CCE further promotes land (15.31ha) located east of the B2145 Selsey Road in Hunston for 240 new homes. The land is deliverable and is fully within CCE's control. The site is highly accessible, located within a maximum of 5-6 minutes walking distance to Selsey Road, where several bus routes connect the village to Chichester.

CCE notes that the Council assessed the HELAA site (ref. HHN0016) as 'developable'. A Vision Document has previously been prepared and submitted to demonstrate the commitment to it being brought forward for residential development within the plan period. This document is enclosed.

To address the Council's concerns in relation to flooding, following publication of the Chichester Strategic Flood Risk Assessment (SFRA), we have prepared an updated Flood Risk Scoping Study which provides an overview of flood risk constraints across the site from a range of sources. Various mitigation measures are recommended in line with recommendations of the Chichester SFRA and prevailing local and national guidance and best practice. With these measures in place, it is likely that the flood risk could be managed effectively in accordance with the requirements of the NPPF. Detailed data has also been requested from the Environment Agency, which will feed into further technical work that is being carried out.

Should the Inspector conclude that additional housing is required, CCE considers that their site is the most appropriate and sustainable location for development in Hunston. The site provides an opportunity to sensitively and sustainably extend the existing village boundary to provide additional homes to meet an identified housing need.

Land East of Drayton Lane

CCE owns land to the east of Drayton Lane which is bound by Tangmere Road to the north and crosses Oving Road and the railway line to the south. The site is c.1km from the centre of Chichester and comprises 49ha. The site was assessed in the HELAA 2021 as developable 'HOV0017'. A Vision Document has been prepared and was presented to the Council in 2022. This includes a detailed analysis of the site and its surroundings and provided justification as to why the site is suitable for development. This technical review of the site concludes there are no technical impediments to development.

The Vision Document demonstrates how the proposals for the land east of Drayton Lane could be developed as an extension to the draft allocation A8 (Land to the east of Chichester) for up to 700 new homes. The land east of Drayton Lane is fully within the CCE's control, is available for development now and is deliverable with some development achievable within the first five years of the plan period. It represents an opportunity to provide new homes, facilities and significant community benefits, through a sensitively designed development that integrates into the surrounding landscape.

The Vision for this site is a landscape and ecology led masterplan which would celebrate the rich wildlife characters of the different surrounding landscapes and uses the connection between countryside and community to generate its character and identity. The Vision Document demonstrates that this is a suitable location for development.

Should the Inspector conclude that additional housing is required, CCE considers that the land east of Drayton Lane would form a natural extension to allocation A8 and is an appropriate and sustainable location for new development.

Appendix C Additional Guidance

Appendix C provides additional guidance on evidence which needs to be submitted in support of certain planning applications related mainly to development in the countryside. As mentioned in the comments above provided in response to Policy NE10, there is no prerequisite contained within the NPPF (2021) that requires an applicant to demonstrate that previous uses were proven unviable prior to the conversion of a building in the countryside to residential use. As such, to be in accordance with national policy, reference to Policy NE10 should be omitted from Appendix C.

Conclusion

CCE welcomes the opportunity to comment on the Local Plan and is keen to continue to engage with the Council, especially in relation to the Broad Location for Development in Southbourne. CCE is supportive of the Council's aspirations in the Local Plan. However, the changes set out above are considered likely to be necessary to ensure the plan is sound.

CCE is a considerable landowner in Chichester with land largely to the south, west and east of Chichester which could assist the Council in meeting their housing and development needs throughout the plan period.

See attachments for site information.

Change suggested by respondent:

Consideration of CCE's landholdings at Southbourne, Oving and Hunston parishes.

Document Element: Policy H3 Non-Strategic Parish Housing Requirements 2021 - 2039

Respondent: CPRE Sussex [6955]

Agent: CPRE Sussex (Dr Jill Sutcliffe) [6956]

Summary:

RECEIVED LATE: Wisborough Green 75 additional houses is unacceptable – see CDC Capacity Study sub sections 166+167. There are limitations: ancient woodland; wildlife – rare habitats and species, river floodplain; and water neutrality. See HRA with reference to Mens Ancient Woodland and presence of European Protected Species, Barbastelle Bats flight paths and foraging across the parish. Also, see Natural England report Site Improvement Report and reports by Frank Greenway, 2008 et al..

Full text:

Thank you for the opportunity to comment on the Draft Chichester District Local Plan 2021-39. We would suggest that there has been insufficient public consultation to date. We commented on the draft Local Plan for 2015, on the Preferred Options in 2019 and there have been many changes in Government policy and commitments since then to include Climate Change, Net Zero and commitments made at COP 26 and 27 to include reducing methane emissions etc. With regards to this consultation we recognise the importance of a plan-led system and support Chichester District Council's (CDC) desire to produce a comprehensive Local Plan. CPRE Sussex wishes to contribute to policies concerning landscape, rural areas, communities, environment and wildlife drawing on evidence and local knowledge.

CONTEXT

1. Examining the previous government consultation which closed on March 2nd, ie the Levelling-up and Regeneration Bill including some aspects of the National Planning Policy Framework, NPPF, there are some issues which would impact on this Local Plan and need consideration.

1.1 That consultation included important changes to the way in which the 5 year housing land supply is calculated, and the timetable for making Local Plans. They are of significance to local councils, especially those with Neighbourhood Plans. Some measures will take effect almost immediately through an update to the existing NPPF in Spring 2023. Others will follow later in the year or in 2024. Surely such consultations should be better phased to make plan development more logical and access to consultations easier?

2. Communities: Our group welcomed the overall shift in emphasis towards communities. Mind you, while the word is used 121 times in the Prospectus it does not appear in the draft NPPF! We would expect much more emphasis on the importance of communities in any forthcoming consultations. Earlier and more effective engagement with communities could help to lead to a less confrontational planning system with an emphasis on active participation.

3 Time required – a lot of time is needed to understand and implement such policies and a searchable on-line version would be very helpful; and, consideration also needs to be extended to those people in the community who are not computerised.

4 We take the word "sufficient" with regard to housing numbers to be equivalent to that which is "needed" and the current Standard Method does not establish that figure. Our MP, the Rt Hon Andrew Griffith, Arundel and South Downs, referred to the approach to developing housing numbers as a mutant algorithm.

4.1 Specifically, the changes to housing targets, to make them 'advisory', are welcome. However, we should remind you that the Government continues to insist on using out-of-date projections (2014). The current ONS population estimates are 1 million less people in the population than allowed for in the figures used to so that the reliance on the 2014 figures is completely out of date. The emphasis should always be on using current up to date evidenceand to use those out-of-date figures produces the wrong results and does not conform with the need to use up to date information. In addition, this would require an immediate change to the guidance to insist (as previously) on the most up-to-date projections.

4.2 We also recommended a review of the Standard Method, which does not make housing affordable and simply supports developers to build market homes where they want to. The graph above illustrates the gap between projection and current population figure provided by the Community Planning Association.

4.3 Local Planning Authorities, LPAs, were also given an opportunity to put forward alternatives to the Standard Method and to name the specific constraints faced. Our contribution to that consultation referred to the:

- Reduction of land available to the CDC given the creation of the South Downs National Park, SDNP
- English Channel
- SDNP itself
- Range of internationally important designated sites
- Rare species and habitats
- River flood plains
- Water neutrality in part of the District
- Nutrient neutrality in the Solent
- Sea Level Rise

4.4 There have already been large housing commitments, loosely put on "flat green land" around Chichester and now CDC is eyeing the "empty" north of the District with allocations being made for Loxwood and an increase in the number of houses being sought in Wisborough Green. Such land supports wildlife which often may not be under recorded as it is private land. Areas in both of those Parishes has been "cleared" of biological interest but the BNG established a baseline of 2020 and google maps can show the state of the environment at that date. The commitment to safeguarding biodiversity needs to be pursued carefully and consistently.

COMMENTS ON THE CDC LOCAL PLAN 2021-2039 REG19 proposed submission comments: the comments cite the para and/or Chapter number

5. At this phase in the local plan process the scope of the invited representations is limited to whether the Plan that has been produced is:

- a) legally compliant (i.e., whether it meets the legal requirements); and
- b) sound (i.e., whether it has been positively prepared, is justified, is effective and is consistent with national policy) and I would ADD whether it is forward thinking enough as it is planned to last until 2039.

5.1 The plan area is split in to three areas, each with different characteristics, landscapes and access to services:

- a) • The East-West Corridor, running across the width of the plan area, is varied in landscape with the inclusion of both larger settlements (including the city) and rural villages. It has the best transport connections and access to facilities in the plan area with the A27 and railway running through-out.
- b) The Manhood Peninsula* MP, located in the south of the plan area, jutting out into the English Channel, is rich in coastal landscapes with the majority of the area covered by environmental designations. It also includes some of the plan area's larger settlements which rely heavily on limited road accessibility to the north towards Chichester city.
- c) The North of the Plan Area is primarily rural in character with diverse landscapes, rich cultural and heritage assets and a number of dispersed settlements, some of which are relatively isolated and served by narrow lanes with limited public transport

*NB The population on the MP is dispersed in a rural landscape and equals that of Chichester. The description for the North section could just as easily have been used for the MP.

Chapter 2 and Local Plan Vision

These Objectives will need to underlie every aspect of the document.

5.2 P 23: Para 2.25 Replace the word "site" by "area" and insert forming part of a diverse set of wetlands (Ditches, Rifes, Ponds, Saline lagoons and a small section of Canal). Info: The Medmerry site is no longer the largest eg having been overtaken in area by the Steart Marshes, Somerset.

5.3 Include mention of rare habitats and species and the role of Selsey Bill in facilitating arrivals and departures of bats, butterflies and birds. That's its USP,

6.1 P 25 Local Plan Vision and Strategic Objectives p 30 Objective 1: CLIMATE CHANGE

This section does not reflect the urgency of the issue nor the vulnerability of parts of Sussex. Many scientists are pointing to Sea Level Rise, SLR, speeding up and some of them cite a 10 year window in which to act ie so that before this Local Plan has run its course, areas on the coast including the coastal plain and the Manhood Peninsula could well be adversely affected. This would have an immediate impact on housing, facilities and transport links and could lead to the local population having to move.

6.2 Actions related to this particular objective need to be included in all the following objectives. The south of the District is very vulnerable and the rest of the District will experience very intensive rainfall, water shortages (NE/EA 2013 report) and hot summers.

6.2 Policies need to include not building on areas below 5m high Water Level. The CDC Climate Change officer should host meetings to consider potential plans for putting houses on stilts, moving people to land safe from flooding and re-directing roads, cycle ways and footpaths to facilitate future access.

6.3 Evidence: See the Surging Seas and NASA websites for prediction of Sea Level Rise. Need to include reference to the UK Climate Resilience Programme jointly led by UK Research and Innovation, UKRI, and the Met Office which was set up to fund research "to help understand how to quantify the risks from climate change and build climate resilience for the UK, This research should produce "usable outputs" to "directly support decision-making" by government, local authorities, communities and other stakeholders

6.3.1 Every area of UK society will feel the effects of climate change and, as global emissions continue to rise, pre-paring for life in a warmer world is crucial. Findings were discussed last week by the UK ranging from assessments of elderly people overheating in care homes through to building community-run water storage.

6.3.2 Every area of UK society will feel the effects of climate change and, as global emissions continue to rise, preparing for life in a warmer world is crucial.

6.2.2.i In early March, UKTI and Met office researchers involved with the programme gathered to present and discuss their findings. They ranged from assessments of elderly people overheating in care homes through to building community-run water storage. These items and website need to be referenced in the evidence section.

6.3.3 The key points are intended to help businesses and policymakers adapt to climate change.

6.3.4 Many focused on "climate services" defined as involving the "production, translation, transfer and use of climate knowledge and information in climate-informed decision making".

6.3.5 Climate services could be an important tool for adaptation because they can provide people with the relevant information to prepare for climate change.

6.3.6 Representatives from the Met Office laid out their recommendations for a UK National Framework for Climate Services. And said they wanted to provide a "driving force" for the nation's climate services community and help ensure that "adaptation action actually does get done".

6.4.7 UK 'SSPs'

"Shared socioeconomic pathways" (SSPs) are tools used by researchers to explore how society will change in the future. This can help them to answer important questions about climate change. As there were no UK-specific versions of SSPs available to complement the UKCP18 climate projections

Ref: The importance of Adaptive Resilience Solutions in the Face of Climate Threats.

Recommendation: This report needs to be drawn on and form part of the evidence base.

7.1 Objective 2: NATURAL ENVIRONMENT Work with site managers of the Designated Sites and NGOs in the wider environment. This objective is vitally important and welcome and its importance needs to be reflected in all parts of the plan to include Wildlife Corridors, Biodiversity Net Gain and the Nature Recovery Network.

Sir David Attenborough

"It may sound frightening, but the scientific evidence is that if we have not taken dramatic action within the next decade, we could face irreversible damage to the natural world and the collapse of our societies."

7.1.1 The emergency concerning Biodiversity also needs to be communicated.

Para 2.32: Agree – this (climate emergency) is the most urgent issue facing us all together with the Biodiversity Emergency (declared by IPBWS, 2019).

7.1.2 Info: The ESPACE project European Spatial Planning: Adapting to Climate Events (ESPACE) was a four-year project funded by the European Commission's north-west Europe INTERREG IIB programme and the ODPM. It produced a Climate Action Plan for the Manhood Peninsula in 2008 and not much action has followed to implement this. Perhaps it needs dusting off and re-visiting and including within the Local Plan?

7.2 Add policy:

PROPOSED Ecosystem Services Policy

7.2.1 CPRE Sussex considers that the Chichester Local Plan 2021 - 2039 should include a policy specifically for Ecosystem Services for the following reasons:

1. NPPF para 174. Planning policies and decisions should contribute to and enhance the natural and local environment by:

- a) protecting and enhancing valued landscapes, sites of biodiversity or geological value and soils (in a manner commensurate with their statutory status or identified quality in the development plan);
- b) recognising the intrinsic character and beauty of the countryside, and the wider benefits from natural capital and ecosystem services – including the economic and other benefits of the best and most versatile agricultural land, and of trees and woodland

7.2.2 'Natural capital refers to the elements of nature that produce value to people –whether directly or indirectly. Our natural capital 'assets' are the stocks of renewable and non-renewable natural capital such as our soils, freshwater, farmland, forests, atmosphere, oceans, ecological processes and the natural processes that underpin them. The flows of ecosystem services and benefits that our natural capital provides can be very obvious such as food, fuel, clean air, clean water, and opportunities for recreation. Others are much less visible, such as climate regulation, flood defences provided by natural vegetation, the billions of tonnes of carbon stored by peatlands and other habitats and the pollination of crops by insects'. (Sussex Local Nature Partnership <http://sussexlnp.org.uk/natural-capital/>)

7.3 Accordingly, we propose an Ecosystem Services policy (an adaptation of South Downs Park Authority's Core Policy SD2: Ecosystem Services'), be added as follows:

1. Development proposals will be permitted where they have an overall positive impact on the ability of the natural environment to contribute goods and services. This will be achieved by means of high-quality design, and by delivering all opportunities to:

- a) Sustainably manage land and water environments;
- b) Protect and provide more, better and joined up natural habitats;
- c) Conserve water resources and improve water quality;
- d) Manage and mitigate the risk of flooding;
- e) Improve the District's resilience to, and mitigation of, climate change;
- f) Increase the ability to store carbon through the retention of existing woodland, new planting or other means;
- g) Conserve and enhance soils, use soils sustainably and protect the best and most versatile agricultural land;
- h) Support the sustainable production and use of food, forestry and raw materials;
- i) Reduce levels of pollution;
- j) Improve opportunities for peoples' health and wellbeing; and
- k) Provide opportunities for access to the natural and cultural resources which contribute to the District's special qualities.

2. The Environment Act 2021 will require the production of a Nature Recovery Network and more locally a Local Nature Recovery Strategy. The Strategic Wildlife Corridors in Chichester District will be integral components of that local network. The importance of local networks in Nature Recovery Networks is highlighted in NPPG

7.3.4 Policy NE 4 Strategic Wildlife Corridors

CPRE Sussex supports this policy, Strategic Wildlife Corridors as part of the Local Plan process, conform with section 179 of the NPPF 2021 which is well-evidenced. However, CPRE Sussex wishes to question the size of the corridors ie the width/

Information provided in the 2021 consultation appears to demonstrate that these areas have been downsized such as those put alongside the East of the City Corridor, it appears that there has been a narrowing of the Strategic Wildlife Corridor around the location of the proposed allocations of A8, Chapter 10: Strategic and Area Based Allocations Land East of Chichester and potential A7, Land at Shopwyke. The Corridor to the East of Chichester was proposed for connectivity and functional links to the area for the rare and European Protected Species of Barbastelle Bats. It is shown on CDC technical consultation documents as a bat network

This does not conform with the Natural Environment & Rural Communities Act, NERC, 2006 and Section 40 subsection 3a as it would destroy a habitat over which the Barbastelle Bat has been recorded, a Section 41 species. And it is the DUTY of the Local Authority to safeguard these species. There should be NO recreational use in the buffer zones.

8. Green Infrastructure: p 160 and Policy P 14 d Submission (Regulation 19)

8.1 Local Green Space

6.82. The NPPF includes the concept of Local Green Space designation. This is a discretionary designation and sites may be identified and included in either local or neighbourhood plans. The designation should only be used as defined by the criteria in the NPPF where the land is not extensive, is local in character and reasonably close to the community; and, where it is demonstrably special, for example because of its beauty, historic significance, recreational value (including as a playing field), tranquillity or richness of its wildlife. Any areas which fall outside a neighbourhood plan area and where such designation is sought, will be considered by the subsequent Site Allocations DPD that will cover the remainder of the plan area. Policies for managing development within a Local Green Space should be consistent with those for Green Belts.

8.2 Parishes should be encouraged to look into such areas to be included in Neighbourhood Plans.

9. Renewable Energy: General policy

9.1 Housing p 103:

CPRE Sussex considers that the Chichester Local Plan should include a policy requiring all new-build homes to be equipped and sold with solar PV panels, roof or wall mounted.

9.2 Although the Chichester District Local Plan, at Para 6.15, states that 'Design proposals should respond to the opportunities a site presents to make best use of solar gain where this can be achieved without compromising good urban design or creating issues of overheating', there is no requirement in the any of the plan's policies for new-build homes to be equipped and sold with roof or wall mounted solar PV.

9.3 Note that West Sussex County Council has advised in their Solar Together initiative that "By generating electricity from the sun, you could reduce your annual carbon emissions by approximately one tonne each year and help West Sussex to become carbon neutral".

Note, too: <https://solartogether.co.uk/westsussex/blog/best-ways-to-increase-solar-self-consumption>

9.4 "According to the University of Oxford findings, UK households with solar PV self-consume 45% of their own solar generation on average and reduce annual electricity demand from the grid by 24%. With additional adjustments, this reduction of 24% can be increased to over 35%".

9.5 New-build homes in Chichester District should therefore be equipped with solar P V panels. We question the statement in Para 6.15 that 'solar gain' could create 'issues of overheating'. Surely this can be prevented by good design?

9.6 There are additional opportunities for solar installations on school rooves (Brighton Sustainable Energy Co-op has many examples), car parks, industrial buildings et al.

10.0 Renewable Energy: Specific location Wisborough Green 75 additional houses. Unacceptable – see CDC Capacity Study sub sections 166+167.

Limitations – Ancient woodland; wildlife – rare habitats and species, river floodplain; Water neutrality; HRA with reference to the Mens Ancient Woodland and presence of European Protected Species, Barbastelle Bats flight paths and foraging across the parish. See Natural England report Site Improvement Report and reports by Frank Greenway, 2008 et al.

10.1 See Page 84: In the north of the plan area, properties within Southern Water's Sussex North Water Resource Zone are supplied with water from a groundwater abstraction at Pulborough which is currently subject to environmental investigations to ensure there is no adverse impact on environmentally designated sites in the Arun Valley. This may impact on the available supply and alternative sources may need to be considered by Southern Water. Natural England published a position statement in September 2021 requiring developments within the Sussex North Supply Zone to be water neutral – this means that the use of water in the supply area after the development is the same or lower than before. A Water Neutrality Strategy had been prepared jointly with other affected authorities. Natural England's Position Statement sets out an interim approach based on minimising water use in new builds and offsetting the water that is used

10.2 Water consumption target. It is noted that both Ports-mouth Water and Southern Water have targets to reduce water consumption to 100 litres per person per day (lppd) by 2040, a lower figure than the current most stringent Building Regulation target of 110 lppd and not that level which could be required for water neutrality.

10.3 The Local Plan is weak on impacts especially from the largest concentration of caravans at Selsey on Medmerry.

10.4 There is no wildlife corridor running east to west along the Manhood Peninsula ie Pagham to East Head and this undermines the importance of a positive barrier zone to protect the habitat. CDC have used the corridors for this barrier purpose possibly more than as a pathway throughout other parts of the plan.

10.5 Nutrient neutrality exclusion of a large area of the Peninsula from the protection zone is illogical as the same conditions exhibited in Chichester harbour (in the zone) exist at Pagham.

10.6 There is a 'tool' - "nutrient budget calculator March, 2022 version" – which gives an "n" factor for instance to discharges from WWTW. There is no direct mention of its use at Chichester harbour and as the data on Pagham Harbour has yet to be made public, the role of Sidlesham WWTW has not been referred to. The "N" factor would probably be more restrictive on outflows from WWTW than the total discharge permits – and shows a lack of coordinated approach between the Environment Agency and Natural England.

10.7 There are two reports due to be published this month - the West Sussex Coast and Gt Brighton Board and Southern Water overall plan for drainage and waste water-the timing of the LP – is thus unable to take these two influential inputs into account and may have implications for the 'Soundness' of the plan as it moves forward.

10.8 No mention is included of Sidlesham WSTW which is operating at and beyond capacity resulting in new housing on the Manhood Peninsula dealing with waste water in gardens, in houses etc.

Pages 87 and 88: Paras 4.112 and 4.113 are contradictory.

Appendix F Monitoring Framework

Early in 2020 attended a Public Inquiry representing the Manhood Wildlife and Heritage Group and presented evidence about an application at Easton Farm where the implementation of an application had not been followed up, which had expanded like Topsy and which potentially could damage the Medmerry coastal realignment site with its runoff. CDC had not been on watch possibly through lack of staff and/or a lack of enforcement staff. The site had grown without permission. This section requires a firm commitment to monitoring and reporting back, not just a paper one.

Thank you for your attention.

Site submission, Headfoldswood Farm, Loxwood. 325 dwellings.

Full text:

1 Introduction

1.1 This representation provides a response to the Regulation 19: Local Plan Consultation in relation to the land at Headfoldswood Farm, Loxwood, RH14 0SX, as shown on the attached Masterplan Promotional Document, and hereon referred to as the site.

1.2 This representation will provide a written responses in relation the questions in the Regulation 19 Local Plan Consultation which directly relate to the promotion of our client's land for future development.

2 Comments on Specific Questions/Tests

2.1 In response to the national planning legislation, this Regulation 19 Local Plan Consultation invites comments on three specific questions, and is the final consultation phase, before the Regulation 19 version of the Local Plan is submitted for examination.

2.2 This representation will respond on these specific questions, and then highlight how our client's site could help fulfil the full housing requirement for the District to be delivered through an appropriate strategic allocation policy within the Council's Local Plan or through an Supplementary Planning Document (SPD).

Is the plan 'sound'?

2.3 Paragraph 35 of the National Planning Policy Framework defines the tests for soundness which requires the plan to be positively prepared, justified, effective and consistent with National Policy. These matters will now be considered in further detail in relation to the current consultation on the Regulation 19 version of the Local Plan.

Is the plan positively prepared and justified?

2.4 Policy S1 of the Draft Local Plan sets out the spatial development strategy for the District and how the Council will achieve sustainable growth over the plan period and Policy H1 sets out the housing target in response to the strategy. Both policies have been informed by the Sustainability Appraisal (SA) dated January 2023 and the Plan objectives, which are set out at paragraph 2.5.2 of the SA and the Council's HEDNA (April 2022).

2.5 The SA then goes on to discuss the potential growth scenarios and confirms two points:

- Standard method housing figure for Chichester (excluding SDNP) is 638 dwellings per annum, or 11,484 in total over the Plan period
- The above figure is capped at 40% above the baseline need and that the uncapped figure is significantly higher than this at 884 dwellings per annum (dpa)

2.6 Of particular note is that point ii. above seeks to cap the overall housing increase by no more than 40% above the previously adopted LP housing figure of 435 dpa. The Local Plan then goes on to constrain housing numbers due to an alleged capacity concern along the A27 strategic road network. The Council therefore result in a constrained housing figure by virtue of the standard method 'steps' and also due to infrastructure capacity. It should be noted that the 435 dpa figure within the 2015 Local Plan was similarly constrained and an early review was the only basis for accepting this reduced housing figure. This early review did not take place.

2.7 In terms of the influence of the A27, this is the key matter that constrains growth within the southern part of the District. This is based on the evidence base documents that state that the road network cannot accommodate an annual housing figure of more than 535 dpa. This is a fundamental point and one that we do not agree and believe there is capacity to accommodate at least the local housing need within the highway network, alongside potential improvements identified for the following reason.

2.8 The Transport Study (January 2023) is the key document on which the Council rely upon to constrain their housing figure to 535 dpa. On review of this document, it is clear that the Council's consultants undertook a sensitivity analysis as to whether the core scenario that supports the 535 dpa position in the local plan could accommodate a higher level of growth. The conclusion in paragraph 5.6.5 and 11.2.3 of the Transport Study appears to be that 700 dpa could be accommodated (in the southern plan area) by the mitigation proposed for the 535 dpa core test, with some additional, and as yet undesigned and not costed, mitigation works beyond those highlighted for the Bognor and Fishbourne roundabouts.

2.9 Accordingly, the Council's own evidence base has undertaken the assessment and concluded that a higher growth figure could be accommodated on the A27, subject to appropriate improvement works. Given the testing of the higher growth figure, which appears to accommodate the higher growth figure, the exceptional circumstances to constrain growth, as set out at paragraph 60 on the NPPF do not exist and the Plan could be considered unsound on this point alone.

2.10 As a result of the above, the SA does not consider a scenario where the Council would meet its local housing need, nor a scenario where it exceeds its local housing need, which is of relevance given the scale of development expected for adjoining authorities, including the highly constrained SDNP.

2.11 It should also be noted that the draft Plan does not therefore address any need in relation to unmet need of neighbouring authorities and it does not contain evidence to suggest that these matters have been discussed with the adjoining Authorities. Notably, Arun District Council have confirmed that they will be objecting to the Plan and currently proposed on the basis that they have a significant housing need themselves. This is likely to be further influenced by unmet need from Chichester, who again are seeking to constrain housing requirements, which was the case in 2015 and the subsequent knock on from that was for Arun to address some of that need in their 2018 Local Plan.

2.12 Given that we do not accept that the A27 capacity matters present a ceiling in terms of housing delivery (based on the Council's Transport Study comments and that of its own consultants), it is not accepted that the Plan and associated SA demonstrates reasonable alternatives have been considered and it is not therefore positively prepared, nor is their approach to housing figures justified.

Effective?

2.13 On the basis of the 535 dpa figure, it is considered that the selected areas for growth and figures are deliverable over the Plan period, however, as set out above, the plan area could accommodate a greater level of growth.

2.14 It should also be noted that the Plan relies on the delivery of Neighbourhood Plan and / or small site allocations DPD. This is set out under Policy H3 in the draft document. This states the following in terms of delivery:

If draft neighbourhood plans making provision for at least the minimum housing numbers of the relevant area have not made demonstrable progress the council will allocate sites for development within a development plan document in order to meet the requirements of this Local Plan.

2.15 The above is not precise and does provide any clear timetable for delivery within the Plan period. Whilst the strategy in the comments above could be effective, the Local Plan needs to give a clear timescale for completion of the supplementary Development Plan documents in order to give a clear timescale for this to be completed.

Is the plan consistent with National Policy?

2.16 On the basis of the comments above, the approach to selected sites for allocation based on the 535 dpa figure is considered to be consistent. However, due to the lack of evidence to demonstrate this, the 535 dpa figure should be capped. Given the A27 capacity points raised, the draft Plan does not appear to meet the exceptional circumstances allowed for at paragraph 61 of the NPPF to justify their alternative approach. The Plan as proposed is therefore inconsistent with NPPF when read as a whole.

3 Development in Loxwood

3.1 Our client's land is located to the west of the village of Loxwood, which is situated to the northeast of the District. The High Street (B2133) runs through the village, connecting the A281 and A272. For a detailed context appraisal of the site and masterplan vision, please see attached the Masterplan Promotional Document. The site was submitted for the Council's call for sites in February 2019 and is included in Council's latest HELAA.

3.2 The Draft Local Plan defines Loxwood as a service village with local facilities and services, these include an infant and junior school, as well as a medical practice, a local shop and community facilities, including a village hall. The village has been identified in the Local Plan as a suitable location for a higher level of growth as it has suitable HELAA sites which could come forward through the Neighbourhood Plan process.

3.3 It is agreed that a strategic expansion to the west of Loxwood is the best option for growth in the north-eastern area of the District as there are fewer constraints within Loxwood in comparison to other villages within the north-eastern area of the District.

3.4 Policy A15 of the Draft Local Plan states that land will be allocated within the revised Loxwood Plan for a minimum of 220 dwellings and supporting facilities and infrastructure. This is based on a downwards adjustment scenario for Loxwood, but it should be noted this figure is closer to the lower growth scenario of 200 dwellings.

3.5 The Council acknowledges in the SA that the highest growth scenario of 1.650 homes could be justified but there are concerns regarding the deliverability of homes due the potential scale of allocations to meet the higher growth figure which in turn could affect the Council's ability to deliver

the housing within the five year period. However, the Plan currently seeks

to allocate reasonably sized housing allocations on a number of small-scale housing sites which by this logic could equally affect the Council's ability to meet the Council's five year housing supply. It is recommended that the middle, higher growth scenario of at least 825 homes is sought, which would allow for meaningful growth in order to meet the needs generated by the new community, such as the identified primary school. The higher housing figure would also provide the benefit of more affordable housing provision for the north-eastern area of the District.

3.6 Loxwood Parish Council have produced a revised Draft Neighbourhood Plan which seeks to allocate 126 dwellings plus 17 carried forward from the Made Loxwood Neighbourhood Plan, providing a total of 143 dwellings. The Draft Neighbourhood Plan was submitted to the Council under Regulation 14 in December 2020. It is noted in response to the Reg 19 Local Plan consultation, that Loxwood Parish Council will be objecting to policy A15 and the increased housing numbers of 220 dwellings on sustainability grounds, with specific reference to water neutrality. The recent Parish Council meeting notes also indicate that there is currently little appetite to undergo another Neighbourhood Plan review, which will likely require additional resource and cost.

3.7 There is concern that relying on the Neighbourhood Plan to allocate specific sites in Loxwood, will result in unnecessary delay to delivery of housing in this area given the points raised above. Policy A15 is not therefore considered precise and does provide any clear timetable for delivery in housing within Loxwood within the Plan period. It is therefore recommended that the allocation of housing sites in Loxwood should be based on a higher growth scenario of at least 825 homes which should be delivered either through a Local Plan policy allocation or within an SPD, with a clear timetable of when the SPD will be produced by the Council.

Water Neutrality

3.8 One of the constraints of the north-east of the District is the requirement is for all new development to meet water neutrality, to ensure that any new it does not impact further on the habitat site comprising the Arun Valley Special Area of Conservation (SAC) or the Arun Valley Special Protection Area (SPA) & Ramsar site, in terms of groundwater abstraction within the Sussex North Water Supply Zone. It is anticipated that further advice and a mitigation strategy will be created by the Council and its partners to demonstrate how developments can achieve water neutrality. However, at present applicants are required to provide a water neutrality strategy to demonstrate how the development can achieve water neutrality.

3.9 To provide the Council with reassurance that the site is deliverable despite this constraint, our client has commissioned an initial water strategy based on a development of approximately 250 dwellings which includes provision for offsetting. The initial strategy indicates that water neutrality could be achieved for development on the site through water efficient fixtures and fittings, reuse of harvested water through greywater recycling for flushing toilets and offsetting through water efficiency upgrades on an educational facility located within the Sussex North Water Supply Zone. It would therefore appear on the basis of the work undertaken to date, that it would be possible for future development on this site to achieve water neutrality.

4. General Policy requirements

Policy H11 Meeting Gypsies, Travellers and Travelling Showpeoples' Needs - object

4.1 The above policy sets out a requirement for 124 pitches across the Plan period, which is to be provided for by allocation of pitches on strategic allocation sites proposing 200+ homes.

4.2 Whilst we understand that there may be a district wide need, we understand that the underlying rationale underpinning this strategic approach is that insufficient sites came forward as part of the Council's Call for Sites process. However, whilst this tells us about availability of sites, it doesn't dictate the appropriateness of locations for gypsy traveller provision. It should also be noted that the proposed allocations would not accommodate the overall need and there is no clear quantifiable policy requirement to deliver this need. Accordingly, the approach is not considered to be robust.

4.3 What is clear is that plots are currently available in other areas of the district that have not been taken up by the Council for allocation (namely HELAA ref. HBI0028).

4.4 From our understanding there appears to be a clear absence of information regarding the requirements for pitch provision in localities and the site specific needs that are required to be met. We have not yet seen any evidence from the Council in respect of engagement with the gypsy traveller community in respect of a desire to be located on suburban residential sites – which we consider would contradict with the typical locations of gypsy traveller pitches which are located on rural sites on the periphery of rural settlements.

4.5 Due to the scale and form of the site and specific access names (larger HGVs for static homes and touring caravans) it makes it very difficult to design and suitable means of access that does not appear overly engineered, within a residential housing estate. No consideration appears to have been given to how this can be accommodated within such a site.

4.6 At this time, we consider it would not be appropriate to include such provision until further evidence has been provided on suitability of the approach, need in this specific location and suitability as part of housing allocation of this scale, with a single point of access.

4.7 On the basis of the above, we object to the proposed policy requirement.

5. Conclusion

5.1 Our client's land is ideally placed to be able to fulfil the sustainable expansion to the west of Loxwood and the much needed, identified housing within the north-eastern plan area. The site measures 57.334 hectares and can be considered as a strategic housing site, west of Loxwood, that would deliver a higher growth of housing within this village and would appear to be able to meet water neutrality requirements. This would also support the viability of the services and facilities in the northern villages. This could include a sustainable addition to the existing village of Loxwood, result in significant enhancements to its existing services and facilities, improved links along, and connectivity to the Wey & Arun Canal and provision of at least 825 homes.

1 Introduction

1.1 This representation provides a response to the Regulation 19: Local Plan Consultation in relation to the land at Flat Farm, Hambrook, PO18 8FT, as shown on the attached plan HA Appendix 1: Site Location Plan, and hereon referred to as the site.

1.2 This representation will provide a written responses in relation the questions in the Regulation 19 Local Plan Consultation which directly relate to the promotion of our client's land for future development.

2 Comments on Specific Questions/Tests

2.1 In response to the national planning legislation, this Regulation 19 Local Plan Consultation invites comments on three specific questions, and is the final consultation phase, before the Regulation 19 version of the Local Plan is submitted for examination.

2.2 This representation will respond on these specific questions, and then highlight how our client's site could help fulfil the full housing requirement for the District through an appropriate allocation within the Council's Local Plan, or through an allocation of numbers to the Hambrook Parish as set out in policy A12 of the Draft Local Plan, who in turn would select sites through a Neighbourhood Plan allocation.

Is the plan 'sound'?

2.3 Paragraph 35 of the National Planning Policy Framework defines the tests for soundness which requires the plan to be positively prepared, justified, effective and consistent with National Policy. These matters will now be considered in further detail in relation to the current consultation on the Regulation 19 version of the Local Plan.

Is the plan positively prepared and justified?

2.4 Policy S1 of the Draft Local Plan sets out the spatial development strategy for the District and how the Council will achieve sustainable growth over the plan period and Policy H1 sets out the housing target in response to the strategy. Both policies have been informed by the Sustainability Appraisal (SA) dated January 2023 and the Plan objectives, which are set out at paragraph 2.5.2 of the SA and the Council's HEDNA (April 2022).

2.5 The SA then goes on to discuss the potential growth scenarios and confirms two points:

- Standard method housing figure for Chichester (excluding SDNP) is 638 dwellings per annum, or 11,484 in total over the Plan period
- The above figure is capped at 40% above the baseline need and that the uncapped figure is significantly higher than this at 884 dwellings per annum (dpa)

2.6 Of particular note is that point ii. above seeks to cap the overall housing increase by no more than 40% above the previously adopted LP housing figure of 435 dpa. The Local Plan then goes on to constrain housing numbers due to an alleged capacity concern along the A27 strategic road network. The Council therefore result in a constrained housing figure by virtue of the standard method 'steps' and also due to infrastructure capacity. It should be noted that the 435 dpa figure within the 2015 Local Plan was similarly constrained and an early review was the only basis for accepting this reduced housing figure. This early review did not take place.

2.7 In terms of the influence of the A27, this is the key matter that constrains growth within the southern part of the District. This is based on the evidence base documents that state that the road network cannot accommodate an annual housing figure of more than 535 dpa. This is a fundamental point and one that we do not agree and believe there is capacity to accommodate at least the local housing need within the highway network, alongside potential improvements identified for the following reason.

2.8 The Transport Study (January 2023) is the key document on which the Council rely upon to constrain their housing figure to 535 dpa. On review of this document, it is clear that the Council's consultants undertook a sensitivity analysis as to whether the core scenario that supports the 535 dpa position in the local plan could accommodate a higher level of growth. The conclusion in paragraph 5.6.5 and 11.2.3 of the Transport Study appears to be that 700 dpa could be accommodated (in the southern plan area) by the mitigation proposed for the 535 dpa core test, with some additional, and as yet undesigned and not costed, mitigation works beyond those highlighted for the Bognor and Fishbourne roundabouts.

2.9 Accordingly, the Council's own evidence base has undertaken the assessment and concluded that a higher growth figure could be accommodated on the A27, subject to appropriate improvement works. Given the testing of the higher growth figure, which appears to accommodate the higher growth figure, the exceptional circumstances to constrain growth, as set out at paragraph 60 on the NPPF do not exist and the Plan could be considered unsound on this point alone.

2.10 As a result of the above, the SA does not consider a scenario where the Council would meet its local housing need, nor a scenario where it exceeds its local housing need, which is of relevance given scale of development expected for adjoining authorities, including the highly constrained SDNP.

2.11 It should also be noted that the draft Plan does not therefore address any need in relation to unmet need of neighbouring authorities and it does not contain evidence to suggest that these matters have been discussed with the adjoining Authorities. Notably, Arun District Council have confirmed that they will be objecting to the Plan and currently proposed on the basis that they have a significant housing need themselves. This is likely to be further influenced by unmet need from Chichester, who again are seeking to constrain housing requirements, which was the case in 2015 and the subsequent knock on from that was for Arun to address some of that need in their 2018 Local Plan.

2.12 Given that we do not accept that the A27 capacity matters present a ceiling in terms of housing delivery (based on the Council's Transport Study comments and that of its own consultants), it is not accepted that the Plan and associated SA demonstrates reasonable alternatives have been considered and it is not therefore positively prepared, nor is their approach to housing figures justified.

Effective?

2.13 On the basis of the 535 dpa figure, it is considered that the selected areas for growth and figures are deliverable over the Plan period, however, as set out above, the plan area could accommodate a greater level of growth.

2.14 It should also be noted that the plan does rely on the delivery of Neighbourhood Plan and / or small site allocations DPD. This is set out under Policy H3 in the draft document. This states the following in terms of delivery:

If draft neighbourhood plans making provision for at least the minimum housing numbers of the relevant area have not made demonstrable progress the council will allocate sites for development within a development plan document in order to meet the requirements of this Local Plan.

2.15 The above is not precise and does not provide any clear timetable for delivery within the Plan period. Whilst my comments are noted above that the Plan could be effective, the Local Plan needs to give a clear timescale for completion of the supplementary Development Plan documents in order to give a clear timescale for this to be completed.

Is the plan consistent with National Policy?

2.16 On the basis of the comments above, the approach to selected sites for allocation based on the 535 dpa figure is considered to be consistent, however, due to the lack of evidence to demonstrate that the 535 dpa figure should be capped due to the A27 capacity points raised, the draft Plan does not appear to meet the exceptional circumstances allowed for at paragraph 61 of the NPPF to justify their alternative approach. The Plan as proposed is therefore inconsistent with NPPF when read as a whole.

3 Development in Chidham, Hambrook & Nutbourne

3.1 Our client's site is located within the village of Nutbourne and comprises an area of land of 1.3 hectares adjacent to the existing residential development along Broad Road. The site is currently located outside, but directly to the east of the settlement boundary of Nutbourne.

3.2 The Local Plan provides for a moderate level of growth within the parishes of Fishbourne, Chidham & Hambrook and Bosham, known as service villages, where it is acknowledged that there is good / excellent potential to bring forward development with opportunities to support and expand existing facilities and for increased use of public transport options.

3.3 Policy A12 relates to the strategic Chidham and Hambrook allocation and confirms that land will be allocated for development in the revised Chidham and Hambrook Neighbourhood Plan for a minimum of 300 dwellings and supporting facilities and infrastructure.

3.4 The Parish of Nutbourne and Hambrook is a logical position for the strategic expansion of 300 dwellings, given its sustainable transportation links and lack of constraints in comparison to other locations within the southern area of the District. The evidence documents which have informed the Plan also support the quantum of development put forward in the policy allocation.

3.5 As our client's land could deliver up to 40 dwellings, it would be an appropriately sized site, adjacent to the existing settlement boundary of Nutbourne, which would not compromise the spatial development of Nutbourne or Hambrook to the north. We will therefore be looking to promote our client's site with Chidham & Hambrook Parish Council through a Neighbourhood Plan allocation, and will be recommending to the Parish they allocate a number of small to medium sites to meet the Local Plan policy requirement of 300 dwellings. This development strategy will ensure the integrity and current linear spatial pattern of the service villages are maintained.

3.6 Our client's land is ideally situated adjacent to existing residential development which surrounds the site to the north, south and west. This includes the recent development at Hambrook Place and the linear form of dwellings along Broad Road to the west, Hambrook Holiday & Caravan Park to the north and further residential development accessed from Broad Road to the south. The site would not extend further to the east than the built form of development located to the north and south and would not therefore encroach on the wider field pattern to the east. The impact on the wider rural landscape to the east would therefore be limited and the views looking towards the South Downs from the A259 would not be harmed.

3.7 The site sits outside and to the south of the Green Corridor shown in the Interim Version of the Chidham & Hambrook Neighbourhood Plan Strategy published October 2021. The development of this site would not therefore impact on the integrity of the Green Corridor or the gap between the settlement boundaries of Hambrook and Nutbourne as shown in the Neighbourhood Plan Strategy.

The Current Appeal

3.8 In addition to the promotion of the site for allocation within the next iteration of the Neighbourhood Plan, the Council will be aware that this site is also currently subject to a pending appeal relating to planning application 20/03378/OUT. This application seeks outline planning permission for thirty dwellings with access, associated works, including the provision of swales.

3.9 The pending planning appeal follows a previous outline application, 20/00412/OUT for an entry level housing scheme of thirty-five affordable dwellings which was dismissed at appeal on 14 January 2022. The main reason for dismissing this appeal was the proposed development was considered to give rise to adverse effects on the integrity of the local Habitats sites. Whilst the Inspector considered adequate mitigation measures in respect of nutrient neutrality had been provided by the Appellant, an appropriate mechanism for securing these measures for the duration of the development had not been provided with any adequate degree of certainty. It should be noted that no other concerns were raised by the Inspector in relation to the suitability of this site for the development.

3.10 The Council have raised two concerns in relation to the current pending appeal for thirty dwellings on the site. The Council raise concern with future occupiers of the discounted market housing (DMS) not being able to obtain mortgages due to properties proximity to electricity pylons which would lead to properties being occupied on a social rented basis. In this scenario, the Council consider in combination with the adjacent social rented scheme, this would result in an unacceptably high concentration of mono tenure properties.

3.11 The Chidham & Hambrook Neighbourhood Plan Strategy also notes the presence of pylons and overhead power lines along the northern edge of Nutbourne and the limitations this might cause to development in relation to the guidance published by National Grid (Design Guidelines for Development near Pylons and High Voltage Overhead Power Lines).

3.12 Taking into account the Inspector's comments on this point in relation to the previous appeal for 35 no. affordable residential dwellings, it should be noted that the Inspector previously considered that the Appellant's evidence demonstrated that there were lenders willing to offer mortgages for DMS properties.

3.13 It should also be noted that as this forms an outline planning application with all matters reserved except for access, the layout of affordable housing is not a matter to be considered under this outline appeal scheme. Nine affordable units would also not lead to an intensive cluster of affordable housing as they have frontages onto different roads.

3.14 The second issue raised by the Council in relation to the appeal could be overcome through the provision of a s106 agreement to provide an appropriate mechanism to secure the mitigation measures relating to nutrient neutrality.

3.15 As the Council have raised no concerns in relation to the principle of residential development on the site with regard to the current planning appeal, the use of the site for residential development is generally considered to be acceptable. This could be delivered through a successful outcome on the current appeal, through a future allocation within the Neighbourhood Plan or via an SPD prepared by the Council.

Change suggested by respondent:

The Local Plan needs to give a clear timescale for completion of the supplementary development plan documents in order to give a clear timescale for this to be completed.

Summary:

Site submission. Land at Flat Farm, Hambrook. 40 dwellings.

Full text:**1 Introduction**

1.1 This representation provides a response to the Regulation 19: Local Plan Consultation in relation to the land at Flat Farm, Hambrook, PO18 8FT, as shown on the attached plan HA Appendix 1: Site Location Plan, and hereon referred to as the site.

1.2 This representation will provide a written responses in relation the questions in the Regulation 19 Local Plan Consultation which directly relate to the promotion of our client's land for future development.

2 Comments on Specific Questions/Tests

2.1 In response to the national planning legislation, this Regulation 19 Local Plan Consultation invites comments on three specific questions, and is the final consultation phase, before the Regulation 19 version of the Local Plan is submitted for examination.

2.2 This representation will respond on these specific questions, and then highlight how our client's site could help fulfil the full housing requirement for the District through an appropriate allocation within the Council's Local Plan, or through an allocation of numbers to the Hambrook Parish as set out in policy A12 of the Draft Local Plan, who in turn would select sites through a Neighbourhood Plan allocation.

Is the plan 'sound'?

2.3 Paragraph 35 of the National Planning Policy Framework defines the tests for soundness which requires the plan to be positively prepared, justified, effective and consistent with National Policy. These matters will now be considered in further detail in relation to the current consultation on the Regulation 19 version of the Local Plan.

Is the plan positively prepared and justified?

2.4 Policy S1 of the Draft Local Plan sets out the spatial development strategy for the District and how the Council will achieve sustainable growth over the plan period and Policy H1 sets out the housing target in response to the strategy. Both policies have been informed by the Sustainability Appraisal (SA) dated January 2023 and the Plan objectives, which are set out at paragraph 2.5.2 of the SA and the Council's HEDNA (April 2022).

2.5 The SA then goes on to discuss the potential growth scenarios and confirms two points:

- Standard method housing figure for Chichester (excluding SDNP) is 638 dwellings per annum, or 11,484 in total over the Plan period
- The above figure is capped at 40% above the baseline need and that the uncapped figure is significantly higher than this at 884 dwellings per annum (dpa)

2.6 Of particular note is that point ii. above seeks to cap the overall housing increase by no more than 40% above the previously adopted LP housing figure of 435 dpa. The Local Plan then goes on to constrain housing numbers due to an alleged capacity concern along the A27 strategic road network. The Council therefore result in a constrained housing figure by virtue of the standard method 'steps' and also due to infrastructure capacity. It should be noted that the 435 dpa figure within the 2015 Local Plan was similarly constrained and an early review was the only basis for accepting this reduced housing figure. This early review did not take place.

2.7 In terms of the influence of the A27, this is the key matter that constrains growth within the southern part of the District. This is based on the evidence base documents that state that the road network cannot accommodate an annual housing figure of more than 535 dpa. This is a fundamental point and one that we do not agree and believe there is capacity to accommodate at least the local housing need within the highway network, alongside potential improvements identified for the following reason.

2.8 The Transport Study (January 2023) is the key document on which the Council rely upon to constrain their housing figure to 535 dpa. On review of this document, it is clear that the Council's consultants undertook a sensitivity analysis as to whether the core scenario that supports the 535 dpa position in the local plan could accommodate a higher level of growth. The conclusion in paragraph 5.6.5 and 11.2.3 of the Transport Study appears to be that 700 dpa could be accommodated (in the southern plan area) by the mitigation proposed for the 535 dpa core test, with some additional, and as yet undesigned and not costed, mitigation works beyond those highlighted for the Bognor and Fishbourne roundabouts.

2.9 Accordingly, the Council's own evidence base has undertaken the assessment and concluded that a higher growth figure could be accommodated on the A27, subject to appropriate improvement works. Given the testing of the higher growth figure, which appears to accommodate the higher growth figure, the exceptional circumstances to constrain growth, as set out at paragraph 60 on the NPPF do not exist and the Plan could be considered unsound on this point alone.

2.10 As a result of the above, the SA does not consider a scenario where the Council would meet its local housing need, nor a scenario where it exceeds its local housing need, which is of relevance given scale of development expected for adjoining authorities, including the highly constrained SDNP.

2.11 It should also be noted that the draft Plan does not therefore address any need in relation to unmet need of neighbouring authorities and it does not contain evidence to suggest that these matters have been discussed with the adjoining Authorities. Notably, Arun District Council have confirmed that they will be objecting to the Plan and currently proposed on the basis that they have a significant housing need themselves. This is likely to be further influenced by unmet need from Chichester, who again are seeking to constrain housing requirements, which was the case in 2015 and the subsequent knock on from that was for Arun to address some of that need in their 2018 Local Plan.

2.12 Given that we do not accept that the A27 capacity matters present a ceiling in terms of housing delivery (based on the Council's Transport Study comments and that of its own consultants), it is not accepted that the Plan and associated SA demonstrates reasonable alternatives have been considered and it is not therefore positively prepared, nor is their approach to housing figures justified.

Effective?

2.13 On the basis of the 535 dpa figure, it is considered that the selected areas for growth and figures are deliverable over the Plan period, however, as set out above, the plan area could accommodate a greater level of growth.

2.14 It should also be noted that the plan does rely on the delivery of Neighbourhood Plan and / or small site allocations DPD. This is set out under Policy H3 in the draft document. This states the following in terms of delivery:

If draft neighbourhood plans making provision for at least the minimum housing numbers of the relevant area have not made demonstrable progress the council will allocate sites for development within a development plan document in order to meet the requirements of this Local Plan.

2.15 The above is not precise and does provide any clear timetable for delivery within the Plan period. Whilst my comments are noted above that the Plan could be effective, the Local Plan needs to give a clear timescale for completion of the supplementary Development Plan documents in order to give a clear timescale for this to be completed.

Is the plan consistent with National Policy?

2.16 On the basis of the comments above, the approach to selected sites for allocation based on the 535 dpa figure is considered to be consistent, however, due to the lack of evidence to demonstrate that the 535 dpa figure should be capped due to the A27 capacity points raised, the draft Plan does not appear to meet the exceptional circumstances allowed for at paragraph 61 of the NPPF to justify their alternative approach. The Plan as proposed is therefore inconsistent with NPPF when read as a whole.

3 Development in Chidham, Hambrook & Nutbourne

3.1 Our client's site is located within the village of Nutbourne and comprises an area of land of 1.3 hectares adjacent to the existing residential development along Broad Road. The site is currently located outside, but directly to the east of the settlement boundary of Nutbourne.

3.2 The Local Plan provides for a moderate level of growth within the parishes of Fishbourne, Chidham & Hambrook and Bosham, known as service villages, where it is acknowledged that there is good / excellent potential to bring forward development with opportunities to support and expand existing facilities and for increased use of public transport options.

3.3 Policy A12 relates to the strategic Chidham and Hambrook allocation and confirms that land will be allocated for development in the revised Chidham and Hambrook Neighbourhood Plan for a minimum of 300 dwellings and supporting facilities and infrastructure.

3.4 The Parish of Nutbourne and Hambrook is a logical position for the strategic expansion of 300 dwellings, given its sustainable transportation links and lack of constraints in comparison to other locations within the southern area of the District. The evidence documents which have informed the Plan also support the quantum of development put forward in the policy allocation.

3.5 As our client's land could deliver up to 40 dwellings, it would be an appropriately sized site, adjacent to the existing settlement boundary of Nutbourne, which would not compromise the spatial development of Nutbourne or Hambrook to the north. We will therefore be looking to promote our client's site with Chidham & Hambrook Parish Council through a Neighbourhood Plan allocation, and will be recommending to the Parish they allocate a number of small to medium sites to meet the Local Plan policy requirement of 300 dwellings. This development strategy will ensure the integrity and current linear spatial pattern of the service villages are maintained.

3.6 Our client's land is ideally situated adjacent to existing residential development which surrounds the site to the north, south and west. This includes the recent development at Hambrook Place and the linear form of dwellings along Broad Road to the west, Hambrook Holiday & Caravan Park to the north and further residential development accessed from Broad Road to the south. The site would not extend further to the east than the built form of development located to the north and south and would not therefore encroach on the wider field pattern to the east. The impact on the wider rural landscape to the east would therefore be limited and the views looking towards the South Downs from the A259 would not be harmed.

3.7 The site sits outside and to the south of the Green Corridor shown in the Interim Version of the Chidham & Hambrook Neighbourhood Plan Strategy published October 2021. The development of this site would not therefore impact on the integrity of the Green Corridor or the gap between the settlement boundaries of Hambrook and Nutbourne as shown in the Neighbourhood Plan Strategy.

The Current Appeal

3.8 In addition to the promotion of the site for allocation within the next iteration of the Neighbourhood Plan, the Council will be aware that this site is also currently subject to a pending appeal relating to planning application 20/03378/OUT. This application seeks outline planning permission for thirty dwellings with access, associated works, including the provision of swales.

3.9 The pending planning appeal follows a previous outline application, 20/00412/OUT for an entry level housing scheme of thirty-five affordable dwellings which was dismissed at appeal on 14 January 2022. The main reason for dismissing this appeal was the proposed development was considered to give rise to adverse effects on the integrity of the local Habitats sites. Whilst the Inspector considered adequate mitigation measures in respect of nutrient neutrality had been provided by the Appellant, an appropriate mechanism for securing these measures for the duration of the development had not been provided with any adequate degree of certainty. It should be noted that no other concerns were raised by the Inspector in relation to the suitability of this site for the development.

3.10 The Council have raised two concerns in relation to the current pending appeal for thirty dwellings on the site. The Council raise concern with future occupiers of the discounted market housing (DMS) not being able to obtain mortgages due to properties proximity to electricity pylons which would lead to properties being occupied on a social rented basis. In this scenario, the Council consider in combination with the adjacent social rented scheme, this would result in an unacceptably high concentration of mono tenure properties.

3.11 The Chidham & Hambrook Neighbourhood Plan Strategy also notes the presence of pylons and overhead power lines along the northern edge of Nutbourne and the limitations this might cause to development in relation to the guidance published by National Grid (Design Guidelines for Development near Pylons and High Voltage Overhead Power Lines).

3.12 Taking into account the Inspector's comments on this point in relation to the previous appeal for 35 no. affordable residential dwellings, it should be noted that the Inspector previously considered that the Appellant's evidence demonstrated that there were lenders willing to offer mortgages for DMS properties.

3.13 It should also be noted that as this forms an outline planning application with all matters reserved except for access, the layout of affordable housing is not a matter to be considered under this outline appeal scheme. Nine affordable units would also not lead to an intensive cluster of affordable housing as they have frontages onto different roads.

3.14 The second issue raised by the Council in relation to the appeal could be overcome through the provision of a s106 agreement to provide an appropriate mechanism to secure the mitigation measures relating to nutrient neutrality.

3.15 As the Council have raised no concerns in relation to the principle of residential development on the site with regard to the current planning appeal, the use of the site for residential development is generally considered to be acceptable. This could be delivered through a successful outcome on the current appeal, through a future allocation within the Neighbourhood Plan or via an SPD prepared by the Council.

Respondent: Deerhyde Limited [7657]

Agent: Vail Williams LLP (David Ramsay, Partner) [8134]

Summary:

Site submission. Land North of Golf Links Lane, Selsey.

Full text:

I am pleased to attach our representations in response to the Chichester Local Plan Regulation 19 consultation. These representations are submitted on behalf of our clients Deerhyde Ltd. owners of land in Selsey and located in the area for a significant number of years.

The submitted documents include the following:

- Representations statement
- Plans showing the potential road widening of Golf Links Lane and Paddock Lane, Selsey
- Development potential of sites for residential development at Golf Links Lane and Old Farm Road, Selsey taking account of flood zones 2 and 3 (2 plans 15-085 SK03 and SK04)
- Plans showing access options to Golf Links Lane site
- Plan showing tracking analysis for low-loaders
- Junction analysis
- Submission form

As detailed in the attached, after careful consideration we have concluded that the housing strategy for Chichester is flawed in principle as it fails to allocate sufficient sites in outside Chichester City (or adjacent to) to allow the remainder of the District to continue to provide houses for local people in areas where they are most needed.

In addition, our clients have put forward a suggestion for an infrastructure improvement to Selsey – namely the widening of Golf Links Lane and Paddocks Lane to accommodate delivery of caravans / other HGV / LGVs but also to provide a wider carriageway which could potentially incorporate a pavement / footpath cycleway to aid safer conveyance of pedestrians and vehicles in the area. Adding in a safer highway solution would also encourage car users to walk or cycle for local trips rather than risking congestion in the car. It would have the added benefit of diverting caravan park traffic travelling from the north into the caravan parks earlier and thus relieving congestion of Selsey High Street.

Introduction

1.1. Vail Williams LLP has been instructed by Deerhyde Ltd to submit representations to the Chichester Local Plan 2021-2039: Proposed Submission (Regulation 19) document.

1.2. As per the Website, these comments seek to address the three questions namely:

1. Is it legally compliant?
2. Is it sound?
3. Does it comply with the duty to cooperate?

1.3. These representations are largely focussed on the provision of housing and ensuring that a satisfactory access (both vehicular and pedestrian) can be maintained and enhanced, particularly in Selsey.

1.4. These representations reflect the fact that our client, Deerhyde Ltd, owns a significant amount of land in the Selsey area, an interest which was acquired in 1986 but with family ownership going back many years before then.

1.5. Our clients have identified a potential opportunity to facilitate highway improvements within Selsey which would be to the benefit of both residents and tourists using the holiday parks and other attractions alike. This would particularly be of benefit given the Council's acknowledgement that the B2145 through Selsey is the busiest B road in the country. These representations bring into question the 'tests of soundness'. In particular regarding the questions as to whether it is 'sound' on the basis of whether it has been 'positively prepared', whether it is 'justified' and 'effective' in respect of the areas of concern raised with respect to employment land provisions.

1.6. As set out at Paragraph 35 of the NPPF local plans are required to be 'sound'. Plans are considered sound when the following applies:

- a) Positively prepared – providing a strategy which, as a minimum, seeks to meet the area's objectively assessed needs¹; and is informed by agreements with other authorities, so that unmet need from neighbouring areas is accommodated where it is practical to do so and is consistent with achieving sustainable development;
- b) Justified – an appropriate strategy², taking into account the reasonable alternatives³, and based on proportionate evidence⁴;
- c) Effective – deliverable over the plan period⁵, and based on effective joint working on crossboundary strategic matters that have been dealt with rather than deferred, as evidenced by the statement of common ground; and
- d) Consistent with national policy – enabling the delivery of sustainable development in accordance with the policies in this Framework and other statements of national planning policy, where relevant.⁶

1.7. These representations seek to highlight that Chapter 5 (Housing) has not been positively prepared, in so far as it does not provide [1.] "a strategy which, as a minimum, seeks to meet the area's objectively assessed needs".

1.8. It is also considered that Chapter 5 is not justified as the housing strategy is [2.] is inappropriate as it relies on a number of large strategic sites, with multiple issues some of which are in conflict with other parts of the local plan.

1.9. Chapter 5 is also not justified with respect to its provisions do not [3.] take into account reasonable alternative sites.

1.10. It is considered on the basis of the other factors highlighted in these representations and the proposed housing land provision is not 'consistent with national policy' as the proposed provision does not enable the delivery of sustainable development in accordance with the policies in this Framework and other statements of national planning policy, where relevant. It is considered that the proposed plans are contrary to the NPPF paragraph 16a, 16b, 16c, 16d and paragraph 20a

2 Local Plan Representations

2.1. Having reviewed the draft Local Plan we would make the following comments:

2.2. Paragraph 3.1 asserts the Government's encouragement for local planning authorities to ensure sustainable development is at the forefront when considering planning applications and that the National Planning Policy Framework (NPPF) defines sustainable development as "meeting the needs of the present without compromising the ability of future generations to meet their own needs". Paragraph 3.5 goes on to advise the range of factors as are informed the spatial strategy which underpins the local plan which, inter alia, "the pattern of need and demand for housing and employment across the area", "infrastructure capacity and constraints, in particular related to waste water treatment, roads and transport", "the availability of potential housing types, their deliverability and phasing" and this needs to take place whilst being mindful of the environmental constraints taking a sequential approach to avoiding flood risk areas, protect the environmental designations, landscape quality, the historic environment and settlement character.

2.3. The principles outlined above are supported as these are the key facets of good planning and plan making. However it falls to local authorities to ensure that the sustainable approach includes providing a sufficient supply of homes and facilitating a variety of sites to come forward where needed, and that the needs of groups within specific housing requirements are addressed and that land with permission is developed without unnecessary delay. (Paragraph 65). Paragraph 66 states that within the overall requirement [for housing] strategic policies should also set out a housing requirement for designated neighbourhood areas which reflects the overall strategy for the pattern and scale of development and any relevant allocations.

2.4. Paragraph 67 goes on, where it is not possible to provide a requirement figure for a neighbourhood area, the local planning authority should provide an indicative figure, if requested to do so by the neighbourhood planning body. This figure should take account of factors such as the latest evidence of local housing need, the population of the neighbourhood area and the most recently available planning strategy of the local planning authority.

2.5. Paragraph 68 asserts that strategic policy making authorities should have a clear understanding of the land available in their area through the preparation of a Strategic Housing Land Availability Assessment (SHLAA). From this, planning policies should identify a sufficient supply and mix of sites, taking into account their availability, suitability and locally economic viability.

2.6. Further guidance states (Paragraph 69) that small and medium sized sites can make an important [my emphasis] contribution to meeting the housing requirements of an area, and are often built-out relatively quickly. To promote the development of a good mix of sites the local planning authority should identify sites of small and medium size and support the development of windfall sites through their promises and decisions giving great weight to the benefits of using suitable sites within existing settlements for homes.

