus services between Guildford and Billingshurst, passing through these settlements.

Otherwise, existing commitments in the plan area already make provision to meet for local needs. To the degree that there is an unmet local requirement for affordable housing of a small scale – for example to support the rural economy – this could be met through neighbourhood plans or through Rural Exception Sites.

## 6. Place-making, Health and Wellbeing

### 6.1. Policy P1 Design principles

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

NPPF requires that proposals should consider transport issues from the earliest possible stage. Designing to properly facilitate safe and efficient access, focusing first on sustainable modes, should be at the heart of development design. Too often it is still an afterthought, notwithstanding this.

Policy P1 must include an additional statement to be compliant and effective with NPPF paragraph 104-105 and 112 a): "Development will be designed to make access and movement using walking, cycling and public transport the natural first choice, and demonstrate through the Design and Access Statement how such modes are afforded the most direct, safe, reliable and efficient routes within to and from the proposals, especially when compared with car use."

### 6.2. Policy P4 Layout and Access

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

A number of proposals in the plan involve large-scale development. It is essential that where appropriate buses can access and circulate efficiently through development at a suitably early stage. There is no acknowledgement of this anywhere in the policy, contrary to NPPF paragraph 112.

Large-scale development which buses cannot access in an efficient or timely manner, or at all, strongly contributes to high levels of car-dependency. Evidence for this is referred to among other places, in DfT Circular 01/2022. To be compliant with NPPF and properly pursue its strategic Objectives, Policy P4 needs to be modified to address this point: "1. Provide safe, direct and attractive conditions for inclusive access, egress and active travel between all locations and providing as good direct high quality links to integrated public transport, and where appropriate efficient access and circulation to bus services, unimpeded by excessive parking, at a suitably early point in the development phasing;

#### 7. Transport and Accessibility

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

The issues related to transport are fundamental to the soundness of the Plan. In particular, the constraints presented by the capacity on the A27 around Chichester and its key junctions, are the paramount reasons why the Council does not consider it can meet its objectively-assessed development needs in full. Thus, the transport issues and potential solutions available and what these mean for the ability of development needs to be accommodated, are matters that go to the heart of the soundness of the Plan.

Paragraph 8.3 sets out the approach taken to date succinctly:

"Increasing the capacity of the road network is key to supporting growth in the Local Plan. However, there is also a need to reduce demand for road transport to achieve net zero in greenhouse gas emissions by 2050 as highlighted in the council's Climate Emergency Action Plan and Strategic Objective 1. In aiming to achieve the ambitions of the action plan, all development is expected to demonstrate how it will support four key objectives to create an integrated transport network which will alleviate pressure on the road network, improve highway safety, encourage sustainable travel behaviours and help reduce transport related impact on air quality, by:

1. Avoiding or reducing the need to travel by car;
2. Enabling access to sustainable means of travel, including public transport, walking and cycling;
3. Managing travel demand; and
4. Mitigating the impacts of travel by car."

However, this approach is unambitious and "lightweight" as it assumes, as does the existing Chichester Transport Strategy on which the current adopted plan relies, that the focus of investment should be, wholly, in highways capacity improvement.

Sustainable modes explicitly are expected to play a greater role to "alleviate pressure" on the local road network, as part of this strategy. To emphasise: to avoid exacerbating congestion, the strategy will have to both remove a significant proportion of existing demands from the network on multiple key approaches to Chichester; and then ensure that travel demands from committed and further new development allocated in the plan does not simply replace these journeys, or, worse, create even greater demands.

This will demand very significant behaviour change. Only by making sustainable modes substantially more attractive, both absolutely, and relative to the same journey made by car, can this be expected to occur. However, the explanatory memorandum as well as the wider policy suite and IDP, well expresses a fundamental unwillingness to taking specific, defined measures to achieve this reduction in car use and material promotion of sustainable modes. It makes plain that sustainable modes, including bus services, will offer a lesser role to which "access will be provided".

Such a vague and weakly defined mechanism will have no effect, at all, on current behaviour and car dependency if the relevance of those choices as a credible alternative to car use, is not substantially boosted. This includes a 5% reduction in trip demand assumed by the Traffic Model at the heart of the Chichester Transport Study 2023.

For this reason. the transport strategy behind the current adopted plan is demonstrably ineffective, as the updated model makes plain. It has not yet been delivered and is yet unclear when or (in the absence of committed funding) even if it can be. It is ineffective to "roll forward" this strategy to support a higher level of planned growth.

We note that a scheme for addressing congestion on the A27 at Chichester has been included in Roads Investment Period 3 (2025-2030) – well within the horizon of this Plan. However, recent history provides compelling evidence that off-line improvement to the north is not politically supported and arguably even technically or economically deliverable. It is not funded, nor at this stage can it be hypothesised if an economically deliverable scheme is achievable sufficient to warrant the necessary investment.

An on-line improvement of the A27, including junction improvements, is likely to favour longer distance east-west though movements, which are of greater significance to the national economy, at the expense of local movements crossing the

SRN- a conundrum that largely sums up the dilemma that is faced by NHC and the County as Highways and Transport Authority. It is one that is played out in many places, but rarely is the tension so stark as at Chichester.

Every local route crossing the A27 at grade around Chichester accommodates a regular bus service - or shortly will do (Oving Road area is expected to follow in 2023, though bus services are likely to not use the modified crossroads but to use the left-in-left-out facilities provided as part of the Shopwhyke Lakes development). The impact of these issues on the entire bus operation are serious and increasingly severe.

By the same token, boosting the relevance and reliability of each of these services substantially consolidating as much demand as possible onto a much smaller number of vehicles, is clearly a strategy that ought to support the effective capacity of each of these junctions being greatly augmented, at the same time as reducing equally substantially, the energy- and carbon intensity of mobility in the plan area. Addressing the A27 should not be considered some kind of "zero-sum" game.

Furthermore, the approach of National Highways in its dealings with development and the planning system now reflect a substantial change in Government Policy set out in DfT Circular 01/2022, which we separately cover in these representations, that entirely aligns with an approach that seeks to appropriately invest in more active and rational management of scarce highways capacity, on both the SRN and local roads.

For environmental, economic and social reasons – including public health, the issues presented by the A27 and its interface with local roads around Chichester stands out, nationally, as an example of where the approach taken to accommodating and mitigating development impacts needs to make a clear break with previous "predict and provide" approaches to meet forecast unconstrained car use as LTN 02/2022 makes clear as a principle. Policy in the West Sussex LTP to 2036 itself makes plain that "shared mobility" – including bus services – must play a much greater role in this area.

The existing Chichester Area Transport Strategy is focused on justifying capital contributions from committed development to fund highways capacity improvement – with nothing included to make bus services more attractive, or importantly more reliable. Indeed this "cars first" approach is so costly, that there is already accepted by WSCC to be insufficient land value remaining to be captured to put into substantial improvements for public transport. That much is very evident, and transparent, from paragraph 8.12 and 8.14, where south of Chichester "This (one) package of works (of several improvements needed) would be between £57.23 and £82.79 million to deliver in full and would not be capable of being funded by development contributions alone." This assumes the scheme is otherwise deliverable, which on the evidence in the public domain for some time, has been considered challengeable.

The draft Local Plan and a modestly updated infrastructure package that flows from the 2023 Chichester Transport Study, pursues exactly the same approach.

This strategy is also even more ineffective having regard to the roll forward of the Plan to 2039. It cannot deliver the key Strategic Objectives of the Plan; and in particular this is explicitly recognised by the Council in the failure of the draft Plan to accommodate the OAN in full.

It is also obsolete, as it does not align, from first principles, with national policy (including the National Decarbonisation Strategy for Transport) and DfT Circular 01/22; nor the Council's own declared Climate Emergency.

As a result, draft Policies T1 and T2 are both unsound, as we will separately explain.

Owing to the lack of evidence about the implications of this for adjoining authorities – especially Adur District – in the absence of the review of the Local Strategic Statement – this has implications for fulfilling the Statutory Duty to Co-operate.

The absence of any meaningfully comprehensive refresh of the transport evidence base means that there are no meaningful schemes of any kind, defined in the plan or its IDP, to indicate either what level of growth can be accommodated, by delivering a change in travel behaviour. This would be aimed to secure a sufficient effective increase in junction throughput (measured in terms of person trips as opposed to passenger car unit movements (PCUs)). Such evidence would propose measure to achieve that outcome and assess the efficacy and costs of such improvements, across all modes.

Paragraphs 8.10-8.13 inclusive indicate that the Council "has moved away from 'predict and provide'" and invites the reader to conclude this has translated into a programme of interventions that can be funded to deliver specific, credibly predictable outcomes. Such a programme should be clear in paragraph 8.11. and the IDP. There is no such clarity and this conclusion would be false.

It would also be evident in the language of the Chichester Transport Study 2023 and its refreshed proposals. Only the most token of lip service is paid to the matter. It is a plainly car-focused, predict and provide methodology to support a "predict and provide" strategy. In fact, it is a brazenly car-focused approach, to the exclusion of all else.

The statements in the Plan regarding any other approach, read properly, offer nothing more than a vague commitment to

look post-adoption, and implementation, at unspecified measures, based on problems that may arise in future that will be decided by a committee: the Traffic and Infrastructure Management Group (TIMG). This does not yet exist and is obviously an attempt to posit a mechanism that retroactively will cover for the lack of serious multi-party engagement to address the existing and future issues. Such a group should, in our view, also include the public transport operators, not least if the requirements of NPPF Para 106c) are to be satisfied, and the strategy and measures to be adopted are material to supporting the Local Plan, as of course the purpose of the TIMG has as its core *raison d'être*.

The approach proposed by the draft plan is plainly ineffective and unsound in justifying the draft Plan.

It is more widely unacceptable to Stagecoach. The issues are severe today and well-known, already serving to jeopardise the delivery of buses relied on by existing residents, much less attract new ones.

We also consider that HM Planning Inspectorate are likely to be quite resistant to accepting this aspect of the plan's transport strategy, nor will it be appropriate for the Council, West Sussex County Council, or National Highways, to define such measures after the submission of the Plan during the Examination process. The Examination in Public of a local plan has no purpose to improve plans, or remedy deficiencies clearly evident prior to submission.

The examination of the West of England Joint Strategic Plan in 2019, and the Uttlesford Local Plan in 2021, among several others, demonstrates especially clearly that the Planning System and the Examination process is not amenable to post-hoc retrofitting of transport evidence and strategies to support a development strategy.

#### 7.1. Transport Evidence Base

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Most of Stagecoach's serious concerns about the soundness of the plan arise from the fact that it has been prepared in advance of any up-to-date transport evidence and suitably robust transport mitigation strategy being advanced to support it. In essence, the Council has rolled forward the existing plan by 9 years, adding some additional sources of housing supply, while still relying implicitly on a transport evidence base that was prepared 10 years ago.

This led to the formulation at that time of what can only be described as an attempt to develop an effective car-based mitigation strategy, creating capacity for general traffic added to accommodate unconstrained additional demands on an already over-taxed highways network – the Chichester Area Transport Strategy. Despite language in support of sustainable modes, no deliverable measures were identified to support either the extension of the bus network to serve allocated sites, and much less to create a vital improvement to the quality and reliability of public transport services. This approach reflected the approach set out in DfT Ministerial Circular 02/2013 "Development and the Strategic Highways Network", applicable since the A27, which is the focus of the most severe difficulties, forms part of the national Strategic Roads Network.

This approach has proven ineffective even before substantial elements of housing land supply in the current plan come forward – in particular West of Chichester and West of Tangmere.

In addition, Circular 02/2013 has now been replaced by a new Ministerial Statement of 23/12/2022, DfT Circular 01/2022.

On both counts the transport evidence base and strategy needs to be properly revisited and established to provide effective mitigation for the plan, including current commitments that are being rolled forward.

The language of the current Ministerial Circular 01/2022 offers a highly condensed synoptic view of the proper approach to addressing transport matters in the planning system notwithstanding that it is directly concerned with the Strategic Roads Network. *Videlicet*:

"31. The NPPF expects local plans and spatial development strategies to be underpinned by a clear and transparent evidence base which informs the authority's preferred approach to land use and strategic transport options, and the formulation of policies and allocations that will be subject to public consultation. The company will expect this process to explore all options to reduce a reliance on the SRN for local journeys including a reduction in the need to travel and integrating land use considerations with the need to maximise opportunities for walking, wheeling, cycling, public transport and shared travel.

32. The Transport Decarbonisation Plan indicates that carbon emissions from car and van use is the largest component of the United Kingdom's total transport emissions. While action is being taken to decarbonise transport such that all new cars and vans will be fully zero emission at the tailpipe from 2035, the proposed location of growth in current plan periods and whether new developments would be genuinely sustainable remain important factors in demonstrating that a local authority area is on a pathway to net zero by 2050 and therefore compliant with the requirements of the Climate Change Act 2008.

33. Alongside this, the local authority should identify the key issues within their study area regarding transport provision and accessibility, setting out how the plan or strategy can address these key issues in consultation with (National Highways, and other transport stakeholders identified in NPPF paragraph 106b). It is the responsibility of the local authority undertaking its strategic policy-making function to present a robust transport evidence base in support of its plan or strategy. The company can review measures that would help to avoid or significantly reduce the need for additional infrastructure on the SRN where development can be delivered through identified improvements to the local transport network, to include infrastructure that promotes walking, wheeling, cycling, public transport and shared travel. A robust evidence base will be required, including demand forecasting models, which inform analysis of alternatives by accounting for the effects of possible mitigation scenarios that shift demand into less carbon-intensive forms of travel.” (our emphasis)

Within the text quoted above, references to National Highways and “the Company” can quite legitimately be extended, given the statements in NPPF paragraph 16, 25, 26 and 106b, to include all the relevant transport infrastructure and service providers in the plan area. Circular 01/2022 also has the weight of secondary legislation as a Written Ministerial Statement and thus should be considered to be highly material.

To date there has been little attempt to explore, to the degree necessary, strategies that conform to Circular 01/2022. It is thus not possible to conclude, as the Council has done, that the issues on the A27 that present a constraint to development, are insuperable.

In line with comments made elsewhere in the response to this pre-submission draft, the Plan thus requires substantial further work to be undertaken with key stakeholders to establish a suitably effective and demonstrably deliverable transport mitigation strategy, to sustainably meet the District’s identifiable development needs and where apparent and appropriate, also ensure that wider cross boundary strategic issues are appropriately addressed, in conformity inter alia, with the Duty to Cooperate, NPPF paragraph 16 and 104-111 inclusive, and DfT Circular 01/2022 and to ensure the Plan’s own Strategic Objectives can be met.

#### 7.2. Policy T1 Transport infrastructure

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

As described in comments elsewhere, Stagecoach does not see that a suitable proportionate and up-to-date basis exists to properly and appropriately address the transport issues in the plan area.

The 2023 Transport Study does not perform this role adequately but, contrary to the explanatory memorandum, is a scheme intended only to facilitate car-borne movements through some of the key junctions. There is no evidence that an holistic integrated and strategic approach to transport mitigations has been prepared. Certainly Stagecoach has not been involved in any of the discussion about appropriate transport measures in support of the plan, including the Transport Study 2023, contrary to the expectations set out in NPPF at paragraph 16 and 106.

Notwithstanding out fundamental concerns about the transport evidence case and mitigations strategy, Policy T1 reflects a weak and ineffective approach, that seeks to try and define a strategy post-adoption.

Contrary even to the explanatory memorandum for the policy, which seeks to maximise the contribution of sustainable modes, the policy is phased in such a way that it gives basis for previous “predict and provide” solutions to facilitate and support current levels of car dependency – already shown to be undeliverable and unaffordable – will nevertheless be the first rather than the last resort. There is no commitment to seek to maximise the contribution made by sustainable modes to meeting mobility needs. Nor is there any recognition that current chronic congestion and lack of network resilience jeopardises the ongoing attractiveness and long- term sustainability of the current public transport offer.

To be effective and create alignment with national policy, and also provide for an up-to-date transport evidence base and strategy to be adduced, Policy T1 should be modified to read:

“Integrated transport measures will be developed to mitigate the impact of planned development on the highways network, improve highway safety and air quality, promote more sustainable travel patterns and through providing in the first instance, new and improved infrastructure and services that will be credible effective in maximising the encourage increased use of sustainable modes of travel, such as public transport, cycling and walking.

To achieve this, the council will work with National Highways, West Sussex County Council, other transport and service providers (including through the Traffic and Infrastructure Management Group) and developers to provide a better integrated transport network and to improve accessibility to key services and facilities...

All parties, including applicants, are expected to support these objectives by:

1. Ensuring that new development is well located and designed to avoid or minimise the need for travel, encourages maximises the use of sustainable modes of travel as an a credible alternative to the private car and directly provides or contributes towards new or improved transport infrastructure;
2. Working with relevant transport infrastructure and service providers to improve accessibility to key services and facilities with primary emphasis on sustainable modes, and to ensure that new facilities are easily accessible by sustainable modes of travel;
3. Targeting investment to provide local travel options as an that represent a clearly credible alternative to the car use, focusing on the delivery of improved integrated bus and train services, and improved pedestrian and cycling networks, including the public rights of way network, based on the routes and projects identified in the Local Transport Plan, West Sussex Bus Service Improvement Plan, Local Cycling and Walking Infrastructure Plan (LCWIP) and the Infrastructure Delivery Plan;
4. Planning to achieve the timely delivery of transport infrastructure on and approaching the A27 and elsewhere on the network, needed to support new housing, employment and other development identified in this plan;
5. Phasing the delivery of new development to align with and where possible facilitate the provision of new and improved transport infrastructure and services and the outcomes of monitoring travel demand on the network, including that arising from areas immediately adjoining the plan area. It may also be Where necessary to achieve this alignment proactively phase development will be phased to take into account the monitoring and effectiveness of travel plans demands on the network and to ensure that measures are implemented to support the highest possible level of encourage sustainable travel behaviour.;
6. Using demand management measures, such as travel plans, to manage robust methodologies to assess travel demand and minimise the need for new or improved transport infrastructure as part of the monitor and manage process.
7. Delivering a coordinated package of infrastructure improvements at and approaching to junctions on the A27 Chichester Bypass along with other small-scale junction improvements interventions within the city and elsewhere, as identified through the monitor and manage process. These will increase road capacity, reduce traffic congestion, improve safety and air quality, and improve access to Chichester city from surrounding areas, first by maximising the contribution of sustainable modes to meeting mobility demands, then, and only as evidenced by robust modelling and option testing, providing increased highway capacity for general traffic.

..."

### 7.3. Policy T2 Transport and Development Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Section 1 b) of T2 will be ineffective as, absent measures to ensure buses can run reliably and efficiently, improved bus services will not be possible, in support of the plan's own stated broad approach to transport mitigation, as well as wider local and national policy.

The draft policy does not require improvements to the quality of services such that sustainable choices will be materially more attractive than car use for many local journeys. Without this the Plan's Strategic Objectives cannot be fulfilled and the objectives of the Plan and this policy, read in its own terms, will not be realised, where reduction in private car use is concerned. It is thus ineffective.

Absent measures to make bus services more reliable and more efficient, by insulating them from chronic congestion as far as possible, still further operating resource and therefore costs, will be needed to just to reliably run existing service frequencies, and capacity, as vehicle productivity continues to be more and more adversely affected by chronic delay. This will be further aggravated by increasing incidence of severe unpredictable service breakdown arising from incidents of diverse kinds on the network, especially on or around the A27, including that arising from more regular severe weather events. Longer journey times can only be expected to lead to relative disadvantage of bus services compared to personal car use, entirely contrary to the objectives of national and local policy, including Policy T1. It can also expect to lead to a dampening effect not on car use, but on bus patronage, threatening the ongoing viability of bus services across the plan area.

Section 1 b) of T2 should be modified to read:

"b) Maximise opportunities for the use of sustainable travel modes through provision of direct and efficient access both to either the existing networks or and through providing such new infrastructure or public transport services, as can be credibly expected to reduce reliance on the private car and work towards achieving net zero in greenhouse gas emissions by 2050;"

Section 1 d) of T2 will be ineffective as the location of development is fixed by this plan. We commend the fact that all the strategic allocations are or will be served by regular bus services.

However, the use of public transport services, where available, depends on the relevance and reliability of these services. Furthermore, provision of services without them generating sufficient patronage to support their long-term operation also threatens the sustainability of the plan and its supporting transport strategy. This is especially true of new services such as those intended to serve West of Chichester and Tangmere and East of Chichester Strategic Allocations.

This can only be assured by the plan being supported by specific measures to ensure buses can operate efficiently and reliably on the existing and projected services intended to serve the developments concerned, and also at the same time secure behavioural change from existing development.

To be sound and effective, the policy T2 1 d.) should be changed to read:

"d) Ensure major development is located to proposals and the supporting mitigation measures enable the use delivery of high-quality, reliable and effective public transport to present the most relevant possible choice to access local services and facilities including employment, leisure and education facilities";

The Policy T2 makes no provision for buses, where necessary, to enter and make efficient and safe progress through major development sites. The plan is thus out of conformity with NPPF paragraphs 104-106. It makes no provision to ensure that penetration of bus services is achieved at a suitably early point in the development trajectory, undermining the achievement of the goals of the Plan and this specific policy. As a good example, West of Chichester Phase 1, currently under construction, cannot be served by buses as a strategy to effect interim bus penetration was never made.

Policy T2 1 f.) should therefore be amended to read:

f) Ensure that the layout and design of the site development proposals provides effective penetration of the site by sustainable modes, at all points in the development build-out, including public transport where appropriate; and sufficient space for all vehicles to manoeuvre without compromising the safety of pedestrians and cyclists, the efficiency of bus services, or the ability to provide an appropriate level of landscaping across the site"

Policy T2 3.) regarding Travel Planning depends entirely on its effectiveness on the quality and relative attractiveness of sustainable alternatives over car use. In the absence of efficient frequent, reliable and direct public transport services (or similarly, high quality facilities for active travel, Travel Plans will continue to be the entirely ineffective "tick box" exercises that they generally are today, evidenced by much lower levels of public transport use in most new developments than it seen in nearby established neighbourhoods, as demonstrated broadly by Census data in 2011, 2011 and 2021.

For this policy to be effective an up-to date transport evidence base and strategy, underpinning a series of specified interventions to promote the relevance and effectiveness of all sustainable does including public transport in particular, needs to be put in place.

#### 8. Chapter 9 Infrastructure – Policy I1 Infrastructure provision

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Policy I1 could not expect to be effective without a clear understanding of the effectiveness and costs of a defined series of measures that are laid out in this Plan and its IDP, to mitigate the transport impacts of the development strategy.

Where the Chichester Transport Study is concerned the only meaningful work has focused on the definition and delivery of a range of highways capacity schemes mainly on the A27 around Chichester.

As we have discussed elsewhere the effectiveness of these schemes is insufficient as set out at Tables 8.1 and 8.2 of the Chichester Transport Study 2023. The plan itself admits that the deliverability of this package cannot be afforded by developer contributions alone.

The Chichester Transport Study 2023 does not attempt provide a realistic assessment of costs to deliver these schemes, despite the fact that they have been under evaluation for many years. Nor does it offer any assurance that the schemes are technically achievable. Rather, it states the opposite:

"9.2.3 No investigation has been carried out into specific land ownership details, or into the location details or cost of moving statutory undertakers and utility apparatus within the areas of the scheme. No design assessments were carried out at this stage to ascertain the deliverability of the proposals except where any Health and Safety concerns were raised."

Thus on the grounds of effectiveness, deliverability and affordability, the measures on which the Plan relies must at the very least be considered to involve an exceptionally high level of risk. Since Policy I1 is founded on these assumptions, it cannot be considered effective.

As we set out elsewhere, the Plan has been advanced on the basis that if any additional sustainable transport measures are required, these mitigations should be retroactively considered and defined after adoption of the Plan. In the light of the doubts that are apparent of both the deliverability, affordability and effectiveness of the Chichester Transport strategy this is especially unsatisfactory even if existing baseline conditions were reasonably acceptable.

However, the Chichester Transport Study 2023, as did its predecessors, makes plain that that existing problems are acute, and can rightly be considered “severe” in the sense of NPPF paragraph 111. Waiting to define deliverable affordable alternatives is an entirely inappropriate approach to the local plan transport mitigation strategy. Such an approach also makes it impossible to consider prior to adoption how far the transport impacts of the plan can be cost-effectively mitigated by alternative means, or whether they are deliverable having regard to technical achievability, land control, development viability, or any combination of the above. Thus, the plan cannot be considered justified, or effective.

Given the mutual dependence of development strategies in Chichester and Arun in particular on these measures this should be seen as crucial of the fulfilment of the Duty to Cooperate.

The remedy for this is ultimately to put in place a suitable transport mitigation strategy following a strategic appraisal of options through review of the LSS. This then must be supplemented by more detailed development specific and localised scheme definition, including, where necessary, bus priority and other measures to support the substantial promotion of the attractiveness of public transport in key bus corridors over private car use. This would then be reflected by costed proposals in the IDP.

Leaving these fundamental weaknesses to one side, even if such a strategy and mitigation package were defined, there is no mention of public transport in the policy even though it is clearly a key part of the policy environment and mitigation strategy for the plan as expressed in the explanatory memorandum for I1, but also at Policies T1 and T2. I1 thus does not effectively support the realisation of the intent of Policies T1 and T2.

Policy I1 iii) should therefore be modified to read:

“(iii) Safeguard the requirements of infrastructure providers, having regard to requirements within and where appropriate across the boundaries of the plan area, including but not limited to:

...

- Highways including specific measures to accommodate improved active travel and public transport level of service and cycle lanes, and...”

At limb v) the Policy expects developers to meet the “in perpetuity costs of operating and maintaining infrastructure”. This shackles development management decisions to developers assuming what are infinite costs – given that “in perpetuity”, read properly, can only mean “without any limit in time”. This means that it is impossible to meet the statutory tests on developer obligations set out in the Community Infrastructure Levy Regulations 2010 (as amended) at Regulation 122, also repeated in NPPF. This policy cannot be lawfully implemented and it is thus ineffective.

In the absence of an up-to-date transport mitigation strategy that is fit for purpose, at the point the Plan is examined these costs of any additional infrastructure are not known in any case. The strategy and its costs, including its affordability and deliverability, are crucial to assessing if the Plan is sound.

Subject to an appropriate defined transport mitigation strategy being arrived at, to be sound, the Policy I1 v) should be modified as follows:

(v) To consider and meet as appropriate the in-perpetuity delivery costs of infrastructure and, where appropriate, improved services, to the point where its long-term operational sustainability is credibly assured from mainstream sources. Where adoption is not envisaged by local authorities, that must include arrangements for its future ongoing management and maintenance;

## 9. Strategic and Area Based Policies

### 9.1. Policy A1 City Centre Development Principles

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Chichester City centre is rightly identified at 10.2 and 10.4 as the commercial and service hub of the District. It is also acknowledged to be the most accessible place in the District by sustainable modes, public transport in particular.

Boosting the vitality of the city centre is something that Stagecoach strongly supports. Irrespective, the enhancement of the commercial and cultural life of the District in the place where these opportunities can be accessed broadly by sustainable modes, is one that has long been at the heart of national planning policy for town centres, reflected in the

“town centre first” approach to locating major trip generating uses.

Paragraph 10.5 exposes an unbalanced and unsound preoccupation with aesthetic matters in its approach to the town centre, and far too little to ensuring that the central place function is enhanced through protecting and enhancing the quality of public transport access.

The city is relatively small but at the heart of an extensive hinterland, and thus the role of bus in supporting sustainable access to and enhanced city centre venue is one that needs appropriate recognition and emphasis. It is important to note that a dominant number of key service and facilities such as the General Hospital are relatively close to the city centre. This directly contributes to driving travel demand into the city, causing congestion. Most importantly, it also makes the task of mitigation simpler, given the impact a suite of active and sustainable measures can have within the same close proximity.

Policy A1 does not provide this. As such, achieving the strategic objectives of the plan is seriously threatened, and the plan is thus not effective.

The Plan needs to ensure that the approach to city centre regeneration maintains and enhances public transport access, interchange and inter-modal connectivity. It also needs to ensure that bus service stopping and interchange facilities are able to address increases in future demand, anticipated by the clear intent expressed elsewhere in the Plan that public transport should be meeting a greater proportion of mobility needs, in a growing district. Achieving this demands an ambitious approach to the location, quality and capacity of bus stop and interchange.

We have been in discussions with the District Council about this, alongside West Sussex County Council, for a very considerable period. Stagecoach has always been keen to help facilitate the Council’s aspirations for the city centre, and we continue to hold this intention. However, this cannot be at the expense of a material diminishing of the convenience and fitness-for-purpose of bus stop infrastructure and interchange. Stagecoach has significant concerns that current proposals to remove the bus station and have all bus services operate from the street kerbside, on an inner distributor road with similar or reduced net stop capacity, fall short of promoting attractive, convenient bus access to the central area as a destination.

For the longer term and where the objectives of the draft plan are concerned looking ahead to 2039, they clearly fall short of enhancing the convenience and attractiveness of public transport use. Much less do they make sufficient provision for a material increase in bus frequency, connectivity, and interchange convenience, on which the draft plan explicitly relies. It is vital that the District Council is clear in policy about its objectives for public transport in the city centre. These objectives must also carry sufficient weight when held in tension with other aspirations for the centre and the constraints on achieving them.

For the Plan to be sound, properly effective and compliant with NPPF, the approach to the City centre cannot ignore its role in the provision of sustainable transport service and connectivity.

Policy A1 should therefore be modified to properly reflect this crucial function, on which the vitality of the city centre must increasingly depend if unacceptable impacts on congestion, air quality and amenity are not to arise. This is still more crucial if wider aspirations to secure a more sustainable society and mitigate carbon are to be achieved.

“...This will include provision for development and proposals that:

- Support and strengthen the vitality and viability of the city centre and its role as a shopping/visitor destination, employment centre, public transport hub and a place to live;
- Support and promote facilitate improved access to the city and with increased emphasis on sustainable modes of travel, with particular regard to enhancing the public transport interchange role of the city centre area, in accordance with the transport strategy for the city and...”

9.2. Policy A3 Southern Gateway Development principles Chichester Bus Station, Bus Depot and Basin Road Car Park Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

There has been aspiration to redevelop the bus station and nearby bus depot from many years. Stagecoach has been engaged with detailed discussion with the District Council on this matter over a very extended period. We confirm that these discussions have reached a relatively mature stage, however at the time of writing are not concluded.

Stagecoach recognises and supports in principle the Council’s wider aspirations for the “Southern Gateway”, and this has governed our approach to the Council to date. We continue to have no “in principle” objection to relocating our administrative, engineering, operational and customer service facilities.

Leaving our proprietary interests entirely to one side, it remains vital that in so doing, the effectiveness, attractiveness and convenience of these facilities is not compromised, as we have outlined in our representations to Policy A1, if wider national and local transport policy, and the local plan strategy itself, are to be effectively achieved.

The depot is crucial infrastructure to support the safe, reliable and legally-compliant operation of Stagecoach bus services over a very extensive area covering the entirety of the District and beyond. Without securing equivalent facilities, that are fit-for-purpose, many of our services would have to cease.

If buses are to provide a greater and more attractive level of service (still more so if they are to be electrified) larger, more capable depot facilities, and city centre bus interchange facilities will be necessary.

Notwithstanding that the bus station and depot sites are leased from the District Council, these leases terminate well beyond the end of the plan period.

Finding suitable sites for a replacement bus depot in Chichester, in common with all similar localities especially in southern England, is extremely challenging. As a sui generis use, bus depots do not automatically benefit from policy support on land allocated for employment uses. Most bus depots benefit from being legacy assets established under very different economic conditions. That is the case here. The value of a depot site for redevelopment net of demolition and remediation costs, rarely approximates to that able to sustain the acquisition of land in a tight wider employment land market, and the construction of suitable new facilities.

Furthermore, the costs of operating bus services are sensitive to the parasitic costs of vehicle and staff hours and mileage associated with "dead running" to a remote depot location from the operational network. Here, the existing depot site is ideal, and any replacement will unavoidable add ongoing operational costs to the operation that cannot be directly recovered.

We confirm that a replacement depot site has been identified and has in principle been agreed, subject to overcoming issues with the disposition of existing and future structures on the site. However, the site is recognised as not capable of accommodating meaningful operational expansion. This is just one of the most important foundational reasons why a positive transformation of bus productivity needs to be achieved, across the plan area and beyond, to support delivery of greater bus mileage and frequencies with the same level of operational resource. At the time of writing, we are not fully convinced that the proposals for the relocation will be sufficiently fit-for-purpose in the event the above is not achieved. Thus, we must raise a concern that the bus depot site might not be available during the plan period. While there is a strong probability it will be, the certainty surrounding the availability of the site, especially within the first 5 years of the plan, needs to be made transparent.

### 9.3. Policy A4 Southern Gateway - Chichester Bus Station, Bus Depot and Basin Road Car Park Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Regarding the removal of the bus station, without equivalent replacement, Stagecoach has significant concerns. Pressures and conflicts at the current bus station site have been gradually rising for several years, arising from increasing use and the need for additional scheduled vehicle layover periods to reduce the risks of accumulated late running from traffic congestion. Peak passenger volumes have recovered strongly on several routes, however passenger accumulations resulting from more frequent delays and disruption have added substantial further pressure on limited space.

Under current plans, buses and bus passengers will be displaced to bus stops at new locations outside the city centre, along Avenue de Chartres. This road was always intended to be a relatively high-speed traffic route, outside the historic core of the city. The city centre has evolved in the subsequent years to reinforce already strong natural severance, with the highway lying beyond the city walls and the green space along the Lavant. It is a traffic dominated, un surveilled and unattractive environment, reflecting the intended function of the road as an efficient movement corridor for high traffic volume, and nothing more. Avenue de Chartres is relatively close to the rail station and pedestrian connectivity can be provided at broadly equivalent distance to the current bus station, but again it is un surveilled and currently unpleasant, lacking natural legibility or any sense of prominence.

We understand kerbside capacity on Avenue de Chartres will be strained even to accommodate current levels of service, with no expansion possible. There is therefore a strong probability that to accommodate more frequencies and key new routes, such as West of Tangmere, East of Chichester and West of Chichester allocations, additional future bus stops must occupy a different location. This makes interchange between routes and rail services substantially challenging and less attractive.

The emerging arrangements risk marginalising public transport and public transport users substantially. This strongly undermines achievement of the wider plan objectives and delivery of a significantly greater role for public transport. If substantial public transport growth is to be accommodated in a growing city and hinterland, as the draft plan anticipates, then a more ambitious strategic approach must be taken. This should plan for additional and improved facilities to accommodate all services predicted to be required, whilst enhancing the passenger experience to ensure meaningful and attractive modal choice.

There is therefore a need for the plan to evidence how these issues will be appropriately resolved, having regard to a

suitably ambitious approach that properly supports clear objectives to boost the relevance of public transport. The current policy is weak, unspecific and indifferent to achieving the strategic objectives of the plan, including a transport strategy in support of the plan, and as such it is ineffective.

Policy A3 should therefore be modified to read:

“ ...  
 • Be designed to encourage and facilitate substantial increase in the use of active travel and public transport to, from and through the city centre.  
 ...”

In line with the commentary above Policy A4 should also be modified to read:

3. Enhance the public interchange function of the immediate area, the public realm, particularly connections to the railway station and the city centre via South Street, Southgate and Basin Road for pedestrians, cyclists and public transport users, and to National Cycle Route 2 and Route 88 which run close by. Suitable replacement bus stops and layover facilities should be provided to replace those at the bus station in line with reflecting the objectives of the West Sussex Bus Service Improvement Plan, and to facilitate growth to meet the requirements of the plan's development strategy. Routes and crossings should reflect pedestrian desire lines, and public art should be incorporated to create a sense of place;

4. Enhance the public realm, in support of this and wider objectives, incorporating public art and other measures to create a strong and attractive sense of place.

...(renumber remaining points)

#### 9.4. Policy A6 Land West of Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

This is an existing Local Plan allocation. The public transport strategy for the site depends on the delivery of the second phase which Stagecoach notes is the subject of several applications now awaiting review and determination by the Council.

The site represents a compact form of development adjoining the city, as the most sustainable settlement, meeting housing needs close to where they arise, and affording very good opportunities for the use of sustainable modes, especially walking and cycling.

It is vital that a bus service is delivered to serve the site at the earliest potential. This was anticipated to be at the start of Phase 2 and will require the early delivery of the entire length of the spine road between the Old Broyle Road and Westgate and making it available for bus services.

It is not clear if the costs of pump-priming the service mentioned in the draft policy are anticipated to be met by the developer. Without such funding, the service will not be deliverable as years of losses will never credibly be covered from future profit. It is likely that the current wording will be interpreted by the developer as meaning that they have no such obligation binding upon them. Not does policy set out any specification for this service, thus its costs and the basis for securing developer contributions does not exist.

As such any wider transport strategy, that seeks to secure a greater role for the use of public transport, and the aspiration for this allocation cannot demonstrably be met. The policy is ineffective.

Policy A6 should be modified to read:

“ ...  
 10. Make provision to accommodate and secure delivery of for regular bus services linking running through the site to Chichester city centre operating at least every 30 minutes Monday-Saturday, and new and improved cycle and pedestrian routes linking the site with the city,  
 ...”

#### 9.5. Policy A7 Land at Shopwhyke

Stagecoach Supports

This is an existing Local Plan allocation, largely built-out, that benefits from an existing set of permissions.

The public transport strategy for the site depends on the delivery of effective bus priority at Oving Crossroads. The current recently implemented scheme, undertaken by National Highways, makes no provision for effective bus priority and needs considerable re-evaluation.

The site represents a compact form of development adjoining the city, as the most sustainable settlement, meeting housing needs close to where they arise, and affording very good opportunities for the use of sustainable modes,

especially walking and cycling. It lies on a new bus corridor that will shortly be put in place, running to Tangmere via Shopwhyke. The allocation is being significantly consolidated by further development in the immediate vicinity which strongly supports the potential for this new service.

As we explain in our representations for East of Chichester proposed allocation A8, and West of Tangmere Allocation A14, a clear corridor strategy to effect bus priority is needed, that should be delivered in support of that further growth, and that at Tangmere SDL. However this allocation is a near complete commitment and there is no scope through policy regarding this land to effect this outcome.

It is notable that Point 6) of policy A7 makes mention of a bus service. This language reflects the currently adopted Local Plan policy and has underpinned the existing permissions. The failure of any bus service to be delivered demonstrates from first principles that this Policy has been entirely ineffective. It is important that lessons are learned from this in the Local Plan Review.

#### 9.6. Policy A8 Land East of Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This proposed allocation lies next to unallocated land that is already consented as a departure from the adopted development plan, with 143 units near completion south of Oving Road (20/02471/FUL). Additional land, also unallocated but similarly consented, has now commenced north of Oving Road (88 units under 21/02197/FUL). This and the allocation site consolidates earlier development at Shopwhyke brought forward under the current Local Plan, and allocated again as draft policy A7.

Development at Shopwhyke was brought forward on the basis of a premise that the developer would provide or somehow arrange a bus service, that was reflected in the policies of the current Local Plan. This was secured by an unenforceable condition. No bus service has been provided, as there was inadequate clarity regarding the basis on which the costs of establishing such a service would be met by the developer, and the expectations of policy on the developer. The site does however lie on a logical new bus corridor between Chichester and West of Tangmere along the Oving Road.

In addition, an expectation that modifications to the Oving Crossroads would effect bus advantage have proven false – the arrangements put buses into a similar or longer queue than if they use the route available to general traffic to and from the A27.

Stagecoach strongly supports the principle of bringing this land forward. However, the soundness of the site depends on deliverability of a regular, reliable and direct bus service along the Oving Road, taking advantage of effective bus priority.

Given the failure of existing policy in the adopted Local Plan covering the proposed A7 allocation to deliver a bus service, it is of great concern that there is no draft policy to adequately address the issue. The policy is out of conformity with NPPF paragraph 104-105 in that sustainable modes do not offer realistic choices, much less an attractive one, and as such also does not secure the objectives of national policy nor of the plan itself.

Currently the proposed allocation is not served at all by public transport. Policy needs to ensure there is a policy basis to secure contributions to deliver such a service, which may well take the form of a proportionate contribution to deliver a new service or enhance provision that is put in place between Chichester along the Shopwhyke Road to west of Tangmere.

To become sound Policy A8 must be modified to read:

“...  
12. Provide for improved high quality connectivity by sustainable travel modes and focused in particular on a corridor between Chichester city centre and Tangmere along Shopwhyke Road, including new improved cycle and pedestrian routes, and a frequent bus service including linkages with Chichester taking advantage of effective bus priority measures on Oving Road at the A27;  
...”

#### 9.7. Policy A9 Land at Westhampnett/North East Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This land is already allocated and consented as part of the existing 2016 Local Plan. All reserved matters are determined.

The site lies on service 55 between Chichester, Westhampnett and Tangmere. This established service benefits from additional demand from the development at Phase 1. Phase 2 which is currently well underway, does not benefit directly

from bus services. However it is a compact and logical form of development where walking and cycling to local facilities and employment is a credible option.

The existing allocation rolls forward policies in the 2015 Local Plan. In so doing it is possible to see which have been effective.

Point 9. regarding bus service and routing has not been effective. In particular the potential for a bus only link between the site and Graylingwell has not been established as policy anticipated. Given congestion around the Portfield area acutely affects public transport this, or alternative methods to secure bus priority over private car use, a clear and unequivocal policy steer is required.

The lack of an up-to-date transport evidence base is ultimately at the root of these issues. Arguably the policy and allocation can only be made sound once this refreshed evidence base in place.

However, it is possible that the allocation could be made sound by modification of Policy A9 as follows:

“

9. Make provision for regular, direct and reliable bus services linking the site with Chichester city centre, and new and improved safe and convenient cycle and pedestrian routes linking the site with Chichester city, the South Downs National Park and other strategic developments to the east of Chichester city including Tangmere. These objectives could include exploring the potential for a bus only route require a deliverable scheme to afford bus priority through Portfield, and potentially linking the development with the Graylingwell area through use of a modal filter;

”

#### 9.8. Policy A10 Land at Maudlin Farm

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing public transport route. It is relatively close to the city and very near substantial centres of employment and services that can be reached by active travel modes, helping damp the demand for car use. It is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services at Portfield and over a wider area. In fact, the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A10 should accordingly be modified to read:

“

5. Provide safe and suitable access points for all users, including a main vehicle access from Old Arundel Road and, subject to further assessment, a secondary vehicle access from Dairy Lane. The development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes;

”

#### 9.9. Policy A11 Bosham – Land at Highgrove Farm

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Bosham Station. It is relatively close to the city and very near substantial centres of employment and services that can be reached by public transport and cycling, offering strong potential to materially damp the demand for car use.

There are serious risks that development in the A259 corridor west of Chichester could place further demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular to bus services.

Nevertheless, given the potential to effect bus priority on the approaches to Fishbourne Roundabout, it is a site which,

with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A11 should accordingly be modified to read:

"...

8. Provide safe and suitable access points for all users, including a main vehicle access from the A259. The development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys crossing the A27 at Fishbourne;

#### 9.10. Policy A12 Chidham and Hambrook

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Nutbourne Station. Substantial centres of employment and services that can be reached by public transport and cycling, offering strong potential to materially damp the demand for car use.

There are serious risks that development in the A259 corridor west of Chichester could place further demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular to bus services.

Nevertheless, given the potential to effect bus priority on the approaches to Fishbourne Roundabout, it is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A12 should accordingly be modified to read:

"...

7. Development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys along the A259, crossing the A27 at Fishbourne and where necessary on the approaches to Emsworth;

8. Facilitate improved sustainable travel modes, and new improved cycle and pedestrian routes, including linkages with Chichester city and settlement along the East/West Corridor;

#### 9.11. Policy A13 Southbourne Broad Location for Development

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach agrees unequivocally that Southbourne is a location that could accommodate growth on a strategic scale. It has a substantial range of service available within the settlement, including secondary education. It is well connected by bus and rail service to key destinations, including Chichester, lying to the east and west.

This is one of the few locations identified for growth that represents substantial additional development in a new location to the strategy in the existing Local Plan adopted in 2015. Thus, the transport impacts of development on the substantial scale envisaged at Southbourne are not covered or accommodated by the Chichester Area Transport Strategy that lies behind the existing plan. This demands, from first principles, that substantial further transport mitigation measures are required.

We recognise and endorse fully that the intent of the draft plan for Southbourne as a Broad Location for Development on a strategic scale, includes "Maximising the potential for sustainable travel links through improved public transport, including consideration of opportunities to reduce community severance caused by the railway line as well as the inclusion of cycling and pedestrian routes." (our emphasis).

The existing railway station at Southbourne is served regularly, however, it is not within the power of this plan to improve rail services. It is, however, well within the scope of action of the Local Planning and Highways Authority to work with bus operators to achieve a step change in the journey time, reliability, frequency and connectivity of bus services, and in particular the major corridor operated as service 700 by Stagecoach along the A259 between Havant and Chichester through Southbourne.

Notwithstanding the clear potential for sustainable connectivity in the western A259 corridor, there are very serious risks that development in the A259 corridor west of Chichester will place further significant car-borne demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular bus services, having the opposite effect to that intended: longer, less reliable and less frequent bus services, leading to a spiral of slowly declining use.

These risks, while very serious, look credibly likely to be entirely mitigated subject to carefully conceived and robust specified actions on the local highway network. It is perplexing to us that this potential still has not been identified, as part of a comprehensive "first principles" review of the transport evidence base. In particular given the former trunk status of the A259, there is evident potential to effect bus priority on the A259, including on the approaches to Fishbourne Roundabout.

With appropriate measures, including but not limited to this, to substantially boost the relevance and attractiveness of sustainable travel choices, strategic development at Southbourne could well be made highly sustainable.

In the absence of a refreshed transport strategy and transport evidence base, the draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact, the only reference that is made in Policy is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A12 should accordingly be modified to read:

"...Development should be comprehensively masterplanned to achieve a high-quality design and layout that integrates well with the surrounding built and natural environments to enable a high degree of connectivity with them, particularly for pedestrians and cyclists, and provides good the highest possible quality of access to facilities and sustainable forms of improved public transport services.

...

4. Provide a suitable means of access to the site(s), and securing secure necessary off-site transport infrastructure and service improvements (including highways in particular to the A259 corridor between Emsworth and Chichester) in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development) to promote sustainable transport options prioritising delivery of high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes;

..."

#### 9.12. Policy A14 Land West of Tangmere

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach strongly supports the principle of intensifying the level of development at the Strategic Development Location already identified and allocated West of Tangmere in the existing Local Plan. This serves to consolidate

development at a location where effective and attractive public transport choices could be provided. It also conforms closely with the principle expressed in NPPF that the best possible use should be made of land on sites that are judged to be sustainable, or potentially sustainable locations for development.

It must be stressed that the current policy suite for the SDL has to date not brought forward development in this location. We recognise that a Master Plan has been adopted by the Council, and that a planning application (20/02893/OUT) for the full larger quantum of 1300 dwellings proposed in the draft plan has received a resolution to grant by the Council.

However, we are not aware that a sustainable transport strategy has been finalised.

Land West of Tangmere is not served by any existing regular bus services. Rather, an entirely new bus service corridor is anticipated to operate in the near term from Chichester through Tangmere and beyond towards Barnham. This would serve proposed allocations A7, A8 and West of Tangmere (A14) included in the draft Plan.

This is reflected in the language of the explanatory memorandum to Policy A14 at paragraph 10.65:

“Opportunities, in partnership with relevant authorities, to provide improved sustainable public transport routes linking the village with Chichester city, to improve cycle routes to the city, and better transport links to Barnham rail station and the ‘Five Villages’ area in Arun District; and..”

Initiating this service will be costly and will in large measure be funded not by developer contributions, but by DfT monies awarded through the West Sussex Bus Service Improvement Plan. It is crucial this service is both sustainable in the longer term without revenue support, and that the success of the service can be built on by scalable frequency improvements as strategic development comes forward in both Chichester District, and proposed allocations A7 A8 and A14, and in Arun District, in particular at Barnham, Eastergate and Westergate (BEW).

This demands measures to effect safe, direct and swift operation of the service especially within the city centre, where it approaches and crosses the A27 at Oving crossroads and on the eastern fringes of the District east and west of Tangmere. Without these measures, bus journey time and reliability will be severely compromised and the impact of this service to damped car trip demands will be very substantially compromised. No such measures are proposed in the draft plan or its evidence base.

Changes to Oving Crossroads have recently taken place which, amongst other intentions, ostensibly provide bus advantage between Chichester and Shopwhyke. The junction in its current form does not offer material gain in bus journey time, as movements involve a less-direct route towards the city over an increased operating distance, much of which involves passage through heavily congested sections of the A27 and Westhampnett Road. A refreshed transport strategy supporting plan-led growth must revisit this area to secure an effective solution which offers bus customers the fastest and most reliable trip-time to and from the city.

In addition, the extension of public transport connectivity towards BEW and Barnham, including key links to secondary education and a logical railhead for journeys beyond towards Brighton and London as provided at Barnham Station, needs to facilitate bus priority between Tangmere and Nyton – whether using the A27, or preferably avoiding it altogether. There are significant safety concerns associated with the at-grade uncontrolled right-hand A27 exit onto the B2233 Nyton Road at Crockerhill Turn. This movement is also prone to extreme delay owing to the conflict with approaching westbound traffic on the A27, travelling at speed, which has priority. Our concerns with this junction in its current form can be expected to worsen with the increased traffic volumes predicted from new residential developments to the west of the city.

A solution providing a suitable short length of highway available only to sustainable modes, between Tangmere and Easthampnett, could provide a very effective solution to this. This would be deliverable within the scope of the separate proposed allocation at A19 Chichester Business Park, Tangmere. We comment on this separately.

Howsoever effected, a reliable direct and delay-free bus corridor between Barnham, BEW, Tangmere and Chichester could expect to secure very substantial elevation of the relative attractiveness of public transport over car use on the entire corridor and serve to effectively damp growth-related demands on this section of the A27. West of Tangmere, in the longer term, there is evident scope for the route corridor to operate as two branches – one via Shopwhyke and one via Westhampnett, effectively serving all the strategic developments proposed in the plan and transforming wider public transport connectivity to key employment destinations and services within and east of Chichester.

However, in common with all the other proposed allocations, the plan proposes no specific measures to provide, much less improve public transport or other sustainable modes to the site. This leaves the draft plan out of conformity with NPPF, especially paragraphs 104-106. The plan is inadequately evidenced and to the degree that public transport measures are identified and emergent, their successful implementation in the near and longer term will be jeopardised without clear measures to provide a safe as well as efficient bus route towards BEW and the Five Village area within Arun. The Duty to Cooperate is not effectively met and effective cross boundary collaboration on these strategic issues through the review of LSS is not demonstrated, despite the current version which identifies the issues.

To be made sound the LSS Review and a subsequent urgent review of the transport evidence base and strategy needs to take place. The strategic issues are especially critical east of Chichester, in our view.

Notwithstanding this foundational deficiency, to be made sound, Policy A14 should be modified to read:

"...

8. Subject to detailed transport assessment, provide primary road access to the site from the slip-road roundabout at the A27/A285 junction to the west of Tangmere providing a spine road link with secondary access from Tangmere Road. Development will be required to provide or fund mitigation for potential off-site traffic impacts through a package of measures in conformity with Policy T1 (Transport Infrastructure) and T2 (Transport and Development) and DfT Circular 01/2022 that maximise the relevance and use of sustainable travel modes, in particular bus services;

9. Make provision for improved sustainable travel modes between Tangmere and Chichester city, in partnership with relevant authorities, including improved direct, seamless safe and reliable and additional bus and cycle routes linking Tangmere with Chichester city, Shopwhyke and Westhampnett. In conjunction with measures in support of Allocation A19, Opportunities should also be explored contributions shall also be sought for providing improving high quality cycling and bus service transport links with the 'Five Villages' area and Barnham rail station in Arun District; and..."

#### 10. Concluding comments

Stagecoach recognises its role as a key stakeholder in the plan, as well as a local employer and corporate citizen. We recognise the primacy of the plan-led system as the mechanism intended to resolve complex challenges, including the proper alignment of transport and spatial planning, which as the National Decarbonisation Strategy for Transport among other policies makes clear, has never been more vital.

In making our representations, we emphasise that we are entirely supportive of the Local Planning Authority and the relevant Highways and Transport Authorities, in their efforts to properly manage the amount and pattern of development to secure vital policy objectives. We recognise that balancing delivery of assessed development needs with a wide variety of other constraints is a very difficult task.

The transport issues faced by the plan are recognised in the draft plan as being serious and long-standing. We believe that there are ways to arrive at a suitable transport mitigation strategy that has regard to wider strategic issues and resolves existing problems in a much more effective way than those pursued to date.

We support the spatial strategy of the plan as it evidently provides the basis to secure the necessary step change in the quality and use of sustainable transport modes, as it explicitly seeks to do. However thus far, there has been insufficient work done to define the measures that will credibly secure these outcomes.

Stagecoach therefore urges the authorities to draw us into the necessary effective ongoing collaborations that is expected by NPPF paragraph 16 and 106; and DfT Circular 01/022, to do this work, prior to, rather than after the submission of the draft plan. We look forward to being approached to initiate this dialogue at the earliest opportunity.

#### Change suggested by respondent:

Policy A1 should therefore be modified to properly reflect this crucial function, on which the vitality of the city centre must increasingly depend if unacceptable impacts on congestion, air quality and amenity are not to arise. This is still more crucial if wider aspirations to secure a more sustainable society and mitigate carbon are to be achieved.

"...This will include provision for development and proposals that:

- Support and strengthen the vitality and viability of the city centre and its role as a shopping/visitor destination, employment centre, public transport hub and a place to live;
- Facilitate improved access to the city with increased emphasis on sustainable modes of travel, with particular regard to enhancing the public transport interchange role of the city centre area, in accordance with the transport strategy for the city and..."

Chichester Local Plan 2039 Regulation 19 Stagecoach South representations.docx - <https://chichester.oc2.uk/a/skh>

## Object

**Document Element:** Policy A3 Southern Gateway Development Principles

**Respondent:** Stagecoach South (Rob Vince) [8141]

**Summary:**

Stagecoach recognises and supports in principle the Council's wider aspirations for the "Southern Gateway", and this has governed our approach to the Council to date. We continue to have no "in principle" objection to relocating our administrative, engineering, operational and customer service facilities.

The depot is crucial infrastructure to support the safe, reliable and legally-compliant operation of Stagecoach bus services over a very extensive area covering the entirety of the District and beyond. Without securing equivalent facilities, that are fit-for-purpose, many of our services would have to cease.

If buses are to provide a greater and more attractive level of service (still more so if they are to be electrified) larger, more capable depot facilities, and city centre bus interchange facilities will be necessary.

Finding suitable sites for a replacement bus depot in Chichester, in common with all similar localities especially in southern England, is extremely challenging. As a sui generis use, bus depots do not automatically benefit from policy support on land allocated for employment uses. Most bus depots benefit from being legacy assets established under very different economic conditions.

We confirm that a replacement depot site has been identified and has in principle been agreed, subject to overcoming issues with the disposition of existing and future structures on the site. However, the site is recognised as not capable of accommodating meaningful operational expansion.

At the time of writing, we are not fully convinced that the proposals for the relocation will be sufficiently fit-for-purpose in the event the above is not achieved. Thus, we must raise a concern that the bus depot site might not be available during the plan period.

Chichester District Local Plan 2039 – Pre-Submission (Regulation 19) Consultation

**1. Introductory Comments**

Stagecoach South is the main commercial public transport operator across Chichester District. The Company has headquarters in the city, which is also the principal public transport hub for the District and it's rather wider travel-to-work area encompassing much of the Arun District. Our services extend throughout and beyond the District boundaries, as far as Littlehampton, Midhurst, Havant and Portsmouth. The vast majority of services operate on a commercial basis – that is to say, sustained by passenger use and fare revenue, including concessionary reimbursement.

While the role of the railway is significant in much of the District, especially the east-west Coastway line, yet bus services account for more boardings locally than the railway, with Chichester depot services carrying over 3.5m passengers each year.

Unlike bus services in other parts of the country, the local network has recovered strongly after the pandemic with fare-paying passenger numbers over 95% of 2019 levels, albeit with concession patronage somewhat lower. This has helped secure not only a stable but growing bus network even during this period of rapidly rising operational costs, avoiding the need for the service contractions seen in other regions. Indeed, during the second quarter of 2023 Stagecoach will invest £5.5m in brand-new vehicles for high-profile coastal Service 700 – one of the largest vehicle investments for Stagecoach Group this year.

Our services are therefore critical to existing and future local connectivity. As the Plan acknowledges, mobility demands do not respect planning authority boundaries. The role of our services is especially high to settlements in the broad A27 corridor, within the District and beyond. This includes major settlements in Arun District such as Pagham and suburban Bognor Regis, where bus is the only mass public transport option. As the Council is well aware, there is an even higher level and rate of committed development envisaged in these locations in the Arun District Local Plan than in Chichester.

It is already evident to the planning authorities, West Sussex County Council and National Highways, as proprietor of the A27 Trunk Road, that accommodating growing mobility demands across Chichester District and especially around Chichester itself, is becoming increasingly challenging to the point of being seriously problematic.

Stagecoach has a particular interest in this Plan arising from:

- The already clear and highly deleterious impact of congestion affecting our operations and their reliability and attractiveness to the public. The effects of these on the approaches to Chichester, and around the A27 bypass are especially severe. If public transport is to retain its existing role – even before the needs of any meaningful growth both in Chichester and neighbouring authorities is considered, are considered – the Council and the Highways Authority need to arrive at clearly-defined measures to protect buses from chronic delay and the damaging impacts arising from the lack of bus network resilience and customer journey times.
- In connection with the above, the need to properly consider the predictable impacts of committed development in Arun District on the transport network and in particular the operation of bus services. The duty to cooperate on cross-border strategic matters is not limited merely to accommodating housing requirements.
- The fact that our entire business premises and operational base at Chichester is the subject of allocation for redevelopment within the Plan period. Specifically, this includes our Head Office, the Bus Station as the operational hub of the network and the key interchange for passenger journeys – including those that involve the railway – and the bus

depot required to support the entire operation. Notwithstanding many years of discussions, there is as yet no agreed deliverable strategy to replace these facilities either in the Draft Plan or elsewhere.

Stagecoach broadly supports the vision and priorities of the draft plan. In most respects, Stagecoach supports strongly the spatial strategy and the identified site allocations that flow from it, and the evidence.

However, it has serious concerns about the soundness of the plan as proposed for submission, for important regards outlined in this response. These are made in the light of requirements set by the National Planning Policy Framework (NPPF), in particular at paragraphs 15 and 16; 35, 105-109 inclusive and having due regard to the need for allocations to satisfy 110-112 inclusive in due course as development permission is sought; and paragraph 174.

Paragraph 16c) of NPPF makes plain that strategic plans and policies should “be shaped by early, proportionate and effective engagement between plan-makers and communities, local organisations, businesses, infrastructure providers and operators and statutory consultees” (our emphasis). This makes plain that collaborative and ongoing involvement of public transport operators is both necessary, and separate and in addition to the engagement with statutory consultees. This has not taken place.

Para 1.25 of the draft plan states that “the council has engaged constructively, actively and on an ongoing basis with other local authorities and organisations to address key strategic matters.” Despite the requirements in NPPF and contrary to the statement made, Stagecoach has not been approached or involved in a meaningful, collaborative or ongoing way in the preparation of the Plan.

Our main concerns centre around the fact that the plan strategy is neither backed by sufficient transport evidence. Even more importantly, the plan relies on a wholly car-based transport mitigation strategy despite policy stating that this is not the case, and the track record of the existing Local Plan, based on a very similar strategy, that has failed to bring forward meaningful mitigations to date to prevent traffic conditions substantially worsening. There is no support in policy for the achievement of the Strategic Objectives in the Plan. Nor is there definition of any measures in the 2023 Transport Study to make provision for sustainable transport infrastructure or services – much less materially improve them.

Finally, to the extent that updated transport evidence has been provided in the form of the 2023 Chichester Transport Study, arising from updated traffic modelling, it does not support the contention that highways capacity constraints on and around the A27 justify not meeting the objectively-assessed development needs of the area, as the draft plan contends.

## 2. Vision and Strategic Objectives

### 2.1. Issues and Opportunities

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant, proportionate and up to date evidence

Stagecoach recognises the important role of the West Sussex and Greater Brighton Strategic Planning Board which agreed a Local Strategic Statement (LSS2) in early 2016 to identify spatial planning issues across the wider area. This established strategic priorities and policies to guide longer term strategic growth in a coordinated and well considered matter. This institutional framework and the purpose of the LSS is a highly significant one and is at the heart of efforts to properly fulfil the statutory Duty to Co-operate, including with regard to strategic infrastructure issues, as NPPF requires.

Given the long period of time elapsed since the 2018 Reg 18 consultation and the already very clear constraints on strategic infrastructure capacity, it is of great concern to Stagecoach that the LSS2 has not been updated to reflect emerging issues in the intervening period. A review and update of the LSS2 has only just commenced. This includes a study of projected housing and employment needs, transport impact, infrastructure and spatial options to deliver the required development in the period after 2030. This Chichester District draft plan covers a period extending to 2039 – therefore well beyond 2030 and the nominal currency of LSS2.

However, infrastructure needs are pressing today. Stagecoach is presented with severe highway operational problems on a near-daily basis. During the winter of 2022-23 we have, for example, seen key road links impacted for many weeks by acute disruption arising from flood events. Unpredictable, but seemingly more-frequent, exogenous events expose a lack of resilience in the highway network around Chichester and its travel-to-work area. However, serious, chronic, unpredictable delay has been normalised over recent years, with peak-time congestion having quickly returned after the pandemic. The existing development strategy has failed to bring forward measures having any impact on this to date, and key commitments – notably at west of Chichester Phase 2 and at Tangmere – have yet to commence to further aggravate the issue.

We have no confidence in the transport mitigations proposed in the existing Local Plan and LSS2 being sufficiently effective, even if deliverable at all. Indeed, the existing adopted Local Plan does little more than make vague speculations about the sustainable transport measures that might be achievable. The draft local plan review is no different. It has no ambitions at all for sustainable modes and thus, makes no meaningful provision to meet them.

This is especially relevant in light of the fact that the approach to resolving issues on the A27 around Chichester that were anticipated in 2015-16 have fallen away. LSS2 is thus currently inadequate to act as a part of an up-to-date, proportionate, and relevant evidence base for the Plan.

An update of a traffic model lies at the heart of a 2023 Chichester Transport Study. This talks no account of the existing role of non-car modes, nor can it do so. It is unable to properly evaluate the nature of problems or solutions that involve public transport, or for that matter, other sustainable modes.

Therefore, we consider that the combination of committed and additional development needs that must be accommodated over the whole plan period between 2022 and 2039, in both the Chichester and Arun Districts, require a "first principles" review. This must be based on a refreshed transport evidence baseline of no earlier than 2022 – given that the effects of COVID distort 2020-22 – and the transport infrastructure and service requirements to sustainably support those needs.

Key issues – including substantial changes with regards to transport issues and challenges, as well as potential solutions – thus do not form part of the evidence base that steers this plan. Given long term changes in travel patterns, and mode share that took place during COVID, as well as a local and national policy context that seeks to radically reduce and then eliminate transport-related carbon emissions, this is especially problematic.

The specific problems of congestion and network resilience that are evident on the A27 and the approaches to Chichester remain a set of especially difficult problems that disproportionately affect the efficiency, reliability and attractiveness of the bus network, that evidently demand larger-scale strategic responses involving multiple stakeholders, including bus operators.

Where the effects of development on the national Strategic Roads Network (SRN) are concerned, the approach of National Highways to addressing and responding to the mobility needs of development has now substantially changed following the promulgation of the DfT Written Ministerial Statement LTN01/22. This makes it clear that adding highways capacity is no longer the first or only strategy that should be pursued, but one subordinate this to maximising the potential of non-car modes and sustainable travel.

"Effective and ongoing collaboration" on transport matters has not led to solutions being agreed and published for public scrutiny as part of the plan evidence base. Whatever the approach to modelling and "highways improvements" that may be agreed or pending agreement with the County Highways Authority and National Highways, Stagecoach is neither participant or sighted. This is despite the clear requirements set out in NPPF Para 106 b) that "Planning policies should ... be prepared with the active involvement of local highways authorities, other transport infrastructure providers and operators and neighbouring councils, so that strategies and investments for supporting sustainable transport and development patterns are aligned." (our emphasis).

We therefore consider that the Council has failed to comply with the requirements of NPPF paragraph 25 and 26 that "relevant bodies" are involved in plan-making, especially with regard to addressing the needs for infrastructure. Public transport services and the infrastructure that supports its operation and use clearly fall within matters relevant to plan-making. This is explicit in NPPF Chapter 9 and indeed within the plan itself – for example reference to public transport and sustainable modes in the Vision for the plan.

It should be stressed that the Regulation 18 "Preferred Approach" consultation took place in December 2018 – over 4 years ago and prior to COVID, based on LSS2. The inordinate length of time that has elapsed between the Regulation 18 and Regulation 19 stages greatly challenges the LSS2 and other parts of the evidence base, especially as the pause straddles the COVID epidemic. That would include the transport modelling baseline, and key assumptions in any traffic modelling that took place prior to mid-2022, which is a point at which a reasonable "new normal" post-COVID might be considered to have become established. In that period, Arun District has also adopted its own Local Plan development strategy that accommodates an unprecedented quantum of development immediately east and south-east of the District Boundary – creating additional substantial transport impacts directly affecting the A27 and multiple major approaches to Chichester crossing it.

The established mechanism to fulfil the Duty to Co-operate has thus not operated effectively.

The Plan is not founded on a relevant, proportionate and up-to date evidence base and is thus inadequately justified.

## 2.2. Spatial Portrait

The spatial portrait is generally succinct and accurate. However, it makes no mention of road-based public transport, the role of the City as a public transport hub, or the range of bus services that provide local connectivity (Section 2.4 and 2.5). The complete concentration of post-16 education in the City itself as just one example of the peculiarities of transport demands in the area, is not highlighted, though this has a profound influence on peak time travel demands affecting the most congested parts of the highway network. Among other things, the role of bus services in supporting the educational system of the plan area is very great indeed.

The potential role of bus in addressing the already-severe transport problems of the plan area and beyond seems entirely overlooked. The spatial portrait is thus clearly inadequate and incomplete.

### 2.3. Strategic Objectives

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Chapter 9 of NPPF and paragraphs 104 and 105 in particular require that plans should:

“Transport issues should be considered from the earliest stages of plan-making and development proposals, so that:

- a) the potential impacts of development on transport networks can be addressed;
  - b) opportunities from existing or proposed transport infrastructure, and changing transport technology and usage, are realised – for example in relation to the scale, location or density of development that can be accommodated;
  - c) opportunities to promote walking, cycling and public transport use are identified and pursued;
  - d) the environmental impacts of traffic and transport infrastructure can be identified, assessed and taken into account – including appropriate opportunities for avoiding and mitigating any adverse effects, and for net environmental gains;...
- ...The planning system should actively manage patterns of growth in support of these objectives. Significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. This can help to reduce congestion and emissions, and improve air quality and public health...”

The Strategic Objectives do not conform with NPPF in these foundational requirements adequately, to transparently steer the plan strategy. They should therefore be amended to read:

“Plan to provide local infrastructure to support new development and seek opportunities to address existing identifiable infrastructure problems deficits, such as in particular those relating to the A27 and its junctions and wastewater treatment.”

Paragraph 2.36 states, in the context of the Climate Emergency and the National Trajectory to “Net Zero” that “The council will enable the delivery of infrastructure, jobs, accessible local services and housing for future generations while protecting, conserving and enhancing the historic and natural environment.”  
Naturally, we support this intent.

However, there is no acknowledgement of the role current patterns of transport use contribute to carbon emissions, nor that substantial mode shift is necessary to address sustainably an acute lack of capacity on the local network and the SRN, especially around Chichester. This is especially concerning as the basic conceptual link is not made between the fact that the greatest such problems lie on the A27 corridor and around Chichester, while these are also at the same time present many of the most sustainable locations for development, and where the opportunities to secure much greater use of sustainable modes also exists.

Strategic Objective 7 “Strategic Infrastructure” includes the following statement:

“To work with infrastructure providers to ensure the timely delivery of key infrastructure to support delivery of new development. New development will be supported by sufficient provision of infrastructure to enable the sustainable delivery of the development strategy for the plan area. Key infrastructure to support the Local Plan will include improvements to transport, ...

A sustainable and integrated transport system will be achieved through improvements to walking and cycling networks and links to accessible public transport. Highway improvements will be delivered to mitigate congestion, including measures to mitigate potential impacts on the A27 through a monitor and manage process.”

The latest transport evidence in the Chichester Transport Study makes no pretence to define much less to deliver a “sustainable or integrated” transport system. It is wholly devoted to sustaining current levels of car use across the District, to and through Chichester area.

It is no more than the lightest of touches to the approach taken to supporting the adopted Local Plan, an approach that is already almost 10 years beyond the date of its gestation but has yet to deliver any significant capacity improvement schemes, much less any measures that sustain even current levels of public transport journey times and reliability in the face of increasing congestion – much less any betterment.

Of the six key junctions on the A27 around Chichester, recognised to require significant mitigation given they are saturated for extended periods, five accommodate regular bus services - indeed frequent ones at least every 20 minutes in several cases. The sixth at Oving Road, relates directly to a key corridor where bus services are needed to support strategic growth currently being delivered at Shopwhyke, as well as substantial further growth West of Tangmere (proposed allocation A14) and “East of Chichester” (A8), south of Shopwhyke Road.

As stated at p12 of the Study Summary “The modelling shows that all the junctions on the A27 Chichester bypass are well over capacity, even before adding in the Local Plan development and with the exception of Portfield Roundabout are

actually shown to be over capacity in the base model year (2014) in one or both peaks". This much has indeed been evident for years from delay and periodic even more severe disruption arising to Stagecoach services from the lack of network resilience.

The reassignment of through and local traffic through Chichester to avoid the A27 bypass is an especially serious issue for bus services that penetrate the city. This is leading to consequential saturation of a range of junctions used by buses. Rising delay and unpredictable running times are at the root of our decision to sever the long-established Portsmouth to Littlehampton service in 2023, which will in future no longer run across Chichester, but terminate to provide additional dwell time to mitigate the impacts of congestion.

While this congestion affects all road users including businesses and freight traffic, the effect on scheduled bus services is greatly higher, as such services cannot reassign route to 'beat the queue'. Traffic congestion often encourages greater car use for this reason, in tandem that people are happier to sit for extended periods in their own vehicle on a seamless door-to-door journey than wait at the roadside for a delayed bus making slower progress in lengthy queues.

As the Study admits at para. 1.3.2 "Although, there have been works at the Portfield Roundabout in this timeline, no other mitigation schemes have been completed along the A27 corridor, as such the mitigation schemes defined in this report will also be required to consider the development from this plan period."

In other words, in the 8 years since the current Local Plan was adopted in 2015, there has been minimal progress in delivering the traffic mitigations. There is no clarity at all when any such mitigations will be brought forward. It is hardly surprising then, that traffic conditions have deteriorated. The "predict and provide" transport strategy supporting the current plan has failed.

Despite this, the Draft Local Plan Review proposed to "double down" on exactly this strategy. It represents, like the rest of the evidence base, a "rolling forward" of the current car-based strategy by 9 years, with the lightest of touches to attempt to accommodate car trip demands from a relatively modest additional development quantum.

Nevertheless, the Study requires a global 5% reduction in trip demands arising from unspecified "credible" (paragraph 4.1.2) sustainable transport and travel planning measures. It is unclear why use of non-car modes will see disproportionate growth when no measures are in place to make them more attractive. This 5% increase in use translates to a doubling in the modal share of bus services. There is no evidence nationally, anywhere, that simple ignorance of alternatives to the car is the main barrier to uptake.

The outputs of the 2023 Chichester Area Traffic (SATURN) model are set out at Table 5.1 (am peak) and 5.2 (pm peak) without mitigation. These betray just how seriously compromised the whole network around Chichester is, and will be in future, even with implementation of a mitigation package to increase traffic capacity that is understood to cost between £92m and £164m – and which the Study and the draft plan acknowledge cannot be delivered through developer funding sources alone. Unspecified external funding presumably from HM Treasury through DfT is required.

Even if this provided and the schemes are delivered, Tables 8.1 and 8.2 indicate these will provide minimal relief. The final columns suggest key junctions, including Portfield, Fishbourne Road and Cathedral Way East will remain at well over 100% ratio of flow to capacity (90% is considered the point at which saturation is approached, with the onset of increasing delay above that figure). RFCs in tables 8.1 and 8.2 are some of the highest we have ever seen in a local transport evidence base for a post-mitigation scenario. While the serious potential risk of reassignment across Chichester City is greatly reduced, which is important and welcome given its impact on bus services, Tables 8.1 and 8.2 show the extent of post-mitigation saturation is also egregious, covering a very large number of key links and junctions.

On every measure and criterion, then, including cost deliverability and effectiveness, the revised Transport Strategy falls well short of evidence to suggest the transport impacts of the plan can be properly addressed by this means.

Despite the repeated statements about sustainable modes throughout the draft plan and Chichester Transport Study, only 2 paragraphs at Section 6.2 within the Study are devoted to public transport:

"6.2.7 The funds generated from the parking management schemes, local/nation funding schemes and developer contributions could also be utilised to fund potential public transport enhancements within the city centre including an expansion of the bus priority lane system within Chichester City Centre. This could reduce reliance on the car in the longer term towards sustainable public transport. A park and ride scheme could be incorporated within a bus priority lane network in the future depending on the uptake and successfulness of early bus priority trials.

6.2.8 Chichester City centre has a constrained existing public highway network. Therefore, any proposed dedicated public transport or light transit corridors that could be implemented would be at the expense of existing highway. This could be managed through a time-based system where certain routes are restricted to public transport only during specific times. E.g., peak hours."

There is some very high-level consideration of Park and Ride following this section. None can be considered a serious practical evaluation of consolidating car-borne trips onto bus services, including existing ones, for example local mobility hubs, more frequent bus corridors, delivery of specific bus priorities.

None of the discussion of alternatives to “predicting and providing” for unconstrained traffic growth is rooted in a deliverable evidence base, or proper evaluation of options and specific projects.

To take just one aspect of the few specifics that can be picked out, a workplace parking levy is hypothesised. This would apply only to “offices”, in Chichester city centre (para 6.2.3), without consideration given as to how this could be practically achieved or even that a meaningful amount of office based employment would qualify. Much less is any consideration given to how far focusing a strategy only on office-based workers would actually deliver a particularly significant effect, apart from to create a strong incentive to relocate offices out of the city centre to places out of reach by public transport.

Looking at the Chichester Transport Study 2023 and the draft plan together, there is insufficient evidence that the traffic capacity increase proposed in the 2023 Transport Study is any more affordable or technically deliverable, or likely to be sufficiently effective, than those in the past strategy. The evidence more strongly points to the fact that no highway improvements are identifiable or economically deliverable to meet even short term increases in demand for car-borne mobility on most of the network around Chichester.

There are no published strategies or schemes clearly supporting the contention that the objective of improving sustainable modes is technically achievable or deliverable either. The plan makes generalised assertions that such strategies will be devised and implemented only after serious problems emerge from a shortfall in the car-borne transport strategy.

The reference to “monitor and manage” is undefined and unsubstantiated. There are no outcomes stated, no mechanisms specified and no timescales for action.

Our experience today is that network conditions have reached unacceptable and prejudicial levels of severe unpredictable delay. The saturation of the network is already evident well outside the traditional peaks on key sections of highway and at key junctions. External shocks such as the effects of severe weather are becoming more common, leading to delays so extreme as to justify the description of “gridlock”. The plan does not identify a strategy to effectively address this, in particular by consolidating passenger car trips onto more efficient public transport vehicles. This is unacceptable to Stagecoach.

#### 2.4. Local Plan Vision

Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the broad approach in Plan Vision and in particular that by 2039, the Plan will support and enable greater use of sustainable modes. However, there is no link made between reducing the use of private cars, and the need for a step change in the use of sustainable modes. Without a published transport evidence base it is impossible to establish a suitable sustainable transport strategy to support both carbon reduction and alleviation of the problems arising from acute congestion. Even on a very crude basis, to achieve a meaning mode shift on key approaches to the A27 Chichester Bypass will require more than 20% of existing peak car-borne journeys to transfer to other modes. A 10 percentage point transfer to bus (about half this shift) would imply more than doubling peak hour bus passenger boardings.

The Vision is nothing more than an aspiration, that needs to more definitively aim at key outcomes, for the plan to be effective. The Vision should thus be altered to read:

“Get about easily, safely and conveniently with less reliance on private cars –making the greatest possible use of the rail and enhanced bus network, and with more opportunities for active travel including walking and cycling; to materially reduce dependence on private car use.”

Underpinning the Plan’s spatial strategy, the Vision section goes into more specific detail about key localities in the Plan area.

Regarding Chichester, Paragraph 2.39 states: “The emphasis will be upon consolidating and enhancing the role of Chichester city as the plan area’s main centre, whilst also developing the role of key settlements to its east and west. The focus will be upon creating communities with good access to a range of employment opportunities and affordable housing for young people and families to balance the ageing population.”

This is clearly the appropriate focus for meeting the District’s development needs in a sustainable manner. The city and key settlements to the east and west, are those places already able to make use of relevant public transport services, both rail and bus. Especially within and near the City, walking and cycling can credibly present highly relevant choices. This emphasis clear can be expected to address the requirements of sustainable development set out in NPPF and their local application set out in the Plans Strategic Objectives.

However, this needs a robust transport strategy, to avoid a further concentration of development and its traffic impacts occurring on or near some of the most chronically congested parts of the highway network. To date, the absence of

intervention has strangled the bus network through further marked deterioration in traffic conditions. This by consequence increases the risk of bus delay or cancellation, lengthens journey time and reduces customer confidence in bus as an attractive alternative mode of travel.

In April 2023, Stagecoach is making significant timetables changes to improve operational resilience in and around Chichester. The biggest such change is the severance of the Portsmouth to Littlehampton section of service 700, at Chichester, with buses operating independently to the east and to the west and ending cross-city links. This is planned to reduce the probability of delay but at the cost of additional vehicle resource (circa £200,000 per annum) which could be better spent providing new or enhanced services. We anticipate a small loss of custom as a direct consequence of the change, but have little choice other than to take negative action so as to fulfil our statutory punctuality obligations.

If the Strategic Objectives of the Plan and its Vision are to be achieved, in the way required by NPPF paragraphs 104-105, a properly-evidenced transport mitigation strategy needs to create the conditions where bus journeys are more reliable than car journeys and thus mobility demand switches as far as can be realistically achieved away from car use, to bus use and other more sustainable modes.

Beyond Chichester, the Plan Vision focuses on key localities beyond to the east and west.

To the west of Chichester a focus on growth at Southbourne is justified at paragraph 2.43: "...the aim is to take advantage of the village's good transport links and existing facilities to deliver significant new residential-led development within the broad location for development which will further enhance local facilities and offer opportunities to reinforce and supplement existing public transport, including bus routes."

We agree this is a very significant opportunity. However, if the requirements of NPPF paragraphs 104-105 are to be met, this demands that effective bus priority is delivered on the A259 corridor, especially eastbound at Fishbourne and westbound approaching Emsworth. Without such measures, the growth committed and planned will serve only to further undermine bus journey time and decrease punctuality on the existing 700 service, entirely contrary to the aims of the Vision.

The emphasis on the A259 corridor served by Stagecoach 700 west of Chichester is reinforced at paragraph 2.45 stating that "Between Chichester and Southbourne, the Plan provides for more moderate levels of growth within the parishes of Fishbourne, Bosham and Chidham & Hambrook, ... with opportunities to support and expand existing facilities and for increased use of public transport options". We strongly support the principle, but the Plan must follow through with specific public transport priority measures that facilitate rather than prejudice such an outcome.

East of Chichester the focus is at Tangmere, where the existing allocation for about 1000 dwellings is being uplifted by 300. Paragraph 2.44 justifies this among other things recognising the scope for "...improved and additional bus services and cycleways will provide better connections to Chichester city and east to Barnham and the 'Five Villages' area in Arun District." We unequivocally endorse this conclusion. Realising a "game-changing" level of bus service quality, reliability and frequency east of the city, also serving committed and planned development north and south of Oving Road at Shopwhyke, is equally essential, given that all SRN links and junctions are approaching equal saturation.

The National Bus Strategy has given new focus on partnership with West Sussex County Council to discuss and deliver a significant new bus service between Chichester, Shopwhyke, Tangmere, Eastergate and Barnham, supporting committed development and acting as an initial phase of what ought to be a more ambitious longer-term strategy to support growth beyond 2025 in both Chichester and Arun Districts. For these improved bus services to be both deliverable and effective, robust bus prioritisation is unavoidable. No such measures are proposed in the Plan or its evidence base and we therefore suggest inclusion of plans to facilitate safe and efficient bus operation between Tangmere and Nyton/Eastergate, ideally avoiding the need to join A27 through-traffic entirely.

We welcome the clear recognition that these localities identified for growth, benefit from existing relevant public transport services. The Vision also sets an expectation that bus services in particular should be "enhanced" and "reinforced".

We entirely agree that these opportunities exist, across the broad strategy and strategic allocation proposed by the draft Local Plan. Securing them will be crucial to achieving national and local policy objectives, including the Strategic Objectives. However, to our continuing very great dismay, the Plan goes no further to defining how this will be achieved. As such the Vision is not demonstrable achievable or deliverable.

Accordingly the Plan cannot be considered effective, in the sense of NPPF.

Remedying this, demands specific measures to protect bus services from congestion in the following corridors:

- A259 East of Emsworth
- A259 Fishbourne
- A 259 Via Ravenna/Cathedral Way
- A286 Stockbridge Road north and south of A27
- B2145 Whyke Road/Hunston Road
- A259 Bognor Road, east and west of A27 and extending to the District Boundary

- B2144 Oving Road/Shopwhyke Road east and west of the A27
- A 285 Westhampnett Road/Portfield Way/Stane Street, potentially involving a mode filter at the west end of Stane Street

These must be defined to a sufficient level of detail to assess their effectiveness and deliverability, including costs.

This would then allow West Sussex County Council and Local Transport and Highways Authority, ourselves as the principal bus operator, and where appropriate other organisations that would be directly tasked with delivering the mitigation package, to agree service levels and standards necessary to deliver specified outcomes, including journey times, frequencies, capacity and hours of operation on the network, and also in respect of the strategic allocations and Strategic Locations for Growth.

The agreed mitigations strategy should be set out in an up-to-date Infrastructure Delivery Plan backed by clear funding commitments, including a funding strategy to justify necessary developer contributions.

Where necessary to support evidence of effectiveness and deliverability, clear statements of support, which might include Statements of Common Ground between the LPA, LTA, National Highways and Stagecoach, could be provided.

### 3. Spatial Strategy

#### Stagecoach Supports

Stagecoach well recognises the constraints outlined in the explanatory narrative at the start of Chapter 3.

In particular we strongly endorse that strategy in that it reflects that the best opportunities to meet housing and employment development requirements sustainably clearly exist in and close to Chichester and on the key east-west movement corridor where – subject to effective measures being delivered to make these modes more attractive, efficient and relevant – sustainable modes can credibly provide for a much higher proportion of movement demands, mitigating most effectively the potential traffic impacts of development.

We agree that the Manhood Peninsula suffers serious environmental constraints, but, added to these, public transport and other sustainable modes cannot provide such attractive alternatives, and significant further development risks merely reinforcing already high levels of car use, aggravated by the carbon impacts of the distances involved – something the plan does very little to evaluate, and makes no reference to.

We endorse the conclusion in paragraph 3.24 that significant development in the part of the District north of the National Park is inappropriate. The rationale is principally on landscape and visual character. This exposes a fundamentally biased approach to plan making that has consistently underplays transport accessibility and carbon issues. In fact, the lack of local services and the extended distances that need to be travelled to fully participate in society in this area, with no realistic prospect of public transport offering relevant choices, ought to rule such a strategy out of play on a far less aesthetic and interpretational basis.

#### 3.1. Policy S1 Spatial Development Strategy

##### Stagecoach Supports

The Spatial Strategy flows clearly and logically from the Spatial Portrait, and the opportunities and constraints identifiable across the Plan area. It represents a logical and justified continuation of the existing Local Plan strategy. In particular the spatial strategy maximises the potential for sustainable modes to contribute to meeting a much higher proportion of all the District's mobility and accessibility needs.

#### 3.2. Policy S2 Settlement Hierarchy

##### Stagecoach Supports

The settlement hierarchy clearly reflects the service endowment and potential self-containment of the settlements in the District. In particular, the second tier of settlement hubs includes secondary schools, which are major peak trip generating uses. Service villages, in the main, also benefit from bus services running at least hourly, which can be expected to provide for a degree of mobility for the higher number of trip purposes that cannot be satisfied by walking or cycling within the immediate locality. Thus, a level of development to meet local needs in this tier is relatively sustainable.

There is a quite broad range of settlements in this category. We have concerns that, north of the National Park, the Service Villages have no realistic public transport choice. These include Plaistow/Ifold, Kirdford, Loxwood, and Wisborough Green. Such as exists is typically a 1/bus per day off-peak shoppers service offering up to 90 minutes in Horsham or Guildford and as such any development here even to meet local needs requires each adult to own a car. This contrasts strongly with Service Villages to the south of the National Park, which are greatly more sustainable.

### 4. Climate Change and the Natural Environment

#### Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This section of the plan is extensive and wide ranging, as should be expected.

However, remarkably, there is no acknowledgement whatever of the role of transport in mitigating climate change or its effects, not of the importance of sustainable movement and access being facilitated across the plan area in addressing anthropogenic impacts on the natural world at a more local level.

This exposes very clearly a troubling level of indifference to transport matters in the production of the Plan, which, while nationally quite common, is neither appropriate nor acceptable. The mitigation of transport impacts is not merely a matter speaking to the social and economic aspects of sustainable development. It is crucial to address the causes and effects of climate change that arise from transport, and personal mobility.

This is now well understood and at the centre of national policy, including the National Decarbonisation Strategy for Transport (July 2021) which at Section 5 commits the government to aligning land use planning and transport strategy much more tightly and effectively to mitigate the carbon emissions associated with the current dependence on cars, and the mode mix; but also to reduce travel distances, both increasing the potential relevance and effectiveness of all sustainable modes, and reducing average journey lengths for residual motorised journeys of all kinds.

National statistics show that well over a third of all domestic carbon emissions arise from land-based transport and of these, the vast majority arise from trips of over 10km – outside the range of large scale use of cycling. In fact, the potential of the plan to materially support carbon emissions reduction from within the plan area lies more in the realm of transport than any other policy theme – including emissions mitigation from buildings, which is in any event an aspatial matter and covered by nationally-binding building regulations. By 2025 something like 40% of all the emissions within the plan-area will be transport related.

There is no evidence supplied to support the plan that addresses the transport carbon impacts of the spatial development strategy in a clear manner.

There is no evidence supplied that sets out the effects of potential worsening of congestion on air quality within the plan area, arising entirely from the excess of passenger car movement demands over available and credibly deliverable highway capacity. This is despite the evidence set out and acknowledged in the explanatory memorandum at paragraph 4.130:

"4.130. The council's Air Quality Action Plan and the West Sussex Transport Plan 2022-2036 both refer to the air quality issues faced by Chichester. There is currently one Air Quality Management Area (AQMA) in the plan area, located at St Pancras, Chichester. AQMAs are designated where air quality exceeds, or is likely to exceed, national air quality standards and objectives. Development within or impacting these areas, or that likely to cause the declaration of any further AQMAs, will be subject to an air quality assessment by the applicant."

This is a retroactive approach – it is not "planning", based on evidence.

We are well aware that air quality issues in and of themselves can render allocated sites to be undeliverable: a good example is in the Vale of White Horse, Oxfordshire, where strategic allocations on the A338 and A420 corridors have been held up for years by air quality issues at Marcham and Frilford, in large measure because agreed transport interventions were considered inadequate or undeliverable a very short time after the Plan was examined and adopted.

There is no evidence that shows how the development strategy can effectively mitigate these impacts as well as the further potential impacts that arise from the development strategy. This is exasperating, as there is clear evidence that could be drawn upon to show that that very substantial opportunities exist to:

- Speed buses up and make them more reliable by the delivery of bus priority on most of the key main corridors. Most of these even today operate relatively frequently
- Improve service frequencies and extend hours of operation.
- Secure significant background mode shift to bus as a result, damping pressure on key links and junctions, by consolidating demands on direct more reliable and more frequent bus services.

The spatial development strategy as submitted is in fact, likely to well conform to such additional evidence.

The allocations require substantial additional transport related work and evidence to demonstrate that the opportunities for sustainable transport have been identified and taken up as required by NPPF paragraphs 104-105.

With regards to specific policy, Policy NE22 should be modified to read:

"Development proposals will be permitted where it can be demonstrated that all the following criteria have been addressed:

1. Development is located and designed to minimise traffic generation and congestion through access to by maximising the relevance and attractiveness of sustainable transport modes, including maximising provision of specific demonstrably effective measures to make pedestrian and cycle and public transport routes and networks more direct, more safe, faster and more reliable;..."

## 5. Housing

### 5.1. Policy H1 Meeting Housing Needs Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

The presumption of the planning system is that local planning authorities should seek to meet their objectively assessed development requirements in full. These needs are assessed by a defined Standard Methodology set out in Planning Practice Guidance and elsewhere, that has explicit regard to ensuring that the economic and social effects associated with housing are properly provided for, to avoid exacerbating serious problems that arise from inadequate housing supply.

As a significant local service provider and employer, Stagecoach is concerned that existing issues with housing availability and affordable housing supply are not exacerbated. This has a direct bearing on staff recruitment and retention. It also has an indirect bearing on our cost base.

The existing problems with housing affordability have developed over many decades of undersupply. It should be emphasised that the significant boost to the supply of housing that has been sought by governments over the last 15 years, has only begun to take effect relatively recently in this District. Tackling the problem will require years of consistent attention.

Stagecoach notes that the Council is no longer proposing to meet its identified housing needs in full. Rather than 638/annum the Council is allocating a total that implies an annual delivery rate of 535/annum.

While a number of matters evidently present challenges to the Council in identifying a sustainable development strategy. Paragraph 5.2 indicates that “constraints, particularly the capacity of the A27 has led to the council planning for a housing requirement below the need derived from the standard method...” The blame for being unable to meet housing requirements is thus laid squarely at the door of transport infrastructure and systems.

This conclusion in no way follows from the evidence in the Chichester Transport Study. This, rather, makes the statement that when a higher annualised quantum of 700 dwellings per annum was tested, in the majority of cases the traffic capacity improvement package would perform little differently. To quote the Study:

“5.6.3 The network performance outputs analysed comprising V/C%, Delays (seconds) and Queues (PCU’s) suggest that generally the proposed SRN mitigation identified for the Core Scenario, can accommodate in the most part, additional increase in development to 700dpa.”

Whether the rest of the local road network is similarly protected is moot.

Irrespective of these results, even if the contention made in the draft plan were true, unlike many other constraints, this is amenable to a suitable effective strategy to address the constraints identified being collaboratively conceived. This is what NPPF expects, as set out in paragraphs 104-106.

Where the A27 is concerned, as part of the SRN, National Highways is now working to a substantially revised approach than that in force at the time to current Local Plan was prepared, or LSS2, or reflected in the Chichester Transport Study. This is set out in DfT WMS 01/22. This document is the policy of the Secretary of State for Transport in relation to the SRN which should be read in conjunction with the National Planning Policy Framework (NPPF). It replaces the policies in the Department for Transport Circular 02/2013 of the same title.

It makes plain that to accommodate additional demands arising from development, National Highways (NHC) expects to meet the requirements of its statutory license in a substantially different manner. With respect to development NHC LTN 01/22 continues to address the tensions between national policy for the environment and carbon mitigation, the ongoing need to substantially boost the supply of housing as well as maintain national economic competitiveness and protect the safety of the public. However, in future, the approach will be to seek first to maximise the impact of demand management measures (reducing the need to travel), and then to accommodate residual additional demands first through maximising the use of sustainable modes, rather than accommodating assumptions about current levels of car dependency and use.

LTN 01/22 much more closely and explicitly aligns with the language of NPPF Chapter 9 paragraphs 104-106. Paragraph 12 states: “New development should be facilitating a reduction in the need to travel by private car and focused on locations that are or can be made sustainable.... Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas.” (our emphasis).

It continues at paragraph 13: “where developments are located, how they are designed and how well delivery and public transport services are integrated has a huge impact on people’s mode of travel for short journeys. The company will therefore expect strategic policy-making authorities and community groups responsible for preparing local and neighbourhood plans to only promote development at locations that are or can be made sustainable [footnote 8] and where opportunities to maximise walking, wheeling, cycling, public transport and shared travel have been identified.” (again, our emphasis)

Stagecoach readily confirms that the draft Plan development strategy conforms well to the first limb of this expectation, in terms of the location of development.

Stagecoach considers that the plan and its evidence base conforms poorly to the second in that the specific opportunities to maximise walking, cycling wheeling and public transport are not clearly identified, and defined, and proven to be effective and deliverable.

The current mitigation strategy for the A27 Chichester area, supporting the adopted Local Plan and for which proportionate developer contributions have and continue to be sought, reflects now-superseded DfT Circular 02/2013. As a direct result, it failed completely to identify any significant effective bus priority measures, despite the fact that frequent services already exist on the key corridor concerned, and that one bus journey can remove, fully seated between 72 and 80 single occupancy car journeys from congested links and across key junctions on the A27. Rather, it sought to implement targeted measures to increase the throughflow of general traffic.

We recognise the realisation that this approach, which was already reliant on some tenuous logic, is simply not technically viable, especially where further development needs are anticipated.

National Highways will form now pursue an approach with the planning system that “includes moving away from transport planning based on predicting future demand to provide capacity (‘predict and provide’) to planning that sets an outcome communities want to achieve and provides the transport solutions to deliver those outcomes (vision-led approaches including ‘vision and validate,’ ‘decide and provide’ or ‘monitor and manage’). The company will support local authorities in achieving this aim through its engagement with their plan-making and decision-taking stages.” (paragraph 15).

Paragraph 23 is at the fulcrum of assessing and defining transport mitigations to accommodate growth on and near the SRN “Capacity enhancements such as modifications to existing junctions or road widening to facilitate development should be determined on a case-by-case basis. The general principle should be accepted where proposals would include measures to improve community connectivity and public transport accessibility, and this will be weighed against any negative safety, traffic flow, environmental and deliverability considerations, impacts on the permeability and attractiveness of local walking, wheeling and cycling routes, and alternative options to manage down the traffic impact of planned development or improve the local road network as a first preference.” (our emphasis).

However, no material work has been done that seeks to identify if a bold robustly conceived and suitable judiciously-prepared strategy that seeks to consolidate flows on already densely travelled corridor onto improved bus services, driving mode shift through insulating these services preferentially from already serious queuing. This would be likely to have very substantial impacts on all the key junctions on the A27, and potentially, on the A27 itself. The need for an integrated approach between Shoreham and Emsworth within West Sussex paying particular regard to development requirements in both Arun and Chichester Districts naturally lies at the heart of this, and we would expect to be picked up by the LSS3 Review among other things.

However, the locus of the problems and its causes and effects are obviously well enough known to start work on defining solutions within the plan area today. We would expect that this work will be essential if National Highways are to support the Plan, especially now given the terms of Circular 01/2022.

Such work could and should start from a “policy off” position: in other words that the Plan should fully accommodate its needs unless it can be proved that a mitigation strategy for the A27 that is compliant with DfT WMS 01/2022 cannot credibly accommodate resulting capacity demands without unacceptable impacts on the safety and efficient operation of the SRN.

This evidence does not exist. In fact the Chichester Transport Strategy 2023, on which the Council solely relies as its transport evidence base, indicates the opposite at para 5.6.3. This is the case before meaningful measures to secure damping of traffic demands through mode reassignment are even considered.

The exception to this is Portfield and Oving Road, which are among the most problematic areas after mitigation even at the Council’s chosen 535 dwelling/annum scenario (para 5.6.4.-5). The costly capacity mitigation simply cannot deliver enough benefit. It is admitted that WSCC has indicated that it would prefer a solution that places greater reliance on sustainable modes damping car-borne demand. This is entirely the strategy required by NHC to follow LTN 01/22, of course. Despite the fact that “predict and provide has “run out of road” no attempt has been made to examine what such a solution set credibly could look like. This is unsatisfactory and deeply troubling.

At paragraph 5.4 the draft plan points back again at the West Sussex and Greater Brighton Strategic Planning Board and the future work that has been commissioned, but has barely begun, to update the Local Strategic Statement. This work is to inform the preparation of plans that have horizons beyond the end date of the current LSS in 2030 and properly to meet the Duty to Cooperate. As we said in our response to section 1 of the Plan we fully endorse the conclusion that this is the right mechanism to look at these issues. However, the mechanism has not been effectively applied to the production of this plan. Therefore, the specific evidence that capacity on the A27 in and of itself supports accommodating a lower housing requirement does not exist.

The Plan thus does not conform to NPPF, is not adequately justified and is not effective.

The Plan does not properly meet the statutory Duty to Cooperate.

We will return to this matter in specific representations to Section 7 of the draft plan.

## 5.2. Policy H2 Strategic Locations/Allocations 2021-2039

### Stagecoach Supports

Policy H1 makes plain that the plan, as far as it identifies locations for development has done so in locations that conform with its spatial strategy. All of the strategic allocations to a greater or lesser extent offer clear opportunities to make use of sustainable modes, by virtue of their location. That is not to say that the opportunities to take up these opportunities, and maximise the role of sustainable modes, has been identified, defined and translated properly into the rest of the plan policy suite or Infrastructure Delivery Plan.

As our remaining representations make clear, we support the locations thus far identified as being those that offer the best opportunities to reduce the need to travel, reduce travel distances, and create high quality attractive sustainable travel choices, for both existing residents as well as new ones.

However, the transport impacts of the allocation will individually and cumulatively likely lead to increasingly severe impacts on the transport network, and on bus services.

Perversely, because these opportunities are not properly identified and secured through the plan and its supporting transport strategy, the opportunities presented by the allocations to secure a substantially more sustainable and lower carbon pattern of movement will not only risk being squandered but may aggravate the wider problems.

## 5.3. Policy H3 Non-strategic Parish Housing Requirements

### Stagecoach Supports

The approach is consistent with the plan's spatial strategy. It generally avoids a dispersal of development to locations likely to be highly car dependent. There is a clear focus on meeting housing needs in the far north-east of the District at the largest and most sustainable settlements, such as Loxwood, Kirdford and Wisborough Green. However, it must be pointed out that public transport availability in this area, provided by the County Council through services it procures, is minimal. These settlements in practice require each adult and child of secondary school age to have access to motorised transport to fully participate in society. This might justify significant measures to secure a boost in the frequency of bus services between Guildford and Billingshurst, passing through these settlements.

Otherwise, existing commitments in the plan area already make provision to meet for local needs. To the degree that there is an unmet local requirement for affordable housing of a small scale – for example to support the rural economy – this could be met through neighbourhood plans or through Rural Exception Sites.

## 6. Place-making, Health and Wellbeing

### 6.1. Policy P1 Design principles

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

NPPF requires that proposals should consider transport issues from the earliest possible stage. Designing to properly facilitate safe and efficient access, focusing first on sustainable modes, should be at the heart of development design. Too often it is still an afterthought, notwithstanding this.

Policy P1 must include an additional statement to be compliant and effective with NPPF paragraph 104-105 and 112 a): "Development will be designed to make access and movement using walking, cycling and public transport the natural first choice, and demonstrate through the Design and Access Statement how such modes are afforded the most direct, safe, reliable and efficient routes within to and from the proposals, especially when compared with car use."

### 6.2. Policy P4 Layout and Access

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

A number of proposals in the plan involve large-scale development. It is essential that where appropriate buses can access and circulate efficiently through development at a suitably early stage. There is no acknowledgement of this anywhere in the policy, contrary to NPPF paragraph 112.

Large-scale development which buses cannot access in an efficient or timely manner, or at all, strongly contributes to high levels of car-dependency. Evidence for this is referred to among other places, in DfT Circular 01/2022. To be compliant with NPPF and properly pursue its strategic Objectives, Policy P4 needs to be modified to address this point:

"1. Provide safe, direct and attractive conditions for inclusive access, egress and active travel between all locations and providing as good direct high quality links to integrated public transport, and where appropriate efficient access and circulation to bus services, unimpeded by excessive parking, at a suitably early point in the development phasing;

## 7. Transport and Accessibility

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

The issues related to transport are fundamental to the soundness of the Plan. In particular, the constraints presented by the capacity on the A27 around Chichester and its key junctions, are the paramount reasons why the Council does not consider it can meet its objectively-assessed development needs in full. Thus, the transport issues and potential solutions available and what these mean for the ability of development needs to be accommodated, are matters that go to the heart of the soundness of the Plan.

Paragraph 8.3 sets out the approach taken to date succinctly:

"Increasing the capacity of the road network is key to supporting growth in the Local Plan. However, there is also a need to reduce demand for road transport to achieve net zero in greenhouse gas emissions by 2050 as highlighted in the council's Climate Emergency Action Plan and Strategic Objective 1. In aiming to achieve the ambitions of the action plan, all development is expected to demonstrate how it will support four key objectives to create an integrated transport network which will alleviate pressure on the road network, improve highway safety, encourage sustainable travel behaviours and help reduce transport related impact on air quality, by:

1. Avoiding or reducing the need to travel by car;
2. Enabling access to sustainable means of travel, including public transport, walking and cycling;
3. Managing travel demand; and
4. Mitigating the impacts of travel by car."

However, this approach is unambitious and "lightweight" as it assumes, as does the existing Chichester Transport Strategy on which the current adopted plan relies, that the focus of investment should be, wholly, in highways capacity improvement.

Sustainable modes explicitly are expected to play a greater role to "alleviate pressure" on the local road network, as part of this strategy. To emphasise: to avoid exacerbating congestion, the strategy will have to both remove a significant proportion of existing demands from the network on multiple key approaches to Chichester; and then ensure that travel demands from committed and further new development allocated in the plan does not simply replace these journeys, or, worse, create even greater demands.

This will demand very significant behaviour change. Only by making sustainable modes substantially more attractive, both absolutely, and relative to the same journey made by car, can this be expected to occur. However, the explanatory memorandum as well as the wider policy suite and IDP, well expresses a fundamental unwillingness to taking specific, defined measures to achieve this reduction in car use and material promotion of sustainable modes. It makes plain that sustainable modes, including bus services, will offer a lesser role to which "access will be provided".

Such a vague and weakly defined mechanism will have no effect, at all, on current behaviour and car dependency if the relevance of those choices as a credible alternative to car use, is not substantially boosted. This includes a 5% reduction in trip demand assumed by the Traffic Model at the heart of the Chichester Transport Study 2023.

For this reason. the transport strategy behind the current adopted plan is demonstrably ineffective, as the updated model makes plain. It has not yet been delivered and is yet unclear when or (in the absence of committed funding) even if it can be. It is ineffective to "roll forward" this strategy to support a higher level of planned growth.

We note that a scheme for addressing congestion on the A27 at Chichester has been included in Roads Investment Period 3 (2025-2030) – well within the horizon of this Plan. However, recent history provides compelling evidence that off-line improvement to the north is not politically supported and arguably even technically or economically deliverable. It is not funded, nor at this stage can it be hypothesised if an economically deliverable scheme is achievable sufficient to warrant the necessary investment.

An on-line improvement of the A27, including junction improvements, is likely to favour longer distance east-west though movements, which are of greater significance to the national economy, at the expense of local movements crossing the SRN- a conundrum that largely sums up the dilemma that is faced by NHC and the County as Highways and Transport Authority. It is one that is played out in many places, but rarely is the tension so stark as at Chichester.

Every local route crossing the A27 at grade around Chichester accommodates a regular bus service - or shortly will do

(Oving Road area is expected to follow in 2023, though bus services are likely to not use the modified crossroads but to use the left-in-left-out facilities provided as part of the Shopwhyke Lakes development). The impact of these issues on the entire bus operation are serious and increasingly severe.

By the same token, boosting the relevance and reliability of each of these services substantially consolidating as much demand as possible onto a much smaller number of vehicles, is clearly a strategy that ought to support the effective capacity of each of these junctions being greatly augmented, at the same time as reducing equally substantially, the energy- and carbon intensity of mobility in the plan area. Addressing the A27 should not be considered some kind of “zero-sum” game.

Furthermore, the approach of National Highways in its dealings with development and the planning system now reflect a substantial change in Government Policy set out in DfT Circular 01/2022, which we separately cover in these representations, that entirely aligns with an approach that seeks to appropriately invest in more active and rational management of scarce highways capacity, on both the SRN and local roads.

For environmental, economic and social reasons – including public health, the issues presented by the A27 and its interface with local roads around Chichester stands out, nationally, as an example of where the approach taken to accommodating and mitigating development impacts needs to make a clear break with previous “predict and provide” approaches to meet forecast unconstrained car use as LTN 02/2022 makes clear as a principle. Policy in the West Sussex LTP to 2036 itself makes plain that “shared mobility” – including bus services – must play a much greater role in this area.

The existing Chichester Area Transport Strategy is focused on justifying capital contributions from committed development to fund highways capacity improvement – with nothing included to make bus services more attractive, or importantly more reliable. Indeed this “cars first” approach is so costly, that there is already accepted by WSCC to be insufficient land value remaining to be captured to put into substantial improvements for public transport. That much is very evident, and transparent, from paragraph 8.12 and 8.14, where south of Chichester “This (one) package of works (of several improvements needed) would be between £57.23 and £82.79 million to deliver in full and would not be capable of being funded by development contributions alone.” This assumes the scheme is otherwise deliverable, which on the evidence in the public domain for some time, has been considered challengeable.

The draft Local Plan and a modestly updated infrastructure package that flows from the 2023 Chichester Transport Study, pursues exactly the same approach.

This strategy is also even more ineffective having regard to the roll forward of the Plan to 2039. It cannot deliver the key Strategic Objectives of the Plan; and in particular this is explicitly recognised by the Council in the failure of the draft Plan to accommodate the OAN in full.

It is also obsolete, as it does not align, from first principles, with national policy (including the National Decarbonisation Strategy for Transport) and DfT Circular 01/22; nor the Council’s own declared Climate Emergency.

As a result, draft Policies T1 and T2 are both unsound, as we will separately explain.

Owing to the lack of evidence about the implications of this for adjoining authorities – especially Adur District – in the absence of the review of the Local Strategic Statement – this has implications for fulfilling the Statutory Duty to Co-operate.

The absence of any meaningfully comprehensive refresh of the transport evidence base means that there are no meaningful schemes of any kind, defined in the plan or its IDP, to indicate either what level of growth can be accommodated, by delivering a change in travel behaviour. This would be aimed to secure a sufficient effective increase in junction throughput (measured in terms of person trips as opposed to passenger car unit movements (PCUs)). Such evidence would propose measure to achieve that outcome and assess the efficacy and costs of such improvements, across all modes.

Paragraphs 8.10-8.13 inclusive indicate that the Council “has moved away from ‘predict and provide’” and invites the reader to conclude this has translated into a programme of interventions that can be funded to deliver specific, credibly predictable outcomes. Such a programme should be clear in paragraph 8.11. and the IDP. There is no such clarity and this conclusion would be false.

It would also be evident in the language of the Chichester Transport Study 2023 and its refreshed proposals. Only the most token of lip service is paid to the matter. It is a plainly car-focused, predict and provide methodology to support a “predict and provide” strategy. In fact, it is a brazenly car-focused approach, to the exclusion of all else.

The statements in the Plan regarding any other approach, read properly, offer nothing more than a vague commitment to look post-adoption, and implementation, at unspecified measures, based on problems that may arise in future that will be decided by a committee: the Traffic and Infrastructure Management Group (TIMG). This does not yet exist and is obviously an attempt to posit a mechanism that retroactively will cover for the lack of serious multi-party engagement to address the existing and future issues. Such a group should, in our view, also include the public transport operators, not

least if the requirements of NPPF Para 106c) are to be satisfied, and the strategy and measures to be adopted are material to supporting the Local Plan, as of course the purpose of the TIMG has as its core raison d'être.

The approach proposed by the draft plan is plainly ineffective and unsound in justifying the draft Plan.

It is more widely unacceptable to Stagecoach. The issues are severe today and well-known, already serving to jeopardise the delivery of buses relied on by existing residents, much less attract new ones.

We also consider that HM Planning Inspectorate are likely to be quite resistant to accepting this aspect of the plan's transport strategy, nor will it be appropriate for the Council, West Sussex County Council, or National Highways, to define such measures after the submission of the Plan during the Examination process. The Examination in Public of a local plan has no purpose to improve plans, or remedy deficiencies clearly evident prior to submission.

The examination of the West of England Joint Strategic Plan in 2019, and the Uttlesford Local Plan in 2021, among several others, demonstrates especially clearly that the Planning System and the Examination process is not amenable to post-hoc retrofitting of transport evidence and strategies to support a development strategy.

#### 7.1. Transport Evidence Base

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Most of Stagecoach's serious concerns about the soundness of the plan arise from the fact that it has been prepared in advance of any up-to-date transport evidence and suitably robust transport mitigation strategy being advanced to support it. In essence, the Council has rolled forward the existing plan by 9 years, adding some additional sources of housing supply, while still relying implicitly on a transport evidence base that was prepared 10 years ago.

This led to the formulation at that time of what can only be described as an attempt to develop an effective car-based mitigation strategy, creating capacity for general traffic added to accommodate unconstrained additional demands on an already over-taxed highways network – the Chichester Area Transport Strategy. Despite language in support of sustainable modes, no deliverable measures were identified to support either the extension of the bus network to serve allocated sites, and much less to create a vital improvement to the quality and reliability of public transport services. This approach reflected the approach set out in DfT Ministerial Circular 02/2013 "Development and the Strategic Highways Network", applicable since the A27, which is the focus of the most severe difficulties, forms part of the national Strategic Roads Network.

This approach has proven ineffective even before substantial elements of housing land supply in the current plan come forward – in particular West of Chichester and West of Tangmere.

In addition, Circular 02/2013 has now been replaced by a new Ministerial Statement of 23/12/2022, DfT Circular 01/2022.

On both counts the transport evidence base and strategy needs to be properly revisited and established to provide effective mitigation for the plan, including current commitments that are being rolled forward.

The language of the current Ministerial Circular 01/2022 offers a highly condensed synoptic view of the proper approach to addressing transport matters in the planning system notwithstanding that it is directly concerned with the Strategic Roads Network. Videlicet:

"31. The NPPF expects local plans and spatial development strategies to be underpinned by a clear and transparent evidence base which informs the authority's preferred approach to land use and strategic transport options, and the formulation of policies and allocations that will be subject to public consultation. The company will expect this process to explore all options to reduce a reliance on the SRN for local journeys including a reduction in the need to travel and integrating land use considerations with the need to maximise opportunities for walking, wheeling, cycling, public transport and shared travel.

32. The Transport Decarbonisation Plan indicates that carbon emissions from car and van use is the largest component of the United Kingdom's total transport emissions. While action is being taken to decarbonise transport such that all new cars and vans will be fully zero emission at the tailpipe from 2035, the proposed location of growth in current plan periods and whether new developments would be genuinely sustainable remain important factors in demonstrating that a local authority area is on a pathway to net zero by 2050 and therefore compliant with the requirements of the Climate Change Act 2008.

33. Alongside this, the local authority should identify the key issues within their study area regarding transport provision and accessibility, setting out how the plan or strategy can address these key issues in consultation with (National Highways, and other transport stakeholders identified in NPPF paragraph 106b). It is the responsibility of the local

authority undertaking its strategic policy-making function to present a robust transport evidence base in support of its plan or strategy. The company can review measures that would help to avoid or significantly reduce the need for additional infrastructure on the SRN where development can be delivered through identified improvements to the local transport network, to include infrastructure that promotes walking, wheeling, cycling, public transport and shared travel. A robust evidence base will be required, including demand forecasting models, which inform analysis of alternatives by accounting for the effects of possible mitigation scenarios that shift demand into less carbon-intensive forms of travel.” (our emphasis)

Within the text quoted above, references to National Highways and “the Company” can quite legitimately be extended, given the statements in NPPF paragraph 16, 25, 26 and 106b, to include all the relevant transport infrastructure and service providers in the plan area. Circular 01/2022 also has the weight of secondary legislation as a Written Ministerial Statement and thus should be considered to be highly material.

To date there has been little attempt to explore, to the degree necessary, strategies that conform to Circular 01/2022. It is thus not possible to conclude, as the Council has done, that the issues on the A27 that present a constraint to development, are insuperable.

In line with comments made elsewhere in the response to this pre-submission draft, the Plan thus requires substantial further work to be undertaken with key stakeholders to establish a suitably effective and demonstrably deliverable transport mitigation strategy, to sustainably meet the District’s identifiable development needs and where apparent and appropriate, also ensure that wider cross boundary strategic issues are appropriately addressed, in conformity inter alia, with the Duty to Cooperate, NPPF paragraph 16 and 104-111 inclusive, and DfT Circular 01/2022 and to ensure the Plan’s own Strategic Objectives can be met.

## 7.2. Policy T1 Transport infrastructure

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

As described in comments elsewhere, Stagecoach does not see that a suitable proportionate and up-to-date basis exists to properly and appropriately address the transport issues in the plan area.

The 2023 Transport Study does not perform this role adequately but, contrary to the explanatory memorandum, is a scheme intended only to facilitate car-borne movements through some of the key junctions. There is no evidence that an holistic integrated and strategic approach to transport mitigations has been prepared. Certainly Stagecoach has not been involved in any of the discussion about appropriate transport measures in support of the plan, including the Transport Study 2023, contrary to the expectations set out in NPPF at paragraph 16 and 106.

Notwithstanding out fundamental concerns about the transport evidence case and mitigations strategy, Policy T1 reflects a weak and ineffective approach, that seeks to try and define a strategy post-adoption.

Contrary even to the explanatory memorandum for the policy, which seeks to maximise the contribution of sustainable modes, the policy is phased in such a way that it gives basis for previous “predict and provide” solutions to facilitate and support current levels of car dependency – already shown to be undeliverable and unaffordable – will nevertheless be the first rather than the last resort. There is no commitment to seek to maximise the contribution made by sustainable modes to meeting mobility needs. Nor is there any recognition that current chronic congestion and lack of network resilience jeopardises the ongoing attractiveness and long-term sustainability of the current public transport offer.

To be effective and create alignment with national policy, and also provide for an up-to-date transport evidence base and strategy to be adduced, Policy T1 should be modified to read:

“Integrated transport measures will be developed to mitigate the impact of planned development on the highways network, improve highway safety and air quality, promote more sustainable travel patterns and through providing in the first instance, new and improved infrastructure and services that will be credible effective in maximising the encourage increased use of sustainable modes of travel, such as public transport, cycling and walking.

To achieve this, the council will work with National Highways, West Sussex County Council, other transport and service providers (including through the Traffic and Infrastructure Management Group) and developers to provide a better integrated transport network and to improve accessibility to key services and facilities...

All parties, including applicants, are expected to support these objectives by:

1. Ensuring that new development is well located and designed to avoid or minimise the need for travel, encourages maximises the use of sustainable modes of travel as an a credible alternative to the private car and directly provides or contributes towards new or improved transport infrastructure;

2. Working with relevant transport infrastructure and service providers to improve accessibility to key services and facilities with primary emphasis on sustainable modes, and to ensure that new facilities are easily accessible by sustainable modes of travel;
3. Targeting investment to provide local travel options as an that represent a clearly credible alternative to the car use, focusing on the delivery of improved integrated bus and train services, and improved pedestrian and cycling networks, including the public rights of way network, based on the routes and projects identified in the Local Transport Plan, West Sussex Bus Service Improvement Plan, Local Cycling and Walking Infrastructure Plan (LCWIP) and the Infrastructure Delivery Plan;
4. Planning to achieve the timely delivery of transport infrastructure on and approaching the A27 and elsewhere on the network, needed to support new housing, employment and other development identified in this plan;
5. Phasing the delivery of new development to align with and where possible facilitate the provision of new and improved transport infrastructure and services and the outcomes of monitoring travel demand on the network, including that arising from areas immediately adjoining the plan area. It may also be Where necessary to achieve this alignment proactively phase development will be phased to take into account the monitoring and effectiveness of travel plans demands on the network and to ensure that measures are implemented to support the highest possible level of encourage sustainable travel behaviour.;
6. Using demand management measures, such as travel plans, to manage robust methodologies to assess travel demand and minimise the need for new or improved transport infrastructure as part of the monitor and manage process.
7. Delivering a coordinated package of infrastructure improvements at and approaching to junctions on the A27 Chichester Bypass along with other small-scale junction improvements interventions within the city and elsewhere, as identified through the monitor and manage process. These will increase road capacity, reduce traffic congestion, improve safety and air quality, and improve access to Chichester city from surrounding areas, first by maximising the contribution of sustainable modes to meeting mobility demands, then, and only as evidenced by robust modelling and option testing, providing increased highway capacity for general traffic.

..."

### 7.3. Policy T2 Transport and Development

Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Section 1 b) of T2 will be ineffective as, absent measures to ensure buses can run reliably and efficiently, improved bus services will not be possible, in support of the plan's own stated broad approach to transport mitigation, as well as wider local and national policy.

The draft policy does not require improvements to the quality of services such that sustainable choices will be materially more attractive than car use for many local journeys. Without this the Plan's Strategic Objectives cannot be fulfilled and the objectives of the Plan and this policy, read in its own terms, will not be realised, where reduction in private car use is concerned. It is thus ineffective.

Absent measures to make bus services more reliable and more efficient, by insulating them from chronic congestion as far as possible, still further operating resource and therefore costs, will be needed to just to reliably run existing service frequencies, and capacity, as vehicle productivity continues to be more and more adversely affected by chronic delay. This will be further aggravated by increasing incidence of severe unpredictable service breakdown arising from incidents of diverse kinds on the network, especially on or around the A27, including that arising from more regular severe weather events. Longer journey times can only be expected to lead to relative disadvantage of bus services compared to personal car use, entirely contrary to the objectives of national and local policy, including Policy T1. It can also expect to lead to a dampening effect not on car use, but on bus patronage, threatening the ongoing viability of bus services across the plan area.

Section 1 b) of T2 should be modified to read:

"b) Maximise opportunities for the use of sustainable travel modes through provision of direct and efficient access both to either the existing networks or and through providing such new infrastructure or public transport services, as can be credibly expected to reduce reliance on the private car and work towards achieving net zero in greenhouse gas emissions by 2050;"

Section 1 d) of T2 will be ineffective as the location of development is fixed by this plan. We commend the fact that all the strategic allocations are or will be served by regular bus services.

However, the use of public transport services, where available, depends on the relevance and reliability of these services. Furthermore, provision of services without them generating sufficient patronage to support their long-term operation also threatens the sustainability of the plan and its supporting transport strategy. This is especially true of new services such

as those intended to serve West of Chichester and Tangmere and East of Chichester Strategic Allocations.

This can only be assured by the plan being supported by specific measures to ensure buses can operate efficiently and reliably on the existing and projected services intended to serve the developments concerned, and also at the same time secure behavioural change from existing development.

To be sound and effective, the policy T2 1 d.) should be changed to read:

“d) Ensure major development is located to proposals and the supporting mitigation measures enable the use delivery of high-quality, reliable and effective public transport to present the most relevant possible choice to access local services and facilities including employment, leisure and education facilities”;

The Policy T2 makes no provision for buses, where necessary, to enter and make efficient and safe progress through major development sites. The plan is thus out of conformity with NPPF paragraphs 104-106. It makes no provision to ensure that penetration of bus services is achieved at a suitably early point in the development trajectory, undermining the achievement of the goals of the Plan and this specific policy. As a good example, West of Chichester Phase 1, currently under construction, cannot be served by buses as a strategy to effect interim bus penetration was never made.

Policy T2 1 f.) should therefore be amended to read:

f) Ensure that the layout and design of the site development proposals provides effective penetration of the site by sustainable modes, at all points in the development build-out, including public transport where appropriate; and sufficient space for all vehicles to manoeuvre without compromising the safety of pedestrians and cyclists, the efficiency of bus services, or the ability to provide an appropriate level of landscaping across the site”

Policy T2 3.) regarding Travel Planning depends entirely on its effectiveness on the quality and relative attractiveness of sustainable alternatives over car use. In the absence of efficient frequent, reliable and direct public transport services (or similarly, high quality facilities for active travel, Travel Plans will continue to be the entirely ineffective “tick box” exercises that they generally are today, evidenced by much lower levels of public transport use in most new developments than it seen in nearby established neighbourhoods, as demonstrated broadly by Census data in 2011, 2011 and 2021.

For this policy to be effective an up-to date transport evidence base and strategy, underpinning a series of specified interventions to promote the relevance and effectiveness of all sustainable does including public transport in particular, needs to be put in place.

#### 8. Chapter 9 Infrastructure – Policy I1 Infrastructure provision

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Policy I1 could not expect to be effective without a clear understanding of the effectiveness and costs of a defined series of measures that are laid out in this Plan and its IDP, to mitigate the transport impacts of the development strategy.

Where the Chichester Transport Study is concerned the only meaningful work has focused on the definition and delivery of a range of highways capacity schemes mainly on the A27 around Chichester.

As we have discussed elsewhere the effectiveness of these schemes is insufficient as set out at Tables 8.1 and 8.2 of the Chichester Transport Study 2023. The plan itself admits that the deliverability of this package cannot be afforded by developer contributions alone.

The Chichester Transport Study 2023 does not attempt provide a realistic assessment of costs to deliver these schemes, despite the fact that they have been under evaluation for many years. Nor does it offer any assurance that the schemes are technically achievable. Rather, it states the opposite:

“9.2.3 No investigation has been carried out into specific land ownership details, or into the location details or cost of moving statutory undertakers and utility apparatus within the areas of the scheme. No design assessments were carried out at this stage to ascertain the deliverability of the proposals except where any Health and Safety concerns were raised.”

Thus on the grounds of effectiveness, deliverability and affordability, the measures on which the Plan relies must at the very least be considered to involve an exceptionally high level of risk. Since Policy I1 is founded on these assumptions, it cannot be considered effective.

As we set out elsewhere, the Plan has been advanced on the basis that if any additional sustainable transport measures are required, these mitigations should be retroactively considered and defined after adoption of the Plan. In the light of the doubts that are apparent of both the deliverability, affordability and effectiveness of the Chichester Transport strategy this is especially unsatisfactory even if existing baseline conditions were reasonably acceptable.

However, the Chichester Transport Study 2023, as did its predecessors, makes plain that that existing problems are acute, and can rightly be considered “severe” in the sense of NPPF paragraph 111. Waiting to define deliverable affordable alternatives is an entirely inappropriate approach to the local plan transport mitigation strategy. Such an approach also makes it impossible to consider prior to adoption how far the transport impacts of the plan can be cost-effectively mitigated by alternative means, or whether they are deliverable having regard to technical achievability, land control, development viability, or any combination of the above. Thus, the plan cannot be considered justified, or effective.

Given the mutual dependence of development strategies in Chichester and Arun in particular on these measures this should be seen as crucial of the fulfilment of the Duty to Cooperate.

The remedy for this is ultimately to put in place a suitable transport mitigation strategy following a strategic appraisal of options through review of the LSS. This then must be supplemented by more detailed development specific and localised scheme definition, including, where necessary, bus priority and other measures to support the substantial promotion of the attractiveness of public transport in key bus corridors over private car use. This would then be reflected by costed proposals in the IDP.

Leaving these fundamental weaknesses to one side, even if such a strategy and mitigation package were defined, there is no mention of public transport in the policy even though it is clearly a key part of the policy environment and mitigation strategy for the plan as expressed in the explanatory memorandum for I1, but also at Policies T1 and T2. I1 thus does not effectively support the realisation of the intent of Policies T1 and T2.

Policy I1 iii) should therefore be modified to read:

“(iii) Safeguard the requirements of infrastructure providers, having regard to requirements within and where appropriate across the boundaries of the plan area, including but not limited to:

...

- Highways including specific measures to accommodate improved active travel and public transport level of service and cycle lanes, and...”

At limb v) the Policy expects developers to meet the “in perpetuity costs of operating and maintaining infrastructure”. This shackles development management decisions to developers assuming what are infinite costs – given that “in perpetuity”, read properly, can only mean “without any limit in time”. This means that it is impossible to meet the statutory tests on developer obligations set out in the Community Infrastructure Levy Regulations 2010 (as amended) at Regulation 122, also repeated in NPPF. This policy cannot be lawfully implemented and it is thus ineffective.

In the absence of an up-to-date transport mitigation strategy that is fit for purpose, at the point the Plan is examined these costs of any additional infrastructure are not known in any case. The strategy and its costs, including its affordability and deliverability, are crucial to assessing if the Plan is sound.

Subject to an appropriate defined transport mitigation strategy being arrived at, to be sound, the Policy I1 v) should be modified as follows:

(v) To consider and meet as appropriate the in-perpetuity delivery costs of infrastructure and, where appropriate, improved services, to the point where its long-term operational sustainability is credibly assured from mainstream sources. Where adoption is not envisaged by local authorities, that must include arrangements for its future ongoing management and maintenance;

## 9. Strategic and Area Based Policies

### 9.1. Policy A1 City Centre Development Principles

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Chichester City centre is rightly identified at 10.2 and 10.4 as the commercial and service hub of the District. It is also acknowledged to be the most accessible place in the District by sustainable modes, public transport in particular.

Boosting the vitality of the city centre is something that Stagecoach strongly supports. Irrespective, the enhancement of the commercial and cultural life of the District in the place where these opportunities can be accessed broadly by sustainable modes, is one that has long been at the heart of national planning policy for town centres, reflected in the “town centre first” approach to locating major trip generating uses.

Paragraph 10.5 exposes an unbalanced and unsound preoccupation with aesthetic matters in its approach to the town centre, and far too little to ensuring that the central place function is enhanced through protecting and enhancing the

quality of public transport access.

The city is relatively small but at the heart of an extensive hinterland, and thus the role of bus in supporting sustainable access to and enhanced city centre venue is one that needs appropriate recognition and emphasis. It is important to note that a dominant number of key service and facilities such as the General Hospital are relatively close to the city centre. This directly contributes to driving travel demand into the city, causing congestion. Most importantly, it also makes the task of mitigation simpler, given the impact a suite of active and sustainable measures can have within the same close proximity.

Policy A1 does not provide this. As such, achieving the strategic objectives of the plan is seriously threatened, and the plan is thus not effective.

The Plan needs to ensure that the approach to city centre regeneration maintains and enhances public transport access, interchange and inter-modal connectivity. It also needs to ensure that bus service stopping and interchange facilities are able to address increases in future demand, anticipated by the clear intent expressed elsewhere in the Plan that public transport should be meeting a greater proportion of mobility needs, in a growing district. Achieving this demands an ambitious approach to the location, quality and capacity of bus stop and interchange.

We have been in discussions with the District Council about this, alongside West Sussex County Council, for a very considerable period. Stagecoach has always been keen to help facilitate the Council's aspirations for the city centre, and we continue to hold this intention. However, this cannot be at the expense of a material diminishing of the convenience and fitness-for-purpose of bus stop infrastructure and interchange. Stagecoach has significant concerns that current proposals to remove the bus station and have all bus services operate from the street kerbside, on an inner distributor road with similar or reduced net stop capacity, fall short of promoting attractive, convenient bus access to the central area as a destination.

For the longer term and where the objectives of the draft plan are concerned looking ahead to 2039, they clearly fall short of enhancing the convenience and attractiveness of public transport use. Much less do they make sufficient provision for a material increase in bus frequency, connectivity, and interchange convenience, on which the draft plan explicitly relies. It is vital that the District Council is clear in policy about its objectives for public transport in the city centre. These objectives must also carry sufficient weight when held in tension with other aspirations for the centre and the constraints on achieving them.

For the Plan to be sound, properly effective and compliant with NPPF, the approach to the City centre cannot ignore its role in the provision of sustainable transport service and connectivity.

Policy A1 should therefore be modified to properly reflect this crucial function, on which the vitality of the city centre must increasingly depend if unacceptable impacts on congestion, air quality and amenity are not to arise. This is still more crucial if wider aspirations to secure a more sustainable society and mitigate carbon are to be achieved.

"...This will include provision for development and proposals that:

- Support and strengthen the vitality and viability of the city centre and its role as a shopping/visitor destination, employment centre, public transport hub and a place to live;
- Support and promote facilitate improved access to the city and with increased emphasis on sustainable modes of travel, with particular regard to enhancing the public transport interchange role of the city centre area, in accordance with the transport strategy for the city and..."

9.2. Policy A3 Southern Gateway Development principles Chichester Bus Station, Bus Depot and Basin Road Car Park Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

There has been aspiration to redevelop the bus station and nearby bus depot from many years. Stagecoach has been engaged with detailed discussion with the District Council on this matter over a very extended period. We confirm that these discussions have reached a relatively mature stage, however at the time of writing are not concluded.

Stagecoach recognises and supports in principle the Council's wider aspirations for the "Southern Gateway", and this has governed our approach to the Council to date. We continue to have no "in principle" objection to relocating our administrative, engineering, operational and customer service facilities.

Leaving our proprietary interests entirely to one side, it remains vital that in so doing, the effectiveness, attractiveness and convenience of these facilities is not compromised, as we have outlined in our representations to Policy A1, if wider national and local transport policy, and the local plan strategy itself, are to be effectively achieved.

The depot is crucial infrastructure to support the safe, reliable and legally-compliant operation of Stagecoach bus services over a very extensive area covering the entirety of the District and beyond. Without securing equivalent facilities, that are fit-for-purpose, many of our services would have to cease.

If buses are to provide a greater and more attractive level of service (still more so if they are to be electrified) larger, more capable depot facilities, and city centre bus interchange facilities will be necessary.

Notwithstanding that the bus station and depot sites are leased from the District Council, these leases terminate well beyond the end of the plan period.

Finding suitable sites for a replacement bus depot in Chichester, in common with all similar localities especially in southern England, is extremely challenging. As a sui generis use, bus depots do not automatically benefit from policy support on land allocated for employment uses. Most bus depots benefit from being legacy assets established under very different economic conditions. That is the case here. The value of a depot site for redevelopment net of demolition and remediation costs, rarely approximates to that able to sustain the acquisition of land in a tight wider employment land market, and the construction of suitable new facilities.

Furthermore, the costs of operating bus services are sensitive to the parasitic costs of vehicle and staff hours and mileage associated with "dead running" to a remote depot location from the operational network. Here, the existing depot site is ideal, and any replacement will unavoidable add ongoing operational costs to the operation that cannot be directly recovered.

We confirm that a replacement depot site has been identified and has in principle been agreed, subject to overcoming issues with the disposition of existing and future structures on the site. However, the site is recognised as not capable of accommodating meaningful operational expansion. This is just one of the most important foundational reasons why a positive transformation of bus productivity needs to be achieved, across the plan area and beyond, to support delivery of greater bus mileage and frequencies with the same level of operational resource. At the time of writing, we are not fully convinced that the proposals for the relocation will be sufficiently fit-for-purpose in the event the above is not achieved. Thus, we must raise a concern that the bus depot site might not be available during the plan period. While there is a strong probability it will be, the certainty surrounding the availability of the site, especially within the first 5 years of the plan, needs to be made transparent.

9.3. Policy A4 Southern Gateway - Chichester Bus Station, Bus Depot and Basin Road Car Park  
Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Regarding the removal of the bus station, without equivalent replacement, Stagecoach has significant concerns. Pressures and conflicts at the current bus station site have been gradually rising for several years, arising from increasing use and the need for additional scheduled vehicle layover periods to reduce the risks of accumulated late running from traffic congestion. Peak passenger volumes have recovered strongly on several routes, however passenger accumulations resulting from more frequent delays and disruption have added substantial further pressure on limited space.

Under current plans, buses and bus passengers will be displaced to bus stops at new locations outside the city centre, along Avenue de Chartres. This road was always intended to be a relatively high-speed traffic route, outside the historic core of the city. The city centre has evolved in the subsequent years to reinforce already strong natural severance, with the highway lying beyond the city walls and the green space along the Lavant. It is a traffic dominated, unsurveyed and unattractive environment, reflecting the intended function of the road as an efficient movement corridor for high traffic volume, and nothing more. Avenue de Chartres is relatively close to the rail station and pedestrian connectivity can be provided at broadly equivalent distance to the current bus station, but again it is unsurveyed and currently unpleasant, lacking natural legibility or any sense of prominence.

We understand kerbside capacity on Avenue de Chartres will be strained even to accommodate current levels of service, with no expansion possible. There is therefore a strong probability that to accommodate more frequencies and key new routes, such as West of Tangmere, East of Chichester and West of Chichester allocations, additional future bus stops must occupy a different location. This makes interchange between routes and rail services substantially challenging and less attractive.

The emerging arrangements risk marginalising public transport and public transport users substantially. This strongly undermines achievement of the wider plan objectives and delivery of a significantly greater role for public transport. If substantial public transport growth is to be accommodated in a growing city and hinterland, as the draft plan anticipates, then a more ambitious strategic approach must be taken. This should plan for additional and improved facilities to accommodate all services predicted to be required, whilst enhancing the passenger experience to ensure meaningful and attractive modal choice.

There is therefore a need for the plan to evidence how these issues will be appropriately resolved, having regard to a suitably ambitious approach that properly supports clear objectives to boost the relevance of public transport. The current policy is weak, unspecific and indifferent to achieving the strategic objectives of the plan, including a transport strategy in support of the plan, and as such it is ineffective.

Policy A3 should therefore be modified to read:

- “ ...
- Be designed to encourage and facilitate substantial increase in the use of active travel and public transport to, from and through the city centre.
- ...”

In line with the commentary above Policy A4 should also be modified to read:

3. Enhance the public interchange function of the immediate area, the public realm, particularly connections to the railway station and the city centre via South Street, Southgate and Basin Road for pedestrians, cyclists and public transport users, and to National Cycle Route 2 and Route 88 which run close by. Suitable replacement bus stops and layover facilities should be provided to replace those at the bus station in line with reflecting the objectives of the West Sussex Bus Service Improvement Plan, and to facilitate growth to meet the requirements of the plan’s development strategy. Routes and crossings should reflect pedestrian desire lines, and public art should be incorporated to create a sense of place;

4. Enhance the public realm, in support of this and wider objectives, incorporating public art and other measures to create a strong and attractive sense of place.

...(renumber remaining points)

#### 9.4. Policy A6 Land West of Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

This is an existing Local Plan allocation. The public transport strategy for the site depends on the delivery of the second phase which Stagecoach notes is the subject of several applications now awaiting review and determination by the Council.

The site represents a compact form of development adjoining the city, as the most sustainable settlement, meeting housing needs close to where they arise, and affording very good opportunities for the use of sustainable modes, especially walking and cycling.

It is vital that a bus service is delivered to serve the site at the earliest potential. This was anticipated to be at the start of Phase 2 and will require the early delivery of the entire length of the spine road between the Old Broyle Road and Westgate and making it available for bus services.

It is not clear if the costs of pump-priming the service mentioned in the draft policy are anticipated to be met by the developer. Without such funding, the service will not be deliverable as years of losses will never credibly be covered from future profit. It is likely that the current wording will be interpreted by the developer as meaning that they have no such obligation binding upon them. Not does policy set out any specification for this service, thus its costs and the basis for securing developer contributions does not exist.

As such any wider transport strategy, that seeks to secure a greater role for the use of public transport, and the aspiration for this allocation cannot demonstrably be met. The policy is ineffective.

Policy A6 should be modified to read:

- “ ...
10. Make provision to accommodate and secure delivery of for regular bus services linking running through the site to Chichester city centre operating at least every 30 minutes Monday-Saturday, and new and improved cycle and pedestrian routes linking the site with the city,
- ...”

#### 9.5. Policy A7 Land at Shopwhyke

Stagecoach Supports

This is an existing Local Plan allocation, largely built-out, that benefits from an existing set of permissions.

The public transport strategy for the site depends on the delivery of effective bus priority at Oving Crossroads. The current recently implemented scheme, undertaken by National Highways, makes no provision for effective bus priority and needs considerable re-evaluation.

The site represents a compact form of development adjoining the city, as the most sustainable settlement, meeting housing needs close to where they arise, and affording very good opportunities for the use of sustainable modes, especially walking and cycling. It lies on a new bus corridor that will shortly be put in place, running to Tangmere via Shopwhyke. The allocation is being significantly consolidated by further development in the immediate vicinity which strongly supports the potential for this new service.

As we explain in our representations for East of Chichester proposed allocation A8, and West of Tangmere Allocation A14, a clear corridor strategy to effect bus priority is needed, that should be delivered in support of that further growth, and that at Tangmere SDL. However this allocation is a near complete commitment and there is no scope through policy regarding this land to effect this outcome.

It is notable that Point 6) of policy A7 makes mention of a bus service. This language reflects the currently adopted Local Plan policy and has underpinned the existing permissions. The failure of any bus service to be delivered demonstrates from first principles that this Policy has been entirely ineffective. It is important that lessons are learned from this in the Local Plan Review.

#### 9.6. Policy A8 Land East of Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This proposed allocation lies next to unallocated land that is already consented as a departure from the adopted development plan, with 143 units near completion south of Oving Road (20/02471/FUL). Additional land, also unallocated but similarly consented, has now commenced north of Oving Road (88 units under 21/02197/FUL). This and the allocation site consolidates earlier development at Shopwhyke brought forward under the current Local Plan, and allocated again as draft policy A7.

Development at Shopwhyke was brought forward on the basis of a premise that the developer would provide or somehow arrange a bus service, that was reflected in the policies of the current Local Plan. This was secured by an unenforceable condition. No bus service has been provided, as there was inadequate clarity regarding the basis on which the costs of establishing such a service would be met by the developer, and the expectations of policy on the developer. The site does however lie on a logical new bus corridor between Chichester and West of Tangmere along the Oving Road.

In addition, an expectation that modifications to the Oving Crossroads would effect bus advantage have proven false – the arrangements put buses into a similar or longer queue than if they use the route available to general traffic to and from the A27.

Stagecoach strongly supports the principle of bringing this land forward. However, the soundness of the site depends on deliverability of a regular, reliable and direct bus service along the Oving Road, taking advantage of effective bus priority.

Given the failure of existing policy in the adopted Local Plan covering the proposed A7 allocation to deliver a bus service, it is of great concern that there is no draft policy to adequately address the issue. The policy is out of conformity with NPPF paragraph 104-105 in that sustainable modes do not offer realistic choices, much less an attractive one, and as such also does not secure the objectives of national policy nor of the plan itself.

Currently the proposed allocation is not served at all by public transport. Policy needs to ensure there is a policy basis to secure contributions to deliver such a service, which may well take the form of a proportionate contribution to deliver a new service or enhance provision that is put in place between Chichester along the Shopwhyke Road to west of Tangmere.

To become sound Policy A8 must be modified to read:

“ ...  
 12. Provide for improved high quality connectivity by sustainable travel modes and focused in particular on a corridor between Chichester city centre and Tangmere along Shopwhyke Road, including new improved cycle and pedestrian routes, and a frequent bus service including linkages with Chichester taking advantage of effective bus priority measures on Oving Road at the A27;  
 ... ”

#### 9.7. Policy A9 Land at Westhampnett/North East Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This land is already allocated and consented as part of the existing 2016 Local Plan. All reserved matters are determined.

The site lies on service 55 between Chichester, Westhampnett and Tangmere. This established service benefits from additional demand from the development at Phase 1. Phase 2 which is currently well underway, does not benefit directly from bus services. However it is a compact and logical form of development where walking and cycling to local facilities and employment is a credible option.

The existing allocation rolls forward policies in the 2015 Local Plan. In so doing it is possible to see which have been

effective.

Point 9. regarding bus service and routing has not been effective. In particular the potential for a bus only link between the site and Graylingwell has not been established as policy anticipated. Given congestion around the Portfield area acutely affects public transport this, or alternative methods to secure bus priority over private car use, a clear and unequivocal policy steer is required.

The lack of an up-to-date transport evidence base is ultimately at the root of these issues. Arguably the policy and allocation can only be made sound once this refreshed evidence base in place.

However, it is possible that the allocation could be made sound by modification of Policy A9 as follows:

"...

9. Make provision for regular, direct and reliable bus services linking the site with Chichester city centre, and new and improved safe and convenient cycle and pedestrian routes linking the site with Chichester city, the South Downs National Park and other strategic developments to the east of Chichester city including Tangmere. These objectives could include exploring the potential for a bus only route require a deliverable scheme to afford bus priority through Portfield, and potentially linking the development with the Graylingwell area through use of a modal filter;

..."

#### 9.8. Policy A10 Land at Maudlin Farm

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing public transport route. It is relatively close to the city and very near substantial centres of employment and services that can be reached by active travel modes, helping damp the demand for car use. It is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services at Portfield and over a wider area. In fact, the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A10 should accordingly be modified to read:

"...

5. Provide safe and suitable access points for all users, including a main vehicle access from Old Arundel Road and, subject to further assessment, a secondary vehicle access from Dairy Lane. The development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis o maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes;

..."

#### 9.9. Policy A11 Bosham – Land at Highgrove Farm

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Bosham Station. It is relatively close to the city and very near substantial centres of employment and services that can be reached by public transport and cycling, offering strong potential to materially damp the demand for car use.

There are serious risks that development in the A259 corridor west of Chichester could place further demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular to bus services.

Nevertheless, given the potential to effect bus priority on the approaches to Fishbourne Roundabout, it is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be

required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A11 should accordingly be modified to read:

" ...

8. Provide safe and suitable access points for all users, including a main vehicle access from the A259. The development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys crossing the A27 at Fishbourne;

9.10. Policy A12 Chidham and Hambrook

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Nutbourne Station. Substantial centres of employment and services that can be reached by public transport and cycling, offering strong potential to materially damp the demand for car use.

There are serious risks that development in the A259 corridor west of Chichester could place further demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular to bus services.

Nevertheless, given the potential to effect bus priority on the approaches to Fishbourne Roundabout, it is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A12 should accordingly be modified to read:

" ...

7. Development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys along the A259, crossing the A27 at Fishbourne and where necessary on the approaches to Emsworth;

8. Facilitate improved sustainable travel modes, and new improved cycle and pedestrian routes, including linkages with Chichester city and settlement along the East/West Corridor;

9.11. Policy A13 Southbourne Broad Location for Development

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach agrees unequivocally that Southbourne is a location that could accommodate growth on a strategic scale. It has a substantial range of service available within the settlement, including secondary education. It is well connected by bus and rail service to key destinations, including Chichester, lying to the east and west.

This is one of the few locations identified for growth that represents substantial additional development in a new location to the strategy in the existing Local Plan adopted in 2015. Thus, the transport impacts of development on the substantial scale envisaged at Southbourne are not covered or accommodated by the Chichester Area Transport Strategy that lies behind the existing plan. This demands, from first principles, that substantial further transport mitigation measures are required.

We recognise and endorse fully that the intent of the draft plan for Southbourne as a Broad Location for Development on a strategic scale, includes “Maximising the potential for sustainable travel links through improved public transport, including consideration of opportunities to reduce community severance caused by the railway line as well as the inclusion of cycling and pedestrian routes.” (our emphasis).

The existing railway station at Southbourne is served regularly, however, it is not within the power of this plan to improve rail services. It is, however, well within the scope of action of the Local Planning and Highways Authority to work with bus operators to achieve a step change in the journey time, reliability, frequency and connectivity of bus services, and in particular the major corridor operated as service 700 by Stagecoach along the A259 between Havant and Chichester through Southbourne.

Notwithstanding the clear potential for sustainable connectivity in the western A259 corridor, there are very serious risks that development in the A259 corridor west of Chichester will place further significant car-borne demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular bus services, having the opposite effect to that intended: longer, less reliable and less frequent bus services, leading to a spiral of slowly declining use.

These risks, while very serious, look credibly likely to be entirely mitigated subject to carefully conceived and robust specified actions on the local highway network. It is perplexing to us that this potential still has not been identified, as part of a comprehensive “first principles” review of the transport evidence base. In particular given the former trunk status of the A259, there is evident potential to effect bus priority on the A259, including on the approaches to Fishbourne Roundabout.

With appropriate measures, including but not limited to this, to substantially boost the relevance and attractiveness of sustainable travel choices, strategic development at Southbourne could well be made highly sustainable.

In the absence of a refreshed transport strategy and transport evidence base, the draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact, the only reference that is made in Policy is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A12 should accordingly be modified to read:

“...Development should be comprehensively masterplanned to achieve a high-quality design and layout that integrates well with the surrounding built and natural environments to enable a high degree of connectivity with them, particularly for pedestrians and cyclists, and provides good the highest possible quality of access to facilities and sustainable forms of improved public transport services.

...

4. Provide a suitable means of access to the site(s), and securing secure necessary off-site transport infrastructure and service improvements (including highways in particular to the A259 corridor between Emsworth and Chichester) in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development) to promote sustainable transport options prioritising delivery of high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes;

...”

#### 9.12. Policy A14 Land West of Tangmere

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach strongly supports the principle of intensifying the level of development at the Strategic Development Location already identified and allocated West of Tangmere in the existing Local Plan. This serves to consolidate development at a location where effective and attractive public transport choices could be provided. It also conforms closely with the principle expressed in NPPF that the best possible use should be made of land on sites that are judged to be sustainable, or potentially sustainable locations for development.

It must be stressed that the current policy suite for the SDL has to date not brought forward development in this location. We recognise that a Master Plan has been adopted by the Council, and that a planning application (20/02893/OUT) for the full larger quantum of 1300 dwellings proposed in the draft plan has received a resolution to grant by the Council.

However, we are not aware that a sustainable transport strategy has been finalised.

Land West of Tangmere is not served by any existing regular bus services. Rather, an entirely new bus service corridor is anticipated to operate in the near term from Chichester through Tangmere and beyond towards Barnham. This would serve proposed allocations A7, A8 and West of Tangmere (A14) included in the draft Plan.

This is reflected in the language of the explanatory memorandum to Policy A14 at paragraph 10.65:

“Opportunities, in partnership with relevant authorities, to provide improved sustainable public transport routes linking the village with Chichester city, to improve cycle routes to the city, and better transport links to Barnham rail station and the ‘Five Villages’ area in Arun District; and..”

Initiating this service will be costly and will in large measure be funded not by developer contributions, but by DfT monies awarded through the West Sussex Bus Service Improvement Plan. It is crucial this service is both sustainable in the longer term without revenue support, and that the success of the service can be built on by scalable frequency improvements as strategic development comes forward in both Chichester District, and proposed allocations A7 A8 and A14, and in Arun District, in particular at Barnham, Eastergate and Westergate (BEW).

This demands measures to effect safe, direct and swift operation of the service especially within the city centre, where it approaches and crosses the A27 at Oving crossroads and on the eastern fringes of the District east and west of Tangmere. Without these measures, bus journey time and reliability will be severely compromised and the impact of this service to damped car trip demands will be very substantially compromised. No such measures are proposed in the draft plan or its evidence base.

Changes to Oving Crossroads have recently taken place which, amongst other intentions, ostensibly provide bus advantage between Chichester and Shopwhyke. The junction in its current form does not offer material gain in bus journey time, as movements involve a less-direct route towards the city over an increased operating distance, much of which involves passage through heavily congested sections of the A27 and Westhampnett Road. A refreshed transport strategy supporting plan-led growth must revisit this area to secure an effective solution which offers bus customers the fastest and most reliable trip-time to and from the city.

In addition, the extension of public transport connectivity towards BEW and Barnham, including key links to secondary education and a logical railhead for journeys beyond towards Brighton and London as provided at Barnham Station, needs to facilitate bus priority between Tangmere and Nyton – whether using the A27, or preferably avoiding it altogether. There are significant safety concerns associated with the at-grade uncontrolled right-hand A27 exit onto the B2233 Nyton Road at Crockerhill Turn. This movement is also prone to extreme delay owing to the conflict with approaching westbound traffic on the A27, travelling at speed, which has priority. Our concerns with this junction in its current form can be expected to worsen with the increased traffic volumes predicted from new residential developments to the west of the city.

A solution providing a suitable short length of highway available only to sustainable modes, between Tangmere and Easthampnett, could provide a very effective solution to this. This would be deliverable within the scope of the separate proposed allocation at A19 Chichester Business Park, Tangmere. We comment on this separately.

Howsoever effected, a reliable direct and delay-free bus corridor between Barnham, BEW, Tangmere and Chichester could expect to secure very substantial elevation of the relative attractiveness of public transport over car use on the entire corridor and serve to effectively damp growth-related demands on this section of the A27. West of Tangmere, in the longer term, there is evident scope for the route corridor to operate as two branches – one via Shopwhyke and one via Westhampnett, effectively serving all the strategic developments proposed in the plan and transforming wider public transport connectivity to key employment destinations and services within and east of Chichester.

However, in common with all the other proposed allocations, the plan proposes no specific measures to provide, much less improve public transport or other sustainable modes to the site. This leaves the draft plan out of conformity with NPPF, especially paragraphs 104-106. The plan is inadequately evidenced and to the degree that public transport measures are identified and emergent, their successful implementation in the near and longer term will be jeopardised without clear measures to provide a safe as well as efficient bus route towards BEW and the Five Village area within Arun. The Duty to Cooperate is not effectively met and effective cross boundary collaboration on these strategic issues through the review of LSS is not demonstrated, despite the current version which identifies the issues.

To be made sound the LSS Review and a subsequent urgent review of the transport evidence base and strategy needs to take place. The strategic issues are especially critical east of Chichester, in our view.

Notwithstanding this foundational deficiency, to be made sound, Policy A14 should be modified to read:

“...  
”

8. Subject to detailed transport assessment, provide primary road access to the site from the slip-road roundabout at the

A27/A285 junction to the west of Tangmere providing a spine road link with secondary access from Tangmere Road. Development will be required to provide or fund mitigation for potential off-site traffic impacts through a package of measures in conformity with Policy T1 (Transport Infrastructure) and T2 (Transport and Development) and DfT Circular 01/2022 that maximise the relevance and use of sustainable travel modes, in particular bus services;

9. Make provision for improved sustainable travel modes between Tangmere and Chichester city, in partnership with relevant authorities, including improved direct, seamless safe and reliable and additional bus and cycle routes linking Tangmere with Chichester city, Shopwhyke and Westhampnett. In conjunction with measures in support of Allocation A19, Opportunities should also be explored contributions shall also be sought for providing improving high quality cycling and bus service transport links with the 'Five Villages' area and Barnham rail station in Arun District; and..."

#### 10. Concluding comments

Stagecoach recognises its role as a key stakeholder in the plan, as well as a local employer and corporate citizen. We recognise the primacy of the plan-led system as the mechanism intended to resolve complex challenges, including the proper alignment of transport and spatial planning, which as the National Decarbonisation Strategy for Transport among other policies makes clear, has never been more vital.

In making our representations, we emphasise that we are entirely supportive of the Local Planning Authority and the relevant Highways and Transport Authorities, in their efforts to properly manage the amount and pattern of development to secure vital policy objectives. We recognise that balancing delivery of assessed development needs with a wide variety of other constraints is a very difficult task.

The transport issues faced by the plan are recognised in the draft plan as being serious and long-standing. We believe that there are ways to arrive at a suitable transport mitigation strategy that has regard to wider strategic issues and resolves existing problems in a much more effective way than those pursued to date.

We support the spatial strategy of the plan as it evidently provides the basis to secure the necessary step change in the quality and use of sustainable transport modes, as it explicitly seeks to do. However thus far, there has been insufficient work done to define the measures that will credibly secure these outcomes.

Stagecoach therefore urges the authorities to draw us into the necessary effective ongoing collaborations that is expected by NPPF paragraph 16 and 106; and DfT Circular 01/022, to do this work, prior to, rather than after the submission of the draft plan. We look forward to being approached to initiate this dialogue at the earliest opportunity.

#### Change suggested by respondent:

Policy A3 should therefore be modified to read:

"...

- Be designed to encourage and facilitate substantial increase in the use of active travel and public transport to, from and through the city centre.

**Legally compliant:** Not specified

**Sound:** No

**Comply with duty:** Not specified

#### Attachments:

Chichester Local Plan 2039 Regulation 19 Stagecoach South representations.docx -  
<https://chichester.oc2.uk/a/skh>

## Object

**Document Element:** Policy A4 Southern Gateway – Bus Station, Bus Depot and Basin Road Car Park

**Respondent:** Stagecoach South (Rob Vince) [8141]

**Summary:**

Regarding the removal of the bus station, without equivalent replacement, Stagecoach has significant concerns. Pressures and conflicts at the current bus station site have been gradually rising for several years, arising from increasing use and the need for additional scheduled vehicle layover periods to reduce the risks of accumulated late running from traffic congestion. Peak passenger volumes have recovered strongly on several routes, however passenger accumulations resulting from more frequent delays and disruption have added substantial further pressure on limited space.

Under current plans, buses and bus passengers will be displaced to bus stops at new locations outside the city centre, along Avenue de Chartres.

Avenue de Chartres is relatively close to the rail station and pedestrian connectivity can be provided at broadly equivalent distance to the current bus station, but again it is unsurveyed and currently unpleasant, lacking natural legibility or any sense of prominence.

We understand kerbside capacity on Avenue de Chartres will be strained even to accommodate current levels of service, with no expansion possible. There is therefore a strong probability that to accommodate more frequencies and key new routes, such as West of Tangmere, East of Chichester and West of Chichester allocations, additional future bus stops must occupy a different location. This makes interchange between routes and rail services substantially challenging and less attractive.

If substantial public transport growth is to be accommodated in a growing city and hinterland, as the draft plan anticipates, then a more ambitious strategic approach must be taken. This should plan for additional and improved facilities to accommodate all services predicted to be required, whilst enhancing the passenger experience to ensure meaningful and attractive modal choice.

There is therefore a need for the plan to evidence how these issues will be appropriately resolved, having regard to a suitably ambitious approach that properly supports clear objectives to boost the relevance of public transport. The current policy is weak, unspecific and indifferent to achieving the strategic objectives of the plan, including a transport strategy in support of the plan, and as such it is ineffective.

**Full text:**

Chichester District Local Plan 2039 – Pre-Submission (Regulation 19) Consultation

**1. Introductory Comments**

Stagecoach South is the main commercial public transport operator across Chichester District. The Company has headquarters in the city, which is also the principal public transport hub for the District and it's rather wider travel-to-work area encompassing much of the Arun District. Our services extend throughout and beyond the District boundaries, as far as Littlehampton, Midhurst, Havant and Portsmouth. The vast majority of services operate on a commercial basis – that is to say, sustained by passenger use and fare revenue, including concessionary reimbursement.

While the role of the railway is significant in much of the District, especially the east-west Coastway line, yet bus services account for more boardings locally than the railway, with Chichester depot services carrying over 3.5m passengers each year.

Unlike bus services in other parts of the country, the local network has recovered strongly after the pandemic with fare-paying passenger numbers over 95% of 2019 levels, albeit with concession patronage somewhat lower. This has helped secure not only a stable but growing bus network even during this period of rapidly rising operational costs, avoiding the need for the service contractions seen in other regions. Indeed, during the second quarter of 2023 Stagecoach will invest £5.5m in brand-new vehicles for high-profile coastal Service 700 – one of the largest vehicle investments for Stagecoach Group this year.

Our services are therefore critical to existing and future local connectivity. As the Plan acknowledges, mobility demands do not respect planning authority boundaries. The role of our services is especially high to settlements in the broad A27 corridor, within the District and beyond. This includes major settlements in Arun District such as Pagham and suburban Bognor Regis, where bus is the only mass public transport option. As the Council is well aware, there is an even higher level and rate of committed development envisaged in these locations in the Arun District Local Plan than in Chichester.

It is already evident to the planning authorities, West Sussex County Council and National Highways, as proprietor of the A27 Trunk Road, that accommodating growing mobility demands across Chichester District and especially around Chichester itself, is becoming increasingly challenging to the point of being seriously problematic.

Stagecoach has a particular interest in this Plan arising from:

- The already clear and highly deleterious impact of congestion affecting our operations and their reliability and attractiveness to the public. The effects of these on the approaches to Chichester, and around the A27 bypass are especially severe. If public transport is to retain its existing role – even before the needs of any meaningful growth both in Chichester and neighbouring authorities is considered, are considered – the Council and the Highways Authority need to arrive at clearly-defined measures to protect buses from chronic delay and the damaging impacts arising from the lack of bus network resilience and customer journey times.

- In connection with the above, the need to properly consider the predictable impacts of committed development in Arun District on the transport network and in particular the operation of bus services. The duty to cooperate on cross-border strategic matters is not limited merely to accommodating housing requirements.
- The fact that our entire business premises and operational base at Chichester is the subject of allocation for redevelopment within the Plan period. Specifically, this includes our Head Office, the Bus Station as the operational hub of the network and the key interchange for passenger journeys – including those that involve the railway – and the bus depot required to support the entire operation. Notwithstanding many years of discussions, there is as yet no agreed deliverable strategy to replace these facilities either in the Draft Plan or elsewhere.

Stagecoach broadly supports the vision and priorities of the draft plan. In most respects, Stagecoach supports strongly the spatial strategy and the identified site allocations that flow from it, and the evidence.

However, it has serious concerns about the soundness of the plan as proposed for submission, for important regards outlined in this response. These are made in the light of requirements set by the National Planning Policy Framework (NPPF), in particular at paragraphs 15 and 16; 35, 105-109 inclusive and having due regard to the need for allocations to satisfy 110-112 inclusive in due course as development permission is sought; and paragraph 174.

Paragraph 16c) of NPPF makes plain that strategic plans and policies should “be shaped by early, proportionate and effective engagement between plan-makers and communities, local organisations, businesses, infrastructure providers and operators and statutory consultees” (our emphasis). This makes plain that collaborative and ongoing involvement of public transport operators is both necessary, and separate and in addition to the engagement with statutory consultees. This has not taken place.

Para 1.25 of the draft plan states that “the council has engaged constructively, actively and on an ongoing basis with other local authorities and organisations to address key strategic matters.” Despite the requirements in NPPF and contrary to the statement made, Stagecoach has not been approached or involved in a meaningful, collaborative or ongoing way in the preparation of the Plan.

Our main concerns centre around the fact that the plan strategy is neither backed by sufficient transport evidence. Even more importantly, the plan relies on a wholly car-based transport mitigation strategy despite policy stating that this is not the case, and the track record of the existing Local Plan, based on a very similar strategy, that has failed to bring forward meaningful mitigations to date to prevent traffic conditions substantially worsening. There is no support in policy for the achievement of the Strategic Objectives in the Plan. Nor is there definition of any measures in the 2023 Transport Study to make provision for sustainable transport infrastructure or services – much less materially improve them.

Finally, to the extent that updated transport evidence has been provided in the form of the 2023 Chichester Transport Study, arising from updated traffic modelling, it does not support the contention that highways capacity constraints on and around the A27 justify not meeting the objectively-assessed development needs of the area, as the draft plan contends.

## 2. Vision and Strategic Objectives

### 2.1. Issues and Opportunities

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant, proportionate and up to date evidence

Stagecoach recognises the important role of the West Sussex and Greater Brighton Strategic Planning Board which agreed a Local Strategic Statement (LSS2) in early 2016 to identify spatial planning issues across the wider area. This established strategic priorities and policies to guide longer term strategic growth in a coordinated and well considered matter. This institutional framework and the purpose of the LSS is a highly significant one and is at the heart of efforts to properly fulfil the statutory Duty to Co-operate, including with regard to strategic infrastructure issues, as NPPF requires.

Given the long period of time elapsed since the 2018 Reg 18 consultation and the already very clear constraints on strategic infrastructure capacity, it is of great concern to Stagecoach that the LSS2 has not been updated to reflect emerging issues in the intervening period. A review and update of the LSS2 has only just commenced. This includes a study of projected housing and employment needs, transport impact, infrastructure and spatial options to deliver the required development in the period after 2030. This Chichester District draft plan covers a period extending to 2039 – therefore well beyond 2030 and the nominal currency of LSS2.

However, infrastructure needs are pressing today. Stagecoach is presented with severe highway operational problems on a near-daily basis. During the winter of 2022-23 we have, for example, seen key road links impacted for many weeks by acute disruption arising from flood events. Unpredictable, but seemingly more-frequent, exogenous events expose a lack of resilience in the highway network around Chichester and its travel-to-work area. However, serious, chronic, unpredictable delay has been normalised over recent years, with peak-time congestion having quickly returned after the pandemic. The existing development strategy has failed to bring forward measures having any impact on this to date, and key commitments – notably at west of Chichester Phase 2 and at Tangmere – have yet to commence to further

aggravate the issue.

We have no confidence in the transport mitigations proposed in the existing Local Plan and LSS2 being sufficiently effective, even if deliverable at all. Indeed, the existing adopted Local Plan does little more than make vague speculations about the sustainable transport measures that might be achievable. The draft local plan review is no different. It has no ambitions at all for sustainable modes and thus, makes no meaningful provision to meet them.

This is especially relevant in light of the fact that the approach to resolving issues on the A27 around Chichester that were anticipated in 2015-16 have fallen away. LSS2 is thus currently inadequate to act as a part of an up-to-date, proportionate, and relevant evidence base for the Plan.

An update of a traffic model lies at the heart of a 2023 Chichester Transport Study. This talks no account of the existing role of non-car modes, nor can it do so. It is unable to properly evaluate the nature of problems or solutions that involve public transport, or for that matter, other sustainable modes.

Therefore, we consider that the combination of committed and additional development needs that must be accommodated over the whole plan period between 2022 and 2039, in both the Chichester and Arun Districts, require a “first principles” review. This must be based on a refreshed transport evidence baseline of no earlier than 2022 – given that the effects of COVID distort 2020-22 – and the transport infrastructure and service requirements to sustainably support those needs.

Key issues – including substantial changes with regards to transport issues and challenges, as well as potential solutions – thus do not form part of the evidence base that steers this plan. Given long term changes in travel patterns, and mode share that took place during COVID, as well as a local and national policy context that seeks to radically reduce and then eliminate transport-related carbon emissions, this is especially problematic.

The specific problems of congestion and network resilience that are evident on the A27 and the approaches to Chichester remain a set of especially difficult problems that disproportionately affect the efficiency, reliability and attractiveness of the bus network, that evidently demand larger-scale strategic responses involving multiple stakeholders, including bus operators.

Where the effects of development on the national Strategic Roads Network (SRN) are concerned, the approach of National Highways to addressing and responding to the mobility needs of development has now substantially changed following the promulgation of the DfT Written Ministerial Statement LTN01/22. This makes it clear that adding highways capacity is no longer the first or only strategy that should be pursued, but one subordinate this to maximising the potential of non-car modes and sustainable travel.

“Effective and ongoing collaboration” on transport matters has not led to solutions being agreed and published for public scrutiny as part of the plan evidence base. Whatever the approach to modelling and “highways improvements” that may be agreed or pending agreement with the County Highways Authority and National Highways, Stagecoach is neither participant or sighted. This is despite the clear requirements set out in NPPF Para 106 b) that “Planning policies should ... be prepared with the active involvement of local highways authorities, other transport infrastructure providers and operators and neighbouring councils, so that strategies and investments for supporting sustainable transport and development patterns are aligned.” (our emphasis).

We therefore consider that the Council has failed to comply with the requirements of NPPF paragraph 25 and 26 that “relevant bodies” are involved in plan-making, especially with regard to addressing the needs for infrastructure. Public transport services and the infrastructure that supports its operation and use clearly fall within matters relevant to plan-making. This is explicit in NPPF Chapter 9 and indeed within the plan itself – for example reference to public transport and sustainable modes in the Vision for the plan.

It should be stressed that the Regulation 18 “Preferred Approach” consultation took place in December 2018 – over 4 years ago and prior to COVID, based on LSS2. The inordinate length of time that has elapsed between the Regulation 18 and Regulation 19 stages greatly challenges the LSS2 and other parts of the evidence base, especially as the pause straddles the COVID epidemic. That would include the transport modelling baseline, and key assumptions in any traffic modelling that took place prior to mid-2022, which is a point at which a reasonable “new normal” post-COVID might be considered to have become established. In that period, Arun District has also adopted its own Local Plan development strategy that accommodates an unprecedented quantum of development immediately east and south-east of the District Boundary – creating additional substantial transport impacts directly affecting the A27 and multiple major approaches to Chichester crossing it.

The established mechanism to fulfil the Duty to Co-operate has thus not operated effectively.

The Plan is not founded on a relevant, proportionate and up-to date evidence base and is thus inadequately justified.

## 2.2. Spatial Portrait

The spatial portrait is generally succinct and accurate. However, it makes no mention of road-based public transport, the

role of the City as a public transport hub, or the range of bus services that provide local connectivity (Section 2.4 and 2.5). The complete concentration of post-16 education in the City itself as just one example of the peculiarities of transport demands in the area, is not highlighted, though this has a profound influence on peak time travel demands affecting the most congested parts of the highway network. Among other things, the role of bus services in supporting the educational system of the plan area is very great indeed.

The potential role of bus in addressing the already-severe transport problems of the plan area and beyond seems entirely overlooked. The spatial portrait is thus clearly inadequate and incomplete.

### 2.3. Strategic Objectives

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Chapter 9 of NPPF and paragraphs 104 and 105 in particular require that plans should:

“Transport issues should be considered from the earliest stages of plan-making and development proposals, so that:

- a) the potential impacts of development on transport networks can be addressed;
- b) opportunities from existing or proposed transport infrastructure, and changing transport technology and usage, are realised – for example in relation to the scale, location or density of development that can be accommodated;
- c) opportunities to promote walking, cycling and public transport use are identified and pursued;
- d) the environmental impacts of traffic and transport infrastructure can be identified, assessed and taken into account – including appropriate opportunities for avoiding and mitigating any adverse effects, and for net environmental gains;...

...The planning system should actively manage patterns of growth in support of these objectives. Significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. This can help to reduce congestion and emissions, and improve air quality and public health...”

The Strategic Objectives do not conform with NPPF in these foundational requirements adequately, to transparently steer the plan strategy. They should therefore be amended to read:

“Plan to provide local infrastructure to support new development and seek opportunities to address existing identifiable infrastructure problems deficits, such as in particular those relating to the A27 and its junctions and wastewater treatment.”

Paragraph 2.36 states, in the context of the Climate Emergency and the National Trajectory to “Net Zero” that “The council will enable the delivery of infrastructure, jobs, accessible local services and housing for future generations while protecting, conserving and enhancing the historic and natural environment.”  
Naturally, we support this intent.

However, there is no acknowledgement of the role current patterns of transport use contribute to carbon emissions, nor that substantial mode shift is necessary to address sustainably an acute lack of capacity on the local network and the SRN, especially around Chichester. This is especially concerning as the basic conceptual link is not made between the fact that the greatest such problems lie on the A27 corridor and around Chichester, while these are also at the same time present many of the most sustainable locations for development, and where the opportunities to secure much greater use of sustainable modes also exists.

Strategic Objective 7 “Strategic Infrastructure” includes the following statement:

“To work with infrastructure providers to ensure the timely delivery of key infrastructure to support delivery of new development. New development will be supported by sufficient provision of infrastructure to enable the sustainable delivery of the development strategy for the plan area. Key infrastructure to support the Local Plan will include improvements to transport, ...

A sustainable and integrated transport system will be achieved through improvements to walking and cycling networks and links to accessible public transport. Highway improvements will be delivered to mitigate congestion, including measures to mitigate potential impacts on the A27 through a monitor and manage process.”

The latest transport evidence in the Chichester Transport Study makes no pretence to define much less to deliver a “sustainable or integrated” transport system. It is wholly devoted to sustaining current levels of car use across the District, to and through Chichester area.

It is no more than the lightest of touches to the approach taken to supporting the adopted Local Plan, an approach that is already almost 10 years beyond the date of its gestation but has yet to deliver any significant capacity improvement schemes, much less any measures that sustain even current levels of public transport journey times and reliability in the face of increasing congestion – much less any betterment.

Of the six key junctions on the A27 around Chichester, recognised to require significant mitigation given they are saturated for extended periods, five accommodate regular bus services - indeed frequent ones at least every 20 minutes

in several cases. The sixth at Oving Road, relates directly to a key corridor where bus services are needed to support strategic growth currently being delivered at Shopwhyke, as well as substantial further growth West of Tangmere (proposed allocation A14) and "East of Chichester" (A8), south of Shopwhyke Road.

As stated at p12 of the Study Summary "The modelling shows that all the junctions on the A27 Chichester bypass are well over capacity, even before adding in the Local Plan development and with the exception of Portfield Roundabout are actually shown to be over capacity in the base model year (2014) in one or both peaks". This much has indeed been evident for years from delay and periodic even more severe disruption arising to Stagecoach services from the lack of network resilience.

The reassignment of through and local traffic through Chichester to avoid the A27 bypass is an especially serious issue for bus services that penetrate the city. This is leading to consequential saturation of a range of junctions used by buses. Rising delay and unpredictable running times are at the root of our decision to sever the long-established Portsmouth to Littlehampton service in 2023, which will in future no longer run across Chichester, but terminate to provide additional dwell time to mitigate the impacts of congestion.

While this congestion affects all road users including businesses and freight traffic, the effect on scheduled bus services is greatly higher, as such services cannot reassign route to 'beat the queue'. Traffic congestion often encourages greater car use for this reason, in tandem that people are happier to sit for extended periods in their own vehicle on a seamless door-to-door journey than wait at the roadside for a delayed bus making slower progress in lengthy queues.

As the Study admits at para. 1.3.2 "Although, there have been works at the Portfield Roundabout in this timeline, no other mitigation schemes have been completed along the A27 corridor, as such the mitigation schemes defined in this report will also be required to consider the development from this plan period."

In other words, in the 8 years since the current Local Plan was adopted in 2015, there has been minimal progress in delivering the traffic mitigations. There is no clarity at all when any such mitigations will be brought forward. It is hardly surprising then, that traffic conditions have deteriorated. The "predict and provide" transport strategy supporting the current plan has failed.

Despite this, the Draft Local Plan Review proposed to "double down" on exactly this strategy. It represents, like the rest of the evidence base, a "rolling forward" of the current car-based strategy by 9 years, with the lightest of touches to attempt to accommodate car trip demands from a relatively modest additional development quantum.

Nevertheless, the Study requires a global 5% reduction in trip demands arising from unspecified "credible" (paragraph 4.1.2) sustainable transport and travel planning measures. It is unclear why use of non-car modes will see disproportionate growth when no measures are in place to make them more attractive. This 5% increase in use translates to a doubling in the modal share of bus services. There is no evidence nationally, anywhere, that simple ignorance of alternatives to the car is the main barrier to uptake.

The outputs of the 2023 Chichester Area Traffic (SATURN) model are set out at Table 5.1 (am peak) and 5.2 (pm peak) without mitigation. These betray just how seriously compromised the whole network around Chichester is, and will be in future, even with implementation of a mitigation package to increase traffic capacity that is understood to cost between £92m and £164m – and which the Study and the draft plan acknowledge cannot be delivered through developer funding sources alone. Unspecified external funding presumably from HM Treasury through DfT is required.

Even if this provided and the schemes are delivered, Tables 8.1 and 8.2 indicate these will provide minimal relief. The final columns suggest key junctions, including Portfield, Fishbourne Road and Cathedral Way East will remain at well over 100% ratio of flow to capacity (90% is considered the point at which saturation is approached, with the onset of increasing delay above that figure). RFCs in tables 8.1 and 8.2 are some of the highest we have ever seen in a local transport evidence base for a post-mitigation scenario. While the serious potential risk of reassignment across Chichester City is greatly reduced, which is important and welcome given its impact on bus services, Tables 8.1 and 8.2 show the extent of post-mitigation saturation is also egregious, covering a very large number of key links and junctions.

On every measure and criterion, then, including cost deliverability and effectiveness, the revised Transport Strategy falls well short of evidence to suggest the transport impacts of the plan can be properly addressed by this means.

Despite the repeated statements about sustainable modes throughout the draft plan and Chichester Transport Study, only 2 paragraphs at Section 6.2 within the Study are devoted to public transport:

"6.2.7 The funds generated from the parking management schemes, local/nation funding schemes and developer contributions could also be utilised to fund potential public transport enhancements within the city centre including an expansion of the bus priority lane system within Chichester City Centre. This could reduce reliance on the car in the longer term towards sustainable public transport. A park and ride scheme could be incorporated within a bus priority lane network in the future depending on the uptake and successfulness of early bus priority trials.

6.2.8 Chichester City centre has a constrained existing public highway network. Therefore, any proposed dedicated public transport or light transit corridors that could be implemented would be at the expense of existing highway. This could be

managed through a time-based system where certain routes are restricted to public transport only during specific times. E.g., peak hours.”

There is some very high-level consideration of Park and Ride following this section. None can be considered a serious practical evaluation of consolidating car-borne trips onto bus services, including existing ones, for example local mobility hubs, more frequent bus corridors, delivery of specific bus priorities.

None of the discussion of alternatives to “predicting and providing” for unconstrained traffic growth is rooted in a deliverable evidence base, or proper evaluation of options and specific projects.

To take just one aspect of the few specifics that can be picked out, a workplace parking levy is hypothesised. This would apply only to “offices”, in Chichester city centre (para 6.2.3), without consideration given as to how this could be practically achieved or even that a meaningful amount of office based employment would qualify. Much less is any consideration given to how far focusing a strategy only on office-based workers would actually deliver a particularly significant effect, apart from to create a strong incentive to relocate offices out of the city centre to places out of reach by public transport.

Looking at the Chichester Transport Study 2023 and the draft plan together, there is insufficient evidence that the traffic capacity increase proposed in the 2023 Transport Study is any more affordable or technically deliverable, or likely to be sufficiently effective, than those in the past strategy. The evidence more strongly points to the fact that no highway improvements are identifiable or economically deliverable to meet even short term increases in demand for car-borne mobility on most of the network around Chichester.

There are no published strategies or schemes clearly supporting the contention that the objective of improving sustainable modes is technically achievable or deliverable either. The plan makes generalised assertions that such strategies will be devised and implemented only after serious problems emerge from a shortfall in the car-borne transport strategy.

The reference to “monitor and manage” is undefined and unsubstantiated. There are no outcomes stated, no mechanisms specified and no timescales for action.

Our experience today is that network conditions have reached unacceptable and prejudicial levels of severe unpredictable delay. The saturation of the network is already evident well outside the traditional peaks on key sections of highway and at key junctions. External shocks such as the effects of severe weather are becoming more common, leading to delays so extreme as to justify the description of “gridlock”. The plan does not identify a strategy to effectively address this, in particular by consolidating passenger car trips onto more efficient public transport vehicles. This is unacceptable to Stagecoach.

#### 2.4. Local Plan Vision

Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the broad approach in Plan Vision and in particular that by 2039, the Plan will support and enable greater use of sustainable modes. However, there is no link made between reducing the use of private cars, and the need for a step change in the use of sustainable modes. Without a published transport evidence base it is impossible to establish a suitable sustainable transport strategy to support both carbon reduction and alleviation of the problems arising from acute congestion. Even on a very crude basis, to achieve a meaning mode shift on key approaches to the A27 Chichester Bypass will require more than 20% of existing peak car-borne journeys to transfer to other modes. A 10 percentage point transfer to bus (about half this shift) would imply more than doubling peak hour bus passenger boardings.

The Vision is nothing more than an aspiration, that needs to more definitively aim at key outcomes, for the plan to be effective. The Vision should thus be altered to read:

“Get about easily, safely and conveniently with less reliance on private cars –making the greatest possible use of the rail and enhanced bus network, and with more opportunities for active travel including walking and cycling; to materially reduce dependence on private car use.”

Underpinning the Plan’s spatial strategy, the Vision section goes into more specific detail about key localities in the Plan area.

Regarding Chichester, Paragraph 2.39 states: “The emphasis will be upon consolidating and enhancing the role of Chichester city as the plan area’s main centre, whilst also developing the role of key settlements to its east and west. The focus will be upon creating communities with good access to a range of employment opportunities and affordable housing for young people and families to balance the ageing population.”

This is clearly the appropriate focus for meeting the District’s development needs in a sustainable manner. The city and key settlements to the east and west, are those places already able to make use of relevant public transport services,

both rail and bus. Especially within and near the City, walking and cycling can credibly present highly relevant choices. This emphasis clear can be expected to address the requirements of sustainable development set out in NPPF and their local application set out in the Plans Strategic Objectives.

However, this needs a robust transport strategy, to avoid a further concentration of development and its traffic impacts occurring on or near some of the most chronically congested parts of the highway network. To date, the absence of intervention has strangled the bus network through further marked deterioration in traffic conditions. This by consequence increases the risk of bus delay or cancellation, lengthens journey time and reduces customer confidence in bus as an attractive alternative mode of travel.

In April 2023, Stagecoach is making significant timetables changes to improve operational resilience in and around Chichester. The biggest such change is the severance of the Portsmouth to Littlehampton section of service 700, at Chichester, with buses operating independently to the east and to the west and ending cross-city links. This is planned to reduce the probability of delay but at the cost of additional vehicle resource (circa £200,000 per annum) which could be better spent providing new or enhanced services. We anticipate a small loss of custom as a direct consequence of the change, but have little choice other than to take negative action so as to fulfil our statutory punctuality obligations.

If the Strategic Objectives of the Plan and its Vision are to be achieved, in the way required by NPPF paragraphs 104-105, a properly-evidenced transport mitigation strategy needs to create the conditions where bus journeys are more reliable than car journeys and thus mobility demand switches as far as can be realistically achieved away from car use, to bus use and other more sustainable modes.

Beyond Chichester, the Plan Vision focuses on key localities beyond to the east and west.

To the west of Chichester a focus on growth at Southbourne is justified at paragraph 2.43: "...the aim is to take advantage of the village's good transport links and existing facilities to deliver significant new residential-led development within the broad location for development which will further enhance local facilities and offer opportunities to reinforce and supplement existing public transport, including bus routes."

We agree this is a very significant opportunity. However, if the requirements of NPPF paragraphs 104-105 are to be met, this demands that effective bus priority is delivered on the A259 corridor, especially eastbound at Fishbourne and westbound approaching Emsworth. Without such measures, the growth committed and planned will serve only to further undermine bus journey time and decrease punctuality on the existing 700 service, entirely contrary to the aims of the Vision.

The emphasis on the A259 corridor served by Stagecoach 700 west of Chichester is reinforced at paragraph 2.45 stating that "Between Chichester and Southbourne, the Plan provides for more moderate levels of growth within the parishes of Fishbourne, Bosham and Chidham & Hambrook, ... with opportunities to support and expand existing facilities and for increased use of public transport options". We strongly support the principle, but the Plan must follow through with specific public transport priority measures that facilitate rather than prejudice such an outcome.

East of Chichester the focus is at Tangmere, where the existing allocation for about 1000 dwellings is being uplifted by 300. Paragraph 2.44 justifies this among other things recognising the scope for "...improved and additional bus services and cycleways will provide better connections to Chichester city and east to Barnham and the 'Five Villages' area in Arun District." We unequivocally endorse this conclusion. Realising a "game-changing" level of bus service quality, reliability and frequency east of the city, also serving committed and planned development north and south of Oving Road at Shopwhyke, is equally essential, given that all SRN links and junctions are approaching equal saturation.

The National Bus Strategy has given new focus on partnership with West Sussex County Council to discuss and deliver a significant new bus service between Chichester, Shopwhyke, Tangmere, Eastergate and Barnham, supporting committed development and acting as an initial phase of what ought to be a more ambitious longer-term strategy to support growth beyond 2025 in both Chichester and Arun Districts. For these improved bus services to be both deliverable and effective, robust bus prioritisation is unavoidable. No such measures are proposed in the Plan or its evidence base and we therefore suggest inclusion of plans to facilitate safe and efficient bus operation between Tangmere and Nyton/Eastergate, ideally avoiding the need to join A27 through-traffic entirely.

We welcome the clear recognition that these localities identified for growth, benefit from existing relevant public transport services. The Vision also sets an expectation that bus services in particular should be "enhanced" and "reinforced".

We entirely agree that these opportunities exist, across the broad strategy and strategic allocation proposed by the draft Local Plan. Securing them will be crucial to achieving national and local policy objectives, including the Strategic Objectives. However, to our continuing very great dismay, the Plan goes no further to defining how this will be achieved. As such the Vision is not demonstrable achievable or deliverable.

Accordingly the Plan cannot be considered effective, in the sense of NPPF.

Remedying this, demands specific measures to protect bus services from congestion in the following corridors:

- A259 East of Emsworth
- A259 Fishbourne
- A 259 Via Ravenna/Cathedral Way
- A286 Stockbridge Road north and south of A27
- B2145 Whyke Road/Hunston Road
- A259 Bognor Road, east and west of A27 and extending to the District Boundary
- B2144 Oving Road/Shopwhyke Road east and west of the A27
- A 285 Westhampnett Road/Portfield Way/Stane Street, potentially involving a mode filter at the west end of Stane Street

These must be defined to a sufficient level of detail to assess their effectiveness and deliverability, including costs.

This would then allow West Sussex County Council and Local Transport and Highways Authority, ourselves as the principal bus operator, and where appropriate other organisations that would be directly tasked with delivering the mitigation package, to agree service levels and standards necessary to deliver specified outcomes, including journey times, frequencies, capacity and hours of operation on the network, and also in respect of the strategic allocations and Strategic Locations for Growth.

The agreed mitigations strategy should be set out in an up-to-date Infrastructure Delivery Plan backed by clear funding commitments, including a funding strategy to justify necessary developer contributions.

Where necessary to support evidence of effectiveness and deliverability, clear statements of support, which might include Statements of Common Ground between the LPA, LTA, National Highways and Stagecoach, could be provided.

### 3. Spatial Strategy

#### Stagecoach Supports

Stagecoach well recognises the constraints outlined in the explanatory narrative at the start of Chapter 3.

In particular we strongly endorse that strategy in that it reflects that the best opportunities to meet housing and employment development requirements sustainably clearly exist in and close to Chichester and on the key east-west movement corridor where – subject to effective measures being delivered to make these modes more attractive, efficient and relevant – sustainable modes can credibly provide for a much higher proportion of movement demands, mitigating most effectively the potential traffic impacts of development.

We agree that the Manhood Peninsula suffers serious environmental constraints, but, added to these, public transport and other sustainable modes cannot provide such attractive alternatives, and significant further development risks merely reinforcing already high levels of car use, aggravated by the carbon impacts of the distances involved – something the plan does very little to evaluate, and makes no reference to.

We endorse the conclusion in paragraph 3.24 that significant development in the part of the District north of the National Park is inappropriate. The rationale is principally on landscape and visual character. This exposes a fundamentally biased approach to plan making that has consistently underplays transport accessibility and carbon issues. In fact, the lack of local services and the extended distances that need to be travelled to fully participate in society in this area, with no realistic prospect of public transport offering relevant choices, ought to rule such a strategy out of play on a far less aesthetic and interpretational basis.

#### 3.1. Policy S1 Spatial Development Strategy

##### Stagecoach Supports

The Spatial Strategy flows clearly and logically from the Spatial Portrait, and the opportunities and constraints identifiable across the Plan area. It represents a logical and justified continuation of the existing Local Plan strategy. In particular the spatial strategy maximises the potential for sustainable modes to contribute to meeting a much higher proportion of all the District's mobility and accessibility needs.

#### 3.2. Policy S2 Settlement Hierarchy

##### Stagecoach Supports

The settlement hierarchy clearly reflects the service endowment and potential self-containment of the settlements in the District. In particular, the second tier of settlement hubs includes secondary schools, which are major peak trip generating uses. Service villages, in the main, also benefit from bus services running at least hourly, which can be expected to provide for a degree of mobility for the higher number of trip purposes that cannot be satisfied by walking or cycling within the immediate locality. Thus, a level of development to meet local needs in this tier is relatively sustainable.

There is a quite broad range of settlements in this category. We have concerns that, north of the National Park, the Service Villages have no realistic public transport choice. These include Plaistow/Ifold, Kirdford, Loxwood, and Wisborough Green. Such as exists is typically a 1/bus per day off-peak shoppers service offering up to 90 minutes in Horsham or Guildford and as such any development here even to meet local needs requires each adult to own a car. This contrasts strongly with Service Villages to the south of the National Park, which are greatly more sustainable.

#### 4. Climate Change and the Natural Environment

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This section of the plan is extensive and wide ranging, as should be expected.

However, remarkably, there is no acknowledgement whatever of the role of transport in mitigating climate change or its effects, not of the importance of sustainable movement and access being facilitated across the plan area in addressing anthropogenic impacts on the natural world at a more local level.

This exposes very clearly a troubling level of indifference to transport matters in the production of the Plan, which, while nationally quite common, is neither appropriate nor acceptable. The mitigation of transport impacts is not merely a matter speaking to the social and economic aspects of sustainable development. It is crucial to address the causes and effects of climate change that arise from transport, and personal mobility.

This is now well understood and at the centre of national policy, including the National Decarbonisation Strategy for Transport (July 2021) which at Section 5 commits the government to aligning land use planning and transport strategy much more tightly and effectively to mitigate the carbon emissions associated with the current dependence on cars, and the mode mix; but also to reduce travel distances, both increasing the potential relevance and effectiveness of all sustainable modes, and reducing average journey lengths for residual motorised journeys of all kinds.

National statistics show that well over a third of all domestic carbon emissions arise from land-based transport and of these, the vast majority arise from trips of over 10km – outside the range of large scale use of cycling. In fact, the potential of the plan to materially support carbon emissions reduction from within the plan area lies more in the realm of transport than any other policy theme – including emissions mitigation from buildings, which is in any event an aspatial matter and covered by nationally-binding building regulations. By 2025 something like 40% of all the emissions within the plan-area will be transport related.

There is no evidence supplied to support the plan that addresses the transport carbon impacts of the spatial development strategy in a clear manner.

There is no evidence supplied that sets out the effects of potential worsening of congestion on air quality within the plan area, arising entirely from the excess of passenger car movement demands over available and credibly deliverable highway capacity. This is despite the evidence set out and acknowledged in the explanatory memorandum at paragraph 4.130:

“4.130. The council’s Air Quality Action Plan and the West Sussex Transport Plan 2022-2036 both refer to the air quality issues faced by Chichester. There is currently one Air Quality Management Area (AQMA) in the plan area, located at St Pancras, Chichester. AQMAs are designated where air quality exceeds, or is likely to exceed, national air quality standards and objectives. Development within or impacting these areas, or that likely to cause the declaration of any further AQMAs, will be subject to an air quality assessment by the applicant.”

This is a retroactive approach – it is not “planning”, based on evidence.

We are well aware that air quality issues in and of themselves can render allocated sites to be undeliverable: a good example is in the Vale of White Horse, Oxfordshire, where strategic allocations on the A338 and A420 corridors have been held up for years by air quality issues at Marcham and Frilford, in large measure because agreed transport interventions were considered inadequate or undeliverable a very short time after the Plan was examined and adopted.

There is no evidence that shows how the development strategy can effectively mitigate these impacts as well as the further potential impacts that arise from the development strategy. This is exasperating, as there is clear evidence that could be drawn upon to show that that very substantial opportunities exist to:

- Speed buses up and make them more reliable by the delivery of bus priority on most of the key main corridors. Most of these even today operate relatively frequently
- Improve service frequencies and extend hours of operation.
- Secure significant background mode shift to bus as a result, damping pressure on key links and junctions, by consolidating demands on direct more reliable and more frequent bus services.

The spatial development strategy as submitted is in fact, likely to well conform to such additional evidence.

The allocations require substantial additional transport related work and evidence to demonstrate that the opportunities for sustainable transport have been identified and taken up as required by NPPF paragraphs 104-105.

With regards to specific policy, Policy NE22 should be modified to read:

“Development proposals will be permitted where it can be demonstrated that all the following criteria have been addressed:

1. Development is located and designed to minimise traffic generation and congestion through access to by maximising the relevance and attractiveness of sustainable transport modes, including maximising provision of specific demonstrably effective measures to make pedestrian and cycle and public transport routes and networks more direct, more safe, faster and more reliable;...”

## 5. Housing

### 5.1. Policy H1 Meeting Housing Needs

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

The presumption of the planning system is that local planning authorities should seek to meet their objectively assessed development requirements in full. These needs are assessed by a defined Standard Methodology set out in Planning Practice Guidance and elsewhere, that has explicit regard to ensuring that the economic and social effects associated with housing are properly provided for, to avoid exacerbating serious problems that arise from inadequate housing supply.

As a significant local service provider and employer, Stagecoach is concerned that existing issues with housing availability and affordable housing supply are not exacerbated. This has a direct bearing on staff recruitment and retention. It also has an indirect bearing on our cost base.

The existing problems with housing affordability have developed over many decades of undersupply. It should be emphasised that the significant boost to the supply of housing that has been sought by governments over the last 15 years, has only begun to take effect relatively recently in this District. Tackling the problem will require years of consistent attention.

Stagecoach notes that the Council is no longer proposing to meet its identified housing needs in full. Rather than 638/annum the Council is allocating a total that implies an annual delivery rate of 535/annum.

While a number of matters evidently present challenges to the Council in identifying a sustainable development strategy. Paragraph 5.2 indicates that "constraints, particularly the capacity of the A27 has led to the council planning for a housing requirement below the need derived from the standard method..." The blame for being unable to meet housing requirements is thus laid squarely at the door of transport infrastructure and systems.

This conclusion in no way follows from the evidence in the Chichester Transport Study. This, rather, makes the statement that when a higher annualised quantum of 700 dwellings per annum was tested, in the majority of cases the traffic capacity improvement package would perform little differently. To quote the Study:

"5.6.3 The network performance outputs analysed comprising V/C%, Delays (seconds) and Queues (PCU's) suggest that generally the proposed SRN mitigation identified for the Core Scenario, can accommodate in the most part, additional increase in development to 700dpa."

Whether the rest of the local road network is similarly protects is moot.

Irrespective of these results, even if the contention made in the draft plan were true, unlike many other constraints, this is amenable to a suitable effective strategy to address the constraints identified being collaboratively conceived. This is what NPPF expects, as set out in paragraphs 104-106.

Where the A27 is concerned, as part of the SRN, National Highways is now working to a substantially revised approach than that in force at the time to current Local Plan was prepared, or LSS2, or reflected in the Chichester Transport Study. This is set out in DfT WMS 01/22. This document is the policy of the Secretary of State for Transport in relation to the SRN which should be read in conjunction with the National Planning Policy Framework (NPPF). It replaces the policies in the Department for Transport Circular 02/2013 of the same title.

It makes plain that to accommodate additional demands arising from development, National Highways (NHC) expects to meet the requirements of its statutory license in a substantially different manner. With respect to development NHC LTN 01/22 continues to address the tensions between national policy for the environment and carbon mitigation, the ongoing need to substantially boost the supply of housing as well as maintain national economic competitiveness and protect the safety of the public. However, in future, the approach will be to seek first to maximise the impact of demand management measures (reducing the need to travel), and then to accommodate residual additional demands first though maximising the use of sustainable modes, rather than accommodating assumptions about current levels of car dependency and use.

LTN 01/22 much more closely and explicitly aligns with the language of NPPF Chapter 9 paragraphs 104-106. Paragraph 12 states: "New development should be facilitating a reduction in the need to travel by private car and focused on locations that are or can be made sustainable.... Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas." (our emphasis).

It continues at paragraph 13: “where developments are located, how they are designed and how well delivery and public transport services are integrated has a huge impact on people’s mode of travel for short journeys. The company will therefore expect strategic policy-making authorities and community groups responsible for preparing local and neighbourhood plans to only promote development at locations that are or can be made sustainable [footnote 8] and where opportunities to maximise walking, wheeling, cycling, public transport and shared travel have been identified.” (again, our emphasis)

Stagecoach readily confirms that the draft Plan development strategy conforms well to the first limb of this expectation, in terms of the location of development.

Stagecoach considers that the plan and its evidence base conforms poorly to the second in that the specific opportunities to maximise walking, cycling wheeling and public transport are not clearly identified, and defined, and proven to be effective and deliverable.

The current mitigation strategy for the A27 Chichester area, supporting the adopted Local Plan and for which proportionate developer contributions have and continue to be sought, reflects now-superseded DfT Circular 02/2013. As a direct result, it failed completely to identify any significant effective bus priority measures, despite the fact that frequent services already exist on the key corridor concerned, and that one bus journey can remove, fully seated between 72 and 80 single occupancy car journeys from congested links and across key junctions on the A27. Rather, it sought to implement targeted measures to increase the throughflow of general traffic.

We recognise the realisation that this approach, which was already reliant on some tenuous logic, is simply not technically viable, especially where further development needs are anticipated.

National Highways will now pursue an approach with the planning system that “includes moving away from transport planning based on predicting future demand to provide capacity (‘predict and provide’) to planning that sets an outcome communities want to achieve and provides the transport solutions to deliver those outcomes (vision-led approaches including ‘vision and validate,’ ‘decide and provide’ or ‘monitor and manage’). The company will support local authorities in achieving this aim through its engagement with their plan-making and decision-taking stages.” (paragraph 15).

Paragraph 23 is at the fulcrum of assessing and defining transport mitigations to accommodate growth on and near the SRN “Capacity enhancements such as modifications to existing junctions or road widening to facilitate development should be determined on a case-by-case basis. The general principle should be accepted where proposals would include measures to improve community connectivity and public transport accessibility, and this will be weighed against any negative safety, traffic flow, environmental and deliverability considerations, impacts on the permeability and attractiveness of local walking, wheeling and cycling routes, and alternative options to manage down the traffic impact of planned development or improve the local road network as a first preference.” (our emphasis).

However, no material work has been done that seeks to identify if a bold robustly conceived and suitable judiciously-prepared strategy that seeks to consolidate flows on already densely travelled corridor onto improved bus services, driving mode shift through insulating these services preferentially from already serious queuing. This would be likely to have very substantial impacts on all the key junctions on the A27, and potentially, on the A27 itself. The need for an integrated approach between Shoreham and Emsworth within West Sussex paying particular regard to development requirements in both Arun and Chichester Districts naturally lies at the heart of this, and we would expect to be picked up by the LSS3 Review among other things.

However, the locus of the problems and its causes and effects are obviously well enough known to start work on defining solutions within the plan area today. We would expect that this work will be essential if National Highways are to support the Plan, especially now given the terms of Circular 01/2022.

Such work could and should start from a “policy off” position: in other words that the Plan should fully accommodate its needs unless it can be proved that a mitigation strategy for the A27 that is compliant with DfT WMS 01/2022 cannot credibly accommodate resulting capacity demands without unacceptable impacts on the safety and efficient operation of the SRN.

This evidence does not exist. In fact the Chichester Transport Strategy 2023, on which the Council solely relies as its transport evidence base, indicates the opposite at para 5.6.3. This is the case before meaningful measures to secure damping of traffic demands through mode reassignment are even considered.

The exception to this is Portfield and Oving Road, which are among the most problematic areas after mitigation even at the Council’s chosen 535 dwelling/annum scenario (para 5.6.4.-5). The costly capacity mitigation simply cannot deliver enough benefit. It is admitted that WSCC has indicated that it would prefer a solution that places greater reliance on sustainable modes damping car-borne demand. This is entirely the strategy required by NHC to follow LTN 01/22, of course. Despite the fact that “predict and provide has “run out of road” no attempt has been made to examine what such a solution set credibly could look like. This is unsatisfactory and deeply troubling.

At paragraph 5.4 the draft plan points back again at the West Sussex and Greater Brighton Strategic Planning Board and

the future work that has been commissioned, but has barely begun, to update the Local Strategic Statement. This work is to inform the preparation of plans that have horizons beyond the end date of the current LSS in 2030 and properly to meet the Duty to Cooperate. As we said in our response to section 1 of the Plan we fully endorse the conclusion that this is the right mechanism to look at these issues. However, the mechanism has not been effectively applied to the production of this plan. Therefore, the specific evidence that capacity on the A27 in and of itself supports accommodating a lower housing requirement does not exist.

The Plan thus does not conform to NPPF, is not adequately justified and is not effective.

The Plan does not properly meet the statutory Duty to Cooperate.

We will return to this matter in specific representations to Section 7 of the draft plan.

## 5.2. Policy H2 Strategic Locations/Allocations 2021-2039

### Stagecoach Supports

Policy H1 makes plain that the plan, as far as it identifies locations for development has done so in locations that conform with its spatial strategy. All of the strategic allocations to a greater or lesser extent offer clear opportunities to make use of sustainable modes, by virtue of their location. That is not to say that the opportunities to take up these opportunities, and maximise the role of sustainable modes, has been identified, defined and translated properly into the rest of the plan policy suite or Infrastructure Delivery Plan.

As our remaining representations make clear, we support the locations thus far identified as being those that offer the best opportunities to reduce the need to travel, reduce travel distances, and create high quality attractive sustainable travel choices, for both existing residents as well as new ones.

However, the transport impacts of the allocation will individually and cumulatively likely to lead to increasingly severe impacts on the transport network, and on bus services.

Perversely, because these opportunities are not properly identified and secured through the plan and its supporting transport strategy, the opportunities presented by the allocations to secure a substantially more sustainable and lower carbon pattern of movement will not only risk being squandered but may aggravate the wider problems.

## 5.3. Policy H3 Non-strategic Parish Housing Requirements

### Stagecoach Supports

The approach is consistent with the plan's spatial strategy. It generally avoids a dispersal of development to locations likely to be highly car dependent. There is a clear focus on meeting housing needs in the far north-east of the District at the largest and most sustainable settlements, such as Loxwood, Kirdford and Wisborough Green. However, it must be pointed out that public transport availability in this area, provided by the County Council through services it procures, is minimal. These settlements in practice require each adult and child of secondary school age to have access to motorised transport to fully participate in society. This might justify significant measures to secure a boost in the frequency of bus services between Guildford and Billingshurst, passing through these settlements.

Otherwise, existing commitments in the plan area already make provision to meet for local needs. To the degree that there is an unmet local requirement for affordable housing of a small scale – for example to support the rural economy – this could be met through neighbourhood plans or through Rural Exception Sites.

## 6. Place-making, Health and Wellbeing

### 6.1. Policy P1 Design principles

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

NPPF requires that proposals should consider transport issues from the earliest possible stage. Designing to properly facilitate safe and efficient access, focusing first on sustainable modes, should be at the heart of development design. Too often it is still an afterthought, notwithstanding this.

Policy P1 must include an additional statement to be compliant and effective with NPPF paragraph 104-105 and 112 a): "Development will be designed to make access and movement using walking, cycling and public transport the natural first choice, and demonstrate through the Design and Access Statement how such modes are afforded the most direct, safe, reliable and efficient routes within to and from the proposals, especially when compared with car use."

### 6.2. Policy P4 Layout and Access

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

A number of proposals in the plan involve large-scale development. It is essential that where appropriate buses can

access and circulate efficiently through development at a suitably early stage. There is no acknowledgement of this anywhere in the policy, contrary to NPPF paragraph 112.

Large-scale development which buses cannot access in an efficient or timely manner, or at all, strongly contributes to high levels of car-dependency. Evidence for this is referred to among other places, in DfT Circular 01/2022. To be compliant with NPPF and properly pursue its strategic Objectives, Policy P4 needs to be modified to address this point: "1. Provide safe, direct and attractive conditions for inclusive access, egress and active travel between all locations and providing as good direct high quality links to integrated public transport, and where appropriate efficient access and circulation to bus services, unimpeded by excessive parking, at a suitably early point in the development phasing;

#### 7. Transport and Accessibility

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

The issues related to transport are fundamental to the soundness of the Plan. In particular, the constraints presented by the capacity on the A27 around Chichester and its key junctions, are the paramount reasons why the Council does not consider it can meet its objectively-assessed development needs in full. Thus, the transport issues and potential solutions available and what these mean for the ability of development needs to be accommodated, are matters that go to the heart of the soundness of the Plan.

Paragraph 8.3 sets out the approach taken to date succinctly:

"Increasing the capacity of the road network is key to supporting growth in the Local Plan. However, there is also a need to reduce demand for road transport to achieve net zero in greenhouse gas emissions by 2050 as highlighted in the council's Climate Emergency Action Plan and Strategic Objective 1. In aiming to achieve the ambitions of the action plan, all development is expected to demonstrate how it will support four key objectives to create an integrated transport network which will alleviate pressure on the road network, improve highway safety, encourage sustainable travel behaviours and help reduce transport related impact on air quality, by:

1. Avoiding or reducing the need to travel by car;
2. Enabling access to sustainable means of travel, including public transport, walking and cycling;
3. Managing travel demand; and
4. Mitigating the impacts of travel by car."

However, this approach is unambitious and "lightweight" as it assumes, as does the existing Chichester Transport Strategy on which the current adopted plan relies, that the focus of investment should be, wholly, in highways capacity improvement.

Sustainable modes explicitly are expected to play a greater role to "alleviate pressure" on the local road network, as part of this strategy. To emphasise: to avoid exacerbating congestion, the strategy will have to both remove a significant proportion of existing demands from the network on multiple key approaches to Chichester; and then ensure that travel demands from committed and further new development allocated in the plan does not simply replace these journeys, or, worse, create even greater demands.

This will demand very significant behaviour change. Only by making sustainable modes substantially more attractive, both absolutely, and relative to the same journey made by car, can this be expected to occur. However, the explanatory memorandum as well as the wider policy suite and IDP, well expresses a fundamental unwillingness to taking specific, defined measures to achieve this reduction in car use and material promotion of sustainable modes. It makes plain that sustainable modes, including bus services, will offer a lesser role to which "access will be provided".

Such a vague and weakly defined mechanism will have no effect, at all, on current behaviour and car dependency if the relevance of those choices as a credible alternative to car use, is not substantially boosted. This includes a 5% reduction in trip demand assumed by the Traffic Model at the heart of the Chichester Transport Study 2023.

For this reason. the transport strategy behind the current adopted plan is demonstrably ineffective, as the updated model makes plain. It has not yet been delivered and is yet unclear when or (in the absence of committed funding) even if it can be. It is ineffective to "roll forward" this strategy to support a higher level of planned growth.

We note that a scheme for addressing congestion on the A27 at Chichester has been included in Roads Investment Period 3 (2025-2030) – well within the horizon of this Plan. However, recent history provides compelling evidence that off-line improvement to the north is not politically supported and arguably even technically or economically deliverable. It is not funded, nor at this stage can it be hypothesised if an economically deliverable scheme is achievable sufficient to warrant the necessary investment.

An on-line improvement of the A27, including junction improvements, is likely to favour longer distance east-west though movements, which are of greater significance to the national economy, at the expense of local movements crossing the SRN- a conundrum that largely sums up the dilemma that is faced by NHC and the County as Highways and Transport Authority. It is one that is played out in many places, but rarely is the tension so stark as at Chichester.

Every local route crossing the A27 at grade around Chichester accommodates a regular bus service - or shortly will do (Oving Road area is expected to follow in 2023, though bus services are likely to not use the modified crossroads but to use the left-in-left-out facilities provided as part of the Shopwhyke Lakes development). The impact of these issues on the entire bus operation are serious and increasingly severe.

By the same token, boosting the relevance and reliability of each of these services substantially consolidating as much demand as possible onto a much smaller number of vehicles, is clearly a strategy that ought to support the effective capacity of each of these junctions being greatly augmented, at the same time as reducing equally substantially, the energy- and carbon intensity of mobility in the plan area. Addressing the A27 should not be considered some kind of "zero-sum" game.

Furthermore, the approach of National Highways in its dealings with development and the planning system now reflect a substantial change in Government Policy set out in DfT Circular 01/2022, which we separately cover in these representations, that entirely aligns with an approach that seeks to appropriately invest in more active and rational management of scarce highways capacity, on both the SRN and local roads.

For environmental, economic and social reasons – including public health, the issues presented by the A27 and its interface with local roads around Chichester stands out, nationally, as an example of where the approach taken to accommodating and mitigating development impacts needs to make a clear break with previous "predict and provide" approaches to meet forecast unconstrained car use as LTN 02/2022 makes clear as a principle. Policy in the West Sussex LTP to 2036 itself makes plain that "shared mobility" – including bus services – must play a much greater role in this area.

The existing Chichester Area Transport Strategy is focused on justifying capital contributions from committed development to fund highways capacity improvement – with nothing included to make bus services more attractive, or importantly more reliable. Indeed this "cars first" approach is so costly, that there is already accepted by WSCC to be insufficient land value remaining to be captured to put into substantial improvements for public transport. That much is very evident, and transparent, from paragraph 8.12 and 8.14, where south of Chichester "This (one) package of works (of several improvements needed) would be between £57.23 and £82.79 million to deliver in full and would not be capable of being funded by development contributions alone." This assumes the scheme is otherwise deliverable, which on the evidence in the public domain for some time, has been considered challengeable.

The draft Local Plan and a modestly updated infrastructure package that flows from the 2023 Chichester Transport Study, pursues exactly the same approach.

This strategy is also even more ineffective having regard to the roll forward of the Plan to 2039. It cannot deliver the key Strategic Objectives of the Plan; and in particular this is explicitly recognised by the Council in the failure of the draft Plan to accommodate the OAN in full.

It is also obsolete, as it does not align, from first principles, with national policy (including the National Decarbonisation Strategy for Transport) and DfT Circular 01/22; nor the Council's own declared Climate Emergency.

As a result, draft Policies T1 and T2 are both unsound, as we will separately explain.

Owing to the lack of evidence about the implications of this for adjoining authorities – especially Adur District – in the absence of the review of the Local Strategic Statement – this has implications for fulfilling the Statutory Duty to Co-operate.

The absence of any meaningfully comprehensive refresh of the transport evidence base means that there are no meaningful schemes of any kind, defined in the plan or its IDP, to indicate either what level of growth can be accommodated, by delivering a change in travel behaviour. This would be aimed to secure a sufficient effective increase in junction throughput (measured in terms of person trips as opposed to passenger car unit movements (PCUs). Such evidence would propose measure to achieve that outcome and assess the efficacy and costs of such improvements, across all modes.

Paragraphs 8.10-8.13 inclusive indicate that the Council "has moved away from 'predict and provide'" and invites the reader to conclude this has translated into a programme of interventions that can be funded to deliver specific, credibly predictable outcomes. Such a programme should be clear in paragraph 8.11. and the IDP. There is no such clarity and this conclusion would be false.

It would also be evident in the language of the Chichester Transport Study 2023 and its refreshed proposals. Only the most token of lip service is paid to the matter. It is a plainly car-focused, predict and provide methodology to support a "predict and provide" strategy. In fact, it is a brazenly car-focused approach, to the exclusion of all else.

The statements in the Plan regarding any other approach, read properly, offer nothing more than a vague commitment to look post-adoption, and implementation, at unspecified measures, based on problems that may arise in future that will be decided by a committee: the Traffic and Infrastructure Management Group (TIMG). This does not yet exist and is obviously an attempt to posit a mechanism that retroactively will cover for the lack of serious multi-party engagement to address the existing and future issues. Such a group should, in our view, also include the public transport operators, not least if the requirements of NPPF Para 106c) are to be satisfied, and the strategy and measures to be adopted are material to supporting the Local Plan, as of course the purpose of the TIMG has as its core *raison d'être*.

The approach proposed by the draft plan is plainly ineffective and unsound in justifying the draft Plan.

It is more widely unacceptable to Stagecoach. The issues are severe today and well-known, already serving to jeopardise the delivery of buses relied on by existing residents, much less attract new ones.

We also consider that HM Planning Inspectorate are likely to be quite resistant to accepting this aspect of the plan's transport strategy, nor will it be appropriate for the Council, West Sussex County Council, or National Highways, to define such measures after the submission of the Plan during the Examination process. The Examination in Public of a local plan has no purpose to improve plans, or remedy deficiencies clearly evident prior to submission.

The examination of the West of England Joint Strategic Plan in 2019, and the Uttlesford Local Plan in 2021, among several others, demonstrates especially clearly that the Planning System and the Examination process is not amenable to post-hoc retrofitting of transport evidence and strategies to support a development strategy.

#### 7.1. Transport Evidence Base

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Most of Stagecoach's serious concerns about the soundness of the plan arise from the fact that it has been prepared in advance of any up-to-date transport evidence and suitably robust transport mitigation strategy being advanced to support it. In essence, the Council has rolled forward the existing plan by 9 years, adding some additional sources of housing supply, while still relying implicitly on a transport evidence base that was prepared 10 years ago.

This led to the formulation at that time of what can only be described as an attempt to develop an effective car-based mitigation strategy, creating capacity for general traffic added to accommodate unconstrained additional demands on an already over-taxed highways network – the Chichester Area Transport Strategy. Despite language in support of sustainable modes, no deliverable measures were identified to support either the extension of the bus network to serve allocated sites, and much less to create a vital improvement to the quality and reliability of public transport services. This approach reflected the approach set out in DfT Ministerial Circular 02/2013 "Development and the Strategic Highways Network", applicable since the A27, which is the focus of the most severe difficulties, forms part of the national Strategic Roads Network.

This approach has proven ineffective even before substantial elements of housing land supply in the current plan come forward – in particular West of Chichester and West of Tangmere.

In addition, Circular 02/2013 has now been replaced by a new Ministerial Statement of 23/12/2022, DfT Circular 01/2022.

On both counts the transport evidence base and strategy needs to be properly revisited and established to provide effective mitigation for the plan, including current commitments that are being rolled forward.

The language of the current Ministerial Circular 01/2022 offers a highly condensed synoptic view of the proper approach to addressing transport matters in the planning system notwithstanding that it is directly concerned with the Strategic Roads Network. *Videlicet*:

"31. The NPPF expects local plans and spatial development strategies to be underpinned by a clear and transparent evidence base which informs the authority's preferred approach to land use and strategic transport options, and the formulation of policies and allocations that will be subject to public consultation. The company will expect this process to explore all options to reduce a reliance on the SRN for local journeys including a reduction in the need to travel and integrating land use considerations with the need to maximise opportunities for walking, wheeling, cycling, public transport and shared travel.

32. The Transport Decarbonisation Plan indicates that carbon emissions from car and van use is the largest component of the United Kingdom's total transport emissions. While action is being taken to decarbonise transport such that all new cars and vans will be fully zero emission at the tailpipe from 2035, the proposed location of growth in current plan periods and whether new developments would be genuinely sustainable remain important factors in demonstrating that

a local authority area is on a pathway to net zero by 2050 and therefore compliant with the requirements of the Climate Change Act 2008.

33. Alongside this, the local authority should identify the key issues within their study area regarding transport provision and accessibility, setting out how the plan or strategy can address these key issues in consultation with (National Highways, and other transport stakeholders identified in NPPF paragraph 106b). It is the responsibility of the local authority undertaking its strategic policy-making function to present a robust transport evidence base in support of its plan or strategy. The company can review measures that would help to avoid or significantly reduce the need for additional infrastructure on the SRN where development can be delivered through identified improvements to the local transport network, to include infrastructure that promotes walking, wheeling, cycling, public transport and shared travel. A robust evidence base will be required, including demand forecasting models, which inform analysis of alternatives by accounting for the effects of possible mitigation scenarios that shift demand into less carbon-intensive forms of travel.” (our emphasis)

Within the text quoted above, references to National Highways and “the Company” can quite legitimately be extended, given the statements in NPPF paragraph 16, 25, 26 and 106b, to include all the relevant transport infrastructure and service providers in the plan area. Circular 01/2022 also has the weight of secondary legislation as a Written Ministerial Statement and thus should be considered to be highly material.

To date there has been little attempt to explore, to the degree necessary, strategies that conform to Circular 01/2022. It is thus not possible to conclude, as the Council has done, that the issues on the A27 that present a constraint to development, are insuperable.

In line with comments made elsewhere in the response to this pre-submission draft, the Plan thus requires substantial further work to be undertaken with key stakeholders to establish a suitably effective and demonstrably deliverable transport mitigation strategy, to sustainably meet the District’s identifiable development needs and where apparent and appropriate, also ensure that wider cross boundary strategic issues are appropriately addressed, in conformity inter alia, with the Duty to Cooperate, NPPF paragraph 16 and 104-111 inclusive, and DfT Circular 01/2022 and to ensure the Plan’s own Strategic Objectives can be met.

#### 7.2. Policy T1 Transport infrastructure

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

As described in comments elsewhere, Stagecoach does not see that a suitable proportionate and up-to-date basis exists to properly and appropriately address the transport issues in the plan area.

The 2023 Transport Study does not perform this role adequately but, contrary to the explanatory memorandum, is a scheme intended only to facilitate car-borne movements through some of the key junctions. There is no evidence that an holistic integrated and strategic approach to transport mitigations has been prepared. Certainly Stagecoach has not been involved in any of the discussion about appropriate transport measures in support of the plan, including the Transport Study 2023, contrary to the expectations set out in NPPF at paragraph 16 and 106.

Notwithstanding out fundamental concerns about the transport evidence case and mitigations strategy, Policy T1 reflects a weak and ineffective approach, that seeks to try and define a strategy post-adoption.

Contrary even to the explanatory memorandum for the policy, which seeks to maximise the contribution of sustainable modes, the policy is phased in such a way that it gives basis for previous “predict and provide” solutions to facilitate and support current levels of car dependency – already shown to be undeliverable and unaffordable – will nevertheless be the first rather than the last resort. There is no commitment to seek to maximise the contribution made by sustainable modes to meeting mobility needs. Nor is there any recognition that current chronic congestion and lack of network resilience jeopardises the ongoing attractiveness and long- term sustainability of the current public transport offer.

To be effective and create alignment with national policy, and also provide for an up-to-date transport evidence base and strategy to be adduced, Policy T1 should be modified to read:

“Integrated transport measures will be developed to mitigate the impact of planned development on the highways network, improve highway safety and air quality, promote more sustainable travel patterns and through providing in the first instance, new and improved infrastructure and services that will be credible effective in maximising the encourage increased use of sustainable modes of travel, such as public transport, cycling and walking.

To achieve this, the council will work with National Highways, West Sussex County Council, other transport and service providers (including through the Traffic and Infrastructure Management Group) and developers to provide a better integrated transport network and to improve accessibility to key services and facilities...

All parties, including applicants, are expected to support these objectives by:

1. Ensuring that new development is well located and designed to avoid or minimise the need for travel, encourages maximises the use of sustainable modes of travel as an a credible alternative to the private car and directly provides or contributes towards new or improved transport infrastructure;
2. Working with relevant transport infrastructure and service providers to improve accessibility to key services and facilities with primary emphasis on sustainable modes, and to ensure that new facilities are easily accessible by sustainable modes of travel;
3. Targeting investment to provide local travel options as an that represent a clearly credible alternative to the car use, focusing on the delivery of improved integrated bus and train services, and improved pedestrian and cycling networks, including the public rights of way network, based on the routes and projects identified in the Local Transport Plan, West Sussex Bus Service Improvement Plan, Local Cycling and Walking Infrastructure Plan (LCWIP) and the Infrastructure Delivery Plan;
4. Planning to achieve the timely delivery of transport infrastructure on and approaching the A27 and elsewhere on the network, needed to support new housing, employment and other development identified in this plan;
5. Phasing the delivery of new development to align with and where possible facilitate the provision of new and improved transport infrastructure and services and the outcomes of monitoring travel demand on the network, including that arising from areas immediately adjoining the plan area. It may also be Where necessary to achieve this alignment proactively phase development will be phased to take into account the monitoring and effectiveness of travel plans demands on the network and to ensure that measures are implemented to support the highest possible level of encourage sustainable travel behaviour.;
6. Using demand management measures, such as travel plans, to manage robust methodologies to assess travel demand and minimise the need for new or improved transport infrastructure as part of the monitor and manage process.
7. Delivering a coordinated package of infrastructure improvements at and approaching to junctions on the A27 Chichester Bypass along with other small-scale junction improvements interventions within the city and elsewhere, as identified through the monitor and manage process. These will increase road capacity, reduce traffic congestion, improve safety and air quality, and improve access to Chichester city from surrounding areas, first by maximising the contribution of sustainable modes to meeting mobility demands, then, and only as evidenced by robust modelling and option testing, providing increased highway capacity for general traffic.

..."

### 7.3. Policy T2 Transport and Development Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Section 1 b) of T2 will be ineffective as, absent measures to ensure buses can run reliably and efficiently, improved bus services will not be possible, in support of the plan's own stated broad approach to transport mitigation, as well as wider local and national policy.

The draft policy does not require improvements to the quality of services such that sustainable choices will be materially more attractive than car use for many local journeys. Without this the Plan's Strategic Objectives cannot be fulfilled and the objectives of the Plan and this policy, read in its own terms, will not be realised, where reduction in private car use is concerned. It is thus ineffective.

Absent measures to make bus services more reliable and more efficient, by insulating them from chronic congestion as far as possible, still further operating resource and therefore costs, will be needed to just to reliably run existing service frequencies, and capacity, as vehicle productivity continues to be more and more adversely affected by chronic delay. This will be further aggravated by increasing incidence of severe unpredictable service breakdown arising from incidents of diverse kinds on the network, especially on or around the A27, including that arising from more regular severe weather events. Longer journey times can only be expected to lead to relative disadvantage of bus services compared to personal car use, entirely contrary to the objectives of national and local policy, including Policy T1. It can also expect to lead to a dampening effect not on car use, but on bus patronage, threatening the ongoing viability of bus services across the plan area.

Section 1 b) of T2 should be modified to read:

"b) Maximise opportunities for the use of sustainable travel modes through provision of direct and efficient access both to either the existing networks or and through providing such new infrastructure or public transport services, as can be credibly expected to reduce reliance on the private car and work towards achieving net zero in greenhouse gas emissions by 2050;"

Section 1 d) of T2 will be ineffective as the location of development is fixed by this plan. We commend the fact that all the strategic allocations are or will be served by regular bus services.

However, the use of public transport services, where available, depends on the relevance and reliability of these services. Furthermore, provision of services without them generating sufficient patronage to support their long-term operation also threatens the sustainability of the plan and its supporting transport strategy. This is especially true of new services such as those intended to serve West of Chichester and Tangmere and East of Chichester Strategic Allocations.

This can only be assured by the plan being supported by specific measures to ensure buses can operate efficiently and reliably on the existing and projected services intended to serve the developments concerned, and also at the same time secure behavioural change from existing development.

To be sound and effective, the policy T2 1 d.) should be changed to read:

“d) Ensure major development is located to proposals and the supporting mitigation measures enable the use delivery of high-quality, reliable and effective public transport to present the most relevant possible choice to access local services and facilities including employment, leisure and education facilities”;

The Policy T2 makes no provision for buses, where necessary, to enter and make efficient and safe progress through major development sites. The plan is thus out of conformity with NPPF paragraphs 104-106. It makes no provision to ensure that penetration of bus services is achieved at a suitably early point in the development trajectory, undermining the achievement of the goals of the Plan and this specific policy. As a good example, West of Chichester Phase 1, currently under construction, cannot be served by buses as a strategy to effect interim bus penetration was never made.

Policy T2 1 f.) should therefore be amended to read:

f) Ensure that the layout and design of the site development proposals provides effective penetration of the site by sustainable modes, at all points in the development build-out, including public transport where appropriate; and sufficient space for all vehicles to manoeuvre without compromising the safety of pedestrians and cyclists, the efficiency of bus services, or the ability to provide an appropriate level of landscaping across the site”

Policy T2 3.) regarding Travel Planning depends entirely on its effectiveness on the quality and relative attractiveness of sustainable alternatives over car use. In the absence of efficient frequent, reliable and direct public transport services (or similarly, high quality facilities for active travel, Travel Plans will continue to be the entirely ineffective “tick box” exercises that they generally are today, evidenced by much lower levels of public transport use in most new developments than it seen in nearby established neighbourhoods, as demonstrated broadly by Census data in 2011, 2011 and 2021.

For this policy to be effective an up-to date transport evidence base and strategy, underpinning a series of specified interventions to promote the relevance and effectiveness of all sustainable does including public transport in particular, needs to be put in place.

## 8. Chapter 9 Infrastructure – Policy I1 Infrastructure provision

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Policy I1 could not expect to be effective without a clear understanding of the effectiveness and costs of a defined series of measures that are laid out in this Plan and its IDP, to mitigate the transport impacts of the development strategy.

Where the Chichester Transport Study is concerned the only meaningful work has focused on the definition and delivery of a range of highways capacity schemes mainly on the A27 around Chichester.

As we have discussed elsewhere the effectiveness of these schemes is insufficient as set out at Tables 8.1 and 8.2 of the Chichester Transport Study 2023. The plan itself admits that the deliverability of this package cannot be afforded by developer contributions alone.

The Chichester Transport Study 2023 does not attempt provide a realistic assessment of costs to deliver these schemes, despite the fact that they have been under evaluation for many years. Nor does it offer any assurance that the schemes are technically achievable. Rather, it states the opposite:

“9.2.3 No investigation has been carried out into specific land ownership details, or into the location details or cost of moving statutory undertakers and utility apparatus within the areas of the scheme. No design assessments were carried out at this stage to ascertain the deliverability of the proposals except where any Health and Safety concerns were raised.”

Thus on the grounds of effectiveness, deliverability and affordability, the measures on which the Plan relies must at the very least be considered to involve an exceptionally high level of risk. Since Policy I1 is founded on these assumptions, it

cannot be considered effective.

As we set out elsewhere, the Plan has been advanced on the basis that if any additional sustainable transport measures are required, these mitigations should be retroactively considered and defined after adoption of the Plan. In the light of the doubts that are apparent of both the deliverability, affordability and effectiveness of the Chichester Transport strategy this is especially unsatisfactory even if existing baseline conditions were reasonably acceptable.

However, the Chichester Transport Study 2023, as did its predecessors, makes plain that that existing problems are acute, and can rightly be considered “severe” in the sense of NPPF paragraph 111. Waiting to define deliverable affordable alternatives is an entirely inappropriate approach to the local plan transport mitigation strategy. Such an approach also makes it impossible to consider prior to adoption how far the transport impacts of the plan can be cost-effectively mitigated by alternative means, or whether they are deliverable having regard to technical achievability, land control, development viability, or any combination of the above. Thus, the plan cannot be considered justified, or effective.

Given the mutual dependence of development strategies in Chichester and Arun in particular on these measures this should be seen as crucial of the fulfilment of the Duty to Cooperate.

The remedy for this is ultimately to put in place a suitable transport mitigation strategy following a strategic appraisal of options through review of the LSS. This then must be supplemented by more detailed development specific and localised scheme definition, including, where necessary, bus priority and other measures to support the substantial promotion of the attractiveness of public transport in key bus corridors over private car use. This would then be reflected by costed proposals in the IDP.

Leaving these fundamental weaknesses to one side, even if such a strategy and mitigation package were defined, there is no mention of public transport in the policy even though it is clearly a key part of the policy environment and mitigation strategy for the plan as expressed in the explanatory memorandum for I1, but also at Policies T1 and T2. I1 thus does not effectively support the realisation of the intent of Policies T1 and T2.

Policy I1 iii) should therefore be modified to read:

“(iii) Safeguard the requirements of infrastructure providers, having regard to requirements within and where appropriate across the boundaries of the plan area, including but not limited to:

...

- Highways including specific measures to accommodate improved active travel and public transport level of service and cycle lanes, and...”

At limb v) the Policy expects developers to meet the “in perpetuity costs of operating and maintaining infrastructure”. This shackles development management decisions to developers assuming what are infinite costs – given that “in perpetuity”, read properly, can only mean “without any limit in time”. This means that it is impossible to meet the statutory tests on developer obligations set out in the Community Infrastructure Levy Regulations 2010 (as amended) at Regulation 122, also repeated in NPPF. This policy cannot be lawfully implemented and it is thus ineffective.

In the absence of an up-to-date transport mitigation strategy that is fit for purpose, at the point the Plan is examined these costs of any additional infrastructure are not known in any case. The strategy and its costs, including its affordability and deliverability, are crucial to assessing if the Plan is sound.

Subject to an appropriate defined transport mitigation strategy being arrived at, to be sound, the Policy I1 v) should be modified as follows:

(v) To consider and meet as appropriate the in-perpetuity delivery costs of infrastructure and, where appropriate, improved services, to the point where its long-term operational sustainability is credibly assured from mainstream sources. Where adoption is not envisaged by local authorities, that must include arrangements for its future ongoing management and maintenance;

## 9. Strategic and Area Based Policies

### 9.1. Policy A1 City Centre Development Principles

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Chichester City centre is rightly identified at 10.2 and 10.4 as the commercial and service hub of the District. It is also acknowledged to be the most accessible place in the District by sustainable modes, public transport in particular.

Boosting the vitality of the city centre is something that Stagecoach strongly supports. Irrespective, the enhancement of

the commercial and cultural life of the District in the place where these opportunities can be accessed broadly by sustainable modes, is one that has long been at the heart of national planning policy for town centres, reflected in the "town centre first" approach to locating major trip generating uses.

Paragraph 10.5 exposes an unbalanced and unsound preoccupation with aesthetic matters in its approach to the town centre, and far too little to ensuring that the central place function is enhanced through protecting and enhancing the quality of public transport access.

The city is relatively small but at the heart of an extensive hinterland, and thus the role of bus in supporting sustainable access to and enhanced city centre venue is one that needs appropriate recognition and emphasis. It is important to note that a dominant number of key service and facilities such as the General Hospital are relatively close to the city centre. This directly contributes to driving travel demand into the city, causing congestion. Most importantly, it also makes the task of mitigation simpler, given the impact a suite of active and sustainable measures can have within the same close proximity.

Policy A1 does not provide this. As such, achieving the strategic objectives of the plan is seriously threatened, and the plan is thus not effective.

The Plan needs to ensure that the approach to city centre regeneration maintains and enhances public transport access, interchange and inter-modal connectivity. It also needs to ensure that bus service stopping and interchange facilities are able to address increases in future demand, anticipated by the clear intent expressed elsewhere in the Plan that public transport should be meeting a greater proportion of mobility needs, in a growing district. Achieving this demands an ambitious approach to the location, quality and capacity of bus stop and interchange.

We have been in discussions with the District Council about this, alongside West Sussex County Council, for a very considerable period. Stagecoach has always been keen to help facilitate the Council's aspirations for the city centre, and we continue to hold this intention. However, this cannot be at the expense of a material diminishing of the convenience and fitness-for-purpose of bus stop infrastructure and interchange. Stagecoach has significant concerns that current proposals to remove the bus station and have all bus services operate from the street kerbside, on an inner distributor road with similar or reduced net stop capacity, fall short of promoting attractive, convenient bus access to the central area as a destination.

For the longer term and where the objectives of the draft plan are concerned looking ahead to 2039, they clearly fall short of enhancing the convenience and attractiveness of public transport use. Much less do they make sufficient provision for a material increase in bus frequency, connectivity, and interchange convenience, on which the draft plan explicitly relies. It is vital that the District Council is clear in policy about its objectives for public transport in the city centre. These objectives must also carry sufficient weight when held in tension with other aspirations for the centre and the constraints on achieving them.

For the Plan to be sound, properly effective and compliant with NPPF, the approach to the City centre cannot ignore its role in the provision of sustainable transport service and connectivity.

Policy A1 should therefore be modified to properly reflect this crucial function, on which the vitality of the city centre must increasingly depend if unacceptable impacts on congestion, air quality and amenity are not to arise. This is still more crucial if wider aspirations to secure a more sustainable society and mitigate carbon are to be achieved.

"...This will include provision for development and proposals that:

- Support and strengthen the vitality and viability of the city centre and its role as a shopping/visitor destination, employment centre, public transport hub and a place to live;
- Support and promote facilitate improved access to the city and with increased emphasis on sustainable modes of travel, with particular regard to enhancing the public transport interchange role of the city centre area, in accordance with the transport strategy for the city and..."

9.2. Policy A3 Southern Gateway Development principles Chichester Bus Station, Bus Depot and Basin Road Car Park Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

There has been aspiration to redevelop the bus station and nearby bus depot from many years. Stagecoach has been engaged with detailed discussion with the District Council on this matter over a very extended period. We confirm that these discussions have reached a relatively mature stage, however at the time of writing are not concluded.

Stagecoach recognises and supports in principle the Council's wider aspirations for the "Southern Gateway", and this has governed our approach to the Council to date. We continue to have no "in principle" objection to relocating our administrative, engineering, operational and customer service facilities.

Leaving our proprietary interests entirely to one side, it remains vital that in so doing, the effectiveness, attractiveness

and convenience of these facilities is not compromised, as we have outlined in our representations to Policy A1, if wider national and local transport policy, and the local plan strategy itself, are to be effectively achieved.

The depot is crucial infrastructure to support the safe, reliable and legally-compliant operation of Stagecoach bus services over a very extensive area covering the entirety of the District and beyond. Without securing equivalent facilities, that are fit-for-purpose, many of our services would have to cease.

If buses are to provide a greater and more attractive level of service (still more so if they are to be electrified) larger, more capable depot facilities, and city centre bus interchange facilities will be necessary.

Notwithstanding that the bus station and depot sites are leased from the District Council, these leases terminate well beyond the end of the plan period.

Finding suitable sites for a replacement bus depot in Chichester, in common with all similar localities especially in southern England, is extremely challenging. As a sui generis use, bus depots do not automatically benefit from policy support on land allocated for employment uses. Most bus depots benefit from being legacy assets established under very different economic conditions. That is the case here. The value of a depot site for redevelopment net of demolition and remediation costs, rarely approximates to that able to sustain the acquisition of land in a tight wider employment land market, and the construction of suitable new facilities.

Furthermore, the costs of operating bus services are sensitive to the parasitic costs of vehicle and staff hours and mileage associated with "dead running" to a remote depot location from the operational network. Here, the existing depot site is ideal, and any replacement will unavoidable add ongoing operational costs to the operation that cannot be directly recovered.

We confirm that a replacement depot site has been identified and has in principle been agreed, subject to overcoming issues with the disposition of existing and future structures on the site. However, the site is recognised as not capable of accommodating meaningful operational expansion. This is just one of the most important foundational reasons why a positive transformation of bus productivity needs to be achieved, across the plan area and beyond, to support delivery of greater bus mileage and frequencies with the same level of operational resource. At the time of writing, we are not fully convinced that the proposals for the relocation will be sufficiently fit-for-purpose in the event the above is not achieved. Thus, we must raise a concern that the bus depot site might not be available during the plan period. While there is a strong probability it will be, the certainty surrounding the availability of the site, especially within the first 5 years of the plan, needs to be made transparent.

9.3. Policy A4 Southern Gateway - Chichester Bus Station, Bus Depot and Basin Road Car Park  
Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Regarding the removal of the bus station, without equivalent replacement, Stagecoach has significant concerns. Pressures and conflicts at the current bus station site have been gradually rising for several years, arising from increasing use and the need for additional scheduled vehicle layover periods to reduce the risks of accumulated late running from traffic congestion. Peak passenger volumes have recovered strongly on several routes, however passenger accumulations resulting from more frequent delays and disruption have added substantial further pressure on limited space.

Under current plans, buses and bus passengers will be displaced to bus stops at new locations outside the city centre, along Avenue de Chartres. This road was always intended to be a relatively high-speed traffic route, outside the historic core of the city. The city centre has evolved in the subsequent years to reinforce already strong natural severance, with the highway lying beyond the city walls and the green space along the Lavant. It is a traffic dominated, un surveilled and unattractive environment, reflecting the intended function of the road as an efficient movement corridor for high traffic volume, and nothing more. Avenue de Chartres is relatively close to the rail station and pedestrian connectivity can be provided at broadly equivalent distance to the current bus station, but again it is un surveilled and currently unpleasant, lacking natural legibility or any sense of prominence.

We understand kerbside capacity on Avenue de Chartres will be strained even to accommodate current levels of service, with no expansion possible. There is therefore a strong probability that to accommodate more frequencies and key new routes, such as West of Tangmere, East of Chichester and West of Chichester allocations, additional future bus stops must occupy a different location. This makes interchange between routes and rail services substantially challenging and less attractive.

The emerging arrangements risk marginalising public transport and public transport users substantially. This strongly undermines achievement of the wider plan objectives and delivery of a significantly greater role for public transport. If substantial public transport growth is to be accommodated in a growing city and hinterland, as the draft plan anticipates, then a more ambitious strategic approach must be taken. This should plan for additional and improved facilities to accommodate all services predicted to be required, whilst enhancing the passenger experience to ensure meaningful and attractive modal choice.

There is therefore a need for the plan to evidence how these issues will be appropriately resolved, having regard to a suitably ambitious approach that properly supports clear objectives to boost the relevance of public transport. The current policy is weak, unspecific and indifferent to achieving the strategic objectives of the plan, including a transport strategy in support of the plan, and as such it is ineffective.

Policy A3 should therefore be modified to read:

" ...  
 • Be designed to encourage and facilitate substantial increase in the use of active travel and public transport to, from and through the city centre.  
 ..."

In line with the commentary above Policy A4 should also be modified to read:

3. Enhance the public interchange function of the immediate area, the public realm, particularly connections to the railway station and the city centre via South Street, Southgate and Basin Road for pedestrians, cyclists and public transport users, and to National Cycle Route 2 and Route 88 which run close by. Suitable replacement bus stops and layover facilities should be provided to replace those at the bus station in line with reflecting the objectives of the West Sussex Bus Service Improvement Plan, and to facilitate growth to meet the requirements of the plan's development strategy. Routes and crossings should reflect pedestrian desire lines, and public art should be incorporated to create a sense of place;

4. Enhance the public realm, in support of this and wider objectives, incorporating public art and other measures to create a strong and attractive sense of place.

...(renumber remaining points)

#### 9.4. Policy A6 Land West of Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

This is an existing Local Plan allocation. The public transport strategy for the site depends on the delivery of the second phase which Stagecoach notes is the subject of several applications now awaiting review and determination by the Council.

The site represents a compact form of development adjoining the city, as the most sustainable settlement, meeting housing needs close to where they arise, and affording very good opportunities for the use of sustainable modes, especially walking and cycling.

It is vital that a bus service is delivered to serve the site at the earliest potential. This was anticipated to be at the start of Phase 2 and will require the early delivery of the entire length of the spine road between the Old Broyle Road and Westgate and making it available for bus services.

It is not clear if the costs of pump-priming the service mentioned in the draft policy are anticipated to be met by the developer. Without such funding, the service will not be deliverable as years of losses will never credibly be covered from future profit. It is likely that the current wording will be interpreted by the developer as meaning that they have no such obligation binding upon them. Not does policy set out any specification for this service, thus its costs and the basis for securing developer contributions does not exist.

As such any wider transport strategy, that seeks to secure a greater role for the use of public transport, and the aspiration for this allocation cannot demonstrably be met. The policy is ineffective.

Policy A6 should be modified to read:

" ...  
 10. Make provision to accommodate and secure delivery of for regular bus services linking running through the site to Chichester city centre operating at least every 30 minutes Monday-Saturday, and new and improved cycle and pedestrian routes linking the site with the city,  
 ..."

#### 9.5. Policy A7 Land at Shopwhyke

Stagecoach Supports

This is an existing Local Plan allocation, largely built-out, that benefits from an existing set of permissions.

The public transport strategy for the site depends on the delivery of effective bus priority at Oving Crossroads. The current recently implemented scheme, undertaken by National Highways, makes no provision for effective bus priority and needs considerable re-evaluation.

The site represents a compact form of development adjoining the city, as the most sustainable settlement, meeting housing needs close to where they arise, and affording very good opportunities for the use of sustainable modes, especially walking and cycling. It lies on a new bus corridor that will shortly be put in place, running to Tangmere via Shopwhyke. The allocation is being significantly consolidated by further development in the immediate vicinity which strongly supports the potential for this new service.

As we explain in our representations for East of Chichester proposed allocation A8, and West of Tangmere Allocation A14, a clear corridor strategy to effect bus priority is needed, that should be delivered in support of that further growth, and that at Tangmere SDL. However this allocation is a near complete commitment and there is no scope through policy regarding this land to effect this outcome.

It is notable that Point 6) of policy A7 makes mention of a bus service. This language reflects the currently adopted Local Plan policy and has underpinned the existing permissions. The failure of any bus service to be delivered demonstrates from first principles that this Policy has been entirely ineffective. It is important that lessons are learned from this in the Local Plan Review.

#### 9.6. Policy A8 Land East of Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This proposed allocation lies next to unallocated land that is already consented as a departure from the adopted development plan, with 143 units near completion south of Oving Road (20/02471/FUL). Additional land, also unallocated but similarly consented, has now commenced north of Oving Road (88 units under 21/02197/FUL). This and the allocation site consolidates earlier development at Shopwhyke brought forward under the current Local Plan, and allocated again as draft policy A7.

Development at Shopwhyke was brought forward on the basis of a premise that the developer would provide or somehow arrange a bus service, that was reflected in the policies of the current Local Plan. This was secured by an unenforceable condition. No bus service has been provided, as there was inadequate clarity regarding the basis on which the costs of establishing such a service would be met by the developer, and the expectations of policy on the developer. The site does however lie on a logical new bus corridor between Chichester and West of Tangmere along the Oving Road.

In addition, an expectation that modifications to the Oving Crossroads would effect bus advantage have proven false – the arrangements put buses into a similar or longer queue than if they use the route available to general traffic to and from the A27.

Stagecoach strongly supports the principle of bringing this land forward. However, the soundness of the site depends on deliverability of a regular, reliable and direct bus service along the Oving Road, taking advantage of effective bus priority.

Given the failure of existing policy in the adopted Local Plan covering the proposed A7 allocation to deliver a bus service, it is of great concern that there is no draft policy to adequately address the issue. The policy is out of conformity with NPPF paragraph 104-105 in that sustainable modes do not offer realistic choices, much less an attractive one, and as such also does not secure the objectives of national policy nor of the plan itself.

Currently the proposed allocation is not served at all by public transport. Policy needs to ensure there is a policy basis to secure contributions to deliver such a service, which may well take the form of a proportionate contribution to deliver a new service or enhance provision that is put in place between Chichester along the Shopwhyke Road to west of Tangmere.

To become sound Policy A8 must be modified to read:

“...

12. Provide for improved high quality connectivity by sustainable travel modes and focused in particular on a corridor between Chichester city centre and Tangmere along Shopwhyke Road, including new improved cycle and pedestrian routes, and a frequent bus service including linkages with Chichester taking advantage of effective bus priority measures on Oving Road at the A27;

...”

#### 9.7. Policy A9 Land at Westhampnett/North East Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This land is already allocated and consented as part of the existing 2016 Local Plan. All reserved matters are determined.

The site lies on service 55 between Chichester, Westhampnett and Tangmere. This established service benefits from additional demand from the development at Phase 1. Phase 2 which is currently well underway, does not benefit directly from bus services. However it is a compact and logical form of development where walking and cycling to local facilities and employment is a credible option.

The existing allocation rolls forward policies in the 2015 Local Plan. In so doing it is possible to see which have been effective.

Point 9. regarding bus service and routing has not been effective. In particular the potential for a bus only link between the site and Graylingwell has not been established as policy anticipated. Given congestion around the Portfield area acutely affects public transport this, or alternative methods to secure bus priority over private car use, a clear and unequivocal policy steer is required.

The lack of an up-to-date transport evidence base is ultimately at the root of these issues. Arguably the policy and allocation can only be made sound once this refreshed evidence base in place.

However, it is possible that the allocation could be made sound by modification of Policy A9 as follows:

"...

9. Make provision for regular, direct and reliable bus services linking the site with Chichester city centre, and new and improved safe and convenient cycle and pedestrian routes linking the site with Chichester city, the South Downs National Park and other strategic developments to the east of Chichester city including Tangmere. These objectives could include exploring the potential for a bus only route require a deliverable scheme to afford bus priority through Portfield, and potentially linking the development with the Graylingwell area through use of a modal filter;

..."

#### 9.8. Policy A10 Land at Maudlin Farm

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing public transport route. It is relatively close to the city and very near substantial centres of employment and services that can be reached by active travel modes, helping damp the demand for car use. It is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services at Portfield and over a wider area. In fact, the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A10 should accordingly be modified to read:

"...

5. Provide safe and suitable access points for all users, including a main vehicle access from Old Arundel Road and, subject to further assessment, a secondary vehicle access from Dairy Lane. The development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes;

..."

#### 9.9. Policy A11 Bosham – Land at Highgrove Farm

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Bosham Station. It is relatively close to the city and very near substantial centres of employment and services that can be reached by public transport and cycling, offering strong potential to materially damp the demand for car use.

There are serious risks that development in the A259 corridor west of Chichester could place further demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular to bus services.

Nevertheless, given the potential to effect bus priority on the approaches to Fishbourne Roundabout, it is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A11 should accordingly be modified to read:

"...

8. Provide safe and suitable access points for all users, including a main vehicle access from the A259. The development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys crossing the A27 at Fishbourne;

#### 9.10. Policy A12 Chidham and Hambrook

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Nutbourne Station. Substantial centres of employment and services that can be reached by public transport and cycling, offering strong potential to materially damp the demand for car use.

There are serious risks that development in the A259 corridor west of Chichester could place further demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular to bus services.

Nevertheless, given the potential to effect bus priority on the approaches to Fishbourne Roundabout, it is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A12 should accordingly be modified to read:

"...

7. Development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys along the A259, crossing the A27 at Fishbourne and where necessary on the approaches to Emsworth;

8. Facilitate improved sustainable travel modes, and new improved cycle and pedestrian routes, including linkages with Chichester city and settlement along the East/West Corridor;

#### 9.11. Policy A13 Southbourne Broad Location for Development

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach agrees unequivocally that Southbourne is a location that could accommodate growth on a strategic scale. It has a substantial range of service available within the settlement, including secondary education. It is well connected by bus and rail service to key destinations, including Chichester, lying to the east and west.

This is one of the few locations identified for growth that represents substantial additional development in a new location to the strategy in the existing Local Plan adopted in 2015. Thus, the transport impacts of development on the substantial scale envisaged at Southbourne are not covered or accommodated by the Chichester Area Transport Strategy that lies behind the existing plan. This demands, from first principles, that substantial further transport mitigation measures are required.

We recognise and endorse fully that the intent of the draft plan for Southbourne as a Broad Location for Development on a strategic scale, includes "Maximising the potential for sustainable travel links through improved public transport, including consideration of opportunities to reduce community severance caused by the railway line as well as the inclusion of cycling and pedestrian routes." (our emphasis).

The existing railway station at Southbourne is served regularly, however, it is not within the power of this plan to improve rail services. It is, however, well within the scope of action of the Local Planning and Highways Authority to work with bus operators to achieve a step change in the journey time, reliability, frequency and connectivity of bus services, and in particular the major corridor operated as service 700 by Stagecoach along the A259 between Havant and Chichester through Southbourne.

Notwithstanding the clear potential for sustainable connectivity in the western A259 corridor, there are very serious risks that development in the A259 corridor west of Chichester will place further significant car-borne demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular bus services, having the opposite effect to that intended: longer, less reliable and less frequent bus services, leading to a spiral of slowly declining use.

These risks, while very serious, look credibly likely to be entirely mitigated subject to carefully conceived and robust specified actions on the local highway network. It is perplexing to us that this potential still has not been identified, as part of a comprehensive "first principles" review of the transport evidence base. In particular given the former trunk status of the A259, there is evident potential to effect bus priority on the A259, including on the approaches to Fishbourne Roundabout.

With appropriate measures, including but not limited to this, to substantially boost the relevance and attractiveness of sustainable travel choices, strategic development at Southbourne could well be made highly sustainable.

In the absence of a refreshed transport strategy and transport evidence base, the draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact, the only reference that is made in Policy is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A12 should accordingly be modified to read:

"...Development should be comprehensively masterplanned to achieve a high-quality design and layout that integrates well with the surrounding built and natural environments to enable a high degree of connectivity with them, particularly for pedestrians and cyclists, and provides good the highest possible quality of access to facilities and sustainable forms of improved public transport services.

...

4. Provide a suitable means of access to the site(s), and securing secure necessary off-site transport infrastructure and service improvements (including highways in particular to the A259 corridor between Emsworth and Chichester) in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development) to promote sustainable transport options prioritising delivery of high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes;

..."

#### 9.12. Policy A14 Land West of Tangmere

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach strongly supports the principle of intensifying the level of development at the Strategic Development Location already identified and allocated West of Tangmere in the existing Local Plan. This serves to consolidate development at a location where effective and attractive public transport choices could be provided. It also conforms closely with the principle expressed in NPPF that the best possible use should be made of land on sites that are judged to be sustainable, or potentially sustainable locations for development.

It must be stressed that the current policy suite for the SDL has to date not brought forward development in this location. We recognise that a Master Plan has been adopted by the Council, and that a planning application (20/02893/OUT) for the full larger quantum of 1300 dwellings proposed in the draft plan has received a resolution to grant by the Council.

However, we are not aware that a sustainable transport strategy has been finalised.

Land West of Tangmere is not served by any existing regular bus services. Rather, an entirely new bus service corridor is anticipated to operate in the near term from Chichester through Tangmere and beyond towards Barnham. This would serve proposed allocations A7, A8 and West of Tangmere (A14) included in the draft Plan.

This is reflected in the language of the explanatory memorandum to Policy A14 at paragraph 10.65:

“Opportunities, in partnership with relevant authorities, to provide improved sustainable public transport routes linking the village with Chichester city, to improve cycle routes to the city, and better transport links to Barnham rail station and the ‘Five Villages’ area in Arun District; and..”

Initiating this service will be costly and will in large measure be funded not by developer contributions, but by DfT monies awarded through the West Sussex Bus Service Improvement Plan. It is crucial this service is both sustainable in the longer term without revenue support, and that the success of the service can be built on by scalable frequency improvements as strategic development comes forward in both Chichester District, and proposed allocations A7 A8 and A14, and in Arun District, in particular at Barnham, Eastergate and Westergate (BEW).

This demands measures to effect safe, direct and swift operation of the service especially within the city centre, where it approaches and crosses the A27 at Oving crossroads and on the eastern fringes of the District east and west of Tangmere. Without these measures, bus journey time and reliability will be severely compromised and the impact of this service to damped car trip demands will be very substantially compromised. No such measures are proposed in the draft plan or its evidence base.

Changes to Oving Crossroads have recently taken place which, amongst other intentions, ostensibly provide bus advantage between Chichester and Shopwhyke. The junction in its current form does not offer material gain in bus journey time, as movements involve a less-direct route towards the city over an increased operating distance, much of which involves passage through heavily congested sections of the A27 and Westhampnett Road. A refreshed transport strategy supporting plan-led growth must revisit this area to secure an effective solution which offers bus customers the fastest and most reliable trip-time to and from the city.

In addition, the extension of public transport connectivity towards BEW and Barnham, including key links to secondary education and a logical railhead for journeys beyond towards Brighton and London as provided at Barnham Station, needs to facilitate bus priority between Tangmere and Nyton – whether using the A27, or preferably avoiding it altogether. There are significant safety concerns associated with the at-grade uncontrolled right-hand A27 exit onto the B2233 Nyton Road at Crockerhill Turn. This movement is also prone to extreme delay owing to the conflict with approaching westbound traffic on the A27, travelling at speed, which has priority. Our concerns with this junction in its current form can be expected to worsen with the increased traffic volumes predicted from new residential developments to the west of the city.

A solution providing a suitable short length of highway available only to sustainable modes, between Tangmere and Easthampnett, could provide a very effective solution to this. This would be deliverable within the scope of the separate proposed allocation at A19 Chichester Business Park, Tangmere. We comment on this separately.

Howsoever effected, a reliable direct and delay-free bus corridor between Barnham, BEW, Tangmere and Chichester could expect to secure very substantial elevation of the relative attractiveness of public transport over car use on the entire corridor and serve to effectively damp growth-related demands on this section of the A27. West of Tangmere, in the longer term, there is evident scope for the route corridor to operate as two branches – one via Shopwhyke and one via Westhampnett, effectively serving all the strategic developments proposed in the plan and transforming wider public transport connectivity to key employment destinations and services within and east of Chichester.

However, in common with all the other proposed allocations, the plan proposes no specific measures to provide, much less improve public transport or other sustainable modes to the site. This leaves the draft plan out of conformity with NPPF, especially paragraphs 104-106. The plan is inadequately evidenced and to the degree that public transport measures are identified and emergent, their successful implementation in the near and longer term will be jeopardised without clear measures to provide a safe as well as efficient bus route towards BEW and the Five Village area within Arun. The Duty to Cooperate is not effectively met and effective cross boundary collaboration on these strategic issues through the review of LSS is not demonstrated, despite the current version which identifies the issues.

To be made sound the LSS Review and a subsequent urgent review of the transport evidence base and strategy needs to take place. The strategic issues are especially critical east of Chichester, in our view.

Notwithstanding this foundational deficiency, to be made sound, Policy A14 should be modified to read:

“...  
8. Subject to detailed transport assessment, provide primary road access to the site from the slip-road roundabout at the A27/A285 junction to the west of Tangmere providing a spine road link with secondary access from Tangmere Road. Development will be required to provide or fund mitigation for potential off-site traffic impacts through a package of measures in conformity with Policy T1 (Transport Infrastructure) and T2 (Transport and Development) and DfT Circular 01/2022 that maximise the relevance and use of sustainable travel modes, in particular bus services;

9. Make provision for improved sustainable travel modes between Tangmere and Chichester city, in partnership with relevant authorities, including improved direct, seamless safe and reliable and additional bus and cycle routes linking Tangmere with Chichester city, Shopwhyke and Westhampnett. In conjunction with measures in support of Allocation A19, Opportunities should also be explored contributions shall also be sought for providing improving high quality cycling and bus service transport links with the 'Five Villages' area and Barnham rail station in Arun District; and...”

#### 10. Concluding comments

Stagecoach recognises its role as a key stakeholder in the plan, as well as a local employer and corporate citizen. We recognise the primacy of the plan-led system as the mechanism intended to resolve complex challenges, including the proper alignment of transport and spatial planning, which as the National Decarbonisation Strategy for Transport among other policies makes clear, has never been more vital.

In making our representations, we emphasise that we are entirely supportive of the Local Planning Authority and the relevant Highways and Transport Authorities, in their efforts to properly manage the amount and pattern of development to secure vital policy objectives. We recognise that balancing delivery of assessed development needs with a wide variety of other constraints is a very difficult task.

The transport issues faced by the plan are recognised in the draft plan as being serious and long-standing. We believe that there are ways to arrive at a suitable transport mitigation strategy that has regard to wider strategic issues and resolves existing problems in a much more effective way than those pursued to date.

We support the spatial strategy of the plan as it evidently provides the basis to secure the necessary step change in the quality and use of sustainable transport modes, as it explicitly seeks to do. However thus far, there has been insufficient work done to define the measures that will credibly secure these outcomes.

Stagecoach therefore urges the authorities to draw us into the necessary effective ongoing collaborations that is expected by NPPF paragraph 16 and 106; and DfT Circular 01/022, to do this work, prior to, rather than after the submission of the draft plan. We look forward to being approached to initiate this dialogue at the earliest opportunity.

#### Change suggested by respondent:

In line with the commentary above Policy A4 should also be modified to read:

3. Enhance the public interchange function of the immediate area, particularly connections to the railway station and the city centre via South Street, Southgate and Basin Road for pedestrians, cyclists and public transport users, and to National Cycle Route 2 and Route 88 which run close by. Suitable replacement bus stops and layover facilities should be provided to replace those at the bus station reflecting the objectives of the West Sussex Bus Service Improvement Plan, and to facilitate growth to meet the requirements of the plan's development strategy. Routes and crossings should reflect pedestrian desire lines.

4. Enhance the public realm, in support of this and wider objectives, incorporating public art and other measures to create a strong and attractive sense of place.

Chichester Local Plan 2039 Regulation 19 Stagecoach South representations.docx -  
<https://chichester.oc2.uk/a/skh>

## Object

**Document Element:** Policy A6 Land West of Chichester

**Respondent:** Stagecoach South (Rob Vince) [8141]

**Summary:**

This is an existing Local Plan allocation. The public transport strategy for the site depends on the delivery of the second phase which Stagecoach notes is the subject of several applications now awaiting review and determination by the Council.

It is vital that a bus service is delivered to serve the site at the earliest potential. This was anticipated to be at the start of Phase 2 and will require the early delivery of the entire length of the spine road between the Old Broyle Road and Westgate and making it available for bus services.

It is not clear if the costs of pump-priming the service mentioned in the draft policy are anticipated to be met by the developer. Without such funding, the service will not be deliverable as years of losses will never credibly be covered from future profit. It is likely that the current wording will be interpreted by the developer as meaning that they have no such obligation binding upon them. Not does policy set out any specification for this service, thus its costs and the basis for securing developer contributions does not exist.

**Full text:**

Chichester District Local Plan 2039 – Pre-Submission (Regulation 19) Consultation

**1. Introductory Comments**

Stagecoach South is the main commercial public transport operator across Chichester District. The Company has headquarters in the city, which is also the principal public transport hub for the District and it's rather wider travel-to-work area encompassing much of the Arun District. Our services extend throughout and beyond the District boundaries, as far as Littlehampton, Midhurst, Havant and Portsmouth. The vast majority of services operate on a commercial basis – that is to say, sustained by passenger use and fare revenue, including concessionary reimbursement.

While the role of the railway is significant in much of the District, especially the east-west Coastway line, yet bus services account for more boardings locally than the railway, with Chichester depot services carrying over 3.5m passengers each year.

Unlike bus services in other parts of the country, the local network has recovered strongly after the pandemic with fare-paying passenger numbers over 95% of 2019 levels, albeit with concession patronage somewhat lower. This has helped secure not only a stable but growing bus network even during this period of rapidly rising operational costs, avoiding the need for the service contractions seen in other regions. Indeed, during the second quarter of 2023 Stagecoach will invest £5.5m in brand-new vehicles for high-profile coastal Service 700 – one of the largest vehicle investments for Stagecoach Group this year.

Our services are therefore critical to existing and future local connectivity. As the Plan acknowledges, mobility demands do not respect planning authority boundaries. The role of our services is especially high to settlements in the broad A27 corridor, within the District and beyond. This includes major settlements in Arun District such as Pagham and suburban Bognor Regis, where bus is the only mass public transport option. As the Council is well aware, there is an even higher level and rate of committed development envisaged in these locations in the Arun District Local Plan than in Chichester.

It is already evident to the planning authorities, West Sussex County Council and National Highways, as proprietor of the A27 Trunk Road, that accommodating growing mobility demands across Chichester District and especially around Chichester itself, is becoming increasingly challenging to the point of being seriously problematic.

Stagecoach has a particular interest in this Plan arising from:

- The already clear and highly deleterious impact of congestion affecting our operations and their reliability and attractiveness to the public. The effects of these on the approaches to Chichester, and around the A27 bypass are especially severe. If public transport is to retain its existing role – even before the needs of any meaningful growth both in Chichester and neighbouring authorities is considered, are considered – the Council and the Highways Authority need to arrive at clearly-defined measures to protect buses from chronic delay and the damaging impacts arising from the lack of bus network resilience and customer journey times.
- In connection with the above, the need to properly consider the predictable impacts of committed development in Arun District on the transport network and in particular the operation of bus services. The duty to cooperate on cross-border strategic matters is not limited merely to accommodating housing requirements.
- The fact that our entire business premises and operational base at Chichester is the subject of allocation for redevelopment within the Plan period. Specifically, this includes our Head Office, the Bus Station as the operational hub of the network and the key interchange for passenger journeys – including those that involve the railway – and the bus depot required to support the entire operation. Notwithstanding many years of discussions, there is as yet no agreed deliverable strategy to replace these facilities either in the Draft Plan or elsewhere.

Stagecoach broadly supports the vision and priorities of the draft plan. In most respects, Stagecoach supports strongly the spatial strategy and the identified site allocations that flow from it, and the evidence.

However, it has serious concerns about the soundness of the plan as proposed for submission, for important regards outlined in this response. These are made in the light of requirements set by the National Planning Policy Framework (NPPF), in particular at paragraphs 15 and 16; 35, 105-109 inclusive and having due regard to the need for allocations to satisfy 110-112 inclusive in due course as development permission is sought; and paragraph 174.

Paragraph 16c) of NPPF makes plain that strategic plans and policies should “be shaped by early, proportionate and effective engagement between plan-makers and communities, local organisations, businesses, infrastructure providers and operators and statutory consultees” (our emphasis). This makes plain that collaborative and ongoing involvement of public transport operators is both necessary, and separate and in addition to the engagement with statutory consultees. This has not taken place.

Para 1.25 of the draft plan states that “the council has engaged constructively, actively and on an ongoing basis with other local authorities and organisations to address key strategic matters.” Despite the requirements in NPPF and contrary to the statement made, Stagecoach has not been approached or involved in a meaningful, collaborative or ongoing way in the preparation of the Plan.

Our main concerns centre around the fact that the plan strategy is neither backed by sufficient transport evidence. Even more importantly, the plan relies on a wholly car-based transport mitigation strategy despite policy stating that this is not the case, and the track record of the existing Local Plan, based on a very similar strategy, that has failed to bring forward meaningful mitigations to date to prevent traffic conditions substantially worsening. There is no support in policy for the achievement of the Strategic Objectives in the Plan. Nor is there definition of any measures in the 2023 Transport Study to make provision for sustainable transport infrastructure or services – much less materially improve them.

Finally, to the extent that updated transport evidence has been provided in the form of the 2023 Chichester Transport Study, arising from updated traffic modelling, it does not support the contention that highways capacity constraints on and around the A27 justify not meeting the objectively-assessed development needs of the area, as the draft plan contends.

## 2. Vision and Strategic Objectives

### 2.1. Issues and Opportunities

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant, proportionate and up to date evidence

Stagecoach recognises the important role of the West Sussex and Greater Brighton Strategic Planning Board which agreed a Local Strategic Statement (LSS2) in early 2016 to identify spatial planning issues across the wider area. This established strategic priorities and policies to guide longer term strategic growth in a coordinated and well considered matter. This institutional framework and the purpose of the LSS is a highly significant one and is at the heart of efforts to properly fulfil the statutory Duty to Co-operate, including with regard to strategic infrastructure issues, as NPPF requires.

Given the long period of time elapsed since the 2018 Reg 18 consultation and the already very clear constraints on strategic infrastructure capacity, it is of great concern to Stagecoach that the LSS2 has not been updated to reflect emerging issues in the intervening period. A review and update of the LSS2 has only just commenced. This includes a study of projected housing and employment needs, transport impact, infrastructure and spatial options to deliver the required development in the period after 2030. This Chichester District draft plan covers a period extending to 2039 – therefore well beyond 2030 and the nominal currency of LSS2.

However, infrastructure needs are pressing today. Stagecoach is presented with severe highway operational problems on a near-daily basis. During the winter of 2022-23 we have, for example, seen key road links impacted for many weeks by acute disruption arising from flood events. Unpredictable, but seemingly more-frequent, exogenous events expose a lack of resilience in the highway network around Chichester and its travel-to-work area. However, serious, chronic, unpredictable delay has been normalised over recent years, with peak-time congestion having quickly returned after the pandemic. The existing development strategy has failed to bring forward measures having any impact on this to date, and key commitments – notably at west of Chichester Phase 2 and at Tangmere – have yet to commence to further aggravate the issue.

We have no confidence in the transport mitigations proposed in the existing Local Plan and LSS2 being sufficiently effective, even if deliverable at all. Indeed, the existing adopted Local Plan does little more than make vague speculations about the sustainable transport measures that might be achievable. The draft local plan review is no different. It has no ambitions at all for sustainable modes and thus, makes no meaningful provision to meet them.

This is especially relevant in light of the fact that the approach to resolving issues on the A27 around Chichester that were anticipated in 2015-16 have fallen away. LSS2 is thus currently inadequate to act as a part of an up-to-date, proportionate, and relevant evidence base for the Plan.

An update of a traffic model lies at the heart of a 2023 Chichester Transport Study. This talks no account of the existing role of non-car modes, nor can it do so. It is unable to properly evaluate the nature of problems or solutions that involve public transport, or for that matter, other sustainable modes.

Therefore, we consider that the combination of committed and additional development needs that must be accommodated over the whole plan period between 2022 and 2039, in both the Chichester and Arun Districts, require a “first principles” review. This must be based on a refreshed transport evidence baseline of no earlier than 2022 – given that the effects of COVID distort 2020-22 – and the transport infrastructure and service requirements to sustainably support those needs.

Key issues – including substantial changes with regards to transport issues and challenges, as well as potential solutions – thus do not form part of the evidence base that steers this plan. Given long term changes in travel patterns, and mode share that took place during COVID, as well as a local and national policy context that seeks to radically reduce and then eliminate transport-related carbon emissions, this is especially problematic.

The specific problems of congestion and network resilience that are evident on the A27 and the approaches to Chichester remain a set of especially difficult problems that disproportionately affect the efficiency, reliability and attractiveness of the bus network, that evidently demand larger-scale strategic responses involving multiple stakeholders, including bus operators.

Where the effects of development on the national Strategic Roads Network (SRN) are concerned, the approach of National Highways to addressing and responding to the mobility needs of development has now substantially changed following the promulgation of the DfT Written Ministerial Statement LTN01/22. This makes it clear that adding highways capacity is no longer the first or only strategy that should be pursued, but one subordinate this to maximising the potential of non-car modes and sustainable travel.

“Effective and ongoing collaboration” on transport matters has not led to solutions being agreed and published for public scrutiny as part of the plan evidence base. Whatever the approach to modelling and “highways improvements” that may be agreed or pending agreement with the County Highways Authority and National Highways, Stagecoach is neither participant or sighted. This is despite the clear requirements set out in NPPF Para 106 b) that “Planning policies should ... be prepared with the active involvement of local highways authorities, other transport infrastructure providers and operators and neighbouring councils, so that strategies and investments for supporting sustainable transport and development patterns are aligned.” (our emphasis).

We therefore consider that the Council has failed to comply with the requirements of NPPF paragraph 25 and 26 that “relevant bodies” are involved in plan-making, especially with regard to addressing the needs for infrastructure. Public transport services and the infrastructure that supports its operation and use clearly fall within matters relevant to plan-making. This is explicit in NPPF Chapter 9 and indeed within the plan itself – for example reference to public transport and sustainable modes in the Vision for the plan.

It should be stressed that the Regulation 18 “Preferred Approach” consultation took place in December 2018 – over 4 years ago and prior to COVID, based on LSS2. The inordinate length of time that has elapsed between the Regulation 18 and Regulation 19 stages greatly challenges the LSS2 and other parts of the evidence base, especially as the pause straddles the COVID epidemic. That would include the transport modelling baseline, and key assumptions in any traffic modelling that took place prior to mid-2022, which is a point at which a reasonable “new normal” post-COVID might be considered to have become established. In that period, Arun District has also adopted its own Local Plan development strategy that accommodates an unprecedented quantum of development immediately east and south-east of the District Boundary – creating additional substantial transport impacts directly affecting the A27 and multiple major approaches to Chichester crossing it.

The established mechanism to fulfil the Duty to Co-operate has thus not operated effectively.

The Plan is not founded on a relevant, proportionate and up-to date evidence base and is thus inadequately justified.

## 2.2. Spatial Portrait

The spatial portrait is generally succinct and accurate. However, it makes no mention of road-based public transport, the role of the City as a public transport hub, or the range of bus services that provide local connectivity (Section 2.4 and 2.5). The complete concentration of post-16 education in the City itself as just one example of the peculiarities of transport demands in the area, is not highlighted, though this has a profound influence on peak time travel demands affecting the most congested parts of the highway network. Among other things, the role of bus services in supporting the educational system of the plan area is very great indeed.

The potential role of bus in addressing the already-severe transport problems of the plan area and beyond seems entirely overlooked. The spatial portrait is thus clearly inadequate and incomplete.

## 2.3. Strategic Objectives

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Chapter 9 of NPPF and paragraphs 104 and 105 in particular require that plans should:

"Transport issues should be considered from the earliest stages of plan-making and development proposals, so that:

- a) the potential impacts of development on transport networks can be addressed;
  - b) opportunities from existing or proposed transport infrastructure, and changing transport technology and usage, are realised – for example in relation to the scale, location or density of development that can be accommodated;
  - c) opportunities to promote walking, cycling and public transport use are identified and pursued;
  - d) the environmental impacts of traffic and transport infrastructure can be identified, assessed and taken into account – including appropriate opportunities for avoiding and mitigating any adverse effects, and for net environmental gains;...
- ...The planning system should actively manage patterns of growth in support of these objectives. Significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. This can help to reduce congestion and emissions, and improve air quality and public health..."

The Strategic Objectives do not conform with NPPF in these foundational requirements adequately, to transparently steer the plan strategy. They should therefore be amended to read:

"Plan to provide local infrastructure to support new development and seek opportunities to address existing identifiable infrastructure problems deficits, such as in particular those relating to the A27 and its junctions and wastewater treatment."

Paragraph 2.36 states, in the context of the Climate Emergency and the National Trajectory to "Net Zero" that "The council will enable the delivery of infrastructure, jobs, accessible local services and housing for future generations while protecting, conserving and enhancing the historic and natural environment."

Naturally, we support this intent.

However, there is no acknowledgement of the role current patterns of transport use contribute to carbon emissions, nor that substantial mode shift is necessary to address sustainably an acute lack of capacity on the local network and the SRN, especially around Chichester. This is especially concerning as the basic conceptual link is not made between the fact that the greatest such problems lie on the A27 corridor and around Chichester, while these are also at the same time present many of the most sustainable locations for development, and where the opportunities to secure much greater use of sustainable modes also exists.

Strategic Objective 7 "Strategic Infrastructure" includes the following statement:

"To work with infrastructure providers to ensure the timely delivery of key infrastructure to support delivery of new development. New development will be supported by sufficient provision of infrastructure to enable the sustainable delivery of the development strategy for the plan area. Key infrastructure to support the Local Plan will include improvements to transport, ...

A sustainable and integrated transport system will be achieved through improvements to walking and cycling networks and links to accessible public transport. Highway improvements will be delivered to mitigate congestion, including measures to mitigate potential impacts on the A27 through a monitor and manage process."

The latest transport evidence in the Chichester Transport Study makes no pretence to define much less to deliver a "sustainable or integrated" transport system. It is wholly devoted to sustaining current levels of car use across the District, to and through Chichester area.

It is no more than the lightest of touches to the approach taken to supporting the adopted Local Plan, an approach that is already almost 10 years beyond the date of its gestation but has yet to deliver any significant capacity improvement schemes, much less any measures that sustain even current levels of public transport journey times and reliability in the face of increasing congestion – much less any betterment.

Of the six key junctions on the A27 around Chichester, recognised to require significant mitigation given they are saturated for extended periods, five accommodate regular bus services - indeed frequent ones at least every 20 minutes in several cases. The sixth at Oving Road, relates directly to a key corridor where bus services are needed to support strategic growth currently being delivered at Shopwhyke, as well as substantial further growth West of Tangmere (proposed allocation A14) and "East of Chichester" (A8), south of Shopwhyke Road.

As stated at p12 of the Study Summary "The modelling shows that all the junctions on the A27 Chichester bypass are well over capacity, even before adding in the Local Plan development and with the exception of Portfield Roundabout are actually shown to be over capacity in the base model year (2014) in one or both peaks". This much has indeed been evident for years from delay and periodic even more severe disruption arising to Stagecoach services from the lack of network resilience.

The reassignment of through and local traffic through Chichester to avoid the A27 bypass is an especially serious issue for bus services that penetrate the city. This is leading to consequential saturation of a range of junctions used by buses. Rising delay and unpredictable running times are at the root of our decision to sever the long-established Portsmouth to Littlehampton service in 2023, which will in future no longer run across Chichester, but terminate to provide additional dwell time to mitigate the impacts of congestion.

While this congestion affects all road users including businesses and freight traffic, the effect on scheduled bus services is greatly higher, as such services cannot reassign route to 'beat the queue'. Traffic congestion often encourages greater car use for this reason, in tandem that people are happier to sit for extended periods in their own vehicle on a seamless door-to-door journey than wait at the roadside for a delayed bus making slower progress in lengthy queues.

As the Study admits at para. 1.3.2 "Although, there have been works at the Portfield Roundabout in this timeline, no other mitigation schemes have been completed along the A27 corridor, as such the mitigation schemes defined in this report will also be required to consider the development from this plan period."

In other words, in the 8 years since the current Local Plan was adopted in 2015, there has been minimal progress in delivering the traffic mitigations. There is no clarity at all when any such mitigations will be brought forward. It is hardly surprising then, that traffic conditions have deteriorated. The "predict and provide" transport strategy supporting the current plan has failed.

Despite this, the Draft Local Plan Review proposed to "double down" on exactly this strategy. It represents, like the rest of the evidence base, a "rolling forward" of the current car-based strategy by 9 years, with the lightest of touches to attempt to accommodate car trip demands from a relatively modest additional development quantum.

Nevertheless, the Study requires a global 5% reduction in trip demands arising from unspecified "credible" (paragraph 4.1.2) sustainable transport and travel planning measures. It is unclear why use of non-car modes will see disproportionate growth when no measures are in place to make them more attractive. This 5% increase in use translates to a doubling in the modal share of bus services. There is no evidence nationally, anywhere, that simple ignorance of alternatives to the car is the main barrier to uptake.

The outputs of the 2023 Chichester Area Traffic (SATURN) model are set out at Table 5.1 (am peak) and 5.2 (pm peak) without mitigation. These betray just how seriously compromised the whole network around Chichester is, and will be in future, even with implementation of a mitigation package to increase traffic capacity that is understood to cost between £92m and £164m – and which the Study and the draft plan acknowledge cannot be delivered through developer funding sources alone. Unspecified external funding presumably from HM Treasury through DfT is required.

Even if this provided and the schemes are delivered, Tables 8.1 and 8.2 indicate these will provide minimal relief. The final columns suggest key junctions, including Portfield, Fishbourne Road and Cathedral Way East will remain at well over 100% ratio of flow to capacity (90% is considered the point at which saturation is approached, with the onset of increasing delay above that figure). RFCs in tables 8.1 and 8.2 are some of the highest we have ever seen in a local transport evidence base for a post-mitigation scenario. While the serious potential risk of reassignment across Chichester City is greatly reduced, which is important and welcome given its impact on bus services, Tables 8.1 and 8.2 show the extent of post-mitigation saturation is also egregious, covering a very large number of key links and junctions.

On every measure and criterion, then, including cost deliverability and effectiveness, the revised Transport Strategy falls well short of evidence to suggest the transport impacts of the plan can be properly addressed by this means.

Despite the repeated statements about sustainable modes throughout the draft plan and Chichester Transport Study, only 2 paragraphs at Section 6.2 within the Study are devoted to public transport:

"6.2.7 The funds generated from the parking management schemes, local/nation funding schemes and developer contributions could also be utilised to fund potential public transport enhancements within the city centre including an expansion of the bus priority lane system within Chichester City Centre. This could reduce reliance on the car in the longer term towards sustainable public transport. A park and ride scheme could be incorporated within a bus priority lane network in the future depending on the uptake and successfulness of early bus priority trials.

6.2.8 Chichester City centre has a constrained existing public highway network. Therefore, any proposed dedicated public transport or light transit corridors that could be implemented would be at the expense of existing highway. This could be managed through a time-based system where certain routes are restricted to public transport only during specific times. E.g., peak hours."

There is some very high-level consideration of Park and Ride following this section. None can be considered a serious practical evaluation of consolidating car-borne trips onto bus services, including existing ones, for example local mobility hubs, more frequent bus corridors, delivery of specific bus priorities.

None of the discussion of alternatives to "predicting and providing" for unconstrained traffic growth is rooted in a deliverable evidence base, or proper evaluation of options and specific projects.

To take just one aspect of the few specifics that can be picked out, a workplace parking levy is hypothesised. This would apply only to "offices", in Chichester city centre (para 6.2.3), without consideration given as to how this could be practically achieved or even that a meaningful amount of office based employment would qualify. Much less is any consideration given to how far focusing a strategy only on office-based workers would actually deliver a particularly significant effect, apart from to create a strong incentive to relocate offices out of the city centre to places out of reach

by public transport.

Looking at the Chichester Transport Study 2023 and the draft plan together, there is insufficient evidence that the traffic capacity increase proposed in the 2023 Transport Study is any more affordable or technically deliverable, or likely to be sufficiently effective, than those in the past strategy. The evidence more strongly points to the fact that no highway improvements are identifiable or economically deliverable to meet even short term increases in demand for car-borne mobility on most of the network around Chichester.

There are no published strategies or schemes clearly supporting the contention that the objective of improving sustainable modes is technically achievable or deliverable either. The plan makes generalised assertions that such strategies will be devised and implemented only after serious problems emerge from a shortfall in the car-borne transport strategy.

The reference to “monitor and manage” is undefined and unsubstantiated. There are no outcomes stated, no mechanisms specified and no timescales for action.

Our experience today is that network conditions have reached unacceptable and prejudicial levels of severe unpredictable delay. The saturation of the network is already evident well outside the traditional peaks on key sections of highway and at key junctions. External shocks such as the effects of severe weather are becoming more common, leading to delays so extreme as to justify the description of “gridlock”. The plan does not identify a strategy to effectively address this, in particular by consolidating passenger car trips onto more efficient public transport vehicles. This is unacceptable to Stagecoach.

#### 2.4. Local Plan Vision

Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the broad approach in Plan Vision and in particular that by 2039, the Plan will support and enable greater use of sustainable modes. However, there is no link made between reducing the use of private cars, and the need for a step change in the use of sustainable modes. Without a published transport evidence base it is impossible to establish a suitable sustainable transport strategy to support both carbon reduction and alleviation of the problems arising from acute congestion. Even on a very crude basis, to achieve a meaning mode shift on key approaches to the A27 Chichester Bypass will require more than 20% of existing peak car-borne journeys to transfer to other modes. A 10 percentage point transfer to bus (about half this shift) would imply more than doubling peak hour bus passenger boardings.

The Vision is nothing more than an aspiration, that needs to more definitively aim at key outcomes, for the plan to be effective. The Vision should thus be altered to read:

“Get about easily, safely and conveniently with less reliance on private cars –making the greatest possible use of the rail and enhanced bus network, and with more opportunities for active travel including walking and cycling; to materially reduce dependence on private car use.”

Underpinning the Plan’s spatial strategy, the Vision section goes into more specific detail about key localities in the Plan area.

Regarding Chichester, Paragraph 2.39 states: “The emphasis will be upon consolidating and enhancing the role of Chichester city as the plan area’s main centre, whilst also developing the role of key settlements to its east and west. The focus will be upon creating communities with good access to a range of employment opportunities and affordable housing for young people and families to balance the ageing population.”

This is clearly the appropriate focus for meeting the District’s development needs in a sustainable manner. The city and key settlements to the east and west, are those places already able to make use of relevant public transport services, both rail and bus. Especially within and near the City, walking and cycling can credibly present highly relevant choices. This emphasis clear can be expected to address the requirements of sustainable development set out in NPPF and their local application set out in the Plans Strategic Objectives.

However, this needs a robust transport strategy, to avoid a further concentration of development and its traffic impacts occurring on or near some of the most chronically congested parts of the highway network. To date, the absence of intervention has strangled the bus network through further marked deterioration in traffic conditions. This by consequence increases the risk of bus delay or cancellation, lengthens journey time and reduces customer confidence in bus as an attractive alternative mode of travel.

In April 2023, Stagecoach is making significant timetables changes to improve operational resilience in and around Chichester. The biggest such change is the severance of the Portsmouth to Littlehampton section of service 700, at Chichester, with buses operating independently to the east and to the west and ending cross-city links. This is planned to reduce the probability of delay but at the cost of additional vehicle resource (circa £200,000 per annum) which could be better spent providing new or enhanced services. We anticipate a small loss of custom as a direct consequence of the

change, but have little choice other than to take negative action so as to fulfil our statutory punctuality obligations.

If the Strategic Objectives of the Plan and its Vision are to be achieved, in the way required by NPPF paragraphs 104-105, a properly-evidenced transport mitigation strategy needs to create the conditions where bus journeys are more reliable than car journeys and thus mobility demand switches as far as can be realistically achieved away from car use, to bus use and other more sustainable modes.

Beyond Chichester, the Plan Vision focuses on key localities beyond to the east and west.

To the west of Chichester a focus on growth at Southbourne is justified at paragraph 2.43: "...the aim is to take advantage of the village's good transport links and existing facilities to deliver significant new residential-led development within the broad location for development which will further enhance local facilities and offer opportunities to reinforce and supplement existing public transport, including bus routes."

We agree this is a very significant opportunity. However, if the requirements of NPPF paragraphs 104-105 are to be met, this demands that effective bus priority is delivered on the A259 corridor, especially eastbound at Fishbourne and westbound approaching Emsworth. Without such measures, the growth committed and planned will serve only to further undermine bus journey time and decrease punctuality on the existing 700 service, entirely contrary to the aims of the Vision.

The emphasis on the A259 corridor served by Stagecoach 700 west of Chichester is reinforced at paragraph 2.45 stating that "Between Chichester and Southbourne, the Plan provides for more moderate levels of growth within the parishes of Fishbourne, Bosham and Chidham & Hambrook, ... with opportunities to support and expand existing facilities and for increased use of public transport options". We strongly support the principle, but the Plan must follow through with specific public transport priority measures that facilitate rather than prejudice such an outcome.

East of Chichester the focus is at Tangmere, where the existing allocation for about 1000 dwellings is being uplifted by 300. Paragraph 2.44 justifies this among other things recognising the scope for "...improved and additional bus services and cycleways will provide better connections to Chichester city and east to Barnham and the 'Five Villages' area in Arun District." We unequivocally endorse this conclusion. Realising a "game-changing" level of bus service quality, reliability and frequency east of the city, also serving committed and planned development north and south of Oving Road at Shopwhyke, is equally essential, given that all SRN links and junctions are approaching equal saturation.

The National Bus Strategy has given new focus on partnership with West Sussex County Council to discuss and deliver a significant new bus service between Chichester, Shopwhyke, Tangmere, Eastergate and Barnham, supporting committed development and acting as an initial phase of what ought to be a more ambitious longer-term strategy to support growth beyond 2025 in both Chichester and Arun Districts. For these improved bus services to be both deliverable and effective, robust bus prioritisation is unavoidable. No such measures are proposed in the Plan or its evidence base and we therefore suggest inclusion of plans to facilitate safe and efficient bus operation between Tangmere and Nyton/Eastergate, ideally avoiding the need to join A27 through-traffic entirely.

We welcome the clear recognition that these localities identified for growth, benefit from existing relevant public transport services. The Vision also sets an expectation that bus services in particular should be "enhanced" and "reinforced".

We entirely agree that these opportunities exist, across the broad strategy and strategic allocation proposed by the draft Local Plan. Securing them will be crucial to achieving national and local policy objectives, including the Strategic Objectives. However, to our continuing very great dismay, the Plan goes no further to defining how this will be achieved. As such the Vision is not demonstrable achievable or deliverable.

Accordingly the Plan cannot be considered effective, in the sense of NPPF.

Remedying this, demands specific measures to protect bus services from congestion in the following corridors:

- A259 East of Emsworth
- A259 Fishbourne
- A 259 Via Ravenna/Cathedral Way
- A286 Stockbridge Road north and south of A27
- B2145 Whyke Road/Hunston Road
- A259 Bognor Road, east and west of A27 and extending to the District Boundary
- B2144 Oving Road/Shopwhyke Road east and west of the A27
- A 285 Westhampnett Road/Portfield Way/Stane Street, potentially involving a mode filter at the west end of Stane Street

These must be defined to a sufficient level of detail to assess their effectiveness and deliverability, including costs.

This would then allow West Sussex County Council and Local Transport and Highways Authority, ourselves as the principal bus operator, and where appropriate other organisations that would be directly tasked with delivering the mitigation package, to agree service levels and standards necessary to deliver specified outcomes, including journey

times, frequencies, capacity and hours of operation on the network, and also in respect of the strategic allocations and Strategic Locations for Growth.

The agreed mitigations strategy should be set out in an up-to-date Infrastructure Delivery Plan backed by clear funding commitments, including a funding strategy to justify necessary developer contributions.

Where necessary to support evidence of effectiveness and deliverability, clear statements of support, which might include Statements of Common Ground between the LPA, LTA, National Highways and Stagecoach, could be provided.

### 3. Spatial Strategy

#### Stagecoach Supports

Stagecoach well recognises the constraints outlined in the explanatory narrative at the start of Chapter 3.

In particular we strongly endorse that strategy in that it reflects that the best opportunities to meet housing and employment development requirements sustainably clearly exist in and close to Chichester and on the key east-west movement corridor where – subject to effective measures being delivered to make these modes more attractive, efficient and relevant – sustainable modes can credibly provide for a much higher proportion of movement demands, mitigating most effectively the potential traffic impacts of development.

We agree that the Manhood Peninsula suffers serious environmental constraints, but, added to these, public transport and other sustainable modes cannot provide such attractive alternatives, and significant further development risks merely reinforcing already high levels of car use, aggravated by the carbon impacts of the distances involved – something the plan does very little to evaluate, and makes no reference to.

We endorse the conclusion in paragraph 3.24 that significant development in the part of the District north of the National Park is inappropriate. The rationale is principally on landscape and visual character. This exposes a fundamentally biased approach to plan making that has consistently underplays transport accessibility and carbon issues. In fact, the lack of local services and the extended distances that need to be travelled to fully participate in society in this area, with no realistic prospect of public transport offering relevant choices, ought to rule such a strategy out of play on a far less aesthetic and interpretational basis.

#### 3.1. Policy S1 Spatial Development Strategy

##### Stagecoach Supports

The Spatial Strategy flows clearly and logically from the Spatial Portrait, and the opportunities and constraints identifiable across the Plan area. It represents a logical and justified continuation of the existing Local Plan strategy. In particular the spatial strategy maximises the potential for sustainable modes to contribute to meeting a much higher proportion of all the District's mobility and accessibility needs.

#### 3.2. Policy S2 Settlement Hierarchy

##### Stagecoach Supports

The settlement hierarchy clearly reflects the service endowment and potential self-containment of the settlements in the District. In particular, the second tier of settlement hubs includes secondary schools, which are major peak trip generating uses. Service villages, in the main, also benefit from bus services running at least hourly, which can be expected to provide for a degree of mobility for the higher number of trip purposes that cannot be satisfied by walking or cycling within the immediate locality. Thus, a level of development to meet local needs in this tier is relatively sustainable.

There is a quite broad range of settlements in this category. We have concerns that, north of the National Park, the Service Villages have no realistic public transport choice. These include Plaistow/Ifold, Kirdford, Loxwood, and Wisborough Green. Such as exists is typically a 1/bus per day off-peak shoppers service offering up to 90 minutes in Horsham or Guildford and as such any development here even to meet local needs requires each adult to own a car. This contrasts strongly with Service Villages to the south of the National Park, which are greatly more sustainable.

### 4. Climate Change and the Natural Environment

#### Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This section of the plan is extensive and wide ranging, as should be expected.

However, remarkably, there is no acknowledgement whatever of the role of transport in mitigating climate change or its effects, not of the importance of sustainable movement and access being facilitated across the plan area in addressing anthropogenic impacts on the natural world at a more local level.

This exposes very clearly a troubling level of indifference to transport matters in the production of the Plan, which, while nationally quite common, is neither appropriate nor acceptable. The mitigation of transport impacts is not merely a matter speaking to the social and economic aspects of sustainable development. It is crucial to address the causes and effects of climate change that arise from transport, and personal mobility.

This is now well understood and at the centre of national policy, including the National Decarbonisation Strategy for Transport (July 2021) which at Section 5 commits the government to aligning land use planning and transport strategy much more tightly and effectively to mitigate the carbon emissions associated with the current dependence on cars, and the mode mix; but also to reduce travel distances, both increasing the potential relevance and effectiveness of all sustainable modes, and reducing average journey lengths for residual motorised journeys of all kinds.

National statistics show that well over a third of all domestic carbon emissions arise from land-based transport and of these, the vast majority arise from trips of over 10km – outside the range of large scale use of cycling. In fact, the potential of the plan to materially support carbon emissions reduction from within the plan area lies more in the realm of transport than any other policy theme – including emissions mitigation from buildings, which is in any event an aspatial matter and covered by nationally-binding building regulations. By 2025 something like 40% of all the emissions within the plan-area will be transport related.

There is no evidence supplied to support the plan that addresses the transport carbon impacts of the spatial development strategy in a clear manner.

There is no evidence supplied that sets out the effects of potential worsening of congestion on air quality within the plan area, arising entirely from the excess of passenger car movement demands over available and credibly deliverable highway capacity. This is despite the evidence set out and acknowledged in the explanatory memorandum at paragraph 4.130:

"4.130. The council's Air Quality Action Plan and the West Sussex Transport Plan 2022-2036 both refer to the air quality issues faced by Chichester. There is currently one Air Quality Management Area (AQMA) in the plan area, located at St Pancras, Chichester. AQMAs are designated where air quality exceeds, or is likely to exceed, national air quality standards and objectives. Development within or impacting these areas, or that likely to cause the declaration of any further AQMAs, will be subject to an air quality assessment by the applicant."

This is a retroactive approach – it is not "planning", based on evidence.

We are well aware that air quality issues in and of themselves can render allocated sites to be undeliverable: a good example is in the Vale of White Horse, Oxfordshire, where strategic allocations on the A338 and A420 corridors have been held up for years by air quality issues at Marcham and Frilford, in large measure because agreed transport interventions were considered inadequate or undeliverable a very short time after the Plan was examined and adopted.

There is no evidence that shows how the development strategy can effectively mitigate these impacts as well as the further potential impacts that arise from the development strategy. This is exasperating, as there is clear evidence that could be drawn upon to show that that very substantial opportunities exist to:

- Speed buses up and make them more reliable by the delivery of bus priority on most of the key main corridors. Most of these even today operate relatively frequently
- Improve service frequencies and extend hours of operation.
- Secure significant background mode shift to bus as a result, damping pressure on key links and junctions, by consolidating demands on direct more reliable and more frequent bus services.

The spatial development strategy as submitted is in fact, likely to well conform to such additional evidence.

The allocations require substantial additional transport related work and evidence to demonstrate that the opportunities for sustainable transport have been identified and taken up as required by NPPF paragraphs 104-105.

With regards to specific policy, Policy NE22 should be modified to read:

"Development proposals will be permitted where it can be demonstrated that all the following criteria have been addressed:

1. Development is located and designed to minimise traffic generation and congestion through access to by maximising the relevance and attractiveness of sustainable transport modes, including maximising provision of specific demonstrably effective measures to make pedestrian and cycle and public transport routes and networks more direct, more safe, faster and more reliable;..."

## 5. Housing

### 5.1. Policy H1 Meeting Housing Needs

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

The presumption of the planning system is that local planning authorities should seek to meet their objectively assessed development requirements in full. These needs are assessed by a defined Standard Methodology set out in Planning Practice Guidance and elsewhere, that has explicit regard to ensuring that the economic and social effects associated with housing are properly provided for, to avoid exacerbating serious problems that arise from inadequate housing supply.

As a significant local service provider and employer, Stagecoach is concerned that existing issues with housing availability and affordable housing supply are not exacerbated. This has a direct bearing on staff recruitment and retention. It also has an indirect bearing on our cost base.

The existing problems with housing affordability have developed over many decades of undersupply. It should be emphasised that the significant boost to the supply of housing that has been sought by governments over the last 15 years, has only begun to take effect relatively recently in this District. Tackling the problem will require years of consistent attention.

Stagecoach notes that the Council is no longer proposing to meet its identified housing needs in full. Rather than 638/annum the Council is allocating a total that implies an annual delivery rate of 535/annum.

While a number of matters evidently present challenges to the Council in identifying a sustainable development strategy. Paragraph 5.2 indicates that "constraints, particularly the capacity of the A27 has led to the council planning for a housing requirement below the need derived from the standard method..." The blame for being unable to meet housing requirements is thus laid squarely at the door of transport infrastructure and systems.

This conclusion in no way follows from the evidence in the Chichester Transport Study. This, rather, makes the statement that when a higher annualised quantum of 700 dwellings per annum was tested, in the majority of cases the traffic capacity improvement package would perform little differently. To quote the Study:

"5.6.3 The network performance outputs analysed comprising V/C%, Delays (seconds) and Queues (PCU's) suggest that generally the proposed SRN mitigation identified for the Core Scenario, can accommodate in the most part, additional increase in development to 700dpa."

Whether the rest of the local road network is similarly protected is moot.

Irrespective of these results, even if the contention made in the draft plan were true, unlike many other constraints, this is amenable to a suitable effective strategy to address the constraints identified being collaboratively conceived. This is what NPPF expects, as set out in paragraphs 104-106.

Where the A27 is concerned, as part of the SRN, National Highways is now working to a substantially revised approach than that in force at the time to current Local Plan was prepared, or LSS2, or reflected in the Chichester Transport Study. This is set out in DfT WMS 01/22. This document is the policy of the Secretary of State for Transport in relation to the SRN which should be read in conjunction with the National Planning Policy Framework (NPPF). It replaces the policies in the Department for Transport Circular 02/2013 of the same title.

It makes plain that to accommodate additional demands arising from development, National Highways (NHC) expects to meet the requirements of its statutory license in a substantially different manner. With respect to development NHC LTN 01/22 continues to address the tensions between national policy for the environment and carbon mitigation, the ongoing need to substantially boost the supply of housing as well as maintain national economic competitiveness and protect the safety of the public. However, in future, the approach will be to seek first to maximise the impact of demand management measures (reducing the need to travel), and then to accommodate residual additional demands first through maximising the use of sustainable modes, rather than accommodating assumptions about current levels of car dependency and use.

LTN 01/22 much more closely and explicitly aligns with the language of NPPF Chapter 9 paragraphs 104-106. Paragraph 12 states: "New development should be facilitating a reduction in the need to travel by private car and focused on locations that are or can be made sustainable.... Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas." (our emphasis).

It continues at paragraph 13: "where developments are located, how they are designed and how well delivery and public transport services are integrated has a huge impact on people's mode of travel for short journeys. The company will therefore expect strategic policy-making authorities and community groups responsible for preparing local and neighbourhood plans to only promote development at locations that are or can be made sustainable [footnote 8] and where opportunities to maximise walking, wheeling, cycling, public transport and shared travel have been identified." (again, our emphasis)

Stagecoach readily confirms that the draft Plan development strategy conforms well to the first limb of this expectation, in terms of the location of development.

Stagecoach considers that the plan and its evidence base conforms poorly to the second in that the specific opportunities to maximise walking, cycling wheeling and public transport are not clearly identified, and defined, and proven to be effective and deliverable.

The current mitigation strategy for the A27 Chichester area, supporting the adopted Local Plan and for which

proportionate developer contributions have and continue to be sought, reflects now-superseded DfT Circular 02/2013. As a direct result, it failed completely to identify any significant effective bus priority measures, despite the fact that frequent services already exist on the key corridor concerned, and that one bus journey can remove, fully seated between 72 and 80 single occupancy car journeys from congested links and across key junctions on the A27. Rather, it sought to implement targeted measures to increase the throughflow of general traffic.

We recognise the realisation that this approach, which was already reliant on some tenuous logic, is simply not technically viable, especially where further development needs are anticipated.

National Highways will now pursue an approach with the planning system that “includes moving away from transport planning based on predicting future demand to provide capacity (‘predict and provide’) to planning that sets an outcome communities want to achieve and provides the transport solutions to deliver those outcomes (vision-led approaches including ‘vision and validate,’ ‘decide and provide’ or ‘monitor and manage’). The company will support local authorities in achieving this aim through its engagement with their plan-making and decision-taking stages.” (paragraph 15).

Paragraph 23 is at the fulcrum of assessing and defining transport mitigations to accommodate growth on and near the SRN “Capacity enhancements such as modifications to existing junctions or road widening to facilitate development should be determined on a case-by-case basis. The general principle should be accepted where proposals would include measures to improve community connectivity and public transport accessibility, and this will be weighed against any negative safety, traffic flow, environmental and deliverability considerations, impacts on the permeability and attractiveness of local walking, wheeling and cycling routes, and alternative options to manage down the traffic impact of planned development or improve the local road network as a first preference.” (our emphasis).

However, no material work has been done that seeks to identify if a bold robustly conceived and suitable judiciously-prepared strategy that seeks to consolidate flows on already densely travelled corridor onto improved bus services, driving mode shift through insulating these services preferentially from already serious queuing. This would be likely to have very substantial impacts on all the key junctions on the A27, and potentially, on the A27 itself. The need for an integrated approach between Shoreham and Emsworth within West Sussex paying particular regard to development requirements in both Arun and Chichester Districts naturally lies at the heart of this, and we would expect to be picked up by the LSS3 Review among other things.

However, the locus of the problems and its causes and effects are obviously well enough known to start work on defining solutions within the plan area today. We would expect that this work will be essential if National Highways are to support the Plan, especially now given the terms of Circular 01/2022.

Such work could and should start from a “policy off” position: in other words that the Plan should fully accommodate its needs unless it can be proved that a mitigation strategy for the A27 that is compliant with DfT WMS 01/2022 cannot credibly accommodate resulting capacity demands without unacceptable impacts on the safety and efficient operation of the SRN.

This evidence does not exist. In fact the Chichester Transport Strategy 2023, on which the Council solely relies as its transport evidence base, indicates the opposite at para 5.6.3. This is the case before meaningful measures to secure damping of traffic demands through mode reassignment are even considered.

The exception to this is Portfield and Oving Road, which are among the most problematic areas after mitigation even at the Council’s chosen 535 dwelling/annum scenario (para 5.6.4.-5). The costly capacity mitigation simply cannot deliver enough benefit. It is admitted that WSCC has indicated that it would prefer a solution that places greater reliance on sustainable modes damping car-borne demand. This is entirely the strategy required by NHC to follow LTN 01/22, of course. Despite the fact that “predict and provide has “run out of road” no attempt has been made to examine what such a solution set credibly could look like. This is unsatisfactory and deeply troubling.

At paragraph 5.4 the draft plan points back again at the West Sussex and Greater Brighton Strategic Planning Board and the future work that has been commissioned, but has barely begun, to update the Local Strategic Statement. This work is to inform the preparation of plans that have horizons beyond the end date of the current LSS in 2030 and properly to meet the Duty to Cooperate. As we said in our response to section 1 of the Plan we fully endorse the conclusion that this is the right mechanism to look at these issues. However, the mechanism has not been effectively applied to the production of this plan. Therefore, the specific evidence that capacity on the A27 in and of itself supports accommodating a lower housing requirement does not exist.

The Plan thus does not conform to NPPF, is not adequately justified and is not effective.

The Plan does not properly meet the statutory Duty to Cooperate.

We will return to this matter in specific representations to Section 7 of the draft plan.

5.2. Policy H2 Strategic Locations/Allocations 2021-2039  
Stagecoach Supports

Policy H1 makes plain that the plan, as far as it identifies locations for development has done so in locations that conform with its spatial strategy. All of the strategic allocations to a greater or lesser extent offer clear opportunities to make use of sustainable modes, by virtue of their location. That is not to say that the opportunities to take up these opportunities, and maximise the role of sustainable modes, has been identified, defined and translated properly into the rest of the plan policy suite or Infrastructure Delivery Plan.

As our remaining representations make clear, we support the locations thus far identified as being those that offer the best opportunities to reduce the need to travel, reduce travel distances, and create high quality attractive sustainable travel choices, for both existing residents as well as new ones.

However, the transport impacts of the allocation will individually and cumulatively likely to lead to increasingly severe impacts on the transport network, and on bus services.

Perversely, because these opportunities are not properly identified and secured through the plan and its supporting transport strategy, the opportunities presented by the allocations to secure a substantially more sustainable and lower carbon pattern of movement will not only risk being squandered but may aggravate the wider problems.

### 5.3. Policy H3 Non-strategic Parish Housing Requirements

#### Stagecoach Supports

The approach is consistent with the plan's spatial strategy. It generally avoids a dispersal of development to locations likely to be highly car dependent. There is a clear focus on meeting housing needs in the far north-east of the District at the largest and most sustainable settlements, such as Loxwood, Kirdford and Wisborough Green. However, it must be pointed out that public transport availability in this area, provided by the County Council through services it procures, is minimal. These settlements in practice require each adult and child of secondary school age to have access to motorised transport to fully participate in society. This might justify significant measures to secure a boost in the frequency of bus services between Guildford and Billingshurst, passing through these settlements.

Otherwise, existing commitments in the plan area already make provision to meet for local needs. To the degree that there is an unmet local requirement for affordable housing of a small scale – for example to support the rural economy – this could be met through neighbourhood plans or through Rural Exception Sites.

## 6. Place-making, Health and Wellbeing

### 6.1. Policy P1 Design principles

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

NPPF requires that proposals should consider transport issues from the earliest possible stage. Designing to properly facilitate safe and efficient access, focusing first on sustainable modes, should be at the heart of development design. Too often it is still an afterthought, notwithstanding this.