2.7. Neighbourhood planning groups should also give particular consideration to the opportunities for allocating small and medium-sized sites suitable for housing in their area. Paragraph 71 goes on: where an allowance is to be made for windfall sites as part of anticipated supply, there should be compelling evidence that they will provide a reliable source of supply. Any allowance should be realistic having regard to the SHLAA, historic windfall delivery rate and expected future trends.

2.8. Whilst it is noted that the delivery of large scale sites can result in the delivery of large numbers of new homes, it is apparent that such developments take considerable time to work their way through the planning system to an approval and even then are only at outline stage. The delivery of new homes is therefore reliant on the Councils to efficiently determine reserved matters applications and, thereafter, discharge of conditions, to allow a swift implementation of planning applications and a timely start on site for the delivery of housing.

2.9. The inclusion of small and medium sites (ie. not reliant on strategic sites) within the housing mix are invaluable in delivering housing quicker and potentially in places, perhaps outside the main settlements, which would allow new housing to be accessible to all which is one of the key facets of the NPPF.

2.10. This approach would assist with maintaining delivery of housing where existing allocations are either stalled or progressing slowly through the planning system or have simply been delayed in coming forward for perhaps other commercial reasons.

2.11. The plan is largely predicated on strategic sites, as detailed at Policy H2 which would provide 7,195 houses. This is a significant reliance on the strategic sites to deliver 75% of the overall housing target and much of them are predicated on the works to the A27 being completed in order to make them acceptable.

2.12. It should be noted that the above housing provision is predicated on the ability to identify mitigation for the impacts on the European environmental designations (including nutrient neutrality), addressing highway implications and negotiating the planning system.

The Manhood Peninsula

2.13. The preferred approached version of the Local Plan does include moderate growth for the settlement hubs of Selsey (250 dwellings) and East Wittering (350) and the service village of Hunston (200). However, since then several planning permissions have contributed to the moderate levels of growth on the Manhood Peninsula which the Council says has accounted for these housing numbers. The plan does not therefore include any strategic allocations on the Manhood Peninsula in recognition of this recently permitted growth and the ongoing constraints the area faces, save for 50 dwellings to come forward at North Mundham.

2.14. This approach is not considered sound as a reason to prevent development of any scale on the Manhood Peninsula (particularly Selsey) for the plan period. As detailed above, it is essential that the plan allocates land across its settlement hierarchy in order to maintain a sustainable and deliverable approach to development and to assist the continuing evolution and economic viability of settlements which rely heavily on tourism and also on new development to maintain the supply of homes to provide options for all sectors of the local community to be able to live on the Peninsula should they so wish.

2.15. It is noted that at Policy S2 (settlement hierarchy), Selsey is listed as a "settlement hub" which is the second tier of settlement under Chichester city. Whilst this hierarchy, particularly in connection with Selsey is supported it is therefore surprising not to see more housing sites allocated within and around Selsey.

2.16. Given the potential number of environmental constraints on the Manhood Peninsula it is unlikely that sites of any excessive size would come forward and large numbers of dwellings would not necessarily result once the sites had taken account of their environmental constraints. That said, and as reflected above, sites of a size proportionate to their location but below "strategic" size can have an important part to play in the delivery of sufficient housing numbers in the right location at the right time in accordance with the NPPF.

Housing

2.17. Policy H1 (meeting housing needs) sets out the housing requirement for the full plan period of 1 April 2021 to 31 March 2039 as 10,350 dwellings. This allocates 963 dwellings to the Manhood Peninsula and a windfall (small site allowance) allocation of 657 dwellings for the whole district. There are no strategic locations/allocations on the Manhood Peninsula under Policy H2 which is considered unsound, particularly given the position that Selsey holds in the settlement hierarchy. Furthermore, under Policy H3 (non-strategic parish housing requirements 2021-2039) Selsey has been allocated zero housing. Again, this is considered unsound as it prevents sustainable development and access to new houses for all settlements across the district.

2.18. An overreliance on consented sites coming forward to provide future housing is considered unsound as, in this case, it effectively prevents any further development on the Peninsula and in Selsey in particular.

Transport

2.19. Policy T1 (transport infrastructure) is specifically aimed at ensuring that integrated transport measures will be developed to mitigate the impact of planned development on the highway network, improve highway safety and air quality, promote more sustainable travel patterns and encourage increased use of sustainable motor travel, such as public transport, cycling and walking.

2.20. The council will work with National Highways, WSCC, other transport and service providers and developers to provide a better integrated transport network and improve accessibility to key services and facilities. The policy lists seven ways in which the key objectives of reducing the need to travel by car, enabling access to sustainable means of travel, including public transport, walking and cycling; managing travel demands; and mitigating the impacts of travelling by car can be achieved.

2.21. Whilst it is not intended to go through all of these in this document it is noted that all parties are expected to support the four objectives by working with relevant providers to improve accessibility to key services and facilities which would be relevant to Selsey (see below).

2.22. The policy is also aimed at planning to achieve a timely delivery of transport infrastructure on the A27 and elsewhere on the network which is needed to support new housing, employment and other development identified in this plan. The phasing of delivery of new development to align with provision of new transport infrastructure such as improvements to the A27 and elsewhere on the highway network, will be key to managing impacts on the highway. This is yet another impediment to the delivery of a strategic allocations and larger scale development which would, by their very nature, generate a higher highway impact on the transport network than carefully planned smaller developments which could satisfy a much more localised need and be cause less impact on the strategic road network. The tariff proposals outlined at paragraph 8.20 only covers part of West of Chichester and Tangmere SDLs and not the other strategic sites outlined at Policy H2.

2.23. Critically it is also understood that Highways England has pulled funding for the improvements to the Bognor Road roundabout as part of a package of A27 improvements. On this basis it is unclear how further funding would be secured at this time.

2.24. The lack of soundness to the approach of significant reliance on strategic sites, due to the current lack of capacity of the A27, is evident in the text that accompanies the policy which states that opportunities to secure funding to implement this package of improvements will be maximised by working proactively with Government agencies, other public sector organisations and private investors. Developer contributions from new development will also be sought. It is clear that smaller scale developments which would have a significantly lesser impact on the highway network could deliver housing quicker and with fewer constraints to implementation. It is for these reasons that smaller sites should be allocated, particularly in the Manhood Peninsula, for development.

2.25. The content of Policy T2 (transport development) is largely supported and considered sound save for the fact that it does not seem to cover the improvement of local transport routes, particularly those that would assist in improving the circulation of traffic around smaller settlements. The policy should be amended to specifically relate to local transport improvements which are locally important to aid traffic circulation and reduce congestion.

Neighbourhood Plan

2.26. The Selsey Neighbourhood Plan does not seek to allocate any sites or residential development, instead relying on those which were allocated in the previous local plan and, in particular, developments at Park Farm/Middle Field and Drift Field totalling 249 houses. It is assumed that this existing commitment accommodates the neighbourhood plan of 150 houses which is the justification for not allocating of residential development in the neighbourhood plan. However, this is short sighted as the neighbourhood plan runs to 2029 and, although development sites are largely controversial within smaller communities there is a lack of recognition of the requirement to provide new houses for existing and future residents (including descendants of current residents) in order to maintain the vitality and viability of the settlement outside of the tourist season where it is recognised that the local population will swell.

2.27. These points add further weight to the considered lack of soundness to the housing policies in the local plan which fail to recognise the need for smaller allocations within the Manhood Peninsula, particularly Selsey.

3 Local Infrastructure Provision

Selsey Road Improvements

3.1. Our clients wish to put forward a potential highway improvement scheme for Selsey which has come about given their extensive historic knowledge of the town and experience of significant congestion along Selsey High Street as a result of an over-reliance of this route by traffic using the caravan parks. It would be a common sense alternative route (to using High Street) which will alleviate congestion along Selsey High Street/School Lane/Paddock Lane/Warners Lane, particularly during the summer months.

3.2. The local plan focusses its attention on the need to improve the strategic highway network but this proposal would provide a significant benefit at a local level in Selsey. As per the attached plan, our clients propose to widen Golf Links Lane from its junction with the B2145 Chichester Road to its junction with Paddock Lane, then widen Paddock Lane and make it up to adoptable standard to enable delivery of holiday traffic to the point where it meets the north eastern corner of White Horse Caravan Park, from which point the road has been made up to carry holiday traffic. At the moment, the northern section of Paddock Lane is just a rough track which is not suitable for ordinary road traffic. It is envisaged that, in conjunction with the owner of the largest caravan parks, Warner's Lane will also be improved. It is currently a tarmac road in poor condition with no footways and one section is too narrow to allow two vehicles to pass each other. This is not satisfactory for the major access route to the largest caravan parks.

3.3. Golf Links Lane is currently a single track, tarmac road which is in poor condition. It is two-way but much of it is too narrow to allow two vehicles to pass each other. It serves Northcommon Farm, a small housing development on the northern side, Selsey Golf Club and Selsey Country Club (which comprises c.300 holiday chalets and an associated licensed club). If it were to be made up to adoptable standard to the point where it meets Paddock Lane, it would improve access for existing users but, importantly, it would also create a more direct access route (in conjunction with Paddock Lane) for traffic associated with thousands of holiday caravans as well as a touring caravan park.

3.4. Given that a large proportion of holiday traffic and other tourist industry-related traffic (HGVs carrying food and drink, caravan transporters, tractor/trailer transport and public transport) use the route along High Street/School Lane/Paddock Lane/Warners Lane it is considered that this could be diverted from the B2145 Chichester Road further north than Selsey High Street, thus taking traffic away from the congested High Street. An easier, more direct route to the major caravan parks would be an attractive alternative.

3.5. The mechanism to deliver such a proposal is not yet the subject of formal agreement. A large proportion of the land required to widen the roads is within the ownership of Deerhyde Limited (our clients) and the owner of the major caravan parks. The latter has been very supportive of the proposal verbally. A short section of land is not in any specific ownership but our clients have long-standing rights over its use, which can be traced back to 1830. Our clients are serious about facilitating these highway improvements, including the use of their land, which will inevitably have a significant financial impact upon them.

Potential Residential Development Sites

3.6. In order to mitigate the financial impact including both the loss of their land and the implementation of the proposed highway improvements our clients would like to promote two sites for residential development, namely land north of Golf Links Lane (13.5 acres/5.46 hectares) and land west of Old Farm Road for residential development. Whilst the north western corner of the site is located within Flood Zones 2 and 3 it is considered that the developable area of the site would be approximately 4 hectares and could therefore deliver approximately 120 to 140 dwellings. This includes retaining the existing boundary screening along the south eastern boundary and avoiding Flood Zones 2 and 3. An indicative plan is attached to this statement.

3.7. Thawscroft Ltd, an associated company, also owns land west of Old Farm Road, Selsey (2.8ha / 6.9 acres) which taking account of the flood risk constraints along its western boundary could accommodate approximately 50 dwellings. An indicative plan is attached to this statement.

3.8. Having reviewed the planning history of the site it is noted that a planning application (under the name of Thawscroft Limited) was made in December 2016, refused in June 2017 and the appeal was dismissed on 11 June 2018.

3.9. The reasons for refusal related to the following:

1. Site is located outside the defined settlement boundary for Selsey.

2. When the planning officer was giving evidence, he stated that he knew of an alternative site at lower risk of flooding but he would not identify it. After the appeal, an area of land north of Park Lane was identified for 250 houses. The land in question becomes waterlogged in the winter and is highly prone to surface water flooding. It is also only about 250m from Paghams Harbour, a site of major ecological importance with a significant level of protection afforded to it. The planning officer said the real issue with our appeal was one of numbers so it seemed curious to me that a site with a much larger number (250) was identified soon afterwards. Also, the land south of Park Lane (similarly prone to surface water flooding) was in the numbers for 2015/20 but in fact could not be started until 2021 so the planning inspector was misled. I believe that was crucial to the outcome. Landlink have proposed land west of the "Wave" roundabout (opposite Asda). This may be as an alternative for the land north of Park Lane. Neither parcel would be a good fit in the settlement policy area, whereas the land to the west of Old Farm Road would be, a fact acknowledged by planning officers in the past.

3. We did in fact offer to provide contributions towards improving the A27 so that reason for refusal was withdrawn prior to the appeal being heard.

4. As far as I can recall, the Council was content with our proposals in these matters at the time the appeal was heard. The criticism was that the need to avoid Flood Zones 2 and 3 created a narrow site which meant that the layout was said to be cramped. It could be that, with a smaller number of houses, MH Architects could provide an improved layout. Maybe this is reflected in the plan to which Vail Williams refer in paragraph 3.13.

3.10. It is considered that, as detailed above, given the Council's approach to an over-reliance on large strategic sites to fulfil its housing need and the lack of sites identified for development on the Manhood Peninsula (and in Selsey in particular) during the plan period this site could be proven to be an appropriate location for development as a "windfall site" to help maintain housing supply whilst the strategic sites are in the planning system.

3.11. It is considered the dwellings on the site could be laid out to avoid the Flood Zones 2 and 3 and therefore be at considerably less flood risk than the proposal which was dismissed at appeal. This is set out in the enclosed plan. This would overcome reason for refusal 2.

3.12. Reasons for refusal 3 and 4 would be overcome through the agreement of under Section 106 of the Town & Country Planning Act to provide contributions towards the improvement to the A27 on a proportionate basis to the size of the site and the number of dwellings and also the relevant number of affordable housing units required by policy (or justified as part of a viability exercise). Other matters such as the management of the landscaping, open space, buffers and drainage infrastructure could also be secured by the Section 106 agreement.

3.13. We commend the above highways solution and subsequent development sites to officers in consideration of the draft Local Plan.

4 Conclusions

4.1. It is clear that whilst the overarching strategy of the location of the majority of development in the largest urban settlement of Chichester or adjacent to it is sound the lack of allocation of significant housing numbers to those areas outside Chichester is unsound. This would mean that the vast majority of the district would attract very little housing over the planning period to 2039 thus ensuring that existing settlements would not evolve and would potentially shrink as existing residents and descendants of residents migrate to the Chichester or its strategic urban extensions.

4.2. Outside Chichester, the strategic proposals for Southbourne and Tangmere are similarly isolated. The Manhood Peninsula is particularly lacking in the provision of additional housing sites during the plan period with the justification provided that, for Selsey in particular, recent planning permissions which are being built or have been completed would accommodate all of the housing need going forward for the plan period.

4.3. This approach is flawed for two main reasons (making the Local Plan unsound):

1. The over-reliance on strategic allocations which themselves are constrained by the capacity issues on the A27 and environmental issues such as nitrate neutrality (and any future water neutrality issues which migrate south from the north of Chichester) and the usual impacts on the European sites could mean that these sites are slower in being delivered with little in the way of alternatives allowed for in the local plan.

2. The failure to acknowledge any future development potential of note within the Manhood Peninsula and in particular Selsey will constrain the continued vitality and viability of the settlements within the Manhood Peninsula, particularly following the pandemic when the service sectors are struggling. Taking into account that Selsey in particular but other settlements along the coast within the Manhood Peninsula are reliant on seasonal tourist activity, additional residents are relied upon outside these times in order to provide income for those businesses which may struggle to survive outside the holiday seasons. An effective block on development would significantly reduce the potential future viability of these settlements outside the tourist season.

4.4. The emphasis on the stated urban-focussed housing strategy encourages neighbourhood planning groups/parish and town councils to maintain an opposition to the relevant rather than a proactive policy framework to direct appropriate development within their areas.

4.5. Our clients have detailed above one way which their land could be used in conjunction with others to facilitate a local infrastructure improvement to assist traffic circulation and access in and around Selsey itself which would need to be funded by future residential development and we commend this proposal to you for further consideration.

4.6. We trust that officers will take these representations into account and we look forward to receiving confirmation that the representations have been duly made.

Respondent: Deerhyde Limited [7657]

Agent: Vail Williams LLP (David Ramsay, Partner) [8134]

Summary:

The Selsey Neighbourhood Plan does not seek to allocate any sites or residential development, instead relying on those which were allocated in the previous local plan and, in particular, developments at Park Farm/Middle Field and Drift Field totalling 249 houses. It is assumed that this existing commitment accommodates the neighbourhood plan of 150 houses which is the justification for not allocating of residential development in the neighbourhood plan. However, this is short sighted as the neighbourhood plan runs to 2029 and, although development sites are largely controversial within smaller communities there is a lack of recognition of the requirement to provide new houses for existing and future residents (including descendants of current residents) in order to maintain the vitality and viability of the settlement outside of the tourist season where it is recognised that the local population will swell.

These points add further weight to the considered lack of soundness to the housing policies in the local plan which fail to recognise the need for smaller allocations within the Manhood Peninsula, particularly Selsey.

Full text:

I am pleased to attach our representations in response to the Chichester Local Plan Regulation 19 consultation. These representations are submitted on behalf of our clients Deerhyde Ltd. owners of land in Selsey and located in the area for a significant number of years.

The submitted documents include the following:

- Representations statement
- Plans showing the potential road widening of Golf Links Lane and Paddock Lane, Selsey
- Development potential of sites for residential development at Golf Links Lane and Old Farm Road, Selsey taking account of flood zones 2 and 3 (2 plans 15-085 SK03 and SK04)
- Plans showing access options to Golf Links Lane site
- Plan showing tracking analysis for low-loaders
- Junction analysis
- Submission form

As detailed in the attached, after careful consideration we have concluded that the housing strategy for Chichester is flawed in principle as it fails to allocate sufficient sites in outside Chichester City (or adjacent to) to allow the remainder of the District to continue to provide houses for local people in areas where they are most needed.

In addition, our clients have put forward a suggestion for an infrastructure improvement to Selsey – namely the widening of Golf Links Lane and Paddocks Lane to accommodate delivery of caravans / other HGV / LGVs but also to provide a wider carriageway which could potentially incorporate a pavement / footpath cycleway to aid safer conveyance of pedestrians and vehicles in the area. Adding in a safer highway solution would also encourage car users to walk or cycle for local trips rather than risking congestion in the car. It would have the added benefit of diverting caravan park traffic travelling from the north into the caravan parks earlier and thus relieving congestion of Selsey High Street.

Introduction

1.1. Vail Williams LLP has been instructed by Deerhyde Ltd to submit representations to the Chichester Local Plan 2021-2039: Proposed Submission (Regulation 19) document.

1.2. As per the Website, these comments seek to address the three questions namely:

1. Is it legally compliant?
2. Is it sound?
3. Does it comply with the duty to cooperate?

1.3. These representations are largely focussed on the provision of housing and ensuring that a satisfactory access (both vehicular and pedestrian) can be maintained and enhanced, particularly in Selsey.

1.4. These representations reflect the fact that our client, Deerhyde Ltd, owns a significant amount of land in the Selsey area, an interest which was acquired in 1986 but with family ownership going back many years before then.

1.5. Our clients have identified a potential opportunity to facilitate highway improvements within Selsey which would be to the benefit of both residents and tourists using the holiday parks and other attractions alike. This would particularly be of benefit given the Council's acknowledgement that the B2145 through Selsey is the busiest B road in the country. These representations bring into question the 'tests of soundness'. In particular regarding the questions as to whether it is 'sound' on the basis of whether it has been 'positively prepared', whether it is 'justified' and 'effective' in respect of the areas of concern raised with respect to employment land provisions.

1.6. As set out at Paragraph 35 of the NPPF local plans are required to be 'sound'. Plans are considered sound when the following applies:

- a) Positively prepared – providing a strategy which, as a minimum, seeks to meet the area's objectively assessed needs¹; and is informed by agreements with other authorities, so that unmet need from neighbouring areas is accommodated where it is practical to do so and is consistent with achieving sustainable development;
- b) Justified – an appropriate strategy², taking into account the reasonable alternatives³, and based on proportionate evidence⁴;
- c) Effective – deliverable over the plan period⁵, and based on effective joint working on crossboundary strategic matters that have been dealt with rather than deferred, as evidenced by the statement of common ground; and
- d) Consistent with national policy – enabling the delivery of sustainable development in accordance with the policies in this Framework and other statements of national planning policy, where relevant.⁶

1.7. These representations seek to highlight that Chapter 5 (Housing) has not been positively prepared, in so far as it does not provide [1.] "a strategy which, as a minimum, seeks to meet the area's objectively assessed needs".

1.8. It is also considered that Chapter 5 is not justified as the housing strategy is [2.] is inappropriate as it relies on a number of large strategic sites, with multiple issues some of which are in conflict with other parts of the local plan.

1.9. Chapter 5 is also not justified with respect to its provisions do not [3.] take into account reasonable alternative sites.

1.10. It is considered on the basis of the other factors highlighted in these representations and the proposed housing land provision is not 'consistent

with national policy' as the proposed provision does not enable the delivery of sustainable development in accordance with the policies in this Framework and other statements of national planning policy, where relevant. It is considered that the proposed plans are contrary to the NPPF paragraph 16a, 16b, 16c, 16d and paragraph 20a

2 Local Plan Representations

2.1. Having reviewed the draft Local Plan we would make the following comments:

2.2. Paragraph 3.1 asserts the Government's encouragement for local planning authorities to ensure sustainable development is at the forefront when considering planning applications and that the National Planning Policy Framework (NPPF) defines sustainable development as "meeting the needs of the present without compromising the ability of future generations to meet their own needs". Paragraph 3.5 goes on to advise the range of factors as are informed the spatial strategy which underpins the local plan which, inter alia, "the pattern of need and demand for housing and employment across the area", "infrastructure capacity and constraints, in particular related to waste water treatment, roads and transport", "the availability of potential housing types, their deliverability and phasing" and this needs to take place whilst being mindful of the environmental constraints taking a sequential approach to avoiding flood risk areas, protect the environmental designations, landscape quality, the historic environment and settlement character.

2.3. The principles outlined above are supported as these are the key facets of good planning and plan making. However it falls to local authorities to ensure that the sustainable approach includes providing a sufficient supply of homes and facilitating a variety of sites to come forward where needed, and that the needs of groups within specific housing requirements are addressed and that land with permission is developed without unnecessary delay. (Paragraph 65). Paragraph 66 states that within the overall requirement [for housing] strategic policies should also set out a housing requirement for designated neighbourhood areas which reflects the overall strategy for the pattern and scale of development and any relevant allocations.

2.4. Paragraph 67 goes on, where it is not possible to provide a requirement figure for a neighbourhood area, the local planning authority should provide an indicative figure, if requested to do so by the neighbourhood planning body. This figure should take account of factors such as the latest evidence of local housing need, the population of the neighbourhood area and the most recently available planning strategy of the local planning authority.

2.5. Paragraph 68 asserts that strategic policy making authorities should have a clear understanding of the land available in their area through the preparation of a Strategic Housing Land Availability Assessment (SHLAA). From this, planning policies should identify a sufficient supply and mix of sites, taking into account their availability, suitability and locally economic viability.

2.6. Further guidance states (Paragraph 69) that small and medium sized sites can make an important [my emphasis] contribution to meeting the housing requirements of an area, and are often built-out relatively quickly. To promote the development of a good mix of sites the local planning authority should identify sites of small and medium size and support the development of windfall sites through their promises and decisions giving great weight to the benefits of using suitable sites within existing settlements for homes.

2.7. Neighbourhood planning groups should also give particular consideration to the opportunities for allocating small and medium-sized sites suitable for housing in their area. Paragraph 71 goes on: where an allowance is to be made for windfall sites as part of anticipated supply, there should be compelling evidence that they will provide a reliable source of supply. Any allowance should be realistic having regard to the SHLAA, historic windfall delivery rate and expected future trends.

2.8. Whilst it is noted that the delivery of large scale sites can result in the delivery of large numbers of new homes, it is apparent that such developments take considerable time to work their way through the planning system to an approval and even then are only at outline stage. The delivery of new homes is therefore reliant on the Councils to efficiently determine reserved matters applications and, thereafter, discharge of conditions, to allow a swift implementation of planning applications and a timely start on site for the delivery of housing.

2.9. The inclusion of small and medium sites (ie. not reliant on strategic sites) within the housing mix are invaluable in delivering housing quicker and potentially in places, perhaps outside the main settlements, which would allow new housing to be accessible to all which is one of the key facets of the NPPF.

2.10. This approach would assist with maintaining delivery of housing where existing allocations are either stalled or progressing slowly through the planning system or have simply been delayed in coming forward for perhaps other commercial reasons.

2.11. The plan is largely predicated on strategic sites, as detailed at Policy H2 which would provide 7,195 houses. This is a significant reliance on the strategic sites to deliver 75% of the overall housing target and much of them are predicated on the works to the A27 being completed in order to make them acceptable.

2.12. It should be noted that the above housing provision is predicated on the ability to identify mitigation for the impacts on the European environmental designations (including nutrient neutrality), addressing highway implications and negotiating the planning system.

The Manhood Peninsula

2.13. The preferred approached version of the Local Plan does include moderate growth for the settlement hubs of Selsey (250 dwellings) and East Wittering (350) and the service village of Hunston (200). However, since then several planning permissions have contributed to the moderate levels of growth on the Manhood Peninsula which the Council says has accounted for these housing numbers. The plan does not therefore include any strategic allocations on the Manhood Peninsula in recognition of this recently permitted growth and the ongoing constraints the area faces, save for 50 dwellings to come forward at North Mundham.

2.14. This approach is not considered sound as a reason to prevent development of any scale on the Manhood Peninsula (particularly Selsey) for the plan period. As detailed above, it is essential that the plan allocates land across its settlement hierarchy in order to maintain a sustainable and deliverable approach to development and to assist the continuing evolution and economic viability of settlements which rely heavily on tourism and also on new development to maintain the supply of homes to provide options for all sectors of the local community to be able to live on the Peninsula should they so wish.

2.15. It is noted that at Policy S2 (settlement hierarchy), Selsey is listed as a "settlement hub" which is the second tier of settlement under Chichester city. Whilst this hierarchy, particularly in connection with Selsey is supported it is therefore surprising not to see more housing sites allocated within and around Selsey.

2.16. Given the potential number of environmental constraints on the Manhood Peninsula it is unlikely that sites of any excessive size would come forward and large numbers of dwellings would not necessarily result once the sites had taken account of their environmental constraints. That said, and as reflected above, sites of a size proportionate to their location but below "strategic" size can have an important part to play in the delivery of sufficient housing numbers in the right location at the right time in accordance with the NPPF.

Housing

2.17. Policy H1 (meeting housing needs) sets out the housing requirement for the full plan period of 1 April 2021 to 31 March 2039 as 10,350 dwellings. This allocates 963 dwellings to the Manhood Peninsula and a windfall (small site allowance) allocation of 657 dwellings for the whole district. There are no strategic locations/allocation on the Manhood Peninsula under Policy H2 which is considered unsound, particularly given the position that Selsey holds in the settlement hierarchy. Furthermore, under Policy H3 (non-strategic parish housing requirements 2021-2039) Selsey has been allocated zero housing. Again, this is considered unsound as it prevents sustainable development and access to new houses for all settlements across the district.

2.18. An overreliance on consented sites coming forward to provide future housing is considered unsound as, in this case, it effectively prevents any further development on the Peninsula and in Selsey in particular.

Transport

2.19. Policy T1 (transport infrastructure) is specifically aimed at ensuring that integrated transport measures will be developed to mitigate the impact of planned development on the highway network, improve highway safety and air quality, promote more sustainable travel patterns and encourage increased use of sustainable motor travel, such as public transport, cycling and walking.

2.20. The council will work with National Highways, WSCC, other transport and service providers and developers to provide a better integrated transport network and improve accessibility to key services and facilities. The policy lists seven ways in which the key objectives of reducing the need to travel by car, enabling access to sustainable means of travel, including public transport, walking and cycling; managing travel demands; and mitigating the impacts of travelling by car can be achieved.

2.21. Whilst it is not intended to go through all of these in this document it is noted that all parties are expected to support the four objectives by working with relevant providers to improve accessibility to key services and facilities which would be relevant to Selsey (see below).

2.22. The policy is also aimed at planning to achieve a timely delivery of transport infrastructure on the A27 and elsewhere on the network which is needed to support new housing, employment and other development identified in this plan. The phasing of delivery of new development to align with provision of new transport infrastructure such as improvements to the A27 and elsewhere on the highway network, will be key to managing impacts on the highway. This is yet another impediment to the delivery of a strategic allocations and larger scale development which would, by their very nature, generate a higher highway impact on the transport network than carefully planned smaller developments which could satisfy a much more localised need and be cause less impact on the strategic road network. The tariff proposals outlined at paragraph 8.20 only covers part of West of Chichester and Tangmere SDLs and not the other strategic sites outlined at Policy H2.

2.23. Critically it is also understood that Highways England has pulled funding for the improvements to the Bognor Road roundabout as part of a package of A27 improvements. On this basis it is unclear how further funding would be secured at this time.

2.24. The lack of soundness to the approach of significant reliance on strategic sites, due to the current lack of capacity of the A27, is evident in the text that accompanies the policy which states that opportunities to secure funding to implement this package of improvements will be maximised by working proactively with Government agencies, other public sector organisations and private investors. Developer contributions from new development will also be sought. It is clear that smaller scale developments which would have a significantly lesser impact on the highway network could deliver housing quicker and with fewer constraints to implementation. It is for these reasons that smaller sites should be allocated, particularly in the Manhood Peninsula, for development.

2.25. The content of Policy T2 (transport development) is largely supported and considered sound save for the fact that it does not seem to cover the improvement of local transport routes, particularly those that would assist in improving the circulation of traffic around smaller settlements. The policy should be amended to specifically relate to local transport improvements which are locally important to aid traffic circulation and reduce congestion.

Neighbourhood Plan

2.26. The Selsey Neighbourhood Plan does not seek to allocate any sites or residential development, instead relying on those which were allocated in the previous local plan and, in particular, developments at Park Farm/Middle Field and Drift Field totalling 249 houses. It is assumed that this existing commitment accommodates the neighbourhood plan of 150 houses which is the justification for not allocating of residential development in the neighbourhood plan. However, this is short sighted as the neighbourhood plan runs to 2029 and, although development sites are largely controversial within smaller communities there is a lack of recognition of the requirement to provide new houses for existing and future residents (including descendants of current residents) in order to maintain the vitality and viability of the settlement outside of the tourist season where it is recognised that the local population will swell.

2.27. These points add further weight to the considered lack of soundness to the housing policies in the local plan which fail to recognise the need for smaller allocations within the Manhood Peninsula, particularly Selsey.

3 Local Infrastructure Provision

Selsey Road Improvements

3.1. Our clients wish to put forward a potential highway improvement scheme for Selsey which has come about given their extensive historic knowledge of the town and experience of significant congestion along Selsey High Street as a result of an over-reliance of this route by traffic using the caravan parks. It would be a common sense alternative route (to using High Street) which will alleviate congestion along Selsey High Street/School Lane/Paddock Lane/Warners Lane, particularly during the summer months.

3.2. The local plan focusses its attention on the need to improve the strategic highway network but this proposal would provide a significant benefit at a local level in Selsey. As per the attached plan, our clients propose to widen Golf Links Lane from its junction with the B2145 Chichester Road to its junction with Paddock Lane, then widen Paddock Lane and make it up to adoptable standard to enable delivery of holiday traffic to the point where it meets the north eastern corner of White Horse Caravan Park, from which point the road has been made up to carry holiday traffic. At the moment, the northern section of Paddock Lane is just a rough track which is not suitable for ordinary road traffic. It is envisaged that, in conjunction with the owner of the largest caravan parks, Warner's Lane will also be improved. It is currently a tarmac road in poor condition with no footways and one section is too narrow to allow two vehicles to pass each other. This is not satisfactory for the major access route to the largest caravan parks.

3.3. Golf Links Lane is currently a single track, tarmac road which is in poor condition. It is two-way but much of it is too narrow to allow two vehicles to pass each other. It serves Northcommon Farm, a small housing development on the northern side, Selsey Golf Club and Selsey Country Club (which comprises c.300 holiday chalets and an associated licensed club). If it were to be made up to adoptable standard to the point where it meets Paddock Lane, it would improve access for existing users but, importantly, it would also create a more direct access route (in conjunction with Paddock Lane) for traffic associated with thousands of holiday caravans as well as a touring caravan park.

3.4. Given that a large proportion of holiday traffic and other tourist industry-related traffic (HGVs carrying food and drink, caravan transporters, tractor/trailer transport and public transport) use the route along High Street/School Lane/Paddock Lane/Warners Lane it is considered that this could

be diverted from the B2145 Chichester Road further north than Selsey High Street, thus taking traffic away from the congested High Street. An easier, more direct route to the major caravan parks would be an attractive alternative.

3.5. The mechanism to deliver such a proposal is not yet the subject of formal agreement. A large proportion of the land required to widen the roads is within the ownership of Deerhyde Limited (our clients) and the owner of the major caravan parks. The latter has been very supportive of the proposal verbally. A short section of land is not in any specific ownership but our clients have long-standing rights over its use, which can be traced back to 1830. Our clients are serious about facilitating these highway improvements, including the use of their land, which will inevitably have a significant financial impact upon them.

Potential Residential Development Sites

3.6. In order to mitigate the financial impact including both the loss of their land and the implementation of the proposed highway improvements our clients would like to promote two sites for residential development, namely land north of Golf Links Lane (13.5 acres/5.46 hectares) and land west of Old Farm Road for residential development. Whilst the north western corner of the site is located within Flood Zones 2 and 3 it is considered that the developable area of the site would be approximately 4 hectares and could therefore deliver approximately 120 to 140 dwellings. This includes retaining the existing boundary screening along the south eastern boundary and avoiding Flood Zones 2 and 3. An indicative plan is attached to this statement.

3.7. Thawscroft Ltd, an associated company, also owns land west of Old Farm Road, Selsey (2.8ha / 6.9 acres) which taking account of the flood risk constraints along its western boundary could accommodate approximately 50 dwellings. An indicative plan is attached to this statement.

3.8. Having reviewed the planning history of the site it is noted that a planning application (under the name of Thawscroft Limited) was made in December 2016, refused in June 2017 and the appeal was dismissed on 11 June 2018.

3.9. The reasons for refusal related to the following:

1. Site is located outside the defined settlement boundary for Selsey.

2. When the planning officer was giving evidence, he stated that he knew of an alternative site at lower risk of flooding but he would not identify it. After the appeal, an area of land north of Park Lane was identified for 250 houses. The land in question becomes waterlogged in the winter and is highly prone to surface water flooding. It is also only about 250m from Pagham Harbour, a site of major ecological importance with a significant level of protection afforded to it. The planning officer said the real issue with our appeal was one of numbers so it seemed curious to me that a site with a much larger number (250) was identified soon afterwards. Also, the land south of Park Lane (similarly prone to surface water flooding) was in the numbers for 2015/20 but in fact could not be started until 2021 so the planning inspector was misled. I believe that was crucial to the outcome. Landlink have proposed land west of the "Wave" roundabout (opposite Asda). This may be as an alternative for the land north of Park Lane. Neither parcel would be a good fit in the settlement policy area, whereas the land to the west of Old Farm Road would be, a fact acknowledged by planning officers in the past.

3. We did in fact offer to provide contributions towards improving the A27 so that reason for refusal was withdrawn prior to the appeal being heard.

4. As far as I can recall, the Council was content with our proposals in these matters at the time the appeal was heard. The criticism was that the need to avoid Flood Zones 2 and 3 created a narrow site which meant that the layout was said to be cramped. It could be that, with a smaller number of houses, MH Architects could provide an improved layout. Maybe this is reflected in the plan to which Vail Williams refer in paragraph 3.13.

3.10. It is considered that, as detailed above, given the Council's approach to an over-reliance on large strategic sites to fulfil its housing need and the lack of sites identified for development on the Manhood Peninsula (and in Selsey in particular) during the plan period this site could be proven to be an appropriate location for development as a "windfall site" to help maintain housing supply whilst the strategic sites are in the planning system.

3.11. It is considered the dwellings on the site could be laid out to avoid the Flood Zones 2 and 3 and therefore be at considerably less flood risk than the proposal which was dismissed at appeal. This is set out in the enclosed plan. This would overcome reason for refusal 2.

3.12. Reasons for refusal 3 and 4 would be overcome through the agreement of under Section 106 of the Town & Country Planning Act to provide contributions towards the improvement to the A27 on a proportionate basis to the size of the site and the number of dwellings and also the relevant number of affordable housing units required by policy (or justified as part of a viability exercise). Other matters such as the management of the landscaping, open space, buffers and drainage infrastructure could also be secured by the Section 106 agreement.

3.13. We commend the above highways solution and subsequent development sites to officers in consideration of the draft Local Plan.

4 Conclusions

4.1. It is clear that whilst the overarching strategy of the location of the majority of development in the largest urban settlement of Chichester or adjacent to it is sound the lack of allocation of significant housing numbers to those areas outside Chichester is unsound. This would mean that the vast majority of the district would attract very little housing over the planning period to 2039 thus ensuring that existing settlements would not evolve and would potentially shrink as existing residents and descendants of residents migrate to the Chichester or its strategic urban extensions.

4.2. Outside Chichester, the strategic proposals for Southbourne and Tangmere are similarly isolated. The Manhood Peninsula is particularly lacking in the provision of additional housing sites during the plan period with the justification provided that, for Selsey in particular, recent planning permissions which are being built or have been completed would accommodate all of the housing need going forward for the plan period.

4.3. This approach is flawed for two main reasons (making the Local Plan unsound):

1. The over-reliance on strategic allocations which themselves are constrained by the capacity issues on the A27 and environmental issues such as nitrate neutrality (and any future water neutrality issues which migrate south from the north of Chichester) and the usual impacts on the European sites could mean that these sites are slower in being delivered with little in the way of alternatives allowed for in the local plan.

2. The failure to acknowledge any future development potential of note within the Manhood Peninsula and in particular Selsey will constrain the continued vitality and viability of the settlements within the Manhood Peninsula, particularly following the pandemic when the service sectors are struggling. Taking into account that Selsey in particular but other settlements along the coast within the Manhood Peninsula are reliant on seasonal tourist activity, additional residents are relied upon outside these times in order to provide income for those businesses which may struggle to survive outside the holiday seasons. An effective block on development would significantly reduce the potential future viability of these settlements outside the tourist season.

4.4. The emphasis on the stated urban-focussed housing strategy encourages neighbourhood planning groups/parish and town councils to maintain an opposition to the relevant rather than a proactive policy framework to direct appropriate development within their areas.

4.5. Our clients have detailed above one way which their land could be used in conjunction with others to facilitate a local infrastructure improvement to

assist traffic circulation and access in and around Selsey itself which would need to be funded by future residential development and we commend this proposal to you for further consideration.

4.6. We trust that officers will take these representations into account and we look forward to receiving confirmation that the representations have been duly made.

5021

Object

Document Element: Policy H3 Non-Strategic Parish Housing Requirements 2021 - 2039

Respondent: Domusea [1816]

Agent: Smith Simmons Partners (Paul White) [7650]

Summary:

Policy H3 identifies non-strategic parish allocations. We have explained above our queries with the 25 dwelling allocation to Plaistow & Ifold, whether it has allowed for the non-implementation of the 10 units in the last 2015 Plan and why it compares so unfavourably with much higher levels of development for the other service villages in the NE part of the district.

We would also query why the options outlined in the PINS advisory visit of 2021 have not been more thoroughly tested for increased housing provision in the north part of the district to increase the supply of housing to meet OAN. There is no updated Settlement Hierarchy background paper, and the revised housing distribution has not been justified anywhere in the evidence base for the Regulation 19 Local Plan.

Full text:

The 'tests of soundness' for Local Plan preparation are set out in paragraph 35 of the July 2021 NPPF. They require the 2021-39 Local Plan to have been:

- Positively prepared – providing a strategy which, as a minimum, seeks to meet the area's objectively assessed needs; and is informed by agreements with other authorities, so that unmet need from neighbouring areas is accommodated where it is practical to do so and is consistent with achieving sustainable development;
- Justified – an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence;
- Effective – deliverable over the plan period, and based on effective joint working on cross-boundary strategic matters that have been dealt with rather than deferred, as evidenced by the statement of common ground; and
- Consistent with national policy – enabling the delivery of sustainable development in accordance with the policies in this Framework.

Local Plan reviews are a legal requirement every 5 years in accordance with Regulation 10A of the 2012 Town and Country Planning (Local Planning) (England) Regulations. The Regulation 19 Plan is not legally compliant as it has not been reviewed within 5 years of the last Plan adopted in July 2015. It is also disappointing that the failure of the current Regulation 19 Local Plan to meet objectively assessed need (OAN) of 638 dpa outside the national park has not been properly evidenced in any up to date statement of common ground with neighbouring authorities with regards to the 'duty to cooperate'.

At this stage we believe the Plan as drafted therefore fails the positively prepared, effective, and consistent with national planning policy tests.

Duty to Cooperate

The 2014-2029 Local Plan adopted in 2015 does not meet the full objectively assessed housing needs for the area. But it did recognise that future proposals to improve the capacity of the A27 and wastewater treatment works could facilitate additional housing growth. For this reason, it committed the Council to a review of the Plan within five years to ensure that housing needs could be met. That undertaking to review within 5 years was not met.

In 2021 the Council invited an advisory visit from PINS to advise on how the present Local Plan should be prepared. The inspector advised that if the Plan was prepared which did not meet the full housing needs of the area, it would have to show that it had followed the duty to co-operate with neighbouring authorities in maximising the effectiveness of plan preparation.

The inspector said the Duty to Cooperate was therefore critical in the preparation of the Local Plan Review. At the time of the meeting, the council said discussions with neighbouring authorities had been carried out on the basis that the Local Plan Review would meet the full objectively assessed housing needs (OAN) for the area. However if this was not the case, the inspector said evidence of constructive, active, and on-going engagement to determine whether or not development needs could be met elsewhere would need to be shown. Importantly, the inspector said, 1) 'a failure to meet the Duty to Cooperate cannot be remedied during the examination process because it applies to the preparation of the Plan, which ends upon submission', and 2) local planning authorities should make every effort to secure the necessary cooperation on strategic cross boundary matters before submitting plans for examination.

The Duty to Cooperate Statement of Compliance (January 2023) forms part of the evidence base for the Submission Local Plan. In the event, the Local Plan excluding the national park only provides for 575 dpa against an OAN of 638 dpa. However this under provision against need has not been justified anywhere in discussions with neighbouring authorities before the Plan was submitted. Appendix 1 of the Statement of Compliance lists those authorities that were consulted during the earlier Regulation 18 Preferred Approach consultation. Appendix 2 lists those authorities where Statements of Common Ground have been agreed with Chichester DC for the Regulation Submission 19 Plan. No statements have produced or agreed. Therefore as it stands the under provision of housing against OAN in the Plan has not been justified. The failure to meet the duty to cooperate cannot be remedied because it has already ended with the Submission Plan. The plan therefore fails the positively prepared and justified tests. It also fails to comply with

national policy in the NPPF paragraph 24-27 which advises on the duty to cooperate approach.

Local Plan Policies

The remainder of these comments deal with the proposed Settlement Hierarchy - policy S2, policy H1 – Meeting Housing Need, Non-Strategic Housing Sites – Policy H3 and T1 Transport Infrastructure.

Policy S2 – Settlement Hierarchy

The Settlement Hierarchy background paper prepared for the Regulation 18 draft Local Plan provides the justification for the hierarchy in Policy S2 of the Regulation 19 Local Plan. We agree that Plaistow & Ifold has been properly identified as a service village in the settlement hierarchy.

Policy H1 – Meeting Housing Needs

The identified housing need has been informed by the 2022 Housing and Economic Development Needs Assessment (HEDNA). It explains that based on the standard methodology, since the last HEDNA in 2020, the district wide housing need has increased from 746 dpa to 763 dpa (621 dpa in the Plan Area to 638 dpa) with the balance to be found in the national park. The proposed 638 dpa for the area of the district outside the national park is the figure that will be tested at the forthcoming Examination.

We have already explained why the failure of the Council to plan for the 638 dpa in the Regulation 19 Local Plan has not been justified in connection with the duty to cooperate and no evidence has been presented in any statement of common ground with neighbouring authorities to show how development needs could be met elsewhere.

We note from policy H1 that the components of housing supply include outstanding housing commitments without planning permission from the 2015 adopted Local Plan, the Site Allocations DPD, and 'made' Neighbourhood Plans.

However, it is unclear how the above housing supply components have been calculated and how they have translated into the strategic and non-strategic allocations in policies H2 and H3.

In the case of Plaistow and Ifold, the last adopted 2015 Local Plan identified the settlement with an allocation of 10 dwellings. The subsequent Site Allocation DPD identified land north of Little Springfield Farm for 10 no. units. A Neighbourhood Plan for Plaistow and Ifold was produced but was withdrawn and no site allocations were confirmed. The allocated site north of Little Springfield Farm remains undeveloped.

With specific reference to Plaistow & Ifold we would therefore query whether 1) the existing housing commitments without planning permission in the 2015 Local Plan and the Site Allocations DPD have been double counted, and 2) whether the non-implementation of the 10 units from the 2015 Local Plan have been ring fenced to count against the new proposed allocation of 25 dwellings at the settlement? In which case, we would question why a further 15 dwellings are only proposed at a service village in the hierarchy compared to other service villages in the NE part of the district which are proposed for higher levels of development (Loxwood 220 dwellings, Kirdford 50 dwellings and Wisborough Green 75 dwellings).

If the 25 dwelling allocation at Plaistow & Ifold is intended to be additional to the 10 units identified in the last 2015 Local Plan, then the allocation should be increased to 35 dwellings as a minimum to reflect the non-implementation of the 2015 allocation.

Policy H3 – Non-Strategic Parish Allocations

Policy H3 identifies non-strategic parish allocations. We have explained above our queries with the 25 dwelling allocation to Plaistow & Ifold, whether it has allowed for the non-implementation of the 10 units in the last 2015 Plan and why it compares so unfavourably with much higher levels of development for the other service villages in the NE part of the district.

We would also query why the options outlined in the PINS advisory visit of 2021 have not been more thoroughly tested for increased housing provision in the north part of the district to increase the supply of housing to meet OAN. There is no updated Settlement Hierarchy background paper, and the revised housing distribution has not been justified anywhere in the evidence base for the Regulation 19 Local Plan.

Policy T1 – Transport Infrastructure

The policy objectives to ensure new development is well located and designed to avoid or minimise the need for travel and encourage the use of sustainable modes of travel as an alternative to the private car are supported. However, the proposed contribution of £7.7k per dwelling towards A27 highway improvements applies to new housing across the district even in the NE part of the district where impacts from development on the A27 will be less than developments in the south of the district.

In any event it is unclear how the contributions are justified when the responsibility for trunk road infrastructure improvements rests with National Highways.

The proposed contribution in T1 is therefore questioned and in our view, flawed. The level of contribution set out in the policy and the principle of a contribution will therefore require further testing at the forthcoming Examination.

Change suggested by respondent:

The role and impact of existing unimplemented commitments in the housing land supply on the proposed non-strategic allocations in H3 requires further clarification in lower case policy text.

Object

Document Element: Policy H3 Non-Strategic Parish Housing Requirements 2021 - 2039**Respondent:** Gladman Developments Ltd (Mr Rob Wilding, Senior Planner) [7816]**Summary:**

Gladman promoting an omission site to the Draft Chichester Local Plan. Land off Main Road, Birdham. 150 dwellings.

Full text:

Gladman are promoting land off Main Road, Birdham for residential development. The site can accommodate a scheme of up to 150 dwellings and is in an entirely suitable and sustainable location to accommodate growth. Figure 1 sets out the location plan of the site, while a development framework plan is included in Appendix of this representation.

The site was assessed as being 'Developable' in the Chichester Housing and Economic Land Availability Assessment 2021 (HELAA ref: HBI00029/29a). The site was concluded by the Council to be suitable, available and achievable and there are no known constraints that would make the development unachievable in principle. Estimated timescales for delivery would be 0-5 years. Gladman fully support the Council's assessment of the site.

The site has good access to social and community infrastructure that would be expected of an edge of settlement location, is not subject to any insurmountable technical or environmental constraints and can accommodate a high-quality residential development that will address identified market and affordable housing needs. The site can deliver a wide range of market and affordable homes to meet Chichester's existing needs general and specialist housing needs and would be able to deliver quickly, without the need for significant infrastructure, within the early part of the plan period. The site represents one of the few opportunities to deliver development outside of the Chichester Harbour Area of Outstanding Natural Beauty location in the authority and thus the potential for development here should be maximised. Gladman currently have a 'live' outline planning application on the site which was submitted to Chichester District Council in June 2021 (application ref: 21/01830/OUT). At the time of writing, the application remains under consideration by the Council.

The remainder of this section describes the site's suitability for residential development in further detail, taking account of the technical studies that have been undertaken to support the delivery of the site to date.

New Homes

The site can deliver a wide range of market and affordable homes to meet the district's general and specialist housing needs and would be able to deliver quickly, without the need for significant infrastructure, within the early part of the plan period. Gladman can confirm that the site can deliver a provision of affordable housing on-site in accordance with local planning policy. This is a significant benefit given the significant level of need for affordable housing across Chichester district.

Community Facilities and Viability

Proportionate developer contributions towards the delivery of new community infrastructure would be provided alongside any proposals. Gladman will agree requests for developer contributions which meet the relevant requirements of paragraph 57 of the NPPF and CIL regulations 122 and 123. Gladman would be pleased to agree an initial set of Heads of Terms with Chichester District Council.

Open Space and Green Infrastructure

The illustrative Development Framework Plan which supports the application demonstrates how the built development will be set within a framework of open space and green infrastructure. The green space will include a formal locally equipped children's play area (LEAP), informal open space and a community park. The proposal seeks to retain existing landscape features; enhance the existing hedgerows and where possible any loss will be mitigated elsewhere on site. The illustrative Development Framework Plan incorporates these elements within a strategic landscape framework. Generous areas of informal and formal open space will underpin the proposals for the site. The total area of open space provided as part of the site's development would meet Chichester District Council's requirements.

Flood Risk Mitigation

Technical work undertaken to date has confirmed that the site is located within Flood Zone 1 (the area at the lowest risk of flooding). The site, therefore, can be developed safely in relation to flood risk and flooding would not pose a constraint to the development of the site. A comprehensive Flood Risk Assessment (FRA) has previously been prepared for the site which demonstrated that the development of the site would be safe for its lifetime taking account of the vulnerability of its users, without increasing flood risk elsewhere, and, where possible, can reduce flood risk overall. SUDs features incorporated in the development will not only operate technically to reduce flood risk, but could also be used to enhance the onsite biodiversity and will be incorporated into the usable green infrastructure to help create high-quality open spaces. Furthermore, site specific information has been provided to the council to demonstrate that the site is at negligible risk of groundwater flooding.

Demonstrating nitrate neutrality

The development is located outside of the Chichester Harbour AoNB and naturally drains in a southerly direction. Through the evidence provided in the Flood Risk Assessment and Habitats Regulations Assessment, the development would not create any nitrate waste into the Chichester Harbour protected area.

Highways and Sustainable Transport

The site is accessed from Main Road, via a simple priority junction. It has been confirmed that the required visibility splays can be achieved and that the

site access junction will operate comfortably within capacity in both the morning and evening peak periods with the proposed development traffic as demonstrated by the Transport Assessment supporting the 'live' application. West Sussex County Council Highways Team have raised no objection in response to the current application on the site in relation to expected traffic capacity impacts and available junction capacity.

The site benefits from good pedestrian connectivity to the village of Birdham. There are a good range of local amenities and facilities which can be accessed on foot, by cycle or by public transport within nationally recognised acceptable walking and cycling distances. These include, but are not limited to: Nisa Local Shop, Birdham Post Office, Birdham CofE Primary School, Birdham Marina and St James Community Centre which are all within the CIHT 'preferred maximum walking distance' guidance.

The site is situated on the existing local bus network with stops located along Main Road. Due to the proximity of the existing transport network, it would be appropriate to assume bus to be the most accessible and efficient sustainable transport system for future residents. The no. 52 bus serves The Witterings and Birdham to Chichester City running every 30 minutes. The service provides commutable journey times to Chichester with buses starting at 06:58 and returning as late as 22:13.

It is possible for future residents of the proposed scheme to easily access sustainable public transport options to further afield via Chichester Bus Station or Chichester Train Station. Both are easily accessible utilising the no. 52 bus service.

Public Rights of Way

The proposals seek to enhance the green gateway to the wider countryside and provide improvements to the existing Public Rights of Way (PROW). Footpath (FP) 48 currently runs to the north of the site and continues to the east towards Sidlesham Lane. This route features in the Green Links across the Manhood's (GLaM) statement as GLaM route 8, identified as Mapsons Lane, which is earmarked to be upgraded from an existing farm track to a bridleway. FP48 is of particular importance within Birdham as it connects to the Salterns Way, a Chichester to West Wittering cycle way (via Crooked Lane) in one direction and to Sidlesham Lane / Batchmere Road in the other which leads to Bracklesham and East Wittering. However, the land required to undertake these improvements falls within private ownership, so this aspiration has to date been undeliverable.

As part of the development proposals, Gladman is proposing to upgrade the existing FP48/GLaM Route 8 to a minimum 3 metre width and to an agreed specification. Improvements to FP48/GLaM Route 8 could be secured via planning condition, likely requiring the work to begin prior to the occupation of an agreed quantum of housing.

In conclusion, there are no outstanding technical objections on the site identified by statutory consultees through the submission of the current 'live' planning application on the site. Alongside the delivery of affordable housing, development of the site will offer the opportunity to deliver a number of other benefits, including:

- A commitment to deliver a high-quality development through the inclusion of a design code, which sets a benchmark for further reserved matters applications;
- Significant areas of attractive and diverse greenspace for new and existing local residents including the provision of a community park and a village green;
- Provision of play areas plus recreational footpaths within the site that would be publicly accessible to new and existing residents;
- Securing net gains in biodiversity through the provision of vast green infrastructure and new wildlife habitats and retention and enhancement of existing ones;
- Improvements to local cycle routes, footpaths and PROW, delivering GLaM Route 8 to a specification that will enable this to become a dedicated Bridleway; and
- An economically active population generating total gross expenditure of approximately £5.4million annually, benefiting the local economy.

Document Element: Policy H3 Non-Strategic Parish Housing Requirements 2021 - 2039

Respondent: Gladman Developments Ltd (Mr Rob Wilding, Senior Planner) [7816]

Summary:

Gladman strongly disagree with the Council providing no new housing allocations in Birdham which is a Tier 3 Service Village. In the Preferred Approach consultation document, Birdham was allocated to deliver 125 new homes over the local plan period and now it is allocated to deliver 0 homes over the plan period.

Full text:

Gladman strongly disagree with the Council providing no new housing allocations in Birdham which is a Tier 3 Service Village. In the Preferred Approach consultation document, Birdham was allocated to deliver 125 new homes over the local plan period and now it is allocated to deliver 0 homes over the plan period.

There have been a few planning applications submitted for residential development in Birdham over the past few years. Gladman's planning application at land off Main Road, Birdham is waiting to be reported to Chichester's Planning Committee. The application site is highly sustainable and logical site in the district which is not currently subject to an adopted allocation or a draft allocation. In light of this conclusion, it seems illogical that the Council will not allocate any further housing growth to a highly sustainable settlement which can accommodate additional housing growth. This will ultimately result in affordability rising across the district and most notably in the northern area of the district.

Change suggested by respondent:

Further housing growth in Birdham.

Document Element: Policy H3 Non-Strategic Parish Housing Requirements 2021 - 2039

Respondent: Gleeson Strategic Land (Mr Peter Rawlinson, Strategic Planner) [855]

Summary:

Site promoted. Land West of Clay Lane, Fishbourne.

Full text:

2.11 Chapter 3 of the draft Local Plan defines how housing and other needs will be met spatially across the District, in accordance with a defined settlement hierarchy.

2.12 Paragraphs 3.5 through 3.28 of the Draft Local Plan summarise the rationale for the proposed distribution of growth, including noting:

- That growth is required in both urban and rural areas to meeting needs;
- The focus remains on Chichester city as a main sub-regional centre and the most sustainable location;
- Outside of Chichester, development will be focused on 'settlement hubs' within the east-west corridor at Tangmere and Southbourne;
- Outside of these locations land for new development will be identified and allocated through the Local Plan or a neighbourhood plan at Service Villages where there are suitable locations to do so; and
- The Local Plan aims to continue to protect the countryside.

2.13 Draft Policy S1 (Spatial Development Strategy) broadly reflects the above, and states that "new residential and employment development is [to be] distributed in line with the settlement hierarchy, with a greater proportion of development in the larger and more sustainable settlements". The corresponding table identifies a range of 'Strategic Development Locations' which are considered to be the 'more sustainable settlements' including the service villages of Bosham, Hambrook / Nutbourne (combined) and Loxwood.

2.14 Draft Policy S2 (Settlement Hierarchy) expands this list to include a wider range of settlements where development will be delivered through site allocations as well as windfall development in accordance with other policies in the draft Plan.

2.15 Whilst we have no objection to the principle of distributing the majority of growth to the most sustainable location, subject to consideration of constraints, it is our view the Council has not sufficiently justified the rationale behind its settlement hierarchy.

2.16 This is because a key settlement, Fishbourne, has been overlooked in the settlement hierarchies set out in draft Policies S1 and S2 without good reason. Fishbourne, has not been identified as a more sustainable settlement and 'Strategic Development Location' in the table at draft Policy S1, and has instead only been identified in draft Policy S2 as a 'Service Village', and a location for the non-strategic provision of only 30 homes. This is despite Fishbourne being a highly sustainable location with suitable and deliverable locations for growth (including Gleeson's site as detailed in Section 3).

2.17 No evidence is provided which considers the sustainability of Service Centres that provides justification for Hambrook / Nutbourne, Loxwood and Bosham being elevated over Fishbourne.

2.18 From our own review, it is clear there is no rationale for this, as shown below:

Current population Sustainable transport options Existing services / facilities Draft Local Plan proposals
Fishbourne 2,666 Train Station and bus services Primary School

Medical Practice

Public Houses

Community Hall

Supermarket (Tesco Extra)

Roman Palace (inc. coffee shop) 30 homes

Hambrook / Nutbourne Hambrook: 1,908

Nutborne: 1,962

Combined total: 3,870 Train Station (Nutbourne) and bus services Post office

Public House 300 homes

Loxwood 1,026 Bus services Primary School

Medical Practice

Post Office

Community Hall 220 homes

Bosham 1,578 Train Station and bus services Primary School

Medical Practice

Post office

Co-op shop

Churches

Public Houses 245 homes

2.19 We consider that Fishbourne should instead be recognised as a 'more sustainable' location where additional strategic-scale growth can and should occur. It has a commensurate number of services and facilities compared to other Service Villages. The proximity to Chichester compared to the other Service Centres and the multitude of employment opportunities and facilities there is also a unique strength of Fishbourne. It also benefits from a nearby Tesco Extra.

2.20 This would be consistent with the Regulation 18 Preferred Approach (December 2018) consultation which identified (through the previous version of draft Policy S1 – at that stage identified as Policy S3 Development Strategy) Fishbourne as a "larger and more sustainable settlement", alongside Bosham, Hambrook / Nutbourne and Hunston, with an allocation of a "minimum of 250 dwellings". Loxwood was not recognised as a more sustainable settlement at that time, albeit was still identified to accommodate 125 homes.

2.21 No information has been provided to justify this change in approach between the Regulation 18 and Regulation 19 consultation. We therefore consider the current approach to the Spatial Strategy is not justified and consider draft Policy S1 not "sound".

Document Element: Policy H3 Non-Strategic Parish Housing Requirements 2021 - 2039

Respondent: Greenwood Group Ltd [7406]

Agent: Smith Simmons Partners (Paul White) [7650]

Summary:

We have already explained our reasons why Sidlesham should be included as a 'service village' in the hierarchy in connection with S2. Based on this revision to the hierarchy, it follows that some housing should be directed to Sidlesham. We believe a parish allocation of the order of 35-70 dwellings would be justified.

Assuming this is accepted we would point out that the 2021 HELAA Site Ref HSI0004 referred to above is still available at Greenwood Nursery Highleigh Road Sidlesham. The Council said the site was deliverable and had an identified capacity of around 35-67 dwellings.

The proposal would generate fewer trips (and no HGV's) compared to the existing nursery business.

Full text:

The 'tests of soundness' for Local Plan preparation are set out in paragraph 35 of the July 2021 NPPF. They require the 2021-39 Local Plan to have been:

- Positively prepared – providing a strategy which, as a minimum, seeks to meet the area's objectively assessed needs; and is informed by agreements with other authorities, so that unmet need from neighbouring areas is accommodated where it is practical to do so and is consistent with achieving sustainable development;
- Justified – an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence;
- Effective – deliverable over the plan period, and based on effective joint working on cross-boundary strategic matters that have been dealt with rather than deferred, as evidenced by the statement of common ground; and
- Consistent with national policy – enabling the delivery of sustainable development in accordance with the policies in this Framework.

Our comments concern the Sustainability Appraisal for the Local Plan and the following policies in connection with Sidlesham: S2 - Settlement Hierarchy and Parish Housing Sites - H3. In our view, Sidlesham should be re classified as a service village in the hierarchy and allocated a modest level of development. This would improve the overall plan in terms of its performance against the 'justified' test of soundness.

Sustainability Appraisal (SA)

This forms part of the evidence base for the Local Plan Review. It has updated the SA prepared for the last Preferred Approach 2018 Local Plan. We note from paragraph 5.2.11 of the updated SA that the southern part of the plan area (i.e. the east west corridor and the Manhood Peninsula) is highly constrained by capacity on the A27. Detailed discussions with National Highways and WSCC, over the course of 2019-2022, have led to a resolution that there is capacity for no more than 535 dpa in this area (with a further 40 dpa in the north part of the District outside the National Park). This contrasts with the actual housing need for the area of 638dpa.

The figure of 535dpa has now been adopted for the submission Local Plan in the southern part of the plan area with no standard 10% supply buffer.

Under providing against OAN will be a matter for discussion at Examination but even accepting the 535dpa can be justified in the south part of the district we still have concerns about the housing distribution for the manhood peninsula. For instance, in order to avoid traffic impact issues on the A27, paragraph 5.2.23 of SA says this would need avoid or minimise growth on the Manhood Peninsula and weight growth to the west of Chichester. Paragraph 5.2.29 also states that growth should be limited on the peninsula because of the need to cross or join the problematic Stockbridge and Whyke A27 junctions which is an issue for private car travel and bus connectivity.

We disagree with this analysis however. 1) it does not explain why development to west of Chichester will not cause the same impacts of having to cross the A27 as suggested will occur for the peninsula; and 2) it assumes the direction of travel will always be towards Chichester. However development on the peninsula could help support local facilities already present in the area and looking in the other direction, could help support the vitality of Selsey and East Wittering as settlement hubs. 3) Development could also help the local economy on the peninsula and introduce a younger profile to the area which the SA notes has a very significant older age structure (33% of those living on the Manhood Peninsula are aged 65+).

The table B in in the SA lists the developable 2021 HELAA sites (Housing and Economic Land Availability Assessment). It includes Site Ref HSI0004 at Sidlesham on page 86. Across a range of performance indicators the site scores 13 green, 4 light green, and 3 red points. Red indicates a significant negative effect; light green a positive; and green a significant positive effect.

Despite the very positive scoring of the site, it has been completely overlooked for any development because of the ranking of Sidlesham as within the 'rest of the plan area' category.

Policy S2 – Settlement Hierarchy

The Settlement Hierarchy background paper was prepared for the last Preferred Options Local Plan in Dec 2018. It has not been updated for the Submission Plan but provides justification for the hierarchy in Policy S2 of the Local Plan. It forms the basis for the proposed distribution of growth by distinguishing between those settlements considered to be the most sustainable having the best range of facilities and accessibility from those with the least. Most development is focused on the former and development to meet local needs or no development whatsoever on the latter. Paragraph 4.8 of the background paper includes Sidlesham in the 'rest of the plan area' least suited for development because it does 'not contain the range of facilities and services to be classified as sustainable'.

We therefore disagree with this classification and believe Sidlesham should be included as a 'service village in the hierarchy based on its population and range of available facilities.

The Councils own Settlement Capacity Profile 2013 shows Sidlesham with a population of over 1,100. This historic population is more than Boxgrove, Kirdford and Westhampnett which are all service villages in Policy 2 of this draft Local Plan.

Sidlesham has 4 employment areas at Enbourne Business Park, Walnut Tree Science Park Locks Lane, Jury Lane and the Horticultural Development Area. Community facilities include a petrol filling station with convenience store and off licence, church, recreation ground and football field with licensed bar and hall, primary school with sports hall available for wider community use, 2 other pubs (one a 'gastro pub' at Sidlesham Quay). Access to bus services are available from the B2145, 1 regular daytime bus service (51) linking to Chichester & Selsey (Most frequent daytime service, every 15 minutes). A more irregular daytime bus service (150) is on Mondays, Wednesdays and Fridays (3 daytime services in each direction).

Based on this range of facilities we therefore believe Sidlesham should be re-categorised as a service village and allocated for a modest amount of development. This would support its existing facilities and the settlement hubs of Selsey and West Wittering. A modest amount of development need not lead to critical impacts on the A27 as travel impacts would not necessarily be attracted towards Chichester.

Policy H3 – Parish housing Sites

We have already explained our reasons why Sidlesham should be included as a 'service village' in the hierarchy in connection with S2. Based on this revision to the hierarchy, it follows that some housing should be directed to Sidlesham. We believe a parish allocation of the order of 35-70 dwellings would be justified.

Assuming this is accepted we would point out that the 2021 HELAA Site Ref HSI0004 referred to above is still available at Greenwood Nursery Highleigh Road Sidlesham. The Council said the site was deliverable and had an identified capacity of around 35-67 dwellings. A draft layout plan is attached showing a 35 dwelling scheme. The site is outside the designated horticultural development area, within flood zone 1 (least liable to flood) and has no biodiversity or heritage interest. It is located outside the Chichester Harbour Area of Outstanding Natural Beauty. It has a footpath link to the nearby school.

The proposal would generate fewer trips (and no HGV's) compared to the existing nursery business.

Document Element: Policy H3 Non-Strategic Parish Housing Requirements 2021 - 2039

Respondent: Hanbury Properties [1697]

Agent: Smith Simmons Partners (Paul White) [7650]

Summary:

Policy H2 identifies strategic scale and policy H3, non-strategic allocations. We have explained above that the Settlement Hierarchy Background Paper was prepared for the 2018 Preferred Options Regulation 18 Local Plan but has not been updated to provide any justification for the revised housing distribution and quantum of development for the named locations and settlements in the Regulation 19 Local Plan.

Full text:

The 'tests of soundness' for Local Plan preparation are set out in paragraph 35 of the July 2021 NPPF. They require the 2021-39 Local Plan to have been:

- Positively prepared – providing a strategy which, as a minimum, seeks to meet the area's objectively assessed needs; and is informed by agreements with other authorities, so that unmet need from neighbouring areas is accommodated where it is practical to do so and is consistent with achieving sustainable development;
 - Justified – an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence;
 - Effective – deliverable over the plan period, and based on effective joint working on cross-boundary strategic matters that have been dealt with rather than deferred, as evidenced by the statement of common ground; and
 - Consistent with national policy – enabling the delivery of sustainable development in accordance with the policies in this Framework.
- Local Plan reviews are a legal requirement every 5 years in accordance with Regulation 10A of the 2012 Town and Country Planning (Local Planning) (England) Regulations. The Regulation 19 Plan is not legally compliant as it has not been reviewed within 5 years of the last Plan adopted in July 2015. It is also disappointing that the failure of the current Regulation 19 Local Plan to meet objectively assessed need (OAN) of 638 dpa outside the national park has not been properly evidenced in any up to date statement of common ground with neighbouring authorities with regards to the 'duty to cooperate'.

At this stage we believe the Plan as drafted therefore fails the 'positively prepared', 'effective', and 'consistent with national policy' tests.

In addition, with regard to the longer term growth requirements and the singular issue of a potential new settlement the plan also fails the 'justified' and 'consistent with national policy' tests of soundness.

Duty to Cooperate

The 2014-2029 Local Plan adopted in 2015 does not meet the full objectively assessed housing needs for the area. But it did recognise that future proposals to improve the capacity of the A27 and wastewater treatment works could facilitate additional housing growth. For this reason, it committed the Council to a review of the Plan within five years to ensure that housing needs could be met. That undertaking to review within 5 years was not met.

In 2021 the Council invited an advisory visit from PINS to advise on how the present Local Plan should be prepared. The inspector advised that if the Plan was prepared which did not meet the full housing needs of the area, it would have to show that it had followed the duty to co-operate with neighbouring authorities in maximising the effectiveness of plan preparation.

The inspector said the Duty to Cooperate was therefore critical in the preparation of the Local Plan Review. At the time of the meeting, the council said discussions with neighbouring authorities had been carried out on the basis that the Local Plan Review would meet the full objectively assessed housing needs (OAN) for the area. However if this was not the case, the inspector said evidence of constructive, active, and on-going engagement to determine whether or not development needs could be met elsewhere would need to be shown. Importantly, the inspector said, 1) 'a failure to meet the Duty to Cooperate cannot be remedied during the examination process because it applies to the preparation of the Plan, which ends upon submission', and 2) local planning authorities should make every effort to secure the necessary cooperation on strategic cross boundary matters before submitting plans for examination.

The Duty to Cooperate Statement of Compliance (January 2023) forms part of the evidence base for the Submission Local Plan. In the event, the Local Plan excluding the national park only provides for 575 dpa against an OAN of 638 dpa. However this under provision against need has not been justified anywhere in discussions with neighbouring authorities before the Plan was submitted. Appendix 1 of the Statement of Compliance lists those

authorities that were consulted during the earlier Regulation 18 Preferred Approach consultation. Appendix 2 lists those authorities where Statements of Common Ground have been agreed with Chichester DC for the Regulation Submission 19 Plan. No statements have produced or agreed. Therefore as it stands the under provision of housing against OAN in the Plan has not been justified. The failure to meet the duty to cooperate cannot be remedied because it has already ended with the Submission Plan. The plan therefore fails the positively prepared and justified tests. It also fails to comply with national policy in the NPPF paragraph 24-27 which advises on the duty to cooperate approach.

Local Plan Policies

The remainder of these comments deal with the Settlement Hierarchy policy S2, H1, H2 H3 and H8.

Policy S2 – Settlement Hierarchy

The Settlement Hierarchy background paper prepared for the Regulation 18 draft Local Plan provides the justification for the hierarchy in Policy S2 of the Regulation 19 Local Plan. We agree that the hierarchy prioritising development at Chichester as the sub regional centre, followed by development at the settlement hubs, service villages and the rest of the plan area is reasonable. However, although the distribution of housing amongst the settlements in the current Regulation 19 plan has been updated compared to the last Regulation 18 plan, the background paper itself has not been updated. Nor is there any justification or explanation for the change in the quantum of strategic and non-strategic housing to the different categories of settlement in the background paper or the Local Plan itself.

Policy H1 – Meeting Housing Needs

The identified housing need has been informed by the 2022 Housing and Economic Development Needs Assessment (HEDNA). It explains that based on the standard methodology, since the last HEDNA in 2020, the district wide housing need has increased from 746 dpa to 763 dpa (621 dpa in the Plan Area to 638 dpa) with the balance to be found in the national park. The proposed 638 dpa for the area of the district outside the national park is the figure that will be tested at the forthcoming Examination.

We have already explained why the failure of the Council to plan for the 638 dpa in the Regulation 19 Local Plan has not been justified in connection with the duty to cooperate and no evidence has been presented in any statement of common ground with neighbouring authorities to show how development needs could be met elsewhere.

Policy H2 – Strategic Site Allocations and Policy H3 – Non-Strategic Parish Allocations

Policy H2 identifies strategic scale and policy H3, non-strategic allocations. We have explained above that the Settlement Hierarchy Background Paper was prepared for the 2018 Preferred Options Regulation 18 Local Plan but has not been updated to provide any justification for the revised housing distribution and quantum of development for the named locations and settlements in the Regulation 19 Local Plan.

Policy H8 – Specialist accommodation for Older People

National policy in the online planning practice guidance (PPG) is clear that the need to provide housing for older people is critical. The guidance on the provision of this type of housing states:

- Plan-making authorities should set clear policies to address the housing needs of groups with particular needs such as older and disabled people. These policies can set out how the plan-making authority will consider proposals for the different types of housing that these groups are likely to require.
- They could provide indicative figures or a range for the number of units of specialist housing for older people needed across the plan area throughout the plan period.
- It includes the following within the general definition of specialist housing - age-restricted general market housing, retirement living or sheltered housing, extra care housing or housing-with-care, residential care homes and nursing homes, and senior co-housing communities.
- LPA's can identify sites for co-housing communities and other specialist housing types for older people, because,
- Allocating sites can provide greater certainty for developers and encourage the provision of sites in suitable locations. This may be appropriate where there is an identified unmet need for specialist housing. The location of housing is a key consideration for older people who may be considering whether to move (including moving to more suitable forms of accommodation).

Factors to consider include the proximity of sites to good public transport, local amenities, health services and town centres.

In our view however, draft Policy H8 doesn't reflect the guidance in the PPG. For instance, although the policy sets out a threshold of provision for specialist housing of housing sites of 200 or more units, there is no guidance on the actual % provision as there is for example, on affordable housing. All it says is the specific type and amount of accommodation required will depend on the size and location of the site.

The supply of specialist housing should not just be focused on large scale housing schemes. The landscape and environmental constraints across the district even outside the national park would not necessarily allow for large 200 plus unit schemes in all locations. To support an ageing population policy should support the provision of suitable specialist housing to meet the differing needs of individuals across a range of options and in a range of locations.

The second part of H8 should therefore confirm that proposals for specialist housing, such as homes for older people will be supported without any policy qualification for a site's location within or outside a settlement boundary or within an AONB where a proposal in its local context is not deemed to represent major development.

Rather than rely on the criteria based approach, the policy should also allow for the allocation of sites for specialist accommodation for older people in a Neighbourhood Plan where a site has the support of local people.

Document Element: Policy H3 Non-Strategic Parish Housing Requirements 2021 - 2039**Respondent:** Mr Andrew Jackson [5294]**Summary:**

The increased allocations for NE area are a direct reaction to the infrastructure issues surrounding A27 in the south. CDC are obliged to look elsewhere with 'no stone unturned', yet there is no comparable evaluation of infrastructure resources in the NE. The presumption is simply 'they can cope with more'.

The targets have been set by unsound assumptions.

The duty of co-operation with neighbouring authorities is only at macro level, and does not consider the relatively large impact to the NE area of the massive Billingshurst and Dunsfold developments - all within 3 miles of the NE villages.

Full text:

The increased allocations for NE area are a direct reaction to the infrastructure issues surrounding A27 in the south. CDC are obliged to look elsewhere with 'no stone unturned', yet there is no comparable evaluation of infrastructure resources in the NE. The presumption is simply 'they can cope with more'.

The targets have been set by unsound assumptions.

The duty of co-operation with neighbouring authorities is only at macro level, and does not consider the relatively large impact to the NE area of the massive Billingshurst and Dunsfold developments - all within 3 miles of the NE villages.

Change suggested by respondent:

Development allocations for the NE plan area have been set a High level of growth, an increase over a lower level advised by CDC in 2018. Whether or not the new increases to the NE plan area are delivered - they are insignificant at the district and county level - however they are massive at village level. The accumulative impact will make village dwelling numbers increase 30% to 70% over a 10 year period (from when these villages started Neighbourhood Plans) which risk irreversible change to their character. The area includes quintessential examples of the Sussex village which risk being lost in a development sprawl all the way beyond Crawley with few and dwindling gaps.

The policy does expect village development sites to be allocated through Neighbourhood Plans (NP) process, however the targets have been set by unsound assumptions and limited analysis of the HEELA process.

Proposed change:

The H3 policy should allow the NE villages to set their own levels of development through the NP process, from a target range set from the Lower growth values and the value in the March 2023 proposal. For example, Wisborough Green would have range 40 - 75 allocation, not the fixed and arbitrary 75.

With this change, the NE villages can use the more rigorous NP process of site evaluation, and can use the better and more local knowledge of resources to 'fine tune' the practical growth that each NP area can plan for.

Full text:

1 Introduction

1.1 This representation provides a response to the Regulation 19: Local Plan Consultation on behalf of our client Landacre (Chichester) Limited. The submission covers the general principles of the Local Plan, but has a focus on land at New Bridge Farm, Clay Lane Chichester, which is in our client's control. The land is shown on the attached context plan (land outlined in purple) included at Appendix 1 and hereon referred to as the site.

1.2 This representation will provide a written responses in relation to the Regulation 19 Local Plan Consultation which directly relate to the promotion of our client's land for future development.

2 Comments on Specific Questions/Tests

2.1 In response to the national planning legislation, this Regulation 19 Local Plan Consultation invites comments on three specific questions, and is the final consultation phase, before the Regulation 19 version of the Local Plan is submitted for Examination.

2.2 This representation will respond on these specific questions, and then highlight how our client's site could help fulfil the full housing requirement for the District. This could be through an allocation within the Council's Local Plan, or at least through an allocation of numbers to the Parish, who in turn would select sites through a Neighbourhood Plan allocation.

Is the plan 'sound'?

2.3 Paragraph 35 of the National Planning Policy Framework defines the tests for soundness which requires the plan to be positively prepared, justified, effective and consistent with National Policy. These matters will now be considered in further detail in relation to the current consultation on the Regulation 19 version of the Local Plan.

Is the plan positively prepared and justified?

2.4 Policy S1 of the Draft Local Plan sets out the spatial development strategy for the District and how the Council will achieve sustainable growth over the plan period. Policy H1 sets out the housing target in response to the strategy. Both policies have been informed by the Sustainability Appraisal (SA) dated January 2023 and the Plan objectives, which are set out at paragraph 2.5.2 of the SA and the Council's HEDNA (April 2022).

2.5 The SA then goes on to discuss the potential growth scenarios and confirms two points:

- ☒ Standard method housing figure for Chichester (excluding SDNP) is 638 dwellings per annum, or 11,484 in total over the Plan period
- ☒ The above figure is capped at 40% above the baseline need and that the uncapped figure is significantly higher than this at 884 dwellings per annum (dpa)

2.6 Of particular note is that point ii. seeks to cap the overall housing increase by no more than 40% above the previously adopted LP housing figure of 435 dpa. The Local Plan then goes on to constrain housing numbers due to an alleged capacity concern along the A27 strategic road network. The Council therefore result in a constrained housing figure by virtue of the standard method 'steps' and also due to infrastructure capacity.

2.7 It should be noted that the 435 dpa figure within the 2015 Local Plan was similarly constrained and an early review was the only basis for accepting this reduced housing figure. This early review did not take place.

2.8 In terms of the influence of the A27, this is the key matter that constrains growth within the southern part of the District. This is based on the Transport Study (2023) which concludes that the road network cannot accommodate an annual housing figure of more than 535 dpa. This is a fundamental point and one that our client do not agree and believe there is capacity to accommodate at least the local housing need within the highway network, alongside potential improvements identified for the following reason.

2.9 The Transport Study (January 2023) is the key document on which the Council rely upon to constrain their housing figure to 535 dpa. On review of this document, it is clear that the Council's consultants undertook a sensitivity analysis as to whether the core scenario that supports the 535 dpa position in the local plan could accommodate a higher level of growth. The conclusion in paragraph 5.6.5 and 11.2.3 of the Transport Study appears to be that 700 dpa could be accommodated (in the southern plan area) by the mitigation proposed for the 535 dpa, with some additional (as yet undesigned and not costed), mitigation works beyond those highlighted for the Bognor and Fishbourne roundabouts. The absence of consideration of additional improvements works appears to be a significant oversight in the preparation of the Transport Study and overall plan making.

2.10 Accordingly, the Council's own evidence base has undertaken the assessment and concluded that a higher growth figure could be accommodated on the A27, subject to appropriate improvement works. Given the testing of the higher growth figure in Transport Study, the exceptional circumstances to constrain growth, as set out at paragraph 60 on the NPPF, do not appear to exist and the Plan could be considered unsound on this point alone.

2.11 As a result of the above, the SA does not consider a scenario where the Council would meet its local housing need, nor a scenario where it exceeds its local housing need, which is of relevance given scale of development expected for adjoining authorities, including the highly constrained SDNP.

2.12 It should also be noted that the draft Plan does not therefore address any requirements in relation to unmet housing need of neighbouring authorities. Nor does it contain evidence to suggest that these matters have been discussed with the adjoining Authorities. Notably, Arun District Council have confirmed that they will be objecting to the Plan and currently proposed on the basis that they have a significant housing need themselves. This is likely to be further influenced by unmet need from Chichester, who again are seeking to constrain housing requirements, which was the case in 2015. The subsequent knock on from that was for Arun to address some of that need in their 2018 Local Plan.

2.13 Given that our client does not accept that the A27 capacity matters present a ceiling in terms of housing delivery (based on the Council's Transport Study comments and that of its own consultants), it is not accepted that the Plan and associated SA demonstrates reasonable alternatives have been considered and it is not therefore positively prepared, nor is their approach to housing figures justified.

Effective?

2.14 On the basis of the 535 dpa figure, it is considered that the selected areas for growth and figures are deliverable over the Plan period, however, as set out above, the plan area could accommodate a greater level of growth.

2.15 It should also be noted that the plan does rely on the delivery of Neighbourhood Plan and / or Small site allocations DPD. This is set out under Policy H3 in the draft document. This states the following in terms of delivery:

If draft neighbourhood plans making provision for at least the minimum housing numbers of the relevant area have not made demonstrable progress the council will allocate sites for development within a development plan document in order to meet the requirements of this Local Plan.

2.16 The above is not precise and does provide any clear timetable for delivery within the Plan period. Whilst my comments are noted above that the Plan could be effective, the Local Plan needs to give a clear timescale for completion of the supplementary Development Plan documents in order to give a clear timescale for this to be completed.

Is the plan consistent with National Policy?

2.17 On the basis of the comments above, the approach to selected sites for allocation based on the 535 dpa figure is considered to be consistent, however, due to the lack of evidence to demonstrate that the 535 dpa figure should be capped due to the A27 capacity points raised, the draft Plan does not appear to meet the exceptional circumstances allowed for at paragraph 61 of the NPPF to justify their alternative approach. The Plan as proposed is therefore inconsistent with NPPF when read as a whole.

3 Development in Chichester City

3.1 Our clients land is located within Chichester City on land north of Clay Lane. The draft Local Plan sets out that the city of Chichester is the main settlement with a population of around 29,193(4) and is the principal location for the provision of higher education and shopping facilities. The city is renowned for its cathedral, its historic heritage and university and is the largest centre of employment in the plan area. The Plan goes on to state that most new development will be well located in and around the main settlements of Chichester, together with Tangmere and Southbourne.

3.2 As would be expected, the Local Plan allocates a significant proportion of housing to the city, which includes a site specific allocation of 1,600 homes to the west of Chichester under Policy A6 (part of current Local Plan allocations), 680 homes to the east under Policy A10, 500 homes to Westhampnett and 585 homes at Shopwyke Lakes. A further allocation of housing numbers for 270 homes under Policy A2 are proposed for Chichester City to be delivered as part of a Neighbourhood Plan for the area site allocations DPD.

3.3 The proposed 270 home allocation should comprise a minimum figure, which for the reasons set out above in relation to the A27 would be feasible. It should also set out that the Council should consider a mix of both city centre and edge of city sites to ensures a mix of house types and sizes, with town centre more likely to comprise flats and edge of settlement a mix of 1-4 bedroom homes, which will include family homes.

3.4 Our position on the approach to further allocations and the need for clear timescales to ensure soundness of the Plan is set out at 2.13-2.16 above.

4 Suitability of land New Bridge Farm, Clay Lane, Chichester

4.1 The site covers an area of approximately 3.1 hectares and located to the North-East of Fishbourne. The site comprises of an open field, bordered by mature foliage and fencing. The site is reasonably flat. The frontage is on the Southern boundary of the application site, which benefits from access to Clay Lane. It could be suitable for a quantum of development between 50-70 dwellings.

4.2 Access to the site is via an existing agricultural access from Clay Lane, which adjoins the southernmost corner of the site. The potential means of access has been the subject of a formal pre-application enquiry with WSCC as highway authority. This confirmed that a suitable means of access could

be achieved for circa 70 dwellings.

4.3 Whilst the access would go through part of the proposed wildlife corridor to the west of the city, the upgrade of the access is not considered to undermine the overall intentions or integrity of the wildlife gap. However, our client would maintain that a wildlife corridor would better serve the area to the west of Fishbourne, rather than to the west of city. This is an uninterrupted route, as opposed to that currently proposed.

4.4 The site is located within flood zone 1, with a small area of surface water flood risk area identified outside of the site, along the Western boundary.

4.5 The site is located to the North-East of the village of Fishbourne, which comprises a settlement of approximately 2,325 people. Whilst the site does not directly adjoin the settlement boundary, the site is abutted by the approved development scheme at White House Farm Development. The site is therefore enclosed by recently approved development to the north and east. Furthermore, to the South, on the other side of Clay Lane an application for 25 dwellings was approved under reference CC/17/03117/FUL and the A27 embankment to the west. Therefore, it is reasonable to say that the site is enclosed by an established principle of development.

4.6 The site also benefits from direct connection to the public footpath network, which runs along the western and northern boundaries. This continues west through White House Farm (1,600 home allocation) and onwards to the city centre.

4.7 The site has the potential to deliver homes in a sustainable location, on a site that would effectively comprise an infill form of development. The site is suitably located to deliver housing without harm to cultural heritage of the city.

5 Conclusion

5.1 Whilst we understand the approach the Council has taken in terms of the selection of sites to meet the 535 dpa figures, we consider that the Plan area is capable of accommodating a greater housing quantum. This will facilitate development and meet the objectives of the Local Plan. The Council have failed to provide sufficient justification for not meeting its housing need in full and have not suitably considered unmet need from adjoining authorities. The latter is particularly relevant given constraints of the SDNP. The Council's position of growth is predicated on the basis of the A27 not having sufficient capacity to accommodate a higher growth of 535 dpa. Its own evidence base (Transport Study 2023) contradicts this position and therefore the Council should at least be meeting their local housing need and also considering what part it can play with meeting unmet needs for the adjoining authorities.

5.2 At present, the Plan fails to be positively prepared and is inconsistent with the NPPF. On the basis that the Council don't reconsider their position, we wish to be present at the relevant Examination hearings to represent our clients' interests and further discuss the views set out in this submission.

Change suggested by respondent:

The Local Plan needs to give a clear timescale for completion of the DPD.

Consideration of proposed site (Land at New Bridge Farm, Clay Lane, Chichester) within the Local Plan or at least through an allocation of numbers to the Parish, who in turn would select sites through a neighbourhood Plan allocation.

Document Element: Policy H3 Non-Strategic Parish Housing Requirements 2021 - 2039**Respondent:** Landowner at Champions Farm, Wisborough Green [8136]**Agent:** Southern Planning Practice (Alice Drew, Principal Planning Consultant) [8135]**Summary:**

We are aware that the Wisborough

Neighbourhood Plan is in the late stages of its review, a regulation 14 consultation took place in June 2021, however, there has been a long pause since this time. Whilst the Neighbourhood Plan seeks to allocate some sites for housing, the housing need figure is not specified, and the current proposed allocations would not provide the 75 dwellings which have been indicated. Further, it is considered that the Local Plan is being over reliant on the Neighbourhood Plan process, and the Development Plan should make provision for the identified housing requirement without the need to rely on Neighbourhood Plans bringing forward sites.

Full text:

Summary

Southern Planning Practice Ltd are instructed by the landowner to submit representations to the Proposed Submission version of the Chichester Local Plan 2021- 2039, published in February 2023. Shorewood Homes, a local developer, have an interest in land at Champions Farm, Wisborough Green and are currently working collaboratively with the landowner.

The site is located to the south of Newpound Lane and to the north of Billingshurst Road (A272) in Wisborough Green. The site is located within the northern area of the district and is closely related to the main urban area of Billingshurst, which is located in the neighbouring authority Horsham District Council.

It is understood that the site has not been previously promoted through the Local Plan process. We can confirm on behalf of our client that the site is now available for development.

In order for the Proposed Submission Local Plan to meet the 'positively prepared' test of soundness as required by paragraph 35 a) of the National Planning Policy Framework (NPPF), the Local Plan Review must:

"provide (ing) a strategy which, as a minimum, seeks to meet the area's objectively assessed needs; and is informed by agreements with other authorities, so that unmet need from neighbouring areas is accommodated where it is practical to do so and is consistent with achieving sustainable development".

Whilst the constraints of the northern area of the district are appreciated, there are several sustainable sites, outside of the National Park and other constrained landscapes, which would assist Chichester to meet their identified housing needs. One such site is the land at Champions Farm in Wisborough Green. The western section of the site could be delivered in the short-medium term and the eastern section could be delivered in the longer term which would contribute to Chichester's future housing supply.

Any new residential development on land at Champions Farm would contribute to the achievement of the 7 strategic objectives of the Local Plan and would also help to boost the housing supply in the short-medium term.

Change suggested by respondent:

As such, we would encourage the Council to look to allocate the land at Champions Farm for development within the Local Plan, or at least as a development plan document in order to meet the requirements of this Local Plan and deliver the identified 75 homes in Wisborough Green.

Document Element: Policy H3 Non-Strategic Parish Housing Requirements 2021 - 2039**Respondent:** Landowners at Chantry Farm [8165]**Agent:** Henry Adams LLP (Mr Chris Locke, Planning and Development Assistant) [7352]**Summary:**

The table contained in the policy identifies that 30 additional houses will need to be provided in Westbourne either through a Neighbourhood Plan or subsequent Development Plan Document. Our clients wish to make representations that they support this approach and the proposed housing numbers of 30, with these being increased should supporting evidence be provided.

The clients wish to make the Inspector aware of their considered potential for additional housing on their land, allocated within the Neighbourhood Plan. Furthermore, they consider that any potential shortfall of housing in the Parish could be met by development on their land.

Full text:

These representations are made on behalf of our client, the owners of Land at Chantry Farm, Westbourne who wish to support Policy H3 of the Chichester Local Plan 2021 – 2039 Proposed Submission Regulation 19 Version but object to Policy NE4.

Background

The owners have been promoting the land in the plan enclosed at Enclosure 1 at all relevant opportunities. The land hatched in blue is allocated in the Westbourne Neighbourhood Plan for 6 houses, the green land is allocated as local green space and the purple is available for either residential development or nitrate/bio diversity offset land for the proposed residential development on the blue land.

The land has been marketed by ourselves, and a developer is looking to purchase all 3 parcels. They will look to submit an application in the shorter term to illustrate that the development will be delivered in the early part of the plan period,

Policy H3

Policy H3 of the Chichester Local Plan relates to the non-strategic parish housing requirements for the plan period. The table contained in the policy identifies that 30 additional houses will need to be provided in Westbourne either through a Neighbourhood Plan or subsequent Development Plan Document. Our clients wish to make representations that they support this approach and the proposed housing numbers of 30, with these being increased should supporting evidence be provided.

The Westbourne Neighbourhood Plan 2017 – 2029 was made by Chichester District Council in September 2021 and allocated 28 houses on 3 separate sites. Our client's land is allocated under Policy SS3 of the Neighbourhood Plan, Land adjacent to Chantry Hall, Foxbury Lane for a development of 6 dwellings.

Our clients support the housing allocation on their land, however the land is able to accommodate far more than 6 dwellings, perhaps up to 20. Our clients wish for the inspector to be aware of the ability to accommodate additional dwellings, should they feel that Westbourne is a sustainable location for numbers in excess of 30 dwellings.

In addition, we would question whether 30 dwellings need to be provided in addition to the 28 allocated in the Neighbourhood Plan as this predates that Proposed Submission Version of the Local Plan. There is currently an application being considered by Chichester District Council for the land allocated under Policy SS1: Land to the West of Monks Hill Lane under ref. WE/22/00209/FUL which we would assume will be approved prior to the Local Plan being adopted. In addition, there is an application under consideration for the land allocated under Policy SS2: Land at Long Copse Lane under ref. 21/02159/FUL which is currently being appealed by the applicant.

It should be noted that the second site mentioned above, land at Long Copse Lane, is allocated in the Neighbourhood Plan for 16 dwellings. However, the application is for just 7, so below the allocation figure. Although, the Land to the West of Monks Lane is 3 dwellings over the allocation, there is potentially a shortfall of housing already in the Parish with the lower numbers consider at Monks Lane. Our clients land is able to accommodate any shortfall.

Policy NE4

Policy NE4 states that 'Development proposals within strategic wildlife corridors will only be granted where it can be demonstrated that:

1. There are no sequentially preferable sites available outside the wildlife corridor; and
2. The development will not have an adverse impact on the integrity and function of the wildlife corridor and protects and enhances its features and habitats.'

Part of our client's land is allocated in the Neighbourhood Plan, so we are concerned that location within the Wildlife corridor will restrict development on a site which is deemed suitable by the Parish and District to accommodate housing.

We would ask that the District and Inspector consider this in the examination of the Local Plan, and that the land allocated in the Neighbourhood Plan, for clarity shown in blue at Enclosure 1, be removed from the wildlife corridor and evidence base considered further as this appears to be absence as to justification of location.

In conclusion, our clients support additional housing in Westbourne but would ask these numbers are seen as a minimum figure. Our clients land is deliverable, with solutions to resolve nitrates and biodiversity on site. Also, we would ask that the Wildlife Corridor is amended to exclude our client's land that is allocated.

Document Element: Policy H3 Non-Strategic Parish Housing Requirements 2021 - 2039

Respondent: Mr David Leah [6440]

Summary:

The Boxgrove Neighbourhood Plan team contest the allocation of 50 dwellings as not being achievable for reasons of:

- Lack of consultation
- % of parish land in the SDNP
- Sites assessments
- Fair treatment of parishes
- Policy NE10 building in the countryside
- School capacity
- Conflict with heritage assets P9 P10 P11
- Grading of agricultural land for development NE2

Full text:

The Neighbourhood Plan team of Boxgrove Parish Council wish to contest the allocation of 50 dwellings during the Local Plan duration.

The Local Plan consultation period has not allowed sufficient time for proper local consultation and includes proposals that have never previously been consulted upon.

We do not understand how so many of the sites, previously discounted in the 2018 HELAA, for various reasons, are now designated in the 2021 HELAA as having 'no known constraints' to development on the same sites.

Furthermore, out of 11 Service Village Parishes, found to have potential sites for dwellings in 2018, 7 of these now have a zero allocation in the Local Plan. Boxgrove has been allocated 50 dwellings, despite over 50% of Boxgrove's land area lying within the boundary of the SDNP.

All of the sites identified are outside of the existing Settlement Boundary, and are therefore in 'The Countryside', in contravention of your Policy NE10.

The village school is at capacity and there are no known plans to expand it.

There are future capacity issues at the A27 Tangmere roundabout junction and concerns about future short cutting through Boxgrove and the already narrow and winding local roads to the north.

Boxgrove and the village of Halnaker both have Conservation Areas and there are a total of 51 listed buildings and two Scheduled Monuments in the Parish many of which would be affected by development on the sites identified.

The Conservation Area Character Appraisals identify many long views out of the CA's, which would be compromised by development.

Development would be in contravention of your Policies P9, P10 and P11 of the Local Plan.

All the sites, identified as potentially developable, are on agricultural land. These are either currently farmed, are vineyards or are livery. This land is graded 2 or 3 in contravention of Policy NE2 Natural Landscape.

In conclusion, we believe that the HELAA and the allocation of 50 dwellings for Boxgrove in the Local Plan are unachievable on most of the sites identified. We are sure that a small number of sites for a lower number of dwellings maybe achievable, and intend to consider this as part of the revisions to our Neighbourhood Plan.

Change suggested by respondent:

We would want to see a reduction in the housing allocation to a number that we believe is achievable on what land is available.

Document Element: Policy H3 Non-Strategic Parish Housing Requirements 2021 - 2039**Respondent:** Levanter Developments Limited (Oliver Tomalin) [8120]**Summary:**

The allocation for 75 dwellings to Wisborough Green is supported as the village is one of the most sustainable locations of all of the parishes/service villages

The overall strategy is highly dependent on the delivery of housing from Neighbourhood Plan areas. It is considered that this approach allows for little mitigation or alternatives should delivery not come forward.

Full text:

I write in response to the regulation 19 consultation version of the Chichester Local Plan 2021-2039 in our capacity as promoters of Ansell's Yard, Kirdford Road, Wisborough Green.

Conclusions

There are several concerns on the soundness of the plan in terms of whether it is effective, justified, positively prepared or consistent with national policy in accordance with paragraph 35 of the NPPF.

It is not considered that the Council has justified the extent of the under supply of housing against the established housing need. There are significant concerns over the delivery of housing from the strategic allocations within the unjustified timescales as set out within the trajectory contained in the plan.

Levanter will continue to make further representations on the deliverability of the site as part of the plan making progress.

Change suggested by respondent:

In order for the plan to be considered 'positively prepared' and 'justified' it is recommended that additional wording is added to policy H3 to state that individual planning applications can come forward on sustainable sites outside of existing settlement boundaries in parishes should delivery not come forward within the first five years of the plan period. Priority should be given to any sites already identified within draft versions of Neighbourhood Plans.

Priority consideration should be given to the proposed sites HWG0004, HWG0019 (Ansell's Yard) and HWG0022, proposed for allocation in a draft Neighbourhood Plan Review.

Only a thin margin of Phase 10 is in the Floodplain. as shown on the attached plan.

Change suggested by respondent:

The land should be allocated for residential development as requested above. It is a highly sustainable location and can contribute to the Council's housing land supply and boost housing delivery. The land can come forward for development in 2024 and a Full planning application is currently being prepared for submission in Summer 2023. This site can provide housing early in the development plan period.

Document Element: Policy H3 Non-Strategic Parish Housing Requirements 2021 - 2039**Respondent:** Dr and Mrs P Longthorne [8208]**Summary:**

[RECEIVED LATE]

Comments relate to Loxwood, Kirdford and Plaistow

We would like to add our concerns regarding the additional housing which has been allocated to this area. Enlarging these beautiful villages will significantly alter the character of the local area. There is almost no public transport to these villages and the surgery at Loxwood is already under pressure. The environmental impact of building more houses in an area of natural beauty would also be significant. It is not clear how much consideration has been given to infrastructure requirements - schools, employment, transport.

Once these beautiful villages are expanded and developed there is no going back and they are lost forever along with the attendant reduction in quality of life for the people who live there.

Document Element: Policy H3 Non-Strategic Parish Housing Requirements 2021 - 2039**Respondent:** Loxwood (Mellow) Ltd [7870]**Agent:** Ms Megan Smith [7858]**Summary:**

Site submission Land South West of Willets Way, Loxwood.

Full text:

As with Policy S1, we are in agreement with the Draft Local Plan defining Loxwood as a 'Service Village' in terms of settlement hierarchy with a need to direct growth to the most accessible and best-connected locations, including villages with good public transport options.

We seek to acknowledge the policy discussion on settlement boundaries, and support the presumption in favour of sustainable development within the settlement boundary of service villages.

However, we consider the Draft Local Plan to be 'ineffective' and 'unjustified' in this respect by giving the power to define the Settlement Boundaries to Neighbourhood Plans. The Draft Local Plan cannot be 'positively prepared' when suitable, available and achievable sites are left fragmented and overlooked by Parish Councils creating piecemeal plots outside of the settlement boundary for often unjustified reasons, the Neighbourhood Plan process being subject to lesser scrutiny (having only to meet basic conditions) than local plans.

In line with our comments on Policy S1 – Spatial Development Strategy, the local plan should both allocate non-strategic sites and define settlement boundaries around the District if it is to meet its role and purpose under the NPPF.

In relation to Loxwood for example, the settlement boundary as defined by the Neighbourhood Plan is not representative of the current village and its settlement, or suitably reflective of the levels of housing growth and allocations required. The current settlement boundary is shown below in the Settlement Boundary (Loxwood Neighbourhood Plan Reg 15) (Figure 4). The settlement boundary fails to include the Land South West of Willets Way which was found in the Housing Economic Land Availability Assessment (HELAA) to be suitable, available and achievable for up to 10 units (HLX0006). The site is clearly sustainable, being close to the village centre, and associated services but was excluded for unjustified reasons through the previous Neighbourhood Plan process.

Furthermore, the settlement boundary also excludes the High Street and associated residential properties to the south of the village centre which are historically and currently part of the village. The historic map shown below (Historical Ordnance survey map dated 1912) shows the small settlement of Loxwood at that time with the junction of Station Road and the High Street and only a small number of properties but the residential dwellings on the High Street were central to the evolution of the village and close to services, facilities, surgeries and the school which grew around them. To exclude the High Street and land to the rear including Land South West of Willets Way is illogical and unjustified.

Figure 6 indicates where the logical and justified settlement boundary should be to the south of Loxwood (represented by the red line). The inclusion of this area is both a sustainable allocation of 10 new homes at Land South West of Willets Way, but also a more accurate reflection of the actual settlement boundary of the village, through the inclusion of the historic 'High Street'.

In order for the Draft Local Plan to be 'justified' and 'effective' in delivering housing through small scale sites, the Local Plan needs to specify the settlement boundaries and allocate sites, and not delegate to Neighbourhood Plans.

Change suggested by respondent:

The local plan should both allocate non-strategic sites and define settlement boundaries around the District if it is to meet its role and purpose under the NPPF.

The settlement boundary fails to include the Land South West of Willets Way which was found in the Housing Economic Land Availability Assessment (HELAA) to be suitable, available and achievable for up to 10 units (HLX0006).

Change suggested by respondent:

We would encourage the Local Plan to allocate small-scale housing sites and or reconsider the redrawing of development boundaries surrounding non-strategic settlements to provide greater opportunities for windfall development.

In particular we respectfully request that the settlement boundary of Ifold be extended to include land to the rear of Felside, Chalk Road, RH14 OUD and the site allocated. In doing so, this represents a logical extension to Ifold, taking the settlement boundary up to the extent of existing rear gardens, wholly consistent with the limits of the settlement boundary elsewhere.

Document Element: Policy H3 Non-Strategic Parish Housing Requirements 2021 - 2039**Respondent:** Obsidian Strategic [7973]**Agent:** Andrew Black Consulting (Mr Andrew Black, MD) [7597]**Summary:**

The overall strategy as set out by CDC in the plan is highly dependent on the delivery of housing from Neighbourhood Plan areas. Whilst this approach is not un-sound in itself, it is considered that the plan in its current form allows for little mitigation or alternatives should delivery not come forward in the neighbourhood plan areas.

Full text:

I write in response to the regulation 19 consultation version of the Chichester Local Plan 2021-2039 on behalf of my client Obsidian Strategic.

Obsidian Strategic have an interest in a site to the South of Main Road, in Hermitage, within the Southbourne Neighbourhood Plan Area. Further details in relation to the site are set out within the appendices of these representations and referred to throughout.

Housing Requirement

The identified housing need for Chichester District Council (CDC) as calculated by the standard method is 638 dwellings per annum (dpa). However, the local plan only seeks to provide 575 dpa or a total supply of 10,350 over the plan period (2021-2039). As result the proposed strategy represents an under supply of 1,134 over the plan period. Furthermore, the undersupply means that CDC is unable to accommodate the unmet arising from the South Downs National Park.

In recent years CDC has not been able to demonstrate a five year housing land supply nor has it delivered housing against the requirements of the Housing Delivery Test. It is therefore important that the unmet need is made up within the early part of the plan period.

Paragraph 5.2 of the plan states that the under supply is due to constraints across the district particularly the capacity of the A27.

Policy H1 (Meeting Housing Needs) sets out the housing target of 10,350 dwellings to be delivered over the plan period 2021-2039. Considering the existing commitments, allocations and permissions this gives a remaining figure without planning permission of 3,056 homes for allocation in the Local Plan.

Strategic Allocations

Policy H2 of the reg 19 plan sets out the following strategic site allocations which are carried forward from the 2015 Local Plan:

****Table****

Table 11 of the latest Annual Monitoring Report (AMR) (produced in November 2022) show the progress of delivery from these allocations:

****Table****

Table 12 of the AMR sets out the progress of the large sites towards future delivery as follows:

****Table****

The Housing Trajectory as set out in Appendix E of the Local Plan shows delivery of the existing allocations as set out under policy H2. Given that the Land at Shopwyke (A7) and the Land at Westhampnett/North-East Chichester (A9) already have permission for the number of dwellings in the allocation and construction has already started, there is no objection to the predicted levels of delivery as set out in the trajectory. However, the housing trajectory sets out delivery from the Land West of Chichester (Phase 2) (A6) and Tangmere SDL as follows:

****Table****

Given that neither of these sites have outline permission then the delivery of units from both sites in a little over 5 years from the adoption of the plan is considered wholly unachievable.

CDC has presented no evidence to justify how this timeframe would be achieved and it is considered that the trajectory is unreliable as a result.

The Local Plan sets out a Broad Location for Development at Southbourne which would be delivered through either the Neighbourhood Plan process or a Site Allocation DPD:

****Table****

The Housing Trajectory as set out in appendix E of the Local Plan sets out the following delivery from this site:

****Table****

Given that policy A13 remains as a 'broad area for development' it is not considered that there is adequate justification for the trajectory as set out. Notwithstanding the effectiveness of allocating a site in this way, an exact location for the housing is yet to be defined, nor is delivery through the neighbourhood plan/DPD confirmed (further details on this is set out within the reps). Until a more detailed site can be defined and delivery confirmed it is not considered that CDC is able to guarantee delivery of dwellings in the housing trajectory as it has done so within the plan.

Non-Strategic Parish Housing Requirements

Policy H3 sets out the following housing requirements from individual parishes.

****Table****

The supporting text of policy H3 sets out that if draft neighbourhood plans making provision for at least the minimum housing numbers of the relevant area have not made demonstrable progress the council will allocate sites for development within a development plan document in order to meet the requirements of this Local Plan.

Table 13 of AMR identifies that there has been historically poor delivery of net housing completions from parishes:

****Table****

The overall strategy as set out by CDC in the plan is highly dependent on the delivery of housing from Neighbourhood Plan areas. Whilst this approach is not un-sound in itself, it is considered that the plan in its current form allows for little mitigation or alternatives should delivery not come forward in the neighbourhood plan areas.

In order for the plan to be considered positively prepared and justified it is recommended that additional wording is added to policy H3 to state that individual applications can come forward on sustainable sites outside of existing settlement boundaries in parishes should delivery not come forward within the first five years of the plan period. Priority should be given to any sites already identified within draft versions of Neighbourhood Plans.

on sustainable sites outside of existing settlement boundaries in parishes should delivery not come forward within the first five years of the plan period. Priority should be given to any sites already identified within draft versions of Neighbourhood Plans.

Southbourne

As set out, the Local Plan proposes a 'Broad Location for Development' at Southbourne for the delivery of 1,050 dwellings. This approach follows the withdrawal of the previously draft version of Neighbourhood Plan after it was found not to comply with basis conditions following examination in early 2022. Southbourne Parish Council is now pursuing a revised Neighbourhood Plan which has been submitted to CDC for a regulation 16 consultation. Obsidian previously responded to the regulation 14 consultation in late 2022 and these are appended to these representations.

The revised Southbourne Neighbourhood Plan does not seek to allocate any new housing allocations and instead takes a protectionist stance against any new development as an interim position whilst the Local Plan is prepared. However, once the Neighbourhood Plan is made, it would form part of the development plan for CDC. It is highly likely that a made Neighbourhood Plan in the form currently proposed by Southbourne would make the allocation of additional housing in the parish less likely rather than more likely.

The Sustainability Appraisal (SA) as prepared for the regulation 19 of the Local Plan sets out the proposed approach to Southbourne as follows:

3.1. With the decision of Southbourne Parish Council to no longer proceed with the inclusion of a strategic allocation in their neighbourhood plan, the Council considered three options for taking forward development in Southbourne, namely:

- Option 1 - redistribute the housing number elsewhere
- Option 2 - allocate a strategic site
- Option 3 - identify a Broad Location for Development

The SA goes on to set out the reason for option 1, for redistributing the housing number elsewhere, being discounted as follows:

3.2. As set out in the Housing Background Paper, the preferred spatial strategy is to focus the majority of growth at Chichester and the east west corridor, with a focus on the Settlement Hubs within the corridor. To redistribute the housing number to other parts of the plan area would not be consistent with the preferred spatial strategy nor reflective of the role of Southbourne as one of the more sustainable locations in the plan area capable of delivering strategic scale development. The ability to redistribute the number to other locations within the east/west corridor is also severely limited due to infrastructure constraints (impact on A27 junctions) or environmental restrictions (wastewater treatment capacity). For these reasons, Option 1 was discounted.

Whilst it is accepted that the redistribution of the entire requirement of 1,050 homes would be problematic, it is considered that CDC should have tested the allocation of other alternative sites such as that at Main Road, Hermitage and other suitable alternative sites.

The SA goes on to set out consideration of option 2 as follows:

3.3. In order to allocate a site in a Local Plan, it needs to have gone through a rigorous process to ensure that the Council can demonstrate that the allocated site is suitable, given reasonable alternatives, and is based on proportionate evidence. Given there is more than one site or combination of sites that could come forward as an allocation in Southbourne, a clear process setting out for why one site was chosen over another would be needed, informed by site specific technical information.

This is correct and it is therefore not accepted that an approach to allocate a broad area for development would be robust, deliverable or effective. The SA goes on to state:

3.5. The allocation of a strategic site at Southbourne would also be a significant change in approach at a late stage of the Local Plan preparation process. The additional technical evidence that would need to be undertaken to justify a Local Plan allocation at this stage would impact significantly in terms of delay to the finalisation of the Regulation 19 Local Plan and its subsequent submission to the Secretary of State for examination. For these reasons Option 2 was discounted.

This provides further weight to the position set out within these representations that the expectation of delivery from the 'broad area' at Southbourne is overly ambitious and it is clear there is significant technical work to undertake on the delivery of homes from the allocation as part of the future plan making process.

The SA goes on to set out the justification of option 3 as follows:

3.6. The identification of a BLD is consistent with the National Planning Policy Framework (NPPF). Paragraph 68 states that for years 6 -10 of the plan, local authorities should through their planning policies identify a supply of 'specific, developable sites or broad locations for growth'.

3.7. There is no definition of 'broad locations' in national policy. It is generally taken to be an area within which housebuilding could reasonably be expected to take place based on the availability of land having regard to the Housing and Economic Land Availability Assessment (HELAA). A BLD does not have a specific geographic location or physical boundary. Areas are identified as broad locations because at that stage it is not yet possible to identify the precise boundaries of a site until further detailed site work has been done. By identifying a broad location gives flexibility and may increase the prospect of appropriate and effective growth i.e. where there is some doubt as to the most effective site boundary could prevent growth coming forward or prevent the most sustainable solution. However, a broad location might be expected to accommodate a significant amount of development; in some cases a single site may be of a sufficient size to accommodate all of the potential development or a number of sites that abut other sites may be considered together.

This is not considered a rational approach to take. Whilst there is no definition of 'broad location' within national policy it is considered that the words 'specific' and 'developable' must be taken at their basic meaning and indeed as set out in the glossary of the framework. It is not considered that the allocation of such a large area for a 'broad location' would be specific, effective or justified against the tests of soundness in the NPPF.

The allocation of Southbourne under policy A13 would represent over 10% of the total housing delivery in the plan. This is considered too significant to leave to a broad location for development.

As set out, Southbourne Parish Council is already at advanced stages of a revised Neighbourhood Plan which does not include the allocation of any of the development parcel envisaged under policy A13. In terms of delivery through the Site Allocations DPD, the timetable for this is set out within the most recent Local Development Scheme (January 2023) which sets out the following:

****Table****

As set out, the housing trajectory assumes delivery of dwellings from the allocation at Southbourne in 2028/29. Given that the Site Allocation DPD would not be delivered until Winter 26/27 at the earliest, and the delivery through the Neighbourhood Plan has been discounted by the progression of a NP without the allocation, then the deliverability of any development at Southbourne remains wholly unjustified within the plan period.

The SA goes on to set out the approach to alternative sites in Southbourne Parish as follows:

4.3. The 2021 HELAA assessed 41 sites in Southbourne Parish (see Appendix 1). Of these, 18 sites were discounted because the site either had planning permission/were under construction (five sites); it was within the Chichester Harbour Area of Outstanding Natural Beauty (AONB) (eight sites); there was insurmountable access issues (two sites); it was in Flood Zone 3 (one site); or there was a legal restriction on the site use (in this case a Section 106 Agreement restricting use to open space) (two sites). These sites were not considered further for inclusion within the BLD.

The land at Main Road was one of the sites discounted due to being located in the AONB. For the reasons set out within subsequent sections of these representation, it is not considered that it was necessary to discount sites within the AONB as other councils have taken the decision to use such sites to meet housing need and not considered the AONB as an absolute constraint.

Specialist Accommodation for Older People

Para 5.41 of the regulation 19 of the Plan sets out the following:

The Housing and Economic Development Needs Assessment (HEDNA) 2022 estimates the greatest population increase in the district by 2039 to be those in age groups 75 and over. To support an ageing population there should be provision of suitable housing options for the differing needs of individuals, including:

- Sufficient adaptable and/or accessible market housing stock so that those wishing to remain in their own homes can do so as their needs change.
- Smaller homes, for those wishing to downsize, and bungalows.
- Extra care housing, for those able to live relatively independently but requiring on-site support.
- Care homes, for those needing additional support.

Table 8.1 of the HEDNA sets out the current population breakdown for separate groups over 65 and demonstrates that CDC has a significantly higher percentage in all age groups over 65 than the average in West Sussex, the South East or England:

****Table****

Policy 8.12 of the HEDNA goes on to set out the need for different groups as follows:

****Table****

The HEDNA sets out the following commentary in this regard:

8.41 It can be seen by 2039 there is an estimated need for between 2,131 and 2,872 additional dwellings with support or care across the whole study area. In addition, there is a need for 429-800 additional nursing and residential care bedspaces.

8.42 Typically for bedspaces it is conventional to convert to dwellings using a standard multiplier (1.80 bedspaces per dwelling for older persons accommodation) and this would therefore equate to around 238-445 dwellings.

8.43 In total, the older persons analysis points towards a need for around 2,369-3,317 units over the 2021-39 period (132-184 per annum) – the older person need equates to some 17-24% of all homes needing to be some form of specialist accommodation for older people.

Given the significant need for Specialist Housing Accommodation across the district it is vital that this is planned for adequately within the emerging Local Plan. The Planning Practice Guidance sets out why it is important to plan for housing needs of older people as follows:

The need to provide housing for older people is critical. People are living longer lives and the proportion of older people in the population is increasing. In mid-2016 there were 1.6 million people aged 85 and over; by mid-2041 this is projected to double to 3.2 million. Offering older people a better choice of accommodation to suit their changing needs can help them live independently for longer, feel more connected to their communities and help reduce costs to the social care and health systems. Therefore, an understanding of how the ageing population affects housing needs is something to be considered from the early stages of plan-making through to decision-taking.

Paragraph: 001 Reference ID: 63-001-20190626 Revision date: 26 June 2019

The PPG goes on to state how housing requirements of such groups should be addressed in plans:

Plan-making authorities should set clear policies to address the housing needs of groups with particular needs such as older and disabled people.

These policies can set out how the planmaking authority will consider proposals for the different types of housing that these groups are likely to require. They could also provide indicative figures or a range for the number of units of specialist housing for older people needed across the plan area throughout the plan period.

Paragraph: 006 Reference ID: 63-006-20190626 Revision date: 26 June 2019

Policy H8 states:

All housing sites over 200 units, including those allocated in this plan, will be required to provide specialist accommodation for older people to include a support or care component. The specific type and amount of accommodation required will depend on the size and location of the site.

Proposals for specialist housing, such as homes for older people, student, HMOs or essential worker accommodation, and other groups requiring specifically designed accommodation will be supported where the following criteria are met:

- 1) There is an identified need;
- 2) It will not lead to a concentration of similar uses in an area that would be detrimental to the character or function of an area and / or residential amenity;
- 3) It is in close proximity to everyday services, connecting by safe and suitable walking / cycling routes or public transport for the intended occupier;
- 4) It can be demonstrated that the development is designed to provide the most appropriate types of support for the target resident;
- 5) It can be demonstrated that revenue funding can be secured to maintain the longterm viability of the scheme (if relevant to the type of accommodation proposed); and
- 6) The scheme is supported by the relevant agencies (if relevant to the accommodation type to be provided).

Proposals which may result in the loss of specialist needs accommodation will not be permitted unless it can be demonstrated that there is no longer a need for such accommodation in the plan area, or alternative provision is being made available locally through replacement or new facilities.

Whilst this approach goes some way to addressing the care needs it is felt that the policy lacks effectiveness and should take a far more constructive and positive approach to the provision of housing for older people.

The wide range of different housing typologies is set out within the Planning Practice Guidance as follows:

- Age-restricted general market housing: This type of housing is generally for people aged 55 and over and the active elderly. It may include some shared amenities such as communal gardens, but does not include support or care services.
- Retirement living or sheltered housing: This usually consists of purpose-built flats or bungalows with limited communal facilities such as a lounge, laundry room and guest room. It does not generally provide care services, but provides some support to enable residents to live independently. This can include 24 hour on-site assistance (alarm) and a warden or house manager.

- Extra care housing or housing-with-care: This usually consists of purpose-built or adapted flats or bungalows with a medium to high level of care available if required, through an onsite care agency registered through the Care Quality Commission (CQC). Residents are able to live independently with 24 hour access to support services and staff, and meals are also available. There are often extensive communal areas, such as space to socialise or a wellbeing centre. In some cases, these developments are known as retirement communities or villages - the intention is for residents to benefit from varying levels of care as time progresses.
 - Residential care homes and nursing homes: These have individual rooms within a residential building and provide a high level of care meeting all activities of daily living. They do not usually include support services for independent living. This type of housing can also include dementia care homes.
- [Paragraph: 010 Reference ID: 63-010-20190626].

It is considered that a residential care home (including housing for dementia needs) could be developed on the Land South of Main Road without causing harm to the AONB and this would provide for a clear need within the village whilst also providing employment to local workers.

Development in AONB

The NPPF sets out the following in relation to development in the AONB at paragraph 172 as follows:

Great weight should be given to conserving and enhancing landscape and scenic beauty in National Parks, the Broads and Areas of Outstanding Natural Beauty, which have the highest status of protection in relation to these issues. The conservation and enhancement of wildlife and cultural heritage are also important considerations in these areas, and should be given great weight in National Parks and the Broads. The scale and extent of development within these designated areas should be limited. Planning permission should be refused for major development⁵⁵ other than in exceptional circumstances, and where it can be demonstrated that the development is in the public interest. Consideration of such applications should include an assessment of:

- a) the need for the development, including in terms of any national considerations, and the impact of permitting it, or refusing it, upon the local economy;
- b) the cost of, and scope for, developing outside the designated area, or meeting the need for it in some other way; and
- c) any detrimental effect on the environment, the landscape and recreational opportunities, and the extent to which that could be moderated

Footnote 55 of paragraph 172 is relevant for the consideration of what is considered as major development and states:

For the purposes of paragraphs 172 and 173, whether a proposal is 'major development' is a matter for the decision maker, taking into account its nature, scale and setting, and whether it could have a significant adverse impact on the purposes for which the area has been designated or defined.

No evidence is set out within the Local Plan or supporting evidence base to state what is considered to be a major development site in the district. Neither the Chichester Harbour AONB: State of the AONB Report (May 2018) or the Chichester Harbour AONB Landscape Character Assessment (April 2019) contain any references to what is considered to constitute a major development.

This is a matter which has been considered at length within other Local Plan examinations. As part of the evidence for its Local Plan, the South Downs National Park sought successive legal opinions from James Maurici QC on what should be considered as 'Major Development' in the AONB and have subsequently become widely known as the 'Maurici Opinions' in other Local Plan examinations. The opinions set out the following conclusions:

- It is a matter of planning judgement to be decided by the decision maker.
- Major development is to be given its ordinary meaning, and it would be wrong to apply the definition of major development contained within the Town and Country Planning (Development Management Procedure) (England) Order 2015. It would also be wrong to apply any set or rigid criteria for defining major development, and the definition should not be restricted to development proposals that raise issues of national significance.
- The decision maker may consider whether the proposed development has the potential to cause a significant adverse impact on the purposes for which the area has been designated or defined, rather than whether there will indeed be a significant adverse impact from the proposed development.
- The decision maker may consider the proposed development in its local context as a matter of planning judgement.
- There may be other considerations but which may not determine whether a proposed development is major development. For example, if the proposed development is Environmental Impact Assessment (EIA) development.
- The ordinary sense of the word 'major' is important and the decision maker should take a common sense view as to whether the proposed development could be considered major development.

In the Mid Sussex District Council Site Allocations DPD Evidence Base there is a topic paper setting out consideration of Major Development in the AONB and concludes that several of the allocations, in some cases up to 70 dwellings, would not be classed as major development in the AONB following a detailed review of each of the factors as set out in footnote 55 of the NPPF against each proposed allocation.

It is considered that this approach should have been undertaken for each of the individual sites discounted in the Local Plan (including Main Road, Hermitage), rather than simply discounting on the sole fact that they were in the AONB.

Sustainability Appraisal

The legal frameworks for SAs are set out within section 19 of the Planning and Compulsory Purchase Act 2004 which states that the authority must prepare a plan with the objective of contributing to the achievement of sustainable development. Moreover, the requirements of the Environmental Assessment of Plans and Programmes Regulations 2004 states that SAs must ensure that the potential environmental effects are given full consideration alongside social and economic issues.

It is not considered that the council has given full consideration to all effects nor are the conclusions of the SA in respect of those impacts robust and logical.

Paragraph 32 of the framework goes on to state that the SA should demonstrate how the plan has addressed relevant economic, social and environmental objectives (including opportunities for net gains). Significant adverse impacts on these objectives should be avoided and, wherever possible, alternative options which reduce or eliminate such impacts should be pursued. Where significant adverse impacts are unavoidable, suitable mitigation measures should be proposed (or, where this is not possible, compensatory measures should be considered).

The SA sets out whether it was reasonable to explore higher growth scenarios as follows:

5.2.12 As discussed above, the PPG on Housing and Economic Needs Assessment sets out reasons for providing for 'above LHN' through local plans, referring to situations where there are "growth strategies for the area... (e.g. Housing Deals); strategic infrastructure improvements that are likely to drive an increase in [need]; or an authority agreeing to take on unmet need from neighbouring authorities..." Also, affordable housing needs can serve as a reason for considering setting the housing requirement at a figure above LHN, with the PPG stating: "An increase in the total housing figures included in the plan may need to be considered where it could help deliver the required number of affordable homes."

5.2.13 However, in the Chichester context there is little or no argument for exploring scenarios whereby the housing requirement is set at a figure above LHN, given the issues discussed above at paragraph 5.2.11. Unmet housing needs are a widespread issue across the sub-region, but there is no realistic potential to provide for unmet housing needs within Chichester. At the time of the Preferred Approach consultation (2018/19), the proposal was to provide for both locally arising housing needs in full and a proportion of the unmet needs arising from the SDNP (41 dpa). Also, it is noted that the SA report published as part of the consultation considered scenarios – considered to be 'reasonable' at that point in time – that would see the housing requirement set at figures significantly above LHN (800 dpa and 1,000 dpa were tested). However, at the current time, in light of the latest available evidence, scenarios involving setting the housing requirement at a figure above LHN can be safely ruled out as unreasonable.

It is not considered that a figure at or above the LHN would be considered unreasonable and that this matter has not been given full consideration (as per the requirements of the SA regulations), particularly in regard to the social impacts of not meeting housing need in full.

Appendix V of the SA sets out commentary in regard to Parish Scenarios. This sets out the following in relation to Southbourne (with emphasis added):

With regards to the extent of the broad location, this matter is considered fairly uncontentious (for the current purposes of arriving at reasonable growth scenarios). Specifically, the proposal is to identify an area of search that includes developable HELAA sites that relate relatively well to the Southbourne settlement edge and avoid the Strategic Wildlife Corridor associated with the Ham Brook, also naturally mindful of the need to maintain a landscape gap to settlements within Chidham and Hambrook Parish, to the east. It is important to note that the total theoretical capacity of developable HELAA sites within this broad area is far in excess of the number of homes that would need delivered under any reasonably foreseeable scenario.

The broad location provides flexibility to identify a detailed allocation either through a Site Allocations Plan or, should the Parish Council wish to do so,

a revised Southbourne Parish Neighbourhood Plan. Site selection considerations will likely include: transport and access (including mindful of links to the train station and by car to Portsmouth); accessibility and community infrastructure (mindful of the secondary school, recreation ground and employment area at the western edge of the village); heritage (e.g. there is a historic rural lane to the east, associated with two listed buildings), topography and landscape (including any visual links to the SDNP and/or the AONB) and the potential to secure a strategic scheme that delivers more than just new market homes, and potentially significant 'planning gain' for the local community.

With regards to the number of homes that should be supported, there is logic to further exploring the scale of growth that was previously considered through the now withdrawn Southbourne NP, and it is not clear that there is an argument for considering lower growth. Additionally, there is a clear argument for exploring the possibility of higher growth, to ensure a suitably comprehensive scheme, with a high level of 'planning gain'.

In conclusion, there are two scenarios for Southbourne Parish, namely completions, commitments and windfall plus either: 1) a broad location for 1,050 homes; or

2) a broad location for ~1,500 homes.

As set out, it is not considered that the SA has considered adequate reasonable alternatives to growth at Southbourne which would include allocation of sites elsewhere in the village including within the AONB that can deliver in the early part of the plan period.