Policy P1 must include an additional statement to be compliant and effective with NPPF paragraph 104-105 and 112 a): "Development will be designed to make access and movement using walking, cycling and public transport the natural first choice, and demonstrate through the Design and Access Statement how such modes are afforded the most direct, safe, reliable and efficient routes within to and from the proposals, especially when compared with car use."

### 6.2. Policy P4 Layout and Access

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

A number of proposals in the plan involve large-scale development. It is essential that where appropriate buses can access and circulate efficiently through development at a suitably early stage. There is no acknowledgement of this anywhere in the policy, contrary to NPPF paragraph 112.

Large-scale development which buses cannot access in an efficient or timely manner, or at all, strongly contributes to high levels of car-dependency. Evidence for this is referred to among other places, in DfT Circular 01/2022. To be compliant with NPPF and properly pursue its strategic Objectives, Policy P4 needs to be modified to address this point: "1. Provide safe, direct and attractive conditions for inclusive access, egress and active travel between all locations and providing as good direct high quality links to integrated public transport, and where appropriate efficient access and circulation to bus services, unimpeded by excessive parking, at a suitably early point in the development phasing;

## 7. Transport and Accessibility

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

The issues related to transport are fundamental to the soundness of the Plan. In particular, the constraints presented by the capacity on the A27 around Chichester and its key junctions, are the paramount reasons why the Council does not consider it can meet its objectively-assessed development needs in full. Thus, the transport issues and potential solutions available and what these mean for the ability of development needs to be accommodated, are matters that go to the heart of the soundness of the Plan.

Paragraph 8.3 sets out the approach taken to date succinctly:

"Increasing the capacity of the road network is key to supporting growth in the Local Plan. However, there is also a need to reduce demand for road transport to achieve net zero in greenhouse gas emissions by 2050 as highlighted in the council's Climate Emergency Action Plan and Strategic Objective 1. In aiming to achieve the ambitions of the action plan, all development is expected to demonstrate how it will support four key objectives to create an integrated transport network which will alleviate pressure on the road network, improve highway safety, encourage sustainable travel behaviours and help reduce transport related impact on air quality, by:

1. Avoiding or reducing the need to travel by car;
2. Enabling access to sustainable means of travel, including public transport, walking and cycling;
3. Managing travel demand; and
4. Mitigating the impacts of travel by car."

However, this approach is unambitious and "lightweight" as it assumes, as does the existing Chichester Transport Strategy on which the current adopted plan relies, that the focus of investment should be, wholly, in highways capacity improvement.

Sustainable modes explicitly are expected to play a greater role to "alleviate pressure" on the local road network, as part of this strategy. To emphasise: to avoid exacerbating congestion, the strategy will have to both remove a significant proportion of existing demands from the network on multiple key approaches to Chichester; and then ensure that travel demands from committed and further new development allocated in the plan does not simply replace these journeys, or, worse, create even greater demands.

This will demand very significant behaviour change. Only by making sustainable modes substantially more attractive, both absolutely, and relative to the same journey made by car, can this be expected to occur. However, the explanatory memorandum as well as the wider policy suite and IDP, well expresses a fundamental unwillingness to taking specific, defined measures to achieve this reduction in car use and material promotion of sustainable modes. It makes plain that sustainable modes, including bus services, will offer a lesser role to which "access will be provided".

Such a vague and weakly defined mechanism will have no effect, at all, on current behaviour and car dependency if the relevance of those choices as a credible alternative to car use, is not substantially boosted. This includes a 5% reduction in trip demand assumed by the Traffic Model at the heart of the Chichester Transport Study 2023.

For this reason. the transport strategy behind the current adopted plan is demonstrably ineffective, as the updated model makes plain. It has not yet been delivered and is yet unclear when or (in the absence of committed funding) even if it can be. It is ineffective to "roll forward" this strategy to support a higher level of planned growth.

We note that a scheme for addressing congestion on the A27 at Chichester has been included in Roads Investment Period 3 (2025-2030) – well within the horizon of this Plan. However, recent history provides compelling evidence that off-line improvement to the north is not politically supported and arguably even technically or economically deliverable. It is not funded, nor at this stage can it be hypothesised if an economically deliverable scheme is achievable sufficient to warrant the necessary investment.

An on-line improvement of the A27, including junction improvements, is likely to favour longer distance east-west though movements, which are of greater significance to the national economy, at the expense of local movements crossing the SRN- a conundrum that largely sums up the dilemma that is faced by NHC and the County as Highways and Transport Authority. It is one that is played out in many places, but rarely is the tension so stark as at Chichester.

Every local route crossing the A27 at grade around Chichester accommodates a regular bus service - or shortly will do (Oving Road area is expected to follow in 2023, though bus services are likely to not use the modified crossroads but to use the left-in-left-out facilities provided as part of the Shopwhyke Lakes development). The impact of these issues on the entire bus operation are serious and increasingly severe.

By the same token, boosting the relevance and reliability of each of these services substantially consolidating as much demand as possible onto a much smaller number of vehicles, is clearly a strategy that ought to support the effective capacity of each of these junctions being greatly augmented, at the same time as reducing equally substantially, the energy- and carbon intensity of mobility in the plan area. Addressing the A27 should not be considered some kind of "zero-sum" game.

Furthermore, the approach of National Highways in its dealings with development and the planning system now reflect a substantial change in Government Policy set out in DfT Circular 01/2022, which we separately cover in these representations, that entirely aligns with an approach that seeks to appropriately invest in more active and rational management of scarce highways capacity, on both the SRN and local roads.

For environmental, economic and social reasons – including public health, the issues presented by the A27 and its interface with local roads around Chichester stands out, nationally, as an example of where the approach taken to accommodating and mitigating development impacts needs to make a clear break with previous “predict and provide” approaches to meet forecast unconstrained car use as LTN 02/2022 makes clear as a principle. Policy in the West Sussex LTP to 2036 itself makes plain that “shared mobility” – including bus services – must play a much greater role in this area.

The existing Chichester Area Transport Strategy is focused on justifying capital contributions from committed development to fund highways capacity improvement – with nothing included to make bus services more attractive, or importantly more reliable. Indeed this “cars first” approach is so costly, that there is already accepted by WSCC to be insufficient land value remaining to be captured to put into substantial improvements for public transport. That much is very evident, and transparent, from paragraph 8.12 and 8.14, where south of Chichester “This (one) package of works (of several improvements needed) would be between £57.23 and £82.79 million to deliver in full and would not be capable of being funded by development contributions alone.” This assumes the scheme is otherwise deliverable, which on the evidence in the public domain for some time, has been considered challengeable.

The draft Local Plan and a modestly updated infrastructure package that flows from the 2023 Chichester Transport Study, pursues exactly the same approach.

This strategy is also even more ineffective having regard to the roll forward of the Plan to 2039. It cannot deliver the key Strategic Objectives of the Plan; and in particular this is explicitly recognised by the Council in the failure of the draft Plan to accommodate the OAN in full.

It is also obsolete, as it does not align, from first principles, with national policy (including the National Decarbonisation Strategy for Transport) and DfT Circular 01/22; nor the Council’s own declared Climate Emergency.

As a result, draft Policies T1 and T2 are both unsound, as we will separately explain.

Owing to the lack of evidence about the implications of this for adjoining authorities – especially Adur District – in the absence of the review of the Local Strategic Statement – this has implications for fulfilling the Statutory Duty to Co-operate.

The absence of any meaningfully comprehensive refresh of the transport evidence base means that there are no meaningful schemes of any kind, defined in the plan or its IDP, to indicate either what level of growth can be accommodated, by delivering a change in travel behaviour. This would be aimed to secure a sufficient effective increase in junction throughput (measured in terms of person trips as opposed to passenger car unit movements (PCUs)). Such evidence would propose measure to achieve that outcome and assess the efficacy and costs of such improvements, across all modes.

Paragraphs 8.10-8.13 inclusive indicate that the Council “has moved away from ‘predict and provide’” and invites the reader to conclude this has translated into a programme of interventions that can be funded to deliver specific, credibly predictable outcomes. Such a programme should be clear in paragraph 8.11. and the IDP. There is no such clarity and this conclusion would be false.

It would also be evident in the language of the Chichester Transport Study 2023 and its refreshed proposals. Only the most token of lip service is paid to the matter. It is a plainly car-focused, predict and provide methodology to support a “predict and provide” strategy. In fact, it is a brazenly car-focused approach, to the exclusion of all else.

The statements in the Plan regarding any other approach, read properly, offer nothing more than a vague commitment to look post-adoption, and implementation, at unspecified measures, based on problems that may arise in future that will be decided by a committee: the Traffic and Infrastructure Management Group (TIMG). This does not yet exist and is obviously an attempt to posit a mechanism that retroactively will cover for the lack of serious multi-party engagement to address the existing and future issues. Such a group should, in our view, also include the public transport operators, not least if the requirements of NPPF Para 106c) are to be satisfied, and the strategy and measures to be adopted are material to supporting the Local Plan, as of course the purpose of the TIMG has as its core *raison d’être*.

The approach proposed by the draft plan is plainly ineffective and unsound in justifying the draft Plan.

It is more widely unacceptable to Stagecoach. The issues are severe today and well-known, already serving to jeopardise the delivery of buses relied on by existing residents, much less attract new ones.

We also consider that HM Planning Inspectorate are likely to be quite resistant to accepting this aspect of the plan’s

transport strategy, nor will it be appropriate for the Council, West Sussex County Council, or National Highways, to define such measures after the submission of the Plan during the Examination process. The Examination in Public of a local plan has no purpose to improve plans, or remedy deficiencies clearly evident prior to submission.

The examination of the West of England Joint Strategic Plan in 2019, and the Uttlesford Local Plan in 2021, among several others, demonstrates especially clearly that the Planning System and the Examination process is not amenable to post-hoc retrofitting of transport evidence and strategies to support a development strategy.

#### 7.1. Transport Evidence Base

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Most of Stagecoach's serious concerns about the soundness of the plan arise from the fact that it has been prepared in advance of any up-to-date transport evidence and suitably robust transport mitigation strategy being advanced to support it. In essence, the Council has rolled forward the existing plan by 9 years, adding some additional sources of housing supply, while still relying implicitly on a transport evidence base that was prepared 10 years ago.

This led to the formulation at that time of what can only be described as an attempt to develop an effective car-based mitigation strategy, creating capacity for general traffic added to accommodate unconstrained additional demands on an already over-taxed highways network – the Chichester Area Transport Strategy. Despite language in support of sustainable modes, no deliverable measures were identified to support either the extension of the bus network to serve allocated sites, and much less to create a vital improvement to the quality and reliability of public transport services. This approach reflected the approach set out in DfT Ministerial Circular 02/2013 "Development and the Strategic Highways Network", applicable since the A27, which is the focus of the most severe difficulties, forms part of the national Strategic Roads Network.

This approach has proven ineffective even before substantial elements of housing land supply in the current plan come forward – in particular West of Chichester and West of Tangmere.

In addition, Circular 02/2013 has now been replaced by a new Ministerial Statement of 23/12/2022, DfT Circular 01/2022.

On both counts the transport evidence base and strategy needs to be properly revisited and established to provide effective mitigation for the plan, including current commitments that are being rolled forward.

The language of the current Ministerial Circular 01/2022 offers a highly condensed synoptic view of the proper approach to addressing transport matters in the planning system notwithstanding that it is directly concerned with the Strategic Roads Network. Videlicet:

"31. The NPPF expects local plans and spatial development strategies to be underpinned by a clear and transparent evidence base which informs the authority's preferred approach to land use and strategic transport options, and the formulation of policies and allocations that will be subject to public consultation. The company will expect this process to explore all options to reduce a reliance on the SRN for local journeys including a reduction in the need to travel and integrating land use considerations with the need to maximise opportunities for walking, wheeling, cycling, public transport and shared travel.

32. The Transport Decarbonisation Plan indicates that carbon emissions from car and van use is the largest component of the United Kingdom's total transport emissions. While action is being taken to decarbonise transport such that all new cars and vans will be fully zero emission at the tailpipe from 2035, the proposed location of growth in current plan periods and whether new developments would be genuinely sustainable remain important factors in demonstrating that a local authority area is on a pathway to net zero by 2050 and therefore compliant with the requirements of the Climate Change Act 2008.

33. Alongside this, the local authority should identify the key issues within their study area regarding transport provision and accessibility, setting out how the plan or strategy can address these key issues in consultation with (National Highways, and other transport stakeholders identified in NPPF paragraph 106b). It is the responsibility of the local authority undertaking its strategic policy-making function to present a robust transport evidence base in support of its plan or strategy. The company can review measures that would help to avoid or significantly reduce the need for additional infrastructure on the SRN where development can be delivered through identified improvements to the local transport network, to include infrastructure that promotes walking, wheeling, cycling, public transport and shared travel. A robust evidence base will be required, including demand forecasting models, which inform analysis of alternatives by accounting for the effects of possible mitigation scenarios that shift demand into less carbon-intensive forms of travel." (our emphasis)

Within the text quoted above, references to National Highways and "the Company" can quite legitimately be extended,

given the statements in NPPF paragraph 16, 25, 26 and 106b, to include all the relevant transport infrastructure and service providers in the plan area. Circular 01/2022 also has the weight of secondary legislation as a Written Ministerial Statement and thus should be considered to be highly material.

To date there has been little attempt to explore, to the degree necessary, strategies that conform to Circular 01/2022. It is thus not possible to conclude, as the Council has done, that the issues on the A27 that present a constraint to development, are insuperable.

In line with comments made elsewhere in the response to this pre-submission draft, the Plan thus requires substantial further work to be undertaken with key stakeholders to establish a suitably effective and demonstrably deliverable transport mitigation strategy, to sustainably meet the District's identifiable development needs and where apparent and appropriate, also ensure that wider cross boundary strategic issues are appropriately addressed, in conformity inter alia, with the Duty to Cooperate, NPPF paragraph 16 and 104-111 inclusive, and DfT Circular 01/2022 and to ensure the Plan's own Strategic Objectives can be met.

## 7.2. Policy T1 Transport infrastructure

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

As described in comments elsewhere, Stagecoach does not see that a suitable proportionate and up-to-date basis exists to properly and appropriately address the transport issues in the plan area.

The 2023 Transport Study does not perform this role adequately but, contrary to the explanatory memorandum, is a scheme intended only to facilitate car-borne movements through some of the key junctions. There is no evidence that an holistic integrated and strategic approach to transport mitigations has been prepared. Certainly Stagecoach has not been involved in any of the discussion about appropriate transport measures in support of the plan, including the Transport Study 2023, contrary to the expectations set out in NPPF at paragraph 16 and 106.

Notwithstanding out fundamental concerns about the transport evidence case and mitigations strategy, Policy T1 reflects a weak and ineffective approach, that seeks to try and define a strategy post-adoption.

Contrary even to the explanatory memorandum for the policy, which seeks to maximise the contribution of sustainable modes, the policy is phased in such a way that it gives basis for previous "predict and provide" solutions to facilitate and support current levels of car dependency – already shown to be undeliverable and unaffordable – will nevertheless be the first rather than the last resort. There is no commitment to seek to maximise the contribution made by sustainable modes to meeting mobility needs. Nor is there any recognition that current chronic congestion and lack of network resilience jeopardises the ongoing attractiveness and long-term sustainability of the current public transport offer.

To be effective and create alignment with national policy, and also provide for an up-to-date transport evidence base and strategy to be adduced, Policy T1 should be modified to read:

"Integrated transport measures will be developed to mitigate the impact of planned development on the highways network, improve highway safety and air quality, promote more sustainable travel patterns and through providing in the first instance, new and improved infrastructure and services that will be credible effective in maximising the encourage increased use of sustainable modes of travel, such as public transport, cycling and walking.

To achieve this, the council will work with National Highways, West Sussex County Council, other transport and service providers (including through the Traffic and Infrastructure Management Group) and developers to provide a better integrated transport network and to improve accessibility to key services and facilities...

All parties, including applicants, are expected to support these objectives by:

1. Ensuring that new development is well located and designed to avoid or minimise the need for travel, encourages maximises the use of sustainable modes of travel as an a credible alternative to the private car and directly provides or contributes towards new or improved transport infrastructure;
2. Working with relevant transport infrastructure and service providers to improve accessibility to key services and facilities with primary emphasis on sustainable modes, and to ensure that new facilities are easily accessible by sustainable modes of travel;
3. Targeting investment to provide local travel options as an that represent a clearly credible alternative to the car use, focusing on the delivery of improved integrated bus and train services, and improved pedestrian and cycling networks, including the public rights of way network, based on the routes and projects identified in the Local Transport Plan, West Sussex Bus Service Improvement Plan, Local Cycling and Walking Infrastructure Plan (LCWIP) and the Infrastructure Delivery Plan;

4. Planning to achieve the timely delivery of transport infrastructure on and approaching the A27 and elsewhere on the network, needed to support new housing, employment and other development identified in this plan;
5. Phasing the delivery of new development to align with and where possible facilitate the provision of new and improved transport infrastructure and services and the outcomes of monitoring travel demand on the network, including that arising from areas immediately adjoining the plan area. It may also be Where necessary to achieve this alignment proactively phase development will be phased to take into account the monitoring and effectiveness of travel plans demands on the network and to ensure that measures are implemented to support the highest possible level of encourage sustainable travel behaviour.;
6. Using demand management measures, such as travel plans, to manage robust methodologies to assess travel demand and minimise the need for new or improved transport infrastructure as part of the monitor and manage process.
7. Delivering a coordinated package of infrastructure improvements at and approaching to junctions on the A27 Chichester Bypass along with other small-scale junction improvements interventions within the city and elsewhere, as identified through the monitor and manage process. These will increase road capacity, reduce traffic congestion, improve safety and air quality, and improve access to Chichester city from surrounding areas, first by maximising the contribution of sustainable modes to meeting mobility demands, then, and only as evidenced by robust modelling and option testing, providing increased highway capacity for general traffic.

..."

### 7.3. Policy T2 Transport and Development Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Section 1 b) of T2 will be ineffective as, absent measures to ensure buses can run reliably and efficiently, improved bus services will not be possible, in support of the plan's own stated broad approach to transport mitigation, as well as wider local and national policy.

The draft policy does not require improvements to the quality of services such that sustainable choices will be materially more attractive than car use for many local journeys. Without this the Plan's Strategic Objectives cannot be fulfilled and the objectives of the Plan and this policy, read in its own terms, will not be realised, where reduction in private car use is concerned. It is thus ineffective.

Absent measures to make bus services more reliable and more efficient, by insulating them from chronic congestion as far as possible, still further operating resource and therefore costs, will be needed to just to reliably run existing service frequencies, and capacity, as vehicle productivity continues to be more and more adversely affected by chronic delay. This will be further aggravated by increasing incidence of severe unpredictable service breakdown arising from incidents of diverse kinds on the network, especially on or around the A27, including that arising from more regular severe weather events. Longer journey times can only be expected to lead to relative disadvantage of bus services compared to personal car use, entirely contrary to the objectives of national and local policy, including Policy T1. It can also expect to lead to a dampening effect not on car use, but on bus patronage, threatening the ongoing viability of bus services across the plan area.

Section 1 b) of T2 should be modified to read:

"b) Maximise opportunities for the use of sustainable travel modes through provision of direct and efficient access both to either the existing networks or and through providing such new infrastructure or public transport services, as can be credibly expected to reduce reliance on the private car and work towards achieving net zero in greenhouse gas emissions by 2050;"

Section 1 d) of T2 will be ineffective as the location of development is fixed by this plan. We commend the fact that all the strategic allocations are or will be served by regular bus services.

However, the use of public transport services, where available, depends on the relevance and reliability of these services. Furthermore, provision of services without them generating sufficient patronage to support their long-term operation also threatens the sustainability of the plan and its supporting transport strategy. This is especially true of new services such as those intended to serve West of Chichester and Tangmere and East of Chichester Strategic Allocations.

This can only be assured by the plan being supported by specific measures to ensure buses can operate efficiently and reliably on the existing and projected services intended to serve the developments concerned, and also at the same time secure behavioural change from existing development.

To be sound and effective, the policy T2 1 d.) should be changed to read:

"d) Ensure major development is located to proposals and the supporting mitigation measures enable the use delivery of high-quality, reliable and effective public transport to present the most relevant possible choice to access local services

and facilities including employment, leisure and education facilities”;

The Policy T2 makes no provision for buses, where necessary, to enter and make efficient and safe progress through major development sites. The plan is thus out of conformity with NPPF paragraphs 104-106. It makes no provision to ensure that penetration of bus services is achieved at a suitably early point in the development trajectory, undermining the achievement of the goals of the Plan and this specific policy. As a good example, West of Chichester Phase 1, currently under construction, cannot be served by buses as a strategy to effect interim bus penetration was never made.

Policy T2 1 f.) should therefore be amended to read:

f) Ensure that the layout and design of the site development proposals provides effective penetration of the site by sustainable modes, at all points in the development build-out, including public transport where appropriate; and sufficient space for all vehicles to manoeuvre without compromising the safety of pedestrians and cyclists, the efficiency of bus services, or the ability to provide an appropriate level of landscaping across the site”

Policy T2 3.) regarding Travel Planning depends entirely on its effectiveness on the quality and relative attractiveness of sustainable alternatives over car use. In the absence of efficient frequent, reliable and direct public transport services (or similarly, high quality facilities for active travel, Travel Plans will continue to be the entirely ineffective “tick box” exercises that they generally are today, evidenced by much lower levels of public transport use in most new developments than it seen in nearby established neighbourhoods, as demonstrated broadly by Census data in 2011, 2011 and 2021.

For this policy to be effective an up-to date transport evidence base and strategy, underpinning a series of specified interventions to promote the relevance and effectiveness of all sustainable does including public transport in particular, needs to be put in place.

#### 8. Chapter 9 Infrastructure – Policy I1 Infrastructure provision

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Policy I1 could not expect to be effective without a clear understanding of the effectiveness and costs of a defined series of measures that are laid out in this Plan and its IDP, to mitigate the transport impacts of the development strategy.

Where the Chichester Transport Study is concerned the only meaningful work has focused on the definition and delivery of a range of highways capacity schemes mainly on the A27 around Chichester.

As we have discussed elsewhere the effectiveness of these schemes is insufficient as set out at Tables 8.1 and 8.2 of the Chichester Transport Study 2023. The plan itself admits that the deliverability of this package cannot be afforded by developer contributions alone.

The Chichester Transport Study 2023 does not attempt provide a realistic assessment of costs to deliver these schemes, despite the fact that they have been under evaluation for many years. Nor does it offer any assurance that the schemes are technically achievable. Rather, it states the opposite:

“9.2.3 No investigation has been carried out into specific land ownership details, or into the location details or cost of moving statutory undertakers and utility apparatus within the areas of the scheme. No design assessments were carried out at this stage to ascertain the deliverability of the proposals except where any Health and Safety concerns were raised.”

Thus on the grounds of effectiveness, deliverability and affordability, the measures on which the Plan relies must at the very least be considered to involve an exceptionally high level of risk. Since Policy I1 is founded on these assumptions, it cannot be considered effective.

As we set out elsewhere, the Plan has been advanced on the basis that if any additional sustainable transport measures are required, these mitigations should be retroactively considered and defined after adoption of the Plan. In the light of the doubts that are apparent of both the deliverability, affordability and effectiveness of the Chichester Transport strategy this is especially unsatisfactory even if existing baseline conditions were reasonably acceptable.

However, the Chichester Transport Study 2023, as did its predecessors, makes plain that that existing problems are acute, and can rightly be considered “severe” in the sense of NPPF paragraph 111. Waiting to define deliverable affordable alternatives is an entirely inappropriate approach to the local plan transport mitigation strategy. Such an approach also makes it impossible to consider prior to adoption how far the transport impacts of the plan can be cost-effectively mitigated by alternative means, or whether they are deliverable having regard to technical achievability, land control, development viability, or any combination of the above. Thus, the plan cannot be considered justified, or effective.

Given the mutual dependence of development strategies in Chichester and Arun in particular on these measures this should be seen as crucial of the fulfilment of the Duty to Cooperate.

The remedy for this is ultimately to put in place a suitable transport mitigation strategy following a strategic appraisal of options through review of the LSS. This then must be supplemented by more detailed development specific and localised scheme definition, including, where necessary, bus priority and other measures to support the substantial promotion of the attractiveness of public transport in key bus corridors over private car use. This would then be reflected by costed proposals in the IDP.

Leaving these fundamental weaknesses to one side, even if such a strategy and mitigation package were defined, there is no mention of public transport in the policy even though it is clearly a key part of the policy environment and mitigation strategy for the plan as expressed in the explanatory memorandum for I1, but also at Policies T1 and T2. I1 thus does not effectively support the realisation of the intent of Policies T1 and T2.

Policy I1 iii) should therefore be modified to read:

“(iii) Safeguard the requirements of infrastructure providers, having regard to requirements within and where appropriate across the boundaries of the plan area, including but not limited to:

...

• Highways including specific measures to accommodate improved active travel and public transport level of service and cycle lanes, and...”

At limb v) the Policy expects developers to meet the “in perpetuity costs of operating and maintaining infrastructure”. This shackles development management decisions to developers assuming what are infinite costs – given that “in perpetuity”, read properly, can only mean “without any limit in time”. This means that it is impossible to meet the statutory tests on developer obligations set out in the Community Infrastructure Levy Regulations 2010 (as amended) at Regulation 122, also repeated in NPPF. This policy cannot be lawfully implemented and it is thus ineffective.

In the absence of an up-to-date transport mitigation strategy that is fit for purpose, at the point the Plan is examined these costs of any additional infrastructure are not known in any case. The strategy and its costs, including its affordability and deliverability, are crucial to assessing if the Plan is sound.

Subject to an appropriate defined transport mitigation strategy being arrived at, to be sound, the Policy I1 v) should be modified as follows:

(v) To consider and meet as appropriate the in-perpetuity delivery costs of infrastructure and, where appropriate, improved services, to the point where its long-term operational sustainability is credibly assured from mainstream sources. Where adoption is not envisaged by local authorities, that must include arrangements for its future ongoing management and maintenance;

## 9. Strategic and Area Based Policies

### 9.1. Policy A1 City Centre Development Principles

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Chichester City centre is rightly identified at 10.2 and 10.4 as the commercial and service hub of the District. It is also acknowledged to be the most accessible place in the District by sustainable modes, public transport in particular.

Boosting the vitality of the city centre is something that Stagecoach strongly supports. Irrespective, the enhancement of the commercial and cultural life of the District in the place where these opportunities can be accessed broadly by sustainable modes, is one that has long been at the heart of national planning policy for town centres, reflected in the “town centre first” approach to locating major trip generating uses.

Paragraph 10.5 exposes an unbalanced and unsound preoccupation with aesthetic matters in its approach to the town centre, and far too little to ensuring that the central place function is enhanced through protecting and enhancing the quality of public transport access.

The city is relatively small but at the heart of an extensive hinterland, and thus the role of bus in supporting sustainable access to and enhanced city centre venue is one that needs appropriate recognition and emphasis. It is important to note that a dominant number of key service and facilities such as the General Hospital are relatively close to the city centre. This directly contributes to driving travel demand into the city, causing congestion. Most importantly, it also makes the task of mitigation simpler, given the impact a suite of active and sustainable measures can have within the same close proximity.

Policy A1 does not provide this. As such, achieving the strategic objectives of the plan is seriously threatened, and the plan is thus not effective.

The Plan needs to ensure that the approach to city centre regeneration maintains and enhances public transport access, interchange and inter-modal connectivity. It also needs to ensure that bus service stopping and interchange facilities are able to address increases in future demand, anticipated by the clear intent expressed elsewhere in the Plan that public transport should be meeting a greater proportion of mobility needs, in a growing district. Achieving this demands an ambitious approach to the location, quality and capacity of bus stop and interchange.

We have been in discussions with the District Council about this, alongside West Sussex County Council, for a very considerable period. Stagecoach has always been keen to help facilitate the Council's aspirations for the city centre, and we continue to hold this intention. However, this cannot be at the expense of a material diminishing of the convenience and fitness-for-purpose of bus stop infrastructure and interchange. Stagecoach has significant concerns that current proposals to remove the bus station and have all bus services operate from the street kerbside, on an inner distributor road with similar or reduced net stop capacity, fall short of promoting attractive, convenient bus access to the central area as a destination.

For the longer term and where the objectives of the draft plan are concerned looking ahead to 2039, they clearly fall short of enhancing the convenience and attractiveness of public transport use. Much less do they make sufficient provision for a material increase in bus frequency, connectivity, and interchange convenience, on which the draft plan explicitly relies. It is vital that the District Council is clear in policy about its objectives for public transport in the city centre. These objectives must also carry sufficient weight when held in tension with other aspirations for the centre and the constraints on achieving them.

For the Plan to be sound, properly effective and compliant with NPPF, the approach to the City centre cannot ignore its role in the provision of sustainable transport service and connectivity.

Policy A1 should therefore be modified to properly reflect this crucial function, on which the vitality of the city centre must increasingly depend if unacceptable impacts on congestion, air quality and amenity are not to arise. This is still more crucial if wider aspirations to secure a more sustainable society and mitigate carbon are to be achieved.

"...This will include provision for development and proposals that:

- Support and strengthen the vitality and viability of the city centre and its role as a shopping/visitor destination, employment centre, public transport hub and a place to live;
- Support and promote facilitate improved access to the city and with increased emphasis on sustainable modes of travel, with particular regard to enhancing the public transport interchange role of the city centre area, in accordance with the transport strategy for the city and..."

9.2. Policy A3 Southern Gateway Development principles Chichester Bus Station, Bus Depot and Basin Road Car Park Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

There has been aspiration to redevelop the bus station and nearby bus depot from many years. Stagecoach has been engaged with detailed discussion with the District Council on this matter over a very extended period. We confirm that these discussions have reached a relatively mature stage, however at the time of writing are not concluded.

Stagecoach recognises and supports in principle the Council's wider aspirations for the "Southern Gateway", and this has governed our approach to the Council to date. We continue to have no "in principle" objection to relocating our administrative, engineering, operational and customer service facilities.

Leaving our proprietary interests entirely to one side, it remains vital that in so doing, the effectiveness, attractiveness and convenience of these facilities is not compromised, as we have outlined in our representations to Policy A1, if wider national and local transport policy, and the local plan strategy itself, are to be effectively achieved.

The depot is crucial infrastructure to support the safe, reliable and legally-compliant operation of Stagecoach bus services over a very extensive area covering the entirety of the District and beyond. Without securing equivalent facilities, that are fit-for-purpose, many of our services would have to cease.

If buses are to provide a greater and more attractive level of service (still more so if they are to be electrified) larger, more capable depot facilities, and city centre bus interchange facilities will be necessary.

Notwithstanding that the bus station and depot sites are leased from the District Council, these leases terminate well beyond the end of the plan period.

Finding suitable sites for a replacement bus depot in Chichester, in common with all similar localities especially in southern England, is extremely challenging. As a sui generis use, bus depots do not automatically benefit from policy

support on land allocated for employment uses. Most bus depots benefit from being legacy assets established under very different economic conditions. That is the case here. The value of a depot site for redevelopment net of demolition and remediation costs, rarely approximates to that able to sustain the acquisition of land in a tight wider employment land market, and the construction of suitable new facilities.

Furthermore, the costs of operating bus services are sensitive to the parasitic costs of vehicle and staff hours and mileage associated with “dead running” to a remote depot location from the operational network. Here, the existing depot site is ideal, and any replacement will unavoidable add ongoing operational costs to the operation that cannot be directly recovered.

We confirm that a replacement depot site has been identified and has in principle been agreed, subject to overcoming issues with the disposition of existing and future structures on the site. However, the site is recognised as not capable of accommodating meaningful operational expansion. This is just one of the most important foundational reasons why a positive transformation of bus productivity needs to be achieved, across the plan area and beyond, to support delivery of greater bus mileage and frequencies with the same level of operational resource. At the time of writing, we are not fully convinced that the proposals for the relocation will be sufficiently fit-for-purpose in the event the above is not achieved. Thus, we must raise a concern that the bus depot site might not be available during the plan period. While there is a strong probability it will be, the certainty surrounding the availability of the site, especially within the first 5 years of the plan, needs to be made transparent.

9.3. Policy A4 Southern Gateway - Chichester Bus Station, Bus Depot and Basin Road Car Park  
Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Regarding the removal of the bus station, without equivalent replacement, Stagecoach has significant concerns. Pressures and conflicts at the current bus station site have been gradually rising for several years, arising from increasing use and the need for additional scheduled vehicle layover periods to reduce the risks of accumulated late running from traffic congestion. Peak passenger volumes have recovered strongly on several routes, however passenger accumulations resulting from more frequent delays and disruption have added substantial further pressure on limited space.

Under current plans, buses and bus passengers will be displaced to bus stops at new locations outside the city centre, along Avenue de Chartres. This road was always intended to be a relatively high-speed traffic route, outside the historic core of the city. The city centre has evolved in the subsequent years to reinforce already strong natural severance, with the highway lying beyond the city walls and the green space along the Lavant. It is a traffic dominated, un surveilled and unattractive environment, reflecting the intended function of the road as an efficient movement corridor for high traffic volume, and nothing more. Avenue de Chartres is relatively close to the rail station and pedestrian connectivity can be provided at broadly equivalent distance to the current bus station, but again it is un surveilled and currently unpleasant, lacking natural legibility or any sense of prominence.

We understand kerbside capacity on Avenue de Chartres will be strained even to accommodate current levels of service, with no expansion possible. There is therefore a strong probability that to accommodate more frequencies and key new routes, such as West of Tangmere, East of Chichester and West of Chichester allocations, additional future bus stops must occupy a different location. This makes interchange between routes and rail services substantially challenging and less attractive.

The emerging arrangements risk marginalising public transport and public transport users substantially. This strongly undermines achievement of the wider plan objectives and delivery of a significantly greater role for public transport. If substantial public transport growth is to be accommodated in a growing city and hinterland, as the draft plan anticipates, then a more ambitious strategic approach must be taken. This should plan for additional and improved facilities to accommodate all services predicted to be required, whilst enhancing the passenger experience to ensure meaningful and attractive modal choice.

There is therefore a need for the plan to evidence how these issues will be appropriately resolved, having regard to a suitably ambitious approach that properly supports clear objectives to boost the relevance of public transport. The current policy is weak, un specific and indifferent to achieving the strategic objectives of the plan, including a transport strategy in support of the plan, and as such it is ineffective.

Policy A3 should therefore be modified to read:

- “ ...
- Be designed to encourage and facilitate substantial increase in the use of active travel and public transport to, from and through the city centre.
- ...”

In line with the commentary above Policy A4 should also be modified to read:

3. Enhance the public interchange function of the immediate area, the public realm, particularly connections to the

railway station and the city centre via South Street, Southgate and Basin Road for pedestrians, cyclists and public transport users, and to National Cycle Route 2 and Route 88 which run close by. Suitable replacement bus stops and layover facilities should be provided to replace those at the bus station in line with reflecting the objectives of the West Sussex Bus Service Improvement Plan, and to facilitate growth to meet the requirements of the plan's development strategy. Routes and crossings should reflect pedestrian desire lines, and public art should be incorporated to create a sense of place;

4. Enhance the public realm, in support of this and wider objectives, incorporating public art and other measures to create a strong and attractive sense of place.

...(renumber remaining points)

#### 9.4. Policy A6 Land West of Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

This is an existing Local Plan allocation. The public transport strategy for the site depends on the delivery of the second phase which Stagecoach notes is the subject of several applications now awaiting review and determination by the Council.

The site represents a compact form of development adjoining the city, as the most sustainable settlement, meeting housing needs close to where they arise, and affording very good opportunities for the use of sustainable modes, especially walking and cycling.

It is vital that a bus service is delivered to serve the site at the earliest potential. This was anticipated to be at the start of Phase 2 and will require the early delivery of the entire length of the spine road between the Old Broyle Road and Westgate and making it available for bus services.

It is not clear if the costs of pump-priming the service mentioned in the draft policy are anticipated to be met by the developer. Without such funding, the service will not be deliverable as years of losses will never credibly be covered from future profit. It is likely that the current wording will be interpreted by the developer as meaning that they have no such obligation binding upon them. Not does policy set out any specification for this service, thus its costs and the basis for securing developer contributions does not exist.

As such any wider transport strategy, that seeks to secure a greater role for the use of public transport, and the aspiration for this allocation cannot demonstrably be met. The policy is ineffective.

Policy A6 should be modified to read:

"...  
10. Make provision to accommodate and secure delivery of for regular bus services linking running through the site to Chichester city centre operating at least every 30 minutes Monday-Saturday, and new and improved cycle and pedestrian routes linking the site with the city,  
..."

#### 9.5. Policy A7 Land at Shopwhyke

Stagecoach Supports

This is an existing Local Plan allocation, largely built-out, that benefits from an existing set of permissions.

The public transport strategy for the site depends on the delivery of effective bus priority at Oving Crossroads. The current recently implemented scheme, undertaken by National Highways, makes no provision for effective bus priority and needs considerable re-evaluation.

The site represents a compact form of development adjoining the city, as the most sustainable settlement, meeting housing needs close to where they arise, and affording very good opportunities for the use of sustainable modes, especially walking and cycling. It lies on a new bus corridor that will shortly be put in place, running to Tangmere via Shopwhyke. The allocation is being significantly consolidated by further development in the immediate vicinity which strongly supports the potential for this new service.

As we explain in our representations for East of Chichester proposed allocation A8, and West of Tangmere Allocation A14, a clear corridor strategy to effect bus priority is needed, that should be delivered in support of that further growth, and that at Tangmere SDL. However this allocation is a near complete commitment and there is no scope through policy regarding this land to effect this outcome.

It is notable that Point 6) of policy A7 makes mention of a bus service. This language reflects the currently adopted Local Plan policy and has underpinned the existing permissions. The failure of any bus service to be delivered demonstrates from first principles that this Policy has been entirely ineffective. It is important that lessons are learned from this in the Local Plan Review.

#### 9.6. Policy A8 Land East of Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This proposed allocation lies next to unallocated land that is already consented as a departure from the adopted development plan, with 143 units near completion south of Oving Road (20/02471/FUL). Additional land, also unallocated but similarly consented, has now commenced north of Oving Road (88 units under 21/02197/FUL). This and the allocation site consolidates earlier development at Shopwhyke brought forward under the current Local Plan, and allocated again as draft policy A7.

Development at Shopwhyke was brought forward on the basis of a premise that the developer would provide or somehow arrange a bus service, that was reflected in the policies of the current Local Plan. This was secured by an unenforceable condition. No bus service has been provided, as there was inadequate clarity regarding the basis on which the costs of establishing such a service would be met by the developer, and the expectations of policy on the developer. The site does however lie on a logical new bus corridor between Chichester and West of Tangmere along the Oving Road.

In addition, an expectation that modifications to the Oving Crossroads would effect bus advantage have proven false – the arrangements put buses into a similar or longer queue than if they use the route available to general traffic to and from the A27.

Stagecoach strongly supports the principle of bringing this land forward. However, the soundness of the site depends on deliverability of a regular, reliable and direct bus service along the Oving Road, taking advantage of effective bus priority.

Given the failure of existing policy in the adopted Local Plan covering the proposed A7 allocation to deliver a bus service, it is of great concern that there is no draft policy to adequately address the issue. The policy is out of conformity with NPPF paragraph 104-105 in that sustainable modes do not offer realistic choices, much less an attractive one, and as such also does not secure the objectives of national policy nor of the plan itself.

Currently the proposed allocation is not served at all by public transport. Policy needs to ensure there is a policy basis to secure contributions to deliver such a service, which may well take the form of a proportionate contribution to deliver a new service or enhance provision that is put in place between Chichester along the Shopwhyke Road to west of Tangmere.

To become sound Policy A8 must be modified to read:

“...  
12. Provide for improved high quality connectivity by sustainable travel modes and focused in particular on a corridor between Chichester city centre and Tangmere along Shopwhyke Road, including new improved cycle and pedestrian routes, and a frequent bus service including linkages with Chichester taking advantage of effective bus priority measures on Oving Road at the A27;  
...”

#### 9.7. Policy A9 Land at Westhampnett/North East Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This land is already allocated and consented as part of the existing 2016 Local Plan. All reserved matters are determined.

The site lies on service 55 between Chichester, Westhampnett and Tangmere. This established service benefits from additional demand from the development at Phase 1. Phase 2 which is currently well underway, does not benefit directly from bus services. However it is a compact and logical form of development where walking and cycling to local facilities and employment is a credible option.

The existing allocation rolls forward policies in the 2015 Local Plan. In so doing it is possible to see which have been effective.

Point 9. regarding bus service and routing has not been effective. In particular the potential for a bus only link between the site and Graylingwell has not been established as policy anticipated. Given congestion around the Portfield area acutely affects public transport this, or alternative methods to secure bus priority over private car use, a clear and unequivocal policy steer is required.

The lack of an up-to-date transport evidence base is ultimately at the root of these issues. Arguably the policy and allocation can only be made sound once this refreshed evidence base is in place.

However, it is possible that the allocation could be made sound by modification of Policy A9 as follows:

" ...

9. Make provision for regular, direct and reliable bus services linking the site with Chichester city centre, and new and improved safe and convenient cycle and pedestrian routes linking the site with Chichester city, the South Downs National Park and other strategic developments to the east of Chichester city including Tangmere. These objectives could include exploring the potential for a bus only route require a deliverable scheme to afford bus priority through Portfield, and potentially linking the development with the Graylingwell area through use of a modal filter;

" ...

#### 9.8. Policy A10 Land at Maudlin Farm

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing public transport route. It is relatively close to the city and very near substantial centres of employment and services that can be reached by active travel modes, helping damp the demand for car use. It is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services at Portfield and over a wider area. In fact, the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A10 should accordingly be modified to read:

" ...

5. Provide safe and suitable access points for all users, including a main vehicle access from Old Arundel Road and, subject to further assessment, a secondary vehicle access from Dairy Lane. The development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes;

" ...

#### 9.9. Policy A11 Bosham – Land at Highgrove Farm

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Bosham Station. It is relatively close to the city and very near substantial centres of employment and services that can be reached by public transport and cycling, offering strong potential to materially damp the demand for car use.

There are serious risks that development in the A259 corridor west of Chichester could place further demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular to bus services.

Nevertheless, given the potential to effect bus priority on the approaches to Fishbourne Roundabout, it is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A11 should accordingly be modified to read:

" ...

8. Provide safe and suitable access points for all users, including a main vehicle access from the A259. The development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys crossing the A27 at Fishbourne;

#### 9.10. Policy A12 Chidham and Hambrook

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Nutbourne Station. Substantial centres of employment and services that can be reached by public transport and cycling, offering strong potential to materially damp the demand for car use.

There are serious risks that development in the A259 corridor west of Chichester could place further demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular to bus services.

Nevertheless, given the potential to effect bus priority on the approaches to Fishbourne Roundabout, it is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A12 should accordingly be modified to read:

"...

7. Development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys along the A259, crossing the A27 at Fishbourne and where necessary on the approaches to Emsworth;

8. Facilitate improved sustainable travel modes, and new improved cycle and pedestrian routes, including linkages with Chichester city and settlement along the East/West Corridor;

#### 9.11. Policy A13 Southbourne Broad Location for Development

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach agrees unequivocally that Southbourne is a location that could accommodate growth on a strategic scale. It has a substantial range of service available within the settlement, including secondary education. It is well connected by bus and rail service to key destinations, including Chichester, lying to the east and west.

This is one of the few locations identified for growth that represents substantial additional development in a new location to the strategy in the existing Local Plan adopted in 2015. Thus, the transport impacts of development on the substantial scale envisaged at Southbourne are not covered or accommodated by the Chichester Area Transport Strategy that lies behind the existing plan. This demands, from first principles, that substantial further transport mitigation measures are required.

We recognise and endorse fully that the intent of the draft plan for Southbourne as a Broad Location for Development on a strategic scale, includes "Maximising the potential for sustainable travel links through improved public transport, including consideration of opportunities to reduce community severance caused by the railway line as well as the

inclusion of cycling and pedestrian routes.” (our emphasis).

The existing railway station at Southbourne is served regularly, however, it is not within the power of this plan to improve rail services. It is, however, well within the scope of action of the Local Planning and Highways Authority to work with bus operators to achieve a step change in the journey time, reliability, frequency and connectivity of bus services, and in particular the major corridor operated as service 700 by Stagecoach along the A259 between Havant and Chichester through Southbourne.

Notwithstanding the clear potential for sustainable connectivity in the western A259 corridor, there are very serious risks that development in the A259 corridor west of Chichester will place further significant car-borne demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular bus services, having the opposite effect to that intended: longer, less reliable and less frequent bus services, leading to a spiral of slowly declining use.

These risks, while very serious, look credibly likely to be entirely mitigated subject to carefully conceived and robust specified actions on the local highway network. It is perplexing to us that this potential still has not been identified, as part of a comprehensive “first principles” review of the transport evidence base. In particular given the former trunk status of the A259, there is evident potential to effect bus priority on the A259, including on the approaches to Fishbourne Roundabout.

With appropriate measures, including but not limited to this, to substantially boost the relevance and attractiveness of sustainable travel choices, strategic development at Southbourne could well be made highly sustainable.

In the absence of a refreshed transport strategy and transport evidence base, the draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact, the only reference that is made in Policy is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A12 should accordingly be modified to read:

“...Development should be comprehensively masterplanned to achieve a high-quality design and layout that integrates well with the surrounding built and natural environments to enable a high degree of connectivity with them, particularly for pedestrians and cyclists, and provides good the highest possible quality of access to facilities and sustainable forms of improved public transport services.

...

4. Provide a suitable means of access to the site(s), and securing secure necessary off-site transport infrastructure and service improvements (including highways in particular to the A259 corridor between Emsworth and Chichester) in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development) to promote sustainable transport options prioritising delivery of high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes;

...”

#### 9.12. Policy A14 Land West of Tangmere

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach strongly supports the principle of intensifying the level of development at the Strategic Development Location already identified and allocated West of Tangmere in the existing Local Plan. This serves to consolidate development at a location where effective and attractive public transport choices could be provided. It also conforms closely with the principle expressed in NPPF that the best possible use should be made of land on sites that are judged to be sustainable, or potentially sustainable locations for development.

It must be stressed that the current policy suite for the SDL has to date not brought forward development in this location. We recognise that a Master Plan has been adopted by the Council, and that a planning application (20/02893/OUT) for the full larger quantum of 1300 dwellings proposed in the draft plan has received a resolution to grant by the Council.

However, we are not aware that a sustainable transport strategy has been finalised.

Land West of Tangmere is not served by any existing regular bus services. Rather, an entirely new bus service corridor is anticipated to operate in the near term from Chichester through Tangmere and beyond towards Barnham. This would serve proposed allocations A7, A8 and West of Tangmere (A14) included in the draft Plan.

This is reflected in the language of the explanatory memorandum to Policy A14 at paragraph 10.65:

“Opportunities, in partnership with relevant authorities, to provide improved sustainable public transport routes linking the village with Chichester city, to improve cycle routes to the city, and better transport links to Barnham rail station and the ‘Five Villages’ area in Arun District; and..”

Initiating this service will be costly and will in large measure be funded not by developer contributions, but by DfT monies awarded through the West Sussex Bus Service Improvement Plan. It is crucial this service is both sustainable in the longer term without revenue support, and that the success of the service can be built on by scalable frequency improvements as strategic development comes forward in both Chichester District, and proposed allocations A7 A8 and A14, and in Arun District, in particular at Barnham, Eastergate and Westergate (BEW).

This demands measures to effect safe, direct and swift operation of the service especially within the city centre, where it approaches and crosses the A27 at Oving crossroads and on the eastern fringes of the District east and west of Tangmere. Without these measures, bus journey time and reliability will be severely compromised and the impact of this service to damped car trip demands will be very substantially compromised. No such measures are proposed in the draft plan or its evidence base.

Changes to Oving Crossroads have recently taken place which, amongst other intentions, ostensibly provide bus advantage between Chichester and Shopwhyke. The junction in its current form does not offer material gain in bus journey time, as movements involve a less-direct route towards the city over an increased operating distance, much of which involves passage through heavily congested sections of the A27 and Westhampnett Road. A refreshed transport strategy supporting plan-led growth must revisit this area to secure an effective solution which offers bus customers the fastest and most reliable trip-time to and from the city.

In addition, the extension of public transport connectivity towards BEW and Barnham, including key links to secondary education and a logical railhead for journeys beyond towards Brighton and London as provided at Barnham Station, needs to facilitate bus priority between Tangmere and Nyton – whether using the A27, or preferably avoiding it altogether. There are significant safety concerns associated with the at-grade uncontrolled right-hand A27 exit onto the B2233 Nyton Road at Crockerhill Turn. This movement is also prone to extreme delay owing to the conflict with approaching westbound traffic on the A27, travelling at speed, which has priority. Our concerns with this junction in its current form can be expected to worsen with the increased traffic volumes predicted from new residential developments to the west of the city.

A solution providing a suitable short length of highway available only to sustainable modes, between Tangmere and Easthampnett, could provide a very effective solution to this. This would be deliverable within the scope of the separate proposed allocation at A19 Chichester Business Park, Tangmere. We comment on this separately.

Howsoever effected, a reliable direct and delay-free bus corridor between Barnham, BEW, Tangmere and Chichester could expect to secure very substantial elevation of the relative attractiveness of public transport over car use on the entire corridor and serve to effectively damp growth-related demands on this section of the A27. West of Tangmere, in the longer term, there is evident scope for the route corridor to operate as two branches – one via Shopwhyke and one via Westhampnett, effectively serving all the strategic developments proposed in the plan and transforming wider public transport connectivity to key employment destinations and services within and east of Chichester.

However, in common with all the other proposed allocations, the plan proposes no specific measures to provide, much less improve public transport or other sustainable modes to the site. This leaves the draft plan out of conformity with NPPF, especially paragraphs 104-106. The plan is inadequately evidenced and to the degree that public transport measures are identified and emergent, their successful implementation in the near and longer term will be jeopardised without clear measures to provide a safe as well as efficient bus route towards BEW and the Five Village area within Arun. The Duty to Cooperate is not effectively met and effective cross boundary collaboration on these strategic issues through the review of LSS is not demonstrated, despite the current version which identifies the issues.

To be made sound the LSS Review and a subsequent urgent review of the transport evidence base and strategy needs to take place. The strategic issues are especially critical east of Chichester, in our view.

Notwithstanding this foundational deficiency, to be made sound, Policy A14 should be modified to read:

“... ”

8. Subject to detailed transport assessment, provide primary road access to the site from the slip-road roundabout at the A27/A285 junction to the west of Tangmere providing a spine road link with secondary access from Tangmere Road. Development will be required to provide or fund mitigation for potential off-site traffic impacts through a package of measures in conformity with Policy T1 (Transport Infrastructure) and T2 (Transport and Development) and DfT Circular 01/2022 that maximise the relevance and use of sustainable travel modes, in particular bus services;

9. Make provision for improved sustainable travel modes between Tangmere and Chichester city, in partnership with relevant authorities, including improved direct, seamless safe and reliable and additional bus and cycle routes linking Tangmere with Chichester city, Shopwhyke and Westhampnett. In conjunction with measures in support of Allocation A19, Opportunities should also be explored contributions shall also be sought for providing improving high quality cycling

and bus service transport links with the 'Five Villages' area and Barnham rail station in Arun District; and..."

## 10. Concluding comments

Stagecoach recognises its role as a key stakeholder in the plan, as well as a local employer and corporate citizen. We recognise the primacy of the plan-led system as the mechanism intended to resolve complex challenges, including the proper alignment of transport and spatial planning, which as the National Decarbonisation Strategy for Transport among other policies makes clear, has never been more vital.

In making our representations, we emphasise that we are entirely supportive of the Local Planning Authority and the relevant Highways and Transport Authorities, in their efforts to properly manage the amount and pattern of development to secure vital policy objectives. We recognise that balancing delivery of assessed development needs with a wide variety of other constraints is a very difficult task.

The transport issues faced by the plan are recognised in the draft plan as being serious and long-standing. We believe that there are ways to arrive at a suitable transport mitigation strategy that has regard to wider strategic issues and resolves existing problems in a much more effective way than those pursued to date.

We support the spatial strategy of the plan as it evidently provides the basis to secure the necessary step change in the quality and use of sustainable transport modes, as it explicitly seeks to do. However thus far, there has been insufficient work done to define the measures that will credibly secure these outcomes.

Stagecoach therefore urges the authorities to draw us into the necessary effective ongoing collaborations that is expected by NPPF paragraph 16 and 106; and DfT Circular 01/022, to do this work, prior to, rather than after the submission of the draft plan. We look forward to being approached to initiate this dialogue at the earliest opportunity.

### Change suggested by respondent:

Policy A6 should be modified to read:

"...  
10. Make provision to accommodate and secure delivery of for regular bus services running through the site to Chichester city centre operating at least every 30 minutes Monday-Saturday, and new and improved cycle and pedestrian routes linking the site with the city,  
..."

Chichester Local Plan 2039 Regulation 19 Stagecoach South representations.docx - <https://chichester.oc2.uk/a/skh>

## Object

**Document Element:** Policy A7 Land at Shopwyke (Oving Parish)

**Respondent:** Stagecoach South (Rob Vince) [8141]

### Summary:

This is an existing Local Plan allocation, largely built-out, that benefits from an existing set of permissions.

The public transport strategy for the site depends on the delivery of effective bus priority at Oving Crossroads. The current recently implemented scheme, undertaken by National Highways, makes no provision for effective bus priority and needs considerable re-evaluation.

It lies on a new bus corridor that will shortly be put in place, running to Tangmere via Shopwhyke. The allocation is being significantly consolidated by further development in the immediate vicinity which strongly supports the potential for this new service.

As we explain in our representations for East of Chichester proposed allocation A8, and West of Tangmere Allocation A14, a clear corridor strategy to effect bus priority is needed, that should be delivered in support of that further growth, and that at Tangmere SDL. However this allocation is a near complete commitment and there is no scope through policy regarding this land to effect this outcome.

The failure of any bus service to be delivered demonstrates from first principles that this Policy has been entirely ineffective. It is important that lessons are learned from this in the Local Plan Review.

Chichester District Local Plan 2039 – Pre-Submission (Regulation 19) Consultation

## 1. Introductory Comments

Stagecoach South is the main commercial public transport operator across Chichester District. The Company has headquarters in the city, which is also the principal public transport hub for the District and it's rather wider travel-to-work area encompassing much of the Arun District. Our services extend throughout and beyond the District boundaries, as far as Littlehampton, Midhurst, Havant and Portsmouth. The vast majority of services operate on a commercial basis – that is to say, sustained by passenger use and fare revenue, including concessionary reimbursement.

While the role of the railway is significant in much of the District, especially the east-west Coastway line, yet bus services account for more boardings locally than the railway, with Chichester depot services carrying over 3.5m passengers each year.

Unlike bus services in other parts of the country, the local network has recovered strongly after the pandemic with fare-paying passenger numbers over 95% of 2019 levels, albeit with concession patronage somewhat lower. This has helped secure not only a stable but growing bus network even during this period of rapidly rising operational costs, avoiding the need for the service contractions seen in other regions. Indeed, during the second quarter of 2023 Stagecoach will invest £5.5m in brand-new vehicles for high-profile coastal Service 700 – one of the largest vehicle investments for Stagecoach Group this year.

Our services are therefore critical to existing and future local connectivity. As the Plan acknowledges, mobility demands do not respect planning authority boundaries. The role of our services is especially high to settlements in the broad A27 corridor, within the District and beyond. This includes major settlements in Arun District such as Pagham and suburban Bognor Regis, where bus is the only mass public transport option. As the Council is well aware, there is an even higher level and rate of committed development envisaged in these locations in the Arun District Local Plan than in Chichester.

It is already evident to the planning authorities, West Sussex County Council and National Highways, as proprietor of the A27 Trunk Road, that accommodating growing mobility demands across Chichester District and especially around Chichester itself, is becoming increasingly challenging to the point of being seriously problematic.

Stagecoach has a particular interest in this Plan arising from:

- The already clear and highly deleterious impact of congestion affecting our operations and their reliability and attractiveness to the public. The effects of these on the approaches to Chichester, and around the A27 bypass are especially severe. If public transport is to retain its existing role – even before the needs of any meaningful growth both in Chichester and neighbouring authorities is considered, are considered – the Council and the Highways Authority need to arrive at clearly-defined measures to protect buses from chronic delay and the damaging impacts arising from the lack of bus network resilience and customer journey times.
- In connection with the above, the need to properly consider the predictable impacts of committed development in Arun District on the transport network and in particular the operation of bus services. The duty to cooperate on cross-border strategic matters is not limited merely to accommodating housing requirements.
- The fact that our entire business premises and operational base at Chichester is the subject of allocation for redevelopment within the Plan period. Specifically, this includes our Head Office, the Bus Station as the operational hub of the network and the key interchange for passenger journeys – including those that involve the railway – and the bus depot required to support the entire operation. Notwithstanding many years of discussions, there is as yet no agreed deliverable strategy to replace these facilities either in the Draft Plan or elsewhere.

Stagecoach broadly supports the vision and priorities of the draft plan. In most respects, Stagecoach supports strongly the spatial strategy and the identified site allocations that flow from it, and the evidence.

However, it has serious concerns about the soundness of the plan as proposed for submission, for important regards outlined in this response. These are made in the light of requirements set by the National Planning Policy Framework (NPPF), in particular at paragraphs 15 and 16; 35, 105-109 inclusive and having due regard to the need for allocations to satisfy 110-112 inclusive in due course as development permission is sought; and paragraph 174.

Paragraph 16c) of NPPF makes plain that strategic plans and policies should “be shaped by early, proportionate and effective engagement between plan-makers and communities, local organisations, businesses, infrastructure providers and operators and statutory consultees” (our emphasis). This makes plain that collaborative and ongoing involvement of public transport operators is both necessary, and separate and in addition to the engagement with statutory consultees. This has not taken place.

Para 1.25 of the draft plan states that “the council has engaged constructively, actively and on an ongoing basis with other local authorities and organisations to address key strategic matters.” Despite the requirements in NPPF and contrary to the statement made, Stagecoach has not been approached or involved in a meaningful, collaborative or ongoing way in the preparation of the Plan.

Our main concerns centre around the fact that the plan strategy is neither backed by sufficient transport evidence. Even more importantly, the plan relies on a wholly car-based transport mitigation strategy despite policy stating that this is not the case, and the track record of the existing Local Plan, based on a very similar strategy, that has failed to bring forward meaningful mitigations to date to prevent traffic conditions substantially worsening. There is no support in policy for the achievement of the Strategic Objectives in the Plan. Nor is there definition of any measures in the 2023 Transport Study

to make provision for sustainable transport infrastructure or services – much less materially improve them.

Finally, to the extent that updated transport evidence has been provided in the form of the 2023 Chichester Transport Study, arising from updated traffic modelling, it does not support the contention that highways capacity constraints on and around the A27 justify not meeting the objectively-assessed development needs of the area, as the draft plan contends.

## 2. Vision and Strategic Objectives

### 2.1. Issues and Opportunities

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant, proportionate and up to date evidence

Stagecoach recognises the important role of the West Sussex and Greater Brighton Strategic Planning Board which agreed a Local Strategic Statement (LSS2) in early 2016 to identify spatial planning issues across the wider area. This established strategic priorities and policies to guide longer term strategic growth in a coordinated and well considered matter. This institutional framework and the purpose of the LSS is a highly significant one and is at the heart of efforts to properly fulfil the statutory Duty to Co-operate, including with regard to strategic infrastructure issues, as NPPF requires.

Given the long period of time elapsed since the 2018 Reg 18 consultation and the already very clear constraints on strategic infrastructure capacity, it is of great concern to Stagecoach that the LSS2 has not been updated to reflect emerging issues in the intervening period. A review and update of the LSS2 has only just commenced. This includes a study of projected housing and employment needs, transport impact, infrastructure and spatial options to deliver the required development in the period after 2030. This Chichester District draft plan covers a period extending to 2039 – therefore well beyond 2030 and the nominal currency of LSS2.

However, infrastructure needs are pressing today. Stagecoach is presented with severe highway operational problems on a near-daily basis. During the winter of 2022-23 we have, for example, seen key road links impacted for many weeks by acute disruption arising from flood events. Unpredictable, but seemingly more-frequent, exogenous events expose a lack of resilience in the highway network around Chichester and its travel-to-work area. However, serious, chronic, unpredictable delay has been normalised over recent years, with peak-time congestion having quickly returned after the pandemic. The existing development strategy has failed to bring forward measures having any impact on this to date, and key commitments – notably at west of Chichester Phase 2 and at Tangmere – have yet to commence to further aggravate the issue.

We have no confidence in the transport mitigations proposed in the existing Local Plan and LSS2 being sufficiently effective, even if deliverable at all. Indeed, the existing adopted Local Plan does little more than make vague speculations about the sustainable transport measures that might be achievable. The draft local plan review is no different. It has no ambitions at all for sustainable modes and thus, makes no meaningful provision to meet them.

This is especially relevant in light of the fact that the approach to resolving issues on the A27 around Chichester that were anticipated in 2015-16 have fallen away. LSS2 is thus currently inadequate to act as a part of an up-to-date, proportionate, and relevant evidence base for the Plan.

An update of a traffic model lies at the heart of a 2023 Chichester Transport Study. This talks no account of the existing role of non-car modes, nor can it do so. It is unable to properly evaluate the nature of problems or solutions that involve public transport, or for that matter, other sustainable modes.

Therefore, we consider that the combination of committed and additional development needs that must be accommodated over the whole plan period between 2022 and 2039, in both the Chichester and Arun Districts, require a “first principles” review. This must be based on a refreshed transport evidence baseline of no earlier than 2022 – given that the effects of COVID distort 2020-22 – and the transport infrastructure and service requirements to sustainably support those needs.

Key issues – including substantial changes with regards to transport issues and challenges, as well as potential solutions – thus do not form part of the evidence base that steers this plan. Given long term changes in travel patterns, and mode share that took place during COVID, as well as a local and national policy context that seeks to radically reduce and then eliminate transport-related carbon emissions, this is especially problematic.

The specific problems of congestion and network resilience that are evident on the A27 and the approaches to Chichester remain a set of especially difficult problems that disproportionately affect the efficiency, reliability and attractiveness of the bus network, that evidently demand larger-scale strategic responses involving multiple stakeholders, including bus operators.

Where the effects of development on the national Strategic Roads Network (SRN) are concerned, the approach of

National Highways to addressing and responding to the mobility needs of development has now substantially changed following the promulgation of the DfT Written Ministerial Statement LTN01/22. This makes it clear that adding highways capacity is no longer the first or only strategy that should be pursued, but one subordinate to maximising the potential of non-car modes and sustainable travel.

“Effective and ongoing collaboration” on transport matters has not led to solutions being agreed and published for public scrutiny as part of the plan evidence base. Whatever the approach to modelling and “highways improvements” that may be agreed or pending agreement with the County Highways Authority and National Highways, Stagecoach is neither participant or sighted. This is despite the clear requirements set out in NPPF Para 106 b) that “Planning policies should ... be prepared with the active involvement of local highways authorities, other transport infrastructure providers and operators and neighbouring councils, so that strategies and investments for supporting sustainable transport and development patterns are aligned.” (our emphasis).

We therefore consider that the Council has failed to comply with the requirements of NPPF paragraph 25 and 26 that “relevant bodies” are involved in plan-making, especially with regard to addressing the needs for infrastructure. Public transport services and the infrastructure that supports its operation and use clearly fall within matters relevant to plan-making. This is explicit in NPPF Chapter 9 and indeed within the plan itself – for example reference to public transport and sustainable modes in the Vision for the plan.

It should be stressed that the Regulation 18 “Preferred Approach” consultation took place in December 2018 – over 4 years ago and prior to COVID, based on LSS2. The inordinate length of time that has elapsed between the Regulation 18 and Regulation 19 stages greatly challenges the LSS2 and other parts of the evidence base, especially as the pause straddles the COVID epidemic. That would include the transport modelling baseline, and key assumptions in any traffic modelling that took place prior to mid-2022, which is a point at which a reasonable “new normal” post-COVID might be considered to have become established. In that period, Arun District has also adopted its own Local Plan development strategy that accommodates an unprecedented quantum of development immediately east and south-east of the District Boundary – creating additional substantial transport impacts directly affecting the A27 and multiple major approaches to Chichester crossing it.

The established mechanism to fulfil the Duty to Co-operate has thus not operated effectively.

The Plan is not founded on a relevant, proportionate and up-to date evidence base and is thus inadequately justified.

## 2.2. Spatial Portrait

The spatial portrait is generally succinct and accurate. However, it makes no mention of road-based public transport, the role of the City as a public transport hub, or the range of bus services that provide local connectivity (Section 2.4 and 2.5). The complete concentration of post-16 education in the City itself as just one example of the peculiarities of transport demands in the area, is not highlighted, though this has a profound influence on peak time travel demands affecting the most congested parts of the highway network. Among other things, the role of bus services in supporting the educational system of the plan area is very great indeed.

The potential role of bus in addressing the already-severe transport problems of the plan area and beyond seems entirely overlooked. The spatial portrait is thus clearly inadequate and incomplete.

## 2.3. Strategic Objectives

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Chapter 9 of NPPF and paragraphs 104 and 105 in particular require that plans should:

“Transport issues should be considered from the earliest stages of plan-making and development proposals, so that:

- a) the potential impacts of development on transport networks can be addressed;
  - b) opportunities from existing or proposed transport infrastructure, and changing transport technology and usage, are realised – for example in relation to the scale, location or density of development that can be accommodated;
  - c) opportunities to promote walking, cycling and public transport use are identified and pursued;
  - d) the environmental impacts of traffic and transport infrastructure can be identified, assessed and taken into account – including appropriate opportunities for avoiding and mitigating any adverse effects, and for net environmental gains;...
- ...The planning system should actively manage patterns of growth in support of these objectives. Significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. This can help to reduce congestion and emissions, and improve air quality and public health...”

The Strategic Objectives do not conform with NPPF in these foundational requirements adequately, to transparently steer the plan strategy. They should therefore be amended to read:

“Plan to provide local infrastructure to support new development and seek opportunities to address existing identifiable

infrastructure problems deficits, such as in particular those relating to the A27 and its junctions and wastewater treatment.”

Paragraph 2.36 states, in the context of the Climate Emergency and the National Trajectory to “Net Zero” that “The council will enable the delivery of infrastructure, jobs, accessible local services and housing for future generations while protecting, conserving and enhancing the historic and natural environment.”

Naturally, we support this intent.

However, there is no acknowledgement of the role current patterns of transport use contribute to carbon emissions, nor that substantial mode shift is necessary to address sustainably an acute lack of capacity on the local network and the SRN, especially around Chichester. This is especially concerning as the basic conceptual link is not made between the fact that the greatest such problems lie on the A27 corridor and around Chichester, while these are also at the same time present many of the most sustainable locations for development, and where the opportunities to secure much greater use of sustainable modes also exists.

Strategic Objective 7 “Strategic Infrastructure” includes the following statement:

“To work with infrastructure providers to ensure the timely delivery of key infrastructure to support delivery of new development. New development will be supported by sufficient provision of infrastructure to enable the sustainable delivery of the development strategy for the plan area. Key infrastructure to support the Local Plan will include improvements to transport, ...

A sustainable and integrated transport system will be achieved through improvements to walking and cycling networks and links to accessible public transport. Highway improvements will be delivered to mitigate congestion, including measures to mitigate potential impacts on the A27 through a monitor and manage process.”

The latest transport evidence in the Chichester Transport Study makes no pretence to define much less to deliver a “sustainable or integrated” transport system. It is wholly devoted to sustaining current levels of car use across the District, to and through Chichester area.

It is no more than the lightest of touches to the approach taken to supporting the adopted Local Plan, an approach that is already almost 10 years beyond the date of its gestation but has yet to deliver any significant capacity improvement schemes, much less any measures that sustain even current levels of public transport journey times and reliability in the face of increasing congestion – much less any betterment.

Of the six key junctions on the A27 around Chichester, recognised to require significant mitigation given they are saturated for extended periods, five accommodate regular bus services - indeed frequent ones at least every 20 minutes in several cases. The sixth at Oving Road, relates directly to a key corridor where bus services are needed to support strategic growth currently being delivered at Shopwhyke, as well as substantial further growth West of Tangmere (proposed allocation A14) and “East of Chichester” (A8), south of Shopwhyke Road.

As stated at p12 of the Study Summary “The modelling shows that all the junctions on the A27 Chichester bypass are well over capacity, even before adding in the Local Plan development and with the exception of Portfield Roundabout are actually shown to be over capacity in the base model year (2014) in one or both peaks”. This much has indeed been evident for years from delay and periodic even more severe disruption arising to Stagecoach services from the lack of network resilience.

The reassignment of through and local traffic through Chichester to avoid the A27 bypass is an especially serious issue for bus services that penetrate the city. This is leading to consequential saturation of a range of junctions used by buses. Rising delay and unpredictable running times are at the root of our decision to sever the long-established Portsmouth to Littlehampton service in 2023, which will in future no longer run across Chichester, but terminate to provide additional dwell time to mitigate the impacts of congestion.

While this congestion affects all road users including businesses and freight traffic, the effect on scheduled bus services is greatly higher, as such services cannot reassign route to ‘beat the queue’. Traffic congestion often encourages greater car use for this reason, in tandem that people are happier to sit for extended periods in their own vehicle on a seamless door-to-door journey than wait at the roadside for a delayed bus making slower progress in lengthy queues.

As the Study admits at para. 1.3.2 “Although, there have been works at the Portfield Roundabout in this timeline, no other mitigation schemes have been completed along the A27 corridor, as such the mitigation schemes defined in this report will also be required to consider the development from this plan period.”

In other words, in the 8 years since the current Local Plan was adopted in 2015, there has been minimal progress is delivering the traffic mitigations. There is no clarity at all when any such mitigations will be brought forward. It is hardly surprising then, that traffic conditions have deteriorated. The “predict and provide” transport strategy supporting the current plan has failed.

Despite this, the Draft Local Plan Review proposed to “double down” on exactly this strategy. It represents, like the rest of the evidence base, a “rolling forward” of the current car-based strategy by 9 years, with the lightest of touches to attempt

to accommodate car trip demands from a relatively modest additional development quantum.

Nevertheless, the Study requires a global 5% reduction in trip demands arising from unspecified “credible” (paragraph 4.1.2) sustainable transport and travel planning measures. It is unclear why use of non-car modes will see disproportionate growth when no measures are in place to make them more attractive. This 5% increase in use translates to a doubling in the modal share of bus services. There is no evidence nationally, anywhere, that simple ignorance of alternatives to the car is the main barrier to uptake.

The outputs of the 2023 Chichester Area Traffic (SATURN) model are set out at Table 5.1 (am peak) and 5.2 (pm peak) without mitigation. These betray just how seriously compromised the whole network around Chichester is, and will be in future, even with implementation of a mitigation package to increase traffic capacity that is understood to cost between £92m and £164m – and which the Study and the draft plan acknowledge cannot be delivered through developer funding sources alone. Unspecified external funding presumably from HM Treasury through DfT is required.

Even if this provided and the schemes are delivered, Tables 8.1 and 8.2 indicate these will provide minimal relief. The final columns suggest key junctions, including Portfield, Fishbourne Road and Cathedral Way East will remain at well over 100% ratio of flow to capacity (90% is considered the point at which saturation is approached, with the onset of increasing delay above that figure). RFCs in tables 8.1 and 8.2 are some of the highest we have ever seen in a local transport evidence base for a post-mitigation scenario. While the serious potential risk of reassignment across Chichester City is greatly reduced, which is important and welcome given its impact on bus services, Tables 8.1 and 8.2 show the extent of post-mitigation saturation is also egregious, covering a very large number of key links and junctions.

On every measure and criterion, then, including cost deliverability and effectiveness, the revised Transport Strategy falls well short of evidence to suggest the transport impacts of the plan can be properly addressed by this means.

Despite the repeated statements about sustainable modes throughout the draft plan and Chichester Transport Study, only 2 paragraphs at Section 6.2 within the Study are devoted to public transport:

“6.2.7 The funds generated from the parking management schemes, local/nation funding schemes and developer contributions could also be utilised to fund potential public transport enhancements within the city centre including an expansion of the bus priority lane system within Chichester City Centre. This could reduce reliance on the car in the longer term towards sustainable public transport. A park and ride scheme could be incorporated within a bus priority lane network in the future depending on the uptake and successfulness of early bus priority trials.

6.2.8 Chichester City centre has a constrained existing public highway network. Therefore, any proposed dedicated public transport or light transit corridors that could be implemented would be at the expense of existing highway. This could be managed through a time-based system where certain routes are restricted to public transport only during specific times. E.g., peak hours.”

There is some very high-level consideration of Park and Ride following this section. None can be considered a serious practical evaluation of consolidating car-borne trips onto bus services, including existing ones, for example local mobility hubs, more frequent bus corridors, delivery of specific bus priorities.

None of the discussion of alternatives to “predicting and providing” for unconstrained traffic growth is rooted in a deliverable evidence base, or proper evaluation of options and specific projects.

To take just one aspect of the few specifics that can be picked out, a workplace parking levy is hypothesised. This would apply only to “offices”, in Chichester city centre (para 6.2.3), without consideration given as to how this could be practically achieved or even that a meaningful amount of office based employment would qualify. Much less is any consideration given to how far focusing a strategy only on office-based workers would actually deliver a particularly significant effect, apart from to create a strong incentive to relocate offices out of the city centre to places out of reach by public transport.

Looking at the Chichester Transport Study 2023 and the draft plan together, there is insufficient evidence that the traffic capacity increase proposed in the 2023 Transport Study is any more affordable or technically deliverable, or likely to be sufficiently effective, than those in the past strategy. The evidence more strongly points to the fact that no highway improvements are identifiable or economically deliverable to meet even short term increases in demand for car-borne mobility on most of the network around Chichester.

There are no published strategies or schemes clearly supporting the contention that the objective of improving sustainable modes is technically achievable or deliverable either. The plan makes generalised assertions that such strategies will be devised and implemented only after serious problems emerge from a shortfall in the car-borne transport strategy.

The reference to “monitor and manage” is undefined and unsubstantiated. There are no outcomes stated, no mechanisms specified and no timescales for action.

Our experience today is that network conditions have reached unacceptable and prejudicial levels of severe

unpredictable delay. The saturation of the network is already evident well outside the traditional peaks on key sections of highway and at key junctions. External shocks such as the effects of severe weather are becoming more common, leading to delays so extreme as to justify the description of “gridlock”. The plan does not identify a strategy to effectively address this, in particular by consolidating passenger car trips onto more efficient public transport vehicles. This is unacceptable to Stagecoach.

#### 2.4. Local Plan Vision

Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the broad approach in Plan Vision and in particular that by 2039, the Plan will support and enable greater use of sustainable modes. However, there is no link made between reducing the use of private cars, and the need for a step change in the use of sustainable modes. Without a published transport evidence base it is impossible to establish a suitable sustainable transport strategy to support both carbon reduction and alleviation of the problems arising from acute congestion. Even on a very crude basis, to achieve a meaning mode shift on key approaches to the A27 Chichester Bypass will require more than 20% of existing peak car-borne journeys to transfer to other modes. A 10 percentage point transfer to bus (about half this shift) would imply more than doubling peak hour bus passenger boardings.

The Vision is nothing more than an aspiration, that needs to more definitively aim at key outcomes, for the plan to be effective. The Vision should thus be altered to read:

“Get about easily, safely and conveniently with less reliance on private cars –making the greatest possible use of the rail and enhanced bus network, and with more opportunities for active travel including walking and cycling; to materially reduce dependence on private car use.”

Underpinning the Plan’s spatial strategy, the Vision section goes into more specific detail about key localities in the Plan area.

Regarding Chichester, Paragraph 2.39 states: “The emphasis will be upon consolidating and enhancing the role of Chichester city as the plan area’s main centre, whilst also developing the role of key settlements to its east and west. The focus will be upon creating communities with good access to a range of employment opportunities and affordable housing for young people and families to balance the ageing population.”

This is clearly the appropriate focus for meeting the District’s development needs in a sustainable manner. The city and key settlements to the east and west, are those places already able to make use of relevant public transport services, both rail and bus. Especially within and near the City, walking and cycling can credibly present highly relevant choices. This emphasis clear can be expected to address the requirements of sustainable development set out in NPPF and their local application set out in the Plans Strategic Objectives.

However, this needs a robust transport strategy, to avoid a further concentration of development and its traffic impacts occurring on or near some of the most chronically congested parts of the highway network. To date, the absence of intervention has strangled the bus network through further marked deterioration in traffic conditions. This by consequence increases the risk of bus delay or cancellation, lengthens journey time and reduces customer confidence in bus as an attractive alternative mode of travel.

In April 2023, Stagecoach is making significant timetables changes to improve operational resilience in and around Chichester. The biggest such change is the severance of the Portsmouth to Littlehampton section of service 700, at Chichester, with buses operating independently to the east and to the west and ending cross-city links. This is planned to reduce the probability of delay but at the cost of additional vehicle resource (circa £200,000 per annum) which could be better spent providing new or enhanced services. We anticipate a small loss of custom as a direct consequence of the change, but have little choice other than to take negative action so as to fulfil our statutory punctuality obligations.

If the Strategic Objectives of the Plan and its Vision are to be achieved, in the way required by NPPF paragraphs 104-105, a properly-evidenced transport mitigation strategy needs to create the conditions where bus journeys are more reliable than car journeys and thus mobility demand switches as far as can be realistically achieved away from car use, to bus use and other more sustainable modes.

Beyond Chichester, the Plan Vision focuses on key localities beyond to the east and west.

To the west of Chichester a focus on growth at Southbourne is justified at paragraph 2.43: “...the aim is to take advantage of the village’s good transport links and existing facilities to deliver significant new residential-led development within the broad location for development which will further enhance local facilities and offer opportunities to reinforce and supplement existing public transport, including bus routes.”

We agree this is a very significant opportunity. However, if the requirements of NPPF paragraphs 104-105 are to be met, this demands that effective bus priority is delivered on the A259 corridor, especially eastbound at Fishbourne and westbound approaching Emsworth. Without such measures, the growth committed and planned will serve only to further

undermine bus journey time and decrease punctuality on the existing 700 service, entirely contrary to the aims of the Vision.

The emphasis on the A259 corridor served by Stagecoach 700 west of Chichester is reinforced at paragraph 2.45 stating that “Between Chichester and Southbourne, the Plan provides for more moderate levels of growth within the parishes of Fishbourne, Bosham and Chidham & Hambrook, ... with opportunities to support and expand existing facilities and for increased use of public transport options”. We strongly support the principle, but the Plan must follow through with specific public transport priority measures that facilitate rather than prejudice such an outcome.

East of Chichester the focus is at Tangmere, where the existing allocation for about 1000 dwellings is being uplifted by 300. Paragraph 2.44 justifies this among other things recognising the scope for “...improved and additional bus services and cycleways will provide better connections to Chichester city and east to Barnham and the ‘Five Villages’ area in Arun District.” We unequivocally endorse this conclusion. Realising a “game-changing” level of bus service quality, reliability and frequency east of the city, also serving committed and planned development north and south of Oving Road at Shopwhyke, is equally essential, given that all SRN links and junctions are approaching equal saturation.

The National Bus Strategy has given new focus on partnership with West Sussex County Council to discuss and deliver a significant new bus service between Chichester, Shopwhyke, Tangmere, Eastergate and Barnham, supporting committed development and acting as an initial phase of what ought to be a more ambitious longer-term strategy to support growth beyond 2025 in both Chichester and Arun Districts. For these improved bus services to be both deliverable and effective, robust bus prioritisation is unavoidable. No such measures are proposed in the Plan or its evidence base and we therefore suggest inclusion of plans to facilitate safe and efficient bus operation between Tangmere and Nyton/Eastergate, ideally avoiding the need to join A27 through-traffic entirely.

We welcome the clear recognition that these localities identified for growth, benefit from existing relevant public transport services. The Vision also sets an expectation that bus services in particular should be “enhanced” and “reinforced”.

We entirely agree that these opportunities exist, across the broad strategy and strategic allocation proposed by the draft Local Plan. Securing them will be crucial to achieving national and local policy objectives, including the Strategic Objectives. However, to our continuing very great dismay, the Plan goes no further to defining how this will be achieved. As such the Vision is not demonstrable achievable or deliverable.

Accordingly the Plan cannot be considered effective, in the sense of NPPF.

Remedying this, demands specific measures to protect bus services from congestion in the following corridors:

- A259 East of Emsworth
- A259 Fishbourne
- A 259 Via Ravenna/Cathedral Way
- A286 Stockbridge Road north and south of A27
- B2145 Whyke Road/Hunston Road
- A259 Bognor Road, east and west of A27 and extending to the District Boundary
- B2144 Oving Road/Shopwhyke Road east and west of the A27
- A 285 Westhampnett Road/Portfield Way/Stane Street, potentially involving a mode filter at the west end of Stane Street

These must be defined to a sufficient level of detail to assess their effectiveness and deliverability, including costs.

This would then allow West Sussex County Council and Local Transport and Highways Authority, ourselves as the principal bus operator, and where appropriate other organisations that would be directly tasked with delivering the mitigation package, to agree service levels and standards necessary to deliver specified outcomes, including journey times, frequencies, capacity and hours of operation on the network, and also in respect of the strategic allocations and Strategic Locations for Growth.

The agreed mitigations strategy should be set out in an up-to-date Infrastructure Delivery Plan backed by clear funding commitments, including a funding strategy to justify necessary developer contributions.

Where necessary to support evidence of effectiveness and deliverability, clear statements of support, which might include Statements of Common Ground between the LPA, LTA, National Highways and Stagecoach, could be provided.

### 3. Spatial Strategy

#### Stagecoach Supports

Stagecoach well recognises the constraints outlined in the explanatory narrative at the start of Chapter 3.

In particular we strongly endorse that strategy in that it reflects that the best opportunities to meet housing and employment development requirements sustainably clearly exist in and close to Chichester and on the key east-west movement corridor where – subject to effective measures being delivered to make these modes more attractive, efficient and relevant – sustainable modes can credibly provide for a much higher proportion of movement demands, mitigating

most effectively the potential traffic impacts of development.

We agree that the Manhood Peninsula suffers serious environmental constraints, but, added to these, public transport and other sustainable modes cannot provide such attractive alternatives, and significant further development risks merely reinforcing already high levels of car use, aggravated by the carbon impacts of the distances involved – something the plan does very little to evaluate, and makes no reference to.

We endorse the conclusion in paragraph 3.24 that significant development in the part of the District north of the National Park is inappropriate. The rationale is principally on landscape and visual character. This exposes a fundamentally biased approach to plan making that has consistently underplays transport accessibility and carbon issues. In fact, the lack of local services and the extended distances that need to be travelled to fully participate in society in this area, with no realistic prospect of public transport offering relevant choices, ought to rule such a strategy out of play on a far less aesthetic and interpretational basis.

### 3.1. Policy S1 Spatial Development Strategy

#### Stagecoach Supports

The Spatial Strategy flows clearly and logically from the Spatial Portrait, and the opportunities and constraints identifiable across the Plan area. It represents a logical and justified continuation of the existing Local Plan strategy. In particular the spatial strategy maximises the potential for sustainable modes to contribute to meeting a much higher proportion of all the District's mobility and accessibility needs.

### 3.2. Policy S2 Settlement Hierarchy

#### Stagecoach Supports

The settlement hierarchy clearly reflects the service endowment and potential self-containment of the settlements in the District. In particular, the second tier of settlement hubs includes secondary schools, which are major peak trip generating uses. Service villages, in the main, also benefit from bus services running at least hourly, which can be expected to provide for a degree of mobility for the higher number of trip purposes that cannot be satisfied by walking or cycling within the immediate locality. Thus, a level of development to meet local needs in this tier is relatively sustainable.

There is a quite broad range of settlements in this category. We have concerns that, north of the National Park, the Service Villages have no realistic public transport choice. These include Plaistow/Ifold, Kirdford, Loxwood, and Wisborough Green. Such as exists is typically a 1/bus per day off-peak shoppers service offering up to 90 minutes in Horsham or Guildford and as such any development here even to meet local needs requires each adult to own a car. This contrasts strongly with Service Villages to the south of the National Park, which are greatly more sustainable.

## 4. Climate Change and the Natural Environment

### Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This section of the plan is extensive and wide ranging, as should be expected.

However, remarkably, there is no acknowledgement whatever of the role of transport in mitigating climate change or its effects, not of the importance of sustainable movement and access being facilitated across the plan area in addressing anthropogenic impacts on the natural world at a more local level.

This exposes very clearly a troubling level of indifference to transport matters in the production of the Plan, which, while nationally quite common, is neither appropriate nor acceptable. The mitigation of transport impacts is not merely a matter speaking to the social and economic aspects of sustainable development. It is crucial to address the causes and effects of climate change that arise from transport, and personal mobility.

This is now well understood and at the centre of national policy, including the National Decarbonisation Strategy for Transport (July 2021) which at Section 5 commits the government to aligning land use planning and transport strategy much more tightly and effectively to mitigate the carbon emissions associated with the current dependence on cars, and the mode mix; but also to reduce travel distances, both increasing the potential relevance and effectiveness of all sustainable modes, and reducing average journey lengths for residual motorised journeys of all kinds.

National statistics show that well over a third of all domestic carbon emissions arise from land-based transport and of these, the vast majority arise from trips of over 10km – outside the range of large scale use of cycling. In fact, the potential of the plan to materially support carbon emissions reduction from within the plan area lies more in the realm of transport than any other policy theme – including emissions mitigation from buildings, which is in any event an aspatial matter and covered by nationally-binding building regulations. By 2025 something like 40% of all the emissions within the plan-area will be transport related.

There is no evidence supplied to support the plan that addresses the transport carbon impacts of the spatial development strategy in a clear manner.

There is no evidence supplied that sets out the effects of potential worsening of congestion on air quality within the plan area, arising entirely from the excess of passenger car movement demands over available and credibly deliverable highway capacity. This is despite the evidence set out and acknowledged in the explanatory memorandum at paragraph 4.130:

"4.130. The council's Air Quality Action Plan and the West Sussex Transport Plan 2022-2036 both refer to the air quality issues faced by Chichester. There is currently one Air Quality Management Area (AQMA) in the plan area, located at St Pancras, Chichester. AQMAs are designated where air quality exceeds, or is likely to exceed, national air quality standards and objectives. Development within or impacting these areas, or that likely to cause the declaration of any further AQMAs, will be subject to an air quality assessment by the applicant."

This is a retroactive approach – it is not "planning", based on evidence.

We are well aware that air quality issues in and of themselves can render allocated sites to be undeliverable: a good example is in the Vale of White Horse, Oxfordshire, where strategic allocations on the A338 and A420 corridors have been held up for years by air quality issues at Marcham and Frilford, in large measure because agreed transport interventions were considered inadequate or undeliverable a very short time after the Plan was examined and adopted.

There is no evidence that shows how the development strategy can effectively mitigate these impacts as well as the further potential impacts that arise from the development strategy. This is exasperating, as there is clear evidence that could be drawn upon to show that that very substantial opportunities exist to:

- Speed buses up and make them more reliable by the delivery of bus priority on most of the key main corridors. Most of these even today operate relatively frequently
- Improve service frequencies and extend hours of operation.
- Secure significant background mode shift to bus as a result, damping pressure on key links and junctions, by consolidating demands on direct more reliable and more frequent bus services.

The spatial development strategy as submitted is in fact, likely to well conform to such additional evidence.

The allocations require substantial additional transport related work and evidence to demonstrate that the opportunities for sustainable transport have been identified and taken up as required by NPPF paragraphs 104-105.

With regards to specific policy, Policy NE22 should be modified to read:

"Development proposals will be permitted where it can be demonstrated that all the following criteria have been addressed:

1. Development is located and designed to minimise traffic generation and congestion through access to by maximising the relevance and attractiveness of sustainable transport modes, including maximising provision of specific demonstrably effective measures to make pedestrian and cycle and public transport routes and networks more direct, more safe, faster and more reliable;..."

## 5. Housing

### 5.1. Policy H1 Meeting Housing Needs

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

The presumption of the planning system is that local planning authorities should seek to meet their objectively assessed development requirements in full. These needs are assessed by a defined Standard Methodology set out in Planning Practice Guidance and elsewhere, that has explicit regard to ensuring that the economic and social effects associated with housing are properly provided for, to avoid exacerbating serious problems that arise from inadequate housing supply.

As a significant local service provider and employer, Stagecoach is concerned that existing issues with housing availability and affordable housing supply are not exacerbated. This has a direct bearing on staff recruitment and retention. It also has an indirect bearing on our cost base.

The existing problems with housing affordability have developed over many decades of undersupply. It should be emphasised that the significant boost to the supply of housing that has been sought by governments over the last 15 years, has only begun to take effect relatively recently in this District. Tackling the problem will require years of consistent attention.

Stagecoach notes that the Council is no longer proposing to meet its identified housing needs in full. Rather than 638/annum the Council is allocating a total that implies an annual delivery rate of 535/annum.

While a number of matters evidently present challenges to the Council in identifying a sustainable development strategy. Paragraph 5.2 indicates that "constraints, particularly the capacity of the A27 has led to the council planning for a housing requirement below the need derived from the standard method..." The blame for being unable to meet housing requirements is thus laid squarely at the door of transport infrastructure and systems.

This conclusion in no way follows from the evidence in the Chichester Transport Study. This, rather, makes the statement that when a higher annualised quantum of 700 dwellings per annum was tested, in the majority of cases the traffic capacity improvement package would perform little differently. To quote the Study:

“5.6.3 The network performance outputs analysed comprising V/C%, Delays (seconds) and Queues (PCU's) suggest that generally the proposed SRN mitigation identified for the Core Scenario, can accommodate in the most part, additional increase in development to 700dpa.”

Whether the rest of the local road network is similarly protected is moot.

Irrespective of these results, even if the contention made in the draft plan were true, unlike many other constraints, this is amenable to a suitable effective strategy to address the constraints identified being collaboratively conceived. This is what NPPF expects, as set out in paragraphs 104-106.

Where the A27 is concerned, as part of the SRN, National Highways is now working to a substantially revised approach than that in force at the time the current Local Plan was prepared, or LSS2, or reflected in the Chichester Transport Study. This is set out in DfT WMS 01/22. This document is the policy of the Secretary of State for Transport in relation to the SRN which should be read in conjunction with the National Planning Policy Framework (NPPF). It replaces the policies in the Department for Transport Circular 02/2013 of the same title.

It makes plain that to accommodate additional demands arising from development, National Highways (NHC) expects to meet the requirements of its statutory license in a substantially different manner. With respect to development NHC LTN 01/22 continues to address the tensions between national policy for the environment and carbon mitigation, the ongoing need to substantially boost the supply of housing as well as maintain national economic competitiveness and protect the safety of the public. However, in future, the approach will be to seek first to maximise the impact of demand management measures (reducing the need to travel), and then to accommodate residual additional demands first through maximising the use of sustainable modes, rather than accommodating assumptions about current levels of car dependency and use.

LTN 01/22 much more closely and explicitly aligns with the language of NPPF Chapter 9 paragraphs 104-106. Paragraph 12 states: “New development should be facilitating a reduction in the need to travel by private car and focused on locations that are or can be made sustainable.... Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas.” (our emphasis).

It continues at paragraph 13: “where developments are located, how they are designed and how well delivery and public transport services are integrated has a huge impact on people’s mode of travel for short journeys. The company will therefore expect strategic policy-making authorities and community groups responsible for preparing local and neighbourhood plans to only promote development at locations that are or can be made sustainable [footnote 8] and where opportunities to maximise walking, wheeling, cycling, public transport and shared travel have been identified.” (again, our emphasis)

Stagecoach readily confirms that the draft Plan development strategy conforms well to the first limb of this expectation, in terms of the location of development.

Stagecoach considers that the plan and its evidence base conforms poorly to the second in that the specific opportunities to maximise walking, cycling wheeling and public transport are not clearly identified, and defined, and proven to be effective and deliverable.

The current mitigation strategy for the A27 Chichester area, supporting the adopted Local Plan and for which proportionate developer contributions have and continue to be sought, reflects now-superseded DfT Circular 02/2013. As a direct result, it failed completely to identify any significant effective bus priority measures, despite the fact that frequent services already exist on the key corridor concerned, and that one bus journey can remove, fully seated between 72 and 80 single occupancy car journeys from congested links and across key junctions on the A27. Rather, it sought to implement targeted measures to increase the throughflow of general traffic.

We recognise the realisation that this approach, which was already reliant on some tenuous logic, is simply not technically viable, especially where further development needs are anticipated.

National Highways will now pursue an approach with the planning system that “includes moving away from transport planning based on predicting future demand to provide capacity (‘predict and provide’) to planning that sets an outcome communities want to achieve and provides the transport solutions to deliver those outcomes (vision-led approaches including ‘vision and validate,’ ‘decide and provide’ or ‘monitor and manage’). The company will support local authorities in achieving this aim through its engagement with their plan-making and decision-taking stages.” (paragraph 15).

Paragraph 23 is at the fulcrum of assessing and defining transport mitigations to accommodate growth on and near the

SRN "Capacity enhancements such as modifications to existing junctions or road widening to facilitate development should be determined on a case-by-case basis. The general principle should be accepted where proposals would include measures to improve community connectivity and public transport accessibility, and this will be weighed against any negative safety, traffic flow, environmental and deliverability considerations, impacts on the permeability and attractiveness of local walking, wheeling and cycling routes, and alternative options to manage down the traffic impact of planned development or improve the local road network as a first preference." (our emphasis).

However, no material work has been done that seeks to identify if a bold robustly conceived and suitable judiciously-prepared strategy that seeks to consolidate flows on already densely travelled corridor onto improved bus services, driving mode shift through insulating these services preferentially from already serious queuing. This would be likely to have very substantial impacts on all the key junctions on the A27, and potentially, on the A27 itself. The need for an integrated approach between Shoreham and Emsworth within West Sussex paying particular regard to development requirements in both Arun and Chichester Districts naturally lies at the heart of this, and we would expect to be picked up by the LSS3 Review among other things.

However, the locus of the problems and its causes and effects are obviously well enough known to start work on defining solutions within the plan area today. We would expect that this work will be essential if National Highways are to support the Plan, especially now given the terms of Circular 01/2022.

Such work could and should start from a "policy off" position: in other words that the Plan should fully accommodate its needs unless it can be proved that a mitigation strategy for the A27 that is compliant with DfT WMS 01/2022 cannot credibly accommodate resulting capacity demands without unacceptable impacts on the safety and efficient operation of the SRN.

This evidence does not exist. In fact the Chichester Transport Strategy 2023, on which the Council solely relies as its transport evidence base, indicates the opposite at para 5.6.3. This is the case before meaningful measures to secure damping of traffic demands through mode reassignment are even considered.

The exception to this is Portfield and Oving Road, which are among the most problematic areas after mitigation even at the Council's chosen 535 dwelling/annum scenario (para 5.6.4.-5). The costly capacity mitigation simply cannot deliver enough benefit. It is admitted that WSCC has indicated that it would prefer a solution that places greater reliance on sustainable modes damping car-borne demand. This is entirely the strategy required by NHC to follow LTN 01/22, of course. Despite the fact that "predict and provide has "run out of road" no attempt has been made to examine what such a solution set credibly could look like. This is unsatisfactory and deeply troubling.

At paragraph 5.4 the draft plan points back again at the West Sussex and Greater Brighton Strategic Planning Board and the future work that has been commissioned, but has barely begun, to update the Local Strategic Statement. This work is to inform the preparation of plans that have horizons beyond the end date of the current LSS in 2030 and properly to meet the Duty to Cooperate. As we said in our response to section 1 of the Plan we fully endorse the conclusion that this is the right mechanism to look at these issues. However, the mechanism has not been effectively applied to the production of this plan. Therefore, the specific evidence that capacity on the A27 in and of itself supports accommodating a lower housing requirement does not exist.

The Plan thus does not conform to NPPF, is not adequately justified and is not effective.

The Plan does not properly meet the statutory Duty to Cooperate.

We will return to this matter in specific representations to Section 7 of the draft plan.

## 5.2. Policy H2 Strategic Locations/Allocations 2021-2039

### Stagecoach Supports

Policy H1 makes plain that the plan, as far as it identifies locations for development has done so in locations that conform with its spatial strategy. All of the strategic allocations to a greater or lesser extent offer clear opportunities to make use of sustainable modes, by virtue of their location. That is not to say that the opportunities to take up these opportunities, and maximise the role of sustainable modes, has been identified, defined and translated properly into the rest of the plan policy suite or Infrastructure Delivery Plan.

As our remaining representations make clear, we support the locations thus far identified as being those that offer the best opportunities to reduce the need to travel, reduce travel distances, and create high quality attractive sustainable travel choices, for both existing residents as well as new ones.

However, the transport impacts of the allocation will individually and cumulatively likely to lead to increasingly severe impacts on the transport network, and on bus services.

Perversely, because these opportunities are not properly identified and secured through the plan and its supporting transport strategy, the opportunities presented by the allocations to secure a substantially more sustainable and lower carbon pattern of movement will not only risk being squandered but may aggravate the wider problems.

### 5.3. Policy H3 Non-strategic Parish Housing Requirements

#### Stagecoach Supports

The approach is consistent with the plan's spatial strategy. It generally avoids a dispersal of development to locations likely to be highly car dependent. There is a clear focus on meeting housing needs in the far north-east of the District at the largest and most sustainable settlements, such as Loxwood, Kirdford and Wisborough Green. However, it must be pointed out that public transport availability in this area, provided by the County Council through services it procures, is minimal. These settlements in practice require each adult and child of secondary school age to have access to motorised transport to fully participate in society. This might justify significant measures to secure a boost in the frequency of bus services between Guildford and Billingshurst, passing through these settlements.

Otherwise, existing commitments in the plan area already make provision to meet for local needs. To the degree that there is an unmet local requirement for affordable housing of a small scale – for example to support the rural economy – this could be met through neighbourhood plans or through Rural Exception Sites.

## 6. Place-making, Health and Wellbeing

### 6.1. Policy P1 Design principles

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

NPPF requires that proposals should consider transport issues from the earliest possible stage. Designing to properly facilitate safe and efficient access, focusing first on sustainable modes, should be at the heart of development design. Too often it is still an afterthought, notwithstanding this.

Policy P1 must include an additional statement to be compliant and effective with NPPF paragraph 104-105 and 112 a): "Development will be designed to make access and movement using walking, cycling and public transport the natural first choice, and demonstrate through the Design and Access Statement how such modes are afforded the most direct, safe, reliable and efficient routes within to and from the proposals, especially when compared with car use."

### 6.2. Policy P4 Layout and Access

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

A number of proposals in the plan involve large-scale development. It is essential that where appropriate buses can access and circulate efficiently through development at a suitably early stage. There is no acknowledgement of this anywhere in the policy, contrary to NPPF paragraph 112.

Large-scale development which buses cannot access in an efficient or timely manner, or at all, strongly contributes to high levels of car-dependency. Evidence for this is referred to among other places, in DfT Circular 01/2022. To be compliant with NPPF and properly pursue its strategic Objectives, Policy P4 needs to be modified to address this point: "1. Provide safe, direct and attractive conditions for inclusive access, egress and active travel between all locations and providing as good direct high quality links to integrated public transport, and where appropriate efficient access and circulation to bus services, unimpeded by excessive parking, at a suitably early point in the development phasing;

## 7. Transport and Accessibility

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

The issues related to transport are fundamental to the soundness of the Plan. In particular, the constraints presented by the capacity on the A27 around Chichester and its key junctions, are the paramount reasons why the Council does not consider it can meet its objectively-assessed development needs in full. Thus, the transport issues and potential solutions available and what these mean for the ability of development needs to be accommodated, are matters that go to the heart of the soundness of the Plan.

Paragraph 8.3 sets out the approach taken to date succinctly:

"Increasing the capacity of the road network is key to supporting growth in the Local Plan. However, there is also a need to reduce demand for road transport to achieve net zero in greenhouse gas emissions by 2050 as highlighted in the council's Climate Emergency Action Plan and Strategic Objective 1. In aiming to achieve the ambitions of the action plan, all development is expected to demonstrate how it will support four key objectives to create an integrated transport network which will alleviate pressure on the road network, improve highway safety, encourage sustainable travel behaviours and help reduce transport related impact on air quality, by:

1. Avoiding or reducing the need to travel by car;
2. Enabling access to sustainable means of travel, including public transport, walking and cycling;
3. Managing travel demand; and
4. Mitigating the impacts of travel by car.”

However, this approach is unambitious and “lightweight” as it assumes, as does the existing Chichester Transport Strategy on which the current adopted plan relies, that the focus of investment should be, wholly, in highways capacity improvement.

Sustainable modes explicitly are expected to play a greater role to “alleviate pressure” on the local road network, as part of this strategy. To emphasise: to avoid exacerbating congestion, the strategy will have to both remove a significant proportion of existing demands from the network on multiple key approaches to Chichester; and then ensure that travel demands from committed and further new development allocated in the plan does not simply replace these journeys, or, worse, create even greater demands.

This will demand very significant behaviour change. Only by making sustainable modes substantially more attractive, both absolutely, and relative to the same journey made by car, can this be expected to occur. However, the explanatory memorandum as well as the wider policy suite and IDP, well expresses a fundamental unwillingness to taking specific, defined measures to achieve this reduction in car use and material promotion of sustainable modes. It makes plain that sustainable modes, including bus services, will offer a lesser role to which “access will be provided”.

Such a vague and weakly defined mechanism will have no effect, at all, on current behaviour and car dependency if the relevance of those choices as a credible alternative to car use, is not substantially boosted. This includes a 5% reduction in trip demand assumed by the Traffic Model at the heart of the Chichester Transport Study 2023.

For this reason. the transport strategy behind the current adopted plan is demonstrably ineffective, as the updated model makes plain. It has not yet been delivered and is yet unclear when or (in the absence of committed funding) even if it can be. It is ineffective to “roll forward” this strategy to support a higher level of planned growth.

We note that a scheme for addressing congestion on the A27 at Chichester has been included in Roads Investment Period 3 (2025-2030) – well within the horizon of this Plan. However, recent history provides compelling evidence that off-line improvement to the north is not politically supported and arguably even technically or economically deliverable. It is not funded, nor at this stage can it be hypothesised if an economically deliverable scheme is achievable sufficient to warrant the necessary investment.

An on-line improvement of the A27, including junction improvements, is likely to favour longer distance east-west though movements, which are of greater significance to the national economy, at the expense of local movements crossing the SRN- a conundrum that largely sums up the dilemma that is faced by NHC and the County as Highways and Transport Authority. It is one that is played out in many places, but rarely is the tension so stark as at Chichester.

Every local route crossing the A27 at grade around Chichester accommodates a regular bus service - or shortly will do (Oving Road area is expected to follow in 2023, though bus services are likely to not use the modified crossroads but to use the left-in-left-out facilities provided as part of the Shopwhyke Lakes development). The impact of these issues on the entire bus operation are serious and increasingly severe.

By the same token, boosting the relevance and reliability of each of these services substantially consolidating as much demand as possible onto a much smaller number of vehicles, is clearly a strategy that ought to support the effective capacity of each of these junctions being greatly augmented, at the same time as reducing equally substantially, the energy- and carbon intensity of mobility in the plan area. Addressing the A27 should not be considered some kind of “zero-sum” game.

Furthermore, the approach of National Highways in its dealings with development and the planning system now reflect a substantial change in Government Policy set out in DfT Circular 01/2022, which we separately cover in these representations, that entirely aligns with an approach that seeks to appropriately invest in more active and rational management of scarce highways capacity, on both the SRN and local roads.

For environmental, economic and social reasons – including public health, the issues presented by the A27 and its interface with local roads around Chichester stands out, nationally, as an example of where the approach taken to accommodating and mitigating development impacts needs to make a clear break with previous “predict and provide” approaches to meet forecast unconstrained car use as LTN 02/2022 makes clear as a principle. Policy in the West Sussex LTP to 2036 itself makes plain that “shared mobility” – including bus services – must play a much greater role in this area.

The existing Chichester Area Transport Strategy is focused on justifying capital contributions from committed development to fund highways capacity improvement – with nothing included to make bus services more attractive, or importantly more reliable. Indeed this “cars first” approach is so costly, that there is already accepted by WSCC to be insufficient land value remaining to be captured to put into substantial improvements for public transport. That much is

very evident, and transparent, from paragraph 8.12 and 8.14, where south of Chichester “This (one) package of works (of several improvements needed) would be between £57.23 and £82.79 million to deliver in full and would not be capable of being funded by development contributions alone.” This assumes the scheme is otherwise deliverable, which on the evidence in the public domain for some time, has been considered challengeable.

The draft Local Plan and a modestly updated infrastructure package that flows from the 2023 Chichester Transport Study, pursues exactly the same approach.

This strategy is also even more ineffective having regard to the roll forward of the Plan to 2039. It cannot deliver the key Strategic Objectives of the Plan; and in particular this is explicitly recognised by the Council in the failure of the draft Plan to accommodate the OAN in full.

It is also obsolete, as it does not align, from first principles, with national policy (including the National Decarbonisation Strategy for Transport) and DfT Circular 01/22; nor the Council’s own declared Climate Emergency.

As a result, draft Policies T1 and T2 are both unsound, as we will separately explain.

Owing to the lack of evidence about the implications of this for adjoining authorities – especially Adur District – in the absence of the review of the Local Strategic Statement – this has implications for fulfilling the Statutory Duty to Co-operate.

The absence of any meaningfully comprehensive refresh of the transport evidence base means that there are no meaningful schemes of any kind, defined in the plan or its IDP, to indicate either what level of growth can be accommodated, by delivering a change in travel behaviour. This would be aimed to secure a sufficient effective increase in junction throughput (measured in terms of person trips as opposed to passenger car unit movements (PCUs)). Such evidence would propose measure to achieve that outcome and assess the efficacy and costs of such improvements, across all modes.

Paragraphs 8.10-8.13 inclusive indicate that the Council “has moved away from ‘predict and provide’” and invites the reader to conclude this has translated into a programme of interventions that can be funded to deliver specific, credibly predictable outcomes. Such a programme should be clear in paragraph 8.11. and the IDP. There is no such clarity and this conclusion would be false.

It would also be evident in the language of the Chichester Transport Study 2023 and its refreshed proposals. Only the most token of lip service is paid to the matter. It is a plainly car-focused, predict and provide methodology to support a “predict and provide” strategy. In fact, it is a brazenly car-focused approach, to the exclusion of all else.

The statements in the Plan regarding any other approach, read properly, offer nothing more than a vague commitment to look post-adoption, and implementation, at unspecified measures, based on problems that may arise in future that will be decided by a committee: the Traffic and Infrastructure Management Group (TIMG). This does not yet exist and is obviously an attempt to posit a mechanism that retroactively will cover for the lack of serious multi-party engagement to address the existing and future issues. Such a group should, in our view, also include the public transport operators, not least if the requirements of NPPF Para 106c) are to be satisfied, and the strategy and measures to be adopted are material to supporting the Local Plan, as of course the purpose of the TIMG has as its core *raison d’être*.

The approach proposed by the draft plan is plainly ineffective and unsound in justifying the draft Plan.

It is more widely unacceptable to Stagecoach. The issues are severe today and well-known, already serving to jeopardise the delivery of buses relied on by existing residents, much less attract new ones.

We also consider that HM Planning Inspectorate are likely to be quite resistant to accepting this aspect of the plan’s transport strategy, nor will it be appropriate for the Council, West Sussex County Council, or National Highways, to define such measures after the submission of the Plan during the Examination process. The Examination in Public of a local plan has no purpose to improve plans, or remedy deficiencies clearly evident prior to submission.

The examination of the West of England Joint Strategic Plan in 2019, and the Uttlesford Local Plan in 2021, among several others, demonstrates especially clearly that the Planning System and the Examination process is not amenable to post-hoc retrofitting of transport evidence and strategies to support a development strategy.

#### 7.1. Transport Evidence Base

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Most of Stagecoach’s serious concerns about the soundness of the plan arise from the fact that it has been prepared in advance of any up-to-date transport evidence and suitably robust transport mitigation strategy being advanced to

support it. In essence, the Council has rolled forward the existing plan by 9 years, adding some additional sources of housing supply, while still relying implicitly on a transport evidence base that was prepared 10 years ago.

This led to the formulation at that time of what can only be described as an attempt to develop an effective car-based mitigation strategy, creating capacity for general traffic added to accommodate unconstrained additional demands on an already over-taxed highways network – the Chichester Area Transport Strategy. Despite language in support of sustainable modes, no deliverable measures were identified to support either the extension of the bus network to serve allocated sites, and much less to create a vital improvement to the quality and reliability of public transport services. This approach reflected the approach set out in DfT Ministerial Circular 02/2013 “Development and the Strategic Highways Network”, applicable since the A27, which is the focus of the most severe difficulties, forms part of the national Strategic Roads Network.

This approach has proven ineffective even before substantial elements of housing land supply in the current plan come forward – in particular West of Chichester and West of Tangmere.

In addition, Circular 02/2013 has now been replaced by a new Ministerial Statement of 23/12/2022, DfT Circular 01/2022.

On both counts the transport evidence base and strategy needs to be properly revisited and established to provide effective mitigation for the plan, including current commitments that are being rolled forward.

The language of the current Ministerial Circular 01/2022 offers a highly condensed synoptic view of the proper approach to addressing transport matters in the planning system notwithstanding that it is directly concerned with the Strategic Roads Network. Videlicet:

“31. The NPPF expects local plans and spatial development strategies to be underpinned by a clear and transparent evidence base which informs the authority’s preferred approach to land use and strategic transport options, and the formulation of policies and allocations that will be subject to public consultation. The company will expect this process to explore all options to reduce a reliance on the SRN for local journeys including a reduction in the need to travel and integrating land use considerations with the need to maximise opportunities for walking, wheeling, cycling, public transport and shared travel.

32. The Transport Decarbonisation Plan indicates that carbon emissions from car and van use is the largest component of the United Kingdom’s total transport emissions. While action is being taken to decarbonise transport such that all new cars and vans will be fully zero emission at the tailpipe from 2035, the proposed location of growth in current plan periods and whether new developments would be genuinely sustainable remain important factors in demonstrating that a local authority area is on a pathway to net zero by 2050 and therefore compliant with the requirements of the Climate Change Act 2008.

33. Alongside this, the local authority should identify the key issues within their study area regarding transport provision and accessibility, setting out how the plan or strategy can address these key issues in consultation with (National Highways, and other transport stakeholders identified in NPPF paragraph 106b). It is the responsibility of the local authority undertaking its strategic policy-making function to present a robust transport evidence base in support of its plan or strategy. The company can review measures that would help to avoid or significantly reduce the need for additional infrastructure on the SRN where development can be delivered through identified improvements to the local transport network, to include infrastructure that promotes walking, wheeling, cycling, public transport and shared travel. A robust evidence base will be required, including demand forecasting models, which inform analysis of alternatives by accounting for the effects of possible mitigation scenarios that shift demand into less carbon-intensive forms of travel.” (our emphasis)

Within the text quoted above, references to National Highways and “the Company” can quite legitimately be extended, given the statements in NPPF paragraph 16, 25, 26 and 106b, to include all the relevant transport infrastructure and service providers in the plan area. Circular 01/2022 also has the weight of secondary legislation as a Written Ministerial Statement and thus should be considered to be highly material.

To date there has been little attempt to explore, to the degree necessary, strategies that conform to Circular 01/2022. It is thus not possible to conclude, as the Council has done, that the issues on the A27 that present a constraint to development, are insuperable.

In line with comments made elsewhere in the response to this pre-submission draft, the Plan thus requires substantial further work to be undertaken with key stakeholders to establish a suitably effective and demonstrably deliverable transport mitigation strategy, to sustainably meet the District’s identifiable development needs and where apparent and appropriate, also ensure that wider cross boundary strategic issues are appropriately addressed, in conformity inter alia, with the Duty to Cooperate, NPPF paragraph 16 and 104-111 inclusive, and DfT Circular 01/2022 and to ensure the Plan’s own Strategic Objectives can be met.

7.2. Policy T1 Transport infrastructure  
Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

As described in comments elsewhere, Stagecoach does not see that a suitable proportionate and up-to-date basis exists to properly and appropriately address the transport issues in the plan area.

The 2023 Transport Study does not perform this role adequately but, contrary to the explanatory memorandum, is a scheme intended only to facilitate car-borne movements through some of the key junctions. There is no evidence that an holistic integrated and strategic approach to transport mitigations has been prepared. Certainly Stagecoach has not been involved in any of the discussion about appropriate transport measures in support of the plan, including the Transport Study 2023, contrary to the expectations set out in NPPF at paragraph 16 and 106.

Notwithstanding out fundamental concerns about the transport evidence case and mitigations strategy, Policy T1 reflects a weak and ineffective approach, that seeks to try and define a strategy post-adoption.

Contrary even to the explanatory memorandum for the policy, which seeks to maximise the contribution of sustainable modes, the policy is phased in such a way that it gives basis for previous “predict and provide” solutions to facilitate and support current levels of car dependency – already shown to be undeliverable and unaffordable – will nevertheless be the first rather than the last resort. There is no commitment to seek to maximise the contribution made by sustainable modes to meeting mobility needs. Nor is there any recognition that current chronic congestion and lack of network resilience jeopardises the ongoing attractiveness and long- term sustainability of the current public transport offer.

To be effective and create alignment with national policy, and also provide for an up-to-date transport evidence base and strategy to be adduced, Policy T1 should be modified to read:

“Integrated transport measures will be developed to mitigate the impact of planned development on the highways network, improve highway safety and air quality, promote more sustainable travel patterns and through providing in the first instance, new and improved infrastructure and services that will be credible effective in maximising the encourage increased use of sustainable modes of travel, such as public transport, cycling and walking.

To achieve this, the council will work with National Highways, West Sussex County Council, other transport and service providers (including through the Traffic and Infrastructure Management Group) and developers to provide a better integrated transport network and to improve accessibility to key services and facilities...

All parties, including applicants, are expected to support these objectives by:

1. Ensuring that new development is well located and designed to avoid or minimise the need for travel, encourages maximises the use of sustainable modes of travel as an a credible alternative to the private car and directly provides or contributes towards new or improved transport infrastructure;
2. Working with relevant transport infrastructure and service providers to improve accessibility to key services and facilities with primary emphasis on sustainable modes, and to ensure that new facilities are easily accessible by sustainable modes of travel;
3. Targeting investment to provide local travel options as an that represent a clearly credible alternative to the car use, focusing on the delivery of improved integrated bus and train services, and improved pedestrian and cycling networks, including the public rights of way network, based on the routes and projects identified in the Local Transport Plan, West Sussex Bus Service Improvement Plan, Local Cycling and Walking Infrastructure Plan (LCWIP) and the Infrastructure Delivery Plan;
4. Planning to achieve the timely delivery of transport infrastructure on and approaching the A27 and elsewhere on the network, needed to support new housing, employment and other development identified in this plan;
5. Phasing the delivery of new development to align with and where possible facilitate the provision of new and improved transport infrastructure and services and the outcomes of monitoring travel demand on the network, including that arising from areas immediately adjoining the plan area. It may also be Where necessary to achieve this alignment proactively phase development will be phased to take into account the monitoring and effectiveness of travel plans demands on the network and to ensure that measures are implemented to support the highest possible level of encourage sustainable travel behaviour.;
6. Using demand management measures, such as travel plans, to manage robust methodologies to assess travel demand and minimise the need for new or improved transport infrastructure as part of the monitor and manage process.
7. Delivering a coordinated package of infrastructure improvements at and approaching to junctions on the A27 Chichester Bypass along with other small-scale junction improvements interventions within the city and elsewhere, as identified through the monitor and manage process. These will increase road capacity, reduce

traffic congestion, improve safety and air quality, and improve access to Chichester city from surrounding areas, first by maximising the contribution of sustainable modes to meeting mobility demands, then, and only as evidenced by robust modelling and option testing, providing increased highway capacity for general traffic.

..."

### 7.3. Policy T2 Transport and Development

Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Section 1 b) of T2 will be ineffective as, absent measures to ensure buses can run reliably and efficiently, improved bus services will not be possible, in support of the plan's own stated broad approach to transport mitigation, as well as wider local and national policy.

The draft policy does not require improvements to the quality of services such that sustainable choices will be materially more attractive than car use for many local journeys. Without this the Plan's Strategic Objectives cannot be fulfilled and the objectives of the Plan and this policy, read in its own terms, will not be realised, where reduction in private car use is concerned. It is thus ineffective.

Absent measures to make bus services more reliable and more efficient, by insulating them from chronic congestion as far as possible, still further operating resource and therefore costs, will be needed to just to reliably run existing service frequencies, and capacity, as vehicle productivity continues to be more and more adversely affected by chronic delay. This will be further aggravated by increasing incidence of severe unpredictable service breakdown arising from incidents of diverse kinds on the network, especially on or around the A27, including that arising from more regular severe weather events. Longer journey times can only be expected to lead to relative disadvantage of bus services compared to personal car use, entirely contrary to the objectives of national and local policy, including Policy T1. It can also expect to lead to a dampening effect not on car use, but on bus patronage, threatening the ongoing viability of bus services across the plan area.

Section 1 b) of T2 should be modified to read:

"b) Maximise opportunities for the use of sustainable travel modes through provision of direct and efficient access both to either the existing networks or and through providing such new infrastructure or public transport services, as can be credibly expected to reduce reliance on the private car and work towards achieving net zero in greenhouse gas emissions by 2050;"

Section 1 d) of T2 will be ineffective as the location of development is fixed by this plan. We commend the fact that all the strategic allocations are or will be served by regular bus services.

However, the use of public transport services, where available, depends on the relevance and reliability of these services. Furthermore, provision of services without them generating sufficient patronage to support their long-term operation also threatens the sustainability of the plan and its supporting transport strategy. This is especially true of new services such as those intended to serve West of Chichester and Tangmere and East of Chichester Strategic Allocations.

This can only be assured by the plan being supported by specific measures to ensure buses can operate efficiently and reliably on the existing and projected services intended to serve the developments concerned, and also at the same time secure behavioural change from existing development.

To be sound and effective, the policy T2 1 d.) should be changed to read:

"d) Ensure major development is located to proposals and the supporting mitigation measures enable the use delivery of high-quality, reliable and effective public transport to present the most relevant possible choice to access local services and facilities including employment, leisure and education facilities";

The Policy T2 makes no provision for buses, where necessary, to enter and make efficient and safe progress through major development sites. The plan is thus out of conformity with NPPF paragraphs 104-106. It makes no provision to ensure that penetration of bus services is achieved at a suitably early point in the development trajectory, undermining the achievement of the goals of the Plan and this specific policy. As a good example, West of Chichester Phase 1, currently under construction, cannot be served by buses as a strategy to effect interim bus penetration was never made.

Policy T2 1 f.) should therefore be amended to read:

f) Ensure that the layout and design of the site development proposals provides effective penetration of the site by sustainable modes, at all points in the development build-out, including public transport where appropriate; and sufficient space for all vehicles to manoeuvre without compromising the safety of pedestrians and cyclists, the efficiency of bus services, or the ability to provide an appropriate level of landscaping across the site"

Policy T2 3.) regarding Travel Planning depends entirely on its effectiveness on the quality and relative attractiveness of sustainable alternatives over car use. In the absence of efficient frequent, reliable and direct public transport services (or similarly, high quality facilities for active travel, Travel Plans will continue to be the entirely ineffective "tick box" exercises

that they generally are today, evidenced by much lower levels of public transport use in most new developments than it seen in nearby established neighbourhoods, as demonstrated broadly by Census data in 2011, 2011 and 2021.

For this policy to be effective an up-to date transport evidence base and strategy, underpinning a series of specified interventions to promote the relevance and effectiveness of all sustainable does including public transport in particular, needs to be put in place.

#### 8. Chapter 9 Infrastructure – Policy I1 Infrastructure provision

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Policy I1 could not expect to be effective without a clear understanding of the effectiveness and costs of a defined series of measures that are laid out in this Plan and its IDP, to mitigate the transport impacts of the development strategy.

Where the Chichester Transport Study is concerned the only meaningful work has focused on the definition and delivery of a range of highways capacity schemes mainly on the A27 around Chichester.

As we have discussed elsewhere the effectiveness of these schemes is insufficient as set out at Tables 8.1 and 8.2 of the Chichester Transport Study 2023. The plan itself admits that the deliverability of this package cannot be afforded by developer contributions alone.

The Chichester Transport Study 2023 does not attempt provide a realistic assessment of costs to deliver these schemes, despite the fact that they have been under evaluation for many years. Nor does it offer any assurance that the schemes are technically achievable. Rather, it states the opposite:

“9.2.3 No investigation has been carried out into specific land ownership details, or into the location details or cost of moving statutory undertakers and utility apparatus within the areas of the scheme. No design assessments were carried out at this stage to ascertain the deliverability of the proposals except where any Health and Safety concerns were raised.”

Thus on the grounds of effectiveness, deliverability and affordability, the measures on which the Plan relies must at the very least be considered to involve an exceptionally high level of risk. Since Policy I1 is founded on these assumptions, it cannot be considered effective.

As we set out elsewhere, the Plan has been advanced on the basis that if any additional sustainable transport measures are required, these mitigations should be retroactively considered and defined after adoption of the Plan. In the light of the doubts that are apparent of both the deliverability, affordability and effectiveness of the Chichester Transport strategy this is especially unsatisfactory even if existing baseline conditions were reasonably acceptable.

However, the Chichester Transport Study 2023, as did its predecessors, makes plain that that existing problems are acute, and can rightly be considered “severe” in the sense of NPPF paragraph 111. Waiting to define deliverable affordable alternatives is an entirely inappropriate approach to the local plan transport mitigation strategy. Such an approach also makes it impossible to consider prior to adoption how far the transport impacts of the plan can be cost-effectively mitigated by alternative means, or whether they are deliverable having regard to technical achievability, land control, development viability, or any combination of the above. Thus, the plan cannot be considered justified, or effective.

Given the mutual dependence of development strategies in Chichester and Arun in particular on these measures this should be seen as crucial of the fulfilment of the Duty to Cooperate.

The remedy for this is ultimately to put in place a suitable transport mitigation strategy following a strategic appraisal of options through review of the LSS. This then must be supplemented by more detailed development specific and localised scheme definition, including, where necessary, bus priority and other measures to support the substantial promotion of the attractiveness of public transport in key bus corridors over private car use. This would then be reflected by costed proposals in the IDP.

Leaving these fundamental weaknesses to one side, even if such a strategy and mitigation package were defined, there is no mention of public transport in the policy even though it is clearly a key part of the policy environment and mitigation strategy for the plan as expressed in the explanatory memorandum for I1, but also at Policies T1 and T2. I1 thus does not effectively support the realisation of the intent of Policies T1 and T2.

Policy I1 iii) should therefore be modified to read:

“(iii) Safeguard the requirements of infrastructure providers, having regard to requirements within and where appropriate

across the boundaries of the plan area, including but not limited to:

...

- Highways including specific measures to accommodate improved active travel and public transport level of service and cycle lanes, and..."

At limb v) the Policy expects developers to meet the "in perpetuity costs of operating and maintaining infrastructure". This shackles development management decisions to developers assuming what are infinite costs – given that "in perpetuity", read properly, can only mean "without any limit in time". This means that it is impossible to meet the statutory tests on developer obligations set out in the Community Infrastructure Levy Regulations 2010 (as amended) at Regulation 122, also repeated in NPPF. This policy cannot be lawfully implemented and it is thus ineffective.

In the absence of an up-to-date transport mitigation strategy that is fit for purpose, at the point the Plan is examined these costs of any additional infrastructure are not known in any case. The strategy and its costs, including its affordability and deliverability, are crucial to assessing if the Plan is sound.

Subject to an appropriate defined transport mitigation strategy being arrived at, to be sound, the Policy I1 v) should be modified as follows:

(v) To consider and meet as appropriate the in-perpetuity delivery costs of infrastructure and, where appropriate, improved services, to the point where its long-term operational sustainability is credibly assured from mainstream sources. Where adoption is not envisaged by local authorities, that must include arrangements for its future ongoing management and maintenance;

## 9. Strategic and Area Based Policies

### 9.1. Policy A1 City Centre Development Principles

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Chichester City centre is rightly identified at 10.2 and 10.4 as the commercial and service hub of the District. It is also acknowledged to be the most accessible place in the District by sustainable modes, public transport in particular.

Boosting the vitality of the city centre is something that Stagecoach strongly supports. Irrespective, the enhancement of the commercial and cultural life of the District in the place where these opportunities can be accessed broadly by sustainable modes, is one that has long been at the heart of national planning policy for town centres, reflected in the "town centre first" approach to locating major trip generating uses.

Paragraph 10.5 exposes an unbalanced and unsound preoccupation with aesthetic matters in its approach to the town centre, and far too little to ensuring that the central place function is enhanced through protecting and enhancing the quality of public transport access.

The city is relatively small but at the heart of an extensive hinterland, and thus the role of bus in supporting sustainable access to and enhanced city centre venue is one that needs appropriate recognition and emphasis. It is important to note that a dominant number of key service and facilities such as the General Hospital are relatively close to the city centre. This directly contributes to driving travel demand into the city, causing congestion. Most importantly, it also makes the task of mitigation simpler, given the impact a suite of active and sustainable measures can have within the same close proximity.

Policy A1 does not provide this. As such, achieving the strategic objectives of the plan is seriously threatened, and the plan is thus not effective.

The Plan needs to ensure that the approach to city centre regeneration maintains and enhances public transport access, interchange and inter-modal connectivity. It also needs to ensure that bus service stopping and interchange facilities are able to address increases in future demand, anticipated by the clear intent expressed elsewhere in the Plan that public transport should be meeting a greater proportion of mobility needs, in a growing district. Achieving this demands an ambitious approach to the location, quality and capacity of bus stop and interchange.

We have been in discussions with the District Council about this, alongside West Sussex County Council, for a very considerable period. Stagecoach has always been keen to help facilitate the Council's aspirations for the city centre, and we continue to hold this intention. However, this cannot be at the expense of a material diminishing of the convenience and fitness-for-purpose of bus stop infrastructure and interchange. Stagecoach has significant concerns that current proposals to remove the bus station and have all bus services operate from the street kerbside, on an inner distributor road with similar or reduced net stop capacity, fall short of promoting attractive, convenient bus access to the central area as a destination.

For the longer term and where the objectives of the draft plan are concerned looking ahead to 2039, they clearly fall short of enhancing the convenience and attractiveness of public transport use. Much less do they make sufficient provision for a material increase in bus frequency, connectivity, and interchange convenience, on which the draft plan explicitly relies. It is vital that the District Council is clear in policy about its objectives for public transport in the city centre. These objectives must also carry sufficient weight when held in tension with other aspirations for the centre and the constraints on achieving them.

For the Plan to be sound, properly effective and compliant with NPPF, the approach to the City centre cannot ignore its role in the provision of sustainable transport service and connectivity.

Policy A1 should therefore be modified to properly reflect this crucial function, on which the vitality of the city centre must increasingly depend if unacceptable impacts on congestion, air quality and amenity are not to arise. This is still more crucial if wider aspirations to secure a more sustainable society and mitigate carbon are to be achieved.

“...This will include provision for development and proposals that:

- Support and strengthen the vitality and viability of the city centre and its role as a shopping/visitor destination, employment centre, public transport hub and a place to live;
- Support and promote facilitate improved access to the city and with increased emphasis on sustainable modes of travel, with particular regard to enhancing the public transport interchange role of the city centre area, in accordance with the transport strategy for the city and...”

9.2. Policy A3 Southern Gateway Development principles Chichester Bus Station, Bus Depot and Basin Road Car Park Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

There has been aspiration to redevelop the bus station and nearby bus depot from many years. Stagecoach has been engaged with detailed discussion with the District Council on this matter over a very extended period. We confirm that these discussions have reached a relatively mature stage, however at the time of writing are not concluded.

Stagecoach recognises and supports in principle the Council’s wider aspirations for the “Southern Gateway”, and this has governed our approach to the Council to date. We continue to have no “in principle” objection to relocating our administrative, engineering, operational and customer service facilities.

Leaving our proprietary interests entirely to one side, it remains vital that in so doing, the effectiveness, attractiveness and convenience of these facilities is not compromised, as we have outlined in our representations to Policy A1, if wider national and local transport policy, and the local plan strategy itself, are to be effectively achieved.

The depot is crucial infrastructure to support the safe, reliable and legally-compliant operation of Stagecoach bus services over a very extensive area covering the entirety of the District and beyond. Without securing equivalent facilities, that are fit-for-purpose, many of our services would have to cease.

If buses are to provide a greater and more attractive level of service (still more so if they are to be electrified) larger, more capable depot facilities, and city centre bus interchange facilities will be necessary.

Notwithstanding that the bus station and depot sites are leased from the District Council, these leases terminate well beyond the end of the plan period.

Finding suitable sites for a replacement bus depot in Chichester, in common with all similar localities especially in southern England, is extremely challenging. As a sui generis use, bus depots do not automatically benefit from policy support on land allocated for employment uses. Most bus depots benefit from being legacy assets established under very different economic conditions. That is the case here. The value of a depot site for redevelopment net of demolition and remediation costs, rarely approximates to that able to sustain the acquisition of land in a tight wider employment land market, and the construction of suitable new facilities.

Furthermore, the costs of operating bus services are sensitive to the parasitic costs of vehicle and staff hours and mileage associated with “dead running” to a remote depot location from the operational network. Here, the existing depot site is ideal, and any replacement will unavoidable add ongoing operational costs to the operation that cannot be directly recovered.

We confirm that a replacement depot site has been identified and has in principle been agreed, subject to overcoming issues with the disposition of existing and future structures on the site. However, the site is recognised as not capable of accommodating meaningful operational expansion. This is just one of the most important foundational reasons why a positive transformation of bus productivity needs to be achieved, across the plan area and beyond, to support delivery of greater bus mileage and frequencies with the same level of operational resource. At the time of writing, we are not fully convinced that the proposals for the relocation will be sufficiently fit-for-purpose in the event the above is not achieved. Thus, we must raise a concern that the bus depot site might not be available during the plan period. While there is a

strong probability it will be, the certainty surrounding the availability of the site, especially within the first 5 years of the plan, needs to be made transparent.

9.3. Policy A4 Southern Gateway - Chichester Bus Station, Bus Depot and Basin Road Car Park  
Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Regarding the removal of the bus station, without equivalent replacement, Stagecoach has significant concerns. Pressures and conflicts at the current bus station site have been gradually rising for several years, arising from increasing use and the need for additional scheduled vehicle layover periods to reduce the risks of accumulated late running from traffic congestion. Peak passenger volumes have recovered strongly on several routes, however passenger accumulations resulting from more frequent delays and disruption have added substantial further pressure on limited space.

Under current plans, buses and bus passengers will be displaced to bus stops at new locations outside the city centre, along Avenue de Chartres. This road was always intended to be a relatively high-speed traffic route, outside the historic core of the city. The city centre has evolved in the subsequent years to reinforce already strong natural severance, with the highway lying beyond the city walls and the green space along the Lavant. It is a traffic dominated, un surveilled and unattractive environment, reflecting the intended function of the road as an efficient movement corridor for high traffic volume, and nothing more. Avenue de Chartres is relatively close to the rail station and pedestrian connectivity can be provided at broadly equivalent distance to the current bus station, but again it is un surveilled and currently unpleasant, lacking natural legibility or any sense of prominence.

We understand kerbside capacity on Avenue de Chartres will be strained even to accommodate current levels of service, with no expansion possible. There is therefore a strong probability that to accommodate more frequencies and key new routes, such as West of Tangmere, East of Chichester and West of Chichester allocations, additional future bus stops must occupy a different location. This makes interchange between routes and rail services substantially challenging and less attractive.

The emerging arrangements risk marginalising public transport and public transport users substantially. This strongly undermines achievement of the wider plan objectives and delivery of a significantly greater role for public transport. If substantial public transport growth is to be accommodated in a growing city and hinterland, as the draft plan anticipates, then a more ambitious strategic approach must be taken. This should plan for additional and improved facilities to accommodate all services predicted to be required, whilst enhancing the passenger experience to ensure meaningful and attractive modal choice.

There is therefore a need for the plan to evidence how these issues will be appropriately resolved, having regard to a suitably ambitious approach that properly supports clear objectives to boost the relevance of public transport. The current policy is weak, unspecific and indifferent to achieving the strategic objectives of the plan, including a transport strategy in support of the plan, and as such it is ineffective.

Policy A3 should therefore be modified to read:

- “ ...
- Be designed to encourage and facilitate substantial increase in the use of active travel and public transport to, from and through the city centre.
- ...”

In line with the commentary above Policy A4 should also be modified to read:

3. Enhance the public interchange function of the immediate area, the public realm, particularly connections to the railway station and the city centre via South Street, Southgate and Basin Road for pedestrians, cyclists and public transport users, and to National Cycle Route 2 and Route 88 which run close by. Suitable replacement bus stops and layover facilities should be provided to replace those at the bus station in line with reflecting the objectives of the West Sussex Bus Service Improvement Plan, and to facilitate growth to meet the requirements of the plan's development strategy. Routes and crossings should reflect pedestrian desire lines, and public art should be incorporated to create a sense of place;

4. Enhance the public realm, in support of this and wider objectives, incorporating public art and other measures to create a strong and attractive sense of place.

...(renumber remaining points)

9.4. Policy A6 Land West of Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

This is an existing Local Plan allocation. The public transport strategy for the site depends on the delivery of the second phase which Stagecoach notes is the subject of several applications now awaiting review and determination by the Council.

The site represents a compact form of development adjoining the city, as the most sustainable settlement, meeting housing needs close to where they arise, and affording very good opportunities for the use of sustainable modes, especially walking and cycling.

It is vital that a bus service is delivered to serve the site at the earliest potential. This was anticipated to be at the start of Phase 2 and will require the early delivery of the entire length of the spine road between the Old Broyle Road and Westgate and making it available for bus services.

It is not clear if the costs of pump-priming the service mentioned in the draft policy are anticipated to be met by the developer. Without such funding, the service will not be deliverable as years of losses will never credibly be covered from future profit. It is likely that the current wording will be interpreted by the developer as meaning that they have no such obligation binding upon them. Not does policy set out any specification for this service, thus its costs and the basis for securing developer contributions does not exist.

As such any wider transport strategy, that seeks to secure a greater role for the use of public transport, and the aspiration for this allocation cannot demonstrably be met. The policy is ineffective.

Policy A6 should be modified to read:

" ...  
10. Make provision to accommodate and secure delivery of for regular bus services linking running through the site to Chichester city centre operating at least every 30 minutes Monday-Saturday, and new and improved cycle and pedestrian routes linking the site with the city,  
..."

#### 9.5. Policy A7 Land at Shopwhyke

##### Stagecoach Supports

This is an existing Local Plan allocation, largely built-out, that benefits from an existing set of permissions.

The public transport strategy for the site depends on the delivery of effective bus priority at Oving Crossroads. The current recently implemented scheme, undertaken by National Highways, makes no provision for effective bus priority and needs considerable re-evaluation.

The site represents a compact form of development adjoining the city, as the most sustainable settlement, meeting housing needs close to where they arise, and affording very good opportunities for the use of sustainable modes, especially walking and cycling. It lies on a new bus corridor that will shortly be put in place, running to Tangmere via Shopwhyke. The allocation is being significantly consolidated by further development in the immediate vicinity which strongly supports the potential for this new service.

As we explain in our representations for East of Chichester proposed allocation A8, and West of Tangmere Allocation A14, a clear corridor strategy to effect bus priority is needed, that should be delivered in support of that further growth, and that at Tangmere SDL. However this allocation is a near complete commitment and there is no scope through policy regarding this land to effect this outcome.

It is notable that Point 6) of policy A7 makes mention of a bus service. This language reflects the currently adopted Local Plan policy and has underpinned the existing permissions. The failure of any bus service to be delivered demonstrates from first principles that this Policy has been entirely ineffective. It is important that lessons are learned from this in the Local Plan Review.

#### 9.6. Policy A8 Land East of Chichester

##### Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This proposed allocation lies next to unallocated land that is already consented as a departure from the adopted development plan, with 143 units near completion south of Oving Road (20/02471/FUL). Additional land, also unallocated but similarly consented, has now commenced north of Oving Road (88 units under 21/02197/FUL). This and the allocation site consolidates earlier development at Shopwhyke brought forward under the current Local Plan, and allocated again as draft policy A7.

Development at Shopwhyke was brought forward on the basis of a premise that the developer would provide or somehow arrange a bus service, that was reflected in the policies of the current Local Plan. This was secured by an unenforceable condition. No bus service has been provided, as there was inadequate clarity regarding the basis on which the costs of establishing such a service would be met by the developer, and the expectations of policy on the developer.

The site does however lie on a logical new bus corridor between Chichester and West of Tangmere along the Oving Road.

In addition, an expectation that modifications to the Oving Crossroads would effect bus advantage have proven false – the arrangements put buses into a similar or longer queue than if they use the route available to general traffic to and from the A27.

Stagecoach strongly supports the principle of bringing this land forward. However, the soundness of the site depends on deliverability of a regular, reliable and direct bus service along the Oving Road, taking advantage of effective bus priority.

Given the failure of existing policy in the adopted Local Plan covering the proposed A7 allocation to deliver a bus service, it is of great concern that there is no draft policy to adequately address the issue. The policy is out of conformity with NPPF paragraph 104-105 in that sustainable modes do not offer realistic choices, much less an attractive one, and as such also does not secure the objectives of national policy nor of the plan itself.

Currently the proposed allocation is not served at all by public transport. Policy needs to ensure there is a policy basis to secure contributions to deliver such a service, which may well take the form of a proportionate contribution to deliver a new service or enhance provision that is put in place between Chichester along the Shopwhyke Road to west of Tangmere.

To become sound Policy A8 must be modified to read:

“...  
12. Provide for improved high quality connectivity by sustainable travel modes and focused in particular on a corridor between Chichester city centre and Tangmere along Shopwhyke Road, including new improved cycle and pedestrian routes, and a frequent bus service including linkages with Chichester taking advantage of effective bus priority measures on Oving Road at the A27;  
...”

#### 9.7. Policy A9 Land at Westhampnett/North East Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This land is already allocated and consented as part of the existing 2016 Local Plan. All reserved matters are determined.

The site lies on service 55 between Chichester, Westhampnett and Tangmere. This established service benefits from additional demand from the development at Phase 1. Phase 2 which is currently well underway, does not benefit directly from bus services. However it is a compact and logical form of development where walking and cycling to local facilities and employment is a credible option.

The existing allocation rolls forward policies in the 2015 Local Plan. In so doing it is possible to see which have been effective.

Point 9. regarding bus service and routing has not been effective. In particular the potential for a bus only link between the site and Graylingwell has not been established as policy anticipated. Given congestion around the Portfield area acutely affects public transport this, or alternative methods to secure bus priority over private car use, a clear and unequivocal policy steer is required.

The lack of an up-to-date transport evidence base is ultimately at the root of these issues. Arguably the policy and allocation can only be made sound once this refreshed evidence base in place.

However, it is possible that the allocation could be made sound by modification of Policy A9 as follows:

“...  
9. Make provision for regular, direct and reliable bus services linking the site with Chichester city centre, and new and improved safe and convenient cycle and pedestrian routes linking the site with Chichester city, the South Downs National Park and other strategic developments to the east of Chichester city including Tangmere. These objectives could include exploring the potential for a bus only route require a deliverable scheme to afford bus priority through Portfield, and potentially linking the development with the Graylingwell area through use of a modal filter;  
...”

#### 9.8. Policy A10 Land at Maudlin Farm

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing

public transport route. It is relatively close to the city and very near substantial centres of employment and services that can be reached by active travel modes, helping damp the demand for car use. It is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services at Portfield and over a wider area. In fact, the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A10 should accordingly be modified to read:

"...

5. Provide safe and suitable access points for all users, including a main vehicle access from Old Arundel Road and, subject to further assessment, a secondary vehicle access from Dairy Lane. The development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes;

"..."

#### 9.9. Policy A11 Bosham – Land at Highgrove Farm

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Bosham Station. It is relatively close to the city and very near substantial centres of employment and services that can be reached by public transport and cycling, offering strong potential to materially damp the demand for car use.

There are serious risks that development in the A259 corridor west of Chichester could place further demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular to bus services.

Nevertheless, given the potential to effect bus priority on the approaches to Fishbourne Roundabout, it is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A11 should accordingly be modified to read:

"...

8. Provide safe and suitable access points for all users, including a main vehicle access from the A259. The development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys crossing the A27 at Fishbourne;

#### 9.10. Policy A12 Chidham and Hambrook

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Nutbourne Station. Substantial centres of employment and services that can be reached by public transport and cycling, offering

strong potential to materially damp the demand for car use.

There are serious risks that development in the A259 corridor west of Chichester could place further demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular to bus services.

Nevertheless, given the potential to effect bus priority on the approaches to Fishbourne Roundabout, it is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A12 should accordingly be modified to read:

"...

7. Development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys along the A259, crossing the A27 at Fishbourne and where necessary on the approaches to Emsworth;

8. Facilitate improved sustainable travel modes, and new improved cycle and pedestrian routes, including linkages with Chichester city and settlement along the East/West Corridor;

#### 9.11. Policy A13 Southbourne Broad Location for Development

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach agrees unequivocally that Southbourne is a location that could accommodate growth on a strategic scale. It has a substantial range of service available within the settlement, including secondary education. It is well connected by bus and rail service to key destinations, including Chichester, lying to the east and west.

This is one of the few locations identified for growth that represents substantial additional development in a new location to the strategy in the existing Local Plan adopted in 2015. Thus, the transport impacts of development on the substantial scale envisaged at Southbourne are not covered or accommodated by the Chichester Area Transport Strategy that lies behind the existing plan. This demands, from first principles, that substantial further transport mitigation measures are required.

We recognise and endorse fully that the intent of the draft plan for Southbourne as a Broad Location for Development on a strategic scale, includes "Maximising the potential for sustainable travel links through improved public transport, including consideration of opportunities to reduce community severance caused by the railway line as well as the inclusion of cycling and pedestrian routes." (our emphasis).

The existing railway station at Southbourne is served regularly, however, it is not within the power of this plan to improve rail services. It is, however, well within the scope of action of the Local Planning and Highways Authority to work with bus operators to achieve a step change in the journey time, reliability, frequency and connectivity of bus services, and in particular the major corridor operated as service 700 by Stagecoach along the A259 between Havant and Chichester through Southbourne.

Notwithstanding the clear potential for sustainable connectivity in the western A259 corridor, there are very serious risks that development in the A259 corridor west of Chichester will place further significant car-borne demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular bus services, having the opposite effect to that intended: longer, less reliable and less frequent bus services, leading to a spiral of slowly declining use.

These risks, while very serious, look credibly likely to be entirely mitigated subject to carefully conceived and robust specified actions on the local highway network. It is perplexing to us that this potential still has not been identified, as part of a comprehensive "first principles" review of the transport evidence base. In particular given the former trunk

status of the A259, there is evident potential to effect bus priority on the A259, including on the approaches to Fishbourne Roundabout.

With appropriate measures, including but not limited to this, to substantially boost the relevance and attractiveness of sustainable travel choices, strategic development at Southbourne could well be made highly sustainable.

In the absence of a refreshed transport strategy and transport evidence base, the draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact, the only reference that is made in Policy is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A12 should accordingly be modified to read:

"...Development should be comprehensively masterplanned to achieve a high-quality design and layout that integrates well with the surrounding built and natural environments to enable a high degree of connectivity with them, particularly for pedestrians and cyclists, and provides good the highest possible quality of access to facilities and sustainable forms of improved public transport services.

...

4. Provide a suitable means of access to the site(s), and securing secure necessary off-site transport infrastructure and service improvements (including highways in particular to the A259 corridor between Emsworth and Chichester) in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development) to promote sustainable transport options prioritising delivery of high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes;

..."

#### 9.12. Policy A14 Land West of Tangmere

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach strongly supports the principle of intensifying the level of development at the Strategic Development Location already identified and allocated West of Tangmere in the existing Local Plan. This serves to consolidate development at a location where effective and attractive public transport choices could be provided. It also conforms closely with the principle expressed in NPPF that the best possible use should be made of land on sites that are judged to be sustainable, or potentially sustainable locations for development.

It must be stressed that the current policy suite for the SDL has to date not brought forward development in this location. We recognise that a Master Plan has been adopted by the Council, and that a planning application (20/02893/OUT) for the full larger quantum of 1300 dwellings proposed in the draft plan has received a resolution to grant by the Council.

However, we are not aware that a sustainable transport strategy has been finalised.

Land West of Tangmere is not served by any existing regular bus services. Rather, an entirely new bus service corridor is anticipated to operate in the near term from Chichester through Tangmere and beyond towards Barnham. This would serve proposed allocations A7, A8 and West of Tangmere (A14) included in the draft Plan.

This is reflected in the language of the explanatory memorandum to Policy A14 at paragraph 10.65:

"Opportunities, in partnership with relevant authorities, to provide improved sustainable public transport routes linking the village with Chichester city, to improve cycle routes to the city, and better transport links to Barnham rail station and the 'Five Villages' area in Arun District; and.."

Initiating this service will be costly and will in large measure be funded not by developer contributions, but by DfT monies awarded through the West Sussex Bus Service Improvement Plan. It is crucial this service is both sustainable in the longer term without revenue support, and that the success of the service can be built on by scalable frequency improvements as strategic development comes forward in both Chichester District, and proposed allocations A7 A8 and A14, and in Arun District, in particular at Barnham, Eastergate and Westergate (BEW).

This demands measures to effect safe, direct and swift operation of the service especially within the city centre, where it approaches and crosses the A27 at Oving crossroads and on the eastern fringes of the District east and west of Tangmere. Without these measures, bus journey time and reliability will be severely compromised and the impact of this service to dampen car trip demands will be very substantially compromised. No such measures are proposed in the draft plan or its evidence base.

Changes to Oving Crossroads have recently taken place which, amongst other intentions, ostensibly provide bus advantage between Chichester and Shopwhyke. The junction in its current form does not offer material gain in bus journey time, as movements involve a less-direct route towards the city over an increased operating distance, much of which involves passage through heavily congested sections of the A27 and Westhampnett Road. A refreshed transport strategy supporting plan-led growth must revisit this area to secure an effective solution which offers bus customers the fastest and most reliable trip-time to and from the city.

In addition, the extension of public transport connectivity towards BEW and Barnham, including key links to secondary education and a logical railhead for journeys beyond towards Brighton and London as provided at Barnham Station, needs to facilitate bus priority between Tangmere and Nyton – whether using the A27, or preferably avoiding it altogether. There are significant safety concerns associated with the at-grade uncontrolled right-hand A27 exit onto the B2233 Nyton Road at Crockerhill Turn. This movement is also prone to extreme delay owing to the conflict with approaching westbound traffic on the A27, travelling at speed, which has priority. Our concerns with this junction in its current form can be expected to worsen with the increased traffic volumes predicted from new residential developments to the west of the city.

A solution providing a suitable short length of highway available only to sustainable modes, between Tangmere and Easthampnett, could provide a very effective solution to this. This would be deliverable within the scope of the separate proposed allocation at A19 Chichester Business Park, Tangmere. We comment on this separately.

Howsoever effected, a reliable direct and delay-free bus corridor between Barnham, BEW, Tangmere and Chichester could expect to secure very substantial elevation of the relative attractiveness of public transport over car use on the entire corridor and serve to effectively damp growth-related demands on this section of the A27. West of Tangmere, in the longer term, there is evident scope for the route corridor to operate as two branches – one via Shopwhyke and one via Westhampnett, effectively serving all the strategic developments proposed in the plan and transforming wider public transport connectivity to key employment destinations and services within and east of Chichester.

However, in common with all the other proposed allocations, the plan proposes no specific measures to provide, much less improve public transport or other sustainable modes to the site. This leaves the draft plan out of conformity with NPPF, especially paragraphs 104-106. The plan is inadequately evidenced and to the degree that public transport measures are identified and emergent, their successful implementation in the near and longer term will be jeopardised without clear measures to provide a safe as well as efficient bus route towards BEW and the Five Village area within Arun. The Duty to Cooperate is not effectively met and effective cross boundary collaboration on these strategic issues through the review of LSS is not demonstrated, despite the current version which identifies the issues.

To be made sound the LSS Review and a subsequent urgent review of the transport evidence base and strategy needs to take place. The strategic issues are especially critical east of Chichester, in our view.

Notwithstanding this foundational deficiency, to be made sound, Policy A14 should be modified to read:

"...