Conclusions

There are significant concerns on the soundness of the plan in terms of whether it is effective, justified, positively prepared or consistent with national policy in accordance with paragraph 35 of the NPPF.

It is not considered that the Council has justified the extent of the under supply of housing against the established housing need. There are significant concerns over the delivery of housing from the strategic allocations within the unjustified timescales as set out within the trajectory contained in the plan.

The Council has not adequately considered reasonable alternatives through the Sustainability Appraisal as published alongside the plan which should have included consideration to the allocation of the site in order to deliver housing in the early part of the plan period.

The plan fails to adequately consider the need for housing for older people, given that the population over 65 across CDC is significantly in excess of the average in the county, south east and county as a whole.

CDC discounted all sites within the AONB, including the site at Main Road, Hermitage, at an early stage of the plan making process. This is not considered effective or consistent with national policy which does not class such sites as an absolute constraint. Other local authorities have allocated such sites in order to deliver the full objectively assessed needs.

ABC will continue to make further representations on the deliverability of the site as part of the plan making progress.

Change suggested by respondent:

In order for the plan to be considered positively prepared and justified it is recommended that additional wording is added to policy H3 to state that individual applications can come forward on sustainable sites outside of existing settlement boundaries in parishes should delivery not come forward within the first five years of the plan period. Priority should be given to any sites already identified within draft versions of Neighbourhood Plans.

Object

Document Element: Policy H3 Non-Strategic Parish Housing Requirements 2021 - 2039**Respondent:** Mr Graham Pick [8079]**Agent:** Batcheller Monkhouse (Miss Clare Bartlett, Head of Planning) [7032]**Summary:**

Birdham Housing Needs Assessment estimated a need for 69 affordable dwellings between 2020-2035. Open market housing will be needed to deliver many of these.

Given the unaddressed housing need that also exists within the wider district, it is reasonable to assume that much of the A27 capacity issues can be attributed to commuting traffic caused by a lack of available local housing. By providing housing in locations with good public transport connections and where cycling to work is a realistic option, commuting traffic can be reduced.

Full text:

Policy H3 prescribes each parish with a housing figure, many of which has been significantly reduced from the previous iteration of the draft Local Plan. In relation to Birdham, the figure has been reduced from 125 to zero.

As part of the preparation of the Birdham Neighbourhood Plan a parish housing needs assessment was undertaken. A report by AECOM on the assessment findings was published in January 2021. The report estimated a need for 43 affordable rented properties over the plan period (2020-2035), or 3 dwellings per year. The report also estimated a need for 26 shared ownership dwellings.

This quantum of affordable housing provision is more likely to be provided as a proportion of an open market housing scheme. On the basis of 30% of units provided as affordable houses, 230 houses would need to be built between 2020 and 2035 to ensure this number of affordable homes are delivered. A housing figure closer to this number for the parish of Birdham should be considered.

Whilst the Local Plan cites A27 capacity issues as the reason for reduced housing provision on the peninsula, housing need remains high. Given the unaddressed housing need that also exists within the wider district, it is reasonable to assume that much of the capacity issues can be attributed to commuting traffic caused by a lack of available local housing. By providing housing in locations with good public transport connections and where cycling to work is a realistic option, commuting traffic can be reduced.

Change suggested by respondent:

Assign a housing figure to Birdham to reflect the housing need.

Object

Document Element: Policy H3 Non-Strategic Parish Housing Requirements 2021 - 2039**Respondent:** Plaistow and Ifold Parish Council (Mrs Catherine Nutting, Clerk & RFO) [7910]**Summary:**

Nuances of proposed 'small scale' development within the North of the Plan Area are to be appreciated:

All housing numbers advocated are large-scale for the current size of the settlements in this area and will increase their population sizes, without providing any services / facilities to manage this increase. The Plan cannot alter constraints such as the proximity of the SDNP; rare ecology; and other infrastructure including higher education / transport links - many of which are oversubscribed or situated outside of the District .

Whilst proposed numbers are small when compared to the rest of the District, any housing number above that which the current local area can reasonably accommodate is unsustainable development.

Full text:

The drafting of this section of the Plan does not match the landscape character evidence in relation to settlement character. The ambition to support landscape quality in the North of the Plan Area is supported by the Council, but it is undermined by identifying all the settlements as 'Service Villages'. Plaistow, Ifold and Kirdford in particular are all small villages in comparison with Loxwood and Wisborough Green, which are larger scale settlements and different in character terms. By labelling them all as 'Service Villages' will risk these smaller villages becoming treated as larger 'Service Villages' in time, which will risk them losing their character and settlement hierarchy within this area. These smaller villages should be reclassified as "Rest of Plan Area: Includes the countryside and other small villages and hamlets which have poor access to facilities."

The Plan identifies that there are few large settlements North of the Plan Area. To ensure this distinctive area of the District is correctly conserved and, where appropriate, enhanced in keeping with the aspirations set out in Chapter 2: Vision and Strategic Objectives, North of the Plan Area, paragraphs 2.49 – 2.51 it is important that the various settlements within the area are correctly identified. Compared to Fishbourne, Boxgrove, and Westhampnett* Wisborough Green is an isolated exceptionally rural village; however, when you compare Wisborough Green to Plaistow, Ifold or Kirdford, Wisborough Green appears more akin to a true 'Service Village'.

*proximity to A27, public transport, Chichester city and other higher order settlement hubs, services and facilities

Therefore, it is incorrect to list Plaistow, Ifold, Kirdford, Wisborough Green and Loxwood in the same 'Service Village' category as Fishbourne, Boxgrove, and Westhampnett etc as this does not correctly recognise the true scale of the settlements in the North of the Plan Area, which are materially different from the rest of the District.

Settlements are 'small and dispersed' with poor connectivity either to each other or to other settlement hubs. To do so, is contrary to the Plan's aspiration to maintain landscape quality. The Plan's policies need to correctly reflect the characteristics of each landscape. If settlements are incorrectly identified any growth will be unsustainable and will change the character of the whole landscape. The ambitions should be constrained by an area's landscape capacity.

Chichester's landscape evidence remains the Capacity Study 2019. The results of this study should be correctly reflected within Plan policies.

Whilst the Council understands that some small-scale development is required within the North of the Plan area and supports this, it wishes to act as a critical friend to ensure that the nuances of the proposed small scale development is fully appreciated.

All housing numbers advocated for the North of the Plan Area are large-scale for the current size of the settlements in this area and will increase their population sizes, without providing any services / facilities to manage this increase. In truth, the Plan cannot / does not deliver the required services / facilities the current settlements need, irrespective of any additional growth. The Plan cannot alter the proximity of the SDNP; the areas dark skies; its rare ecology; the poor rural road networks; the proximity of key services to these northern settlements e.g., secondary schools / higher education / transport links - many of which are situated outside of the District itself; the lack of supermarkets; the lack of other services which are necessary to support a diverse population i.e., libraries, children's centres, job centres etc and the dependence on private vehicles.

The various services / facilities required to support bigger population sizes are outside of the control of CDC and the Local Plan – medical services / school placements (primary, secondary, and higher education) / public transport services / leisure / retail. Therefore, whilst 25, 50, 75, 220 are very small housing numbers when compared to the rest of the District, if the local services upon which these additional residents will rely upon are already oversubscribed – which they are - and there is no prospect of delivering the requires support services in the area – which there is not - then any housing number above that which the current local area can reasonably accommodate is unsustainable development.

Document Element: Policy H3 Non-Strategic Parish Housing Requirements 2021 - 2039

Respondent: Mr Michael Rankin [7846]

Summary:

We have lived in Wisborough Green for 23 years in this beautiful village. We strongly object to the additional 75 houses. Our village's infrastructure cannot support further development due to the lack of public transport, sewage, roads, medical facilities, schools, water. We have 3 brownfield sites already allocated. Any further development would be on greenfield sites. CDC has been dithering and indecisive and want to overload the NE parishes. This is due to the debacle surrounding the upgrading of the A27 which is going to drag on for many years. Homes are needed in the southern area not the northern.

Document Element: Policy H3 Non-Strategic Parish Housing Requirements 2021 - 2039

Respondent: Reside Developments Ltd [8133]

Agent: Henry Adams LLP (Peter Cleveland, Head of Planning) [6827]

Summary:

On the basis of the 535 dpa figure, it is considered that the selected areas for growth and figures are deliverable over the Plan period, however, as set out in other representations, the plan area could accommodate a greater level of growth.

The Plan relies on the delivery of Neighbourhood Plan and / or small site allocations DPD. This is set out under Policy H3 in the draft document. The wording is not precise and does not provide any clear timetable for delivery within the Plan period.

Whilst the strategy in the comments above could be effective, the Local Plan needs to give a clear timescale for completion of the supplementary Development Plan documents in order to give a clear timescale for this to be completed.

Full text:

1 Introduction

1.1 This representation provides a response to the Regulation 19: Local Plan Consultation on behalf of our client Reside Developments Ltd. The submission covers the general principles of the Local Plan, but has a focus on Land at Herons Farm, Kirdford, which is in our clients control. The land is shown on the attached location plan included at Appendix 1 and hereon referred to as the site.

1.2 This representation will provide a written responses in relation to the Regulation 19 Local Plan Consultation which directly relate to the promotion of our client's land for future development.

2 Comments on Specific Questions/Tests

2.1 In response to the national planning legislation, this Regulation 19 Local Plan Consultation invites comments on three specific questions, and is the final consultation phase, before the Regulation 19 version of the Local Plan is submitted for Examination.

2.2 This representation will respond on these specific questions, and then highlight how our client's site could help fulfil the full housing requirement for the District. This could be through an allocation within the Council's Local Plan, or as currently proposed, through a Neighbourhood Plan allocation.

Is the plan 'sound'?

2.3 Paragraph 35 of the National Planning Policy Framework defines the tests for soundness which requires the plan to be positively prepared, justified, effective and consistent with National Policy.

These matters will now be considered in further detail in relation to the current consultation on the Regulation 19 version of the Local Plan.

Is the plan positively prepared and justified?

2.4 Policy S1 of the Draft Local Plan sets out the spatial development strategy for the District and how the Council will achieve sustainable growth over the plan period and Policy H1 sets out the housing target in response to the strategy. Both policies have been informed by the Sustainability Appraisal (SA) dated January 2023 and the Plan objectives, which are set out at paragraph 2.5.2 of the SA and the Council's HEDNA (April 2022).

2.5 The SA then goes on to discuss the potential growth scenarios and confirms two points:

- i. Standard method housing figure for Chichester (excluding SDNP) is 638 dwellings per annum, or 11,484 in total over the Plan period
- ii. The above figure is capped at 40% above the baseline need and that the uncapped figure is significantly higher than this at 884 dwellings per annum (dpa)

2.6 Of particular note is that point ii. above seeks to cap the overall housing increase by no more than 40% above the previously adopted LP housing figure of 435 dpa. The Local Plan then goes on to constrain housing numbers due to an alleged capacity concern along the A27 strategic road network. The Council therefore result in a constrained housing figure by virtue of the standard method 'steps' and also due to infrastructure capacity. It should be noted that the 435 dpa figure within the 2015 Local Plan was similarly constrained and an early review was the only basis for accepting this reduced housing figure. This early review did not take place.

2.7 In terms of the influence of the A27, this is the key matter that constrains growth within the southern part of the District. This is based on the evidence base documents that state that the road network cannot accommodate an annual housing figure of more than 535 dpa. This is a fundamental point and one that is not agreeable as we believe there is capacity to accommodate at least the local housing need within the highway network, alongside potential improvements identified for the following reason.

2.8 The Transport Study (January 2023) is the key document on which the Council rely upon to constrain their housing figure to 535 dpa. On review of this document, it is clear that the Council's consultants undertook a sensitivity analysis as to whether the core scenario that supports the 535 dpa position in the local plan could accommodate a higher level of growth. The conclusion in paragraph 5.6.5 and 11.2.3 of the Transport Study appears to be that 700 dpa could be accommodated (in the southern plan area) by the mitigation proposed for the 535 dpa core test, with some additional, and as yet undesigned and not costed, mitigation works beyond those highlighted for the Bognor and Fishbourne roundabouts.

2.9 Accordingly, the Council's own evidence base has undertaken the assessment and concluded that a higher growth figure could be accommodated on the A27, subject to appropriate improvement works. Given the testing of the higher growth figure, which appears to accommodate the higher growth figure, the exceptional circumstances to constrain growth, as set out at paragraph 60 on the NPPF do not exist and the Plan could be considered unsound on this point alone.

2.10 As a result of the above, the SA does not consider a scenario where the Council would meet its local housing need, nor a scenario where it exceeds its local housing need, which is of relevance given the scale of development expected for adjoining authorities, including the highly constrained SDNP area.

2.11 It should also be noted that the draft Plan does not therefore address any need in relation to unmet need of neighbouring authorities and it does not contain evidence to suggest that these matters have been discussed with the adjoining Authorities. Notably, Arun District Council have confirmed that they will be objecting to the Plan and currently proposed on the basis that they have a significant housing need themselves. This is likely to be further influenced by unmet need from Chichester, who again are seeking to constrain housing requirements, which was the case in 2015 and the subsequent knock on from that was for Arun to address some of that need in their 2018 Local Plan.

2.12 Given that we do not accept that the A27 capacity matters present a ceiling in terms of housing delivery (based on the Council's Transport Study comments and that of its own consultants), it is not accepted that the Plan and associated SA demonstrates reasonable alternatives have been considered and it is not therefore positively prepared, nor is their approach to housing figures justified.

Effective?

2.13 On the basis of the 535 dpa figure, it is considered that the selected areas for growth and figures are deliverable over the Plan period, however, as set out above, the plan area could accommodate a greater level of growth.

2.14 It should also be noted that the Plan relies on the delivery of Neighbourhood Plan and / or small site allocations DPD. This is set out under Policy H3 in the draft document. This states the following in terms of delivery:

'If draft neighbourhood plans making provision for at least the minimum housing numbers of the relevant area have not made demonstrable progress the council will allocate sites for development within a development plan document in order to meet the requirements of this Local Plan.'

2.15 The above is not precise and does not provide any clear timetable for delivery within the Plan period.

Whilst the strategy in the comments above could be effective, the Local Plan needs to give a clear timescale for completion of the supplementary Development Plan documents in order to give a clear timescale for this to be completed.

Is the plan consistent with National Policy?

2.16 On the basis of the comments above, the approach to selected sites for allocation based on the 535 dpa figure is considered to be consistent. However, due to the lack of evidence to demonstrate this, the 535 dpa figure should be capped. Given the A27 capacity points raised, the draft Plan does not appear to meet the exceptional circumstances allowed for at paragraph 61 of the NPPF to justify their alternative approach. The Plan as proposed is therefore inconsistent with NPPF when read as a whole.

3 Approach to development in Kirdford

Overview

3.1 The Draft Local Plan defined Kirdford as a service village, which benefits from some local facilities and services including a village hall, a local shop and two pubs. The village has been allocated 50 units within the draft local plan and is therefore suitable for a quantum of growth. The Sustainability Appraisal (SA) identifies Kirdford as a village with some facilities, albeit that due to the absence of a school, these are limited. The SA notes that the delivery of community infrastructure would be required to accommodate any quantum of housing, our client's land provides ample opportunities to provide this infrastructure alongside housing. The HELAA identifies a number of sites which could come forward through the Neighbourhood Plan process.

Sustainability Appraisal

3.2 Section 5.4 of the SA states that it is important to consider each of the settlements within the plan area, and explore reasonable growth scenarios. 5.4.2 continues this, stating that there is a clear need to explore a wide range of growth quantum scenarios in the northeast plan area.

3.3 The Sustainability Appraisal addresses the constraints of this area in terms of its rural locality, unsustainable travel patterns and achieving water neutrality. 5.4.7 sets out that there are three reasonable growth scenarios for each of the four Parishes in the Northeast plan area, if the option of a new settlement at Crouchlands Farm is ruled out as unreasonable. 5.4.8 states there is a strong argument to suggest that this option is unreasonable, nevertheless, it has been deemed appropriate to take the option forward to consideration. Within the SA, the Council justifies their approach which comprises a blend between Scenario 1 and Scenario 2 as described below:

☒ Scenario 1 – Lower growth scenario across all parishes – This would relate to an allocation of 50 units to Kirdford.

☒ Scenario 2 – Higher growth scenario across all parishes – This would relate to an allocation of 150 units to Kirdford.

3.4 The SA sets out that it is fair to rule-out the lowest growth scenario for Kirdford (growth at committed sites only). The SA also sets out there is an argument for ruling out the highest growth scenario (300 homes) as unreasonable, as Kirdford is poorly connected and does not benefit from a primary school. The SA sets out three growth scenarios following the above. These scenarios relate to 50 homes, 150 homes, and 300 homes.

3.5 A blended approach for Parishes within the Northeast plan area has been supported within the SA, attributing the Scenario 1 model (lower growth) to Kirdford.

3.6 The reasoning given by the Council for attributing the lower growth figure to Kirdford relates to the unsuitability of the northeast plan area as a whole, including unsustainable travel patterns, risks to achieving water neutrality and settlement specific concerns relating to the potential impacts of growth of Kirdford.

3.7 Whilst these concerns raised within the SA and those regarding the existing infrastructure of the village are noted, we believe that the need to support the growth of existing villages, and the ability of development to create and enhance infrastructure should be afforded weight when considering the housing numbers attributed to the village.

3.8 The SA raises concerns surrounding the HELAA options towards the North of the village. This is mainly due to the connectivity to the village and road network, and environmental concerns. These concerns will be addressed later in this representation.

3.9 It should be noted more broadly that higher growth scenarios can provide more significant community infrastructure enhancements to the area.

4 Suitability of Site

Site Description

4.1 Our client's land is located to the North of the main settlement of Kirdford, which is situated in the northeast of the District. The plan submitted alongside this statement includes land edged in red, to be considered for housing/community uses, and land in blue for biodiversity enhancements. For ease of reference, the red area has been split into Area A, Area B and Area C, which correspond to the split of the site in the HELAA. The site is connected to Kirdford by Footpath 610 and 606. As mentioned previously, the site was previously submitted to the Council's call for sites and is included in the most recent HELAA.

4.2 The Southernmost part of our client's land is annotated as Area A on the drawing included at Appendix 1 (HELAA reference HKD0007). The site was considered to be potentially suitable, subject to detailed consideration of access, and heritage impact. We believe that through well considered design, there is clear potential for development on this parcel as the site is well connected to the P.R.O.W and local transport network. Footpath 606 runs along the Northern boundary of the site, and Footpath 610 runs along the Western boundary of the site which provide access to the main settlement of the Kirdford. The access track to Heron's Farm is adjacent to the Eastern boundary of the site. Whilst the concerns relating to connectivity are noted, we believe there is strong evidence to suggest the site is well connected to the settlement, and there are achievable technical solutions to access.

4.3 The central parcel of our client's ownership is annotated as Area B on the drawing included at Appendix 1 (HELAA reference HKD0009). The site has been considered potentially suitable subject to consideration of access and landscape matters.

The site is immediately adjacent to the established residential development at Bramley Close, and an allocated site with planning permission (HELAA reference HKD0002). We are of the view that there are technical solutions to access at the site, which can be explored as part of our 'next steps'. Footpath 610 provides pedestrian links to the main settlement. Further to this, we are of the view that development of this site to the North of the settlement appears as a natural continuation of Kirdford. This is due to the presence of the adjacent site to the West, the sports pitches to the North, and the shaping of the existing woodland. Initial landscaping works have been completed, and it has been concluded that appropriate landscape-led masterplanning, and green infrastructure plans can be provided as part of any prospective development, which would allow the landscape characteristics of the site and its locality to be retained and enhanced. The site provides an opportunity to introduce a new landscape framework within the parcels and enables any proposed development to sit within a treed landscape. Further works for the site would look to come forward following liaison with the Parish Council, which could include further landscaping evidence.

4.4 The Northernmost parcel is annotated as Area C on the drawing included at Appendix 1 (HELAA reference HKD0011). The site was deemed to be potentially suitable for residential development subject to considerations of access. As set out previously within this statement, the site has potential vehicular and pedestrian links to the settlement, and the wider transport network. We feel there are multiple technical solutions to achieving access to the site.

4.5 Whilst noted that in order to ease the consideration of the site, it is necessary to divide the site into sections, we are of the view that our clients land should be looked at more strategically. The SA sets out that the delivery of community infrastructure would be required to accommodate any quantum of housing and we would look to provide this within our clients ownership. The provision of this infrastructure will be subject to consultation with the Parish Council and local occupiers to understand what community infrastructure would be sought for the area. Further, the parcels provide an opportunity to introduce a new landscape framework and enables any development to sit within a treed landscape. The land within our client's control is considered to have potential to accommodate a quantum of up to 200 dwellings, including provision for selfbuild units.

4.6 The area outlined in blue is put forward as land for biodiversity enhancement, which could be delivered as part of any application.

Sustainability

4.7 The site is suitably located to deliver a host of benefits to the local area and help achieve objectives of the northeast of the District, without harm to the key attractions for visitors, the setting of the National Park, or the rural character of the locality.

Water Neutrality

4.8 One of the constraints of the north-east of the District is the requirement is for all new development to meet water neutrality, to ensure that any new it does not impact further on the habitat site comprising the Arun Valley Special Area of Conservation (SAC) or the Arun Valley Special Protection Area (SPA) & Ramsar site, in terms of groundwater abstraction within the Sussex North Water Supply Zone. It is anticipated that further advice and a mitigation strategy will be created by the Council and its partners to demonstrate how developments can achieve water neutrality. However, at present applicants are required to provide a water neutrality strategy to demonstrate how the development can achieve water neutrality.

4.9 To provide the Council with reassurance that the site is deliverable despite this constraint, it should be noted that our client has worked on other sites with this constraint, and has developed approved strategies in this instance to mitigate development.

5 Conclusion

5.1 Whilst we understand the approach the Council has taken in terms of the selection of sites to meet the 535 dpa figures, we consider that the Plan area is capable of accommodating a greater housing quantum. This will facilitate development and help villages in particular to flourish and meet the objectives of the Local Plan. The Council have failed to provide sufficient justification for not meeting its housing need in full and have not suitably considered unmet need from adjoining authorities. The latter is particularly relevant given constraints of the SDNP. The Council's position of growth is predicated on the basis of the A27 not having sufficient capacity to accommodate a higher growth of 535 dpa. Its own evidence base (Transport Study 2023) contradicts this position and therefore the Council should at least be meeting their local housing need and also considering what part it can play with meeting unmet needs for the adjoining authorities.

5.2 Our clients land is well placed to assist in the delivery of a sustainable expansion of Kirdford, and deliver both much needed housing within the north-eastern plan area, but also provide highquality infrastructure within the area. The allocation of a greater quantum of housing to the village will support the vitality, and viability of services and facilities within the Northern villages.

5.3 At present, the Plan fails to be positively prepared and is inconsistent with the NPPF. On the basis that the Council don't reconsider their position, we wish to be present at the relevant Examination hearings to represent our clients' interests and further discuss the views set out in this submission. Our next steps will include liaison with the Parish Council in order to best understand what they would like to see from development proposals within the area.

Document Element: Policy H3 Non-Strategic Parish Housing Requirements 2021 - 2039**Respondent:** Rydon Homes Limited [1499]**Agent:** DMH Stallard LLP (Mr Mark Walker, Planner) [7918]**Summary:**

This housing need shortfall is exacerbated by the fact that the Plan fails to take account of the full potential of all of the new strategic locations within the District, such as Boxgrove. This strategic level of growth could amount to at least 200 homes, significantly greater than that proposed in Plan Policy H3, which states that, as a 'service village', 50 dwellings could 'come forward through the neighbourhood planning process'. Paragraph 3.19, Page 38, of the Regulation 19 document cites some of the reasons for this limited growth within non-strategic Parishes, such as Boxgrove, as being:

- Land Availability.
- Landscape Considerations.
- Settlement Patterns.
- Available Infrastructure.

Indeed, there is an evidence base that supports the case that Boxgrove has the potential to accommodate a strategic level of housing growth, rather than the conclusion that it has limited capacity due to constraints – or the 50 homes proposed by CDC in Plan Policy H3.

Document Element: Policy H3 Non-Strategic Parish Housing Requirements 2021 - 2039**Respondent:** Rydon Homes Limited [1499]**Agent:** DMH Stallard LLP (Mr Mark Walker, Planner) [7918]**Summary:**

In regards to Policy H3 regarding a Non-Strategic Parish Housing Requirement, we object to the proposed quantum of homes (50 homes) for Boxgrove Parish.

Policy H3 references 'non-strategic parish housing requirements', referring to 'small scale housing sites'. The largest quantum of homes within Policy H3 is 75 additional homes for Wisborough Green. In contrast the lowest quantum of new homes under Policy H2 is 220 new homes at Loxwood. We feel that if Policy H2 defines a strategic level of growth as a minimum of 220 new homes, then Policy H3 should plan for a higher quantum of growth than 75 additional homes.

Object

Document Element: Policy H3 Non-Strategic Parish Housing Requirements 2021 - 2039**Respondent:** South Downs National Park Authority (Clare Tester, Planning Policy Manager) [8124]**Summary:**

It is noted that a substantial number of new homes are proposed on the A259 corridor between Emsworth and Chichester. This is a sensitive stretch of land in the coastal plain between the coast, the south coast railway and the A27. This corridor provides the connection, including intervisibility, between the protected landscapes of the South Downs National Park and Chichester Harbour AONB, for example views of the channels within the Harbour from the Trundle and Stoke Clump. The amendments to policy set out earlier in this consultation response will help to ensure that development coming forward in this sensitive area positively addresses the South Downs National Park and its setting.

It is noted that several settlements around the South Downs National Park have been given a figure to be identified through either Neighbourhood Development Plans or through a potential future Site Allocations DPD. We particularly note Southbourne (1,050 homes), Wisborough Green (75 homes), (Kirdford (50 homes) and Boxgrove (50 homes). We raise concern about these figures and the challenge neighbourhood planning groups may have as many potential sites in these areas are likely to be in the setting of the South Downs National Park. It will be important that attempts to meet these target figures address the requirements of NPPF paragraph 176 on setting.

Document Element: Policy H3 Non-Strategic Parish Housing Requirements 2021 - 2039**Respondent:** Southcott Homes Limited (Mr Andy Southcott) [8190]**Agent:** Genesis Town Planning Ltd (Mr Jeremy Farrelly, Director of Planning) [7504]**Summary:**

As the Non-Strategic Parish Housing requirements set out in this policy are based on the dwelling requirement set out in Policy H1 which itself fails to provide for the housing needs of the plan area it has not been positively prepared. In addition it does not take into account the unmet needs of neighbouring authorities or nearby authorities in the same sub-region and as such is not effective. As a result of the inadequacies Policy H3 is not consistent with national policy, and overall it does not comply with the tests of soundness.

Full text:

See attached response forms.

Change suggested by respondent:

When the revised dwelling requirement is established for Policy H1, the housing figure in Policy H3 for Westbourne should be increased above the currently proposed figure of 30 dwellings.

Westbourne is one of 17 service villages within the plan area with a good range of local services and facilities. As such it is a sustainable location for additional development. This is recognised by allocations in previous Local Plans and more recent housing allocations in the 'made' Westbourne Neighbourhood Plan 2021. It is also located close to the western fringe of the district and is therefore less likely to generate traffic movements on the A27 Chichester Bypass.

My clients land at The Shires, Long Copse Lane, Westbourne which is edged red on the plan in the attached response form would make an ideal housing allocation for up to 7 dwellings.

Legally compliant: No**Sound:** No**Comply with duty:** No**Attachments:** Rep form H3 - <https://chichester.oc2.uk/a/spb>

5537

Support

Document Element: Policy H3 Non-Strategic Parish Housing Requirements 2021 - 2039**Respondent:** Stagecoach South (Rob Vince) [8141]**Summary:**

The approach is consistent with the plan's spatial strategy. It generally avoids a dispersal of development to locations likely to be highly car dependent. There is a clear focus on meeting housing needs in the far north-east of the District at the largest and most sustainable settlements, such as Loxwood, Kirdford and Wisborough Green. However, it must be pointed out that public transport availability in this area, provided by the County Council through services it procures, is minimal. These settlements in practice require each adult and child of secondary school age to have access to motorised transport to fully participate in society. This might justify significant measures to secure a boost in the frequency of bus services between Guildford and Billingshurst, passing through these settlements.

Otherwise, existing commitments in the plan area already make provision to meet for local needs. To the degree that there is an unmet local requirement for affordable housing of a small scale – for example to support the rural economy – this could be met through neighbourhood plans or through Rural Exception Sites.

Chichester District Local Plan 2039 – Pre-Submission (Regulation 19) Consultation

1. Introductory Comments

Stagecoach South is the main commercial public transport operator across Chichester District. The Company has headquarters in the city, which is also the principal public transport hub for the District and it's rather wider travel-to-work area encompassing much of the Arun District. Our services extend throughout and beyond the District boundaries, as far as Littlehampton, Midhurst, Havant and Portsmouth. The vast majority of services operate on a commercial basis – that is to say, sustained by passenger use and fare revenue, including concessionary reimbursement.

While the role of the railway is significant in much of the District, especially the east-west Coastway line, yet bus services account for more boardings locally than the railway, with Chichester depot services carrying over 3.5m passengers each year.

Unlike bus services in other parts of the country, the local network has recovered strongly after the pandemic with fare-paying passenger numbers over 95% of 2019 levels, albeit with concession patronage somewhat lower. This has helped secure not only a stable but growing bus network even during this period of rapidly rising operational costs, avoiding the need for the service contractions seen in other regions. Indeed, during the second quarter of 2023 Stagecoach will invest £5.5m in brand-new vehicles for high-profile coastal Service 700 – one of the largest vehicle investments for Stagecoach Group this year.

Our services are therefore critical to existing and future local connectivity. As the Plan acknowledges, mobility demands do not respect planning authority boundaries. The role of our services is especially high to settlements in the broad A27 corridor, within the District and beyond. This includes major settlements in Arun District such as Pagham and suburban Bognor Regis, where bus is the only mass public transport option. As the Council is well aware, there is an even higher level and rate of committed development envisaged in these locations in the Arun District Local Plan than in Chichester.

It is already evident to the planning authorities, West Sussex County Council and National Highways, as proprietor of the A27 Trunk Road, that accommodating growing mobility demands across Chichester District and especially around Chichester itself, is becoming increasingly challenging to the point of being seriously problematic.

Stagecoach has a particular interest in this Plan arising from:

- The already clear and highly deleterious impact of congestion affecting our operations and their reliability and attractiveness to the public. The effects of these on the approaches to Chichester, and around the A27 bypass are especially severe. If public transport is to retain its existing role – even before the needs of any meaningful growth both in Chichester and neighbouring authorities is considered, are considered – the Council and the Highways Authority need to arrive at clearly-defined measures to protect buses from chronic delay and the damaging impacts arising from the lack of bus network resilience and customer journey times.
- In connection with the above, the need to properly consider the predictable impacts of committed development in Arun District on the transport network and in particular the operation of bus services. The duty to cooperate on cross-border strategic matters is not limited merely to

accommodating housing requirements.

- The fact that our entire business premises and operational base at Chichester is the subject of allocation for redevelopment within the Plan period. Specifically, this includes our Head Office, the Bus Station as the operational hub of the network and the key interchange for passenger journeys – including those that involve the railway – and the bus depot required to support the entire operation. Notwithstanding many years of discussions, there is as yet no agreed deliverable strategy to replace these facilities either in the Draft Plan or elsewhere.

Stagecoach broadly supports the vision and priorities of the draft plan. In most respects, Stagecoach supports strongly the spatial strategy and the identified site allocations that flow from it, and the evidence.

However, it has serious concerns about the soundness of the plan as proposed for submission, for important regards outlined in this response. These are made in the light of requirements set by the National Planning Policy Framework (NPPF), in particular at paragraphs 15 and 16; 35, 105-109 inclusive and having due regard to the need for allocations to satisfy 110-112 inclusive in due course as development permission is sought; and paragraph 174.

Paragraph 16c) of NPPF makes plain that strategic plans and policies should “be shaped by early, proportionate and effective engagement between plan-makers and communities, local organisations, businesses, infrastructure providers and operators and statutory consultees” (our emphasis). This makes plain that collaborative and ongoing involvement of public transport operators is both necessary, and separate and in addition to the engagement with statutory consultees. This has not taken place.

Para 1.25 of the draft plan states that “the council has engaged constructively, actively and on an ongoing basis with other local authorities and organisations to address key strategic matters.” Despite the requirements in NPPF and contrary to the statement made, Stagecoach has not been approached or involved in a meaningful, collaborative or ongoing way in the preparation of the Plan.

Our main concerns centre around the fact that the plan strategy is neither backed by sufficient transport evidence. Even more importantly, the plan relies on a wholly car-based transport mitigation strategy despite policy stating that this is not the case, and the track record of the existing Local Plan, based on a very similar strategy, that has failed to bring forward meaningful mitigations to date to prevent traffic conditions substantially worsening. There is no support in policy for the achievement of the Strategic Objectives in the Plan. Nor is there definition of any measures in the 2023 Transport Study to make provision for sustainable transport infrastructure or services – much less materially improve them.

Finally, to the extent that updated transport evidence has been provided in the form of the 2023 Chichester Transport Study, arising from updated traffic modelling, it does not support the contention that highways capacity constraints on and around the A27 justify not meeting the objectively-assessed development needs of the area, as the draft plan contends.

2. Vision and Strategic Objectives

2.1. Issues and Opportunities

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant, proportionate and up to date evidence

Stagecoach recognises the important role of the West Sussex and Greater Brighton Strategic Planning Board which agreed a Local Strategic Statement (LSS2) in early 2016 to identify spatial planning issues across the wider area. This established strategic priorities and policies to guide longer term strategic growth in a coordinated and well considered matter. This institutional framework and the purpose of the LSS is a highly significant one and is at the heart of efforts to properly fulfil the statutory Duty to Co-operate, including with regard to strategic infrastructure issues, as NPPF requires.

Given the long period of time elapsed since the 2018 Reg 18 consultation and the already very clear constraints on strategic infrastructure capacity, it is of great concern to Stagecoach that the LSS2 has not been updated to reflect emerging issues in the intervening period. A review and update of the LSS2 has only just commenced. This includes a study of projected housing and employment needs, transport impact, infrastructure and spatial options to deliver the required development in the period after 2030. This Chichester District draft plan covers a period extending to 2039 – therefore well beyond 2030 and the nominal currency of LSS2.

However, infrastructure needs are pressing today. Stagecoach is presented with severe highway operational problems on a near-daily basis. During the winter of 2022-23 we have, for example, seen key road links impacted for many weeks by acute disruption arising from flood events. Unpredictable, but seemingly more-frequent, exogenous events expose a lack of resilience in the highway network around Chichester and its travel-to-work area. However, serious, chronic, unpredictable delay has been normalised over recent years, with peak-time congestion having quickly returned after the pandemic. The existing development strategy has failed to bring forward measures having any impact on this to date, and key commitments – notably at west of Chichester Phase 2 and at Tangmere – have yet to commence to further aggravate the issue.

We have no confidence in the transport mitigations proposed in the existing Local Plan and LSS2 being sufficiently effective, even if deliverable at all. Indeed, the existing adopted Local Plan does little more than make vague speculations about the sustainable transport measures that might be achievable. The draft local plan review is no different. It has no ambitions at all for sustainable modes and thus, makes no meaningful provision to meet them.

This is especially relevant in light of the fact that the approach to resolving issues on the A27 around Chichester that were anticipated in 2015-16 have fallen away. LSS2 is thus currently inadequate to act as a part of an up-to-date, proportionate, and relevant evidence base for the Plan.

An update of a traffic model lies at the heart of a 2023 Chichester Transport Study. This talks no account of the existing role of non-car modes, nor can it do so. It is unable to properly evaluate the nature of problems or solutions that involve public transport, or for that matter, other sustainable modes.

Therefore, we consider that the combination of committed and additional development needs that must be accommodated over the whole plan period between 2022 and 2039, in both the Chichester and Arun Districts, require a “first principles” review. This must be based on a refreshed transport evidence baseline of no earlier than 2022 – given that the effects of COVID distort 2020-22 – and the transport infrastructure and service requirements to sustainably support those needs.

Key issues – including substantial changes with regards to transport issues and challenges, as well as potential solutions – thus do not form part of the evidence base that steers this plan. Given long term changes in travel patterns, and mode share that took place during COVID, as well as a local and national policy context that seeks to radically reduce and then eliminate transport-related carbon emissions, this is especially problematic.

The specific problems of congestion and network resilience that are evident on the A27 and the approaches to Chichester remain a set of especially difficult problems that disproportionately affect the efficiency, reliability and attractiveness of the bus network, that evidently demand larger-scale strategic responses involving multiple stakeholders, including bus operators.

Where the effects of development on the national Strategic Roads Network (SRN) are concerned, the approach of National Highways to addressing and responding to the mobility needs of development has now substantially changed following the promulgation of the DfT Written Ministerial Statement

LTN01/22. This makes it clear that adding highways capacity is no longer the first or only strategy that should be pursued, but one subordinate this to maximising the potential of non-car modes and sustainable travel.

“Effective and ongoing collaboration” on transport matters has not led to solutions being agreed and published for public scrutiny as part of the plan evidence base. Whatever the approach to modelling and “highways improvements” that may be agreed or pending agreement with the County Highways Authority and National Highways, Stagecoach is neither participant or sighted. This is despite the clear requirements set out in NPPF Para 106 b) that “Planning policies should ... be prepared with the active involvement of local highways authorities, other transport infrastructure providers and operators and neighbouring councils, so that strategies and investments for supporting sustainable transport and development patterns are aligned.” (our emphasis).

We therefore consider that the Council has failed to comply with the requirements of NPPF paragraph 25 and 26 that “relevant bodies” are involved in plan-making, especially with regard to addressing the needs for infrastructure. Public transport services and the infrastructure that supports its operation and use clearly fall within matters relevant to plan-making. This is explicit in NPPF Chapter 9 and indeed within the plan itself – for example reference to public transport and sustainable modes in the Vision for the plan.

It should be stressed that the Regulation 18 “Preferred Approach” consultation took place in December 2018 – over 4 years ago and prior to COVID, based on LSS2. The inordinate length of time that has elapsed between the Regulation 18 and Regulation 19 stages greatly challenges the LSS2 and other parts of the evidence base, especially as the pause straddles the COVID epidemic. That would include the transport modelling baseline, and key assumptions in any traffic modelling that took place prior to mid-2022, which is a point at which a reasonable “new normal” post-COVID might be considered to have become established. In that period, Arun District has also adopted its own Local Plan development strategy that accommodates an unprecedented quantum of development immediately east and south-east of the District Boundary – creating additional substantial transport impacts directly affecting the A27 and multiple major approaches to Chichester crossing it.

The established mechanism to fulfil the Duty to Co-operate has thus not operated effectively. The Plan is not founded on a relevant, proportionate and up-to date evidence base and is thus inadequately justified.

2.2. Spatial Portrait

The spatial portrait is generally succinct and accurate. However, it makes no mention of road-based public transport, the role of the City as a public transport hub, or the range of bus services that provide local connectivity (Section 2.4 and 2.5). The complete concentration of post-16 education in the City itself as just one example of the peculiarities of transport demands in the area, is not highlighted, though this has a profound influence on peak time travel demands affecting the most congested parts of the highway network. Among other things, the role of bus services in supporting the educational system of the plan area is very great indeed.

The potential role of bus in addressing the already-severe transport problems of the plan area and beyond seems entirely overlooked. The spatial portrait is thus clearly inadequate and incomplete.

2.3. Strategic Objectives

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Chapter 9 of NPPF and paragraphs 104 and 105 in particular require that plans should:

“Transport issues should be considered from the earliest stages of plan-making and development proposals, so that:

- a) the potential impacts of development on transport networks can be addressed;
- b) opportunities from existing or proposed transport infrastructure, and changing transport technology and usage, are realised – for example in relation to the scale, location or density of development that can be accommodated;
- c) opportunities to promote walking, cycling and public transport use are identified and pursued;
- d) the environmental impacts of traffic and transport infrastructure can be identified, assessed and taken into account – including appropriate opportunities for avoiding and mitigating any adverse effects, and for net environmental gains;...

...The planning system should actively manage patterns of growth in support of these objectives. Significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. This can help to reduce congestion and emissions, and improve air quality and public health...”

The Strategic Objectives do not conform with NPPF in these foundational requirements adequately, to transparently steer the plan strategy. They should therefore be amended to read:

“Plan to provide local infrastructure to support new development and seek opportunities to address existing identifiable infrastructure problems deficits, such as in particular those relating to the A27 and its junctions and wastewater treatment.”

Paragraph 2.36 states, in the context of the Climate Emergency and the National Trajectory to “Net Zero” that “The council will enable the delivery of infrastructure, jobs, accessible local services and housing for future generations while protecting, conserving and enhancing the historic and natural environment.”

Naturally, we support this intent.

However, there is no acknowledgement of the role current patterns of transport use contribute to carbon emissions, nor that substantial mode shift is necessary to address sustainably an acute lack of capacity on the local network and the SRN, especially around Chichester. This is especially concerning as the basic conceptual link is not made between the fact that the greatest such problems lie on the A27 corridor and around Chichester, while these are also at the same time present many of the most sustainable locations for development, and where the opportunities to secure much greater use of sustainable modes also exists.

Strategic Objective 7 “Strategic Infrastructure” includes the following statement:

“To work with infrastructure providers to ensure the timely delivery of key infrastructure to support delivery of new development. New development will be supported by sufficient provision of infrastructure to enable the sustainable delivery of the development strategy for the plan area. Key infrastructure to support the Local Plan will include improvements to transport, ...

A sustainable and integrated transport system will be achieved through improvements to walking and cycling networks and links to accessible public transport. Highway improvements will be delivered to mitigate congestion, including measures to mitigate potential impacts on the A27 through a monitor and manage process.”

The latest transport evidence in the Chichester Transport Study makes no pretence to define much less to deliver a “sustainable or integrated” transport system. It is wholly devoted to sustaining current levels of car use across the District, to and through Chichester area.

It is no more than the lightest of touches to the approach taken to supporting the adopted Local Plan, an approach that is already almost 10 years beyond the date of its gestation but has yet to deliver any significant capacity improvement schemes, much less any measures that sustain even current levels of public transport journey times and reliability in the face of increasing congestion – much less any betterment.

Of the six key junctions on the A27 around Chichester, recognised to require significant mitigation given they are saturated for extended periods, five accommodate regular bus services - indeed frequent ones at least every 20 minutes in several cases. The sixth at Oving Road, relates directly to a key corridor where bus services are needed to support strategic growth currently being delivered at Shopwhyke, as well as substantial further growth West of Tangmere (proposed allocation A14) and "East of Chichester" (A8), south of Shopwhyke Road.

As stated at p12 of the Study Summary "The modelling shows that all the junctions on the A27 Chichester bypass are well over capacity, even before adding in the Local Plan development and with the exception of Portfield Roundabout are actually shown to be over capacity in the base model year (2014) in one or both peaks". This much has indeed been evident for years from delay and periodic even more severe disruption arising to Stagecoach services from the lack of network resilience.

The reassignment of through and local traffic through Chichester to avoid the A27 bypass is an especially serious issue for bus services that penetrate the city. This is leading to consequential saturation of a range of junctions used by buses. Rising delay and unpredictable running times are at the root of our decision to sever the long-established Portsmouth to Littlehampton service in 2023, which will in future no longer run across Chichester, but terminate to provide additional dwell time to mitigate the impacts of congestion.

While this congestion affects all road users including businesses and freight traffic, the effect on scheduled bus services is greatly higher, as such services cannot reassign route to 'beat the queue'. Traffic congestion often encourages greater car use for this reason, in tandem that people are happier to sit for extended periods in their own vehicle on a seamless door-to-door journey than wait at the roadside for a delayed bus making slower progress in lengthy queues.

As the Study admits at para. 1.3.2 "Although, there have been works at the Portfield Roundabout in this timeline, no other mitigation schemes have been completed along the A27 corridor, as such the mitigation schemes defined in this report will also be required to consider the development from this plan period."

In other words, in the 8 years since the current Local Plan was adopted in 2015, there has been minimal progress in delivering the traffic mitigations. There is no clarity at all when any such mitigations will be brought forward. It is hardly surprising then, that traffic conditions have deteriorated. The "predict and provide" transport strategy supporting the current plan has failed.

Despite this, the Draft Local Plan Review proposed to "double down" on exactly this strategy. It represents, like the rest of the evidence base, a "rolling forward" of the current car-based strategy by 9 years, with the lightest of touches to attempt to accommodate car trip demands from a relatively modest additional development quantum.

Nevertheless, the Study requires a global 5% reduction in trip demands arising from unspecified "credible" (paragraph 4.1.2) sustainable transport and travel planning measures. It is unclear why use of non-car modes will see disproportionate growth when no measures are in place to make them more attractive. This 5% increase in use translates to a doubling in the modal share of bus services. There is no evidence nationally, anywhere, that simple ignorance of alternatives to the car is the main barrier to uptake.

The outputs of the 2023 Chichester Area Traffic (SATURN) model are set out at Table 5.1 (am peak) and 5.2 (pm peak) without mitigation. These betray just how seriously compromised the whole network around Chichester is, and will be in future, even with implementation of a mitigation package to increase traffic capacity that is understood to cost between £92m and £164m – and which the Study and the draft plan acknowledge cannot be delivered through developer funding sources alone. Unspecified external funding presumably from HM Treasury through DfT is required.

Even if this provided and the schemes are delivered, Tables 8.1 and 8.2 indicate these will provide minimal relief. The final columns suggest key junctions, including Portfield, Fishbourne Road and Cathedral Way East will remain at well over 100% ratio of flow to capacity (90% is considered the point at which saturation is approached, with the onset of increasing delay above that figure). RFCs in tables 8.1 and 8.2 are some of the highest we have ever seen in a local transport evidence base for a post-mitigation scenario. While the serious potential risk of reassignment across Chichester City is greatly reduced, which is important and welcome given its impact on bus services, Tables 8.1 and 8.2 show the extent of post-mitigation saturation is also egregious, covering a very large number of key links and junctions.

On every measure and criterion, then, including cost deliverability and effectiveness, the revised Transport Strategy falls well short of evidence to suggest the transport impacts of the plan can be properly addressed by this means.

Despite the repeated statements about sustainable modes throughout the draft plan and Chichester Transport Study, only 2 paragraphs at Section 6.2 within the Study are devoted to public transport:

"6.2.7 The funds generated from the parking management schemes, local/nation funding schemes and developer contributions could also be utilised to fund potential public transport enhancements within the city centre including an expansion of the bus priority lane system within Chichester City Centre. This could reduce reliance on the car in the longer term towards sustainable public transport. A park and ride scheme could be incorporated within a bus priority lane network in the future depending on the uptake and successfulness of early bus priority trials.

6.2.8 Chichester City centre has a constrained existing public highway network. Therefore, any proposed dedicated public transport or light transit corridors that could be implemented would be at the expense of existing highway. This could be managed through a time-based system where certain routes are restricted to public transport only during specific times. E.g., peak hours."

There is some very high-level consideration of Park and Ride following this section. None can be considered a serious practical evaluation of consolidating car-borne trips onto bus services, including existing ones, for example local mobility hubs, more frequent bus corridors, delivery of specific bus priorities.

None of the discussion of alternatives to "predicting and providing" for unconstrained traffic growth is rooted in a deliverable evidence base, or proper evaluation of options and specific projects.

To take just one aspect of the few specifics that can be picked out, a workplace parking levy is hypothesised. This would apply only to "offices", in Chichester city centre (para 6.2.3), without consideration given as to how this could be practically achieved or even that a meaningful amount of office based employment would qualify. Much less is any consideration given to how far focusing a strategy only on office-based workers would actually deliver a particularly significant effect, apart from to create a strong incentive to relocate offices out of the city centre to places out of reach by public transport.

Looking at the Chichester Transport Study 2023 and the draft plan together, there is insufficient evidence that the traffic capacity increase proposed in the 2023 Transport Study is any more affordable or technically deliverable, or likely to be sufficiently effective, than those in the past strategy. The evidence more strongly points to the fact that no highways improvements are identifiable or economically deliverable to meet even short term increases in demand for car-borne mobility on most of the network around Chichester.

There are no published strategies or schemes clearly supporting the contention that the objective of improving sustainable modes is technically achievable or deliverable either. The plan makes generalised assertions that such strategies will be devised and implemented only after serious problems emerge from a shortfall in the car-borne transport strategy.

The reference to “monitor and manage” is undefined and unsubstantiated. There are no outcomes stated, no mechanisms specified and no timescales for action.

Our experience today is that network conditions have reached unacceptable and prejudicial levels of severe unpredictable delay. The saturation of the network is already evident well outside the traditional peaks on key sections of highway and at key junctions. External shocks such as the effects of severe weather are becoming more common, leading to delays so extreme as to justify the description of “gridlock”. The plan does not identify a strategy to effectively address this, in particular by consolidating passenger car trips onto more efficient public transport vehicles. This is unacceptable to Stagecoach.

2.4. Local Plan Vision

Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the broad approach in Plan Vision and in particular that by 2039, the Plan will support and enable greater use of sustainable modes. However, there is no link made between reducing the use of private cars, and the need for a step change in the use of sustainable modes. Without a published transport evidence base it is impossible to establish a suitable sustainable transport strategy to support both carbon reduction and alleviation of the problems arising from acute congestion. Even on a very crude basis, to achieve a meaning mode shift on key approaches to the A27 Chichester Bypass will require more than 20% of existing peak car-borne journeys to transfer to other modes. A 10 percentage point transfer to bus (about half this shift) would imply more than doubling peak hour bus passenger boardings.

The Vision is nothing more than an aspiration, that needs to more definitively aim at key outcomes, for the plan to be effective. The Vision should thus be altered to read:

“Get about easily, safely and conveniently with less reliance on private cars –making the greatest possible use of the rail and enhanced bus network, and with more opportunities for active travel including walking and cycling; to materially reduce dependence on private car use.”

Underpinning the Plan’s spatial strategy, the Vision section goes into more specific detail about key localities in the Plan area.

Regarding Chichester, Paragraph 2.39 states: “The emphasis will be upon consolidating and enhancing the role of Chichester city as the plan area’s main centre, whilst also developing the role of key settlements to its east and west. The focus will be upon creating communities with good access to a range of employment opportunities and affordable housing for young people and families to balance the ageing population.”

This is clearly the appropriate focus for meeting the District’s development needs in a sustainable manner. The city and key settlements to the east and west, are those places already able to make use of relevant public transport services, both rail and bus. Especially within and near the City, walking and cycling can credibly present highly relevant choices. This emphasis clear can be expected to address the requirements of sustainable development set out in NPPF and their local application set out in the Plans Strategic Objectives.

However, this needs a robust transport strategy, to avoid a further concentration of development and its traffic impacts occurring on or near some of the most chronically congested parts of the highway network. To date, the absence of intervention has strangled the bus network through further marked deterioration in traffic conditions. This by consequence increases the risk of bus delay or cancellation, lengthens journey time and reduces customer confidence in bus as an attractive alternative mode of travel.

In April 2023, Stagecoach is making significant timetables changes to improve operational resilience in and around Chichester. The biggest such change is the severance of the Portsmouth to Littlehampton section of service 700, at Chichester, with buses operating independently to the east and to the west and ending cross-city links. This is planned to reduce the probability of delay but at the cost of additional vehicle resource (circa £200,000 per annum) which could be better spent providing new or enhanced services. We anticipate a small loss of custom as a direct consequence of the change, but have little choice other than to take negative action so as to fulfil our statutory punctuality obligations.

If the Strategic Objectives of the Plan and its Vision are to be achieved, in the way required by NPPF paragraphs 104-105, a properly-evidenced transport mitigation strategy needs to create the conditions where bus journeys are more reliable than car journeys and thus mobility demand switches as far as can be realistically achieved away from car use, to bus use and other more sustainable modes.

Beyond Chichester, the Plan Vision focuses on key localities beyond to the east and west.

To the west of Chichester a focus on growth at Southbourne is justified at paragraph 2.43: “...the aim is to take advantage of the village’s good transport links and existing facilities to deliver significant new residential-led development within the broad location for development which will further enhance local facilities and offer opportunities to reinforce and supplement existing public transport, including bus routes.”

We agree this is a very significant opportunity. However, if the requirements of NPPF paragraphs 104-105 are to be met, this demands that effective bus priority is delivered on the A259 corridor, especially eastbound at Fishbourne and westbound approaching Emsworth. Without such measures, the growth committed and planned will serve only to further undermine bus journey time and decrease punctuality on the existing 700 service, entirely contrary to the aims of the Vision.

The emphasis on the A259 corridor served by Stagecoach 700 west of Chichester is reinforced at paragraph 2.45 stating that “Between Chichester and Southbourne, the Plan provides for more moderate levels of growth within the parishes of Fishbourne, Bosham and Chidham & Hambrook, ... with opportunities to support and expand existing facilities and for increased use of public transport options”. We strongly support the principle, but the Plan must follow through with specific public transport priority measures that facilitate rather than prejudice such an outcome.

East of Chichester the focus is at Tangmere, where the existing allocation for about 1000 dwellings is being uplifted by 300. Paragraph 2.44 justifies this among other things recognising the scope for “...improved and additional bus services and cycleways will provide better connections to Chichester city and east to Barnham and the ‘Five Villages’ area in Arun District.” We unequivocally endorse this conclusion. Realising a “game-changing” level of bus service quality, reliability and frequency east of the city, also serving committed and planned development north and south of Oving Road at Shopwhyke, is equally essential, given that all SRN links and junctions are approaching equal saturation.

The National Bus Strategy has given new focus on partnership with West Sussex County Council to discuss and deliver a significant new bus service between Chichester, Shopwhyke, Tangmere, Eastergate and Barnham, supporting committed development and acting as an initial phase of what ought to be a more ambitious longer-term strategy to support growth beyond 2025 in both Chichester and Arun Districts. For these improved bus services to be both deliverable and effective, robust bus prioritisation is unavoidable. No such measures are proposed in the Plan or its evidence base and we therefore suggest inclusion of plans to facilitate safe and efficient bus operation between Tangmere and Nyton/Eastergate, ideally avoiding the need to join A27 through-traffic entirely.

We welcome the clear recognition that these localities identified for growth, benefit from existing relevant public transport services. The Vision also sets an expectation that bus services in particular should be “enhanced” and “reinforced”.

We entirely agree that these opportunities exist, across the broad strategy and strategic allocation proposed by the draft Local Plan. Securing them will be crucial to achieving national and local policy objectives, including the Strategic Objectives. However, to our continuing very great dismay, the Plan goes no further to defining how this will be achieved. As such the Vision is not demonstrable achievable or deliverable.

Accordingly the Plan cannot be considered effective, in the sense of NPPF.

Remedying this, demands specific measures to protect bus services from congestion in the following corridors:

- A259 East of Emsworth
- A259 Fishbourne
- A 259 Via Ravenna/Cathedral Way
- A286 Stockbridge Road north and south of A27
- B2145 Whyke Road/Hunston Road
- A259 Bognor Road, east and west of A27 and extending to the District Boundary
- B2144 Oving Road/Shopwhyke Road east and west of the A27
- A 285 Westhampnett Road/Portfield Way/Stane Street, potentially involving a mode filter at the west end of Stane Street

These must be defined to a sufficient level of detail to assess their effectiveness and deliverability, including costs.

This would then allow West Sussex County Council and Local Transport and Highways Authority, ourselves as the principal bus operator, and where appropriate other organisations that would be directly tasked with delivering the mitigation package, to agree service levels and standards necessary to deliver specified outcomes, including journey times, frequencies, capacity and hours of operation on the network, and also in respect of the strategic allocations and Strategic Locations for Growth.

The agreed mitigations strategy should be set out in an up-to-date Infrastructure Delivery Plan backed by clear funding commitments, including a funding strategy to justify necessary developer contributions.

Where necessary to support evidence of effectiveness and deliverability, clear statements of support, which might include Statements of Common Ground between the LPA, LTA, National Highways and Stagecoach, could be provided.

3. Spatial Strategy

Stagecoach Supports

Stagecoach well recognises the constraints outlined in the explanatory narrative at the start of Chapter 3.

In particular we strongly endorse that strategy in that it reflects that the best opportunities to meet housing and employment development requirements sustainably clearly exist in and close to Chichester and on the key east-west movement corridor where – subject to effective measures being delivered to make these modes more attractive, efficient and relevant – sustainable modes can credibly provide for a much higher proportion of movement demands, mitigating most effectively the potential traffic impacts of development.

We agree that the Manhood Peninsula suffers serious environmental constraints, but, added to these, public transport and other sustainable modes cannot provide such attractive alternatives, and significant further development risks merely reinforcing already high levels of car use, aggravated by the carbon impacts of the distances involved – something the plan does very little to evaluate, and makes no reference to.

We endorse the conclusion in paragraph 3.24 that significant development in the part of the District north of the National Park is inappropriate. The rationale is principally on landscape and visual character. This exposes a fundamentally biased approach to plan making that has consistently underplays transport accessibility and carbon issues. In fact, the lack of local services and the extended distances that need to be travelled to fully participate in society in this area, with no realistic prospect of public transport offering relevant choices, ought to rule such a strategy out of play on a far less aesthetic and interpretational basis.

3.1. Policy S1 Spatial Development Strategy

Stagecoach Supports

The Spatial Strategy flows clearly and logically from the Spatial Portrait, and the opportunities and constraints identifiable across the Plan area. It represents a logical and justified continuation of the existing Local Plan strategy. In particular the spatial strategy maximises the potential for sustainable modes to contribute to meeting a much higher proportion of all the District’s mobility and accessibility needs.

3.2. Policy S2 Settlement Hierarchy

Stagecoach Supports

The settlement hierarchy clearly reflects the service endowment and potential self-containment of the settlements in the District. In particular, the second tier of settlement hubs includes secondary schools, which are major peak trip generating uses. Service villages, in the main, also benefit from bus services running at least hourly, which can be expected to provide for a degree of mobility for the higher number of trip purposes that cannot be satisfied by walking or cycling within the immediate locality. Thus, a level of development to meet local needs in this tier is relatively sustainable.

There is a quite broad range of settlements in this category. We have concerns that, north of the National Park, the Service Villages have no realistic public transport choice. These include Plaistow/Ifold, Kirdford, Loxwood, and Wisborough Green. Such as exists is typically a 1/bus per day off-peak shoppers service offering up to 90 minutes in Horsham or Guildford and as such any development here even to meet local needs requires each adult to own a car. This contrasts strongly with Service Villages to the south of the National Park, which are greatly more sustainable.

4. Climate Change and the Natural Environment

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This section of the plan is extensive and wide ranging, as should be expected.

However, remarkably, there is no acknowledgement whatever of the role of transport in mitigating climate change or its effects, not of the importance of sustainable movement and access being facilitated across the plan area in addressing anthropogenic impacts on the natural world at a more local level.

This exposes very clearly a troubling level of indifference to transport matters in the production of the Plan, which, while nationally quite common, is neither appropriate nor acceptable. The mitigation of transport impacts is not merely a matter speaking to the social and economic aspects of sustainable development. It is crucial to address the causes and effects of climate change that arise from transport, and personal mobility.

This is now well understood and at the centre of national policy, including the National Decarbonisation Strategy for Transport (July 2021) which at Section 5 commits the government to aligning land use planning and transport strategy much more tightly and effectively to mitigate the carbon emissions associated with the current dependence on cars, and the mode mix; but also to reduce travel distances, both increasing the potential relevance and effectiveness of all sustainable modes, and reducing average journey lengths for residual motorised journeys of all kinds.

National statistics show that well over a third of all domestic carbon emissions arise from land-based transport and of these, the vast majority arise from trips of over 10km – outside the range of large scale use of cycling. In fact, the potential of the plan to materially support carbon emissions reduction from within the plan area lies more in the realm of transport than any other policy theme – including emissions mitigation from buildings, which is in any event an aspatial matter and covered by nationally-binding building regulations. By 2025 something like 40% of all the emissions within the plan-area will be transport related.

There is no evidence supplied to support the plan that addresses the transport carbon impacts of the spatial development strategy in a clear manner.

There is no evidence supplied that sets out the effects of potential worsening of congestion on air quality within the plan area, arising entirely from the excess of passenger car movement demands over available and credibly deliverable highway capacity. This is despite the evidence set out and acknowledged in the explanatory memorandum at paragraph 4.130:

“4.130. The council’s Air Quality Action Plan and the West Sussex Transport Plan 2022-2036 both refer to the air quality issues faced by Chichester. There is currently one Air Quality Management Area (AQMA) in the plan area, located at St Pancras, Chichester. AQMAs are designated where air quality exceeds, or is likely to exceed, national air quality standards and objectives. Development within or impacting these areas, or that likely to cause the declaration of any further AQMAs, will be subject to an air quality assessment by the applicant.”

This is a retroactive approach – it is not “planning”, based on evidence.

We are well aware that air quality issues in and of themselves can render allocated sites to be undeliverable: a good example is in the Vale of White Horse, Oxfordshire, where strategic allocations on the A338 and A420 corridors have been held up for years by air quality issues at Marcham and Frilford, in large measure because agreed transport interventions were considered inadequate or undeliverable a very short time after the Plan was examined and adopted.

There is no evidence that shows how the development strategy can effectively mitigate these impacts as well as the further potential impacts that arise from the development strategy. This is exasperating, as there is clear evidence that could be drawn upon to show that that very substantial opportunities exist to:

- Speed buses up and make them more reliable by the delivery of bus priority on most of the key main corridors. Most of these even today operate relatively frequently
- Improve service frequencies and extend hours of operation.
- Secure significant background mode shift to bus as a result, damping pressure on key links and junctions, by consolidating demands on direct more reliable and more frequent bus services.

The spatial development strategy as submitted is in fact, likely to well conform to such additional evidence.

The allocations require substantial additional transport related work and evidence to demonstrate that the opportunities for sustainable transport have been identified and taken up as required by NPPF paragraphs 104-105.

With regards to specific policy, Policy NE22 should be modified to read:

“Development proposals will be permitted where it can be demonstrated that all the following criteria have been addressed:

1. Development is located and designed to minimise traffic generation and congestion through access to by maximising the relevance and attractiveness of sustainable transport modes, including maximising provision of specific demonstrably effective measures to make pedestrian and cycle and public transport routes and networks more direct, more safe, faster and more reliable;...”

5. Housing

5.1. Policy H1 Meeting Housing Needs

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

The presumption of the planning system is that local planning authorities should seek to meet their objectively assessed development requirements in full. These needs are assessed by a defined Standard Methodology set out in Planning Practice Guidance and elsewhere, that has explicit regard to ensuring that the economic and social effects associated with housing are properly provided for, to avoid exacerbating serious problems that arise from inadequate housing supply.

As a significant local service provider and employer, Stagecoach is concerned that existing issues with housing availability and affordable housing supply are not exacerbated. This has a direct bearing on staff recruitment and retention. It also has an indirect bearing on our cost base.

The existing problems with housing affordability have developed over many decades of undersupply. It should be emphasised that the significant boost to the supply of housing that has been sought by governments over the last 15 years, has only begun to take effect relatively recently in this District. Tackling the problem will require years of consistent attention.

Stagecoach notes that the Council is no longer proposing to meet its identified housing needs in full. Rather than 638/annum the Council is allocating a total that implies an annual delivery rate of 535/annum.

While a number of matters evidently present challenges to the Council in identifying a sustainable development strategy. Paragraph 5.2 indicates that “constraints, particularly the capacity of the A27 has led to the council planning for a housing requirement below the need derived from the standard method...” The blame for being unable to meet housing requirements is thus laid squarely at the door of transport infrastructure and systems.

This conclusion in no way follows from the evidence in the Chichester Transport Study. This, rather, makes the statement that when a higher annualised quantum of 700 dwellings per annum was tested, in the majority of cases the traffic capacity improvement package would perform little differently. To quote the Study:

“5.6.3 The network performance outputs analysed comprising V/C%, Delays (seconds) and Queues (PCU’s) suggest that generally the proposed SRN mitigation identified for the Core Scenario, can accommodate in the most part, additional increase in development to 700dpa.”

Whether the rest of the local road network is similarly protects is moot.

Irrespective of these results, even if the contention made in the draft plan were true, unlike many other constraints, this is amenable to a suitable

effective strategy to address the constraints identified being collaboratively conceived. This is what NPPF expects, as set out in paragraphs 104-106.

Where the A27 is concerned, as part of the SRN, National Highways is now working to a substantially revised approach than that in force at the time to current Local Plan was prepared, or LSS2, or reflected in the Chichester Transport Study. This is set out in DfT WMS 01/22. This document is the policy of the Secretary of State for Transport in relation to the SRN which should be read in conjunction with the National Planning Policy Framework (NPPF). It replaces the policies in the Department for Transport Circular 02/2013 of the same title.

It makes plain that to accommodate additional demands arising from development, National Highways (NHC) expects to meet the requirements of its statutory license in a substantially different manner. With respect to development NHC LTN 01/22 continues to address the tensions between national policy for the environment and carbon mitigation, the ongoing need to substantially boost the supply of housing as well as maintain national economic competitiveness and protect the safety of the public. However, in future, the approach will be to seek first to maximise the impact of demand management measures (reducing the need to travel), and then to accommodate residual additional demands first though maximising the use of sustainable modes, rather than accommodating assumptions about current levels of car dependency and use.

LTN 01/22 much more closely and explicitly aligns with the language of NPPF Chapter 9 paragraphs 104-106. Paragraph 12 states: "New development should be facilitating a reduction in the need to travel by private car and focused on locations that are or can be made sustainable.... Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas." (our emphasis).

It continues at paragraph 13: "where developments are located, how they are designed and how well delivery and public transport services are integrated has a huge impact on people's mode of travel for short journeys. The company will therefore expect strategic policy-making authorities and community groups responsible for preparing local and neighbourhood plans to only promote development at locations that are or can be made sustainable [footnote 8] and where opportunities to maximise walking, wheeling, cycling, public transport and shared travel have been identified." (again, our emphasis)

Stagecoach readily confirms that the draft Plan development strategy conforms well to the first limb of this expectation, in terms of the location of development.

Stagecoach considers that the plan and its evidence base conforms poorly to the second in that the specific opportunities to maximise walking, cycling wheeling and public transport are not clearly identified, and defined, and proven to be effective and deliverable.

The current mitigation strategy for the A27 Chichester area, supporting the adopted Local Plan and for which proportionate developer contributions have and continue to be sought, reflects now-superseded DfT Circular 02/2013. As a direct result, it failed completely to identify any significant effective bus priority measures, despite the fact that frequent services already exist on the key corridor concerned, and that one bus journey can remove, fully seated between 72 and 80 single occupancy car journeys from congested links and across key junctions on the A27. Rather, it sought to implement targeted measures to increase the throughflow of general traffic.

We recognise the realisation that this approach, which was already reliant on some tenuous logic, is simply not technically viable, especially where further development needs are anticipated.

National Highways will now pursue an approach with the planning system that "includes moving away from transport planning based on predicting future demand to provide capacity ('predict and provide') to planning that sets an outcome communities want to achieve and provides the transport solutions to deliver those outcomes (vision-led approaches including 'vision and validate,' 'decide and provide' or 'monitor and manage')." The company will support local authorities in achieving this aim through its engagement with their plan-making and decision-taking stages." (paragraph 15).

Paragraph 23 is at the fulcrum of assessing and defining transport mitigations to accommodate growth on and near the SRN "Capacity enhancements such as modifications to existing junctions or road widening to facilitate development should be determined on a case-by-case basis. The general principle should be accepted where proposals would include measures to improve community connectivity and public transport accessibility, and this will be weighed against any negative safety, traffic flow, environmental and deliverability considerations, impacts on the permeability and attractiveness of local walking, wheeling and cycling routes, and alternative options to manage down the traffic impact of planned development or improve the local road network as a first preference." (our emphasis).

However, no material work has been done that seeks to identify if a bold robustly conceived and suitable judiciously-prepared strategy that seeks to consolidate flows on already densely travelled corridor onto improved bus services, driving mode shift through insulating these services preferentially from already serious queuing. This would be likely to have very substantial impacts on all the key junctions on the A27, and potentially, on the A27 itself. The need for an integrated approach between Shoreham and Emsworth within West Sussex paying particular regard to development requirements in both Arun and Chichester Districts naturally lies at the heart of this, and we would expect to be picked up by the LSS3 Review among other things.

However, the locus of the problems and its causes and effects are obviously well enough known to start work on defining solutions within the plan area today. We would expect that this work will be essential if National Highways are to support the Plan, especially now given the terms of Circular 01/2022.

Such work could and should start from a "policy off" position: in other words that the Plan should fully accommodate its needs unless it can be proved that a mitigation strategy for the A27 that is compliant with DfT WMS 01/2022 cannot credibly accommodate resulting capacity demands without unacceptable impacts on the safety and efficient operation of the SRN.

This evidence does not exist. In fact the Chichester Transport Strategy 2023, on which the Council solely relies as its transport evidence base, indicates the opposite at para 5.6.3. This is the case before meaningful measures to secure damping of traffic demands through mode reassignment are even considered.

The exception to this is Portfield and Oving Road, which are among the most problematic areas after mitigation even at the Council's chosen 535 dwelling/annum scenario (para 5.6.4-5). The costly capacity mitigation simply cannot deliver enough benefit. It is admitted that WSCC has indicated that it would prefer a solution that places greater reliance on sustainable modes damping car-borne demand. This is entirely the strategy required by NHC to follow LTN 01/22, of course. Despite the fact that "predict and provide" has "run out of road" no attempt has been made to examine what such a solution set credibly could look like. This is unsatisfactory and deeply troubling.

At paragraph 5.4 the draft plan points back again at the West Sussex and Greater Brighton Strategic Planning Board and the future work that has been commissioned, but has barely begun, to update the Local Strategic Statement. This work is to inform the preparation of plans that have horizons beyond the end date of the current LSS in 2030 and properly to meet the Duty to Cooperate. As we said in our response to section 1 of the Plan we fully endorse the conclusion that this is the right mechanism to look at these issues. However, the mechanism has not been effectively applied to the production of this plan. Therefore, the specific evidence that capacity on the A27 in and of itself supports accommodating a lower housing requirement does not exist.

The Plan thus does not conform to NPPF, is not adequately justified and is not effective.

The Plan does not properly meet the statutory Duty to Cooperate.

We will return to this matter in specific representations to Section 7 of the draft plan.

5.2. Policy H2 Strategic Locations/Allocations 2021-2039

Stagecoach Supports

Policy H1 makes plain that the plan, as far as it identifies locations for development has done so in locations that conform with its spatial strategy. All of the strategic allocations to a greater or lesser extent offer clear opportunities to make use of sustainable modes, by virtue of their location. That is not to say that the opportunities to take up these opportunities, and maximise the role of sustainable modes, has been identified, defined and translated properly into the rest of the plan policy suite or Infrastructure Delivery Plan.

As our remaining representations make clear, we support the locations thus far identified as being those that offer the best opportunities to reduce the need to travel, reduce travel distances, and create high quality attractive sustainable travel choices, for both existing residents as well as new ones.

However, the transport impacts of the allocation will individually and cumulatively likely to lead to increasingly severe impacts on the transport network, and on bus services.

Perversely, because these opportunities are not properly identified and secured through the plan and its supporting transport strategy, the opportunities presented by the allocations to secure a substantially more sustainable and lower carbon pattern of movement will not only risk being squandered but may aggravate the wider problems.

5.3. Policy H3 Non-strategic Parish Housing Requirements

Stagecoach Supports

The approach is consistent with the plan's spatial strategy. It generally avoids a dispersal of development to locations likely to be highly car dependent. There is a clear focus on meeting housing needs in the far north-east of the District at the largest and most sustainable settlements, such as Loxwood, Kirdford and Wisborough Green. However, it must be pointed out that public transport availability in this area, provided by the County Council through services it procures, is minimal. These settlements in practice require each adult and child of secondary school age to have access to motorised transport to fully participate in society. This might justify significant measures to secure a boost in the frequency of bus services between Guildford and Billingshurst, passing through these settlements.

Otherwise, existing commitments in the plan area already make provision to meet for local needs. To the degree that there is an unmet local requirement for affordable housing of a small scale – for example to support the rural economy – this could be met through neighbourhood plans or through Rural Exception Sites.

6. Place-making, Health and Wellbeing

6.1. Policy P1 Design principles

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

NPPF requires that proposals should consider transport issues from the earliest possible stage. Designing to properly facilitate safe and efficient access, focusing first on sustainable modes, should be at the heart of development design. Too often it is still an afterthought, notwithstanding this. Policy P1 must include an additional statement to be compliant and effective with NPPF paragraph 104-105 and 112 a):

"Development will be designed to make access and movement using walking, cycling and public transport the natural first choice, and demonstrate through the Design and Access Statement how such modes are afforded the most direct, safe, reliable and efficient routes within to and from the proposals, especially when compared with car use."

6.2. Policy P4 Layout and Access

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

A number of proposals in the plan involve large-scale development. It is essential that where appropriate buses can access and circulate efficiently through development at a suitably early stage. There is no acknowledgement of this anywhere in the policy, contrary to NPPF paragraph 112.

Large-scale development which buses cannot access in an efficient or timely manner, or at all, strongly contributes to high levels of car-dependency. Evidence for this is referred to among other places, in DfT Circular 01/2022. To be compliant with NPPF and properly pursue its strategic Objectives, Policy P4 needs to be modified to address this point:

"1. Provide safe, direct and attractive conditions for inclusive access, egress and active travel between all locations and providing as good direct high quality links to integrated public transport, and where appropriate efficient access and circulation to bus services, unimpeded by excessive parking, at a suitably early point in the development phasing;

7. Transport and Accessibility

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

The issues related to transport are fundamental to the soundness of the Plan. In particular, the constraints presented by the capacity on the A27 around Chichester and its key junctions, are the paramount reasons why the Council does not consider it can meet its objectively-assessed development needs in full. Thus, the transport issues and potential solutions available and what these mean for the ability of development needs to be accommodated, are matters that go to the heart of the soundness of the Plan.

Paragraph 8.3 sets out the approach taken to date succinctly:

"Increasing the capacity of the road network is key to supporting growth in the Local Plan. However, there is also a need to reduce demand for road transport to achieve net zero in greenhouse gas emissions by 2050 as highlighted in the council's Climate Emergency Action Plan and Strategic Objective 1. In aiming to achieve the ambitions of the action plan, all development is expected to demonstrate how it will support four key objectives to create an integrated transport network which will alleviate pressure on the road network, improve highway safety, encourage sustainable travel behaviours and help reduce transport related impact on air quality, by:

1. Avoiding or reducing the need to travel by car;
2. Enabling access to sustainable means of travel, including public transport, walking and cycling;
3. Managing travel demand; and
4. Mitigating the impacts of travel by car."

However, this approach is unambitious and "lightweight" as it assumes, as does the existing Chichester Transport Strategy on which the current adopted plan relies, that the focus of investment should be, wholly, in highways capacity improvement.

Sustainable modes explicitly are expected to play a greater role to "alleviate pressure" on the local road network, as part of this strategy. To emphasise: to avoid exacerbating congestion, the strategy will have to both remove a significant proportion of existing demands from the network on multiple key approaches to Chichester; and then ensure that travel demands from committed and further new development allocated in the plan does not simply replace these journeys, or, worse, create even greater demands.

This will demand very significant behaviour change. Only by making sustainable modes substantially more attractive, both absolutely, and relative to the same journey made by car, can this be expected to occur. However, the explanatory memorandum as well as the wider policy suite and IDP, well expresses a fundamental unwillingness to taking specific, defined measures to achieve this reduction in car use and material promotion of sustainable modes. It makes plain that sustainable modes, including bus services, will offer a lesser role to which "access will be provided".

Such a vague and weakly defined mechanism will have no effect, at all, on current behaviour and car dependency if the relevance of those choices as a credible alternative to car use, is not substantially boosted. This includes a 5% reduction in trip demand assumed by the Traffic Model at the heart of the Chichester Transport Study 2023.

For this reason, the transport strategy behind the current adopted plan is demonstrably ineffective, as the updated model makes plain. It has not yet been delivered and is yet unclear when or (in the absence of committed funding) even if it can be. It is ineffective to "roll forward" this strategy to support a higher level of planned growth.

We note that a scheme for addressing congestion on the A27 at Chichester has been included in Roads Investment Period 3 (2025-2030) – well within the horizon of this Plan. However, recent history provides compelling evidence that off-line improvement to the north is not politically supported and arguably even technically or economically deliverable. It is not funded, nor at this stage can it be hypothesised if an economically deliverable scheme is achievable sufficient to warrant the necessary investment.

An on-line improvement of the A27, including junction improvements, is likely to favour longer distance east-west through movements, which are of greater significance to the national economy, at the expense of local movements crossing the SRN- a conundrum that largely sums up the dilemma that is faced by NHC and the County as Highways and Transport Authority. It is one that is played out in many places, but rarely is the tension so stark as at Chichester.

Every local route crossing the A27 at grade around Chichester accommodates a regular bus service - or shortly will do (Oving Road area is expected to follow in 2023, though bus services are likely to not use the modified crossroads but to use the left-in-left-out facilities provided as part of the Shopwhyke Lakes development). The impact of these issues on the entire bus operation are serious and increasingly severe.

By the same token, boosting the relevance and reliability of each of these services substantially consolidating as much demand as possible onto a much smaller number of vehicles, is clearly a strategy that ought to support the effective capacity of each of these junctions being greatly augmented, at the same time as reducing equally substantially, the energy- and carbon intensity of mobility in the plan area. Addressing the A27 should not be considered some kind of "zero-sum" game.

Furthermore, the approach of National Highways in its dealings with development and the planning system now reflect a substantial change in Government Policy set out in DfT Circular 01/2022, which we separately cover in these representations, that entirely aligns with an approach that seeks to appropriately invest in more active and rational management of scarce highways capacity, on both the SRN and local roads.

For environmental, economic and social reasons – including public health, the issues presented by the A27 and its interface with local roads around Chichester stands out, nationally, as an example of where the approach taken to accommodating and mitigating development impacts needs to make a clear break with previous "predict and provide" approaches to meet forecast unconstrained car use as LTN 02/2022 makes clear as a principle. Policy in the West Sussex LTP to 2036 itself makes plain that "shared mobility" – including bus services – must play a much greater role in this area.

The existing Chichester Area Transport Strategy is focused on justifying capital contributions from committed development to fund highways capacity improvement – with nothing included to make bus services more attractive, or importantly more reliable. Indeed this "cars first" approach is so costly, that there is already accepted by WSCC to be insufficient land value remaining to be captured to put into substantial improvements for public transport. That much is very evident, and transparent, from paragraph 8.12 and 8.14, where south of Chichester "This (one) package of works (of several improvements needed) would be between £57.23 and £82.79 million to deliver in full and would not be capable of being funded by development contributions alone." This assumes the scheme is otherwise deliverable, which on the evidence in the public domain for some time, has been considered challengeable.

The draft Local Plan and a modestly updated infrastructure package that flows from the 2023 Chichester Transport Study, pursues exactly the same approach.

This strategy is also even more ineffective having regard to the roll forward of the Plan to 2039. It cannot deliver the key Strategic Objectives of the Plan; and in particular this is explicitly recognised by the Council in the failure of the draft Plan to accommodate the OAN in full.

It is also obsolete, as it does not align, from first principles, with national policy (including the National Decarbonisation Strategy for Transport) and DfT Circular 01/22; nor the Council's own declared Climate Emergency.

As a result, draft Policies T1 and T2 are both unsound, as we will separately explain.

Owing to the lack of evidence about the implications of this for adjoining authorities – especially Adur District – in the absence of the review of the Local Strategic Statement – this has implications for fulfilling the Statutory Duty to Co-operate.

The absence of any meaningfully comprehensive refresh of the transport evidence base means that there are no meaningful schemes of any kind, defined in the plan or its IDP, to indicate either what level of growth can be accommodated, by delivering a change in travel behaviour. This would be aimed to secure a sufficient effective increase in junction throughput (measured in terms of person trips as opposed to passenger car unit movements (PCUs)). Such evidence would propose measure to achieve that outcome and assess the efficacy and costs of such improvements, across all modes.

Paragraphs 8.10-8.13 inclusive indicate that the Council "has moved away from 'predict and provide'" and invites the reader to conclude this has translated into a programme of interventions that can be funded to deliver specific, credibly predictable outcomes. Such a programme should be clear in paragraph 8.11. and the IDP. There is no such clarity and this conclusion would be false.

It would also be evident in the language of the Chichester Transport Study 2023 and its refreshed proposals. Only the most token of lip service is paid to the matter. It is a plainly car-focused, predict and provide methodology to support a “predict and provide” strategy. In fact, it is a brazenly car-focused approach, to the exclusion of all else.

The statements in the Plan regarding any other approach, read properly, offer nothing more than a vague commitment to look post-adoption, and implementation, at unspecified measures, based on problems that may arise in future that will be decided by a committee: the Traffic and Infrastructure Management Group (TIMG). This does not yet exist and is obviously an attempt to posit a mechanism that retroactively will cover for the lack of serious multi-party engagement to address the existing and future issues. Such a group should, in our view, also include the public transport operators, not least if the requirements of NPPF Para 106c) are to be satisfied, and the strategy and measures to be adopted are material to supporting the Local Plan, as of course the purpose of the TIMG has as its core *raison d'être*.

The approach proposed by the draft plan is plainly ineffective and unsound in justifying the draft Plan.

It is more widely unacceptable to Stagecoach. The issues are severe today and well-known, already serving to jeopardise the delivery of buses relied on by existing residents, much less attract new ones.

We also consider that HM Planning Inspectorate are likely to be quite resistant to accepting this aspect of the plan’s transport strategy, nor will it be appropriate for the Council, West Sussex County Council, or National Highways, to define such measures after the submission of the Plan during the Examination process. The Examination in Public of a local plan has no purpose to improve plans, or remedy deficiencies clearly evident prior to submission.

The examination of the West of England Joint Strategic Plan in 2019, and the Uttlesford Local Plan in 2021, among several others, demonstrates especially clearly that the Planning System and the Examination process is not amenable to post-hoc retrofitting of transport evidence and strategies to support a development strategy.

7.1. Transport Evidence Base

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Most of Stagecoach’s serious concerns about the soundness of the plan arise from the fact that it has been prepared in advance of any up-to-date transport evidence and suitably robust transport mitigation strategy being advanced to support it. In essence, the Council has rolled forward the existing plan by 9 years, adding some additional sources of housing supply, while still relying implicitly on a transport evidence base that was prepared 10 years ago.

This led to the formulation at that time of what can only be described as an attempt to develop an effective car-based mitigation strategy, creating capacity for general traffic added to accommodate unconstrained additional demands on an already over-taxed highways network – the Chichester Area Transport Strategy. Despite language in support of sustainable modes, no deliverable measures were identified to support either the extension of the bus network to serve allocated sites, and much less to create a vital improvement to the quality and reliability of public transport services. This approach reflected the approach set out in DfT Ministerial Circular 02/2013 “Development and the Strategic Highways Network”, applicable since the A27, which is the focus of the most severe difficulties, forms part of the national Strategic Roads Network.

This approach has proven ineffective even before substantial elements of housing land supply in the current plan come forward – in particular West of Chichester and West of Tangmere.

In addition, Circular 02/2013 has now been replaced by a new Ministerial Statement of 23/12/2022, DfT Circular 01/2022.

On both counts the transport evidence base and strategy needs to be properly revisited and established to provide effective mitigation for the plan, including current commitments that are being rolled forward.

The language of the current Ministerial Circular 01/2022 offers a highly condensed synoptic view of the proper approach to addressing transport matters in the planning system notwithstanding that it is directly concerned with the Strategic Roads Network. *Videlicet*:

“31. The NPPF expects local plans and spatial development strategies to be underpinned by a clear and transparent evidence base which informs the authority’s preferred approach to land use and strategic transport options, and the formulation of policies and allocations that will be subject to public consultation. The company will expect this process to explore all options to reduce a reliance on the SRN for local journeys including a reduction in the need to travel and integrating land use considerations with the need to maximise opportunities for walking, wheeling, cycling, public transport and shared travel.

32. The Transport Decarbonisation Plan indicates that carbon emissions from car and van use is the largest component of the United Kingdom’s total transport emissions. While action is being taken to decarbonise transport such that all new cars and vans will be fully zero emission at the tailpipe from 2035, the proposed location of growth in current plan periods and whether new developments would be genuinely sustainable remain important factors in demonstrating that a local authority area is on a pathway to net zero by 2050 and therefore compliant with the requirements of the Climate Change Act 2008.

33. Alongside this, the local authority should identify the key issues within their study area regarding transport provision and accessibility, setting out how the plan or strategy can address these key issues in consultation with (National Highways, and other transport stakeholders identified in NPPF paragraph 106b). It is the responsibility of the local authority undertaking its strategic policy-making function to present a robust transport evidence base in support of its plan or strategy. The company can review measures that would help to avoid or significantly reduce the need for additional infrastructure on the SRN where development can be delivered through identified improvements to the local transport network, to include infrastructure that promotes walking, wheeling, cycling, public transport and shared travel. A robust evidence base will be required, including demand forecasting models, which inform analysis of alternatives by accounting for the effects of possible mitigation scenarios that shift demand into less carbon-intensive forms of travel.” (our emphasis)

Within the text quoted above, references to National Highways and “the Company” can quite legitimately be extended, given the statements in NPPF paragraph 16, 25, 26 and 106b, to include all the relevant transport infrastructure and service providers in the plan area. Circular 01/2022 also has the weight of secondary legislation as a Written Ministerial Statement and thus should be considered to be highly material.

To date there has been little attempt to explore, to the degree necessary, strategies that conform to Circular 01/2022. It is thus not possible to conclude, as the Council has done, that the issues on the A27 that present a constraint to development, are insuperable.

In line with comments made elsewhere in the response to this pre-submission draft, the Plan thus requires substantial further work to be undertaken with key stakeholders to establish a suitably effective and demonstrably deliverable transport mitigation strategy, to sustainably meet the District’s

identifiable development needs and where apparent and appropriate, also ensure that wider cross boundary strategic issues are appropriately addressed, in conformity inter alia, with the Duty to Cooperate, NPPF paragraph 16 and 104-111 inclusive, and DfT Circular 01/2022 and to ensure the Plan's own Strategic Objectives can be met.

7.2. Policy T1 Transport infrastructure

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

As described in comments elsewhere, Stagecoach does not see that a suitable proportionate and up-to-date basis exists to properly and appropriately address the transport issues in the plan area.

The 2023 Transport Study does not perform this role adequately but, contrary to the explanatory memorandum, is a scheme intended only to facilitate car-borne movements through some of the key junctions. There is no evidence that an holistic integrated and strategic approach to transport mitigations has been prepared. Certainly Stagecoach has not been involved in any of the discussion about appropriate transport measures in support of the plan, including the Transport Study 2023, contrary to the expectations set out in NPPF at paragraph 16 and 106.

Notwithstanding out fundamental concerns about the transport evidence case and mitigations strategy, Policy T1 reflects a weak and ineffective approach, that seeks to try and define a strategy post-adoption.

Contrary even to the explanatory memorandum for the policy, which seeks to maximise the contribution of sustainable modes, the policy is phased in such a way that it gives basis for previous "predict and provide" solutions to facilitate and support current levels of car dependency – already shown to be undeliverable and unaffordable – will nevertheless be the first rather than the last resort. There is no commitment to seek to maximise the contribution made by sustainable modes to meeting mobility needs. Nor is there any recognition that current chronic congestion and lack of network resilience jeopardises the ongoing attractiveness and long- term sustainability of the current public transport offer.

To be effective and create alignment with national policy, and also provide for an up-to-date transport evidence base and strategy to be adduced, Policy T1 should be modified to read:

"Integrated transport measures will be developed to mitigate the impact of planned development on the highways network, improve highway safety and air quality, promote more sustainable travel patterns and through providing in the first instance, new and improved infrastructure and services that will be credible effective in maximising the encourage increased use of sustainable modes of travel, such as public transport, cycling and walking.

To achieve this, the council will work with National Highways, West Sussex County Council, other transport and service providers (including through the Traffic and Infrastructure Management Group) and developers to provide a better integrated transport network and to improve accessibility to key services and facilities...

All parties, including applicants, are expected to support these objectives by:

1. Ensuring that new development is well located and designed to avoid or minimise the need for travel, encourages maximises the use of sustainable modes of travel as an a credible alternative to the private car and directly provides or contributes towards new or improved transport infrastructure;
2. Working with relevant transport infrastructure and service providers to improve accessibility to key services and facilities with primary emphasis on sustainable modes, and to ensure that new facilities are easily accessible by sustainable modes of travel;
3. Targeting investment to provide local travel options as an that represent a clearly credible alternative to the car use, focusing on the delivery of improved integrated bus and train services, and improved pedestrian and cycling networks, including the public rights of way network, based on the routes and projects identified in the Local Transport Plan, West Sussex Bus Service Improvement Plan, Local Cycling and Walking Infrastructure Plan (LCWIP) and the Infrastructure Delivery Plan;
4. Planning to achieve the timely delivery of transport infrastructure on and approaching the A27 and elsewhere on the network, needed to support new housing, employment and other development identified in this plan;
5. Phasing the delivery of new development to align with and where possible facilitate the provision of new and improved transport infrastructure and services and the outcomes of monitoring travel demand on the network, including that arising from areas immediately adjoining the plan area. It may also be Where necessary to achieve this alignment proactively phase development will be phased to take into account the monitoring and effectiveness of travel plans demands on the network and to ensure that measures are implemented to support the highest possible level of encourage sustainable travel behaviour.;
6. Using demand management measures, such as travel plans, to manage robust methodologies to assess travel demand and minimise the need for new or improved transport infrastructure as part of the monitor and manage process.
7. Delivering a coordinated package of infrastructure improvements at and approaching to junctions on the A27 Chichester Bypass along with other small-scale junction improvements interventions within the city and elsewhere, as identified through the monitor and manage process. These will increase road capacity, reduce traffic congestion, improve safety and air quality, and improve access to Chichester city from surrounding areas, first by maximising the contribution of sustainable modes to meeting mobility demands, then, and only as evidenced by robust modelling and option testing, providing increased highway capacity for general traffic.

..."

7.3. Policy T2 Transport and Development

Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Section 1 b) of T2 will be ineffective as, absent measures to ensure buses can run reliably and efficiently, improved bus services will not be possible, in support of the plan's own stated broad approach to transport mitigation, as well as wider local and national policy.

The draft policy does not require improvements to the quality of services such that sustainable choices will be materially more attractive than car use for many local journeys. Without this the Plan's Strategic Objectives cannot be fulfilled and the objectives of the Plan and this policy, read in its own terms, will not be realised, where reduction in private car use is concerned. It is thus ineffective.

Absent measures to make bus services more reliable and more efficient, by insulating them from chronic congestion as far as possible, still further operating resource and therefore costs, will be needed to just to reliably run existing service frequencies, and capacity, as vehicle productivity continues to be more and more adversely affected by chronic delay. This will be further aggravated by increasing incidence of severe unpredictable service breakdown arising from incidents of diverse kinds on the network, especially on or around the A27, including that arising from more regular severe weather events. Longer journey times can only be expected to lead to relative disadvantage of bus services compared to personal car use, entirely contrary to the objectives of national and local policy, including Policy T1. It can also expect to lead to a dampening effect not on car use, but on bus patronage, threatening the ongoing viability of bus services across the plan area.

Section 1 b) of T2 should be modified to read:

"b) Maximise opportunities for the use of sustainable travel modes through provision of direct and efficient access both to either the existing networks or and through providing such new infrastructure or public transport services, as can be credibly expected to reduce reliance on the private car and work towards achieving net zero in greenhouse gas emissions by 2050;"

Section 1 d) of T2 will be ineffective as the location of development is fixed by this plan. We commend the fact that all the strategic allocations are or will be served by regular bus services.

However, the use of public transport services, where available, depends on the relevance and reliability of these services. Furthermore, provision of services without them generating sufficient patronage to support their long-term operation also threatens the sustainability of the plan and its supporting transport strategy. This is especially true of new services such as those intended to serve West of Chichester and Tangmere and East of Chichester Strategic Allocations.

This can only be assured by the plan being supported by specific measures to ensure buses can operate efficiently and reliably on the existing and projected services intended to serve the developments concerned, and also at the same time secure behavioural change from existing development.

To be sound and effective, the policy T2 1 d.) should be changed to read:

"d) Ensure major development is located to proposals and the supporting mitigation measures enable the use delivery of high-quality, reliable and effective public transport to present the most relevant possible choice to access local services and facilities including employment, leisure and education facilities";

The Policy T2 makes no provision for buses, where necessary, to enter and make efficient and safe progress through major development sites. The plan is thus out of conformity with NPPF paragraphs 104-106. It makes no provision to ensure that penetration of bus services is achieved at a suitably early point in the development trajectory, undermining the achievement of the goals of the Plan and this specific policy. As a good example, West of Chichester Phase 1, currently under construction, cannot be served by buses as a strategy to effect interim bus penetration was never made.

Policy T2 1 f.) should therefore be amended to read:

f) Ensure that the layout and design of the site development proposals provides effective penetration of the site by sustainable modes, at all points in the development build-out, including public transport where appropriate; and sufficient space for all vehicles to manoeuvre without compromising the safety of pedestrians and cyclists, the efficiency of bus services, or the ability to provide an appropriate level of landscaping across the site"

Policy T2 3.) regarding Travel Planning depends entirely on its effectiveness on the quality and relative attractiveness of sustainable alternatives over car use. In the absence of efficient frequent, reliable and direct public transport services (or similarly, high quality facilities for active travel, Travel Plans will continue to be the entirely ineffective "tick box" exercises that they generally are today, evidenced by much lower levels of public transport use in most new developments than it seen in nearby established neighbourhoods, as demonstrated broadly by Census data in 2011, 2011 and 2021.

For this policy to be effective an up-to date transport evidence base and strategy, underpinning a series of specified interventions to promote the relevance and effectiveness of all sustainable does including public transport in particular, needs to be put in place.

8. Chapter 9 Infrastructure – Policy I1 Infrastructure provision

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Policy I1 could not expect to be effective without a clear understanding of the effectiveness and costs of a defined series of measures that are laid out in this Plan and its IDP, to mitigate the transport impacts of the development strategy.

Where the Chichester Transport Study is concerned the only meaningful work has focused on the definition and delivery of a range of highways capacity schemes mainly on the A27 around Chichester.

As we have discussed elsewhere the effectiveness of these schemes is insufficient as set out at Tables 8.1 and 8.2 of the Chichester Transport Study 2023. The plan itself admits that the deliverability of this package cannot be afforded by developer contributions alone.

The Chichester Transport Study 2023 does not attempt provide a realistic assessment of costs to deliver these schemes, despite the fact that they have been under evaluation for many years. Nor does it offer any assurance that the schemes are technically achievable. Rather, it states the opposite:

"9.2.3 No investigation has been carried out into specific land ownership details, or into the location details or cost of moving statutory undertakers and utility apparatus within the areas of the scheme. No design assessments were carried out at this stage to ascertain the deliverability of the proposals except where any Health and Safety concerns were raised."

Thus on the grounds of effectiveness, deliverability and affordability, the measures on which the Plan relies must at the very least be considered to involve an exceptionally high level of risk. Since Policy I1 is founded on these assumptions, it cannot be considered effective.

As we set out elsewhere, the Plan has been advanced on the basis that if any additional sustainable transport measures are required, these mitigations should be retroactively considered and defined after adoption of the Plan. In the light of the doubts that are apparent of both the deliverability, affordability and effectiveness of the Chichester Transport strategy this is especially unsatisfactory even if existing baseline conditions were reasonably acceptable.

However, the Chichester Transport Study 2023, as did its predecessors, makes plain that that existing problems are acute, and can rightly be considered "severe" in the sense of NPPF paragraph 111. Waiting to define deliverable affordable alternatives is an entirely inappropriate approach to the local plan transport mitigation strategy. Such an approach also makes it impossible to consider prior to adoption how far the transport impacts of the plan can be cost-effectively mitigated by alternative means, or whether they are deliverable having regard to technical achievability, land control, development viability, or any combination of the above. Thus, the plan cannot be considered justified, or effective.

Given the mutual dependence of development strategies in Chichester and Arun in particular on these measures this should be seen as crucial of the fulfilment of the Duty to Cooperate.

The remedy for this is ultimately to put in place a suitable transport mitigation strategy following a strategic appraisal of options through review of the LSS. This then must be supplemented by more detailed development specific and localised scheme definition, including, where necessary, bus priority and other measures to support the substantial promotion of the attractiveness of public transport in key bus corridors over private car use. This would then be reflected by costed proposals in the IDP.

Leaving these fundamental weaknesses to one side, even if such a strategy and mitigation package were defined, there is no mention of public transport in the policy even though it is clearly a key part of the policy environment and mitigation strategy for the plan as expressed in the explanatory memorandum for I1, but also at Policies T1 and T2. I1 thus does not effectively support the realisation of the intent of Policies T1 and T2.

Policy I1 iii) should therefore be modified to read:

“(iii) Safeguard the requirements of infrastructure providers, having regard to requirements within and where appropriate across the boundaries of the plan area, including but not limited to:

...
• Highways including specific measures to accommodate improved active travel and public transport level of service and cycle lanes, and...”

At limb v) the Policy expects developers to meet the “in perpetuity costs of operating and maintaining infrastructure”. This shackles development management decisions to developers assuming what are infinite costs – given that “in perpetuity”, read properly, can only mean “without any limit in time”. This means that it is impossible to meet the statutory tests on developer obligations set out in the Community Infrastructure Levy Regulations 2010 (as amended) at Regulation 122, also repeated in NPPF. This policy cannot be lawfully implemented and it is thus ineffective.

In the absence of an up-to-date transport mitigation strategy that is fit for purpose, at the point the Plan is examined these costs of any additional infrastructure are not known in any case. The strategy and its costs, including its affordability and deliverability, are crucial to assessing if the Plan is sound.

Subject to an appropriate defined transport mitigation strategy being arrived at, to be sound, the Policy I1 v) should be modified as follows:

(v) To consider and meet as appropriate the in-perpetuity delivery costs of infrastructure and, where appropriate, improved services, to the point where its long-term operational sustainability is credibly assured from mainstream sources. Where adoption is not envisaged by local authorities, that must include arrangements for its future ongoing management and maintenance;

9. Strategic and Area Based Policies

9.1. Policy A1 City Centre Development Principles

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Chichester City centre is rightly identified at 10.2 and 10.4 as the commercial and service hub of the District. It is also acknowledged to be the most accessible place in the District by sustainable modes, public transport in particular.

Boosting the vitality of the city centre is something that Stagecoach strongly supports. Irrespective, the enhancement of the commercial and cultural life of the District in the place where these opportunities can be accessed broadly by sustainable modes, is one that has long been at the heart of national planning policy for town centres, reflected in the “town centre first” approach to locating major trip generating uses.

Paragraph 10.5 exposes an unbalanced and unsound preoccupation with aesthetic matters in its approach to the town centre, and far too little to ensuring that the central place function is enhanced through protecting and enhancing the quality of public transport access.

The city is relatively small but at the heart of an extensive hinterland, and thus the role of bus in supporting sustainable access to and enhanced city centre venue is one that needs appropriate recognition and emphasis. It is important to note that a dominant number of key service and facilities such as the General Hospital are relatively close to the city centre. This directly contributes to driving travel demand into the city, causing congestion. Most importantly, it also makes the task of mitigation simpler, given the impact a suite of active and sustainable measures can have within the same close proximity.

Policy A1 does not provide this. As such, achieving the strategic objectives of the plan is seriously threatened, and the plan is thus not effective.

The Plan needs to ensure that the approach to city centre regeneration maintains and enhances public transport access, interchange and inter-modal connectivity. It also needs to ensure that bus service stopping and interchange facilities are able to address increases in future demand, anticipated by the clear intent expressed elsewhere in the Plan that public transport should be meeting a greater proportion of mobility needs, in a growing district. Achieving this demands an ambitious approach to the location, quality and capacity of bus stop and interchange.

We have been in discussions with the District Council about this, alongside West Sussex County Council, for a very considerable period. Stagecoach has always been keen to help facilitate the Council’s aspirations for the city centre, and we continue to hold this intention. However, this cannot be at the expense of a material diminishing of the convenience and fitness-for-purpose of bus stop infrastructure and interchange. Stagecoach has significant concerns that current proposals to remove the bus station and have all bus services operate from the street kerbside, on an inner distributor road with similar or reduced net stop capacity, fall short of promoting attractive, convenient bus access to the central area as a destination.

For the longer term and where the objectives of the draft plan are concerned looking ahead to 2039, they clearly fall short of enhancing the convenience and attractiveness of public transport use. Much less do they make sufficient provision for a material increase in bus frequency, connectivity, and interchange convenience, on which the draft plan explicitly relies. It is vital that the District Council is clear in policy about its objectives for public transport in the city centre. These objectives must also carry sufficient weight when held in tension with other aspirations for the centre and the constraints on achieving them.

For the Plan to be sound, properly effective and compliant with NPPF, the approach to the City centre cannot ignore its role in the provision of sustainable transport service and connectivity.

Policy A1 should therefore be modified to properly reflect this crucial function, on which the vitality of the city centre must increasingly depend if unacceptable impacts on congestion, air quality and amenity are not to arise. This is still more crucial if wider aspirations to secure a more sustainable society and mitigate carbon are to be achieved.

"...This will include provision for development and proposals that:

- Support and strengthen the vitality and viability of the city centre and its role as a shopping/visitor destination, employment centre, public transport hub and a place to live;
- Support and promote facilitate improved access to the city and with increased emphasis on sustainable modes of travel, with particular regard to enhancing the public transport interchange role of the city centre area, in accordance with the transport strategy for the city and..."

9.2. Policy A3 Southern Gateway Development principles Chichester Bus Station, Bus Depot and Basin Road Car Park
Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

There has been aspiration to redevelop the bus station and nearby bus depot from many years. Stagecoach has been engaged with detailed discussion with the District Council on this matter over a very extended period. We confirm that these discussions have reached a relatively mature stage, however at the time of writing are not concluded.

Stagecoach recognises and supports in principle the Council's wider aspirations for the "Southern Gateway", and this has governed our approach to the Council to date. We continue to have no "in principle" objection to relocating our administrative, engineering, operational and customer service facilities.

Leaving our proprietary interests entirely to one side, it remains vital that in so doing, the effectiveness, attractiveness and convenience of these facilities is not compromised, as we have outlined in our representations to Policy A1, if wider national and local transport policy, and the local plan strategy itself, are to be effectively achieved.

The depot is crucial infrastructure to support the safe, reliable and legally-compliant operation of Stagecoach bus services over a very extensive area covering the entirety of the District and beyond. Without securing equivalent facilities, that are fit-for-purpose, many of our services would have to cease.

If buses are to provide a greater and more attractive level of service (still more so if they are to be electrified) larger, more capable depot facilities, and city centre bus interchange facilities will be necessary.

Notwithstanding that the bus station and depot sites are leased from the District Council, these leases terminate well beyond the end of the plan period.

Finding suitable sites for a replacement bus depot in Chichester, in common with all similar localities especially in southern England, is extremely challenging. As a sui generis use, bus depots do not automatically benefit from policy support on land allocated for employment uses. Most bus depots benefit from being legacy assets established under very different economic conditions. That is the case here. The value of a depot site for redevelopment net of demolition and remediation costs, rarely approximates to that able to sustain the acquisition of land in a tight wider employment land market, and the construction of suitable new facilities.

Furthermore, the costs of operating bus services are sensitive to the parasitic costs of vehicle and staff hours and mileage associated with "dead running" to a remote depot location from the operational network. Here, the existing depot site is ideal, and any replacement will unavoidable add ongoing operational costs to the operation that cannot be directly recovered.

We confirm that a replacement depot site has been identified and has in principle been agreed, subject to overcoming issues with the disposition of existing and future structures on the site. However, the site is recognised as not capable of accommodating meaningful operational expansion. This is just one of the most important foundational reasons why a positive transformation of bus productivity needs to be achieved, across the plan area and beyond, to support delivery of greater bus mileage and frequencies with the same level of operational resource. At the time of writing, we are not fully convinced that the proposals for the relocation will be sufficiently fit-for-purpose in the event the above is not achieved. Thus, we must raise a concern that the bus depot site might not be available during the plan period. While there is a strong probability it will be, the certainty surrounding the availability of the site, especially within the first 5 years of the plan, needs to be made transparent.

9.3. Policy A4 Southern Gateway - Chichester Bus Station, Bus Depot and Basin Road Car Park
Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Regarding the removal of the bus station, without equivalent replacement, Stagecoach has significant concerns. Pressures and conflicts at the current bus station site have been gradually rising for several years, arising from increasing use and the need for additional scheduled vehicle layover periods to reduce the risks of accumulated late running from traffic congestion. Peak passenger volumes have recovered strongly on several routes, however passenger accumulations resulting from more frequent delays and disruption have added substantial further pressure on limited space.

Under current plans, buses and bus passengers will be displaced to bus stops at new locations outside the city centre, along Avenue de Chartres. This road was always intended to be a relatively high-speed traffic route, outside the historic core of the city. The city centre has evolved in the subsequent years to reinforce already strong natural severance, with the highway lying beyond the city walls and the green space along the Lavant. It is a traffic dominated, unsurveyed and unattractive environment, reflecting the intended function of the road as an efficient movement corridor for high traffic volume, and nothing more. Avenue de Chartres is relatively close to the rail station and pedestrian connectivity can be provided at broadly equivalent distance to the current bus station, but again it is unsurveyed and currently unpleasant, lacking natural legibility or any sense of prominence.

We understand kerbside capacity on Avenue de Chartres will be strained even to accommodate current levels of service, with no expansion possible. There is therefore a strong probability that to accommodate more frequencies and key new routes, such as West of Tangmere, East of Chichester and West of Chichester allocations, additional future bus stops must occupy a different location. This makes interchange between routes and rail services substantially challenging and less attractive.

The emerging arrangements risk marginalising public transport and public transport users substantially. This strongly undermines achievement of the wider plan objectives and delivery of a significantly greater role for public transport. If substantial public transport growth is to be accommodated in a growing city and hinterland, as the draft plan anticipates, then a more ambitious strategic approach must be taken. This should plan for additional and improved facilities to accommodate all services predicted to be required, whilst enhancing the passenger experience to ensure meaningful and attractive modal choice.

There is therefore a need for the plan to evidence how these issues will be appropriately resolved, having regard to a suitably ambitious approach that properly supports clear objectives to boost the relevance of public transport. The current policy is weak, unspecific and indifferent to achieving the strategic objectives of the plan, including a transport strategy in support of the plan, and as such it is ineffective.

Policy A3 should therefore be modified to read:

"...

- Be designed to encourage and facilitate substantial increase in the use of active travel and public transport to, from and through the city centre.

..."

In line with the commentary above Policy A4 should also be modified to read:

3. Enhance the public interchange function of the immediate area, the public realm, particularly connections to the railway station and the city centre via South Street, Southgate and Basin Road for pedestrians, cyclists and public transport users, and to National Cycle Route 2 and Route 88 which run close by. Suitable replacement bus stops and layover facilities should be provided to replace those at the bus station in line with reflecting the objectives of the West Sussex Bus Service Improvement Plan, and to facilitate growth to meet the requirements of the plan's development strategy. Routes and crossings should reflect pedestrian desire lines, and public art should be incorporated to create a sense of place;

4. Enhance the public realm, in support of this and wider objectives, incorporating public art and other measures to create a strong and attractive sense of place.

...(renumber remaining points)

9.4. Policy A6 Land West of Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

This is an existing Local Plan allocation. The public transport strategy for the site depends on the delivery of the second phase which Stagecoach notes is the subject of several applications now awaiting review and determination by the Council.

The site represents a compact form of development adjoining the city, as the most sustainable settlement, meeting housing needs close to where they arise, and affording very good opportunities for the use of sustainable modes, especially walking and cycling.

It is vital that a bus service is delivered to serve the site at the earliest potential. This was anticipated to be at the start of Phase 2 and will require the early delivery of the entire length of the spine road between the Old Broyle Road and Westgate and making it available for bus services.

It is not clear if the costs of pump-priming the service mentioned in the draft policy are anticipated to be met by the developer. Without such funding, the service will not be deliverable as years of losses will never credibly be covered from future profit. It is likely that the current wording will be interpreted by the developer as meaning that they have no such obligation binding upon them. Not does policy set out any specification for this service, thus its costs and the basis for securing developer contributions does not exist.

As such any wider transport strategy, that seeks to secure a greater role for the use of public transport, and the aspiration for this allocation cannot demonstrably be met. The policy is ineffective.

Policy A6 should be modified to read:

"

10. Make provision to accommodate and secure delivery of for regular bus services linking running through the site to Chichester city centre operating at least every 30 minutes Monday-Saturday, and new and improved cycle and pedestrian routes linking the site with the city,

..."

9.5. Policy A7 Land at Shopwhyke

Stagecoach Supports

This is an existing Local Plan allocation, largely built-out, that benefits from an existing set of permissions.

The public transport strategy for the site depends on the delivery of effective bus priority at Oving Crossroads. The current recently implemented scheme, undertaken by National Highways, makes no provision for effective bus priority and needs considerable re-evaluation.

The site represents a compact form of development adjoining the city, as the most sustainable settlement, meeting housing needs close to where they arise, and affording very good opportunities for the use of sustainable modes, especially walking and cycling. It lies on a new bus corridor that will shortly be put in place, running to Tangmere via Shopwhyke. The allocation is being significantly consolidated by further development in the immediate vicinity which strongly supports the potential for this new service.

As we explain in our representations for East of Chichester proposed allocation A8, and West of Tangmere Allocation A14, a clear corridor strategy to effect bus priority is needed, that should be delivered in support of that further growth, and that at Tangmere SDL. However this allocation is a near complete commitment and there is no scope through policy regarding this land to effect this outcome.

It is notable that Point 6) of policy A7 makes mention of a bus service. This language reflects the currently adopted Local Plan policy and has underpinned the existing permissions. The failure of any bus service to be delivered demonstrates from first principles that this Policy has been entirely ineffective. It is important that lessons are learned from this in the Local Plan Review.

9.6. Policy A8 Land East of Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This proposed allocation lies next to unallocated land that is already consented as a departure from the adopted development plan, with 143 units near completion south of Oving Road (20/02471/FUL). Additional land, also unallocated but similarly consented, has now commenced north of Oving Road (88 units under 21/02197/FUL). This and the allocation site consolidates earlier development at Shopwhyke brought forward under the current Local Plan, and allocated again as draft policy A7.

Development at Shopwhyke was brought forward on the basis of a premise that the developer would provide or somehow arrange a bus service, that was reflected in the policies of the current Local Plan. This was secured by an unenforceable condition. No bus service has been provided, as there was inadequate clarity regarding the basis on which the costs of establishing such a service would be met by the developer, and the expectations of policy on the developer. The site does however lie on a logical new bus corridor between Chichester and West of Tangmere along the Oving Road.

In addition, an expectation that modifications to the Oving Crossroads would effect bus advantage have proven false – the arrangements put buses into a similar or longer queue than if they use the route available to general traffic to and from the A27.

Stagecoach strongly supports the principle of bringing this land forward. However, the soundness of the site depends on deliverability of a regular, reliable and direct bus service along the Oving Road, taking advantage of effective bus priority.

Given the failure of existing policy in the adopted Local Plan covering the proposed A7 allocation to deliver a bus service, it is of great concern that there is no draft policy to adequately address the issue. The policy is out of conformity with NPPF paragraph 104-105 in that sustainable modes do not offer realistic choices, much less an attractive one, and as such also does not secure the objectives of national policy nor of the plan itself.

Currently the proposed allocation is not served at all by public transport. Policy needs to ensure there is a policy basis to secure contributions to deliver such a service, which may well take the form of a proportionate contribution to deliver a new service or enhance provision that is put in place between Chichester along the Shopwhyke Road to west of Tangmere.

To become sound Policy A8 must be modified to read:

" ...

12. Provide for improved high quality connectivity by sustainable travel modes and focused in particular on a corridor between Chichester city centre and Tangmere along Shopwhyke Road, including new improved cycle and pedestrian routes, and a frequent bus service including linkages with Chichester taking advantage of effective bus priority measures on Oving Road at the A27;

" ...

9.7. Policy A9 Land at Westhampnett/North East Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This land is already allocated and consented as part of the existing 2016 Local Plan. All reserved matters are determined.

The site lies on service 55 between Chichester, Westhampnett and Tangmere. This established service benefits from additional demand from the development at Phase 1. Phase 2 which is currently well underway, does not benefit directly from bus services. However it is a compact and logical form of development where walking and cycling to local facilities and employment is a credible option.

The existing allocation rolls forward policies in the 2015 Local Plan. In so doing it is possible to see which have been effective.

Point 9. regarding bus service and routing has not been effective. In particular the potential for a bus only link between the site and Graylingwell has not been established as policy anticipated. Given congestion around the Portfield area acutely affects public transport this, or alternative methods to secure bus priority over private car use, a clear and unequivocal policy steer is required.

The lack of an up-to-date transport evidence base is ultimately at the root of these issues. Arguably the policy and allocation can only be made sound once this refreshed evidence base in place.

However, it is possible that the allocation could be made sound by modification of Policy A9 as follows:

" ...

9. Make provision for regular, direct and reliable bus services linking the site with Chichester city centre, and new and improved safe and convenient cycle and pedestrian routes linking the site with Chichester city, the South Downs National Park and other strategic developments to the east of Chichester city including Tangmere. These objectives could include exploring the potential for a bus only route require a deliverable scheme to afford bus priority through Portfield, and potentially linking the development with the Graylingwell area through use of a modal filter;

" ...

9.8. Policy A10 Land at Maudlin Farm

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing public transport route. It is relatively close to the city and very near substantial centres of employment and services that can be reached by active travel modes, helping damp the demand for car use. It is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services at Portfield and over a wider area. In fact, the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A10 should accordingly be modified to read:

" ...

5. Provide safe and suitable access points for all users, including a main vehicle access from Old Arundel Road and, subject to further assessment, a secondary vehicle access from Dairy Lane. The development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes;

" ...

9.9. Policy A11 Bosham – Land at Highgrove Farm

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Bosham Station. It is relatively close to the city and very near substantial centres of employment and services that can be reached by public transport and cycling, offering strong potential to materially damp the demand for car use.

There are serious risks that development in the A259 corridor west of Chichester could place further demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular to bus services.

Nevertheless, given the potential to effect bus priority on the approaches to Fishbourne Roundabout, it is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A11 should accordingly be modified to read:

"...

8. Provide safe and suitable access points for all users, including a main vehicle access from the A259. The development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys crossing the A27 at Fishbourne;

9.10. Policy A12 Chidham and Hambrook

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Nutbourne Station. Substantial centres of employment and services that can be reached by public transport and cycling, offering strong potential to materially damp the demand for car use.

There are serious risks that development in the A259 corridor west of Chichester could place further demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular to bus services.

Nevertheless, given the potential to effect bus priority on the approaches to Fishbourne Roundabout, it is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A12 should accordingly be modified to read:

"...

7. Development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys along the A259, crossing the A27 at Fishbourne and where necessary on the approaches to Emsworth;

8. Facilitate improved sustainable travel modes, and new improved cycle and pedestrian routes, including linkages with Chichester city and settlement along the East/West Corridor;

9.11. Policy A13 Southbourne Broad Location for Development

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach agrees unequivocally that Southbourne is a location that could accommodate growth on a strategic scale. It has a substantial range of service available within the settlement, including secondary education. It is well connected by bus and rail service to key destinations, including Chichester, lying to the east and west.

This is one of the few locations identified for growth that represents substantial additional development in a new location to the strategy in the existing Local Plan adopted in 2015. Thus, the transport impacts of development on the substantial scale envisaged at Southbourne are not covered or accommodated by the Chichester Area Transport Strategy that lies behind the existing plan. This demands, from first principles, that substantial further transport mitigation measures are required.

We recognise and endorse fully that the intent of the draft plan for Southbourne as a Broad Location for Development on a strategic scale, includes "Maximising the potential for sustainable travel links through improved public transport, including consideration of opportunities to reduce community severance caused by the railway line as well as the inclusion of cycling and pedestrian routes." (our emphasis).

The existing railway station at Southbourne is served regularly, however, it is not within the power of this plan to improve rail services. It is, however, well within the scope of action of the Local Planning and Highways Authority to work with bus operators to achieve a step change in the journey time, reliability, frequency and connectivity of bus services, and in particular the major corridor operated as service 700 by Stagecoach along the A259 between Havant and Chichester through Southbourne.

Notwithstanding the clear potential for sustainable connectivity in the western A259 corridor, there are very serious risks that development in the A259 corridor west of Chichester will place further significant car-borne demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular bus services, having the opposite effect to that intended: longer, less reliable and less frequent bus services, leading to a spiral of slowly declining use.

These risks, while very serious, look credibly likely to be entirely mitigated subject to carefully conceived and robust specified actions on the local highway network. It is perplexing to us that this potential still has not been identified, as part of a comprehensive "first principles" review of the transport evidence base. In particular given the former trunk status of the A259, there is evident potential to effect bus priority on the A259, including on the approaches to Fishbourne Roundabout.

With appropriate measures, including but not limited to this, to substantially boost the relevance and attractiveness of sustainable travel choices, strategic development at Southbourne could well be made highly sustainable.

In the absence of a refreshed transport strategy and transport evidence base, the draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact, the only reference that is made in Policy is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A12 should accordingly be modified to read:

"...Development should be comprehensively masterplanned to achieve a high-quality design and layout that integrates well with the surrounding built and natural environments to enable a high degree of connectivity with them, particularly for pedestrians and cyclists, and provides good the highest possible quality of access to facilities and sustainable forms of improved public transport services.

...

4. Provide a suitable means of access to the site(s), and securing secure necessary off-site transport infrastructure and service improvements (including highways in particular to the A259 corridor between Emsworth and Chichester) in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development) to promote sustainable transport options prioritising delivery of high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes;

..."

9.12. Policy A14 Land West of Tangmere

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach strongly supports the principle of intensifying the level of development at the Strategic Development Location already identified and allocated West of Tangmere in the existing Local Plan. This serves to consolidate development at a location where effective and attractive public transport choices could be provided. It also conforms closely with the principle expressed in NPPF that the best possible use should be made of land on sites that are judged to be sustainable, or potentially sustainable locations for development.

It must be stressed that the current policy suite for the SDL has to date not brought forward development in this location. We recognise that a Master Plan has been adopted by the Council, and that a planning application (20/02893/OUT) for the full larger quantum of 1300 dwellings proposed in the draft plan has received a resolution to grant by the Council.

However, we are not aware that a sustainable transport strategy has been finalised.

Land West of Tangmere is not served by any existing regular bus services. Rather, an entirely new bus service corridor is anticipated to operate in the near term from Chichester through Tangmere and beyond towards Barnham. This would serve proposed allocations A7, A8 and West of Tangmere (A14) included in the draft Plan.

This is reflected in the language of the explanatory memorandum to Policy A14 at paragraph 10.65:

"Opportunities, in partnership with relevant authorities, to provide improved sustainable public transport routes linking the village with Chichester city, to improve cycle routes to the city, and better transport links to Barnham rail station and the 'Five Villages' area in Arun District; and.."

Initiating this service will be costly and will in large measure be funded not by developer contributions, but by DfT monies awarded through the West Sussex Bus Service Improvement Plan. It is crucial this service is both sustainable in the longer term without revenue support, and that the success of the service can be built on by scalable frequency improvements as strategic development comes forward in both Chichester District, and proposed allocations A7 A8 and A14, and in Arun District, in particular at Barnham, Eastergate and Westergate (BEW).

This demands measures to effect safe, direct and swift operation of the service especially within the city centre, where it approaches and crosses the A27 at Oving crossroads and on the eastern fringes of the District east and west of Tangmere. Without these measures, bus journey time and reliability will be severely compromised and the impact of this service to damped car trip demands will be very substantially compromised. No such measures are proposed in the draft plan or its evidence base.

Changes to Oving Crossroads have recently taken place which, amongst other intentions, ostensibly provide bus advantage between Chichester and Shopwhyke. The junction in its current form does not offer material gain in bus journey time, as movements involve a less-direct route towards the city over an increased operating distance, much of which involves passage through heavily congested sections of the A27 and Westhampnett Road. A refreshed transport strategy supporting plan-led growth must revisit this area to secure an effective solution which offers bus customers the fastest and most reliable trip-time to and from the city.

In addition, the extension of public transport connectivity towards BEW and Barnham, including key links to secondary education and a logical railhead for journeys beyond towards Brighton and London as provided at Barnham Station, needs to facilitate bus priority between Tangmere and Nyton – whether using the A27, or preferably avoiding it altogether. There are significant safety concerns associated with the at-grade uncontrolled right-hand A27 exit onto the B2233 Nyton Road at Crockerhill Turn. This movement is also prone to extreme delay owing to the conflict with approaching westbound traffic on the A27, travelling at speed, which has priority. Our concerns with this junction in its current form can be expected to worsen with the increased traffic volumes predicted from new residential developments to the west of the city.

A solution providing a suitable short length of highway available only to sustainable modes, between Tangmere and Easthampnett, could provide a very effective solution to this. This would be deliverable within the scope of the separate proposed allocation at A19 Chichester Business Park, Tangmere. We comment on this separately.

Howsoever effected, a reliable direct and delay-free bus corridor between Barnham, BEW, Tangmere and Chichester could expect to secure very substantial elevation of the relative attractiveness of public transport over car use on the entire corridor and serve to effectively damp growth-related demands on this section of the A27. West of Tangmere, in the longer term, there is evident scope for the route corridor to operate as two branches – one via Shopwhyke and one via Westhampnett, effectively serving all the strategic developments proposed in the plan and transforming wider public

transport connectivity to key employment destinations and services within and east of Chichester.

However, in common with all the other proposed allocations, the plan proposes no specific measures to provide, much less improve public transport or other sustainable modes to the site. This leaves the draft plan out of conformity with NPPF, especially paragraphs 104-106. The plan is inadequately evidenced and to the degree that public transport measures are identified and emergent, their successful implementation in the near and longer term will be jeopardised without clear measures to provide a safe as well as efficient bus route towards BEW and the Five Village area within Arun. The Duty to Cooperate is not effectively met and effective cross boundary collaboration on these strategic issues through the review of LSS is not demonstrated, despite the current version which identifies the issues.

To be made sound the LSS Review and a subsequent urgent review of the transport evidence base and strategy needs to take place. The strategic issues are especially critical east of Chichester, in our view.

Notwithstanding this foundational deficiency, to be made sound, Policy A14 should be modified to read:

"...

8. Subject to detailed transport assessment, provide primary road access to the site from the slip-road roundabout at the A27/A285 junction to the west of Tangmere providing a spine road link with secondary access from Tangmere Road. Development will be required to provide or fund mitigation for potential off-site traffic impacts through a package of measures in conformity with Policy T1 (Transport Infrastructure) and T2 (Transport and Development) and DfT Circular 01/2022 that maximise the relevance and use of sustainable travel modes, in particular bus services;

9. Make provision for improved sustainable travel modes between Tangmere and Chichester city, in partnership with relevant authorities, including improved direct, seamless safe and reliable and additional bus and cycle routes linking Tangmere with Chichester city, Shopwhyke and Westhampnett. In conjunction with measures in support of Allocation A19, Opportunities should also be explored contributions shall also be sought for providing improving high quality cycling and bus service transport links with the 'Five Villages' area and Barnham rail station in Arun District; and..."

10. Concluding comments

Stagecoach recognises its role as a key stakeholder in the plan, as well as a local employer and corporate citizen. We recognise the primacy of the plan-led system as the mechanism intended to resolve complex challenges, including the proper alignment of transport and spatial planning, which as the National Decarbonisation Strategy for Transport among other policies makes clear, has never been more vital.

In making our representations, we emphasise that we are entirely supportive of the Local Planning Authority and the relevant Highways and Transport Authorities, in their efforts to properly manage the amount and pattern of development to secure vital policy objectives. We recognise that balancing delivery of assessed development needs with a wide variety of other constraints is a very difficult task.

The transport issues faced by the plan are recognised in the draft plan as being serious and long-standing. We believe that there are ways to arrive at a suitable transport mitigation strategy that has regard to wider strategic issues and resolves existing problems in a much more effective way than those pursued to date.

We support the spatial strategy of the plan as it evidently provides the basis to secure the necessary step change in the quality and use of sustainable transport modes, as it explicitly seeks to do. However thus far, there has been insufficient work done to define the measures that will credibly secure these outcomes.

Stagecoach therefore urges the authorities to draw us into the necessary effective ongoing collaborations that is expected by NPPF paragraph 16 and 106; and DfT Circular 01/022, to do this work, prior to, rather than after the submission of the draft plan. We look forward to being approached to initiate this dialogue at the earliest opportunity.

Support

Document Element: Policy H3 Non-Strategic Parish Housing Requirements 2021 - 2039

Respondent: The Stickland Family [8166]

Agent: Henry Adams LLP (Andrew Thomas) [8167]

Summary:

In conclusion, our client supports the proposed housing numbers in Policy H3 for Wisborough Green and that the proposed figure of 75 should be seen as a minimum figure. Our clients will be making the District and the Parish aware of their land being available. This land is also deliverable, with potential solutions on site for bio-diversity and water neutrality.

Full text:

Chichester District Council – Reg. 19 Local Plan Consultation – Land to the West of Wisborough Green
These representations are made on behalf of our client, the Stickland Family who wish to support Policy H3 of the Chichester Local Plan 2021 – 2039 Proposed Submission Regulation 19 Version.