8. Subject to detailed transport assessment, provide primary road access to the site from the slip-road roundabout at the A27/A285 junction to the west of Tangmere providing a spine road link with secondary access from Tangmere Road. Development will be required to provide or fund mitigation for potential off-site traffic impacts through a package of measures in conformity with Policy T1 (Transport Infrastructure) and T2 (Transport and Development) and DfT Circular 01/2022 that maximise the relevance and use of sustainable travel modes, in particular bus services;

9. Make provision for improved sustainable travel modes between Tangmere and Chichester city, in partnership with relevant authorities, including improved direct, seamless safe and reliable and additional bus and cycle routes linking Tangmere with Chichester city, Shopwhyke and Westhampnett. In conjunction with measures in support of Allocation A19, Opportunities should also be explored contributions shall also be sought for providing improving high quality cycling and bus service transport links with the 'Five Villages' area and Barnham rail station in Arun District; and..."

## 10. Concluding comments

Stagecoach recognises its role as a key stakeholder in the plan, as well as a local employer and corporate citizen. We recognise the primacy of the plan-led system as the mechanism intended to resolve complex challenges, including the proper alignment of transport and spatial planning, which as the National Decarbonisation Strategy for Transport among other policies makes clear, has never been more vital.

In making our representations, we emphasise that we are entirely supportive of the Local Planning Authority and the relevant Highways and Transport Authorities, in their efforts to properly manage the amount and pattern of development to secure vital policy objectives. We recognise that balancing delivery of assessed development needs with a wide variety of other constraints is a very difficult task.

The transport issues faced by the plan are recognised in the draft plan as being serious and long-standing. We believe that there are ways to arrive at a suitable transport mitigation strategy that has regard to wider strategic issues and

resolves existing problems in a much more effective way than those pursued to date.

We support the spatial strategy of the plan as it evidently provides the basis to secure the necessary step change in the quality and use of sustainable transport modes, as it explicitly seeks to do. However thus far, there has been insufficient work done to define the measures that will credibly secure these outcomes.

Stagecoach therefore urges the authorities to draw us into the necessary effective ongoing collaborations that is expected by NPPF paragraph 16 and 106; and DfT Circular 01/022, to do this work, prior to, rather than after the submission of the draft plan. We look forward to being approached to initiate this dialogue at the earliest opportunity.

## Object

**Document Element:** Policy A8 Land East of Chichester

**Respondent:** Stagecoach South (Rob Vince) [8141]

#### Summary:

Development at Shopwhyke was brought forward on the basis of a premise that the developer would provide or somehow arrange a bus service, that was reflected in the policies of the current Local Plan. This was secured by an unenforceable condition. No bus service has been provided, as there was inadequate clarity regarding the basis on which the costs of establishing such a service would be met by the developer, and the expectations of policy on the developer. The site does however lie on a logical new bus corridor between Chichester and West of Tangmere along the Oving Road.

In addition, an expectation that modifications to the Oving Crossroads would effect bus advantage have proven false – the arrangements put buses into a similar or longer queue than if they use the route available to general traffic to and from the A27.

Stagecoach strongly supports the principle of bringing this land forward. However, the soundness of the site depends on deliverability of a regular, reliable and direct bus service along the Oving Road, taking advantage of effective bus priority.

Given the failure of existing policy in the adopted Local Plan covering the proposed A7 allocation to deliver a bus service, it is of great concern that there is no draft policy to adequately address the issue. The policy is out of conformity with NPPF paragraph 104-105 in that sustainable modes do not offer realistic choices, much less an attractive one, and as such also does not secure the objectives of national policy nor of the plan itself.

Currently the proposed allocation is not served at all by public transport. Policy needs to ensure there is a policy basis to secure contributions to deliver such a service, which may well take the form of a proportionate contribution to deliver a new service or enhance provision that is put in place between Chichester along the Shopwhyke Road to west of Tangmere.

#### Full text:

Chichester District Local Plan 2039 – Pre-Submission (Regulation 19) Consultation

#### 1. Introductory Comments

Stagecoach South is the main commercial public transport operator across Chichester District. The Company has headquarters in the city, which is also the principal public transport hub for the District and it's rather wider travel-to-work area encompassing much of the Arun District. Our services extend throughout and beyond the District boundaries, as far as Littlehampton, Midhurst, Havant and Portsmouth. The vast majority of services operate on a commercial basis – that is to say, sustained by passenger use and fare revenue, including concessionary reimbursement.

While the role of the railway is significant in much of the District, especially the east-west Coastway line, yet bus services account for more boardings locally than the railway, with Chichester depot services carrying over 3.5m passengers each year.

Unlike bus services in other parts of the country, the local network has recovered strongly after the pandemic with fare-paying passenger numbers over 95% of 2019 levels, albeit with concession patronage somewhat lower. This has helped secure not only a stable but growing bus network even during this period of rapidly rising operational costs, avoiding the need for the service contractions seen in other regions. Indeed, during the second quarter of 2023 Stagecoach will invest £5.5m in brand-new vehicles for high-profile coastal Service 700 – one of the largest vehicle investments for Stagecoach

Group this year.

Our services are therefore critical to existing and future local connectivity. As the Plan acknowledges, mobility demands do not respect planning authority boundaries. The role of our services is especially high to settlements in the broad A27 corridor, within the District and beyond. This includes major settlements in Arun District such as Pagham and suburban Bognor Regis, where bus is the only mass public transport option. As the Council is well aware, there is an even higher level and rate of committed development envisaged in these locations in the Arun District Local Plan than in Chichester.

It is already evident to the planning authorities, West Sussex County Council and National Highways, as proprietor of the A27 Trunk Road, that accommodating growing mobility demands across Chichester District and especially around Chichester itself, is becoming increasingly challenging to the point of being seriously problematic.

Stagecoach has a particular interest in this Plan arising from:

- The already clear and highly deleterious impact of congestion affecting our operations and their reliability and attractiveness to the public. The effects of these on the approaches to Chichester, and around the A27 bypass are especially severe. If public transport is to retain its existing role – even before the needs of any meaningful growth both in Chichester and neighbouring authorities is considered, are considered – the Council and the Highways Authority need to arrive at clearly-defined measures to protect buses from chronic delay and the damaging impacts arising from the lack of bus network resilience and customer journey times.
- In connection with the above, the need to properly consider the predictable impacts of committed development in Arun District on the transport network and in particular the operation of bus services. The duty to cooperate on cross-border strategic matters is not limited merely to accommodating housing requirements.
- The fact that our entire business premises and operational base at Chichester is the subject of allocation for redevelopment within the Plan period. Specifically, this includes our Head Office, the Bus Station as the operational hub of the network and the key interchange for passenger journeys – including those that involve the railway – and the bus depot required to support the entire operation. Notwithstanding many years of discussions, there is as yet no agreed deliverable strategy to replace these facilities either in the Draft Plan or elsewhere.

Stagecoach broadly supports the vision and priorities of the draft plan. In most respects, Stagecoach supports strongly the spatial strategy and the identified site allocations that flow from it, and the evidence.

However, it has serious concerns about the soundness of the plan as proposed for submission, for important regards outlined in this response. These are made in the light of requirements set by the National Planning Policy Framework (NPPF), in particular at paragraphs 15 and 16; 35, 105-109 inclusive and having due regard to the need for allocations to satisfy 110-112 inclusive in due course as development permission is sought; and paragraph 174.

Paragraph 16c) of NPPF makes plain that strategic plans and policies should “be shaped by early, proportionate and effective engagement between plan-makers and communities, local organisations, businesses, infrastructure providers and operators and statutory consultees” (our emphasis). This makes plain that collaborative and ongoing involvement of public transport operators is both necessary, and separate and in addition to the engagement with statutory consultees. This has not taken place.

Para 1.25 of the draft plan states that “the council has engaged constructively, actively and on an ongoing basis with other local authorities and organisations to address key strategic matters.” Despite the requirements in NPPF and contrary to the statement made, Stagecoach has not been approached or involved in a meaningful, collaborative or ongoing way in the preparation of the Plan.

Our main concerns centre around the fact that the plan strategy is neither backed by sufficient transport evidence. Even more importantly, the plan relies on a wholly car-based transport mitigation strategy despite policy stating that this is not the case, and the track record of the existing Local Plan, based on a very similar strategy, that has failed to bring forward meaningful mitigations to date to prevent traffic conditions substantially worsening. There is no support in policy for the achievement of the Strategic Objectives in the Plan. Nor is there definition of any measures in the 2023 Transport Study to make provision for sustainable transport infrastructure or services – much less materially improve them.

Finally, to the extent that updated transport evidence has been provided in the form of the 2023 Chichester Transport Study, arising from updated traffic modelling, it does not support the contention that highways capacity constraints on and around the A27 justify not meeting the objectively-assessed development needs of the area, as the draft plan contends.

## 2. Vision and Strategic Objectives

### 2.1. Issues and Opportunities

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant, proportionate and up to date evidence

Stagecoach recognises the important role of the West Sussex and Greater Brighton Strategic Planning Board which agreed a Local Strategic Statement (LSS2) in early 2016 to identify spatial planning issues across the wider area. This established strategic priorities and policies to guide longer term strategic growth in a coordinated and well considered matter. This institutional framework and the purpose of the LSS is a highly significant one and is at the heart of efforts to properly fulfil the statutory Duty to Co-operate, including with regard to strategic infrastructure issues, as NPPF requires.

Given the long period of time elapsed since the 2018 Reg 18 consultation and the already very clear constraints on strategic infrastructure capacity, it is of great concern to Stagecoach that the LSS2 has not been updated to reflect emerging issues in the intervening period. A review and update of the LSS2 has only just commenced. This includes a study of projected housing and employment needs, transport impact, infrastructure and spatial options to deliver the required development in the period after 2030. This Chichester District draft plan covers a period extending to 2039 – therefore well beyond 2030 and the nominal currency of LSS2.

However, infrastructure needs are pressing today. Stagecoach is presented with severe highway operational problems on a near-daily basis. During the winter of 2022-23 we have, for example, seen key road links impacted for many weeks by acute disruption arising from flood events. Unpredictable, but seemingly more-frequent, exogenous events expose a lack of resilience in the highway network around Chichester and its travel-to-work area. However, serious, chronic, unpredictable delay has been normalised over recent years, with peak-time congestion having quickly returned after the pandemic. The existing development strategy has failed to bring forward measures having any impact on this to date, and key commitments – notably at west of Chichester Phase 2 and at Tangmere – have yet to commence to further aggravate the issue.

We have no confidence in the transport mitigations proposed in the existing Local Plan and LSS2 being sufficiently effective, even if deliverable at all. Indeed, the existing adopted Local Plan does little more than make vague speculations about the sustainable transport measures that might be achievable. The draft local plan review is no different. It has no ambitions at all for sustainable modes and thus, makes no meaningful provision to meet them.

This is especially relevant in light of the fact that the approach to resolving issues on the A27 around Chichester that were anticipated in 2015-16 have fallen away. LSS2 is thus currently inadequate to act as a part of an up-to-date, proportionate, and relevant evidence base for the Plan.

An update of a traffic model lies at the heart of a 2023 Chichester Transport Study. This talks no account of the existing role of non-car modes, nor can it do so. It is unable to properly evaluate the nature of problems or solutions that involve public transport, or for that matter, other sustainable modes.

Therefore, we consider that the combination of committed and additional development needs that must be accommodated over the whole plan period between 2022 and 2039, in both the Chichester and Arun Districts, require a “first principles” review. This must be based on a refreshed transport evidence baseline of no earlier than 2022 – given that the effects of COVID distort 2020-22 – and the transport infrastructure and service requirements to sustainably support those needs.

Key issues – including substantial changes with regards to transport issues and challenges, as well as potential solutions – thus do not form part of the evidence base that steers this plan. Given long term changes in travel patterns, and mode share that took place during COVID, as well as a local and national policy context that seeks to radically reduce and then eliminate transport-related carbon emissions, this is especially problematic.

The specific problems of congestion and network resilience that are evident on the A27 and the approaches to Chichester remain a set of especially difficult problems that disproportionately affect the efficiency, reliability and attractiveness of the bus network, that evidently demand larger-scale strategic responses involving multiple stakeholders, including bus operators.

Where the effects of development on the national Strategic Roads Network (SRN) are concerned, the approach of National Highways to addressing and responding to the mobility needs of development has now substantially changed following the promulgation of the DfT Written Ministerial Statement LTN01/22. This makes it clear that adding highways capacity is no longer the first or only strategy that should be pursued, but one subordinate this to maximising the potential of non-car modes and sustainable travel.

“Effective and ongoing collaboration” on transport matters has not led to solutions being agreed and published for public scrutiny as part of the plan evidence base. Whatever the approach to modelling and “highways improvements” that may be agreed or pending agreement with the County Highways Authority and National Highways, Stagecoach is neither participant or sighted. This is despite the clear requirements set out in NPPF Para 106 b) that “Planning policies should ... be prepared with the active involvement of local highways authorities, other transport infrastructure providers and operators and neighbouring councils, so that strategies and investments for supporting sustainable transport and development patterns are aligned.” (our emphasis).

We therefore consider that the Council has failed to comply with the requirements of NPPF paragraph 25 and 26 that “relevant bodies” are involved in plan-making, especially with regard to addressing the needs for infrastructure. Public transport services and the infrastructure that supports its operation and use clearly fall within matters relevant to plan-

making. This is explicit in NPPF Chapter 9 and indeed within the plan itself – for example reference to public transport and sustainable modes in the Vision for the plan.

It should be stressed that the Regulation 18 “Preferred Approach” consultation took place in December 2018 – over 4 years ago and prior to COVID, based on LSS2. The inordinate length of time that has elapsed between the Regulation 18 and Regulation 19 stages greatly challenges the LSS2 and other parts of the evidence base, especially as the pause straddles the COVID epidemic. That would include the transport modelling baseline, and key assumptions in any traffic modelling that took place prior to mid-2022, which is a point at which a reasonable “new normal” post-COVID might be considered to have become established. In that period, Arun District has also adopted its own Local Plan development strategy that accommodates an unprecedented quantum of development immediately east and south-east of the District Boundary – creating additional substantial transport impacts directly affecting the A27 and multiple major approaches to Chichester crossing it.

The established mechanism to fulfil the Duty to Co-operate has thus not operated effectively.

The Plan is not founded on a relevant, proportionate and up-to date evidence base and is thus inadequately justified.

## 2.2. Spatial Portrait

The spatial portrait is generally succinct and accurate. However, it makes no mention of road-based public transport, the role of the City as a public transport hub, or the range of bus services that provide local connectivity (Section 2.4 and 2.5). The complete concentration of post-16 education in the City itself as just one example of the peculiarities of transport demands in the area, is not highlighted, though this has a profound influence on peak time travel demands affecting the most congested parts of the highway network. Among other things, the role of bus services in supporting the educational system of the plan area is very great indeed.

The potential role of bus in addressing the already-severe transport problems of the plan area and beyond seems entirely overlooked. The spatial portrait is thus clearly inadequate and incomplete.

## 2.3. Strategic Objectives

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Chapter 9 of NPPF and paragraphs 104 and 105 in particular require that plans should:

“Transport issues should be considered from the earliest stages of plan-making and development proposals, so that:

- a) the potential impacts of development on transport networks can be addressed;
- b) opportunities from existing or proposed transport infrastructure, and changing transport technology and usage, are realised – for example in relation to the scale, location or density of development that can be accommodated;
- c) opportunities to promote walking, cycling and public transport use are identified and pursued;
- d) the environmental impacts of traffic and transport infrastructure can be identified, assessed and taken into account – including appropriate opportunities for avoiding and mitigating any adverse effects, and for net environmental gains;...

...The planning system should actively manage patterns of growth in support of these objectives. Significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. This can help to reduce congestion and emissions, and improve air quality and public health...”

The Strategic Objectives do not conform with NPPF in these foundational requirements adequately, to transparently steer the plan strategy. They should therefore be amended to read:

“Plan to provide local infrastructure to support new development and seek opportunities to address existing identifiable infrastructure problems deficits, such as in particular those relating to the A27 and its junctions and wastewater treatment.”

Paragraph 2.36 states, in the context of the Climate Emergency and the National Trajectory to “Net Zero” that “The council will enable the delivery of infrastructure, jobs, accessible local services and housing for future generations while protecting, conserving and enhancing the historic and natural environment.”  
Naturally, we support this intent.

However, there is no acknowledgement of the role current patterns of transport use contribute to carbon emissions, nor that substantial mode shift is necessary to address sustainably an acute lack of capacity on the local network and the SRN, especially around Chichester. This is especially concerning as the basic conceptual link is not made between the fact that the greatest such problems lie on the A27 corridor and around Chichester, while these are also at the same time present many of the most sustainable locations for development, and where the opportunities to secure much greater use of sustainable modes also exists.

Strategic Objective 7 “Strategic Infrastructure” includes the following statement:

"To work with infrastructure providers to ensure the timely delivery of key infrastructure to support delivery of new development. New development will be supported by sufficient provision of infrastructure to enable the sustainable delivery of the development strategy for the plan area. Key infrastructure to support the Local Plan will include improvements to transport, ...

A sustainable and integrated transport system will be achieved through improvements to walking and cycling networks and links to accessible public transport. Highway improvements will be delivered to mitigate congestion, including measures to mitigate potential impacts on the A27 through a monitor and manage process."

The latest transport evidence in the Chichester Transport Study makes no pretence to define much less to deliver a "sustainable or integrated" transport system. It is wholly devoted to sustaining current levels of car use across the District, to and through Chichester area.

It is no more than the lightest of touches to the approach taken to supporting the adopted Local Plan, an approach that is already almost 10 years beyond the date of its gestation but has yet to deliver any significant capacity improvement schemes, much less any measures that sustain even current levels of public transport journey times and reliability in the face of increasing congestion – much less any betterment.

Of the six key junctions on the A27 around Chichester, recognised to require significant mitigation given they are saturated for extended periods, five accommodate regular bus services - indeed frequent ones at least every 20 minutes in several cases. The sixth at Oving Road, relates directly to a key corridor where bus services are needed to support strategic growth currently being delivered at Shopwhyke, as well as substantial further growth West of Tangmere (proposed allocation A14) and "East of Chichester" (A8), south of Shopwhyke Road.

As stated at p12 of the Study Summary "The modelling shows that all the junctions on the A27 Chichester bypass are well over capacity, even before adding in the Local Plan development and with the exception of Portfield Roundabout are actually shown to be over capacity in the base model year (2014) in one or both peaks". This much has indeed been evident for years from delay and periodic even more severe disruption arising to Stagecoach services from the lack of network resilience.

The reassignment of through and local traffic through Chichester to avoid the A27 bypass is an especially serious issue for bus services that penetrate the city. This is leading to consequential saturation of a range of junctions used by buses. Rising delay and unpredictable running times are at the root of our decision to sever the long-established Portsmouth to Littlehampton service in 2023, which will in future no longer run across Chichester, but terminate to provide additional dwell time to mitigate the impacts of congestion.

While this congestion affects all road users including businesses and freight traffic, the effect on scheduled bus services is greatly higher, as such services cannot reassign route to 'beat the queue'. Traffic congestion often encourages greater car use for this reason, in tandem that people are happier to sit for extended periods in their own vehicle on a seamless door-to-door journey than wait at the roadside for a delayed bus making slower progress in lengthy queues.

As the Study admits at para. 1.3.2 "Although, there have been works at the Portfield Roundabout in this timeline, no other mitigation schemes have been completed along the A27 corridor, as such the mitigation schemes defined in this report will also be required to consider the development from this plan period."

In other words, in the 8 years since the current Local Plan was adopted in 2015, there has been minimal progress is delivering the traffic mitigations. There is no clarity at all when any such mitigations will be brought forward. It is hardly surprising then, that traffic conditions have deteriorated. The "predict and provide" transport strategy supporting the current plan has failed.

Despite this, the Draft Local Plan Review proposed to "double down" on exactly this strategy. It represents, like the rest of the evidence base, a "rolling forward" of the current car-based strategy by 9 years, with the lightest of touches to attempt to accommodate car trip demands from a relatively modest additional development quantum.

Nevertheless, the Study requires a global 5% reduction in trip demands arising from unspecified "credible" (paragraph 4.1.2) sustainable transport and travel planning measures. It is unclear why use of non-car modes will see disproportionate growth when no measures are in place to make them more attractive. This 5% increase in use translates to a doubling in the modal share of bus services. There is no evidence nationally, anywhere, that simple ignorance of alternatives to the car is the main barrier to uptake.

The outputs of the 2023 Chichester Area Traffic (SATURN) model are set out at Table 5.1 (am peak) and 5.2 (pm peak) without mitigation. These betray just how seriously compromised the whole network around Chichester is, and will be in future, even with implementation of a mitigation partake to increase traffic capacity that is understood to cost between £92m and £164m – and which the Study and the draft plan acknowledge cannot be delivered through developer funding sources alone. Unspecified external funding presumably from HM Treasury through DfT is required.

Even if this provided and the schemes are delivered, Tables 8.1 and 8.2 indicate these will provide minimal relief. The final columns suggest key junctions, including Portfield, Fishbourne Road and Cathedral Way East will remain at well over

100% ratio of flow to capacity (90% is considered the point at which saturation is approached, with the onset of increasing delay above that figure). RFCs in tables 8.1 and 8.2 are some of the highest we have ever seen in a local transport evidence base for a post-mitigation scenario. While the serious potential risk of reassignment across Chichester City is greatly reduced, which is important and welcome given its impact on bus services, Tables 8.1 and 8.2 show the extent of post-mitigation saturation is also egregious, covering a very large number of key links and junctions.

On every measure and criterion, then, including cost deliverability and effectiveness, the revised Transport Strategy falls well short of evidence to suggest the transport impacts of the plan can be properly addressed by this means.

Despite the repeated statements about sustainable modes throughout the draft plan and Chichester Transport Study, only 2 paragraphs at Section 6.2 within the Study are devoted to public transport:

“6.2.7 The funds generated from the parking management schemes, local/nation funding schemes and developer contributions could also be utilised to fund potential public transport enhancements within the city centre including an expansion of the bus priority lane system within Chichester City Centre. This could reduce reliance on the car in the longer term towards sustainable public transport. A park and ride scheme could be incorporated within a bus priority lane network in the future depending on the uptake and successfulness of early bus priority trials.

6.2.8 Chichester City centre has a constrained existing public highway network. Therefore, any proposed dedicated public transport or light transit corridors that could be implemented would be at the expense of existing highway. This could be managed through a time-based system where certain routes are restricted to public transport only during specific times. E.g., peak hours.”

There is some very high-level consideration of Park and Ride following this section. None can be considered a serious practical evaluation of consolidating car-borne trips onto bus services, including existing ones, for example local mobility hubs, more frequent bus corridors, delivery of specific bus priorities.

None of the discussion of alternatives to “predicting and providing” for unconstrained traffic growth is rooted in a deliverable evidence base, or proper evaluation of options and specific projects.

To take just one aspect of the few specifics that can be picked out, a workplace parking levy is hypothesised. This would apply only to “offices”, in Chichester city centre (para 6.2.3), without consideration given as to how this could be practically achieved or even that a meaningful amount of office based employment would qualify. Much less is any consideration given to how far focusing a strategy only on office-based workers would actually deliver a particularly significant effect, apart from to create a strong incentive to relocate offices out of the city centre to places out of reach by public transport.

Looking at the Chichester Transport Study 2023 and the draft plan together, there is insufficient evidence that the traffic capacity increase proposed in the 2023 Transport Study is any more affordable or technically deliverable, or likely to be sufficiently effective, than those in the past strategy. The evidence more strongly points to the fact that no highway improvements are identifiable or economically deliverable to meet even short term increases in demand for car-borne mobility on most of the network around Chichester.

There are no published strategies or schemes clearly supporting the contention that the objective of improving sustainable modes is technically achievable or deliverable either. The plan makes generalised assertions that such strategies will be devised and implemented only after serious problems emerge from a shortfall in the car-borne transport strategy.

The reference to “monitor and manage” is undefined and unsubstantiated. There are no outcomes stated, no mechanisms specified and no timescales for action.

Our experience today is that network conditions have reached unacceptable and prejudicial levels of severe unpredictable delay. The saturation of the network is already evident well outside the traditional peaks on key sections of highway and at key junctions. External shocks such as the effects of severe weather are becoming more common, leading to delays so extreme as to justify the description of “gridlock”. The plan does not identify a strategy to effectively address this, in particular by consolidating passenger car trips onto more efficient public transport vehicles. This is unacceptable to Stagecoach.

#### 2.4. Local Plan Vision

Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the broad approach in Plan Vision and in particular that by 2039, the Plan will support and enable greater use of sustainable modes. However, there is no link made between reducing the use of private cars, and the need for a step change in the use of sustainable modes. Without a published transport evidence base it is impossible to establish a suitable sustainable transport strategy to support both carbon reduction and alleviation of the problems arising from acute congestion. Even on a very crude basis, to achieve a meaning mode shift on key approaches to the

A27 Chichester Bypass will require more than 20% of existing peak car-borne journeys to transfer to other modes. A 10 percentage point transfer to bus (about half this shift) would imply more than doubling peak hour bus passenger boardings.

The Vision is nothing more than an aspiration, that needs to more definitively aim at key outcomes, for the plan to be effective. The Vision should thus be altered to read:

“Get about easily, safely and conveniently with less reliance on private cars –making the greatest possible use of the rail and enhanced bus network, and with more opportunities for active travel including walking and cycling; to materially reduce dependence on private car use.”

Underpinning the Plan’s spatial strategy, the Vision section goes into more specific detail about key localities in the Plan area.

Regarding Chichester, Paragraph 2.39 states: “The emphasis will be upon consolidating and enhancing the role of Chichester city as the plan area’s main centre, whilst also developing the role of key settlements to its east and west. The focus will be upon creating communities with good access to a range of employment opportunities and affordable housing for young people and families to balance the ageing population.”

This is clearly the appropriate focus for meeting the District’s development needs in a sustainable manner. The city and key settlements to the east and west, are those places already able to make use of relevant public transport services, both rail and bus. Especially within and near the City, walking and cycling can credibly present highly relevant choices. This emphasis clear can be expected to address the requirements of sustainable development set out in NPPF and their local application set out in the Plans Strategic Objectives.

However, this needs a robust transport strategy, to avoid a further concentration of development and its traffic impacts occurring on or near some of the most chronically congested parts of the highway network. To date, the absence of intervention has strangled the bus network through further marked deterioration in traffic conditions. This by consequence increases the risk of bus delay or cancellation, lengthens journey time and reduces customer confidence in bus as an attractive alternative mode of travel.

In April 2023, Stagecoach is making significant timetables changes to improve operational resilience in and around Chichester. The biggest such change is the severance of the Portsmouth to Littlehampton section of service 700, at Chichester, with buses operating independently to the east and to the west and ending cross-city links. This is planned to reduce the probability of delay but at the cost of additional vehicle resource (circa £200,000 per annum) which could be better spent providing new or enhanced services. We anticipate a small loss of custom as a direct consequence of the change, but have little choice other than to take negative action so as to fulfil our statutory punctuality obligations.

If the Strategic Objectives of the Plan and its Vision are to be achieved, in the way required by NPPF paragraphs 104-105, a properly-evidenced transport mitigation strategy needs to create the conditions where bus journeys are more reliable than car journeys and thus mobility demand switches as far as can be realistically achieved away from car use, to bus use and other more sustainable modes.

Beyond Chichester, the Plan Vision focuses on key localities beyond to the east and west.

To the west of Chichester a focus on growth at Southbourne is justified at paragraph 2.43: “...the aim is to take advantage of the village’s good transport links and existing facilities to deliver significant new residential-led development within the broad location for development which will further enhance local facilities and offer opportunities to reinforce and supplement existing public transport, including bus routes.”

We agree this is a very significant opportunity. However, if the requirements of NPPF paragraphs 104-105 are to be met, this demands that effective bus priority is delivered on the A259 corridor, especially eastbound at Fishbourne and westbound approaching Emsworth. Without such measures, the growth committed and planned will serve only to further undermine bus journey time and decrease punctuality on the existing 700 service, entirely contrary to the aims of the Vision.

The emphasis on the A259 corridor served by Stagecoach 700 west of Chichester is reinforced at paragraph 2.45 stating that “Between Chichester and Southbourne, the Plan provides for more moderate levels of growth within the parishes of Fishbourne, Bosham and Chidham & Hambrook, ... with opportunities to support and expand existing facilities and for increased use of public transport options”. We strongly support the principle, but the Plan must follow through with specific public transport priority measures that facilitate rather than prejudice such an outcome.

East of Chichester the focus is at Tangmere, where the existing allocation for about 1000 dwellings is being uplifted by 300. Paragraph 2.44 justifies this among other things recognising the scope for “...improved and additional bus services and cycleways will provide better connections to Chichester city and east to Barnham and the ‘Five Villages’ area in Arun District.” We unequivocally endorse this conclusion. Realising a “game-changing” level of bus service quality, reliability and frequency east of the city, also serving committed and planned development north and south of Oving Road at Shopwhyke, is equally essential, given that all SRN links and junctions are approaching equal saturation.

The National Bus Strategy has given new focus on partnership with West Sussex County Council to discuss and deliver a

significant new bus service between Chichester, Shopwhyke, Tangmere, Eastergate and Barnham, supporting committed development and acting as an initial phase of what ought to be a more ambitious longer-term strategy to support growth beyond 2025 in both Chichester and Arun Districts. For these improved bus services to be both deliverable and effective, robust bus prioritisation is unavoidable. No such measures are proposed in the Plan or its evidence base and we therefore suggest inclusion of plans to facilitate safe and efficient bus operation between Tangmere and Nyton/Eastergate, ideally avoiding the need to join A27 through-traffic entirely.

We welcome the clear recognition that these localities identified for growth, benefit from existing relevant public transport services. The Vision also sets an expectation that bus services in particular should be “enhanced” and “reinforced”.

We entirely agree that these opportunities exist, across the broad strategy and strategic allocation proposed by the draft Local Plan. Securing them will be crucial to achieving national and local policy objectives, including the Strategic Objectives. However, to our continuing very great dismay, the Plan goes no further to defining how this will be achieved. As such the Vision is not demonstrable achievable or deliverable.

Accordingly the Plan cannot be considered effective, in the sense of NPPF.

Remedying this, demands specific measures to protect bus services from congestion in the following corridors:

- A259 East of Emsworth
- A259 Fishbourne
- A 259 Via Ravenna/Cathedral Way
- A286 Stockbridge Road north and south of A27
- B2145 Whyke Road/Hunston Road
- A259 Bognor Road, east and west of A27 and extending to the District Boundary
- B2144 Oving Road/Shopwhyke Road east and west of the A27
- A 285 Westhampnett Road/Portfield Way/Stane Street, potentially involving a mode filter at the west end of Stane Street

These must be defined to a sufficient level of detail to assess their effectiveness and deliverability, including costs.

This would then allow West Sussex County Council and Local Transport and Highways Authority, ourselves as the principal bus operator, and where appropriate other organisations that would be directly tasked with delivering the mitigation package, to agree service levels and standards necessary to deliver specified outcomes, including journey times, frequencies, capacity and hours of operation on the network, and also in respect of the strategic allocations and Strategic Locations for Growth.

The agreed mitigations strategy should be set out in an up-to-date Infrastructure Delivery Plan backed by clear funding commitments, including a funding strategy to justify necessary developer contributions.

Where necessary to support evidence of effectiveness and deliverability, clear statements of support, which might include Statements of Common Ground between the LPA, LTA, National Highways and Stagecoach, could be provided.

### 3. Spatial Strategy

#### Stagecoach Supports

Stagecoach well recognises the constraints outlined in the explanatory narrative at the start of Chapter 3.

In particular we strongly endorse that strategy in that it reflects that the best opportunities to meet housing and employment development requirements sustainably clearly exist in and close to Chichester and on the key east-west movement corridor where – subject to effective measures being delivered to make these modes more attractive, efficient and relevant – sustainable modes can credibly provide for a much higher proportion of movement demands, mitigating most effectively the potential traffic impacts of development.

We agree that the Manhood Peninsula suffers serious environmental constraints, but, added to these, public transport and other sustainable modes cannot provide such attractive alternatives, and significant further development risks merely reinforcing already high levels of car use, aggravated by the carbon impacts of the distances involved – something the plan does very little to evaluate, and makes no reference to.

We endorse the conclusion in paragraph 3.24 that significant development in the part of the District north of the National Park is inappropriate. The rationale is principally on landscape and visual character. This exposes a fundamentally biased approach to plan making that has consistently underplays transport accessibility and carbon issues. In fact, the lack of local services and the extended distances that need to be travelled to fully participate in society in this area, with no realistic prospect of public transport offering relevant choices, ought to rule such a strategy out of play on a far less aesthetic and interpretational basis.

#### 3.1. Policy S1 Spatial Development Strategy

##### Stagecoach Supports

The Spatial Strategy flows clearly and logically from the Spatial Portrait, and the opportunities and constraints

identifiable across the Plan area. It represents a logical and justified continuation of the existing Local Plan strategy. In particular the spatial strategy maximises the potential for sustainable modes to contribute to meeting a much higher proportion of all the District's mobility and accessibility needs.

### 3.2. Policy S2 Settlement Hierarchy

#### Stagecoach Supports

The settlement hierarchy clearly reflects the service endowment and potential self-containment of the settlements in the District. In particular, the second tier of settlement hubs includes secondary schools, which are major peak trip generating uses. Service villages, in the main, also benefit from bus services running at least hourly, which can be expected to provide for a degree of mobility for the higher number of trip purposes that cannot be satisfied by walking or cycling within the immediate locality. Thus, a level of development to meet local needs in this tier is relatively sustainable.

There is a quite broad range of settlements in this category. We have concerns that, north of the National Park, the Service Villages have no realistic public transport choice. These include Plaistow/Ifold, Kirdford, Loxwood, and Wisborough Green. Such as exists is typically a 1/bus per day off-peak shoppers service offering up to 90 minutes in Horsham or Guildford and as such any development here even to meet local needs requires each adult to own a car. This contrasts strongly with Service Villages to the south of the National Park, which are greatly more sustainable.

### 4. Climate Change and the Natural Environment

#### Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This section of the plan is extensive and wide ranging, as should be expected.

However, remarkably, there is no acknowledgement whatever of the role of transport in mitigating climate change or its effects, not of the importance of sustainable movement and access being facilitated across the plan area in addressing anthropogenic impacts on the natural world at a more local level.

This exposes very clearly a troubling level of indifference to transport matters in the production of the Plan, which, while nationally quite common, is neither appropriate nor acceptable. The mitigation of transport impacts is not merely a matter speaking to the social and economic aspects of sustainable development. It is crucial to address the causes and effects of climate change that arise from transport, and personal mobility.

This is now well understood and at the centre of national policy, including the National Decarbonisation Strategy for Transport (July 2021) which at Section 5 commits the government to aligning land use planning and transport strategy much more tightly and effectively to mitigate the carbon emissions associated with the current dependence on cars, and the mode mix; but also to reduce travel distances, both increasing the potential relevance and effectiveness of all sustainable modes, and reducing average journey lengths for residual motorised journeys of all kinds.

National statistics show that well over a third of all domestic carbon emissions arise from land-based transport and of these, the vast majority arise from trips of over 10km – outside the range of large scale use of cycling. In fact, the potential of the plan to materially support carbon emissions reduction from within the plan area lies more in the realm of transport than any other policy theme – including emissions mitigation from buildings, which is in any event an aspatial matter and covered by nationally-binding building regulations. By 2025 something like 40% of all the emissions within the plan-area will be transport related.

There is no evidence supplied to support the plan that addresses the transport carbon impacts of the spatial development strategy in a clear manner.

There is no evidence supplied that sets out the effects of potential worsening of congestion on air quality within the plan area, arising entirely from the excess of passenger car movement demands over available and credibly deliverable highway capacity. This is despite the evidence set out and acknowledged in the explanatory memorandum at paragraph 4.130:

"4.130. The council's Air Quality Action Plan and the West Sussex Transport Plan 2022-2036 both refer to the air quality issues faced by Chichester. There is currently one Air Quality Management Area (AQMA) in the plan area, located at St Pancras, Chichester. AQMAs are designated where air quality exceeds, or is likely to exceed, national air quality standards and objectives. Development within or impacting these areas, or that likely to cause the declaration of any further AQMAs, will be subject to an air quality assessment by the applicant."

This is a retroactive approach – it is not "planning", based on evidence.

We are well aware that air quality issues in and of themselves can render allocated sites to be undeliverable: a good example is in the Vale of White Horse, Oxfordshire, where strategic allocations on the A338 and A420 corridors have been held up for years by air quality issues at Marcham and Frilford, in large measure because agreed transport interventions were considered inadequate or undeliverable a very short time after the Plan was examined and adopted.

There is no evidence that shows how the development strategy can effectively mitigate these impacts as well as the further potential impacts that arise from the development strategy. This is exasperating, as there is clear evidence that could be drawn upon to show that that very substantial opportunities exist to:

- Speed buses up and make them more reliable by the delivery of bus priority on most of the key main corridors. Most of these even today operate relatively frequently
- Improve service frequencies and extend hours of operation.
- Secure significant background mode shift to bus as a result, damping pressure on key links and junctions, by consolidating demands on direct more reliable and more frequent bus services.

The spatial development strategy as submitted is in fact, likely to well conform to such additional evidence.

The allocations require substantial additional transport related work and evidence to demonstrate that the opportunities for sustainable transport have been identified and taken up as required by NPPF paragraphs 104-105.

With regards to specific policy, Policy NE22 should be modified to read:

“Development proposals will be permitted where it can be demonstrated that all the following criteria have been addressed:

1. Development is located and designed to minimise traffic generation and congestion through access to by maximising the relevance and attractiveness of sustainable transport modes, including maximising provision of specific demonstrably effective measures to make pedestrian and cycle and public transport routes and networks more direct, more safe, faster and more reliable;...”

## 5. Housing

### 5.1. Policy H1 Meeting Housing Needs

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

The presumption of the planning system is that local planning authorities should seek to meet their objectively assessed development requirements in full. These needs are assessed by a defined Standard Methodology set out in Planning Practice Guidance and elsewhere, that has explicit regard to ensuring that the economic and social effects associated with housing are properly provided for, to avoid exacerbating serious problems that arise from inadequate housing supply.

As a significant local service provider and employer, Stagecoach is concerned that existing issues with housing availability and affordable housing supply are not exacerbated. This has a direct bearing on staff recruitment and retention. It also has an indirect bearing on our cost base.

The existing problems with housing affordability have developed over many decades of undersupply. It should be emphasised that the significant boost to the supply of housing that has been sought by governments over the last 15 years, has only begun to take effect relatively recently in this District. Tackling the problem will require years of consistent attention.

Stagecoach notes that the Council is no longer proposing to meet its identified housing needs in full. Rather than 638/annum the Council is allocating a total that implies an annual delivery rate of 535/annum.

While a number of matters evidently present challenges to the Council in identifying a sustainable development strategy. Paragraph 5.2 indicates that “constraints, particularly the capacity of the A27 has led to the council planning for a housing requirement below the need derived from the standard method...” The blame for being unable to meet housing requirements is thus laid squarely at the door of transport infrastructure and systems.

This conclusion in no way follows from the evidence in the Chichester Transport Study. This, rather, makes the statement that when a higher annualised quantum of 700 dwellings per annum was tested, in the majority of cases the traffic capacity improvement package would perform little differently. To quote the Study:

“5.6.3 The network performance outputs analysed comprising V/C%, Delays (seconds) and Queues (PCU's) suggest that generally the proposed SRN mitigation identified for the Core Scenario, can accommodate in the most part, additional increase in development to 700dpa.”

Whether the rest of the local road network is similarly protects is moot.

Irrespective of these results, even if the contention made in the draft plan were true, unlike many other constraints, this is amenable to a suitable effective strategy to address the constraints identified being collaboratively conceived. This is what NPPF expects, as set out in paragraphs 104-106.

Where the A27 is concerned, as part of the SRN, National Highways is now working to a substantially revised approach

than that in force at the time to current Local Plan was prepared, or LSS2, or reflected in the Chichester Transport Study. This is set out in DfT WMS 01/22. This document is the policy of the Secretary of State for Transport in relation to the SRN which should be read in conjunction with the National Planning Policy Framework (NPPF). It replaces the policies in the Department for Transport Circular 02/2013 of the same title.

It makes plain that to accommodate additional demands arising from development, National Highways (NHC) expects to meet the requirements of its statutory license in a substantially different manner. With respect to development NHC LTN 01/22 continues to address the tensions between national policy for the environment and carbon mitigation, the ongoing need to substantially boost the supply of housing as well as maintain national economic competitiveness and protect the safety of the public. However, in future, the approach will be to seek first to maximise the impact of demand management measures (reducing the need to travel), and then to accommodate residual additional demands first though maximising the use of sustainable modes, rather than accommodating assumptions about current levels of car dependency and use.

LTN 01/22 much more closely and explicitly aligns with the language of NPPF Chapter 9 paragraphs 104-106. Paragraph 12 states: "New development should be facilitating a reduction in the need to travel by private car and focused on locations that are or can be made sustainable.... Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas." (our emphasis).

It continues at paragraph 13: "where developments are located, how they are designed and how well delivery and public transport services are integrated has a huge impact on people's mode of travel for short journeys. The company will therefore expect strategic policy-making authorities and community groups responsible for preparing local and neighbourhood plans to only promote development at locations that are or can be made sustainable [footnote 8] and where opportunities to maximise walking, wheeling, cycling, public transport and shared travel have been identified." (again, our emphasis)

Stagecoach readily confirms that the draft Plan development strategy conforms well to the first limb of this expectation, in terms of the location of development.

Stagecoach considers that the plan and its evidence base conforms poorly to the second in that the specific opportunities to maximise walking, cycling wheeling and public transport are not clearly identified, and defined, and proven to be effective and deliverable.

The current mitigation strategy for the A27 Chichester area, supporting the adopted Local Plan and for which proportionate developer contributions have and continue to be sought, reflects now-superseded DfT Circular 02/2013. As a direct result, it failed completely to identify any significant effective bus priority measures, despite the fact that frequent services already exist on the key corridor concerned, and that one bus journey can remove, fully seated between 72 and 80 single occupancy car journeys from congested links and across key junctions on the A27. Rather, it sought to implement targeted measures to increase the throughflow of general traffic.

We recognise the realisation that this approach, which was already reliant on some tenuous logic, is simply not technically viable, especially where further development needs are anticipated.

National Highways will now pursue an approach with the planning system that "includes moving away from transport planning based on predicting future demand to provide capacity ('predict and provide') to planning that sets an outcome communities want to achieve and provides the transport solutions to deliver those outcomes (vision-led approaches including 'vision and validate,' 'decide and provide' or 'monitor and manage'). The company will support local authorities in achieving this aim through its engagement with their plan-making and decision-taking stages." (paragraph 15).

Paragraph 23 is at the fulcrum of assessing and defining transport mitigations to accommodate growth on and near the SRN "Capacity enhancements such as modifications to existing junctions or road widening to facilitate development should be determined on a case-by-case basis. The general principle should be accepted where proposals would include measures to improve community connectivity and public transport accessibility, and this will be weighed against any negative safety, traffic flow, environmental and deliverability considerations, impacts on the permeability and attractiveness of local walking, wheeling and cycling routes, and alternative options to manage down the traffic impact of planned development or improve the local road network as a first preference." (our emphasis).

However, no material work has been done that seeks to identify if a bold robustly conceived and suitable judiciously-prepared strategy that seeks to consolidate flows on already densely travelled corridor onto improved bus services, driving mode shift through insulating these services preferentially from already serious queuing. This would be likely to have very substantial impacts on all the key junctions on the A27, and potentially, on the A27 itself. The need for an integrated approach between Shoreham and Emsworth within West Sussex paying particular regard to development requirements in both Arun and Chichester Districts naturally lies at the heart of this, and we would expect to be picked up by the LSS3 Review among other things.

However, the locus of the problems and its causes and effects are obviously well enough known to start work on defining

solutions within the plan area today. We would expect that this work will be essential if National Highways are to support the Plan, especially now given the terms of Circular 01/2022.

Such work could and should start from a “policy off” position: in other words that the Plan should fully accommodate its needs unless it can be proved that a mitigation strategy for the A27 that is compliant with DfT WMS 01/2022 cannot credibly accommodate resulting capacity demands without unacceptable impacts on the safety and efficient operation of the SRN.

This evidence does not exist. In fact the Chichester Transport Strategy 2023, on which the Council solely relies as its transport evidence base, indicates the opposite at para 5.6.3. This is the case before meaningful measures to secure damping of traffic demands through mode reassignment are even considered.

The exception to this is Portfield and Oving Road, which are among the most problematic areas after mitigation even at the Council’s chosen 535 dwelling/annum scenario (para 5.6.4.-5). The costly capacity mitigation simply cannot deliver enough benefit. It is admitted that WSCC has indicated that it would prefer a solution that places greater reliance on sustainable modes damping car-borne demand. This is entirely the strategy required by NHC to follow LTN 01/22, of course. Despite the fact that “predict and provide has “run out of road” no attempt has been made to examine what such a solution set credibly could look like. This is unsatisfactory and deeply troubling.

At paragraph 5.4 the draft plan points back again at the West Sussex and Greater Brighton Strategic Planning Board and the future work that has been commissioned, but has barely begun, to update the Local Strategic Statement. This work is to inform the preparation of plans that have horizons beyond the end date of the current LSS in 2030 and properly to meet the Duty to Cooperate. As we said in our response to section 1 of the Plan we fully endorse the conclusion that this is the right mechanism to look at these issues. However, the mechanism has not been effectively applied to the production of this plan. Therefore, the specific evidence that capacity on the A27 in and of itself supports accommodating a lower housing requirement does not exist.

The Plan thus does not conform to NPPF, is not adequately justified and is not effective.

The Plan does not properly meet the statutory Duty to Cooperate.

We will return to this matter in specific representations to Section 7 of the draft plan.

## 5.2. Policy H2 Strategic Locations/Allocations 2021-2039

### Stagecoach Supports

Policy H1 makes plain that the plan, as far as it identifies locations for development has done so in locations that conform with its spatial strategy. All of the strategic allocations to a greater or lesser extent offer clear opportunities to make use of sustainable modes, by virtue of their location. That is not to say that the opportunities to take up these opportunities, and maximise the role of sustainable modes, has been identified, defined and translated properly into the rest of the plan policy suite or Infrastructure Delivery Plan.

As our remaining representations make clear, we support the locations thus far identified as being those that offer the best opportunities to reduce the need to travel, reduce travel distances, and create high quality attractive sustainable travel choices, for both existing residents as well as new ones.

However, the transport impacts of the allocation will individually and cumulatively likely to lead to increasingly severe impacts on the transport network, and on bus services.

Perversely, because these opportunities are not properly identified and secured through the plan and its supporting transport strategy, the opportunities presented by the allocations to secure a substantially more sustainable and lower carbon pattern of movement will not only risk being squandered but may aggravate the wider problems.

## 5.3. Policy H3 Non-strategic Parish Housing Requirements

### Stagecoach Supports

The approach is consistent with the plan’s spatial strategy. It generally avoids a dispersal of development to locations likely to be highly car dependent. There is a clear focus on meeting housing needs in the far north-east of the District at the largest and most sustainable settlements, such as Loxwood, Kirdford and Wisborough Green. However, it must be pointed out that public transport availability in this area, provided by the County Council through services it procures, is minimal. These settlements in practice require each adult and child of secondary school age to have access to motorised transport to fully participate in society. This might justify significant measures to secure a boost in the frequency of bus services between Guildford and Billingshurst, passing through these settlements.

Otherwise, existing commitments in the plan area already make provision to meet for local needs. To the degree that there is an unmet local requirement for affordable housing of a small scale – for example to support the rural economy – this could be met through neighbourhood plans or through Rural Exception Sites.

## 6. Place-making, Health and Wellbeing

### 6.1. Policy P1 Design principles

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

NPPF requires that proposals should consider transport issues from the earliest possible stage. Designing to properly facilitate safe and efficient access, focusing first on sustainable modes, should be at the heart of development design. Too often it is still an afterthought, notwithstanding this.

Policy P1 must include an additional statement to be compliant and effective with NPPF paragraph 104-105 and 112 a): "Development will be designed to make access and movement using walking, cycling and public transport the natural first choice, and demonstrate through the Design and Access Statement how such modes are afforded the most direct, safe, reliable and efficient routes within to and from the proposals, especially when compared with car use."

### 6.2. Policy P4 Layout and Access

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

A number of proposals in the plan involve large-scale development. It is essential that where appropriate buses can access and circulate efficiently through development at a suitably early stage. There is no acknowledgement of this anywhere in the policy, contrary to NPPF paragraph 112.

Large-scale development which buses cannot access in an efficient or timely manner, or at all, strongly contributes to high levels of car-dependency. Evidence for this is referred to among other places, in DfT Circular 01/2022. To be compliant with NPPF and properly pursue its strategic Objectives, Policy P4 needs to be modified to address this point: "1. Provide safe, direct and attractive conditions for inclusive access, egress and active travel between all locations and providing as good direct high quality links to integrated public transport, and where appropriate efficient access and circulation to bus services, unimpeded by excessive parking, at a suitably early point in the development phasing;

### 7. Transport and Accessibility

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

The issues related to transport are fundamental to the soundness of the Plan. In particular, the constraints presented by the capacity on the A27 around Chichester and its key junctions, are the paramount reasons why the Council does not consider it can meet its objectively-assessed development needs in full. Thus, the transport issues and potential solutions available and what these mean for the ability of development needs to be accommodated, are matters that go to the heart of the soundness of the Plan.

Paragraph 8.3 sets out the approach taken to date succinctly:

"Increasing the capacity of the road network is key to supporting growth in the Local Plan. However, there is also a need to reduce demand for road transport to achieve net zero in greenhouse gas emissions by 2050 as highlighted in the council's Climate Emergency Action Plan and Strategic Objective 1. In aiming to achieve the ambitions of the action plan, all development is expected to demonstrate how it will support four key objectives to create an integrated transport network which will alleviate pressure on the road network, improve highway safety, encourage sustainable travel behaviours and help reduce transport related impact on air quality, by:

1. Avoiding or reducing the need to travel by car;
2. Enabling access to sustainable means of travel, including public transport, walking and cycling;
3. Managing travel demand; and
4. Mitigating the impacts of travel by car."

However, this approach is unambitious and "lightweight" as it assumes, as does the existing Chichester Transport Strategy on which the current adopted plan relies, that the focus of investment should be, wholly, in highways capacity improvement.

Sustainable modes explicitly are expected to play a greater role to "alleviate pressure" on the local road network, as part of this strategy. To emphasise: to avoid exacerbating congestion, the strategy will have to both remove a significant proportion of existing demands from the network on multiple key approaches to Chichester; and then ensure that travel demands from committed and further new development allocated in the plan does not simply replace these journeys, or, worse, create even greater demands.

This will demand very significant behaviour change. Only by making sustainable modes substantially more attractive, both absolutely, and relative to the same journey made by car, can this be expected to occur. However, the explanatory memorandum as well as the wider policy suite and IDP, well expresses a fundamental unwillingness to taking specific, defined measures to achieve this reduction in car use and material promotion of sustainable modes. It makes plain that sustainable modes, including bus services, will offer a lesser role to which “access will be provided”.

Such a vague and weakly defined mechanism will have no effect, at all, on current behaviour and car dependency if the relevance of those choices as a credible alternative to car use, is not substantially boosted. This includes a 5% reduction in trip demand assumed by the Traffic Model at the heart of the Chichester Transport Study 2023.

For this reason, the transport strategy behind the current adopted plan is demonstrably ineffective, as the updated model makes plain. It has not yet been delivered and is yet unclear when or (in the absence of committed funding) even if it can be. It is ineffective to “roll forward” this strategy to support a higher level of planned growth.

We note that a scheme for addressing congestion on the A27 at Chichester has been included in Roads Investment Period 3 (2025-2030) – well within the horizon of this Plan. However, recent history provides compelling evidence that off-line improvement to the north is not politically supported and arguably even technically or economically deliverable. It is not funded, nor at this stage can it be hypothesised if an economically deliverable scheme is achievable sufficient to warrant the necessary investment.

An on-line improvement of the A27, including junction improvements, is likely to favour longer distance east-west though movements, which are of greater significance to the national economy, at the expense of local movements crossing the SRN- a conundrum that largely sums up the dilemma that is faced by NHC and the County as Highways and Transport Authority. It is one that is played out in many places, but rarely is the tension so stark as at Chichester.

Every local route crossing the A27 at grade around Chichester accommodates a regular bus service - or shortly will do (Oving Road area is expected to follow in 2023, though bus services are likely to not use the modified crossroads but to use the left-in-left-out facilities provided as part of the Shopwhyke Lakes development). The impact of these issues on the entire bus operation are serious and increasingly severe.

By the same token, boosting the relevance and reliability of each of these services substantially consolidating as much demand as possible onto a much smaller number of vehicles, is clearly a strategy that ought to support the effective capacity of each of these junctions being greatly augmented, at the same time as reducing equally substantially, the energy- and carbon intensity of mobility in the plan area. Addressing the A27 should not be considered some kind of “zero-sum” game.

Furthermore, the approach of National Highways in its dealings with development and the planning system now reflect a substantial change in Government Policy set out in DfT Circular 01/2022, which we separately cover in these representations, that entirely aligns with an approach that seeks to appropriately invest in more active and rational management of scarce highways capacity, on both the SRN and local roads.

For environmental, economic and social reasons – including public health, the issues presented by the A27 and its interface with local roads around Chichester stands out, nationally, as an example of where the approach taken to accommodating and mitigating development impacts needs to make a clear break with previous “predict and provide” approaches to meet forecast unconstrained car use as LTN 02/2022 makes clear as a principle. Policy in the West Sussex LTP to 2036 itself makes plain that “shared mobility” – including bus services – must play a much greater role in this area.

The existing Chichester Area Transport Strategy is focused on justifying capital contributions from committed development to fund highways capacity improvement – with nothing included to make bus services more attractive, or importantly more reliable. Indeed this “cars first” approach is so costly, that there is already accepted by WSCC to be insufficient land value remaining to be captured to put into substantial improvements for public transport. That much is very evident, and transparent, from paragraph 8.12 and 8.14, where south of Chichester “This (one) package of works (of several improvements needed) would be between £57.23 and £82.79 million to deliver in full and would not be capable of being funded by development contributions alone.” This assumes the scheme is otherwise deliverable, which on the evidence in the public domain for some time, has been considered challengeable.

The draft Local Plan and a modestly updated infrastructure package that flows from the 2023 Chichester Transport Study, pursues exactly the same approach.

This strategy is also even more ineffective having regard to the roll forward of the Plan to 2039. It cannot deliver the key Strategic Objectives of the Plan; and in particular this is explicitly recognised by the Council in the failure of the draft Plan to accommodate the OAN in full.

It is also obsolete, as it does not align, from first principles, with national policy (including the National Decarbonisation Strategy for Transport) and DfT Circular 01/22; nor the Council’s own declared Climate Emergency.

As a result, draft Policies T1 and T2 are both unsound, as we will separately explain.

Owing to the lack of evidence about the implications of this for adjoining authorities – especially Adur District – in the absence of the review of the Local Strategic Statement – this has implications for fulfilling the Statutory Duty to Cooperate.

The absence of any meaningfully comprehensive refresh of the transport evidence base means that there are no meaningful schemes of any kind, defined in the plan or its IDP, to indicate either what level of growth can be accommodated, by delivering a change in travel behaviour. This would be aimed to secure a sufficient effective increase in junction throughput (measured in terms of person trips as opposed to passenger car unit movements (PCUs)). Such evidence would propose measure to achieve that outcome and assess the efficacy and costs of such improvements, across all modes.

Paragraphs 8.10-8.13 inclusive indicate that the Council “has moved away from ‘predict and provide’” and invites the reader to conclude this has translated into a programme of interventions that can be funded to deliver specific, credibly predictable outcomes. Such a programme should be clear in paragraph 8.11. and the IDP. There is no such clarity and this conclusion would be false.

It would also be evident in the language of the Chichester Transport Study 2023 and its refreshed proposals. Only the most token of lip service is paid to the matter. It is a plainly car-focused, predict and provide methodology to support a “predict and provide” strategy. In fact, it is a brazenly car-focused approach, to the exclusion of all else.

The statements in the Plan regarding any other approach, read properly, offer nothing more than a vague commitment to look post-adoption, and implementation, at unspecified measures, based on problems that may arise in future that will be decided by a committee: the Traffic and Infrastructure Management Group (TIMG). This does not yet exist and is obviously an attempt to posit a mechanism that retroactively will cover for the lack of serious multi-party engagement to address the existing and future issues. Such a group should, in our view, also include the public transport operators, not least if the requirements of NPPF Para 106c) are to be satisfied, and the strategy and measures to be adopted are material to supporting the Local Plan, as of course the purpose of the TIMG has as its core *raison d'être*.

The approach proposed by the draft plan is plainly ineffective and unsound in justifying the draft Plan.

It is more widely unacceptable to Stagecoach. The issues are severe today and well-known, already serving to jeopardise the delivery of buses relied on by existing residents, much less attract new ones.

We also consider that HM Planning Inspectorate are likely to be quite resistant to accepting this aspect of the plan’s transport strategy, nor will it be appropriate for the Council, West Sussex County Council, or National Highways, to define such measures after the submission of the Plan during the Examination process. The Examination in Public of a local plan has no purpose to improve plans, or remedy deficiencies clearly evident prior to submission.

The examination of the West of England Joint Strategic Plan in 2019, and the Uttlesford Local Plan in 2021, among several others, demonstrates especially clearly that the Planning System and the Examination process is not amenable to post-hoc retrofitting of transport evidence and strategies to support a development strategy.

#### 7.1. Transport Evidence Base

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Most of Stagecoach’s serious concerns about the soundness of the plan arise from the fact that it has been prepared in advance of any up-to-date transport evidence and suitably robust transport mitigation strategy being advanced to support it. In essence, the Council has rolled forward the existing plan by 9 years, adding some additional sources of housing supply, while still relying implicitly on a transport evidence base that was prepared 10 years ago.

This led to the formulation at that time of what can only be described as an attempt to develop an effective car-based mitigation strategy, creating capacity for general traffic added to accommodate unconstrained additional demands on an already over-taxed highways network – the Chichester Area Transport Strategy. Despite language in support of sustainable modes, no deliverable measures were identified to support either the extension of the bus network to serve allocated sites, and much less to create a vital improvement to the quality and reliability of public transport services. This approach reflected the approach set out in DfT Ministerial Circular 02/2013 “Development and the Strategic Highways Network”, applicable since the A27, which is the focus of the most severe difficulties, forms part of the national Strategic Roads Network.

This approach has proven ineffective even before substantial elements of housing land supply in the current plan come forward – in particular West of Chichester and West of Tangmere.

In addition, Circular 02/2013 has now been replaced by a new Ministerial Statement of 23/12/2022, DfT Circular

01/2022.

On both counts the transport evidence base and strategy needs to be properly revisited and established to provide effective mitigation for the plan, including current commitments that are being rolled forward.

The language of the current Ministerial Circular 01/2022 offers a highly condensed synoptic view of the proper approach to addressing transport matters in the planning system notwithstanding that it is directly concerned with the Strategic Roads Network. Videlicet:

"31. The NPPF expects local plans and spatial development strategies to be underpinned by a clear and transparent evidence base which informs the authority's preferred approach to land use and strategic transport options, and the formulation of policies and allocations that will be subject to public consultation. The company will expect this process to explore all options to reduce a reliance on the SRN for local journeys including a reduction in the need to travel and integrating land use considerations with the need to maximise opportunities for walking, wheeling, cycling, public transport and shared travel.

32. The Transport Decarbonisation Plan indicates that carbon emissions from car and van use is the largest component of the United Kingdom's total transport emissions. While action is being taken to decarbonise transport such that all new cars and vans will be fully zero emission at the tailpipe from 2035, the proposed location of growth in current plan periods and whether new developments would be genuinely sustainable remain important factors in demonstrating that a local authority area is on a pathway to net zero by 2050 and therefore compliant with the requirements of the Climate Change Act 2008.

33. Alongside this, the local authority should identify the key issues within their study area regarding transport provision and accessibility, setting out how the plan or strategy can address these key issues in consultation with (National Highways, and other transport stakeholders identified in NPPF paragraph 106b). It is the responsibility of the local authority undertaking its strategic policy-making function to present a robust transport evidence base in support of its plan or strategy. The company can review measures that would help to avoid or significantly reduce the need for additional infrastructure on the SRN where development can be delivered through identified improvements to the local transport network, to include infrastructure that promotes walking, wheeling, cycling, public transport and shared travel. A robust evidence base will be required, including demand forecasting models, which inform analysis of alternatives by accounting for the effects of possible mitigation scenarios that shift demand into less carbon-intensive forms of travel." (our emphasis)

Within the text quoted above, references to National Highways and "the Company" can quite legitimately be extended, given the statements in NPPF paragraph 16, 25, 26 and 106b, to include all the relevant transport infrastructure and service providers in the plan area. Circular 01/2022 also has the weight of secondary legislation as a Written Ministerial Statement and thus should be considered to be highly material.

To date there has been little attempt to explore, to the degree necessary, strategies that conform to Circular 01/2022. It is thus not possible to conclude, as the Council has done, that the issues on the A27 that present a constraint to development, are insuperable.

In line with comments made elsewhere in the response to this pre-submission draft, the Plan thus requires substantial further work to be undertaken with key stakeholders to establish a suitably effective and demonstrably deliverable transport mitigation strategy, to sustainably meet the District's identifiable development needs and where apparent and appropriate, also ensure that wider cross boundary strategic issues are appropriately addressed, in conformity inter alia, with the Duty to Cooperate, NPPF paragraph 16 and 104-111 inclusive, and DfT Circular 01/2022 and to ensure the Plan's own Strategic Objectives can be met.

7.2. Policy T1 Transport infrastructure  
Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

As described in comments elsewhere, Stagecoach does not see that a suitable proportionate and up-to-date basis exists to properly and appropriately address the transport issues in the plan area.

The 2023 Transport Study does not perform this role adequately but, contrary to the explanatory memorandum, is a scheme intended only to facilitate car-borne movements through some of the key junctions. There is no evidence that an holistic integrated and strategic approach to transport mitigations has been prepared. Certainly Stagecoach has not been involved in any of the discussion about appropriate transport measures in support of the plan, including the Transport Study 2023, contrary to the expectations set out in NPPF at paragraph 16 and 106.

Notwithstanding out fundamental concerns about the transport evidence case and mitigations strategy, Policy T1 reflects a weak and ineffective approach, that seeks to try and define a strategy post-adoption.

Contrary even to the explanatory memorandum for the policy, which seeks to maximise the contribution of sustainable modes, the policy is phased in such a way that it gives basis for previous “predict and provide” solutions to facilitate and support current levels of car dependency – already shown to be undeliverable and unaffordable – will nevertheless be the first rather than the last resort. There is no commitment to seek to maximise the contribution made by sustainable modes to meeting mobility needs. Nor is there any recognition that current chronic congestion and lack of network resilience jeopardises the ongoing attractiveness and long-term sustainability of the current public transport offer.

To be effective and create alignment with national policy, and also provide for an up-to-date transport evidence base and strategy to be adduced, Policy T1 should be modified to read:

“Integrated transport measures will be developed to mitigate the impact of planned development on the highways network, improve highway safety and air quality, promote more sustainable travel patterns and through providing in the first instance, new and improved infrastructure and services that will be credible effective in maximising the encourage increased use of sustainable modes of travel, such as public transport, cycling and walking.

To achieve this, the council will work with National Highways, West Sussex County Council, other transport and service providers (including through the Traffic and Infrastructure Management Group) and developers to provide a better integrated transport network and to improve accessibility to key services and facilities...

All parties, including applicants, are expected to support these objectives by:

1. Ensuring that new development is well located and designed to avoid or minimise the need for travel, encourages maximises the use of sustainable modes of travel as an a credible alternative to the private car and directly provides or contributes towards new or improved transport infrastructure;
2. Working with relevant transport infrastructure and service providers to improve accessibility to key services and facilities with primary emphasis on sustainable modes, and to ensure that new facilities are easily accessible by sustainable modes of travel;
3. Targeting investment to provide local travel options as an that represent a clearly credible alternative to the car use, focusing on the delivery of improved integrated bus and train services, and improved pedestrian and cycling networks, including the public rights of way network, based on the routes and projects identified in the Local Transport Plan, West Sussex Bus Service Improvement Plan, Local Cycling and Walking Infrastructure Plan (LCWIP) and the Infrastructure Delivery Plan;
4. Planning to achieve the timely delivery of transport infrastructure on and approaching the A27 and elsewhere on the network, needed to support new housing, employment and other development identified in this plan;
5. Phasing the delivery of new development to align with and where possible facilitate the provision of new and improved transport infrastructure and services and the outcomes of monitoring travel demand on the network, including that arising from areas immediately adjoining the plan area. It may also be Where necessary to achieve this alignment proactively phase development will be phased to take into account the monitoring and effectiveness of travel plans demands on the network and to ensure that measures are implemented to support the highest possible level of encourage sustainable travel behaviour.;
6. Using demand management measures, such as travel plans, to manage robust methodologies to assess travel demand and minimise the need for new or improved transport infrastructure as part of the monitor and manage process.
7. Delivering a coordinated package of infrastructure improvements at and approaching to junctions on the A27 Chichester Bypass along with other small-scale junction improvements interventions within the city and elsewhere, as identified through the monitor and manage process. These will increase road capacity, reduce traffic congestion, improve safety and air quality, and improve access to Chichester city from surrounding areas, first by maximising the contribution of sustainable modes to meeting mobility demands, then, and only as evidenced by robust modelling and option testing, providing increased highway capacity for general traffic.

...”

### 7.3. Policy T2 Transport and Development

Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Section 1 b) of T2 will be ineffective as, absent measures to ensure buses can run reliably and efficiently, improved bus services will not be possible, in support of the plan’s own stated broad approach to transport mitigation, as well as wider local and national policy.

The draft policy does not require improvements to the quality of services such that sustainable choices will be materially

more attractive than car use for many local journeys. Without this the Plan's Strategic Objectives cannot be fulfilled and the objectives of the Plan and this policy, read in its own terms, will not be realised, where reduction in private car use is concerned. It is thus ineffective.

Absent measures to make bus services more reliable and more efficient, by insulating them from chronic congestion as far as possible, still further operating resource and therefore costs, will be needed to just to reliably run existing service frequencies, and capacity, as vehicle productivity continues to be more and more adversely affected by chronic delay. This will be further aggravated by increasing incidence of severe unpredictable service breakdown arising from incidents of diverse kinds on the network, especially on or around the A27, including that arising from more regular severe weather events. Longer journey times can only be expected to lead to relative disadvantage of bus services compared to personal car use, entirely contrary to the objectives of national and local policy, including Policy T1. It can also expect to lead to a dampening effect not on car use, but on bus patronage, threatening the ongoing viability of bus services across the plan area.

Section 1 b) of T2 should be modified to read:

"b) Maximise opportunities for the use of sustainable travel modes through provision of direct and efficient access both to either the existing networks or and through providing such new infrastructure or public transport services, as can be credibly expected to reduce reliance on the private car and work towards achieving net zero in greenhouse gas emissions by 2050;"

Section 1 d) of T2 will be ineffective as the location of development is fixed by this plan. We commend the fact that all the strategic allocations are or will be served by regular bus services.

However, the use of public transport services, where available, depends on the relevance and reliability of these services. Furthermore, provision of services without them generating sufficient patronage to support their long-term operation also threatens the sustainability of the plan and its supporting transport strategy. This is especially true of new services such as those intended to serve West of Chichester and Tangmere and East of Chichester Strategic Allocations.

This can only be assured by the plan being supported by specific measures to ensure buses can operate efficiently and reliably on the existing and projected services intended to serve the developments concerned, and also at the same time secure behavioural change from existing development.

To be sound and effective, the policy T2 1 d.) should be changed to read:

"d) Ensure major development is located to proposals and the supporting mitigation measures enable the use delivery of high-quality, reliable and effective public transport to present the most relevant possible choice to access local services and facilities including employment, leisure and education facilities";

The Policy T2 makes no provision for buses, where necessary, to enter and make efficient and safe progress through major development sites. The plan is thus out of conformity with NPPF paragraphs 104-106. It makes no provision to ensure that penetration of bus services is achieved at a suitably early point in the development trajectory, undermining the achievement of the goals of the Plan and this specific policy. As a good example, West of Chichester Phase 1, currently under construction, cannot be served by buses as a strategy to effect interim bus penetration was never made.

Policy T2 1 f.) should therefore be amended to read:

f) Ensure that the layout and design of the site development proposals provides effective penetration of the site by sustainable modes, at all points in the development build-out, including public transport where appropriate; and sufficient space for all vehicles to manoeuvre without compromising the safety of pedestrians and cyclists, the efficiency of bus services, or the ability to provide an appropriate level of landscaping across the site"

Policy T2 3.) regarding Travel Planning depends entirely on its effectiveness on the quality and relative attractiveness of sustainable alternatives over car use. In the absence of efficient frequent, reliable and direct public transport services (or similarly, high quality facilities for active travel, Travel Plans will continue to be the entirely ineffective "tick box" exercises that they generally are today, evidenced by much lower levels of public transport use in most new developments than it seen in nearby established neighbourhoods, as demonstrated broadly by Census data in 2011, 2011 and 2021.

For this policy to be effective an up-to date transport evidence base and strategy, underpinning a series of specified interventions to promote the relevance and effectiveness of all sustainable does including public transport in particular, needs to be put in place.

## 8. Chapter 9 Infrastructure – Policy I1 Infrastructure provision

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Policy I1 could not expect to be effective without a clear understanding of the effectiveness and costs of a defined series

of measures that are laid out in this Plan and its IDP, to mitigate the transport impacts of the development strategy.

Where the Chichester Transport Study is concerned the only meaningful work has focused on the definition and delivery of a range of highways capacity schemes mainly on the A27 around Chichester.

As we have discussed elsewhere the effectiveness of these schemes is insufficient as set out at Tables 8.1 and 8.2 of the Chichester Transport Study 2023. The plan itself admits that the deliverability of this package cannot be afforded by developer contributions alone.

The Chichester Transport Study 2023 does not attempt provide a realistic assessment of costs to deliver these schemes, despite the fact that they have been under evaluation for many years. Nor does it offer any assurance that the schemes are technically achievable. Rather, it states the opposite:

“9.2.3 No investigation has been carried out into specific land ownership details, or into the location details or cost of moving statutory undertakers and utility apparatus within the areas of the scheme. No design assessments were carried out at this stage to ascertain the deliverability of the proposals except where any Health and Safety concerns were raised.”

Thus on the grounds of effectiveness, deliverability and affordability, the measures on which the Plan relies must at the very least be considered to involve an exceptionally high level of risk. Since Policy I1 is founded on these assumptions, it cannot be considered effective.

As we set out elsewhere, the Plan has been advanced on the basis that if any additional sustainable transport measures are required, these mitigations should be retroactively considered and defined after adoption of the Plan. In the light of the doubts that are apparent of both the deliverability, affordability and effectiveness of the Chichester Transport strategy this is especially unsatisfactory even if existing baseline conditions were reasonably acceptable.

However, the Chichester Transport Study 2023, as did its predecessors, makes plain that that existing problems are acute, and can rightly be considered “severe” in the sense of NPPF paragraph 111. Waiting to define deliverable affordable alternatives is an entirely inappropriate approach to the local plan transport mitigation strategy. Such an approach also makes it impossible to consider prior to adoption how far the transport impacts of the plan can be cost-effectively mitigated by alternative means, or whether they are deliverable having regard to technical achievability, land control, development viability, or any combination of the above. Thus, the plan cannot be considered justified, or effective.

Given the mutual dependence of development strategies in Chichester and Arun in particular on these measures this should be seen as crucial of the fulfilment of the Duty to Cooperate.

The remedy for this is ultimately to put in place a suitable transport mitigation strategy following a strategic appraisal of options through review of the LSS. This then must be supplemented by more detailed development specific and localised scheme definition, including, where necessary, bus priority and other measures to support the substantial promotion of the attractiveness of public transport in key bus corridors over private car use. This would then be reflected by costed proposals in the IDP.

Leaving these fundamental weaknesses to one side, even if such a strategy and mitigation package were defined, there is no mention of public transport in the policy even though it is clearly a key part of the policy environment and mitigation strategy for the plan as expressed in the explanatory memorandum for I1, but also at Policies T1 and T2. I1 thus does not effectively support the realisation of the intent of Policies T1 and T2.

Policy I1 iii) should therefore be modified to read:

“(iii) Safeguard the requirements of infrastructure providers, having regard to requirements within and where appropriate across the boundaries of the plan area, including but not limited to:

...

- Highways including specific measures to accommodate improved active travel and public transport level of service and cycle lanes, and...”

At limb v) the Policy expects developers to meet the “in perpetuity costs of operating and maintaining infrastructure”. This shackles development management decisions to developers assuming what are infinite costs – given that “in perpetuity”, read properly, can only mean “without any limit in time”. This means that it is impossible to meet the statutory tests on developer obligations set out in the Community Infrastructure Levy Regulations 2010 (as amended) at Regulation 122, also repeated in NPPF. This policy cannot be lawfully implemented and it is thus ineffective.

In the absence of an up-to-date transport mitigation strategy that is fit for purpose, at the point the Plan is examined these costs of any additional infrastructure are not known in any case. The strategy and its costs, including its affordability and deliverability, are crucial to assessing if the Plan is sound.

Subject to an appropriate defined transport mitigation strategy being arrived at, to be sound, the Policy I1 v) should be

modified as follows:

(v) To consider and meet as appropriate the in-perpetuity delivery costs of infrastructure and, where appropriate, improved services, to the point where its long-term operational sustainability is credibly assured from mainstream sources. Where adoption is not envisaged by local authorities, that must include arrangements for its future ongoing management and maintenance;

## 9. Strategic and Area Based Policies

### 9.1. Policy A1 City Centre Development Principles

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Chichester City centre is rightly identified at 10.2 and 10.4 as the commercial and service hub of the District. It is also acknowledged to be the most accessible place in the District by sustainable modes, public transport in particular.

Boosting the vitality of the city centre is something that Stagecoach strongly supports. Irrespective, the enhancement of the commercial and cultural life of the District in the place where these opportunities can be accessed broadly by sustainable modes, is one that has long been at the heart of national planning policy for town centres, reflected in the "town centre first" approach to locating major trip generating uses.

Paragraph 10.5 exposes an unbalanced and unsound preoccupation with aesthetic matters in its approach to the town centre, and far too little to ensuring that the central place function is enhanced through protecting and enhancing the quality of public transport access.

The city is relatively small but at the heart of an extensive hinterland, and thus the role of bus in supporting sustainable access to and enhanced city centre venue is one that needs appropriate recognition and emphasis. It is important to note that a dominant number of key service and facilities such as the General Hospital are relatively close to the city centre. This directly contributes to driving travel demand into the city, causing congestion. Most importantly, it also makes the task of mitigation simpler, given the impact a suite of active and sustainable measures can have within the same close proximity.

Policy A1 does not provide this. As such, achieving the strategic objectives of the plan is seriously threatened, and the plan is thus not effective.

The Plan needs to ensure that the approach to city centre regeneration maintains and enhances public transport access, interchange and inter-modal connectivity. It also needs to ensure that bus service stopping and interchange facilities are able to address increases in future demand, anticipated by the clear intent expressed elsewhere in the Plan that public transport should be meeting a greater proportion of mobility needs, in a growing district. Achieving this demands an ambitious approach to the location, quality and capacity of bus stop and interchange.

We have been in discussions with the District Council about this, alongside West Sussex County Council, for a very considerable period. Stagecoach has always been keen to help facilitate the Council's aspirations for the city centre, and we continue to hold this intention. However, this cannot be at the expense of a material diminishing of the convenience and fitness-for-purpose of bus stop infrastructure and interchange. Stagecoach has significant concerns that current proposals to remove the bus station and have all bus services operate from the street kerbside, on an inner distributor road with similar or reduced net stop capacity, fall short of promoting attractive, convenient bus access to the central area as a destination.

For the longer term and where the objectives of the draft plan are concerned looking ahead to 2039, they clearly fall short of enhancing the convenience and attractiveness of public transport use. Much less do they make sufficient provision for a material increase in bus frequency, connectivity, and interchange convenience, on which the draft plan explicitly relies. It is vital that the District Council is clear in policy about its objectives for public transport in the city centre. These objectives must also carry sufficient weight when held in tension with other aspirations for the centre and the constraints on achieving them.

For the Plan to be sound, properly effective and compliant with NPPF, the approach to the City centre cannot ignore its role in the provision of sustainable transport service and connectivity.

Policy A1 should therefore be modified to properly reflect this crucial function, on which the vitality of the city centre must increasingly depend if unacceptable impacts on congestion, air quality and amenity are not to arise. This is still more crucial if wider aspirations to secure a more sustainable society and mitigate carbon are to be achieved.

"...This will include provision for development and proposals that:

- Support and strengthen the vitality and viability of the city centre and its role as a shopping/visitor destination,

employment centre, public transport hub and a place to live;

- Support and promote facilitate improved access to the city and with increased emphasis on sustainable modes of travel, with particular regard to enhancing the public transport interchange role of the city centre area, in accordance with the transport strategy for the city and..."

9.2. Policy A3 Southern Gateway Development principles Chichester Bus Station, Bus Depot and Basin Road Car Park Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

There has been aspiration to redevelop the bus station and nearby bus depot from many years. Stagecoach has been engaged with detailed discussion with the District Council on this matter over a very extended period. We confirm that these discussions have reached a relatively mature stage, however at the time of writing are not concluded.

Stagecoach recognises and supports in principle the Council's wider aspirations for the "Southern Gateway", and this has governed our approach to the Council to date. We continue to have no "in principle" objection to relocating our administrative, engineering, operational and customer service facilities.

Leaving our proprietary interests entirely to one side, it remains vital that in so doing, the effectiveness, attractiveness and convenience of these facilities is not compromised, as we have outlined in our representations to Policy A1, if wider national and local transport policy, and the local plan strategy itself, are to be effectively achieved.

The depot is crucial infrastructure to support the safe, reliable and legally-compliant operation of Stagecoach bus services over a very extensive area covering the entirety of the District and beyond. Without securing equivalent facilities, that are fit-for-purpose, many of our services would have to cease.

If buses are to provide a greater and more attractive level of service (still more so if they are to be electrified) larger, more capable depot facilities, and city centre bus interchange facilities will be necessary.

Notwithstanding that the bus station and depot sites are leased from the District Council, these leases terminate well beyond the end of the plan period.

Finding suitable sites for a replacement bus depot in Chichester, in common with all similar localities especially in southern England, is extremely challenging. As a sui generis use, bus depots do not automatically benefit from policy support on land allocated for employment uses. Most bus depots benefit from being legacy assets established under very different economic conditions. That is the case here. The value of a depot site for redevelopment net of demolition and remediation costs, rarely approximates to that able to sustain the acquisition of land in a tight wider employment land market, and the construction of suitable new facilities.

Furthermore, the costs of operating bus services are sensitive to the parasitic costs of vehicle and staff hours and mileage associated with "dead running" to a remote depot location from the operational network. Here, the existing depot site is ideal, and any replacement will unavoidable add ongoing operational costs to the operation that cannot be directly recovered.

We confirm that a replacement depot site has been identified and has in principle been agreed, subject to overcoming issues with the disposition of existing and future structures on the site. However, the site is recognised as not capable of accommodating meaningful operational expansion. This is just one of the most important foundational reasons why a positive transformation of bus productivity needs to be achieved, across the plan area and beyond, to support delivery of greater bus mileage and frequencies with the same level of operational resource. At the time of writing, we are not fully convinced that the proposals for the relocation will be sufficiently fit-for-purpose in the event the above is not achieved. Thus, we must raise a concern that the bus depot site might not be available during the plan period. While there is a strong probability it will be, the certainty surrounding the availability of the site, especially within the first 5 years of the plan, needs to be made transparent.

9.3. Policy A4 Southern Gateway - Chichester Bus Station, Bus Depot and Basin Road Car Park Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Regarding the removal of the bus station, without equivalent replacement, Stagecoach has significant concerns. Pressures and conflicts at the current bus station site have been gradually rising for several years, arising from increasing use and the need for additional scheduled vehicle layover periods to reduce the risks of accumulated late running from traffic congestion. Peak passenger volumes have recovered strongly on several routes, however passenger accumulations resulting from more frequent delays and disruption have added substantial further pressure on limited space.

Under current plans, buses and bus passengers will be displaced to bus stops at new locations outside the city centre,

along Avenue de Chartres. This road was always intended to be a relatively high-speed traffic route, outside the historic core of the city. The city centre has evolved in the subsequent years to reinforce already strong natural severance, with the highway lying beyond the city walls and the green space along the Lavant. It is a traffic dominated, unsurveyed and unattractive environment, reflecting the intended function of the road as an efficient movement corridor for high traffic volume, and nothing more. Avenue de Chartres is relatively close to the rail station and pedestrian connectivity can be provided at broadly equivalent distance to the current bus station, but again it is unsurveyed and currently unpleasant, lacking natural legibility or any sense of prominence.

We understand kerbside capacity on Avenue de Chartres will be strained even to accommodate current levels of service, with no expansion possible. There is therefore a strong probability that to accommodate more frequencies and key new routes, such as West of Tangmere, East of Chichester and West of Chichester allocations, additional future bus stops must occupy a different location. This makes interchange between routes and rail services substantially challenging and less attractive.

The emerging arrangements risk marginalising public transport and public transport users substantially. This strongly undermines achievement of the wider plan objectives and delivery of a significantly greater role for public transport. If substantial public transport growth is to be accommodated in a growing city and hinterland, as the draft plan anticipates, then a more ambitious strategic approach must be taken. This should plan for additional and improved facilities to accommodate all services predicted to be required, whilst enhancing the passenger experience to ensure meaningful and attractive modal choice.

There is therefore a need for the plan to evidence how these issues will be appropriately resolved, having regard to a suitably ambitious approach that properly supports clear objectives to boost the relevance of public transport. The current policy is weak, unspecific and indifferent to achieving the strategic objectives of the plan, including a transport strategy in support of the plan, and as such it is ineffective.

Policy A3 should therefore be modified to read:

" ...

- Be designed to encourage and facilitate substantial increase in the use of active travel and public transport to, from and through the city centre.

" ..."

In line with the commentary above Policy A4 should also be modified to read:

3. Enhance the public interchange function of the immediate area, the public realm, particularly connections to the railway station and the city centre via South Street, Southgate and Basin Road for pedestrians, cyclists and public transport users, and to National Cycle Route 2 and Route 88 which run close by. Suitable replacement bus stops and layover facilities should be provided to replace those at the bus station in line with reflecting the objectives of the West Sussex Bus Service Improvement Plan, and to facilitate growth to meet the requirements of the plan's development strategy. Routes and crossings should reflect pedestrian desire lines, and public art should be incorporated to create a sense of place;

4. Enhance the public realm, in support of this and wider objectives, incorporating public art and other measures to create a strong and attractive sense of place.

...(renumber remaining points)

#### 9.4. Policy A6 Land West of Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

This is an existing Local Plan allocation. The public transport strategy for the site depends on the delivery of the second phase which Stagecoach notes is the subject of several applications now awaiting review and determination by the Council.

The site represents a compact form of development adjoining the city, as the most sustainable settlement, meeting housing needs close to where they arise, and affording very good opportunities for the use of sustainable modes, especially walking and cycling.

It is vital that a bus service is delivered to serve the site at the earliest potential. This was anticipated to be at the start of Phase 2 and will require the early delivery of the entire length of the spine road between the Old Broyle Road and Westgate and making it available for bus services.

It is not clear if the costs of pump-priming the service mentioned in the draft policy are anticipated to be met by the developer. Without such funding, the service will not be deliverable as years of losses will never credibly be covered from future profit. It is likely that the current wording will be interpreted by the developer as meaning that they have no such obligation binding upon them. Not does policy set out any specification for this service, thus its costs and the basis for

securing developer contributions does not exist.

As such any wider transport strategy, that seeks to secure a greater role for the use of public transport, and the aspiration for this allocation cannot demonstrably be met. The policy is ineffective.

Policy A6 should be modified to read:

" ...

10. Make provision to accommodate and secure delivery of for regular bus services linking running through the site to Chichester city centre operating at least every 30 minutes Monday-Saturday, and new and improved cycle and pedestrian routes linking the site with the city,

" ..."

#### 9.5. Policy A7 Land at Shopwhyke Stagecoach Supports

This is an existing Local Plan allocation, largely built-out, that benefits from an existing set of permissions.

The public transport strategy for the site depends on the delivery of effective bus priority at Oving Crossroads. The current recently implemented scheme, undertaken by National Highways, makes no provision for effective bus priority and needs considerable re-evaluation.

The site represents a compact form of development adjoining the city, as the most sustainable settlement, meeting housing needs close to where they arise, and affording very good opportunities for the use of sustainable modes, especially walking and cycling. It lies on a new bus corridor that will shortly be put in place, running to Tangmere via Shopwhyke. The allocation is being significantly consolidated by further development in the immediate vicinity which strongly supports the potential for this new service.

As we explain in our representations for East of Chichester proposed allocation A8, and West of Tangmere Allocation A14, a clear corridor strategy to effect bus priority is needed, that should be delivered in support of that further growth, and that at Tangmere SDL. However this allocation is a near complete commitment and there is no scope through policy regarding this land to effect this outcome.

It is notable that Point 6) of policy A7 makes mention of a bus service. This language reflects the currently adopted Local Plan policy and has underpinned the existing permissions. The failure of any bus service to be delivered demonstrates from first principles that this Policy has been entirely ineffective. It is important that lessons are learned from this in the Local Plan Review.

#### 9.6. Policy A8 Land East of Chichester Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This proposed allocation lies next to unallocated land that is already consented as a departure from the adopted development plan, with 143 units near completion south of Oving Road (20/02471/FUL). Additional land, also unallocated but similarly consented, has now commenced north of Oving Road (88 units under 21/02197/FUL). This and the allocation site consolidates earlier development at Shopwhyke brought forward under the current Local Plan, and allocated again as draft policy A7.

Development at Shopwhyke was brought forward on the basis of a premise that the developer would provide or somehow arrange a bus service, that was reflected in the policies of the current Local Plan. This was secured by an unenforceable condition. No bus service has been provided, as there was inadequate clarity regarding the basis on which the costs of establishing such a service would be met by the developer, and the expectations of policy on the developer. The site does however lie on a logical new bus corridor between Chichester and West of Tangmere along the Oving Road.

In addition, an expectation that modifications to the Oving Crossroads would effect bus advantage have proven false – the arrangements put buses into a similar or longer queue than if they use the route available to general traffic to and from the A27.

Stagecoach strongly supports the principle of bringing this land forward. However, the soundness of the site depends on deliverability of a regular, reliable and direct bus service along the Oving Road, taking advantage of effective bus priority.

Given the failure of existing policy in the adopted Local Plan covering the proposed A7 allocation to deliver a bus service, it is of great concern that there is no draft policy to adequately address the issue. The policy is out of conformity with NPPF paragraph 104-105 in that sustainable modes do not offer realistic choices, much less an attractive one, and as such also does not secure the objectives of national policy nor of the plan itself.

Currently the proposed allocation is not served at all by public transport. Policy needs to ensure there is a policy basis to

secure contributions to deliver such a service, which may well take the form of a proportionate contribution to deliver a new service or enhance provision that is put in place between Chichester along the Shopwhyke Road to west of Tangmere.

To become sound Policy A8 must be modified to read:

“...  
12. Provide for improved high quality connectivity by sustainable travel modes and focused in particular on a corridor between Chichester city centre and Tangmere along Shopwhyke Road, including new improved cycle and pedestrian routes, and a frequent bus service including linkages with Chichester taking advantage of effective bus priority measures on Oving Road at the A27;  
...”

#### 9.7. Policy A9 Land at Westhampnett/North East Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This land is already allocated and consented as part of the existing 2016 Local Plan. All reserved matters are determined.

The site lies on service 55 between Chichester, Westhampnett and Tangmere. This established service benefits from additional demand from the development at Phase 1. Phase 2 which is currently well underway, does not benefit directly from bus services. However it is a compact and logical form of development where walking and cycling to local facilities and employment is a credible option.

The existing allocation rolls forward policies in the 2015 Local Plan. In so doing it is possible to see which have been effective.

Point 9. regarding bus service and routing has not been effective. In particular the potential for a bus only link between the site and Graylingwell has not been established as policy anticipated. Given congestion around the Portfield area acutely affects public transport this, or alternative methods to secure bus priority over private car use, a clear and unequivocal policy steer is required.

The lack of an up-to-date transport evidence base is ultimately at the root of these issues. Arguably the policy and allocation can only be made sound once this refreshed evidence base in place.

However, it is possible that the allocation could be made sound by modification of Policy A9 as follows:

“...  
9. Make provision for regular, direct and reliable bus services linking the site with Chichester city centre, and new and improved safe and convenient cycle and pedestrian routes linking the site with Chichester city, the South Downs National Park and other strategic developments to the east of Chichester city including Tangmere. These objectives could include exploring the potential for a bus only route require a deliverable scheme to afford bus priority through Portfield, and potentially linking the development with the Graylingwell area through use of a modal filter;  
...”

#### 9.8. Policy A10 Land at Maudlin Farm

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing public transport route. It is relatively close to the city and very near substantial centres of employment and services that can be reached by active travel modes, helping damp the demand for car use. It is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services at Portfield and over a wider area. In fact, the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A10 should accordingly be modified to read:

“...  
5. Provide safe and suitable access points for all users, including a main vehicle access from Old Arundel Road and, subject to further assessment, a secondary vehicle access from Dairy Lane. The development should make the requisite

contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes;

..."

#### 9.9. Policy A11 Bosham – Land at Highgrove Farm

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Bosham Station. It is relatively close to the city and very near substantial centres of employment and services that can be reached by public transport and cycling, offering strong potential to materially damp the demand for car use.

There are serious risks that development in the A259 corridor west of Chichester could place further demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular to bus services.

Nevertheless, given the potential to effect bus priority on the approaches to Fishbourne Roundabout, it is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A11 should accordingly be modified to read:

“...

8. Provide safe and suitable access points for all users, including a main vehicle access from the A259. The development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys crossing the A27 at Fishbourne;

#### 9.10. Policy A12 Chidham and Hambrook

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Nutbourne Station. Substantial centres of employment and services that can be reached by public transport and cycling, offering strong potential to materially damp the demand for car use.

There are serious risks that development in the A259 corridor west of Chichester could place further demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular to bus services.

Nevertheless, given the potential to effect bus priority on the approaches to Fishbourne Roundabout, it is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this

strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A12 should accordingly be modified to read:

"...

7. Development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys along the A259, crossing the A27 at Fishbourne and where necessary on the approaches to Emsworth;

8. Facilitate improved sustainable travel modes, and new improved cycle and pedestrian routes, including linkages with Chichester city and settlement along the East/West Corridor;

#### 9.11. Policy A13 Southbourne Broad Location for Development

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach agrees unequivocally that Southbourne is a location that could accommodate growth on a strategic scale. It has a substantial range of service available within the settlement, including secondary education. It is well connected by bus and rail service to key destinations, including Chichester, lying to the east and west.

This is one of the few locations identified for growth that represents substantial additional development in a new location to the strategy in the existing Local Plan adopted in 2015. Thus, the transport impacts of development on the substantial scale envisaged at Southbourne are not covered or accommodated by the Chichester Area Transport Strategy that lies behind the existing plan. This demands, from first principles, that substantial further transport mitigation measures are required.

We recognise and endorse fully that the intent of the draft plan for Southbourne as a Broad Location for Development on a strategic scale, includes "Maximising the potential for sustainable travel links through improved public transport, including consideration of opportunities to reduce community severance caused by the railway line as well as the inclusion of cycling and pedestrian routes." (our emphasis).

The existing railway station at Southbourne is served regularly, however, it is not within the power of this plan to improve rail services. It is, however, well within the scope of action of the Local Planning and Highways Authority to work with bus operators to achieve a step change in the journey time, reliability, frequency and connectivity of bus services, and in particular the major corridor operated as service 700 by Stagecoach along the A259 between Havant and Chichester through Southbourne.

Notwithstanding the clear potential for sustainable connectivity in the western A259 corridor, there are very serious risks that development in the A259 corridor west of Chichester will place further significant car-borne demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular bus services, having the opposite effect to that intended: longer, less reliable and less frequent bus services, leading to a spiral of slowly declining use.

These risks, while very serious, look credibly likely to be entirely mitigated subject to carefully conceived and robust specified actions on the local highway network. It is perplexing to us that this potential still has not been identified, as part of a comprehensive "first principles" review of the transport evidence base. In particular given the former trunk status of the A259, there is evident potential to effect bus priority on the A259, including on the approaches to Fishbourne Roundabout.

With appropriate measures, including but not limited to this, to substantially boost the relevance and attractiveness of sustainable travel choices, strategic development at Southbourne could well be made highly sustainable.

In the absence of a refreshed transport strategy and transport evidence base, the draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact, the only reference that is made in Policy is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A12 should accordingly be modified to read:

"...Development should be comprehensively masterplanned to achieve a high-quality design and layout that integrates well with the surrounding built and natural environments to enable a high degree of connectivity with them, particularly for pedestrians and cyclists, and provides good the highest possible quality of access to facilities and sustainable forms of improved public transport services.

...

4. Provide a suitable means of access to the site(s), and securing secure necessary off-site transport infrastructure and service improvements (including highways in particular to the A259 corridor between Emsworth and Chichester) in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development) to promote sustainable transport options prioritising delivery of high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes;

..."

#### 9.12. Policy A14 Land West of Tangmere

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach strongly supports the principle of intensifying the level of development at the Strategic Development Location already identified and allocated West of Tangmere in the existing Local Plan. This serves to consolidate development at a location where effective and attractive public transport choices could be provided. It also conforms closely with the principle expressed in NPPF that the best possible use should be made of land on sites that are judged to be sustainable, or potentially sustainable locations for development.

It must be stressed that the current policy suite for the SDL has to date not brought forward development in this location. We recognise that a Master Plan has been adopted by the Council, and that a planning application (20/02893/OUT) for the full larger quantum of 1300 dwellings proposed in the draft plan has received a resolution to grant by the Council.

However, we are not aware that a sustainable transport strategy has been finalised.

Land West of Tangmere is not served by any existing regular bus services. Rather, an entirely new bus service corridor is anticipated to operate in the near term from Chichester through Tangmere and beyond towards Barnham. This would serve proposed allocations A7, A8 and West of Tangmere (A14) included in the draft Plan.

This is reflected in the language of the explanatory memorandum to Policy A14 at paragraph 10.65:

"Opportunities, in partnership with relevant authorities, to provide improved sustainable public transport routes linking the village with Chichester city, to improve cycle routes to the city, and better transport links to Barnham rail station and the 'Five Villages' area in Arun District; and.."

Initiating this service will be costly and will in large measure be funded not by developer contributions, but by DfT monies awarded through the West Sussex Bus Service Improvement Plan. It is crucial this service is both sustainable in the longer term without revenue support, and that the success of the service can be built on by scalable frequency improvements as strategic development comes forward in both Chichester District, and proposed allocations A7 A8 and A14, and in Arun District, in particular at Barnham, Eastergate and Westergate (BEW).

This demands measures to effect safe, direct and swift operation of the service especially within the city centre, where it approaches and crosses the A27 at Oving crossroads and on the eastern fringes of the District east and west of Tangmere. Without these measures, bus journey time and reliability will be severely compromised and the and impact of this service to damped car trip demands will be very substantially compromised. No such measures are proposed in the draft plan or its evidence base.

Changes to Oving Crossroads have recently taken place which, amongst other intentions, ostensibly provide bus advantage between Chichester and Shopwhyke. The junction in its current form does not offer material gain in bus journey time, as movements involve a less-direct route towards the city over an increased operating distance, much of which involves passage through heavily congested sections of the A27 and Westhampnett Road. A refreshed transport strategy supporting plan-led growth must revisit this area to secure an effective solution which offers bus customers the fastest and most reliable trip-time to and from the city.

In addition, the extension of public transport connectivity towards BEW and Barnham, including key links to secondary education and a logical railhead for journeys beyond towards Brighton and London as provided at Barnham Station, needs to facilitate bus priority between Tangmere and Nyton – whether using the A27, or preferably avoiding it altogether. There are significant safety concerns associated with the at-grade uncontrolled right-hand A27 exit onto the B2233 Nyton Road at Crockerhill Turn. This movement is also prone to extreme delay owing to the conflict with approaching westbound traffic on the A27, travelling at speed, which has priority. Our concerns with this junction in its current form can be expected to worsen with the increased traffic volumes predicted from new residential developments to the west of the city.

A solution providing a suitable short length of highway available only to sustainable modes, between Tangmere and Easthampnett, could provide a very effective solution to this. This would be deliverable within the scope of the separate proposed allocation at A19 Chichester Business Park, Tangmere. We comment on this separately.

Howsoever effected, a reliable direct and delay-free bus corridor between Barnham, BEW, Tangmere and Chichester could expect to secure very substantial elevation of the relative attractiveness of public transport over car use on the entire corridor and serve to effectively damp growth-related demands on this section of the A27. West of Tangmere, in the longer term, there is evident scope for the route corridor to operate as two branches – one via Shopwhyke and one via Westhampnett, effectively serving all the strategic developments proposed in the plan and transforming wider public transport connectivity to key employment destinations and services within and east of Chichester.

However, in common with all the other proposed allocations, the plan proposes no specific measures to provide, much less improve public transport or other sustainable modes to the site. This leaves the draft plan out of conformity with NPPF, especially paragraphs 104-106. The plan is inadequately evidenced and to the degree that public transport measures are identified and emergent, their successful implementation in the near and longer term will be jeopardised without clear measures to provide a safe as well as efficient bus route towards BEW and the Five Village area within Arun. The Duty to Cooperate is not effectively met and effective cross boundary collaboration on these strategic issues through the review of LSS is not demonstrated, despite the current version which identifies the issues.

To be made sound the LSS Review and a subsequent urgent review of the transport evidence base and strategy needs to take place. The strategic issues are especially critical east of Chichester, in our view.

Notwithstanding this foundational deficiency, to be made sound, Policy A14 should be modified to read:

“...  
8. Subject to detailed transport assessment, provide primary road access to the site from the slip-road roundabout at the A27/A285 junction to the west of Tangmere providing a spine road link with secondary access from Tangmere Road. Development will be required to provide or fund mitigation for potential off-site traffic impacts through a package of measures in conformity with Policy T1 (Transport Infrastructure) and T2 (Transport and Development) and DfT Circular 01/2022 that maximise the relevance and use of sustainable travel modes, in particular bus services;

9. Make provision for improved sustainable travel modes between Tangmere and Chichester city, in partnership with relevant authorities, including improved direct, seamless safe and reliable and additional bus and cycle routes linking Tangmere with Chichester city, Shopwhyke and Westhampnett. In conjunction with measures in support of Allocation A19, Opportunities should also be explored contributions shall also be sought for providing improving high quality cycling and bus service transport links with the 'Five Villages' area and Barnham rail station in Arun District; and...”

#### 10. Concluding comments

Stagecoach recognises its role as a key stakeholder in the plan, as well as a local employer and corporate citizen. We recognise the primacy of the plan-led system as the mechanism intended to resolve complex challenges, including the proper alignment of transport and spatial planning, which as the National Decarbonisation Strategy for Transport among other policies makes clear, has never been more vital.

In making our representations, we emphasise that we are entirely supportive of the Local Planning Authority and the relevant Highways and Transport Authorities, in their efforts to properly manage the amount and pattern of development to secure vital policy objectives. We recognise that balancing delivery of assessed development needs with a wide variety of other constraints is a very difficult task.

The transport issues faced by the plan are recognised in the draft plan as being serious and long-standing. We believe that there are ways to arrive at a suitable transport mitigation strategy that has regard to wider strategic issues and resolves existing problems in a much more effective way than those pursued to date.

We support the spatial strategy of the plan as it evidently provides the basis to secure the necessary step change in the quality and use of sustainable transport modes, as it explicitly seeks to do. However thus far, there has been insufficient work done to define the measures that will credibly secure these outcomes.

Stagecoach therefore urges the authorities to draw us into the necessary effective ongoing collaborations that is expected by NPPF paragraph 16 and 106; and DfT Circular 01/022, to do this work, prior to, rather than after the submission of the draft plan. We look forward to being approached to initiate this dialogue at the earliest opportunity.

#### Change suggested by respondent:

To become sound Policy A8 must be modified to read:

“...  
12. Provide high quality connectivity by sustainable travel modes focused in particular on a corridor between Chichester city centre and Tangmere along Shopwhyke Road, including new improved cycle and pedestrian routes, and a frequent bus service taking advantage of effective bus priority measures on Oving Road at the A27;  
...”

Chichester Local Plan 2039 Regulation 19 Stagecoach South representations.docx - <https://chichester.oc2.uk/a/skh>

## Object

**Document Element:** Policy A9 Land at Westhampnett/North East Chichester

**Respondent:** Stagecoach South (Rob Vince) [8141]

### Summary:

This land is already allocated and consented as part of the existing 2016 Local Plan. All reserved matters are determined.

The site lies on service 55 between Chichester, Westhampnett and Tangmere. This established service benefits from additional demand from the development at Phase 1. Phase 2 which is currently well underway, does not benefit directly from bus services. However it is a compact and logical form of development where walking and cycling to local facilities and employment is a credible option.

The existing allocation rolls forward policies in the 2015 Local Plan. In so doing it is possible to see which have been effective.

Point 9. regarding bus service and routing has not been effective. In particular the potential for a bus only link between the site and Graylingwell has not been established as policy anticipated. Given congestion around the Portfield area acutely affects public transport this, or alternative methods to secure bus priority over private car use, a clear and unequivocal policy steer is required.

The lack of an up-to-date transport evidence base is ultimately at the root of these issues. Arguably the policy and allocation can only be made sound once this refreshed evidence base in place.

### Full text:

Chichester District Local Plan 2039 – Pre-Submission (Regulation 19) Consultation

#### 1. Introductory Comments

Stagecoach South is the main commercial public transport operator across Chichester District. The Company has headquarters in the city, which is also the principal public transport hub for the District and it's rather wider travel-to-work area encompassing much of the Arun District. Our services extend throughout and beyond the District boundaries, as far as Littlehampton, Midhurst, Havant and Portsmouth. The vast majority of services operate on a commercial basis – that is to say, sustained by passenger use and fare revenue, including concessionary reimbursement.

While the role of the railway is significant in much of the District, especially the east-west Coastway line, yet bus services account for more boardings locally than the railway, with Chichester depot services carrying over 3.5m passengers each year.

Unlike bus services in other parts of the country, the local network has recovered strongly after the pandemic with fare-paying passenger numbers over 95% of 2019 levels, albeit with concession patronage somewhat lower. This has helped secure not only a stable but growing bus network even during this period of rapidly rising operational costs, avoiding the need for the service contractions seen in other regions. Indeed, during the second quarter of 2023 Stagecoach will invest £5.5m in brand-new vehicles for high-profile coastal Service 700 – one of the largest vehicle investments for Stagecoach Group this year.

Our services are therefore critical to existing and future local connectivity. As the Plan acknowledges, mobility demands do not respect planning authority boundaries. The role of our services is especially high to settlements in the broad A27 corridor, within the District and beyond. This includes major settlements in Arun District such as Pagham and suburban Bognor Regis, where bus is the only mass public transport option. As the Council is well aware, there is an even higher level and rate of committed development envisaged in these locations in the Arun District Local Plan than in Chichester.

It is already evident to the planning authorities, West Sussex County Council and National Highways, as proprietor of the A27 Trunk Road, that accommodating growing mobility demands across Chichester District and especially around Chichester itself, is becoming increasingly challenging to the point of being seriously problematic.

Stagecoach has a particular interest in this Plan arising from:

- The already clear and highly deleterious impact of congestion affecting our operations and their reliability and attractiveness to the public. The effects of these on the approaches to Chichester, and around the A27 bypass are especially severe. If public transport is to retain its existing role – even before the needs of any meaningful growth both in Chichester and neighbouring authorities is considered, are considered – the Council and the Highways Authority need to

arrive at clearly-defined measures to protect buses from chronic delay and the damaging impacts arising from the lack of bus network resilience and customer journey times.

- In connection with the above, the need to properly consider the predictable impacts of committed development in Arun District on the transport network and in particular the operation of bus services. The duty to cooperate on cross-border strategic matters is not limited merely to accommodating housing requirements.
- The fact that our entire business premises and operational base at Chichester is the subject of allocation for redevelopment within the Plan period. Specifically, this includes our Head Office, the Bus Station as the operational hub of the network and the key interchange for passenger journeys – including those that involve the railway – and the bus depot required to support the entire operation. Notwithstanding many years of discussions, there is as yet no agreed deliverable strategy to replace these facilities either in the Draft Plan or elsewhere.

Stagecoach broadly supports the vision and priorities of the draft plan. In most respects, Stagecoach supports strongly the spatial strategy and the identified site allocations that flow from it, and the evidence.

However, it has serious concerns about the soundness of the plan as proposed for submission, for important regards outlined in this response. These are made in the light of requirements set by the National Planning Policy Framework (NPPF), in particular at paragraphs 15 and 16; 35, 105-109 inclusive and having due regard to the need for allocations to satisfy 110-112 inclusive in due course as development permission is sought; and paragraph 174.

Paragraph 16c) of NPPF makes plain that strategic plans and policies should “be shaped by early, proportionate and effective engagement between plan-makers and communities, local organisations, businesses, infrastructure providers and operators and statutory consultees” (our emphasis). This makes plain that collaborative and ongoing involvement of public transport operators is both necessary, and separate and in addition to the engagement with statutory consultees. This has not taken place.

Para 1.25 of the draft plan states that “the council has engaged constructively, actively and on an ongoing basis with other local authorities and organisations to address key strategic matters.” Despite the requirements in NPPF and contrary to the statement made, Stagecoach has not been approached or involved in a meaningful, collaborative or ongoing way in the preparation of the Plan.

Our main concerns centre around the fact that the plan strategy is neither backed by sufficient transport evidence. Even more importantly, the plan relies on a wholly car-based transport mitigation strategy despite policy stating that this is not the case, and the track record of the existing Local Plan, based on a very similar strategy, that has failed to bring forward meaningful mitigations to date to prevent traffic conditions substantially worsening. There is no support in policy for the achievement of the Strategic Objectives in the Plan. Nor is there definition of any measures in the 2023 Transport Study to make provision for sustainable transport infrastructure or services – much less materially improve them.

Finally, to the extent that updated transport evidence has been provided in the form of the 2023 Chichester Transport Study, arising from updated traffic modelling, it does not support the contention that highways capacity constraints on and around the A27 justify not meeting the objectively-assessed development needs of the area, as the draft plan contends.

## 2. Vision and Strategic Objectives

### 2.1. Issues and Opportunities

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant, proportionate and up to date evidence

Stagecoach recognises the important role of the West Sussex and Greater Brighton Strategic Planning Board which agreed a Local Strategic Statement (LSS2) in early 2016 to identify spatial planning issues across the wider area. This established strategic priorities and policies to guide longer term strategic growth in a coordinated and well considered matter. This institutional framework and the purpose of the LSS is a highly significant one and is at the heart of efforts to properly fulfil the statutory Duty to Co-operate, including with regard to strategic infrastructure issues, as NPPF requires.

Given the long period of time elapsed since the 2018 Reg 18 consultation and the already very clear constraints on strategic infrastructure capacity, it is of great concern to Stagecoach that the LSS2 has not been updated to reflect emerging issues in the intervening period. A review and update of the LSS2 has only just commenced. This includes a study of projected housing and employment needs, transport impact, infrastructure and spatial options to deliver the required development in the period after 2030. This Chichester District draft plan covers a period extending to 2039 – therefore well beyond 2030 and the nominal currency of LSS2.

However, infrastructure needs are pressing today. Stagecoach is presented with severe highway operational problems on a near-daily basis. During the winter of 2022-23 we have, for example, seen key road links impacted for many weeks by acute disruption arising from flood events. Unpredictable, but seemingly more-frequent, exogenous events expose a lack of resilience in the highway network around Chichester and its travel-to-work area. However, serious, chronic, unpredictable delay has been normalised over recent years, with peak-time congestion having quickly returned after the

pandemic. The existing development strategy has failed to bring forward measures having any impact on this to date, and key commitments – notably at west of Chichester Phase 2 and at Tangmere – have yet to commence to further aggravate the issue.

We have no confidence in the transport mitigations proposed in the existing Local Plan and LSS2 being sufficiently effective, even if deliverable at all. Indeed, the existing adopted Local Plan does little more than make vague speculations about the sustainable transport measures that might be achievable. The draft local plan review is no different. It has no ambitions at all for sustainable modes and thus, makes no meaningful provision to meet them.

This is especially relevant in light of the fact that the approach to resolving issues on the A27 around Chichester that were anticipated in 2015-16 have fallen away. LSS2 is thus currently inadequate to act as a part of an up-to-date, proportionate, and relevant evidence base for the Plan.

An update of a traffic model lies at the heart of a 2023 Chichester Transport Study. This talks no account of the existing role of non-car modes, nor can it do so. It is unable to properly evaluate the nature of problems or solutions that involve public transport, or for that matter, other sustainable modes.

Therefore, we consider that the combination of committed and additional development needs that must be accommodated over the whole plan period between 2022 and 2039, in both the Chichester and Arun Districts, require a “first principles” review. This must be based on a refreshed transport evidence baseline of no earlier than 2022 – given that the effects of COVID distort 2020-22 – and the transport infrastructure and service requirements to sustainably support those needs.

Key issues – including substantial changes with regards to transport issues and challenges, as well as potential solutions – thus do not form part of the evidence base that steers this plan. Given long term changes in travel patterns, and mode share that took place during COVID, as well as a local and national policy context that seeks to radically reduce and then eliminate transport-related carbon emissions, this is especially problematic.

The specific problems of congestion and network resilience that are evident on the A27 and the approaches to Chichester remain a set of especially difficult problems that disproportionately affect the efficiency, reliability and attractiveness of the bus network, that evidently demand larger-scale strategic responses involving multiple stakeholders, including bus operators.

Where the effects of development on the national Strategic Roads Network (SRN) are concerned, the approach of National Highways to addressing and responding to the mobility needs of development has now substantially changed following the promulgation of the DfT Written Ministerial Statement LTN01/22. This makes it clear that adding highways capacity is no longer the first or only strategy that should be pursued, but one subordinate this to maximising the potential of non-car modes and sustainable travel.

“Effective and ongoing collaboration” on transport matters has not led to solutions being agreed and published for public scrutiny as part of the plan evidence base. Whatever the approach to modelling and “highways improvements” that may be agreed or pending agreement with the County Highways Authority and National Highways, Stagecoach is neither participant or sighted. This is despite the clear requirements set out in NPPF Para 106 b) that “Planning policies should ... be prepared with the active involvement of local highways authorities, other transport infrastructure providers and operators and neighbouring councils, so that strategies and investments for supporting sustainable transport and development patterns are aligned.” (our emphasis).

We therefore consider that the Council has failed to comply with the requirements of NPPF paragraph 25 and 26 that “relevant bodies” are involved in plan-making, especially with regard to addressing the needs for infrastructure. Public transport services and the infrastructure that supports its operation and use clearly fall within matters relevant to plan-making. This is explicit in NPPF Chapter 9 and indeed within the plan itself – for example reference to public transport and sustainable modes in the Vision for the plan.

It should be stressed that the Regulation 18 “Preferred Approach” consultation took place in December 2018 – over 4 years ago and prior to COVID, based on LSS2. The inordinate length of time that has elapsed between the Regulation 18 and Regulation 19 stages greatly challenges the LSS2 and other parts of the evidence base, especially as the pause straddles the COVID epidemic. That would include the transport modelling baseline, and key assumptions in any traffic modelling that took place prior to mid-2022, which is a point at which a reasonable “new normal” post-COVID might be considered to have become established. In that period, Arun District has also adopted its own Local Plan development strategy that accommodates an unprecedented quantum of development immediately east and south-east of the District Boundary – creating additional substantial transport impacts directly affecting the A27 and multiple major approaches to Chichester crossing it.

The established mechanism to fulfil the Duty to Co-operate has thus not operated effectively.

The Plan is not founded on a relevant, proportionate and up-to date evidence base and is thus inadequately justified.

## 2.2. Spatial Portrait

The spatial portrait is generally succinct and accurate. However, it makes no mention of road-based public transport, the role of the City as a public transport hub, or the range of bus services that provide local connectivity (Section 2.4 and 2.5). The complete concentration of post-16 education in the City itself as just one example of the peculiarities of transport demands in the area, is not highlighted, though this has a profound influence on peak time travel demands affecting the most congested parts of the highway network. Among other things, the role of bus services in supporting the educational system of the plan area is very great indeed.

The potential role of bus in addressing the already-severe transport problems of the plan area and beyond seems entirely overlooked. The spatial portrait is thus clearly inadequate and incomplete.

## 2.3. Strategic Objectives

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Chapter 9 of NPPF and paragraphs 104 and 105 in particular require that plans should:

“Transport issues should be considered from the earliest stages of plan-making and development proposals, so that:

- a) the potential impacts of development on transport networks can be addressed;
- b) opportunities from existing or proposed transport infrastructure, and changing transport technology and usage, are realised – for example in relation to the scale, location or density of development that can be accommodated;
- c) opportunities to promote walking, cycling and public transport use are identified and pursued;
- d) the environmental impacts of traffic and transport infrastructure can be identified, assessed and taken into account – including appropriate opportunities for avoiding and mitigating any adverse effects, and for net environmental gains;...

...The planning system should actively manage patterns of growth in support of these objectives. Significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. This can help to reduce congestion and emissions, and improve air quality and public health...”

The Strategic Objectives do not conform with NPPF in these foundational requirements adequately, to transparently steer the plan strategy. They should therefore be amended to read:

“Plan to provide local infrastructure to support new development and seek opportunities to address existing identifiable infrastructure problems deficits, such as in particular those relating to the A27 and its junctions and wastewater treatment.”

Paragraph 2.36 states, in the context of the Climate Emergency and the National Trajectory to “Net Zero” that “The council will enable the delivery of infrastructure, jobs, accessible local services and housing for future generations while protecting, conserving and enhancing the historic and natural environment.”

Naturally, we support this intent.

However, there is no acknowledgement of the role current patterns of transport use contribute to carbon emissions, nor that substantial mode shift is necessary to address sustainably an acute lack of capacity on the local network and the SRN, especially around Chichester. This is especially concerning as the basic conceptual link is not made between the fact that the greatest such problems lie on the A27 corridor and around Chichester, while these are also at the same time present many of the most sustainable locations for development, and where the opportunities to secure much greater use of sustainable modes also exists.

Strategic Objective 7 “Strategic Infrastructure” includes the following statement:

“To work with infrastructure providers to ensure the timely delivery of key infrastructure to support delivery of new development. New development will be supported by sufficient provision of infrastructure to enable the sustainable delivery of the development strategy for the plan area. Key infrastructure to support the Local Plan will include improvements to transport, ...

A sustainable and integrated transport system will be achieved through improvements to walking and cycling networks and links to accessible public transport. Highway improvements will be delivered to mitigate congestion, including measures to mitigate potential impacts on the A27 through a monitor and manage process.”

The latest transport evidence in the Chichester Transport Study makes no pretence to define much less to deliver a “sustainable or integrated” transport system. It is wholly devoted to sustaining current levels of car use across the District, to and through Chichester area.

It is no more than the lightest of touches to the approach taken to supporting the adopted Local Plan, an approach that is already almost 10 years beyond the date of its gestation but has yet to deliver any significant capacity improvement schemes, much less any measures that sustain even current levels of public transport journey times and reliability in the face of increasing congestion – much less any betterment.

Of the six key junctions on the A27 around Chichester, recognised to require significant mitigation given they are saturated for extended periods, five accommodate regular bus services - indeed frequent ones at least every 20 minutes in several cases. The sixth at Oving Road, relates directly to a key corridor where bus services are needed to support strategic growth currently being delivered at Shopwhyke, as well as substantial further growth West of Tangmere (proposed allocation A14) and "East of Chichester" (A8), south of Shopwhyke Road.

As stated at p12 of the Study Summary "The modelling shows that all the junctions on the A27 Chichester bypass are well over capacity, even before adding in the Local Plan development and with the exception of Portfield Roundabout are actually shown to be over capacity in the base model year (2014) in one or both peaks". This much has indeed been evident for years from delay and periodic even more severe disruption arising to Stagecoach services from the lack of network resilience.

The reassignment of through and local traffic through Chichester to avoid the A27 bypass is an especially serious issue for bus services that penetrate the city. This is leading to consequential saturation of a range of junctions used by buses. Rising delay and unpredictable running times are at the root of our decision to sever the long-established Portsmouth to Littlehampton service in 2023, which will in future no longer run across Chichester, but terminate to provide additional dwell time to mitigate the impacts of congestion.

While this congestion affects all road users including businesses and freight traffic, the effect on scheduled bus services is greatly higher, as such services cannot reassign route to 'beat the queue'. Traffic congestion often encourages greater car use for this reason, in tandem that people are happier to sit for extended periods in their own vehicle on a seamless door-to-door journey than wait at the roadside for a delayed bus making slower progress in lengthy queues.

As the Study admits at para. 1.3.2 "Although, there have been works at the Portfield Roundabout in this timeline, no other mitigation schemes have been completed along the A27 corridor, as such the mitigation schemes defined in this report will also be required to consider the development from this plan period."

In other words, in the 8 years since the current Local Plan was adopted in 2015, there has been minimal progress in delivering the traffic mitigations. There is no clarity at all when any such mitigations will be brought forward. It is hardly surprising then, that traffic conditions have deteriorated. The "predict and provide" transport strategy supporting the current plan has failed.

Despite this, the Draft Local Plan Review proposed to "double down" on exactly this strategy. It represents, like the rest of the evidence base, a "rolling forward" of the current car-based strategy by 9 years, with the lightest of touches to attempt to accommodate car trip demands from a relatively modest additional development quantum.

Nevertheless, the Study requires a global 5% reduction in trip demands arising from unspecified "credible" (paragraph 4.1.2) sustainable transport and travel planning measures. It is unclear why use of non-car modes will see disproportionate growth when no measures are in place to make them more attractive. This 5% increase in use translates to a doubling in the modal share of bus services. There is no evidence nationally, anywhere, that simple ignorance of alternatives to the car is the main barrier to uptake.

The outputs of the 2023 Chichester Area Traffic (SATURN) model are set out at Table 5.1 (am peak) and 5.2 (pm peak) without mitigation. These betray just how seriously compromised the whole network around Chichester is, and will be in future, even with implementation of a mitigation package to increase traffic capacity that is understood to cost between £92m and £164m – and which the Study and the draft plan acknowledge cannot be delivered through developer funding sources alone. Unspecified external funding presumably from HM Treasury through DfT is required.

Even if this provided and the schemes are delivered, Tables 8.1 and 8.2 indicate these will provide minimal relief. The final columns suggest key junctions, including Portfield, Fishbourne Road and Cathedral Way East will remain at well over 100% ratio of flow to capacity (90% is considered the point at which saturation is approached, with the onset of increasing delay above that figure). RFCs in tables 8.1 and 8.2 are some of the highest we have ever seen in a local transport evidence base for a post-mitigation scenario. While the serious potential risk of reassignment across Chichester City is greatly reduced, which is important and welcome given its impact on bus services, Tables 8.1 and 8.2 show the extent of post-mitigation saturation is also egregious, covering a very large number of key links and junctions.

On every measure and criterion, then, including cost deliverability and effectiveness, the revised Transport Strategy falls well short of evidence to suggest the transport impacts of the plan can be properly addressed by this means.

Despite the repeated statements about sustainable modes throughout the draft plan and Chichester Transport Study, only 2 paragraphs at Section 6.2 within the Study are devoted to public transport:

"6.2.7 The funds generated from the parking management schemes, local/nation funding schemes and developer contributions could also be utilised to fund potential public transport enhancements within the city centre including an expansion of the bus priority lane system within Chichester City Centre. This could reduce reliance on the car in the longer term towards sustainable public transport. A park and ride scheme could be incorporated within a bus priority lane network in the future depending on the uptake and successfulness of early bus priority trials.

6.2.8 Chichester City centre has a constrained existing public highway network. Therefore, any proposed dedicated public transport or light transit corridors that could be implemented would be at the expense of existing highway. This could be managed through a time-based system where certain routes are restricted to public transport only during specific times. E.g., peak hours.”

There is some very high-level consideration of Park and Ride following this section. None can be considered a serious practical evaluation of consolidating car-borne trips onto bus services, including existing ones, for example local mobility hubs, more frequent bus corridors, delivery of specific bus priorities.

None of the discussion of alternatives to “predicting and providing” for unconstrained traffic growth is rooted in a deliverable evidence base, or proper evaluation of options and specific projects.

To take just one aspect of the few specifics that can be picked out, a workplace parking levy is hypothesised. This would apply only to “offices”, in Chichester city centre (para 6.2.3), without consideration given as to how this could be practically achieved or even that a meaningful amount of office based employment would qualify. Much less is any consideration given to how far focusing a strategy only on office-based workers would actually deliver a particularly significant effect, apart from to create a strong incentive to relocate offices out of the city centre to places out of reach by public transport.

Looking at the Chichester Transport Study 2023 and the draft plan together, there is insufficient evidence that the traffic capacity increase proposed in the 2023 Transport Study is any more affordable or technically deliverable, or likely to be sufficiently effective, than those in the past strategy. The evidence more strongly points to the fact that no highway improvements are identifiable or economically deliverable to meet even short term increases in demand for car-borne mobility on most of the network around Chichester.

There are no published strategies or schemes clearly supporting the contention that the objective of improving sustainable modes is technically achievable or deliverable either. The plan makes generalised assertions that such strategies will be devised and implemented only after serious problems emerge from a shortfall in the car-borne transport strategy.

The reference to “monitor and manage” is undefined and unsubstantiated. There are no outcomes stated, no mechanisms specified and no timescales for action.

Our experience today is that network conditions have reached unacceptable and prejudicial levels of severe unpredictable delay. The saturation of the network is already evident well outside the traditional peaks on key sections of highway and at key junctions. External shocks such as the effects of severe weather are becoming more common, leading to delays so extreme as to justify the description of “gridlock”. The plan does not identify a strategy to effectively address this, in particular by consolidating passenger car trips onto more efficient public transport vehicles. This is unacceptable to Stagecoach.

#### 2.4. Local Plan Vision

Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the broad approach in Plan Vision and in particular that by 2039, the Plan will support and enable greater use of sustainable modes. However, there is no link made between reducing the use of private cars, and the need for a step change in the use of sustainable modes. Without a published transport evidence base it is impossible to establish a suitable sustainable transport strategy to support both carbon reduction and alleviation of the problems arising from acute congestion. Even on a very crude basis, to achieve a meaning mode shift on key approaches to the A27 Chichester Bypass will require more than 20% of existing peak car-borne journeys to transfer to other modes. A 10 percentage point transfer to bus (about half this shift) would imply more than doubling peak hour bus passenger boardings.

The Vision is nothing more than an aspiration, that needs to more definitively aim at key outcomes, for the plan to be effective. The Vision should thus be altered to read:

“Get about easily, safely and conveniently with less reliance on private cars –making the greatest possible use of the rail and enhanced bus network, and with more opportunities for active travel including walking and cycling; to materially reduce dependence on private car use.”

Underpinning the Plan’s spatial strategy, the Vision section goes into more specific detail about key localities in the Plan area.

Regarding Chichester, Paragraph 2.39 states: “The emphasis will be upon consolidating and enhancing the role of Chichester city as the plan area’s main centre, whilst also developing the role of key settlements to its east and west. The focus will be upon creating communities with good access to a range of employment opportunities and affordable housing for young people and families to balance the ageing population.”

This is clearly the appropriate focus for meeting the District's development needs in a sustainable manner. The city and key settlements to the east and west, are those places already able to make use of relevant public transport services, both rail and bus. Especially within and near the City, walking and cycling can credibly present highly relevant choices. This emphasis clear can be expected to address the requirements of sustainable development set out in NPPF and their local application set out in the Plans Strategic Objectives.

However, this needs a robust transport strategy, to avoid a further concentration of development and its traffic impacts occurring on or near some of the most chronically congested parts of the highway network. To date, the absence of intervention has strangled the bus network through further marked deterioration in traffic conditions. This by consequence increases the risk of bus delay or cancellation, lengthens journey time and reduces customer confidence in bus as an attractive alternative mode of travel.

In April 2023, Stagecoach is making significant timetables changes to improve operational resilience in and around Chichester. The biggest such change is the severance of the Portsmouth to Littlehampton section of service 700, at Chichester, with buses operating independently to the east and to the west and ending cross-city links. This is planned to reduce the probability of delay but at the cost of additional vehicle resource (circa £200,000 per annum) which could be better spent providing new or enhanced services. We anticipate a small loss of custom as a direct consequence of the change, but have little choice other than to take negative action so as to fulfil our statutory punctuality obligations.

If the Strategic Objectives of the Plan and its Vision are to be achieved, in the way required by NPPF paragraphs 104-105, a properly-evidenced transport mitigation strategy needs to create the conditions where bus journeys are more reliable than car journeys and thus mobility demand switches as far as can be realistically achieved away from car use, to bus use and other more sustainable modes.

Beyond Chichester, the Plan Vision focuses on key localities beyond to the east and west.

To the west of Chichester a focus on growth at Southbourne is justified at paragraph 2.43: "...the aim is to take advantage of the village's good transport links and existing facilities to deliver significant new residential-led development within the broad location for development which will further enhance local facilities and offer opportunities to reinforce and supplement existing public transport, including bus routes."

We agree this is a very significant opportunity. However, if the requirements of NPPF paragraphs 104-105 are to be met, this demands that effective bus priority is delivered on the A259 corridor, especially eastbound at Fishbourne and westbound approaching Emsworth. Without such measures, the growth committed and planned will serve only to further undermine bus journey time and decrease punctuality on the existing 700 service, entirely contrary to the aims of the Vision.

The emphasis on the A259 corridor served by Stagecoach 700 west of Chichester is reinforced at paragraph 2.45 stating that "Between Chichester and Southbourne, the Plan provides for more moderate levels of growth within the parishes of Fishbourne, Bosham and Chidham & Hambrook, ... with opportunities to support and expand existing facilities and for increased use of public transport options". We strongly support the principle, but the Plan must follow through with specific public transport priority measures that facilitate rather than prejudice such an outcome.

East of Chichester the focus is at Tangmere, where the existing allocation for about 1000 dwellings is being uplifted by 300. Paragraph 2.44 justifies this among other things recognising the scope for "...improved and additional bus services and cycleways will provide better connections to Chichester city and east to Barnham and the 'Five Villages' area in Arun District." We unequivocally endorse this conclusion. Realising a "game-changing" level of bus service quality, reliability and frequency east of the city, also serving committed and planned development north and south of Oving Road at Shopwhyke, is equally essential, given that all SRN links and junctions are approaching equal saturation.

The National Bus Strategy has given new focus on partnership with West Sussex County Council to discuss and deliver a significant new bus service between Chichester, Shopwhyke, Tangmere, Eastergate and Barnham, supporting committed development and acting as an initial phase of what ought to be a more ambitious longer-term strategy to support growth beyond 2025 in both Chichester and Arun Districts. For these improved bus services to be both deliverable and effective, robust bus prioritisation is unavoidable. No such measures are proposed in the Plan or its evidence base and we therefore suggest inclusion of plans to facilitate safe and efficient bus operation between Tangmere and Nyton/Eastergate, ideally avoiding the need to join A27 through-traffic entirely.

We welcome the clear recognition that these localities identified for growth, benefit from existing relevant public transport services. The Vision also sets an expectation that bus services in particular should be "enhanced" and "reinforced".

We entirely agree that these opportunities exist, across the broad strategy and strategic allocation proposed by the draft Local Plan. Securing them will be crucial to achieving national and local policy objectives, including the Strategic Objectives. However, to our continuing very great dismay, the Plan goes no further to defining how this will be achieved. As such the Vision is not demonstrable achievable or deliverable.

Accordingly the Plan cannot be considered effective, in the sense of NPPF.

Remedying this, demands specific measures to protect bus services from congestion in the following corridors:

- A259 East of Emsworth
- A259 Fishbourne
- A 259 Via Ravenna/Cathedral Way
- A286 Stockbridge Road north and south of A27
- B2145 Whyke Road/Hunston Road
- A259 Bognor Road, east and west of A27 and extending to the District Boundary
- B2144 Oving Road/Shopwhyke Road east and west of the A27
- A 285 Westhampnett Road/Portfield Way/Stane Street, potentially involving a mode filter at the west end of Stane Street

These must be defined to a sufficient level of detail to assess their effectiveness and deliverability, including costs.

This would then allow West Sussex County Council and Local Transport and Highways Authority, ourselves as the principal bus operator, and where appropriate other organisations that would be directly tasked with delivering the mitigation package, to agree service levels and standards necessary to deliver specified outcomes, including journey times, frequencies, capacity and hours of operation on the network, and also in respect of the strategic allocations and Strategic Locations for Growth.

The agreed mitigations strategy should be set out in an up-to-date Infrastructure Delivery Plan backed by clear funding commitments, including a funding strategy to justify necessary developer contributions.

Where necessary to support evidence of effectiveness and deliverability, clear statements of support, which might include Statements of Common Ground between the LPA, LTA, National Highways and Stagecoach, could be provided.

### 3. Spatial Strategy

#### Stagecoach Supports

Stagecoach well recognises the constraints outlined in the explanatory narrative at the start of Chapter 3.

In particular we strongly endorse that strategy in that it reflects that the best opportunities to meet housing and employment development requirements sustainably clearly exist in and close to Chichester and on the key east-west movement corridor where – subject to effective measures being delivered to make these modes more attractive, efficient and relevant – sustainable modes can credibly provide for a much higher proportion of movement demands, mitigating most effectively the potential traffic impacts of development.

We agree that the Manhood Peninsula suffers serious environmental constraints, but, added to these, public transport and other sustainable modes cannot provide such attractive alternatives, and significant further development risks merely reinforcing already high levels of car use, aggravated by the carbon impacts of the distances involved – something the plan does very little to evaluate, and makes no reference to.

We endorse the conclusion in paragraph 3.24 that significant development in the part of the District north of the National Park is inappropriate. The rationale is principally on landscape and visual character. This exposes a fundamentally biased approach to plan making that has consistently underplays transport accessibility and carbon issues. In fact, the lack of local services and the extended distances that need to be travelled to fully participate in society in this area, with no realistic prospect of public transport offering relevant choices, ought to rule such a strategy out of play on a far less aesthetic and interpretational basis.

#### 3.1. Policy S1 Spatial Development Strategy

##### Stagecoach Supports

The Spatial Strategy flows clearly and logically from the Spatial Portrait, and the opportunities and constraints identifiable across the Plan area. It represents a logical and justified continuation of the existing Local Plan strategy. In particular the spatial strategy maximises the potential for sustainable modes to contribute to meeting a much higher proportion of all the District's mobility and accessibility needs.

#### 3.2. Policy S2 Settlement Hierarchy

##### Stagecoach Supports

The settlement hierarchy clearly reflects the service endowment and potential self-containment of the settlements in the District. In particular, the second tier of settlement hubs includes secondary schools, which are major peak trip generating uses. Service villages, in the main, also benefit from bus services running at least hourly, which can be expected to provide for a degree of mobility for the higher number of trip purposes that cannot be satisfied by walking or cycling within the immediate locality. Thus, a level of development to meet local needs in this tier is relatively sustainable.

There is a quite broad range of settlements in this category. We have concerns that, north of the National Park, the Service Villages have no realistic public transport choice. These include Plaistow/Ifold, Kirdford, Loxwood, and Wisborough Green. Such as exists is typically a 1/bus per day off-peak shoppers service offering up to 90 minutes in Horsham or Guildford and as such any development here even to meet local needs requires each adult to own a car. This contrasts strongly with Service Villages to the south of the National Park, which are greatly more sustainable.

#### 4. Climate Change and the Natural Environment

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This section of the plan is extensive and wide ranging, as should be expected.

However, remarkably, there is no acknowledgement whatever of the role of transport in mitigating climate change or its effects, not of the importance of sustainable movement and access being facilitated across the plan area in addressing anthropogenic impacts on the natural world at a more local level.

This exposes very clearly a troubling level of indifference to transport matters in the production of the Plan, which, while nationally quite common, is neither appropriate nor acceptable. The mitigation of transport impacts is not merely a matter speaking to the social and economic aspects of sustainable development. It is crucial to address the causes and effects of climate change that arise from transport, and personal mobility.

This is now well understood and at the centre of national policy, including the National Decarbonisation Strategy for Transport (July 2021) which at Section 5 commits the government to aligning land use planning and transport strategy much more tightly and effectively to mitigate the carbon emissions associated with the current dependence on cars, and the mode mix; but also to reduce travel distances, both increasing the potential relevance and effectiveness of all sustainable modes, and reducing average journey lengths for residual motorised journeys of all kinds.

National statistics show that well over a third of all domestic carbon emissions arise from land-based transport and of these, the vast majority arise from trips of over 10km – outside the range of large scale use of cycling. In fact, the potential of the plan to materially support carbon emissions reduction from within the plan area lies more in the realm of transport than any other policy theme – including emissions mitigation from buildings, which is in any event an aspatial matter and covered by nationally-binding building regulations. By 2025 something like 40% of all the emissions within the plan-area will be transport related.

There is no evidence supplied to support the plan that addresses the transport carbon impacts of the spatial development strategy in a clear manner.

There is no evidence supplied that sets out the effects of potential worsening of congestion on air quality within the plan area, arising entirely from the excess of passenger car movement demands over available and credibly deliverable highway capacity. This is despite the evidence set out and acknowledged in the explanatory memorandum at paragraph 4.130:

“4.130. The council’s Air Quality Action Plan and the West Sussex Transport Plan 2022-2036 both refer to the air quality issues faced by Chichester. There is currently one Air Quality Management Area (AQMA) in the plan area, located at St Pancras, Chichester. AQMAs are designated where air quality exceeds, or is likely to exceed, national air quality standards and objectives. Development within or impacting these areas, or that likely to cause the declaration of any further AQMAs, will be subject to an air quality assessment by the applicant.”

This is a retroactive approach – it is not “planning”, based on evidence.

We are well aware that air quality issues in and of themselves can render allocated sites to be undeliverable: a good example is in the Vale of White Horse, Oxfordshire, where strategic allocations on the A338 and A420 corridors have been held up for years by air quality issues at Marcham and Frilford, in large measure because agreed transport interventions were considered inadequate or undeliverable a very short time after the Plan was examined and adopted.

There is no evidence that shows how the development strategy can effectively mitigate these impacts as well as the further potential impacts that arise from the development strategy. This is exasperating, as there is clear evidence that could be drawn upon to show that that very substantial opportunities exist to:

- Speed buses up and make them more reliable by the delivery of bus priority on most of the key main corridors. Most of these even today operate relatively frequently
- Improve service frequencies and extend hours of operation.
- Secure significant background mode shift to bus as a result, damping pressure on key links and junctions, by consolidating demands on direct more reliable and more frequent bus services.

The spatial development strategy as submitted is in fact, likely to well conform to such additional evidence.

The allocations require substantial additional transport related work and evidence to demonstrate that the opportunities for sustainable transport have been identified and taken up as required by NPPF paragraphs 104-105.

With regards to specific policy, Policy NE22 should be modified to read:

“Development proposals will be permitted where it can be demonstrated that all the following criteria have been addressed:

1. Development is located and designed to minimise traffic generation and congestion through access to by maximising the relevance and attractiveness of sustainable transport modes, including maximising

provision of specific demonstrably effective measures to make pedestrian and cycle and public transport routes and networks more direct, more safe, faster and more reliable;...”

## 5. Housing

### 5.1. Policy H1 Meeting Housing Needs

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

The presumption of the planning system is that local planning authorities should seek to meet their objectively assessed development requirements in full. These needs are assessed by a defined Standard Methodology set out in Planning Practice Guidance and elsewhere, that has explicit regard to ensuring that the economic and social effects associated with housing are properly provided for, to avoid exacerbating serious problems that arise from inadequate housing supply.

As a significant local service provider and employer, Stagecoach is concerned that existing issues with housing availability and affordable housing supply are not exacerbated. This has a direct bearing on staff recruitment and retention. It also has an indirect bearing on our cost base.

The existing problems with housing affordability have developed over many decades of undersupply. It should be emphasised that the significant boost to the supply of housing that has been sought by governments over the last 15 years, has only begun to take effect relatively recently in this District. Tackling the problem will require years of consistent attention.

Stagecoach notes that the Council is no longer proposing to meet its identified housing needs in full. Rather than 638/annum the Council is allocating a total that implies an annual delivery rate of 535/annum.

While a number of matters evidently present challenges to the Council in identifying a sustainable development strategy. Paragraph 5.2 indicates that “constraints, particularly the capacity of the A27 has led to the council planning for a housing requirement below the need derived from the standard method...” The blame for being unable to meet housing requirements is thus laid squarely at the door of transport infrastructure and systems.

This conclusion in no way follows from the evidence in the Chichester Transport Study. This, rather, makes the statement that when a higher annualised quantum of 700 dwellings per annum was tested, in the majority of cases the traffic capacity improvement package would perform little differently. To quote the Study:

“5.6.3 The network performance outputs analysed comprising V/C%, Delays (seconds) and Queues (PCU’s) suggest that generally the proposed SRN mitigation identified for the Core Scenario, can accommodate in the most part, additional increase in development to 700dpa.”

Whether the rest of the local road network is similarly protects is moot.

Irrespective of these results, even if the contention made in the draft plan were true, unlike many other constraints, this is amenable to a suitable effective strategy to address the constraints identified being collaboratively conceived. This is what NPPF expects, as set out in paragraphs 104-106.

Where the A27 is concerned, as part of the SRN, National Highways is now working to a substantially revised approach than that in force at the time to current Local Plan was prepared, or LSS2, or reflected in the Chichester Transport Study. This is set out in DfT WMS 01/22. This document is the policy of the Secretary of State for Transport in relation to the SRN which should be read in conjunction with the National Planning Policy Framework (NPPF). It replaces the policies in the Department for Transport Circular 02/2013 of the same title.

It makes plain that to accommodate additional demands arising from development, National Highways (NHC) expects to meet the requirements of its statutory license in a substantially different manner. With respect to development NHC LTN 01/22 continues to address the tensions between national policy for the environment and carbon mitigation, the ongoing need to substantially boost the supply of housing as well as maintain national economic competitiveness and protect the safety of the public. However, in future, the approach will be to seek first to maximise the impact of demand management measures (reducing the need to travel), and then to accommodate residual additional demands first though maximising the use of sustainable modes, rather than accommodating assumptions about current levels of car dependency and use.

LTN 01/22 much more closely and explicitly aligns with the language of NPPF Chapter 9 paragraphs 104-106. Paragraph 12 states: “New development should be facilitating a reduction in the need to travel by private car and focused on locations that are or can be made sustainable.... Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all

local authority areas.” (our emphasis).

It continues at paragraph 13: “where developments are located, how they are designed and how well delivery and public transport services are integrated has a huge impact on people’s mode of travel for short journeys. The company will therefore expect strategic policy-making authorities and community groups responsible for preparing local and neighbourhood plans to only promote development at locations that are or can be made sustainable [footnote 8] and where opportunities to maximise walking, wheeling, cycling, public transport and shared travel have been identified.” (again, our emphasis)

Stagecoach readily confirms that the draft Plan development strategy conforms well to the first limb of this expectation, in terms of the location of development.

Stagecoach considers that the plan and its evidence base conforms poorly to the second in that the specific opportunities to maximise walking, cycling wheeling and public transport are not clearly identified, and defined, and proven to be effective and deliverable.

The current mitigation strategy for the A27 Chichester area, supporting the adopted Local Plan and for which proportionate developer contributions have and continue to be sought, reflects now-superseded DfT Circular 02/2013. As a direct result, it failed completely to identify any significant effective bus priority measures, despite the fact that frequent services already exist on the key corridor concerned, and that one bus journey can remove, fully seated between 72 and 80 single occupancy car journeys from congested links and across key junctions on the A27. Rather, it sought to implement targeted measures to increase the throughflow of general traffic.

We recognise the realisation that this approach, which was already reliant on some tenuous logic, is simply not technically viable, especially where further development needs are anticipated.

National Highways will now pursue an approach with the planning system that “includes moving away from transport planning based on predicting future demand to provide capacity (‘predict and provide’) to planning that sets an outcome communities want to achieve and provides the transport solutions to deliver those outcomes (vision-led approaches including ‘vision and validate,’ ‘decide and provide’ or ‘monitor and manage’). The company will support local authorities in achieving this aim through its engagement with their plan-making and decision-taking stages.” (paragraph 15).

Paragraph 23 is at the fulcrum of assessing and defining transport mitigations to accommodate growth on and near the SRN “Capacity enhancements such as modifications to existing junctions or road widening to facilitate development should be determined on a case-by-case basis. The general principle should be accepted where proposals would include measures to improve community connectivity and public transport accessibility, and this will be weighed against any negative safety, traffic flow, environmental and deliverability considerations, impacts on the permeability and attractiveness of local walking, wheeling and cycling routes, and alternative options to manage down the traffic impact of planned development or improve the local road network as a first preference.” (our emphasis).

However, no material work has been done that seeks to identify if a bold robustly conceived and suitable judiciously-prepared strategy that seeks to consolidate flows on already densely travelled corridor onto improved bus services, driving mode shift through insulating these services preferentially from already serious queuing. This would be likely to have very substantial impacts on all the key junctions on the A27, and potentially, on the A27 itself. The need for an integrated approach between Shoreham and Emsworth within West Sussex paying particular regard to development requirements in both Arun and Chichester Districts naturally lies at the heart of this, and we would expect to be picked up by the LSS3 Review among other things.

However, the locus of the problems and its causes and effects are obviously well enough known to start work on defining solutions within the plan area today. We would expect that this work will be essential if National Highways are to support the Plan, especially now given the terms of Circular 01/2022.

Such work could and should start from a “policy off” position: in other words that the Plan should fully accommodate its needs unless it can be proved that a mitigation strategy for the A27 that is compliant with DfT WMS 01/2022 cannot credibly accommodate resulting capacity demands without unacceptable impacts on the safety and efficient operation of the SRN.

This evidence does not exist. In fact the Chichester Transport Strategy 2023, on which the Council solely relies as its transport evidence base, indicates the opposite at para 5.6.3. This is the case before meaningful measures to secure damping of traffic demands through mode reassignment are even considered.

The exception to this is Portfield and Oving Road, which are among the most problematic areas after mitigation even at the Council’s chosen 535 dwelling/annum scenario (para 5.6.4.-5). The costly capacity mitigation simply cannot deliver enough benefit. It is admitted that WSCC has indicated that it would prefer a solution that places greater reliance on sustainable modes damping car-borne demand. This is entirely the strategy required by NHC to follow LTN 01/22, of course. Despite the fact that “predict and provide has “run out of road” no attempt has been made to examine what such a solution set credibly could look like. This is unsatisfactory and deeply troubling.

At paragraph 5.4 the draft plan points back again at the West Sussex and Greater Brighton Strategic Planning Board and the future work that has been commissioned, but has barely begun, to update the Local Strategic Statement. This work is to inform the preparation of plans that have horizons beyond the end date of the current LSS in 2030 and properly to meet the Duty to Cooperate. As we said in our response to section 1 of the Plan we fully endorse the conclusion that this is the right mechanism to look at these issues. However, the mechanism has not been effectively applied to the production of this plan. Therefore, the specific evidence that capacity on the A27 in and of itself supports accommodating a lower housing requirement does not exist.

The Plan thus does not conform to NPPF, is not adequately justified and is not effective.

The Plan does not properly meet the statutory Duty to Cooperate.

We will return to this matter in specific representations to Section 7 of the draft plan.

## 5.2. Policy H2 Strategic Locations/Allocations 2021-2039

### Stagecoach Supports

Policy H1 makes plain that the plan, as far as it identifies locations for development has done so in locations that conform with its spatial strategy. All of the strategic allocations to a greater or lesser extent offer clear opportunities to make use of sustainable modes, by virtue of their location. That is not to say that the opportunities to take up these opportunities, and maximise the role of sustainable modes, has been identified, defined and translated properly into the rest of the plan policy suite or Infrastructure Delivery Plan.

As our remaining representations make clear, we support the locations thus far identified as being those that offer the best opportunities to reduce the need to travel, reduce travel distances, and create high quality attractive sustainable travel choices, for both existing residents as well as new ones.

However, the transport impacts of the allocation will individually and cumulatively likely to lead to increasingly severe impacts on the transport network, and on bus services.

Perversely, because these opportunities are not properly identified and secured through the plan and its supporting transport strategy, the opportunities presented by the allocations to secure a substantially more sustainable and lower carbon pattern of movement will not only risk being squandered but may aggravate the wider problems.

## 5.3. Policy H3 Non-strategic Parish Housing Requirements

### Stagecoach Supports

The approach is consistent with the plan's spatial strategy. It generally avoids a dispersal of development to locations likely to be highly car dependent. There is a clear focus on meeting housing needs in the far north-east of the District at the largest and most sustainable settlements, such as Loxwood, Kirdford and Wisborough Green. However, it must be pointed out that public transport availability in this area, provided by the County Council through services it procures, is minimal. These settlements in practice require each adult and child of secondary school age to have access to motorised transport to fully participate in society. This might justify significant measures to secure a boost in the frequency of bus services between Guildford and Billingshurst, passing through these settlements.

Otherwise, existing commitments in the plan area already make provision to meet for local needs. To the degree that there is an unmet local requirement for affordable housing of a small scale – for example to support the rural economy – this could be met through neighbourhood plans or through Rural Exception Sites.

## 6. Place-making, Health and Wellbeing

### 6.1. Policy P1 Design principles

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

NPPF requires that proposals should consider transport issues from the earliest possible stage. Designing to properly facilitate safe and efficient access, focusing first on sustainable modes, should be at the heart of development design. Too often it is still an afterthought, notwithstanding this.

Policy P1 must include an additional statement to be compliant and effective with NPPF paragraph 104-105 and 112 a): "Development will be designed to make access and movement using walking, cycling and public transport the natural first choice, and demonstrate through the Design and Access Statement how such modes are afforded the most direct, safe, reliable and efficient routes within to and from the proposals, especially when compared with car use."

### 6.2. Policy P4 Layout and Access

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

A number of proposals in the plan involve large-scale development. It is essential that where appropriate buses can access and circulate efficiently through development at a suitably early stage. There is no acknowledgement of this anywhere in the policy, contrary to NPPF paragraph 112.

Large-scale development which buses cannot access in an efficient or timely manner, or at all, strongly contributes to high levels of car-dependency. Evidence for this is referred to among other places, in DfT Circular 01/2022. To be compliant with NPPF and properly pursue its strategic Objectives, Policy P4 needs to be modified to address this point: "1. Provide safe, direct and attractive conditions for inclusive access, egress and active travel between all locations and providing as good direct high quality links to integrated public transport, and where appropriate efficient access and circulation to bus services, unimpeded by excessive parking, at a suitably early point in the development phasing;

## 7. Transport and Accessibility

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

The issues related to transport are fundamental to the soundness of the Plan. In particular, the constraints presented by the capacity on the A27 around Chichester and its key junctions, are the paramount reasons why the Council does not consider it can meet its objectively-assessed development needs in full. Thus, the transport issues and potential solutions available and what these mean for the ability of development needs to be accommodated, are matters that go to the heart of the soundness of the Plan.

Paragraph 8.3 sets out the approach taken to date succinctly:

"Increasing the capacity of the road network is key to supporting growth in the Local Plan. However, there is also a need to reduce demand for road transport to achieve net zero in greenhouse gas emissions by 2050 as highlighted in the council's Climate Emergency Action Plan and Strategic Objective 1. In aiming to achieve the ambitions of the action plan, all development is expected to demonstrate how it will support four key objectives to create an integrated transport network which will alleviate pressure on the road network, improve highway safety, encourage sustainable travel behaviours and help reduce transport related impact on air quality, by:

1. Avoiding or reducing the need to travel by car;
2. Enabling access to sustainable means of travel, including public transport, walking and cycling;
3. Managing travel demand; and
4. Mitigating the impacts of travel by car."