Background

The Stickland Family are local landowners who live and farm in Wisborough Green. They own approximately 48 acres of farmland and buildings to west of the village, along Kirdford Road. Their land hasn't been promoted to either Chichester District Council or Wisborough Green Parish Council previously. However, the site will be submitted for consideration in the next publication of the Housing and Economic Land Availability Assessment (HELAA). In addition, we will be making contact with the Parish Council to ensure that they are aware of its availability.

Site suitability

The land comprises a mixture of farmland and buildings which could be redeveloped to meet a local housing need. It is also important to note that, given the nature of the existing use, there could be the potential to offset the resulting water neutrality impact. Ongoing surveys and advice is being taken to confirm feasibility and also capacity.

In addition to this, our Clients recognise that Biodiversity Net Gain is an important consideration going forward. Should part of their landholdings be developed in the future, they do have the ability to provide net gain accordingly. Both of these points should be important considerations should additional housing sites need to be identified through the Neighbourhood Plan Review or subsequent Development Plan Document. This site is available and deliverable and thus would assist with meeting future housing need.

Policy H3 - support

Policy H3 of the Chichester Local Plan relates to the non-strategic parish housing requirements for the plan period. The table contained in the policy identifies that 75 additional houses will need to be provided in Wisborough Green either through a Neighbourhood Plan or subsequent Development Plan Document. Our client wishes to make representations that they support this approach and the proposed housing numbers of 75, with these being increased should supporting evidence be provided.

Wisborough Green Parish Council have commenced with their Neighbourhood Plan review and published the Regulation 14 version in June 2021. This version was based on a lower housing number which was previously identified for the Parish through the Local Plan Regulation 18 consultation. Therefore, should the Inspector agree with the proposed housing numbers for Wisborough Green, it is assumed that the Parish will continue with their Neighbourhood Plan with the new housing figure.

Our client would like to confirm that their land could provide residential development in line with policy requirements, so the Inspector should not be concerned that there are no additional deliverable sites in the Parish.

In conclusion, our client supports the proposed housing numbers in Policy H3 for Wisborough Green and that the proposed figure of 75 should be seen as a minimum figure. Our clients will be making the District and the Parish aware of their land being available. This land is also deliverable, with potential solutions on site for bio-diversity and water neutrality

Object

Document Element: Policy H3 Non-Strategic Parish Housing Requirements 2021 - 2039

Respondent: Mrs Elizabeth Sullivan [8001]

Summary:

The proposed quota for villages in North has been set because the Council seem unable to resolve its issues regarding A27. Residential development better suited to the large towns in the South and need to commit to a solution to the A27

There should be consideration of all of the factors such as infrastructure, ecology, utilities, public transport, car reliance, school places, medical facilities and sewage capacity.

The proposed changes will cause irreversible harm to biodiversity and character of the area. The proposed number of houses is huge in proportion to the existing size of the villages.

Full text:

I am concerned that the proposed housing quota for the villages to the North has been set because the Council have been unable to resolve its issues regarding the A27. Residential development of any scale is better suited to the large towns in the South and the Council need to commit to a solution to the A27 and then a housing policy around it. Allocating housing to the North as a short term fudge will only serve to create long term issues for future generations to struggle with.

Beyond the A27 there is no logic to the revised allocations for the villages to the North and that is unacceptable. Any allocation needs to be based on a sound evidence base and strategy and the Council have failed to evidence such a case.

I firmly agree that a local plan should be in place but it must be one that is sound and which has properly considered all of the factors such as infrastructure, ecology, utilities, public transport, car reliance, school places, medical facilities and sewage capacity. Any reasonable analysis of the villages in the North clearly shows that they are unsuitable for the extent of development now proposed. Any reasonable analysis would show that any number of towns to the south would be much better suited.

The proposed changes to the housing allocation for the villages to the North will cause irreversible harm to the local biodiversity and character of the area. The proposed number of additional houses is huge in proportion to the existing size of the villages. No consideration of scale in the current proposal.

Assumptions that have formed the basis of the allocations are flawed, there a simply no buses so which buses will the new residents be using? The local bus runs between 10am and 2pm 4 days a week. That is not sufficient to sustain a viable community with work and wellbeing commitments.

There is no shop in Loxwood so how is it a service village?

All in all the revised allocations are based on ill conceived notions and poor judgement and should not be adopted. The allocations made in 2018 were sensible, the increase in 2020 were excessive and the proposed increase in 2023 is frankly wrong and needs to be withdrawn.

Change suggested by respondent:

The allocation of housing to the north need to be reduced back to the levels allocated in 2020

Object

Document Element: Policy H3 Non-Strategic Parish Housing Requirements 2021 - 2039

Respondent: Tim Swann [8149]

Summary:

CDC have not consulted on revised housing numbers in North of the district-it quote the restrictions of the A27 which prevents the southern development however the A281 is a bigger constraint which will also have Dunsfold adding pressure.

Allocation of 220 houses plus a further 91 houses on already allocated sites is not sustainable in rural Loxwood-it a huge Percentage increase and will destroy the village.

Full text:

I feel very strongly the local plan is ill thought through and a unbalanced distribution of houses that doesn't reflect the nature of rural villages. Loxwood is a rural village with no public transport links that are usable for the working population, no work opportunities, a serious lack of sewage capacity, no local grocery shop and yet the council deem it suitable for over 312 houses which will give a 50% increase in dwellings and a potential for significantly more as a 'strategic' location-it is completely bonkers. We are not a town!

It is also very disrespectful of the council to ignore our latest neighbourhood plan-we have accepted the national need for additional houses and have spent significant time and funds to produce this. It has completely demoralized the parish council and make a mockery of the whole process.

I have included my comments below why i believe this is not a viable plan for the council.

CDC have not consulted on revised housing numbers in North of the district-it quote the restrictions of the A27 which prevents the southern development however the A281 is a bigger constraint which will also have Dunsfold adding pressure.

Allocation of 220 houses plus a further 91 houses on already allocated sites is not sustainable in rural Loxwood-it a huge Percentage increase and will destroy the village.

CDC Sustainability Appraisal is weak in its justification for allocation of 220 houses

There is no viable bus, lack of sewerage capacity, a village school, shops to support large increase in housing

Policy A15 should be removed and Policies H2 and H3 amended to reflect a realistic allocation of 125 houses which is still generous compared to other local area with better services.

Loxwood should not be deemed to be a strategic location-it is a small rural village

LPC have spent time and effort to create a Revised Neighbourhood Plan which allocates 126 houses plus 17 carried forward from the Made Neighbourhood Plan giving 143 houses. It has reached Regulation 14 consultation stage and is based upon the Preferred Approach Local Plan consultation. The residentsof the Parish and Loxwood Parish Council have satisfied themselves through evidence gathered that 126 homes is a sustainable allocation given the constraints that exist-it should not be ignored due to water neutrality issues

This protects the village and the community and reflects the importance of Neighborhood plans for Loxwood and the rest of the country -there is a process and it should be respected otherwise it makes a mockery of the whole planning system and developers win every time.

Please can you protect the rural nature of this county and vote against plan.

Change suggested by respondent:

Policy A15 should be removed and Policies H2 and H3 amended to reflect a realistic allocation of 125 houses which is still generous compared to other local area with better services.

Object

Document Element: Policy H3 Non-Strategic Parish Housing Requirements 2021 - 2039**Respondent:** Peter Tait [7237]**Summary:**

[RECEIVED LATE]

Objection to proposed development within Loxwood of grounds of:

- insufficient supporting infrastructure including:

i) water and sewage;

ii) services including shop, school and medical practice;

ii) issue of power supply

- Impact on landscape and flood risk

- Impact on natural environment

- Lack of consideration of Neighbourhood Plan

Full text:

[RECEIVED LATE]

I would like to register my strong objections to the Local Plan published on 3rd February last, which sets out proposals to develop 220 new homes in Loxwood in addition to the 91 that are under development.

My principle cause for concern about these plans are that it is already demonstrably clear that the infrastructure in Loxwood cannot adequately support the existing developments, let alone this proposal, which contains no mention of any attempts to improve it.

This includes but is not limited to:-

Water & Sewerage: Southern Water have admitted that the capacity in Loxwood is insufficient to deal with even current demand and has no plans to increase it.

I have personally experienced sewage backflow on my property on a number of occasions in the last twelve months, which has been rectified recently by the fitting of a valve system which shifts the problem elsewhere. Furthermore, the "workarounds" in place for recent housing developments lead to unpleasant odours and risk of discharge into the water courses.

Services: Loxwood has no village shop, its school and medical practice are at capacity and there is negligible public transport serving the village. Over development is placing a strain on the electrical grid supply leading to instances of power disruption.

Landscape and flood risk: The conversion of the significant amount of land involved with this proposal from fields to housing plots will add further pressure from rain water flow on the capacity of the River Lox and Loxwood stream, thereby increasing the risk of flooding to many properties (including my own) in the village.

The proposals dig deep into the natural environment that defines the character of the village and its surroundings with footpaths, vistas and natural habitats permanently degraded as a consequence.

Loxwood PC developed a Neighbourhood Plan in 2018 which was revised in 2020; this seems to have been ignored completely by CDC despite central government encouragement of such plans. It appears that CDC's desire to focus more housing development in the North of its district is leading to draconian disregard for the considered views of local residents reflected in the Neighbourhood Plan.

I ask that you take my points into consideration when this Local Plan Proposal is refined further.

Document Element: Policy H3 Non-Strategic Parish Housing Requirements 2021 - 2039**Respondent:** Tanglewood Residences Limited [7976]**Agent:** Andrew Black Consulting (Mr Andrew Black, MD) [7597]**Summary:**

The overall strategy as set out by CDC in the plan is highly dependent on the delivery of housing from Neighbourhood Plan areas. Whilst this approach is not un-sound in itself, it is considered that the plan in its current form allows for little mitigation or alternatives should delivery not come forward in the neighbourhood plan areas. It is considered that in order to be 'effective' and 'positively prepared' the Local Plan should also allocate the sites in Wisborough Green as stand-alone applications with an allowance that applications could come forward on these sites in the event that the Neighbourhood Plans do not progress

Full text:

See attached representation.

Change suggested by respondent:

In order for the plan to be considered 'positively prepared' and 'justified' it is recommended that additional wording is added to policy H3 to state that individual planning applications can come forward on sustainable sites outside of existing settlement boundaries in parishes should delivery not come forward within the first 2 years of the plan period. Priority should be given to any sites already identified within draft versions of Neighbourhood Plans. This is inclusive of the proposed Tanglewood Nursery site at Wisborough Green.

Document Element: Policy H3 Non-Strategic Parish Housing Requirements 2021 - 2039**Respondent:** The Birkett Family [8175]**Agent:** Henry Adams LLP (Mr Chris Locke, Planning and Development Assistant) [7352]**Summary:**

Policy H3 does not allocate any additional housing to Tangmere Parish other than the Strategic Development Location. It is considered that along with the strategic development to the West, that our client's land to the East of Tangmere can provide additional housing in Tangmere.

Full text:

These representations are made on behalf of our client, the Birkett Family and the Chichester Local Plan 2021 – 2039 Proposed Submission Regulation 19 Version.

Background

The Birkett Family are local landowners who live in Easthampnett. They own approximately 44 acres of farmland to the west of Easthampnett which is edged red at Enclosure 1. The land has been promoted intermittently to Chichester District Council but they wish to confirm to Chichester District Council and the Inspector that the land is available for development should they consider Tangmere as an area for additional growth.

Site suitability

The land comprises farmland which could be redeveloped to meet a local housing need. Although limited work has been undertaken to date, the landowner is in the process of negotiating to enter into an agreement with a developer / promoter to promote the land to Chichester District Council to ensure it is deliverable.

Therefore, in time and at the request of the Council or Inspector, additional reports and surveys could be provided to support any future housing allocation. However, a highways appraisal has been undertaken, and access to the site is achievable and this can be provided at request.

Soundness

Policy H2 of the Chichester Local Plan allocates 1,300 dwellings at the Tangmere Strategic Development Location. This site has an outline permission and is subject to a Compulsory Purchase Order. For clarity, our client does not object to this allocation, but supports it as it shows that Tangmere is a location that can be seen to grow.

Policy H3 does not allocate any additional housing to Tangmere Parish other than the Strategic Development Location. It is considered that along with the strategic development to the West, that our client's land to the East of Tangmere can provide additional housing in Tangmere.

We trust our comments will be considered as part of the Local Plan review, and please do not hesitate to make contact if you require anything further.

Change suggested by respondent:

Promoted land to the East of Tangmere can provide additional housing in Tangmere.

Document Element: Policy H3 Non-Strategic Parish Housing Requirements 2021 - 2039**Respondent:** The Bramley Family [8087]**Agent:** PowerHaus Consultancy (Ms Harriet Young, Planner) [8083]**Summary:**

Given evidence published in HELAA, number of dwellings identified for Fishbourne should be amended. Development of site at Clay Lane would result in sustainable infill of otherwise vacant site and would introduce appropriate uses within the area, including delivering a supply of high-quality residential units in a highly accessible location. Development of the site would not result in unacceptable adverse impacts on highways network and development could be achieved alongside wildlife corridor.

Full text:

See attached representation.

Change suggested by respondent:

Given the HELAA identifies developable land in Fishbourne to deliver approximately 215 dwellings, the number of dwellings allocated to Fishbourne under Policy H3 should be amended from 30 dwellings to 250 as identified in draft Policy AL9 of the Regulation 18 Local Plan. Sites promoted at Clay Lane.

Document Element: Policy H3 Non-Strategic Parish Housing Requirements 2021 - 2039**Respondent:** The Brooks Family [8117]**Agent:** Henry Adams LLP (Mrs Dawn Appleton, Senior Planner) [8118]**Summary:**

On the basis of the 535 dpa figure, it is considered that the selected areas for growth and housing figures are deliverable over the Plan period, however, the plan area could accommodate a greater level of growth. Our clients support the approach to Boxgrove and the allocation of a minimum of 50 houses with a suitable site to be identified through the Neighbourhood Plan or Site Allocations DPD. Our clients' land is the most suitable land to provide a sustainable addition to the village given the landscape and heritage constraints to the north. The provision of all the housing on one site will provide 15 affordable homes for the village which is a significant benefit.

Document Element: Policy H3 Non-Strategic Parish Housing Requirements 2021 - 2039**Respondent:** The Goodwood Estates Company Limited [7922]**Agent:** HMPC Ltd (Mr Haydn Morris) [112]**Summary:**

It is inappropriate to require villages to provide a zero-housing figure. Villages may not be strategic locations for significant additional housing, but it is not unreasonable, through neighbouring planning or individual promotions to support some limited development subject to material considerations and individual merit.

At Lavant for example the Estate has land interests where a small contribution to housing supply could be made – not necessarily as open market housing, but specific quality housing to meet identified needs. In other villages in-fill development might be appropriate.

Full text:

It is inappropriate to require villages to provide a zero-housing figure. At Lavant for example the Estate has land interests where a small contribution to housing supply could be made – not necessarily as open market housing, but specific quality housing to meet identified needs. In other villages in-fill development might be appropriate.

Change suggested by respondent:

The plan should clarify that a zero figure in Policy H3 does not mean all development opportunities, including windfalls, must be resisted. The zero figure is offered as a strategic guide to housing locations but is not an indication that all forms of housing will be inappropriate.

Document Element: Policy H3 Non-Strategic Parish Housing Requirements 2021 - 2039

Respondent: The Pick Family [8168]

Agent: Henry Adams LLP (Mr Chris Locke, Planning and Development Assistant) [7352]

Summary:

It is therefore our view that the [housing] figure of 535 should be seen as an absolute minimum and other land should be considered to be allocated.

Full text:

These representations are made on behalf of our client, the Pick Family who wish to make representations with regards to the Chichester Local Plan 2021 – 2039 Proposed Submission Regulation 19 Version.

Background

The Pick Family are local landowners who live and farm in Birdham. They own approximately 15 acres of farmland to the west of Birdham which is edged blue on the plan at Enclosure 1. The land has been promoted at all relevant opportunities to Chichester District Council but they wish to confirm to Chichester District Council and the Inspector that the land is available for development should they consider Birdham as an area for growth.

Site suitability

Our client's have split their landholding previously, as they appreciate that development of the whole would increase the size of Birdham significantly. However, our client's front parcel, edged red at Enclosure 2, is well enclosed and views into the site from the AONB are limited. There is a significant hedgerow on its western boundary, screening any potential residential development in this parcel.

This portion of the landholding is approximately 1.05 hectares in size and it is our opinion that a development of 25 units could be achieved at this site. Due to the site constraints, the developer would have to ensure that the scheme is designed sensitively, taking into consideration the Area of Outstanding Natural Beauty. However, this is not considered to constrain development overall on the site and therefore, the site should be considered sustainable in taking account of the three dimensions for sustainability set out in the NPPF.

Due to our client having a wider landholding, if the Council or the Inspector felt it necessary to allocate the site, our client would be able to offset any nitrate or biodiversity impacts from the front parcel onto his retained land. This illustrates that the site is deliverable.

Policy S1 & H1

Policy S1 of the Draft Local Plan sets out the spatial development strategy for the District and how the Council will achieve sustainable growth over the plan period. Policy H1 sets out the housing target in response to the strategy. Both policies have been informed by the Sustainability Appraisal (SA) dated January 2023 and the Plan objectives, which are set out at paragraph 2.5.2 of the SA and the Council's HEDNA (April 2022).

The Local Plan then goes on to constrain housing numbers due to an alleged capacity concern along the A27 strategic road network. The Council therefore result in a constrained housing figure by virtue of the standard method 'steps' and also due to infrastructure capacity.

In terms of the influence of the A27, this is the key matter that constrains growth within the southern part of the District. This is based on the Transport Study (2023) concludes that the road network cannot accommodate an annual housing figure of more than 535 dpa. This is a fundamental point and one that our clients do not agree and believe there is capacity to accommodate at least the local housing need within the highway network, alongside potential improvements identified for the following reason.

The Transport Study (January 2023) is the key document on which the Council rely upon to constrain their housing figure to 535 dpa. On review of this document, it is clear that the Council's consultants undertook a sensitivity analysis as to whether the core scenario that supports the 535 dpa position in the local plan could accommodate a higher level of growth. The conclusion in paragraph 5.6.5 and 11.2.3 of the Transport Study appears to be that 700 dpa could be accommodated (in the southern plan area) by the mitigation proposed for the 535 dpa, with some additional (as yet undesigned and not costed), mitigation works beyond those highlighted for the Bognor and Fishbourne roundabouts.

It is therefore our view that the figure of 535 should be seen as an absolute minimum and other land should be considered to be allocated.

We trust our comments will be considered as part of the Local Plan review, and please do not hesitate to make contact if you require anything further

Document Element: Policy H3 Non-Strategic Parish Housing Requirements 2021 - 2039**Respondent:** Peter Thompson [8200]**Summary:**

[RECEIVED LATE]

Objection to proposed housing development within Kirdford.

States fewer permissions should be granted for large scale housing in small villages.

Examples given of objection to proposed 70 dwelling Townfield Meadows development considered inappropriate for location (former agricultural land), private (non-rental) housing not addressing local need, lack of supporting infrastructure. Also objection to proposed 54 dwellings within Plaistow Road. Represent potential to increase village size by 55% - out of proportion to local need and surrounding landscape.

Inconsistent with Kirdford Neighbourhood Plan (12 dwellings on Townfield site).

Full text:

I am alarmed that the new Chichester District Local Plan - finishing its' public consultation stage today - has increased the number of houses in Loxwood ward by 50 extra in KIRDFFORD. I believe we should be VERY MUCH restricting new housing development on greenfield sites [as does Michael Gove, I believe, from his statements in the press in 2022].

We should have FEWER PERMISSIONS GRANTED for large scale housing developments in small villages than is currently the case, and obviously this element of the proposed CDLP works against this.

In KIRDFFORD, we are fighting a proposed 70 house build on Townfield Meadows . . . inappropriate locality on previously fairly recently purposed agricultural land; quantity of private (non-rent) housing not required for local need; lack of local infrastructure; etc. Currently we see the commencement of building works on previous agricultural / green field space in Plaistow Road, Kirdford [Pippins Field] - where there will be a largely uncalled for development of 54 homes. We have already protested that if the proposals for 70 new homes were to come to fruition south of Townfield in Kirdford, it would 'see our village grow by 55 per cent.'

I understand the updated Kirdford Neighbourhood Plan states only 12 houses could be built on part of the Townfield former agricultural / greenfield site over the plan's lifespan; the proposed allocation of 50 in Kirdford in the new CDLP would be completely out of proportion to both village need and the immediate surrounding country landscape.

Document Element: Policy H3 Non-Strategic Parish Housing Requirements 2021 - 2039**Respondent:** Westbourne Parish Council (Clare Kennett Parish Clerk) [1051]**Summary:**

[RECEIVED LATE] - Westbourne is identified as a Service Village and there is a given allocation for new development of 30 dwellings. In general terms this seems like a reasonable level of new growth that can be accommodated. However, the plan recognises that in the general area the scope for new development between the National Park boundary and the A27 is limited outside of Southbourne due to physical and environmental constraints. Given these limited opportunities to find land for new development around the village, which was confirmed in the Neighbourhood Planning process recently completed, the scope for Westbourne to take further development is very limited. The Parish Council would urge the District Council to see this quantity of 30 as a maximum target. We would ask the District Council to confirm that it would not suggest a new strategic development being brought forward in the allocations plan for Westbourne as the constraints of the National Park setting and other countryside policies severely limit the scope for further development.

Full text:

The Parish Council supports the vision and overall strategic objectives of the Local Plan 2021-2039.

Spatial strategy:

Westbourne is identified as a Service Village and there is a given allocation for new development of 30 dwellings. In general terms this seems like a reasonable level of new growth that can be accommodated. However, the plan recognises that in the general area the scope for new development between the National Park boundary and the A27 is limited outside of Southbourne due to physical and environmental constraints. Given these limited opportunities to find land for new development around the village, which was confirmed in the Neighbourhood Planning process recently completed, the scope for Westbourne to take further development is very limited. The Parish Council would urge the District Council to see this quantity of 30 as a maximum target. We would ask the District Council to confirm that it would not suggest a new strategic development being brought forward in the allocations plan for Westbourne as the constraints of the National Park setting and other countryside policies severely limit the scope for further development.

Policy H4, affordable housing policy:

The existing policy only requires on-site provision of affordable housing for 10 or more dwellings. The proposed changes to require commuted sum payments in defined rural areas on sites for between six to nine dwellings is supported. However, this as drafted currently excludes Westbourne. Westbourne Parish Council would urge the District Council to ensure that this policy applies to Westbourne as it has limited opportunity for larger sites which makes it difficult to bring forward affordable housing and there is a clear need for more affordable housing in the Parish.

Policies H12 and H13:

The Plan indicates that there is a high level of unmet need generally for Gypsy's Travellers and Show People. The high levels of existing and unauthorised pitches in Westbourne is also mentioned in the Plan. The neighbouring parish of Southbourne is also mentioned as a location with high levels of pitches and unmet need. The relevant extract on the approach to meeting this need is as follows. "the council has had to utilise a wide range of options for meeting this need. This entails providing pitches on the strategic housing allocation sites, supporting increases in the density of pitches on existing authorised sites which have been assessed as being acceptable in principle for additional pitches, and allowing pitches to come forward on a case-by-case basis. The council will also consider allocating additional pitches via the forthcoming Allocations DPD."

Westbourne Parish Council is concerned to avoid intensification of the authorised and unauthorised Gypsy and Traveller and Showman's Pitches located within the Parish. Westbourne already has one of the highest concentrations of such uses anywhere in the District and further intensification will have an adverse impact on the balanced and cohesive community that we seek to protect. We would argue that other locations with lower intensities of such use should be sought to meet this need.

The site in Cemetery Lane at Greenacre is identified as a location for an additional four pitches. There have been many enforcement issues in this area with unauthorised pitches and unauthorised industrial and commercial development, and further increases in the quantity of pitches will exacerbate the situation to the detriment of the balanced and cohesive community that the Parish Council seeks to protect and enhance.

Document Element: Policy H3 Non-Strategic Parish Housing Requirements 2021 - 2039**Respondent:** Wisborough Green Parish Council (Mrs Louise Davies, Parish Clerk) [1064]**Summary:**

Please refer to the attached document for a detailed response. In summary we consider that policy H3 is not justified and is therefore not sound. The allocation of 75 homes to Wisborough Green is inconsistent with the approach to housing distribution set out in other policies. CDC has made a strong case for the reasons why development in the southern part of the district is constrained, but it is in error in then considering that the northern part of the district can accommodate additional development above that suggested during the Regulation 18 consultation. A sustainability-based approach does not support the proposed allocation and it should revert to that proposed at Regulation 18 stage.

Document Element: Longer Term Growth Requirements, 5.11**Respondent:** Northgate Properties Ltd [8108]**Agent:** Smith Simmons Partners (Paul White) [7650]**Summary:**

We agree that a new settlement would have a valuable role to play in meeting future housing need of the district and support the lower-case policy text of the Plan at paragraphs 5.11-14. However, bearing in mind the national policy guidance for a 30 year or so vision to allow for the planning and site identification for a new settlement, we see no reason why that part of the lower-case text at paragraph 5.14 of the Regulation 19 Plan should not be elevated into actual Plan policy.

This would offer a 'land supply reserve' in the event the Examiner for the Local Plan finds that it should meet OAN in accordance with the 'positively prepared' test. If a new settlement is needed to contribute to OAN, it would then form part of the development strategy of the Plan and justify the policy in principle.

Full text:

The 'tests of soundness' for Local Plan preparation are set out in paragraph 35 of the July 2021 NPPF. They require the 2021-39 Local Plan to have been:

- Positively prepared – providing a strategy which, as a minimum, seeks to meet the area’s objectively assessed needs; and is informed by agreements with other authorities, so that unmet need from neighbouring areas is accommodated where it is practical to do so and is consistent with achieving sustainable development;
- Justified – an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence;
- Effective – deliverable over the plan period, and based on effective joint working on cross-boundary strategic matters that have been dealt with rather than deferred, as evidenced by the statement of common ground; and
- Consistent with national policy – enabling the delivery of sustainable development in accordance with the policies in this Framework.

Local Plan reviews are a legal requirement every 5 years in accordance with Regulation 10A of the 2012 Town and Country Planning (Local Planning) (England) Regulations. A question could be raised over the legality of the Regulation 19 Plan as it has not been reviewed within 5 years of the last Plan, which was adopted in July 2015. On the Council’s own admission the current Regulation 19 Local Plan fails to meet objectively assessed need (OAN) of 638 dpa outside the national park. However, without any properly evidenced ‘duty to cooperate’ statement of common ground with neighbouring authorities, it is unclear whether this under provision is justified.

We support the local authority in its attempts to navigate what is a challenging situation in relation to housing delivery within the district, however at this stage we believe the Plan, as drafted, fails to meet the ‘positively prepared’, ‘effective’, and ‘consistent with national policy’ tests and therefore could be interpreted as unsound.

In a bid to assist the process, we have collated our thoughts on how the Regulation 19 Local Plan could be improved below.

Local Plan Policies

These comments deal with the proposed Spatial Strategy (Policy S1) Settlement Hierarchy (S2), policies H1, H2 H3 and NE4. We also propose a new policy H4.

Policy S1- Spatial Strategy

Policy S1 deals with the spatial strategy of the plan. It has been informed by the role of each settlement within a hierarchy based on its facilities and services.

We agree that the spatial strategy for delivering growth and development should focus on Chichester city as the main sub-regional centre and most sustainable location with a wide range of services and facilities. However, there are self-evident constraints to further strategic scale development at the settlement itself because of its historic setting, the A27 to the south and east, the harbour AONB to the west and the national park in the north. Focusing growth close to the city would however still reinforce its role as a sub-regional centre and locating a significant proportion of development in or around Chichester city ahead of the second tier settlement hubs would reduce the need to travel to facilities and deliver sustainable development.

Policy S2 – Settlement Hierarchy

The Settlement Hierarchy background paper prepared for the Regulation 18 draft Local Plan provides the justification for the hierarchy in Policy S2 of the Regulation 19 Local Plan. We agree that the hierarchy prioritising development at Chichester as the sub regional centre, followed by development at the settlement hubs, service villages and the rest of the plan area is reasonable. However, although the distribution of housing amongst the settlements in the current Regulation 19 plan has been updated compared to the last Regulation 18 plan, the background paper itself has not been updated. Nor is there any justification or explanation for the change in the quantum of strategic and non-strategic housing to the different categories of settlement in the background paper or the Local Plan itself.

Policy H1 – Meeting Housing Needs

The identified housing need has been informed by the 2022 Housing and Economic Development Needs Assessment (HEDNA). It explains that based on the standard methodology, since the last HEDNA in 2020, the district wide housing need has increased from 746 dpa to 763 dpa (621 dpa in the Plan Area to 638 dpa) with the balance to be found in the national park. The proposed 638 dpa for the area of the district outside the national park is the figure that will be tested at the forthcoming Examination.

As indicated earlier, without any properly evidenced ‘duty to cooperate’ statement of common ground with neighbouring authorities, it is unclear whether this under provision is justified.

Policy H2 – Strategic Site Allocations and Policy H3 – Non-Strategic Parish Allocations

Policy H2 identifies strategic scale and policy H3, non-strategic allocations. We have explained above that the Settlement Hierarchy Background Paper was prepared for the 2018 Preferred Options Regulation 18 Local Plan but has not been updated to provide any justification for the revised housing distribution and quantum of development for the named locations and settlements in the Regulation 19 Local Plan.

Longer Term Growth Requirements

Paragraph 22 of the NPPF says strategic policies should look ahead over a minimum 15-year period from the date of the adoption of a plan to anticipate and respond to long-term requirements and opportunities, such as those arising from major improvements in infrastructure. This justifies the proposed end date of the Plan of 2039. However, the NPPF goes on to state that where larger scale developments such as new settlements or significant extensions to existing villages and towns form part of the strategy for the area, policies should be set within a vision that looks further ahead (at least 30 years), to take into account the likely timescale for delivery.

Paragraphs 5.11-5.14 of the draft Plan says although its focus is on the development needs of the plan area up to 2039, some initial consideration has been given to the concept of a new settlement to accommodate potential longer term growth needs. This arises from some reservations about whether it will be appropriate in the longer term to continue to rely on existing sources of supply (e.g. urban extensions and urban intensification).

We agree that a new settlement would have a valuable role to play in meeting future housing need of the district and support the lower-case policy text of the Plan at paragraphs 5.11-14. However, bearing in mind the national policy guidance for a 30 year or so vision to allow for the planning and site identification for a new settlement, we see no reason why that part of the lower-case text at paragraph 5.14 of the Regulation 19 Plan should not be elevated into actual Plan policy. Such an approach would deliver benefits to the plan anyway in offering a ‘land supply reserve’ in the event the Examiner for the Local Plan finds that it should meet OAN in accordance with the ‘positively prepared’ test. If a new settlement is needed to contribute to OAN, it would then form part of the development strategy of the Plan and justify the policy in principle.

We therefore propose a new Policy H4 – A New Settlement as set out in section 6 below.

Policy NE4 – Strategic Wildlife Corridors

The Council produced a Strategic Wildlife Corridor background paper in December 2018 and another technical consultation document in July 2021. Neither document has been updated for the present Regulation 19 Local Plan. It is unclear therefore whether the ecological interest has changed and whether it can still inform the extent and location of the defined wildlife corridors in the current Plan. We say this on the basis that standard habitat surveys are usually required to be reviewed and updated after 18 months.

Paragraph 179(a) of the NPPF sets out policy to protect and enhance biodiversity and geodiversity and states that Plans should identify, map and safeguard components of local wildlife-rich habitats and wider ecological networks, including the hierarchy of international, national, and locally designated sites of importance for biodiversity; wildlife corridors and stepping stones that connect them.

We therefore agree that the identification of wildlife corridors in the emerging Plan is consistent with national policy but without any up to date proportionate evidence of biodiversity interest we would question whether their extent and location as shown on the relevant proposals maps have been justified.

As it stands, the wording of Policy NE4 also goes beyond the purpose of the policy which is the ‘safeguarding of wildlife rich habitats and wider ecological networks’.

Policy NE4 states development will only be permitted where it would not lead to an adverse effect upon the ecological value, function, integrity, and connectivity of the strategic wildlife corridors. It does not resist development in principle and so long as impacts can be adequately mitigated it should be granted.

This policy principle therefore makes redundant policy test 1 which introduces a sequential test for preferable sites outside a corridor. The test is in conflict with the underlying purpose of the policy which is to safeguard wildlife corridors from adverse harmful impacts that cannot be mitigated. Test 1 should therefore be deleted.

Development outside or in close proximity to a wildlife corridor should not be subject to the policy requirements of NE4 either and the designation should end at its boundary. 'Close proximity' is vague and would introduce uncertainty to the policy. If development does not undermine the connectivity and ecological value of the corridor, then there is no proper basis for the policy restriction on such development. We therefore propose the deletion of the second part of the policy as well.

Change suggested by respondent:

We feel it would be prudent when considering the long term nature of such proposals to include a new policy to allow for the planning and site identification for a new settlement, using part of the lower-case text at paragraph 5.14 of the Regulation 19 Plan as actual Plan policy. Such an approach would deliver benefits to the plan anyway in offering a 'land supply reserve' in the event the Examiner for the Local Plan finds that it should meet OAN in accordance with the 'positively prepared' test.

New Policy H4 – A New Settlement

'In order to progress the identification of a site for a new settlement to contribute to housing need, the following considerations will guide potential discussions with the LPA. The selected site will be included in the Site Allocations DPD or a site-specific Development Brief.

- The site will be of sufficient scale to support potential long-term development needs arising and comprehensively planned in consultation with existing communities and key stakeholders;
- Deliver a sustainable, inclusive, and cohesive community promoting self-sufficiency and with high levels of sustainable transport connectivity;
- Allow for the inclusion of on-site measures to avoid and mitigate any significant adverse impacts on any protected habitats;
- Provide a mix of uses to meet longer term development needs and contribute towards its distinctive identity; and
- The layout and form of development avoids coalescence with existing settlements and does not undermine their separate identity;
- Avoids harm to the designated Area of Outstanding Natural Beauty, respects the historic and landscape character, and conserves and where possible enhances the character, significance and setting of heritage assets.

Document Element: Longer Term Growth Requirements, 5.11

Respondent: The Goodwood Estates Company Limited [7922]

Agent: HMPC Ltd (Mr Haydn Morris) [112]

Summary:

The recognition of longer-term growth requirements is welcomed although it should be stated that there exist significant material constraints that are unlikely to be removed through subsequent plans, but are not identified. These constraints should be identified now to provide confidence for investment going forward, and to local communities. A review of the plan could be in as little as 5 years. For example, areas designated for open green or blue space and well used, key view lines, or areas preventing coalescence, should have a degree of permanency attached, to offer a presumption against their early release in subsequent plans.

Respondent: National Highways (Mr Marius Pieters, Spatial Planning Manager) [8127]

Summary:

[National Highways letter dated 24/07/23 confirmed representation should be categorised as Comment - Supporting collaborative working.] National Highways welcomes the opportunity to work with you to monitor future population, household growth, commuting patterns and any excessive incommuting as part of the update of this Local Plan within the next five years.

Full text:

We have reviewed the publicly available Local Plan documents and provided comments in the attached letter, in relation to the transport implications of the plan for the safety and operation of the SRN.

Our comments include issues to resolve, comments, requests for further information and recommendations. A brief summary of our main comments are:

- the reliance on the delivery of the A27 Chichester bypass improvements project.
 - the requirements for new, additional, and adapted processes and assessments, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments.
 - collaborative working between agencies in combination with a robust monitor and manage policy.
- We hope our comments assist.

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders. We look forward to continuing to participate in future consultations and discussions. Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Background

National Highways has been appointed by the Secretary of State for Transport as strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the strategic road network (SRN).

National Highways is responsible for operating, maintaining, and improving the Strategic Road Network (SRN) i.e., the Trunk Road and Motorway Network in England, as laid down in Department for Transport (DfT) Circular 01/2022 (Strategic Road Network and the delivery of sustainable development).

The SRN is a critical national asset and as such we work to ensure that it operates and is managed in the public interest, both in respect of current activities and needs as well as in providing effective stewardship of its long-term operation and integrity.

Our responses to Local Plan consultations are guided by relevant policy and guidance including the National Planning Policy Framework (2021) (NPPF):

- Transport issues should be considered from the earliest stages of plan-making and development proposals so that the potential impact of development on transport networks can be addressed (para 104).
- The planning system should actively manage patterns of growth such that significant development is focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. (para 105).
- Planning policies should be prepared with the active involvement of highways authorities and other transport infrastructure providers so that strategies and investments for supporting sustainable transport and development patterns are aligned. (para 106).
- In terms of identifying the necessity of transport infrastructure, NPPF confirms that development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe. (para 111).
- Planning policies and decisions should support development that makes efficient use of land, taking into account the availability and capacity of infrastructure and services – both existing and proposed – as well as their potential for further improvement and the scope to promote sustainable travel modes that limit future car use. (para 124).

In relation to the tests of soundness set out at paragraph 35 of the NPPF, in the context of transport, these are interpreted as meaning:

- a) Positively prepared - has the transport strategy been prepared with the active involvement of the highway authorities, other transport infrastructure providers and operators and neighbouring councils?
- b) Justified – Is the transport strategy based on a robust evidence base prepared with the agreement in partnership, or with the support of the highway authorities?
- c) Effective – Does the transport strategy and policy satisfy the transport needs of the plan and is it deliverable at a pace which provides for and accommodates the proposed progress and implementation of the plan?
- d) Consistent with national policy – Does the transport strategy support the economic, social, and environmental objectives of the Plan and the NPPF/NPPG?

We will be concerned with proposals that have the potential to impact on the safe and efficient operation of the SRN; in this case, the A27 trunk road (Chichester Bypass and its junctions) which is the main access route in the Chichester area. We have particular interest in any allocation, policy or proposals which could have implications for the A27 and the wider SRN network. We are interested as to whether there would be any adverse road safety or operational implications for the SRN. The latter would include a material increase in queueing or delay or reduction in journey time reliability during the construction or operation of the development set out in the plan.

National Highways is a key delivery partner for sustainable development promoted through the plan-led system, and as a statutory consultee we have a duty to cooperate with local authorities to support the preparation and implementation of development plan documents.

In accordance with national planning and transport policy and our operating licence, we are entirely neutral on the principle of development as it is for the local planning authority to determine whether development should be allocated or permitted; albeit it must comply with national policy on locating development in locations that are or can be made sustainable. Therefore, while always seeking early and fulsome engagement with local plans and/or developers, we will simply be assessing the transport and related implications of plans or proposals and agreeing any necessary transport improvements and relevant development management policy.

In progressing Local Plans, we will seek to agree the following:

- Assessment tools and methodology
- Baseline Assessment i.e., to demonstrate that the assessment tool accurately reflects current transport conditions
- Comparator case assessment i.e., to forecast the transport conditions that would occur in the absence of the plan
- Forecast modelling i.e., to forecast the transport conditions that would arise with the plan in place, this will include an assessment at the end of the Plan period; and, if required, at full build out if that occurs after the end of the Plan period
- Outputs and outcomes of modelling, demonstrating, as appropriate, what transport infrastructure is necessary to support the plan o It should be noted that a suite of transport modelling tools may be required. This includes strategic modelling covering an area at least one major junction beyond the district boundary, localised network modelling where several links/junctions are close together and/or individual junction modelling
 - o A DMRB (Design Manual for Roads and Bridges) compliancy assessment may also be required for certain highway features, such as Merge/Diverge assessment at Grade separated junctions, link capacity assessments, and others.
- The design of any necessary transport infrastructure, to an extent suitable for establishing deliverability during the plan period at the time that it becomes necessary for the purpose of ensuring that unacceptable road safety impacts or severe operational impacts do not arise as a result of development. This may be to at least General Arrangement design stage or preliminary design stage. Whichever degree of detail is agreed, the products must be in full compliance with the DMRB.
- Industry standard transport intervention costings.
- The delivery/funding mechanisms for necessary transport interventions. It should not be assumed that National Highways will have any responsibility to identify or deliver necessary transport interventions.
- If considered appropriate, a “Monitor & Manage” (M&M) framework, aimed at managing the pace of development in line with the pace of funding and delivery of necessary highway interventions in a manner which responds to the realworld impacts of development may be agreed for inclusion in the plan subject to the adequacy of risk control measures included therein. This can include the move from a ‘predict & provide’ style of delivery to ‘a vision & validate’ style. o Any M&M framework must be based on a “worst case scenario” whereby necessary mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. It must be translated into development management plan policy and policy relating to development allocations.

Further detail on the above can be provided by National Highways.

While ideally all the above should be agreed prior to the Submission of the Local Plan for examination, we recognise that this is not always possible. However, all parties should work towards all matters being agreed and reflected in a Statement of Common Ground (SoCG) by the start of the Local Plan Examination at the latest. Ideally the SoCG between the Council and National Highways would be prepared well in advance of plan submission in order to guide resource input and to track progress towards final agreement on all relevant matters starting from the earliest plan iterations until the final version is agreed.

It is acknowledged that Government policy places much emphasis on housing delivery as a means for ensuring economic growth and addressing the current national shortage of housing. The NPPF is very clear that:
 "Strategic policy-making authorities should establish a housing requirement figure for their whole area, which shows the extent to which their identified housing need (and any needs that cannot be met within neighbouring areas) can be met over the plan period."

However, new DfT C1/22 and the NPPF are equally clear that any development, including housing delivery, must be tempered by the requirement to ensure that the associated transport demand can be accommodated without unacceptable impacts on the safety of the SRN or severe impacts on the operation of the SRN including reliability and congestion. Therefore, as necessary and appropriate, any plan and/or development must be accompanied by suitable mitigation in the right places at the right time, that is to the required design standards and is deliverable in terms of land availability, constructability and funding.

We would also draw your attention to the then Highways England document 'The Strategic Road Network, Planning for the Future: A guide to working with National Highways on planning matters' (September 2015). This document sets out how National Highways intends to work with local planning authorities and developers to support the preparation of sound documents which enable the delivery of sustainable development.
https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/461023/N150227_-_Highways_England_Planning_Document_FINAL-lo.pdf

Responses to Local Plan consultations are also guided by National Planning Policy Framework (NPPF) revised on 20 July 2021 which sets out the government's planning policies for England and how these are expected to be applied.

Updated Circular (01/2022)

It should be noted that since the start of the Local Plan consultation process, on the 23 December 2022, the Department for Transport released a new circular on the 'Strategic road network and the delivery of sustainable development' (Circular 01/2022), which replaces all of the policies in Circular 02/2013 of the same name. These representations take account of the new circular and the requirements in terms of the Local Plan evidence base and process.

We request that the Local Plan is prepared in line with all aspects of the new circular. Particularly, the principles of sustainable development (paragraphs 11 to 17), new connections and capacity enhancements (paragraphs 18 to 25), and engagement with plan-making (paragraphs 26 to 38).

Regulation 18 submission

In our Regulation 18 submission we noted several matters including:

- The need to mitigate the adverse impacts of strategic development traffic to the A27 Chichester Bypass and its junctions at Portfield Roundabout, Bognor Road Roundabout, Whyke Roundabout, Stockbridge Roundabout and Fishbourne Roundabout and Oving junction.
- The need to identify a mechanism to calculate contributions towards the delivery of the previously agreed Local Plan A27 improvements
- The need to confirm the number of dwellings needed within the plan period
- The need to establish National Highways acceptance of the traffic model reference and future case scenarios
- The need to confirm costs, viability, and funding associated with mitigating the safety and congestion impacts of the development included within the plan.

Local Plan context

This Local Plan (Chichester Local Plan 2021 – 2039), prepared by the Local Planning Authority (LPA) Chichester District Council, sets out the vision for future development in the district and will be used to help decide on planning applications and other planning related decisions including shaping infrastructure investments.

The draft sets out how the district should be developed over the next 18-years to 2039 including for the full Plan period (1 April 2021 to 31 March 2039) the total supply of
 - 10,359 dwellings
 - 114,652 net additional sqm new floorspace
 Minus the completions this is equivalent to around 530 dwellings and 6,150 sqm of floorspace a year.

National Highways Representations

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders.

We have undertaken a review of the Chichester Local Plan 2021-2039 proposed submission version and accompanying evidence documents, our comments are set out in the tables below (following pages). [see table within attachment]

Summary

We have reviewed the publicly available Local Plan documents and provided comments above in relation to the transport implications of the plan for the safety and operation of the SRN. We understand that other technical information is available, but this was not presented as part of this consultation. Chichester, and the A27, are already heavily congested, infrastructure in the existing Local Plan remains undelivered and the growth set out in the new Plan will further increase travel demand.

As presented, satisfying the transport needs of the plan is clearly reliant on the delivery of the A27 Chichester bypass improvements project. The A27 Chichester bypass improvements project is one of 32 pipeline schemes being considered for possible inclusion in National Highways third Road Investment Strategy (RIS3) covering 1 April 2025 to 31 March 2030.

On 9 March 2023 the UK Transport Secretary ensured record funding would be invested in the country's transport network, sustainably driving growth across the country while managing the pressures of inflation. The announcement cited the A27 Arundel Bypass as being deferred from RIS2 to RIS 3 (covering 2025-2030). The transport secretary also identified a number of challenges to the delivery of the road investment strategy and cited the benefit of allowing extra time to ensure schemes are better planned and efficient schemes can be deployed more effectively.

At present, there is no commitment by DfT to carry out the A27 Chichester bypass improvements project. Until the A27 Chichester bypass improvements project is published in the RIS3, consented and a decision to invest is made it cannot be assumed to be a committed project.

We note that the Plan does not address any uncertainty of delivery of the A27 Chichester bypass improvements project and we strongly recommend that there is either no reliance placed on RIS3 to realise capacity for growth in the Plan or that contingency measures are included to cover the eventuality that RIS3 funding is not forthcoming within the plan period. It is not clear that the potential impact of development on transport networks can be addressed in the absence of the A27 Chichester bypass improvements project.

Achieving net zero, reducing emissions reduction, acting on climate, and supporting thousands of new homes and new employment developments will

be problematic with existing processes. New, additional, and adapted processes and assessments will likely be required, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments. We acknowledge that change is complex, expensive, and time-consuming, especially for smaller district level Councils. But the hard work will deliver benefits for the Council and residents in the longer-term.

National Highways seeks to continue working with the Council and WSCC to progress coordinated and deliverable packages of interim mitigation measures and alternative transport solutions while a long-term strategic solution is considered by government. This must however be in combination with a robust monitor and manage policy that appropriately manages the risk of unacceptable road impacts resulting from new housing and other development over the Plan period.

We have been in discussion with Chichester District Council regarding their proposed Monitor and Manage Strategy. At present, we do not consider the current strategy to be robust and we seek further information and detail especially on who, when and when monitoring and management will be undertaken. Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas. Any M&M framework must be based on a "worst case scenario" whereby necessary transport mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. The M&M framework must set out that the alternative to mitigation not being delivered is that development does not proceed where that development would give rise to unacceptable road safety risk or severe cumulative impacts on the road network in the absence of that mitigation. The M&M framework must be translated into development management plan policy and policy relating to development allocations.

As we have reiterated throughout our comments, we welcome the opportunity to work with you to address these outstanding matters and we will continue to liaise over submitted Transport Assessment, Travel Plan policy and Monitor and Manage Policy to help to work towards a viable plan.

We hope our comments assist.

We look forward to continuing to participate in future consultations and discussions. Please do continue to consult us as the Plan progresses so that we can remain aware of, and comment as required on, its contents.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Object

Document Element: Policy H4 Affordable Housing**Respondent:** Mr Paul Bedford [5302]**Summary:**

A significant consideration in the plan that supports the need for more housing supply is the need to address affordability. The district has one of the highest ratio of median earnings to house prices of 14 times and despite substantial house building during the period 2013 -2022 the ratio has increased from 10.55.

Full text:

These comments are confined to the three areas set out in the consultation - Legal, Soundness and Duty to Cooperate and to two documents -the draft Local Plan and the Sustainability Assessment.

Legal Status

The Legal status of the Plan is proven but because of the protracted course of the plan's preparation some stages are now dated and raise the question that they should be refreshed. This is the particular case in respect of public participation. There have also been significant changes in legislation that guides the plan's formulation that would have benefited from revised statement of legislative/legal context.

Soundness

In the SA it is stated that the key issue for the plan is the A27 and its capacity. This statement is fundamental in that it is realistically outside the scope of the local planning authorities (CDC and West Sussex CC) to have any direct control over. Unless National Highways position is changed from their previous statements on time scales and what might be included in their assessment no consideration of A27 will be made until RIS3 taking any even initial action into the next decade.

So fundamental and influential is the A27 that assessment of Local Housing Need (LHN), a key component of the whole plan, is reduced from 638 units pa to 535. This position must have an impact on the plan's 'Soundness and crucially the phasing of development.

It is worthy of note that three recent housing appeal decisions unfortunately focused primarily on the lack of a 5yr housing supply base on the 638 higher figure. More pressing were issues of sewage system capacity, coastal inundation and fluvial flooding and nutrient neutrality.

The reduction of housing requirements that the Reg19 LP now promotes is very welcomed.

The reduction on the Manhood Peninsula appears to be derived because of recent housing approvals on appeal bringing forward housing that achieves the revised target based on the 535 figure. Two points arise none of these sites are in locations that CDC indicated in documents such as the HELAA and SHELAA as positively sustainable and as all other significant Peninsula housing is dropped do these sites exceed what would have been planned totals.

The SA 'Framework' only addresses 'Water- protection of resources' this is highly appropriate given the problems experienced in the north eastern part of the district in the summer of 2022 and will become more pressing in the south. Resolution of this issue that stopped planning applications seems to be by reducing water usage at least to 110 ltr ppp or lower this is when Southern Water only hope to achieve 125ltr by 2050.

Consideration in the framework should extend to the 'Water Cycle' and particularly address the acute problems of sewage system network capacity, polluting WWTW outfalls, nutrient neutrality. These systems are already currently stressed/ completely overloaded with current levels of use without new development coming on stream and discharges of untreated sewage are a significant and growing problem to Chichester, Langston and Pagham Harbours- this situation must be set against Defra- Storm Overflow Discharge Reduction Plan's statement "Protecting the Environment-water companies shall only be permitted to discharge from a storm overflow where they can demonstrate that there is no local ecological impact". Damage to Chichester/ Langstone Harbours is documented by a daming Natural England report and by that expected for Pagham Harbour all the sites of national significance for biodiversity and protected habitats.

Whilst para 5.2.34 and Box 5.1 of the SA summarise the position no direct statement of intervention is made. Reliance on a 'Statement of Common Ground' that is referred to offers no positive programme of future capital investment by Southern Water (SW) especially when set against SW's overall regional programme its cost and priorities as set out in their draft DWMP- the final version of which is due for release in March this year- does the Plan reflect this documents information that is so crucial to supporting the infrastructure need for the scale of development envisaged is challenging to the plan's 'Soundness'

Time scale of the crucial improvements to infrastructure and particularly sewer and IWWTW capacity is of particular concern. SW's Drainage and Wastewater Management Plan v1 May 2020 set out in very comprehensive way what needs to be achieved and indication of time scale -placing most in AMP8 the next 5 yr business cycle and OFWAT approval would be needed for the scale of expenditure that is many hundred of millions. These time scale constraints should be reflected in the phasing of any housing development that will have to utilise the network. There is no direct indication that such phasing will be actively enforced.

The lack of inclusion in a key background supporting document -Strategic Flood Risk Assessment (SFRA) -of the Planning Practice Guidance on Flood Risk and Coastal Change that has important bearing on issues particularly for the southern plan area and specifically mentions the importance of the phasing of development to infrastructure provision is a concern especially when it was published in August 2022. These omission again have an impact on the Plan's overall 'Soundness.

A significant consideration in the plan that supports the need for more housing supply is the need to address affordability. The district has one of the highest ratio of median earnings to house prices of 14 times and despite substantial house building during the period 2013 -2022 the ratio has increased from 10.55. It is clear that the type of housing that has occurred and continues to be proposed in the district has done little if anything to impact on affordability and address the need for social/lower cost housing. Based on the 2011 census the district experienced 1,505 inward migration (only Brighton and Hove being higher in the West Sussex/ Gt Brighton area) - this trend has been expected to have continued and accelerated as the pandemic increased the popularity of coastal property and raised market cost of property. Just building more houses without policy intervention to prioritise social shared ownership housing will most probably prove to further increase the extent of unaffordability with the resultant consequences on workforce -especially to support the district ageing population- and supporting young people to remain in the area they have grown up in or have come to be educated. This aspect is cause concern over the Plan's 'Soundness'.

Considerable emphasis is placed on the issues of nutrient neutrality, damage to biodiversity and pollution of Chichester Harbour AONB but such emphasis is not extended to Pagham Harbour that has a similar ecological status to Chichester and suffers the same degradation issues. Although Pagham is outside of the nutrient protection zone the factors contributing to nutrient problems are apparent feeding into Pagham. The delayed report on condition for Pagham from Natural England mirroring that for Chichester Hb gives every indication it will indicate the same levels of detriment as those in Chichester Hb. This assumption being supported by condition reports for instance for rife and ditch condition known reports. Added to these factors are known issues relating to untreated discharges from Sidlesham WWTW. The Local Plans's lack of affording Pagham similar consideration to Chichester Hb is an issue that impacts on the Local Plan's overall 'Soundness'.

Duty to cooperate

The West Sussex and Greater Brighton Strategic Planning Board (WSGBSPB) provides a context for integrated planning along the coast plain area. It is stated that this board is due to issue a review of its 2016 report next month -does the Plan address any issues that this review may raise? Housing needs are a major feature of the area and the need to transfer unmet housing demand to adjoining authorities is characteristic feature of past policy.. The SA quite categorically states that there would be no realistic potential to meet unmet housing need above the now established LHN figure. Should the WSGBSPB's report signal the need for the district to absorb housing from other areas there may be problems as the Plan does not appear to offer any contingency or process how such pressure might be mitigated.

The highly restricted housing numbers in the South Downs National Park Local Plan and the closeness of its boundary to the 'coastal strip' are contributing factors to the area's carrying and overall capacity to support development. Further constraint is imposed by the Chichester Harbour Area of Outstanding Natural Beauty (AONB) and the geographical physical restrictions of the Manhood Peninsula creating 'coastal squeeze'.

Chichester Local Plan – Proposed Submission

Duty to Co-operate

The Statutory Housing Authority welcomes the opportunity to comment on the Chichester Local Plan 2021 – 2039 and strongly commends the Local Planning Authority on progressing with its plan-making activities at a time when a number of Local Planning Authorities across the country have stalled owing to a state of flux in the national policy picture.

Chichester District Council Housing Authority considers that the Chichester Planning Policy Team have engaged in a pro-active manner in an ongoing basis to meet the needs of our communities. Furthermore, the authority has been consulted throughout in the crafting of the proposed housing policies H1 – H10 and confirm that the Duty to Co-operate has been met in this regard.

Is it legally compliant?

The Housing Authority consider the plan as presented, to be legally compliant and have no specific comments in relation to the Sustainability Appraisal, Habitats Regulations Assessment or the Statement of Community Involvement.

Soundness

The Housing Authority is satisfied that the plan is positively prepared and seeks to meet the housing need for both market and affordable housing, so far as is practicable, whilst having consideration for the various constraints of the plan area including AONB designation, heritage matters, flooding matters and infrastructure capacity issues. The Housing Authority believe the plan seeks to balance between these competing demands in a sustainable and realistic manner for the plan period 2021 -2039.

The Housing Authority consider the plan provides for a reasonable evidence based strategy which is consistent with national planning policy and guidance and contributes to the delivery of sustainable development, having regard to the reasonable alternatives available.

Meeting housing need

The Housing Authority considers the plan meets housing need so far as is realistically possible considering the constraints of the plan area.

Policy H1, including the Broad Spatial Distribution - is noted.

Policy H2, the strategic locations are broadly located in areas where the Council held Housing Register indicates the highest level of housing need.

Policy H3 - is noted.

Policy H4 – The Housing Authority fully endorse and support the provisions contained in Policy H4.

Policy H5 - The Housing Authority is supportive of the housing mix outlined in policy H5 and the ability to reflect local need where it is appropriate to do so. Furthermore it is right to provide this level of certainty, whilst allowing for some degree of flexibility.

Policy H6 - The Housing Authority are in full support of this policy and fully endorse the opportunity for Neighbourhood Planning groups to bring forward Self and Custom Build serviced plots. The Housing Authority are encouraged by the potential that may arise with the call for sites for such plots. We look forward to working with our colleagues and communities to bring forward Self and Custom Build opportunities within the plan area.

Policy H7 - The Housing Authority recognise the difficulties in bringing forward exception sites for affordable housing and welcome this policy which seeks to enable the needs of our rural communities to be met.

Policy H8 - The Housing Authority strongly advocate for the inclusion of specialist accommodation for older people, and the intention is to secure affordable housing across all specialist accommodation for older people, including Extra Care to meet the needs of those unable to secure such accommodation in the open market.

H9 – The Housing Authority support the policy to retain accommodation for rural workers.

H10-H14 – The Housing Authority has no observations to make in relation to these policies.

Document Element: Policy H4 Affordable Housing**Respondent:** Churchill Retirement Living [8176]**Agent:** Planning Issues (Stuart Goodwill) [8257]**Summary:**

Churchill Retirement Living are strongly of the view that it would be more appropriate to set a nil affordable housing target for sheltered and extra care development, at the very least in urban areas in the south of the District. This approach accords with the guidance of the PPG which states that 'Different (affordable housing) requirements may be set for different types or location of site or types of development' (Paragraph: 001 Reference ID: 10-001-20190509).

The requirement for affordable housing contributions from specialist older persons' housing typologies is therefore speculative rather than based on the evidence presented. The Local Plan is therefore considered to be unsound on the grounds the affordable housing targets are not justified, positively prepared or effective.

Full text:

See attachment.

Conclusion

5.1.1 Churchill Retirement Living are strongly of the view that it would be more appropriate to set a nil affordable housing target for sheltered and extra care development, at the very least in urban areas in the south of the District. This approach accords with the guidance of the PPG which states that 'Different (affordable housing) requirements may be set for different types or location of site or types of development' (Paragraph: 001 Reference ID: 10-001-20190509).

5.1.2 The guidance in the NPPF and the PPG is that the role for viability assessment is primarily at the Plan making stage: Where up-to-date policies have set out the contributions expected from development, planning applications that comply with them should be assumed to be viable. It is up to the applicant to demonstrate whether particular circumstances justify the need for a viability assessment at the application stage. The weight to be given to a viability assessment is a matter for the decision maker, having regard to all the circumstances in the case, including whether the plan and the viability evidence underpinning it is up to date, and any change in site circumstances since the plan was brought into force (paragraph 57.)

5.1.3 Council Members, Officers and the general public will assume that applications for sheltered or extra care housing will be able to support a policy compliant level of affordable housing. This would however be wholly at odds with the viability evidence underpinning the Local Plan.

5.1.4 The requirement for affordable housing contributions from specialist older persons' housing typologies is therefore speculative rather than based on the evidence presented. The Local Plan is therefore considered to be unsound on the grounds the affordable housing targets are not justified, positively prepared or effective.

5.1.5 We therefore respectfully request that a new subclause is added stating that:
Specialist older persons' housing will be subject to a nil affordable housing requirement on brownfield / urban sites in the South of the District and a 30% affordable housing requirement on greenfield sites.

5.1.6 To that end, we would like to draw the Council's attention to Paragraph 5.33 of Policy HP5: Provision of Affordable Housing in the emerging Fareham Borough Local Plan which advises that:

5.33 ... The Viability Study concludes that affordable housing is not viable for older persons and specialist housing. Therefore, Policy HP5 does not apply to specialist housing or older persons housing.

5.1.7 A nil affordable housing rate could facilitate a step-change in the delivery of older person's housing in the District, helping to meet the diverse housing needs of the elderly. The benefits of specialist older persons' housing extend beyond the delivery of planning obligations as these forms of development contribute to the regeneration of town centres and assist Council's by making savings on health and social care.

Change suggested by respondent:

Request that a new subclause is added stating that:

Specialist older persons' housing will be subject to a nil affordable housing requirement on brownfield / urban sites in the South of the District and a 30% affordable housing requirement on greenfield sites.

Support

Document Element: Policy H4 Affordable Housing**Respondent:** Gladman Developments Ltd (Mr Rob Wilding, Senior Planner) [7816]**Summary:**

Gladman support the current approach of draft Policy H4 which proposes different levels of affordable housing provision depending on location within the district as assessed within the Housing and Economic Development Needs Assessment 2022 (HEDNA) and the viability. Gladman further welcome the flexibility within the policy which allows for reduced rates of affordable housing where viability concerns exist.

Gladman support the provision of affordable housing on site but consider that all affordable housing requirements are tested thoroughly to ensure that they are viable and deliverable alongside the other policy requirements of the Local Plan. The Local Plan should consider that the NPPF determines a minimum affordable housing requirement of 10%, and that it is preferred that a proportion of affordable housing are First Homes.

Full text:

Sustainability Appraisal Comments on Soundness

More action is needed to preserve and improve the quality of life of residents. Recently there has been increased flooding and release of sewage in the Chidham, Hambrook and Bosham areas. Wildlife is also suffering and pollution increasing through high levels of traffic.

Further work needs to make clear to the government the difficulties found by the Council in coping with large new housing developments. Current infrastructure is inadequate in many areas.

A representative of Southern Water recently stated at CDC Overview and Scrutiny committee that it would be able to start on improvements in 2025, a date that they would be available was not given. Southern Water is being put in an impossible position when they are unable to manage the current amount of wastewater but have a statutory duty to treat wastewater from a new development. Tankers should only be used for short periods in emergencies, they increase the carbon footprint, pollution and damage local roads. Water is being extracted from the River Ems to cope with increasing demand.

Roads are in poor condition and becoming overcrowded, with many more cars parking along narrow roads, so that the roads become one way. Closer inspection and management of roads is needed. Priors Leaze Lane in Hambrook and Southbourne is narrow and winds along the Ham Brook. The section running between Inlands Road and the Grain Store should be converted to a footpath and cycle track so that residents from Hambrook and Southbourne can safely travel on foot/cycle.

Any new development should provide 50% of affordable housing. Other districts have managed to make 100% of some developments affordable. The current affordable price should be agreed and statistics published to show that local people, young and old are buying/renting.

The importance of rare chalk streams has recently been mentioned by the WWF, the South Downs National Committee on Chalk Streams and in the West Sussex Wildlife Trust magazine. Care should be taken to protect the Ham Brook and Hairspring Watercress Farm (mentioned in the Domesday Book).

Object

Document Element: Policy H4 Affordable Housing**Respondent:** Mayday! Action Group (John Garrett) [7163]**Summary:**

The Local Plan as written does not state how it will go about addressing the need to create affordable homes. The District Council's record on this matter since the last made plan has been inadequate and now the creation of affordable homes has become urgent as political/economic/social factors drive an ever increasing rate of change within the District.

Full text:

Executive Summary

The Local Plan as written lacks ambition and vision, and will be detrimental to the landscape within which the district lies. It is a plan borne out of a need to produce a legal document which will satisfy the regulatory authorities. In terms of Urban Planning it fails "To meet the needs of the present without compromising the ability of future generations to meet their own needs" (NPPF).

The development that will consequentially arise from the deployment of such a made Local Plan is not sustainable. It will adversely affect the Character, Amenity and Safety of the built environment, throughout our district.

In particular, the Local Plan is inadequate for the needs of the people in the district both at present and in the future because –

1. It has been written in advance of the District having a properly formed and agreed Climate Emergency Action Plan. It is inconceivable that such a key document will not shape our Local Plan. It is this Action Plan that is needed first in order to provide the long-term strategic view as to how and what the District will look like in the future; this, in turn, will help form and shape the policies outlined in any prospective, Local Plan. The Plan as proposed is moribund, as a result of “cart before the horse” thinking.

2. The Local Plan as written does not adequately address how infrastructure, transport and services are going to be materially and strategically improved to meet the predicted growth and shift to a significantly ageing population. There is presently insufficient capacity to supply services and to have adequate people and environmentally friendly connectivity, as a direct result of decades of neglect towards investing in infrastructure and services to meet the needs of the District’s population. We are led to believe that developers through increased levies in order to gain permission to build will fulfil this need, but all that this will result in is an uncoordinated, dysfunctional mess completely lacking in any future-proof master planning approach. We contend that this will do nothing for the quality of life of Chichester District residents and it will create a vacuum whereby few if indeed any can be held accountable or indeed found liable for shortcomings in the future.

3. The Local Plan as written does not state how it will go about addressing the need to create affordable homes. The District Council’s record on this matter since the last made plan has been inadequate and now the creation of affordable homes has become urgent as political/economic/social factors drive an ever increasing rate of change within the District.

4. Flood risks assessments used in forming the Plan are out of date (last completed in 2018) and any decision to allocate sites is contrary to Environment Agency policy. Additionally, since March 2021 Natural England established a position in relationship to ‘Hold the Line’ vs. ‘Managed Retreat’ in environmentally sensitive areas, of which the Chichester Harbour AONB is a significant example. CDC have failed to set out an appropriate policy within the proposed Local Plan that addresses this requirement.

5. The A27 needs significant investment in order to yield significant benefits for those travelling through the East-West corridor; this is unfunded. Essential improvements to the A27 are key to the success of any Local Plan particularly as the city’s ambitions are to expand significantly in the next two decades. But any ambitions will fall flat if the A27 is not improved before such plans are implemented.. The A259 is an increasingly dangerous so-called ‘resilient road’ with a significant increase in accidents and fatalities in recent years. In 2011, the BBC named the road as the “most crash prone A road” in the UK. There is nothing in the Local Plan that addresses this issue. There is no capacity within the strategic road network serving our district to accommodate the increase in housing planned, and the Local Plan does not guarantee it.

6. There is insufficient wastewater treatment capacity in the District to support the current houses let alone more. The tankering of wastewater from recent developments that Southern Water has not been able to connect to their network and in recent months the required emergency use of tankers to pump out overflowing sewers within our City/District reflects the gross weakness of short-termism dominated thinking at its worst and is an indictment of how broken our water system is. The provision of wastewater treatment is absolutely critical and essential to the well-being of all our residents and the long-term safety of our built environment. The abdication by those in authority, whether that be nationally, regionally or locally, is causing serious harm to the people to whom those in power owe a duty of care and their lack of urgency in dealing properly with this issue is seriously jeopardizing the environment in which we and all wildlife co-exist.

7. Settlement Boundaries should be left to the determination of Parish Councils to make and nobody else. The proposed policy outlined in the Local Plan to allow development on plots of land adjacent to existing settlement boundaries is ill-conceived and will lead to coalescence which is in contradiction of Policy NE3.

8. All the sites allocated in the Strategic Area Based Policies appear to be in the majority of cases Greenfield Sites. The plan makes little, if any reference to the development of Brownfield sites. In fact, there is not a Policy that relates to this source of land within the Local Plan as proposed. Whilst in the 2021 HELAA Report sites identified as being suitable for development in the District as being Brownfield sites were predicted to yield over 4000 new dwellings. Why would our Local Plan not seek to develop these sites ahead of Greenfield sites?

9. The Local Plan does not define the minimum size that a wildlife corridor should be in width. What does close proximity to a wildlife corridor mean? How can you have a policy (NE 4) that suggests you can have development within a wildlife corridor? These exceptions need to have clear measures and accountability for providing evidence of no adverse impact on the wildlife corridor where a development is proposed. Our view is quite clear. Wildlife and indeed nature in the UK is under serious and in the case of far too many species, potentially terminal threat. Natural England has suggested that a Wildlife Corridor should not be less than 100metres wide. The proposed Wildlife Corridors agreed to by CDC must be enlarged and fully protected from any development. This is essential and urgent for those Wildlife Corridors which allow wildlife to achieve essential connectivity between the Chichester Harbour AONB and the South Downs National Park.

10. Biodiversity Policy NE5 - This is an absolute nonsense. If biodiversity is going to be harmed there should be no ability to mitigate or for developers to be able to buy their way out of this situation. This mindset is exactly why we are seeing a significant decline in biodiversity in the District which should be a rich in biodiversity area and why the World Economic Forum Report (2023) cites the UK as one of the worst countries in the world for destroying its biodiversity.

11. In many cases as set out in the Policies the strategic requirements lack being SMART in nature – particularly the M Measurable. These need to be explicit and clear: “you get what you measure”.

12. 65% of the perimeter of the District of Chichester south of the SDNP is coastal in nature. The remainder being land-facing. Policy NE11 does not sufficiently address the impact of building property in close proximity to the area surrounding the harbour, something acknowledged by the Harbour Conservancy in a published report in 2018 reflecting upon how surrounding the harbour with housing was detrimental to it long-term health. And here we are 5 years on and all of the organizations that CDC are saying that they are working in collaboration with, to remedy the decline in the harbour’s condition, are failing to implement the actions necessary in a reasonable timescale. CDC are following when they should be actually taking the lead on the issue. Being followers rather than leaders makes it easy to abdicate responsibility. There must be full and transparent accountability.

13. The very significant space constraints for the plan area must be taken into account. The standard methodology need no longer apply where there are exceptional circumstances and we are certain that our District should be treated as a special case because of the developable land area is severely reduced by the South Downs National Park (SDNP) to the north and the unique marine AONB of Chichester Harbour to the south. A target of 535dpa is way too high. This number should be reduced to reflect the fact that only 30% of the area can be developed and much of that is rural/semi-rural land which provides essential connectivity for wildlife via a number of wildlife corridors running between the SDNP and the AONB. Excessive housebuilding will do irretrievable damage to the environment and lead to a significant deterioration in quality of life for all who reside within the East / West corridor.

14. Many of the sites identified in the Strategic & Area Based Policies could result in Grade 1 ^ 2 farmland being built upon. The UK is not self-sufficient in our food security. It is short-sighted to expect the world to return to what we have come to expect. Our good quality agricultural land should not all be covered with non-environmentally friendly designed homes.

Document Element: Policy H4 Affordable Housing
Respondent: Metis Homes [1602]
Agent: Nova Planning (Mr Patrick Barry, Director) [1195]

Summary:

Policy provides no basis for reduced affordable housing 'provision' on viability grounds which is highly unusual for a policy of this nature and contrary to the advice from Dixon Searle. In the absence of provisions within Policy H4 to allow for reduced affordable housing provision on viability grounds, the policy is likely to undermine the delivery of development. In particular, it will undermine development on brownfield sites contrary to paragraph 119 of the NPPF. On this basis the policy is unjustified, and its inclusion makes the Plan unsound.

Respondent: National Highways (Mr Marius Pieters, Spatial Planning Manager) [8127]

Summary:

[National Highways letter dated 24/07/23 confirmed representation should be categorised as Comment - Seeking to understand further e.g., trip generation.] Affordable housing is especially pertinent on the Manhood peninsula, where we note that caravan parks are seeking 365 days a year occupation.

We seek to understand further information about the anticipated traffic generation associated with such changes.

Full text:

We have reviewed the publicly available Local Plan documents and provided comments in the attached letter, in relation to the transport implications of the plan for the safety and operation of the SRN.

Our comments include issues to resolve, comments, requests for further information and recommendations. A brief summary of our main comments are:

- the reliance on the delivery of the A27 Chichester bypass improvements project.
- the requirements for new, additional, and adapted processes and assessments, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments.
- collaborative working between agencies in combination with a robust monitor and manage policy.

We hope our comments assist.

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders. We look forward to continuing to participate in future consultations and discussions. Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Background

National Highways has been appointed by the Secretary of State for Transport as strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the strategic road network (SRN).

National Highways is responsible for operating, maintaining, and improving the Strategic Road Network (SRN) i.e., the Trunk Road and Motorway Network in England, as laid down in Department for Transport (DfT) Circular 01/2022 (Strategic Road Network and the delivery of sustainable development).

The SRN is a critical national asset and as such we work to ensure that it operates and is managed in the public interest, both in respect of current activities and needs as well as in providing effective stewardship of its long-term operation and integrity.

Our responses to Local Plan consultations are guided by relevant policy and guidance including the National Planning Policy Framework (2021) (NPPF):

- Transport issues should be considered from the earliest stages of plan-making and development proposals so that the potential impact of development on transport networks can be addressed (para 104).
- The planning system should actively manage patterns of growth such that significant development is focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. (para 105).
- Planning policies should be prepared with the active involvement of highways authorities and other transport infrastructure providers so that strategies and investments for supporting sustainable transport and development patterns are aligned. (para 106).
- In terms of identifying the necessity of transport infrastructure, NPPF confirms that development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe. (para 111).
- Planning policies and decisions should support development that makes efficient use of land, taking into account the availability and capacity of infrastructure and services – both existing and proposed – as well as their potential for further improvement and the scope to promote sustainable travel modes that limit future car use. (para 124).

In relation to the tests of soundness set out at paragraph 35 of the NPPF, in the context of transport, these are interpreted as meaning:

- a) Positively prepared - has the transport strategy been prepared with the active involvement of the highway authorities, other transport infrastructure providers and operators and neighbouring councils?
- b) Justified – Is the transport strategy based on a robust evidence base prepared with the agreement in partnership, or with the support of the highway authorities?
- c) Effective – Does the transport strategy and policy satisfy the transport needs of the plan and is it deliverable at a pace which provides for and accommodates the proposed progress and implementation of the plan?
- d) Consistent with national policy – Does the transport strategy support the economic, social, and environmental objectives of the Plan and the NPPF/NPPG?

We will be concerned with proposals that have the potential to impact on the safe and efficient operation of the SRN; in this case, the A27 trunk road (Chichester Bypass and its junctions) which is the main access route in the Chichester area. We have particular interest in any allocation, policy or proposals which could have implications for the A27 and the wider SRN network. We are interested as to whether there would be any adverse road safety or operational implications for the SRN. The latter would include a material increase in queueing or delay or reduction in journey time reliability during the construction or operation of the development set out in the plan.

National Highways is a key delivery partner for sustainable development promoted through the plan-led system, and as a statutory consultee we have a duty to cooperate with local authorities to support the preparation and implementation of development plan documents.

In accordance with national planning and transport policy and our operating licence, we are entirely neutral on the principle of development as it is for the local planning authority to determine whether development should be allocated or permitted; albeit it must comply with national policy on locating development in locations that are or can be made sustainable. Therefore, while always seeking early and fulsome engagement with local plans and/or developers, we will simply be assessing the transport and related implications of plans or proposals and agreeing any necessary transport improvements and relevant development management policy.

In progressing Local Plans, we will seek to agree the following:

- Assessment tools and methodology
- Baseline Assessment i.e., to demonstrate that the assessment tool accurately reflects current transport conditions
- Comparator case assessment i.e., to forecast the transport conditions that would occur in the absence of the plan
- Forecast modelling i.e., to forecast the transport conditions that would arise with the plan in place, this will include an assessment at the end of the Plan period; and, if required, at full build out if that occurs after the end of the Plan period
- Outputs and outcomes of modelling, demonstrating, as appropriate, what transport infrastructure is necessary to support the plan o It should be noted

that a suite of transport modelling tools may be required. This includes strategic modelling covering an area at least one major junction beyond the district boundary, localised network modelling where several links/junctions are close together and/or individual junction modelling

- o A DMRB (Design Manual for Roads and Bridges) compliancy assessment may also be required for certain highway features, such as Merge/Diverge assessment at Grade separated junctions, link capacity assessments, and others.
- The design of any necessary transport infrastructure, to an extent suitable for establishing deliverability during the plan period at the time that it becomes necessary for the purpose of ensuring that unacceptable road safety impacts or severe operational impacts do not arise as a result of development. This may be to at least General Arrangement design stage or preliminary design stage. Whichever degree of detail is agreed, the products must be in full compliance with the DMRB.
- Industry standard transport intervention costings.
- The delivery/funding mechanisms for necessary transport interventions. It should not be assumed that National Highways will have any responsibility to identify or deliver necessary transport interventions.
- If considered appropriate, a "Monitor & Manage" (M&M) framework, aimed at managing the pace of development in line with the pace of funding and delivery of necessary highway interventions in a manner which responds to the realworld impacts of development may be agreed for inclusion in the plan subject to the adequacy of risk control measures included therein. This can include the move from a 'predict & provide' style of delivery to 'a vision & validate' style.
 - o Any M&M framework must be based on a "worst case scenario" whereby necessary mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. It must be translated into development management plan policy and policy relating to development allocations.

Further detail on the above can be provided by National Highways.

While ideally all the above should be agreed prior to the Submission of the Local Plan for examination, we recognise that this is not always possible. However, all parties should work towards all matters being agreed and reflected in a Statement of Common Ground (SoCG) by the start of the Local Plan Examination at the latest. Ideally the SoCG between the Council and National Highways would be prepared well in advance of plan submission in order to guide resource input and to track progress towards final agreement on all relevant matters starting from the earliest plan iterations until the final version is agreed.

It is acknowledged that Government policy places much emphasis on housing delivery as a means for ensuring economic growth and addressing the current national shortage of housing. The NPPF is very clear that:
 "Strategic policy-making authorities should establish a housing requirement figure for their whole area, which shows the extent to which their identified housing need (and any needs that cannot be met within neighbouring areas) can be met over the plan period."

However, new DfT C1/22 and the NPPF are equally clear that any development, including housing delivery, must be tempered by the requirement to ensure that the associated transport demand can be accommodated without unacceptable impacts on the safety of the SRN or severe impacts on the operation of the SRN including reliability and congestion. Therefore, as necessary and appropriate, any plan and/or development must be accompanied by suitable mitigation in the right places at the right time, that is to the required design standards and is deliverable in terms of land availability, constructability and funding.

We would also draw your attention to the then Highways England document 'The Strategic Road Network, Planning for the Future: A guide to working with National Highways on planning matters' (September 2015). This document sets out how National Highways intends to work with local planning authorities and developers to support the preparation of sound documents which enable the delivery of sustainable development.
https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_t_data/file/461023/N150227_-_Highways_England_Planning_Document_FINAL-lo.pdf

Responses to Local Plan consultations are also guided by National Planning Policy Framework (NPPF) revised on 20 July 2021 which sets out the government's planning policies for England and how these are expected to be applied.

Updated Circular (01/2022)

It should be noted that since the start of the Local Plan consultation process, on the 23 December 2022, the Department for Transport released a new circular on the 'Strategic road network and the delivery of sustainable development' (Circular 01/2022), which replaces all of the policies in Circular 02/2013 of the same name. These representations take account of the new circular and the requirements in terms of the Local Plan evidence base and process.

We request that the Local Plan is prepared in line with all aspects of the new circular. Particularly, the principles of sustainable development (paragraphs 11 to 17), new connections and capacity enhancements (paragraphs 18 to 25), and engagement with plan-making (paragraphs 26 to 38).

Regulation 18 submission

In our Regulation 18 submission we noted several matters including:

- The need to mitigate the adverse impacts of strategic development traffic to the A27 Chichester Bypass and its junctions at Portfield Roundabout, Bognor Road Roundabout, Whyke Roundabout, Stockbridge Roundabout and Fishbourne Roundabout and Oving junction.
- The need to identify a mechanism to calculate contributions towards the delivery of the previously agreed Local Plan A27 improvements
- The need to confirm the number of dwellings needed within the plan period
- The need to establish National Highways acceptance of the traffic model reference and future case scenarios
- The need to confirm costs, viability, and funding associated with mitigating the safety and congestion impacts of the development included within the plan.

Local Plan context

This Local Plan (Chichester Local Plan 2021 – 2039), prepared by the Local Planning Authority (LPA) Chichester District Council, sets out the vision for future development in the district and will be used to help decide on planning applications and other planning related decisions including shaping infrastructure investments.

The draft sets out how the district should be developed over the next 18-years to 2039 including for the full Plan period (1 April 2021 to 31 March 2039) the total supply of

- 10,359 dwellings
- 114,652 net additional sqm new floorspace

Minus the completions this is equivalent to around 530 dwellings and 6,150 sqm of floorspace a year.

National Highways Representations

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders.

We have undertaken a review of the Chichester Local Plan 2021-2039 proposed submission version and accompanying evidence documents, our comments are set out in the tables below (following pages). [see table within attachment]

Summary

We have reviewed the publicly available Local Plan documents and provided comments above in relation to the transport implications of the plan for the safety and operation of the SRN. We understand that other technical information is available, but this was not presented as part of this consultation. Chichester, and the A27, are already heavily congested, infrastructure in the existing Local Plan remains undelivered and the growth set out in the new Plan will further increase travel demand.

As presented, satisfying the transport needs of the plan is clearly reliant on the delivery of the A27 Chichester bypass improvements project. The A27 Chichester bypass improvements project is one of 32 pipeline schemes being considered for possible inclusion in National Highways third Road Investment Strategy (RIS3) covering 1 April 2025 to 31 March 2030.

On 9 March 2023 the UK Transport Secretary ensured record funding would be invested in the country's transport network, sustainably driving growth across the country while managing the pressures of inflation. The announcement cited the A27 Arundel Bypass as being deferred from RIS2 to RIS3 (covering 2025-2030). The transport secretary also identified a number of challenges to the delivery of the road investment strategy and cited the benefit of allowing extra time to ensure schemes are better planned and efficient schemes can be deployed more effectively.

At present, there is no commitment by DfT to carry out the A27 Chichester bypass improvements project. Until the A27 Chichester bypass improvements project is published in the RIS3, consented and a decision to invest is made it cannot be assumed to be a committed project.

We note that the Plan does not address any uncertainty of delivery of the A27 Chichester bypass improvements project and we strongly recommend that there is either no reliance placed on RIS3 to realise capacity for growth in the Plan or that contingency measures are included to cover the eventuality that RIS3 funding is not forthcoming within the plan period. It is not clear that the potential impact of development on transport networks can be addressed in the absence of the A27 Chichester bypass improvements project.

Achieving net zero, reducing emissions reduction, acting on climate, and supporting thousands of new homes and new employment developments will be problematic with existing processes. New, additional, and adapted processes and assessments will likely be required, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments. We acknowledge that change is complex, expensive, and time-consuming, especially for smaller district level Councils. But the hard work will deliver benefits for the Council and residents in the longer-term.

National Highways seeks to continue working with the Council and WSCC to progress coordinated and deliverable packages of interim mitigation measures and alternative transport solutions while a long-term strategic solution is considered by government. This must however be in combination with a robust monitor and manage policy that appropriately manages the risk of unacceptable road impacts resulting from new housing and other development over the Plan period.

We have been in discussion with Chichester District Council regarding their proposed Monitor and Manage Strategy. At present, we do not consider the current strategy to be robust and we seek further information and detail especially on who, when and when monitoring and management will be undertaken. Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas. Any M&M framework must be based on a "worst case scenario" whereby necessary transport mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. The M&M framework must set out that the alternative to mitigation not being delivered is that development does not proceed where that development would give rise to unacceptable road safety risk or severe cumulative impacts on the road network in the absence of that mitigation. The M&M framework must be translated into development management plan policy and policy relating to development allocations.

As we have reiterated throughout our comments, we welcome the opportunity to work with you to address these outstanding matters and we will continue to liaise over submitted Transport Assessment, Travel Plan policy and Monitor and Manage Policy to help to work towards a viable plan. We hope our comments assist.

We look forward to continuing to participate in future consultations and discussions. Please do continue to consult us as the Plan progresses so that we can remain aware of, and comment as required on, its contents.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Object

Document Element: Policy H4 Affordable Housing**Respondent:** Ms Meghan Rossiter [7722]**Summary:**

First Homes should be flexibly applied, with more clarity on responding to local needs in favour of rented and shared ownership affordable homes.

Full text:

The use of different affordable housing percentages for greenfield and brownfield sites in this policy is supported on the basis of this supporting regeneration of brownfield sites. The text in this policy does not however reflect that delivery of First Homes across the Borough may further dilute the delivery of affordable housing tenures that better meet local housing needs, and in sufficient quantities to hit the Council's targets for meeting housing need. It is concerning that the Viability Assessment – Further Update Note (January 2023) does not contain any detailed analysis of the costs associated with delivering First Homes, nor the impact of varying discounts necessary to deliver different house sizes to meet the price cap within Chichester.

The local planning authorities of Bath and North East Somerset Council and Guildford Borough Council have identified the lack of affordability of First Homes within their communities and taken steps to prioritise other affordable housing tenures. In the case of B&NES due to the evidence demonstrating that First Homes is not affordable and would affect delivery of other affordable tenures, the Council has decided not to implement the national guidance and excluded the tenure from their policies and guidance.

In contrast, the emerging draft Guildford Local Plan Policy H8 incorporates flexibility to deliver alternative affordable home ownership tenures where delivery of First Homes would “lead to an adverse planning outcome”, making delivery of First Homes an expectation, but not a requirement.

The HEDNA (April 2022 Final Report) suggests that:

“the clear need for additional rented housing would arguably mean that providing the affordable home ownership would ‘prejudice the ability’ to meet the needs of the ‘specific group’ requiring rented accommodation”.

It also notes that delivery of First Homes may ‘squeeze out’ other forms of low cost home ownership housing such as shared ownership, and delivery will, in particular for 3-bedroom dwellings for which there is significant need within Chichester, require additional discounts to hit the national cap. These higher discounts prejudice the viability of development, and in particular the delivery of rented affordable housing.

The introduction of First Homes as expected by the national guidance may reduce the opportunities for mixed tenure developments to meet local housing needs, contrary to national policy. We ask that the Council review whether the omission of the tenure, as supported by Bath and North East Somerset Council, would operate more effectively in Chichester than the flexibility currently suggested in the policy text. If not, the flexibility as currently drafted will assist in delivering housing in response to local need, affordability, and viability.

Abri supports the further text supporting development identifying opportunities for delivering a proportion of affordable housing for older persons.

Change suggested by respondent:

The Council should consider omitting the tenure altogether.

Document Element: Policy H4 Affordable Housing**Respondent:** The Planning Bureau on behalf of McCarthy Stone [8093]**Agent:** Miss Natasha Styles [8040]**Summary:**

The viability assessment clearly shows that specialist housing for older people is only marginally viable. We are also concerned that the level of financial contributions attributed to achieving nitrate neutrality and water neutrality are massively underrepresented. This has implications for the viability of retirement housing schemes for which there is a critical need in the area,

Full text:

Policy H4- Affordable Housing

The Local Plan is one of an alarmingly limited number of emerging Local Plans that have set a differential affordable housing rate. The policy stipulates that affordable housing requirement of 40% on Greenfield sites and 30% on previously developed land. This is commendable and suggests a greater focus on viability in the Plan making stage. The affordable housing target set out in Policy H4 are informed by the evidence base, namely the Viability Assessment taken by Dixon Searle Partnership, hereafter referred to as the viability assessment. We commend the Council for making the report available at the Regulation 18 stage.

We note that the viability assessment has assessed the viability of the extra care older persons housing typologies and that reference is also made to Sheltered housing typologies. We would recommend caution as the viability assessment clearly shows that specialist housing for older people is only marginally viable using the inputs that Dixon Searle have adopted. We are also concerned that the level of financial contributions attributed to achieving nitrate neutrality and water neutrality are massively underrepresented, we believe that figures could be up to £8k a unit for nutrient neutrality (based on examples requested in other LPAs) and given there are no example of off-site credit systems, a similar figure could potentially be required again for water neutrality. The implications of £157.2 per square metre towards CIL contributions on a 50-unit retirement scheme, in conjunction with the other s106 contributions would be as follows:

- Nutrient Neutrality is £2k per unit = £100k
- Water Neutrality is £2k per unit = £100k
- SPA mitigation - £625 per dwelling = £31,250
- Residual S106 - £1500 per unit - £75k
- A827 contribution £8k (assumed to be per development not per dwelling)

This would mean that there would be contributions of around £974,000 on an average scheme in the south of the District before affordable housing is calculated. This has massive implications for the viability of retirement housing schemes for which there is a critical need in the area, and as we are not confident that the. Figures are appropriate for nutrients and water neutrality, this could mean that some retirement housing schemes are rendered unviable by these inputs.

In light of the above, we would suggest that the Council ensure that there is sufficient headroom in the viability of developments and that its policy requirements are robustly tested and the inputs for water neutrality and nitrate neutrality in particular are re-evaluated.

Change suggested by respondent:

In light of our comments we would recommend that the Council ensure that there is sufficient headroom in the viability of developments and that its policy requirements are robustly tested and the inputs for water neutrality and nitrate neutrality in particular are re-evaluated.

Object

Document Element: Policy H4 Affordable Housing**Respondent:** Westbourne Parish Council (Clare Kennett Parish Clerk) [1051]**Summary:**

[RECEIVED LATE] - The existing policy only requires on-site provision of affordable housing for 10 or more dwellings. The proposed changes to require commuted sum payments in defined rural areas on sites for between six to nine dwellings is supported. However, this as drafted currently excludes Westbourne. Westbourne Parish Council would urge the District Council to ensure that this policy applies to Westbourne as it has limited opportunity for larger sites which makes it difficult to bring forward affordable housing and there is a clear need for more affordable housing in the Parish.

Full text:

The Parish Council supports the vision and overall strategic objectives of the Local Plan 2021-2039.

Spatial strategy:

Westbourne is identified as a Service Village and there is a given allocation for new development of 30 dwellings. In general terms this seems like a reasonable level of new growth that can be accommodated. However, the plan recognises that in the general area the scope for new development between the National Park boundary and the A27 is limited outside of Southbourne due to physical and environmental constraints. Given these limited opportunities to find land for new development around the village, which was confirmed in the Neighbourhood Planning process recently completed, the scope for Westbourne to take further development is very limited. The Parish Council would urge the District Council to see this quantity of 30 as a maximum target. We would ask the District Council to confirm that it would not suggest a new strategic development being brought forward in the allocations plan for Westbourne as the constraints of the National Park setting and other countryside policies severely limit the scope for further development.

Policy H4, affordable housing policy:

The existing policy only requires on-site provision of affordable housing for 10 or more dwellings. The proposed changes to require commuted sum payments in defined rural areas on sites for between six to nine dwellings is supported. However, this as drafted currently excludes Westbourne. Westbourne Parish Council would urge the District Council to ensure that this policy applies to Westbourne as it has limited opportunity for larger sites which makes it difficult to bring forward affordable housing and there is a clear need for more affordable housing in the Parish.

Policies H12 and H13:

The Plan indicates that there is a high level of unmet need generally for Gypsy's Travellers and Show People. The high levels of existing and unauthorised pitches in Westbourne is also mentioned in the Plan. The neighbouring parish of Southbourne is also mentioned as a location with high levels of pitches and unmet need. The relevant extract on the approach to meeting this need is as follows. "the council has had to utilise a wide range of options for meeting this need. This entails providing pitches on the strategic housing allocation sites, supporting increases in the density of pitches on existing authorised sites which have been assessed as being acceptable in principle for additional pitches, and allowing pitches to come forward on a case-by-case basis. The council will also consider allocating additional pitches via the forthcoming Allocations DPD."

Westbourne Parish Council is concerned to avoid intensification of the authorised and unauthorised Gypsy and Traveller and Showman's Pitches located within the Parish. Westbourne already has one of the highest concentrations of such uses anywhere in the District and further intensification will have an adverse impact on the balanced and cohesive community that we seek to protect. We would argue that other locations with lower intensities of such use should be sought to meet this need.

The site in Cemetery Lane at Greenacre is identified as a location for an additional four pitches. There have been many enforcement issues in this area with unauthorised pitches and unauthorised industrial and commercial development, and further increases in the quantity of pitches will exacerbate the situation to the detriment of the balanced and cohesive community that the Parish Council seeks to protect and enhance.

Document Element: Policy H5 Housing Mix**Respondent:** Bellway Homes (Wessex) Ltd [1573]**Agent:** Chapman Lily Planning (Mr Brett Spiller, Planning Consultancy Director) [8132]**Summary:**

Bellway supports draft Policy H5, which requires the delivery of an appropriate type and size, consistent with the most up to date HEDNA. Bellway welcome that planning permission can be granted for an alternative mix subject to a robust evidencing that the proposal addresses any housing imbalance that exists or that it addresses need and demand for affordable housing, self-build housing, older person and specialised housing. Bellway contend that the draft Policy 'Housing Mix' as conveyed in the Pre-submission Plan has been positively prepared, is fully justified, effective and consistent with the NPPF.

Full text:

See attachment.

Change suggested by respondent:

Bellway recommend that criterion 3 also includes reference to need for the housing mix to take into account the location of the site, for example city centre sites are more suitable for a higher density form of development with smaller units vs other sites where a greater proportion of family housing may be appropriate.

Chichester Local Plan – Proposed Submission

Duty to Co-operate

The Statutory Housing Authority welcomes the opportunity to comment on the Chichester Local Plan 2021 – 2039 and strongly commends the Local Planning Authority on progressing with its plan-making activities at a time when a number of Local Planning Authorities across the country have stalled owing to a state of flux in the national policy picture.

Chichester District Council Housing Authority considers that the Chichester Planning Policy Team have engaged in a pro-active manner in an ongoing basis to meet the needs of our communities. Furthermore, the authority has been consulted throughout in the crafting of the proposed housing policies H1 – H10 and confirm that the Duty to Co-operate has been met in this regard.

Is it legally compliant?

The Housing Authority consider the plan as presented, to be legally compliant and have no specific comments in relation to the Sustainability Appraisal, Habitats Regulations Assessment or the Statement of Community Involvement.

Soundness

The Housing Authority is satisfied that the plan is positively prepared and seeks to meet the housing need for both market and affordable housing, so far as is practicable, whilst having consideration for the various constraints of the plan area including AONB designation, heritage matters, flooding matters and infrastructure capacity issues. The Housing Authority believe the plan seeks to balance between these competing demands in a sustainable and realistic manner for the plan period 2021 -2039.

The Housing Authority consider the plan provides for a reasonable evidence based strategy which is consistent with national planning policy and guidance and contributes to the delivery of sustainable development, having regard to the reasonable alternatives available.

Meeting housing need

The Housing Authority considers the plan meets housing need so far as is realistically possible considering the constraints of the plan area.

Policy H1, including the Broad Spatial Distribution - is noted.

Policy H2, the strategic locations are broadly located in areas where the Council held Housing Register indicates the highest level of housing need.

Policy H3 - is noted.

Policy H4 – The Housing Authority fully endorse and support the provisions contained in Policy H4.

Policy H5 - The Housing Authority is supportive of the housing mix outlined in policy H5 and the ability to reflect local need where it is appropriate to do so. Furthermore it is right to provide this level of certainty, whilst allowing for some degree of flexibility.

Policy H6 - The Housing Authority are in full support of this policy and fully endorse the opportunity for Neighbourhood Planning groups to bring forward Self and Custom Build serviced plots. The Housing Authority are encouraged by the potential that may arise with the call for sites for such plots. We look forward to working with our colleagues and communities to bring forward Self and Custom Build opportunities within the plan area.

Policy H7 - The Housing Authority recognise the difficulties in bringing forward exception sites for affordable housing and welcome this policy which seeks to enable the needs of our rural communities to be met.

Policy H8 - The Housing Authority strongly advocate for the inclusion of specialist accommodation for older people, and the intention is to secure affordable housing across all specialist accommodation for older people, including Extra Care to meet the needs of those unable to secure such accommodation in the open market.

H9 – The Housing Authority support the policy to retain accommodation for rural workers.

H10-H14 – The Housing Authority has no observations to make in relation to these policies.

Document Element: Policy H5 Housing Mix**Respondent:** Church Commissioners for England [1858]**Agent:** Lichfields (Tara Johnston, Planner) [7506]**Summary:**

Draft Policy H5 confirms that the housing mix for a development will be based on the most up to date HEDNA to address identified local needs and market demands.

Full text:

We write in response to the above consultation on behalf of our client, the Church Commissioners for England (CCE). CCE owns a large amount of land in the area largely to the south, west and east of Chichester.

We welcome the opportunity to further engage with the Local Plan process. Whilst we support some aspects of the Local Plan, we consider that some changes are likely to be necessary to ensure that the Plan can be found sound.

By way of background, CCE submitted several sites for consideration as part of the Housing Economic Land Availability Assessment (HELAA) in 2021. These sites were previously promoted as part of the Preferred Approach Local Plan Regulation 18 Consultation in 2019.

As part of these representations, we take the opportunity to re-promote a number of CCE's sites, which could assist the Council in delivering much needed housing for the district. CCE has updated its technical work and provide Vision Documents in relation to its landholdings in Southbourne, Oving, and Hunston Parishes to demonstrate how additional housing can be delivered. These Vision Documents are enclosed.

We consider this and other aspects of the emerging Local Plan below.

Chapter 2: Vision & Strategic Objectives

The Local Plan Vision details a positive approach to supporting sustainable development in the context of the climate emergency. CCE welcomes the Vision for Chichester, particularly the importance placed on the delivery of new homes in 'Objective 3' and the delivery of new infrastructure to support the new development in 'Objective 7'.

Chapter 3: Spatial Strategy and Settlement Hierarchy

The Spatial Strategy builds on the previous Local Plan by focussing growth on Chichester city as the main sub-regional centre. Outside Chichester city and its closest settlements, development will focus on the two settlement hubs within the east-west corridor at Tangmere and Southbourne. This approach is supported by CCE.

Policy S1 Spatial Development Strategy

Draft Policy S1 (Spatial Development Strategy) identifies the broad approach to providing sustainable development in the plan area, which includes ensuring that new residential development is distributed in line with the settlement hierarchy, with a greater proportion of development in the larger and more sustainable settlements. We support this strategy, with particular support for development at the settlement hubs of Southbourne (Policy A13) and Tangmere (Policy A14). We also support that provision is made for extant Site Allocations and the Tangmere strategic site remains allocated under draft Policy A14.

Policy A14 continues to allocate Land West of Tangmere for 1,300 dwellings. CCE questions the Council's decision to not amend the existing settlement boundary of Tangmere to include the land subject to the allocation. Without amending the settlement boundary, the future growth of Tangmere may be hindered. As such, the settlement boundary of Tangmere should be amended to include the allocated site to ensure that the plan is justified.

Draft Policy S1 also refers to development in service villages such as Bosham, Hambrook and Loxwood.

Hunston is excluded from the Spatial Strategy but is identified as a Service Village within the Settlement Hierarchy in draft Policy SP2 (Settlement Hierarchy). The draft Local Plan suggests that the allocation of homes in Hunston has been removed as a result of growth in the Manhood Peninsula. CCE acknowledges that the overall housing numbers across the district have been reduced as a result of local constraints but reiterate that their landholding in Hunston remains a suitable site for housing should the Council need to identify more land for housing. This is discussed further below.

Policy S2 Settlement Hierarchy

As stated in paragraph 3.31 of the draft local plan, 'The NPPF encourages housing delivery where it will enhance or maintain the vitality of rural communities'. Paragraph 79 of the NPPF (2021) states that 'To promote sustainable development in rural areas, housing should be located where it will enhance or maintain the vitality of rural communities. Planning policies should identify opportunities for villages to grow and thrive, especially where this will support local services. Where there are groups of smaller settlements, development in one village may support services in a village nearby'.

CCE owns substantial land holdings in South Mundham, which is in close proximity to North Mundham/Runcton which is defined as a Service Village. As such, whilst South Mundham does not contain any services, development in the hamlet would enable sustainable growth to support facilities in North Mundham and Runcton. To ensure that the draft plan is consistent with national policy, South Mundham should be considered as part of North Mundham as a Service Village when considering the future pairing/grouping of some settlements where the facilities and services could be shared to capitalise on the close connections some settlements have.

Development outside the settlements listed in the hierarchy in SP2 is restricted to proposals which require a countryside location or meet an essential local rural local need or supports rural diversification in accordance with Policy NE10. To this end, CCE has smaller land holdings in Tangmere, Oving, South Mundham, Birdham, Chidham and Sidlesham, which may be suitable for conversion for residential use or via windfall housing. Location plans for each of the sites can be found in Appendices 1-8.

Chapter 4: Climate Change and the Natural Environment**Policy NE4 Strategic Wildlife Corridors**

The East of City strategic wildlife corridor has been relocated to the eastern side of proposed Site Allocation A8 (Land to the East of Chichester). The relocation of this wildlife corridor follows additional evidence that shows that the commuting route for Barbastelle Bats is along Drayton Lane.

CCE owns land to the east of Drayton Lane (immediately adjacent to the wildlife corridor and to the east of draft allocation A8) and surrounding the village of Oving. Its land has been identified in the HELAA (2021) as being developable, including site HOV0017 (Drayton Lane). The land east of Drayton Lane is sustainably located being close to Chichester and its amenities. The site provides an opportunity to sensitively and sustainably provide additional homes for the District. In accordance with Draft Policy NE4, the proposals for the Land East of Drayton Lane will not have an adverse impact on the integrity and function of the wildlife corridor and will not undermine the connectivity and ecological value of the corridor. This Vision Document will be shared under separate cover.

The eastern edge of the relocated wildlife corridor encroaches into CCE land. Any proposal on this land would be required to take the statutory

protection for bats and other protected species into consideration and managed as part of a sensitive masterplan for development and on this basis, it is considered unnecessary to extend the wildlife corridor to encroach into the CCE site.

It is also considered that the detail of policy NE4 goes beyond the purpose of the policy, which should be to safeguard wildlife rich habitats and wider ecological networks. The policy is clear that development should only be permitted where it would not create an adverse effect upon the ecological value, function, integrity and connectivity of the corridors. It does not resist development in principle. This therefore makes redundant policy text 1, which seeks to introduce a sequential test for preferable sites outside of a wildlife corridor. It is considered that this test conflicts with the underlying purpose of the policy, which is to safeguard wildlife corridors from harmful impacts that cannot be mitigated, and should therefore be deleted.

Policy NE7 Development and Disturbance of Birds

CCE is broadly supportive of Policy NE7. However, they would like to note that the situation regarding the national guidance on nutrient neutrality is still evolving and therefore, this policy is only relevant to current legislation. Policy NE7 may therefore not be relevant throughout the entirety of the plan period. As such, CCE considers that it is necessary in this instance to ensure that an appropriate reference to changing legislation is included within the policy to prevent it from becoming out of date and would also ensure that the policy remains effective once adopted.

Policy NE10 The Countryside

CCE is supportive of the inclusion of a policy referencing the conversion of existing buildings in the countryside, however, we believe that Policy NE10 is not consistent with national policy. Policy NE10 criteria B states that proposals for the conversion of buildings in the countryside will be permitted where 'it has been demonstrated that economic and community uses have been considered before residential, with residential uses only permitted if economic and community uses are shown to be inappropriate and unviable'. This policy is not in accordance with Paragraph 152 of the NPPF (2021) which states that the reuse of existing resources should be encouraged, including 'the conversion of existing buildings'. Under paragraph 152, there is no prerequisite to adopt a sequential approach, or to give preference to other uses. As such, criteria B should be omitted from Policy NE10. Reference to criteria B should also be removed from criteria C.

Chapter 5: Housing

Policy H1 Meeting Housing Needs

The Preferred Approach Local Plan was based on meeting the identified objectively assessed housing needs of the plan area of 638 dwellings per annum. However, due to constraints, particularly the capacity of the A27, the Submission Version of the Local Plan has planned for a housing requirement below the need derived from the standard method. The Plan proposes to deliver 535 dpa in the southern plan area and a further 40 dpa in the northern plan area, a total supply of 10,350 dwellings over the plan period from 2021 – 2039 (575 dpa).

The Planning Inspectorate has previously asked the Council to determine what level of housing could be achieved based on deliverable improvements to the A27 and to consider whether the full housing needs could be met another way. It is acknowledged that the Council has carried out the additional work required and the local constraints have resulted in a proposed lower housing requirement.

The NPPF (2021) confirms that to determine the minimum number of homes needed, strategic policies should be informed by a local housing need assessment, conducted using the standard method in national planning guidance – unless exceptional circumstances justify an alternative approach (para. 61). CCE acknowledges that that housing numbers have been reduced as a result of local constraints and it will be down to the Inspector to determine whether the Council's exceptional circumstances justify this. Should the Planning Inspector find that the Council requires additional land to meet the housing need using the standard method, CCE's land at Southbourne, Oving, Drayton Land and Hunston are suitable, available and developable for housing. In addition, CCE's rural development sites could also contribute to meeting the housing need.

Policy H2 Strategic Allocations

Draft Policy H2 confirms that the Tangmere Strategic Development Location is carried forward from the 2015 Local Plan and this is supported by CCE. Strong support is also given for the Broad Location of Development in Southbourne (Policy A13) for up to 1,050 dwellings.

Policy H5 Housing Mix

Draft Policy H5 confirms that the housing mix for a development will be based on the most up to date HEDNA to address identified local needs and market demands. We suggest that the Council considers a range of criteria, including site characteristics, when determining the housing mix for individual sites and this should be reflected in wording of Policy H5.

Policy H7 Rural and First Homes Exception Sites

Draft Policy H7 relates to rural and first homes exception sites. CCE is supportive of the principle of the inclusion of a rural exceptions policy. However, we have concerns over criteria contained within the policy which limits the amount of development that can be delivered under it.

The NPPF (2021) at paragraph 78 states that planning policies and decisions should be responsive to local circumstances and support housing development that reflect local needs. Furthermore it also states that 'local planning authorities should support opportunities to bring forward rural exception sites that will provide affordable housing to meet identified local needs'.

The key aspect of the policy is to enable the delivery of rural exception sites which would address an identified local need. Within the policy, there is no limit on the amount of development that can be delivered and therefore, it is considered that if Policy H7 is limited to a maximum of 30 dwellings it could serve to hinder development (especially on slightly larger sites), which would otherwise be sustainable. As such, we consider that the amount of development should not be limited and rather should be dictated on a site and need specific basis. CCE considers that for Policy H7 to be positively prepared and in accordance with National Policy, criteria 2 should be removed.

In addition, criteria 6 states that proposals for affordable housing on rural exception sites will only be supported where 'the site is located adjacent or as close as possible to the existing settlement boundary and does not result in scattered or isolated development in rural areas'. The NPPF (2021) does not specify the location of rural exception sites. As such, to be consistent with national policy, criteria 6 should also be omitted.

Furthermore, Policy H7 states that 'applications for first homes exception sites that propose the inclusion of a small proportion of market housing will be expected to provide robust evidence...'

However, in the policy there is no allowance for the provision of market housing on rural exception sites in addition to first homes exception sites. As a result of this, the requirements of the policy are again not consistent with national policy. Paragraph 78 of the NPPF (2021) is supportive of 'some market housing' where it would facilitate the delivery of rural exception sites. As such, CCE considers that Policy H7 should be amended as follows:

'Applications for rural and first homes exceptions sites that propose the inclusion of a small proportion of market housing will be expected to provide robust evidence that the site would be unviable without such housing being included'.

Policy H8 Specialist Accommodation

Draft Policy H8 confirms that all housing sites over 200 units, including those allocated in this plan, will be required to provide specialist accommodation for older people with a support or care component. We request that this policy is amended to add 'where appropriate and viable', acknowledging that viability and site-specific factors need to be taken into consideration.

Chapter 6: Place-making

Policy P3 Density

We support the objective of Draft Policy P3 (Density) to make the most efficient use of land and follow a design led approach to achieve the optimum density for a site. The Policy does not prescribe an appropriate density for the District and this is supported. However, we consider that reference should be made to the fact that density may vary depending upon site specific circumstances and could be higher where transport links and access to services is good.

Chapter 7: Employment and Economy

Policy E3 and E4 Horticultural Development

Chapter 7 of the draft Local Plan confirms that 67 hectares of land is identified to meet the future horticultural land need within four Horticultural Development Areas (HDAs) over the plan period. It is confirmed that an additional 137 hectares of horticultural land is also forecast to be required outside of HDAs to meet future need.

CCE has significant landholdings which could assist the Council in addressing the insufficient availability within the current HDAs. The CCE sites which are considered suitable for horticulture development are listed below and location plans for each of the sites can be found in Appendices 9-13.

- Somerley Farm, NE East Wittering, PO20 7JB
- Fisher Farm, South Mundham, PO20 1ND
- Church & Haise Farm, Sidlesham
- Cowdry Farm, Birdham
- Groves Farm, nr Merston, PO20 2DX / Colworth Manor Farm PO20 2DU.

CCE supports draft Policy E3 which confirms that "approximately 137 hectares of land is also needed outside of HDAs to meet anticipated horticultural and ancillary development land need for the plan period." Support is also given for draft Policy E4 in relation to land outside HDAs. This Policy confirms that proposals for horticultural development can come forward outside the HDAs, subject to a set of criteria. We would welcome continued discussion with the Council on how these sites could help meet the districts horticultural needs in the future.

Chapter 10: Strategic and Area Based Policies

CCE supports Chichester District Council's proposal to allocate additional land for housing at Southbourne and to maintain the existing allocation at Tangmere. We also consider that CCE's land at Hunston and Oving could assist the Council in meeting its housing needs, should additional housing be required. We consider these opportunities in turn below.

Policy A13 Southbourne Broad Location for Development

CCE supports draft Policy A13 and the allocation of a Broad Location for Development in Southbourne for a mixed-use form of development including 1,050 dwellings.

CCE has significant landholdings around Southbourne which is suitable, available and developable. The land to the north and west of Southbourne measures 70ha and is wholly within CCE's control. The land adjoins the existing settlement and provides an opportunity for a sustainable extension to Southbourne with the potential to deliver c. 1,200 homes for the village, as well as employment, community uses and a significant amount of new public space and green open space. A new Vision Document is enclosed which explains one way in which this opportunity could be realised. Importantly, it is considered that there are no technical impediments that would prevent development from coming forward on this site.

This site has been promoted throughout the Southbourne Neighbourhood Plan process, most recently in the December 2022 consultation. The new Vision Document demonstrates that the CCE site presents the opportunity to provide a comprehensive development that would contain strategic housing growth, significant areas of green infrastructure and open space in a sustainable location. The key access strategy for the site is to provide two new access points from the south A259 Main Road and the east Stein Road. These access points would connect to a spine road which would form a continuous vehicle route around the north-western edge of Southbourne.

The site almost entirely comprises a Secondary Support Area under the Solent Waders and Brent Goose Strategy (SWBGS), which aims to protect the network of non-designated terrestrial wader and brent goose sites that support the Solent Special Protection Areas (SPA) from land take and recreational pressure associated with new development. Due to the designation of the site, discussion was undertaken with the Hampshire and Isle of Wight Wildlife Trust with a view to determine a suitable approach for the scheme and an appropriate survey effort to establish the use of the site by designated birds. As a result of these discussions, wintering bird surveys are taking place. The aim of these surveys is to explore opportunities for mitigation for this SWBGS support area such that development within the red line can proceed without adverse impacts to the bird populations noted within this strategy. Following the survey, the results and approach will be presented to Natural England for further discussion.

In relation to viability, we note that Policy A13 sets several policy objectives for development at Southbourne. The NPPF (2021) notes that where there are up-to-date policies which have set out the contributions expected from development, planning applications that comply with them should be assumed to be viable (para. 58). With this in mind the policy objectives outlined within Policy A13 will require viability testing to be undertaken to ensure a policy compliant scheme is both viable and deliverable. This is necessary to ensure that the policy is sound.

The Policy suggests that employment opportunities are required to be delivered as part of the allocation but there is no specific reference to the amount of use required. CCE supports this proposed approach as it is sufficiently flexible to enable an amount of employment land to be proposed in response to market conditions at the appropriate time and this will help to support delivery of the allocation.

The scale of development proposed has been reduced from 1,250 to 1,050 dwellings to reflect the proportionate reduction in housing numbers across the parishes in the east west corridor as a consequence of the limit on numbers in the southern plan area. If the Inspector finds that additional housing is required, the Vision Document submitted demonstrates that the CCE site in Southbourne could deliver c. 1,200 homes and so could increase housing without needing to identify additional land for development elsewhere.

To summarise, the site could accommodate approximately 1,200 homes which could be delivered on a phased basis early in the plan period. There are no overriding physical or technical constraints that would act as an impediment to development. There is also a clear access arrangement proposed.

Policy A14 Land West of Tangmere

CCE supports that Policy A14 is carried forward into this Local Plan to facilitate the delivery of a residential-led development of at least 1,300 dwellings.

Additional sites

Hunston

CCE further promotes land (15.31ha) located east of the B2145 Selsey Road in Hunston for 240 new homes. The land is deliverable and is fully within CCE's control. The site is highly accessible, located within a maximum of 5-6 minutes walking distance to Selsey Road, where several bus routes connect the village to Chichester.

CCE notes that the Council assessed the HELAA site (ref. HHN0016) as 'developable'. A Vision Document has previously been prepared and submitted to demonstrate the commitment to it being brought forward for residential development within the plan period. This document is enclosed.

To address the Council's concerns in relation to flooding, following publication of the Chichester Strategic Flood Risk Assessment (SFRA), we have prepared an updated Flood Risk Scoping Study which provides an overview of flood risk constraints across the site from a range of sources. Various mitigation measures are recommended in line with recommendations of the Chichester SFRA and prevailing local and national guidance and best practice. With these measures in place, it is likely that the flood risk could be managed effectively in accordance with the requirements of the NPPF. Detailed data has also been requested from the Environment Agency, which will feed into further technical work that is being carried out.

Should the Inspector conclude that additional housing is required, CCE considers that their site is the most appropriate and sustainable location for development in Hunston. The site provides an opportunity to sensitively and sustainably extend the existing village boundary to provide additional homes to meet an identified housing need.

Land East of Drayton Lane

CCE owns land to the east of Drayton Lane which is bound by Tangmere Road to the north and crosses Oving Road and the railway line to the south. The site is c.1km from the centre of Chichester and comprises 49ha. The site was assessed in the HELAA 2021 as developable 'HOV0017'. A Vision Document has been prepared and was presented to the Council in 2022. This includes a detailed analysis of the site and its surroundings and provided justification as to why the site is suitable for development. This technical review of the site concludes there are no technical impediments to development.

The Vision Document demonstrates how the proposals for the land east of Drayton Lane could be developed as an extension to the draft allocation A8 (Land to the east of Chichester) for up to 700 new homes. The land east of Drayton Lane is fully within the CCE's control, is available for development now and is deliverable with some development achievable within the first five years of the plan period. It represents an opportunity to provide new homes, facilities and significant community benefits, through a sensitively designed development that integrates into the surrounding landscape.

The Vision for this site is a landscape and ecology led masterplan which would celebrate the rich wildlife characters of the different surrounding landscapes and uses the connection between countryside and community to generate its character and identity. The Vision Document demonstrates that this is a suitable location for development.

Should the Inspector conclude that additional housing is required, CCE considers that the land east of Drayton Lane would form a natural extension to allocation A8 and is an appropriate and sustainable location for new development.

Appendix C Additional Guidance

Appendix C provides additional guidance on evidence which needs to be submitted in support of certain planning applications related mainly to development in the countryside. As mentioned in the comments above provided in response to Policy NE10, there is no prerequisite contained within the NPPF (2021) that requires an applicant to demonstrate that previous uses were proven unviable prior to the conversion of a building in the countryside to residential use. As such, to be in accordance with national policy, reference to Policy NE10 should be omitted from Appendix C.

Conclusion

CCE welcomes the opportunity to comment on the Local Plan and is keen to continue to engage with the Council, especially in relation to the Broad Location for Development in Southbourne. CCE is supportive of the Council's aspirations in the Local Plan. However, the changes set out above are considered likely to be necessary to ensure the plan is sound.

CCE is a considerable landowner in Chichester with land largely to the south, west and east of Chichester which could assist the Council in meeting their housing and development needs throughout the plan period.

See attachments for site information.

Change suggested by respondent:

We suggest that the Council considers a range of criteria, including site characteristics, when determining the housing mix for individual sites and this should be reflected in wording of Policy H5.

Object

Document Element: Policy H5 Housing Mix**Respondent:** Mr Simon Davenport [7100]**Summary:**

There is already an imbalance in housing provision and the % of larger and detached dwellings is above national averages. In addressing the remedies for this problem the council needs to ensure that local need is met first and developments using houses as investment, holiday accommodation and second homes are strongly discouraged. Any discounts applied to encourage first time buyers should be strictly controlled and available to purchasers that can demonstrate a history of living in the area; such discounts being repayable if the property is sold within 5 years.

Support

Document Element: Policy H5 Housing Mix**Respondent:** Gladman Developments Ltd (Mr Rob Wilding, Senior Planner) [7816]**Summary:**

Gladman is broadly supportive of the policy, but stress that it is important to note that the housing mix identified in the latest evidence is only a snapshot in time and that a flexible approach is required.

Full text:

Gladman recognise the importance of new development opportunities to provide appropriate mixes of housing types, sizes and tenures to meet the identified housing needs of the area. It is important to note that the housing mix as identified in the Council's latest evidence base only represents a snapshot in time in relation to the current housing needs.

As such, the policy should provide for flexibility going forward so that the Plan is able to respond to changes in circumstances at the time of an application being submitted to the local planning authority so that development opportunities can make better use of the land available whilst responding to the housing needs at that time. In this instance, Gladman support the general approach of the policy, particularly sub-criterion 3 which allows flexibility within the mix and variety of dwellings sizes for market dwellings.

Document Element: Policy H5 Housing Mix**Respondent:** Mayday! Action Group (John Garrett) [7163]**Summary:**

We do not hear much at all about the Housing Register so where is the transparency and indeed how accurate are the housing need figures?

CDC outsources housing need studies to paid, professional consultants.

No statistics are published (or if they are they are not shared widely) which reveal the speed of uptake of new homes built and the housing market in 2023 and perhaps for several years hence is very likely to be less buoyant than it has been for decades.

We need to be certain that CDC is not chasing shadows created by an annual housebuilding target of 300,000 homes per annum – a target that has not ever been reached if CPRE's findings are correct.

Do we really want to destroy this unique part of the South Coast just because we have an unrealistic and inaccurate target set?

Full text:

Executive Summary

The Local Plan as written lacks ambition and vision, and will be detrimental to the landscape within which the district lies. It is a plan borne out of a need to produce a legal document which will satisfy the regulatory authorities. In terms of Urban Planning it fails "To meet the needs of the present without compromising the ability of future generations to meet their own needs" (NPPF).

The development that will consequentially arise from the deployment of such a made Local Plan is not sustainable. It will adversely affect the Character, Amenity and Safety of the built environment, throughout our district.

In particular, the Local Plan is inadequate for the needs of the people in the district both at present and in the future because –

1. It has been written in advance of the District having a properly formed and agreed Climate Emergency Action Plan. It is inconceivable that such a key document will not shape our Local Plan. It is this Action Plan that is needed first in order to provide the long-term strategic view as to how and what the District will look like in the future; this, in turn, will help form and shape the policies outlined in any prospective, Local Plan. The Plan as proposed is moribund, as a result of "cart before the horse" thinking.

2. The Local Plan as written does not adequately address how infrastructure, transport and services are going to be materially and strategically improved to meet the predicted growth and shift to a significantly ageing population. There is presently insufficient capacity to supply services and to have adequate people and environmentally friendly connectivity, as a direct result of decades of neglect towards investing in infrastructure and services to meet the needs of the District's population. We are led to believe that developers through increased levies in order to gain permission to build will fulfil this need, but all that this will result in is an uncoordinated, dysfunctional mess completely lacking in any future-proof master planning approach. We contend that this will do nothing for the quality of life of Chichester District residents and it will create a vacuum whereby few if indeed any can be held accountable or indeed found liable for shortcomings in the future.

3. The Local Plan as written does not state how it will go about addressing the need to create affordable homes. The District Council's record on this matter since the last made plan has been inadequate and now the creation of affordable homes has become urgent as political/economic/social factors drive an ever increasing rate of change within the District.

4. Flood risks assessments used in forming the Plan are out of date (last completed in 2018) and any decision to allocate sites is contrary to Environment Agency policy. Additionally, since March 2021 Natural England established a position in relationship to 'Hold the Line' vs. 'Managed Retreat' in environmentally sensitive areas, of which the Chichester Harbour AONB is a significant example. CDC have failed to set out an appropriate policy within the proposed Local Plan that addresses this requirement.

5. The A27 needs significant investment in order to yield significant benefits for those travelling through the East-West corridor; this is unfunded. Essential improvements to the A27 are key to the success of any Local Plan particularly as the city's ambitions are to expand significantly in the next two decades. But any ambitions will fall flat if the A27 is not improved before such plans are implemented. The A259 is an increasingly dangerous so-called 'resilient road' with a significant increase in accidents and fatalities in recent years. In 2011, the BBC named the road as the "most crash prone A road" in the UK. There is nothing in the Local Plan that addresses this issue. There is no capacity within the strategic road network serving our district to accommodate the increase in housing planned, and the Local Plan does not guarantee it.

6. There is insufficient wastewater treatment capacity in the District to support the current houses let alone more. The tankering of wastewater from recent developments that Southern Water has not been able to connect to their network and in recent months the required emergency use of tankers to pump out overflowing sewers within our City/District reflects the gross weakness of short-termism dominated thinking at its worst and is an indictment of how broken our water system is. The provision of wastewater treatment is absolutely critical and essential to the well-being of all our residents and the long-term safety of our built environment. The abdication by those in authority, whether that be nationally, regionally or locally, is causing serious harm to the people to whom those in power owe a duty of care and their lack of urgency in dealing properly with this issue is seriously jeopardizing the environment in which we and all wildlife co-exist.

7. Settlement Boundaries should be left to the determination of Parish Councils to make and nobody else. The proposed policy outlined in the Local Plan to allow development on plots of land adjacent to existing settlement boundaries is ill-conceived and will lead to coalescence which is in contradiction of Policy NE3.

8. All the sites allocated in the Strategic Area Based Policies appear to be in the majority of cases Greenfield Sites. The plan makes little, if any reference to the development of Brownfield sites. In fact, there is not a Policy that relates to this source of land within the Local Plan as proposed. Whilst in the 2021 HELAA Report sites identified as being suitable for development in the District as being Brownfield sites were predicted to yield over 4000 new dwellings. Why would our Local Plan not seek to develop these sites ahead of Greenfield sites?

9. The Local Plan does not define the minimum size that a wildlife corridor should be in width. What does close proximity to a wildlife corridor mean? How can you have a policy (NE 4) that suggests you can have development within a wildlife corridor? These exceptions need to have clear measures and accountability for providing evidence of no adverse impact on the wildlife corridor where a development is proposed. Our view is quite clear. Wildlife and indeed nature in the UK is under serious and in the case of far too many species, potentially terminal threat. Natural England has suggested that a Wildlife Corridor should not be less than 100metres wide. The proposed Wildlife Corridors agreed to by CDC must be enlarged and fully protected from any development. This is essential and urgent for those Wildlife Corridors which allow wildlife to achieve essential connectivity between the Chichester Harbour AONB and the South Downs National Park.

10. Biodiversity Policy NE5 - This is an absolute nonsense. If biodiversity is going to be harmed there should be no ability to mitigate or for developers to be able to buy their way out of this situation. This mindset is exactly why we are seeing a significant decline in biodiversity in the District which should be a rich in biodiversity area and why the World Economic Forum Report (2023) cites the UK as one of the worst countries in the world for destroying its biodiversity.

11. In many cases as set out in the Policies the strategic requirements lack being SMART in nature – particularly the M Measurable. These need to be explicit and clear: "you get what you measure".

12. 65% of the perimeter of the District of Chichester south of the SDNP is coastal in nature. The remainder being land-facing. Policy NE11 does not sufficiently address the impact of building property in close proximity to the area surrounding the harbour, something acknowledged by the Harbour Conservancy in a published report in 2018 reflecting upon how surrounding the harbour with housing was detrimental to its long-term health. And here we are 5 years on and all of the organizations that CDC are saying that they are working in collaboration with, to remedy the decline in the harbour's condition, are failing to implement the actions necessary in a reasonable timescale. CDC are following when they should be actually taking the lead on the issue. Being followers rather than leaders makes it easy to abdicate responsibility. There must be full and transparent accountability.

13. The very significant space constraints for the plan area must be taken into account. The standard methodology need no longer apply where there are exceptional circumstances and we are certain that our District should be treated as a special case because of the developable land area is severely reduced by the South Downs National Park (SDNP) to the north and the unique marine AONB of Chichester Harbour to the south. A target of 535dpa is way too high. This number should be reduced to reflect the fact that only 30% of the area can be developed and much of that is rural/semi-rural land which provides essential connectivity for wildlife via a number of wildlife corridors running between the SDNP and the AONB. Excessive housebuilding will do irretrievable damage to the environment and lead to a significant deterioration in quality of life for all who reside within the East / West corridor.

14. Many of the sites identified in the Strategic & Area Based Policies could result in Grade 1 ^ 2 farmland being built upon. The UK is not self-sufficient in our food security. It is short-sighted to expect the world to return to what we have come to expect. Our good quality agricultural land should not all be covered with non-environmentally friendly designed homes.

Summary:

Generally, we support providing a mix of homes of differing size, types and tenures to meet a range of local needs.

Full text:

Point 1 suggests new market and affordable homes must be delivered in line with the HEDNA. However, point 3 then provides exceptions – it is suggested point 1 references point 3 to avoid confusion.

More generally, we support providing a mix of homes of differing size, types and tenures to meet a range of local needs. However, any such policy has to be flexible enough to recognise the range of needs locally and the specifics of the site and its context. Relying solely on the HEDNA and infrequently published updates to it does not fully provide this flexibility and would not allow home builders to respond effectively to changing market conditions over the plan period, which in the current economic and political climate, can occur quickly. It also does not recognise that, within the district, and particularly on large sites such as West of Chichester, circumstances may exist which require a less prescriptive approach to housing mix on site.