However, this approach is unambitious and "lightweight" as it assumes, as does the existing Chichester Transport Strategy on which the current adopted plan relies, that the focus of investment should be, wholly, in highways capacity improvement.

Sustainable modes explicitly are expected to play a greater role to "alleviate pressure" on the local road network, as part of this strategy. To emphasise: to avoid exacerbating congestion, the strategy will have to both remove a significant proportion of existing demands from the network on multiple key approaches to Chichester; and then ensure that travel demands from committed and further new development allocated in the plan does not simply replace these journeys, or, worse, create even greater demands.

This will demand very significant behaviour change. Only by making sustainable modes substantially more attractive, both absolutely, and relative to the same journey made by car, can this be expected to occur. However, the explanatory memorandum as well as the wider policy suite and IDP, well expresses a fundamental unwillingness to taking specific, defined measures to achieve this reduction in car use and material promotion of sustainable modes. It makes plain that sustainable modes, including bus services, will offer a lesser role to which "access will be provided".

Such a vague and weakly defined mechanism will have no effect, at all, on current behaviour and car dependency if the relevance of those choices as a credible alternative to car use, is not substantially boosted. This includes a 5% reduction in trip demand assumed by the Traffic Model at the heart of the Chichester Transport Study 2023.

For this reason. the transport strategy behind the current adopted plan is demonstrably ineffective, as the updated model makes plain. It has not yet been delivered and is yet unclear when or (in the absence of committed funding) even if it can be. It is ineffective to "roll forward" this strategy to support a higher level of planned growth.

We note that a scheme for addressing congestion on the A27 at Chichester has been included in Roads Investment Period 3 (2025-2030) – well within the horizon of this Plan. However, recent history provides compelling evidence that off-line improvement to the north is not politically supported and arguably even technically or economically deliverable. It is not funded, nor at this stage can it be hypothesised if an economically deliverable scheme is achievable sufficient to

warrant the necessary investment.

An on-line improvement of the A27, including junction improvements, is likely to favour longer distance east-west through movements, which are of greater significance to the national economy, at the expense of local movements crossing the SRN- a conundrum that largely sums up the dilemma that is faced by NHC and the County as Highways and Transport Authority. It is one that is played out in many places, but rarely is the tension so stark as at Chichester.

Every local route crossing the A27 at grade around Chichester accommodates a regular bus service - or shortly will do (Oving Road area is expected to follow in 2023, though bus services are likely to not use the modified crossroads but to use the left-in-left-out facilities provided as part of the Shopwhyke Lakes development). The impact of these issues on the entire bus operation are serious and increasingly severe.

By the same token, boosting the relevance and reliability of each of these services substantially consolidating as much demand as possible onto a much smaller number of vehicles, is clearly a strategy that ought to support the effective capacity of each of these junctions being greatly augmented, at the same time as reducing equally substantially, the energy- and carbon intensity of mobility in the plan area. Addressing the A27 should not be considered some kind of "zero-sum" game.

Furthermore, the approach of National Highways in its dealings with development and the planning system now reflect a substantial change in Government Policy set out in DfT Circular 01/2022, which we separately cover in these representations, that entirely aligns with an approach that seeks to appropriately invest in more active and rational management of scarce highways capacity, on both the SRN and local roads.

For environmental, economic and social reasons – including public health, the issues presented by the A27 and its interface with local roads around Chichester stands out, nationally, as an example of where the approach taken to accommodating and mitigating development impacts needs to make a clear break with previous "predict and provide" approaches to meet forecast unconstrained car use as LTN 02/2022 makes clear as a principle. Policy in the West Sussex LTP to 2036 itself makes plain that "shared mobility" – including bus services – must play a much greater role in this area.

The existing Chichester Area Transport Strategy is focused on justifying capital contributions from committed development to fund highways capacity improvement – with nothing included to make bus services more attractive, or importantly more reliable. Indeed this "cars first" approach is so costly, that there is already accepted by WSCC to be insufficient land value remaining to be captured to put into substantial improvements for public transport. That much is very evident, and transparent, from paragraph 8.12 and 8.14, where south of Chichester "This (one) package of works (of several improvements needed) would be between £57.23 and £82.79 million to deliver in full and would not be capable of being funded by development contributions alone." This assumes the scheme is otherwise deliverable, which on the evidence in the public domain for some time, has been considered challengeable.

The draft Local Plan and a modestly updated infrastructure package that flows from the 2023 Chichester Transport Study, pursues exactly the same approach.

This strategy is also even more ineffective having regard to the roll forward of the Plan to 2039. It cannot deliver the key Strategic Objectives of the Plan; and in particular this is explicitly recognised by the Council in the failure of the draft Plan to accommodate the OAN in full.

It is also obsolete, as it does not align, from first principles, with national policy (including the National Decarbonisation Strategy for Transport) and DfT Circular 01/22; nor the Council's own declared Climate Emergency.

As a result, draft Policies T1 and T2 are both unsound, as we will separately explain.

Owing to the lack of evidence about the implications of this for adjoining authorities – especially Adur District – in the absence of the review of the Local Strategic Statement – this has implications for fulfilling the Statutory Duty to Co-operate.

The absence of any meaningfully comprehensive refresh of the transport evidence base means that there are no meaningful schemes of any kind, defined in the plan or its IDP, to indicate either what level of growth can be accommodated, by delivering a change in travel behaviour. This would be aimed to secure a sufficient effective increase in junction throughput (measured in terms of person trips as opposed to passenger car unit movements (PCUs)). Such evidence would propose measure to achieve that outcome and assess the efficacy and costs of such improvements, across all modes.

Paragraphs 8.10-8.13 inclusive indicate that the Council "has moved away from 'predict and provide'" and invites the reader to conclude this has translated into a programme of interventions that can be funded to deliver specific, credibly predictable outcomes. Such a programme should be clear in paragraph 8.11. and the IDP. There is no such clarity and this conclusion would be false.

It would also be evident in the language of the Chichester Transport Study 2023 and its refreshed proposals. Only the

most token of lip service is paid to the matter. It is a plainly car-focused, predict and provide methodology to support a "predict and provide" strategy. In fact, it is a brazenly car-focused approach, to the exclusion of all else.

The statements in the Plan regarding any other approach, read properly, offer nothing more than a vague commitment to look post-adoption, and implementation, at unspecified measures, based on problems that may arise in future that will be decided by a committee: the Traffic and Infrastructure Management Group (TIMG). This does not yet exist and is obviously an attempt to posit a mechanism that retroactively will cover for the lack of serious multi-party engagement to address the existing and future issues. Such a group should, in our view, also include the public transport operators, not least if the requirements of NPPF Para 106c) are to be satisfied, and the strategy and measures to be adopted are material to supporting the Local Plan, as of course the purpose of the TIMG has as its core *raison d'être*.

The approach proposed by the draft plan is plainly ineffective and unsound in justifying the draft Plan.

It is more widely unacceptable to Stagecoach. The issues are severe today and well-known, already serving to jeopardise the delivery of buses relied on by existing residents, much less attract new ones.

We also consider that HM Planning Inspectorate are likely to be quite resistant to accepting this aspect of the plan's transport strategy, nor will it be appropriate for the Council, West Sussex County Council, or National Highways, to define such measures after the submission of the Plan during the Examination process. The Examination in Public of a local plan has no purpose to improve plans, or remedy deficiencies clearly evident prior to submission.

The examination of the West of England Joint Strategic Plan in 2019, and the Uttlesford Local Plan in 2021, among several others, demonstrates especially clearly that the Planning System and the Examination process is not amenable to post-hoc retrofitting of transport evidence and strategies to support a development strategy.

#### 7.1. Transport Evidence Base

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Most of Stagecoach's serious concerns about the soundness of the plan arise from the fact that it has been prepared in advance of any up-to-date transport evidence and suitably robust transport mitigation strategy being advanced to support it. In essence, the Council has rolled forward the existing plan by 9 years, adding some additional sources of housing supply, while still relying implicitly on a transport evidence base that was prepared 10 years ago.

This led to the formulation at that time of what can only be described as an attempt to develop an effective car-based mitigation strategy, creating capacity for general traffic added to accommodate unconstrained additional demands on an already over-taxed highways network – the Chichester Area Transport Strategy. Despite language in support of sustainable modes, no deliverable measures were identified to support either the extension of the bus network to serve allocated sites, and much less to create a vital improvement to the quality and reliability of public transport services. This approach reflected the approach set out in DfT Ministerial Circular 02/2013 "Development and the Strategic Highways Network", applicable since the A27, which is the focus of the most severe difficulties, forms part of the national Strategic Roads Network.

This approach has proven ineffective even before substantial elements of housing land supply in the current plan come forward – in particular West of Chichester and West of Tangmere.

In addition, Circular 02/2013 has now been replaced by a new Ministerial Statement of 23/12/2022, DfT Circular 01/2022.

On both counts the transport evidence base and strategy needs to be properly revisited and established to provide effective mitigation for the plan, including current commitments that are being rolled forward.

The language of the current Ministerial Circular 01/2022 offers a highly condensed synoptic view of the proper approach to addressing transport matters in the planning system notwithstanding that it is directly concerned with the Strategic Roads Network. *Videlicet*:

"31. The NPPF expects local plans and spatial development strategies to be underpinned by a clear and transparent evidence base which informs the authority's preferred approach to land use and strategic transport options, and the formulation of policies and allocations that will be subject to public consultation. The company will expect this process to explore all options to reduce a reliance on the SRN for local journeys including a reduction in the need to travel and integrating land use considerations with the need to maximise opportunities for walking, wheeling, cycling, public transport and shared travel.

32. The Transport Decarbonisation Plan indicates that carbon emissions from car and van use is the largest component of the United Kingdom's total transport emissions. While action is being taken to decarbonise transport such that all new

cars and vans will be fully zero emission at the tailpipe from 2035, the proposed location of growth in current plan periods and whether new developments would be genuinely sustainable remain important factors in demonstrating that a local authority area is on a pathway to net zero by 2050 and therefore compliant with the requirements of the Climate Change Act 2008.

33. Alongside this, the local authority should identify the key issues within their study area regarding transport provision and accessibility, setting out how the plan or strategy can address these key issues in consultation with (National Highways, and other transport stakeholders identified in NPPF paragraph 106b). It is the responsibility of the local authority undertaking its strategic policy-making function to present a robust transport evidence base in support of its plan or strategy. The company can review measures that would help to avoid or significantly reduce the need for additional infrastructure on the SRN where development can be delivered through identified improvements to the local transport network, to include infrastructure that promotes walking, wheeling, cycling, public transport and shared travel. A robust evidence base will be required, including demand forecasting models, which inform analysis of alternatives by accounting for the effects of possible mitigation scenarios that shift demand into less carbon-intensive forms of travel." (our emphasis)

Within the text quoted above, references to National Highways and "the Company" can quite legitimately be extended, given the statements in NPPF paragraph 16, 25, 26 and 106b, to include all the relevant transport infrastructure and service providers in the plan area. Circular 01/2022 also has the weight of secondary legislation as a Written Ministerial Statement and thus should be considered to be highly material.

To date there has been little attempt to explore, to the degree necessary, strategies that conform to Circular 01/2022. It is thus not possible to conclude, as the Council has done, that the issues on the A27 that present a constraint to development, are insuperable.

In line with comments made elsewhere in the response to this pre-submission draft, the Plan thus requires substantial further work to be undertaken with key stakeholders to establish a suitably effective and demonstrably deliverable transport mitigation strategy, to sustainably meet the District's identifiable development needs and where apparent and appropriate, also ensure that wider cross boundary strategic issues are appropriately addressed, in conformity inter alia, with the Duty to Cooperate, NPPF paragraph 16 and 104-111 inclusive, and DfT Circular 01/2022 and to ensure the Plan's own Strategic Objectives can be met.

7.2. Policy T1 Transport infrastructure  
Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

As described in comments elsewhere, Stagecoach does not see that a suitable proportionate and up-to-date basis exists to properly and appropriately address the transport issues in the plan area.

The 2023 Transport Study does not perform this role adequately but, contrary to the explanatory memorandum, is a scheme intended only to facilitate car-borne movements through some of the key junctions. There is no evidence that an holistic integrated and strategic approach to transport mitigations has been prepared. Certainly Stagecoach has not been involved in any of the discussion about appropriate transport measures in support of the plan, including the Transport Study 2023, contrary to the expectations set out in NPPF at paragraph 16 and 106.

Notwithstanding out fundamental concerns about the transport evidence case and mitigations strategy, Policy T1 reflects a weak and ineffective approach, that seeks to try and define a strategy post-adoption.

Contrary even to the explanatory memorandum for the policy, which seeks to maximise the contribution of sustainable modes, the policy is phased in such a way that it gives basis for previous "predict and provide" solutions to facilitate and support current levels of car dependency – already shown to be undeliverable and unaffordable – will nevertheless be the first rather than the last resort. There is no commitment to seek to maximise the contribution made by sustainable modes to meeting mobility needs. Nor is there any recognition that current chronic congestion and lack of network resilience jeopardises the ongoing attractiveness and long-term sustainability of the current public transport offer.

To be effective and create alignment with national policy, and also provide for an up-to-date transport evidence base and strategy to be adduced, Policy T1 should be modified to read:

"Integrated transport measures will be developed to mitigate the impact of planned development on the highways network, improve highway safety and air quality, promote more sustainable travel patterns and through providing in the first instance, new and improved infrastructure and services that will be credible effective in maximising the encourage increased use of sustainable modes of travel, such as public transport, cycling and walking.

To achieve this, the council will work with National Highways, West Sussex County Council, other transport and service providers (including through the Traffic and Infrastructure Management Group) and developers to provide a better integrated transport network and to improve accessibility to key services and

facilities...

All parties, including applicants, are expected to support these objectives by:

1. Ensuring that new development is well located and designed to avoid or minimise the need for travel, encourages maximises the use of sustainable modes of travel as an a credible alternative to the private car and directly provides or contributes towards new or improved transport infrastructure;
2. Working with relevant transport infrastructure and service providers to improve accessibility to key services and facilities with primary emphasis on sustainable modes, and to ensure that new facilities are easily accessible by sustainable modes of travel;
3. Targeting investment to provide local travel options as an that represent a clearly credible alternative to the car use, focusing on the delivery of improved integrated bus and train services, and improved pedestrian and cycling networks, including the public rights of way network, based on the routes and projects identified in the Local Transport Plan, West Sussex Bus Service Improvement Plan, Local Cycling and Walking Infrastructure Plan (LCWIP) and the Infrastructure Delivery Plan;
4. Planning to achieve the timely delivery of transport infrastructure on and approaching the A27 and elsewhere on the network, needed to support new housing, employment and other development identified in this plan;
5. Phasing the delivery of new development to align with and where possible facilitate the provision of new and improved transport infrastructure and services and the outcomes of monitoring travel demand on the network, including that arising from areas immediately adjoining the plan area. It may also be Where necessary to achieve this alignment proactively phase development will be phased to take into account the monitoring and effectiveness of travel plans demands on the network and to ensure that measures are implemented to support the highest possible level of encourage sustainable travel behaviour.;
6. Using demand management measures, such as travel plans, to manage robust methodologies to assess travel demand and minimise the need for new or improved transport infrastructure as part of the monitor and manage process.
7. Delivering a coordinated package of infrastructure improvements at and approaching to junctions on the A27 Chichester Bypass along with other small-scale junction improvements interventions within the city and elsewhere, as identified through the monitor and manage process. These will increase road capacity, reduce traffic congestion, improve safety and air quality, and improve access to Chichester city from surrounding areas, first by maximising the contribution of sustainable modes to meeting mobility demands, then, and only as evidenced by robust modelling and option testing, providing increased highway capacity for general traffic.

..."

### 7.3. Policy T2 Transport and Development

Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Section 1 b) of T2 will be ineffective as, absent measures to ensure buses can run reliably and efficiently, improved bus services will not be possible, in support of the plan's own stated broad approach to transport mitigation, as well as wider local and national policy.

The draft policy does not require improvements to the quality of services such that sustainable choices will be materially more attractive than car use for many local journeys. Without this the Plan's Strategic Objectives cannot be fulfilled and the objectives of the Plan and this policy, read in its own terms, will not be realised, where reduction in private car use is concerned. It is thus ineffective.

Absent measures to make bus services more reliable and more efficient, by insulating them from chronic congestion as far as possible, still further operating resource and therefore costs, will be needed to just to reliably run existing service frequencies, and capacity, as vehicle productivity continues to be more and more adversely affected by chronic delay. This will be further aggravated by increasing incidence of severe unpredictable service breakdown arising from incidents of diverse kinds on the network, especially on or around the A27, including that arising from more regular severe weather events. Longer journey times can only be expected to lead to relative disadvantage of bus services compared to personal car use, entirely contrary to the objectives of national and local policy, including Policy T1. It can also expect to lead to a dampening effect not on car use, but on bus patronage, threatening the ongoing viability of bus services across the plan area.

Section 1 b) of T2 should be modified to read:

"b) Maximise opportunities for the use of sustainable travel modes through provision of direct and efficient access both to either the existing networks or and through providing such new infrastructure or public transport services, as can be credibly expected to reduce reliance on the private car and work towards achieving net zero in greenhouse gas

emissions by 2050;”

Section 1 d) of T2 will be ineffective as the location of development is fixed by this plan. We commend the fact that all the strategic allocations are or will be served by regular bus services.

However, the use of public transport services, where available, depends on the relevance and reliability of these services. Furthermore, provision of services without them generating sufficient patronage to support their long-term operation also threatens the sustainability of the plan and its supporting transport strategy. This is especially true of new services such as those intended to serve West of Chichester and Tangmere and East of Chichester Strategic Allocations.

This can only be assured by the plan being supported by specific measures to ensure buses can operate efficiently and reliably on the existing and projected services intended to serve the developments concerned, and also at the same time secure behavioural change from existing development.

To be sound and effective, the policy T2 1 d.) should be changed to read:

“d) Ensure major development is located to proposals and the supporting mitigation measures enable the use delivery of high-quality, reliable and effective public transport to present the most relevant possible choice to access local services and facilities including employment, leisure and education facilities”;

The Policy T2 makes no provision for buses, where necessary, to enter and make efficient and safe progress through major development sites. The plan is thus out of conformity with NPPF paragraphs 104-106. It makes no provision to ensure that penetration of bus services is achieved at a suitably early point in the development trajectory, undermining the achievement of the goals of the Plan and this specific policy. As a good example, West of Chichester Phase 1, currently under construction, cannot be served by buses as a strategy to effect interim bus penetration was never made.

Policy T2 1 f.) should therefore be amended to read:

f) Ensure that the layout and design of the site development proposals provides effective penetration of the site by sustainable modes, at all points in the development build-out, including public transport where appropriate; and sufficient space for all vehicles to manoeuvre without compromising the safety of pedestrians and cyclists, the efficiency of bus services, or the ability to provide an appropriate level of landscaping across the site”

Policy T2 3.) regarding Travel Planning depends entirely on its effectiveness on the quality and relative attractiveness of sustainable alternatives over car use. In the absence of efficient frequent, reliable and direct public transport services (or similarly, high quality facilities for active travel, Travel Plans will continue to be the entirely ineffective “tick box” exercises that they generally are today, evidenced by much lower levels of public transport use in most new developments than it seen in nearby established neighbourhoods, as demonstrated broadly by Census data in 2011, 2011 and 2021.

For this policy to be effective an up-to date transport evidence base and strategy, underpinning a series of specified interventions to promote the relevance and effectiveness of all sustainable does including public transport in particular, needs to be put in place.

#### 8. Chapter 9 Infrastructure – Policy I1 Infrastructure provision

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Policy I1 could not expect to be effective without a clear understanding of the effectiveness and costs of a defined series of measures that are laid out in this Plan and its IDP, to mitigate the transport impacts of the development strategy.

Where the Chichester Transport Study is concerned the only meaningful work has focused on the definition and delivery of a range of highways capacity schemes mainly on the A27 around Chichester.

As we have discussed elsewhere the effectiveness of these schemes is insufficient as set out at Tables 8.1 and 8.2 of the Chichester Transport Study 2023. The plan itself admits that the deliverability of this package cannot be afforded by developer contributions alone.

The Chichester Transport Study 2023 does not attempt provide a realistic assessment of costs to deliver these schemes, despite the fact that they have been under evaluation for many years. Nor does it offer any assurance that the schemes are technically achievable. Rather, it states the opposite:

“9.2.3 No investigation has been carried out into specific land ownership details, or into the location details or cost of moving statutory undertakers and utility apparatus within the areas of the scheme. No design assessments were carried out at this stage to ascertain the deliverability of the proposals except where any Health and Safety concerns were raised.”

Thus on the grounds of effectiveness, deliverability and affordability, the measures on which the Plan relies must at the very least be considered to involve an exceptionally high level of risk. Since Policy I1 is founded on these assumptions, it cannot be considered effective.

As we set out elsewhere, the Plan has been advanced on the basis that if any additional sustainable transport measures are required, these mitigations should be retroactively considered and defined after adoption of the Plan. In the light of the doubts that are apparent of both the deliverability, affordability and effectiveness of the Chichester Transport strategy this is especially unsatisfactory even if existing baseline conditions were reasonably acceptable.

However, the Chichester Transport Study 2023, as did its predecessors, makes plain that that existing problems are acute, and can rightly be considered “severe” in the sense of NPPF paragraph 111. Waiting to define deliverable affordable alternatives is an entirely inappropriate approach to the local plan transport mitigation strategy. Such an approach also makes it impossible to consider prior to adoption how far the transport impacts of the plan can be cost-effectively mitigated by alternative means, or whether they are deliverable having regard to technical achievability, land control, development viability, or any combination of the above. Thus, the plan cannot be considered justified, or effective.

Given the mutual dependence of development strategies in Chichester and Arun in particular on these measures this should be seen as crucial of the fulfilment of the Duty to Cooperate.

The remedy for this is ultimately to put in place a suitable transport mitigation strategy following a strategic appraisal of options through review of the LSS. This then must be supplemented by more detailed development specific and localised scheme definition, including, where necessary, bus priority and other measures to support the substantial promotion of the attractiveness of public transport in key bus corridors over private car use. This would then be reflected by costed proposals in the IDP.

Leaving these fundamental weaknesses to one side, even if such a strategy and mitigation package were defined, there is no mention of public transport in the policy even though it is clearly a key part of the policy environment and mitigation strategy for the plan as expressed in the explanatory memorandum for I1, but also at Policies T1 and T2. I1 thus does not effectively support the realisation of the intent of Policies T1 and T2.

Policy I1 iii) should therefore be modified to read:

“(iii) Safeguard the requirements of infrastructure providers, having regard to requirements within and where appropriate across the boundaries of the plan area, including but not limited to:

...

- Highways including specific measures to accommodate improved active travel and public transport level of service and cycle lanes, and...”

At limb v) the Policy expects developers to meet the “in perpetuity costs of operating and maintaining infrastructure”. This shackles development management decisions to developers assuming what are infinite costs – given that “in perpetuity”, read properly, can only mean “without any limit in time”. This means that it is impossible to meet the statutory tests on developer obligations set out in the Community Infrastructure Levy Regulations 2010 (as amended) at Regulation 122, also repeated in NPPF. This policy cannot be lawfully implemented and it is thus ineffective.

In the absence of an up-to-date transport mitigation strategy that is fit for purpose, at the point the Plan is examined these costs of any additional infrastructure are not known in any case. The strategy and its costs, including its affordability and deliverability, are crucial to assessing if the Plan is sound.

Subject to an appropriate defined transport mitigation strategy being arrived at, to be sound, the Policy I1 v) should be modified as follows:

(v) To consider and meet as appropriate the in-perpetuity delivery costs of infrastructure and, where appropriate, improved services, to the point where its long-term operational sustainability is credibly assured from mainstream sources. Where adoption is not envisaged by local authorities, that must include arrangements for its future ongoing management and maintenance;

## 9. Strategic and Area Based Policies

### 9.1. Policy A1 City Centre Development Principles

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Chichester City centre is rightly identified at 10.2 and 10.4 as the commercial and service hub of the District. It is also acknowledged to be the most accessible place in the District by sustainable modes, public transport in particular.

Boosting the vitality of the city centre is something that Stagecoach strongly supports. Irrespective, the enhancement of the commercial and cultural life of the District in the place where these opportunities can be accessed broadly by sustainable modes, is one that has long been at the heart of national planning policy for town centres, reflected in the “town centre first” approach to locating major trip generating uses.

Paragraph 10.5 exposes an unbalanced and unsound preoccupation with aesthetic matters in its approach to the town centre, and far too little to ensuring that the central place function is enhanced through protecting and enhancing the quality of public transport access.

The city is relatively small but at the heart of an extensive hinterland, and thus the role of bus in supporting sustainable access to and enhanced city centre venue is one that needs appropriate recognition and emphasis. It is important to note that a dominant number of key service and facilities such as the General Hospital are relatively close to the city centre. This directly contributes to driving travel demand into the city, causing congestion. Most importantly, it also makes the task of mitigation simpler, given the impact a suite of active and sustainable measures can have within the same close proximity.

Policy A1 does not provide this. As such, achieving the strategic objectives of the plan is seriously threatened, and the plan is thus not effective.

The Plan needs to ensure that the approach to city centre regeneration maintains and enhances public transport access, interchange and inter-modal connectivity. It also needs to ensure that bus service stopping and interchange facilities are able to address increases in future demand, anticipated by the clear intent expressed elsewhere in the Plan that public transport should be meeting a greater proportion of mobility needs, in a growing district. Achieving this demands an ambitious approach to the location, quality and capacity of bus stop and interchange.

We have been in discussions with the District Council about this, alongside West Sussex County Council, for a very considerable period. Stagecoach has always been keen to help facilitate the Council’s aspirations for the city centre, and we continue to hold this intention. However, this cannot be at the expense of a material diminishing of the convenience and fitness-for-purpose of bus stop infrastructure and interchange. Stagecoach has significant concerns that current proposals to remove the bus station and have all bus services operate from the street kerbside, on an inner distributor road with similar of reduced net stop capacity, fall short of promoting attractive, convenient bus access to the central area as a destination.

For the longer term and where the objectives of the draft plan are concerned looking ahead to 2039, they clearly fall short of enhancing the convenience and attractiveness of public transport use. Much less do they make sufficient provision for a material increase in bus frequency, connectivity, and interchange convenience, on which the draft plan explicitly relies. It is vital that the District Council is clear in policy about its objectives for public transport in the city centre. These objectives must also carry sufficient weight when held in tension with other aspirations for the centre and the constraints on achieving them.

For the Plan to be sound, properly effective and compliant with NPPF, the approach to the City centre cannot ignore its role in the provision of sustainable transport service and connectivity.

Policy A1 should therefore be modified to properly reflect this crucial function, on which the vitality of the city centre must increasingly depend if unacceptable impacts on congestion, air quality and amenity are not to arise. This is still more crucial if wider aspirations to secure a more sustainable society and mitigate carbon are to be achieved.

“...This will include provision for development and proposals that:

- Support and strengthen the vitality and viability of the city centre and its role as a shopping/visitor destination, employment centre, public transport hub and a place to live;
- Support and promote facilitate improved access to the city and with increased emphasis on sustainable modes of travel, with particular regard to enhancing the public transport interchange role of the city centre area, in accordance with the transport strategy for the city and...”

9.2. Policy A3 Southern Gateway Development principles Chichester Bus Station, Bus Depot and Basin Road Car Park Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

There has been aspiration to redevelop the bus station and nearby bus depot from many years. Stagecoach has been engaged with detailed discussion with the District Council on this matter over a very extended period. We confirm that these discussions have reached a relatively mature stage, however at the time of writing are not concluded.

Stagecoach recognises and supports in principle the Council’s wider aspirations for the “Southern Gateway”, and this has governed our approach to the Council to date. We continue to have no “in principle” objection to relocating our administrative, engineering, operational and customer service facilities.

Leaving our proprietary interests entirely to one side, it remains vital that in so doing, the effectiveness, attractiveness and convenience of these facilities is not compromised, as we have outlined in our representations to Policy A1, if wider national and local transport policy, and the local plan strategy itself, are to be effectively achieved.

The depot is crucial infrastructure to support the safe, reliable and legally-compliant operation of Stagecoach bus services over a very extensive area covering the entirety of the District and beyond. Without securing equivalent facilities, that are fit-for-purpose, many of our services would have to cease.

If buses are to provide a greater and more attractive level of service (still more so if they are to be electrified) larger, more capable depot facilities, and city centre bus interchange facilities will be necessary.

Notwithstanding that the bus station and depot sites are leased from the District Council, these leases terminate well beyond the end of the plan period.

Finding suitable sites for a replacement bus depot in Chichester, in common with all similar localities especially in southern England, is extremely challenging. As a sui generis use, bus depots do not automatically benefit from policy support on land allocated for employment uses. Most bus depots benefit from being legacy assets established under very different economic conditions. That is the case here. The value of a depot site for redevelopment net of demolition and remediation costs, rarely approximates to that able to sustain the acquisition of land in a tight wider employment land market, and the construction of suitable new facilities.

Furthermore, the costs of operating bus services are sensitive to the parasitic costs of vehicle and staff hours and mileage associated with "dead running" to a remote depot location from the operational network. Here, the existing depot site is ideal, and any replacement will unavoidable add ongoing operational costs to the operation that cannot be directly recovered.

We confirm that a replacement depot site has been identified and has in principle been agreed, subject to overcoming issues with the disposition of existing and future structures on the site. However, the site is recognised as not capable of accommodating meaningful operational expansion. This is just one of the most important foundational reasons why a positive transformation of bus productivity needs to be achieved, across the plan area and beyond, to support delivery of greater bus mileage and frequencies with the same level of operational resource. At the time of writing, we are not fully convinced that the proposals for the relocation will be sufficiently fit-for-purpose in the event the above is not achieved. Thus, we must raise a concern that the bus depot site might not be available during the plan period. While there is a strong probability it will be, the certainty surrounding the availability of the site, especially within the first 5 years of the plan, needs to be made transparent.

9.3. Policy A4 Southern Gateway - Chichester Bus Station, Bus Depot and Basin Road Car Park  
Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Regarding the removal of the bus station, without equivalent replacement, Stagecoach has significant concerns. Pressures and conflicts at the current bus station site have been gradually rising for several years, arising from increasing use and the need for additional scheduled vehicle layover periods to reduce the risks of accumulated late running from traffic congestion. Peak passenger volumes have recovered strongly on several routes, however passenger accumulations resulting from more frequent delays and disruption have added substantial further pressure on limited space.

Under current plans, buses and bus passengers will be displaced to bus stops at new locations outside the city centre, along Avenue de Chartres. This road was always intended to be a relatively high-speed traffic route, outside the historic core of the city. The city centre has evolved in the subsequent years to reinforce already strong natural severance, with the highway lying beyond the city walls and the green space along the Lavant. It is a traffic dominated, un surveilled and unattractive environment, reflecting the intended function of the road as an efficient movement corridor for high traffic volume, and nothing more. Avenue de Chartres is relatively close to the rail station and pedestrian connectivity can be provided at broadly equivalent distance to the current bus station, but again it is un surveilled and currently unpleasant, lacking natural legibility or any sense of prominence.

We understand kerbside capacity on Avenue de Chartres will be strained even to accommodate current levels of service, with no expansion possible. There is therefore a strong probability that to accommodate more frequencies and key new routes, such as West of Tangmere, East of Chichester and West of Chichester allocations, additional future bus stops must occupy a different location. This makes interchange between routes and rail services substantially challenging and less attractive.

The emerging arrangements risk marginalising public transport and public transport users substantially. This strongly undermines achievement of the wider plan objectives and delivery of a significantly greater role for public transport. If substantial public transport growth is to be accommodated in a growing city and hinterland, as the draft plan anticipates, then a more ambitious strategic approach must be taken. This should plan for additional and improved facilities to

accommodate all services predicted to be required, whilst enhancing the passenger experience to ensure meaningful and attractive modal choice.

There is therefore a need for the plan to evidence how these issues will be appropriately resolved, having regard to a suitably ambitious approach that properly supports clear objectives to boost the relevance of public transport. The current policy is weak, unspecific and indifferent to achieving the strategic objectives of the plan, including a transport strategy in support of the plan, and as such it is ineffective.

Policy A3 should therefore be modified to read:

“ ...  
 • Be designed to encourage and facilitate substantial increase in the use of active travel and public transport to, from and through the city centre.  
 ...”

In line with the commentary above Policy A4 should also be modified to read:

3. Enhance the public interchange function of the immediate area, the public realm, particularly connections to the railway station and the city centre via South Street, Southgate and Basin Road for pedestrians, cyclists and public transport users, and to National Cycle Route 2 and Route 88 which run close by. Suitable replacement bus stops and layover facilities should be provided to replace those at the bus station in line with reflecting the objectives of the West Sussex Bus Service Improvement Plan, and to facilitate growth to meet the requirements of the plan's development strategy. Routes and crossings should reflect pedestrian desire lines, and public art should be incorporated to create a sense of place;

4. Enhance the public realm, in support of this and wider objectives, incorporating public art and other measures to create a strong and attractive sense of place.

...(renumber remaining points)

#### 9.4. Policy A6 Land West of Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

This is an existing Local Plan allocation. The public transport strategy for the site depends on the delivery of the second phase which Stagecoach notes is the subject of several applications now awaiting review and determination by the Council.

The site represents a compact form of development adjoining the city, as the most sustainable settlement, meeting housing needs close to where they arise, and affording very good opportunities for the use of sustainable modes, especially walking and cycling.

It is vital that a bus service is delivered to serve the site at the earliest potential. This was anticipated to be at the start of Phase 2 and will require the early delivery of the entire length of the spine road between the Old Broyle Road and Westgate and making it available for bus services.

It is not clear if the costs of pump-priming the service mentioned in the draft policy are anticipated to be met by the developer. Without such funding, the service will not be deliverable as years of losses will never credibly be covered from future profit. It is likely that the current wording will be interpreted by the developer as meaning that they have no such obligation binding upon them. Not does policy set out any specification for this service, thus its costs and the basis for securing developer contributions does not exist.

As such any wider transport strategy, that seeks to secure a greater role for the use of public transport, and the aspiration for this allocation cannot demonstrably be met. The policy is ineffective.

Policy A6 should be modified to read:

“ ...  
 10. Make provision to accommodate and secure delivery of for regular bus services linking running through the site to Chichester city centre operating at least every 30 minutes Monday-Saturday, and new and improved cycle and pedestrian routes linking the site with the city,  
 ...”

#### 9.5. Policy A7 Land at Shopwhyke

Stagecoach Supports

This is an existing Local Plan allocation, largely built-out, that benefits from an existing set of permissions.

The public transport strategy for the site depends on the delivery of effective bus priority at Oving Crossroads. The current recently implemented scheme, undertaken by National Highways, makes no provision for effective bus priority

and needs considerable re-evaluation.

The site represents a compact form of development adjoining the city, as the most sustainable settlement, meeting housing needs close to where they arise, and affording very good opportunities for the use of sustainable modes, especially walking and cycling. It lies on a new bus corridor that will shortly be put in place, running to Tangmere via Shopwhyke. The allocation is being significantly consolidated by further development in the immediate vicinity which strongly supports the potential for this new service.

As we explain in our representations for East of Chichester proposed allocation A8, and West of Tangmere Allocation A14, a clear corridor strategy to effect bus priority is needed, that should be delivered in support of that further growth, and that at Tangmere SDL. However this allocation is a near complete commitment and there is no scope through policy regarding this land to effect this outcome.

It is notable that Point 6) of policy A7 makes mention of a bus service. This language reflects the currently adopted Local Plan policy and has underpinned the existing permissions. The failure of any bus service to be delivered demonstrates from first principles that this Policy has been entirely ineffective. It is important that lessons are learned from this in the Local Plan Review.

#### 9.6. Policy A8 Land East of Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This proposed allocation lies next to unallocated land that is already consented as a departure from the adopted development plan, with 143 units near completion south of Oving Road (20/02471/FUL). Additional land, also unallocated but similarly consented, has now commenced north of Oving Road (88 units under 21/02197/FUL). This and the allocation site consolidates earlier development at Shopwhyke brought forward under the current Local Plan, and allocated again as draft policy A7.

Development at Shopwhyke was brought forward on the basis of a premise that the developer would provide or somehow arrange a bus service, that was reflected in the policies of the current Local Plan. This was secured by an unenforceable condition. No bus service has been provided, as there was inadequate clarity regarding the basis on which the costs of establishing such a service would be met by the developer, and the expectations of policy on the developer. The site does however lie on a logical new bus corridor between Chichester and West of Tangmere along the Oving Road.

In addition, an expectation that modifications to the Oving Crossroads would effect bus advantage have proven false – the arrangements put buses into a similar or longer queue than if they use the route available to general traffic to and from the A27.

Stagecoach strongly supports the principle of bringing this land forward. However, the soundness of the site depends on deliverability of a regular, reliable and direct bus service along the Oving Road, taking advantage of effective bus priority.

Given the failure of existing policy in the adopted Local Plan covering the proposed A7 allocation to deliver a bus service, it is of great concern that there is no draft policy to adequately address the issue. The policy is out of conformity with NPPF paragraph 104-105 in that sustainable modes do not offer realistic choices, much less an attractive one, and as such also does not secure the objectives of national policy nor of the plan itself.

Currently the proposed allocation is not served at all by public transport. Policy needs to ensure there is a policy basis to secure contributions to deliver such a service, which may well take the form of a proportionate contribution to deliver a new service or enhance provision that is put in place between Chichester along the Shopwhyke Road to west of Tangmere.

To become sound Policy A8 must be modified to read:

“  
 ...  
 12. Provide for improved high quality connectivity by sustainable travel modes and focused in particular on a corridor between Chichester city centre and Tangmere along Shopwhyke Road, including new improved cycle and pedestrian routes, and a frequent bus service including linkages with Chichester taking advantage of effective bus priority measures on Oving Road at the A27;  
 ...”

#### 9.7. Policy A9 Land at Westhampnett/North East Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This land is already allocated and consented as part of the existing 2016 Local Plan. All reserved matters are determined.

The site lies on service 55 between Chichester, Westhampnett and Tangmere. This established service benefits from additional demand from the development at Phase 1. Phase 2 which is currently well underway, does not benefit directly from bus services. However it is a compact and logical form of development where walking and cycling to local facilities and employment is a credible option.

The existing allocation rolls forward policies in the 2015 Local Plan. In so doing it is possible to see which have been effective.

Point 9. regarding bus service and routing has not been effective. In particular the potential for a bus only link between the site and Graylingwell has not been established as policy anticipated. Given congestion around the Portfield area acutely affects public transport this, or alternative methods to secure bus priority over private car use, a clear and unequivocal policy steer is required.

The lack of an up-to-date transport evidence base is ultimately at the root of these issues. Arguably the policy and allocation can only be made sound once this refreshed evidence base in place.

However, it is possible that the allocation could be made sound by modification of Policy A9 as follows:

"...

9. Make provision for regular, direct and reliable bus services linking the site with Chichester city centre, and new and improved safe and convenient cycle and pedestrian routes linking the site with Chichester city, the South Downs National Park and other strategic developments to the east of Chichester city including Tangmere. These objectives could include exploring the potential for a bus only route require a deliverable scheme to afford bus priority through Portfield, and potentially linking the development with the Graylingwell area through use of a modal filter;

"..."

#### 9.8. Policy A10 Land at Maudlin Farm

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing public transport route. It is relatively close to the city and very near substantial centres of employment and services that can be reached by active travel modes, helping damp the demand for car use. It is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services at Portfield and over a wider area. In fact, the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A10 should accordingly be modified to read:

"...

5. Provide safe and suitable access points for all users, including a main vehicle access from Old Arundel Road and, subject to further assessment, a secondary vehicle access from Dairy Lane. The development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes;

"..."

#### 9.9. Policy A11 Bosham – Land at Highgrove Farm

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Bosham Station. It is relatively close to the city and very near substantial centres of employment and services that can be reached by public transport and cycling, offering strong potential to materially damp the demand for car use.

There are serious risks that development in the A259 corridor west of Chichester could place further demands on the

junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular to bus services.

Nevertheless, given the potential to effect bus priority on the approaches to Fishbourne Roundabout, it is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A11 should accordingly be modified to read:

" ...

8. Provide safe and suitable access points for all users, including a main vehicle access from the A259. The development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys crossing the A27 at Fishbourne;

#### 9.10. Policy A12 Chidham and Hambrook

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Nutbourne Station. Substantial centres of employment and services that can be reached by public transport and cycling, offering strong potential to materially damp the demand for car use.

There are serious risks that development in the A259 corridor west of Chichester could place further demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular to bus services.

Nevertheless, given the potential to effect bus priority on the approaches to Fishbourne Roundabout, it is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A12 should accordingly be modified to read:

" ...

7. Development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys along the A259, crossing the A27 at Fishbourne and where necessary on the approaches to Emsworth;

8. Facilitate improved sustainable travel modes, and new improved cycle and pedestrian routes, including linkages with Chichester city and settlement along the East/West Corridor;

#### 9.11. Policy A13 Southbourne Broad Location for Development

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach agrees unequivocally that Southbourne is a location that could accommodate growth on a strategic scale. It has a substantial range of service available within the settlement, including secondary education. It is well connected by bus and rail service to key destinations, including Chichester, lying to the east and west.

This is one of the few locations identified for growth that represents substantial additional development in a new location to the strategy in the existing Local Plan adopted in 2015. Thus, the transport impacts of development on the substantial scale envisaged at Southbourne are not covered or accommodated by the Chichester Area Transport Strategy that lies behind the existing plan. This demands, from first principles, that substantial further transport mitigation measures are required.

We recognise and endorse fully that the intent of the draft plan for Southbourne as a Broad Location for Development on a strategic scale, includes "Maximising the potential for sustainable travel links through improved public transport, including consideration of opportunities to reduce community severance caused by the railway line as well as the inclusion of cycling and pedestrian routes." (our emphasis).

The existing railway station at Southbourne is served regularly, however, it is not within the power of this plan to improve rail services. It is, however, well within the scope of action of the Local Planning and Highways Authority to work with bus operators to achieve a step change in the journey time, reliability, frequency and connectivity of bus services, and in particular the major corridor operated as service 700 by Stagecoach along the A259 between Havant and Chichester through Southbourne.

Notwithstanding the clear potential for sustainable connectivity in the western A259 corridor, there are very serious risks that development in the A259 corridor west of Chichester will place further significant car-borne demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular bus services, having the opposite effect to that intended: longer, less reliable and less frequent bus services, leading to a spiral of slowly declining use.

These risks, while very serious, look credibly likely to be entirely mitigated subject to carefully conceived and robust specified actions on the local highway network. It is perplexing to us that this potential still has not been identified, as part of a comprehensive "first principles" review of the transport evidence base. In particular given the former trunk status of the A259, there is evident potential to effect bus priority on the A259, including on the approaches to Fishbourne Roundabout.

With appropriate measures, including but not limited to this, to substantially boost the relevance and attractiveness of sustainable travel choices, strategic development at Southbourne could well be made highly sustainable.

In the absence of a refreshed transport strategy and transport evidence base, the draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact, the only reference that is made in Policy is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A12 should accordingly be modified to read:

"...Development should be comprehensively masterplanned to achieve a high-quality design and layout that integrates well with the surrounding built and natural environments to enable a high degree of connectivity with them, particularly for pedestrians and cyclists, and provides good the highest possible quality of access to facilities and sustainable forms of improved public transport services.

...

4. Provide a suitable means of access to the site(s), and securing secure necessary off-site transport infrastructure and service improvements (including highways in particular to the A259 corridor between Emsworth and Chichester) in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development) to promote sustainable transport options prioritising delivery of high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes;

..."

#### 9.12. Policy A14 Land West of Tangmere

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach strongly supports the principle of intensifying the level of development at the Strategic Development Location already identified and allocated West of Tangmere in the existing Local Plan. This serves to consolidate development at a location where effective and attractive public transport choices could be provided. It also conforms closely with the principle expressed in NPPF that the best possible use should be made of land on sites that are judged to be sustainable, or potentially sustainable locations for development.

It must be stressed that the current policy suite for the SDL has to date not brought forward development in this location. We recognise that a Master Plan has been adopted by the Council, and that a planning application (20/02893/OUT) for the full larger quantum of 1300 dwellings proposed in the draft plan has received a resolution to grant by the Council.

However, we are not aware that a sustainable transport strategy has been finalised.

Land West of Tangmere is not served by any existing regular bus services. Rather, an entirely new bus service corridor is anticipated to operate in the near term from Chichester through Tangmere and beyond towards Barnham. This would serve proposed allocations A7, A8 and West of Tangmere (A14) included in the draft Plan.

This is reflected in the language of the explanatory memorandum to Policy A14 at paragraph 10.65:

“Opportunities, in partnership with relevant authorities, to provide improved sustainable public transport routes linking the village with Chichester city, to improve cycle routes to the city, and better transport links to Barnham rail station and the ‘Five Villages’ area in Arun District; and..”

Initiating this service will be costly and will in large measure be funded not by developer contributions, but by DfT monies awarded through the West Sussex Bus Service Improvement Plan. It is crucial this service is both sustainable in the longer term without revenue support, and that the success of the service can be built on by scalable frequency improvements as strategic development comes forward in both Chichester District, and proposed allocations A7 A8 and A14, and in Arun District, in particular at Barnham, Eastergate and Westergate (BEW).

This demands measures to effect safe, direct and swift operation of the service especially within the city centre, where it approaches and crosses the A27 at Oving crossroads and on the eastern fringes of the District east and west of Tangmere. Without these measures, bus journey time and reliability will be severely compromised and the impact of this service to damped car trip demands will be very substantially compromised. No such measures are proposed in the draft plan or its evidence base.

Changes to Oving Crossroads have recently taken place which, amongst other intentions, ostensibly provide bus advantage between Chichester and Shopwhyke. The junction in its current form does not offer material gain in bus journey time, as movements involve a less-direct route towards the city over an increased operating distance, much of which involves passage through heavily congested sections of the A27 and Westhampnett Road. A refreshed transport strategy supporting plan-led growth must revisit this area to secure an effective solution which offers bus customers the fastest and most reliable trip-time to and from the city.

In addition, the extension of public transport connectivity towards BEW and Barnham, including key links to secondary education and a logical railhead for journeys beyond towards Brighton and London as provided at Barnham Station, needs to facilitate bus priority between Tangmere and Nyton – whether using the A27, or preferably avoiding it altogether. There are significant safety concerns associated with the at-grade uncontrolled right-hand A27 exit onto the B2233 Nyton Road at Crockerhill Turn. This movement is also prone to extreme delay owing to the conflict with approaching westbound traffic on the A27, travelling at speed, which has priority. Our concerns with this junction in its current form can be expected to worsen with the increased traffic volumes predicted from new residential developments to the west of the city.

A solution providing a suitable short length of highway available only to sustainable modes, between Tangmere and Easthampnett, could provide a very effective solution to this. This would be deliverable within the scope of the separate proposed allocation at A19 Chichester Business Park, Tangmere. We comment on this separately.

Howsoever effected, a reliable direct and delay-free bus corridor between Barnham, BEW, Tangmere and Chichester could expect to secure very substantial elevation of the relative attractiveness of public transport over car use on the entire corridor and serve to effectively damp growth-related demands on this section of the A27. West of Tangmere, in the longer term, there is evident scope for the route corridor to operate as two branches – one via Shopwhyke and one via Westhampnett, effectively serving all the strategic developments proposed in the plan and transforming wider public transport connectivity to key employment destinations and services within and east of Chichester.

However, in common with all the other proposed allocations, the plan proposes no specific measures to provide, much less improve public transport or other sustainable modes to the site. This leaves the draft plan out of conformity with NPPF, especially paragraphs 104-106. The plan is inadequately evidenced and to the degree that public transport measures are identified and emergent, their successful implementation in the near and longer term will be jeopardised without clear measures to provide a safe as well as efficient bus route towards BEW and the Five Village area within Arun. The Duty to Cooperate is not effectively met and effective cross boundary collaboration on these strategic issues

through the review of LSS is not demonstrated, despite the current version which identifies the issues.

To be made sound the LSS Review and a subsequent urgent review of the transport evidence base and strategy needs to take place. The strategic issues are especially critical east of Chichester, in our view.

Notwithstanding this foundational deficiency, to be made sound, Policy A14 should be modified to read:

"...

8. Subject to detailed transport assessment, provide primary road access to the site from the slip-road roundabout at the A27/A285 junction to the west of Tangmere providing a spine road link with secondary access from Tangmere Road. Development will be required to provide or fund mitigation for potential off-site traffic impacts through a package of measures in conformity with Policy T1 (Transport Infrastructure) and T2 (Transport and Development) and DfT Circular 01/2022 that maximise the relevance and use of sustainable travel modes, in particular bus services;

9. Make provision for improved sustainable travel modes between Tangmere and Chichester city, in partnership with relevant authorities, including improved direct, seamless safe and reliable and additional bus and cycle routes linking Tangmere with Chichester city, Shopwhyke and Westhampnett. In conjunction with measures in support of Allocation A19, Opportunities should also be explored contributions shall also be sought for providing improving high quality cycling and bus service transport links with the 'Five Villages' area and Barnham rail station in Arun District; and..."

#### 10. Concluding comments

Stagecoach recognises its role as a key stakeholder in the plan, as well as a local employer and corporate citizen. We recognise the primacy of the plan-led system as the mechanism intended to resolve complex challenges, including the proper alignment of transport and spatial planning, which as the National Decarbonisation Strategy for Transport among other policies makes clear, has never been more vital.

In making our representations, we emphasise that we are entirely supportive of the Local Planning Authority and the relevant Highways and Transport Authorities, in their efforts to properly manage the amount and pattern of development to secure vital policy objectives. We recognise that balancing delivery of assessed development needs with a wide variety of other constraints is a very difficult task.

The transport issues faced by the plan are recognised in the draft plan as being serious and long-standing. We believe that there are ways to arrive at a suitable transport mitigation strategy that has regard to wider strategic issues and resolves existing problems in a much more effective way than those pursued to date.

We support the spatial strategy of the plan as it evidently provides the basis to secure the necessary step change in the quality and use of sustainable transport modes, as it explicitly seeks to do. However thus far, there has been insufficient work done to define the measures that will credibly secure these outcomes.

Stagecoach therefore urges the authorities to draw us into the necessary effective ongoing collaborations that is expected by NPPF paragraph 16 and 106; and DfT Circular 01/022, to do this work, prior to, rather than after the submission of the draft plan. We look forward to being approached to initiate this dialogue at the earliest opportunity.

#### Change suggested by respondent:

However, it is possible that the allocation could be made sound by modification of Policy A9 as follows:

"...

9. Make provision for regular, direct and reliable bus services linking the site with Chichester city centre, and new and improved safe and convenient cycle and pedestrian routes linking the site with Chichester city, the South Downs National Park and other strategic developments to the east of Chichester city including Tangmere. These objectives require a deliverable scheme to afford bus priority through Portfield, and potentially linking the development with the Graylingwell area through use of a modal filter;

..."

**Legally compliant:** Not specified

**Sound:** No

**Comply with duty:** Not specified

**Attachments:**

Chichester Local Plan 2039 Regulation 19 Stagecoach South representations.docx -  
<https://chichester.oc2.uk/a/skh>

## Object

**Document Element:** Policy A10 Land at Maudlin Farm

**Respondent:** Stagecoach South (Rob Vince) [8141]

**Summary:**

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing public transport route. It is relatively close to the city and very near substantial centres of employment and services that can be reached by active travel modes, helping damp the demand for car use. It is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services at Portfield and over a wider area. In fact, the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

**Full text:**

Chichester District Local Plan 2039 – Pre-Submission (Regulation 19) Consultation

**1. Introductory Comments**

Stagecoach South is the main commercial public transport operator across Chichester District. The Company has headquarters in the city, which is also the principal public transport hub for the District and it's rather wider travel-to-work area encompassing much of the Arun District. Our services extend throughout and beyond the District boundaries, as far as Littlehampton, Midhurst, Havant and Portsmouth. The vast majority of services operate on a commercial basis – that is to say, sustained by passenger use and fare revenue, including concessionary reimbursement.

While the role of the railway is significant in much of the District, especially the east-west Coastway line, yet bus services account for more boardings locally than the railway, with Chichester depot services carrying over 3.5m passengers each year.

Unlike bus services in other parts of the country, the local network has recovered strongly after the pandemic with fare-paying passenger numbers over 95% of 2019 levels, albeit with concession patronage somewhat lower. This has helped secure not only a stable but growing bus network even during this period of rapidly rising operational costs, avoiding the need for the service contractions seen in other regions. Indeed, during the second quarter of 2023 Stagecoach will invest £5.5m in brand-new vehicles for high-profile coastal Service 700 – one of the largest vehicle investments for Stagecoach Group this year.

Our services are therefore critical to existing and future local connectivity. As the Plan acknowledges, mobility demands do not respect planning authority boundaries. The role of our services is especially high to settlements in the broad A27 corridor, within the District and beyond. This includes major settlements in Arun District such as Pagham and suburban Bognor Regis, where bus is the only mass public transport option. As the Council is well aware, there is an even higher level and rate of committed development envisaged in these locations in the Arun District Local Plan than in Chichester.

It is already evident to the planning authorities, West Sussex County Council and National Highways, as proprietor of the A27 Trunk Road, that accommodating growing mobility demands across Chichester District and especially around Chichester itself, is becoming increasingly challenging to the point of being seriously problematic.

Stagecoach has a particular interest in this Plan arising from:

- The already clear and highly deleterious impact of congestion affecting our operations and their reliability and attractiveness to the public. The effects of these on the approaches to Chichester, and around the A27 bypass are especially severe. If public transport is to retain its existing role – even before the needs of any meaningful growth both in Chichester and neighbouring authorities is considered, are considered – the Council and the Highways Authority need to arrive at clearly-defined measures to protect buses from chronic delay and the damaging impacts arising from the lack of bus network resilience and customer journey times.
- In connection with the above, the need to properly consider the predictable impacts of committed development in Arun District on the transport network and in particular the operation of bus services. The duty to cooperate on cross-border strategic matters is not limited merely to accommodating housing requirements.
- The fact that our entire business premises and operational base at Chichester is the subject of allocation for redevelopment within the Plan period. Specifically, this includes our Head Office, the Bus Station as the operational hub of the network and the key interchange for passenger journeys – including those that involve the railway – and the bus depot required to support the entire operation. Notwithstanding many years of discussions, there is as yet no agreed deliverable strategy to replace these facilities either in the Draft Plan or elsewhere.

Stagecoach broadly supports the vision and priorities of the draft plan. In most respects, Stagecoach supports strongly the spatial strategy and the identified site allocations that flow from it, and the evidence.

However, it has serious concerns about the soundness of the plan as proposed for submission, for important regards outlined in this response. These are made in the light of requirements set by the National Planning Policy Framework (NPPF), in particular at paragraphs 15 and 16; 35, 105-109 inclusive and having due regard to the need for allocations to satisfy 110-112 inclusive in due course as development permission is sought; and paragraph 174.

Paragraph 16c) of NPPF makes plain that strategic plans and policies should “be shaped by early, proportionate and effective engagement between plan-makers and communities, local organisations, businesses, infrastructure providers and operators and statutory consultees” (our emphasis). This makes plain that collaborative and ongoing involvement of public transport operators is both necessary, and separate and in addition to the engagement with statutory consultees. This has not taken place.

Para 1.25 of the draft plan states that “the council has engaged constructively, actively and on an ongoing basis with other local authorities and organisations to address key strategic matters.” Despite the requirements in NPPF and contrary to the statement made, Stagecoach has not been approached or involved in a meaningful, collaborative or ongoing way in the preparation of the Plan.

Our main concerns centre around the fact that the plan strategy is neither backed by sufficient transport evidence. Even more importantly, the plan relies on a wholly car-based transport mitigation strategy despite policy stating that this is not the case, and the track record of the existing Local Plan, based on a very similar strategy, that has failed to bring forward meaningful mitigations to date to prevent traffic conditions substantially worsening. There is no support in policy for the achievement of the Strategic Objectives in the Plan. Nor is there definition of any measures in the 2023 Transport Study to make provision for sustainable transport infrastructure or services – much less materially improve them.

Finally, to the extent that updated transport evidence has been provided in the form of the 2023 Chichester Transport Study, arising from updated traffic modelling, it does not support the contention that highways capacity constraints on and around the A27 justify not meeting the objectively-assessed development needs of the area, as the draft plan contends.

## 2. Vision and Strategic Objectives

### 2.1. Issues and Opportunities

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant, proportionate and up to date evidence

Stagecoach recognises the important role of the West Sussex and Greater Brighton Strategic Planning Board which agreed a Local Strategic Statement (LSS2) in early 2016 to identify spatial planning issues across the wider area. This established strategic priorities and policies to guide longer term strategic growth in a coordinated and well considered matter. This institutional framework and the purpose of the LSS is a highly significant one and is at the heart of efforts to properly fulfil the statutory Duty to Co-operate, including with regard to strategic infrastructure issues, as NPPF requires.

Given the long period of time elapsed since the 2018 Reg 18 consultation and the already very clear constraints on strategic infrastructure capacity, it is of great concern to Stagecoach that the LSS2 has not been updated to reflect emerging issues in the intervening period. A review and update of the LSS2 has only just commenced. This includes a study of projected housing and employment needs, transport impact, infrastructure and spatial options to deliver the required development in the period after 2030. This Chichester District draft plan covers a period extending to 2039 – therefore well beyond 2030 and the nominal currency of LSS2.

However, infrastructure needs are pressing today. Stagecoach is presented with severe highway operational problems on a near-daily basis. During the winter of 2022-23 we have, for example, seen key road links impacted for many weeks by acute disruption arising from flood events. Unpredictable, but seemingly more-frequent, exogenous events expose a lack of resilience in the highway network around Chichester and its travel-to-work area. However, serious, chronic, unpredictable delay has been normalised over recent years, with peak-time congestion having quickly returned after the pandemic. The existing development strategy has failed to bring forward measures having any impact on this to date, and key commitments – notably at west of Chichester Phase 2 and at Tangmere – have yet to commence to further aggravate the issue.

We have no confidence in the transport mitigations proposed in the existing Local Plan and LSS2 being sufficiently effective, even if deliverable at all. Indeed, the existing adopted Local Plan does little more than make vague speculations about the sustainable transport measures that might be achievable. The draft local plan review is no different. It has no ambitions at all for sustainable modes and thus, makes no meaningful provision to meet them.

This is especially relevant in light of the fact that the approach to resolving issues on the A27 around Chichester that were anticipated in 2015-16 have fallen away. LSS2 is thus currently inadequate to act as a part of an up-to-date, proportionate, and relevant evidence base for the Plan.

An update of a traffic model lies at the heart of a 2023 Chichester Transport Study. This talks no account of the existing role of non-car modes, nor can it do so. It is unable to properly evaluate the nature of problems or solutions that involve public transport, or for that matter, other sustainable modes.

Therefore, we consider that the combination of committed and additional development needs that must be

accommodated over the whole plan period between 2022 and 2039, in both the Chichester and Arun Districts, require a “first principles” review. This must be based on a refreshed transport evidence baseline of no earlier than 2022 – given that the effects of COVID distort 2020-22 – and the transport infrastructure and service requirements to sustainably support those needs.

Key issues – including substantial changes with regards to transport issues and challenges, as well as potential solutions – thus do not form part of the evidence base that steers this plan. Given long term changes in travel patterns, and mode share that took place during COVID, as well as a local and national policy context that seeks to radically reduce and then eliminate transport-related carbon emissions, this is especially problematic.

The specific problems of congestion and network resilience that are evident on the A27 and the approaches to Chichester remain a set of especially difficult problems that disproportionately affect the efficiency, reliability and attractiveness of the bus network, that evidently demand larger-scale strategic responses involving multiple stakeholders, including bus operators.

Where the effects of development on the national Strategic Roads Network (SRN) are concerned, the approach of National Highways to addressing and responding to the mobility needs of development has now substantially changed following the promulgation of the DfT Written Ministerial Statement LTN01/22. This makes it clear that adding highways capacity is no longer the first or only strategy that should be pursued, but one subordinate this to maximising the potential of non-car modes and sustainable travel.

“Effective and ongoing collaboration” on transport matters has not led to solutions being agreed and published for public scrutiny as part of the plan evidence base. Whatever the approach to modelling and “highways improvements” that may be agreed or pending agreement with the County Highways Authority and National Highways, Stagecoach is neither participant or sighted. This is despite the clear requirements set out in NPPF Para 106 b) that “Planning policies should ... be prepared with the active involvement of local highways authorities, other transport infrastructure providers and operators and neighbouring councils, so that strategies and investments for supporting sustainable transport and development patterns are aligned.” (our emphasis).

We therefore consider that the Council has failed to comply with the requirements of NPPF paragraph 25 and 26 that “relevant bodies” are involved in plan-making, especially with regard to addressing the needs for infrastructure. Public transport services and the infrastructure that supports its operation and use clearly fall within matters relevant to plan-making. This is explicit in NPPF Chapter 9 and indeed within the plan itself – for example reference to public transport and sustainable modes in the Vision for the plan.

It should be stressed that the Regulation 18 “Preferred Approach” consultation took place in December 2018 – over 4 years ago and prior to COVID, based on LSS2. The inordinate length of time that has elapsed between the Regulation 18 and Regulation 19 stages greatly challenges the LSS2 and other parts of the evidence base, especially as the pause straddles the COVID epidemic. That would include the transport modelling baseline, and key assumptions in any traffic modelling that took place prior to mid-2022, which is a point at which a reasonable “new normal” post-COVID might be considered to have become established. In that period, Arun District has also adopted its own Local Plan development strategy that accommodates an unprecedented quantum of development immediately east and south-east of the District Boundary – creating additional substantial transport impacts directly affecting the A27 and multiple major approaches to Chichester crossing it.

The established mechanism to fulfil the Duty to Co-operate has thus not operated effectively. The Plan is not founded on a relevant, proportionate and up-to date evidence base and is thus inadequately justified.

## 2.2. Spatial Portrait

The spatial portrait is generally succinct and accurate. However, it makes no mention of road-based public transport, the role of the City as a public transport hub, or the range of bus services that provide local connectivity (Section 2.4 and 2.5). The complete concentration of post-16 education in the City itself as just one example of the peculiarities of transport demands in the area, is not highlighted, though this has a profound influence on peak time travel demands affecting the most congested parts of the highway network. Among other things, the role of bus services in supporting the educational system of the plan area is very great indeed.

The potential role of bus in addressing the already-severe transport problems of the plan area and beyond seems entirely overlooked. The spatial portrait is thus clearly inadequate and incomplete.

## 2.3. Strategic Objectives

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Chapter 9 of NPPF and paragraphs 104 and 105 in particular require that plans should:

“Transport issues should be considered from the earliest stages of plan-making and development proposals, so that:

- the potential impacts of development on transport networks can be addressed;
- opportunities from existing or proposed transport infrastructure, and changing transport technology and usage, are realised – for example in relation to the scale, location or density of development that can be accommodated;
- opportunities to promote walking, cycling and public transport use are identified and pursued;
- the environmental impacts of traffic and transport infrastructure can be identified, assessed and taken into account – including appropriate opportunities for avoiding and mitigating any adverse effects, and for net environmental gains;...

...The planning system should actively manage patterns of growth in support of these objectives. Significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. This can help to reduce congestion and emissions, and improve air quality and public health...”

The Strategic Objectives do not conform with NPPF in these foundational requirements adequately, to transparently steer the plan strategy. They should therefore be amended to read:

“Plan to provide local infrastructure to support new development and seek opportunities to address existing identifiable infrastructure problems deficits, such as in particular those relating to the A27 and its junctions and wastewater treatment.”

Paragraph 2.36 states, in the context of the Climate Emergency and the National Trajectory to “Net Zero” that “The council will enable the delivery of infrastructure, jobs, accessible local services and housing for future generations while protecting, conserving and enhancing the historic and natural environment.”  
Naturally, we support this intent.

However, there is no acknowledgement of the role current patterns of transport use contribute to carbon emissions, nor that substantial mode shift is necessary to address sustainably an acute lack of capacity on the local network and the SRN, especially around Chichester. This is especially concerning as the basic conceptual link is not made between the fact that the greatest such problems lie on the A27 corridor and around Chichester, while these are also at the same time present many of the most sustainable locations for development, and where the opportunities to secure much greater use of sustainable modes also exists.

Strategic Objective 7 “Strategic Infrastructure” includes the following statement:

“To work with infrastructure providers to ensure the timely delivery of key infrastructure to support delivery of new development. New development will be supported by sufficient provision of infrastructure to enable the sustainable delivery of the development strategy for the plan area. Key infrastructure to support the Local Plan will include improvements to transport, ...

A sustainable and integrated transport system will be achieved through improvements to walking and cycling networks and links to accessible public transport. Highway improvements will be delivered to mitigate congestion, including measures to mitigate potential impacts on the A27 through a monitor and manage process.”

The latest transport evidence in the Chichester Transport Study makes no pretence to define much less to deliver a “sustainable or integrated” transport system. It is wholly devoted to sustaining current levels of car use across the District, to and through Chichester area.

It is no more than the lightest of touches to the approach taken to supporting the adopted Local Plan, an approach that is already almost 10 years beyond the date of its gestation but has yet to deliver any significant capacity improvement schemes, much less any measures that sustain even current levels of public transport journey times and reliability in the face of increasing congestion – much less any betterment.

Of the six key junctions on the A27 around Chichester, recognised to require significant mitigation given they are saturated for extended periods, five accommodate regular bus services - indeed frequent ones at least every 20 minutes in several cases. The sixth at Oving Road, relates directly to a key corridor where bus services are needed to support strategic growth currently being delivered at Shopwhyke, as well as substantial further growth West of Tangmere (proposed allocation A14) and “East of Chichester” (A8), south of Shopwhyke Road.

As stated at p12 of the Study Summary “The modelling shows that all the junctions on the A27 Chichester bypass are well over capacity, even before adding in the Local Plan development and with the exception of Portfield Roundabout are actually shown to be over capacity in the base model year (2014) in one or both peaks”. This much has indeed been evident for years from delay and periodic even more severe disruption arising to Stagecoach services from the lack of network resilience.

The reassignment of through and local traffic through Chichester to avoid the A27 bypass is an especially serious issue for bus services that penetrate the city. This is leading to consequential saturation of a range of junctions used by buses. Rising delay and unpredictable running times are at the root of our decision to sever the long-established Portsmouth to Littlehampton service in 2023, which will in future no longer run across Chichester, but terminate to provide additional dwell time to mitigate the impacts of congestion.

While this congestion affects all road users including businesses and freight traffic, the effect on scheduled bus services is greatly higher, as such services cannot reassign route to 'beat the queue'. Traffic congestion often encourages greater car use for this reason, in tandem that people are happier to sit for extended periods in their own vehicle on a seamless door-to-door journey than wait at the roadside for a delayed bus making slower progress in lengthy queues.

As the Study admits at para. 1.3.2 "Although, there have been works at the Portfield Roundabout in this timeline, no other mitigation schemes have been completed along the A27 corridor, as such the mitigation schemes defined in this report will also be required to consider the development from this plan period."

In other words, in the 8 years since the current Local Plan was adopted in 2015, there has been minimal progress in delivering the traffic mitigations. There is no clarity at all when any such mitigations will be brought forward. It is hardly surprising then, that traffic conditions have deteriorated. The "predict and provide" transport strategy supporting the current plan has failed.

Despite this, the Draft Local Plan Review proposed to "double down" on exactly this strategy. It represents, like the rest of the evidence base, a "rolling forward" of the current car-based strategy by 9 years, with the lightest of touches to attempt to accommodate car trip demands from a relatively modest additional development quantum.

Nevertheless, the Study requires a global 5% reduction in trip demands arising from unspecified "credible" (paragraph 4.1.2) sustainable transport and travel planning measures. It is unclear why use of non-car modes will see disproportionate growth when no measures are in place to make them more attractive. This 5% increase in use translates to a doubling in the modal share of bus services. There is no evidence nationally, anywhere, that simple ignorance of alternatives to the car is the main barrier to uptake.

The outputs of the 2023 Chichester Area Traffic (SATURN) model are set out at Table 5.1 (am peak) and 5.2 (pm peak) without mitigation. These betray just how seriously compromised the whole network around Chichester is, and will be in future, even with implementation of a mitigation package to increase traffic capacity that is understood to cost between £92m and £164m – and which the Study and the draft plan acknowledge cannot be delivered through developer funding sources alone. Unspecified external funding presumably from HM Treasury through DfT is required.

Even if this provided and the schemes are delivered, Tables 8.1 and 8.2 indicate these will provide minimal relief. The final columns suggest key junctions, including Portfield, Fishbourne Road and Cathedral Way East will remain at well over 100% ratio of flow to capacity (90% is considered the point at which saturation is approached, with the onset of increasing delay above that figure). RFCs in tables 8.1 and 8.2 are some of the highest we have ever seen in a local transport evidence base for a post-mitigation scenario. While the serious potential risk of reassignment across Chichester City is greatly reduced, which is important and welcome given its impact on bus services, Tables 8.1 and 8.2 show the extent of post-mitigation saturation is also egregious, covering a very large number of key links and junctions.

On every measure and criterion, then, including cost deliverability and effectiveness, the revised Transport Strategy falls well short of evidence to suggest the transport impacts of the plan can be properly addressed by this means.

Despite the repeated statements about sustainable modes throughout the draft plan and Chichester Transport Study, only 2 paragraphs at Section 6.2 within the Study are devoted to public transport:

"6.2.7 The funds generated from the parking management schemes, local/nation funding schemes and developer contributions could also be utilised to fund potential public transport enhancements within the city centre including an expansion of the bus priority lane system within Chichester City Centre. This could reduce reliance on the car in the longer term towards sustainable public transport. A park and ride scheme could be incorporated within a bus priority lane network in the future depending on the uptake and successfulness of early bus priority trials.

6.2.8 Chichester City centre has a constrained existing public highway network. Therefore, any proposed dedicated public transport or light transit corridors that could be implemented would be at the expense of existing highway. This could be managed through a time-based system where certain routes are restricted to public transport only during specific times. E.g., peak hours."

There is some very high-level consideration of Park and Ride following this section. None can be considered a serious practical evaluation of consolidating car-borne trips onto bus services, including existing ones, for example local mobility hubs, more frequent bus corridors, delivery of specific bus priorities.

None of the discussion of alternatives to "predicting and providing" for unconstrained traffic growth is rooted in a deliverable evidence base, or proper evaluation of options and specific projects.

To take just one aspect of the few specifics that can be picked out, a workplace parking levy is hypothesised. This would apply only to "offices", in Chichester city centre (para 6.2.3), without consideration given as to how this could be practically achieved or even that a meaningful amount of office based employment would qualify. Much less is any consideration given to how far focusing a strategy only on office-based workers would actually deliver a particularly significant effect, apart from to create a strong incentive to relocate offices out of the city centre to places out of reach by public transport.

Looking at the Chichester Transport Study 2023 and the draft plan together, there is insufficient evidence that the traffic capacity increase proposed in the 2023 Transport Study is any more affordable or technically deliverable, or likely to be sufficiently effective, than those in the past strategy. The evidence more strongly points to the fact that no highway improvements are identifiable or economically deliverable to meet even short term increases in demand for car-borne mobility on most of the network around Chichester.

There are no published strategies or schemes clearly supporting the contention that the objective of improving sustainable modes is technically achievable or deliverable either. The plan makes generalised assertions that such strategies will be devised and implemented only after serious problems emerge from a shortfall in the car-borne transport strategy.

The reference to “monitor and manage” is undefined and unsubstantiated. There are no outcomes stated, no mechanisms specified and no timescales for action.

Our experience today is that network conditions have reached unacceptable and prejudicial levels of severe unpredictable delay. The saturation of the network is already evident well outside the traditional peaks on key sections of highway and at key junctions. External shocks such as the effects of severe weather are becoming more common, leading to delays so extreme as to justify the description of “gridlock”. The plan does not identify a strategy to effectively address this, in particular by consolidating passenger car trips onto more efficient public transport vehicles. This is unacceptable to Stagecoach.

#### 2.4. Local Plan Vision

Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the broad approach in Plan Vision and in particular that by 2039, the Plan will support and enable greater use of sustainable modes. However, there is no link made between reducing the use of private cars, and the need for a step change in the use of sustainable modes. Without a published transport evidence base it is impossible to establish a suitable sustainable transport strategy to support both carbon reduction and alleviation of the problems arising from acute congestion. Even on a very crude basis, to achieve a meaning mode shift on key approaches to the A27 Chichester Bypass will require more than 20% of existing peak car-borne journeys to transfer to other modes. A 10 percentage point transfer to bus (about half this shift) would imply more than doubling peak hour bus passenger boardings.

The Vision is nothing more than an aspiration, that needs to more definitively aim at key outcomes, for the plan to be effective. The Vision should thus be altered to read:

“Get about easily, safely and conveniently with less reliance on private cars –making the greatest possible use of the rail and enhanced bus network, and with more opportunities for active travel including walking and cycling; to materially reduce dependence on private car use.”

Underpinning the Plan’s spatial strategy, the Vision section goes into more specific detail about key localities in the Plan area.

Regarding Chichester, Paragraph 2.39 states: “The emphasis will be upon consolidating and enhancing the role of Chichester city as the plan area’s main centre, whilst also developing the role of key settlements to its east and west. The focus will be upon creating communities with good access to a range of employment opportunities and affordable housing for young people and families to balance the ageing population.”

This is clearly the appropriate focus for meeting the District’s development needs in a sustainable manner. The city and key settlements to the east and west, are those places already able to make use of relevant public transport services, both rail and bus. Especially within and near the City, walking and cycling can credibly present highly relevant choices. This emphasis clear can be expected to address the requirements of sustainable development set out in NPPF and their local application set out in the Plans Strategic Objectives.

However, this needs a robust transport strategy, to avoid a further concentration of development and its traffic impacts occurring on or near some of the most chronically congested parts of the highway network. To date, the absence of intervention has strangled the bus network through further marked deterioration in traffic conditions. This by consequence increases the risk of bus delay or cancellation, lengthens journey time and reduces customer confidence in bus as an attractive alternative mode of travel.

In April 2023, Stagecoach is making significant timetables changes to improve operational resilience in and around Chichester. The biggest such change is the severance of the Portsmouth to Littlehampton section of service 700, at Chichester, with buses operating independently to the east and to the west and ending cross-city links. This is planned to reduce the probability of delay but at the cost of additional vehicle resource (circa £200,000 per annum) which could be better spent providing new or enhanced services. We anticipate a small loss of custom as a direct consequence of the change, but have little choice other than to take negative action so as to fulfil our statutory punctuality obligations.

If the Strategic Objectives of the Plan and its Vision are to be achieved, in the way required by NPPF paragraphs 104-105, a properly-evidenced transport mitigation strategy needs to create the conditions where bus journeys are more reliable than car journeys and thus mobility demand switches as far as can be realistically achieved away from car use, to bus use and other more sustainable modes.

Beyond Chichester, the Plan Vision focuses on key localities beyond to the east and west.

To the west of Chichester a focus on growth at Southbourne is justified at paragraph 2.43: "...the aim is to take advantage of the village's good transport links and existing facilities to deliver significant new residential-led development within the broad location for development which will further enhance local facilities and offer opportunities to reinforce and supplement existing public transport, including bus routes."

We agree this is a very significant opportunity. However, if the requirements of NPPF paragraphs 104-105 are to be met, this demands that effective bus priority is delivered on the A259 corridor, especially eastbound at Fishbourne and westbound approaching Emsworth. Without such measures, the growth committed and planned will serve only to further undermine bus journey time and decrease punctuality on the existing 700 service, entirely contrary to the aims of the Vision.

The emphasis on the A259 corridor served by Stagecoach 700 west of Chichester is reinforced at paragraph 2.45 stating that "Between Chichester and Southbourne, the Plan provides for more moderate levels of growth within the parishes of Fishbourne, Bosham and Chidham & Hambrook, ... with opportunities to support and expand existing facilities and for increased use of public transport options". We strongly support the principle, but the Plan must follow through with specific public transport priority measures that facilitate rather than prejudice such an outcome.

East of Chichester the focus is at Tangmere, where the existing allocation for about 1000 dwellings is being uplifted by 300. Paragraph 2.44 justifies this among other things recognising the scope for "...improved and additional bus services and cycleways will provide better connections to Chichester city and east to Barnham and the 'Five Villages' area in Arun District." We unequivocally endorse this conclusion. Realising a "game-changing" level of bus service quality, reliability and frequency east of the city, also serving committed and planned development north and south of Oving Road at Shopwhyke, is equally essential, given that all SRN links and junctions are approaching equal saturation.

The National Bus Strategy has given new focus on partnership with West Sussex County Council to discuss and deliver a significant new bus service between Chichester, Shopwhyke, Tangmere, Eastergate and Barnham, supporting committed development and acting as an initial phase of what ought to be a more ambitious longer-term strategy to support growth beyond 2025 in both Chichester and Arun Districts. For these improved bus services to be both deliverable and effective, robust bus prioritisation is unavoidable. No such measures are proposed in the Plan or its evidence base and we therefore suggest inclusion of plans to facilitate safe and efficient bus operation between Tangmere and Nyton/Eastergate, ideally avoiding the need to join A27 through-traffic entirely.

We welcome the clear recognition that these localities identified for growth, benefit from existing relevant public transport services. The Vision also sets an expectation that bus services in particular should be "enhanced" and "reinforced".

We entirely agree that these opportunities exist, across the broad strategy and strategic allocation proposed by the draft Local Plan. Securing them will be crucial to achieving national and local policy objectives, including the Strategic Objectives. However, to our continuing very great dismay, the Plan goes no further to defining how this will be achieved. As such the Vision is not demonstrable achievable or deliverable.

Accordingly the Plan cannot be considered effective, in the sense of NPPF.

Remedying this, demands specific measures to protect bus services from congestion in the following corridors:

- A259 East of Emsworth
- A259 Fishbourne
- A 259 Via Ravenna/Cathedral Way
- A286 Stockbridge Road north and south of A27
- B2145 Whyke Road/Hunston Road
- A259 Bognor Road, east and west of A27 and extending to the District Boundary
- B2144 Oving Road/Shopwhyke Road east and west of the A27
- A 285 Westhampnett Road/Portfield Way/Stane Street, potentially involving a mode filter at the west end of Stane Street

These must be defined to a sufficient level of detail to assess their effectiveness and deliverability, including costs.

This would then allow West Sussex County Council and Local Transport and Highways Authority, ourselves as the principal bus operator, and where appropriate other organisations that would be directly tasked with delivering the mitigation package, to agree service levels and standards necessary to deliver specified outcomes, including journey times, frequencies, capacity and hours of operation on the network, and also in respect of the strategic allocations and

## Strategic Locations for Growth.

The agreed mitigations strategy should be set out in an up-to-date Infrastructure Delivery Plan backed by clear funding commitments, including a funding strategy to justify necessary developer contributions.

Where necessary to support evidence of effectiveness and deliverability, clear statements of support, which might include Statements of Common Ground between the LPA, LTA, National Highways and Stagecoach, could be provided.

### 3. Spatial Strategy

#### Stagecoach Supports

Stagecoach well recognises the constraints outlined in the explanatory narrative at the start of Chapter 3.

In particular we strongly endorse that strategy in that it reflects that the best opportunities to meet housing and employment development requirements sustainably clearly exist in and close to Chichester and on the key east-west movement corridor where – subject to effective measures being delivered to make these modes more attractive, efficient and relevant – sustainable modes can credibly provide for a much higher proportion of movement demands, mitigating most effectively the potential traffic impacts of development.

We agree that the Manhood Peninsula suffers serious environmental constraints, but, added to these, public transport and other sustainable modes cannot provide such attractive alternatives, and significant further development risks merely reinforcing already high levels of car use, aggravated by the carbon impacts of the distances involved – something the plan does very little to evaluate, and makes no reference to.

We endorse the conclusion in paragraph 3.24 that significant development in the part of the District north of the National Park is inappropriate. The rationale is principally on landscape and visual character. This exposes a fundamentally biased approach to plan making that has consistently underplays transport accessibility and carbon issues. In fact, the lack of local services and the extended distances that need to be travelled to fully participate in society in this area, with no realistic prospect of public transport offering relevant choices, ought to rule such a strategy out of play on a far less aesthetic and interpretational basis.

#### 3.1. Policy S1 Spatial Development Strategy

##### Stagecoach Supports

The Spatial Strategy flows clearly and logically from the Spatial Portrait, and the opportunities and constraints identifiable across the Plan area. It represents a logical and justified continuation of the existing Local Plan strategy. In particular the spatial strategy maximises the potential for sustainable modes to contribute to meeting a much higher proportion of all the District's mobility and accessibility needs.

#### 3.2. Policy S2 Settlement Hierarchy

##### Stagecoach Supports

The settlement hierarchy clearly reflects the service endowment and potential self-containment of the settlements in the District. In particular, the second tier of settlement hubs includes secondary schools, which are major peak trip generating uses. Service villages, in the main, also benefit from bus services running at least hourly, which can be expected to provide for a degree of mobility for the higher number of trip purposes that cannot be satisfied by walking or cycling within the immediate locality. Thus, a level of development to meet local needs in this tier is relatively sustainable.

There is a quite broad range of settlements in this category. We have concerns that, north of the National Park, the Service Villages have no realistic public transport choice. These include Plaistow/Ifold, Kirdford, Loxwood, and Wisborough Green. Such as exists is typically a 1/bus per day off-peak shoppers service offering up to 90 minutes in Horsham or Guildford and as such any development here even to meet local needs requires each adult to own a car. This contrasts strongly with Service Villages to the south of the National Park, which are greatly more sustainable.

### 4. Climate Change and the Natural Environment

#### Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This section of the plan is extensive and wide ranging, as should be expected.

However, remarkably, there is no acknowledgement whatever of the role of transport in mitigating climate change or its effects, not of the importance of sustainable movement and access being facilitated across the plan area in addressing anthropogenic impacts on the natural world at a more local level.

This exposes very clearly a troubling level of indifference to transport matters in the production of the Plan, which, while nationally quite common, is neither appropriate nor acceptable. The mitigation of transport impacts is not merely a matter speaking to the social and economic aspects of sustainable development. It is crucial to address the causes and effects of climate change that arise from transport, and personal mobility.

This is now well understood and at the centre of national policy, including the National Decarbonisation Strategy for Transport (July 2021) which at Section 5 commits the government to aligning land use planning and transport strategy much more tightly and effectively to mitigate the carbon emissions associated with the current dependence on cars, and the mode mix; but also to reduce travel distances, both increasing the potential relevance and effectiveness of all sustainable modes, and reducing average journey lengths for residual motorised journeys of all kinds.

National statistics show that well over a third of all domestic carbon emissions arise from land-based transport and of these, the vast majority arise from trips of over 10km – outside the range of large scale use of cycling. In fact, the potential of the plan to materially support carbon emissions reduction from within the plan area lies more in the realm of transport than any other policy theme – including emissions mitigation from buildings, which is in any event an aspatial matter and covered by nationally-binding building regulations. By 2025 something like 40% of all the emissions within the plan-area will be transport related.

There is no evidence supplied to support the plan that addresses the transport carbon impacts of the spatial development strategy in a clear manner.

There is no evidence supplied that sets out the effects of potential worsening of congestion on air quality within the plan area, arising entirely from the excess of passenger car movement demands over available and credibly deliverable highway capacity. This is despite the evidence set out and acknowledged in the explanatory memorandum at paragraph 4.130:

"4.130. The council's Air Quality Action Plan and the West Sussex Transport Plan 2022-2036 both refer to the air quality issues faced by Chichester. There is currently one Air Quality Management Area (AQMA) in the plan area, located at St Pancras, Chichester. AQMAs are designated where air quality exceeds, or is likely to exceed, national air quality standards and objectives. Development within or impacting these areas, or that likely to cause the declaration of any further AQMAs, will be subject to an air quality assessment by the applicant."

This is a retroactive approach – it is not "planning", based on evidence.

We are well aware that air quality issues in and of themselves can render allocated sites to be undeliverable: a good example is in the Vale of White Horse, Oxfordshire, where strategic allocations on the A338 and A420 corridors have been held up for years by air quality issues at Marcham and Frilford, in large measure because agreed transport interventions were considered inadequate or undeliverable a very short time after the Plan was examined and adopted.

There is no evidence that shows how the development strategy can effectively mitigate these impacts as well as the further potential impacts that arise from the development strategy. This is exasperating, as there is clear evidence that could be drawn upon to show that that very substantial opportunities exist to:

- Speed buses up and make them more reliable by the delivery of bus priority on most of the key main corridors. Most of these even today operate relatively frequently
- Improve service frequencies and extend hours of operation.
- Secure significant background mode shift to bus as a result, damping pressure on key links and junctions, by consolidating demands on direct more reliable and more frequent bus services.

The spatial development strategy as submitted is in fact, likely to well conform to such additional evidence.

The allocations require substantial additional transport related work and evidence to demonstrate that the opportunities for sustainable transport have been identified and taken up as required by NPPF paragraphs 104-105.

With regards to specific policy, Policy NE22 should be modified to read:

"Development proposals will be permitted where it can be demonstrated that all the following criteria have been addressed:

1. Development is located and designed to minimise traffic generation and congestion through access to by maximising the relevance and attractiveness of sustainable transport modes, including maximising provision of specific demonstrably effective measures to make pedestrian and cycle and public transport routes and networks more direct, more safe, faster and more reliable;..."

## 5. Housing

### 5.1. Policy H1 Meeting Housing Needs

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

The presumption of the planning system is that local planning authorities should seek to meet their objectively assessed development requirements in full. These needs are assessed by a defined Standard Methodology set out in Planning Practice Guidance and elsewhere, that has explicit regard to ensuring that the economic and social effects associated with housing are properly provided for, to avoid exacerbating serious problems that arise from inadequate housing supply.

As a significant local service provider and employer, Stagecoach is concerned that existing issues with housing availability and affordable housing supply are not exacerbated. This has a direct bearing on staff recruitment and retention. It also has an indirect bearing on our cost base.

The existing problems with housing affordability have developed over many decades of undersupply. It should be emphasised that the significant boost to the supply of housing that has been sought by governments over the last 15 years, has only begun to take effect relatively recently in this District. Tackling the problem will require years of consistent attention.

Stagecoach notes that the Council is no longer proposing to meet its identified housing needs in full. Rather than 638/annum the Council is allocating a total that implies an annual delivery rate of 535/annum.

While a number of matters evidently present challenges to the Council in identifying a sustainable development strategy. Paragraph 5.2 indicates that "constraints, particularly the capacity of the A27 has led to the council planning for a housing requirement below the need derived from the standard method..." The blame for being unable to meet housing requirements is thus laid squarely at the door of transport infrastructure and systems.

This conclusion in no way follows from the evidence in the Chichester Transport Study. This, rather, makes the statement that when a higher annualised quantum of 700 dwellings per annum was tested, in the majority of cases the traffic capacity improvement package would perform little differently. To quote the Study:

"5.6.3 The network performance outputs analysed comprising V/C%, Delays (seconds) and Queues (PCU's) suggest that generally the proposed SRN mitigation identified for the Core Scenario, can accommodate in the most part, additional increase in development to 700dpa."

Whether the rest of the local road network is similarly protects is moot.

Irrespective of these results, even if the contention made in the draft plan were true, unlike many other constraints, this is amenable to a suitable effective strategy to address the constraints identified being collaboratively conceived. This is what NPPF expects, as set out in paragraphs 104-106.

Where the A27 is concerned, as part of the SRN, National Highways is now working to a substantially revised approach than that in force at the time to current Local Plan was prepared, or LSS2, or reflected in the Chichester Transport Study. This is set out in DfT WMS 01/22. This document is the policy of the Secretary of State for Transport in relation to the SRN which should be read in conjunction with the National Planning Policy Framework (NPPF). It replaces the policies in the Department for Transport Circular 02/2013 of the same title.

It makes plain that to accommodate additional demands arising from development, National Highways (NHC) expects to meet the requirements of its statutory license in a substantially different manner. With respect to development NHC LTN 01/22 continues to address the tensions between national policy for the environment and carbon mitigation, the ongoing need to substantially boost the supply of housing as well as maintain national economic competitiveness and protect the safety of the public. However, in future, the approach will be to seek first to maximise the impact of demand management measures (reducing the need to travel), and then to accommodate residual additional demands first though maximising the use of sustainable modes, rather than accommodating assumptions about current levels of car dependency and use.

LTN 01/22 much more closely and explicitly aligns with the language of NPPF Chapter 9 paragraphs 104-106. Paragraph 12 states: "New development should be facilitating a reduction in the need to travel by private car and focused on locations that are or can be made sustainable... Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas." (our emphasis).

It continues at paragraph 13: "where developments are located, how they are designed and how well delivery and public transport services are integrated has a huge impact on people's mode of travel for short journeys. The company will therefore expect strategic policy-making authorities and community groups responsible for preparing local and neighbourhood plans to only promote development at locations that are or can be made sustainable [footnote 8] and where opportunities to maximise walking, wheeling, cycling, public transport and shared travel have been identified." (again, our emphasis)

Stagecoach readily confirms that the draft Plan development strategy conforms well to the first limb of this expectation, in terms of the location of development.

Stagecoach considers that the plan and its evidence base conforms poorly to the second in that the specific opportunities to maximise walking, cycling wheeling and public transport are not clearly identified, and defined, and proven to be effective and deliverable.

The current mitigation strategy for the A27 Chichester area, supporting the adopted Local Plan and for which proportionate developer contributions have and continue to be sought, reflects now-superseded DfT Circular 02/2013. As

a direct result, it failed completely to identify any significant effective bus priority measures, despite the fact that frequent services already exist on the key corridor concerned, and that one bus journey can remove, fully seated between 72 and 80 single occupancy car journeys from congested links and across key junctions on the A27. Rather, it sought to implement targeted measures to increase the throughflow of general traffic.

We recognise the realisation that this approach, which was already reliant on some tenuous logic, is simply not technically viable, especially where further development needs are anticipated.

National Highways will now pursue an approach with the planning system that "includes moving away from transport planning based on predicting future demand to provide capacity ('predict and provide') to planning that sets an outcome communities want to achieve and provides the transport solutions to deliver those outcomes (vision-led approaches including 'vision and validate,' 'decide and provide' or 'monitor and manage'). The company will support local authorities in achieving this aim through its engagement with their plan-making and decision-taking stages." (paragraph 15).

Paragraph 23 is at the fulcrum of assessing and defining transport mitigations to accommodate growth on and near the SRN "Capacity enhancements such as modifications to existing junctions or road widening to facilitate development should be determined on a case-by-case basis. The general principle should be accepted where proposals would include measures to improve community connectivity and public transport accessibility, and this will be weighed against any negative safety, traffic flow, environmental and deliverability considerations, impacts on the permeability and attractiveness of local walking, wheeling and cycling routes, and alternative options to manage down the traffic impact of planned development or improve the local road network as a first preference." (our emphasis).

However, no material work has been done that seeks to identify if a bold robustly conceived and suitable judiciously-prepared strategy that seeks to consolidate flows on already densely travelled corridor onto improved bus services, driving mode shift through insulating these services preferentially from already serious queuing. This would be likely to have very substantial impacts on all the key junctions on the A27, and potentially, on the A27 itself. The need for an integrated approach between Shoreham and Emsworth within West Sussex paying particular regard to development requirements in both Arun and Chichester Districts naturally lies at the heart of this, and we would expect to be picked up by the LSS3 Review among other things.

However, the locus of the problems and its causes and effects are obviously well enough known to start work on defining solutions within the plan area today. We would expect that this work will be essential if National Highways are to support the Plan, especially now given the terms of Circular 01/2022.

Such work could and should start from a "policy off" position: in other words that the Plan should fully accommodate its needs unless it can be proved that a mitigation strategy for the A27 that is compliant with DfT WMS 01/2022 cannot credibly accommodate resulting capacity demands without unacceptable impacts on the safety and efficient operation of the SRN.

This evidence does not exist. In fact the Chichester Transport Strategy 2023, on which the Council solely relies as its transport evidence base, indicates the opposite at para 5.6.3. This is the case before meaningful measures to secure damping of traffic demands through mode reassignment are even considered.

The exception to this is Portfield and Oving Road, which are among the most problematic areas after mitigation even at the Council's chosen 535 dwelling/annum scenario (para 5.6.4.-5). The costly capacity mitigation simply cannot deliver enough benefit. It is admitted that WSCC has indicated that it would prefer a solution that places greater reliance on sustainable modes damping car-borne demand. This is entirely the strategy required by NHC to follow LTN 01/22, of course. Despite the fact that "predict and provide has "run out of road" no attempt has been made to examine what such a solution set credibly could look like. This is unsatisfactory and deeply troubling.

At paragraph 5.4 the draft plan points back again at the West Sussex and Greater Brighton Strategic Planning Board and the future work that has been commissioned, but has barely begun, to update the Local Strategic Statement. This work is to inform the preparation of plans that have horizons beyond the end date of the current LSS in 2030 and properly to meet the Duty to Cooperate. As we said in our response to section 1 of the Plan we fully endorse the conclusion that this is the right mechanism to look at these issues. However, the mechanism has not been effectively applied to the production of this plan. Therefore, the specific evidence that capacity on the A27 in and of itself supports accommodating a lower housing requirement does not exist.

The Plan thus does not conform to NPPF, is not adequately justified and is not effective.

The Plan does not properly meet the statutory Duty to Cooperate.

We will return to this matter in specific representations to Section 7 of the draft plan.

## 5.2. Policy H2 Strategic Locations/Allocations 2021-2039

### Stagecoach Supports

Policy H1 makes plain that the plan, as far as it identifies locations for development has done so in locations that

conform with its spatial strategy. All of the strategic allocations to a greater or lesser extent offer clear opportunities to make use of sustainable modes, by virtue of their location. That is not to say that the opportunities to take up these opportunities, and maximise the role of sustainable modes, has been identified, defined and translated properly into the rest of the plan policy suite or Infrastructure Delivery Plan.

As our remaining representations make clear, we support the locations thus far identified as being those that offer the best opportunities to reduce the need to travel, reduce travel distances, and create high quality attractive sustainable travel choices, for both existing residents as well as new ones.

However, the transport impacts of the allocation will individually and cumulatively likely to lead to increasingly severe impacts on the transport network, and on bus services.

Perversely, because these opportunities are not properly identified and secured through the plan and its supporting transport strategy, the opportunities presented by the allocations to secure a substantially more sustainable and lower carbon pattern of movement will not only risk being squandered but may aggravate the wider problems.

### 5.3. Policy H3 Non-strategic Parish Housing Requirements

#### Stagecoach Supports

The approach is consistent with the plan's spatial strategy. It generally avoids a dispersal of development to locations likely to be highly car dependent. There is a clear focus on meeting housing needs in the far north-east of the District at the largest and most sustainable settlements, such as Loxwood, Kirdford and Wisborough Green. However, it must be pointed out that public transport availability in this area, provided by the County Council through services it procures, is minimal. These settlements in practice require each adult and child of secondary school age to have access to motorised transport to fully participate in society. This might justify significant measures to secure a boost in the frequency of bus services between Guildford and Billingshurst, passing through these settlements.

Otherwise, existing commitments in the plan area already make provision to meet for local needs. To the degree that there is an unmet local requirement for affordable housing of a small scale – for example to support the rural economy – this could be met through neighbourhood plans or through Rural Exception Sites.

## 6. Place-making, Health and Wellbeing

### 6.1. Policy P1 Design principles

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

NPPF requires that proposals should consider transport issues from the earliest possible stage. Designing to properly facilitate safe and efficient access, focusing first on sustainable modes, should be at the heart of development design. Too often it is still an afterthought, notwithstanding this.

Policy P1 must include an additional statement to be compliant and effective with NPPF paragraph 104-105 and 112 a): "Development will be designed to make access and movement using walking, cycling and public transport the natural first choice, and demonstrate through the Design and Access Statement how such modes are afforded the most direct, safe, reliable and efficient routes within to and from the proposals, especially when compared with car use."

### 6.2. Policy P4 Layout and Access

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

A number of proposals in the plan involve large-scale development. It is essential that where appropriate buses can access and circulate efficiently through development at a suitably early stage. There is no acknowledgement of this anywhere in the policy, contrary to NPPF paragraph 112.

Large-scale development which buses cannot access in an efficient or timely manner, or at all, strongly contributes to high levels of car-dependency. Evidence for this is referred to among other places, in DfT Circular 01/2022. To be compliant with NPPF and properly pursue its strategic Objectives, Policy P4 needs to be modified to address this point: "1. Provide safe, direct and attractive conditions for inclusive access, egress and active travel between all locations and providing as good direct high quality links to integrated public transport, and where appropriate efficient access and circulation to bus services, unimpeded by excessive parking, at a suitably early point in the development phasing;

## 7. Transport and Accessibility

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

- is unsound because it is not based on relevant proportionate and up to date evidence

The issues related to transport are fundamental to the soundness of the Plan. In particular, the constraints presented by the capacity on the A27 around Chichester and its key junctions, are the paramount reasons why the Council does not consider it can meet its objectively-assessed development needs in full. Thus, the transport issues and potential solutions available and what these mean for the ability of development needs to be accommodated, are matters that go to the heart of the soundness of the Plan.

Paragraph 8.3 sets out the approach taken to date succinctly:

"Increasing the capacity of the road network is key to supporting growth in the Local Plan. However, there is also a need to reduce demand for road transport to achieve net zero in greenhouse gas emissions by 2050 as highlighted in the council's Climate Emergency Action Plan and Strategic Objective 1. In aiming to achieve the ambitions of the action plan, all development is expected to demonstrate how it will support four key objectives to create an integrated transport network which will alleviate pressure on the road network, improve highway safety, encourage sustainable travel behaviours and help reduce transport related impact on air quality, by:

1. Avoiding or reducing the need to travel by car;
2. Enabling access to sustainable means of travel, including public transport, walking and cycling;
3. Managing travel demand; and
4. Mitigating the impacts of travel by car."

However, this approach is unambitious and "lightweight" as it assumes, as does the existing Chichester Transport Strategy on which the current adopted plan relies, that the focus of investment should be, wholly, in highways capacity improvement.

Sustainable modes explicitly are expected to play a greater role to "alleviate pressure" on the local road network, as part of this strategy. To emphasise: to avoid exacerbating congestion, the strategy will have to both remove a significant proportion of existing demands from the network on multiple key approaches to Chichester; and then ensure that travel demands from committed and further new development allocated in the plan does not simply replace these journeys, or, worse, create even greater demands.

This will demand very significant behaviour change. Only by making sustainable modes substantially more attractive, both absolutely, and relative to the same journey made by car, can this be expected to occur. However, the explanatory memorandum as well as the wider policy suite and IDP, well expresses a fundamental unwillingness to taking specific, defined measures to achieve this reduction in car use and material promotion of sustainable modes. It makes plain that sustainable modes, including bus services, will offer a lesser role to which "access will be provided".

Such a vague and weakly defined mechanism will have no effect, at all, on current behaviour and car dependency if the relevance of those choices as a credible alternative to car use, is not substantially boosted. This includes a 5% reduction in trip demand assumed by the Traffic Model at the heart of the Chichester Transport Study 2023.

For this reason. the transport strategy behind the current adopted plan is demonstrably ineffective, as the updated model makes plain. It has not yet been delivered and is yet unclear when or (in the absence of committed funding) even if it can be. It is ineffective to "roll forward" this strategy to support a higher level of planned growth.

We note that a scheme for addressing congestion on the A27 at Chichester has been included in Roads Investment Period 3 (2025-2030) – well within the horizon of this Plan. However, recent history provides compelling evidence that off-line improvement to the north is not politically supported and arguably even technically or economically deliverable. It is not funded, nor at this stage can it be hypothesised if an economically deliverable scheme is achievable sufficient to warrant the necessary investment.

An on-line improvement of the A27, including junction improvements, is likely to favour longer distance east-west though movements, which are of greater significance to the national economy, at the expense of local movements crossing the SRN- a conundrum that largely sums up the dilemma that is faced by NHC and the County as Highways and Transport Authority. It is one that is played out in many places, but rarely is the tension so stark as at Chichester.

Every local route crossing the A27 at grade around Chichester accommodates a regular bus service - or shortly will do (Oving Road area is expected to follow in 2023, though bus services are likely to not use the modified crossroads but to use the left-in-left-out facilities provided as part of the Shopwhyke Lakes development). The impact of these issues on the entire bus operation are serious and increasingly severe.

By the same token, boosting the relevance and reliability of each of these services substantially consolidating as much demand as possible onto a much smaller number of vehicles, is clearly a strategy that ought to support the effective capacity of each of these junctions being greatly augmented, at the same time as reducing equally substantially, the energy- and carbon intensity of mobility in the plan area. Addressing the A27 should not be considered some kind of "zero-sum" game.

Furthermore, the approach of National Highways in its dealings with development and the planning system now reflect a substantial change in Government Policy set out in DfT Circular 01/2022, which we separately cover in these representations, that entirely aligns with an approach that seeks to appropriately invest in more active and rational management of scarce highways capacity, on both the SRN and local roads.

For environmental, economic and social reasons – including public health, the issues presented by the A27 and its interface with local roads around Chichester stands out, nationally, as an example of where the approach taken to accommodating and mitigating development impacts needs to make a clear break with previous “predict and provide” approaches to meet forecast unconstrained car use as LTN 02/2022 makes clear as a principle. Policy in the West Sussex LTP to 2036 itself makes plain that “shared mobility” – including bus services – must play a much greater role in this area.

The existing Chichester Area Transport Strategy is focused on justifying capital contributions from committed development to fund highways capacity improvement – with nothing included to make bus services more attractive, or importantly more reliable. Indeed this “cars first” approach is so costly, that there is already accepted by WSCC to be insufficient land value remaining to be captured to put into substantial improvements for public transport. That much is very evident, and transparent, from paragraph 8.12 and 8.14, where south of Chichester “This (one) package of works (of several improvements needed) would be between £57.23 and £82.79 million to deliver in full and would not be capable of being funded by development contributions alone.” This assumes the scheme is otherwise deliverable, which on the evidence in the public domain for some time, has been considered challengeable.

The draft Local Plan and a modestly updated infrastructure package that flows from the 2023 Chichester Transport Study, pursues exactly the same approach.

This strategy is also even more ineffective having regard to the roll forward of the Plan to 2039. It cannot deliver the key Strategic Objectives of the Plan; and in particular this is explicitly recognised by the Council in the failure of the draft Plan to accommodate the OAN in full.

It is also obsolete, as it does not align, from first principles, with national policy (including the National Decarbonisation Strategy for Transport) and DfT Circular 01/22; nor the Council’s own declared Climate Emergency.

As a result, draft Policies T1 and T2 are both unsound, as we will separately explain.

Owing to the lack of evidence about the implications of this for adjoining authorities – especially Adur District – in the absence of the review of the Local Strategic Statement – this has implications for fulfilling the Statutory Duty to Co-operate.

The absence of any meaningfully comprehensive refresh of the transport evidence base means that there are no meaningful schemes of any kind, defined in the plan or its IDP, to indicate either what level of growth can be accommodated, by delivering a change in travel behaviour. This would be aimed to secure a sufficient effective increase in junction throughput (measured in terms of person trips as opposed to passenger car unit movements (PCUs)). Such evidence would propose measure to achieve that outcome and assess the efficacy and costs of such improvements, across all modes.

Paragraphs 8.10-8.13 inclusive indicate that the Council “has moved away from ‘predict and provide’” and invites the reader to conclude this has translated into a programme of interventions that can be funded to deliver specific, credibly predictable outcomes. Such a programme should be clear in paragraph 8.11. and the IDP. There is no such clarity and this conclusion would be false.

It would also be evident in the language of the Chichester Transport Study 2023 and its refreshed proposals. Only the most token of lip service is paid to the matter. It is a plainly car-focused, predict and provide methodology to support a “predict and provide” strategy. In fact, it is a brazenly car-focused approach, to the exclusion of all else.

The statements in the Plan regarding any other approach, read properly, offer nothing more than a vague commitment to look post-adoption, and implementation, at unspecified measures, based on problems that may arise in future that will be decided by a committee: the Traffic and Infrastructure Management Group (TIMG). This does not yet exist and is obviously an attempt to posit a mechanism that retroactively will cover for the lack of serious multi-party engagement to address the existing and future issues. Such a group should, in our view, also include the public transport operators, not least if the requirements of NPPF Para 106c) are to be satisfied, and the strategy and measures to be adopted are material to supporting the Local Plan, as of course the purpose of the TIMG has as its core *raison d’être*.

The approach proposed by the draft plan is plainly ineffective and unsound in justifying the draft Plan.

It is more widely unacceptable to Stagecoach. The issues are severe today and well-known, already serving to jeopardise the delivery of buses relied on by existing residents, much less attract new ones.

We also consider that HM Planning Inspectorate are likely to be quite resistant to accepting this aspect of the plan’s transport strategy, nor will it be appropriate for the Council, West Sussex County Council, or National Highways, to define

such measures after the submission of the Plan during the Examination process. The Examination in Public of a local plan has no purpose to improve plans, or remedy deficiencies clearly evident prior to submission.

The examination of the West of England Joint Strategic Plan in 2019, and the Uttlesford Local Plan in 2021, among several others, demonstrates especially clearly that the Planning System and the Examination process is not amenable to post-hoc retrofitting of transport evidence and strategies to support a development strategy.

#### 7.1. Transport Evidence Base

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Most of Stagecoach's serious concerns about the soundness of the plan arise from the fact that it has been prepared in advance of any up-to-date transport evidence and suitably robust transport mitigation strategy being advanced to support it. In essence, the Council has rolled forward the existing plan by 9 years, adding some additional sources of housing supply, while still relying implicitly on a transport evidence base that was prepared 10 years ago.

This led to the formulation at that time of what can only be described as an attempt to develop an effective car-based mitigation strategy, creating capacity for general traffic added to accommodate unconstrained additional demands on an already over-taxed highways network – the Chichester Area Transport Strategy. Despite language in support of sustainable modes, no deliverable measures were identified to support either the extension of the bus network to serve allocated sites, and much less to create a vital improvement to the quality and reliability of public transport services. This approach reflected the approach set out in DfT Ministerial Circular 02/2013 "Development and the Strategic Highways Network", applicable since the A27, which is the focus of the most severe difficulties, forms part of the national Strategic Roads Network.

This approach has proven ineffective even before substantial elements of housing land supply in the current plan come forward – in particular West of Chichester and West of Tangmere.

In addition, Circular 02/2013 has now been replaced by a new Ministerial Statement of 23/12/2022, DfT Circular 01/2022.

On both counts the transport evidence base and strategy needs to be properly revisited and established to provide effective mitigation for the plan, including current commitments that are being rolled forward.

The language of the current Ministerial Circular 01/2022 offers a highly condensed synoptic view of the proper approach to addressing transport matters in the planning system notwithstanding that it is directly concerned with the Strategic Roads Network. Videlicet:

"31. The NPPF expects local plans and spatial development strategies to be underpinned by a clear and transparent evidence base which informs the authority's preferred approach to land use and strategic transport options, and the formulation of policies and allocations that will be subject to public consultation. The company will expect this process to explore all options to reduce a reliance on the SRN for local journeys including a reduction in the need to travel and integrating land use considerations with the need to maximise opportunities for walking, wheeling, cycling, public transport and shared travel.

32. The Transport Decarbonisation Plan indicates that carbon emissions from car and van use is the largest component of the United Kingdom's total transport emissions. While action is being taken to decarbonise transport such that all new cars and vans will be fully zero emission at the tailpipe from 2035, the proposed location of growth in current plan periods and whether new developments would be genuinely sustainable remain important factors in demonstrating that a local authority area is on a pathway to net zero by 2050 and therefore compliant with the requirements of the Climate Change Act 2008.

33. Alongside this, the local authority should identify the key issues within their study area regarding transport provision and accessibility, setting out how the plan or strategy can address these key issues in consultation with (National Highways, and other transport stakeholders identified in NPPF paragraph 106b). It is the responsibility of the local authority undertaking its strategic policy-making function to present a robust transport evidence base in support of its plan or strategy. The company can review measures that would help to avoid or significantly reduce the need for additional infrastructure on the SRN where development can be delivered through identified improvements to the local transport network, to include infrastructure that promotes walking, wheeling, cycling, public transport and shared travel. A robust evidence base will be required, including demand forecasting models, which inform analysis of alternatives by accounting for the effects of possible mitigation scenarios that shift demand into less carbon-intensive forms of travel." (our emphasis)

Within the text quoted above, references to National Highways and "the Company" can quite legitimately be extended, given the statements in NPPF paragraph 16, 25, 26 and 106b, to include all the relevant transport infrastructure and

service providers in the plan area. Circular 01/2022 also has the weight of secondary legislation as a Written Ministerial Statement and thus should be considered to be highly material.

To date there has been little attempt to explore, to the degree necessary, strategies that conform to Circular 01/2022. It is thus not possible to conclude, as the Council has done, that the issues on the A27 that present a constraint to development, are insuperable.

In line with comments made elsewhere in the response to this pre-submission draft, the Plan thus requires substantial further work to be undertaken with key stakeholders to establish a suitably effective and demonstrably deliverable transport mitigation strategy, to sustainably meet the District's identifiable development needs and where apparent and appropriate, also ensure that wider cross boundary strategic issues are appropriately addressed, in conformity inter alia, with the Duty to Cooperate, NPPF paragraph 16 and 104-111 inclusive, and DfT Circular 01/2022 and to ensure the Plan's own Strategic Objectives can be met.

## 7.2. Policy T1 Transport infrastructure

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

As described in comments elsewhere, Stagecoach does not see that a suitable proportionate and up-to-date basis exists to properly and appropriately address the transport issues in the plan area.

The 2023 Transport Study does not perform this role adequately but, contrary to the explanatory memorandum, is a scheme intended only to facilitate car-borne movements through some of the key junctions. There is no evidence that an holistic integrated and strategic approach to transport mitigations has been prepared. Certainly Stagecoach has not been involved in any of the discussion about appropriate transport measures in support of the plan, including the Transport Study 2023, contrary to the expectations set out in NPPF at paragraph 16 and 106.

Notwithstanding out fundamental concerns about the transport evidence case and mitigations strategy, Policy T1 reflects a weak and ineffective approach, that seeks to try and define a strategy post-adoption.

Contrary even to the explanatory memorandum for the policy, which seeks to maximise the contribution of sustainable modes, the policy is phased in such a way that it gives basis for previous "predict and provide" solutions to facilitate and support current levels of car dependency – already shown to be undeliverable and unaffordable – will nevertheless be the first rather than the last resort. There is no commitment to seek to maximise the contribution made by sustainable modes to meeting mobility needs. Nor is there any recognition that current chronic congestion and lack of network resilience jeopardises the ongoing attractiveness and long-term sustainability of the current public transport offer.

To be effective and create alignment with national policy, and also provide for an up-to-date transport evidence base and strategy to be adduced, Policy T1 should be modified to read:

"Integrated transport measures will be developed to mitigate the impact of planned development on the highways network, improve highway safety and air quality, promote more sustainable travel patterns and through providing in the first instance, new and improved infrastructure and services that will be credible effective in maximising the encourage increased use of sustainable modes of travel, such as public transport, cycling and walking.

To achieve this, the council will work with National Highways, West Sussex County Council, other transport and service providers (including through the Traffic and Infrastructure Management Group) and developers to provide a better integrated transport network and to improve accessibility to key services and facilities...

All parties, including applicants, are expected to support these objectives by:

1. Ensuring that new development is well located and designed to avoid or minimise the need for travel, encourages maximises the use of sustainable modes of travel as an a credible alternative to the private car and directly provides or contributes towards new or improved transport infrastructure;
2. Working with relevant transport infrastructure and service providers to improve accessibility to key services and facilities with primary emphasis on sustainable modes, and to ensure that new facilities are easily accessible by sustainable modes of travel;
3. Targeting investment to provide local travel options as an that represent a clearly credible alternative to the car use, focusing on the delivery of improved integrated bus and train services, and improved pedestrian and cycling networks, including the public rights of way network, based on the routes and projects identified in the Local Transport Plan, West Sussex Bus Service Improvement Plan, Local Cycling and Walking Infrastructure Plan (LCWIP) and the Infrastructure Delivery Plan;

4. Planning to achieve the timely delivery of transport infrastructure on and approaching the A27 and elsewhere on the network, needed to support new housing, employment and other development identified in this plan;
  5. Phasing the delivery of new development to align with and where possible facilitate the provision of new and improved transport infrastructure and services and the outcomes of monitoring travel demand on the network, including that arising from areas immediately adjoining the plan area. It may also be Where necessary to achieve this alignment proactively phase development will be phased to take into account the monitoring and effectiveness of travel plans demands on the network and to ensure that measures are implemented to support the highest possible level of encourage sustainable travel behaviour.;
  6. Using demand management measures, such as travel plans, to manage robust methodologies to assess travel demand and minimise the need for new or improved transport infrastructure as part of the monitor and manage process.
  7. Delivering a coordinated package of infrastructure improvements at and approaching to junctions on the A27 Chichester Bypass along with other small-scale junction improvements interventions within the city and elsewhere, as identified through the monitor and manage process. These will increase road capacity, reduce traffic congestion, improve safety and air quality, and improve access to Chichester city from surrounding areas, first by maximising the contribution of sustainable modes to meeting mobility demands, then, and only as evidenced by robust modelling and option testing, providing increased highway capacity for general traffic.
- ..."

### 7.3. Policy T2 Transport and Development

Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Section 1 b) of T2 will be ineffective as, absent measures to ensure buses can run reliably and efficiently, improved bus services will not be possible, in support of the plan's own stated broad approach to transport mitigation, as well as wider local and national policy.

The draft policy does not require improvements to the quality of services such that sustainable choices will be materially more attractive than car use for many local journeys. Without this the Plan's Strategic Objectives cannot be fulfilled and the objectives of the Plan and this policy, read in its own terms, will not be realised, where reduction in private car use is concerned. It is thus ineffective.

Absent measures to make bus services more reliable and more efficient, by insulating them from chronic congestion as far as possible, still further operating resource and therefore costs, will be needed to just to reliably run existing service frequencies, and capacity, as vehicle productivity continues to be more and more adversely affected by chronic delay. This will be further aggravated by increasing incidence of severe unpredictable service breakdown arising from incidents of diverse kinds on the network, especially on or around the A27, including that arising from more regular severe weather events. Longer journey times can only be expected to lead to relative disadvantage of bus services compared to personal car use, entirely contrary to the objectives of national and local policy, including Policy T1. It can also expect to lead to a dampening effect not on car use, but on bus patronage, threatening the ongoing viability of bus services across the plan area.

Section 1 b) of T2 should be modified to read:

"b) Maximise opportunities for the use of sustainable travel modes through provision of direct and efficient access both to either the existing networks or and through providing such new infrastructure or public transport services, as can be credibly expected to reduce reliance on the private car and work towards achieving net zero in greenhouse gas emissions by 2050;"

Section 1 d) of T2 will be ineffective as the location of development is fixed by this plan. We commend the fact that all the strategic allocations are or will be served by regular bus services.

However, the use of public transport services, where available, depends on the relevance and reliability of these services. Furthermore, provision of services without them generating sufficient patronage to support their long-term operation also threatens the sustainability of the plan and its supporting transport strategy. This is especially true of new services such as those intended to serve West of Chichester and Tangmere and East of Chichester Strategic Allocations.

This can only be assured by the plan being supported by specific measures to ensure buses can operate efficiently and reliably on the existing and projected services intended to serve the developments concerned, and also at the same time secure behavioural change from existing development.

To be sound and effective, the policy T2 1 d.) should be changed to read:

"d) Ensure major development is located to proposals and the supporting mitigation measures enable the use delivery of high-quality, reliable and effective public transport to present the most relevant possible choice to access local services and facilities including employment, leisure and education facilities";

The Policy T2 makes no provision for buses, where necessary, to enter and make efficient and safe progress through major development sites. The plan is thus out of conformity with NPPF paragraphs 104-106. It makes no provision to ensure that penetration of bus services is achieved at a suitably early point in the development trajectory, undermining the achievement of the goals of the Plan and this specific policy. As a good example, West of Chichester Phase 1, currently under construction, cannot be served by buses as a strategy to effect interim bus penetration was never made.

Policy T2 1 f.) should therefore be amended to read:

f) Ensure that the layout and design of the site development proposals provides effective penetration of the site by sustainable modes, at all points in the development build-out, including public transport where appropriate; and sufficient space for all vehicles to manoeuvre without compromising the safety of pedestrians and cyclists, the efficiency of bus services, or the ability to provide an appropriate level of landscaping across the site"

Policy T2 3.) regarding Travel Planning depends entirely on its effectiveness on the quality and relative attractiveness of sustainable alternatives over car use. In the absence of efficient frequent, reliable and direct public transport services (or similarly, high quality facilities for active travel, Travel Plans will continue to be the entirely ineffective "tick box" exercises that they generally are today, evidenced by much lower levels of public transport use in most new developments than it seen in nearby established neighbourhoods, as demonstrated broadly by Census data in 2011, 2011 and 2021.

For this policy to be effective an up-to date transport evidence base and strategy, underpinning a series of specified interventions to promote the relevance and effectiveness of all sustainable does including public transport in particular, needs to be put in place.

#### 8. Chapter 9 Infrastructure – Policy I1 Infrastructure provision

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Policy I1 could not expect to be effective without a clear understanding of the effectiveness and costs of a defined series of measures that are laid out in this Plan and its IDP, to mitigate the transport impacts of the development strategy.

Where the Chichester Transport Study is concerned the only meaningful work has focused on the definition and delivery of a range of highways capacity schemes mainly on the A27 around Chichester.

As we have discussed elsewhere the effectiveness of these schemes is insufficient as set out at Tables 8.1 and 8.2 of the Chichester Transport Study 2023. The plan itself admits that the deliverability of this package cannot be afforded by developer contributions alone.

The Chichester Transport Study 2023 does not attempt provide a realistic assessment of costs to deliver these schemes, despite the fact that they have been under evaluation for many years. Nor does it offer any assurance that the schemes are technically achievable. Rather, it states the opposite:

"9.2.3 No investigation has been carried out into specific land ownership details, or into the location details or cost of moving statutory undertakers and utility apparatus within the areas of the scheme. No design assessments were carried out at this stage to ascertain the deliverability of the proposals except where any Health and Safety concerns were raised."

Thus on the grounds of effectiveness, deliverability and affordability, the measures on which the Plan relies must at the very least be considered to involve an exceptionally high level of risk. Since Policy I1 is founded on these assumptions, it cannot be considered effective.

As we set out elsewhere, the Plan has been advanced on the basis that if any additional sustainable transport measures are required, these mitigations should be retroactively considered and defined after adoption of the Plan. In the light of the doubts that are apparent of both the deliverability, affordability and effectiveness of the Chichester Transport strategy this is especially unsatisfactory even if existing baseline conditions were reasonably acceptable.

However, the Chichester Transport Study 2023, as did its predecessors, makes plain that that existing problems are acute, and can rightly be considered "severe" in the sense of NPPF paragraph 111. Waiting to define deliverable affordable alternatives is an entirely inappropriate approach to the local plan transport mitigation strategy. Such an approach also makes it impossible to consider prior to adoption how far the transport impacts of the plan can be cost-effectively mitigated by alternative means, or whether they are deliverable having regard to technical achievability, land control, development viability, or any combination of the above. Thus, the plan cannot be considered justified, or effective.

Given the mutual dependence of development strategies in Chichester and Arun in particular on these measures this

should be seen as crucial of the fulfilment of the Duty to Cooperate.

The remedy for this is ultimately to put in place a suitable transport mitigation strategy following a strategic appraisal of options through review of the LSS. This then must be supplemented by more detailed development specific and localised scheme definition, including, where necessary, bus priority and other measures to support the substantial promotion of the attractiveness of public transport in key bus corridors over private car use. This would then be reflected by costed proposals in the IDP.

Leaving these fundamental weaknesses to one side, even if such a strategy and mitigation package were defined, there is no mention of public transport in the policy even though it is clearly a key part of the policy environment and mitigation strategy for the plan as expressed in the explanatory memorandum for I1, but also at Policies T1 and T2. I1 thus does not effectively support the realisation of the intent of Policies T1 and T2.

Policy I1 iii) should therefore be modified to read:

“(iii) Safeguard the requirements of infrastructure providers, having regard to requirements within and where appropriate across the boundaries of the plan area, including but not limited to:

...

- Highways including specific measures to accommodate improved active travel and public transport level of service and cycle lanes, and...”

At limb v) the Policy expects developers to meet the “in perpetuity costs of operating and maintaining infrastructure”. This shackles development management decisions to developers assuming what are infinite costs – given that “in perpetuity”, read properly, can only mean “without any limit in time”. This means that it is impossible to meet the statutory tests on developer obligations set out in the Community Infrastructure Levy Regulations 2010 (as amended) at Regulation 122, also repeated in NPPF. This policy cannot be lawfully implemented and it is thus ineffective.

In the absence of an up-to-date transport mitigation strategy that is fit for purpose, at the point the Plan is examined these costs of any additional infrastructure are not known in any case. The strategy and its costs, including its affordability and deliverability, are crucial to assessing if the Plan is sound.

Subject to an appropriate defined transport mitigation strategy being arrived at, to be sound, the Policy I1 v) should be modified as follows:

(v) To consider and meet as appropriate the in-perpetuity delivery costs of infrastructure and, where appropriate, improved services, to the point where its long-term operational sustainability is credibly assured from mainstream sources. Where adoption is not envisaged by local authorities, that must include arrangements for its future ongoing management and maintenance;

## 9. Strategic and Area Based Policies

### 9.1. Policy A1 City Centre Development Principles

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Chichester City centre is rightly identified at 10.2 and 10.4 as the commercial and service hub of the District. It is also acknowledged to be the most accessible place in the District by sustainable modes, public transport in particular.

Boosting the vitality of the city centre is something that Stagecoach strongly supports. Irrespective, the enhancement of the commercial and cultural life of the District in the place where these opportunities can be accessed broadly by sustainable modes, is one that has long been at the heart of national planning policy for town centres, reflected in the “town centre first” approach to locating major trip generating uses.

Paragraph 10.5 exposes an unbalanced and unsound preoccupation with aesthetic matters in its approach to the town centre, and far too little to ensuring that the central place function is enhanced through protecting and enhancing the quality of public transport access.

The city is relatively small but at the heart of an extensive hinterland, and thus the role of bus in supporting sustainable access to and enhanced city centre venue is one that needs appropriate recognition and emphasis. It is important to note that a dominant number of key service and facilities such as the General Hospital are relatively close to the city centre. This directly contributes to driving travel demand into the city, causing congestion. Most importantly, it also makes the task of mitigation simpler, given the impact a suite of active and sustainable measures can have within the same close proximity.

Policy A1 does not provide this. As such, achieving the strategic objectives of the plan is seriously threatened, and the

plan is thus not effective.

The Plan needs to ensure that the approach to city centre regeneration maintains and enhances public transport access, interchange and inter-modal connectivity. It also needs to ensure that bus service stopping and interchange facilities are able to address increases in future demand, anticipated by the clear intent expressed elsewhere in the Plan that public transport should be meeting a greater proportion of mobility needs, in a growing district. Achieving this demands an ambitious approach to the location, quality and capacity of bus stop and interchange.

We have been in discussions with the District Council about this, alongside West Sussex County Council, for a very considerable period. Stagecoach has always been keen to help facilitate the Council's aspirations for the city centre, and we continue to hold this intention. However, this cannot be at the expense of a material diminishing of the convenience and fitness-for-purpose of bus stop infrastructure and interchange. Stagecoach has significant concerns that current proposals to remove the bus station and have all bus services operate from the street kerbside, on an inner distributor road with similar or reduced net stop capacity, fall short of promoting attractive, convenient bus access to the central area as a destination.

For the longer term and where the objectives of the draft plan are concerned looking ahead to 2039, they clearly fall short of enhancing the convenience and attractiveness of public transport use. Much less do they make sufficient provision for a material increase in bus frequency, connectivity, and interchange convenience, on which the draft plan explicitly relies. It is vital that the District Council is clear in policy about its objectives for public transport in the city centre. These objectives must also carry sufficient weight when held in tension with other aspirations for the centre and the constraints on achieving them.

For the Plan to be sound, properly effective and compliant with NPPF, the approach to the City centre cannot ignore its role in the provision of sustainable transport service and connectivity.

Policy A1 should therefore be modified to properly reflect this crucial function, on which the vitality of the city centre must increasingly depend if unacceptable impacts on congestion, air quality and amenity are not to arise. This is still more crucial if wider aspirations to secure a more sustainable society and mitigate carbon are to be achieved.

"...This will include provision for development and proposals that:

- Support and strengthen the vitality and viability of the city centre and its role as a shopping/visitor destination, employment centre, public transport hub and a place to live;
- Support and promote facilitate improved access to the city and with increased emphasis on sustainable modes of travel, with particular regard to enhancing the public transport interchange role of the city centre area, in accordance with the transport strategy for the city and..."

9.2. Policy A3 Southern Gateway Development principles Chichester Bus Station, Bus Depot and Basin Road Car Park Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

There has been aspiration to redevelop the bus station and nearby bus depot from many years. Stagecoach has been engaged with detailed discussion with the District Council on this matter over a very extended period. We confirm that these discussions have reached a relatively mature stage, however at the time of writing are not concluded.

Stagecoach recognises and supports in principle the Council's wider aspirations for the "Southern Gateway", and this has governed our approach to the Council to date. We continue to have no "in principle" objection to relocating our administrative, engineering, operational and customer service facilities.

Leaving our proprietary interests entirely to one side, it remains vital that in so doing, the effectiveness, attractiveness and convenience of these facilities is not compromised, as we have outlined in our representations to Policy A1, if wider national and local transport policy, and the local plan strategy itself, are to be effectively achieved.

The depot is crucial infrastructure to support the safe, reliable and legally-compliant operation of Stagecoach bus services over a very extensive area covering the entirety of the District and beyond. Without securing equivalent facilities, that are fit-for-purpose, many of our services would have to cease.

If buses are to provide a greater and more attractive level of service (still more so if they are to be electrified) larger, more capable depot facilities, and city centre bus interchange facilities will be necessary.

Notwithstanding that the bus station and depot sites are leased from the District Council, these leases terminate well beyond the end of the plan period.

Finding suitable sites for a replacement bus depot in Chichester, in common with all similar localities especially in southern England, is extremely challenging. As a sui generis use, bus depots do not automatically benefit from policy support on land allocated for employment uses. Most bus depots benefit from being legacy assets established under

very different economic conditions. That is the case here. The value of a depot site for redevelopment net of demolition and remediation costs, rarely approximates to that able to sustain the acquisition of land in a tight wider employment land market, and the construction of suitable new facilities.

Furthermore, the costs of operating bus services are sensitive to the parasitic costs of vehicle and staff hours and mileage associated with “dead running” to a remote depot location from the operational network. Here, the existing depot site is ideal, and any replacement will unavoidable add ongoing operational costs to the operation that cannot be directly recovered.

We confirm that a replacement depot site has been identified and has in principle been agreed, subject to overcoming issues with the disposition of existing and future structures on the site. However, the site is recognised as not capable of accommodating meaningful operational expansion. This is just one of the most important foundational reasons why a positive transformation of bus productivity needs to be achieved, across the plan area and beyond, to support delivery of greater bus mileage and frequencies with the same level of operational resource. At the time of writing, we are not fully convinced that the proposals for the relocation will be sufficiently fit-for-purpose in the event the above is not achieved. Thus, we must raise a concern that the bus depot site might not be available during the plan period. While there is a strong probability it will be, the certainty surrounding the availability of the site, especially within the first 5 years of the plan, needs to be made transparent.

9.3. Policy A4 Southern Gateway - Chichester Bus Station, Bus Depot and Basin Road Car Park  
Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Regarding the removal of the bus station, without equivalent replacement, Stagecoach has significant concerns. Pressures and conflicts at the current bus station site have been gradually rising for several years, arising from increasing use and the need for additional scheduled vehicle layover periods to reduce the risks of accumulated late running from traffic congestion. Peak passenger volumes have recovered strongly on several routes, however passenger accumulations resulting from more frequent delays and disruption have added substantial further pressure on limited space.

Under current plans, buses and bus passengers will be displaced to bus stops at new locations outside the city centre, along Avenue de Chartres. This road was always intended to be a relatively high-speed traffic route, outside the historic core of the city. The city centre has evolved in the subsequent years to reinforce already strong natural severance, with the highway lying beyond the city walls and the green space along the Lavant. It is a traffic dominated, un surveilled and unattractive environment, reflecting the intended function of the road as an efficient movement corridor for high traffic volume, and nothing more. Avenue de Chartres is relatively close to the rail station and pedestrian connectivity can be provided at broadly equivalent distance to the current bus station, but again it is un surveilled and currently unpleasant, lacking natural legibility or any sense of prominence.

We understand kerbside capacity on Avenue de Chartres will be strained even to accommodate current levels of service, with no expansion possible. There is therefore a strong probability that to accommodate more frequencies and key new routes, such as West of Tangmere, East of Chichester and West of Chichester allocations, additional future bus stops must occupy a different location. This makes interchange between routes and rail services substantially challenging and less attractive.

The emerging arrangements risk marginalising public transport and public transport users substantially. This strongly undermines achievement of the wider plan objectives and delivery of a significantly greater role for public transport. If substantial public transport growth is to be accommodated in a growing city and hinterland, as the draft plan anticipates, then a more ambitious strategic approach must be taken. This should plan for additional and improved facilities to accommodate all services predicted to be required, whilst enhancing the passenger experience to ensure meaningful and attractive modal choice.

There is therefore a need for the plan to evidence how these issues will be appropriately resolved, having regard to a suitably ambitious approach that properly supports clear objectives to boost the relevance of public transport. The current policy is weak, un specific and indifferent to achieving the strategic objectives of the plan, including a transport strategy in support of the plan, and as such it is ineffective.

Policy A3 should therefore be modified to read:

- “ ...
- Be designed to encourage and facilitate substantial increase in the use of active travel and public transport to, from and through the city centre.
- ... ”

In line with the commentary above Policy A4 should also be modified to read:

3. Enhance the public interchange function of the immediate area, the public realm, particularly connections to the railway station and the city centre via South Street, Southgate and Basin Road for pedestrians, cyclists and public

transport users, and to National Cycle Route 2 and Route 88 which run close by. Suitable replacement bus stops and layover facilities should be provided to replace those at the bus station in line with reflecting the objectives of the West Sussex Bus Service Improvement Plan, and to facilitate growth to meet the requirements of the plan's development strategy. Routes and crossings should reflect pedestrian desire lines, and public art should be incorporated to create a sense of place;

4. Enhance the public realm, in support of this and wider objectives, incorporating public art and other measures to create a strong and attractive sense of place.

...(renumber remaining points)

#### 9.4. Policy A6 Land West of Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

This is an existing Local Plan allocation. The public transport strategy for the site depends on the delivery of the second phase which Stagecoach notes is the subject of several applications now awaiting review and determination by the Council.

The site represents a compact form of development adjoining the city, as the most sustainable settlement, meeting housing needs close to where they arise, and affording very good opportunities for the use of sustainable modes, especially walking and cycling.

It is vital that a bus service is delivered to serve the site at the earliest potential. This was anticipated to be at the start of Phase 2 and will require the early delivery of the entire length of the spine road between the Old Broyle Road and Westgate and making it available for bus services.

It is not clear if the costs of pump-priming the service mentioned in the draft policy are anticipated to be met by the developer. Without such funding, the service will not be deliverable as years of losses will never credibly be covered from future profit. It is likely that the current wording will be interpreted by the developer as meaning that they have no such obligation binding upon them. Not does policy set out any specification for this service, thus its costs and the basis for securing developer contributions does not exist.

As such any wider transport strategy, that seeks to secure a greater role for the use of public transport, and the aspiration for this allocation cannot demonstrably be met. The policy is ineffective.

Policy A6 should be modified to read:

"...

10. Make provision to accommodate and secure delivery of for regular bus services linking running through the site to Chichester city centre operating at least every 30 minutes Monday-Saturday, and new and improved cycle and pedestrian routes linking the site with the city,

..."

#### 9.5. Policy A7 Land at Shopwhyke

Stagecoach Supports

This is an existing Local Plan allocation, largely built-out, that benefits from an existing set of permissions.

The public transport strategy for the site depends on the delivery of effective bus priority at Oving Crossroads. The current recently implemented scheme, undertaken by National Highways, makes no provision for effective bus priority and needs considerable re-evaluation.

The site represents a compact form of development adjoining the city, as the most sustainable settlement, meeting housing needs close to where they arise, and affording very good opportunities for the use of sustainable modes, especially walking and cycling. It lies on a new bus corridor that will shortly be put in place, running to Tangmere via Shopwhyke. The allocation is being significantly consolidated by further development in the immediate vicinity which strongly supports the potential for this new service.

As we explain in our representations for East of Chichester proposed allocation A8, and West of Tangmere Allocation A14, a clear corridor strategy to effect bus priority is needed, that should be delivered in support of that further growth, and that at Tangmere SDL. However this allocation is a near complete commitment and there is no scope through policy regarding this land to effect this outcome.

It is notable that Point 6) of policy A7 makes mention of a bus service. This language reflects the currently adopted Local Plan policy and has underpinned the existing permissions. The failure of any bus service to be delivered demonstrates from first principles that this Policy has been entirely ineffective. It is important that lessons are learned from this in the Local Plan Review.

#### 9.6. Policy A8 Land East of Chichester Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This proposed allocation lies next to unallocated land that is already consented as a departure from the adopted development plan, with 143 units near completion south of Oving Road (20/02471/FUL). Additional land, also unallocated but similarly consented, has now commenced north of Oving Road (88 units under 21/02197/FUL). This and the allocation site consolidates earlier development at Shopwhyke brought forward under the current Local Plan, and allocated again as draft policy A7.

Development at Shopwhyke was brought forward on the basis of a premise that the developer would provide or somehow arrange a bus service, that was reflected in the policies of the current Local Plan. This was secured by an unenforceable condition. No bus service has been provided, as there was inadequate clarity regarding the basis on which the costs of establishing such a service would be met by the developer, and the expectations of policy on the developer. The site does however lie on a logical new bus corridor between Chichester and West of Tangmere along the Oving Road.

In addition, an expectation that modifications to the Oving Crossroads would effect bus advantage have proven false – the arrangements put buses into a similar or longer queue than if they use the route available to general traffic to and from the A27.

Stagecoach strongly supports the principle of bringing this land forward. However, the soundness of the site depends on deliverability of a regular, reliable and direct bus service along the Oving Road, taking advantage of effective bus priority.

Given the failure of existing policy in the adopted Local Plan covering the proposed A7 allocation to deliver a bus service, it is of great concern that there is no draft policy to adequately address the issue. The policy is out of conformity with NPPF paragraph 104-105 in that sustainable modes do not offer realistic choices, much less an attractive one, and as such also does not secure the objectives of national policy nor of the plan itself.

Currently the proposed allocation is not served at all by public transport. Policy needs to ensure there is a policy basis to secure contributions to deliver such a service, which may well take the form of a proportionate contribution to deliver a new service or enhance provision that is put in place between Chichester along the Shopwhyke Road to west of Tangmere.

To become sound Policy A8 must be modified to read:

“...  
12. Provide for improved high quality connectivity by sustainable travel modes and focused in particular on a corridor between Chichester city centre and Tangmere along Shopwhyke Road, including new improved cycle and pedestrian routes, and a frequent bus service including linkages with Chichester taking advantage of effective bus priority measures on Oving Road at the A27;  
...”

#### 9.7. Policy A9 Land at Westhampnett/North East Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This land is already allocated and consented as part of the existing 2016 Local Plan. All reserved matters are determined.

The site lies on service 55 between Chichester, Westhampnett and Tangmere. This established service benefits from additional demand from the development at Phase 1. Phase 2 which is currently well underway, does not benefit directly from bus services. However it is a compact and logical form of development where walking and cycling to local facilities and employment is a credible option.

The existing allocation rolls forward policies in the 2015 Local Plan. In so doing it is possible to see which have been effective.

Point 9. regarding bus service and routing has not been effective. In particular the potential for a bus only link between the site and Graylingwell has not been established as policy anticipated. Given congestion around the Portfield area acutely affects public transport this, or alternative methods to secure bus priority over private car use, a clear and unequivocal policy steer is required.

The lack of an up-to-date transport evidence base is ultimately at the root of these issues. Arguably the policy and allocation can only be made sound once this refreshed evidence base is in place.

However, it is possible that the allocation could be made sound by modification of Policy A9 as follows:

" ...

9. Make provision for regular, direct and reliable bus services linking the site with Chichester city centre, and new and improved safe and convenient cycle and pedestrian routes linking the site with Chichester city, the South Downs National Park and other strategic developments to the east of Chichester city including Tangmere. These objectives could include exploring the potential for a bus only route require a deliverable scheme to afford bus priority through Portfield, and potentially linking the development with the Graylingwell area through use of a modal filter;

" ...

#### 9.8. Policy A10 Land at Maudlin Farm

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing public transport route. It is relatively close to the city and very near substantial centres of employment and services that can be reached by active travel modes, helping damp the demand for car use. It is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services at Portfield and over a wider area. In fact, the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A10 should accordingly be modified to read:

" ...

5. Provide safe and suitable access points for all users, including a main vehicle access from Old Arundel Road and, subject to further assessment, a secondary vehicle access from Dairy Lane. The development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes;

" ...

#### 9.9. Policy A11 Bosham – Land at Highgrove Farm

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Bosham Station. It is relatively close to the city and very near substantial centres of employment and services that can be reached by public transport and cycling, offering strong potential to materially damp the demand for car use.

There are serious risks that development in the A259 corridor west of Chichester could place further demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular to bus services.

Nevertheless, given the potential to effect bus priority on the approaches to Fishbourne Roundabout, it is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A11 should accordingly be modified to read:

" ...

8. Provide safe and suitable access points for all users, including a main vehicle access

from the A259. The development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys crossing the A27 at Fishbourne;

#### 9.10. Policy A12 Chidham and Hambrook

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Nutbourne Station. Substantial centres of employment and services that can be reached by public transport and cycling, offering strong potential to materially damp the demand for car use.

There are serious risks that development in the A259 corridor west of Chichester could place further demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular to bus services.

Nevertheless, given the potential to effect bus priority on the approaches to Fishbourne Roundabout, it is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A12 should accordingly be modified to read:

“ ...

7. Development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys along the A259, crossing the A27 at Fishbourne and where necessary on the approaches to Emsworth;

8. Facilitate improved sustainable travel modes, and new improved cycle and pedestrian routes, including linkages with Chichester city and settlement along the East/West Corridor;

#### 9.11. Policy A13 Southbourne Broad Location for Development

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach agrees unequivocally that Southbourne is a location that could accommodate growth on a strategic scale. It has a substantial range of service available within the settlement, including secondary education. It is well connected by bus and rail service to key destinations, including Chichester, lying to the east and west.

This is one of the few locations identified for growth that represents substantial additional development in a new location to the strategy in the existing Local Plan adopted in 2015. Thus, the transport impacts of development on the substantial scale envisaged at Southbourne are not covered or accommodated by the Chichester Area Transport Strategy that lies behind the existing plan. This demands, from first principles, that substantial further transport mitigation measures are required.

We recognise and endorse fully that the intent of the draft plan for Southbourne as a Broad Location for Development on a strategic scale, includes “Maximising the potential for sustainable travel links through improved public transport, including consideration of opportunities to reduce community severance caused by the railway line as well as the inclusion of cycling and pedestrian routes.” (our emphasis).

The existing railway station at Southbourne is served regularly, however, it is not within the power of this plan to improve rail services. It is, however, well within the scope of action of the Local Planning and Highways Authority to work with bus operators to achieve a step change in the journey time, reliability, frequency and connectivity of bus services, and in particular the major corridor operated as service 700 by Stagecoach along the A259 between Havant and Chichester through Southbourne.

Notwithstanding the clear potential for sustainable connectivity in the western A259 corridor, there are very serious risks that development in the A259 corridor west of Chichester will place further significant car-borne demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular bus services, having the opposite effect to that intended: longer, less reliable and less frequent bus services, leading to a spiral of slowly declining use.

These risks, while very serious, look credibly likely to be entirely mitigated subject to carefully conceived and robust specified actions on the local highway network. It is perplexing to us that this potential still has not been identified, as part of a comprehensive "first principles" review of the transport evidence base. In particular given the former trunk status of the A259, there is evident potential to effect bus priority on the A259, including on the approaches to Fishbourne Roundabout.

With appropriate measures, including but not limited to this, to substantially boost the relevance and attractiveness of sustainable travel choices, strategic development at Southbourne could well be made highly sustainable.

In the absence of a refreshed transport strategy and transport evidence base, the draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact, the only reference that is made in Policy is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A12 should accordingly be modified to read:

"...Development should be comprehensively masterplanned to achieve a high-quality design and layout that integrates well with the surrounding built and natural environments to enable a high degree of connectivity with them, particularly for pedestrians and cyclists, and provides good the highest possible quality of access to facilities and sustainable forms of improved public transport services.

...

4. Provide a suitable means of access to the site(s), and securing secure necessary off-site transport infrastructure and service improvements (including highways in particular to the A259 corridor between Emsworth and Chichester) in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development) to promote sustainable transport options prioritising delivery of high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes;

..."

#### 9.12. Policy A14 Land West of Tangmere

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach strongly supports the principle of intensifying the level of development at the Strategic Development Location already identified and allocated West of Tangmere in the existing Local Plan. This serves to consolidate development at a location where effective and attractive public transport choices could be provided. It also conforms closely with the principle expressed in NPPF that the best possible use should be made of land on sites that are judged to be sustainable, or potentially sustainable locations for development.

It must be stressed that the current policy suite for the SDL has to date not brought forward development in this location. We recognise that a Master Plan has been adopted by the Council, and that a planning application (20/02893/OUT) for the full larger quantum of 1300 dwellings proposed in the draft plan has received a resolution to grant by the Council.

However, we are not aware that a sustainable transport strategy has been finalised.

Land West of Tangmere is not served by any existing regular bus services. Rather, an entirely new bus service corridor is anticipated to operate in the near term from Chichester through Tangmere and beyond towards Barnham. This would serve proposed allocations A7, A8 and West of Tangmere (A14) included in the draft Plan.

This is reflected in the language of the explanatory memorandum to Policy A14 at paragraph 10.65:

“Opportunities, in partnership with relevant authorities, to provide improved sustainable public transport routes linking the village with Chichester city, to improve cycle routes to the city, and better transport links to Barnham rail station and the ‘Five Villages’ area in Arun District; and..”

Initiating this service will be costly and will in large measure be funded not by developer contributions, but by DfT monies awarded through the West Sussex Bus Service Improvement Plan. It is crucial this service is both sustainable in the longer term without revenue support, and that the success of the service can be built on by scalable frequency improvements as strategic development comes forward in both Chichester District, and proposed allocations A7 A8 and A14, and in Arun District, in particular at Barnham, Eastergate and Westergate (BEW).

This demands measures to effect safe, direct and swift operation of the service especially within the city centre, where it approaches and crosses the A27 at Oving crossroads and on the eastern fringes of the District east and west of Tangmere. Without these measures, bus journey time and reliability will be severely compromised and the impact of this service to damped car trip demands will be very substantially compromised. No such measures are proposed in the draft plan or its evidence base.

Changes to Oving Crossroads have recently taken place which, amongst other intentions, ostensibly provide bus advantage between Chichester and Shopwhyke. The junction in its current form does not offer material gain in bus journey time, as movements involve a less-direct route towards the city over an increased operating distance, much of which involves passage through heavily congested sections of the A27 and Westhampnett Road. A refreshed transport strategy supporting plan-led growth must revisit this area to secure an effective solution which offers bus customers the fastest and most reliable trip-time to and from the city.

In addition, the extension of public transport connectivity towards BEW and Barnham, including key links to secondary education and a logical railhead for journeys beyond towards Brighton and London as provided at Barnham Station, needs to facilitate bus priority between Tangmere and Nyton – whether using the A27, or preferably avoiding it altogether. There are significant safety concerns associated with the at-grade uncontrolled right-hand A27 exit onto the B2233 Nyton Road at Crockerhill Turn. This movement is also prone to extreme delay owing to the conflict with approaching westbound traffic on the A27, travelling at speed, which has priority. Our concerns with this junction in its current form can be expected to worsen with the increased traffic volumes predicted from new residential developments to the west of the city.

A solution providing a suitable short length of highway available only to sustainable modes, between Tangmere and Easthampnett, could provide a very effective solution to this. This would be deliverable within the scope of the separate proposed allocation at A19 Chichester Business Park, Tangmere. We comment on this separately.

Howsoever effected, a reliable direct and delay-free bus corridor between Barnham, BEW, Tangmere and Chichester could expect to secure very substantial elevation of the relative attractiveness of public transport over car use on the entire corridor and serve to effectively damp growth-related demands on this section of the A27. West of Tangmere, in the longer term, there is evident scope for the route corridor to operate as two branches – one via Shopwhyke and one via Westhampnett, effectively serving all the strategic developments proposed in the plan and transforming wider public transport connectivity to key employment destinations and services within and east of Chichester.

However, in common with all the other proposed allocations, the plan proposes no specific measures to provide, much less improve public transport or other sustainable modes to the site. This leaves the draft plan out of conformity with NPPF, especially paragraphs 104-106. The plan is inadequately evidenced and to the degree that public transport measures are identified and emergent, their successful implementation in the near and longer term will be jeopardised without clear measures to provide a safe as well as efficient bus route towards BEW and the Five Village area within Arun. The Duty to Cooperate is not effectively met and effective cross boundary collaboration on these strategic issues through the review of LSS is not demonstrated, despite the current version which identifies the issues.

To be made sound the LSS Review and a subsequent urgent review of the transport evidence base and strategy needs to take place. The strategic issues are especially critical east of Chichester, in our view.

Notwithstanding this foundational deficiency, to be made sound, Policy A14 should be modified to read:

“... ”

8. Subject to detailed transport assessment, provide primary road access to the site from the slip-road roundabout at the A27/A285 junction to the west of Tangmere providing a spine road link with secondary access from Tangmere Road. Development will be required to provide or fund mitigation for potential off-site traffic impacts through a package of measures in conformity with Policy T1 (Transport Infrastructure) and T2 (Transport and Development) and DfT Circular 01/2022 that maximise the relevance and use of sustainable travel modes, in particular bus services;

9. Make provision for improved sustainable travel modes between Tangmere and Chichester city, in partnership with relevant authorities, including improved direct, seamless safe and reliable and additional bus and cycle routes linking Tangmere with Chichester city, Shopwhyke and Westhampnett. In conjunction with measures in support of Allocation A19, Opportunities should also be explored contributions shall also be sought for providing improving high quality cycling and bus service transport links with the ‘Five Villages’ area and Barnham rail station in Arun District; and...”

## 10. Concluding comments

Stagecoach recognises its role as a key stakeholder in the plan, as well as a local employer and corporate citizen. We recognise the primacy of the plan-led system as the mechanism intended to resolve complex challenges, including the proper alignment of transport and spatial planning, which as the National Decarbonisation Strategy for Transport among other policies makes clear, has never been more vital.

In making our representations, we emphasise that we are entirely supportive of the Local Planning Authority and the relevant Highways and Transport Authorities, in their efforts to properly manage the amount and pattern of development to secure vital policy objectives. We recognise that balancing delivery of assessed development needs with a wide variety of other constraints is a very difficult task.

The transport issues faced by the plan are recognised in the draft plan as being serious and long-standing. We believe that there are ways to arrive at a suitable transport mitigation strategy that has regard to wider strategic issues and resolves existing problems in a much more effective way than those pursued to date.

We support the spatial strategy of the plan as it evidently provides the basis to secure the necessary step change in the quality and use of sustainable transport modes, as it explicitly seeks to do. However thus far, there has been insufficient work done to define the measures that will credibly secure these outcomes.

Stagecoach therefore urges the authorities to draw us into the necessary effective ongoing collaborations that is expected by NPPF paragraph 16 and 106; and DfT Circular 01/022, to do this work, prior to, rather than after the submission of the draft plan. We look forward to being approached to initiate this dialogue at the earliest opportunity.

### Change suggested by respondent:

Policy A10 should accordingly be modified to read:

"...

5. Provide safe and suitable access points for all users, including a main vehicle access from Old Arundel Road and, subject to further assessment, a secondary vehicle access from Dairy Lane. The development should make the requisite contributions for off-site improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include high quality pedestrian, cycling and public transport routes;

"..."

**Legally compliant:** Not specified

**Sound:** No

**Comply with duty:** Not specified

Chichester Local Plan 2039 Regulation 19 Stagecoach South representations.docx - <https://chichester.oc2.uk/a/skh>

## Object

**Document Element:** Policy A11 Highgrove Farm, Bosham

**Respondent:** Stagecoach South (Rob Vince) [8141]

### Summary:

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Bosham Station. It is relatively close to the city and very near substantial centres of employment and services that can be reached by public transport and cycling, offering strong potential to materially damp the demand for car use.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

### Full text:

Chichester District Local Plan 2039 – Pre-Submission (Regulation 19) Consultation

#### 1. Introductory Comments

Stagecoach South is the main commercial public transport operator across Chichester District. The Company has headquarters in the city, which is also the principal public transport hub for the District and it's rather wider travel-to-work area encompassing much of the Arun District. Our services extend throughout and beyond the District boundaries, as far

as Littlehampton, Midhurst, Havant and Portsmouth. The vast majority of services operate on a commercial basis – that is to say, sustained by passenger use and fare revenue, including concessionary reimbursement.

While the role of the railway is significant in much of the District, especially the east-west Coastway line, yet bus services account for more boardings locally than the railway, with Chichester depot services carrying over 3.5m passengers each year.

Unlike bus services in other parts of the country, the local network has recovered strongly after the pandemic with fare-paying passenger numbers over 95% of 2019 levels, albeit with concession patronage somewhat lower. This has helped secure not only a stable but growing bus network even during this period of rapidly rising operational costs, avoiding the need for the service contractions seen in other regions. Indeed, during the second quarter of 2023 Stagecoach will invest £5.5m in brand-new vehicles for high-profile coastal Service 700 – one of the largest vehicle investments for Stagecoach Group this year.

Our services are therefore critical to existing and future local connectivity. As the Plan acknowledges, mobility demands do not respect planning authority boundaries. The role of our services is especially high to settlements in the broad A27 corridor, within the District and beyond. This includes major settlements in Arun District such as Pagham and suburban Bognor Regis, where bus is the only mass public transport option. As the Council is well aware, there is an even higher level and rate of committed development envisaged in these locations in the Arun District Local Plan than in Chichester.

It is already evident to the planning authorities, West Sussex County Council and National Highways, as proprietor of the A27 Trunk Road, that accommodating growing mobility demands across Chichester District and especially around Chichester itself, is becoming increasingly challenging to the point of being seriously problematic.

Stagecoach has a particular interest in this Plan arising from:

- The already clear and highly deleterious impact of congestion affecting our operations and their reliability and attractiveness to the public. The effects of these on the approaches to Chichester, and around the A27 bypass are especially severe. If public transport is to retain its existing role – even before the needs of any meaningful growth both in Chichester and neighbouring authorities is considered, are considered – the Council and the Highways Authority need to arrive at clearly-defined measures to protect buses from chronic delay and the damaging impacts arising from the lack of bus network resilience and customer journey times.
- In connection with the above, the need to properly consider the predictable impacts of committed development in Arun District on the transport network and in particular the operation of bus services. The duty to cooperate on cross-border strategic matters is not limited merely to accommodating housing requirements.
- The fact that our entire business premises and operational base at Chichester is the subject of allocation for redevelopment within the Plan period. Specifically, this includes our Head Office, the Bus Station as the operational hub of the network and the key interchange for passenger journeys – including those that involve the railway – and the bus depot required to support the entire operation. Notwithstanding many years of discussions, there is as yet no agreed deliverable strategy to replace these facilities either in the Draft Plan or elsewhere.

Stagecoach broadly supports the vision and priorities of the draft plan. In most respects, Stagecoach supports strongly the spatial strategy and the identified site allocations that flow from it, and the evidence.

However, it has serious concerns about the soundness of the plan as proposed for submission, for important regards outlined in this response. These are made in the light of requirements set by the National Planning Policy Framework (NPPF), in particular at paragraphs 15 and 16; 35, 105-109 inclusive and having due regard to the need for allocations to satisfy 110-112 inclusive in due course as development permission is sought; and paragraph 174.

Paragraph 16c) of NPPF makes plain that strategic plans and policies should “be shaped by early, proportionate and effective engagement between plan-makers and communities, local organisations, businesses, infrastructure providers and operators and statutory consultees” (our emphasis). This makes plain that collaborative and ongoing involvement of public transport operators is both necessary, and separate and in addition to the engagement with statutory consultees. This has not taken place.

Para 1.25 of the draft plan states that “the council has engaged constructively, actively and on an ongoing basis with other local authorities and organisations to address key strategic matters.” Despite the requirements in NPPF and contrary to the statement made, Stagecoach has not been approached or involved in a meaningful, collaborative or ongoing way in the preparation of the Plan.

Our main concerns centre around the fact that the plan strategy is neither backed by sufficient transport evidence. Even more importantly, the plan relies on a wholly car-based transport mitigation strategy despite policy stating that this is not the case, and the track record of the existing Local Plan, based on a very similar strategy, that has failed to bring forward meaningful mitigations to date to prevent traffic conditions substantially worsening. There is no support in policy for the achievement of the Strategic Objectives in the Plan. Nor is there definition of any measures in the 2023 Transport Study to make provision for sustainable transport infrastructure or services – much less materially improve them.

Finally, to the extent that updated transport evidence has been provided in the form of the 2023 Chichester Transport Study, arising from updated traffic modelling, it does not support the contention that highways capacity constraints on

and around the A27 justify not meeting the objectively-assessed development needs of the area, as the draft plan contends.

## 2. Vision and Strategic Objectives

### 2.1. Issues and Opportunities

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant, proportionate and up to date evidence

Stagecoach recognises the important role of the West Sussex and Greater Brighton Strategic Planning Board which agreed a Local Strategic Statement (LSS2) in early 2016 to identify spatial planning issues across the wider area. This established strategic priorities and policies to guide longer term strategic growth in a coordinated and well considered matter. This institutional framework and the purpose of the LSS is a highly significant one and is at the heart of efforts to properly fulfil the statutory Duty to Co-operate, including with regard to strategic infrastructure issues, as NPPF requires.

Given the long period of time elapsed since the 2018 Reg 18 consultation and the already very clear constraints on strategic infrastructure capacity, it is of great concern to Stagecoach that the LSS2 has not been updated to reflect emerging issues in the intervening period. A review and update of the LSS2 has only just commenced. This includes a study of projected housing and employment needs, transport impact, infrastructure and spatial options to deliver the required development in the period after 2030. This Chichester District draft plan covers a period extending to 2039 – therefore well beyond 2030 and the nominal currency of LSS2.

However, infrastructure needs are pressing today. Stagecoach is presented with severe highway operational problems on a near-daily basis. During the winter of 2022-23 we have, for example, seen key road links impacted for many weeks by acute disruption arising from flood events. Unpredictable, but seemingly more-frequent, exogenous events expose a lack of resilience in the highway network around Chichester and its travel-to-work area. However, serious, chronic, unpredictable delay has been normalised over recent years, with peak-time congestion having quickly returned after the pandemic. The existing development strategy has failed to bring forward measures having any impact on this to date, and key commitments – notably at west of Chichester Phase 2 and at Tangmere – have yet to commence to further aggravate the issue.

We have no confidence in the transport mitigations proposed in the existing Local Plan and LSS2 being sufficiently effective, even if deliverable at all. Indeed, the existing adopted Local Plan does little more than make vague speculations about the sustainable transport measures that might be achievable. The draft local plan review is no different. It has no ambitions at all for sustainable modes and thus, makes no meaningful provision to meet them.

This is especially relevant in light of the fact that the approach to resolving issues on the A27 around Chichester that were anticipated in 2015-16 have fallen away. LSS2 is thus currently inadequate to act as a part of an up-to-date, proportionate, and relevant evidence base for the Plan.

An update of a traffic model lies at the heart of a 2023 Chichester Transport Study. This talks no account of the existing role of non-car modes, nor can it do so. It is unable to properly evaluate the nature of problems or solutions that involve public transport, or for that matter, other sustainable modes.

Therefore, we consider that the combination of committed and additional development needs that must be accommodated over the whole plan period between 2022 and 2039, in both the Chichester and Arun Districts, require a “first principles” review. This must be based on a refreshed transport evidence baseline of no earlier than 2022 – given that the effects of COVID distort 2020-22 – and the transport infrastructure and service requirements to sustainably support those needs.

Key issues – including substantial changes with regards to transport issues and challenges, as well as potential solutions – thus do not form part of the evidence base that steers this plan. Given long term changes in travel patterns, and mode share that took place during COVID, as well as a local and national policy context that seeks to radically reduce and then eliminate transport-related carbon emissions, this is especially problematic.

The specific problems of congestion and network resilience that are evident on the A27 and the approaches to Chichester remain a set of especially difficult problems that disproportionately affect the efficiency, reliability and attractiveness of the bus network, that evidently demand larger-scale strategic responses involving multiple stakeholders, including bus operators.

Where the effects of development on the national Strategic Roads Network (SRN) are concerned, the approach of National Highways to addressing and responding to the mobility needs of development has now substantially changed following the promulgation of the DfT Written Ministerial Statement LTN01/22. This makes it clear that adding highways capacity is no longer the first or only strategy that should be pursued, but one subordinate this to maximising the potential of non-car modes and sustainable travel.

"Effective and ongoing collaboration" on transport matters has not led to solutions being agreed and published for public scrutiny as part of the plan evidence base. Whatever the approach to modelling and "highways improvements" that may be agreed or pending agreement with the County Highways Authority and National Highways, Stagecoach is neither participant or sighted. This is despite the clear requirements set out in NPPF Para 106 b) that "Planning policies should ... be prepared with the active involvement of local highways authorities, other transport infrastructure providers and operators and neighbouring councils, so that strategies and investments for supporting sustainable transport and development patterns are aligned." (our emphasis).

We therefore consider that the Council has failed to comply with the requirements of NPPF paragraph 25 and 26 that "relevant bodies" are involved in plan-making, especially with regard to addressing the needs for infrastructure. Public transport services and the infrastructure that supports its operation and use clearly fall within matters relevant to plan-making. This is explicit in NPPF Chapter 9 and indeed within the plan itself – for example reference to public transport and sustainable modes in the Vision for the plan.

It should be stressed that the Regulation 18 "Preferred Approach" consultation took place in December 2018 – over 4 years ago and prior to COVID, based on LSS2. The inordinate length of time that has elapsed between the Regulation 18 and Regulation 19 stages greatly challenges the LSS2 and other parts of the evidence base, especially as the pause straddles the COVID epidemic. That would include the transport modelling baseline, and key assumptions in any traffic modelling that took place prior to mid-2022, which is a point at which a reasonable "new normal" post-COVID might be considered to have become established. In that period, Arun District has also adopted its own Local Plan development strategy that accommodates an unprecedented quantum of development immediately east and south-east of the District Boundary – creating additional substantial transport impacts directly affecting the A27 and multiple major approaches to Chichester crossing it.

The established mechanism to fulfil the Duty to Co-operate has thus not operated effectively.

The Plan is not founded on a relevant, proportionate and up-to date evidence base and is thus inadequately justified.

## 2.2. Spatial Portrait

The spatial portrait is generally succinct and accurate. However, it makes no mention of road-based public transport, the role of the City as a public transport hub, or the range of bus services that provide local connectivity (Section 2.4 and 2.5). The complete concentration of post-16 education in the City itself as just one example of the peculiarities of transport demands in the area, is not highlighted, though this has a profound influence on peak time travel demands affecting the most congested parts of the highway network. Among other things, the role of bus services in supporting the educational system of the plan area is very great indeed.

The potential role of bus in addressing the already-severe transport problems of the plan area and beyond seems entirely overlooked. The spatial portrait is thus clearly inadequate and incomplete.

## 2.3. Strategic Objectives

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Chapter 9 of NPPF and paragraphs 104 and 105 in particular require that plans should:

"Transport issues should be considered from the earliest stages of plan-making and development proposals, so that:

- a) the potential impacts of development on transport networks can be addressed;
  - b) opportunities from existing or proposed transport infrastructure, and changing transport technology and usage, are realised – for example in relation to the scale, location or density of development that can be accommodated;
  - c) opportunities to promote walking, cycling and public transport use are identified and pursued;
  - d) the environmental impacts of traffic and transport infrastructure can be identified, assessed and taken into account – including appropriate opportunities for avoiding and mitigating any adverse effects, and for net environmental gains;...
- ...The planning system should actively manage patterns of growth in support of these objectives. Significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. This can help to reduce congestion and emissions, and improve air quality and public health..."

The Strategic Objectives do not conform with NPPF in these foundational requirements adequately, to transparently steer the plan strategy. They should therefore be amended to read:

"Plan to provide local infrastructure to support new development and seek opportunities to address existing identifiable infrastructure problems deficits, such as in particular those relating to the A27 and its junctions and wastewater treatment."

Paragraph 2.36 states, in the context of the Climate Emergency and the National Trajectory to "Net Zero" that "The

council will enable the delivery of infrastructure, jobs, accessible local services and housing for future generations while protecting, conserving and enhancing the historic and natural environment.”  
Naturally, we support this intent.

However, there is no acknowledgement of the role current patterns of transport use contribute to carbon emissions, nor that substantial mode shift is necessary to address sustainably an acute lack of capacity on the local network and the SRN, especially around Chichester. This is especially concerning as the basic conceptual link is not made between the fact that the greatest such problems lie on the A27 corridor and around Chichester, while these are also at the same time present many of the most sustainable locations for development, and where the opportunities to secure much greater use of sustainable modes also exists.

Strategic Objective 7 “Strategic Infrastructure” includes the following statement:

“To work with infrastructure providers to ensure the timely delivery of key infrastructure to support delivery of new development. New development will be supported by sufficient provision of infrastructure to enable the sustainable delivery of the development strategy for the plan area. Key infrastructure to support the Local Plan will include improvements to transport, ...

A sustainable and integrated transport system will be achieved through improvements to walking and cycling networks and links to accessible public transport. Highway improvements will be delivered to mitigate congestion, including measures to mitigate potential impacts on the A27 through a monitor and manage process.”

The latest transport evidence in the Chichester Transport Study makes no pretence to define much less to deliver a “sustainable or integrated” transport system. It is wholly devoted to sustaining current levels of car use across the District, to and through Chichester area.

It is no more than the lightest of touches to the approach taken to supporting the adopted Local Plan, an approach that is already almost 10 years beyond the date of its gestation but has yet to deliver any significant capacity improvement schemes, much less any measures that sustain even current levels of public transport journey times and reliability in the face of increasing congestion – much less any betterment.

Of the six key junctions on the A27 around Chichester, recognised to require significant mitigation given they are saturated for extended periods, five accommodate regular bus services - indeed frequent ones at least every 20 minutes in several cases. The sixth at Oving Road, relates directly to a key corridor where bus services are needed to support strategic growth currently being delivered at Shopwhyke, as well as substantial further growth West of Tangmere (proposed allocation A14) and “East of Chichester” (A8), south of Shopwhyke Road.

As stated at p12 of the Study Summary “The modelling shows that all the junctions on the A27 Chichester bypass are well over capacity, even before adding in the Local Plan development and with the exception of Portfield Roundabout are actually shown to be over capacity in the base model year (2014) in one or both peaks”. This much has indeed been evident for years from delay and periodic even more severe disruption arising to Stagecoach services from the lack of network resilience.

The reassignment of through and local traffic through Chichester to avoid the A27 bypass is an especially serious issue for bus services that penetrate the city. This is leading to consequential saturation of a range of junctions used by buses. Rising delay and unpredictable running times are at the root of our decision to sever the long-established Portsmouth to Littlehampton service in 2023, which will in future no longer run across Chichester, but terminate to provide additional dwell time to mitigate the impacts of congestion.

While this congestion affects all road users including businesses and freight traffic, the effect on scheduled bus services is greatly higher, as such services cannot reassign route to ‘beat the queue’. Traffic congestion often encourages greater car use for this reason, in tandem that people are happier to sit for extended periods in their own vehicle on a seamless door-to-door journey than wait at the roadside for a delayed bus making slower progress in lengthy queues.

As the Study admits at para. 1.3.2 “Although, there have been works at the Portfield Roundabout in this timeline, no other mitigation schemes have been completed along the A27 corridor, as such the mitigation schemes defined in this report will also be required to consider the development from this plan period.”

In other words, in the 8 years since the current Local Plan was adopted in 2015, there has been minimal progress is delivering the traffic mitigations. There is no clarity at all when any such mitigations will be brought forward. It is hardly surprising then, that traffic conditions have deteriorated. The “predict and provide” transport strategy supporting the current plan has failed.

Despite this, the Draft Local Plan Review proposed to “double down” on exactly this strategy. It represents, like the rest of the evidence base, a “rolling forward” of the current car-based strategy by 9 years, with the lightest of touches to attempt to accommodate car trip demands from a relatively modest additional development quantum.

Nevertheless, the Study requires a global 5% reduction in trip demands arising from unspecified “credible” (paragraph 4.1.2) sustainable transport and travel planning measures. It is unclear why use of non-car modes will see

disproportionate growth when no measures are in place to make them more attractive. This 5% increase in use translates to a doubling in the modal share of bus services. There is no evidence nationally, anywhere, that simple ignorance of alternatives to the car is the main barrier to uptake.

The outputs of the 2023 Chichester Area Traffic (SATURN) model are set out at Table 5.1 (am peak) and 5.2 (pm peak) without mitigation. These betray just how seriously compromised the whole network around Chichester is, and will be in future, even with implementation of a mitigation partake to increase traffic capacity that is understood to cost between £92m and £164m – and which the Study and the draft plan acknowledge cannot be delivered through developer funding sources alone. Unspecified external funding presumably from HM Treasury through DfT is required.

Even if this provided and the schemes are delivered, Tables 8.1 and 8.2 indicate these will provide minimal relief. The final columns suggest key junctions, including Portfield, Fishbourne Road and Cathedral Way East will remain at well over 100% ratio of flow to capacity (90% is considered the point at which saturation is approached, with the onset of increasing delay above that figure). RFCs in tables 8.1 and 8.2 are some of the highest we have ever seen in a local transport evidence base for a post-mitigation scenario. While the serious potential risk of reassignment across Chichester City is greatly reduced, which is important and welcome given its impact on bus services, Tables 8.1 and 8.2 show the extent of post-mitigation saturation is also egregious, covering a very large number of key links and junctions.

On every measure and criterion, then, including cost deliverability and effectiveness, the revised Transport Strategy falls well short of evidence to suggest the transport impacts of the plan can be properly addressed by this means.

Despite the repeated statements about sustainable modes throughout the draft plan and Chichester Transport Study, only 2 paragraphs at Section 6.2 within the Study are devoted to public transport:

“6.2.7 The funds generated from the parking management schemes, local/nation funding schemes and developer contributions could also be utilised to fund potential public transport enhancements within the city centre including an expansion of the bus priority lane system within Chichester City Centre. This could reduce reliance on the car in the longer term towards sustainable public transport. A park and ride scheme could be incorporated within a bus priority lane network in the future depending on the uptake and successfulness of early bus priority trials.

6.2.8 Chichester City centre has a constrained existing public highway network. Therefore, any proposed dedicated public transport or light transit corridors that could be implemented would be at the expense of existing highway. This could be managed through a time-based system where certain routes are restricted to public transport only during specific times. E.g., peak hours.”

There is some very high-level consideration of Park and Ride following this section. None can be considered a serious practical evaluation of consolidating car-borne trips onto bus services, including existing ones, for example local mobility hubs, more frequent bus corridors, delivery of specific bus priorities.

None of the discussion of alternatives to “predicting and providing” for unconstrained traffic growth is rooted in a deliverable evidence base, or proper evaluation of options and specific projects.

To take just one aspect of the few specifics that can be picked out, a workplace parking levy is hypothesised. This would apply only to “offices”, in Chichester city centre (para 6.2.3), without consideration given as to how this could be practically achieved or even that a meaningful amount of office based employment would qualify. Much less is any consideration given to how far focusing a strategy only on office-based workers would actually deliver a particularly significant effect, apart from to create a strong incentive to relocate offices out of the city centre to places out of reach by public transport.

Looking at the Chichester Transport Study 2023 and the draft plan together, there is insufficient evidence that the traffic capacity increase proposed in the 2023 Transport Study is any more affordable or technically deliverable, or likely to be sufficiently effective, than those in the past strategy. The evidence more strongly points to the fact that no highway improvements are identifiable or economically deliverable to meet even short term increases in demand for car-borne mobility on most of the network around Chichester.

There are no published strategies or schemes clearly supporting the contention that the objective of improving sustainable modes is technically achievable or deliverable either. The plan makes generalised assertions that such strategies will be devised and implemented only after serious problems emerge from a shortfall in the car-borne transport strategy.

The reference to “monitor and manage” is undefined and unsubstantiated. There are no outcomes stated, no mechanisms specified and no timescales for action.

Our experience today is that network conditions have reached unacceptable and prejudicial levels of severe unpredictable delay. The saturation of the network is already evident well outside the traditional peaks on key sections of highway and at key junctions. External shocks such as the effects of severe weather are becoming more common, leading to delays so extreme as to justify the description of “gridlock”. The plan does not identify a strategy to effectively address this, in particular by consolidating passenger car trips onto more efficient public transport vehicles. This is

unacceptable to Stagecoach.

#### 2.4. Local Plan Vision

Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the broad approach in Plan Vision and in particular that by 2039, the Plan will support and enable greater use of sustainable modes. However, there is no link made between reducing the use of private cars, and the need for a step change in the use of sustainable modes. Without a published transport evidence base it is impossible to establish a suitable sustainable transport strategy to support both carbon reduction and alleviation of the problems arising from acute congestion. Even on a very crude basis, to achieve a meaning mode shift on key approaches to the A27 Chichester Bypass will require more than 20% of existing peak car-borne journeys to transfer to other modes. A 10 percentage point transfer to bus (about half this shift) would imply more than doubling peak hour bus passenger boardings.

The Vision is nothing more than an aspiration, that needs to more definitively aim at key outcomes, for the plan to be effective. The Vision should thus be altered to read:

“Get about easily, safely and conveniently with less reliance on private cars –making the greatest possible use of the rail and enhanced bus network, and with more opportunities for active travel including walking and cycling; to materially reduce dependence on private car use.”

Underpinning the Plan's spatial strategy, the Vision section goes into more specific detail about key localities in the Plan area.

Regarding Chichester, Paragraph 2.39 states: “The emphasis will be upon consolidating and enhancing the role of Chichester city as the plan area's main centre, whilst also developing the role of key settlements to its east and west. The focus will be upon creating communities with good access to a range of employment opportunities and affordable housing for young people and families to balance the ageing population.”

This is clearly the appropriate focus for meeting the District's development needs in a sustainable manner. The city and key settlements to the east and west, are those places already able to make use of relevant public transport services, both rail and bus. Especially within and near the City, walking and cycling can credibly present highly relevant choices. This emphasis clear can be expected to address the requirements of sustainable development set out in NPPF and their local application set out in the Plans Strategic Objectives.

However, this needs a robust transport strategy, to avoid a further concentration of development and its traffic impacts occurring on or near some of the most chronically congested parts of the highway network. To date, the absence of intervention has strangled the bus network through further marked deterioration in traffic conditions. This by consequence increases the risk of bus delay or cancellation, lengthens journey time and reduces customer confidence in bus as an attractive alternative mode of travel.

In April 2023, Stagecoach is making significant timetables changes to improve operational resilience in and around Chichester. The biggest such change is the severance of the Portsmouth to Littlehampton section of service 700, at Chichester, with buses operating independently to the east and to the west and ending cross-city links. This is planned to reduce the probability of delay but at the cost of additional vehicle resource (circa £200,000 per annum) which could be better spent providing new or enhanced services. We anticipate a small loss of custom as a direct consequence of the change, but have little choice other than to take negative action so as to fulfil our statutory punctuality obligations.

If the Strategic Objectives of the Plan and its Vision are to be achieved, in the way required by NPPF paragraphs 104-105, a properly-evidenced transport mitigation strategy needs to create the conditions where bus journeys are more reliable than car journeys and thus mobility demand switches as far as can be realistically achieved away from car use, to bus use and other more sustainable modes.

Beyond Chichester, the Plan Vision focuses on key localities beyond to the east and west.

To the west of Chichester a focus on growth at Southbourne is justified at paragraph 2.43: “...the aim is to take advantage of the village's good transport links and existing facilities to deliver significant new residential-led development within the broad location for development which will further enhance local facilities and offer opportunities to reinforce and supplement existing public transport, including bus routes.”

We agree this is a very significant opportunity. However, if the requirements of NPPF paragraphs 104-105 are to be met, this demands that effective bus priority is delivered on the A259 corridor, especially eastbound at Fishbourne and westbound approaching Emsworth. Without such measures, the growth committed and planned will serve only to further undermine bus journey time and decrease punctuality on the existing 700 service, entirely contrary to the aims of the Vision.

The emphasis on the A259 corridor served by Stagecoach 700 west of Chichester is reinforced at paragraph 2.45 stating

that “Between Chichester and Southbourne, the Plan provides for more moderate levels of growth within the parishes of Fishbourne, Bosham and Chidham & Hambrook, ... with opportunities to support and expand existing facilities and for increased use of public transport options”. We strongly support the principle, but the Plan must follow through with specific public transport priority measures that facilitate rather than prejudice such an outcome.

East of Chichester the focus is at Tangmere, where the existing allocation for about 1000 dwellings is being uplifted by 300. Paragraph 2.44 justifies this among other things recognising the scope for “...improved and additional bus services and cycleways will provide better connections to Chichester city and east to Barnham and the ‘Five Villages’ area in Arun District.” We unequivocally endorse this conclusion. Realising a “game-changing” level of bus service quality, reliability and frequency east of the city, also serving committed and planned development north and south of Oving Road at Shopwhyke, is equally essential, given that all SRN links and junctions are approaching equal saturation.

The National Bus Strategy has given new focus on partnership with West Sussex County Council to discuss and deliver a significant new bus service between Chichester, Shopwhyke, Tangmere, Eastergate and Barnham, supporting committed development and acting as an initial phase of what ought to be a more ambitious longer-term strategy to support growth beyond 2025 in both Chichester and Arun Districts. For these improved bus services to be both deliverable and effective, robust bus prioritisation is unavoidable. No such measures are proposed in the Plan or its evidence base and we therefore suggest inclusion of plans to facilitate safe and efficient bus operation between Tangmere and Nyton/Eastergate, ideally avoiding the need to join A27 through-traffic entirely.

We welcome the clear recognition that these localities identified for growth, benefit from existing relevant public transport services. The Vision also sets an expectation that bus services in particular should be “enhanced” and “reinforced”.

We entirely agree that these opportunities exist, across the broad strategy and strategic allocation proposed by the draft Local Plan. Securing them will be crucial to achieving national and local policy objectives, including the Strategic Objectives. However, to our continuing very great dismay, the Plan goes no further to defining how this will be achieved. As such the Vision is not demonstrable achievable or deliverable.

Accordingly the Plan cannot be considered effective, in the sense of NPPF.

Remedying this, demands specific measures to protect bus services from congestion in the following corridors:

- A259 East of Emsworth
- A259 Fishbourne
- A 259 Via Ravenna/Cathedral Way
- A286 Stockbridge Road north and south of A27
- B2145 Whyke Road/Hunston Road
- A259 Bognor Road, east and west of A27 and extending to the District Boundary
- B2144 Oving Road/Shopwhyke Road east and west of the A27
- A 285 Westhampnett Road/Portfield Way/Stane Street, potentially involving a mode filter at the west end of Stane Street

These must be defined to a sufficient level of detail to assess their effectiveness and deliverability, including costs.

This would then allow West Sussex County Council and Local Transport and Highways Authority, ourselves as the principal bus operator, and where appropriate other organisations that would be directly tasked with delivering the mitigation package, to agree service levels and standards necessary to deliver specified outcomes, including journey times, frequencies, capacity and hours of operation on the network, and also in respect of the strategic allocations and Strategic Locations for Growth.

The agreed mitigations strategy should be set out in an up-to-date Infrastructure Delivery Plan backed by clear funding commitments, including a funding strategy to justify necessary developer contributions.

Where necessary to support evidence of effectiveness and deliverability, clear statements of support, which might include Statements of Common Ground between the LPA, LTA, National Highways and Stagecoach, could be provided.

### 3. Spatial Strategy

#### Stagecoach Supports

Stagecoach well recognises the constraints outlined in the explanatory narrative at the start of Chapter 3.

In particular we strongly endorse that strategy in that it reflects that the best opportunities to meet housing and employment development requirements sustainably clearly exist in and close to Chichester and on the key east-west movement corridor where – subject to effective measures being delivered to make these modes more attractive, efficient and relevant – sustainable modes can credibly provide for a much higher proportion of movement demands, mitigating most effectively the potential traffic impacts of development.

We agree that the Manhood Peninsula suffers serious environmental constraints, but, added to these, public transport and other sustainable modes cannot provide such attractive alternatives, and significant further development risks merely reinforcing already high levels of car use, aggravated by the carbon impacts of the distances involved –

something the plan does very little to evaluate, and makes no reference to.

We endorse the conclusion in paragraph 3.24 that significant development in the part of the District north of the National Park is inappropriate. The rationale is principally on landscape and visual character. This exposes a fundamentally biased approach to plan making that has consistently underplays transport accessibility and carbon issues. In fact, the lack of local services and the extended distances that need to be travelled to fully participate in society in this area, with no realistic prospect of public transport offering relevant choices, ought to rule such a strategy out of play on a far less aesthetic and interpretational basis.

### 3.1. Policy S1 Spatial Development Strategy

#### Stagecoach Supports

The Spatial Strategy flows clearly and logically from the Spatial Portrait, and the opportunities and constraints identifiable across the Plan area. It represents a logical and justified continuation of the existing Local Plan strategy. In particular the spatial strategy maximises the potential for sustainable modes to contribute to meeting a much higher proportion of all the District's mobility and accessibility needs.

### 3.2. Policy S2 Settlement Hierarchy

#### Stagecoach Supports

The settlement hierarchy clearly reflects the service endowment and potential self-containment of the settlements in the District. In particular, the second tier of settlement hubs includes secondary schools, which are major peak trip generating uses. Service villages, in the main, also benefit from bus services running at least hourly, which can be expected to provide for a degree of mobility for the higher number of trip purposes that cannot be satisfied by walking or cycling within the immediate locality. Thus, a level of development to meet local needs in this tier is relatively sustainable.

There is a quite broad range of settlements in this category. We have concerns that, north of the National Park, the Service Villages have no realistic public transport choice. These include Plaistow/Ifold, Kirdford, Loxwood, and Wisborough Green. Such as exists is typically a 1/bus per day off-peak shoppers service offering up to 90 minutes in Horsham or Guildford and as such any development here even to meet local needs requires each adult to own a car. This contrasts strongly with Service Villages to the south of the National Park, which are greatly more sustainable.

## 4. Climate Change and the Natural Environment

### Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This section of the plan is extensive and wide ranging, as should be expected.

However, remarkably, there is no acknowledgement whatever of the role of transport in mitigating climate change or its effects, not of the importance of sustainable movement and access being facilitated across the plan area in addressing anthropogenic impacts on the natural world at a more local level.

This exposes very clearly a troubling level of indifference to transport matters in the production of the Plan, which, while nationally quite common, is neither appropriate nor acceptable. The mitigation of transport impacts is not merely a matter speaking to the social and economic aspects of sustainable development. It is crucial to address the causes and effects of climate change that arise from transport, and personal mobility.

This is now well understood and at the centre of national policy, including the National Decarbonisation Strategy for Transport (July 2021) which at Section 5 commits the government to aligning land use planning and transport strategy much more tightly and effectively to mitigate the carbon emissions associated with the current dependence on cars, and the mode mix; but also to reduce travel distances, both increasing the potential relevance and effectiveness of all sustainable modes, and reducing average journey lengths for residual motorised journeys of all kinds.

National statistics show that well over a third of all domestic carbon emissions arise from land-based transport and of these, the vast majority arise from trips of over 10km – outside the range of large scale use of cycling. In fact, the potential of the plan to materially support carbon emissions reduction from within the plan area lies more in the realm of transport than any other policy theme – including emissions mitigation from buildings, which is in any event an aspatial matter and covered by nationally-binding building regulations. By 2025 something like 40% of all the emissions within the plan-area will be transport related.

There is no evidence supplied to support the plan that addresses the transport carbon impacts of the spatial development strategy in a clear manner.

There is no evidence supplied that sets out the effects of potential worsening of congestion on air quality within the plan area, arising entirely from the excess of passenger car movement demands over available and credibly deliverable highway capacity. This is despite the evidence set out and acknowledged in the explanatory memorandum at paragraph 4.130:

"4.130. The council's Air Quality Action Plan and the West Sussex Transport Plan 2022-2036 both refer to the air quality issues faced by Chichester. There is currently one Air Quality Management Area (AQMA) in the plan area, located at St Pancras, Chichester. AQMAs are designated where air quality exceeds, or is likely to exceed, national air quality standards and objectives. Development within or impacting these areas, or that likely to cause the declaration of any further AQMAs, will be subject to an air quality assessment by the applicant."

This is a retroactive approach – it is not "planning", based on evidence.

We are well aware that air quality issues in and of themselves can render allocated sites to be undeliverable: a good example is in the Vale of White Horse, Oxfordshire, where strategic allocations on the A338 and A420 corridors have been held up for years by air quality issues at Marcham and Frilford, in large measure because agreed transport interventions were considered inadequate or undeliverable a very short time after the Plan was examined and adopted.

There is no evidence that shows how the development strategy can effectively mitigate these impacts as well as the further potential impacts that arise from the development strategy. This is exasperating, as there is clear evidence that could be drawn upon to show that that very substantial opportunities exist to:

- Speed buses up and make them more reliable by the delivery of bus priority on most of the key main corridors. Most of these even today operate relatively frequently
- Improve service frequencies and extend hours of operation.
- Secure significant background mode shift to bus as a result, damping pressure on key links and junctions, by consolidating demands on direct more reliable and more frequent bus services.

The spatial development strategy as submitted is in fact, likely to well conform to such additional evidence.

The allocations require substantial additional transport related work and evidence to demonstrate that the opportunities for sustainable transport have been identified and taken up as required by NPPF paragraphs 104-105.

With regards to specific policy, Policy NE22 should be modified to read:

"Development proposals will be permitted where it can be demonstrated that all the following criteria have been addressed:

1. Development is located and designed to minimise traffic generation and congestion through access to by maximising the relevance and attractiveness of sustainable transport modes, including maximising provision of specific demonstrably effective measures to make pedestrian and cycle and public transport routes and networks more direct, more safe, faster and more reliable;..."

## 5. Housing

### 5.1. Policy H1 Meeting Housing Needs

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

The presumption of the planning system is that local planning authorities should seek to meet their objectively assessed development requirements in full. These needs are assessed by a defined Standard Methodology set out in Planning Practice Guidance and elsewhere, that has explicit regard to ensuring that the economic and social effects associated with housing are properly provided for, to avoid exacerbating serious problems that arise from inadequate housing supply.

As a significant local service provider and employer, Stagecoach is concerned that existing issues with housing availability and affordable housing supply are not exacerbated. This has a direct bearing on staff recruitment and retention. It also has an indirect bearing on our cost base.

The existing problems with housing affordability have developed over many decades of undersupply. It should be emphasised that the significant boost to the supply of housing that has been sought by governments over the last 15 years, has only begun to take effect relatively recently in this District. Tackling the problem will require years of consistent attention.

Stagecoach notes that the Council is no longer proposing to meet its identified housing needs in full. Rather than 638/annum the Council is allocating a total that implies an annual delivery rate of 535/annum.

While a number of matters evidently present challenges to the Council in identifying a sustainable development strategy. Paragraph 5.2 indicates that "constraints, particularly the capacity of the A27 has led to the council planning for a housing requirement below the need derived from the standard method..." The blame for being unable to meet housing requirements is thus laid squarely at the door of transport infrastructure and systems.

This conclusion in no way follows from the evidence in the Chichester Transport Study. This, rather, makes the statement that when a higher annualised quantum of 700 dwellings per annum was tested, in the majority of cases the traffic capacity improvement package would perform little differently. To quote the Study:

"5.6.3 The network performance outputs analysed comprising V/C%, Delays (seconds) and Queues (PCU's) suggest that generally the proposed SRN mitigation identified for the Core Scenario, can accommodate in the most part, additional increase in development to 700dpa."

Whether the rest of the local road network is similarly protected is moot.

Irrespective of these results, even if the contention made in the draft plan were true, unlike many other constraints, this is amenable to a suitable effective strategy to address the constraints identified being collaboratively conceived. This is what NPPF expects, as set out in paragraphs 104-106.

Where the A27 is concerned, as part of the SRN, National Highways is now working to a substantially revised approach than that in force at the time the current Local Plan was prepared, or LSS2, or reflected in the Chichester Transport Study. This is set out in DfT WMS 01/22. This document is the policy of the Secretary of State for Transport in relation to the SRN which should be read in conjunction with the National Planning Policy Framework (NPPF). It replaces the policies in the Department for Transport Circular 02/2013 of the same title.

It makes plain that to accommodate additional demands arising from development, National Highways (NHC) expects to meet the requirements of its statutory license in a substantially different manner. With respect to development NHC LTN 01/22 continues to address the tensions between national policy for the environment and carbon mitigation, the ongoing need to substantially boost the supply of housing as well as maintain national economic competitiveness and protect the safety of the public. However, in future, the approach will be to seek first to maximise the impact of demand management measures (reducing the need to travel), and then to accommodate residual additional demands first through maximising the use of sustainable modes, rather than accommodating assumptions about current levels of car dependency and use.

LTN 01/22 much more closely and explicitly aligns with the language of NPPF Chapter 9 paragraphs 104-106. Paragraph 12 states: "New development should be facilitating a reduction in the need to travel by private car and focused on locations that are or can be made sustainable.... Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas." (our emphasis).

It continues at paragraph 13: "where developments are located, how they are designed and how well delivery and public transport services are integrated has a huge impact on people's mode of travel for short journeys. The company will therefore expect strategic policy-making authorities and community groups responsible for preparing local and neighbourhood plans to only promote development at locations that are or can be made sustainable [footnote 8] and where opportunities to maximise walking, wheeling, cycling, public transport and shared travel have been identified." (again, our emphasis)

Stagecoach readily confirms that the draft Plan development strategy conforms well to the first limb of this expectation, in terms of the location of development.

Stagecoach considers that the plan and its evidence base conforms poorly to the second in that the specific opportunities to maximise walking, cycling wheeling and public transport are not clearly identified, and defined, and proven to be effective and deliverable.

The current mitigation strategy for the A27 Chichester area, supporting the adopted Local Plan and for which proportionate developer contributions have and continue to be sought, reflects now-superseded DfT Circular 02/2013. As a direct result, it failed completely to identify any significant effective bus priority measures, despite the fact that frequent services already exist on the key corridor concerned, and that one bus journey can remove, fully seated between 72 and 80 single occupancy car journeys from congested links and across key junctions on the A27. Rather, it sought to implement targeted measures to increase the throughflow of general traffic.

We recognise the realisation that this approach, which was already reliant on some tenuous logic, is simply not technically viable, especially where further development needs are anticipated.

National Highways will now pursue an approach with the planning system that "includes moving away from transport planning based on predicting future demand to provide capacity ('predict and provide') to planning that sets an outcome communities want to achieve and provides the transport solutions to deliver those outcomes (vision-led approaches including 'vision and validate,' 'decide and provide' or 'monitor and manage'). The company will support local authorities in achieving this aim through its engagement with their plan-making and decision-taking stages." (paragraph 15).

Paragraph 23 is at the fulcrum of assessing and defining transport mitigations to accommodate growth on and near the SRN "Capacity enhancements such as modifications to existing junctions or road widening to facilitate development should be determined on a case-by-case basis. The general principle should be accepted where proposals would include measures to improve community connectivity and public transport accessibility, and this will be weighed against any negative safety, traffic flow, environmental and deliverability considerations, impacts on the permeability and

attractiveness of local walking, wheeling and cycling routes, and alternative options to manage down the traffic impact of planned development or improve the local road network as a first preference.” (our emphasis).

However, no material work has been done that seeks to identify if a bold robustly conceived and suitable judiciously-prepared strategy that seeks to consolidate flows on already densely travelled corridor onto improved bus services, driving mode shift through insulating these services preferentially from already serious queuing. This would be likely to have very substantial impacts on all the key junctions on the A27, and potentially, on the A27 itself. The need for an integrated approach between Shoreham and Emsworth within West Sussex paying particular regard to development requirements in both Arun and Chichester Districts naturally lies at the heart of this, and we would expect to be picked up by the LSS3 Review among other things.

However, the locus of the problems and its causes and effects are obviously well enough known to start work on defining solutions within the plan area today. We would expect that this work will be essential if National Highways are to support the Plan, especially now given the terms of Circular 01/2022.

Such work could and should start from a “policy off” position: in other words that the Plan should fully accommodate its needs unless it can be proved that a mitigation strategy for the A27 that is compliant with DfT WMS 01/2022 cannot credibly accommodate resulting capacity demands without unacceptable impacts on the safety and efficient operation of the SRN.

This evidence does not exist. In fact the Chichester Transport Strategy 2023, on which the Council solely relies as its transport evidence base, indicates the opposite at para 5.6.3. This is the case before meaningful measures to secure damping of traffic demands through mode reassignment are even considered.

The exception to this is Portfield and Oving Road, which are among the most problematic areas after mitigation even at the Council’s chosen 535 dwelling/annum scenario (para 5.6.4.-5). The costly capacity mitigation simply cannot deliver enough benefit. It is admitted that WSCC has indicated that it would prefer a solution that places greater reliance on sustainable modes damping car-borne demand. This is entirely the strategy required by NHC to follow LTN 01/22, of course. Despite the fact that “predict and provide has “run out of road” no attempt has been made to examine what such a solution set credibly could look like. This is unsatisfactory and deeply troubling.

At paragraph 5.4 the draft plan points back again at the West Sussex and Greater Brighton Strategic Planning Board and the future work that has been commissioned, but has barely begun, to update the Local Strategic Statement. This work is to inform the preparation of plans that have horizons beyond the end date of the current LSS in 2030 and properly to meet the Duty to Cooperate. As we said in our response to section 1 of the Plan we fully endorse the conclusion that this is the right mechanism to look at these issues. However, the mechanism has not been effectively applied to the production of this plan. Therefore, the specific evidence that capacity on the A27 in and of itself supports accommodating a lower housing requirement does not exist.

The Plan thus does not conform to NPPF, is not adequately justified and is not effective.

The Plan does not properly meet the statutory Duty to Cooperate.

We will return to this matter in specific representations to Section 7 of the draft plan.

## 5.2. Policy H2 Strategic Locations/Allocations 2021-2039

### Stagecoach Supports

Policy H1 makes plain that the plan, as far as it identifies locations for development has done so in locations that conform with its spatial strategy. All of the strategic allocations to a greater or lesser extent offer clear opportunities to make use of sustainable modes, by virtue of their location. That is not to say that the opportunities to take up these opportunities, and maximise the role of sustainable modes, has been identified, defined and translated properly into the rest of the plan policy suite or Infrastructure Delivery Plan.

As our remaining representations make clear, we support the locations thus far identified as being those that offer the best opportunities to reduce the need to travel, reduce travel distances, and create high quality attractive sustainable travel choices, for both existing residents as well as new ones.

However, the transport impacts of the allocation will individually and cumulatively likely to lead to increasingly severe impacts on the transport network, and on bus services.

Perversely, because these opportunities are not properly identified and secured through the plan and its supporting transport strategy, the opportunities presented by the allocations to secure a substantially more sustainable and lower carbon pattern of movement will not only risk being squandered but may aggravate the wider problems.

## 5.3. Policy H3 Non-strategic Parish Housing Requirements

### Stagecoach Supports

The approach is consistent with the plan’s spatial strategy. It generally avoids a dispersal of development to locations likely to be highly car dependent. There is a clear focus on meeting housing needs in the far north-east of the District at

the largest and most sustainable settlements, such as Loxwood, Kirdford and Wisborough Green. However, it must be pointed out that public transport availability in this area, provided by the County Council through services it procures, is minimal. These settlements in practice require each adult and child of secondary school age to have access to motorised transport to fully participate in society. This might justify significant measures to secure a boost in the frequency of bus services between Guildford and Billingshurst, passing through these settlements.

Otherwise, existing commitments in the plan area already make provision to meet for local needs. To the degree that there is an unmet local requirement for affordable housing of a small scale – for example to support the rural economy – this could be met through neighbourhood plans or through Rural Exception Sites.

## 6. Place-making, Health and Wellbeing

### 6.1. Policy P1 Design principles

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

NPPF requires that proposals should consider transport issues from the earliest possible stage. Designing to properly facilitate safe and efficient access, focusing first on sustainable modes, should be at the heart of development design. Too often it is still an afterthought, notwithstanding this.

Policy P1 must include an additional statement to be compliant and effective with NPPF paragraph 104-105 and 112 a): “Development will be designed to make access and movement using walking, cycling and public transport the natural first choice, and demonstrate through the Design and Access Statement how such modes are afforded the most direct, safe, reliable and efficient routes within to and from the proposals, especially when compared with car use.”

### 6.2. Policy P4 Layout and Access

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

A number of proposals in the plan involve large-scale development. It is essential that where appropriate buses can access and circulate efficiently through development at a suitably early stage. There is no acknowledgement of this anywhere in the policy, contrary to NPPF paragraph 112.

Large-scale development which buses cannot access in an efficient or timely manner, or at all, strongly contributes to high levels of car-dependency. Evidence for this is referred to among other places, in DfT Circular 01/2022. To be compliant with NPPF and properly pursue its strategic Objectives, Policy P4 needs to be modified to address this point: “1. Provide safe, direct and attractive conditions for inclusive access, egress and active travel between all locations and providing as good direct high quality links to integrated public transport, and where appropriate efficient access and circulation to bus services, unimpeded by excessive parking, at a suitably early point in the development phasing;

## 7. Transport and Accessibility

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

The issues related to transport are fundamental to the soundness of the Plan. In particular, the constraints presented by the capacity on the A27 around Chichester and its key junctions, are the paramount reasons why the Council does not consider it can meet its objectively-assessed development needs in full. Thus, the transport issues and potential solutions available and what these mean for the ability of development needs to be accommodated, are matters that go to the heart of the soundness of the Plan.

Paragraph 8.3 sets out the approach taken to date succinctly:

“Increasing the capacity of the road network is key to supporting growth in the Local Plan. However, there is also a need to reduce demand for road transport to achieve net zero in greenhouse gas emissions by 2050 as highlighted in the council’s Climate Emergency Action Plan and Strategic Objective 1. In aiming to achieve the ambitions of the action plan, all development is expected to demonstrate how it will support four key objectives to create an integrated transport network which will alleviate pressure on the road network, improve highway safety, encourage sustainable travel behaviours and help reduce transport related impact on air quality, by:

1. Avoiding or reducing the need to travel by car;
2. Enabling access to sustainable means of travel, including public transport, walking and cycling;
3. Managing travel demand; and

#### 4. Mitigating the impacts of travel by car.”

However, this approach is unambitious and “lightweight” as it assumes, as does the existing Chichester Transport Strategy on which the current adopted plan relies, that the focus of investment should be, wholly, in highways capacity improvement.

Sustainable modes explicitly are expected to play a greater role to “alleviate pressure” on the local road network, as part of this strategy. To emphasise: to avoid exacerbating congestion, the strategy will have to both remove a significant proportion of existing demands from the network on multiple key approaches to Chichester; and then ensure that travel demands from committed and further new development allocated in the plan does not simply replace these journeys, or, worse, create even greater demands.

This will demand very significant behaviour change. Only by making sustainable modes substantially more attractive, both absolutely, and relative to the same journey made by car, can this be expected to occur. However, the explanatory memorandum as well as the wider policy suite and IDP, well expresses a fundamental unwillingness to taking specific, defined measures to achieve this reduction in car use and material promotion of sustainable modes. It makes plain that sustainable modes, including bus services, will offer a lesser role to which “access will be provided”.

Such a vague and weakly defined mechanism will have no effect, at all, on current behaviour and car dependency if the relevance of those choices as a credible alternative to car use, is not substantially boosted. This includes a 5% reduction in trip demand assumed by the Traffic Model at the heart of the Chichester Transport Study 2023.

For this reason. the transport strategy behind the current adopted plan is demonstrably ineffective, as the updated model makes plain. It has not yet been delivered and is yet unclear when or (in the absence of committed funding) even if it can be. It is ineffective to “roll forward” this strategy to support a higher level of planned growth.

We note that a scheme for addressing congestion on the A27 at Chichester has been included in Roads Investment Period 3 (2025-2030) – well within the horizon of this Plan. However, recent history provides compelling evidence that off-line improvement to the north is not politically supported and arguably even technically or economically deliverable. It is not funded, nor at this stage can it be hypothesised if an economically deliverable scheme is achievable sufficient to warrant the necessary investment.

An on-line improvement of the A27, including junction improvements, is likely to favour longer distance east-west though movements, which are of greater significance to the national economy, at the expense of local movements crossing the SRN- a conundrum that largely sums up the dilemma that is faced by NHC and the County as Highways and Transport Authority. It is one that is played out in many places, but rarely is the tension so stark as at Chichester.

Every local route crossing the A27 at grade around Chichester accommodates a regular bus service - or shortly will do (Oving Road area is expected to follow in 2023, though bus services are likely to not use the modified crossroads but to use the left-in-left-out facilities provided as part of the Shopwhyke Lakes development). The impact of these issues on the entire bus operation are serious and increasingly severe.

By the same token, boosting the relevance and reliability of each of these services substantially consolidating as much demand as possible onto a much smaller number of vehicles, is clearly a strategy that ought to support the effective capacity of each of these junctions being greatly augmented, at the same time as reducing equally substantially, the energy- and carbon intensity of mobility in the plan area. Addressing the A27 should not be considered some kind of “zero-sum” game.

Furthermore, the approach of National Highways in its dealings with development and the planning system now reflect a substantial change in Government Policy set out in DfT Circular 01/2022, which we separately cover in these representations, that entirely aligns with an approach that seeks to appropriately invest in more active and rational management of scarce highways capacity, on both the SRN and local roads.

For environmental, economic and social reasons – including public health, the issues presented by the A27 and its interface with local roads around Chichester stands out, nationally, as an example of where the approach taken to accommodating and mitigating development impacts needs to make a clear break with previous “predict and provide” approaches to meet forecast unconstrained car use as LTN 02/2022 makes clear as a principle. Policy in the West Sussex LTP to 2036 itself makes plain that “shared mobility” – including bus services – must play a much greater role in this area.

The existing Chichester Area Transport Strategy is focused on justifying capital contributions from committed development to fund highways capacity improvement – with nothing included to make bus services more attractive, or importantly more reliable. Indeed this “cars first” approach is so costly, that there is already accepted by WSCC to be insufficient land value remaining to be captured to put into substantial improvements for public transport. That much is very evident, and transparent, from paragraph 8.12 and 8.14, where south of Chichester “This (one) package of works (of several improvements needed) would be between £57.23 and £82.79 million to deliver in full and would not be capable of being funded by development contributions alone.” This assumes the scheme is otherwise deliverable, which on the evidence in the public domain for some time, has been considered challengeable.

The draft Local Plan and a modestly updated infrastructure package that flows from the 2023 Chichester Transport Study, pursues exactly the same approach.

This strategy is also even more ineffective having regard to the roll forward of the Plan to 2039. It cannot deliver the key Strategic Objectives of the Plan; and in particular this is explicitly recognised by the Council in the failure of the draft Plan to accommodate the OAN in full.

It is also obsolete, as it does not align, from first principles, with national policy (including the National Decarbonisation Strategy for Transport) and DfT Circular 01/22; nor the Council's own declared Climate Emergency.

As a result, draft Policies T1 and T2 are both unsound, as we will separately explain.

Owing to the lack of evidence about the implications of this for adjoining authorities – especially Adur District – in the absence of the review of the Local Strategic Statement – this has implications for fulfilling the Statutory Duty to Co-operate.

The absence of any meaningfully comprehensive refresh of the transport evidence base means that there are no meaningful schemes of any kind, defined in the plan or its IDP, to indicate either what level of growth can be accommodated, by delivering a change in travel behaviour. This would be aimed to secure a sufficient effective increase in junction throughput (measured in terms of person trips as opposed to passenger car unit movements (PCUs)). Such evidence would propose measure to achieve that outcome and assess the efficacy and costs of such improvements, across all modes.

Paragraphs 8.10-8.13 inclusive indicate that the Council “has moved away from ‘predict and provide’” and invites the reader to conclude this has translated into a programme of interventions that can be funded to deliver specific, credibly predictable outcomes. Such a programme should be clear in paragraph 8.11. and the IDP. There is no such clarity and this conclusion would be false.

It would also be evident in the language of the Chichester Transport Study 2023 and its refreshed proposals. Only the most token of lip service is paid to the matter. It is a plainly car-focused, predict and provide methodology to support a “predict and provide” strategy. In fact, it is a brazenly car-focused approach, to the exclusion of all else.

The statements in the Plan regarding any other approach, read properly, offer nothing more than a vague commitment to look post-adoption, and implementation, at unspecified measures, based on problems that may arise in future that will be decided by a committee: the Traffic and Infrastructure Management Group (TIMG). This does not yet exist and is obviously an attempt to posit a mechanism that retroactively will cover for the lack of serious multi-party engagement to address the existing and future issues. Such a group should, in our view, also include the public transport operators, not least if the requirements of NPPF Para 106c) are to be satisfied, and the strategy and measures to be adopted are material to supporting the Local Plan, as of course the purpose of the TIMG has as its core raison d'être.

The approach proposed by the draft plan is plainly ineffective and unsound in justifying the draft Plan.

It is more widely unacceptable to Stagecoach. The issues are severe today and well-known, already serving to jeopardise the delivery of buses relied on by existing residents, much less attract new ones.

We also consider that HM Planning Inspectorate are likely to be quite resistant to accepting this aspect of the plan's transport strategy, nor will it be appropriate for the Council, West Sussex County Council, or National Highways, to define such measures after the submission of the Plan during the Examination process. The Examination in Public of a local plan has no purpose to improve plans, or remedy deficiencies clearly evident prior to submission.

The examination of the West of England Joint Strategic Plan in 2019, and the Uttlesford Local Plan in 2021, among several others, demonstrates especially clearly that the Planning System and the Examination process is not amenable to post-hoc retrofitting of transport evidence and strategies to support a development strategy.

#### 7.1. Transport Evidence Base

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Most of Stagecoach's serious concerns about the soundness of the plan arise from the fact that it has been prepared in advance of any up-to-date transport evidence and suitably robust transport mitigation strategy being advanced to support it. In essence, the Council has rolled forward the existing plan by 9 years, adding some additional sources of housing supply, while still relying implicitly on a transport evidence base that was prepared 10 years ago.

This led to the formulation at that time of what can only be described as an attempt to develop an effective car-based

mitigation strategy, creating capacity for general traffic added to accommodate unconstrained additional demands on an already over-taxed highways network – the Chichester Area Transport Strategy. Despite language in support of sustainable modes, no deliverable measures were identified to support either the extension of the bus network to serve allocated sites, and much less to create a vital improvement to the quality and reliability of public transport services. This approach reflected the approach set out in DfT Ministerial Circular 02/2013 “Development and the Strategic Highways Network”, applicable since the A27, which is the focus of the most severe difficulties, forms part of the national Strategic Roads Network.

This approach has proven ineffective even before substantial elements of housing land supply in the current plan come forward – in particular West of Chichester and West of Tangmere.

In addition, Circular 02/2013 has now been replaced by a new Ministerial Statement of 23/12/2022, DfT Circular 01/2022.

On both counts the transport evidence base and strategy needs to be properly revisited and established to provide effective mitigation for the plan, including current commitments that are being rolled forward.

The language of the current Ministerial Circular 01/2022 offers a highly condensed synoptic view of the proper approach to addressing transport matters in the planning system notwithstanding that it is directly concerned with the Strategic Roads Network. Videlicet:

“31. The NPPF expects local plans and spatial development strategies to be underpinned by a clear and transparent evidence base which informs the authority’s preferred approach to land use and strategic transport options, and the formulation of policies and allocations that will be subject to public consultation. The company will expect this process to explore all options to reduce a reliance on the SRN for local journeys including a reduction in the need to travel and integrating land use considerations with the need to maximise opportunities for walking, wheeling, cycling, public transport and shared travel.

32. The Transport Decarbonisation Plan indicates that carbon emissions from car and van use is the largest component of the United Kingdom’s total transport emissions. While action is being taken to decarbonise transport such that all new cars and vans will be fully zero emission at the tailpipe from 2035, the proposed location of growth in current plan periods and whether new developments would be genuinely sustainable remain important factors in demonstrating that a local authority area is on a pathway to net zero by 2050 and therefore compliant with the requirements of the Climate Change Act 2008.

33. Alongside this, the local authority should identify the key issues within their study area regarding transport provision and accessibility, setting out how the plan or strategy can address these key issues in consultation with (National Highways, and other transport stakeholders identified in NPPF paragraph 106b). It is the responsibility of the local authority undertaking its strategic policy-making function to present a robust transport evidence base in support of its plan or strategy. The company can review measures that would help to avoid or significantly reduce the need for additional infrastructure on the SRN where development can be delivered through identified improvements to the local transport network, to include infrastructure that promotes walking, wheeling, cycling, public transport and shared travel. A robust evidence base will be required, including demand forecasting models, which inform analysis of alternatives by accounting for the effects of possible mitigation scenarios that shift demand into less carbon-intensive forms of travel.” (our emphasis)

Within the text quoted above, references to National Highways and “the Company” can quite legitimately be extended, given the statements in NPPF paragraph 16, 25, 26 and 106b, to include all the relevant transport infrastructure and service providers in the plan area. Circular 01/2022 also has the weight of secondary legislation as a Written Ministerial Statement and thus should be considered to be highly material.

To date there has been little attempt to explore, to the degree necessary, strategies that conform to Circular 01/2022. It is thus not possible to conclude, as the Council has done, that the issues on the A27 that present a constraint to development, are insuperable.

In line with comments made elsewhere in the response to this pre-submission draft, the Plan thus requires substantial further work to be undertaken with key stakeholders to establish a suitably effective and demonstrably deliverable transport mitigation strategy, to sustainably meet the District’s identifiable development needs and where apparent and appropriate, also ensure that wider cross boundary strategic issues are appropriately addressed, in conformity inter alia, with the Duty to Cooperate, NPPF paragraph 16 and 104-111 inclusive, and DfT Circular 01/2022 and to ensure the Plan’s own Strategic Objectives can be met.

7.2. Policy T1 Transport infrastructure  
Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

As described in comments elsewhere, Stagecoach does not see that a suitable proportionate and up-to-date basis exists to properly and appropriately address the transport issues in the plan area.

The 2023 Transport Study does not perform this role adequately but, contrary to the explanatory memorandum, is a scheme intended only to facilitate car-borne movements through some of the key junctions. There is no evidence that an holistic integrated and strategic approach to transport mitigations has been prepared. Certainly Stagecoach has not been involved in any of the discussion about appropriate transport measures in support of the plan, including the Transport Study 2023, contrary to the expectations set out in NPPF at paragraph 16 and 106.

Notwithstanding out fundamental concerns about the transport evidence case and mitigations strategy, Policy T1 reflects a weak and ineffective approach, that seeks to try and define a strategy post-adoption.

Contrary even to the explanatory memorandum for the policy, which seeks to maximise the contribution of sustainable modes, the policy is phased in such a way that it gives basis for previous "predict and provide" solutions to facilitate and support current levels of car dependency – already shown to be undeliverable and unaffordable – will nevertheless be the first rather than the last resort. There is no commitment to seek to maximise the contribution made by sustainable modes to meeting mobility needs. Nor is there any recognition that current chronic congestion and lack of network resilience jeopardises the ongoing attractiveness and long-term sustainability of the current public transport offer.

To be effective and create alignment with national policy, and also provide for an up-to-date transport evidence base and strategy to be adduced, Policy T1 should be modified to read:

"Integrated transport measures will be developed to mitigate the impact of planned development on the highways network, improve highway safety and air quality, promote more sustainable travel patterns and through providing in the first instance, new and improved infrastructure and services that will be credible effective in maximising the encourage increased use of sustainable modes of travel, such as public transport, cycling and walking.

To achieve this, the council will work with National Highways, West Sussex County Council, other transport and service providers (including through the Traffic and Infrastructure Management Group) and developers to provide a better integrated transport network and to improve accessibility to key services and facilities...

All parties, including applicants, are expected to support these objectives by:

1. Ensuring that new development is well located and designed to avoid or minimise the need for travel, encourages maximises the use of sustainable modes of travel as an a credible alternative to the private car and directly provides or contributes towards new or improved transport infrastructure;
2. Working with relevant transport infrastructure and service providers to improve accessibility to key services and facilities with primary emphasis on sustainable modes, and to ensure that new facilities are easily accessible by sustainable modes of travel;
3. Targeting investment to provide local travel options as an that represent a clearly credible alternative to the car use, focusing on the delivery of improved integrated bus and train services, and improved pedestrian and cycling networks, including the public rights of way network, based on the routes and projects identified in the Local Transport Plan, West Sussex Bus Service Improvement Plan, Local Cycling and Walking Infrastructure Plan (LCWIP) and the Infrastructure Delivery Plan;
4. Planning to achieve the timely delivery of transport infrastructure on and approaching the A27 and elsewhere on the network, needed to support new housing, employment and other development identified in this plan;
5. Phasing the delivery of new development to align with and where possible facilitate the provision of new and improved transport infrastructure and services and the outcomes of monitoring travel demand on the network, including that arising from areas immediately adjoining the plan area. It may also be Where necessary to achieve this alignment proactively phase development will be phased to take into account the monitoring and effectiveness of travel plans demands on the network and to ensure that measures are implemented to support the highest possible level of encourage sustainable travel behaviour.;
6. Using demand management measures, such as travel plans, to manage robust methodologies to assess travel demand and minimise the need for new or improved transport infrastructure as part of the monitor and manage process.
7. Delivering a coordinated package of infrastructure improvements at and approaching to junctions on the A27 Chichester Bypass along with other small-scale junction improvements interventions within the city and elsewhere, as identified through the monitor and manage process. These will increase road capacity, reduce traffic congestion, improve safety and air quality, and improve access to Chichester city from surrounding areas, first by maximising the contribution of sustainable modes to meeting mobility demands, then, and only as evidenced by robust modelling and option testing, providing increased highway capacity for general traffic.

..."

### 7.3. Policy T2 Transport and Development

Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Section 1 b) of T2 will be ineffective as, absent measures to ensure buses can run reliably and efficiently, improved bus services will not be possible, in support of the plan's own stated broad approach to transport mitigation, as well as wider local and national policy.

The draft policy does not require improvements to the quality of services such that sustainable choices will be materially more attractive than car use for many local journeys. Without this the Plan's Strategic Objectives cannot be fulfilled and the objectives of the Plan and this policy, read in its own terms, will not be realised, where reduction in private car use is concerned. It is thus ineffective.

Absent measures to make bus services more reliable and more efficient, by insulating them from chronic congestion as far as possible, still further operating resource and therefore costs, will be needed to just to reliably run existing service frequencies, and capacity, as vehicle productivity continues to be more and more adversely affected by chronic delay. This will be further aggravated by increasing incidence of severe unpredictable service breakdown arising from incidents of diverse kinds on the network, especially on or around the A27, including that arising from more regular severe weather events. Longer journey times can only be expected to lead to relative disadvantage of bus services compared to personal car use, entirely contrary to the objectives of national and local policy, including Policy T1. It can also expect to lead to a dampening effect not on car use, but on bus patronage, threatening the ongoing viability of bus services across the plan area.

Section 1 b) of T2 should be modified to read:

"b) Maximise opportunities for the use of sustainable travel modes through provision of direct and efficient access both to either the existing networks or and through providing such new infrastructure or public transport services, as can be credibly expected to reduce reliance on the private car and work towards achieving net zero in greenhouse gas emissions by 2050;"

Section 1 d) of T2 will be ineffective as the location of development is fixed by this plan. We commend the fact that all the strategic allocations are or will be served by regular bus services.

However, the use of public transport services, where available, depends on the relevance and reliability of these services. Furthermore, provision of services without them generating sufficient patronage to support their long-term operation also threatens the sustainability of the plan and its supporting transport strategy. This is especially true of new services such as those intended to serve West of Chichester and Tangmere and East of Chichester Strategic Allocations.

This can only be assured by the plan being supported by specific measures to ensure buses can operate efficiently and reliably on the existing and projected services intended to serve the developments concerned, and also at the same time secure behavioural change from existing development.

To be sound and effective, the policy T2 1 d.) should be changed to read:

"d) Ensure major development is located to proposals and the supporting mitigation measures enable the use delivery of high-quality, reliable and effective public transport to present the most relevant possible choice to access local services and facilities including employment, leisure and education facilities";

The Policy T2 makes no provision for buses, where necessary, to enter and make efficient and safe progress through major development sites. The plan is thus out of conformity with NPPF paragraphs 104-106. It makes no provision to ensure that penetration of bus services is achieved at a suitably early point in the development trajectory, undermining the achievement of the goals of the Plan and this specific policy. As a good example, West of Chichester Phase 1, currently under construction, cannot be served by buses as a strategy to effect interim bus penetration was never made.

Policy T2 1 f.) should therefore be amended to read:

f) Ensure that the layout and design of the site development proposals provides effective penetration of the site by sustainable modes, at all points in the development build-out, including public transport where appropriate; and sufficient space for all vehicles to manoeuvre without compromising the safety of pedestrians and cyclists, the efficiency of bus services, or the ability to provide an appropriate level of landscaping across the site"

Policy T2 3.) regarding Travel Planning depends entirely on its effectiveness on the quality and relative attractiveness of sustainable alternatives over car use. In the absence of efficient frequent, reliable and direct public transport services (or similarly, high quality facilities for active travel, Travel Plans will continue to be the entirely ineffective "tick box" exercises that they generally are today, evidenced by much lower levels of public transport use in most new developments than it seen in nearby established neighbourhoods, as demonstrated broadly by Census data in 2011, 2011 and 2021.

For this policy to be effective an up-to date transport evidence base and strategy, underpinning a series of specified

interventions to promote the relevance and effectiveness of all sustainable modes including public transport in particular, needs to be put in place.

#### 8. Chapter 9 Infrastructure – Policy I1 Infrastructure provision

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Policy I1 could not expect to be effective without a clear understanding of the effectiveness and costs of a defined series of measures that are laid out in this Plan and its IDP, to mitigate the transport impacts of the development strategy.

Where the Chichester Transport Study is concerned the only meaningful work has focused on the definition and delivery of a range of highways capacity schemes mainly on the A27 around Chichester.

As we have discussed elsewhere the effectiveness of these schemes is insufficient as set out at Tables 8.1 and 8.2 of the Chichester Transport Study 2023. The plan itself admits that the deliverability of this package cannot be afforded by developer contributions alone.

The Chichester Transport Study 2023 does not attempt provide a realistic assessment of costs to deliver these schemes, despite the fact that they have been under evaluation for many years. Nor does it offer any assurance that the schemes are technically achievable. Rather, it states the opposite:

“9.2.3 No investigation has been carried out into specific land ownership details, or into the location details or cost of moving statutory undertakers and utility apparatus within the areas of the scheme. No design assessments were carried out at this stage to ascertain the deliverability of the proposals except where any Health and Safety concerns were raised.”

Thus on the grounds of effectiveness, deliverability and affordability, the measures on which the Plan relies must at the very least be considered to involve an exceptionally high level of risk. Since Policy I1 is founded on these assumptions, it cannot be considered effective.

As we set out elsewhere, the Plan has been advanced on the basis that if any additional sustainable transport measures are required, these mitigations should be retroactively considered and defined after adoption of the Plan. In the light of the doubts that are apparent of both the deliverability, affordability and effectiveness of the Chichester Transport strategy this is especially unsatisfactory even if existing baseline conditions were reasonably acceptable.

However, the Chichester Transport Study 2023, as did its predecessors, makes plain that that existing problems are acute, and can rightly be considered “severe” in the sense of NPPF paragraph 111. Waiting to define deliverable affordable alternatives is an entirely inappropriate approach to the local plan transport mitigation strategy. Such an approach also makes it impossible to consider prior to adoption how far the transport impacts of the plan can be cost-effectively mitigated by alternative means, or whether they are deliverable having regard to technical achievability, land control, development viability, or any combination of the above. Thus, the plan cannot be considered justified, or effective.

Given the mutual dependence of development strategies in Chichester and Arun in particular on these measures this should be seen as crucial of the fulfilment of the Duty to Cooperate.

The remedy for this is ultimately to put in place a suitable transport mitigation strategy following a strategic appraisal of options through review of the LSS. This then must be supplemented by more detailed development specific and localised scheme definition, including, where necessary, bus priority and other measures to support the substantial promotion of the attractiveness of public transport in key bus corridors over private car use. This would then be reflected by costed proposals in the IDP.

Leaving these fundamental weaknesses to one side, even if such a strategy and mitigation package were defined, there is no mention of public transport in the policy even though it is clearly a key part of the policy environment and mitigation strategy for the plan as expressed in the explanatory memorandum for I1, but also at Policies T1 and T2. I1 thus does not effectively support the realisation of the intent of Policies T1 and T2.

Policy I1 iii) should therefore be modified to read:

“(iii) Safeguard the requirements of infrastructure providers, having regard to requirements within and where appropriate across the boundaries of the plan area, including but not limited to:

...

- Highways including specific measures to accommodate improved active travel and public transport level of service and cycle lanes, and...”

At limb v) the Policy expects developers to meet the “in perpetuity costs of operating and maintaining infrastructure”. This shackles development management decisions to developers assuming what are infinite costs – given that “in perpetuity”, read properly, can only mean “without any limit in time”. This means that it is impossible to meet the statutory tests on developer obligations set out in the Community Infrastructure Levy Regulations 2010 (as amended) at Regulation 122, also repeated in NPPF. This policy cannot be lawfully implemented and it is thus ineffective.

In the absence of an up-to-date transport mitigation strategy that is fit for purpose, at the point the Plan is examined these costs of any additional infrastructure are not known in any case. The strategy and its costs, including its affordability and deliverability, are crucial to assessing if the Plan is sound.

Subject to an appropriate defined transport mitigation strategy being arrived at, to be sound, the Policy I1 v) should be modified as follows:

(v) To consider and meet as appropriate the in-perpetuity delivery costs of infrastructure and, where appropriate, improved services, to the point where its long-term operational sustainability is credibly assured from mainstream sources. Where adoption is not envisaged by local authorities, that must include arrangements for its future ongoing management and maintenance;

## 9. Strategic and Area Based Policies

### 9.1. Policy A1 City Centre Development Principles

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Chichester City centre is rightly identified at 10.2 and 10.4 as the commercial and service hub of the District. It is also acknowledged to be the most accessible place in the District by sustainable modes, public transport in particular.

Boosting the vitality of the city centre is something that Stagecoach strongly supports. Irrespective, the enhancement of the commercial and cultural life of the District in the place where these opportunities can be accessed broadly by sustainable modes, is one that has long been at the heart of national planning policy for town centres, reflected in the “town centre first” approach to locating major trip generating uses.

Paragraph 10.5 exposes an unbalanced and unsound preoccupation with aesthetic matters in its approach to the town centre, and far too little to ensuring that the central place function is enhanced through protecting and enhancing the quality of public transport access.

The city is relatively small but at the heart of an extensive hinterland, and thus the role of bus in supporting sustainable access to and enhanced city centre venue is one that needs appropriate recognition and emphasis. It is important to note that a dominant number of key service and facilities such as the General Hospital are relatively close to the city centre. This directly contributes to driving travel demand into the city, causing congestion. Most importantly, it also makes the task of mitigation simpler, given the impact a suite of active and sustainable measures can have within the same close proximity.

Policy A1 does not provide this. As such, achieving the strategic objectives of the plan is seriously threatened, and the plan is thus not effective.

The Plan needs to ensure that the approach to city centre regeneration maintains and enhances public transport access, interchange and inter-modal connectivity. It also needs to ensure that bus service stopping and interchange facilities are able to address increases in future demand, anticipated by the clear intent expressed elsewhere in the Plan that public transport should be meeting a greater proportion of mobility needs, in a growing district. Achieving this demands an ambitious approach to the location, quality and capacity of bus stop and interchange.

We have been in discussions with the District Council about this, alongside West Sussex County Council, for a very considerable period. Stagecoach has always been keen to help facilitate the Council’s aspirations for the city centre, and we continue to hold this intention. However, this cannot be at the expense of a material diminishing of the convenience and fitness-for-purpose of bus stop infrastructure and interchange. Stagecoach has significant concerns that current proposals to remove the bus station and have all bus services operate from the street kerbside, on an inner distributor road with similar or reduced net stop capacity, fall short of promoting attractive, convenient bus access to the central area as a destination.

For the longer term and where the objectives of the draft plan are concerned looking ahead to 2039, they clearly fall short of enhancing the convenience and attractiveness of public transport use. Much less do they make sufficient provision for a material increase in bus frequency, connectivity, and interchange convenience, on which the draft plan explicitly relies. It is vital that the District Council is clear in policy about its objectives for public transport in the city centre. These

objectives must also carry sufficient weight when held in tension with other aspirations for the centre and the constraints on achieving them.

For the Plan to be sound, properly effective and compliant with NPPF, the approach to the City centre cannot ignore its role in the provision of sustainable transport service and connectivity.

Policy A1 should therefore be modified to properly reflect this crucial function, on which the vitality of the city centre must increasingly depend if unacceptable impacts on congestion, air quality and amenity are not to arise. This is still more crucial if wider aspirations to secure a more sustainable society and mitigate carbon are to be achieved.

“...This will include provision for development and proposals that:

- Support and strengthen the vitality and viability of the city centre and its role as a shopping/visitor destination, employment centre, public transport hub and a place to live;
- Support and promote facilitate improved access to the city and with increased emphasis on sustainable modes of travel, with particular regard to enhancing the public transport interchange role of the city centre area, in accordance with the transport strategy for the city and...”

9.2. Policy A3 Southern Gateway Development principles Chichester Bus Station, Bus Depot and Basin Road Car Park Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

There has been aspiration to redevelop the bus station and nearby bus depot from many years. Stagecoach has been engaged with detailed discussion with the District Council on this matter over a very extended period. We confirm that these discussions have reached a relatively mature stage, however at the time of writing are not concluded.

Stagecoach recognises and supports in principle the Council’s wider aspirations for the “Southern Gateway”, and this has governed our approach to the Council to date. We continue to have no “in principle” objection to relocating our administrative, engineering, operational and customer service facilities.

Leaving our proprietary interests entirely to one side, it remains vital that in so doing, the effectiveness, attractiveness and convenience of these facilities is not compromised, as we have outlined in our representations to Policy A1, if wider national and local transport policy, and the local plan strategy itself, are to be effectively achieved.

The depot is crucial infrastructure to support the safe, reliable and legally-compliant operation of Stagecoach bus services over a very extensive area covering the entirety of the District and beyond. Without securing equivalent facilities, that are fit-for-purpose, many of our services would have to cease.

If buses are to provide a greater and more attractive level of service (still more so if they are to be electrified) larger, more capable depot facilities, and city centre bus interchange facilities will be necessary.

Notwithstanding that the bus station and depot sites are leased from the District Council, these leases terminate well beyond the end of the plan period.

Finding suitable sites for a replacement bus depot in Chichester, in common with all similar localities especially in southern England, is extremely challenging. As a sui generis use, bus depots do not automatically benefit from policy support on land allocated for employment uses. Most bus depots benefit from being legacy assets established under very different economic conditions. That is the case here. The value of a depot site for redevelopment net of demolition and remediation costs, rarely approximates to that able to sustain the acquisition of land in a tight wider employment land market, and the construction of suitable new facilities.

Furthermore, the costs of operating bus services are sensitive to the parasitic costs of vehicle and staff hours and mileage associated with “dead running” to a remote depot location from the operational network. Here, the existing depot site is ideal, and any replacement will unavoidable add ongoing operational costs to the operation that cannot be directly recovered.

We confirm that a replacement depot site has been identified and has in principle been agreed, subject to overcoming issues with the disposition of existing and future structures on the site. However, the site is recognised as not capable of accommodating meaningful operational expansion. This is just one of the most important foundational reasons why a positive transformation of bus productivity needs to be achieved, across the plan area and beyond, to support delivery of greater bus mileage and frequencies with the same level of operational resource. At the time of writing, we are not fully convinced that the proposals for the relocation will be sufficiently fit-for-purpose in the event the above is not achieved. Thus, we must raise a concern that the bus depot site might not be available during the plan period. While there is a strong probability it will be, the certainty surrounding the availability of the site, especially within the first 5 years of the plan, needs to be made transparent.

9.3. Policy A4 Southern Gateway - Chichester Bus Station, Bus Depot and Basin Road Car Park

Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Regarding the removal of the bus station, without equivalent replacement, Stagecoach has significant concerns. Pressures and conflicts at the current bus station site have been gradually rising for several years, arising from increasing use and the need for additional scheduled vehicle layover periods to reduce the risks of accumulated late running from traffic congestion. Peak passenger volumes have recovered strongly on several routes, however passenger accumulations resulting from more frequent delays and disruption have added substantial further pressure on limited space.

Under current plans, buses and bus passengers will be displaced to bus stops at new locations outside the city centre, along Avenue de Chartres. This road was always intended to be a relatively high-speed traffic route, outside the historic core of the city. The city centre has evolved in the subsequent years to reinforce already strong natural severance, with the highway lying beyond the city walls and the green space along the Lavant. It is a traffic dominated, un surveilled and unattractive environment, reflecting the intended function of the road as an efficient movement corridor for high traffic volume, and nothing more. Avenue de Chartres is relatively close to the rail station and pedestrian connectivity can be provided at broadly equivalent distance to the current bus station, but again it is un surveilled and currently unpleasant, lacking natural legibility or any sense of prominence.

We understand kerbside capacity on Avenue de Chartres will be strained even to accommodate current levels of service, with no expansion possible. There is therefore a strong probability that to accommodate more frequencies and key new routes, such as West of Tangmere, East of Chichester and West of Chichester allocations, additional future bus stops must occupy a different location. This makes interchange between routes and rail services substantially challenging and less attractive.

The emerging arrangements risk marginalising public transport and public transport users substantially. This strongly undermines achievement of the wider plan objectives and delivery of a significantly greater role for public transport. If substantial public transport growth is to be accommodated in a growing city and hinterland, as the draft plan anticipates, then a more ambitious strategic approach must be taken. This should plan for additional and improved facilities to accommodate all services predicted to be required, whilst enhancing the passenger experience to ensure meaningful and attractive modal choice.

There is therefore a need for the plan to evidence how these issues will be appropriately resolved, having regard to a suitably ambitious approach that properly supports clear objectives to boost the relevance of public transport. The current policy is weak, un specific and indifferent to achieving the strategic objectives of the plan, including a transport strategy in support of the plan, and as such it is ineffective.

Policy A3 should therefore be modified to read:

- “ ...
- Be designed to encourage and facilitate substantial increase in the use of active travel and public transport to, from and through the city centre.
- ... ”

In line with the commentary above Policy A4 should also be modified to read:

3. Enhance the public interchange function of the immediate area, the public realm, particularly connections to the railway station and the city centre via South Street, Southgate and Basin Road for pedestrians, cyclists and public transport users, and to National Cycle Route 2 and Route 88 which run close by. Suitable replacement bus stops and layover facilities should be provided to replace those at the bus station in line with reflecting the objectives of the West Sussex Bus Service Improvement Plan, and to facilitate growth to meet the requirements of the plan's development strategy. Routes and crossings should reflect pedestrian desire lines, and public art should be incorporated to create a sense of place;

4. Enhance the public realm, in support of this and wider objectives, incorporating public art and other measures to create a strong and attractive sense of place.  
...(re number remaining points)

#### 9.4. Policy A6 Land West of Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

This is an existing Local Plan allocation. The public transport strategy for the site depends on the delivery of the second phase which Stagecoach notes is the subject of several applications now awaiting review and determination by the Council.

The site represents a compact form of development adjoining the city, as the most sustainable settlement, meeting housing needs close to where they arise, and affording very good opportunities for the use of sustainable modes, especially walking and cycling.

It is vital that a bus service is delivered to serve the site at the earliest potential. This was anticipated to be at the start of Phase 2 and will require the early delivery of the entire length of the spine road between the Old Broyle Road and Westgate and making it available for bus services.

It is not clear if the costs of pump-priming the service mentioned in the draft policy are anticipated to be met by the developer. Without such funding, the service will not be deliverable as years of losses will never credibly be covered from future profit. It is likely that the current wording will be interpreted by the developer as meaning that they have no such obligation binding upon them. Not does policy set out any specification for this service, thus its costs and the basis for securing developer contributions does not exist.

As such any wider transport strategy, that seeks to secure a greater role for the use of public transport, and the aspiration for this allocation cannot demonstrably be met. The policy is ineffective.

Policy A6 should be modified to read:

" ...  
10. Make provision to accommodate and secure delivery of for regular bus services linking running through the site to Chichester city centre operating at least every 30 minutes Monday-Saturday, and new and improved cycle and pedestrian routes linking the site with the city,  
..."

#### 9.5. Policy A7 Land at Shopwhyke

##### Stagecoach Supports

This is an existing Local Plan allocation, largely built-out, that benefits from an existing set of permissions.

The public transport strategy for the site depends on the delivery of effective bus priority at Oving Crossroads. The current recently implemented scheme, undertaken by National Highways, makes no provision for effective bus priority and needs considerable re-evaluation.

The site represents a compact form of development adjoining the city, as the most sustainable settlement, meeting housing needs close to where they arise, and affording very good opportunities for the use of sustainable modes, especially walking and cycling. It lies on a new bus corridor that will shortly be put in place, running to Tangmere via Shopwhyke. The allocation is being significantly consolidated by further development in the immediate vicinity which strongly supports the potential for this new service.

As we explain in our representations for East of Chichester proposed allocation A8, and West of Tangmere Allocation A14, a clear corridor strategy to effect bus priority is needed, that should be delivered in support of that further growth, and that at Tangmere SDL. However this allocation is a near complete commitment and there is no scope through policy regarding this land to effect this outcome.

It is notable that Point 6) of policy A7 makes mention of a bus service. This language reflects the currently adopted Local Plan policy and has underpinned the existing permissions. The failure of any bus service to be delivered demonstrates from first principles that this Policy has been entirely ineffective. It is important that lessons are learned from this in the Local Plan Review.

#### 9.6. Policy A8 Land East of Chichester

##### Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This proposed allocation lies next to unallocated land that is already consented as a departure from the adopted development plan, with 143 units near completion south of Oving Road (20/02471/FUL). Additional land, also unallocated but similarly consented, has now commenced north of Oving Road (88 units under 21/02197/FUL). This and the allocation site consolidates earlier development at Shopwhyke brought forward under the current Local Plan, and allocated again as draft policy A7.

Development at Shopwhyke was brought forward on the basis of a premise that the developer would provide or somehow arrange a bus service, that was reflected in the policies of the current Local Plan. This was secured by an unenforceable condition. No bus service has been provided, as there was inadequate clarity regarding the basis on which the costs of establishing such a service would be met by the developer, and the expectations of policy on the developer. The site does however lies on a logical new bus corridor between Chichester and West of Tangmere along the Oving Road.

In addition, an expectation that modifications to the Oving Crossroads would effect bus advantage have proven false –

the arrangements put buses into a similar or longer queue than if they use the route available to general traffic to and from the A27.

Stagecoach strongly supports the principle of bringing this land forward. However, the soundness of the site depends on deliverability of a regular, reliable and direct bus service along the Oving Road, taking advantage of effective bus priority.

Given the failure of existing policy in the adopted Local Plan covering the proposed A7 allocation to deliver a bus service, it is of great concern that there is no draft policy to adequately address the issue. The policy is out of conformity with NPPF paragraph 104-105 in that sustainable modes do not offer realistic choices, much less an attractive one, and as such also does not secure the objectives of national policy nor of the plan itself.

Currently the proposed allocation is not served at all by public transport. Policy needs to ensure there is a policy basis to secure contributions to deliver such a service, which may well take the form of a proportionate contribution to deliver a new service or enhance provision that is put in place between Chichester along the Shopwhyke Road to west of Tangmere.

To become sound Policy A8 must be modified to read:

"...

12. Provide for improved high quality connectivity by sustainable travel modes and focused in particular on a corridor between Chichester city centre and Tangmere along Shopwhyke Road, including new improved cycle and pedestrian routes, and a frequent bus service including linkages with Chichester taking advantage of effective bus priority measures on Oving Road at the A27;

"..."

#### 9.7. Policy A9 Land at Westhampnett/North East Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This land is already allocated and consented as part of the existing 2016 Local Plan. All reserved matters are determined.

The site lies on service 55 between Chichester, Westhampnett and Tangmere. This established service benefits from additional demand from the development at Phase 1. Phase 2 which is currently well underway, does not benefit directly from bus services. However it is a compact and logical form of development where walking and cycling to local facilities and employment is a credible option.

The existing allocation rolls forward policies in the 2015 Local Plan. In so doing it is possible to see which have been effective.

Point 9. regarding bus service and routing has not been effective. In particular the potential for a bus only link between the site and Graylingwell has not been established as policy anticipated. Given congestion around the Portfield area acutely affects public transport this, or alternative methods to secure bus priority over private car use, a clear and unequivocal policy steer is required.

The lack of an up-to-date transport evidence base is ultimately at the root of these issues. Arguably the policy and allocation can only be made sound once this refreshed evidence base in place.

However, it is possible that the allocation could be made sound by modification of Policy A9 as follows:

"...

9. Make provision for regular, direct and reliable bus services linking the site with Chichester city centre, and new and improved safe and convenient cycle and pedestrian routes linking the site with Chichester city, the South Downs National Park and other strategic developments to the east of Chichester city including Tangmere. These objectives could include exploring the potential for a bus only route require a deliverable scheme to afford bus priority through Portfield, and potentially linking the development with the Graylingwell area through use of a modal filter;

"..."

#### 9.8. Policy A10 Land at Maudlin Farm

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing public transport route. It is relatively close to the city and very near substantial centres of employment and services that can be reached by active travel modes, helping damp the demand for car use. It is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services at Portfield and over a wider area. In fact, the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A10 should accordingly be modified to read:

" ...

5. Provide safe and suitable access points for all users, including a main vehicle access from Old Arundel Road and, subject to further assessment, a secondary vehicle access from Dairy Lane. The development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes;

" ...

#### 9.9. Policy A11 Bosham – Land at Highgrove Farm

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Bosham Station. It is relatively close to the city and very near substantial centres of employment and services that can be reached by public transport and cycling, offering strong potential to materially damp the demand for car use.

There are serious risks that development in the A259 corridor west of Chichester could place further demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular to bus services.

Nevertheless, given the potential to effect bus priority on the approaches to Fishbourne Roundabout, it is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A11 should accordingly be modified to read:

" ...

8. Provide safe and suitable access points for all users, including a main vehicle access from the A259. The development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys crossing the A27 at Fishbourne;

#### 9.10. Policy A12 Chidham and Hambrook

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Nutbourne Station. Substantial centres of employment and services that can be reached by public transport and cycling, offering strong potential to materially damp the demand for car use.

There are serious risks that development in the A259 corridor west of Chichester could place further demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in

particular to bus services.

Nevertheless, given the potential to effect bus priority on the approaches to Fishbourne Roundabout, it is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A12 should accordingly be modified to read:

“ ...

7. Development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys along the A259, crossing the A27 at Fishbourne and where necessary on the approaches to Emsworth;

8. Facilitate improved sustainable travel modes, and new improved cycle and pedestrian routes, including linkages with Chichester city and settlement along the East/West Corridor;

#### 9.11. Policy A13 Southbourne Broad Location for Development

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach agrees unequivocally that Southbourne is a location that could accommodate growth on a strategic scale. It has a substantial range of service available within the settlement, including secondary education. It is well connected by bus and rail service to key destinations, including Chichester, lying to the east and west.

This is one of the few locations identified for growth that represents substantial additional development in a new location to the strategy in the existing Local Plan adopted in 2015. Thus, the transport impacts of development on the substantial scale envisaged at Southbourne are not covered or accommodated by the Chichester Area Transport Strategy that lies behind the existing plan. This demands, from first principles, that substantial further transport mitigation measures are required.

We recognise and endorse fully that the intent of the draft plan for Southbourne as a Broad Location for Development on a strategic scale, includes “Maximising the potential for sustainable travel links through improved public transport, including consideration of opportunities to reduce community severance caused by the railway line as well as the inclusion of cycling and pedestrian routes.” (our emphasis).

The existing railway station at Southbourne is served regularly, however, it is not within the power of this plan to improve rail services. It is, however, well within the scope of action of the Local Planning and Highways Authority to work with bus operators to achieve a step change in the journey time, reliability, frequency and connectivity of bus services, and in particular the major corridor operated as service 700 by Stagecoach along the A259 between Havant and Chichester through Southbourne.

Notwithstanding the clear potential for sustainable connectivity in the western A259 corridor, there are very serious risks that development in the A259 corridor west of Chichester will place further significant car-borne demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular bus services, having the opposite effect to that intended: longer, less reliable and less frequent bus services, leading to a spiral of slowly declining use.

These risks, while very serious, look credibly likely to be entirely mitigated subject to carefully conceived and robust specified actions on the local highway network. It is perplexing to us that this potential still has not been identified, as part of a comprehensive “first principles” review of the transport evidence base. In particular given the former trunk status of the A259, there is evident potential to effect bus priority on the A259, including on the approaches to Fishbourne Roundabout.

With appropriate measures, including but not limited to this, to substantially boost the relevance and attractiveness of

sustainable travel choices, strategic development at Southbourne could well be made highly sustainable.

In the absence of a refreshed transport strategy and transport evidence base, the draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact, the only reference that is made in Policy is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A12 should accordingly be modified to read:

"...Development should be comprehensively masterplanned to achieve a high-quality design and layout that integrates well with the surrounding built and natural environments to enable a high degree of connectivity with them, particularly for pedestrians and cyclists, and provides good the highest possible quality of access to facilities and sustainable forms of improved public transport services.

...

4. Provide a suitable means of access to the site(s), and securing secure necessary off-site transport infrastructure and service improvements (including highways in particular to the A259 corridor between Emsworth and Chichester) in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development) to promote sustainable transport options prioritising delivery of high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes;

..."

#### 9.12. Policy A14 Land West of Tangmere

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach strongly supports the principle of intensifying the level of development at the Strategic Development Location already identified and allocated West of Tangmere in the existing Local Plan. This serves to consolidate development at a location where effective and attractive public transport choices could be provided. It also conforms closely with the principle expressed in NPPF that the best possible use should be made of land on sites that are judged to be sustainable, or potentially sustainable locations for development.

It must be stressed that the current policy suite for the SDL has to date not brought forward development in this location. We recognise that a Master Plan has been adopted by the Council, and that a planning application (20/02893/OUT) for the full larger quantum of 1300 dwellings proposed in the draft plan has received a resolution to grant by the Council.

However, we are not aware that a sustainable transport strategy has been finalised.

Land West of Tangmere is not served by any existing regular bus services. Rather, an entirely new bus service corridor is anticipated to operate in the near term from Chichester through Tangmere and beyond towards Barnham. This would serve proposed allocations A7, A8 and West of Tangmere (A14) included in the draft Plan.

This is reflected in the language of the explanatory memorandum to Policy A14 at paragraph 10.65:

"Opportunities, in partnership with relevant authorities, to provide improved sustainable public transport routes linking the village with Chichester city, to improve cycle routes to the city, and better transport links to Barnham rail station and the 'Five Villages' area in Arun District; and.."

Initiating this service will be costly and will in large measure be funded not by developer contributions, but by DfT monies awarded through the West Sussex Bus Service Improvement Plan. It is crucial this service is both sustainable in the longer term without revenue support, and that the success of the service can be built on by scalable frequency improvements as strategic development comes forward in both Chichester District, and proposed allocations A7 A8 and A14, and in Arun District, in particular at Barnham, Eastergate and Westergate (BEW).

This demands measures to effect safe, direct and swift operation of the service especially within the city centre, where it approaches and crosses the A27 at Oving crossroads and on the eastern fringes of the District east and west of Tangmere. Without these measures, bus journey time and reliability will be severely compromised and the and impact of this service to damped car trip demands will be very substantially compromised. No such measures are proposed in the draft plan or its evidence base.

Changes to Oving Crossroads have recently taken place which, amongst other intentions, ostensibly provide bus advantage between Chichester and Shopwhyke. The junction in its current form does not offer material gain in bus journey time, as movements involve a less-direct route towards the city over an increased operating distance, much of

which involves passage through heavily congested sections of the A27 and Westhampnett Road. A refreshed transport strategy supporting plan-led growth must revisit this area to secure an effective solution which offers bus customers the fastest and most reliable trip-time to and from the city.

In addition, the extension of public transport connectivity towards BEW and Barnham, including key links to secondary education and a logical railhead for journeys beyond towards Brighton and London as provided at Barnham Station, needs to facilitate bus priority between Tangmere and Nyton – whether using the A27, or preferably avoiding it altogether. There are significant safety concerns associated with the at-grade uncontrolled right-hand A27 exit onto the B2233 Nyton Road at Crockerhill Turn. This movement is also prone to extreme delay owing to the conflict with approaching westbound traffic on the A27, travelling at speed, which has priority. Our concerns with this junction in its current form can be expected to worsen with the increased traffic volumes predicted from new residential developments to the west of the city.

A solution providing a suitable short length of highway available only to sustainable modes, between Tangmere and Easthampnett, could provide a very effective solution to this. This would be deliverable within the scope of the separate proposed allocation at A19 Chichester Business Park, Tangmere. We comment on this separately.

Howsoever effected, a reliable direct and delay-free bus corridor between Barnham, BEW, Tangmere and Chichester could expect to secure very substantial elevation of the relative attractiveness of public transport over car use on the entire corridor and serve to effectively damp growth-related demands on this section of the A27. West of Tangmere, in the longer term, there is evident scope for the route corridor to operate as two branches – one via Shopwhyke and one via Westhampnett, effectively serving all the strategic developments proposed in the plan and transforming wider public transport connectivity to key employment destinations and services within and east of Chichester.

However, in common with all the other proposed allocations, the plan proposes no specific measures to provide, much less improve public transport or other sustainable modes to the site. This leaves the draft plan out of conformity with NPPF, especially paragraphs 104-106. The plan is inadequately evidenced and to the degree that public transport measures are identified and emergent, their successful implementation in the near and longer term will be jeopardised without clear measures to provide a safe as well as efficient bus route towards BEW and the Five Village area within Arun. The Duty to Cooperate is not effectively met and effective cross boundary collaboration on these strategic issues through the review of LSS is not demonstrated, despite the current version which identifies the issues.

To be made sound the LSS Review and a subsequent urgent review of the transport evidence base and strategy needs to take place. The strategic issues are especially critical east of Chichester, in our view.

Notwithstanding this foundational deficiency, to be made sound, Policy A14 should be modified to read:

“... ”

8. Subject to detailed transport assessment, provide primary road access to the site from the slip-road roundabout at the A27/A285 junction to the west of Tangmere providing a spine road link with secondary access from Tangmere Road. Development will be required to provide or fund mitigation for potential off-site traffic impacts through a package of measures in conformity with Policy T1 (Transport Infrastructure) and T2 (Transport and Development) and DfT Circular 01/2022 that maximise the relevance and use of sustainable travel modes, in particular bus services;

9. Make provision for improved sustainable travel modes between Tangmere and Chichester city, in partnership with relevant authorities, including improved direct, seamless safe and reliable and additional bus and cycle routes linking Tangmere with Chichester city, Shopwhyke and Westhampnett. In conjunction with measures in support of Allocation A19, Opportunities should also be explored contributions shall also be sought for providing improving high quality cycling and bus service transport links with the 'Five Villages' area and Barnham rail station in Arun District; and...”

## 10. Concluding comments

Stagecoach recognises its role as a key stakeholder in the plan, as well as a local employer and corporate citizen. We recognise the primacy of the plan-led system as the mechanism intended to resolve complex challenges, including the proper alignment of transport and spatial planning, which as the National Decarbonisation Strategy for Transport among other policies makes clear, has never been more vital.

In making our representations, we emphasise that we are entirely supportive of the Local Planning Authority and the relevant Highways and Transport Authorities, in their efforts to properly manage the amount and pattern of development to secure vital policy objectives. We recognise that balancing delivery of assessed development needs with a wide variety of other constraints is a very difficult task.

The transport issues faced by the plan are recognised in the draft plan as being serious and long-standing. We believe that there are ways to arrive at a suitable transport mitigation strategy that has regard to wider strategic issues and resolves existing problems in a much more effective way than those pursued to date.

We support the spatial strategy of the plan as it evidently provides the basis to secure the necessary step change in the quality and use of sustainable transport modes, as it explicitly seeks to do. However thus far, there has been insufficient

work done to define the measures that will credibly secure these outcomes.

Stagecoach therefore urges the authorities to draw us into the necessary effective ongoing collaborations that is expected by NPPF paragraph 16 and 106; and DfT Circular 01/022, to do this work, prior to, rather than after the submission of the draft plan. We look forward to being approached to initiate this dialogue at the earliest opportunity.

#### Change suggested by respondent:

Policy A11 should accordingly be modified to read:

"...

8. Provide safe and suitable access points for all users, including a main vehicle access from the A259. The development should make the requisite contributions for off-site improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys crossing the A27 at Fishbourne;

## Object

**Document Element:** Policy A12 Chidham and Hambrook

**Respondent:** Stagecoach South (Rob Vince) [8141]

#### Summary:

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Nutbourne Station. Substantial centres of employment and services that can be reached by public transport and cycling, offering strong potential to materially damp the demand for car use.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Chichester District Local Plan 2039 – Pre-Submission (Regulation 19) Consultation

#### 1. Introductory Comments

Stagecoach South is the main commercial public transport operator across Chichester District. The Company has headquarters in the city, which is also the principal public transport hub for the District and it's rather wider travel-to-work area encompassing much of the Arun District. Our services extend throughout and beyond the District boundaries, as far as Littlehampton, Midhurst, Havant and Portsmouth. The vast majority of services operate on a commercial basis – that is to say, sustained by passenger use and fare revenue, including concessionary reimbursement.

While the role of the railway is significant in much of the District, especially the east-west Coastway line, yet bus services account for more boardings locally than the railway, with Chichester depot services carrying over 3.5m passengers each year.

Unlike bus services in other parts of the country, the local network has recovered strongly after the pandemic with fare-paying passenger numbers over 95% of 2019 levels, albeit with concession patronage somewhat lower. This has helped secure not only a stable but growing bus network even during this period of rapidly rising operational costs, avoiding the need for the service contractions seen in other regions. Indeed, during the second quarter of 2023 Stagecoach will invest £5.5m in brand-new vehicles for high-profile coastal Service 700 – one of the largest vehicle investments for Stagecoach Group this year.

Our services are therefore critical to existing and future local connectivity. As the Plan acknowledges, mobility demands do not respect planning authority boundaries. The role of our services is especially high to settlements in the broad A27 corridor, within the District and beyond. This includes major settlements in Arun District such as Pagham and suburban Bognor Regis, where bus is the only mass public transport option. As the Council is well aware, there is an even higher level and rate of committed development envisaged in these locations in the Arun District Local Plan than in Chichester.

It is already evident to the planning authorities, West Sussex County Council and National Highways, as proprietor of the A27 Trunk Road, that accommodating growing mobility demands across Chichester District and especially around Chichester itself, is becoming increasingly challenging to the point of being seriously problematic.

Stagecoach has a particular interest in this Plan arising from:

- The already clear and highly deleterious impact of congestion affecting our operations and their reliability and attractiveness to the public. The effects of these on the approaches to Chichester, and around the A27 bypass are especially severe. If public transport is to retain its existing role – even before the needs of any meaningful growth both in Chichester and neighbouring authorities is considered, are considered – the Council and the Highways Authority need to arrive at clearly-defined measures to protect buses from chronic delay and the damaging impacts arising from the lack of bus network resilience and customer journey times.
- In connection with the above, the need to properly consider the predictable impacts of committed development in Arun District on the transport network and in particular the operation of bus services. The duty to cooperate on cross-border strategic matters is not limited merely to accommodating housing requirements.
- The fact that our entire business premises and operational base at Chichester is the subject of allocation for redevelopment within the Plan period. Specifically, this includes our Head Office, the Bus Station as the operational hub of the network and the key interchange for passenger journeys – including those that involve the railway – and the bus depot required to support the entire operation. Notwithstanding many years of discussions, there is as yet no agreed deliverable strategy to replace these facilities either in the Draft Plan or elsewhere.

Stagecoach broadly supports the vision and priorities of the draft plan. In most respects, Stagecoach supports strongly the spatial strategy and the identified site allocations that flow from it, and the evidence.

However, it has serious concerns about the soundness of the plan as proposed for submission, for important regards outlined in this response. These are made in the light of requirements set by the National Planning Policy Framework (NPPF), in particular at paragraphs 15 and 16; 35, 105-109 inclusive and having due regard to the need for allocations to satisfy 110-112 inclusive in due course as development permission is sought; and paragraph 174.

Paragraph 16c) of NPPF makes plain that strategic plans and policies should “be shaped by early, proportionate and effective engagement between plan-makers and communities, local organisations, businesses, infrastructure providers and operators and statutory consultees” (our emphasis). This makes plain that collaborative and ongoing involvement of public transport operators is both necessary, and separate and in addition to the engagement with statutory consultees. This has not taken place.

Para 1.25 of the draft plan states that “the council has engaged constructively, actively and on an ongoing basis with other local authorities and organisations to address key strategic matters.” Despite the requirements in NPPF and contrary to the statement made, Stagecoach has not been approached or involved in a meaningful, collaborative or ongoing way in the preparation of the Plan.

Our main concerns centre around the fact that the plan strategy is neither backed by sufficient transport evidence. Even more importantly, the plan relies on a wholly car-based transport mitigation strategy despite policy stating that this is not the case, and the track record of the existing Local Plan, based on a very similar strategy, that has failed to bring forward meaningful mitigations to date to prevent traffic conditions substantially worsening. There is no support in policy for the achievement of the Strategic Objectives in the Plan. Nor is there definition of any measures in the 2023 Transport Study to make provision for sustainable transport infrastructure or services – much less materially improve them.

Finally, to the extent that updated transport evidence has been provided in the form of the 2023 Chichester Transport Study, arising from updated traffic modelling, it does not support the contention that highways capacity constraints on and around the A27 justify not meeting the objectively-assessed development needs of the area, as the draft plan contends.

## 2. Vision and Strategic Objectives

### 2.1. Issues and Opportunities

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant, proportionate and up to date evidence

Stagecoach recognises the important role of the West Sussex and Greater Brighton Strategic Planning Board which agreed a Local Strategic Statement (LSS2) in early 2016 to identify spatial planning issues across the wider area. This established strategic priorities and policies to guide longer term strategic growth in a coordinated and well considered matter. This institutional framework and the purpose of the LSS is a highly significant one and is at the heart of efforts to properly fulfil the statutory Duty to Co-operate, including with regard to strategic infrastructure issues, as NPPF requires.

Given the long period of time elapsed since the 2018 Reg 18 consultation and the already very clear constraints on strategic infrastructure capacity, it is of great concern to Stagecoach that the LSS2 has not been updated to reflect

emerging issues in the intervening period. A review and update of the LSS2 has only just commenced. This includes a study of projected housing and employment needs, transport impact, infrastructure and spatial options to deliver the required development in the period after 2030. This Chichester District draft plan covers a period extending to 2039 – therefore well beyond 2030 and the nominal currency of LSS2.

However, infrastructure needs are pressing today. Stagecoach is presented with severe highway operational problems on a near-daily basis. During the winter of 2022-23 we have, for example, seen key road links impacted for many weeks by acute disruption arising from flood events. Unpredictable, but seemingly more-frequent, exogenous events expose a lack of resilience in the highway network around Chichester and its travel-to-work area. However, serious, chronic, unpredictable delay has been normalised over recent years, with peak-time congestion having quickly returned after the pandemic. The existing development strategy has failed to bring forward measures having any impact on this to date, and key commitments – notably at west of Chichester Phase 2 and at Tangmere – have yet to commence to further aggravate the issue.

We have no confidence in the transport mitigations proposed in the existing Local Plan and LSS2 being sufficiently effective, even if deliverable at all. Indeed, the existing adopted Local Plan does little more than make vague speculations about the sustainable transport measures that might be achievable. The draft local plan review is no different. It has no ambitions at all for sustainable modes and thus, makes no meaningful provision to meet them.

This is especially relevant in light of the fact that the approach to resolving issues on the A27 around Chichester that were anticipated in 2015-16 have fallen away. LSS2 is thus currently inadequate to act as a part of an up-to-date, proportionate, and relevant evidence base for the Plan.

An update of a traffic model lies at the heart of a 2023 Chichester Transport Study. This talks no account of the existing role of non-car modes, nor can it do so. It is unable to properly evaluate the nature of problems or solutions that involve public transport, or for that matter, other sustainable modes.

Therefore, we consider that the combination of committed and additional development needs that must be accommodated over the whole plan period between 2022 and 2039, in both the Chichester and Arun Districts, require a “first principles” review. This must be based on a refreshed transport evidence baseline of no earlier than 2022 – given that the effects of COVID distort 2020-22 – and the transport infrastructure and service requirements to sustainably support those needs.

Key issues – including substantial changes with regards to transport issues and challenges, as well as potential solutions – thus do not form part of the evidence base that steers this plan. Given long term changes in travel patterns, and mode share that took place during COVID, as well as a local and national policy context that seeks to radically reduce and then eliminate transport-related carbon emissions, this is especially problematic.

The specific problems of congestion and network resilience that are evident on the A27 and the approaches to Chichester remain a set of especially difficult problems that disproportionately affect the efficiency, reliability and attractiveness of the bus network, that evidently demand larger-scale strategic responses involving multiple stakeholders, including bus operators.

Where the effects of development on the national Strategic Roads Network (SRN) are concerned, the approach of National Highways to addressing and responding to the mobility needs of development has now substantially changed following the promulgation of the DfT Written Ministerial Statement LTN01/22. This makes it clear that adding highways capacity is no longer the first or only strategy that should be pursued, but one subordinate this to maximising the potential of non-car modes and sustainable travel.

“Effective and ongoing collaboration” on transport matters has not led to solutions being agreed and published for public scrutiny as part of the plan evidence base. Whatever the approach to modelling and “highways improvements” that may be agreed or pending agreement with the County Highways Authority and National Highways, Stagecoach is neither participant or sighted. This is despite the clear requirements set out in NPPF Para 106 b) that “Planning policies should ... be prepared with the active involvement of local highways authorities, other transport infrastructure providers and operators and neighbouring councils, so that strategies and investments for supporting sustainable transport and development patterns are aligned.” (our emphasis).

We therefore consider that the Council has failed to comply with the requirements of NPPF paragraph 25 and 26 that “relevant bodies” are involved in plan-making, especially with regard to addressing the needs for infrastructure. Public transport services and the infrastructure that supports its operation and use clearly fall within matters relevant to plan-making. This is explicit in NPPF Chapter 9 and indeed within the plan itself – for example reference to public transport and sustainable modes in the Vision for the plan.

It should be stressed that the Regulation 18 “Preferred Approach” consultation took place in December 2018 – over 4 years ago and prior to COVID, based on LSS2. The inordinate length of time that has elapsed between the Regulation 18 and Regulation 19 stages greatly challenges the LSS2 and other parts of the evidence base, especially as the pause straddles the COVID epidemic. That would include the transport modelling baseline, and key assumptions in any traffic modelling that took place prior to mid-2022, which is a point at which a reasonable “new normal” post-COVID might be

considered to have become established. In that period, Arun District has also adopted its own Local Plan development strategy that accommodates an unprecedented quantum of development immediately east and south-east of the District Boundary – creating additional substantial transport impacts directly affecting the A27 and multiple major approaches to Chichester crossing it.

The established mechanism to fulfil the Duty to Co-operate has thus not operated effectively.

The Plan is not founded on a relevant, proportionate and up-to date evidence base and is thus inadequately justified.

## 2.2. Spatial Portrait

The spatial portrait is generally succinct and accurate. However, it makes no mention of road-based public transport, the role of the City as a public transport hub, or the range of bus services that provide local connectivity (Section 2.4 and 2.5). The complete concentration of post-16 education in the City itself as just one example of the peculiarities of transport demands in the area, is not highlighted, though this has a profound influence on peak time travel demands affecting the most congested parts of the highway network. Among other things, the role of bus services in supporting the educational system of the plan area is very great indeed.

The potential role of bus in addressing the already-severe transport problems of the plan area and beyond seems entirely overlooked. The spatial portrait is thus clearly inadequate and incomplete.

## 2.3. Strategic Objectives

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Chapter 9 of NPPF and paragraphs 104 and 105 in particular require that plans should:

“Transport issues should be considered from the earliest stages of plan-making and development proposals, so that:

- a) the potential impacts of development on transport networks can be addressed;
  - b) opportunities from existing or proposed transport infrastructure, and changing transport technology and usage, are realised – for example in relation to the scale, location or density of development that can be accommodated;
  - c) opportunities to promote walking, cycling and public transport use are identified and pursued;
  - d) the environmental impacts of traffic and transport infrastructure can be identified, assessed and taken into account – including appropriate opportunities for avoiding and mitigating any adverse effects, and for net environmental gains;...
- ...The planning system should actively manage patterns of growth in support of these objectives. Significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. This can help to reduce congestion and emissions, and improve air quality and public health...”

The Strategic Objectives do not conform with NPPF in these foundational requirements adequately, to transparently steer the plan strategy. They should therefore be amended to read:

“Plan to provide local infrastructure to support new development and seek opportunities to address existing identifiable infrastructure problems deficits, such as in particular those relating to the A27 and its junctions and wastewater treatment.”

Paragraph 2.36 states, in the context of the Climate Emergency and the National Trajectory to “Net Zero” that “The council will enable the delivery of infrastructure, jobs, accessible local services and housing for future generations while protecting, conserving and enhancing the historic and natural environment.”

Naturally, we support this intent.

However, there is no acknowledgement of the role current patterns of transport use contribute to carbon emissions, nor that substantial mode shift is necessary to address sustainably an acute lack of capacity on the local network and the SRN, especially around Chichester. This is especially concerning as the basic conceptual link is not made between the fact that the greatest such problems lie on the A27 corridor and around Chichester, while these are also at the same time present many of the most sustainable locations for development, and where the opportunities to secure much greater use of sustainable modes also exists.

Strategic Objective 7 “Strategic Infrastructure” includes the following statement:

“To work with infrastructure providers to ensure the timely delivery of key infrastructure to support delivery of new development. New development will be supported by sufficient provision of infrastructure to enable the sustainable delivery of the development strategy for the plan area. Key infrastructure to support the Local Plan will include improvements to transport, ...

A sustainable and integrated transport system will be achieved through improvements to walking and cycling networks and links to accessible public transport. Highway improvements will be delivered to mitigate congestion, including

measures to mitigate potential impacts on the A27 through a monitor and manage process.”

The latest transport evidence in the Chichester Transport Study makes no pretence to define much less to deliver a “sustainable or integrated” transport system. It is wholly devoted to sustaining current levels of car use across the District, to and through Chichester area.

It is no more than the lightest of touches to the approach taken to supporting the adopted Local Plan, an approach that is already almost 10 years beyond the date of its gestation but has yet to deliver any significant capacity improvement schemes, much less any measures that sustain even current levels of public transport journey times and reliability in the face of increasing congestion – much less any betterment.

Of the six key junctions on the A27 around Chichester, recognised to require significant mitigation given they are saturated for extended periods, five accommodate regular bus services - indeed frequent ones at least every 20 minutes in several cases. The sixth at Oving Road, relates directly to a key corridor where bus services are needed to support strategic growth currently being delivered at Shopwhyke, as well as substantial further growth West of Tangmere (proposed allocation A14) and “East of Chichester” (A8), south of Shopwhyke Road.

As stated at p12 of the Study Summary “The modelling shows that all the junctions on the A27 Chichester bypass are well over capacity, even before adding in the Local Plan development and with the exception of Portfield Roundabout are actually shown to be over capacity in the base model year (2014) in one or both peaks”. This much has indeed been evident for years from delay and periodic even more severe disruption arising to Stagecoach services from the lack of network resilience.

The reassignment of through and local traffic through Chichester to avoid the A27 bypass is an especially serious issue for bus services that penetrate the city. This is leading to consequential saturation of a range of junctions used by buses. Rising delay and unpredictable running times are at the root of our decision to sever the long-established Portsmouth to Littlehampton service in 2023, which will in future no longer run across Chichester, but terminate to provide additional dwell time to mitigate the impacts of congestion.

While this congestion affects all road users including businesses and freight traffic, the effect on scheduled bus services is greatly higher, as such services cannot reassign route to ‘beat the queue’. Traffic congestion often encourages greater car use for this reason, in tandem that people are happier to sit for extended periods in their own vehicle on a seamless door-to-door journey than wait at the roadside for a delayed bus making slower progress in lengthy queues.

As the Study admits at para. 1.3.2 “Although, there have been works at the Portfield Roundabout in this timeline, no other mitigation schemes have been completed along the A27 corridor, as such the mitigation schemes defined in this report will also be required to consider the development from this plan period.”

In other words, in the 8 years since the current Local Plan was adopted in 2015, there has been minimal progress in delivering the traffic mitigations. There is no clarity at all when any such mitigations will be brought forward. It is hardly surprising then, that traffic conditions have deteriorated. The “predict and provide” transport strategy supporting the current plan has failed.

Despite this, the Draft Local Plan Review proposed to “double down” on exactly this strategy. It represents, like the rest of the evidence base, a “rolling forward” of the current car-based strategy by 9 years, with the lightest of touches to attempt to accommodate car trip demands from a relatively modest additional development quantum.

Nevertheless, the Study requires a global 5% reduction in trip demands arising from unspecified “credible” (paragraph 4.1.2) sustainable transport and travel planning measures. It is unclear why use of non-car modes will see disproportionate growth when no measures are in place to make them more attractive. This 5% increase in use translates to a doubling in the modal share of bus services. There is no evidence nationally, anywhere, that simple ignorance of alternatives to the car is the main barrier to uptake.

The outputs of the 2023 Chichester Area Traffic (SATURN) model are set out at Table 5.1 (am peak) and 5.2 (pm peak) without mitigation. These betray just how seriously compromised the whole network around Chichester is, and will be in future, even with implementation of a mitigation partake to increase traffic capacity that is understood to cost between £92m and £164m – and which the Study and the draft plan acknowledge cannot be delivered through developer funding sources alone. Unspecified external funding presumably from HM Treasury through DfT is required.

Even if this provided and the schemes are delivered, Tables 8.1 and 8.2 indicate these will provide minimal relief. The final columns suggest key junctions, including Portfield, Fishbourne Road and Cathedral Way East will remain at well over 100% ratio of flow to capacity (90% is considered the point at which saturation is approached, with the onset of increasing delay above that figure). RFCs in tables 8.1 and 8.2 are some of the highest we have ever seen in a local transport evidence base for a post-mitigation scenario. While the serious potential risk of reassignment across Chichester City is greatly reduced, which is important and welcome given its impact on bus services, Tables 8.1 and 8.2 show the extent of post-mitigation saturation is also egregious, covering a very large number of key links and junctions.

On every measure and criterion, then, including cost deliverability and effectiveness, the revised Transport Strategy falls well short of evidence to suggest the transport impacts of the plan can be properly addressed by this means.

Despite the repeated statements about sustainable modes throughout the draft plan and Chichester Transport Study, only 2 paragraphs at Section 6.2 within the Study are devoted to public transport:

“6.2.7 The funds generated from the parking management schemes, local/nation funding schemes and developer contributions could also be utilised to fund potential public transport enhancements within the city centre including an expansion of the bus priority lane system within Chichester City Centre. This could reduce reliance on the car in the longer term towards sustainable public transport. A park and ride scheme could be incorporated within a bus priority lane network in the future depending on the uptake and successfulness of early bus priority trials.

6.2.8 Chichester City centre has a constrained existing public highway network. Therefore, any proposed dedicated public transport or light transit corridors that could be implemented would be at the expense of existing highway. This could be managed through a time-based system where certain routes are restricted to public transport only during specific times. E.g., peak hours.”

There is some very high-level consideration of Park and Ride following this section. None can be considered a serious practical evaluation of consolidating car-borne trips onto bus services, including existing ones, for example local mobility hubs, more frequent bus corridors, delivery of specific bus priorities.

None of the discussion of alternatives to “predicting and providing” for unconstrained traffic growth is rooted in a deliverable evidence base, or proper evaluation of options and specific projects.

To take just one aspect of the few specifics that can be picked out, a workplace parking levy is hypothesised. This would apply only to “offices”, in Chichester city centre (para 6.2.3), without consideration given as to how this could be practically achieved or even that a meaningful amount of office based employment would qualify. Much less is any consideration given to how far focusing a strategy only on office-based workers would actually deliver a particularly significant effect, apart from to create a strong incentive to relocate offices out of the city centre to places out of reach by public transport.

Looking at the Chichester Transport Study 2023 and the draft plan together, there is insufficient evidence that the traffic capacity increase proposed in the 2023 Transport Study is any more affordable or technically deliverable, or likely to be sufficiently effective, than those in the past strategy. The evidence more strongly points to the fact that no highway improvements are identifiable or economically deliverable to meet even short term increases in demand for car-borne mobility on most of the network around Chichester.

There are no published strategies or schemes clearly supporting the contention that the objective of improving sustainable modes is technically achievable or deliverable either. The plan makes generalised assertions that such strategies will be devised and implemented only after serious problems emerge from a shortfall in the car-borne transport strategy.

The reference to “monitor and manage” is undefined and unsubstantiated. There are no outcomes stated, no mechanisms specified and no timescales for action.

Our experience today is that network conditions have reached unacceptable and prejudicial levels of severe unpredictable delay. The saturation of the network is already evident well outside the traditional peaks on key sections of highway and at key junctions. External shocks such as the effects of severe weather are becoming more common, leading to delays so extreme as to justify the description of “gridlock”. The plan does not identify a strategy to effectively address this, in particular by consolidating passenger car trips onto more efficient public transport vehicles. This is unacceptable to Stagecoach.

#### 2.4. Local Plan Vision

Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the broad approach in Plan Vision and in particular that by 2039, the Plan will support and enable greater use of sustainable modes. However, there is no link made between reducing the use of private cars, and the need for a step change in the use of sustainable modes. Without a published transport evidence base it is impossible to establish a suitable sustainable transport strategy to support both carbon reduction and alleviation of the problems arising from acute congestion. Even on a very crude basis, to achieve a meaningful mode shift on key approaches to the A27 Chichester Bypass will require more than 20% of existing peak car-borne journeys to transfer to other modes. A 10 percentage point transfer to bus (about half this shift) would imply more than doubling peak hour bus passenger boardings.

The Vision is nothing more than an aspiration, that needs to more definitively aim at key outcomes, for the plan to be effective. The Vision should thus be altered to read:

“Get about easily, safely and conveniently with less reliance on private cars –making the greatest possible use of the rail and enhanced bus network, and with more opportunities for active travel including walking and cycling; to materially

reduce dependence on private car use.”

Underpinning the Plan’s spatial strategy, the Vision section goes into more specific detail about key localities in the Plan area.

Regarding Chichester, Paragraph 2.39 states: “The emphasis will be upon consolidating and enhancing the role of Chichester city as the plan area’s main centre, whilst also developing the role of key settlements to its east and west. The focus will be upon creating communities with good access to a range of employment opportunities and affordable housing for young people and families to balance the ageing population.”

This is clearly the appropriate focus for meeting the District’s development needs in a sustainable manner. The city and key settlements to the east and west, are those places already able to make use of relevant public transport services, both rail and bus. Especially within and near the City, walking and cycling can credibly present highly relevant choices. This emphasis clear can be expected to address the requirements of sustainable development set out in NPPF and their local application set out in the Plans Strategic Objectives.

However, this needs a robust transport strategy, to avoid a further concentration of development and its traffic impacts occurring on or near some of the most chronically congested parts of the highway network. To date, the absence of intervention has strangled the bus network through further marked deterioration in traffic conditions. This by consequence increases the risk of bus delay or cancellation, lengthens journey time and reduces customer confidence in bus as an attractive alternative mode of travel.

In April 2023, Stagecoach is making significant timetables changes to improve operational resilience in and around Chichester. The biggest such change is the severance of the Portsmouth to Littlehampton section of service 700, at Chichester, with buses operating independently to the east and to the west and ending cross-city links. This is planned to reduce the probability of delay but at the cost of additional vehicle resource (circa £200,000 per annum) which could be better spent providing new or enhanced services. We anticipate a small loss of custom as a direct consequence of the change, but have little choice other than to take negative action so as to fulfil our statutory punctuality obligations.

If the Strategic Objectives of the Plan and its Vision are to be achieved, in the way required by NPPF paragraphs 104-105, a properly-evidenced transport mitigation strategy needs to create the conditions where bus journeys are more reliable than car journeys and thus mobility demand switches as far as can be realistically achieved away from car use, to bus use and other more sustainable modes.

Beyond Chichester, the Plan Vision focuses on key localities beyond to the east and west.

To the west of Chichester a focus on growth at Southbourne is justified at paragraph 2.43: “...the aim is to take advantage of the village’s good transport links and existing facilities to deliver significant new residential-led development within the broad location for development which will further enhance local facilities and offer opportunities to reinforce and supplement existing public transport, including bus routes.”

We agree this is a very significant opportunity. However, if the requirements of NPPF paragraphs 104-105 are to be met, this demands that effective bus priority is delivered on the A259 corridor, especially eastbound at Fishbourne and westbound approaching Emsworth. Without such measures, the growth committed and planned will serve only to further undermine bus journey time and decrease punctuality on the existing 700 service, entirely contrary to the aims of the Vision.

The emphasis on the A259 corridor served by Stagecoach 700 west of Chichester is reinforced at paragraph 2.45 stating that “Between Chichester and Southbourne, the Plan provides for more moderate levels of growth within the parishes of Fishbourne, Bosham and Chidham & Hambrook, ... with opportunities to support and expand existing facilities and for increased use of public transport options”. We strongly support the principle, but the Plan must follow through with specific public transport priority measures that facilitate rather than prejudice such an outcome.

East of Chichester the focus is at Tangmere, where the existing allocation for about 1000 dwellings is being uplifted by 300. Paragraph 2.44 justifies this among other things recognising the scope for “...improved and additional bus services and cycleways will provide better connections to Chichester city and east to Barnham and the ‘Five Villages’ area in Arun District.” We unequivocally endorse this conclusion. Realising a “game-changing” level of bus service quality, reliability and frequency east of the city, also serving committed and planned development north and south of Oving Road at Shopwhyke, is equally essential, given that all SRN links and junctions are approaching equal saturation.

The National Bus Strategy has given new focus on partnership with West Sussex County Council to discuss and deliver a significant new bus service between Chichester, Shopwhyke, Tangmere, Eastergate and Barnham, supporting committed development and acting as an initial phase of what ought to be a more ambitious longer-term strategy to support growth beyond 2025 in both Chichester and Arun Districts. For these improved bus services to be both deliverable and effective, robust bus prioritisation is unavoidable. No such measures are proposed in the Plan or its evidence base and we therefore suggest inclusion of plans to facilitate safe and efficient bus operation between Tangmere and Nyton/Eastergate, ideally avoiding the need to join A27 through-traffic entirely.

We welcome the clear recognition that these localities identified for growth, benefit from existing relevant public

transport services. The Vision also sets an expectation that bus services in particular should be “enhanced” and “reinforced”.

We entirely agree that these opportunities exist, across the broad strategy and strategic allocation proposed by the draft Local Plan. Securing them will be crucial to achieving national and local policy objectives, including the Strategic Objectives. However, to our continuing very great dismay, the Plan goes no further to defining how this will be achieved. As such the Vision is not demonstrable achievable or deliverable.

Accordingly the Plan cannot be considered effective, in the sense of NPPF.

Remedying this, demands specific measures to protect bus services from congestion in the following corridors:

- A259 East of Emsworth
- A259 Fishbourne
- A 259 Via Ravenna/Cathedral Way
- A286 Stockbridge Road north and south of A27
- B2145 Whyke Road/Hunston Road
- A259 Bognor Road, east and west of A27 and extending to the District Boundary
- B2144 Oving Road/Shopwhyke Road east and west of the A27
- A 285 Westhampnett Road/Portfield Way/Stane Street, potentially involving a mode filter at the west end of Stane Street

These must be defined to a sufficient level of detail to assess their effectiveness and deliverability, including costs.

This would then allow West Sussex County Council and Local Transport and Highways Authority, ourselves as the principal bus operator, and where appropriate other organisations that would be directly tasked with delivering the mitigation package, to agree service levels and standards necessary to deliver specified outcomes, including journey times, frequencies, capacity and hours of operation on the network, and also in respect of the strategic allocations and Strategic Locations for Growth.

The agreed mitigations strategy should be set out in an up-to-date Infrastructure Delivery Plan backed by clear funding commitments, including a funding strategy to justify necessary developer contributions.

Where necessary to support evidence of effectiveness and deliverability, clear statements of support, which might include Statements of Common Ground between the LPA, LTA, National Highways and Stagecoach, could be provided.

### 3. Spatial Strategy

#### Stagecoach Supports

Stagecoach well recognises the constraints outlined in the explanatory narrative at the start of Chapter 3.

In particular we strongly endorse that strategy in that it reflects that the best opportunities to meet housing and employment development requirements sustainably clearly exist in and close to Chichester and on the key east-west movement corridor where – subject to effective measures being delivered to make these modes more attractive, efficient and relevant – sustainable modes can credibly provide for a much higher proportion of movement demands, mitigating most effectively the potential traffic impacts of development.

We agree that the Manhood Peninsula suffers serious environmental constraints, but, added to these, public transport and other sustainable modes cannot provide such attractive alternatives, and significant further development risks merely reinforcing already high levels of car use, aggravated by the carbon impacts of the distances involved – something the plan does very little to evaluate, and makes no reference to.

We endorse the conclusion in paragraph 3.24 that significant development in the part of the District north of the National Park is inappropriate. The rationale is principally on landscape and visual character. This exposes a fundamentally biased approach to plan making that has consistently underplays transport accessibility and carbon issues. In fact, the lack of local services and the extended distances that need to be travelled to fully participate in society in this area, with no realistic prospect of public transport offering relevant choices, ought to rule such a strategy out of play on a far less aesthetic and interpretational basis.

#### 3.1. Policy S1 Spatial Development Strategy

##### Stagecoach Supports

The Spatial Strategy flows clearly and logically from the Spatial Portrait, and the opportunities and constraints identifiable across the Plan area. It represents a logical and justified continuation of the existing Local Plan strategy. In particular the spatial strategy maximises the potential for sustainable modes to contribute to meeting a much higher proportion of all the District’s mobility and accessibility needs.

#### 3.2. Policy S2 Settlement Hierarchy

##### Stagecoach Supports

The settlement hierarchy clearly reflects the service endowment and potential self-containment of the settlements in the District. In particular, the second tier of settlement hubs includes secondary schools, which are major peak trip

generating uses. Service villages, in the main, also benefit from bus services running at least hourly, which can be expected to provide for a degree of mobility for the higher number of trip purposes that cannot be satisfied by walking or cycling within the immediate locality. Thus, a level of development to meet local needs in this tier is relatively sustainable.

There is a quite broad range of settlements in this category. We have concerns that, north of the National Park, the Service Villages have no realistic public transport choice. These include Plaistow/Ifold, Kirdford, Loxwood, and Wisborough Green. Such as exists is typically a 1/bus per day off-peak shoppers service offering up to 90 minutes in Horsham or Guildford and as such any development here even to meet local needs requires each adult to own a car. This contrasts strongly with Service Villages to the south of the National Park, which are greatly more sustainable.

#### 4. Climate Change and the Natural Environment

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This section of the plan is extensive and wide ranging, as should be expected.

However, remarkably, there is no acknowledgement whatever of the role of transport in mitigating climate change or its effects, not of the importance of sustainable movement and access being facilitated across the plan area in addressing anthropogenic impacts on the natural world at a more local level.

This exposes very clearly a troubling level of indifference to transport matters in the production of the Plan, which, while nationally quite common, is neither appropriate nor acceptable. The mitigation of transport impacts is not merely a matter speaking to the social and economic aspects of sustainable development. It is crucial to address the causes and effects of climate change that arise from transport, and personal mobility.

This is now well understood and at the centre of national policy, including the National Decarbonisation Strategy for Transport (July 2021) which at Section 5 commits the government to aligning land use planning and transport strategy much more tightly and effectively to mitigate the carbon emissions associated with the current dependence on cars, and the mode mix; but also to reduce travel distances, both increasing the potential relevance and effectiveness of all sustainable modes, and reducing average journey lengths for residual motorised journeys of all kinds.

National statistics show that well over a third of all domestic carbon emissions arise from land-based transport and of these, the vast majority arise from trips of over 10km – outside the range of large scale use of cycling. In fact, the potential of the plan to materially support carbon emissions reduction from within the plan area lies more in the realm of transport than any other policy theme – including emissions mitigation from buildings, which is in any event an aspatial matter and covered by nationally-binding building regulations. By 2025 something like 40% of all the emissions within the plan-area will be transport related.

There is no evidence supplied to support the plan that addresses the transport carbon impacts of the spatial development strategy in a clear manner.

There is no evidence supplied that sets out the effects of potential worsening of congestion on air quality within the plan area, arising entirely from the excess of passenger car movement demands over available and credibly deliverable highway capacity. This is despite the evidence set out and acknowledged in the explanatory memorandum at paragraph 4.130:

“4.130. The council’s Air Quality Action Plan and the West Sussex Transport Plan 2022-2036 both refer to the air quality issues faced by Chichester. There is currently one Air Quality Management Area (AQMA) in the plan area, located at St Pancras, Chichester. AQMAs are designated where air quality exceeds, or is likely to exceed, national air quality standards and objectives. Development within or impacting these areas, or that likely to cause the declaration of any further AQMAs, will be subject to an air quality assessment by the applicant.”

This is a retroactive approach – it is not “planning”, based on evidence.

We are well aware that air quality issues in and of themselves can render allocated sites to be undeliverable: a good example is in the Vale of White Horse, Oxfordshire, where strategic allocations on the A338 and A420 corridors have been held up for years by air quality issues at Marcham and Frilford, in large measure because agreed transport interventions were considered inadequate or undeliverable a very short time after the Plan was examined and adopted.

There is no evidence that shows how the development strategy can effectively mitigate these impacts as well as the further potential impacts that arise from the development strategy. This is exasperating, as there is clear evidence that could be drawn upon to show that that very substantial opportunities exist to:

- Speed buses up and make them more reliable by the delivery of bus priority on most of the key main corridors. Most of these even today operate relatively frequently
- Improve service frequencies and extend hours of operation.
- Secure significant background mode shift to bus as a result, damping pressure on key links and junctions, by consolidating demands on direct more reliable and more frequent bus services.

The spatial development strategy as submitted is in fact, likely to well conform to such additional evidence.

The allocations require substantial additional transport related work and evidence to demonstrate that the opportunities for sustainable transport have been identified and taken up as required by NPPF paragraphs 104-105.

With regards to specific policy, Policy NE22 should be modified to read:

"Development proposals will be permitted where it can be demonstrated that all the following criteria have been addressed:

1. Development is located and designed to minimise traffic generation and congestion through access to by maximising the relevance and attractiveness of sustainable transport modes, including maximising provision of specific demonstrably effective measures to make pedestrian and cycle and public transport routes and networks more direct, more safe, faster and more reliable;..."

## 5. Housing

### 5.1. Policy H1 Meeting Housing Needs

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

The presumption of the planning system is that local planning authorities should seek to meet their objectively assessed development requirements in full. These needs are assessed by a defined Standard Methodology set out in Planning Practice Guidance and elsewhere, that has explicit regard to ensuring that the economic and social effects associated with housing are properly provided for, to avoid exacerbating serious problems that arise from inadequate housing supply.

As a significant local service provider and employer, Stagecoach is concerned that existing issues with housing availability and affordable housing supply are not exacerbated. This has a direct bearing on staff recruitment and retention. It also has an indirect bearing on our cost base.

The existing problems with housing affordability have developed over many decades of undersupply. It should be emphasised that the significant boost to the supply of housing that has been sought by governments over the last 15 years, has only begun to take effect relatively recently in this District. Tackling the problem will require years of consistent attention.

Stagecoach notes that the Council is no longer proposing to meet its identified housing needs in full. Rather than 638/annum the Council is allocating a total that implies an annual delivery rate of 535/annum.

While a number of matters evidently present challenges to the Council in identifying a sustainable development strategy. Paragraph 5.2 indicates that "constraints, particularly the capacity of the A27 has led to the council planning for a housing requirement below the need derived from the standard method..." The blame for being unable to meet housing requirements is thus laid squarely at the door of transport infrastructure and systems.

This conclusion in no way follows from the evidence in the Chichester Transport Study. This, rather, makes the statement that when a higher annualised quantum of 700 dwellings per annum was tested, in the majority of cases the traffic capacity improvement package would perform little differently. To quote the Study:

"5.6.3 The network performance outputs analysed comprising V/C%, Delays (seconds) and Queues (PCU's) suggest that generally the proposed SRN mitigation identified for the Core Scenario, can accommodate in the most part, additional increase in development to 700dpa."

Whether the rest of the local road network is similarly protects is moot.

Irrespective of these results, even if the contention made in the draft plan were true, unlike many other constraints, this is amenable to a suitable effective strategy to address the constraints identified being collaboratively conceived. This is what NPPF expects, as set out in paragraphs 104-106.

Where the A27 is concerned, as part of the SRN, National Highways is now working to a substantially revised approach than that in force at the time to current Local Plan was prepared, or LSS2, or reflected in the Chichester Transport Study. This is set out in DfT WMS 01/22. This document is the policy of the Secretary of State for Transport in relation to the SRN which should be read in conjunction with the National Planning Policy Framework (NPPF). It replaces the policies in the Department for Transport Circular 02/2013 of the same title.

It makes plain that to accommodate additional demands arising from development, National Highways (NHC) expects to meet the requirements of its statutory license in a substantially different manner. With respect to development NHC LTN 01/22 continues to address the tensions between national policy for the environment and carbon mitigation, the ongoing

need to substantially boost the supply of housing as well as maintain national economic competitiveness and protect the safety of the public. However, in future, the approach will be to seek first to maximise the impact of demand management measures (reducing the need to travel), and then to accommodate residual additional demands first though maximising the use of sustainable modes, rather than accommodating assumptions about current levels of car dependency and use.

LTN 01/22 much more closely and explicitly aligns with the language of NPPF Chapter 9 paragraphs 104-106. Paragraph 12 states: "New development should be facilitating a reduction in the need to travel by private car and focused on locations that are or can be made sustainable.... Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas." (our emphasis).

It continues at paragraph 13: "where developments are located, how they are designed and how well delivery and public transport services are integrated has a huge impact on people's mode of travel for short journeys. The company will therefore expect strategic policy-making authorities and community groups responsible for preparing local and neighbourhood plans to only promote development at locations that are or can be made sustainable [footnote 8] and where opportunities to maximise walking, wheeling, cycling, public transport and shared travel have been identified." (again, our emphasis)

Stagecoach readily confirms that the draft Plan development strategy conforms well to the first limb of this expectation, in terms of the location of development.

Stagecoach considers that the plan and its evidence base conforms poorly to the second in that the specific opportunities to maximise walking, cycling wheeling and public transport are not clearly identified, and defined, and proven to be effective and deliverable.

The current mitigation strategy for the A27 Chichester area, supporting the adopted Local Plan and for which proportionate developer contributions have and continue to be sought, reflects now-superseded DfT Circular 02/2013. As a direct result, it failed completely to identify any significant effective bus priority measures, despite the fact that frequent services already exist on the key corridor concerned, and that one bus journey can remove, fully seated between 72 and 80 single occupancy car journeys from congested links and across key junctions on the A27. Rather, it sought to implement targeted measures to increase the throughflow of general traffic.

We recognise the realisation that this approach, which was already reliant on some tenuous logic, is simply not technically viable, especially where further development needs are anticipated.

National Highways will now pursue an approach with the planning system that "includes moving away from transport planning based on predicting future demand to provide capacity ('predict and provide') to planning that sets an outcome communities want to achieve and provides the transport solutions to deliver those outcomes (vision-led approaches including 'vision and validate,' 'decide and provide' or 'monitor and manage'). The company will support local authorities in achieving this aim through its engagement with their plan-making and decision-taking stages." (paragraph 15).

Paragraph 23 is at the fulcrum of assessing and defining transport mitigations to accommodate growth on and near the SRN "Capacity enhancements such as modifications to existing junctions or road widening to facilitate development should be determined on a case-by-case basis. The general principle should be accepted where proposals would include measures to improve community connectivity and public transport accessibility, and this will be weighed against any negative safety, traffic flow, environmental and deliverability considerations, impacts on the permeability and attractiveness of local walking, wheeling and cycling routes, and alternative options to manage down the traffic impact of planned development or improve the local road network as a first preference." (our emphasis).

However, no material work has been done that seeks to identify if a bold robustly conceived and suitable judiciously-prepared strategy that seeks to consolidate flows on already densely travelled corridor onto improved bus services, driving mode shift through insulating these services preferentially from already serious queuing. This would be likely to have very substantial impacts on all the key junctions on the A27, and potentially, on the A27 itself. The need for an integrated approach between Shoreham and Emsworth within West Sussex paying particular regard to development requirements in both Arun and Chichester Districts naturally lies at the heart of this, and we would expect to be picked up by the LSS3 Review among other things.

However, the locus of the problems and its causes and effects are obviously well enough known to start work on defining solutions within the plan area today. We would expect that this work will be essential if National Highways are to support the Plan, especially now given the terms of Circular 01/2022.

Such work could and should start from a "policy off" position: in other words that the Plan should fully accommodate its needs unless it can be proved that a mitigation strategy for the A27 that is compliant with DfT WMS 01/2022 cannot credibly accommodate resulting capacity demands without unacceptable impacts on the safety and efficient operation of the SRN.

This evidence does not exist. In fact the Chichester Transport Strategy 2023, on which the Council solely relies as its transport evidence base, indicates the opposite at para 5.6.3. This is the case before meaningful measures to secure damping of traffic demands through mode reassignment are even considered.

The exception to this is Portfield and Oving Road, which are among the most problematic areas after mitigation even at the Council's chosen 535 dwelling/annum scenario (para 5.6.4.-5). The costly capacity mitigation simply cannot deliver enough benefit. It is admitted that WSCC has indicated that it would prefer a solution that places greater reliance on sustainable modes damping car-borne demand. This is entirely the strategy required by NHC to follow LTN 01/22, of course. Despite the fact that "predict and provide has "run out of road" no attempt has been made to examine what such a solution set credibly could look like. This is unsatisfactory and deeply troubling.

At paragraph 5.4 the draft plan points back again at the West Sussex and Greater Brighton Strategic Planning Board and the future work that has been commissioned, but has barely begun, to update the Local Strategic Statement. This work is to inform the preparation of plans that have horizons beyond the end date of the current LSS in 2030 and properly to meet the Duty to Cooperate. As we said in our response to section 1 of the Plan we fully endorse the conclusion that this is the right mechanism to look at these issues. However, the mechanism has not been effectively applied to the production of this plan. Therefore, the specific evidence that capacity on the A27 in and of itself supports accommodating a lower housing requirement does not exist.

The Plan thus does not conform to NPPF, is not adequately justified and is not effective.

The Plan does not properly meet the statutory Duty to Cooperate.

We will return to this matter in specific representations to Section 7 of the draft plan.

## 5.2. Policy H2 Strategic Locations/Allocations 2021-2039

### Stagecoach Supports

Policy H1 makes plain that the plan, as far as it identifies locations for development has done so in locations that conform with its spatial strategy. All of the strategic allocations to a greater or lesser extent offer clear opportunities to make use of sustainable modes, by virtue of their location. That is not to say that the opportunities to take up these opportunities, and maximise the role of sustainable modes, has been identified, defined and translated properly into the rest of the plan policy suite or Infrastructure Delivery Plan.

As our remaining representations make clear, we support the locations thus far identified as being those that offer the best opportunities to reduce the need to travel, reduce travel distances, and create high quality attractive sustainable travel choices, for both existing residents as well as new ones.

However, the transport impacts of the allocation will individually and cumulatively likely to lead to increasingly severe impacts on the transport network, and on bus services.

Perversely, because these opportunities are not properly identified and secured through the plan and its supporting transport strategy, the opportunities presented by the allocations to secure a substantially more sustainable and lower carbon pattern of movement will not only risk being squandered but may aggravate the wider problems.

## 5.3. Policy H3 Non-strategic Parish Housing Requirements

### Stagecoach Supports

The approach is consistent with the plan's spatial strategy. It generally avoids a dispersal of development to locations likely to be highly car dependent. There is a clear focus on meeting housing needs in the far north-east of the District at the largest and most sustainable settlements, such as Loxwood, Kirdford and Wisborough Green. However, it must be pointed out that public transport availability in this area, provided by the County Council through services it procures, is minimal. These settlements in practice require each adult and child of secondary school age to have access to motorised transport to fully participate in society. This might justify significant measures to secure a boost in the frequency of bus services between Guildford and Billingshurst, passing through these settlements.

Otherwise, existing commitments in the plan area already make provision to meet for local needs. To the degree that there is an unmet local requirement for affordable housing of a small scale – for example to support the rural economy – this could be met through neighbourhood plans or through Rural Exception Sites.

## 6. Place-making, Health and Wellbeing

### 6.1. Policy P1 Design principles

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

NPPF requires that proposals should consider transport issues from the earliest possible stage. Designing to properly facilitate safe and efficient access, focusing first on sustainable modes, should be at the heart of development design.

Too often it is still an afterthought, notwithstanding this.

Policy P1 must include an additional statement to be compliant and effective with NPPF paragraph 104-105 and 112 a): "Development will be designed to make access and movement using walking, cycling and public transport the natural first choice, and demonstrate through the Design and Access Statement how such modes are afforded the most direct, safe, reliable and efficient routes within to and from the proposals, especially when compared with car use."

## 6.2. Policy P4 Layout and Access

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

A number of proposals in the plan involve large-scale development. It is essential that where appropriate buses can access and circulate efficiently through development at a suitably early stage. There is no acknowledgement of this anywhere in the policy, contrary to NPPF paragraph 112.

Large-scale development which buses cannot access in an efficient or timely manner, or at all, strongly contributes to high levels of car-dependency. Evidence for this is referred to among other places, in DfT Circular 01/2022. To be compliant with NPPF and properly pursue its strategic Objectives, Policy P4 needs to be modified to address this point: "1. Provide safe, direct and attractive conditions for inclusive access, egress and active travel between all locations and providing as good direct high quality links to integrated public transport, and where appropriate efficient access and circulation to bus services, unimpeded by excessive parking, at a suitably early point in the development phasing;

## 7. Transport and Accessibility

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

The issues related to transport are fundamental to the soundness of the Plan. In particular, the constraints presented by the capacity on the A27 around Chichester and its key junctions, are the paramount reasons why the Council does not consider it can meet its objectively-assessed development needs in full. Thus, the transport issues and potential solutions available and what these mean for the ability of development needs to be accommodated, are matters that go to the heart of the soundness of the Plan.

Paragraph 8.3 sets out the approach taken to date succinctly:

"Increasing the capacity of the road network is key to supporting growth in the Local Plan. However, there is also a need to reduce demand for road transport to achieve net zero in greenhouse gas emissions by 2050 as highlighted in the council's Climate Emergency Action Plan and Strategic Objective 1. In aiming to achieve the ambitions of the action plan, all development is expected to demonstrate how it will support four key objectives to create an integrated transport network which will alleviate pressure on the road network, improve highway safety, encourage sustainable travel behaviours and help reduce transport related impact on air quality, by:

1. Avoiding or reducing the need to travel by car;
2. Enabling access to sustainable means of travel, including public transport, walking and cycling;
3. Managing travel demand; and
4. Mitigating the impacts of travel by car."

However, this approach is unambitious and "lightweight" as it assumes, as does the existing Chichester Transport Strategy on which the current adopted plan relies, that the focus of investment should be, wholly, in highways capacity improvement.

Sustainable modes explicitly are expected to play a greater role to "alleviate pressure" on the local road network, as part of this strategy. To emphasise: to avoid exacerbating congestion, the strategy will have to both remove a significant proportion of existing demands from the network on multiple key approaches to Chichester; and then ensure that travel demands from committed and further new development allocated in the plan does not simply replace these journeys, or, worse, create even greater demands.

This will demand very significant behaviour change. Only by making sustainable modes substantially more attractive, both absolutely, and relative to the same journey made by car, can this be expected to occur. However, the explanatory memorandum as well as the wider policy suite and IDP, well expresses a fundamental unwillingness to taking specific, defined measures to achieve this reduction in car use and material promotion of sustainable modes. It makes plain that sustainable modes, including bus services, will offer a lesser role to which "access will be provided".

Such a vague and weakly defined mechanism will have no effect, at all, on current behaviour and car dependency if the relevance of those choices as a credible alternative to car use, is not substantially boosted. This includes a 5% reduction

in trip demand assumed by the Traffic Model at the heart of the Chichester Transport Study 2023.

For this reason, the transport strategy behind the current adopted plan is demonstrably ineffective, as the updated model makes plain. It has not yet been delivered and is yet unclear when or (in the absence of committed funding) even if it can be. It is ineffective to “roll forward” this strategy to support a higher level of planned growth.

We note that a scheme for addressing congestion on the A27 at Chichester has been included in Roads Investment Period 3 (2025-2030) – well within the horizon of this Plan. However, recent history provides compelling evidence that off-line improvement to the north is not politically supported and arguably even technically or economically deliverable. It is not funded, nor at this stage can it be hypothesised if an economically deliverable scheme is achievable sufficient to warrant the necessary investment.

An on-line improvement of the A27, including junction improvements, is likely to favour longer distance east-west through movements, which are of greater significance to the national economy, at the expense of local movements crossing the SRN- a conundrum that largely sums up the dilemma that is faced by NHC and the County as Highways and Transport Authority. It is one that is played out in many places, but rarely is the tension so stark as at Chichester.

Every local route crossing the A27 at grade around Chichester accommodates a regular bus service - or shortly will do (Oving Road area is expected to follow in 2023, though bus services are likely to not use the modified crossroads but to use the left-in-left-out facilities provided as part of the Shopwhyke Lakes development). The impact of these issues on the entire bus operation are serious and increasingly severe.

By the same token, boosting the relevance and reliability of each of these services substantially consolidating as much demand as possible onto a much smaller number of vehicles, is clearly a strategy that ought to support the effective capacity of each of these junctions being greatly augmented, at the same time as reducing equally substantially, the energy- and carbon intensity of mobility in the plan area. Addressing the A27 should not be considered some kind of “zero-sum” game.

Furthermore, the approach of National Highways in its dealings with development and the planning system now reflect a substantial change in Government Policy set out in DfT Circular 01/2022, which we separately cover in these representations, that entirely aligns with an approach that seeks to appropriately invest in more active and rational management of scarce highways capacity, on both the SRN and local roads.

For environmental, economic and social reasons – including public health, the issues presented by the A27 and its interface with local roads around Chichester stands out, nationally, as an example of where the approach taken to accommodating and mitigating development impacts needs to make a clear break with previous “predict and provide” approaches to meet forecast unconstrained car use as LTN 02/2022 makes clear as a principle. Policy in the West Sussex LTP to 2036 itself makes plain that “shared mobility” – including bus services – must play a much greater role in this area.

The existing Chichester Area Transport Strategy is focused on justifying capital contributions from committed development to fund highways capacity improvement – with nothing included to make bus services more attractive, or importantly more reliable. Indeed this “cars first” approach is so costly, that there is already accepted by WSCC to be insufficient land value remaining to be captured to put into substantial improvements for public transport. That much is very evident, and transparent, from paragraph 8.12 and 8.14, where south of Chichester “This (one) package of works (of several improvements needed) would be between £57.23 and £82.79 million to deliver in full and would not be capable of being funded by development contributions alone.” This assumes the scheme is otherwise deliverable, which on the evidence in the public domain for some time, has been considered challengeable.

The draft Local Plan and a modestly updated infrastructure package that flows from the 2023 Chichester Transport Study, pursues exactly the same approach.

This strategy is also even more ineffective having regard to the roll forward of the Plan to 2039. It cannot deliver the key Strategic Objectives of the Plan; and in particular this is explicitly recognised by the Council in the failure of the draft Plan to accommodate the OAN in full.

It is also obsolete, as it does not align, from first principles, with national policy (including the National Decarbonisation Strategy for Transport) and DfT Circular 01/22; nor the Council’s own declared Climate Emergency.

As a result, draft Policies T1 and T2 are both unsound, as we will separately explain.

Owing to the lack of evidence about the implications of this for adjoining authorities – especially Adur District – in the absence of the review of the Local Strategic Statement – this has implications for fulfilling the Statutory Duty to Co-operate.

The absence of any meaningfully comprehensive refresh of the transport evidence base means that there are no meaningful schemes of any kind, defined in the plan or its IDP, to indicate either what level of growth can be accommodated, by delivering a change in travel behaviour. This would be aimed to secure a sufficient effective increase

in junction throughput (measured in terms of person trips as opposed to passenger car unit movements (PCUs). Such evidence would propose measure to achieve that outcome and assess the efficacy and costs of such improvements, across all modes.

Paragraphs 8.10-8.13 inclusive indicate that the Council “has moved away from ‘predict and provide’” and invites the reader to conclude this has translated into a programme of interventions that can be funded to deliver specific, credibly predictable outcomes. Such a programme should be clear in paragraph 8.11. and the IDP. There is no such clarity and this conclusion would be false.

It would also be evident in the language of the Chichester Transport Study 2023 and its refreshed proposals. Only the most token of lip service is paid to the matter. It is a plainly car-focused, predict and provide methodology to support a “predict and provide” strategy. In fact, it is a brazenly car-focused approach, to the exclusion of all else.

The statements in the Plan regarding any other approach, read properly, offer nothing more than a vague commitment to look post-adoption, and implementation, at unspecified measures, based on problems that may arise in future that will be decided by a committee: the Traffic and Infrastructure Management Group (TIMG). This does not yet exist and is obviously an attempt to posit a mechanism that retroactively will cover for the lack of serious multi-party engagement to address the existing and future issues. Such a group should, in our view, also include the public transport operators, not least if the requirements of NPPF Para 106c) are to be satisfied, and the strategy and measures to be adopted are material to supporting the Local Plan, as of course the purpose of the TIMG has as its core *raison d'être*.

The approach proposed by the draft plan is plainly ineffective and unsound in justifying the draft Plan.

It is more widely unacceptable to Stagecoach. The issues are severe today and well-known, already serving to jeopardise the delivery of buses relied on by existing residents, much less attract new ones.

We also consider that HM Planning Inspectorate are likely to be quite resistant to accepting this aspect of the plan's transport strategy, nor will it be appropriate for the Council, West Sussex County Council, or National Highways, to define such measures after the submission of the Plan during the Examination process. The Examination in Public of a local plan has no purpose to improve plans, or remedy deficiencies clearly evident prior to submission.

The examination of the West of England Joint Strategic Plan in 2019, and the Uttlesford Local Plan in 2021, among several others, demonstrates especially clearly that the Planning System and the Examination process is not amenable to post-hoc retrofitting of transport evidence and strategies to support a development strategy.

#### 7.1. Transport Evidence Base

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Most of Stagecoach's serious concerns about the soundness of the plan arise from the fact that it has been prepared in advance of any up-to-date transport evidence and suitably robust transport mitigation strategy being advanced to support it. In essence, the Council has rolled forward the existing plan by 9 years, adding some additional sources of housing supply, while still relying implicitly on a transport evidence base that was prepared 10 years ago.

This led to the formulation at that time of what can only be described as an attempt to develop an effective car-based mitigation strategy, creating capacity for general traffic added to accommodate unconstrained additional demands on an already over-taxed highways network – the Chichester Area Transport Strategy. Despite language in support of sustainable modes, no deliverable measures were identified to support either the extension of the bus network to serve allocated sites, and much less to create a vital improvement to the quality and reliability of public transport services. This approach reflected the approach set out in DfT Ministerial Circular 02/2013 “Development and the Strategic Highways Network”, applicable since the A27, which is the focus of the most severe difficulties, forms part of the national Strategic Roads Network.

This approach has proven ineffective even before substantial elements of housing land supply in the current plan come forward – in particular West of Chichester and West of Tangmere.

In addition, Circular 02/2013 has now been replaced by a new Ministerial Statement of 23/12/2022, DfT Circular 01/2022.

On both counts the transport evidence base and strategy needs to be properly revisited and established to provide effective mitigation for the plan, including current commitments that are being rolled forward.

The language of the current Ministerial Circular 01/2022 offers a highly condensed synoptic view of the proper approach to addressing transport matters in the planning system notwithstanding that it is directly concerned with the Strategic Roads Network. *Videlicet*:

"31. The NPPF expects local plans and spatial development strategies to be underpinned by a clear and transparent evidence base which informs the authority's preferred approach to land use and strategic transport options, and the formulation of policies and allocations that will be subject to public consultation. The company will expect this process to explore all options to reduce a reliance on the SRN for local journeys including a reduction in the need to travel and integrating land use considerations with the need to maximise opportunities for walking, wheeling, cycling, public transport and shared travel.

32. The Transport Decarbonisation Plan indicates that carbon emissions from car and van use is the largest component of the United Kingdom's total transport emissions. While action is being taken to decarbonise transport such that all new cars and vans will be fully zero emission at the tailpipe from 2035, the proposed location of growth in current plan periods and whether new developments would be genuinely sustainable remain important factors in demonstrating that a local authority area is on a pathway to net zero by 2050 and therefore compliant with the requirements of the Climate Change Act 2008.

33. Alongside this, the local authority should identify the key issues within their study area regarding transport provision and accessibility, setting out how the plan or strategy can address these key issues in consultation with (National Highways, and other transport stakeholders identified in NPPF paragraph 106b). It is the responsibility of the local authority undertaking its strategic policy-making function to present a robust transport evidence base in support of its plan or strategy. The company can review measures that would help to avoid or significantly reduce the need for additional infrastructure on the SRN where development can be delivered through identified improvements to the local transport network, to include infrastructure that promotes walking, wheeling, cycling, public transport and shared travel. A robust evidence base will be required, including demand forecasting models, which inform analysis of alternatives by accounting for the effects of possible mitigation scenarios that shift demand into less carbon-intensive forms of travel." (our emphasis)

Within the text quoted above, references to National Highways and "the Company" can quite legitimately be extended, given the statements in NPPF paragraph 16, 25, 26 and 106b, to include all the relevant transport infrastructure and service providers in the plan area. Circular 01/2022 also has the weight of secondary legislation as a Written Ministerial Statement and thus should be considered to be highly material.

To date there has been little attempt to explore, to the degree necessary, strategies that conform to Circular 01/2022. It is thus not possible to conclude, as the Council has done, that the issues on the A27 that present a constraint to development, are insuperable.

In line with comments made elsewhere in the response to this pre-submission draft, the Plan thus requires substantial further work to be undertaken with key stakeholders to establish a suitably effective and demonstrably deliverable transport mitigation strategy, to sustainably meet the District's identifiable development needs and where apparent and appropriate, also ensure that wider cross boundary strategic issues are appropriately addressed, in conformity inter alia, with the Duty to Cooperate, NPPF paragraph 16 and 104-111 inclusive, and DfT Circular 01/2022 and to ensure the Plan's own Strategic Objectives can be met.

7.2. Policy T1 Transport infrastructure  
Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

As described in comments elsewhere, Stagecoach does not see that a suitable proportionate and up-to-date basis exists to properly and appropriately address the transport issues in the plan area.

The 2023 Transport Study does not perform this role adequately but, contrary to the explanatory memorandum, is a scheme intended only to facilitate car-borne movements through some of the key junctions. There is no evidence that an holistic integrated and strategic approach to transport mitigations has been prepared. Certainly Stagecoach has not been involved in any of the discussion about appropriate transport measures in support of the plan, including the Transport Study 2023, contrary to the expectations set out in NPPF at paragraph 16 and 106.

Notwithstanding out fundamental concerns about the transport evidence case and mitigations strategy, Policy T1 reflects a weak and ineffective approach, that seeks to try and define a strategy post-adoption.

Contrary even to the explanatory memorandum for the policy, which seeks to maximise the contribution of sustainable modes, the policy is phased in such a way that it gives basis for previous "predict and provide" solutions to facilitate and support current levels of car dependency – already shown to be undeliverable and unaffordable – will nevertheless be the first rather than the last resort. There is no commitment to seek to maximise the contribution made by sustainable modes to meeting mobility needs. Nor is there any recognition that current chronic congestion and lack of network resilience jeopardises the ongoing attractiveness and long-term sustainability of the current public transport offer.

To be effective and create alignment with national policy, and also provide for an up-to-date transport evidence base and

strategy to be added, Policy T1 should be modified to read:

"Integrated transport measures will be developed to mitigate the impact of planned development on the highways network, improve highway safety and air quality, promote more sustainable travel patterns and through providing in the first instance, new and improved infrastructure and services that will be credible effective in maximising the encourage increased use of sustainable modes of travel, such as public transport, cycling and walking.

To achieve this, the council will work with National Highways, West Sussex County Council, other transport and service providers (including through the Traffic and Infrastructure Management Group) and developers to provide a better integrated transport network and to improve accessibility to key services and facilities...

All parties, including applicants, are expected to support these objectives by:

1. Ensuring that new development is well located and designed to avoid or minimise the need for travel, encourages maximises the use of sustainable modes of travel as an a credible alternative to the private car and directly provides or contributes towards new or improved transport infrastructure;
2. Working with relevant transport infrastructure and service providers to improve accessibility to key services and facilities with primary emphasis on sustainable modes, and to ensure that new facilities are easily accessible by sustainable modes of travel;
3. Targeting investment to provide local travel options as an that represent a clearly credible alternative to the car use, focusing on the delivery of improved integrated bus and train services, and improved pedestrian and cycling networks, including the public rights of way network, based on the routes and projects identified in the Local Transport Plan, West Sussex Bus Service Improvement Plan, Local Cycling and Walking Infrastructure Plan (LCWIP) and the Infrastructure Delivery Plan;
4. Planning to achieve the timely delivery of transport infrastructure on and approaching the A27 and elsewhere on the network, needed to support new housing, employment and other development identified in this plan;
5. Phasing the delivery of new development to align with and where possible facilitate the provision of new and improved transport infrastructure and services and the outcomes of monitoring travel demand on the network, including that arising from areas immediately adjoining the plan area. It may also be Where necessary to achieve this alignment proactively phase development will be phased to take into account the monitoring and effectiveness of travel plans demands on the network and to ensure that measures are implemented to support the highest possible level of encourage sustainable travel behaviour.;
6. Using demand management measures, such as travel plans, to manage robust methodologies to assess travel demand and minimise the need for new or improved transport infrastructure as part of the monitor and manage process.
7. Delivering a coordinated package of infrastructure improvements at and approaching to junctions on the A27 Chichester Bypass along with other small-scale junction improvements interventions within the city and elsewhere, as identified through the monitor and manage process. These will increase road capacity, reduce traffic congestion, improve safety and air quality, and improve access to Chichester city from surrounding areas, first by maximising the contribution of sustainable modes to meeting mobility demands, then, and only as evidenced by robust modelling and option testing, providing increased highway capacity for general traffic.

..."

### 7.3. Policy T2 Transport and Development

Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Section 1 b) of T2 will be ineffective as, absent measures to ensure buses can run reliably and efficiently, improved bus services will not be possible, in support of the plan's own stated broad approach to transport mitigation, as well as wider local and national policy.

The draft policy does not require improvements to the quality of services such that sustainable choices will be materially more attractive than car use for many local journeys. Without this the Plan's Strategic Objectives cannot be fulfilled and the objectives of the Plan and this policy, read in its own terms, will not be realised, where reduction in private car use is concerned. It is thus ineffective.

Absent measures to make bus services more reliable and more efficient, by insulating them from chronic congestion as far as possible, still further operating resource and therefore costs, will be needed to just to reliably run existing service frequencies, and capacity, as vehicle productivity continues to be more and more adversely affected by chronic delay. This will be further aggravated by increasing incidence of severe unpredictable service breakdown arising from incidents

of diverse kinds on the network, especially on or around the A27, including that arising from more regular severe weather events. Longer journey times can only be expected to lead to relative disadvantage of bus services compared to personal car use, entirely contrary to the objectives of national and local policy, including Policy T1. It can also expect to lead to a dampening effect not on car use, but on bus patronage, threatening the ongoing viability of bus services across the plan area.

Section 1 b) of T2 should be modified to read:

“b) Maximise opportunities for the use of sustainable travel modes through provision of direct and efficient access both to either the existing networks or and through providing such new infrastructure or public transport services, as can be credibly expected to reduce reliance on the private car and work towards achieving net zero in greenhouse gas emissions by 2050;”

Section 1 d) of T2 will be ineffective as the location of development is fixed by this plan. We commend the fact that all the strategic allocations are or will be served by regular bus services.

However, the use of public transport services, where available, depends on the relevance and reliability of these services. Furthermore, provision of services without them generating sufficient patronage to support their long-term operation also threatens the sustainability of the plan and its supporting transport strategy. This is especially true of new services such as those intended to serve West of Chichester and Tangmere and East of Chichester Strategic Allocations.

This can only be assured by the plan being supported by specific measures to ensure buses can operate efficiently and reliably on the existing and projected services intended to serve the developments concerned, and also at the same time secure behavioural change from existing development.

To be sound and effective, the policy T2 1 d.) should be changed to read:

“d) Ensure major development is located to proposals and the supporting mitigation measures enable the use delivery of high-quality, reliable and effective public transport to present the most relevant possible choice to access local services and facilities including employment, leisure and education facilities”;

The Policy T2 makes no provision for buses, where necessary, to enter and make efficient and safe progress through major development sites. The plan is thus out of conformity with NPPF paragraphs 104-106. It makes no provision to ensure that penetration of bus services is achieved at a suitably early point in the development trajectory, undermining the achievement of the goals of the Plan and this specific policy. As a good example, West of Chichester Phase 1, currently under construction, cannot be served by buses as a strategy to effect interim bus penetration was never made.

Policy T2 1 f.) should therefore be amended to read:

f) Ensure that the layout and design of the site development proposals provides effective penetration of the site by sustainable modes, at all points in the development build-out, including public transport where appropriate; and sufficient space for all vehicles to manoeuvre without compromising the safety of pedestrians and cyclists, the efficiency of bus services, or the ability to provide an appropriate level of landscaping across the site”

Policy T2 3.) regarding Travel Planning depends entirely on its effectiveness on the quality and relative attractiveness of sustainable alternatives over car use. In the absence of efficient frequent, reliable and direct public transport services (or similarly, high quality facilities for active travel, Travel Plans will continue to be the entirely ineffective “tick box” exercises that they generally are today, evidenced by much lower levels of public transport use in most new developments than it seen in nearby established neighbourhoods, as demonstrated broadly by Census data in 2011, 2011 and 2021.

For this policy to be effective an up-to date transport evidence base and strategy, underpinning a series of specified interventions to promote the relevance and effectiveness of all sustainable does including public transport in particular, needs to be put in place.

#### 8. Chapter 9 Infrastructure – Policy I1 Infrastructure provision

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Policy I1 could not expect to be effective without a clear understanding of the effectiveness and costs of a defined series of measures that are laid out in this Plan and its IDP, to mitigate the transport impacts of the development strategy.

Where the Chichester Transport Study is concerned the only meaningful work has focused on the definition and delivery of a range of highways capacity schemes mainly on the A27 around Chichester.

As we have discussed elsewhere the effectiveness of these schemes is insufficient as set out at Tables 8.1 and 8.2 of the Chichester Transport Study 2023. The plan itself admits that the deliverability of this package cannot be afforded by developer contributions alone.

The Chichester Transport Study 2023 does not attempt provide a realistic assessment of costs to deliver these schemes, despite the fact that they have been under evaluation for many years. Nor does it offer any assurance that the schemes are technically achievable. Rather, it states the opposite:

“9.2.3 No investigation has been carried out into specific land ownership details, or into the location details or cost of moving statutory undertakers and utility apparatus within the areas of the scheme. No design assessments were carried out at this stage to ascertain the deliverability of the proposals except where any Health and Safety concerns were raised.”

Thus on the grounds of effectiveness, deliverability and affordability, the measures on which the Plan relies must at the very least be considered to involve an exceptionally high level of risk. Since Policy I1 is founded on these assumptions, it cannot be considered effective.

As we set out elsewhere, the Plan has been advanced on the basis that if any additional sustainable transport measures are required, these mitigations should be retroactively considered and defined after adoption of the Plan. In the light of the doubts that are apparent of both the deliverability, affordability and effectiveness of the Chichester Transport strategy this is especially unsatisfactory even if existing baseline conditions were reasonably acceptable.

However, the Chichester Transport Study 2023, as did its predecessors, makes plain that that existing problems are acute, and can rightly be considered “severe” in the sense of NPPF paragraph 111. Waiting to define deliverable affordable alternatives is an entirely inappropriate approach to the local plan transport mitigation strategy. Such an approach also makes it impossible to consider prior to adoption how far the transport impacts of the plan can be cost-effectively mitigated by alternative means, or whether they are deliverable having regard to technical achievability, land control, development viability, or any combination of the above. Thus, the plan cannot be considered justified, or effective.

Given the mutual dependence of development strategies in Chichester and Arun in particular on these measures this should be seen as crucial of the fulfilment of the Duty to Cooperate.

The remedy for this is ultimately to put in place a suitable transport mitigation strategy following a strategic appraisal of options through review of the LSS. This then must be supplemented by more detailed development specific and localised scheme definition, including, where necessary, bus priority and other measures to support the substantial promotion of the attractiveness of public transport in key bus corridors over private car use. This would then be reflected by costed proposals in the IDP.

Leaving these fundamental weaknesses to one side, even if such a strategy and mitigation package were defined, there is no mention of public transport in the policy even though it is clearly a key part of the policy environment and mitigation strategy for the plan as expressed in the explanatory memorandum for I1, but also at Policies T1 and T2. I1 thus does not effectively support the realisation of the intent of Policies T1 and T2.

Policy I1 iii) should therefore be modified to read:

“(iii) Safeguard the requirements of infrastructure providers, having regard to requirements within and where appropriate across the boundaries of the plan area, including but not limited to:

...

• Highways including specific measures to accommodate improved active travel and public transport level of service and cycle lanes, and...”

At limb v) the Policy expects developers to meet the “in perpetuity costs of operating and maintaining infrastructure”. This shackles development management decisions to developers assuming what are infinite costs – given that “in perpetuity”, read properly, can only mean “without any limit in time”. This means that it is impossible to meet the statutory tests on developer obligations set out in the Community Infrastructure Levy Regulations 2010 (as amended) at Regulation 122, also repeated in NPPF. This policy cannot be lawfully implemented and it is thus ineffective.

In the absence of an up-to-date transport mitigation strategy that is fit for purpose, at the point the Plan is examined these costs of any additional infrastructure are not known in any case. The strategy and its costs, including its affordability and deliverability, are crucial to assessing if the Plan is sound.

Subject to an appropriate defined transport mitigation strategy being arrived at, to be sound, the Policy I1 v) should be modified as follows:

(v) To consider and meet as appropriate the in-perpetuity delivery costs of infrastructure and, where appropriate, improved services, to the point where its long-term operational sustainability is credibly assured from mainstream sources. Where adoption is not envisaged by local authorities, that must include arrangements for its future ongoing management and maintenance;

## 9. Strategic and Area Based Policies

### 9.1. Policy A1 City Centre Development Principles

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Chichester City centre is rightly identified at 10.2 and 10.4 as the commercial and service hub of the District. It is also acknowledged to be the most accessible place in the District by sustainable modes, public transport in particular.

Boosting the vitality of the city centre is something that Stagecoach strongly supports. Irrespective, the enhancement of the commercial and cultural life of the District in the place where these opportunities can be accessed broadly by sustainable modes, is one that has long been at the heart of national planning policy for town centres, reflected in the “town centre first” approach to locating major trip generating uses.

Paragraph 10.5 exposes an unbalanced and unsound preoccupation with aesthetic matters in its approach to the town centre, and far too little to ensuring that the central place function is enhanced through protecting and enhancing the quality of public transport access.

The city is relatively small but at the heart of an extensive hinterland, and thus the role of bus in supporting sustainable access to and enhanced city centre venue is one that needs appropriate recognition and emphasis. It is important to note that a dominant number of key service and facilities such as the General Hospital are relatively close to the city centre. This directly contributes to driving travel demand into the city, causing congestion. Most importantly, it also makes the task of mitigation simpler, given the impact a suite of active and sustainable measures can have within the same close proximity.

Policy A1 does not provide this. As such, achieving the strategic objectives of the plan is seriously threatened, and the plan is thus not effective.

The Plan needs to ensure that the approach to city centre regeneration maintains and enhances public transport access, interchange and inter-modal connectivity. It also needs to ensure that bus service stopping and interchange facilities are able to address increases in future demand, anticipated by the clear intent expressed elsewhere in the Plan that public transport should be meeting a greater proportion of mobility needs, in a growing district. Achieving this demands an ambitious approach to the location, quality and capacity of bus stop and interchange.

We have been in discussions with the District Council about this, alongside West Sussex County Council, for a very considerable period. Stagecoach has always been keen to help facilitate the Council’s aspirations for the city centre, and we continue to hold this intention. However, this cannot be at the expense of a material diminishing of the convenience and fitness-for-purpose of bus stop infrastructure and interchange. Stagecoach has significant concerns that current proposals to remove the bus station and have all bus services operate from the street kerbside, on an inner distributor road with similar or reduced net stop capacity, fall short of promoting attractive, convenient bus access to the central area as a destination.

For the longer term and where the objectives of the draft plan are concerned looking ahead to 2039, they clearly fall short of enhancing the convenience and attractiveness of public transport use. Much less do they make sufficient provision for a material increase in bus frequency, connectivity, and interchange convenience, on which the draft plan explicitly relies. It is vital that the District Council is clear in policy about its objectives for public transport in the city centre. These objectives must also carry sufficient weight when held in tension with other aspirations for the centre and the constraints on achieving them.

For the Plan to be sound, properly effective and compliant with NPPF, the approach to the City centre cannot ignore its role in the provision of sustainable transport service and connectivity.

Policy A1 should therefore be modified to properly reflect this crucial function, on which the vitality of the city centre must increasingly depend if unacceptable impacts on congestion, air quality and amenity are not to arise. This is still more crucial if wider aspirations to secure a more sustainable society and mitigate carbon are to be achieved.

“...This will include provision for development and proposals that:

- Support and strengthen the vitality and viability of the city centre and its role as a shopping/visitor destination, employment centre, public transport hub and a place to live;
- Support and promote facilitate improved access to the city and with increased emphasis on sustainable modes of travel, with particular regard to enhancing the public transport interchange role of the city centre area, in accordance with the transport strategy for the city and...”

### 9.2. Policy A3 Southern Gateway Development principles Chichester Bus Station, Bus Depot and Basin Road Car Park

Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

There has been aspiration to redevelop the bus station and nearby bus depot from many years. Stagecoach has been engaged with detailed discussion with the District Council on this matter over a very extended period. We confirm that these discussions have reached a relatively mature stage, however at the time of writing are not concluded.

Stagecoach recognises and supports in principle the Council's wider aspirations for the "Southern Gateway", and this has governed our approach to the Council to date. We continue to have no "in principle" objection to relocating our administrative, engineering, operational and customer service facilities.

Leaving our proprietary interests entirely to one side, it remains vital that in so doing, the effectiveness, attractiveness and convenience of these facilities is not compromised, as we have outlined in our representations to Policy A1, if wider national and local transport policy, and the local plan strategy itself, are to be effectively achieved.

The depot is crucial infrastructure to support the safe, reliable and legally-compliant operation of Stagecoach bus services over a very extensive area covering the entirety of the District and beyond. Without securing equivalent facilities, that are fit-for-purpose, many of our services would have to cease.

If buses are to provide a greater and more attractive level of service (still more so if they are to be electrified) larger, more capable depot facilities, and city centre bus interchange facilities will be necessary.

Notwithstanding that the bus station and depot sites are leased from the District Council, these leases terminate well beyond the end of the plan period.

Finding suitable sites for a replacement bus depot in Chichester, in common with all similar localities especially in southern England, is extremely challenging. As a sui generis use, bus depots do not automatically benefit from policy support on land allocated for employment uses. Most bus depots benefit from being legacy assets established under very different economic conditions. That is the case here. The value of a depot site for redevelopment net of demolition and remediation costs, rarely approximates to that able to sustain the acquisition of land in a tight wider employment land market, and the construction of suitable new facilities.

Furthermore, the costs of operating bus services are sensitive to the parasitic costs of vehicle and staff hours and mileage associated with "dead running" to a remote depot location from the operational network. Here, the existing depot site is ideal, and any replacement will unavoidable add ongoing operational costs to the operation that cannot be directly recovered.

We confirm that a replacement depot site has been identified and has in principle been agreed, subject to overcoming issues with the disposition of existing and future structures on the site. However, the site is recognised as not capable of accommodating meaningful operational expansion. This is just one of the most important foundational reasons why a positive transformation of bus productivity needs to be achieved, across the plan area and beyond, to support delivery of greater bus mileage and frequencies with the same level of operational resource. At the time of writing, we are not fully convinced that the proposals for the relocation will be sufficiently fit-for-purpose in the event the above is not achieved. Thus, we must raise a concern that the bus depot site might not be available during the plan period. While there is a strong probability it will be, the certainty surrounding the availability of the site, especially within the first 5 years of the plan, needs to be made transparent.

### 9.3. Policy A4 Southern Gateway - Chichester Bus Station, Bus Depot and Basin Road Car Park

Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Regarding the removal of the bus station, without equivalent replacement, Stagecoach has significant concerns. Pressures and conflicts at the current bus station site have been gradually rising for several years, arising from increasing use and the need for additional scheduled vehicle layover periods to reduce the risks of accumulated late running from traffic congestion. Peak passenger volumes have recovered strongly on several routes, however passenger accumulations resulting from more frequent delays and disruption have added substantial further pressure on limited space.

Under current plans, buses and bus passengers will be displaced to bus stops at new locations outside the city centre, along Avenue de Chartres. This road was always intended to be a relatively high-speed traffic route, outside the historic core of the city. The city centre has evolved in the subsequent years to reinforce already strong natural severance, with the highway lying beyond the city walls and the green space along the Lavant. It is a traffic dominated, unsurveyed and unattractive environment, reflecting the intended function of the road as an efficient movement corridor for high traffic volume, and nothing more. Avenue de Chartres is relatively close to the rail station and pedestrian connectivity can be provided at broadly equivalent distance to the current bus station, but again it is unsurveyed and currently unpleasant, lacking natural legibility or any sense of prominence.

We understand kerbside capacity on Avenue de Chartres will be strained even to accommodate current levels of service, with no expansion possible. There is therefore a strong probability that to accommodate more frequencies and key new routes, such as West of Tangmere, East of Chichester and West of Chichester allocations, additional future bus stops must occupy a different location. This makes interchange between routes and rail services substantially challenging and less attractive.

The emerging arrangements risk marginalising public transport and public transport users substantially. This strongly undermines achievement of the wider plan objectives and delivery of a significantly greater role for public transport. If substantial public transport growth is to be accommodated in a growing city and hinterland, as the draft plan anticipates, then a more ambitious strategic approach must be taken. This should plan for additional and improved facilities to accommodate all services predicted to be required, whilst enhancing the passenger experience to ensure meaningful and attractive modal choice.

There is therefore a need for the plan to evidence how these issues will be appropriately resolved, having regard to a suitably ambitious approach that properly supports clear objectives to boost the relevance of public transport. The current policy is weak, unspecific and indifferent to achieving the strategic objectives of the plan, including a transport strategy in support of the plan, and as such it is ineffective.

Policy A3 should therefore be modified to read:

" ...  
 • Be designed to encourage and facilitate substantial increase in the use of active travel and public transport to, from and through the city centre.  
 ..."

In line with the commentary above Policy A4 should also be modified to read:

3. Enhance the public interchange function of the immediate area, the public realm, particularly connections to the railway station and the city centre via South Street, Southgate and Basin Road for pedestrians, cyclists and public transport users, and to National Cycle Route 2 and Route 88 which run close by. Suitable replacement bus stops and layover facilities should be provided to replace those at the bus station in line with reflecting the objectives of the West Sussex Bus Service Improvement Plan, and to facilitate growth to meet the requirements of the plan's development strategy. Routes and crossings should reflect pedestrian desire lines, and public art should be incorporated to create a sense of place;

4. Enhance the public realm, in support of this and wider objectives, incorporating public art and other measures to create a strong and attractive sense of place.  
 ...(renumber remaining points)

#### 9.4. Policy A6 Land West of Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

This is an existing Local Plan allocation. The public transport strategy for the site depends on the delivery of the second phase which Stagecoach notes is the subject of several applications now awaiting review and determination by the Council.

The site represents a compact form of development adjoining the city, as the most sustainable settlement, meeting housing needs close to where they arise, and affording very good opportunities for the use of sustainable modes, especially walking and cycling.

It is vital that a bus service is delivered to serve the site at the earliest potential. This was anticipated to be at the start of Phase 2 and will require the early delivery of the entire length of the spine road between the Old Broyle Road and Westgate and making it available for bus services.

It is not clear if the costs of pump-priming the service mentioned in the draft policy are anticipated to be met by the developer. Without such funding, the service will not be deliverable as years of losses will never credibly be covered from future profit. It is likely that the current wording will be interpreted by the developer as meaning that they have no such obligation binding upon them. Not does policy set out any specification for this service, thus its costs and the basis for securing developer contributions does not exist.

As such any wider transport strategy, that seeks to secure a greater role for the use of public transport, and the aspiration for this allocation cannot demonstrably be met. The policy is ineffective.

Policy A6 should be modified to read:

" ...  
 10. Make provision to accommodate and secure delivery of for regular bus services linking running through the site to

Chichester city centre operating at least every 30 minutes Monday-Saturday, and new and improved cycle and pedestrian routes linking the site with the city,  
 ...”

#### 9.5. Policy A7 Land at Shopwhyke Stagecoach Supports

This is an existing Local Plan allocation, largely built-out, that benefits from an existing set of permissions.

The public transport strategy for the site depends on the delivery of effective bus priority at Oving Crossroads. The current recently implemented scheme, undertaken by National Highways, makes no provision for effective bus priority and needs considerable re-evaluation.

The site represents a compact form of development adjoining the city, as the most sustainable settlement, meeting housing needs close to where they arise, and affording very good opportunities for the use of sustainable modes, especially walking and cycling. It lies on a new bus corridor that will shortly be put in place, running to Tangmere via Shopwhyke. The allocation is being significantly consolidated by further development in the immediate vicinity which strongly supports the potential for this new service.

As we explain in our representations for East of Chichester proposed allocation A8, and West of Tangmere Allocation A14, a clear corridor strategy to effect bus priority is needed, that should be delivered in support of that further growth, and that at Tangmere SDL. However this allocation is a near complete commitment and there is no scope through policy regarding this land to effect this outcome.

It is notable that Point 6) of policy A7 makes mention of a bus service. This language reflects the currently adopted Local Plan policy and has underpinned the existing permissions. The failure of any bus service to be delivered demonstrates from first principles that this Policy has been entirely ineffective. It is important that lessons are learned from this in the Local Plan Review.

#### 9.6. Policy A8 Land East of Chichester Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This proposed allocation lies next to unallocated land that is already consented as a departure from the adopted development plan, with 143 units near completion south of Oving Road (20/02471/FUL). Additional land, also unallocated but similarly consented, has now commenced north of Oving Road (88 units under 21/02197/FUL). This and the allocation site consolidates earlier development at Shopwhyke brought forward under the current Local Plan, and allocated again as draft policy A7.

Development at Shopwhyke was brought forward on the basis of a premise that the developer would provide or somehow arrange a bus service, that was reflected in the policies of the current Local Plan. This was secured by an unenforceable condition. No bus service has been provided, as there was inadequate clarity regarding the basis on which the costs of establishing such a service would be met by the developer, and the expectations of policy on the developer. The site does however lie on a logical new bus corridor between Chichester and West of Tangmere along the Oving Road.

In addition, an expectation that modifications to the Oving Crossroads would effect bus advantage have proven false – the arrangements put buses into a similar or longer queue than if they use the route available to general traffic to and from the A27.

Stagecoach strongly supports the principle of bringing this land forward. However, the soundness of the site depends on deliverability of a regular, reliable and direct bus service along the Oving Road, taking advantage of effective bus priority.

Given the failure of existing policy in the adopted Local Plan covering the proposed A7 allocation to deliver a bus service, it is of great concern that there is no draft policy to adequately address the issue. The policy is out of conformity with NPPF paragraph 104-105 in that sustainable modes do not offer realistic choices, much less an attractive one, and as such also does not secure the objectives of national policy nor of the plan itself.

Currently the proposed allocation is not served at all by public transport. Policy needs to ensure there is a policy basis to secure contributions to deliver such a service, which may well take the form of a proportionate contribution to deliver a new service or enhance provision that is put in place between Chichester along the Shopwhyke Road to west of Tangmere.

To become sound Policy A8 must be modified to read:

“...  
 ...”

12. Provide for improved high quality connectivity by sustainable travel modes and focused in particular on a corridor between Chichester city centre and Tangmere along Shopwhyke Road, including new improved cycle and pedestrian

routes, and a frequent bus service including linkages with Chichester taking advantage of effective bus priority measures on Oving Road at the A27;

“

#### 9.7. Policy A9 Land at Westhampnett/North East Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This land is already allocated and consented as part of the existing 2016 Local Plan. All reserved matters are determined.

The site lies on service 55 between Chichester, Westhampnett and Tangmere. This established service benefits from additional demand from the development at Phase 1. Phase 2 which is currently well underway, does not benefit directly from bus services. However it is a compact and logical form of development where walking and cycling to local facilities and employment is a credible option.

The existing allocation rolls forward policies in the 2015 Local Plan. In so doing it is possible to see which have been effective.

Point 9. regarding bus service and routing has not been effective. In particular the potential for a bus only link between the site and Graylingwell has not been established as policy anticipated. Given congestion around the Portfield area acutely affects public transport this, or alternative methods to secure bus priority over private car use, a clear and unequivocal policy steer is required.

The lack of an up-to-date transport evidence base is ultimately at the root of these issues. Arguably the policy and allocation can only be made sound once this refreshed evidence base in place.

However, it is possible that the allocation could be made sound by modification of Policy A9 as follows:

“

9. Make provision for regular, direct and reliable bus services linking the site with Chichester city centre, and new and improved safe and convenient cycle and pedestrian routes linking the site with Chichester city, the South Downs National Park and other strategic developments to the east of Chichester city including Tangmere. These objectives could include exploring the potential for a bus only route require a deliverable scheme to afford bus priority through Portfield, and potentially linking the development with the Graylingwell area through use of a modal filter;

“

#### 9.8. Policy A10 Land at Maudlin Farm

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing public transport route. It is relatively close to the city and very near substantial centres of employment and services that can be reached by active travel modes, helping damp the demand for car use. It is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services at Portfield and over a wider area. In fact, the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A10 should accordingly be modified to read:

“

5. Provide safe and suitable access points for all users, including a main vehicle access from Old Arundel Road and, subject to further assessment, a secondary vehicle access from Dairy Lane. The development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis o maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes;

“

#### 9.9. Policy A11 Bosham – Land at Highgrove Farm

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Bosham Station. It is relatively close to the city and very near substantial centres of employment and services that can be reached by public transport and cycling, offering strong potential to materially damp the demand for car use.

There are serious risks that development in the A259 corridor west of Chichester could place further demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular to bus services.

Nevertheless, given the potential to effect bus priority on the approaches to Fishbourne Roundabout, it is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A11 should accordingly be modified to read:

" ...

8. Provide safe and suitable access points for all users, including a main vehicle access from the A259. The development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys crossing the A27 at Fishbourne;

#### 9.10. Policy A12 Chidham and Hambrook

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Nutbourne Station. Substantial centres of employment and services that can be reached by public transport and cycling, offering strong potential to materially damp the demand for car use.

There are serious risks that development in the A259 corridor west of Chichester could place further demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular to bus services.

Nevertheless, given the potential to effect bus priority on the approaches to Fishbourne Roundabout, it is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A12 should accordingly be modified to read:

" ...

7. Development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time

advantage for sustainable modes on journeys along the A259, crossing the A27 at Fishbourne and where necessary on the approaches to Emsworth;

8. Facilitate improved sustainable travel modes, and new improved cycle and pedestrian routes, including linkages with Chichester city and settlement along the East/West Corridor;

#### 9.11. Policy A13 Southbourne Broad Location for Development

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach agrees unequivocally that Southbourne is a location that could accommodate growth on a strategic scale. It has a substantial range of service available within the settlement, including secondary education. It is well connected by bus and rail service to key destinations, including Chichester, lying to the east and west.

This is one of the few locations identified for growth that represents substantial additional development in a new location to the strategy in the existing Local Plan adopted in 2015. Thus, the transport impacts of development on the substantial scale envisaged at Southbourne are not covered or accommodated by the Chichester Area Transport Strategy that lies behind the existing plan. This demands, from first principles, that substantial further transport mitigation measures are required.

We recognise and endorse fully that the intent of the draft plan for Southbourne as a Broad Location for Development on a strategic scale, includes “Maximising the potential for sustainable travel links through improved public transport, including consideration of opportunities to reduce community severance caused by the railway line as well as the inclusion of cycling and pedestrian routes.” (our emphasis).

The existing railway station at Southbourne is served regularly, however, it is not within the power of this plan to improve rail services. It is, however, well within the scope of action of the Local Planning and Highways Authority to work with bus operators to achieve a step change in the journey time, reliability, frequency and connectivity of bus services, and in particular the major corridor operated as service 700 by Stagecoach along the A259 between Havant and Chichester through Southbourne.

Notwithstanding the clear potential for sustainable connectivity in the western A259 corridor, there are very serious risks that development in the A259 corridor west of Chichester will place further significant car-borne demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular bus services, having the opposite effect to that intended: longer, less reliable and less frequent bus services, leading to a spiral of slowly declining use.

These risks, while very serious, look credibly likely to be entirely mitigated subject to carefully conceived and robust specified actions on the local highway network. It is perplexing to us that this potential still has not been identified, as part of a comprehensive “first principles” review of the transport evidence base. In particular given the former trunk status of the A259, there is evident potential to effect bus priority on the A259, including on the approaches to Fishbourne Roundabout.

With appropriate measures, including but not limited to this, to substantially boost the relevance and attractiveness of sustainable travel choices, strategic development at Southbourne could well be made highly sustainable.

In the absence of a refreshed transport strategy and transport evidence base, the draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact, the only reference that is made in Policy is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A12 should accordingly be modified to read:

“...Development should be comprehensively masterplanned to achieve a high-quality design and layout that integrates well with the surrounding built and natural environments to enable a high degree of connectivity with them, particularly for pedestrians and cyclists, and provides good the highest possible quality of access to facilities and sustainable forms of improved public transport services.

...

4. Provide a suitable means of access to the site(s), and securing secure necessary off-site transport infrastructure and

service improvements (including highways in particular to the A259 corridor between Emsworth and Chichester) in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development) to promote sustainable transport options prioritising delivery of high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes;

..."

#### 9.12. Policy A14 Land West of Tangmere

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach strongly supports the principle of intensifying the level of development at the Strategic Development Location already identified and allocated West of Tangmere in the existing Local Plan. This serves to consolidate development at a location where effective and attractive public transport choices could be provided. It also conforms closely with the principle expressed in NPPF that the best possible use should be made of land on sites that are judged to be sustainable, or potentially sustainable locations for development.

It must be stressed that the current policy suite for the SDL has to date not brought forward development in this location. We recognise that a Master Plan has been adopted by the Council, and that a planning application (20/02893/OUT) for the full larger quantum of 1300 dwellings proposed in the draft plan has received a resolution to grant by the Council.

However, we are not aware that a sustainable transport strategy has been finalised.

Land West of Tangmere is not served by any existing regular bus services. Rather, an entirely new bus service corridor is anticipated to operate in the near term from Chichester through Tangmere and beyond towards Barnham. This would serve proposed allocations A7, A8 and West of Tangmere (A14) included in the draft Plan.

This is reflected in the language of the explanatory memorandum to Policy A14 at paragraph 10.65:

"Opportunities, in partnership with relevant authorities, to provide improved sustainable public transport routes linking the village with Chichester city, to improve cycle routes to the city, and better transport links to Barnham rail station and the 'Five Villages' area in Arun District; and.."

Initiating this service will be costly and will in large measure be funded not by developer contributions, but by DfT monies awarded through the West Sussex Bus Service Improvement Plan. It is crucial this service is both sustainable in the longer term without revenue support, and that the success of the service can be built on by scalable frequency improvements as strategic development comes forward in both Chichester District, and proposed allocations A7 A8 and A14, and in Arun District, in particular at Barnham, Eastergate and Westergate (BEW).

This demands measures to effect safe, direct and swift operation of the service especially within the city centre, where it approaches and crosses the A27 at Oving crossroads and on the eastern fringes of the District east and west of Tangmere. Without these measures, bus journey time and reliability will be severely compromised and the impact of this service to damped car trip demands will be very substantially compromised. No such measures are proposed in the draft plan or its evidence base.

Changes to Oving Crossroads have recently taken place which, amongst other intentions, ostensibly provide bus advantage between Chichester and Shopwhyke. The junction in its current form does not offer material gain in bus journey time, as movements involve a less-direct route towards the city over an increased operating distance, much of which involves passage through heavily congested sections of the A27 and Westhampnett Road. A refreshed transport strategy supporting plan-led growth must revisit this area to secure an effective solution which offers bus customers the fastest and most reliable trip-time to and from the city.

In addition, the extension of public transport connectivity towards BEW and Barnham, including key links to secondary education and a logical railhead for journeys beyond towards Brighton and London as provided at Barnham Station, needs to facilitate bus priority between Tangmere and Nyton – whether using the A27, or preferably avoiding it altogether. There are significant safety concerns associated with the at-grade uncontrolled right-hand A27 exit onto the B2233 Nyton Road at Crockerhill Turn. This movement is also prone to extreme delay owing to the conflict with approaching westbound traffic on the A27, travelling at speed, which has priority. Our concerns with this junction in its current form can be expected to worsen with the increased traffic volumes predicted from new residential developments to the west of the city.

A solution providing a suitable short length of highway available only to sustainable modes, between Tangmere and Easthampnett, could provide a very effective solution to this. This would be deliverable within the scope of the separate proposed allocation at A19 Chichester Business Park, Tangmere. We comment on this separately.

Howsoever effected, a reliable direct and delay-free bus corridor between Barnham, BEW, Tangmere and Chichester could expect to secure very substantial elevation of the relative attractiveness of public transport over car use on the entire corridor and serve to effectively damp growth-related demands on this section of the A27. West of Tangmere, in

the longer term, there is evident scope for the route corridor to operate as two branches – one via Shopwhyke and one via Westhampnett, effectively serving all the strategic developments proposed in the plan and transforming wider public transport connectivity to key employment destinations and services within and east of Chichester.

However, in common with all the other proposed allocations, the plan proposes no specific measures to provide, much less improve public transport or other sustainable modes to the site. This leaves the draft plan out of conformity with NPPF, especially paragraphs 104-106. The plan is inadequately evidenced and to the degree that public transport measures are identified and emergent, their successful implementation in the near and longer term will be jeopardised without clear measures to provide a safe as well as efficient bus route towards BEW and the Five Village area within Arun. The Duty to Cooperate is not effectively met and effective cross boundary collaboration on these strategic issues through the review of LSS is not demonstrated, despite the current version which identifies the issues.

To be made sound the LSS Review and a subsequent urgent review of the transport evidence base and strategy needs to take place. The strategic issues are especially critical east of Chichester, in our view.

Notwithstanding this foundational deficiency, to be made sound, Policy A14 should be modified to read:

“ ...

8. Subject to detailed transport assessment, provide primary road access to the site from the slip-road roundabout at the A27/A285 junction to the west of Tangmere providing a spine road link with secondary access from Tangmere Road. Development will be required to provide or fund mitigation for potential off-site traffic impacts through a package of measures in conformity with Policy T1 (Transport Infrastructure) and T2 (Transport and Development) and DfT Circular 01/2022 that maximise the relevance and use of sustainable travel modes, in particular bus services;

9. Make provision for improved sustainable travel modes between Tangmere and Chichester city, in partnership with relevant authorities, including improved direct, seamless safe and reliable and additional bus and cycle routes linking Tangmere with Chichester city, Shopwhyke and Westhampnett. In conjunction with measures in support of Allocation A19, Opportunities should also be explored contributions shall also be sought for providing improving high quality cycling and bus service transport links with the 'Five Villages' area and Barnham rail station in Arun District; and...”

#### 10. Concluding comments

Stagecoach recognises its role as a key stakeholder in the plan, as well as a local employer and corporate citizen. We recognise the primacy of the plan-led system as the mechanism intended to resolve complex challenges, including the proper alignment of transport and spatial planning, which as the National Decarbonisation Strategy for Transport among other policies makes clear, has never been more vital.

In making our representations, we emphasise that we are entirely supportive of the Local Planning Authority and the relevant Highways and Transport Authorities, in their efforts to properly manage the amount and pattern of development to secure vital policy objectives. We recognise that balancing delivery of assessed development needs with a wide variety of other constraints is a very difficult task.

The transport issues faced by the plan are recognised in the draft plan as being serious and long-standing. We believe that there are ways to arrive at a suitable transport mitigation strategy that has regard to wider strategic issues and resolves existing problems in a much more effective way than those pursued to date.

We support the spatial strategy of the plan as it evidently provides the basis to secure the necessary step change in the quality and use of sustainable transport modes, as it explicitly seeks to do. However thus far, there has been insufficient work done to define the measures that will credibly secure these outcomes.

Stagecoach therefore urges the authorities to draw us into the necessary effective ongoing collaborations that is expected by NPPF paragraph 16 and 106; and DfT Circular 01/022, to do this work, prior to, rather than after the submission of the draft plan. We look forward to being approached to initiate this dialogue at the earliest opportunity.

#### Change suggested by respondent:

Policy A12 should accordingly be modified to read:

“ ...

7. Development should make the requisite contributions for off-site improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys along the A259, crossing the A27 at Fishbourne and where necessary on the approaches to Emsworth;

**Legally compliant:** Not specified

**Sound:** No

**Comply with duty:** Not specified

<https://chichester.oc2.uk/a/skh>

## Object

**Document Element:** Policy A13 Southbourne Broad Location for Development

**Respondent:** Stagecoach South (Rob Vince) [8141]

### Summary:

In the absence of a refreshed transport strategy and transport evidence base, the draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact, the only reference that is made in Policy is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

### Full text:

Chichester District Local Plan 2039 – Pre-Submission (Regulation 19) Consultation

#### 1. Introductory Comments

Stagecoach South is the main commercial public transport operator across Chichester District. The Company has headquarters in the city, which is also the principal public transport hub for the District and it's rather wider travel-to-work area encompassing much of the Arun District. Our services extend throughout and beyond the District boundaries, as far as Littlehampton, Midhurst, Havant and Portsmouth. The vast majority of services operate on a commercial basis – that is to say, sustained by passenger use and fare revenue, including concessionary reimbursement.

While the role of the railway is significant in much of the District, especially the east-west Coastway line, yet bus services account for more boardings locally than the railway, with Chichester depot services carrying over 3.5m passengers each year.

Unlike bus services in other parts of the country, the local network has recovered strongly after the pandemic with fare-paying passenger numbers over 95% of 2019 levels, albeit with concession patronage somewhat lower. This has helped secure not only a stable but growing bus network even during this period of rapidly rising operational costs, avoiding the need for the service contractions seen in other regions. Indeed, during the second quarter of 2023 Stagecoach will invest £5.5m in brand-new vehicles for high-profile coastal Service 700 – one of the largest vehicle investments for Stagecoach Group this year.

Our services are therefore critical to existing and future local connectivity. As the Plan acknowledges, mobility demands do not respect planning authority boundaries. The role of our services is especially high to settlements in the broad A27 corridor, within the District and beyond. This includes major settlements in Arun District such as Pagham and suburban Bognor Regis, where bus is the only mass public transport option. As the Council is well aware, there is an even higher level and rate of committed development envisaged in these locations in the Arun District Local Plan than in Chichester.

It is already evident to the planning authorities, West Sussex County Council and National Highways, as proprietor of the A27 Trunk Road, that accommodating growing mobility demands across Chichester District and especially around Chichester itself, is becoming increasingly challenging to the point of being seriously problematic.

Stagecoach has a particular interest in this Plan arising from:

- The already clear and highly deleterious impact of congestion affecting our operations and their reliability and attractiveness to the public. The effects of these on the approaches to Chichester, and around the A27 bypass are especially severe. If public transport is to retain its existing role – even before the needs of any meaningful growth both in Chichester and neighbouring authorities is considered, are considered – the Council and the Highways Authority need to arrive at clearly-defined measures to protect buses from chronic delay and the damaging impacts arising from the lack of bus network resilience and customer journey times.
- In connection with the above, the need to properly consider the predictable impacts of committed development in Arun District on the transport network and in particular the operation of bus services. The duty to cooperate on cross-border strategic matters is not limited merely to accommodating housing requirements.
- The fact that our entire business premises and operational base at Chichester is the subject of allocation for redevelopment within the Plan period. Specifically, this includes our Head Office, the Bus Station as the operational hub of the network and the key interchange for passenger journeys – including those that involve the railway – and the bus depot required to support the entire operation. Notwithstanding many years of discussions, there is as yet no agreed deliverable strategy to replace these facilities either in the Draft Plan or elsewhere.

Stagecoach broadly supports the vision and priorities of the draft plan. In most respects, Stagecoach supports strongly the spatial strategy and the identified site allocations that flow from it, and the evidence.

However, it has serious concerns about the soundness of the plan as proposed for submission, for important regards outlined in this response. These are made in the light of requirements set by the National Planning Policy Framework (NPPF), in particular at paragraphs 15 and 16; 35, 105-109 inclusive and having due regard to the need for allocations to

satisfy 110-112 inclusive in due course as development permission is sought; and paragraph 174.

Paragraph 16c) of NPPF makes plain that strategic plans and policies should “be shaped by early, proportionate and effective engagement between plan-makers and communities, local organisations, businesses, infrastructure providers and operators and statutory consultees” (our emphasis). This makes plain that collaborative and ongoing involvement of public transport operators is both necessary, and separate and in addition to the engagement with statutory consultees. This has not taken place.

Para 1.25 of the draft plan states that “the council has engaged constructively, actively and on an ongoing basis with other local authorities and organisations to address key strategic matters.” Despite the requirements in NPPF and contrary to the statement made, Stagecoach has not been approached or involved in a meaningful, collaborative or ongoing way in the preparation of the Plan.

Our main concerns centre around the fact that the plan strategy is neither backed by sufficient transport evidence. Even more importantly, the plan relies on a wholly car-based transport mitigation strategy despite policy stating that this is not the case, and the track record of the existing Local Plan, based on a very similar strategy, that has failed to bring forward meaningful mitigations to date to prevent traffic conditions substantially worsening. There is no support in policy for the achievement of the Strategic Objectives in the Plan. Nor is there definition of any measures in the 2023 Transport Study to make provision for sustainable transport infrastructure or services – much less materially improve them.

Finally, to the extent that updated transport evidence has been provided in the form of the 2023 Chichester Transport Study, arising from updated traffic modelling, it does not support the contention that highways capacity constraints on and around the A27 justify not meeting the objectively-assessed development needs of the area, as the draft plan contends.

## 2. Vision and Strategic Objectives

### 2.1. Issues and Opportunities

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant, proportionate and up to date evidence

Stagecoach recognises the important role of the West Sussex and Greater Brighton Strategic Planning Board which agreed a Local Strategic Statement (LSS2) in early 2016 to identify spatial planning issues across the wider area. This established strategic priorities and policies to guide longer term strategic growth in a coordinated and well considered matter. This institutional framework and the purpose of the LSS is a highly significant one and is at the heart of efforts to properly fulfil the statutory Duty to Co-operate, including with regard to strategic infrastructure issues, as NPPF requires.

Given the long period of time elapsed since the 2018 Reg 18 consultation and the already very clear constraints on strategic infrastructure capacity, it is of great concern to Stagecoach that the LSS2 has not been updated to reflect emerging issues in the intervening period. A review and update of the LSS2 has only just commenced. This includes a study of projected housing and employment needs, transport impact, infrastructure and spatial options to deliver the required development in the period after 2030. This Chichester District draft plan covers a period extending to 2039 – therefore well beyond 2030 and the nominal currency of LSS2.

However, infrastructure needs are pressing today. Stagecoach is presented with severe highway operational problems on a near-daily basis. During the winter of 2022-23 we have, for example, seen key road links impacted for many weeks by acute disruption arising from flood events. Unpredictable, but seemingly more-frequent, exogenous events expose a lack of resilience in the highway network around Chichester and its travel-to-work area. However, serious, chronic, unpredictable delay has been normalised over recent years, with peak-time congestion having quickly returned after the pandemic. The existing development strategy has failed to bring forward measures having any impact on this to date, and key commitments – notably at west of Chichester Phase 2 and at Tangmere – have yet to commence to further aggravate the issue.

We have no confidence in the transport mitigations proposed in the existing Local Plan and LSS2 being sufficiently effective, even if deliverable at all. Indeed, the existing adopted Local Plan does little more than make vague speculations about the sustainable transport measures that might be achievable. The draft local plan review is no different. It has no ambitions at all for sustainable modes and thus, makes no meaningful provision to meet them.

This is especially relevant in light of the fact that the approach to resolving issues on the A27 around Chichester that were anticipated in 2015-16 have fallen away. LSS2 is thus currently inadequate to act as a part of an up-to-date, proportionate, and relevant evidence base for the Plan.

An update of a traffic model lies at the heart of a 2023 Chichester Transport Study. This talks no account of the existing role of non-car modes, nor can it do so. It is unable to properly evaluate the nature of problems or solutions that involve public transport, or for that matter, other sustainable modes.

Therefore, we consider that the combination of committed and additional development needs that must be accommodated over the whole plan period between 2022 and 2039, in both the Chichester and Arun Districts, require a “first principles” review. This must be based on a refreshed transport evidence baseline of no earlier than 2022 – given that the effects of COVID distort 2020-22 – and the transport infrastructure and service requirements to sustainably support those needs.

Key issues – including substantial changes with regards to transport issues and challenges, as well as potential solutions – thus do not form part of the evidence base that steers this plan. Given long term changes in travel patterns, and mode share that took place during COVID, as well as a local and national policy context that seeks to radically reduce and then eliminate transport-related carbon emissions, this is especially problematic.

The specific problems of congestion and network resilience that are evident on the A27 and the approaches to Chichester remain a set of especially difficult problems that disproportionately affect the efficiency, reliability and attractiveness of the bus network, that evidently demand larger-scale strategic responses involving multiple stakeholders, including bus operators.

Where the effects of development on the national Strategic Roads Network (SRN) are concerned, the approach of National Highways to addressing and responding to the mobility needs of development has now substantially changed following the promulgation of the DfT Written Ministerial Statement LTN01/22. This makes it clear that adding highways capacity is no longer the first or only strategy that should be pursued, but one subordinate this to maximising the potential of non-car modes and sustainable travel.

“Effective and ongoing collaboration” on transport matters has not led to solutions being agreed and published for public scrutiny as part of the plan evidence base. Whatever the approach to modelling and “highways improvements” that may be agreed or pending agreement with the County Highways Authority and National Highways, Stagecoach is neither participant or sighted. This is despite the clear requirements set out in NPPF Para 106 b) that “Planning policies should ... be prepared with the active involvement of local highways authorities, other transport infrastructure providers and operators and neighbouring councils, so that strategies and investments for supporting sustainable transport and development patterns are aligned.” (our emphasis).

We therefore consider that the Council has failed to comply with the requirements of NPPF paragraph 25 and 26 that “relevant bodies” are involved in plan-making, especially with regard to addressing the needs for infrastructure. Public transport services and the infrastructure that supports its operation and use clearly fall within matters relevant to plan-making. This is explicit in NPPF Chapter 9 and indeed within the plan itself – for example reference to public transport and sustainable modes in the Vision for the plan.

It should be stressed that the Regulation 18 “Preferred Approach” consultation took place in December 2018 – over 4 years ago and prior to COVID, based on LSS2. The inordinate length of time that has elapsed between the Regulation 18 and Regulation 19 stages greatly challenges the LSS2 and other parts of the evidence base, especially as the pause straddles the COVID epidemic. That would include the transport modelling baseline, and key assumptions in any traffic modelling that took place prior to mid-2022, which is a point at which a reasonable “new normal” post-COVID might be considered to have become established. In that period, Arun District has also adopted its own Local Plan development strategy that accommodates an unprecedented quantum of development immediately east and south-east of the District Boundary – creating additional substantial transport impacts directly affecting the A27 and multiple major approaches to Chichester crossing it.

The established mechanism to fulfil the Duty to Co-operate has thus not operated effectively. The Plan is not founded on a relevant, proportionate and up-to date evidence base and is thus inadequately justified.

## 2.2. Spatial Portrait

The spatial portrait is generally succinct and accurate. However, it makes no mention of road-based public transport, the role of the City as a public transport hub, or the range of bus services that provide local connectivity (Section 2.4 and 2.5). The complete concentration of post-16 education in the City itself as just one example of the peculiarities of transport demands in the area, is not highlighted, though this has a profound influence on peak time travel demands affecting the most congested parts of the highway network. Among other things, the role of bus services in supporting the educational system of the plan area is very great indeed.

The potential role of bus in addressing the already-severe transport problems of the plan area and beyond seems entirely overlooked. The spatial portrait is thus clearly inadequate and incomplete.

## 2.3. Strategic Objectives

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Chapter 9 of NPPF and paragraphs 104 and 105 in particular require that plans should:

“Transport issues should be considered from the earliest stages of plan-making and development proposals, so that:

- a) the potential impacts of development on transport networks can be addressed;
- b) opportunities from existing or proposed transport infrastructure, and changing transport technology and usage, are realised – for example in relation to the scale, location or density of development that can be accommodated;
- c) opportunities to promote walking, cycling and public transport use are identified and pursued;
- d) the environmental impacts of traffic and transport infrastructure can be identified, assessed and taken into account – including appropriate opportunities for avoiding and mitigating any adverse effects, and for net environmental gains;...

...The planning system should actively manage patterns of growth in support of these objectives. Significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. This can help to reduce congestion and emissions, and improve air quality and public health...”

The Strategic Objectives do not conform with NPPF in these foundational requirements adequately, to transparently steer the plan strategy. They should therefore be amended to read:

“Plan to provide local infrastructure to support new development and seek opportunities to address existing identifiable infrastructure problems deficits, such as in particular those relating to the A27 and its junctions and wastewater treatment.”

Paragraph 2.36 states, in the context of the Climate Emergency and the National Trajectory to “Net Zero” that “The council will enable the delivery of infrastructure, jobs, accessible local services and housing for future generations while protecting, conserving and enhancing the historic and natural environment.”

Naturally, we support this intent.

However, there is no acknowledgement of the role current patterns of transport use contribute to carbon emissions, nor that substantial mode shift is necessary to address sustainably an acute lack of capacity on the local network and the SRN, especially around Chichester. This is especially concerning as the basic conceptual link is not made between the fact that the greatest such problems lie on the A27 corridor and around Chichester, while these are also at the same time present many of the most sustainable locations for development, and where the opportunities to secure much greater use of sustainable modes also exists.

Strategic Objective 7 “Strategic Infrastructure” includes the following statement:

“To work with infrastructure providers to ensure the timely delivery of key infrastructure to support delivery of new development. New development will be supported by sufficient provision of infrastructure to enable the sustainable delivery of the development strategy for the plan area. Key infrastructure to support the Local Plan will include improvements to transport, ...

A sustainable and integrated transport system will be achieved through improvements to walking and cycling networks and links to accessible public transport. Highway improvements will be delivered to mitigate congestion, including measures to mitigate potential impacts on the A27 through a monitor and manage process.”

The latest transport evidence in the Chichester Transport Study makes no pretence to define much less to deliver a “sustainable or integrated” transport system. It is wholly devoted to sustaining current levels of car use across the District, to and through Chichester area.

It is no more than the lightest of touches to the approach taken to supporting the adopted Local Plan, an approach that is already almost 10 years beyond the date of its gestation but has yet to deliver any significant capacity improvement schemes, much less any measures that sustain even current levels of public transport journey times and reliability in the face of increasing congestion – much less any betterment.

Of the six key junctions on the A27 around Chichester, recognised to require significant mitigation given they are saturated for extended periods, five accommodate regular bus services - indeed frequent ones at least every 20 minutes in several cases. The sixth at Oving Road, relates directly to a key corridor where bus services are needed to support strategic growth currently being delivered at Shopwhyke, as well as substantial further growth West of Tangmere (proposed allocation A14) and “East of Chichester” (A8), south of Shopwhyke Road.

As stated at p12 of the Study Summary “The modelling shows that all the junctions on the A27 Chichester bypass are well over capacity, even before adding in the Local Plan development and with the exception of Portfield Roundabout are actually shown to be over capacity in the base model year (2014) in one or both peaks”. This much has indeed been evident for years from delay and periodic even more severe disruption arising to Stagecoach services from the lack of network resilience.

The reassignment of through and local traffic through Chichester to avoid the A27 bypass is an especially serious issue for bus services that penetrate the city. This is leading to consequential saturation of a range of junctions used by buses. Rising delay and unpredictable running times are at the root of our decision to sever the long-established Portsmouth to Littlehampton service in 2023, which will in future no longer run across Chichester, but terminate to provide additional

dwelling time to mitigate the impacts of congestion.

While this congestion affects all road users including businesses and freight traffic, the effect on scheduled bus services is greatly higher, as such services cannot reassign route to 'beat the queue'. Traffic congestion often encourages greater car use for this reason, in tandem that people are happier to sit for extended periods in their own vehicle on a seamless door-to-door journey than wait at the roadside for a delayed bus making slower progress in lengthy queues.

As the Study admits at para. 1.3.2 "Although, there have been works at the Portfield Roundabout in this timeline, no other mitigation schemes have been completed along the A27 corridor, as such the mitigation schemes defined in this report will also be required to consider the development from this plan period."

In other words, in the 8 years since the current Local Plan was adopted in 2015, there has been minimal progress in delivering the traffic mitigations. There is no clarity at all when any such mitigations will be brought forward. It is hardly surprising then, that traffic conditions have deteriorated. The "predict and provide" transport strategy supporting the current plan has failed.

Despite this, the Draft Local Plan Review proposed to "double down" on exactly this strategy. It represents, like the rest of the evidence base, a "rolling forward" of the current car-based strategy by 9 years, with the lightest of touches to attempt to accommodate car trip demands from a relatively modest additional development quantum.

Nevertheless, the Study requires a global 5% reduction in trip demands arising from unspecified "credible" (paragraph 4.1.2) sustainable transport and travel planning measures. It is unclear why use of non-car modes will see disproportionate growth when no measures are in place to make them more attractive. This 5% increase in use translates to a doubling in the modal share of bus services. There is no evidence nationally, anywhere, that simple ignorance of alternatives to the car is the main barrier to uptake.

The outputs of the 2023 Chichester Area Traffic (SATURN) model are set out at Table 5.1 (am peak) and 5.2 (pm peak) without mitigation. These betray just how seriously compromised the whole network around Chichester is, and will be in future, even with implementation of a mitigation package to increase traffic capacity that is understood to cost between £92m and £164m – and which the Study and the draft plan acknowledge cannot be delivered through developer funding sources alone. Unspecified external funding presumably from HM Treasury through DfT is required.

Even if this provided and the schemes are delivered, Tables 8.1 and 8.2 indicate these will provide minimal relief. The final columns suggest key junctions, including Portfield, Fishbourne Road and Cathedral Way East will remain at well over 100% ratio of flow to capacity (90% is considered the point at which saturation is approached, with the onset of increasing delay above that figure). RFCs in tables 8.1 and 8.2 are some of the highest we have ever seen in a local transport evidence base for a post-mitigation scenario. While the serious potential risk of reassignment across Chichester City is greatly reduced, which is important and welcome given its impact on bus services, Tables 8.1 and 8.2 show the extent of post-mitigation saturation is also egregious, covering a very large number of key links and junctions.

On every measure and criterion, then, including cost deliverability and effectiveness, the revised Transport Strategy falls well short of evidence to suggest the transport impacts of the plan can be properly addressed by this means.

Despite the repeated statements about sustainable modes throughout the draft plan and Chichester Transport Study, only 2 paragraphs at Section 6.2 within the Study are devoted to public transport:

"6.2.7 The funds generated from the parking management schemes, local/nation funding schemes and developer contributions could also be utilised to fund potential public transport enhancements within the city centre including an expansion of the bus priority lane system within Chichester City Centre. This could reduce reliance on the car in the longer term towards sustainable public transport. A park and ride scheme could be incorporated within a bus priority lane network in the future depending on the uptake and successfulness of early bus priority trials.

6.2.8 Chichester City centre has a constrained existing public highway network. Therefore, any proposed dedicated public transport or light transit corridors that could be implemented would be at the expense of existing highway. This could be managed through a time-based system where certain routes are restricted to public transport only during specific times. E.g., peak hours."

There is some very high-level consideration of Park and Ride following this section. None can be considered a serious practical evaluation of consolidating car-borne trips onto bus services, including existing ones, for example local mobility hubs, more frequent bus corridors, delivery of specific bus priorities.

None of the discussion of alternatives to "predicting and providing" for unconstrained traffic growth is rooted in a deliverable evidence base, or proper evaluation of options and specific projects.

To take just one aspect of the few specifics that can be picked out, a workplace parking levy is hypothesised. This would apply only to "offices", in Chichester city centre (para 6.2.3), without consideration given as to how this could be practically achieved or even that a meaningful amount of office based employment would qualify. Much less is any consideration given to how far focusing a strategy only on office-based workers would actually deliver a particularly

significant effect, apart from to create a strong incentive to relocate offices out of the city centre to places out of reach by public transport.

Looking at the Chichester Transport Study 2023 and the draft plan together, there is insufficient evidence that the traffic capacity increase proposed in the 2023 Transport Study is any more affordable or technically deliverable, or likely to be sufficiently effective, than those in the past strategy. The evidence more strongly points to the fact that no highway improvements are identifiable or economically deliverable to meet even short term increases in demand for car-borne mobility on most of the network around Chichester.

There are no published strategies or schemes clearly supporting the contention that the objective of improving sustainable modes is technically achievable or deliverable either. The plan makes generalised assertions that such strategies will be devised and implemented only after serious problems emerge from a shortfall in the car-borne transport strategy.

The reference to “monitor and manage” is undefined and unsubstantiated. There are no outcomes stated, no mechanisms specified and no timescales for action.

Our experience today is that network conditions have reached unacceptable and prejudicial levels of severe unpredictable delay. The saturation of the network is already evident well outside the traditional peaks on key sections of highway and at key junctions. External shocks such as the effects of severe weather are becoming more common, leading to delays so extreme as to justify the description of “gridlock”. The plan does not identify a strategy to effectively address this, in particular by consolidating passenger car trips onto more efficient public transport vehicles. This is unacceptable to Stagecoach.

#### 2.4. Local Plan Vision

Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the broad approach in Plan Vision and in particular that by 2039, the Plan will support and enable greater use of sustainable modes. However, there is no link made between reducing the use of private cars, and the need for a step change in the use of sustainable modes. Without a published transport evidence base it is impossible to establish a suitable sustainable transport strategy to support both carbon reduction and alleviation of the problems arising from acute congestion. Even on a very crude basis, to achieve a meaning mode shift on key approaches to the A27 Chichester Bypass will require more than 20% of existing peak car-borne journeys to transfer to other modes. A 10 percentage point transfer to bus (about half this shift) would imply more than doubling peak hour bus passenger boardings.

The Vision is nothing more than an aspiration, that needs to more definitively aim at key outcomes, for the plan to be effective. The Vision should thus be altered to read:

“Get about easily, safely and conveniently with less reliance on private cars –making the greatest possible use of the rail and enhanced bus network, and with more opportunities for active travel including walking and cycling; to materially reduce dependence on private car use.”

Underpinning the Plan’s spatial strategy, the Vision section goes into more specific detail about key localities in the Plan area.

Regarding Chichester, Paragraph 2.39 states: “The emphasis will be upon consolidating and enhancing the role of Chichester city as the plan area’s main centre, whilst also developing the role of key settlements to its east and west. The focus will be upon creating communities with good access to a range of employment opportunities and affordable housing for young people and families to balance the ageing population.”

This is clearly the appropriate focus for meeting the District’s development needs in a sustainable manner. The city and key settlements to the east and west, are those places already able to make use of relevant public transport services, both rail and bus. Especially within and near the City, walking and cycling can credibly present highly relevant choices. This emphasis clear can be expected to address the requirements of sustainable development set out in NPPF and their local application set out in the Plans Strategic Objectives.

However, this needs a robust transport strategy, to avoid a further concentration of development and its traffic impacts occurring on or near some of the most chronically congested parts of the highway network. To date, the absence of intervention has strangled the bus network through further marked deterioration in traffic conditions. This by consequence increases the risk of bus delay or cancellation, lengthens journey time and reduces customer confidence in bus as an attractive alternative mode of travel.

In April 2023, Stagecoach is making significant timetables changes to improve operational resilience in and around Chichester. The biggest such change is the severance of the Portsmouth to Littlehampton section of service 700, at Chichester, with buses operating independently to the east and to the west and ending cross-city links. This is planned to reduce the probability of delay but at the cost of additional vehicle resource (circa £200,000 per annum) which could be

better spent providing new or enhanced services. We anticipate a small loss of custom as a direct consequence of the change, but have little choice other than to take negative action so as to fulfil our statutory punctuality obligations.

If the Strategic Objectives of the Plan and its Vision are to be achieved, in the way required by NPPF paragraphs 104-105, a properly-evidenced transport mitigation strategy needs to create the conditions where bus journeys are more reliable than car journeys and thus mobility demand switches as far as can be realistically achieved away from car use, to bus use and other more sustainable modes.

Beyond Chichester, the Plan Vision focuses on key localities beyond to the east and west.

To the west of Chichester a focus on growth at Southbourne is justified at paragraph 2.43: "...the aim is to take advantage of the village's good transport links and existing facilities to deliver significant new residential-led development within the broad location for development which will further enhance local facilities and offer opportunities to reinforce and supplement existing public transport, including bus routes."

We agree this is a very significant opportunity. However, if the requirements of NPPF paragraphs 104-105 are to be met, this demands that effective bus priority is delivered on the A259 corridor, especially eastbound at Fishbourne and westbound approaching Emsworth. Without such measures, the growth committed and planned will serve only to further undermine bus journey time and decrease punctuality on the existing 700 service, entirely contrary to the aims of the Vision.

The emphasis on the A259 corridor served by Stagecoach 700 west of Chichester is reinforced at paragraph 2.45 stating that "Between Chichester and Southbourne, the Plan provides for more moderate levels of growth within the parishes of Fishbourne, Bosham and Chidham & Hambrook, ... with opportunities to support and expand existing facilities and for increased use of public transport options". We strongly support the principle, but the Plan must follow through with specific public transport priority measures that facilitate rather than prejudice such an outcome.

East of Chichester the focus is at Tangmere, where the existing allocation for about 1000 dwellings is being uplifted by 300. Paragraph 2.44 justifies this among other things recognising the scope for "...improved and additional bus services and cycleways will provide better connections to Chichester city and east to Barnham and the 'Five Villages' area in Arun District." We unequivocally endorse this conclusion. Realising a "game-changing" level of bus service quality, reliability and frequency east of the city, also serving committed and planned development north and south of Oving Road at Shopwhyke, is equally essential, given that all SRN links and junctions are approaching equal saturation.

The National Bus Strategy has given new focus on partnership with West Sussex County Council to discuss and deliver a significant new bus service between Chichester, Shopwhyke, Tangmere, Eastergate and Barnham, supporting committed development and acting as an initial phase of what ought to be a more ambitious longer-term strategy to support growth beyond 2025 in both Chichester and Arun Districts. For these improved bus services to be both deliverable and effective, robust bus prioritisation is unavoidable. No such measures are proposed in the Plan or its evidence base and we therefore suggest inclusion of plans to facilitate safe and efficient bus operation between Tangmere and Nyton/Eastergate, ideally avoiding the need to join A27 through-traffic entirely.

We welcome the clear recognition that these localities identified for growth, benefit from existing relevant public transport services. The Vision also sets an expectation that bus services in particular should be "enhanced" and "reinforced".

We entirely agree that these opportunities exist, across the broad strategy and strategic allocation proposed by the draft Local Plan. Securing them will be crucial to achieving national and local policy objectives, including the Strategic Objectives. However, to our continuing very great dismay, the Plan goes no further to defining how this will be achieved. As such the Vision is not demonstrable achievable or deliverable.

Accordingly the Plan cannot be considered effective, in the sense of NPPF.

Remedying this, demands specific measures to protect bus services from congestion in the following corridors:

- A259 East of Emsworth
- A259 Fishbourne
- A 259 Via Ravenna/Cathedral Way
- A286 Stockbridge Road north and south of A27
- B2145 Whyke Road/Hunston Road
- A259 Bognor Road, east and west of A27 and extending to the District Boundary
- B2144 Oving Road/Shopwhyke Road east and west of the A27
- A 285 Westhampnett Road/Portfield Way/Stane Street, potentially involving a mode filter at the west end of Stane Street

These must be defined to a sufficient level of detail to assess their effectiveness and deliverability, including costs.

This would then allow West Sussex County Council and Local Transport and Highways Authority, ourselves as the principal bus operator, and where appropriate other organisations that would be directly tasked with delivering the

mitigation package, to agree service levels and standards necessary to deliver specified outcomes, including journey times, frequencies, capacity and hours of operation on the network, and also in respect of the strategic allocations and Strategic Locations for Growth.

The agreed mitigations strategy should be set out in an up-to-date Infrastructure Delivery Plan backed by clear funding commitments, including a funding strategy to justify necessary developer contributions.

Where necessary to support evidence of effectiveness and deliverability, clear statements of support, which might include Statements of Common Ground between the LPA, LTA, National Highways and Stagecoach, could be provided.

### 3. Spatial Strategy

#### Stagecoach Supports

Stagecoach well recognises the constraints outlined in the explanatory narrative at the start of Chapter 3.

In particular we strongly endorse that strategy in that it reflects that the best opportunities to meet housing and employment development requirements sustainably clearly exist in and close to Chichester and on the key east-west movement corridor where – subject to effective measures being delivered to make these modes more attractive, efficient and relevant – sustainable modes can credibly provide for a much higher proportion of movement demands, mitigating most effectively the potential traffic impacts of development.

We agree that the Manhood Peninsula suffers serious environmental constraints, but, added to these, public transport and other sustainable modes cannot provide such attractive alternatives, and significant further development risks merely reinforcing already high levels of car use, aggravated by the carbon impacts of the distances involved – something the plan does very little to evaluate, and makes no reference to.

We endorse the conclusion in paragraph 3.24 that significant development in the part of the District north of the National Park is inappropriate. The rationale is principally on landscape and visual character. This exposes a fundamentally biased approach to plan making that has consistently underplays transport accessibility and carbon issues. In fact, the lack of local services and the extended distances that need to be travelled to fully participate in society in this area, with no realistic prospect of public transport offering relevant choices, ought to rule such a strategy out of play on a far less aesthetic and interpretational basis.

#### 3.1. Policy S1 Spatial Development Strategy

##### Stagecoach Supports

The Spatial Strategy flows clearly and logically from the Spatial Portrait, and the opportunities and constraints identifiable across the Plan area. It represents a logical and justified continuation of the existing Local Plan strategy. In particular the spatial strategy maximises the potential for sustainable modes to contribute to meeting a much higher proportion of all the District's mobility and accessibility needs.

#### 3.2. Policy S2 Settlement Hierarchy

##### Stagecoach Supports

The settlement hierarchy clearly reflects the service endowment and potential self-containment of the settlements in the District. In particular, the second tier of settlement hubs includes secondary schools, which are major peak trip generating uses. Service villages, in the main, also benefit from bus services running at least hourly, which can be expected to provide for a degree of mobility for the higher number of trip purposes that cannot be satisfied by walking or cycling within the immediate locality. Thus, a level of development to meet local needs in this tier is relatively sustainable.

There is a quite broad range of settlements in this category. We have concerns that, north of the National Park, the Service Villages have no realistic public transport choice. These include Plaistow/Ifold, Kirdford, Loxwood, and Wisborough Green. Such as exists is typically a 1/bus per day off-peak shoppers service offering up to 90 minutes in Horsham or Guildford and as such any development here even to meet local needs requires each adult to own a car. This contrasts strongly with Service Villages to the south of the National Park, which are greatly more sustainable.

### 4. Climate Change and the Natural Environment

#### Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This section of the plan is extensive and wide ranging, as should be expected.

However, remarkably, there is no acknowledgement whatever of the role of transport in mitigating climate change or its effects, not of the importance of sustainable movement and access being facilitated across the plan area in addressing anthropogenic impacts on the natural world at a more local level.

This exposes very clearly a troubling level of indifference to transport matters in the production of the Plan, which, while nationally quite common, is neither appropriate nor acceptable. The mitigation of transport impacts is not merely a matter speaking to the social and economic aspects of sustainable development. It is crucial to address the causes and

effects of climate change that arise from transport, and personal mobility.

This is now well understood and at the centre of national policy, including the National Decarbonisation Strategy for Transport (July 2021) which at Section 5 commits the government to aligning land use planning and transport strategy much more tightly and effectively to mitigate the carbon emissions associated with the current dependence on cars, and the mode mix; but also to reduce travel distances, both increasing the potential relevance and effectiveness of all sustainable modes, and reducing average journey lengths for residual motorised journeys of all kinds.

National statistics show that well over a third of all domestic carbon emissions arise from land-based transport and of these, the vast majority arise from trips of over 10km – outside the range of large scale use of cycling. In fact, the potential of the plan to materially support carbon emissions reduction from within the plan area lies more in the realm of transport than any other policy theme – including emissions mitigation from buildings, which is in any event an aspatial matter and covered by nationally-binding building regulations. By 2025 something like 40% of all the emissions within the plan-area will be transport related.

There is no evidence supplied to support the plan that addresses the transport carbon impacts of the spatial development strategy in a clear manner.

There is no evidence supplied that sets out the effects of potential worsening of congestion on air quality within the plan area, arising entirely from the excess of passenger car movement demands over available and credibly deliverable highway capacity. This is despite the evidence set out and acknowledged in the explanatory memorandum at paragraph 4.130:

"4.130. The council's Air Quality Action Plan and the West Sussex Transport Plan 2022-2036 both refer to the air quality issues faced by Chichester. There is currently one Air Quality Management Area (AQMA) in the plan area, located at St Pancras, Chichester. AQMAs are designated where air quality exceeds, or is likely to exceed, national air quality standards and objectives. Development within or impacting these areas, or that likely to cause the declaration of any further AQMAs, will be subject to an air quality assessment by the applicant."

This is a retroactive approach – it is not "planning", based on evidence.

We are well aware that air quality issues in and of themselves can render allocated sites to be undeliverable: a good example is in the Vale of White Horse, Oxfordshire, where strategic allocations on the A338 and A420 corridors have been held up for years by air quality issues at Marcham and Frilford, in large measure because agreed transport interventions were considered inadequate or undeliverable a very short time after the Plan was examined and adopted.

There is no evidence that shows how the development strategy can effectively mitigate these impacts as well as the further potential impacts that arise from the development strategy. This is exasperating, as there is clear evidence that could be drawn upon to show that that very substantial opportunities exist to:

- Speed buses up and make them more reliable by the delivery of bus priority on most of the key main corridors. Most of these even today operate relatively frequently
- Improve service frequencies and extend hours of operation.
- Secure significant background mode shift to bus as a result, damping pressure on key links and junctions, by consolidating demands on direct more reliable and more frequent bus services.

The spatial development strategy as submitted is in fact, likely to well conform to such additional evidence.

The allocations require substantial additional transport related work and evidence to demonstrate that the opportunities for sustainable transport have been identified and taken up as required by NPPF paragraphs 104-105.

With regards to specific policy, Policy NE22 should be modified to read:

"Development proposals will be permitted where it can be demonstrated that all the following criteria have been addressed:

1. Development is located and designed to minimise traffic generation and congestion through access to by maximising the relevance and attractiveness of sustainable transport modes, including maximising provision of specific demonstrably effective measures to make pedestrian and cycle and public transport routes and networks more direct, more safe, faster and more reliable;..."

## 5. Housing

### 5.1. Policy H1 Meeting Housing Needs

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

The presumption of the planning system is that local planning authorities should seek to meet their objectively assessed development requirements in full. These needs are assessed by a defined Standard Methodology set out in Planning Practice Guidance and elsewhere, that has explicit regard to ensuring that the economic and social effects associated with housing are properly provided for, to avoid exacerbating serious problems that arise from inadequate housing

supply.

As a significant local service provider and employer, Stagecoach is concerned that existing issues with housing availability and affordable housing supply are not exacerbated. This has a direct bearing on staff recruitment and retention. It also has an indirect bearing on our cost base.

The existing problems with housing affordability have developed over many decades of undersupply. It should be emphasised that the significant boost to the supply of housing that has been sought by governments over the last 15 years, has only begun to take effect relatively recently in this District. Tackling the problem will require years of consistent attention.

Stagecoach notes that the Council is no longer proposing to meet its identified housing needs in full. Rather than 638/annum the Council is allocating a total that implies an annual delivery rate of 535/annum.

While a number of matters evidently present challenges to the Council in identifying a sustainable development strategy. Paragraph 5.2 indicates that "constraints, particularly the capacity of the A27 has led to the council planning for a housing requirement below the need derived from the standard method..." The blame for being unable to meet housing requirements is thus laid squarely at the door of transport infrastructure and systems.

This conclusion in no way follows from the evidence in the Chichester Transport Study. This, rather, makes the statement that when a higher annualised quantum of 700 dwellings per annum was tested, in the majority of cases the traffic capacity improvement package would perform little differently. To quote the Study:

"5.6.3 The network performance outputs analysed comprising V/C%, Delays (seconds) and Queues (PCU's) suggest that generally the proposed SRN mitigation identified for the Core Scenario, can accommodate in the most part, additional increase in development to 700dpa."

Whether the rest of the local road network is similarly protects is moot.

Irrespective of these results, even if the contention made in the draft plan were true, unlike many other constraints, this is amenable to a suitable effective strategy to address the constraints identified being collaboratively conceived. This is what NPPF expects, as set out in paragraphs 104-106.

Where the A27 is concerned, as part of the SRN, National Highways is now working to a substantially revised approach than that in force at the time to current Local Plan was prepared, or LSS2, or reflected in the Chichester Transport Study. This is set out in DfT WMS 01/22. This document is the policy of the Secretary of State for Transport in relation to the SRN which should be read in conjunction with the National Planning Policy Framework (NPPF). It replaces the policies in the Department for Transport Circular 02/2013 of the same title.

It makes plain that to accommodate additional demands arising from development, National Highways (NHC) expects to meet the requirements of its statutory license in a substantially different manner. With respect to development NHC LTN 01/22 continues to address the tensions between national policy for the environment and carbon mitigation, the ongoing need to substantially boost the supply of housing as well as maintain national economic competitiveness and protect the safety of the public. However, in future, the approach will be to seek first to maximise the impact of demand management measures (reducing the need to travel), and then to accommodate residual additional demands first though maximising the use of sustainable modes, rather than accommodating assumptions about current levels of car dependency and use.

LTN 01/22 much more closely and explicitly aligns with the language of NPPF Chapter 9 paragraphs 104-106. Paragraph 12 states: "New development should be facilitating a reduction in the need to travel by private car and focused on locations that are or can be made sustainable.... Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas." (our emphasis).

It continues at paragraph 13: "where developments are located, how they are designed and how well delivery and public transport services are integrated has a huge impact on people's mode of travel for short journeys. The company will therefore expect strategic policy-making authorities and community groups responsible for preparing local and neighbourhood plans to only promote development at locations that are or can be made sustainable [footnote 8] and where opportunities to maximise walking, wheeling, cycling, public transport and shared travel have been identified." (again, our emphasis)

Stagecoach readily confirms that the draft Plan development strategy conforms well to the first limb of this expectation, in terms of the location of development.

Stagecoach considers that the plan and its evidence base conforms poorly to the second in that the specific opportunities to maximise walking, cycling wheeling and public transport are not clearly identified, and defined, and proven to be effective and deliverable.

The current mitigation strategy for the A27 Chichester area, supporting the adopted Local Plan and for which proportionate developer contributions have and continue to be sought, reflects now-superseded DfT Circular 02/2013. As a direct result, it failed completely to identify any significant effective bus priority measures, despite the fact that frequent services already exist on the key corridor concerned, and that one bus journey can remove, fully seated between 72 and 80 single occupancy car journeys from congested links and across key junctions on the A27. Rather, it sought to implement targeted measures to increase the throughflow of general traffic.

We recognise the realisation that this approach, which was already reliant on some tenuous logic, is simply not technically viable, especially where further development needs are anticipated.

National Highways will now pursue an approach with the planning system that “includes moving away from transport planning based on predicting future demand to provide capacity (‘predict and provide’) to planning that sets an outcome communities want to achieve and provides the transport solutions to deliver those outcomes (vision-led approaches including ‘vision and validate,’ ‘decide and provide’ or ‘monitor and manage’). The company will support local authorities in achieving this aim through its engagement with their plan-making and decision-taking stages.” (paragraph 15).

Paragraph 23 is at the fulcrum of assessing and defining transport mitigations to accommodate growth on and near the SRN “Capacity enhancements such as modifications to existing junctions or road widening to facilitate development should be determined on a case-by-case basis. The general principle should be accepted where proposals would include measures to improve community connectivity and public transport accessibility, and this will be weighed against any negative safety, traffic flow, environmental and deliverability considerations, impacts on the permeability and attractiveness of local walking, wheeling and cycling routes, and alternative options to manage down the traffic impact of planned development or improve the local road network as a first preference.” (our emphasis).

However, no material work has been done that seeks to identify if a bold robustly conceived and suitable judiciously-prepared strategy that seeks to consolidate flows on already densely travelled corridor onto improved bus services, driving mode shift through insulating these services preferentially from already serious queuing. This would be likely to have very substantial impacts on all the key junctions on the A27, and potentially, on the A27 itself. The need for an integrated approach between Shoreham and Emsworth within West Sussex paying particular regard to development requirements in both Arun and Chichester Districts naturally lies at the heart of this, and we would expect to be picked up by the LSS3 Review among other things.

However, the locus of the problems and its causes and effects are obviously well enough known to start work on defining solutions within the plan area today. We would expect that this work will be essential if National Highways are to support the Plan, especially now given the terms of Circular 01/2022.

Such work could and should start from a “policy off” position: in other words that the Plan should fully accommodate its needs unless it can be proved that a mitigation strategy for the A27 that is compliant with DfT WMS 01/2022 cannot credibly accommodate resulting capacity demands without unacceptable impacts on the safety and efficient operation of the SRN.

This evidence does not exist. In fact the Chichester Transport Strategy 2023, on which the Council solely relies as its transport evidence base, indicates the opposite at para 5.6.3. This is the case before meaningful measures to secure damping of traffic demands through mode reassignment are even considered.

The exception to this is Portfield and Oving Road, which are among the most problematic areas after mitigation even at the Council’s chosen 535 dwelling/annum scenario (para 5.6.4.-5). The costly capacity mitigation simply cannot deliver enough benefit. It is admitted that WSCC has indicated that it would prefer a solution that places greater reliance on sustainable modes damping car-borne demand. This is entirely the strategy required by NHC to follow LTN 01/22, of course. Despite the fact that “predict and provide has “run out of road” no attempt has been made to examine what such a solution set credibly could look like. This is unsatisfactory and deeply troubling.

At paragraph 5.4 the draft plan points back again at the West Sussex and Greater Brighton Strategic Planning Board and the future work that has been commissioned, but has barely begun, to update the Local Strategic Statement. This work is to inform the preparation of plans that have horizons beyond the end date of the current LSS in 2030 and properly to meet the Duty to Cooperate. As we said in our response to section 1 of the Plan we fully endorse the conclusion that this is the right mechanism to look at these issues. However, the mechanism has not been effectively applied to the production of this plan. Therefore, the specific evidence that capacity on the A27 in and of itself supports accommodating a lower housing requirement does not exist.

The Plan thus does not conform to NPPF, is not adequately justified and is not effective.

The Plan does not properly meet the statutory Duty to Cooperate.

We will return to this matter in specific representations to Section 7 of the draft plan.

## 5.2. Policy H2 Strategic Locations/Allocations 2021-2039

## Stagecoach Supports

Policy H1 makes plain that the plan, as far as it identifies locations for development has done so in locations that conform with its spatial strategy. All of the strategic allocations to a greater or lesser extent offer clear opportunities to make use of sustainable modes, by virtue of their location. That is not to say that the opportunities to take up these opportunities, and maximise the role of sustainable modes, has been identified, defined and translated properly into the rest of the plan policy suite or Infrastructure Delivery Plan.

As our remaining representations make clear, we support the locations thus far identified as being those that offer the best opportunities to reduce the need to travel, reduce travel distances, and create high quality attractive sustainable travel choices, for both existing residents as well as new ones.

However, the transport impacts of the allocation will individually and cumulatively likely to lead to increasingly severe impacts on the transport network, and on bus services.

Perversely, because these opportunities are not properly identified and secured through the plan and its supporting transport strategy, the opportunities presented by the allocations to secure a substantially more sustainable and lower carbon pattern of movement will not only risk being squandered but may aggravate the wider problems.

### 5.3. Policy H3 Non-strategic Parish Housing Requirements

#### Stagecoach Supports

The approach is consistent with the plan's spatial strategy. It generally avoids a dispersal of development to locations likely to be highly car dependent. There is a clear focus on meeting housing needs in the far north-east of the District at the largest and most sustainable settlements, such as Loxwood, Kirdford and Wisborough Green. However, it must be pointed out that public transport availability in this area, provided by the County Council through services it procures, is minimal. These settlements in practice require each adult and child of secondary school age to have access to motorised transport to fully participate in society. This might justify significant measures to secure a boost in the frequency of bus services between Guildford and Billingshurst, passing through these settlements.

Otherwise, existing commitments in the plan area already make provision to meet for local needs. To the degree that there is an unmet local requirement for affordable housing of a small scale – for example to support the rural economy – this could be met through neighbourhood plans or through Rural Exception Sites.

## 6. Place-making, Health and Wellbeing

### 6.1. Policy P1 Design principles

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

NPPF requires that proposals should consider transport issues from the earliest possible stage. Designing to properly facilitate safe and efficient access, focusing first on sustainable modes, should be at the heart of development design. Too often it is still an afterthought, notwithstanding this.

Policy P1 must include an additional statement to be compliant and effective with NPPF paragraph 104-105 and 112 a): "Development will be designed to make access and movement using walking, cycling and public transport the natural first choice, and demonstrate through the Design and Access Statement how such modes are afforded the most direct, safe, reliable and efficient routes within to and from the proposals, especially when compared with car use."

### 6.2. Policy P4 Layout and Access

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

A number of proposals in the plan involve large-scale development. It is essential that where appropriate buses can access and circulate efficiently through development at a suitably early stage. There is no acknowledgement of this anywhere in the policy, contrary to NPPF paragraph 112.

Large-scale development which buses cannot access in an efficient or timely manner, or at all, strongly contributes to high levels of car-dependency. Evidence for this is referred to among other places, in DfT Circular 01/2022. To be compliant with NPPF and properly pursue its strategic Objectives, Policy P4 needs to be modified to address this point: "1. Provide safe, direct and attractive conditions for inclusive access, egress and active travel between all locations and providing as good direct high quality links to integrated public transport, and where appropriate efficient access and circulation to bus services, unimpeded by excessive parking, at a suitably early point in the development phasing;

## 7. Transport and Accessibility

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

The issues related to transport are fundamental to the soundness of the Plan. In particular, the constraints presented by the capacity on the A27 around Chichester and its key junctions, are the paramount reasons why the Council does not consider it can meet its objectively-assessed development needs in full. Thus, the transport issues and potential solutions available and what these mean for the ability of development needs to be accommodated, are matters that go to the heart of the soundness of the Plan.

Paragraph 8.3 sets out the approach taken to date succinctly:

"Increasing the capacity of the road network is key to supporting growth in the Local Plan. However, there is also a need to reduce demand for road transport to achieve net zero in greenhouse gas emissions by 2050 as highlighted in the council's Climate Emergency Action Plan and Strategic Objective 1. In aiming to achieve the ambitions of the action plan, all development is expected to demonstrate how it will support four key objectives to create an integrated transport network which will alleviate pressure on the road network, improve highway safety, encourage sustainable travel behaviours and help reduce transport related impact on air quality, by:

1. Avoiding or reducing the need to travel by car;
2. Enabling access to sustainable means of travel, including public transport, walking and cycling;
3. Managing travel demand; and
4. Mitigating the impacts of travel by car."

However, this approach is unambitious and "lightweight" as it assumes, as does the existing Chichester Transport Strategy on which the current adopted plan relies, that the focus of investment should be, wholly, in highways capacity improvement.

Sustainable modes explicitly are expected to play a greater role to "alleviate pressure" on the local road network, as part of this strategy. To emphasise: to avoid exacerbating congestion, the strategy will have to both remove a significant proportion of existing demands from the network on multiple key approaches to Chichester; and then ensure that travel demands from committed and further new development allocated in the plan does not simply replace these journeys, or, worse, create even greater demands.

This will demand very significant behaviour change. Only by making sustainable modes substantially more attractive, both absolutely, and relative to the same journey made by car, can this be expected to occur. However, the explanatory memorandum as well as the wider policy suite and IDP, well expresses a fundamental unwillingness to taking specific, defined measures to achieve this reduction in car use and material promotion of sustainable modes. It makes plain that sustainable modes, including bus services, will offer a lesser role to which "access will be provided".

Such a vague and weakly defined mechanism will have no effect, at all, on current behaviour and car dependency if the relevance of those choices as a credible alternative to car use, is not substantially boosted. This includes a 5% reduction in trip demand assumed by the Traffic Model at the heart of the Chichester Transport Study 2023.

For this reason. the transport strategy behind the current adopted plan is demonstrably ineffective, as the updated model makes plain. It has not yet been delivered and is yet unclear when or (in the absence of committed funding) even if it can be. It is ineffective to "roll forward" this strategy to support a higher level of planned growth.

We note that a scheme for addressing congestion on the A27 at Chichester has been included in Roads Investment Period 3 (2025-2030) – well within the horizon of this Plan. However, recent history provides compelling evidence that off-line improvement to the north is not politically supported and arguably even technically or economically deliverable. It is not funded, nor at this stage can it be hypothesised if an economically deliverable scheme is achievable sufficient to warrant the necessary investment.

An on-line improvement of the A27, including junction improvements, is likely to favour longer distance east-west though movements, which are of greater significance to the national economy, at the expense of local movements crossing the SRN- a conundrum that largely sums up the dilemma that is faced by NHC and the County as Highways and Transport Authority. It is one that is played out in many places, but rarely is the tension so stark as at Chichester.

Every local route crossing the A27 at grade around Chichester accommodates a regular bus service - or shortly will do (Oving Road area is expected to follow in 2023, though bus services are likely to not use the modified crossroads but to use the left-in-left-out facilities provided as part of the Shopwhyke Lakes development). The impact of these issues on the entire bus operation are serious and increasingly severe.

By the same token, boosting the relevance and reliability of each of these services substantially consolidating as much demand as possible onto a much smaller number of vehicles, is clearly a strategy that ought to support the effective capacity of each of these junctions being greatly augmented, at the same time as reducing equally substantially, the energy- and carbon intensity of mobility in the plan area. Addressing the A27 should not be considered some kind of

“zero-sum” game.

Furthermore, the approach of National Highways in its dealings with development and the planning system now reflect a substantial change in Government Policy set out in DfT Circular 01/2022, which we separately cover in these representations, that entirely aligns with an approach that seeks to appropriately invest in more active and rational management of scarce highways capacity, on both the SRN and local roads.

For environmental, economic and social reasons – including public health, the issues presented by the A27 and its interface with local roads around Chichester stands out, nationally, as an example of where the approach taken to accommodating and mitigating development impacts needs to make a clear break with previous “predict and provide” approaches to meet forecast unconstrained car use as LTN 02/2022 makes clear as a principle. Policy in the West Sussex LTP to 2036 itself makes plain that “shared mobility” – including bus services – must play a much greater role in this area.

The existing Chichester Area Transport Strategy is focused on justifying capital contributions from committed development to fund highways capacity improvement – with nothing included to make bus services more attractive, or importantly more reliable. Indeed this “cars first” approach is so costly, that there is already accepted by WSCC to be insufficient land value remaining to be captured to put into substantial improvements for public transport. That much is very evident, and transparent, from paragraph 8.12 and 8.14, where south of Chichester “This (one) package of works (of several improvements needed) would be between £57.23 and £82.79 million to deliver in full and would not be capable of being funded by development contributions alone.” This assumes the scheme is otherwise deliverable, which on the evidence in the public domain for some time, has been considered challengeable.

The draft Local Plan and a modestly updated infrastructure package that flows from the 2023 Chichester Transport Study, pursues exactly the same approach.

This strategy is also even more ineffective having regard to the roll forward of the Plan to 2039. It cannot deliver the key Strategic Objectives of the Plan; and in particular this is explicitly recognised by the Council in the failure of the draft Plan to accommodate the OAN in full.

It is also obsolete, as it does not align, from first principles, with national policy (including the National Decarbonisation Strategy for Transport) and DfT Circular 01/22; nor the Council’s own declared Climate Emergency.

As a result, draft Policies T1 and T2 are both unsound, as we will separately explain.

Owing to the lack of evidence about the implications of this for adjoining authorities – especially Adur District – in the absence of the review of the Local Strategic Statement – this has implications for fulfilling the Statutory Duty to Co-operate.

The absence of any meaningfully comprehensive refresh of the transport evidence base means that there are no meaningful schemes of any kind, defined in the plan or its IDP, to indicate either what level of growth can be accommodated, by delivering a change in travel behaviour. This would be aimed to secure a sufficient effective increase in junction throughput (measured in terms of person trips as opposed to passenger car unit movements (PCUs)). Such evidence would propose measure to achieve that outcome and assess the efficacy and costs of such improvements, across all modes.

Paragraphs 8.10-8.13 inclusive indicate that the Council “has moved away from ‘predict and provide’” and invites the reader to conclude this has translated into a programme of interventions that can be funded to deliver specific, credibly predictable outcomes. Such a programme should be clear in paragraph 8.11. and the IDP. There is no such clarity and this conclusion would be false.

It would also be evident in the language of the Chichester Transport Study 2023 and its refreshed proposals. Only the most token of lip service is paid to the matter. It is a plainly car-focused, predict and provide methodology to support a “predict and provide” strategy. In fact, it is a brazenly car-focused approach, to the exclusion of all else.

The statements in the Plan regarding any other approach, read properly, offer nothing more than a vague commitment to look post-adoption, and implementation, at unspecified measures, based on problems that may arise in future that will be decided by a committee: the Traffic and Infrastructure Management Group (TIMG). This does not yet exist and is obviously an attempt to posit a mechanism that retroactively will cover for the lack of serious multi-party engagement to address the existing and future issues. Such a group should, in our view, also include the public transport operators, not least if the requirements of NPPF Para 106c) are to be satisfied, and the strategy and measures to be adopted are material to supporting the Local Plan, as of course the purpose of the TIMG has as its core *raison d’être*.

The approach proposed by the draft plan is plainly ineffective and unsound in justifying the draft Plan.

It is more widely unacceptable to Stagecoach. The issues are severe today and well-known, already serving to jeopardise the delivery of buses relied on by existing residents, much less attract new ones.

We also consider that HM Planning Inspectorate are likely to be quite resistant to accepting this aspect of the plan's transport strategy, nor will it be appropriate for the Council, West Sussex County Council, or National Highways, to define such measures after the submission of the Plan during the Examination process. The Examination in Public of a local plan has no purpose to improve plans, or remedy deficiencies clearly evident prior to submission.

The examination of the West of England Joint Strategic Plan in 2019, and the Uttlesford Local Plan in 2021, among several others, demonstrates especially clearly that the Planning System and the Examination process is not amenable to post-hoc retrofitting of transport evidence and strategies to support a development strategy.

#### 7.1. Transport Evidence Base

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Most of Stagecoach's serious concerns about the soundness of the plan arise from the fact that it has been prepared in advance of any up-to-date transport evidence and suitably robust transport mitigation strategy being advanced to support it. In essence, the Council has rolled forward the existing plan by 9 years, adding some additional sources of housing supply, while still relying implicitly on a transport evidence base that was prepared 10 years ago.

This led to the formulation at that time of what can only be described as an attempt to develop an effective car-based mitigation strategy, creating capacity for general traffic added to accommodate unconstrained additional demands on an already over-taxed highways network – the Chichester Area Transport Strategy. Despite language in support of sustainable modes, no deliverable measures were identified to support either the extension of the bus network to serve allocated sites, and much less to create a vital improvement to the quality and reliability of public transport services. This approach reflected the approach set out in DfT Ministerial Circular 02/2013 "Development and the Strategic Highways Network", applicable since the A27, which is the focus of the most severe difficulties, forms part of the national Strategic Roads Network.

This approach has proven ineffective even before substantial elements of housing land supply in the current plan come forward – in particular West of Chichester and West of Tangmere.

In addition, Circular 02/2013 has now been replaced by a new Ministerial Statement of 23/12/2022, DfT Circular 01/2022.

On both counts the transport evidence base and strategy needs to be properly revisited and established to provide effective mitigation for the plan, including current commitments that are being rolled forward.

The language of the current Ministerial Circular 01/2022 offers a highly condensed synoptic view of the proper approach to addressing transport matters in the planning system notwithstanding that it is directly concerned with the Strategic Roads Network. Videlicet:

"31. The NPPF expects local plans and spatial development strategies to be underpinned by a clear and transparent evidence base which informs the authority's preferred approach to land use and strategic transport options, and the formulation of policies and allocations that will be subject to public consultation. The company will expect this process to explore all options to reduce a reliance on the SRN for local journeys including a reduction in the need to travel and integrating land use considerations with the need to maximise opportunities for walking, wheeling, cycling, public transport and shared travel.

32. The Transport Decarbonisation Plan indicates that carbon emissions from car and van use is the largest component of the United Kingdom's total transport emissions. While action is being taken to decarbonise transport such that all new cars and vans will be fully zero emission at the tailpipe from 2035, the proposed location of growth in current plan periods and whether new developments would be genuinely sustainable remain important factors in demonstrating that a local authority area is on a pathway to net zero by 2050 and therefore compliant with the requirements of the Climate Change Act 2008.

33. Alongside this, the local authority should identify the key issues within their study area regarding transport provision and accessibility, setting out how the plan or strategy can address these key issues in consultation with (National Highways, and other transport stakeholders identified in NPPF paragraph 106b). It is the responsibility of the local authority undertaking its strategic policy-making function to present a robust transport evidence base in support of its plan or strategy. The company can review measures that would help to avoid or significantly reduce the need for additional infrastructure on the SRN where development can be delivered through identified improvements to the local transport network, to include infrastructure that promotes walking, wheeling, cycling, public transport and shared travel. A robust evidence base will be required, including demand forecasting models, which inform analysis of alternatives by accounting for the effects of possible mitigation scenarios that shift demand into less carbon-intensive forms of travel." (our emphasis)

Within the text quoted above, references to National Highways and “the Company” can quite legitimately be extended, given the statements in NPPF paragraph 16, 25, 26 and 106b, to include all the relevant transport infrastructure and service providers in the plan area. Circular 01/2022 also has the weight of secondary legislation as a Written Ministerial Statement and thus should be considered to be highly material.

To date there has been little attempt to explore, to the degree necessary, strategies that conform to Circular 01/2022. It is thus not possible to conclude, as the Council has done, that the issues on the A27 that present a constraint to development, are insuperable.

In line with comments made elsewhere in the response to this pre-submission draft, the Plan thus requires substantial further work to be undertaken with key stakeholders to establish a suitably effective and demonstrably deliverable transport mitigation strategy, to sustainably meet the District’s identifiable development needs and where apparent and appropriate, also ensure that wider cross boundary strategic issues are appropriately addressed, in conformity inter alia, with the Duty to Cooperate, NPPF paragraph 16 and 104-111 inclusive, and DfT Circular 01/2022 and to ensure the Plan’s own Strategic Objectives can be met.

## 7.2. Policy T1 Transport infrastructure

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

As described in comments elsewhere, Stagecoach does not see that a suitable proportionate and up-to-date basis exists to properly and appropriately address the transport issues in the plan area.

The 2023 Transport Study does not perform this role adequately but, contrary to the explanatory memorandum, is a scheme intended only to facilitate car-borne movements through some of the key junctions. There is no evidence that an holistic integrated and strategic approach to transport mitigations has been prepared. Certainly Stagecoach has not been involved in any of the discussion about appropriate transport measures in support of the plan, including the Transport Study 2023, contrary to the expectations set out in NPPF at paragraph 16 and 106.

Notwithstanding out fundamental concerns about the transport evidence case and mitigations strategy, Policy T1 reflects a weak and ineffective approach, that seeks to try and define a strategy post-adoption.

Contrary even to the explanatory memorandum for the policy, which seeks to maximise the contribution of sustainable modes, the policy is phased in such a way that it gives basis for previous “predict and provide” solutions to facilitate and support current levels of car dependency – already shown to be undeliverable and unaffordable – will nevertheless be the first rather than the last resort. There is no commitment to seek to maximise the contribution made by sustainable modes to meeting mobility needs. Nor is there any recognition that current chronic congestion and lack of network resilience jeopardises the ongoing attractiveness and long-term sustainability of the current public transport offer.

To be effective and create alignment with national policy, and also provide for an up-to-date transport evidence base and strategy to be adduced, Policy T1 should be modified to read:

“Integrated transport measures will be developed to mitigate the impact of planned development on the highways network, improve highway safety and air quality, promote more sustainable travel patterns and through providing in the first instance, new and improved infrastructure and services that will be credible effective in maximising the encourage increased use of sustainable modes of travel, such as public transport, cycling and walking.

To achieve this, the council will work with National Highways, West Sussex County Council, other transport and service providers (including through the Traffic and Infrastructure Management Group) and developers to provide a better integrated transport network and to improve accessibility to key services and facilities...

All parties, including applicants, are expected to support these objectives by:

1. Ensuring that new development is well located and designed to avoid or minimise the need for travel, encourages maximises the use of sustainable modes of travel as an a credible alternative to the private car and directly provides or contributes towards new or improved transport infrastructure;
2. Working with relevant transport infrastructure and service providers to improve accessibility to key services and facilities with primary emphasis on sustainable modes, and to ensure that new facilities are easily accessible by sustainable modes of travel;
3. Targeting investment to provide local travel options as an that represent a clearly credible alternative to the car use, focusing on the delivery of improved integrated bus and train services, and improved pedestrian and cycling networks, including the public rights of way network, based on the routes and projects identified in the Local Transport Plan, West Sussex Bus Service Improvement Plan, Local Cycling and Walking Infrastructure Plan (LCWIP) and the Infrastructure

Delivery Plan;

4. Planning to achieve the timely delivery of transport infrastructure on and approaching the A27 and elsewhere on the network, needed to support new housing, employment and other development identified in this plan;
5. Phasing the delivery of new development to align with and where possible facilitate the provision of new and improved transport infrastructure and services and the outcomes of monitoring travel demand on the network, including that arising from areas immediately adjoining the plan area. It may also be Where necessary to achieve this alignment proactively phase development will be phased to take into account the monitoring and effectiveness of travel plans demands on the network and to ensure that measures are implemented to support the highest possible level of encourage sustainable travel behaviour.;
6. Using demand management measures, such as travel plans, to manage robust methodologies to assess travel demand and minimise the need for new or improved transport infrastructure as part of the monitor and manage process.
7. Delivering a coordinated package of infrastructure improvements at and approaching to junctions on the A27 Chichester Bypass along with other small-scale junction improvements interventions within the city and elsewhere, as identified through the monitor and manage process. These will increase road capacity, reduce traffic congestion, improve safety and air quality, and improve access to Chichester city from surrounding areas, first by maximising the contribution of sustainable modes to meeting mobility demands, then, and only as evidenced by robust modelling and option testing, providing increased highway capacity for general traffic.

..."

### 7.3. Policy T2 Transport and Development

Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Section 1 b) of T2 will be ineffective as, absent measures to ensure buses can run reliably and efficiently, improved bus services will not be possible, in support of the plan's own stated broad approach to transport mitigation, as well as wider local and national policy.

The draft policy does not require improvements to the quality of services such that sustainable choices will be materially more attractive than car use for many local journeys. Without this the Plan's Strategic Objectives cannot be fulfilled and the objectives of the Plan and this policy, read in its own terms, will not be realised, where reduction in private car use is concerned. It is thus ineffective.

Absent measures to make bus services more reliable and more efficient, by insulating them from chronic congestion as far as possible, still further operating resource and therefore costs, will be needed to just to reliably run existing service frequencies, and capacity, as vehicle productivity continues to be more and more adversely affected by chronic delay. This will be further aggravated by increasing incidence of severe unpredictable service breakdown arising from incidents of diverse kinds on the network, especially on or around the A27, including that arising from more regular severe weather events. Longer journey times can only be expected to lead to relative disadvantage of bus services compared to personal car use, entirely contrary to the objectives of national and local policy, including Policy T1. It can also expect to lead to a dampening effect not on car use, but on bus patronage, threatening the ongoing viability of bus services across the plan area.

Section 1 b) of T2 should be modified to read:

"b) Maximise opportunities for the use of sustainable travel modes through provision of direct and efficient access both to either the existing networks or and through providing such new infrastructure or public transport services, as can be credibly expected to reduce reliance on the private car and work towards achieving net zero in greenhouse gas emissions by 2050;"

Section 1 d) of T2 will be ineffective as the location of development is fixed by this plan. We commend the fact that all the strategic allocations are or will be served by regular bus services.

However, the use of public transport services, where available, depends on the relevance and reliability of these services. Furthermore, provision of services without them generating sufficient patronage to support their long-term operation also threatens the sustainability of the plan and its supporting transport strategy. This is especially true of new services such as those intended to serve West of Chichester and Tangmere and East of Chichester Strategic Allocations.

This can only be assured by the plan being supported by specific measures to ensure buses can operate efficiently and reliably on the existing and projected services intended to serve the developments concerned, and also at the same time secure behavioural change from existing development.

To be sound and effective, the policy T2 1 d.) should be changed to read:

"d) Ensure major development is located to proposals and the supporting mitigation measures enable the use delivery of

high-quality, reliable and effective public transport to present the most relevant possible choice to access local services and facilities including employment, leisure and education facilities”;

The Policy T2 makes no provision for buses, where necessary, to enter and make efficient and safe progress through major development sites. The plan is thus out of conformity with NPPF paragraphs 104-106. It makes no provision to ensure that penetration of bus services is achieved at a suitably early point in the development trajectory, undermining the achievement of the goals of the Plan and this specific policy. As a good example, West of Chichester Phase 1, currently under construction, cannot be served by buses as a strategy to effect interim bus penetration was never made.

Policy T2 1 f.) should therefore be amended to read:

f) Ensure that the layout and design of the site development proposals provides effective penetration of the site by sustainable modes, at all points in the development build-out, including public transport where appropriate; and sufficient space for all vehicles to manoeuvre without compromising the safety of pedestrians and cyclists, the efficiency of bus services, or the ability to provide an appropriate level of landscaping across the site”

Policy T2 3.) regarding Travel Planning depends entirely on its effectiveness on the quality and relative attractiveness of sustainable alternatives over car use. In the absence of efficient frequent, reliable and direct public transport services (or similarly, high quality facilities for active travel, Travel Plans will continue to be the entirely ineffective “tick box” exercises that they generally are today, evidenced by much lower levels of public transport use in most new developments than it seen in nearby established neighbourhoods, as demonstrated broadly by Census data in 2011, 2011 and 2021.

For this policy to be effective an up-to date transport evidence base and strategy, underpinning a series of specified interventions to promote the relevance and effectiveness of all sustainable does including public transport in particular, needs to be put in place.

#### 8. Chapter 9 Infrastructure – Policy I1 Infrastructure provision

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Policy I1 could not expect to be effective without a clear understanding of the effectiveness and costs of a defined series of measures that are laid out in this Plan and its IDP, to mitigate the transport impacts of the development strategy.

Where the Chichester Transport Study is concerned the only meaningful work has focused on the definition and delivery of a range of highways capacity schemes mainly on the A27 around Chichester.

As we have discussed elsewhere the effectiveness of these schemes is insufficient as set out at Tables 8.1 and 8.2 of the Chichester Transport Study 2023. The plan itself admits that the deliverability of this package cannot be afforded by developer contributions alone.

The Chichester Transport Study 2023 does not attempt provide a realistic assessment of costs to deliver these schemes, despite the fact that they have been under evaluation for many years. Nor does it offer any assurance that the schemes are technically achievable. Rather, it states the opposite:

“9.2.3 No investigation has been carried out into specific land ownership details, or into the location details or cost of moving statutory undertakers and utility apparatus within the areas of the scheme. No design assessments were carried out at this stage to ascertain the deliverability of the proposals except where any Health and Safety concerns were raised.”

Thus on the grounds of effectiveness, deliverability and affordability, the measures on which the Plan relies must at the very least be considered to involve an exceptionally high level of risk. Since Policy I1 is founded on these assumptions, it cannot be considered effective.

As we set out elsewhere, the Plan has been advanced on the basis that if any additional sustainable transport measures are required, these mitigations should be retroactively considered and defined after adoption of the Plan. In the light of the doubts that are apparent of both the deliverability, affordability and effectiveness of the Chichester Transport strategy this is especially unsatisfactory even if existing baseline conditions were reasonably acceptable.

However, the Chichester Transport Study 2023, as did its predecessors, makes plain that that existing problems are acute, and can rightly be considered “severe” in the sense of NPPF paragraph 111. Waiting to define deliverable affordable alternatives is an entirely inappropriate approach to the local plan transport mitigation strategy. Such an approach also makes it impossible to consider prior to adoption how far the transport impacts of the plan can be cost-effectively mitigated by alternative means, or whether they are deliverable having regard to technical achievability, land control, development viability, or any combination of the above. Thus, the plan cannot be considered justified, or effective.

Given the mutual dependence of development strategies in Chichester and Arun in particular on these measures this should be seen as crucial of the fulfilment of the Duty to Cooperate.

The remedy for this is ultimately to put in place a suitable transport mitigation strategy following a strategic appraisal of options through review of the LSS. This then must be supplemented by more detailed development specific and localised scheme definition, including, where necessary, bus priority and other measures to support the substantial promotion of the attractiveness of public transport in key bus corridors over private car use. This would then be reflected by costed proposals in the IDP.

Leaving these fundamental weaknesses to one side, even if such a strategy and mitigation package were defined, there is no mention of public transport in the policy even though it is clearly a key part of the policy environment and mitigation strategy for the plan as expressed in the explanatory memorandum for I1, but also at Policies T1 and T2. I1 thus does not effectively support the realisation of the intent of Policies T1 and T2.

Policy I1 iii) should therefore be modified to read:

“(iii) Safeguard the requirements of infrastructure providers, having regard to requirements within and where appropriate across the boundaries of the plan area, including but not limited to:

...  
 • Highways including specific measures to accommodate improved active travel and public transport level of service and cycle lanes, and...”

At limb v) the Policy expects developers to meet the “in perpetuity costs of operating and maintaining infrastructure”. This shackles development management decisions to developers assuming what are infinite costs – given that “in perpetuity”, read properly, can only mean “without any limit in time”. This means that it is impossible to meet the statutory tests on developer obligations set out in the Community Infrastructure Levy Regulations 2010 (as amended) at Regulation 122, also repeated in NPPF. This policy cannot be lawfully implemented and it is thus ineffective.

In the absence of an up-to-date transport mitigation strategy that is fit for purpose, at the point the Plan is examined these costs of any additional infrastructure are not known in any case. The strategy and its costs, including its affordability and deliverability, are crucial to assessing if the Plan is sound.

Subject to an appropriate defined transport mitigation strategy being arrived at, to be sound, the Policy I1 v) should be modified as follows:

(v) To consider and meet as appropriate the in-perpetuity delivery costs of infrastructure and, where appropriate, improved services, to the point where its long-term operational sustainability is credibly assured from mainstream sources. Where adoption is not envisaged by local authorities, that must include arrangements for its future ongoing management and maintenance;

## 9. Strategic and Area Based Policies

### 9.1. Policy A1 City Centre Development Principles

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Chichester City centre is rightly identified at 10.2 and 10.4 as the commercial and service hub of the District. It is also acknowledged to be the most accessible place in the District by sustainable modes, public transport in particular.

Boosting the vitality of the city centre is something that Stagecoach strongly supports. Irrespective, the enhancement of the commercial and cultural life of the District in the place where these opportunities can be accessed broadly by sustainable modes, is one that has long been at the heart of national planning policy for town centres, reflected in the “town centre first” approach to locating major trip generating uses.

Paragraph 10.5 exposes an unbalanced and unsound preoccupation with aesthetic matters in its approach to the town centre, and far too little to ensuring that the central place function is enhanced through protecting and enhancing the quality of public transport access.

The city is relatively small but at the heart of an extensive hinterland, and thus the role of bus in supporting sustainable access to and enhanced city centre venue is one that needs appropriate recognition and emphasis. It is important to note that a dominant number of key service and facilities such as the General Hospital are relatively close to the city centre. This directly contributes to driving travel demand into the city, causing congestion. Most importantly, it also makes the task of mitigation simpler, given the impact a suite of active and sustainable measures can have within the same close proximity.

Policy A1 does not provide this. As such, achieving the strategic objectives of the plan is seriously threatened, and the plan is thus not effective.

The Plan needs to ensure that the approach to city centre regeneration maintains and enhances public transport access, interchange and inter-modal connectivity. It also needs to ensure that bus service stopping and interchange facilities are able to address increases in future demand, anticipated by the clear intent expressed elsewhere in the Plan that public transport should be meeting a greater proportion of mobility needs, in a growing district. Achieving this demands an ambitious approach to the location, quality and capacity of bus stop and interchange.

We have been in discussions with the District Council about this, alongside West Sussex County Council, for a very considerable period. Stagecoach has always been keen to help facilitate the Council's aspirations for the city centre, and we continue to hold this intention. However, this cannot be at the expense of a material diminishing of the convenience and fitness-for-purpose of bus stop infrastructure and interchange. Stagecoach has significant concerns that current proposals to remove the bus station and have all bus services operate from the street kerbside, on an inner distributor road with similar or reduced net stop capacity, fall short of promoting attractive, convenient bus access to the central area as a destination.

For the longer term and where the objectives of the draft plan are concerned looking ahead to 2039, they clearly fall short of enhancing the convenience and attractiveness of public transport use. Much less do they make sufficient provision for a material increase in bus frequency, connectivity, and interchange convenience, on which the draft plan explicitly relies. It is vital that the District Council is clear in policy about its objectives for public transport in the city centre. These objectives must also carry sufficient weight when held in tension with other aspirations for the centre and the constraints on achieving them.

For the Plan to be sound, properly effective and compliant with NPPF, the approach to the City centre cannot ignore its role in the provision of sustainable transport service and connectivity.

Policy A1 should therefore be modified to properly reflect this crucial function, on which the vitality of the city centre must increasingly depend if unacceptable impacts on congestion, air quality and amenity are not to arise. This is still more crucial if wider aspirations to secure a more sustainable society and mitigate carbon are to be achieved.

"...This will include provision for development and proposals that:

- Support and strengthen the vitality and viability of the city centre and its role as a shopping/visitor destination, employment centre, public transport hub and a place to live;
- Support and promote facilitate improved access to the city and with increased emphasis on sustainable modes of travel, with particular regard to enhancing the public transport interchange role of the city centre area, in accordance with the transport strategy for the city and..."

9.2. Policy A3 Southern Gateway Development principles Chichester Bus Station, Bus Depot and Basin Road Car Park Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

There has been aspiration to redevelop the bus station and nearby bus depot from many years. Stagecoach has been engaged with detailed discussion with the District Council on this matter over a very extended period. We confirm that these discussions have reached a relatively mature stage, however at the time of writing are not concluded.

Stagecoach recognises and supports in principle the Council's wider aspirations for the "Southern Gateway", and this has governed our approach to the Council to date. We continue to have no "in principle" objection to relocating our administrative, engineering, operational and customer service facilities.

Leaving our proprietary interests entirely to one side, it remains vital that in so doing, the effectiveness, attractiveness and convenience of these facilities is not compromised, as we have outlined in our representations to Policy A1, if wider national and local transport policy, and the local plan strategy itself, are to be effectively achieved.

The depot is crucial infrastructure to support the safe, reliable and legally-compliant operation of Stagecoach bus services over a very extensive area covering the entirety of the District and beyond. Without securing equivalent facilities, that are fit-for-purpose, many of our services would have to cease.

If buses are to provide a greater and more attractive level of service (still more so if they are to be electrified) larger, more capable depot facilities, and city centre bus interchange facilities will be necessary.

Notwithstanding that the bus station and depot sites are leased from the District Council, these leases terminate well beyond the end of the plan period.

Finding suitable sites for a replacement bus depot in Chichester, in common with all similar localities especially in

southern England, is extremely challenging. As a sui generis use, bus depots do not automatically benefit from policy support on land allocated for employment uses. Most bus depots benefit from being legacy assets established under very different economic conditions. That is the case here. The value of a depot site for redevelopment net of demolition and remediation costs, rarely approximates to that able to sustain the acquisition of land in a tight wider employment land market, and the construction of suitable new facilities.

Furthermore, the costs of operating bus services are sensitive to the parasitic costs of vehicle and staff hours and mileage associated with “dead running” to a remote depot location from the operational network. Here, the existing depot site is ideal, and any replacement will unavoidable add ongoing operational costs to the operation that cannot be directly recovered.

We confirm that a replacement depot site has been identified and has in principle been agreed, subject to overcoming issues with the disposition of existing and future structures on the site. However, the site is recognised as not capable of accommodating meaningful operational expansion. This is just one of the most important foundational reasons why a positive transformation of bus productivity needs to be achieved, across the plan area and beyond, to support delivery of greater bus mileage and frequencies with the same level of operational resource. At the time of writing, we are not fully convinced that the proposals for the relocation will be sufficiently fit-for-purpose in the event the above is not achieved. Thus, we must raise a concern that the bus depot site might not be available during the plan period. While there is a strong probability it will be, the certainty surrounding the availability of the site, especially within the first 5 years of the plan, needs to be made transparent.

9.3. Policy A4 Southern Gateway - Chichester Bus Station, Bus Depot and Basin Road Car Park  
Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Regarding the removal of the bus station, without equivalent replacement, Stagecoach has significant concerns. Pressures and conflicts at the current bus station site have been gradually rising for several years, arising from increasing use and the need for additional scheduled vehicle layover periods to reduce the risks of accumulated late running from traffic congestion. Peak passenger volumes have recovered strongly on several routes, however passenger accumulations resulting from more frequent delays and disruption have added substantial further pressure on limited space.

Under current plans, buses and bus passengers will be displaced to bus stops at new locations outside the city centre, along Avenue de Chartres. This road was always intended to be a relatively high-speed traffic route, outside the historic core of the city. The city centre has evolved in the subsequent years to reinforce already strong natural severance, with the highway lying beyond the city walls and the green space along the Lavant. It is a traffic dominated, un surveilled and unattractive environment, reflecting the intended function of the road as an efficient movement corridor for high traffic volume, and nothing more. Avenue de Chartres is relatively close to the rail station and pedestrian connectivity can be provided at broadly equivalent distance to the current bus station, but again it is un surveilled and currently unpleasant, lacking natural legibility or any sense of prominence.

We understand kerbside capacity on Avenue de Chartres will be strained even to accommodate current levels of service, with no expansion possible. There is therefore a strong probability that to accommodate more frequencies and key new routes, such as West of Tangmere, East of Chichester and West of Chichester allocations, additional future bus stops must occupy a different location. This makes interchange between routes and rail services substantially challenging and less attractive.

The emerging arrangements risk marginalising public transport and public transport users substantially. This strongly undermines achievement of the wider plan objectives and delivery of a significantly greater role for public transport. If substantial public transport growth is to be accommodated in a growing city and hinterland, as the draft plan anticipates, then a more ambitious strategic approach must be taken. This should plan for additional and improved facilities to accommodate all services predicted to be required, whilst enhancing the passenger experience to ensure meaningful and attractive modal choice.

There is therefore a need for the plan to evidence how these issues will be appropriately resolved, having regard to a suitably ambitious approach that properly supports clear objectives to boost the relevance of public transport. The current policy is weak, un specific and indifferent to achieving the strategic objectives of the plan, including a transport strategy in support of the plan, and as such it is ineffective.

Policy A3 should therefore be modified to read:

“ ...

- Be designed to encourage and facilitate substantial increase in the use of active travel and public transport to, from and through the city centre.

...”

In line with the commentary above Policy A4 should also be modified to read:

3. Enhance the public interchange function of the immediate area, the public realm, particularly connections to the railway station and the city centre via South Street, Southgate and Basin Road for pedestrians, cyclists and public transport users, and to National Cycle Route 2 and Route 88 which run close by. Suitable replacement bus stops and layover facilities should be provided to replace those at the bus station in line with reflecting the objectives of the West Sussex Bus Service Improvement Plan, and to facilitate growth to meet the requirements of the plan's development strategy. Routes and crossings should reflect pedestrian desire lines, and public art should be incorporated to create a sense of place;

4. Enhance the public realm, in support of this and wider objectives, incorporating public art and other measures to create a strong and attractive sense of place.

...(renumber remaining points)

#### 9.4. Policy A6 Land West of Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

This is an existing Local Plan allocation. The public transport strategy for the site depends on the delivery of the second phase which Stagecoach notes is the subject of several applications now awaiting review and determination by the Council.

The site represents a compact form of development adjoining the city, as the most sustainable settlement, meeting housing needs close to where they arise, and affording very good opportunities for the use of sustainable modes, especially walking and cycling.

It is vital that a bus service is delivered to serve the site at the earliest potential. This was anticipated to be at the start of Phase 2 and will require the early delivery of the entire length of the spine road between the Old Broyle Road and Westgate and making it available for bus services.

It is not clear if the costs of pump-priming the service mentioned in the draft policy are anticipated to be met by the developer. Without such funding, the service will not be deliverable as years of losses will never credibly be covered from future profit. It is likely that the current wording will be interpreted by the developer as meaning that they have no such obligation binding upon them. Not does policy set out any specification for this service, thus its costs and the basis for securing developer contributions does not exist.

As such any wider transport strategy, that seeks to secure a greater role for the use of public transport, and the aspiration for this allocation cannot demonstrably be met. The policy is ineffective.

Policy A6 should be modified to read:

"...

10. Make provision to accommodate and secure delivery of for regular bus services linking running through the site to Chichester city centre operating at least every 30 minutes Monday-Saturday, and new and improved cycle and pedestrian routes linking the site with the city,

..."

#### 9.5. Policy A7 Land at Shopwhyke

Stagecoach Supports

This is an existing Local Plan allocation, largely built-out, that benefits from an existing set of permissions.

The public transport strategy for the site depends on the delivery of effective bus priority at Oving Crossroads. The current recently implemented scheme, undertaken by National Highways, makes no provision for effective bus priority and needs considerable re-evaluation.

The site represents a compact form of development adjoining the city, as the most sustainable settlement, meeting housing needs close to where they arise, and affording very good opportunities for the use of sustainable modes, especially walking and cycling. It lies on a new bus corridor that will shortly be put in place, running to Tangmere via Shopwhyke. The allocation is being significantly consolidated by further development in the immediate vicinity which strongly supports the potential for this new service.

As we explain in our representations for East of Chichester proposed allocation A8, and West of Tangmere Allocation A14, a clear corridor strategy to effect bus priority is needed, that should be delivered in support of that further growth, and that at Tangmere SDL. However this allocation is a near complete commitment and there is no scope through policy regarding this land to effect this outcome.

It is notable that Point 6) of policy A7 makes mention of a bus service. This language reflects the currently adopted Local Plan policy and has underpinned the existing permissions. The failure of any bus service to be delivered demonstrates from first principles that this Policy has been entirely ineffective. It is important that lessons are learned from this in the

## Local Plan Review.

## 9.6. Policy A8 Land East of Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This proposed allocation lies next to unallocated land that is already consented as a departure from the adopted development plan, with 143 units near completion south of Oving Road (20/02471/FUL). Additional land, also unallocated but similarly consented, has now commenced north of Oving Road (88 units under 21/02197/FUL). This and the allocation site consolidates earlier development at Shopwhyke brought forward under the current Local Plan, and allocated again as draft policy A7.

Development at Shopwhyke was brought forward on the basis of a premise that the developer would provide or somehow arrange a bus service, that was reflected in the policies of the current Local Plan. This was secured by an unenforceable condition. No bus service has been provided, as there was inadequate clarity regarding the basis on which the costs of establishing such a service would be met by the developer, and the expectations of policy on the developer. The site does however lie on a logical new bus corridor between Chichester and West of Tangmere along the Oving Road.

In addition, an expectation that modifications to the Oving Crossroads would effect bus advantage have proven false – the arrangements put buses into a similar or longer queue than if they use the route available to general traffic to and from the A27.

Stagecoach strongly supports the principle of bringing this land forward. However, the soundness of the site depends on deliverability of a regular, reliable and direct bus service along the Oving Road, taking advantage of effective bus priority.

Given the failure of existing policy in the adopted Local Plan covering the proposed A7 allocation to deliver a bus service, it is of great concern that there is no draft policy to adequately address the issue. The policy is out of conformity with NPPF paragraph 104-105 in that sustainable modes do not offer realistic choices, much less an attractive one, and as such also does not secure the objectives of national policy nor of the plan itself.

Currently the proposed allocation is not served at all by public transport. Policy needs to ensure there is a policy basis to secure contributions to deliver such a service, which may well take the form of a proportionate contribution to deliver a new service or enhance provision that is put in place between Chichester along the Shopwhyke Road to west of Tangmere.

To become sound Policy A8 must be modified to read:

"...  
12. Provide for improved high quality connectivity by sustainable travel modes and focused in particular on a corridor between Chichester city centre and Tangmere along Shopwhyke Road, including new improved cycle and pedestrian routes, and a frequent bus service including linkages with Chichester taking advantage of effective bus priority measures on Oving Road at the A27;  
..."

## 9.7. Policy A9 Land at Westhampnett/North East Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This land is already allocated and consented as part of the existing 2016 Local Plan. All reserved matters are determined.

The site lies on service 55 between Chichester, Westhampnett and Tangmere. This established service benefits from additional demand from the development at Phase 1. Phase 2 which is currently well underway, does not benefit directly from bus services. However it is a compact and logical form of development where walking and cycling to local facilities and employment is a credible option.

The existing allocation rolls forward policies in the 2015 Local Plan. In so doing it is possible to see which have been effective.

Point 9. regarding bus service and routing has not been effective. In particular the potential for a bus only link between the site and Graylingwell has not been established as policy anticipated. Given congestion around the Portfield area acutely affects public transport this, or alternative methods to secure bus priority over private car use, a clear and unequivocal policy steer is required.

The lack of an up-to-date transport evidence base is ultimately at the root of these issues. Arguably the policy and

allocation can only be made sound once this refreshed evidence base in place.

However, it is possible that the allocation could be made sound by modification of Policy A9 as follows:

"...

9. Make provision for regular, direct and reliable bus services linking the site with Chichester city centre, and new and improved safe and convenient cycle and pedestrian routes linking the site with Chichester city, the South Downs National Park and other strategic developments to the east of Chichester city including Tangmere. These objectives could include exploring the potential for a bus only route require a deliverable scheme to afford bus priority through Portfield, and potentially linking the development with the Graylingwell area through use of a modal filter;

..."

#### 9.8. Policy A10 Land at Maudlin Farm

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing public transport route. It is relatively close to the city and very near substantial centres of employment and services that can be reached by active travel modes, helping damp the demand for car use. It is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services at Portfield and over a wider area. In fact, the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A10 should accordingly be modified to read:

"...

5. Provide safe and suitable access points for all users, including a main vehicle access from Old Arundel Road and, subject to further assessment, a secondary vehicle access from Dairy Lane. The development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes;

..."

#### 9.9. Policy A11 Bosham – Land at Highgrove Farm

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Bosham Station. It is relatively close to the city and very near substantial centres of employment and services that can be reached by public transport and cycling, offering strong potential to materially damp the demand for car use.

There are serious risks that development in the A259 corridor west of Chichester could place further demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular to bus services.

Nevertheless, given the potential to effect bus priority on the approaches to Fishbourne Roundabout, it is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A11 should accordingly be modified to read:

" ...

8. Provide safe and suitable access points for all users, including a main vehicle access from the A259. The development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys crossing the A27 at Fishbourne;

#### 9.10. Policy A12 Chidham and Hambrook

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Nutbourne Station. Substantial centres of employment and services that can be reached by public transport and cycling, offering strong potential to materially damp the demand for car use.

There are serious risks that development in the A259 corridor west of Chichester could place further demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular to bus services.

Nevertheless, given the potential to effect bus priority on the approaches to Fishbourne Roundabout, it is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A12 should accordingly be modified to read:

" ...

7. Development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys along the A259, crossing the A27 at Fishbourne and where necessary on the approaches to Emsworth;

8. Facilitate improved sustainable travel modes, and new improved cycle and pedestrian routes, including linkages with Chichester city and settlement along the East/West Corridor;

#### 9.11. Policy A13 Southbourne Broad Location for Development

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach agrees unequivocally that Southbourne is a location that could accommodate growth on a strategic scale. It has a substantial range of service available within the settlement, including secondary education. It is well connected by bus and rail service to key destinations, including Chichester, lying to the east and west.

This is one of the few locations identified for growth that represents substantial additional development in a new location to the strategy in the existing Local Plan adopted in 2015. Thus, the transport impacts of development on the substantial scale envisaged at Southbourne are not covered or accommodated by the Chichester Area Transport Strategy that lies behind the existing plan. This demands, from first principles, that substantial further transport mitigation measures are required.

We recognise and endorse fully that the intent of the draft plan for Southbourne as a Broad Location for Development on a strategic scale, includes "Maximising the potential for sustainable travel links through improved public transport,

including consideration of opportunities to reduce community severance caused by the railway line as well as the inclusion of cycling and pedestrian routes.” (our emphasis).

The existing railway station at Southbourne is served regularly, however, it is not within the power of this plan to improve rail services. It is, however, well within the scope of action of the Local Planning and Highways Authority to work with bus operators to achieve a step change in the journey time, reliability, frequency and connectivity of bus services, and in particular the major corridor operated as service 700 by Stagecoach along the A259 between Havant and Chichester through Southbourne.

Notwithstanding the clear potential for sustainable connectivity in the western A259 corridor, there are very serious risks that development in the A259 corridor west of Chichester will place further significant car-borne demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular bus services, having the opposite effect to that intended: longer, less reliable and less frequent bus services, leading to a spiral of slowly declining use.

These risks, while very serious, look credibly likely to be entirely mitigated subject to carefully conceived and robust specified actions on the local highway network. It is perplexing to us that this potential still has not been identified, as part of a comprehensive “first principles” review of the transport evidence base. In particular given the former trunk status of the A259, there is evident potential to effect bus priority on the A259, including on the approaches to Fishbourne Roundabout.

With appropriate measures, including but not limited to this, to substantially boost the relevance and attractiveness of sustainable travel choices, strategic development at Southbourne could well be made highly sustainable.

In the absence of a refreshed transport strategy and transport evidence base, the draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact, the only reference that is made in Policy is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A12 should accordingly be modified to read:

“...Development should be comprehensively masterplanned to achieve a high-quality design and layout that integrates well with the surrounding built and natural environments to enable a high degree of connectivity with them, particularly for pedestrians and cyclists, and provides good the highest possible quality of access to facilities and sustainable forms of improved public transport services.

...

4. Provide a suitable means of access to the site(s), and securing secure necessary off-site transport infrastructure and service improvements (including highways in particular to the A259 corridor between Emsworth and Chichester) in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development) to promote sustainable transport options prioritising delivery of high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes;

...”

#### 9.12. Policy A14 Land West of Tangmere

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach strongly supports the principle of intensifying the level of development at the Strategic Development Location already identified and allocated West of Tangmere in the existing Local Plan. This serves to consolidate development at a location where effective and attractive public transport choices could be provided. It also conforms closely with the principle expressed in NPPF that the best possible use should be made of land on sites that are judged to be sustainable, or potentially sustainable locations for development.

It must be stressed that the current policy suite for the SDL has to date not brought forward development in this location. We recognise that a Master Plan has been adopted by the Council, and that a planning application (20/02893/OUT) for the full larger quantum of 1300 dwellings proposed in the draft plan has received a resolution to grant by the Council.

However, we are not aware that a sustainable transport strategy has been finalised.

Land West of Tangmere is not served by any existing regular bus services. Rather, an entirely new bus service corridor is anticipated to operate in the near term from Chichester through Tangmere and beyond towards Barnham. This would

serve proposed allocations A7, A8 and West of Tangmere (A14) included in the draft Plan.

This is reflected in the language of the explanatory memorandum to Policy A14 at paragraph 10.65:

“Opportunities, in partnership with relevant authorities, to provide improved sustainable public transport routes linking the village with Chichester city, to improve cycle routes to the city, and better transport links to Barnham rail station and the ‘Five Villages’ area in Arun District; and..”

Initiating this service will be costly and will in large measure be funded not by developer contributions, but by DfT monies awarded through the West Sussex Bus Service Improvement Plan. It is crucial this service is both sustainable in the longer term without revenue support, and that the success of the service can be built on by scalable frequency improvements as strategic development comes forward in both Chichester District, and proposed allocations A7 A8 and A14, and in Arun District, in particular at Barnham, Eastergate and Westergate (BEW).

This demands measures to effect safe, direct and swift operation of the service especially within the city centre, where it approaches and crosses the A27 at Oving crossroads and on the eastern fringes of the District east and west of Tangmere. Without these measures, bus journey time and reliability will be severely compromised and the impact of this service to damped car trip demands will be very substantially compromised. No such measures are proposed in the draft plan or its evidence base.

Changes to Oving Crossroads have recently taken place which, amongst other intentions, ostensibly provide bus advantage between Chichester and Shopwhyke. The junction in its current form does not offer material gain in bus journey time, as movements involve a less-direct route towards the city over an increased operating distance, much of which involves passage through heavily congested sections of the A27 and Westhampnett Road. A refreshed transport strategy supporting plan-led growth must revisit this area to secure an effective solution which offers bus customers the fastest and most reliable trip-time to and from the city.

In addition, the extension of public transport connectivity towards BEW and Barnham, including key links to secondary education and a logical railhead for journeys beyond towards Brighton and London as provided at Barnham Station, needs to facilitate bus priority between Tangmere and Nyton – whether using the A27, or preferably avoiding it altogether. There are significant safety concerns associated with the at-grade uncontrolled right-hand A27 exit onto the B2233 Nyton Road at Crockerhill Turn. This movement is also prone to extreme delay owing to the conflict with approaching westbound traffic on the A27, travelling at speed, which has priority. Our concerns with this junction in its current form can be expected to worsen with the increased traffic volumes predicted from new residential developments to the west of the city.

A solution providing a suitable short length of highway available only to sustainable modes, between Tangmere and Easthampnett, could provide a very effective solution to this. This would be deliverable within the scope of the separate proposed allocation at A19 Chichester Business Park, Tangmere. We comment on this separately.

Howsoever effected, a reliable direct and delay-free bus corridor between Barnham, BEW, Tangmere and Chichester could expect to secure very substantial elevation of the relative attractiveness of public transport over car use on the entire corridor and serve to effectively damp growth-related demands on this section of the A27. West of Tangmere, in the longer term, there is evident scope for the route corridor to operate as two branches – one via Shopwhyke and one via Westhampnett, effectively serving all the strategic developments proposed in the plan and transforming wider public transport connectivity to key employment destinations and services within and east of Chichester.

However, in common with all the other proposed allocations, the plan proposes no specific measures to provide, much less improve public transport or other sustainable modes to the site. This leaves the draft plan out of conformity with NPPF, especially paragraphs 104-106. The plan is inadequately evidenced and to the degree that public transport measures are identified and emergent, their successful implementation in the near and longer term will be jeopardised without clear measures to provide a safe as well as efficient bus route towards BEW and the Five Village area within Arun. The Duty to Cooperate is not effectively met and effective cross boundary collaboration on these strategic issues through the review of LSS is not demonstrated, despite the current version which identifies the issues.

To be made sound the LSS Review and a subsequent urgent review of the transport evidence base and strategy needs to take place. The strategic issues are especially critical east of Chichester, in our view.

Notwithstanding this foundational deficiency, to be made sound, Policy A14 should be modified to read:

“... ”

8. Subject to detailed transport assessment, provide primary road access to the site from the slip-road roundabout at the A27/A285 junction to the west of Tangmere providing a spine road link with secondary access from Tangmere Road. Development will be required to provide or fund mitigation for potential off-site traffic impacts through a package of measures in conformity with Policy T1 (Transport Infrastructure) and T2 (Transport and Development) and DfT Circular 01/2022 that maximise the relevance and use of sustainable travel modes, in particular bus services;

9. Make provision for improved sustainable travel modes between Tangmere and Chichester city, in partnership with relevant authorities, including improved direct, seamless safe and reliable and additional bus and cycle routes linking Tangmere with Chichester city, Shopwhyke and Westhampnett. In conjunction with measures in support of Allocation

A19, Opportunities should also be explored contributions shall also be sought for providing improving high quality cycling and bus service transport links with the 'Five Villages' area and Barnham rail station in Arun District; and..."

## 10. Concluding comments

Stagecoach recognises its role as a key stakeholder in the plan, as well as a local employer and corporate citizen. We recognise the primacy of the plan-led system as the mechanism intended to resolve complex challenges, including the proper alignment of transport and spatial planning, which as the National Decarbonisation Strategy for Transport among other policies makes clear, has never been more vital.

In making our representations, we emphasise that we are entirely supportive of the Local Planning Authority and the relevant Highways and Transport Authorities, in their efforts to properly manage the amount and pattern of development to secure vital policy objectives. We recognise that balancing delivery of assessed development needs with a wide variety of other constraints is a very difficult task.

The transport issues faced by the plan are recognised in the draft plan as being serious and long-standing. We believe that there are ways to arrive at a suitable transport mitigation strategy that has regard to wider strategic issues and resolves existing problems in a much more effective way than those pursued to date.

We support the spatial strategy of the plan as it evidently provides the basis to secure the necessary step change in the quality and use of sustainable transport modes, as it explicitly seeks to do. However thus far, there has been insufficient work done to define the measures that will credibly secure these outcomes.

Stagecoach therefore urges the authorities to draw us into the necessary effective ongoing collaborations that is expected by NPPF paragraph 16 and 106; and DfT Circular 01/022, to do this work, prior to, rather than after the submission of the draft plan. We look forward to being approached to initiate this dialogue at the earliest opportunity.

### Change suggested by respondent:

Policy A13 should accordingly be modified to read:

"...Development should be comprehensively masterplanned to achieve a high-quality design and layout that integrates well with the surrounding built and natural environments to enable a high degree of connectivity with them, particularly for pedestrians and cyclists, and provides the highest possible quality of access to facilities and improved public transport services.

...

4. Provide a suitable means of access to the site(s), and securing secure necessary off-site transport infrastructure and service improvements (in particular to the A259 corridor between Emsworth and Chichester) in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development) to prioritising delivery of high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes;

..."

Chichester Local Plan 2039 Regulation 19 Stagecoach South representations.docx -  
<https://chichester.oc2.uk/a/skh>

## Object

**Document Element:** Policy A14 Land West of Tangmere

**Respondent:** Stagecoach South (Rob Vince) [8141]

**Summary:**

Stagecoach strongly supports the principle of intensifying the level of development at the Strategic Development Location already identified and allocated West of Tangmere in the existing Local Plan.

Land West of Tangmere is not served by any existing regular bus services. Rather, an entirely new bus service corridor is anticipated to operate in the near term from Chichester through Tangmere and beyond towards Barnham. This would serve proposed allocations A7, A8 and West of Tangmere (A14) included in the draft Plan.

Initiating this service will be costly and will in large measure be funded not by developer contributions, but by DfT monies awarded through the West Sussex Bus Service Improvement Plan. It is crucial this service is both sustainable in the longer term without revenue support, and that the success of the service can be built on by scalable frequency improvements as strategic development comes forward in both Chichester District and in Arun District.

This demands measures to effect safe, direct and swift operation of the service especially within the city centre, where it approaches and crosses the A27 at Oving crossroads and on the eastern fringes of the District east and west of Tangmere. Without these measures, bus journey time and reliability will be severely compromised and the impact of this service to damped car trip demands will be very substantially compromised. No such measures are proposed in the draft plan or its evidence base.

However, in common with all the other proposed allocations, the plan proposes no specific measures to provide, much less improve public transport or other sustainable modes to the site. This leaves the draft plan out of conformity with NPPF, especially paragraphs 104-106. The plan is inadequately evidenced and to the degree that public transport measures are identified and emergent, their successful implementation in the near and longer term will be jeopardised without clear measures to provide a safe as well as efficient bus route towards BEW and the Five Village area within Arun. The Duty to Cooperate is not effectively met and effective cross boundary collaboration on these strategic issues through the review of LSS is not demonstrated, despite the current version which identifies the issues.

**Full text:**

Chichester District Local Plan 2039 – Pre-Submission (Regulation 19) Consultation

**1. Introductory Comments**

Stagecoach South is the main commercial public transport operator across Chichester District. The Company has headquarters in the city, which is also the principal public transport hub for the District and it's rather wider travel-to-work area encompassing much of the Arun District. Our services extend throughout and beyond the District boundaries, as far as Littlehampton, Midhurst, Havant and Portsmouth. The vast majority of services operate on a commercial basis – that is to say, sustained by passenger use and fare revenue, including concessionary reimbursement.

While the role of the railway is significant in much of the District, especially the east-west Coastway line, yet bus services account for more boardings locally than the railway, with Chichester depot services carrying over 3.5m passengers each year.

Unlike bus services in other parts of the country, the local network has recovered strongly after the pandemic with fare-paying passenger numbers over 95% of 2019 levels, albeit with concession patronage somewhat lower. This has helped secure not only a stable but growing bus network even during this period of rapidly rising operational costs, avoiding the need for the service contractions seen in other regions. Indeed, during the second quarter of 2023 Stagecoach will invest £5.5m in brand-new vehicles for high-profile coastal Service 700 – one of the largest vehicle investments for Stagecoach Group this year.

Our services are therefore critical to existing and future local connectivity. As the Plan acknowledges, mobility demands do not respect planning authority boundaries. The role of our services is especially high to settlements in the broad A27 corridor, within the District and beyond. This includes major settlements in Arun District such as Pagham and suburban Bognor Regis, where bus is the only mass public transport option. As the Council is well aware, there is an even higher level and rate of committed development envisaged in these locations in the Arun District Local Plan than in Chichester.

It is already evident to the planning authorities, West Sussex County Council and National Highways, as proprietor of the A27 Trunk Road, that accommodating growing mobility demands across Chichester District and especially around Chichester itself, is becoming increasingly challenging to the point of being seriously problematic.

Stagecoach has a particular interest in this Plan arising from:

- The already clear and highly deleterious impact of congestion affecting our operations and their reliability and attractiveness to the public. The effects of these on the approaches to Chichester, and around the A27 bypass are especially severe. If public transport is to retain its existing role – even before the needs of any meaningful growth both in Chichester and neighbouring authorities is considered, are considered – the Council and the Highways Authority need to arrive at clearly-defined measures to protect buses from chronic delay and the damaging impacts arising from the lack of bus network resilience and customer journey times.
- In connection with the above, the need to properly consider the predictable impacts of committed development in Arun District on the transport network and in particular the operation of bus services. The duty to cooperate on cross-border strategic matters is not limited merely to accommodating housing requirements.

- The fact that our entire business premises and operational base at Chichester is the subject of allocation for redevelopment within the Plan period. Specifically, this includes our Head Office, the Bus Station as the operational hub of the network and the key interchange for passenger journeys – including those that involve the railway – and the bus depot required to support the entire operation. Notwithstanding many years of discussions, there is as yet no agreed deliverable strategy to replace these facilities either in the Draft Plan or elsewhere.

Stagecoach broadly supports the vision and priorities of the draft plan. In most respects, Stagecoach supports strongly the spatial strategy and the identified site allocations that flow from it, and the evidence.

However, it has serious concerns about the soundness of the plan as proposed for submission, for important regards outlined in this response. These are made in the light of requirements set by the National Planning Policy Framework (NPPF), in particular at paragraphs 15 and 16; 35, 105-109 inclusive and having due regard to the need for allocations to satisfy 110-112 inclusive in due course as development permission is sought; and paragraph 174.

Paragraph 16c) of NPPF makes plain that strategic plans and policies should “be shaped by early, proportionate and effective engagement between plan-makers and communities, local organisations, businesses, infrastructure providers and operators and statutory consultees” (our emphasis). This makes plain that collaborative and ongoing involvement of public transport operators is both necessary, and separate and in addition to the engagement with statutory consultees. This has not taken place.

Para 1.25 of the draft plan states that “the council has engaged constructively, actively and on an ongoing basis with other local authorities and organisations to address key strategic matters.” Despite the requirements in NPPF and contrary to the statement made, Stagecoach has not been approached or involved in a meaningful, collaborative or ongoing way in the preparation of the Plan.

Our main concerns centre around the fact that the plan strategy is neither backed by sufficient transport evidence. Even more importantly, the plan relies on a wholly car-based transport mitigation strategy despite policy stating that this is not the case, and the track record of the existing Local Plan, based on a very similar strategy, that has failed to bring forward meaningful mitigations to date to prevent traffic conditions substantially worsening. There is no support in policy for the achievement of the Strategic Objectives in the Plan. Nor is there definition of any measures in the 2023 Transport Study to make provision for sustainable transport infrastructure or services – much less materially improve them.

Finally, to the extent that updated transport evidence has been provided in the form of the 2023 Chichester Transport Study, arising from updated traffic modelling, it does not support the contention that highways capacity constraints on and around the A27 justify not meeting the objectively-assessed development needs of the area, as the draft plan contends.

## 2. Vision and Strategic Objectives

### 2.1. Issues and Opportunities

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant, proportionate and up to date evidence

Stagecoach recognises the important role of the West Sussex and Greater Brighton Strategic Planning Board which agreed a Local Strategic Statement (LSS2) in early 2016 to identify spatial planning issues across the wider area. This established strategic priorities and policies to guide longer term strategic growth in a coordinated and well considered matter. This institutional framework and the purpose of the LSS is a highly significant one and is at the heart of efforts to properly fulfil the statutory Duty to Co-operate, including with regard to strategic infrastructure issues, as NPPF requires.

Given the long period of time elapsed since the 2018 Reg 18 consultation and the already very clear constraints on strategic infrastructure capacity, it is of great concern to Stagecoach that the LSS2 has not been updated to reflect emerging issues in the intervening period. A review and update of the LSS2 has only just commenced. This includes a study of projected housing and employment needs, transport impact, infrastructure and spatial options to deliver the required development in the period after 2030. This Chichester District draft plan covers a period extending to 2039 – therefore well beyond 2030 and the nominal currency of LSS2.

However, infrastructure needs are pressing today. Stagecoach is presented with severe highway operational problems on a near-daily basis. During the winter of 2022-23 we have, for example, seen key road links impacted for many weeks by acute disruption arising from flood events. Unpredictable, but seemingly more-frequent, exogenous events expose a lack of resilience in the highway network around Chichester and its travel-to-work area. However, serious, chronic, unpredictable delay has been normalised over recent years, with peak-time congestion having quickly returned after the pandemic. The existing development strategy has failed to bring forward measures having any impact on this to date, and key commitments – notably at west of Chichester Phase 2 and at Tangmere – have yet to commence to further aggravate the issue.

We have no confidence in the transport mitigations proposed in the existing Local Plan and LSS2 being sufficiently

effective, even if deliverable at all. Indeed, the existing adopted Local Plan does little more than make vague speculations about the sustainable transport measures that might be achievable. The draft local plan review is no different. It has no ambitions at all for sustainable modes and thus, makes no meaningful provision to meet them.

This is especially relevant in light of the fact that the approach to resolving issues on the A27 around Chichester that were anticipated in 2015-16 have fallen away. LSS2 is thus currently inadequate to act as a part of an up-to-date, proportionate, and relevant evidence base for the Plan.

An update of a traffic model lies at the heart of a 2023 Chichester Transport Study. This talks no account of the existing role of non-car modes, nor can it do so. It is unable to properly evaluate the nature of problems or solutions that involve public transport, or for that matter, other sustainable modes.

Therefore, we consider that the combination of committed and additional development needs that must be accommodated over the whole plan period between 2022 and 2039, in both the Chichester and Arun Districts, require a “first principles” review. This must be based on a refreshed transport evidence baseline of no earlier than 2022 – given that the effects of COVID distort 2020-22 – and the transport infrastructure and service requirements to sustainably support those needs.

Key issues – including substantial changes with regards to transport issues and challenges, as well as potential solutions – thus do not form part of the evidence base that steers this plan. Given long term changes in travel patterns, and mode share that took place during COVID, as well as a local and national policy context that seeks to radically reduce and then eliminate transport-related carbon emissions, this is especially problematic.

The specific problems of congestion and network resilience that are evident on the A27 and the approaches to Chichester remain a set of especially difficult problems that disproportionately affect the efficiency, reliability and attractiveness of the bus network, that evidently demand larger-scale strategic responses involving multiple stakeholders, including bus operators.

Where the effects of development on the national Strategic Roads Network (SRN) are concerned, the approach of National Highways to addressing and responding to the mobility needs of development has now substantially changed following the promulgation of the DfT Written Ministerial Statement LTN01/22. This makes it clear that adding highways capacity is no longer the first or only strategy that should be pursued, but one subordinate this to maximising the potential of non-car modes and sustainable travel.

“Effective and ongoing collaboration” on transport matters has not led to solutions being agreed and published for public scrutiny as part of the plan evidence base. Whatever the approach to modelling and “highways improvements” that may be agreed or pending agreement with the County Highways Authority and National Highways, Stagecoach is neither participant or sighted. This is despite the clear requirements set out in NPPF Para 106 b) that “Planning policies should ... be prepared with the active involvement of local highways authorities, other transport infrastructure providers and operators and neighbouring councils, so that strategies and investments for supporting sustainable transport and development patterns are aligned.” (our emphasis).

We therefore consider that the Council has failed to comply with the requirements of NPPF paragraph 25 and 26 that “relevant bodies” are involved in plan-making, especially with regard to addressing the needs for infrastructure. Public transport services and the infrastructure that supports its operation and use clearly fall within matters relevant to plan-making. This is explicit in NPPF Chapter 9 and indeed within the plan itself – for example reference to public transport and sustainable modes in the Vision for the plan.

It should be stressed that the Regulation 18 “Preferred Approach” consultation took place in December 2018 – over 4 years ago and prior to COVID, based on LSS2. The inordinate length of time that has elapsed between the Regulation 18 and Regulation 19 stages greatly challenges the LSS2 and other parts of the evidence base, especially as the pause straddles the COVID epidemic. That would include the transport modelling baseline, and key assumptions in any traffic modelling that took place prior to mid-2022, which is a point at which a reasonable “new normal” post-COVID might be considered to have become established. In that period, Arun District has also adopted its own Local Plan development strategy that accommodates an unprecedented quantum of development immediately east and south-east of the District Boundary – creating additional substantial transport impacts directly affecting the A27 and multiple major approaches to Chichester crossing it.

The established mechanism to fulfil the Duty to Co-operate has thus not operated effectively.

The Plan is not founded on a relevant, proportionate and up-to date evidence base and is thus inadequately justified.

## 2.2. Spatial Portrait

The spatial portrait is generally succinct and accurate. However, it makes no mention of road-based public transport, the role of the City as a public transport hub, or the range of bus services that provide local connectivity (Section 2.4 and 2.5). The complete concentration of post-16 education in the City itself as just one example of the peculiarities of transport demands in the area, is not highlighted, though this has a profound influence on peak time travel demands

affecting the most congested parts of the highway network. Among other things, the role of bus services in supporting the educational system of the plan area is very great indeed.

The potential role of bus in addressing the already-severe transport problems of the plan area and beyond seems entirely overlooked. The spatial portrait is thus clearly inadequate and incomplete.

### 2.3. Strategic Objectives

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Chapter 9 of NPPF and paragraphs 104 and 105 in particular require that plans should:

“Transport issues should be considered from the earliest stages of plan-making and development proposals, so that:

- a) the potential impacts of development on transport networks can be addressed;
  - b) opportunities from existing or proposed transport infrastructure, and changing transport technology and usage, are realised – for example in relation to the scale, location or density of development that can be accommodated;
  - c) opportunities to promote walking, cycling and public transport use are identified and pursued;
  - d) the environmental impacts of traffic and transport infrastructure can be identified, assessed and taken into account – including appropriate opportunities for avoiding and mitigating any adverse effects, and for net environmental gains;...
- ...The planning system should actively manage patterns of growth in support of these objectives. Significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. This can help to reduce congestion and emissions, and improve air quality and public health...”

The Strategic Objectives do not conform with NPPF in these foundational requirements adequately, to transparently steer the plan strategy. They should therefore be amended to read:

“Plan to provide local infrastructure to support new development and seek opportunities to address existing identifiable infrastructure problems deficits, such as in particular those relating to the A27 and its junctions and wastewater treatment.”

Paragraph 2.36 states, in the context of the Climate Emergency and the National Trajectory to “Net Zero” that “The council will enable the delivery of infrastructure, jobs, accessible local services and housing for future generations while protecting, conserving and enhancing the historic and natural environment.”

Naturally, we support this intent.

However, there is no acknowledgement of the role current patterns of transport use contribute to carbon emissions, nor that substantial mode shift is necessary to address sustainably an acute lack of capacity on the local network and the SRN, especially around Chichester. This is especially concerning as the basic conceptual link is not made between the fact that the greatest such problems lie on the A27 corridor and around Chichester, while these are also at the same time present many of the most sustainable locations for development, and where the opportunities to secure much greater use of sustainable modes also exists.

Strategic Objective 7 “Strategic Infrastructure” includes the following statement:

“To work with infrastructure providers to ensure the timely delivery of key infrastructure to support delivery of new development. New development will be supported by sufficient provision of infrastructure to enable the sustainable delivery of the development strategy for the plan area. Key infrastructure to support the Local Plan will include improvements to transport, ...

A sustainable and integrated transport system will be achieved through improvements to walking and cycling networks and links to accessible public transport. Highway improvements will be delivered to mitigate congestion, including measures to mitigate potential impacts on the A27 through a monitor and manage process.”

The latest transport evidence in the Chichester Transport Study makes no pretence to define much less to deliver a “sustainable or integrated” transport system. It is wholly devoted to sustaining current levels of car use across the District, to and through Chichester area.

It is no more than the lightest of touches to the approach taken to supporting the adopted Local Plan, an approach that is already almost 10 years beyond the date of its gestation but has yet to deliver any significant capacity improvement schemes, much less any measures that sustain even current levels of public transport journey times and reliability in the face of increasing congestion – much less any betterment.

Of the six key junctions on the A27 around Chichester, recognised to require significant mitigation given they are saturated for extended periods, five accommodate regular bus services - indeed frequent ones at least every 20 minutes in several cases. The sixth at Oving Road, relates directly to a key corridor where bus services are needed to support strategic growth currently being delivered at Shopwhyke, as well as substantial further growth West of Tangmere (proposed allocation A14) and “East of Chichester” (A8), south of Shopwhyke Road.

As stated at p12 of the Study Summary “The modelling shows that all the junctions on the A27 Chichester bypass are well over capacity, even before adding in the Local Plan development and with the exception of Portfield Roundabout are actually shown to be over capacity in the base model year (2014) in one or both peaks”. This much has indeed been evident for years from delay and periodic even more severe disruption arising to Stagecoach services from the lack of network resilience.

The reassignment of through and local traffic through Chichester to avoid the A27 bypass is an especially serious issue for bus services that penetrate the city. This is leading to consequential saturation of a range of junctions used by buses. Rising delay and unpredictable running times are at the root of our decision to sever the long-established Portsmouth to Littlehampton service in 2023, which will in future no longer run across Chichester, but terminate to provide additional dwell time to mitigate the impacts of congestion.

While this congestion affects all road users including businesses and freight traffic, the effect on scheduled bus services is greatly higher, as such services cannot reassign route to ‘beat the queue’. Traffic congestion often encourages greater car use for this reason, in tandem that people are happier to sit for extended periods in their own vehicle on a seamless door-to-door journey than wait at the roadside for a delayed bus making slower progress in lengthy queues.

As the Study admits at para. 1.3.2 “Although, there have been works at the Portfield Roundabout in this timeline, no other mitigation schemes have been completed along the A27 corridor, as such the mitigation schemes defined in this report will also be required to consider the development from this plan period.”

In other words, in the 8 years since the current Local Plan was adopted in 2015, there has been minimal progress in delivering the traffic mitigations. There is no clarity at all when any such mitigations will be brought forward. It is hardly surprising then, that traffic conditions have deteriorated. The “predict and provide” transport strategy supporting the current plan has failed.

Despite this, the Draft Local Plan Review proposed to “double down” on exactly this strategy. It represents, like the rest of the evidence base, a “rolling forward” of the current car-based strategy by 9 years, with the lightest of touches to attempt to accommodate car trip demands from a relatively modest additional development quantum.

Nevertheless, the Study requires a global 5% reduction in trip demands arising from unspecified “credible” (paragraph 4.1.2) sustainable transport and travel planning measures. It is unclear why use of non-car modes will see disproportionate growth when no measures are in place to make them more attractive. This 5% increase in use translates to a doubling in the modal share of bus services. There is no evidence nationally, anywhere, that simple ignorance of alternatives to the car is the main barrier to uptake.

The outputs of the 2023 Chichester Area Traffic (SATURN) model are set out at Table 5.1 (am peak) and 5.2 (pm peak) without mitigation. These betray just how seriously compromised the whole network around Chichester is, and will be in future, even with implementation of a mitigation package to increase traffic capacity that is understood to cost between £92m and £164m – and which the Study and the draft plan acknowledge cannot be delivered through developer funding sources alone. Unspecified external funding presumably from HM Treasury through DfT is required.

Even if this provided and the schemes are delivered, Tables 8.1 and 8.2 indicate these will provide minimal relief. The final columns suggest key junctions, including Portfield, Fishbourne Road and Cathedral Way East will remain at well over 100% ratio of flow to capacity (90% is considered the point at which saturation is approached, with the onset of increasing delay above that figure). RFCs in tables 8.1 and 8.2 are some of the highest we have ever seen in a local transport evidence base for a post-mitigation scenario. While the serious potential risk of reassignment across Chichester City is greatly reduced, which is important and welcome given its impact on bus services, Tables 8.1 and 8.2 show the extent of post-mitigation saturation is also egregious, covering a very large number of key links and junctions.

On every measure and criterion, then, including cost deliverability and effectiveness, the revised Transport Strategy falls well short of evidence to suggest the transport impacts of the plan can be properly addressed by this means.

Despite the repeated statements about sustainable modes throughout the draft plan and Chichester Transport Study, only 2 paragraphs at Section 6.2 within the Study are devoted to public transport:

“6.2.7 The funds generated from the parking management schemes, local/nation funding schemes and developer contributions could also be utilised to fund potential public transport enhancements within the city centre including an expansion of the bus priority lane system within Chichester City Centre. This could reduce reliance on the car in the longer term towards sustainable public transport. A park and ride scheme could be incorporated within a bus priority lane network in the future depending on the uptake and successfulness of early bus priority trials.

6.2.8 Chichester City centre has a constrained existing public highway network. Therefore, any proposed dedicated public transport or light transit corridors that could be implemented would be at the expense of existing highway. This could be managed through a time-based system where certain routes are restricted to public transport only during specific times. E.g., peak hours.”

There is some very high-level consideration of Park and Ride following this section. None can be considered a serious practical evaluation of consolidating car-borne trips onto bus services, including existing ones, for example local mobility hubs, more frequent bus corridors, delivery of specific bus priorities.

None of the discussion of alternatives to “predicting and providing” for unconstrained traffic growth is rooted in a deliverable evidence base, or proper evaluation of options and specific projects.

To take just one aspect of the few specifics that can be picked out, a workplace parking levy is hypothesised. This would apply only to “offices”, in Chichester city centre (para 6.2.3), without consideration given as to how this could be practically achieved or even that a meaningful amount of office based employment would qualify. Much less is any consideration given to how far focusing a strategy only on office-based workers would actually deliver a particularly significant effect, apart from to create a strong incentive to relocate offices out of the city centre to places out of reach by public transport.

Looking at the Chichester Transport Study 2023 and the draft plan together, there is insufficient evidence that the traffic capacity increase proposed in the 2023 Transport Study is any more affordable or technically deliverable, or likely to be sufficiently effective, than those in the past strategy. The evidence more strongly points to the fact that no highways improvements are identifiable or economically deliverable to meet even short term increases in demand for car-borne mobility on most of the network around Chichester.

There are no published strategies or schemes clearly supporting the contention that the objective of improving sustainable modes is technically achievable or deliverable either. The plan makes generalised assertions that such strategies will be devised and implemented only after serious problems emerge from a shortfall in the car-borne transport strategy.

The reference to “monitor and manage” is undefined and unsubstantiated. There are no outcomes stated, no mechanisms specified and no timescales for action.

Our experience today is that network conditions have reached unacceptable and prejudicial levels of severe unpredictable delay. The saturation of the network is already evident well outside the traditional peaks on key sections of highway and at key junctions. External shocks such as the effects of severe weather are becoming more common, leading to delays so extreme as to justify the description of “gridlock”. The plan does not identify a strategy to effectively address this, in particular by consolidating passenger car trips onto more efficient public transport vehicles. This is unacceptable to Stagecoach.

#### 2.4. Local Plan Vision

Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the broad approach in Plan Vision and in particular that by 2039, the Plan will support and enable greater use of sustainable modes. However, there is no link made between reducing the use of private cars, and the need for a step change in the use of sustainable modes. Without a published transport evidence base it is impossible to establish a suitable sustainable transport strategy to support both carbon reduction and alleviation of the problems arising from acute congestion. Even on a very crude basis, to achieve a meaning mode shift on key approaches to the A27 Chichester Bypass will require more than 20% of existing peak car-borne journeys to transfer to other modes. A 10 percentage point transfer to bus (about half this shift) would imply more than doubling peak hour bus passenger boardings.

The Vision is nothing more than an aspiration, that needs to more definitively aim at key outcomes, for the plan to be effective. The Vision should thus be altered to read:

“Get about easily, safely and conveniently with less reliance on private cars –making the greatest possible use of the rail and enhanced bus network, and with more opportunities for active travel including walking and cycling; to materially reduce dependence on private car use.”

Underpinning the Plan’s spatial strategy, the Vision section goes into more specific detail about key localities in the Plan area.

Regarding Chichester, Paragraph 2.39 states: “The emphasis will be upon consolidating and enhancing the role of Chichester city as the plan area’s main centre, whilst also developing the role of key settlements to its east and west. The focus will be upon creating communities with good access to a range of employment opportunities and affordable housing for young people and families to balance the ageing population.”

This is clearly the appropriate focus for meeting the District’s development needs in a sustainable manner. The city and key settlements to the east and west, are those places already able to make use of relevant public transport services, both rail and bus. Especially within and near the City, walking and cycling can credibly present highly relevant choices. This emphasis clear can be expected to address the requirements of sustainable development set out in NPPF and their local application set out in the Plans Strategic Objectives.

However, this needs a robust transport strategy, to avoid a further concentration of development and its traffic impacts occurring on or near some of the most chronically congested parts of the highway network. To date, the absence of intervention has strangled the bus network through further marked deterioration in traffic conditions. This by consequence increases the risk of bus delay or cancellation, lengthens journey time and reduces customer confidence in bus as an attractive alternative mode of travel.

In April 2023, Stagecoach is making significant timetables changes to improve operational resilience in and around Chichester. The biggest such change is the severance of the Portsmouth to Littlehampton section of service 700, at Chichester, with buses operating independently to the east and to the west and ending cross-city links. This is planned to reduce the probability of delay but at the cost of additional vehicle resource (circa £200,000 per annum) which could be better spent providing new or enhanced services. We anticipate a small loss of custom as a direct consequence of the change, but have little choice other than to take negative action so as to fulfil our statutory punctuality obligations.

If the Strategic Objectives of the Plan and its Vision are to be achieved, in the way required by NPPF paragraphs 104-105, a properly-evidenced transport mitigation strategy needs to create the conditions where bus journeys are more reliable than car journeys and thus mobility demand switches as far as can be realistically achieved away from car use, to bus use and other more sustainable modes.

Beyond Chichester, the Plan Vision focuses on key localities beyond to the east and west.

To the west of Chichester a focus on growth at Southbourne is justified at paragraph 2.43: "...the aim is to take advantage of the village's good transport links and existing facilities to deliver significant new residential-led development within the broad location for development which will further enhance local facilities and offer opportunities to reinforce and supplement existing public transport, including bus routes."

We agree this is a very significant opportunity. However, if the requirements of NPPF paragraphs 104-105 are to be met, this demands that effective bus priority is delivered on the A259 corridor, especially eastbound at Fishbourne and westbound approaching Emsworth. Without such measures, the growth committed and planned will serve only to further undermine bus journey time and decrease punctuality on the existing 700 service, entirely contrary to the aims of the Vision.

The emphasis on the A259 corridor served by Stagecoach 700 west of Chichester is reinforced at paragraph 2.45 stating that "Between Chichester and Southbourne, the Plan provides for more moderate levels of growth within the parishes of Fishbourne, Bosham and Chidham & Hambrook, ... with opportunities to support and expand existing facilities and for increased use of public transport options". We strongly support the principle, but the Plan must follow through with specific public transport priority measures that facilitate rather than prejudice such an outcome.

East of Chichester the focus is at Tangmere, where the existing allocation for about 1000 dwellings is being uplifted by 300. Paragraph 2.44 justifies this among other things recognising the scope for "...improved and additional bus services and cycleways will provide better connections to Chichester city and east to Barnham and the 'Five Villages' area in Arun District." We unequivocally endorse this conclusion. Realising a "game-changing" level of bus service quality, reliability and frequency east of the city, also serving committed and planned development north and south of Oving Road at Shopwhyke, is equally essential, given that all SRN links and junctions are approaching equal saturation.

The National Bus Strategy has given new focus on partnership with West Sussex County Council to discuss and deliver a significant new bus service between Chichester, Shopwhyke, Tangmere, Eastergate and Barnham, supporting committed development and acting as an initial phase of what ought to be a more ambitious longer-term strategy to support growth beyond 2025 in both Chichester and Arun Districts. For these improved bus services to be both deliverable and effective, robust bus prioritisation is unavoidable. No such measures are proposed in the Plan or its evidence base and we therefore suggest inclusion of plans to facilitate safe and efficient bus operation between Tangmere and Nyton/Eastergate, ideally avoiding the need to join A27 through-traffic entirely.

We welcome the clear recognition that these localities identified for growth, benefit from existing relevant public transport services. The Vision also sets an expectation that bus services in particular should be "enhanced" and "reinforced".

We entirely agree that these opportunities exist, across the broad strategy and strategic allocation proposed by the draft Local Plan. Securing them will be crucial to achieving national and local policy objectives, including the Strategic Objectives. However, to our continuing very great dismay, the Plan goes no further to defining how this will be achieved. As such the Vision is not demonstrable achievable or deliverable.

Accordingly the Plan cannot be considered effective, in the sense of NPPF.

Remedying this, demands specific measures to protect bus services from congestion in the following corridors:

- A259 East of Emsworth
- A259 Fishbourne
- A 259 Via Ravenna/Cathedral Way

- A286 Stockbridge Road north and south of A27
- B2145 Whyke Road/Hunston Road
- A259 Bognor Road, east and west of A27 and extending to the District Boundary
- B2144 Oving Road/Shopwhyke Road east and west of the A27
- A 285 Westhampnett Road/Portfield Way/Stane Street, potentially involving a mode filter at the west end of Stane Street

These must be defined to a sufficient level of detail to assess their effectiveness and deliverability, including costs.

This would then allow West Sussex County Council and Local Transport and Highways Authority, ourselves as the principal bus operator, and where appropriate other organisations that would be directly tasked with delivering the mitigation package, to agree service levels and standards necessary to deliver specified outcomes, including journey times, frequencies, capacity and hours of operation on the network, and also in respect of the strategic allocations and Strategic Locations for Growth.

The agreed mitigations strategy should be set out in an up-to-date Infrastructure Delivery Plan backed by clear funding commitments, including a funding strategy to justify necessary developer contributions.

Where necessary to support evidence of effectiveness and deliverability, clear statements of support, which might include Statements of Common Ground between the LPA, LTA, National Highways and Stagecoach, could be provided.

### 3. Spatial Strategy

#### Stagecoach Supports

Stagecoach well recognises the constraints outlined in the explanatory narrative at the start of Chapter 3.

In particular we strongly endorse that strategy in that it reflects that the best opportunities to meet housing and employment development requirements sustainably clearly exist in and close to Chichester and on the key east-west movement corridor where – subject to effective measures being delivered to make these modes more attractive, efficient and relevant – sustainable modes can credibly provide for a much higher proportion of movement demands, mitigating most effectively the potential traffic impacts of development.

We agree that the Manhood Peninsula suffers serious environmental constraints, but, added to these, public transport and other sustainable modes cannot provide such attractive alternatives, and significant further development risks merely reinforcing already high levels of car use, aggravated by the carbon impacts of the distances involved – something the plan does very little to evaluate, and makes no reference to.

We endorse the conclusion in paragraph 3.24 that significant development in the part of the District north of the National Park is inappropriate. The rationale is principally on landscape and visual character. This exposes a fundamentally biased approach to plan making that has consistently underplays transport accessibility and carbon issues. In fact, the lack of local services and the extended distances that need to be travelled to fully participate in society in this area, with no realistic prospect of public transport offering relevant choices, ought to rule such a strategy out of play on a far less aesthetic and interpretational basis.

#### 3.1. Policy S1 Spatial Development Strategy

##### Stagecoach Supports

The Spatial Strategy flows clearly and logically from the Spatial Portrait, and the opportunities and constraints identifiable across the Plan area. It represents a logical and justified continuation of the existing Local Plan strategy. In particular the spatial strategy maximises the potential for sustainable modes to contribute to meeting a much higher proportion of all the District's mobility and accessibility needs.

#### 3.2. Policy S2 Settlement Hierarchy

##### Stagecoach Supports

The settlement hierarchy clearly reflects the service endowment and potential self-containment of the settlements in the District. In particular, the second tier of settlement hubs includes secondary schools, which are major peak trip generating uses. Service villages, in the main, also benefit from bus services running at least hourly, which can be expected to provide for a degree of mobility for the higher number of trip purposes that cannot be satisfied by walking or cycling within the immediate locality. Thus, a level of development to meet local needs in this tier is relatively sustainable.

There is a quite broad range of settlements in this category. We have concerns that, north of the National Park, the Service Villages have no realistic public transport choice. These include Plaistow/Ifold, Kirdford, Loxwood, and Wisborough Green. Such as exists is typically a 1/bus per day off-peak shoppers service offering up to 90 minutes in Horsham or Guildford and as such any development here even to meet local needs requires each adult to own a car. This contrasts strongly with Service Villages to the south of the National Park, which are greatly more sustainable.

### 4. Climate Change and the Natural Environment

#### Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This section of the plan is extensive and wide ranging, as should be expected.

However, remarkably, there is no acknowledgement whatever of the role of transport in mitigating climate change or its effects, not of the importance of sustainable movement and access being facilitated across the plan area in addressing anthropogenic impacts on the natural world at a more local level.

This exposes very clearly a troubling level of indifference to transport matters in the production of the Plan, which, while nationally quite common, is neither appropriate nor acceptable. The mitigation of transport impacts is not merely a matter speaking to the social and economic aspects of sustainable development. It is crucial to address the causes and effects of climate change that arise from transport, and personal mobility.

This is now well understood and at the centre of national policy, including the National Decarbonisation Strategy for Transport (July 2021) which at Section 5 commits the government to aligning land use planning and transport strategy much more tightly and effectively to mitigate the carbon emissions associated with the current dependence on cars, and the mode mix; but also to reduce travel distances, both increasing the potential relevance and effectiveness of all sustainable modes, and reducing average journey lengths for residual motorised journeys of all kinds.

National statistics show that well over a third of all domestic carbon emissions arise from land-based transport and of these, the vast majority arise from trips of over 10km – outside the range of large scale use of cycling. In fact, the potential of the plan to materially support carbon emissions reduction from within the plan area lies more in the realm of transport than any other policy theme – including emissions mitigation from buildings, which is in any event an aspatial matter and covered by nationally-binding building regulations. By 2025 something like 40% of all the emissions within the plan-area will be transport related.

There is no evidence supplied to support the plan that addresses the transport carbon impacts of the spatial development strategy in a clear manner.

There is no evidence supplied that sets out the effects of potential worsening of congestion on air quality within the plan area, arising entirely from the excess of passenger car movement demands over available and credibly deliverable highway capacity. This is despite the evidence set out and acknowledged in the explanatory memorandum at paragraph 4.130:

“4.130. The council’s Air Quality Action Plan and the West Sussex Transport Plan 2022-2036 both refer to the air quality issues faced by Chichester. There is currently one Air Quality Management Area (AQMA) in the plan area, located at St Pancras, Chichester. AQMAs are designated where air quality exceeds, or is likely to exceed, national air quality standards and objectives. Development within or impacting these areas, or that likely to cause the declaration of any further AQMAs, will be subject to an air quality assessment by the applicant.”

This is a retroactive approach – it is not “planning”, based on evidence.

We are well aware that air quality issues in and of themselves can render allocated sites to be undeliverable: a good example is in the Vale of White Horse, Oxfordshire, where strategic allocations on the A338 and A420 corridors have been held up for years by air quality issues at Marcham and Frilford, in large measure because agreed transport interventions were considered inadequate or undeliverable a very short time after the Plan was examined and adopted.

There is no evidence that shows how the development strategy can effectively mitigate these impacts as well as the further potential impacts that arise from the development strategy. This is exasperating, as there is clear evidence that could be drawn upon to show that that very substantial opportunities exist to:

- Speed buses up and make them more reliable by the delivery of bus priority on most of the key main corridors. Most of these even today operate relatively frequently
- Improve service frequencies and extend hours of operation.
- Secure significant background mode shift to bus as a result, damping pressure on key links and junctions, by consolidating demands on direct more reliable and more frequent bus services.

The spatial development strategy as submitted is in fact, likely to well conform to such additional evidence.

The allocations require substantial additional transport related work and evidence to demonstrate that the opportunities for sustainable transport have been identified and taken up as required by NPPF paragraphs 104-105.

With regards to specific policy, Policy NE22 should be modified to read:

“Development proposals will be permitted where it can be demonstrated that all the following criteria have been addressed:

1. Development is located and designed to minimise traffic generation and congestion through access to by maximising the relevance and attractiveness of sustainable transport modes, including maximising provision of specific demonstrably effective measures to make pedestrian and cycle and public transport routes and networks more direct, more safe, faster and more reliable;...”

## 5. Housing

### 5.1. Policy H1 Meeting Housing Needs

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

The presumption of the planning system is that local planning authorities should seek to meet their objectively assessed development requirements in full. These needs are assessed by a defined Standard Methodology set out in Planning Practice Guidance and elsewhere, that has explicit regard to ensuring that the economic and social effects associated with housing are properly provided for, to avoid exacerbating serious problems that arise from inadequate housing supply.

As a significant local service provider and employer, Stagecoach is concerned that existing issues with housing availability and affordable housing supply are not exacerbated. This has a direct bearing on staff recruitment and retention. It also has an indirect bearing on our cost base.

The existing problems with housing affordability have developed over many decades of undersupply. It should be emphasised that the significant boost to the supply of housing that has been sought by governments over the last 15 years, has only begun to take effect relatively recently in this District. Tackling the problem will require years of consistent attention.

Stagecoach notes that the Council is no longer proposing to meet its identified housing needs in full. Rather than 638/annum the Council is allocating a total that implies an annual delivery rate of 535/annum.

While a number of matters evidently present challenges to the Council in identifying a sustainable development strategy. Paragraph 5.2 indicates that “constraints, particularly the capacity of the A27 has led to the council planning for a housing requirement below the need derived from the standard method...” The blame for being unable to meet housing requirements is thus laid squarely at the door of transport infrastructure and systems.

This conclusion in no way follows from the evidence in the Chichester Transport Study. This, rather, makes the statement that when a higher annualised quantum of 700 dwellings per annum was tested, in the majority of cases the traffic capacity improvement package would perform little differently. To quote the Study:

“5.6.3 The network performance outputs analysed comprising V/C%, Delays (seconds) and Queues (PCU's) suggest that generally the proposed SRN mitigation identified for the Core Scenario, can accommodate in the most part, additional increase in development to 700dpa.”

Whether the rest of the local road network is similarly protects is moot.

Irrespective of these results, even if the contention made in the draft plan were true, unlike many other constraints, this is amenable to a suitable effective strategy to address the constraints identified being collaboratively conceived. This is what NPPF expects, as set out in paragraphs 104-106.

Where the A27 is concerned, as part of the SRN, National Highways is now working to a substantially revised approach than that in force at the time to current Local Plan was prepared, or LSS2, or reflected in the Chichester Transport Study. This is set out in DfT WMS 01/22. This document is the policy of the Secretary of State for Transport in relation to the SRN which should be read in conjunction with the National Planning Policy Framework (NPPF). It replaces the policies in the Department for Transport Circular 02/2013 of the same title.

It makes plain that to accommodate additional demands arising from development, National Highways (NHC) expects to meet the requirements of its statutory license in a substantially different manner. With respect to development NHC LTN 01/22 continues to address the tensions between national policy for the environment and carbon mitigation, the ongoing need to substantially boost the supply of housing as well as maintain national economic competitiveness and protect the safety of the public. However, in future, the approach will be to seek first to maximise the impact of demand management measures (reducing the need to travel), and then to accommodate residual additional demands first though maximising the use of sustainable modes, rather than accommodating assumptions about current levels of car dependency and use.

LTN 01/22 much more closely and explicitly aligns with the language of NPPF Chapter 9 paragraphs 104-106. Paragraph 12 states: “New development should be facilitating a reduction in the need to travel by private car and focused on locations that are or can be made sustainable.... Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas.” (our emphasis).

It continues at paragraph 13: “where developments are located, how they are designed and how well delivery and public transport services are integrated has a huge impact on people’s mode of travel for short journeys. The company will therefore expect strategic policy-making authorities and community groups responsible for preparing local and

neighbourhood plans to only promote development at locations that are or can be made sustainable [footnote 8] and where opportunities to maximise walking, wheeling, cycling, public transport and shared travel have been identified.” (again, our emphasis)

Stagecoach readily confirms that the draft Plan development strategy conforms well to the first limb of this expectation, in terms of the location of development.

Stagecoach considers that the plan and its evidence base conforms poorly to the second in that the specific opportunities to maximise walking, cycling wheeling and public transport are not clearly identified, and defined, and proven to be effective and deliverable.

The current mitigation strategy for the A27 Chichester area, supporting the adopted Local Plan and for which proportionate developer contributions have and continue to be sought, reflects now-superseded DfT Circular 02/2013. As a direct result, it failed completely to identify any significant effective bus priority measures, despite the fact that frequent services already exist on the key corridor concerned, and that one bus journey can remove, fully seated between 72 and 80 single occupancy car journeys from congested links and across key junctions on the A27. Rather, it sought to implement targeted measures to increase the throughflow of general traffic.

We recognise the realisation that this approach, which was already reliant on some tenuous logic, is simply not technically viable, especially where further development needs are anticipated.

National Highways will now pursue an approach with the planning system that “includes moving away from transport planning based on predicting future demand to provide capacity (‘predict and provide’) to planning that sets an outcome communities want to achieve and provides the transport solutions to deliver those outcomes (vision-led approaches including ‘vision and validate,’ ‘decide and provide’ or ‘monitor and manage’). The company will support local authorities in achieving this aim through its engagement with their plan-making and decision-taking stages.” (paragraph 15).

Paragraph 23 is at the fulcrum of assessing and defining transport mitigations to accommodate growth on and near the SRN “Capacity enhancements such as modifications to existing junctions or road widening to facilitate development should be determined on a case-by-case basis. The general principle should be accepted where proposals would include measures to improve community connectivity and public transport accessibility, and this will be weighed against any negative safety, traffic flow, environmental and deliverability considerations, impacts on the permeability and attractiveness of local walking, wheeling and cycling routes, and alternative options to manage down the traffic impact of planned development or improve the local road network as a first preference.” (our emphasis).

However, no material work has been done that seeks to identify if a bold robustly conceived and suitable judiciously-prepared strategy that seeks to consolidate flows on already densely travelled corridor onto improved bus services, driving mode shift through insulating these services preferentially from already serious queuing. This would be likely to have very substantial impacts on all the key junctions on the A27, and potentially, on the A27 itself. The need for an integrated approach between Shoreham and Emsworth within West Sussex paying particular regard to development requirements in both Arun and Chichester Districts naturally lies at the heart of this, and we would expect to be picked up by the LSS3 Review among other things.

However, the locus of the problems and its causes and effects are obviously well enough known to start work on defining solutions within the plan area today. We would expect that this work will be essential if National Highways are to support the Plan, especially now given the terms of Circular 01/2022.

Such work could and should start from a “policy off” position: in other words that the Plan should fully accommodate its needs unless it can be proved that a mitigation strategy for the A27 that is compliant with DfT WMS 01/2022 cannot credibly accommodate resulting capacity demands without unacceptable impacts on the safety and efficient operation of the SRN.

This evidence does not exist. In fact the Chichester Transport Strategy 2023, on which the Council solely relies as its transport evidence base, indicates the opposite at para 5.6.3. This is the case before meaningful measures to secure damping of traffic demands through mode reassignment are even considered.

The exception to this is Portfield and Oving Road, which are among the most problematic areas after mitigation even at the Council’s chosen 535 dwelling/annum scenario (para 5.6.4.-5). The costly capacity mitigation simply cannot deliver enough benefit. It is admitted that WSCC has indicated that it would prefer a solution that places greater reliance on sustainable modes damping car-borne demand. This is entirely the strategy required by NHC to follow LTN 01/22, of course. Despite the fact that “predict and provide has “run out of road” no attempt has been made to examine what such a solution set credibly could look like. This is unsatisfactory and deeply troubling.

At paragraph 5.4 the draft plan points back again at the West Sussex and Greater Brighton Strategic Planning Board and the future work that has been commissioned, but has barely begun, to update the Local Strategic Statement. This work is to inform the preparation of plans that have horizons beyond the end date of the current LSS in 2030 and properly to meet the Duty to Cooperate. As we said in our response to section 1 of the Plan we fully endorse the conclusion that this

is the right mechanism to look at these issues. However, the mechanism has not been effectively applied to the production of this plan. Therefore, the specific evidence that capacity on the A27 in and of itself supports accommodating a lower housing requirement does not exist.

The Plan thus does not conform to NPPF, is not adequately justified and is not effective.

The Plan does not properly meet the statutory Duty to Cooperate.

We will return to this matter in specific representations to Section 7 of the draft plan.

## 5.2. Policy H2 Strategic Locations/Allocations 2021-2039

### Stagecoach Supports

Policy H1 makes plain that the plan, as far as it identifies locations for development has done so in locations that conform with its spatial strategy. All of the strategic allocations to a greater or lesser extent offer clear opportunities to make use of sustainable modes, by virtue of their location. That is not to say that the opportunities to take up these opportunities, and maximise the role of sustainable modes, has been identified, defined and translated properly into the rest of the plan policy suite or Infrastructure Delivery Plan.

As our remaining representations make clear, we support the locations thus far identified as being those that offer the best opportunities to reduce the need to travel, reduce travel distances, and create high quality attractive sustainable travel choices, for both existing residents as well as new ones.

However, the transport impacts of the allocation will individually and cumulatively likely to lead to increasingly severe impacts on the transport network, and on bus services.

Perversely, because these opportunities are not properly identified and secured through the plan and its supporting transport strategy, the opportunities presented by the allocations to secure a substantially more sustainable and lower carbon pattern of movement will not only risk being squandered but may aggravate the wider problems.

## 5.3. Policy H3 Non-strategic Parish Housing Requirements

### Stagecoach Supports

The approach is consistent with the plan's spatial strategy. It generally avoids a dispersal of development to locations likely to be highly car dependent. There is a clear focus on meeting housing needs in the far north-east of the District at the largest and most sustainable settlements, such as Loxwood, Kirdford and Wisborough Green. However, it must be pointed out that public transport availability in this area, provided by the County Council through services it procures, is minimal. These settlements in practice require each adult and child of secondary school age to have access to motorised transport to fully participate in society. This might justify significant measures to secure a boost in the frequency of bus services between Guildford and Billingshurst, passing through these settlements.

Otherwise, existing commitments in the plan area already make provision to meet for local needs. To the degree that there is an unmet local requirement for affordable housing of a small scale – for example to support the rural economy – this could be met through neighbourhood plans or through Rural Exception Sites.

## 6. Place-making, Health and Wellbeing

### 6.1. Policy P1 Design principles

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

NPPF requires that proposals should consider transport issues from the earliest possible stage. Designing to properly facilitate safe and efficient access, focusing first on sustainable modes, should be at the heart of development design. Too often it is still an afterthought, notwithstanding this.

Policy P1 must include an additional statement to be compliant and effective with NPPF paragraph 104-105 and 112 a): "Development will be designed to make access and movement using walking, cycling and public transport the natural first choice, and demonstrate through the Design and Access Statement how such modes are afforded the most direct, safe, reliable and efficient routes within to and from the proposals, especially when compared with car use."

### 6.2. Policy P4 Layout and Access

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

A number of proposals in the plan involve large-scale development. It is essential that where appropriate buses can access and circulate efficiently through development at a suitably early stage. There is no acknowledgement of this anywhere in the policy, contrary to NPPF paragraph 112.

Large-scale development which buses cannot access in an efficient or timely manner, or at all, strongly contributes to high levels of car-dependency. Evidence for this is referred to among other places, in DfT Circular 01/2022. To be compliant with NPPF and properly pursue its strategic Objectives, Policy P4 needs to be modified to address this point: "1. Provide safe, direct and attractive conditions for inclusive access, egress and active travel between all locations and providing as good direct high quality links to integrated public transport, and where appropriate efficient access and circulation to bus services, unimpeded by excessive parking, at a suitably early point in the development phasing;

## 7. Transport and Accessibility

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

The issues related to transport are fundamental to the soundness of the Plan. In particular, the constraints presented by the capacity on the A27 around Chichester and its key junctions, are the paramount reasons why the Council does not consider it can meet its objectively-assessed development needs in full. Thus, the transport issues and potential solutions available and what these mean for the ability of development needs to be accommodated, are matters that go to the heart of the soundness of the Plan.

Paragraph 8.3 sets out the approach taken to date succinctly:

"Increasing the capacity of the road network is key to supporting growth in the Local Plan. However, there is also a need to reduce demand for road transport to achieve net zero in greenhouse gas emissions by 2050 as highlighted in the council's Climate Emergency Action Plan and Strategic Objective 1. In aiming to achieve the ambitions of the action plan, all development is expected to demonstrate how it will support four key objectives to create an integrated transport network which will alleviate pressure on the road network, improve highway safety, encourage sustainable travel behaviours and help reduce transport related impact on air quality, by:

1. Avoiding or reducing the need to travel by car;
2. Enabling access to sustainable means of travel, including public transport, walking and cycling;
3. Managing travel demand; and
4. Mitigating the impacts of travel by car."

However, this approach is unambitious and "lightweight" as it assumes, as does the existing Chichester Transport Strategy on which the current adopted plan relies, that the focus of investment should be, wholly, in highways capacity improvement.

Sustainable modes explicitly are expected to play a greater role to "alleviate pressure" on the local road network, as part of this strategy. To emphasise: to avoid exacerbating congestion, the strategy will have to both remove a significant proportion of existing demands from the network on multiple key approaches to Chichester; and then ensure that travel demands from committed and further new development allocated in the plan does not simply replace these journeys, or, worse, create even greater demands.

This will demand very significant behaviour change. Only by making sustainable modes substantially more attractive, both absolutely, and relative to the same journey made by car, can this be expected to occur. However, the explanatory memorandum as well as the wider policy suite and IDP, well expresses a fundamental unwillingness to taking specific, defined measures to achieve this reduction in car use and material promotion of sustainable modes. It makes plain that sustainable modes, including bus services, will offer a lesser role to which "access will be provided".

Such a vague and weakly defined mechanism will have no effect, at all, on current behaviour and car dependency if the relevance of those choices as a credible alternative to car use, is not substantially boosted. This includes a 5% reduction in trip demand assumed by the Traffic Model at the heart of the Chichester Transport Study 2023.

For this reason. the transport strategy behind the current adopted plan is demonstrably ineffective, as the updated model makes plain. It has not yet been delivered and is yet unclear when or (in the absence of committed funding) even if it can be. It is ineffective to "roll forward" this strategy to support a higher level of planned growth.

We note that a scheme for addressing congestion on the A27 at Chichester has been included in Roads Investment Period 3 (2025-2030) – well within the horizon of this Plan. However, recent history provides compelling evidence that off-line improvement to the north is not politically supported and arguably even technically or economically deliverable. It is not funded, nor at this stage can it be hypothesised if an economically deliverable scheme is achievable sufficient to warrant the necessary investment.

An on-line improvement of the A27, including junction improvements, is likely to favour longer distance east-west though movements, which are of greater significance to the national economy, at the expense of local movements crossing the SRN- a conundrum that largely sums up the dilemma that is faced by NHC and the County as Highways and Transport

Authority. It is one that is played out in many places, but rarely is the tension so stark as at Chichester.

Every local route crossing the A27 at grade around Chichester accommodates a regular bus service - or shortly will do (Oving Road area is expected to follow in 2023, though bus services are likely to not use the modified crossroads but to use the left-in-left-out facilities provided as part of the Shopwhyke Lakes development). The impact of these issues on the entire bus operation are serious and increasingly severe.

By the same token, boosting the relevance and reliability of each of these services substantially consolidating as much demand as possible onto a much smaller number of vehicles, is clearly a strategy that ought to support the effective capacity of each of these junctions being greatly augmented, at the same time as reducing equally substantially, the energy- and carbon intensity of mobility in the plan area. Addressing the A27 should not be considered some kind of "zero-sum" game.

Furthermore, the approach of National Highways in its dealings with development and the planning system now reflect a substantial change in Government Policy set out in DfT Circular 01/2022, which we separately cover in these representations, that entirely aligns with an approach that seeks to appropriately invest in more active and rational management of scarce highways capacity, on both the SRN and local roads.

For environmental, economic and social reasons – including public health, the issues presented by the A27 and its interface with local roads around Chichester stands out, nationally, as an example of where the approach taken to accommodating and mitigating development impacts needs to make a clear break with previous "predict and provide" approaches to meet forecast unconstrained car use as LTN 02/2022 makes clear as a principle. Policy in the West Sussex LTP to 2036 itself makes plain that "shared mobility" – including bus services – must play a much greater role in this area.

The existing Chichester Area Transport Strategy is focused on justifying capital contributions from committed development to fund highways capacity improvement – with nothing included to make bus services more attractive, or importantly more reliable. Indeed this "cars first" approach is so costly, that there is already accepted by WSCC to be insufficient land value remaining to be captured to put into substantial improvements for public transport. That much is very evident, and transparent, from paragraph 8.12 and 8.14, where south of Chichester "This (one) package of works (of several improvements needed) would be between £57.23 and £82.79 million to deliver in full and would not be capable of being funded by development contributions alone." This assumes the scheme is otherwise deliverable, which on the evidence in the public domain for some time, has been considered challengeable.

The draft Local Plan and a modestly updated infrastructure package that flows from the 2023 Chichester Transport Study, pursues exactly the same approach.

This strategy is also even more ineffective having regard to the roll forward of the Plan to 2039. It cannot deliver the key Strategic Objectives of the Plan; and in particular this is explicitly recognised by the Council in the failure of the draft Plan to accommodate the OAN in full.

It is also obsolete, as it does not align, from first principles, with national policy (including the National Decarbonisation Strategy for Transport) and DfT Circular 01/22; nor the Council's own declared Climate Emergency.

As a result, draft Policies T1 and T2 are both unsound, as we will separately explain.

Owing to the lack of evidence about the implications of this for adjoining authorities – especially Adur District – in the absence of the review of the Local Strategic Statement – this has implications for fulfilling the Statutory Duty to Co-operate.

The absence of any meaningfully comprehensive refresh of the transport evidence base means that there are no meaningful schemes of any kind, defined in the plan or its IDP, to indicate either what level of growth can be accommodated, by delivering a change in travel behaviour. This would be aimed to secure a sufficient effective increase in junction throughput (measured in terms of person trips as opposed to passenger car unit movements (PCUs)). Such evidence would propose measure to achieve that outcome and assess the efficacy and costs of such improvements, across all modes.

Paragraphs 8.10-8.13 inclusive indicate that the Council "has moved away from 'predict and provide'" and invites the reader to conclude this has translated into a programme of interventions that can be funded to deliver specific, credibly predictable outcomes. Such a programme should be clear in paragraph 8.11. and the IDP. There is no such clarity and this conclusion would be false.

It would also be evident in the language of the Chichester Transport Study 2023 and its refreshed proposals. Only the most token of lip service is paid to the matter. It is a plainly car-focused, predict and provide methodology to support a "predict and provide" strategy. In fact, it is a brazenly car-focused approach, to the exclusion of all else.

The statements in the Plan regarding any other approach, read properly, offer nothing more than a vague commitment to look post-adoption, and implementation, at unspecified measures, based on problems that may arise in future that will be

decided by a committee: the Traffic and Infrastructure Management Group (TIMG). This does not yet exist and is obviously an attempt to posit a mechanism that retroactively will cover for the lack of serious multi-party engagement to address the existing and future issues. Such a group should, in our view, also include the public transport operators, not least if the requirements of NPPF Para 106c) are to be satisfied, and the strategy and measures to be adopted are material to supporting the Local Plan, as of course the purpose of the TIMG has as its core *raison d'être*.

The approach proposed by the draft plan is plainly ineffective and unsound in justifying the draft Plan.

It is more widely unacceptable to Stagecoach. The issues are severe today and well-known, already serving to jeopardise the delivery of buses relied on by existing residents, much less attract new ones.

We also consider that HM Planning Inspectorate are likely to be quite resistant to accepting this aspect of the plan's transport strategy, nor will it be appropriate for the Council, West Sussex County Council, or National Highways, to define such measures after the submission of the Plan during the Examination process. The Examination in Public of a local plan has no purpose to improve plans, or remedy deficiencies clearly evident prior to submission.

The examination of the West of England Joint Strategic Plan in 2019, and the Uttlesford Local Plan in 2021, among several others, demonstrates especially clearly that the Planning System and the Examination process is not amenable to post-hoc retrofitting of transport evidence and strategies to support a development strategy.

#### 7.1. Transport Evidence Base

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Most of Stagecoach's serious concerns about the soundness of the plan arise from the fact that it has been prepared in advance of any up-to-date transport evidence and suitably robust transport mitigation strategy being advanced to support it. In essence, the Council has rolled forward the existing plan by 9 years, adding some additional sources of housing supply, while still relying implicitly on a transport evidence base that was prepared 10 years ago.

This led to the formulation at that time of what can only be described as an attempt to develop an effective car-based mitigation strategy, creating capacity for general traffic added to accommodate unconstrained additional demands on an already over-taxed highways network – the Chichester Area Transport Strategy. Despite language in support of sustainable modes, no deliverable measures were identified to support either the extension of the bus network to serve allocated sites, and much less to create a vital improvement to the quality and reliability of public transport services. This approach reflected the approach set out in DfT Ministerial Circular 02/2013 "Development and the Strategic Highways Network", applicable since the A27, which is the focus of the most severe difficulties, forms part of the national Strategic Roads Network.

This approach has proven ineffective even before substantial elements of housing land supply in the current plan come forward – in particular West of Chichester and West of Tangmere.

In addition, Circular 02/2013 has now been replaced by a new Ministerial Statement of 23/12/2022, DfT Circular 01/2022.

On both counts the transport evidence base and strategy needs to be properly revisited and established to provide effective mitigation for the plan, including current commitments that are being rolled forward.

The language of the current Ministerial Circular 01/2022 offers a highly condensed synoptic view of the proper approach to addressing transport matters in the planning system notwithstanding that it is directly concerned with the Strategic Roads Network. *Videlicet*:

"31. The NPPF expects local plans and spatial development strategies to be underpinned by a clear and transparent evidence base which informs the authority's preferred approach to land use and strategic transport options, and the formulation of policies and allocations that will be subject to public consultation. The company will expect this process to explore all options to reduce a reliance on the SRN for local journeys including a reduction in the need to travel and integrating land use considerations with the need to maximise opportunities for walking, wheeling, cycling, public transport and shared travel.

32. The Transport Decarbonisation Plan indicates that carbon emissions from car and van use is the largest component of the United Kingdom's total transport emissions. While action is being taken to decarbonise transport such that all new cars and vans will be fully zero emission at the tailpipe from 2035, the proposed location of growth in current plan periods and whether new developments would be genuinely sustainable remain important factors in demonstrating that a local authority area is on a pathway to net zero by 2050 and therefore compliant with the requirements of the Climate Change Act 2008.

33. Alongside this, the local authority should identify the key issues within their study area regarding transport provision and accessibility, setting out how the plan or strategy can address these key issues in consultation with (National Highways, and other transport stakeholders identified in NPPF paragraph 106b). It is the responsibility of the local authority undertaking its strategic policy-making function to present a robust transport evidence base in support of its plan or strategy. The company can review measures that would help to avoid or significantly reduce the need for additional infrastructure on the SRN where development can be delivered through identified improvements to the local transport network, to include infrastructure that promotes walking, wheeling, cycling, public transport and shared travel. A robust evidence base will be required, including demand forecasting models, which inform analysis of alternatives by accounting for the effects of possible mitigation scenarios that shift demand into less carbon-intensive forms of travel.” (our emphasis)

Within the text quoted above, references to National Highways and “the Company” can quite legitimately be extended, given the statements in NPPF paragraph 16, 25, 26 and 106b, to include all the relevant transport infrastructure and service providers in the plan area. Circular 01/2022 also has the weight of secondary legislation as a Written Ministerial Statement and thus should be considered to be highly material.

To date there has been little attempt to explore, to the degree necessary, strategies that conform to Circular 01/2022. It is thus not possible to conclude, as the Council has done, that the issues on the A27 that present a constraint to development, are insuperable.

In line with comments made elsewhere in the response to this pre-submission draft, the Plan thus requires substantial further work to be undertaken with key stakeholders to establish a suitably effective and demonstrably deliverable transport mitigation strategy, to sustainably meet the District’s identifiable development needs and where apparent and appropriate, also ensure that wider cross boundary strategic issues are appropriately addressed, in conformity inter alia, with the Duty to Cooperate, NPPF paragraph 16 and 104-111 inclusive, and DfT Circular 01/2022 and to ensure the Plan’s own Strategic Objectives can be met.

#### 7.2. Policy T1 Transport infrastructure

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

As described in comments elsewhere, Stagecoach does not see that a suitable proportionate and up-to-date basis exists to properly and appropriately address the transport issues in the plan area.

The 2023 Transport Study does not perform this role adequately but, contrary to the explanatory memorandum, is a scheme intended only to facilitate car-borne movements through some of the key junctions. There is no evidence that an holistic integrated and strategic approach to transport mitigations has been prepared. Certainly Stagecoach has not been involved in any of the discussion about appropriate transport measures in support of the plan, including the Transport Study 2023, contrary to the expectations set out in NPPF at paragraph 16 and 106.

Notwithstanding out fundamental concerns about the transport evidence case and mitigations strategy, Policy T1 reflects a weak and ineffective approach, that seeks to try and define a strategy post-adoption.

Contrary even to the explanatory memorandum for the policy, which seeks to maximise the contribution of sustainable modes, the policy is phased in such a way that it gives basis for previous “predict and provide” solutions to facilitate and support current levels of car dependency – already shown to be undeliverable and unaffordable – will nevertheless be the first rather than the last resort. There is no commitment to seek to maximise the contribution made by sustainable modes to meeting mobility needs. Nor is there any recognition that current chronic congestion and lack of network resilience jeopardises the ongoing attractiveness and long- term sustainability of the current public transport offer.

To be effective and create alignment with national policy, and also provide for an up-to-date transport evidence base and strategy to be adduced, Policy T1 should be modified to read:

“Integrated transport measures will be developed to mitigate the impact of planned development on the highways network, improve highway safety and air quality, promote more sustainable travel patterns and through providing in the first instance, new and improved infrastructure and services that will be credible effective in maximising the encourage increased use of sustainable modes of travel, such as public transport, cycling and walking.

To achieve this, the council will work with National Highways, West Sussex County Council, other transport and service providers (including through the Traffic and Infrastructure Management Group) and developers to provide a better integrated transport network and to improve accessibility to key services and facilities...

All parties, including applicants, are expected to support these objectives by:

1. Ensuring that new development is well located and designed to avoid or minimise the

need for travel, encourages maximises the use of sustainable modes of travel as an a credible alternative to the private car and directly provides or contributes towards new or improved transport infrastructure;

2. Working with relevant transport infrastructure and service providers to improve accessibility to key services and facilities with primary emphasis on sustainable modes, and to ensure that new facilities are easily accessible by sustainable modes of travel;
3. Targeting investment to provide local travel options as an that represent a clearly credible alternative to the car use, focusing on the delivery of improved integrated bus and train services, and improved pedestrian and cycling networks, including the public rights of way network, based on the routes and projects identified in the Local Transport Plan, West Sussex Bus Service Improvement Plan, Local Cycling and Walking Infrastructure Plan (LCWIP) and the Infrastructure Delivery Plan;
4. Planning to achieve the timely delivery of transport infrastructure on and approaching the A27 and elsewhere on the network, needed to support new housing, employment and other development identified in this plan;
5. Phasing the delivery of new development to align with and where possible facilitate the provision of new and improved transport infrastructure and services and the outcomes of monitoring travel demand on the network, including that arising from areas immediately adjoining the plan area. It may also be Where necessary to achieve this alignment proactively phase development will be phased to take into account the monitoring and effectiveness of travel plans demands on the network and to ensure that measures are implemented to support the highest possible level of encourage sustainable travel behaviour.;
6. Using demand management measures, such as travel plans, to manage robust methodologies to assess travel demand and minimise the need for new or improved transport infrastructure as part of the monitor and manage process.
7. Delivering a coordinated package of infrastructure improvements at and approaching to junctions on the A27 Chichester Bypass along with other small-scale junction improvements interventions within the city and elsewhere, as identified through the monitor and manage process. These will increase road capacity, reduce traffic congestion, improve safety and air quality, and improve access to Chichester city from surrounding areas, first by maximising the contribution of sustainable modes to meeting mobility demands, then, and only as evidenced by robust modelling and option testing, providing increased highway capacity for general traffic.

..."

### 7.3. Policy T2 Transport and Development

Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Section 1 b) of T2 will be ineffective as, absent measures to ensure buses can run reliably and efficiently, improved bus services will not be possible, in support of the plan's own stated broad approach to transport mitigation, as well as wider local and national policy.

The draft policy does not require improvements to the quality of services such that sustainable choices will be materially more attractive than car use for many local journeys. Without this the Plan's Strategic Objectives cannot be fulfilled and the objectives of the Plan and this policy, read in its own terms, will not be realised, where reduction in private car use is concerned. It is thus ineffective.

Absent measures to make bus services more reliable and more efficient, by insulating them from chronic congestion as far as possible, still further operating resource and therefore costs, will be needed to just to reliably run existing service frequencies, and capacity, as vehicle productivity continues to be more and more adversely affected by chronic delay. This will be further aggravated by increasing incidence of severe unpredictable service breakdown arising from incidents of diverse kinds on the network, especially on or around the A27, including that arising from more regular severe weather events. Longer journey times can only be expected to lead to relative disadvantage of bus services compared to personal car use, entirely contrary to the objectives of national and local policy, including Policy T1. It can also expect to lead to a dampening effect not on car use, but on bus patronage, threatening the ongoing viability of bus services across the plan area.

Section 1 b) of T2 should be modified to read:

"b) Maximise opportunities for the use of sustainable travel modes through provision of direct and efficient access both to either the existing networks or and through providing such new infrastructure or public transport services, as can be credibly expected to reduce reliance on the private car and work towards achieving net zero in greenhouse gas emissions by 2050;"

Section 1 d) of T2 will be ineffective as the location of development is fixed by this plan. We commend the fact that all the strategic allocations are or will be served by regular bus services.

However, the use of public transport services, where available, depends on the relevance and reliability of these services. Furthermore, provision of services without them generating sufficient patronage to support their long-term operation also threatens the sustainability of the plan and its supporting transport strategy. This is especially true of new services such as those intended to serve West of Chichester and Tangmere and East of Chichester Strategic Allocations.

This can only be assured by the plan being supported by specific measures to ensure buses can operate efficiently and reliably on the existing and projected services intended to serve the developments concerned, and also at the same time secure behavioural change from existing development.

To be sound and effective, the policy T2 1 d.) should be changed to read:

“d) Ensure major development is located to proposals and the supporting mitigation measures enable the use delivery of high-quality, reliable and effective public transport to present the most relevant possible choice to access local services and facilities including employment, leisure and education facilities”;

The Policy T2 makes no provision for buses, where necessary, to enter and make efficient and safe progress through major development sites. The plan is thus out of conformity with NPPF paragraphs 104-106. It makes no provision to ensure that penetration of bus services is achieved at a suitably early point in the development trajectory, undermining the achievement of the goals of the Plan and this specific policy. As a good example, West of Chichester Phase 1, currently under construction, cannot be served by buses as a strategy to effect interim bus penetration was never made.

Policy T2 1 f.) should therefore be amended to read:

f) Ensure that the layout and design of the site development proposals provides effective penetration of the site by sustainable modes, at all points in the development build-out, including public transport where appropriate; and sufficient space for all vehicles to manoeuvre without compromising the safety of pedestrians and cyclists, the efficiency of bus services, or the ability to provide an appropriate level of landscaping across the site”

Policy T2 3.) regarding Travel Planning depends entirely on its effectiveness on the quality and relative attractiveness of sustainable alternatives over car use. In the absence of efficient frequent, reliable and direct public transport services (or similarly, high quality facilities for active travel, Travel Plans will continue to be the entirely ineffective “tick box” exercises that they generally are today, evidenced by much lower levels of public transport use in most new developments than it seen in nearby established neighbourhoods, as demonstrated broadly by Census data in 2011, 2011 and 2021.

For this policy to be effective an up-to date transport evidence base and strategy, underpinning a series of specified interventions to promote the relevance and effectiveness of all sustainable does including public transport in particular, needs to be put in place.

#### 8. Chapter 9 Infrastructure – Policy I1 Infrastructure provision

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Policy I1 could not expect to be effective without a clear understanding of the effectiveness and costs of a defined series of measures that are laid out in this Plan and its IDP, to mitigate the transport impacts of the development strategy.

Where the Chichester Transport Study is concerned the only meaningful work has focused on the definition and delivery of a range of highways capacity schemes mainly on the A27 around Chichester.

As we have discussed elsewhere the effectiveness of these schemes is insufficient as set out at Tables 8.1 and 8.2 of the Chichester Transport Study 2023. The plan itself admits that the deliverability of this package cannot be afforded by developer contributions alone.

The Chichester Transport Study 2023 does not attempt provide a realistic assessment of costs to deliver these schemes, despite the fact that they have been under evaluation for many years. Nor does it offer any assurance that the schemes are technically achievable. Rather, it states the opposite:

“9.2.3 No investigation has been carried out into specific land ownership details, or into the location details or cost of moving statutory undertakers and utility apparatus within the areas of the scheme. No design assessments were carried out at this stage to ascertain the deliverability of the proposals except where any Health and Safety concerns were raised.”

Thus on the grounds of effectiveness, deliverability and affordability, the measures on which the Plan relies must at the very least be considered to involve an exceptionally high level of risk. Since Policy I1 is founded on these assumptions, it cannot be considered effective.

As we set out elsewhere, the Plan has been advanced on the basis that if any additional sustainable transport measures

are required, these mitigations should be retroactively considered and defined after adoption of the Plan. In the light of the doubts that are apparent of both the deliverability, affordability and effectiveness of the Chichester Transport strategy this is especially unsatisfactory even if existing baseline conditions were reasonably acceptable.

However, the Chichester Transport Study 2023, as did its predecessors, makes plain that that existing problems are acute, and can rightly be considered “severe” in the sense of NPPF paragraph 111. Waiting to define deliverable affordable alternatives is an entirely inappropriate approach to the local plan transport mitigation strategy. Such an approach also makes it impossible to consider prior to adoption how far the transport impacts of the plan can be cost-effectively mitigated by alternative means, or whether they are deliverable having regard to technical achievability, land control, development viability, or any combination of the above. Thus, the plan cannot be considered justified, or effective.

Given the mutual dependence of development strategies in Chichester and Arun in particular on these measures this should be seen as crucial of the fulfilment of the Duty to Cooperate.

The remedy for this is ultimately to put in place a suitable transport mitigation strategy following a strategic appraisal of options through review of the LSS. This then must be supplemented by more detailed development specific and localised scheme definition, including, where necessary, bus priority and other measures to support the substantial promotion of the attractiveness of public transport in key bus corridors over private car use. This would then be reflected by costed proposals in the IDP.

Leaving these fundamental weaknesses to one side, even if such a strategy and mitigation package were defined, there is no mention of public transport in the policy even though it is clearly a key part of the policy environment and mitigation strategy for the plan as expressed in the explanatory memorandum for I1, but also at Policies T1 and T2. I1 thus does not effectively support the realisation of the intent of Policies T1 and T2.

Policy I1 iii) should therefore be modified to read:

“(iii) Safeguard the requirements of infrastructure providers, having regard to requirements within and where appropriate across the boundaries of the plan area, including but not limited to:

...

- Highways including specific measures to accommodate improved active travel and public transport level of service and cycle lanes, and...”

At limb v) the Policy expects developers to meet the “in perpetuity costs of operating and maintaining infrastructure”. This shackles development management decisions to developers assuming what are infinite costs – given that “in perpetuity”, read properly, can only mean “without any limit in time”. This means that it is impossible to meet the statutory tests on developer obligations set out in the Community Infrastructure Levy Regulations 2010 (as amended) at Regulation 122, also repeated in NPPF. This policy cannot be lawfully implemented and it is thus ineffective.

In the absence of an up-to-date transport mitigation strategy that is fit for purpose, at the point the Plan is examined these costs of any additional infrastructure are not known in any case. The strategy and its costs, including its affordability and deliverability, are crucial to assessing if the Plan is sound.

Subject to an appropriate defined transport mitigation strategy being arrived at, to be sound, the Policy I1 v) should be modified as follows:

(v) To consider and meet as appropriate the in-perpetuity delivery costs of infrastructure and, where appropriate, improved services, to the point where its long-term operational sustainability is credibly assured from mainstream sources. Where adoption is not envisaged by local authorities, that must include arrangements for its future ongoing management and maintenance;

## 9. Strategic and Area Based Policies

### 9.1. Policy A1 City Centre Development Principles

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Chichester City centre is rightly identified at 10.2 and 10.4 as the commercial and service hub of the District. It is also acknowledged to be the most accessible place in the District by sustainable modes, public transport in particular.

Boosting the vitality of the city centre is something that Stagecoach strongly supports. Irrespective, the enhancement of the commercial and cultural life of the District in the place where these opportunities can be accessed broadly by sustainable modes, is one that has long been at the heart of national planning policy for town centres, reflected in the “town centre first” approach to locating major trip generating uses.

Paragraph 10.5 exposes an unbalanced and unsound preoccupation with aesthetic matters in its approach to the town centre, and far too little to ensuring that the central place function is enhanced through protecting and enhancing the quality of public transport access.

The city is relatively small but at the heart of an extensive hinterland, and thus the role of bus in supporting sustainable access to and enhanced city centre venue is one that needs appropriate recognition and emphasis. It is important to note that a dominant number of key service and facilities such as the General Hospital are relatively close to the city centre. This directly contributes to driving travel demand into the city, causing congestion. Most importantly, it also makes the task of mitigation simpler, given the impact a suite of active and sustainable measures can have within the same close proximity.

Policy A1 does not provide this. As such, achieving the strategic objectives of the plan is seriously threatened, and the plan is thus not effective.

The Plan needs to ensure that the approach to city centre regeneration maintains and enhances public transport access, interchange and inter-modal connectivity. It also needs to ensure that bus service stopping and interchange facilities are able to address increases in future demand, anticipated by the clear intent expressed elsewhere in the Plan that public transport should be meeting a greater proportion of mobility needs, in a growing district. Achieving this demands an ambitious approach to the location, quality and capacity of bus stop and interchange.

We have been in discussions with the District Council about this, alongside West Sussex County Council, for a very considerable period. Stagecoach has always been keen to help facilitate the Council's aspirations for the city centre, and we continue to hold this intention. However, this cannot be at the expense of a material diminishing of the convenience and fitness-for-purpose of bus stop infrastructure and interchange. Stagecoach has significant concerns that current proposals to remove the bus station and have all bus services operate from the street kerbside, on an inner distributor road with similar or reduced net stop capacity, fall short of promoting attractive, convenient bus access to the central area as a destination.

For the longer term and where the objectives of the draft plan are concerned looking ahead to 2039, they clearly fall short of enhancing the convenience and attractiveness of public transport use. Much less do they make sufficient provision for a material increase in bus frequency, connectivity, and interchange convenience, on which the draft plan explicitly relies. It is vital that the District Council is clear in policy about its objectives for public transport in the city centre. These objectives must also carry sufficient weight when held in tension with other aspirations for the centre and the constraints on achieving them.

For the Plan to be sound, properly effective and compliant with NPPF, the approach to the City centre cannot ignore its role in the provision of sustainable transport service and connectivity.

Policy A1 should therefore be modified to properly reflect this crucial function, on which the vitality of the city centre must increasingly depend if unacceptable impacts on congestion, air quality and amenity are not to arise. This is still more crucial if wider aspirations to secure a more sustainable society and mitigate carbon are to be achieved.

"...This will include provision for development and proposals that:

- Support and strengthen the vitality and viability of the city centre and its role as a shopping/visitor destination, employment centre, public transport hub and a place to live;
- Support and promote facilitate improved access to the city and with increased emphasis on sustainable modes of travel, with particular regard to enhancing the public transport interchange role of the city centre area, in accordance with the transport strategy for the city and..."

9.2. Policy A3 Southern Gateway Development principles Chichester Bus Station, Bus Depot and Basin Road Car Park Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

There has been aspiration to redevelop the bus station and nearby bus depot from many years. Stagecoach has been engaged with detailed discussion with the District Council on this matter over a very extended period. We confirm that these discussions have reached a relatively mature stage, however at the time of writing are not concluded.

Stagecoach recognises and supports in principle the Council's wider aspirations for the "Southern Gateway", and this has governed our approach to the Council to date. We continue to have no "in principle" objection to relocating our administrative, engineering, operational and customer service facilities.

Leaving our proprietary interests entirely to one side, it remains vital that in so doing, the effectiveness, attractiveness and convenience of these facilities is not compromised, as we have outlined in our representations to Policy A1, if wider national and local transport policy, and the local plan strategy itself, are to be effectively achieved.

The depot is crucial infrastructure to support the safe, reliable and legally-compliant operation of Stagecoach bus services over a very extensive area covering the entirety of the District and beyond. Without securing equivalent facilities, that are fit-for-purpose, many of our services would have to cease.

If buses are to provide a greater and more attractive level of service (still more so if they are to be electrified) larger, more capable depot facilities, and city centre bus interchange facilities will be necessary.

Notwithstanding that the bus station and depot sites are leased from the District Council, these leases terminate well beyond the end of the plan period.

Finding suitable sites for a replacement bus depot in Chichester, in common with all similar localities especially in southern England, is extremely challenging. As a sui generis use, bus depots do not automatically benefit from policy support on land allocated for employment uses. Most bus depots benefit from being legacy assets established under very different economic conditions. That is the case here. The value of a depot site for redevelopment net of demolition and remediation costs, rarely approximates to that able to sustain the acquisition of land in a tight wider employment land market, and the construction of suitable new facilities.

Furthermore, the costs of operating bus services are sensitive to the parasitic costs of vehicle and staff hours and mileage associated with "dead running" to a remote depot location from the operational network. Here, the existing depot site is ideal, and any replacement will unavoidable add ongoing operational costs to the operation that cannot be directly recovered.

We confirm that a replacement depot site has been identified and has in principle been agreed, subject to overcoming issues with the disposition of existing and future structures on the site. However, the site is recognised as not capable of accommodating meaningful operational expansion. This is just one of the most important foundational reasons why a positive transformation of bus productivity needs to be achieved, across the plan area and beyond, to support delivery of greater bus mileage and frequencies with the same level of operational resource. At the time of writing, we are not fully convinced that the proposals for the relocation will be sufficiently fit-for-purpose in the event the above is not achieved. Thus, we must raise a concern that the bus depot site might not be available during the plan period. While there is a strong probability it will be, the certainty surrounding the availability of the site, especially within the first 5 years of the plan, needs to be made transparent.

### 9.3. Policy A4 Southern Gateway - Chichester Bus Station, Bus Depot and Basin Road Car Park

Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Regarding the removal of the bus station, without equivalent replacement, Stagecoach has significant concerns. Pressures and conflicts at the current bus station site have been gradually rising for several years, arising from increasing use and the need for additional scheduled vehicle layover periods to reduce the risks of accumulated late running from traffic congestion. Peak passenger volumes have recovered strongly on several routes, however passenger accumulations resulting from more frequent delays and disruption have added substantial further pressure on limited space.

Under current plans, buses and bus passengers will be displaced to bus stops at new locations outside the city centre, along Avenue de Chartres. This road was always intended to be a relatively high-speed traffic route, outside the historic core of the city. The city centre has evolved in the subsequent years to reinforce already strong natural severance, with the highway lying beyond the city walls and the green space along the Lavant. It is a traffic dominated, un surveilled and unattractive environment, reflecting the intended function of the road as an efficient movement corridor for high traffic volume, and nothing more. Avenue de Chartres is relatively close to the rail station and pedestrian connectivity can be provided at broadly equivalent distance to the current bus station, but again it is un surveilled and currently unpleasant, lacking natural legibility or any sense of prominence.

We understand kerbside capacity on Avenue de Chartres will be strained even to accommodate current levels of service, with no expansion possible. There is therefore a strong probability that to accommodate more frequencies and key new routes, such as West of Tangmere, East of Chichester and West of Chichester allocations, additional future bus stops must occupy a different location. This makes interchange between routes and rail services substantially challenging and less attractive.

The emerging arrangements risk marginalising public transport and public transport users substantially. This strongly undermines achievement of the wider plan objectives and delivery of a significantly greater role for public transport. If substantial public transport growth is to be accommodated in a growing city and hinterland, as the draft plan anticipates, then a more ambitious strategic approach must be taken. This should plan for additional and improved facilities to accommodate all services predicted to be required, whilst enhancing the passenger experience to ensure meaningful and attractive modal choice.

There is therefore a need for the plan to evidence how these issues will be appropriately resolved, having regard to a suitably ambitious approach that properly supports clear objectives to boost the relevance of public transport. The

current policy is weak, unspecific and indifferent to achieving the strategic objectives of the plan, including a transport strategy in support of the plan, and as such it is ineffective.

Policy A3 should therefore be modified to read:

" ...

- Be designed to encourage and facilitate substantial increase in the use of active travel and public transport to, from and through the city centre.

" ...

In line with the commentary above Policy A4 should also be modified to read:

3. Enhance the public interchange function of the immediate area, the public realm, particularly connections to the railway station and the city centre via South Street, Southgate and Basin Road for pedestrians, cyclists and public transport users, and to National Cycle Route 2 and Route 88 which run close by. Suitable replacement bus stops and layover facilities should be provided to replace those at the bus station in line with reflecting the objectives of the West Sussex Bus Service Improvement Plan, and to facilitate growth to meet the requirements of the plan's development strategy. Routes and crossings should reflect pedestrian desire lines, and public art should be incorporated to create a sense of place;

4. Enhance the public realm, in support of this and wider objectives, incorporating public art and other measures to create a strong and attractive sense of place.

...(renumber remaining points)

#### 9.4. Policy A6 Land West of Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

This is an existing Local Plan allocation. The public transport strategy for the site depends on the delivery of the second phase which Stagecoach notes is the subject of several applications now awaiting review and determination by the Council.

The site represents a compact form of development adjoining the city, as the most sustainable settlement, meeting housing needs close to where they arise, and affording very good opportunities for the use of sustainable modes, especially walking and cycling.

It is vital that a bus service is delivered to serve the site at the earliest potential. This was anticipated to be at the start of Phase 2 and will require the early delivery of the entire length of the spine road between the Old Broyle Road and Westgate and making it available for bus services.

It is not clear if the costs of pump-priming the service mentioned in the draft policy are anticipated to be met by the developer. Without such funding, the service will not be deliverable as years of losses will never credibly be covered from future profit. It is likely that the current wording will be interpreted by the developer as meaning that they have no such obligation binding upon them. Not does policy set out any specification for this service, thus its costs and the basis for securing developer contributions does not exist.

As such any wider transport strategy, that seeks to secure a greater role for the use of public transport, and the aspiration for this allocation cannot demonstrably be met. The policy is ineffective.

Policy A6 should be modified to read:

" ...

10. Make provision to accommodate and secure delivery of for regular bus services linking running through the site to Chichester city centre operating at least every 30 minutes Monday-Saturday, and new and improved cycle and pedestrian routes linking the site with the city,

" ...

#### 9.5. Policy A7 Land at Shopwhyke

Stagecoach Supports

This is an existing Local Plan allocation, largely built-out, that benefits from an existing set of permissions.

The public transport strategy for the site depends on the delivery of effective bus priority at Oving Crossroads. The current recently implemented scheme, undertaken by National Highways, makes no provision for effective bus priority and needs considerable re-evaluation.

The site represents a compact form of development adjoining the city, as the most sustainable settlement, meeting housing needs close to where they arise, and affording very good opportunities for the use of sustainable modes, especially walking and cycling. It lies on a new bus corridor that will shortly be put in place, running to Tangmere via

Shopwhyke. The allocation is being significantly consolidated by further development in the immediate vicinity which strongly supports the potential for this new service.

As we explain in our representations for East of Chichester proposed allocation A8, and West of Tangmere Allocation A14, a clear corridor strategy to effect bus priority is needed, that should be delivered in support of that further growth, and that at Tangmere SDL. However this allocation is a near complete commitment and there is no scope through policy regarding this land to effect this outcome.

It is notable that Point 6) of policy A7 makes mention of a bus service. This language reflects the currently adopted Local Plan policy and has underpinned the existing permissions. The failure of any bus service to be delivered demonstrates from first principles that this Policy has been entirely ineffective. It is important that lessons are learned from this in the Local Plan Review.

#### 9.6. Policy A8 Land East of Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This proposed allocation lies next to unallocated land that is already consented as a departure from the adopted development plan, with 143 units near completion south of Oving Road (20/02471/FUL). Additional land, also unallocated but similarly consented, has now commenced north of Oving Road (88 units under 21/02197/FUL). This and the allocation site consolidates earlier development at Shopwhyke brought forward under the current Local Plan, and allocated again as draft policy A7.

Development at Shopwhyke was brought forward on the basis of a premise that the developer would provide or somehow arrange a bus service, that was reflected in the policies of the current Local Plan. This was secured by an unenforceable condition. No bus service has been provided, as there was inadequate clarity regarding the basis on which the costs of establishing such a service would be met by the developer, and the expectations of policy on the developer. The site does however lie on a logical new bus corridor between Chichester and West of Tangmere along the Oving Road.

In addition, an expectation that modifications to the Oving Crossroads would effect bus advantage have proven false – the arrangements put buses into a similar or longer queue than if they use the route available to general traffic to and from the A27.

Stagecoach strongly supports the principle of bringing this land forward. However, the soundness of the site depends on deliverability of a regular, reliable and direct bus service along the Oving Road, taking advantage of effective bus priority.

Given the failure of existing policy in the adopted Local Plan covering the proposed A7 allocation to deliver a bus service, it is of great concern that there is no draft policy to adequately address the issue. The policy is out of conformity with NPPF paragraph 104-105 in that sustainable modes do not offer realistic choices, much less an attractive one, and as such also does not secure the objectives of national policy nor of the plan itself.

Currently the proposed allocation is not served at all by public transport. Policy needs to ensure there is a policy basis to secure contributions to deliver such a service, which may well take the form of a proportionate contribution to deliver a new service or enhance provision that is put in place between Chichester along the Shopwhyke Road to west of Tangmere.

To become sound Policy A8 must be modified to read:

"...

12. Provide for improved high quality connectivity by sustainable travel modes and focused in particular on a corridor between Chichester city centre and Tangmere along Shopwhyke Road, including new improved cycle and pedestrian routes, and a frequent bus service including linkages with Chichester taking advantage of effective bus priority measures on Oving Road at the A27;

..."

#### 9.7. Policy A9 Land at Westhampnett/North East Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This land is already allocated and consented as part of the existing 2016 Local Plan. All reserved matters are determined.

The site lies on service 55 between Chichester, Westhampnett and Tangmere. This established service benefits from additional demand from the development at Phase 1. Phase 2 which is currently well underway, does not benefit directly from bus services. However it is a compact and logical form of development where walking and cycling to local facilities

and employment is a credible option.

The existing allocation rolls forward policies in the 2015 Local Plan. In so doing it is possible to see which have been effective.

Point 9. regarding bus service and routing has not been effective. In particular the potential for a bus only link between the site and Graylingwell has not been established as policy anticipated. Given congestion around the Portfield area acutely affects public transport this, or alternative methods to secure bus priority over private car use, a clear and unequivocal policy steer is required.

The lack of an up-to-date transport evidence base is ultimately at the root of these issues. Arguably the policy and allocation can only be made sound once this refreshed evidence base in place.

However, it is possible that the allocation could be made sound by modification of Policy A9 as follows:

“ ...

9. Make provision for regular, direct and reliable bus services linking the site with Chichester city centre, and new and improved safe and convenient cycle and pedestrian routes linking the site with Chichester city, the South Downs National Park and other strategic developments to the east of Chichester city including Tangmere. These objectives could include exploring the potential for a bus only route require a deliverable scheme to afford bus priority through Portfield, and potentially linking the development with the Graylingwell area through use of a modal filter;

”

#### 9.8. Policy A10 Land at Maudlin Farm

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing public transport route. It is relatively close to the city and very near substantial centres of employment and services that can be reached by active travel modes, helping damp the demand for car use. It is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services at Portfield and over a wider area. In fact, the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A10 should accordingly be modified to read:

“ ...

5. Provide safe and suitable access points for all users, including a main vehicle access from Old Arundel Road and, subject to further assessment, a secondary vehicle access from Dairy Lane. The development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes;

”

#### 9.9. Policy A11 Bosham – Land at Highgrove Farm

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Bosham Station. It is relatively close to the city and very near substantial centres of employment and services that can be reached by public transport and cycling, offering strong potential to materially damp the demand for car use.

There are serious risks that development in the A259 corridor west of Chichester could place further demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular to bus services.

Nevertheless, given the potential to effect bus priority on the approaches to Fishbourne Roundabout, it is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made

sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A11 should accordingly be modified to read:

"...

8. Provide safe and suitable access points for all users, including a main vehicle access from the A259. The development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys crossing the A27 at Fishbourne;

9.10. Policy A12 Chidham and Hambrook

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Nutbourne Station. Substantial centres of employment and services that can be reached by public transport and cycling, offering strong potential to materially damp the demand for car use.

There are serious risks that development in the A259 corridor west of Chichester could place further demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular to bus services.

Nevertheless, given the potential to effect bus priority on the approaches to Fishbourne Roundabout, it is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A12 should accordingly be modified to read:

"...

7. Development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys along the A259, crossing the A27 at Fishbourne and where necessary on the approaches to Emsworth;

8. Facilitate improved sustainable travel modes, and new improved cycle and pedestrian routes, including linkages with Chichester city and settlement along the East/West Corridor;

9.11. Policy A13 Southbourne Broad Location for Development

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach agrees unequivocally that Southbourne is a location that could accommodate growth on a strategic scale. It

has a substantial range of service available within the settlement, including secondary education. It is well connected by bus and rail service to key destinations, including Chichester, lying to the east and west.

This is one of the few locations identified for growth that represents substantial additional development in a new location to the strategy in the existing Local Plan adopted in 2015. Thus, the transport impacts of development on the substantial scale envisaged at Southbourne are not covered or accommodated by the Chichester Area Transport Strategy that lies behind the existing plan. This demands, from first principles, that substantial further transport mitigation measures are required.

We recognise and endorse fully that the intent of the draft plan for Southbourne as a Broad Location for Development on a strategic scale, includes "Maximising the potential for sustainable travel links through improved public transport, including consideration of opportunities to reduce community severance caused by the railway line as well as the inclusion of cycling and pedestrian routes." (our emphasis).

The existing railway station at Southbourne is served regularly, however, it is not within the power of this plan to improve rail services. It is, however, well within the scope of action of the Local Planning and Highways Authority to work with bus operators to achieve a step change in the journey time, reliability, frequency and connectivity of bus services, and in particular the major corridor operated as service 700 by Stagecoach along the A259 between Havant and Chichester through Southbourne.

Notwithstanding the clear potential for sustainable connectivity in the western A259 corridor, there are very serious risks that development in the A259 corridor west of Chichester will place further significant car-borne demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular bus services, having the opposite effect to that intended: longer, less reliable and less frequent bus services, leading to a spiral of slowly declining use.

These risks, while very serious, look credibly likely to be entirely mitigated subject to carefully conceived and robust specified actions on the local highway network. It is perplexing to us that this potential still has not been identified, as part of a comprehensive "first principles" review of the transport evidence base. In particular given the former trunk status of the A259, there is evident potential to effect bus priority on the A259, including on the approaches to Fishbourne Roundabout.

With appropriate measures, including but not limited to this, to substantially boost the relevance and attractiveness of sustainable travel choices, strategic development at Southbourne could well be made highly sustainable.

In the absence of a refreshed transport strategy and transport evidence base, the draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact, the only reference that is made in Policy is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A12 should accordingly be modified to read:

"...Development should be comprehensively masterplanned to achieve a high-quality design and layout that integrates well with the surrounding built and natural environments to enable a high degree of connectivity with them, particularly for pedestrians and cyclists, and provides good the highest possible quality of access to facilities and sustainable forms of improved public transport services.

...

4. Provide a suitable means of access to the site(s), and securing secure necessary off-site transport infrastructure and service improvements (including highways in particular to the A259 corridor between Emsworth and Chichester) in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development) to promote sustainable transport options prioritising delivery of high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes;

..."

#### 9.12. Policy A14 Land West of Tangmere

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach strongly supports the principle of intensifying the level of development at the Strategic Development Location already identified and allocated West of Tangmere in the existing Local Plan. This serves to consolidate development at a location where effective and attractive public transport choices could be provided. It also conforms

closely with the principle expressed in NPPF that the best possible use should be made of land on sites that are judged to be sustainable, or potentially sustainable locations for development.

It must be stressed that the current policy suite for the SDL has to date not brought forward development in this location. We recognise that a Master Plan has been adopted by the Council, and that a planning application (20/02893/OUT) for the full larger quantum of 1300 dwellings proposed in the draft plan has received a resolution to grant by the Council.

However, we are not aware that a sustainable transport strategy has been finalised.

Land West of Tangmere is not served by any existing regular bus services. Rather, an entirely new bus service corridor is anticipated to operate in the near term from Chichester through Tangmere and beyond towards Barnham. This would serve proposed allocations A7, A8 and West of Tangmere (A14) included in the draft Plan.

This is reflected in the language of the explanatory memorandum to Policy A14 at paragraph 10.65:

“Opportunities, in partnership with relevant authorities, to provide improved sustainable public transport routes linking the village with Chichester city, to improve cycle routes to the city, and better transport links to Barnham rail station and the ‘Five Villages’ area in Arun District; and..”

Initiating this service will be costly and will in large measure be funded not by developer contributions, but by DfT monies awarded through the West Sussex Bus Service Improvement Plan. It is crucial this service is both sustainable in the longer term without revenue support, and that the success of the service can be built on by scalable frequency improvements as strategic development comes forward in both Chichester District, and proposed allocations A7 A8 and A14, and in Arun District, in particular at Barnham, Eastergate and Westergate (BEW).

This demands measures to effect safe, direct and swift operation of the service especially within the city centre, where it approaches and crosses the A27 at Oving crossroads and on the eastern fringes of the District east and west of Tangmere. Without these measures, bus journey time and reliability will be severely compromised and the impact of this service to damped car trip demands will be very substantially compromised. No such measures are proposed in the draft plan or its evidence base.

Changes to Oving Crossroads have recently taken place which, amongst other intentions, ostensibly provide bus advantage between Chichester and Shopwhyke. The junction in its current form does not offer material gain in bus journey time, as movements involve a less-direct route towards the city over an increased operating distance, much of which involves passage through heavily congested sections of the A27 and Westhampnett Road. A refreshed transport strategy supporting plan-led growth must revisit this area to secure an effective solution which offers bus customers the fastest and most reliable trip-time to and from the city.

In addition, the extension of public transport connectivity towards BEW and Barnham, including key links to secondary education and a logical railhead for journeys beyond towards Brighton and London as provided at Barnham Station, needs to facilitate bus priority between Tangmere and Nyton – whether using the A27, or preferably avoiding it altogether. There are significant safety concerns associated with the at-grade uncontrolled right-hand A27 exit onto the B2233 Nyton Road at Crockerhill Turn. This movement is also prone to extreme delay owing to the conflict with approaching westbound traffic on the A27, travelling at speed, which has priority. Our concerns with this junction in its current form can be expected to worsen with the increased traffic volumes predicted from new residential developments to the west of the city.

A solution providing a suitable short length of highway available only to sustainable modes, between Tangmere and Easthampnett, could provide a very effective solution to this. This would be deliverable within the scope of the separate proposed allocation at A19 Chichester Business Park, Tangmere. We comment on this separately.

Howsoever effected, a reliable direct and delay-free bus corridor between Barnham, BEW, Tangmere and Chichester could expect to secure very substantial elevation of the relative attractiveness of public transport over car use on the entire corridor and serve to effectively damp growth-related demands on this section of the A27. West of Tangmere, in the longer term, there is evident scope for the route corridor to operate as two branches – one via Shopwhyke and one via Westhampnett, effectively serving all the strategic developments proposed in the plan and transforming wider public transport connectivity to key employment destinations and services within and east of Chichester.

However, in common with all the other proposed allocations, the plan proposes no specific measures to provide, much less improve public transport or other sustainable modes to the site. This leaves the draft plan out of conformity with NPPF, especially paragraphs 104-106. The plan is inadequately evidenced and to the degree that public transport measures are identified and emergent, their successful implementation in the near and longer term will be jeopardised without clear measures to provide a safe as well as efficient bus route towards BEW and the Five Village area within Arun. The Duty to Cooperate is not effectively met and effective cross boundary collaboration on these strategic issues through the review of LSS is not demonstrated, despite the current version which identifies the issues.

To be made sound the LSS Review and a subsequent urgent review of the transport evidence base and strategy needs to take place. The strategic issues are especially critical east of Chichester, in our view.

Notwithstanding this foundational deficiency, to be made sound, Policy A14 should be modified to read:

"...

8. Subject to detailed transport assessment, provide primary road access to the site from the slip-road roundabout at the A27/A285 junction to the west of Tangmere providing a spine road link with secondary access from Tangmere Road. Development will be required to provide or fund mitigation for potential off-site traffic impacts through a package of measures in conformity with Policy T1 (Transport Infrastructure) and T2 (Transport and Development) and DfT Circular 01/2022 that maximise the relevance and use of sustainable travel modes, in particular bus services;

9. Make provision for improved sustainable travel modes between Tangmere and Chichester city, in partnership with relevant authorities, including improved direct, seamless safe and reliable and additional bus and cycle routes linking Tangmere with Chichester city, Shopwhyke and Westhampnett. In conjunction with measures in support of Allocation A19, Opportunities should also be explored contributions shall also be sought for providing improving high quality cycling and bus service transport links with the 'Five Villages' area and Barnham rail station in Arun District; and..."

#### 10. Concluding comments

Stagecoach recognises its role as a key stakeholder in the plan, as well as a local employer and corporate citizen. We recognise the primacy of the plan-led system as the mechanism intended to resolve complex challenges, including the proper alignment of transport and spatial planning, which as the National Decarbonisation Strategy for Transport among other policies makes clear, has never been more vital.

In making our representations, we emphasise that we are entirely supportive of the Local Planning Authority and the relevant Highways and Transport Authorities, in their efforts to properly manage the amount and pattern of development to secure vital policy objectives. We recognise that balancing delivery of assessed development needs with a wide variety of other constraints is a very difficult task.

The transport issues faced by the plan are recognised in the draft plan as being serious and long-standing. We believe that there are ways to arrive at a suitable transport mitigation strategy that has regard to wider strategic issues and resolves existing problems in a much more effective way than those pursued to date.

We support the spatial strategy of the plan as it evidently provides the basis to secure the necessary step change in the quality and use of sustainable transport modes, as it explicitly seeks to do. However thus far, there has been insufficient work done to define the measures that will credibly secure these outcomes.

Stagecoach therefore urges the authorities to draw us into the necessary effective ongoing collaborations that is expected by NPPF paragraph 16 and 106; and DfT Circular 01/022, to do this work, prior to, rather than after the submission of the draft plan. We look forward to being approached to initiate this dialogue at the earliest opportunity.

#### Change suggested by respondent:

Notwithstanding this foundational deficiency, to be made sound, Policy A14 should be modified to read:

"...

8. Subject to detailed transport assessment, provide primary road access to the site from the slip-road roundabout at the A27/A285 junction to the west of Tangmere providing a spine road link with secondary access from Tangmere Road. Development will be required to provide or fund mitigation for potential off-site traffic impacts through a package of measures in conformity with Policy T1 (Transport Infrastructure) and T2 (Transport and Development) and DfT Circular 01/2022 that maximise the relevance and use of sustainable travel modes, in particular bus services;

9. Make provision for improved sustainable travel modes between Tangmere and Chichester city, in partnership with relevant authorities, including direct, seamless safe and reliable bus and cycle routes linking Tangmere with Chichester city, Shopwhyke and Westhampnett. In conjunction with measures in support of Allocation A19, contributions shall also be sought for providing high quality cycling and bus service transport links with the 'Five Villages' area and Barnham rail station in Arun District; and..."

Chichester Local Plan 2039 Regulation 19 Stagecoach South representations.docx -  
<https://chichester.oc2.uk/a/skh>

**Document Element:** Policy H3 Non-Strategic Parish Housing Requirements 2021 - 2039

**Respondent:** The Stickland Family [8166]

**Agent:** Henry Adams LLP (Andrew Thomas) [8167]

**Summary:**

In conclusion, our client supports the proposed housing numbers in Policy H3 for Wisborough Green and that the proposed figure of 75 should be seen as a minimum figure. Our clients will be making the District and the Parish aware of their land being available. This land is also deliverable, with potential solutions on site for bio-diversity and water neutrality.

**Full text:**

Chichester District Council – Reg. 19 Local Plan Consultation – Land to the West of Wisborough Green  
These representations are made on behalf of our client, the Stickland Family who wish to support Policy H3 of the Chichester Local Plan 2021 – 2039 Proposed Submission Regulation 19 Version.

**Background**

The Stickland Family are local landowners who live and farm in Wisborough Green. They own approximately 48 acres of farmland and buildings to west of the village, along Kirdford Road. Their land hasn't been promoted to either Chichester District Council or Wisborough Green Parish Council previously. However, the site will be submitted for consideration in the next publication of the

Housing and Economic Land Availability Assessment (HELAA). In addition, we will be making contact with the Parish Council to ensure that they are aware of its availability.

**Site suitability**

The land comprises a mixture of farmland and buildings which could be redeveloped to meet a local housing need. It is also important to note that, given the nature of the existing use, there could be the potential to offset the resulting water neutrality impact. Ongoing surveys and advice is being taken to confirm feasibility and also capacity.

In addition to this, our Clients recognise that Biodiversity Net Gain is an important consideration going forward. Should part of their landholdings be developed in the future, they do have the ability to provide net gain accordingly.

Both of these points should be important considerations should additional housing sites need to be identified through the Neighbourhood Plan Review or subsequent Development Plan Document. This site is available and deliverable and thus would assist with meeting future housing need.

**Policy H3 - support**

Policy H3 of the Chichester Local Plan relates to the non-strategic parish housing requirements for the plan period. The table contained in the policy identifies that 75 additional houses will need to be provided in Wisborough Green either through a Neighbourhood Plan or subsequent Development Plan Document. Our client wishes to make representations that they support this approach and the proposed housing numbers of 75, with these being increased should supporting evidence be provided.

Wisborough Green Parish Council have commenced with their Neighbourhood Plan review and published the Regulation 14 version in June 2021. This version was based on a lower housing number which was previously identified for the Parish through the Local Plan Regulation 18 consultation.

Therefore, should the Inspector agree with the proposed housing numbers for Wisborough Green, it is assumed that the Parish will continue with their Neighbourhood Plan with the new housing figure.

Our client would like to confirm that their land could provide residential development in line with policy requirements, so the Inspector should not be concerned that there are no additional deliverable sites in the Parish.

In conclusion, our client supports the proposed housing numbers in Policy H3 for Wisborough Green and that the proposed figure of 75 should be seen as a minimum figure. Our clients will be making the District and the Parish aware of their land being available. This land is also deliverable, with potential solutions on site for bio-diversity and water neutrality

## Object

**Document Element:** Policy H3 Non-Strategic Parish Housing Requirements 2021 - 2039

**Respondent:** Mrs Elizabeth Sullivan [8001]

**Summary:**

The proposed quota for villages in North has been set because the Council seem unable to resolve its issues regarding A27. Residential development better suited to the large towns in the South and need to commit to a solution to the A27

There should be consideration of all of the factors such as infrastructure, ecology, utilities, public transport, car reliance, school places, medical facilities and sewage capacity.

The proposed changes will cause irreversible harm to biodiversity and character of the area. The proposed number of houses is huge in proportion to the existing size of the villages.

**Full text:**

I am concerned that the proposed housing quota for the villages to the North has been set because the Council have been unable to resolve its issues regarding the A27. Residential development of any scale is better suited to the large towns in the South and the Council need to commit to a solution to the A27 and then a housing policy around it. Allocating housing to the North as a short term fudge will only serve to create long term issues for future generations to struggle with.

Beyond the A27 there is no logic to the revised allocations for the villages to the North and that is unacceptable. Any allocation needs to be based on a sound evidence base and strategy and the Council have failed to evidence such a case. I firmly agree that a local plan should be in place but it must be one that is sound and which has properly considered all of the factors such as infrastructure, ecology, utilities, public transport, car reliance, school places, medical facilities and sewage capacity. Any reasonable analysis of the villages in the North clearly shows that they are unsuitable for the extent of development now proposed. Any reasonable analysis would show that any number of towns to the south would be much better suited.

The proposed changes to the housing allocation for the villages to the North will cause irreversible harm to the local biodiversity and character of the area. The proposed number of additional houses is huge in proportion to the existing size of the villages. No consideration of scale in the current proposal.

Assumptions that have formed the basis of the allocations are flawed, there a simply no buses so which buses will the new residents be using? The local bus runs between 10am and 2pm 4 days a week. That is not sufficient to sustain a viable community with work and wellbeing commitments. There is no shop in Loxwood so how is it a service village?

All in all the revised allocations are based on ill conceived notions and poor judgement and should not be adopted. The allocations made in 2018 were sensible, the increase in 2020 were excessive and the proposed increase in 2023 is frankly wrong and needs to be withdrawn.

**Change suggested by respondent:**

The allocation of housing to the north need to be reduced back to the levels allocated in 2020

**Legally compliant:** No

**Sound:** No

**Comply with duty:** No

**Attachments:** None

**Document Element:** Policy NE4 Strategic Wildlife Corridors

**Respondent:** Sussex Ornithological Society (Mr Mark Mallalieu) [8089]

**Summary:**

We are concerned that the Strategic Wildlife Corridor (SWC) east of the city has been reduced significantly in a manner that has not been justified, undermines the value of the corridor and will lead to harm to biodiversity in the development stage of Policy A8. Such harm can and therefore should be avoided by restoring the larger corridor previously identified. We believe that this would ensure that development complies with NPPF section 180 a). We comment in detail under Policy A8. We also note and support the Regulation 19 plan vision that all SWCs should be fully protected (p.26).

**Full text:**

Policy NE4 Strategic Wildlife Corridors (p.50)

We are concerned that the Strategic Wildlife Corridor (SWC) east of the city has been reduced significantly in a manner that has not been justified, undermines the value of the corridor and will lead to harm to biodiversity in the development stage of Policy A8. Such harm can and therefore should be avoided by restoring the larger corridor previously identified. We believe that this would ensure that development complies with NPPF section 180 a). We comment in detail under Policy A8. We also note and support the Regulation 19 plan vision that all SWCs should be fully protected (p.26).

Policy A8 Land East of Chichester (p.231)

We object to the significant reduction in the Strategic Wildlife Corridor (SWC) east of the city. In addition to the wildlife impacts of this reduction that other conservation bodies are likely to highlight, e.g. on bats, we wish to draw attention again to the recent presence of breeding Marsh Harriers on the lake adjacent to the south side of the Policy A8 development, as noted in section 10.30, p.229 of the CDC Regulation 19 Local Plan. Marsh Harrier is a Schedule 1 species, scarce nationally and monitored by the Rare Breeding Birds Panel . Only 1-2 pairs nest annually in West Sussex . We consider that the SWC should therefore be restored to its previous dimensions and that the A8 development proceeds in a manner that will enhance the biodiversity of the lake and its surrounds, including by limiting access to the immediate proximity of the lake (bird hides could be considered to limit disturbance). This will increase the chances of the harriers occupying the site in the future, but is desirable anyway given other biodiversity benefits including for bats. Full protection in line with the CDC vision (p.26 of the Regulation 19 plan) will be an additional important benefit.

**Change suggested by respondent:**

Amend corridor to wider version previously identified (August 2021).

**Legally compliant:** Not specified

**Sound:** Not specified

**Comply with duty:** Not specified

## Object

**Document Element:** Spatial strategy, 3.5

**Respondent:** Sussex Wildlife Trust (Laura Brook) [7654]

**Summary:**

Plan should seek to demonstrate how delivery of Nature Recovery Network and more localised Local Nature Recovery Strategies are going to be incorporated in the spatial element of identifying allocations for development, consistent with s179 of NPPF 2021. Planning for nature's recovery will be vital to support ambitions of plan. In relation to Objective 2: Natural Environment, it will be vital for the spatial element of the Plan to consider how this is achieved through its own actions and also policy hooks. This will enable the emerging Local Nature Recovery Strategy to work effectively with the Local Plan and be a key driver for nature's recovery over the lifetime of the plan (NPPG Paragraph: 010). SWT is supportive of CDC already taking progressive action with the identification and inclusion of Strategic Wildlife Corridors, consistent with section 179 of NPPF 2021.

**Full text:**

See attached representation.

**Change suggested by respondent:**

SWT wants this section of the draft plan to demonstrate more clearly how the spatial strategy is enabling nature's recovery. The plan should seek to demonstrate how the delivery of the Nature Recovery Network and the more localised Local Nature Recovery Strategies are going to be incorporated in the spatial element of identifying allocations for development. This would be consistent with section 179 of the National Planning Policy Framework (NPPF) 2021.

## Object

**Document Element:** Policy NE4 Strategic Wildlife Corridors

**Respondent:** Sussex Wildlife Trust (Laura Brook) [7654]

**Summary:**

SWT supports CDC's decision to identify and map Strategic Wildlife Corridors although objects to policy on grounds that following further consultation on the Strategic Wildlife Corridors in 2021, there is a narrowing of the Pagham to Westhampnett Strategic Wildlife Corridor around the location of the proposed allocation of A8, Land East of Chichester - no information presented by CDC prior to Regulation 19 consultation or within draft Plan that provides justification for the narrowing. CDC to provide justification for amendment given previous submission of evidence and confirm if further amendments have been made to Strategic Wildlife Corridor network since 2021 consultation. Environment Act 2021 will require production of a Nature Recovery Network/Local Nature Recovery Strategy. Strategic Wildlife Corridors will be integral components of that local network (see NPPG Paragraph: 012). Other policies interact or overlay with the Strategic Wildlife Corridors; ie. Policy E3 Addressing Horticultural Needs. Suggest Policy NE4 makes it clear that not only should development protect and enhance features of Strategic Wildlife Corridors, but that it should also seek to restore them as per 179 of the NPPF 2021. Unclear what the definition of a sequentially preferable site is - CDC should clarify this.

**Full text:**

See attached representation.

**Change suggested by respondent:**

SWT proposes an amendment to policy bullet point 2:

2. The development will not have an adverse impact on the integrity and function of the wildlife corridor and protects, enhances and restores its features and habitats.

## Object

**Document Element:** Policy NE5 Biodiversity and Biodiversity Net Gain

**Respondent:** Sussex Wildlife Trust (Laura Brook) [7654]

**Summary:**

Proposes changes to ensure consistency with the NPPF and NPPG. Proposes a more ambitious target for BNG for major development sites. Urges CDC to consider how BNG will be addressed for phased development.

We also ask if CDC has considered a more ambitious target for BNG on its major development sites? We draw CDC's attention to the adopted biodiversity policy (DM18) within the Worthing Local Plan, which seeks to achieve 20% BNG on previously developed sites.

In Chapter 10 some allocations reference phased development, we encourage CDC to consider how BNG will be addressed in this approach in terms of delivery, to ensure that it comes forward in a proportionate and timely way.

**Full text:**

See attached representation.

**Change suggested by respondent:**

We propose the following amendments to the policy:

Within bullet point e), SWT proposes the addition of the word protected to priority, so that it will be consistent with NPPG Paragraph: 016 Reference ID: 8-016-20190721. With the amendment it would now read:

e) Protected and Priority Habitats and Species.

Point 3 e), we seek the removal of the term where possible at the end of the sentence. This will make it consistent with section 179 of the NPPF 2021. The new bullet point would read as follows;

e) Outside of designated sites:

Development proposals should identify and incorporate opportunities to conserve, restore and recreate priority habitats and ecological networks. Development proposals should take opportunities to contribute and deliver on the aims and objectives of the relevant biodiversity strategies where possible.

## Object

**Document Element:** Policy NE19 Nutrient Neutrality

**Respondent:** Sussex Wildlife Trust (Laura Brook) [7654]

**Summary:**

On a practical note, when considering the presentation of this policy against the information provided in the Water Neutrality Policy, the Water Neutrality Policy seems to indicate a degree of direction in terms of what the local authority requires as part of the planning application, for example a water neutrality statement. However, this type of detail is not set out in the Nutrient Neutrality Policy, and we question if it might be useful to those applying this policy to their application to have set out in policy the information required for submission.

## Object

**Document Element:** Policy E3 Addressing Horticultural Needs

**Respondent:** Sussex Wildlife Trust (Laura Brook) [7654]

**Summary:**

Having looked at the information presented in the consultation, this policy appears to propose an extension to the Runcton Horticultural Development Needs on top of the East of the City Wildlife Corridor. Neither Policy E3 addressing Horticultural Need, nor indeed Policy N4 Strategic Wildlife Corridors, seem to address how these two policies have the opportunity to interact positively for the benefit of biodiversity. We would suggest that this policy more clearly reflects that it overlays a Wildlife Corridor and as such must recognise the requirements of policy NE 4 Strategic Wildlife Corridors when proceeding.

**Full text:**

See attached representation.

**Change suggested by respondent:**

We would suggest that this policy more clearly reflects that it overlays a Wildlife Corridor and as such must recognise the requirements of policy NE 4 Strategic Wildlife Corridors when proceeding.

## Object

**Document Element:** Policy A2 Chichester City – Strategic housing location

**Respondent:** Sussex Wildlife Trust (Laura Brook) [7654]

**Summary:**

The consultation document does not seem to provide a map to identify the area defined by this allocation, so it is difficult for SWT to give specific feedback on impacts to biodiversity.

We are encouraged to see the policy requirements acknowledge under bullet point 5, the need to avoid impacts on biodiversity, and the potential for the area to deliver gains for biodiversity.

**Full text:**

See attached representation.

**Change suggested by respondent:**

Given the urban nature of the allocation, we would also like to see the policy make reference to the importance of delivering strategic Green Infrastructure across this large area for allocation, as per section 175 of the NPPF 2021.

**Legally compliant:** Not specified

**Sound:** Not specified

**Comply with duty:** Not specified

**Attachments:**

SWT Response F-Chichester Reg 19 - <https://chichester.oc2.uk/a/sfd>

## Object

**Document Element:** Policy A3 Southern Gateway Development Principles

**Respondent:** Sussex Wildlife Trust (Laura Brook) [7654]

**Summary:**

SWT highlights the close proximity of A3, A4 & A5. We ask CDC to consider these allocations in combination and their ability to deliver a cohesive approach to the integration of Green Infrastructure and Biodiversity Net Gain should be strongly considered by CDC. This doesn't seem to be reflected in this policy of the broad development principles.

**Full text:**

See attached representation.

**Change suggested by respondent:**

In order for the policy to be consistent with national policy (174d, NPPF 2021) we propose an additional bullet point for the policy:

- Deliver an integrated and cohesive approach to green infrastructure across the southern gateway, as part of a wider strategic network.

**Legally compliant:** Not specified

**Sound:** No

**Comply with duty:** Not specified

**Attachments:**

SWT Response F-Chichester Reg 19 - <https://chichester.oc2.uk/a/sfd>

## Object

**Document Element:** Policy A4 Southern Gateway – Bus Station, Bus Depot and Basin Road Car Park

**Respondent:** Sussex Wildlife Trust (Laura Brook) [7654]

**Summary:**

The policy supporting this allocation makes clear under bullet point 6 the need to protect and provide net gains for biodiversity, as per paragraph 174 (d) of the NPPF. We seek clarity from CDC as to why many of the allocation policies say required net gain and do not specify that it must be a minimum of 10% BNG? For urbanised locations such as this allocation, there could be opportunities to deliver significantly more than 10% BNG.

**Full text:**

See attached representation.

**Change suggested by respondent:**

We again reiterate the point made under Policy A3 about maximising the opportunities to deliver for Green Infrastructure and BNG with adjoining allocation A5.

**Legally compliant:** Not specified

**Sound:** No

**Comply with duty:** Not specified

## Object

**Document Element:** Policy A6 Land West of Chichester

**Respondent:** Sussex Wildlife Trust (Laura Brook) [7654]

**Summary:**

We can see from aerial photography and information that this allocation appears to already be under construction in a phased manner. It is also sited adjacent to a Strategic Wildlife Corridor. Whilst we acknowledge that the supporting policy has sought to recognise the sensitivities of the habitats within it and the Strategic Wildlife Corridor to the west of the site, we question whether sufficient opportunity has been taken to adequately protect these features. For example, should bullet point 6 also reference Policy NE8 Trees Hedgerows and Woodland, given the ancient woodland on site?

**Full text:**

See attached representation.

**Change suggested by respondent:**

Should bullet point 6 also reference Policy NE8 Trees Hedgerows and Woodland, given the ancient woodland on site?

**Legally compliant:** Not specified

**Sound:** Not specified

**Comply with duty:** Not specified

**Attachments:**

SWT Response F-Chichester Reg 19 - <https://chichester.oc2.uk/a/sfd>

## Object

**Document Element:** Policy A7 Land at Shopwyke (Oving Parish)

**Respondent:** Sussex Wildlife Trust (Laura Brook) [7654]

**Summary:**

We recognise that information supporting this allocation indicates that outline permission has already been granted for this allocation. SWT has observed on the policies map that this allocation extends into Wildlife Corridor. SWT feels that the policy wording supporting this allocation fails to adequately reflect the opportunities it has to deliver benefits for biodiversity. For example, bullet point 8 seems negatively worded. We suggest this is unsound as is inconsistent with national policy relating to biodiversity; for example, the NPPF paragraph 174(d) makes clear the need to provide net gains for biodiversity.

**Full text:**

See attached representation.

**Change suggested by respondent:**

SWT proposes that the allocation boundary be amended to take it outside the area identified as a Strategic Wildlife Corridor in the 2021 consultation, and that sufficient buffers are incorporated within the new redline boundary to protect the integrity and function of the corridor.

The following addition could be made to bullet point 8:

8) Demonstrate that development would not have an adverse impact on the nature conservation interest of identified sites and habitats and; deliver net gains for biodiversity.

**Legally compliant:** Not specified

**Sound:** No

**Comply with duty:** Not specified

SWT Response F-Chichester Reg 19 - <https://chichester.oc2.uk/a/sfd>

## Object

---

**Document Element:** Policy A8 Land East of Chichester

**Respondent:** Sussex Wildlife Trust (Laura Brook) [7654]

**Summary:**

Do not consider current boundary of allocation to be sound. Do not support narrowing of Strategic Wildlife Corridor around proposed allocation (A8) since consultation in 2021. CDC to provide justification for narrowing of Corridor.? Understood from 2021 technical consultation that Corridor was shifted west to incorporate bat data commissioned in part by CDC to inform locations of Strategic Wildlife Corridors, information is available as part of the Local Plan evidence base. SWT does not consider it possible to avoid harm to priority species and habitats in current allocation boundary for A8 due to large area of important woodland habitat for birds and bats in north eastern section of site allocation boundary that would be lost as a result of development.

**Full text:**

See attached representation.

**Change suggested by respondent:**

SWT propose that the allocation boundary of A8 be amended to take it outside the area identified as the modified Pagham to Westhampnett Strategic Wildlife Corridor in the 2021 consultation. In addition sufficient buffers must be incorporated within the new redline boundary to protect the integrity and function of the Strategic Wildlife Corridor.

## Object

---

**Document Element:** Policy A10 Land at Maudlin Farm

**Respondent:** Sussex Wildlife Trust (Laura Brook) [7654]

**Summary:**

We note that this allocation policy seeks to ensure impacts to biodiversity are avoided and that net gains for biodiversity are achieved, in line with section 174 of the NPPF. We note that again this policy doesn't specify a minimum for Biodiversity Net Gain. We question whether the policies should be more specific, as we have seen in other Local Authority Plans. For example, the Environment Act will make a minimum of 10% Biodiversity Net Gain mandatory by November 2023, and as such this should be made clear in the policy. Alternatively, if CDC is seeking to be more ambitious by setting a minimum of 20% BNG for major development, as seen in the Adopted Worthing Local Plan, this could be specified.

**Full text:**

See attached representation.

**Change suggested by respondent:**

-

**Legally compliant:** Not specified

**Sound:** Not specified

**Comply with duty:** Not specified

## Object

**Document Element:** Policy A12 Chidham and Hambrook

**Respondent:** Sussex Wildlife Trust (Laura Brook) [7654]

**Summary:**

The information available in the consultation does not seem to define the area and as such, does not enable SWT to give effective feedback on the impacts on biodiversity from development at this scale in this broad location. We do note that that supporting policy wording requires impacts to biodiversity and protected sites to be avoided, and the delivery of Biodiversity Net Gain. We wish to highlight that the broad location, in addition to a Strategic Wildlife Corridor, has Biodiversity Opportunity Areas highlighted within it and these are likely to be key locations in Nature Recovery Networks and emerging Local Nature Recovery Strategies, NPPG Paragraph: 010 Reference ID: 8-010-20190721

Given the clear commitment to coastal policies in the draft Local Plan, we ask if that should be highlighted within the policy requirements.

**Full text:**

See attached representation.

**Change suggested by respondent:**

Given the clear commitment to coastal policies in the draft Local Plan, we ask if that should be highlighted within the policy requirements.

## Object

**Document Element:** Policy A13 Southbourne Broad Location for Development

**Respondent:** Sussex Wildlife Trust (Laura Brook) [7654]

**Summary:**

The information we have been able to obtain by looking at this plan does not enable SWT to give effective feedback on the impacts on biodiversity from development at this scale in this broad location. We are encouraged to see the supporting text acknowledging the importance of master planning when considering suitability of development in that location.

We feel that this policy is inconsistent with other policies in the draft Local Plan. While bullet point 9 references no adverse impacts to wildlife, it fails to acknowledge the requirement to leave biodiversity in a better state via the delivery of BNG.

**Full text:**

See attached representation.

**Change suggested by respondent:**

Amend policy to acknowledge the addition of BNG to ensure the policy is consistent with national policy, 179b NPPF 2021:

9) Demonstrate that development would not have an adverse impact on the nature conservation interest of identified sites and habitats including the strategic wildlife corridors;. Deliver biodiversity net gain that facilitates habitat connectivity.

**Legally compliant:** Not specified

**Sound:** No

**Comply with duty:** Not specified

## Object

**Document Element:** Appendix F: Monitoring framework

**Respondent:** Sussex Wildlife Trust (Laura Brook) [7654]

**Summary:**

SWT suggests that the monitoring framework as presented doesn't clearly indicate the monitoring requirement for each policy. As a result, SWT feels it fails to capture some important information to inform the effectiveness of the policies. For example, policy NE5 Biodiversity and Biodiversity Net Gain does not appear to have a monitoring requirement that will capture the percentage of net gain delivered by applications. Given that the Environment Act will bring in mandatory net gain of a minimum of 10% by November 2023, we feel it would be remiss of CDC to miss capturing the effectiveness of their policy against national mandatory requirements. It might also help to build a picture of the feasibility of exceeding that minimum requirement.

We also highlight that Sussex Wildlife Trust is listed as a responsible agency/partner. Can we ask CDC to clarify our role in that? It may be that an amendment is required to more specifically reference the role of the Sussex Biodiversity Record Centre rather than SWT.

**Full text:**

See attached representation.

**Change suggested by respondent:**

Propose an additional monitoring indicator of;

- Number of planning applications delivering a BNG in excess of 10%

SWT Response F-Chichester Reg 19 - <https://chichester.oc2.uk/a/sfd>

**Document Element:** Policy A15 Loxwood

**Respondent:** Mrs T P Swann [7253]

**Summary:**

How are families without their own transport able to get to and from Horsham or Guildford for work? There are no employment opportunities, the surgery is at capacity, flooding is already an issue, power cuts are increasing and there is a lack of water capacity and waste water plans.

This is a beautiful rural area, full of wildlife and green space - this needs protecting rather than building on. The families who have recently moved in with children have voiced feeling cut off and isolated with no access to the facilities they need as they do not have cars.

LPC have spent time and effort to create a Revised Neighbourhood Plan which allocates 126 houses plus 17 carried forward from the Made Neighbourhood Plan giving 143 houses. It has reached Regulation 14 consultation stage and is based upon the Preferred Approach Local Plan consultation. The residents of the Parish and Loxwood Parish Council have satisfied themselves through evidence gathered that 126 homes is a sustainable allocation given the constraints that exist and it should not be ignored due to water neutrality issues, let alone the transport and services issues.

This protects the village and the community and reflects the importance of Neighborhood plans for Loxwood and the rest of the country - Loxwood is a historic small village with limited services and it should be understood and respected as such.

**Full text:**

Loxwood is not capable of sustaining a further 220 houses due to its lack of infrastructure. Families who have recently been moved into the new housing development are now walking over 4 miles to the next village (and back again along a dangerous road without a pavement), Rudgwick, in order to buy food from the Co-op as they do not have access to a car. Loxwood village does not have a general shop, only a highly priced butcher. The bus service is not viable for families who have children in school and who need to return within a reasonable amount of time to collect them - it is not servicable for work purposes.

**Change suggested by respondent:**

Policy A15 should be removed and Policies H2 and H3 amended to reflect a realistic allocation of 125 houses which is still generous compared to other local area with better services.

Loxwood should not be deemed to be a strategic location as it is a small rural village

## Object

**Document Element:** Policy H2 Strategic Locations/ Allocations 2021 - 2039

**Respondent:** Mr Tim Swann [7917]

**Summary:**

CDC have not consulted on revised housing numbers in North of the district-it quotes the restrictions of the A27 which prevents the southern development however the A281 is a bigger constraint which will also have Dunsfold adding pressure.

Allocation of 220 houses plus a further 91 houses on already allocated sites is not sustainable in rural Loxwood-it a huge Percentage increase and will destroy the village CDC Sustainability Appraisal is weak in its justification for allocation of 220 houses

There is no viable bus, lack of sewerage capacity, a village school, shops to support large increase in housing.

Allocation of 220 houses plus a further 91 houses on already allocated sites is not sustainable in rural Loxwood-it a huge Percentage increase and will destroy the village.

**Full text:**

I feel very strongly the local plan is ill thought through and a unbalanced distribution of houses that doesn't reflect the nature of rural villages. Loxwood is a rural village with no public transport links that are usable for the working population, no work opportunities, a serious lack of sewage capacity, no local grocery shop and yet the council deem it suitable for over 312 houses which will give a 50% increase in dwellings and a potential for significantly more as a 'strategic' location-it is completely bonkers. We are not a town!

It is also very disrespectful of the council to ignore our latest neighbourhood plan-we have accepted the national need for additional houses and have spent significant time and funds to produce this. It has completely demoralized the parish council and make a mockery of the whole process.

I have included my comments below why i believe this is not a viable plan for the council.

**Document Element:** Policy H3 Non-Strategic Parish Housing Requirements 2021 - 2039

**Respondent:** Peter Tait [7237]

**Summary:**

[RECEIVED LATE]

Objection to proposed development within Loxwood of grounds of:

- insufficient supporting infrastructure including:

i) water and sewage;

ii) services including shop, school and medical practice;

ii) issue of power supply

- Impact on landscape and flood risk

- Impact on natural environment

- Lack of consideration of Neighbourhood Plan

**Full text:**

[RECEIVED LATE]

I would like to register my strong objections to the Local Plan published on 3rd February last, which sets out proposals to develop 220 new homes in Loxwood in addition to the 91 that are under development.

My principle cause for concern about these plans are that it is already demonstrably clear that the infrastructure in Loxwood cannot adequately support the existing developments, let alone this proposal, which contains no mention of any attempts to improve it.

This includes but is not limited to:-

**Water & Sewerage:** Southern Water have admitted that the capacity in Loxwood is insufficient to deal with even current demand and has no plans to increase it.

I have personally experienced sewage backflow on my property on a number of occasions in the last twelve months, which has been rectified recently by the fitting of a valve system which shifts the problem elsewhere. Furthermore, the "workarounds" in place for recent housing developments lead to unpleasant odours and risk of discharge into the water courses.

**Services:** Loxwood has no village shop, its school and medical practice are at capacity and there is negligible public transport serving the village. Over development is placing a strain on the electrical grid supply leading to instances of power disruption.

**Landscape and flood risk:** The conversion of the significant amount of land involved with this proposal from fields to housing plots will add further pressure from rain water flow on the capacity of the River Lox and Loxwood stream, thereby increasing the risk of flooding to many properties (including my own) in the village.

The proposals dig deep into the natural environment that defines the character of the village and its surroundings with footpaths, vistas and natural habitats permanently degraded as a consequence.

Loxwood PC developed a Neighbourhood Plan in 2018 which was revised in 2020; this seems to have been ignored completely by CDC despite central government encouragement of such plans. It appears that CDC's desire to focus more housing development in the North of its district is leading to draconian disregard for the considered views of local residents reflected in the Neighbourhood Plan.

I ask that you take my points into consideration when this Local Plan Proposal is refined further.

**Change suggested by respondent:**

-

**Legally compliant:** Not specified

**Sound:** Not specified

**Comply with duty:** Not specified

**Attachments:** None

**Document Element:** Policy NE4 Strategic Wildlife Corridors

**Respondent:** Mrs Sue Talbot [6219]

**Summary:**

– The Ham Brook Wildlife Corridor area should be larger as shown in the proposed Neighbourhood Plan (Southbourne Parish Neighbourhood Plan, Submission Modified Plan 2014 – 2029 Ham Brook Strategic Wildlife Corridor Map (Plan D, page 47) as confirmed by District and Parish Council surveys, and validated by the Sussex Biodiversity Record Centre.

Is the District Council Map definitive, or a strategic guideline? The Local Plan (Policy NE4, Map NE4a and para. 4.16) confirms definitive boundaries. Discussions with the National Park (Duty to Cooperate Statement of Compliance Jan 2023, page 38), agreed that details would be defined in Neighbourhood Plans.

**Full text:**

The Ham Brook Wildlife Corridor was included in the Local Plan following strong representations from the Southbourne Parish Council, Hambrook and Chidham Parish Council, and members of the public. Southbourne Parish Council organised surveys to support its inclusion but the area selected by the District Council is not as large as the area defined by the Parish Council.

The evidence commissioned by the District Council (Wildlife Corridors Technical Consultation Document, July 2021) shows contributory branches of the Ham Brook Chalk Stream to the west (Figure 1) which have not been included in the strategic corridor. It is not clear why. Chalk streams are rare and worthy of protection. Prolific evidence of water voles was discovered during the Parish Council survey of these side-streams.

The District Council bat survey had only two recording points, but despite this, bat activity was recorded to the west and north west of the currently proposed corridor (Wildlife Corridors Technical Consultation Document, July 2021 – Figure 2). Bat surveys organised and commissioned by the Parish Council were more wide ranging and fully support the identification of a wider area as shown in the Neighbourhood Plan.

At a meeting between officers of the District Council and the South Downs National Park (SDNP), SDNP officers “queried whether they [Wildlife Corridors] are substantial enough to perform intended function” (Duty to Cooperate Statement of Compliance Jan 2023, page37). This would appear to support the case for a larger and wider Corridor along the Ham Brook.

Conclusion - The Wildlife corridor should be extended to include the area shown in the Neighbourhood Plan on the basis of the evidence secured by both District and Parish Councils. Confirmation is required about whether boundaries are defined in the Local Plan or in Neighbourhood Plans.

**Change suggested by respondent:**

Policy NE4 should state which plans confirm the boundaries of the Wildlife Corridors and Local Plan Map 4a needs amending to show a larger area for the Nutbourne to Hambrook Wildlife Corridor.

**Document Element:** Policy A13 Southbourne Broad Location for Development

**Respondent:** Mrs Sue Talbot [6219]

**Summary:**

Policy A13 proposes "... a comprehensive and coordinated approach, piecemeal or unplanned development proposals within the area which are likely to prejudice its delivery including the infrastructure for the area will not be permitted." The Council's housing supply figure was 4.74 years (April 2022), thus activating its "Interim Position Statement for Housing". This Statement may be withdrawn on approval of the new Local Plan (date unknown) but it could be retained. The Statement steers development towards individually assessed "sustainable locations" which conflicts with the masterplanning intended in Policy A13. The Interim Statement should be withdrawn immediately in respect of Southbourne.

**Full text:**

The HEELA 2021 shows the District Council's assessment of the potential for housing in Southbourne to be well over 4000 dwellings. However, the parish is not capable of accommodating an unlimited amount of housing.

The parish is under great pressure and this was acknowledged by the reduction of the strategic allocation from 1250 to 1050 in the Council's letter dated 26th November 2020. The District Council reduced the strategic allocation to take account of an appeal which allowed 199 dwellings on a site in Cooks Lane, Southbourne on 2nd March 2020. (199 dwellings App. No. 18/03/03145/OUT). A letter from the District Council to the Parish Council dated 26th November 2020 stated "... the revised distribution we are testing includes a proposed level of development of 1,250 dwellings for your parish. The working assumption therefore is that your parish council will bring forward a neighbourhood plan identifying sites (of five or more dwellings) to deliver this level of development for the period 2019-2037. Typically, any sites or schemes which already have planning permission, allocated in the existing Local Plan or a "made" Neighbourhood Plan as at 1 April 2020 would not count towards this figure. Nor would development on sites of less than five dwellings, as they count towards the "windfall" figure for the Local Plan Review and so cannot be double counted. The exception to this is the 199 dwellings which have planning permission on the Cook's Lane site, which I can confirm are envisaged will count towards the 1,250 total." It appears that, quite rightly, the District Council made this exception because it was recognised that more than 1250 dwellings could not be sustained in the parish.

This pressure continues. There are currently four large applications pending in Southbourne. Those at Penny Lane (23/00024/OUT – 84 dwellings), and Four Acre Nursery (22/01903/OUT – 40 dwellings) lie within the BLD. Hopefully these will be refused as approval would prejudice the intention of Policy A13. A third lies outside the BLD at Gosden Green Nursery (21/02238/FULEIA – 29 dwellings) and the outcome of an appeal is awaited. The fourth (21/01910/OUT – 63 dwellings) lies outside the BLD and close to Hambrook. "The Interim Position Statement for Housing" has been invoked in three of these applications. If approved, these "piecemeal and unplanned" applications as submitted will chip away at the strategic allocation figure and the proposed masterplanning without providing the infrastructure so badly needed in the parish. The Interim Position Statement has weight as Supplementary Planning Guidance and the Local Plan Review also has weight having reached its Regulation 19 stage, it is not clear which has precedence.

The period of greatest pressure is likely to be experienced before the approval of the Local Plan and therefore the "Chichester Interim Position Statement for Housing" should be amended to exclude Southbourne parish now.

(Please note the uploaded document "Chichester Interim Position Statement for Housing" is dated 2020 as the 2022 version does not appear to be on the CDC website)

**Change suggested by respondent:**

Policy A13 should include the following "Due to the circumstances which require a BLD to be proposed for Southbourne, the provisions of the Council's 'Interim Position Statement for Housing April 2022' will not be applied in Southbourne parish". A similar statement needs to be added to the "Interim Position Statement for Housing" for consistency.

**Respondent:** Tanglewood Residences Limited [7976]

**Agent:** Andrew Black Consulting (Mr Andrew Black, MD) [7597]

**Summary:**

The overall strategy as set out by CDC in the plan is highly dependent on the delivery of housing from Neighbourhood Plan areas. Whilst this approach is not un-sound in itself, it is considered that the plan in its current form allows for little mitigation or alternatives should delivery not come forward in the neighbourhood plan areas. It is considered that in order to be 'effective' and 'positively prepared' the Local Plan should also allocate the sites in Wisborough Green as stand-alone applications with an allowance that applications could come forward on these sites in the event that the Neighbourhood Plans do not progress

**Full text:**

See attached representation.

**Change suggested by respondent:**

In order for the plan to be considered 'positively prepared' and 'justified' it is recommended that additional wording is added to policy H3 to state that individual planning applications can come forward on sustainable sites outside of existing settlement boundaries in parishes should delivery not come forward within the first 2 years of the plan period. Priority should be given to any sites already identified within draft versions of Neighbourhood Plans. This is inclusive of the proposed Tanglewood Nursery site at Wisborough Green.

CDC Regulation 19 - Andrew Black Consulting - obo Tanglewood Residences - March 2023 - Final redacted - <https://chichester.oc2.uk/a/sxb>

**Document Element:** Policy A15 Loxwood

**Respondent:** Mr Graham Tarrant [8007]

**Summary:**

Policy A15 is misleading/incorrect - Loxwood is no longer a service village by your own definition. The bus service is merely a box-ticking exercise, the time table ensures it is of no use for main employment areas of Horsham or Guildford. There is nothing in A15 to increase capacity of school and health centre, which are both currently full. Existing sewage and waste water problems have been ignored by CDC on recent Loxwood developments and the wording in A15 is nowhere near strong enough to ensure this is not glossed over again going forward.

**Full text:**

Policy A15 is misleading/incorrect - Loxwood is no longer a service village by your own definition. The bus service is merely a box-ticking exercise, the time table ensures it is of no use for main employment areas of Horsham or Guildford. There is nothing in A15 to increase capacity of school and health centre, which are both currently full. Existing sewage and waste water problems have been ignored by CDC on recent Loxwood developments and the wording in A15 is nowhere near strong enough to ensure this is not glossed over again going forward.

**Change suggested by respondent:**

The plan needs to recognise that Loxwood is not a suitable neighbourhood for an additional 220 dwellings. The plan needs to recognise the wishes of the 2020 Loxwood Neighbourhood plan. The plan needs to recognise that resolving the EXISTING serious capacity problems of sewage and waste water MUST be a pre-cursor to ANY further development. The current statements in A15 are far too "wishy-washy".

**Legally compliant:** No

**Sound:** No

**Comply with duty:** Yes

**Attachments:** None

**Document Element:** Chapter 1: Introduction, 1.1

**Respondent:** Mr Matthew Taylor [7977]

**Summary:**

The strategy of the Plan has changed in such a way that that the public should have an opportunity to comment on those changes before a Reg 19 consultation. As we can only comment on tests of soundness there is not an opportunity for appropriate public engagement. There is not an opportunity to comment on new allocations, the suitability of the sites, or content of the policy. it is not felt that there is an intention for meaningful engagement.

We cannot make comments on new allocations, or changes to strategy i.e. introducing Gypsy and Traveller sites on all allocations at a Reg 19 stage of a Local Plan. It feels as though the Plan has been rushed through in order to tick boxes rather than producing a Plan where the public can meaningfully comment and shape our communities.

**Full text:**

I would question whether the Plan should be a Reg 19 consultation. The Plan contains changes to strategy and approach which the general public have not had the opportunity to comment on. As this is a 'technical consultation' where we can only comment on issues relating to the test of soundness it hardly gives the general public an opportunity for genuine public engagement.

The strategy of the Plan has changed for example:

- removal of all allocations on the Manhood Peninsula
- the identification of additional sites i.e. Maudlin Farm , Rolls Royce etc with no opportunity to comment on their suitability or policy requirements
- the inclusion of Gypsy and Traveller sites on all allocations again without an opportunity to comment on the suitability of this approach or policy requirements
- amendments to the wildlife corridors without an opportunity to comment on this. Given that changes now enable development in some areas ie Maudlin this could be seen as a cynical move.

**Change suggested by respondent:**

The Plan should be paused and time given for public engagement at a meaningful level.

## Object

**Document Element:** Policy A14 Land West of Tangmere

**Respondent:** Mrs Patricia Tedman [7972]

**Summary:**

As an owner and resident of Saxon Meadow I am deeply concerned with the proposed plan to build 1300 dwellings. It will have an unacceptable impact on my health and well being, also the property value in the future. Not legally compliant because it fails to apply the statement of community involvement principles through the omission of a clear and transparent reason why CDC ignored 2016 Neighbourhood Plan by proposing 30% more homes and is not justified given events since 2019.

**Full text:**

As an owner and resident of Saxon Meadow I am deeply concerned with the proposed plan to build 1300 dwellings. It will have an unacceptable impact on my health and well being, also the property value in the future. Not legally compliant because it fails to apply the statement of community involvement principles through the omission of a clear and transparent reason why CDC ignored 2016 Neighbourhood Plan by proposing 30% more home and is not justified given events since 2019.

**Change suggested by respondent:**

The following modifications are necessary to make the Local Plan legally compliant and sound:

- Reduce dwelling numbers
- Shift the proposed housing towards Tangmere Road
- Increase the green space border between the dwellings and Saxon Meadow, as we are in a conservation area.

**Document Element:** Policy A10 Land at Maudlin Farm

**Respondent:** Teren Project Management Ltd [8174]

**Agent:** Henry Adams LLP (Peter Cleveland, Head of Planning) [6827]

**Summary:**

Request minor amendments be made to allow for level of flexibility so that future development can be aligned with local needs at time of development.

Recognise that specialist accommodation for the elderly is important given the ageing population, flexibility should be included to ensure provision is akin to local need.

Clear that gypsy and traveller plots currently available in other areas of District have not been taken up by Council for allocation (HBI0028). Clear absence of information regarding requirements for pitch provision in localities and site specific needs required to be met. No evidence in respect of engagement with gypsy traveller community in respect of desire to be located on suburban residential sites. Difficult to design suitable means of access within residential housing estate, no consideration given to how this can be accommodated within such a site. Not appropriate to include gypsy and traveller site provision until further evidence provided on suitability of approach, need in this specific location and suitability as part of housing allocation of this scale, with single point of access. Object to inclusion of allocation for 3 gypsy and traveller plots.

Criterion 5 - Secondary vehicular access unsuitable, although a pedestrian access would connect into existing footpath network to the west.

**Full text:**

See attached representation.

**Change suggested by respondent:**

Allocation references 13.4 hectares but the land available comprises 14.7ha, as detailed in attachment. request wording at 2nd bullet point be amended to read as follows; 'Specialist accommodation for older persons, to include a component of care or support, of a form which is appropriate to an evidenced need of the local area.'

Criterion 5 - Request that requirement for secondary access be removed. Whilst vehicular access would not be suitable, a pedestrian access would be and would connect into existing footpath network to the west.

## Object

---

**Document Element:** How the Plan has developed, 1.37

**Respondent:** Thakeham Homes (Katie Martin, Planner) [8163]

**Summary:**

Concerns with length of delay between Regulation 18 and 19 consultations. Regulation 19 consultation only allows for comments relating to soundness of Plan, not its content, and there are a number of new policies. Since Regulation 18 consultation in 2018 a number of large events/changes have taken place including Covid and NPPF changes, as well as new constraints such as water and nutrient neutrality.

Main concern is how up to date the evidence base remains and if Plan will stand up to Examination and be considered sound. Concerned that five years between Regulation 18 and 19 is too long without fully updated evidence base.

## Object

**Document Element:** Policy NE15 Flood Risk and Water Management

**Respondent:** Thakeham Homes (Katie Martin, Planner) [8163]

**Summary:**

Unrealistic to set finished floor levels (FFL's) to an offset from 'average site level'. Setting minimum FFL's to 300mm above an average site level would challenge viability of any larger site or smaller site on a considerable gradient and restrict master planning and placemaking (due to earthworks required to achieve FFL offset from 'average site level') at no benefit to flood risk. Exceedance event flow routes can be protected with no increased flood risk to properties without having lift plot FFL's in lower areas of development sites to such a level. It is recommended wording looks to protect exceedance flow routes ensuring property FFL's are 300mm above exceedance flood level. Additionally, 'vulnerable' development is not clearly defined – is this specific to dwellings in Flood Zones 2 or 3? Should be clarified.

**Full text:**

See attached representation.

**Change suggested by respondent:**

Policy NE15 should be re-worded:

Paragraph 2:

Development should not increase the risk of flooding elsewhere, taking into account the cumulative effects of other development, and should (where possible) seek to achieve a reduction in flood risk for existing communities on and off site

Point 4:

For vulnerable development, finished floor levels should be no lower than:

- 300mm above the adjacent road level to the building
- 300mm above predicted significant fluvial/tidal flood level (Fluvial 1 in 100year / Tidal 1 in 200year plus latest climate change allowances) for the lifetime of the development.

Written representation letter - <https://chichester.oc2.uk/a/szx>

## Object

---

**Document Element:** Policy P8 Materials and Detailing

**Respondent:** Thakeham Homes (Katie Martin, Planner) [8163]

**Summary:**

Point 6 - If features such as chimneys are desired to be incorporated into a scheme, then they need to be GRP. GRP chimneys can be in keeping with existing character of an area and should not be dismissed with a blanket policy such as this.

Point 9 - fibre cement boarding can be a visually attractive design within a development. If cladding is to be used it is preferred to be fibre cement due to safety benefits. Timber is combustible and even if it has been treated poses a fire risk. Timber is not recommended by Building Regulations, further support of this is within The Building Safety Act.

Point 10 - would recommend this is assessed on a case-by-case basis depending on what blocks are put forward at design stage.

Point 11 - uPVC provides a robust and reliable material at a reasonable price which is highly popular in the housing market. It is also a product that house buyers would commonly expect to find on a new-build and are familiar with.

**Full text:**

See attached representation.

**Change suggested by respondent:**

Reconsider wording of point 6 of Policy P8. Either remove point 11 or amend as follows: "The use of uPVC will not be unsupported, however the use of alternative materials with environmental benefits will be encouraged".

**Respondent:** Thames Water Utilities Ltd (Mr David Wilson, Town Planner) [7761]

**Summary:**

If any sites were to be located within the Thames Water region, a consideration to the potential impact on water and wastewater infrastructure should be included when promoting a development and provision for upgrades should be made, where required.

**Full text:**

Thames Water are the statutory sewerage undertaker for a small part of the northern area of the District around Haslemere and are hence a "specific consultation body" in accordance with the Town & Country Planning (Local Planning) Regulations 2012

None of the strategic sites are located within the Thames Water region.

If any sites were to be located within the Thames Water region, a consideration to the potential impact on water and wastewater infrastructure should be included when promoting a development and provision for upgrades should be made, where required.

The time to deliver water/wastewater infrastructure should not be underestimated. It can take 18 months – 3 years for local upgrades and 3 – 5 years plus for more strategic solutions to be delivered. It is therefore vital that the Council and Developers work alongside Thames Water so that we can build up a detailed picture what is being built where, get confidence of when that development is going to start and what the phasing of that development will be.

To support this Thames Water offers a Free pre planning service where developer can engage Thames water to understand what if any upgrades will be needed to serve the development where and when.

Link here > <https://www.thameswater.co.uk/developers/larger-scale-developments/planning-your-development/water-and-wastewater-capacity>

We recommend developers attach the information we provide to their planning applications so that the Council and the wider public are assured water and waste matters for the development are being addressed.

## Object

**Document Element:** Policy I1 Infrastructure Provision

**Respondent:** Thames Water Utilities Ltd (Mr David Wilson, Town Planner) [7761]

**Summary:**

Object to policy - water/wastewater infrastructure essential to any development, failure to ensure required upgrades to infrastructure network are delivered alongside development could result in adverse impacts in form of internal and external sewer flooding and pollution of land and water courses and/or low water pressure. Plan should seek to ensure there is adequate water and wastewater infrastructure to serve all new developments and include a specific policy on key issue of provision of water and sewerage/wastewater infrastructure to service development. This is necessary as it will not be possible to identify all water/sewerage infrastructure required over plan period due to the way water companies are regulated and plan in 5 year periods.

**Full text:**

See attached representation.

**Change suggested by respondent:**

Policy I1 should be amended to include following text:

**“Water Supply & Wastewater Infrastructure:**

Where appropriate, planning permission for developments which result in the need for off-site upgrades, will be subject to conditions to ensure the occupation is aligned with the delivery of necessary infrastructure upgrades.”

“The Local Planning Authority will seek to ensure that there is adequate water and wastewater infrastructure to serve all new developments. Developers are encouraged to contact the water/waste water company as early as possible to discuss their development proposals and intended delivery programme to assist with identifying any potential water and wastewater network reinforcement requirements. Where there is a capacity constraint the Local Planning Authority will, where appropriate, apply phasing conditions to any approval to ensure that any necessary infrastructure upgrades are delivered ahead of the occupation of the relevant phase of development.”

## Support

**Document Element:** Policy H2 Strategic Locations/ Allocations 2021 - 2039

**Respondent:** The Birkett Family [8175]

**Agent:** Henry Adams LLP (Mr Chris Locke, Planning and Development Assistant) [7352]

**Summary:**

For clarity, our client does not object to this allocation, but supports it as it shows that Tangmere is a location that can be seen to grow.

**Full text:**

These representations are made on behalf of our client, the Birkett Family and the Chichester Local Plan 2021 – 2039 Proposed Submission Regulation 19 Version.

**Background**

The Birkett Family are local landowners who live in Easthampnett. They own approximately 44 acres of farmland to the west of Easthampnett which is edged red at Enclosure 1. The land has been promoted intermittently to Chichester District Council but they wish to confirm to Chichester District Council and the Inspector that the land is available for development should they consider Tangmere as an area for additional growth.

**Site suitability**

The land comprises farmland which could be redeveloped to meet a local housing need. Although limited work has been undertaken to date, the landowner is in the process of negotiating to enter into an agreement with a developer / promoter to promote the land to Chichester District Council to ensure it is deliverable.

Therefore, in time and at the request of the Council or Inspector, additional reports and surveys could be provided to support any future housing allocation. However, a highways appraisal has been undertaken, and access to the site is achievable and this can be provided at request.

**Soundness**

Policy H2 of the Chichester Local Plan allocates 1,300 dwellings at the Tangmere Strategic Development Location. This site has an outline permission and is subject to a Compulsory Purchase Order. For clarity, our client does not object to this allocation, but supports it as it shows that Tangmere is a location that can be seen to grow.

Policy H3 does not allocate any additional housing to Tangmere Parish other than the Strategic Development Location. It is considered that along with the strategic development to the West, that our client's land to the East of Tangmere can provide additional housing in Tangmere.

We trust our comments will be considered as part of the Local Plan review, and please do not hesitate to make contact if you require anything further.

## Object

---

**Document Element:** Background, 4.8

**Respondent:** The Bosham Association (Mr Richard Pratt, Joint Chair) [7835]

**Summary:**

The threshold of twenty hectares is exceedingly low in proportion to the scale of most field sizes in the coastal plain. A vast swathe of the best and most versatile agricultural land could be lost without recourse to more series specialised and detailed assessment.

There is a logical inconsistency between this statement and the policy advanced for Highgrove Farm, Bosham (A11) which straddles grade 1 and grade 2 agricultural land and is capable of yielding between 126 and 144 tonnes of cereal per year that's 244,800 loaves of bread according to a local seed merchant.

**Full text:**

The threshold of twenty hectares is exceedingly low in proportion to the scale of most field sizes in the coastal plain. A vast swathe of the best and most versatile agricultural land could be lost without recourse to more series specialised and detailed assessment.

There is a logical inconsistency between this statement and the policy advanced for Highgrove Farm, Bosham (A11) which straddles grade 1 and grade 2 agricultural land and is capable of yielding between 126 and 144 tonnes of cereal per year that's 244,800 loaves of bread according to a local seed merchant.

**Change suggested by respondent:**

The Highgrove site at policy A11 needs to be removed from the local plan as it contradicts the statement in paragraph 4.8.

**Legally compliant:** Yes

**Sound:** No

**Comply with duty:** Yes

**Attachments:** None

## Object

**Document Element:** Background, 4.8

**Respondent:** The Bosham Association (Mr Richard Pratt, Joint Chair) [7835]

**Summary:**

The site proposed for policy A11 is grade 1 and 2 agricultural land and productive farmland. It has been in production until last year and includes mature hedgerow at the rear boundary. Although the site is less than 20 hectares in size, it is capable of producing a variety of cereal crops.

Policy NE10 refers to development in the countryside. It states that proposals to build should be complementary to or compatible with its countryside location and does not prejudice any viable agricultural operations or other existing viable uses.

This again brings policy A11 into contradiction with the local plan.

**Full text:**

## Object

**Document Element:** Treating wastewater; 4.102

**Respondent:** The Bosham Association (Mr Richard Pratt, Joint Chair) [7835]

**Summary:**

Last year, Southern Water polluted Chichester Harbour with 1700.37 hours of wastewater overflows. This is 70.85 days or 19.41% of the year. CDC are aware of this and recognises that wastewater infrastructure needs improvement but there is no guaranteed improvement promised in the plan. The plan states that development proposals will only be permitted if the development has no adverse impact on the quality of water bodies. However, if the system is at capacity at the moment which it is clear from the data above it is, then CDC have a duty to residents not to exacerbate the problem.

**Full text:**

Last year, Southern Water polluted Chichester Harbour with 1700.37 hours of wastewater overflows. This is 70.85 days or 19.41% of the year. CDC are aware of this and recognises that wastewater infrastructure needs improvement but there is no guaranteed improvement promised in the plan. The plan states that development proposals will only be permitted if the development has no adverse impact on the quality of water bodies. However, if the system is at capacity at the moment which it is clear from the data above it is, then CDC have a duty to residents not to exacerbate the problem.

**Change suggested by respondent:**

There should be a moratorium on any further house building until Southern Water have a concrete plan in place and have provided clear details of how they plan to deal with the overflows into the harbour. The plan contradicts itself saying that development will only be permitted if it does not have an adverse impact on the quality of water bodies because the development proposed is guaranteed to adversely impact the harbour and there is no detail in the plan of how sewage overflows are going to be stopped or the damage that has already been done mitigated.