Furthermore, the financial viability of providing a given mix also has to be considered and allowed for in any policy wording to reflect that, particularly on larger sites, too heavy a weighting on any particular size of houses can have significant viability implications. The provisions of point 3(a) provide some flexibility but is still considered too rigid to enable sites to quickly adapt to evolving housing demands.

Chichester Local Plan – Proposed Submission

Duty to Co-operate

The Statutory Housing Authority welcomes the opportunity to comment on the Chichester Local Plan 2021 – 2039 and strongly commends the Local Planning Authority on progressing with its plan-making activities at a time when a number of Local Planning Authorities across the country have stalled owing to a state of flux in the national policy picture.

Chichester District Council Housing Authority considers that the Chichester Planning Policy Team have engaged in a pro-active manner in an ongoing basis to meet the needs of our communities. Furthermore, the authority has been consulted throughout in the crafting of the proposed housing policies H1 – H10 and confirm that the Duty to Co-operate has been met in this regard.

Is it legally compliant?

The Housing Authority consider the plan as presented, to be legally compliant and have no specific comments in relation to the Sustainability Appraisal, Habitats Regulations Assessment or the Statement of Community Involvement.

Soundness

The Housing Authority is satisfied that the plan is positively prepared and seeks to meet the housing need for both market and affordable housing, so far as is practicable, whilst having consideration for the various constraints of the plan area including AONB designation, heritage matters, flooding matters and infrastructure capacity issues. The Housing Authority believe the plan seeks to balance between these competing demands in a sustainable and realistic manner for the plan period 2021 -2039.

The Housing Authority consider the plan provides for a reasonable evidence based strategy which is consistent with national planning policy and guidance and contributes to the delivery of sustainable development, having regard to the reasonable alternatives available.

Meeting housing need

The Housing Authority considers the plan meets housing need so far as is realistically possible considering the constraints of the plan area.

Policy H1, including the Broad Spatial Distribution - is noted.

Policy H2, the strategic locations are broadly located in areas where the Council held Housing Register indicates the highest level of housing need.

Policy H3 - is noted.

Policy H4 – The Housing Authority fully endorse and support the provisions contained in Policy H4.

Policy H5 - The Housing Authority is supportive of the housing mix outlined in policy H5 and the ability to reflect local need where it is appropriate to do so. Furthermore it is right to provide this level of certainty, whilst allowing for some degree of flexibility.

Policy H6 - The Housing Authority are in full support of this policy and fully endorse the opportunity for Neighbourhood Planning groups to bring forward Self and Custom Build serviced plots. The Housing Authority are encouraged by the potential that may arise with the call for sites for such plots. We look forward to working with our colleagues and communities to bring forward Self and Custom Build opportunities within the plan area.

Policy H7 - The Housing Authority recognise the difficulties in bringing forward exception sites for affordable housing and welcome this policy which seeks to enable the needs of our rural communities to be met.

Policy H8 - The Housing Authority strongly advocate for the inclusion of specialist accommodation for older people, and the intention is to secure affordable housing across all specialist accommodation for older people, including Extra Care to meet the needs of those unable to secure such accommodation in the open market.

H9 – The Housing Authority support the policy to retain accommodation for rural workers.

H10-H14 – The Housing Authority has no observations to make in relation to these policies.

Full text:

REG 19 RESPONSE TO CDC DRAFT LOCAL PLAN – 7 PAGES

INTRODUCTION

I am a trained Quantity Surveyor and ex director of a major UK PLC house-building company. I am now semi-retired. I am an expert in Self and Custom Build (S&CB) housing. I was one of the first in the UK to become a self-builder at the age of 23. Similarly one of the first to gain a self build mortgage – all without parental support. I believe, as do Government, supported by all the political parties in the House of Commons that every single person should be allowed the opportunity to aspire and to be helped and supported in building their own home. This is now enshrined in law and has been since 2015.

Chichester District Council's (CDC's) revised Local Plan is not fit for purpose, is not joined-up or managed strategic purposeful thinking nor is the approach consistent, analysed or researched on issues around S&CB within the District, in offering people building plots in a location where they wish to live for many years.

Neither has CDC consulted with myself, the initiator of Self and Custom Build (S&CB) in the District nor with Loxwood Parish Council (LPC) under the Localism Act, who have latterly formally requested CDC to be positive and pro-active in working with them in creating more S&CB in the village, thereby best retaining village character, history, uniqueness, high build standards and diversity of housing mix and opportunity (Exhibit 1) ... all as requested by Government. Nor have CDC consulted us to create a purposeful Housing Strategy for Loxwood.

The revised Local Plan is therefore not sound as CDC have shown little regard of Government's ever continuing initiatives to fully support S&CB in the region and nationwide, as clearly shown by their lack of substance, strategy and joined-up thinking within Chapter 5 and elsewhere within the revised Local Plan. (Exhibit 2) is a letter to me from the Minister of State for Housing which says 'The Government strongly believes that Self and Custom Build Housing can play a crucial role as part of a wider package of measures in securing greater diversity in the housing market as well as helping to deliver the homes people want', and in locations they want.

OVERVIEW

For S&CB to even start to work at CDC, the S&CB Register wording needs to be dramatically improved upon. At present the wording is purposely negative, discouraging and unhelpful to applicants. The Register is required to be inviting to all residents, of whatever status and also those from

outside our District.

Similarly CDC should be fully supportive of S&CB in all guises, not only in words in the Local Plan draft, but in actual initiatives directly from CDC as to continually educate, market, promote and encourage S&CB in the District; especially in major Service villages such as Loxwood, which is fast losing its village character by being overrun by major developers and their standard box style nondescript housing schemes, against the direct wishes of the Parish Council and also residents, as confirmed by Exhibit 1.

One of the major frustrations for prospective self and custom builders (S&CB's) is that despite the introduction of the 2015 Self Build and Custom House Building Act (as amended by the 2016 Housing and Planning Act), namely the Act there are still too many local authorities that remain resistant to giving self-build the due consideration in the planning process that the Government desires.

Indeed, the level of weight that Planning Inspectors have regularly attributed to Self-Build in appeal decisions is at odds with the weight that too many local authorities across England ascribe it within the planning balance. This is well recognised by Government, who have set up the Self Build Task Force (or Right to Build Task Force, as otherwise known) to interact with LPA's directly as to educate and encourage them to adhere to the Act and the PPG and other Government initiatives, to get their Register in order, and to be far more encouraging and supportive of S&CB.

Similarly, too many local authorities produce over-inflated monitoring figures with respect to the number of self-build plots they claim to have permissioned and in doing so also claim to have met their statutory duty to meet demand from their Self Build Register. This tends to be achieved through a mixture of double counting and the inclusion of applications within their claimed supply that plainly do not (and never will) meet either the legislative definition within the Act and/or are not in line with the guidance in the S&CB section of the PPG.

However, the proposed additional amendments to the Levelling Up and Regeneration Bill – aimed at removing some of the loopholes from the original legislation should help to make it easier for landowners, developers and promoters to bring schemes forward.

The proposed amendments, tabled in the House of Lords Committee, build on the new Clause 115 which has already been introduced in the House of Commons, and which seeks to clarify the duty of Councils to grant sufficient planning permissions for S&CB projects by removing the uncertainty around what constitutes a 'suitable permission' under the current legislation.

Amendment 281 CB would allow the Government to create new regulations or amend existing ones in order to specify the types of planning permissions that should be counted towards a local authority's statutory duty to meet the demand for S&CB arising from its Self-Build Register.

Meanwhile Amendment 281CC stipulates that demand for S&CB in an area, as established by a local authority's statutory S&CB Register, is cumulative. What this means in practice is that any unmet demand from any previous Base Period will be rolled over to the next until such time it is met. The result is that local authorities will no longer be able to simply write off previous under supply.

These amendments are a welcome response to the practical challenges highlighted in 'The Bacon Review', initiated by Government, into scaling up the S&CB market.

'The Bacon Review' found evidence of some local authorities mis-managing their Registers to suppress demand and permission plots. The detailed analysis and critique of such practices are regularly the subject of successful application and appeal work that professional planning consultants undertake on behalf of landowners and site promoters, to demonstrate that local authorities are not meeting the needs of those wishing to build their own home – as they are required to do both by legislation and the National Planning Policy Framework (NPPF).

Market analysis (e.g. example source) shows that demand for S&CB plots is strong and increasing, with landowners, developers and promoters keen to bring more schemes forward. However, to date, loopholes in the legislation and a combination of mis- understanding and the mis-management by too many local authorities has hindered progress with delivering enough permissioned plots to meet demand. This is why the Government funded 'Self Build Task Force' 'has been created (also known as The Right to Build Task Force).

If the proposed amendments are carried into law, they will help to close off existing loopholes, which should help to enable more land for S&CB to come forward and allow more prospective self and custom builders, at all levels, to achieve their dream home.

I was formally asked by two very senior 'separate' party councillors at CDC to offer advice as to how best CDC could improve their standards on S&CB in order to adhere to the law, to come in line with Government thinking and how best to support the wishes and dreams of its residents. This information was formally supplied to CDC (as attached Exhibits 3A, 3B, 3C, 3D and 3E) but has been in large part ignored, within Chapter 5 and elsewhere in the revised Plan.

ISSUES THAT NEED ADDRESSING IN THE DRAFT LOCAL PLAN – CHAPTER 5 AND ELSEWHERE

1. Resistance to S&CB in the Planning Process at CDC

- Resistance is clearly shown in the lack of meaningful input within the policy statement in Chapter 5 and elsewhere. CDC have not addressed the initial most important issue around their Register by purposely discouraging people to join, including myself (See Exhibit 3D), yet Government is well aware of this hidden agenda and is keen for CDC and others to be far more transparent and in seeking help from outside experts, so they can quickly assist their residents and others who wish to Self and Custom Build.
- Resistance has been shown by CDC's lack of any helpful transparent discussion or interaction with me, as to how their systems can be improved, as to best encourage and publicise S&CB in the district.

REMEDY

- All Members (after the May elections) to be encouraged to attend a Government Task Force Seminar on the many merits of S&CB especially within the rural parish councils of the District, as I am to understand that the Task Force have been asked to visit CDC within the next few months. The first issue being the re-writing of the Self Build Register and to make it transparent and open to all. Also that the new Register is extensively advertised to all District residents and elsewhere outside our District as a new 'upgraded Register'.
- Similarly so by encouraging officers of CDC planning department and also councillors of our northern parishes in particular to also attend the Seminar.
- To encourage all Member Councillors at CDC (in the planning role) to take on the higher role of planning decision making and not allowing officers to continue to take control. Also by reducing officer Delegated Power control and making officers more accountable for their decisions, and by taking back more control themselves, in determining new housing applications specifically as related to S&CB (directly or indirectly).
- CDC to appoint a part time Self and Custom Build Officer with direct experience in this subject, as do several other LPA's, with the sole function of promoting, publishing, encouraging and pushing for more such alternative and upgraded housing. At present CDC advise me that they spend one hour per week on S&CB issues.

2. CDC's S&CB Figures

CDC were monitored recently by the independent HEDNA Report 2022 which very clearly highlighted the inaccurate figures being quoted by CDC. HEDNA showed that the Register numbers were indeed 153 and not 3 as quoted by CDC (Exhibit 3A and 3E)

This is a major reason why the draft Local Plan is not sound. CDC have done nothing to amend or deal with this gross error and others as highlighted in the HEDNA report.

3. CDC's Register for Self and Custom Build

- Several parties at CDC have told me that they fully accept that their Register is discriminative and not helpful and wholly deficient and that it needs major changes in attitude.
- CDC are certainly not fulfilling their statutory duties as encouraging, promoting, advertising and educating their councillors and their residents in the many benefits of S&CB. Also in seeking out potential sites, especially in the Loxwood parish for 100% S&CB housing in order to offset major developer housing and the loss of character of the village because of the influx of poor developer standards and loss of community 'add ons' such as a Post Office, a larger primary school, a community hub coffee shop etc. It is well known that S&CB's do not wish to build their homes on major developer sites, but in clustered 100% S&CB sites.
- CDC have advised me that the re-writing of the Register will take 1 year to achieve. Yet bearing in mind that I have already supplied them with the skeleton wording, this is a nonsense. It will take no more than a few days to re-write. The whole process of publicity of the new Register could be completed within one month, if the will was there.
- I don't believe that CDC officers are at all aware of the Government continuous on-going initiatives towards S&CB.
- I also believe such initiatives plus further initiatives will be encompassed into The Levelling Up and Regeneration Bill and also into the new NPPF when it is published shortly.
- It should be duly noted that CDC were given circa £90,000 by Government some 5 years ago to support S&CB. This money was never used for this purpose and was utilised elsewhere. CDC very recently applied again for a similar grant and were rejected (Exhibit 4).

REMEDY

- CDC should be encouraged to include in their draft Plan all the changes I have proposed and are duty bound by statute to do in revising and extending their Register, allowing for all the new initiatives Government have already published and hopefully are due to publish and further extend in the near future.
- As to support CDC in these endeavours they should:-
 - seek the help of people like myself and swiftly action such matters
 - arrange an extended Government Task Force meeting and swiftly implement their advice and insert same into the Local Plan as to best interpret Government policy so they (CDC) can ensure their Plan becomes sound.
 - Everybody should understand that all this support and advice will be given for free at no cost to the ratepayers of CDC
- * CDC should regularly consult with people on their Register and if people like myself are willing to offer Register Members help and advice for free, these people should have the opportunity, if they wish, in seeking any help from us. At present CDC are doing nothing to help or encourage this to their Register Members, residents and others in finding suitable building plots, suitable mortgage funding, suitable builders and sub-contractors etc. Again this is a duty that they have ignored.

CONCLUSIONS

I ask at Examination which I wish to attend that the Inspector seeks that CDC:-

- (1) That the Council will adhere to all the recommendations in the independent HEDNA Report '22 in support of S&CB; starting with re-writing the Register to show 153 potential applicants and not 3 as stated by CDC (see Exhibit 3A pages 1-3 inc. as already written up. Also Exhibit 3 (E). Also to place in their Plan reference to such changes including those as denoted below as to create a more rigorous S&CB statement.
- (2) That the Self Build Register be substantially re-written as not to be discriminative by removing all barriers to application. Also that the Register be fully published and supported within the District and that all new and revised Neighbourhood Plans in the District including Letters of Wishes from Parish Councils, show similar insertions in their existing or proposed Plans.
- (3) That the Bacon Review proposed insertions be installed in the Plan and any further inserts coming out of the Levelling Up and Regeneration Bill and the new NPPF also be inserted, once any or all become law or are published, supporting S&CB.
- (4) That the Council will seek out and support potential sites for S&CB and will encourage their Parish Councils to follow suit.
- (5) That the Council will write a Planning, Design and Sustainability Statement, specific to S&CB (See Exhibit 3 (b) as already written up).
- (6) That the Council will write a full and precise Statement of Intent for S&CB Housing (See Exhibit 3(A) pages 4 & 5 – as already written up).
- (7) That the Council will act with some haste in actioning these matters and confirm same in their S&CB Policy Statement, within the Plan.
- (8) CDC have no strategy for the Northern District of our Council area and in particular for Loxwood which CDC classify as a Service Village which out of all the parishes is having to take by far the largest majority of all new housing in the Northern area.

Loxwood will need to increase their housing numbers by 220 new homes, plus permissions already granted (91), namely totalling 311 new homes. If strategy is not fully implemented our historic village character will be lost forever.

It is clearly imperative that CDC planners help and support us in Strategising the housing layout of our whole village style development hubs (of 100% S&CB) by creating housing clusters in lieu of large developer's schemes as per Loxwood Parish Council's (LPC's) wish (under the Localism Act) and their Letter of Wishes sent to CDC on 4th October, 2022 (Exhibit 1).

The reasonable wish of the residents in Loxwood Parish is to re-invigorate and re-create our historic village layout with new retail and village appropriate developments that will help 'service' us now we are to be a substantially larger village community.

This needs a meaningful impact strategy (under the Localism Act) from CDC planners in co-operation with LPC to best encourage our existing residents to stay, by best re-designing our community housing layout and make it fully sustainable and characterful into the next century, and make our historic village a flagship location where people wish to live and build their distinctive highly eco and bio diverse S&CB homes.

Change suggested by respondent:

Bacon Review, Levelling Up and Regeneration Bill and NPPF re; S&CB should be reflected in Plan; incorporate Planning, Design and Sustainability Statement and Statement of Intent for S&CB Housing to be inserted in Local Plan(see attachments); strategy for Northern District (100% S&CB in Loxwood).

Object

Document Element: Policy H6 Custom and/or Self Build Homes

Respondent: Mr William MacGeagh [5889]

Summary:

The policy and supporting text do not reflect the scale and potential of self build demand and the sector in the north of the district. S&CB has unique contemporary potential and a position in the housing market to address emerging housing demand from families and residents of the district.

Full text:

The CDC Register represents the minimum self build requirement in the area. It is the minimum required of a Local Authority and does not reflect S&CB demand of people and households not already active in the sector.

There has not been proactive activity to take S&CB seriously. CDC are not fulfilling their statutory duties as encouraging, promoting, advertising and educating their councillors and their residents in the many benefits of S&CB. At present CDC are doing very little to help or encourage this to their Register Members, residents and others in finding suitable building plots, suitable mortgage funding, suitable builders and sub-contractors etc. Resistance to Self and Custom Build (S&CB) is clearly shown in the lack of meaningful input within the policy and supporting text. Possibly because of lack of education in S&CB as a housing alternative.

The Council has not taken seriously the contemporary potential of Self Build to enable working age people to invest and remain in the area contributing to the organic evolution and reasonable growth of established settlements.

S&CB has unique contemporary potential and a position in the housing market to address emerging housing demand from families and residents of the district. This is in terms of available demographic and economic evidence as well as insights within local communities and positive attitudes towards self build development enabling organic proportionate growth of settlements supporting the economy and social life as well as diversifying housing supply towards local housing demand and need.

In seeking out potential sites, especially in the Loxwood parish for 100% S&CB housing in order to offset major developer housing and the loss of character of the village because of the influx of poor developer standards and loss of community 'add ons' such as a Post Office, a larger primary school etc.

The lack of a positive approach to the distinct nature of the north of the district leaves it vulnerable to inappropriate homogeneous large scale housing estate development that does little to broaden housing choice in the local area.

Change suggested by respondent:

The plan should be amended to set out a greater requirement and emphasis on self build.

This should have regard to:

(a) appreciation of the self build register being the lower end of anticipated demand (in the absence of public and community engagement and promotion activity).

(b) the particular opportunities for self build to be a good fit with the distinctive northern part of the district (outside the national park).

Document Element: Policy H6 Custom and/or Self Build Homes**Respondent:** National Highways (Mr Marius Pieters, Spatial Planning Manager) [8127]**Summary:**

[National Highways letter dated 24/07/23 confirmed representation should be categorised as Comment - Seeking further information regarding CEMP's.] New sites over 200 units which are allocated in the Local Plan will be required to provide self and custom build serviced plots (2% of units on strategic scale housing sites).

We seek to understand if the Council will utilise Construction Environmental Management Plan (CEMP) to manage and coordinate the activities of individual self-build builders, especially during the construction phase, to avoid, minimise and/or mitigate effects on the road environment.

Full text:

We have reviewed the publicly available Local Plan documents and provided comments in the attached letter, in relation to the transport implications of the plan for the safety and operation of the SRN.

Our comments include issues to resolve, comments, requests for further information and recommendations. A brief summary of our main comments are:

- the reliance on the delivery of the A27 Chichester bypass improvements project.

- the requirements for new, additional, and adapted processes and assessments, especially in assessing Transport Assessments, mandating Travel

Plans and monitoring traffic associated with new developments.

- collaborative working between agencies in combination with a robust monitor and manage policy.

We hope our comments assist.

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSSC) and we will continue to work with the Council and other key stakeholders. We look forward to continuing to participate in future consultations and discussions. Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Background

National Highways has been appointed by the Secretary of State for Transport as strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the strategic road network (SRN).

National Highways is responsible for operating, maintaining, and improving the Strategic Road Network (SRN) i.e., the Trunk Road and Motorway Network in England, as laid down in Department for Transport (DfT) Circular 01/2022 (Strategic Road Network and the delivery of sustainable development).

The SRN is a critical national asset and as such we work to ensure that it operates and is managed in the public interest, both in respect of current activities and needs as well as in providing effective stewardship of its long-term operation and integrity.

Our responses to Local Plan consultations are guided by relevant policy and guidance including the National Planning Policy Framework (2021) (NPPF):

- Transport issues should be considered from the earliest stages of plan-making and development proposals so that the potential impact of development on transport networks can be addressed (para 104).
- The planning system should actively manage patterns of growth such that significant development is focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. (para 105).
- Planning policies should be prepared with the active involvement of highways authorities and other transport infrastructure providers so that strategies and investments for supporting sustainable transport and development patterns are aligned. (para 106).
- In terms of identifying the necessity of transport infrastructure, NPPF confirms that development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe. (para 111).
- Planning policies and decisions should support development that makes efficient use of land, taking into account the availability and capacity of infrastructure and services – both existing and proposed – as well as their potential for further improvement and the scope to promote sustainable travel modes that limit future car use. (para 124).

In relation to the tests of soundness set out at paragraph 35 of the NPPF, in the context of transport, these are interpreted as meaning:

- a) Positively prepared - has the transport strategy been prepared with the active involvement of the highway authorities, other transport infrastructure providers and operators and neighbouring councils?
- b) Justified – Is the transport strategy based on a robust evidence base prepared with the agreement in partnership, or with the support of the highway authorities?
- c) Effective – Does the transport strategy and policy satisfy the transport needs of the plan and is it deliverable at a pace which provides for and accommodates the proposed progress and implementation of the plan?
- d) Consistent with national policy – Does the transport strategy support the economic, social, and environmental objectives of the Plan and the NPPF/NPPG?

We will be concerned with proposals that have the potential to impact on the safe and efficient operation of the SRN; in this case, the A27 trunk road (Chichester Bypass and its junctions) which is the main access route in the Chichester area. We have particular interest in any allocation, policy or proposals which could have implications for the A27 and the wider SRN network. We are interested as to whether there would be any adverse road safety or operational implications for the SRN. The latter would include a material increase in queuing or delay or reduction in journey time reliability during the construction or operation of the development set out in the plan.

National Highways is a key delivery partner for sustainable development promoted through the plan-led system, and as a statutory consultee we have a duty to cooperate with local authorities to support the preparation and implementation of development plan documents.

In accordance with national planning and transport policy and our operating licence, we are entirely neutral on the principle of development as it is for the local planning authority to determine whether development should be allocated or permitted; albeit it must comply with national policy on locating development in locations that are or can be made sustainable. Therefore, while always seeking early and fulsome engagement with local plans and/or developers, we will simply be assessing the transport and related implications of plans or proposals and agreeing any necessary transport improvements and relevant development management policy.

In progressing Local Plans, we will seek to agree the following:

- Assessment tools and methodology
- Baseline Assessment i.e., to demonstrate that the assessment tool accurately reflects current transport conditions
- Comparator case assessment i.e., to forecast the transport conditions that would occur in the absence of the plan
- Forecast modelling i.e., to forecast the transport conditions that would arise with the plan in place, this will include an assessment at the end of the Plan period; and, if required, at full build out if that occurs after the end of the Plan period
- Outputs and outcomes of modelling, demonstrating, as appropriate, what transport infrastructure is necessary to support the plan o It should be noted that a suite of transport modelling tools may be required. This includes strategic modelling covering an area at least one major junction beyond the district boundary, localised network modelling where several links/junctions are close together and/or individual junction modelling
 - o A DMRB (Design Manual for Roads and Bridges) compliancy assessment may also be required for certain highway features, such as Merge/Diverge assessment at Grade separated junctions, link capacity assessments, and others.
- The design of any necessary transport infrastructure, to an extent suitable for establishing deliverability during the plan period at the time that it becomes necessary for the purpose of ensuring that unacceptable road safety impacts or severe operational impacts do not arise as a result of development. This may be to at least General Arrangement design stage or preliminary design stage. Whichever degree of detail is agreed, the products must be in full compliance with the DMRB.
- Industry standard transport intervention costings.
- The delivery/funding mechanisms for necessary transport interventions. It should not be assumed that National Highways will have any responsibility to identify or deliver necessary transport interventions.
- If considered appropriate, a "Monitor & Manage" (M&M) framework, aimed at managing the pace of development in line with the pace of funding and delivery of necessary highway interventions in a manner which responds to the realworld impacts of development may be agreed for inclusion in the

plan subject to the adequacy of risk control measures included therein. This can include the move from a 'predict & provide' style of delivery to 'a vision & validate' style. o Any M&M framework must be based on a "worst case scenario" whereby necessary mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. It must be translated into development management plan policy and policy relating to development allocations.

Further detail on the above can be provided by National Highways.

While ideally all the above should be agreed prior to the Submission of the Local Plan for examination, we recognise that this is not always possible. However, all parties should work towards all matters being agreed and reflected in a Statement of Common Ground (SoCG) by the start of the Local Plan Examination at the latest. Ideally the SoCG between the Council and National Highways would be prepared well in advance of plan submission in order to guide resource input and to track progress towards final agreement on all relevant matters starting from the earliest plan iterations until the final version is agreed.

It is acknowledged that Government policy places much emphasis on housing delivery as a means for ensuring economic growth and addressing the current national shortage of housing. The NPPF is very clear that:

"Strategic policy-making authorities should establish a housing requirement figure for their whole area, which shows the extent to which their identified housing need (and any needs that cannot be met within neighbouring areas) can be met over the plan period."

However, new DfT C1/22 and the NPPF are equally clear that any development, including housing delivery, must be tempered by the requirement to ensure that the associated transport demand can be accommodated without unacceptable impacts on the safety of the SRN or severe impacts on the operation of the SRN including reliability and congestion. Therefore, as necessary and appropriate, any plan and/or development must be accompanied by suitable mitigation in the right places at the right time, that is to the required design standards and is deliverable in terms of land availability, constructability and funding.

We would also draw your attention to the then Highways England document 'The Strategic Road Network, Planning for the Future: A guide to working with National

Highways on planning matters' (September 2015). This document sets out how National Highways intends to work with local planning authorities and developers to support the preparation of sound documents which enable the delivery of sustainable development.

https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_t_data/file/461023/N150227_-_Highways_England_Planning_Document_FINAL-lo.pdf

Responses to Local Plan consultations are also guided by National Planning Policy Framework (NPPF) revised on 20 July 2021 which sets out the government's planning policies for England and how these are expected to be applied.

Updated Circular (01/2022)

It should be noted that since the start of the Local Plan consultation process, on the 23 December 2022, the Department for Transport released a new circular on the 'Strategic road network and the delivery of sustainable development' (Circular 01/2022), which replaces all of the policies in Circular 02/2013 of the same name. These representations take account of the new circular and the requirements in terms of the Local Plan evidence base and process.

We request that the Local Plan is prepared in line with all aspects of the new circular. Particularly, the principles of sustainable development (paragraphs 11 to 17), new connections and capacity enhancements (paragraphs 18 to 25), and engagement with plan-making (paragraphs 26 to 38).

Regulation 18 submission

In our Regulation 18 submission we noted several matters including:

- The need to mitigate the adverse impacts of strategic development traffic to the A27 Chichester Bypass and its junctions at Portfield Roundabout, Bognor Road Roundabout, Whyke Roundabout, Stockbridge Roundabout and Fishbourne Roundabout and Oving junction.
- The need to identify a mechanism to calculate contributions towards the delivery of the previously agreed Local Plan A27 improvements
- The need to confirm the number of dwellings needed within the plan period
- The need to establish National Highways acceptance of the traffic model reference and future case scenarios
- The need to confirm costs, viability, and funding associated with mitigating the safety and congestion impacts of the development included within the plan.

Local Plan context

This Local Plan (Chichester Local Plan 2021 – 2039), prepared by the Local Planning Authority (LPA) Chichester District Council, sets out the vision for future development in the district and will be used to help decide on planning applications and other planning related decisions including shaping infrastructure investments.

The draft sets out how the district should be developed over the next 18-years to 2039 including for the full Plan period (1 April 2021 to 31 March 2039) the total supply of

- 10,359 dwellings

- 114,652 net additional sqm new floorspace

Minus the completions this is equivalent to around 530 dwellings and 6,150 sqm of floorspace a year.

National Highways Representations

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders.

We have undertaken a review of the Chichester Local Plan 2021-2039 proposed submission version and accompanying evidence documents, our comments are set out in the tables below (following pages). [see table within attachment]

Summary

We have reviewed the publicly available Local Plan documents and provided comments above in relation to the transport implications of the plan for the safety and operation of the SRN. We understand that other technical information is available, but this was not presented as part of this consultation. Chichester, and the A27, are already heavily congested, infrastructure in the existing Local Plan remains undelivered and the growth set out in the new Plan will further increase travel demand.

As presented, satisfying the transport needs of the plan is clearly reliant on the delivery of the A27 Chichester bypass improvements project. The A27 Chichester bypass improvements project is one of 32 pipeline schemes being considered for possible inclusion in National Highways third Road Investment Strategy (RIS3) covering 1 April 2025 to 31 March 2030.

On 9 March 2023 the UK Transport Secretary ensured record funding would be invested in the country's transport network, sustainably driving growth across the country while managing the pressures of inflation. The announcement cited the A27 Arundel Bypass as being deferred from RIS2 to RIS 3 (covering 2025-2030). The transport secretary also identified a number of challenges to the delivery of the road investment strategy and cited the benefit of allowing extra time to ensure schemes are better planned and efficient schemes can be deployed more effectively.

At present, there is no commitment by DfT to carry out the A27 Chichester bypass improvements project. Until the A27 Chichester bypass improvements project is published in the RIS3, consented and a decision to invest is made it cannot be assumed to be a committed project. We note that the Plan does not address any uncertainty of delivery of the A27 Chichester bypass improvements project and we strongly recommend that there is either no reliance placed on RIS3 to realise capacity for growth in the Plan or that contingency measures are included to cover the eventuality that RIS3 funding is not forthcoming within the plan period. It is not clear that the potential impact of development on transport networks can be addressed in the absence of the A27 Chichester bypass improvements project.

Achieving net zero, reducing emissions reduction, acting on climate, and supporting thousands of new homes and new employment developments will be problematic with existing processes. New, additional, and adapted processes and assessments will likely be required, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments. We acknowledge that change is complex, expensive, and time-consuming, especially for smaller district level Councils. But the hard work will deliver benefits for the Council and residents in the longer-term.

National Highways seeks to continue working with the Council and WSCC to progress coordinated and deliverable packages of interim mitigation measures and alternative transport solutions while a long-term strategic solution is considered by government. This must however be in combination with a robust monitor and manage policy that appropriately manages the risk of unacceptable road impacts resulting from new housing and other development over the Plan period.

We have been in discussion with Chichester District Council regarding their proposed Monitor and Manage Strategy. At present, we do not consider the current strategy to be robust and we seek further information and detail especially on who, when and when monitoring and management will be undertaken. Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas. Any M&M framework must be based on a "worst case scenario" whereby necessary transport mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. The M&M framework must set out that the alternative to mitigation not being delivered is that development does not proceed where that development would give rise to unacceptable road safety risk or severe cumulative impacts on the road network in the absence of that mitigation. The M&M framework must be translated into development management plan policy and policy relating to development allocations.

As we have reiterated throughout our comments, we welcome the opportunity to work with you to address these outstanding matters and we will continue to liaise over submitted Transport Assessment, Travel Plan policy and Monitor and Manage Policy to help to work towards a viable plan. We hope our comments assist.

We look forward to continuing to participate in future consultations and discussions. Please do continue to consult us as the Plan progresses so that we can remain aware of, and comment as required on, its contents.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Document Element: Policy H6 Custom and/or Self Build Homes

Respondent: Thakeham Homes (Tristan Robinson, Planner) [8163]

Summary:

Thakeham objects to the requirement for: "2% of market units provided on strategic scale housing sites should be self/custom build". Requirements on relatively small sites creates undesirable piecemeal provision with potential feasibility and deliverability issues at implementation stage. Would suggest a focussed provision on sites of 500 or more dwellings represents a more acceptable approach, ensuring effective and comprehensive delivery. To ensure Policy is suitably justified, CDC should consider alternative approaches to increasing supply of self-build plots as referenced in PPG.

Full text:

See attached representation.

Change suggested by respondent:

Policy H6 should be amended to read:

"On developments of 500 dwellings or more, 2% of market units should be self/custom build".

Document Element: Policy H7 Rural and First Homes Exception Sites**Respondent:** Chichester District Council Housing Team - Local Housing Authority (Mark Bristow) [7764]**Summary:**

The Housing Authority recognise the difficulties in bringing forward exception sites for affordable housing and welcome this policy which seeks to enable the needs of our rural communities to be met.

Full text:

Chichester Local Plan – Proposed Submission

Duty to Co-operate

The Statutory Housing Authority welcomes the opportunity to comment on the Chichester Local Plan 2021 – 2039 and strongly commends the Local Planning Authority on progressing with its plan-making activities at a time when a number of Local Planning Authorities across the country have stalled owing to a state of flux in the national policy picture.

Chichester District Council Housing Authority considers that the Chichester Planning Policy Team have engaged in a pro-active manner in an ongoing basis to meet the needs of our communities. Furthermore, the authority has been consulted throughout in the crafting of the proposed housing policies H1 – H10 and confirm that the Duty to Co-operate has been met in this regard.

Is it legally compliant?

The Housing Authority consider the plan as presented, to be legally compliant and have no specific comments in relation to the Sustainability Appraisal, Habitats Regulations Assessment or the Statement of Community Involvement.

Soundness

The Housing Authority is satisfied that the plan is positively prepared and seeks to meet the housing need for both market and affordable housing, so far as is practicable, whilst having consideration for the various constraints of the plan area including AONB designation, heritage matters, flooding matters and infrastructure capacity issues. The Housing Authority believe the plan seeks to balance between these competing demands in a sustainable and realistic manner for the plan period 2021 -2039.

The Housing Authority consider the plan provides for a reasonable evidence based strategy which is consistent with national planning policy and guidance and contributes to the delivery of sustainable development, having regard to the reasonable alternatives available.

Meeting housing need

The Housing Authority considers the plan meets housing need so far as is realistically possible considering the constraints of the plan area.

Policy H1, including the Broad Spatial Distribution - is noted.

Policy H2, the strategic locations are broadly located in areas where the Council held Housing Register indicates the highest level of housing need.

Policy H3 - is noted.

Policy H4 – The Housing Authority fully endorse and support the provisions contained in Policy H4.

Policy H5 - The Housing Authority is supportive of the housing mix outlined in policy H5 and the ability to reflect local need where it is appropriate to do so. Furthermore it is right to provide this level of certainty, whilst allowing for some degree of flexibility.

Policy H6 - The Housing Authority are in full support of this policy and fully endorse the opportunity for Neighbourhood Planning groups to bring forward Self and Custom Build serviced plots. The Housing Authority are encouraged by the potential that may arise with the call for sites for such plots. We look forward to working with our colleagues and communities to bring forward Self and Custom Build opportunities within the plan area.

Policy H7 - The Housing Authority recognise the difficulties in bringing forward exception sites for affordable housing and welcome this policy which seeks to enable the needs of our rural communities to be met.

Policy H8 - The Housing Authority strongly advocate for the inclusion of specialist accommodation for older people, and the intention is to secure affordable housing across all specialist accommodation for older people, including Extra Care to meet the needs of those unable to secure such accommodation in the open market.

H9 – The Housing Authority support the policy to retain accommodation for rural workers.

H10-H14 – The Housing Authority has no observations to make in relation to these policies.

Document Element: Policy H7 Rural and First Homes Exception Sites**Respondent:** Church Commissioners for England [1858]**Agent:** Lichfields (Tara Johnston, Planner) [7506]**Summary:**

Concerns regarding policy criteria which limit amount of development that can be delivered;

- Criteria 2 (maximum of 30 dwellings) inconsistent with NPPF;

- Criteria 6 (proximity to settlement boundary) inconsistent with NPPF;

Policy provides no allowance for market housing on rural exception sites in addition to first homes exception sites and is inconsistent with NPPF.

Full text:

We write in response to the above consultation on behalf of our client, the Church Commissioners for England (CCE). CCE owns a large amount of land in the area largely to the south, west and east of Chichester.

We welcome the opportunity to further engage with the Local Plan process. Whilst we support some aspects of the Local Plan, we consider that some changes are likely to be necessary to ensure that the Plan can be found sound.

By way of background, CCE submitted several sites for consideration as part of the Housing Economic Land Availability Assessment (HELAA) in 2021. These sites were previously promoted as part of the Preferred Approach Local Plan Regulation 18 Consultation in 2019.

As part of these representations, we take the opportunity to re-promote a number of CCE's sites, which could assist the Council in delivering much needed housing for the district. CCE has updated its technical work and provide Vision Documents in relation to its landholdings in Southbourne, Oving, and Hunston Parishes to demonstrate how additional housing can be delivered. These Vision Documents are enclosed.

We consider this and other aspects of the emerging Local Plan below.

Chapter 2: Vision & Strategic Objectives

The Local Plan Vision details a positive approach to supporting sustainable development in the context of the climate emergency. CCE welcomes the Vision for Chichester, particularly the importance placed on the delivery of new homes in 'Objective 3' and the delivery of new infrastructure to support the new development in 'Objective 7'.

Chapter 3: Spatial Strategy and Settlement Hierarchy

The Spatial Strategy builds on the previous Local Plan by focussing growth on Chichester city as the main sub-regional centre. Outside Chichester city and its closest settlements, development will focus on the two settlement hubs within the east-west corridor at Tangmere and Southbourne. This approach is supported by CCE.

Policy S1 Spatial Development Strategy

Draft Policy S1 (Spatial Development Strategy) identifies the broad approach to providing sustainable development in the plan area, which includes ensuring that new residential development is distributed in line with the settlement hierarchy, with a greater proportion of development in the larger and more sustainable settlements. We support this strategy, with particular support for development at the settlement hubs of Southbourne (Policy A13) and Tangmere (Policy A14). We also support that provision is made for extant Site Allocations and the Tangmere strategic site remains allocated under draft Policy A14.

Policy A14 continues to allocate Land West of Tangmere for 1,300 dwellings. CCE questions the Council's decision to not amend the existing settlement boundary of Tangmere to include the land subject to the allocation. Without amending the settlement boundary, the future growth of Tangmere may be hindered. As such, the settlement boundary of Tangmere should be amended to include the allocated site to ensure that the plan is justified.

Draft Policy S1 also refers to development in service villages such as Bosham, Hambrook and Loxwood. Hunston is excluded from the Spatial Strategy but is identified as a Service Village within the Settlement Hierarchy in draft Policy SP2 (Settlement Hierarchy). The draft Local Plan suggests that the allocation of homes in Hunston has been removed as a result of growth in the Manhood Peninsula. CCE acknowledges that the overall housing numbers across the district have been reduced as a result of local constraints but reiterate that their landholding in Hunston remains a suitable site for housing should the Council need to identify more land for housing. This is discussed further below.

Policy S2 Settlement Hierarchy

As stated in paragraph 3.31 of the draft local plan, 'The NPPF encourages housing delivery where it will enhance or maintain the vitality of rural communities'. Paragraph 79 of the NPPF (2021) states that 'To promote sustainable development in rural areas, housing should be located where it will enhance or maintain the vitality of rural communities. Planning policies should identify opportunities for villages to grow and thrive, especially where this will support local services. Where there are groups of smaller settlements, development in one village may support services in a village nearby'.

CCE owns substantial land holdings in South Mundham, which is in close proximity to North Mundham/Runcton which is defined as a Service Village. As such, whilst South Mundham does not contain any services, development in the hamlet would enable sustainable growth to support facilities in North Mundham and Runcton. To ensure that the draft plan is consistent with national policy, South Mundham should be considered as part of North Mundham as a Service Village when considering the future pairing/grouping of some settlements where the facilities and services could be shared to capitalise on the close connections some settlements have. Development outside the settlements listed in the hierarchy in SP2 is restricted to proposals which require a countryside location or meet an essential local rural local need or supports rural diversification in accordance with Policy NE10. To this end, CCE has smaller land holdings in Tangmere, Oving, South Mundham, Birdham, Chidham and Sidlesham, which may be suitable for conversion for residential use or via windfall housing. Location plans for each of the sites can be found in Appendices 1-8.

Chapter 4: Climate Change and the Natural Environment

Policy NE4 Strategic Wildlife Corridors

The East of City strategic wildlife corridor has been relocated to the eastern side of proposed Site Allocation A8 (Land to the East of Chichester). The relocation of this wildlife corridor follows additional evidence that shows that the commuting route for Barbastelle Bats is along Drayton Lane.

CCE owns land to the east of Drayton Lane (immediately adjacent to the wildlife corridor and to the east of draft allocation A8) and surrounding the village of Oving. Its land has been identified in the HELAA (2021) as being developable, including site HOV0017 (Drayton Lane). The land east of Drayton Lane is sustainably located being close to Chichester and its amenities. The site provides an opportunity to sensitively and sustainably provide additional homes for the District. In accordance with Draft Policy NE4, the proposals for the Land East of Drayton Lane will not have an adverse impact on the integrity and function of the wildlife corridor and will not undermine the connectivity and ecological value of the corridor. This Vision Document will be shared under separate cover.

The eastern edge of the relocated wildlife corridor encroaches into CCE land. Any proposal on this land would be required to take the statutory protection for bats and other protected species into consideration and managed as part of a sensitive masterplan for development and on this basis, it is considered unnecessary to extend the wildlife corridor to encroach into the CCE site.

It is also considered that the detail of policy NE4 goes beyond the purpose of the policy, which should be to safeguard wildlife rich habitats and wider ecological networks. The policy is clear that development should only be permitted where it would not create an adverse effect upon the ecological value, function, integrity and connectivity of the corridors. It does not resist development in principle. This therefore makes redundant policy text 1, which seeks to introduce a sequential test for preferable sites outside of a wildlife corridor. It is considered that this test conflicts with the underlying purpose of the policy, which is to safeguard wildlife corridors from harmful impacts that cannot be mitigated, and should therefore be deleted.

Policy NE7 Development and Disturbance of Birds

CCE is broadly supportive of Policy NE7. However, they would like to note that the situation regarding the national guidance on nutrient neutrality is still evolving and therefore, this policy is only relevant to current legislation. Policy NE7 may therefore not be relevant throughout the entirety of the plan period. As such, CCE considers that it is necessary in this instance to ensure that an appropriate reference to changing legislation is included within the policy to prevent it from becoming out of date and would also ensure that the policy remains effective once adopted.

Policy NE10 The Countryside

CCE is supportive of the inclusion of a policy referencing the conversion of existing buildings in the countryside, however, we believe that Policy NE10 is not consistent with national policy. Policy NE10 criteria B states that proposals for the conversion of buildings in the countryside will be permitted where 'it has been demonstrated that economic and community uses have been considered before residential, with residential uses only permitted if economic and community uses are shown to be inappropriate and unviable'. This policy is not in accordance with Paragraph 152 of the NPPF (2021) which states that the reuse of existing resources should be encouraged, including 'the conversion of existing buildings'. Under paragraph 152, there is no prerequisite to adopt a sequential approach, or to give preference to other uses. As such, criteria B should be omitted from Policy NE10. Reference

to criteria B should also be removed from criteria C.

Chapter 5: Housing

Policy H1 Meeting Housing Needs

The Preferred Approach Local Plan was based on meeting the identified objectively assessed housing needs of the plan area of 638 dwellings per annum. However, due to constraints, particularly the capacity of the A27, the Submission Version of the Local Plan has planned for a housing requirement below the need derived from the standard method. The Plan proposes to deliver 535 dpa in the southern plan area and a further 40 dpa in the northern plan area, a total supply of 10,350 dwellings over the plan period from 2021 – 2039 (575 dpa).

The Planning Inspectorate has previously asked the Council to determine what level of housing could be achieved based on deliverable improvements to the A27 and to consider whether the full housing needs could be met another way. It is acknowledged that the Council has carried out the additional work required and the local constraints have resulted in a proposed lower housing requirement.

The NPPF (2021) confirms that to determine the minimum number of homes needed, strategic policies should be informed by a local housing need assessment, conducted using the standard method in national planning guidance – unless exceptional circumstances justify an alternative approach (para. 61). CCE acknowledges that housing numbers have been reduced as a result of local constraints and it will be down to the Inspector to determine whether the Council's exceptional circumstances justify this. Should the Planning Inspector find that the Council requires additional land to meet the housing need using the standard method, CCE's land at Southbourne, Oving, Drayton Land and Hunston are suitable, available and developable for housing. In addition, CCE's rural development sites could also contribute to meeting the housing need.

Policy H2 Strategic Allocations

Draft Policy H2 confirms that the Tangmere Strategic Development Location is carried forward from the 2015 Local Plan and this is supported by CCE. Strong support is also given for the Broad Location of Development in Southbourne (Policy A13) for up to 1,050 dwellings.

Policy H5 Housing Mix

Draft Policy H5 confirms that the housing mix for a development will be based on the most up to date HEDNA to address identified local needs and market demands. We suggest that the Council considers a range of criteria, including site characteristics, when determining the housing mix for individual sites and this should be reflected in wording of Policy H5.

Policy H7 Rural and First Homes Exception Sites

Draft Policy H7 relates to rural and first homes exception sites. CCE is supportive of the principle of the inclusion of a rural exceptions policy. However, we have concerns over criteria contained within the policy which limits the amount of development that can be delivered under it.

The NPPF (2021) at paragraph 78 states that planning policies and decisions should be responsive to local circumstances and support housing development that reflect local needs. Furthermore it also states that 'local planning authorities should support opportunities to bring forward rural exception sites that will provide affordable housing to meet identified local needs'.

The key aspect of the policy is to enable the delivery of rural exception sites which would address an identified local need. Within the policy, there is no limit on the amount of development that can be delivered and therefore, it is considered that if Policy H7 is limited to a maximum of 30 dwellings it could serve to hinder development (especially on slightly larger sites), which would otherwise be sustainable. As such, we consider that the amount of development should not be limited and rather should be dictated on a site and need specific basis. CCE considers that for Policy H7 to be positively prepared and in accordance with National Policy, criteria 2 should be removed.

In addition, criteria 6 states that proposals for affordable housing on rural exception sites will only be supported where 'the site is located adjacent or as close as possible to the existing settlement boundary and does not result in scattered or isolated development in rural areas'. The NPPF (2021) does not specify the location of rural exception sites. As such, to be consistent with national policy, criteria 6 should also be omitted.

Furthermore, Policy H7 states that 'applications for first homes exception sites that propose the inclusion of a small proportion of market housing will be expected to provide robust evidence...'

However, in the policy there is no allowance for the provision of market housing on rural exception sites in addition to first homes exception sites. As a result of this, the requirements of the policy are again not consistent with national policy. Paragraph 78 of the NPPF (2021) is supportive of 'some market housing' where it would facilitate the delivery of rural exception sites. As such, CCE considers that Policy H7 should be amended as follows:

'Applications for rural and first homes exceptions sites that propose the inclusion of a small proportion of market housing will be expected to provide robust evidence that the site would be unviable without such housing being included'.

Policy H8 Specialist Accommodation

Draft Policy H8 confirms that all housing sites over 200 units, including those allocated in this plan, will be required to provide specialist accommodation for older people with a support or care component. We request that this policy is amended to add 'where appropriate and viable', acknowledging that viability and site-specific factors need to be taken into consideration.

Chapter 6: Place-making

Policy P3 Density

We support the objective of Draft Policy P3 (Density) to make the most efficient use of land and follow a design led approach to achieve the optimum density for a site. The Policy does not prescribe an appropriate density for the District and this is supported. However, we consider that reference should be made to the fact that density may vary depending upon site specific circumstances and could be higher where transport links and access to services is good.

Chapter 7: Employment and Economy

Policy E3 and E4 Horticultural Development

Chapter 7 of the draft Local Plan confirms that 67 hectares of land is identified to meet the future horticultural land need within four Horticultural Development Areas (HDAs) over the plan period. It is confirmed that an additional 137 hectares of horticultural land is also forecast to be required outside of HDAs to meet future need.

CCE has significant landholdings which could assist the Council in addressing the insufficient availability within the current HDAs. The CCE sites which

are considered suitable for horticulture development are listed below and location plans for each of the sites can be found in Appendices 9-13.

- Somerley Farm, NE East Wittering, PO20 7JB
- Fisher Farm, South Mundham, PO20 1ND
- Church & Haise Farm, Sidlesham
- Cowdry Farm, Birdham
- Groves Farm, nr Merston, PO20 2DX / Colworth Manor Farm PO20 2DU.

CCE supports draft Policy E3 which confirms that “approximately 137 hectares of land is also needed outside of HDAs to meet anticipated horticultural and ancillary development land need for the plan period.” Support is also given for draft Policy E4 in relation to land outside HDAs. This Policy confirms that proposals for horticultural development can come forward outside the HDAs, subject to a set of criteria. We would welcome continued discussion with the Council on how these sites could help meet the districts horticultural needs in the future.

Chapter 10: Strategic and Area Based Policies

CCE supports Chichester District Council’s proposal to allocate additional land for housing at Southbourne and to maintain the existing allocation at Tangmere. We also consider that CCE’s land at Hunston and Oving could assist the Council in meeting its housing needs, should additional housing be required. We consider these opportunities in turn below.

Policy A13 Southbourne Broad Location for Development

CCE supports draft Policy A13 and the allocation of a Broad Location for Development in Southbourne for a mixed-use form of development including 1,050 dwellings.

CCE has significant landholdings around Southbourne which is suitable, available and developable. The land to the north and west of Southbourne measures 70ha and is wholly within CCE’s control. The land adjoins the existing settlement and provides an opportunity for a sustainable extension to Southbourne with the potential to deliver c. 1,200 homes for the village, as well as employment, community uses and a significant amount of new public space and green open space. A new Vision Document is enclosed which explains one way in which this opportunity could be realised. Importantly, it is considered that there are no technical impediments that would prevent development from coming forward on this site.

This site has been promoted throughout the Southbourne Neighbourhood Plan process, most recently in the December 2022 consultation. The new Vision Document demonstrates that the CCE site presents the opportunity to provide a comprehensive development that would contain strategic housing growth, significant areas of green infrastructure and open space in a sustainable location. The key access strategy for the site is to provide two new access points from the south A259 Main Road and the east Stein Road. These access points would connect to a spine road which would form a continuous vehicle route around the north-western edge of Southbourne.

The site almost entirely comprises a Secondary Support Area under the Solent Waders and Brent Goose Strategy (SWBGS), which aims to protect the network of non-designated terrestrial wader and brent goose sites that support the Solent Special Protection Areas (SPA) from land take and recreational pressure associated with new development. Due to the designation of the site, discussion was undertaken with the Hampshire and Isle of Wight Wildlife Trust with a view to determine a suitable approach for the scheme and an appropriate survey effort to establish the use of the site by designated birds. As a result of these discussions, wintering bird surveys are taking place. The aim of these surveys is to explore opportunities for mitigation for this SWBGS support area such that development within the red line can proceed without adverse impacts to the bird populations noted within this strategy. Following the survey, the results and approach will be presented to Natural England for further discussion.

In relation to viability, we note that Policy A13 sets several policy objectives for development at Southbourne. The NPPF (2021) notes that where there are up-to-date policies which have set out the contributions expected from development, planning applications that comply with them should be assumed to be viable (para. 58). With this in mind the policy objectives outlined within Policy A13 will require viability testing to be undertaken to ensure a policy compliant scheme is both viable and deliverable. This is necessary to ensure that the policy is sound.

The Policy suggests that employment opportunities are required to be delivered as part of the allocation but there is no specific reference to the amount of use required. CCE supports this proposed approach as it is sufficiently flexible to enable an amount of employment land to be proposed in response to market conditions at the appropriate time and this will help to support delivery of the allocation.

The scale of development proposed has been reduced from 1,250 to 1,050 dwellings to reflect the proportionate reduction in housing numbers across the parishes in the east west corridor as a consequence of the limit on numbers in the southern plan area. If the Inspector finds that additional housing is required, the Vision Document submitted demonstrates that the CCE site in Southbourne could deliver c. 1,200 homes and so could increase housing without needing to identify additional land for development elsewhere.

To summarise, the site could accommodate approximately 1,200 homes which could be delivered on a phased basis early in the plan period. There are no overriding physical or technical constraints that would act as an impediment to development. There is also a clear access arrangement proposed.

Policy A14 Land West of Tangmere

CCE supports that Policy A14 is carried forward into this Local Plan to facilitate the delivery of a residential-led development of at least 1,300 dwellings.

Additional sites

Hunston

CCE further promotes land (15.31ha) located east of the B2145 Selsey Road in Hunston for 240 new homes. The land is deliverable and is fully within CCE’s control. The site is highly accessible, located within a maximum of 5-6 minutes walking distance to Selsey Road, where several bus routes connect the village to Chichester.

CCE notes that the Council assessed the HELAA site (ref. HHN0016) as ‘developable’. A Vision Document has previously been prepared and submitted to demonstrate the commitment to it being brought forward for residential development within the plan period. This document is enclosed.

To address the Council’s concerns in relation to flooding, following publication of the Chichester Strategic Flood Risk Assessment (SFRA), we have prepared an updated Flood Risk Scoping Study which provides an overview of flood risk constraints across the site from a range of sources. Various mitigation measures are recommended in line with recommendations of the Chichester SFRA and prevailing local and national guidance and best practice. With these measures in place, it is likely that the flood risk could be managed effectively in accordance with the requirements of the NPPF. Detailed data has also been requested from the Environment Agency, which will feed into further technical work that is being carried out.

Should the Inspector conclude that additional housing is required, CCE considers that their site is the most appropriate and sustainable location for development in Hunston. The site provides an opportunity to sensitively and sustainably extend the existing village boundary to provide additional homes to meet an identified housing need.

Land East of Drayton Lane

CCE owns land to the east of Drayton Lane which is bound by Tangmere Road to the north and crosses Oving Road and the railway line to the south. The site is c.1km from the centre of Chichester and comprises 49ha. The site was assessed in the HELAA 2021 as developable 'HOV0017'. A Vision Document has been prepared and was presented to the Council in 2022. This includes a detailed analysis of the site and its surroundings and provided justification as to why the site is suitable for development. This technical review of the site concludes there are no technical impediments to development.

The Vision Document demonstrates how the proposals for the land east of Drayton Lane could be developed as an extension to the draft allocation A8 (Land to the east of Chichester) for up to 700 new homes. The land east of Drayton Lane is fully within the CCE's control, is available for development now and is deliverable with some development achievable within the first five years of the plan period. It represents an opportunity to provide new homes, facilities and significant community benefits, through a sensitively designed development that integrates into the surrounding landscape.

The Vision for this site is a landscape and ecology led masterplan which would celebrate the rich wildlife characters of the different surrounding landscapes and uses the connection between countryside and community to generate its character and identity. The Vision Document demonstrates that this is a suitable location for development.

Should the Inspector conclude that additional housing is required, CCE considers that the land east of Drayton Lane would form a natural extension to allocation A8 and is an appropriate and sustainable location for new development.

Appendix C Additional Guidance

Appendix C provides additional guidance on evidence which needs to be submitted in support of certain planning applications related mainly to development in the countryside. As mentioned in the comments above provided in response to Policy NE10, there is no prerequisite contained within the NPPF (2021) that requires an applicant to demonstrate that previous uses were proven unviable prior to the conversion of a building in the countryside to residential use. As such, to be in accordance with national policy, reference to Policy NE10 should be omitted from Appendix C.

Conclusion

CCE welcomes the opportunity to comment on the Local Plan and is keen to continue to engage with the Council, especially in relation to the Broad Location for Development in Southbourne. CCE is supportive of the Council's aspirations in the Local Plan. However, the changes set out above are considered likely to be necessary to ensure the plan is sound.

CCE is a considerable landowner in Chichester with land largely to the south, west and east of Chichester which could assist the Council in meeting their housing and development needs throughout the plan period.

See attachments for site information.

Change suggested by respondent:

We consider that the amount of development should not be limited and rather should be dictated on a site and need specific basis. CCE considers that for Policy H7 to be positively prepared and in accordance with National Policy, criteria 2 should be removed.

The NPPF (2021) does not specify the location of rural exception sites. As such, to be consistent with national policy, criteria 6 should also be omitted.

In relation to market housing, CCE considers Policy H7 should be amended as follows:

'Applications for rural and first homes exceptions sites that propose the inclusion of a small proportion of market housing will be expected to provide robust evidence that the site would be unviable within such housing being included'.

Document Element: Policy H7 Rural and First Homes Exception Sites**Respondent:** Kirdford Parish Council [1875]**Agent:** Troy Planning + Design (Troy Hayes, Managing Director) [7640]**Summary:**

What does the policy define as local? What is CDC's justification for 30 dwellings? How has 30 dwellings been decided as the upper threshold? This seems like a large scheme for small settlements. Unclear what CDC considers to be a 'local connection'? Also unclear what Policy refers to in terms of a connection to the host parish "in the first instance" but then refers to a "second instance" where immediately surrounding parishes can then be considered. Unclear as to how this would work in practice. Not possible to determine what is "adjacent" or "as close as possible to the settlement boundary".

Document Element: Policy H7 Rural and First Homes Exception Sites**Respondent:** National Highways (Mr Marius Pieters, Spatial Planning Manager) [8127]**Summary:**

[National Highways letter dated 24/07/23 confirmed representation should be categorised as Comment - Seeking to understand Council's approach.] With up to 30 dwellings per site across the region, we seek to understand how the Council plans to include such sites in an overarching monitor and manage policy which addresses the cumulative traffic impacts of these and other sites and manages their collective impact on the A27.

Full text:

We have reviewed the publicly available Local Plan documents and provided comments in the attached letter, in relation to the transport implications of the plan for the safety and operation of the SRN.

Our comments include issues to resolve, comments, requests for further information and recommendations. A brief summary of our main comments are:

- the reliance on the delivery of the A27 Chichester bypass improvements project.
- the requirements for new, additional, and adapted processes and assessments, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments.
- collaborative working between agencies in combination with a robust monitor and manage policy.

We hope our comments assist.

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders. We look forward to continuing to participate in future consultations and discussions. Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Background

National Highways has been appointed by the Secretary of State for Transport as strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the strategic road network (SRN).

National Highways is responsible for operating, maintaining, and improving the Strategic Road Network (SRN) i.e., the Trunk Road and Motorway Network in England, as laid down in Department for Transport (DfT) Circular 01/2022 (Strategic Road Network and the delivery of sustainable development).

The SRN is a critical national asset and as such we work to ensure that it operates and is managed in the public interest, both in respect of current activities and needs as well as in providing effective stewardship of its long-term operation and integrity.

Our responses to Local Plan consultations are guided by relevant policy and guidance including the National Planning Policy Framework (2021) (NPPF):

- Transport issues should be considered from the earliest stages of plan-making and development proposals so that the potential impact of development on transport networks can be addressed (para 104).
- The planning system should actively manage patterns of growth such that significant development is focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. (para 105).
- Planning policies should be prepared with the active involvement of highways authorities and other transport infrastructure providers so that strategies and investments for supporting sustainable transport and development patterns are aligned. (para 106).
- In terms of identifying the necessity of transport infrastructure, NPPF confirms that development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe. (para 111).
- Planning policies and decisions should support development that makes efficient use of land, taking into account the availability and capacity of infrastructure and services – both existing and proposed – as well as their potential for further improvement and the scope to promote sustainable travel modes that limit future car use. (para 124).

In relation to the tests of soundness set out at paragraph 35 of the NPPF, in the context of transport, these are interpreted as meaning:

- a) Positively prepared - has the transport strategy been prepared with the active involvement of the highway authorities, other transport infrastructure providers and operators and neighbouring councils?
- b) Justified – Is the transport strategy based on a robust evidence base prepared with the agreement in partnership, or with the support of the highway authorities?

c) Effective – Does the transport strategy and policy satisfy the transport needs of the plan and is it deliverable at a pace which provides for and accommodates the proposed progress and implementation of the plan?

d) Consistent with national policy – Does the transport strategy support the economic, social, and environmental objectives of the Plan and the NPPF/NPPG?

We will be concerned with proposals that have the potential to impact on the safe and efficient operation of the SRN; in this case, the A27 trunk road (Chichester Bypass and its junctions) which is the main access route in the Chichester area. We have particular interest in any allocation, policy or proposals which could have implications for the A27 and the wider SRN network. We are interested as to whether there would be any adverse road safety or operational implications for the SRN. The latter would include a material increase in queueing or delay or reduction in journey time reliability during the construction or operation of the development set out in the plan.

National Highways is a key delivery partner for sustainable development promoted through the plan-led system, and as a statutory consultee we have a duty to cooperate with local authorities to support the preparation and implementation of development plan documents.

In accordance with national planning and transport policy and our operating licence, we are entirely neutral on the principle of development as it is for the local planning authority to determine whether development should be allocated or permitted; albeit it must comply with national policy on locating development in locations that are or can be made sustainable. Therefore, while always seeking early and fulsome engagement with local plans and/or developers, we will simply be assessing the transport and related implications of plans or proposals and agreeing any necessary transport improvements and relevant development management policy.

In progressing Local Plans, we will seek to agree the following:

- Assessment tools and methodology
- Baseline Assessment i.e., to demonstrate that the assessment tool accurately reflects current transport conditions
- Comparator case assessment i.e., to forecast the transport conditions that would occur in the absence of the plan
- Forecast modelling i.e., to forecast the transport conditions that would arise with the plan in place, this will include an assessment at the end of the Plan period; and, if required, at full build out if that occurs after the end of the Plan period
- Outputs and outcomes of modelling, demonstrating, as appropriate, what transport infrastructure is necessary to support the plan o It should be noted that a suite of transport modelling tools may be required. This includes strategic modelling covering an area at least one major junction beyond the district boundary, localised network modelling where several links/junctions are close together and/or individual junction modelling
- o A DMRB (Design Manual for Roads and Bridges) compliancy assessment may also be required for certain highway features, such as Merge/Diverge assessment at Grade separated junctions, link capacity assessments, and others.
- The design of any necessary transport infrastructure, to an extent suitable for establishing deliverability during the plan period at the time that it becomes necessary for the purpose of ensuring that unacceptable road safety impacts or severe operational impacts do not arise as a result of development. This may be to at least General Arrangement design stage or preliminary design stage. Whichever degree of detail is agreed, the products must be in full compliance with the DMRB.
- Industry standard transport intervention costings.
- The delivery/funding mechanisms for necessary transport interventions. It should not be assumed that National Highways will have any responsibility to identify or deliver necessary transport interventions.
- If considered appropriate, a “Monitor & Manage” (M&M) framework, aimed at managing the pace of development in line with the pace of funding and delivery of necessary highway interventions in a manner which responds to the realworld impacts of development may be agreed for inclusion in the plan subject to the adequacy of risk control measures included therein. This can include the move from a ‘predict & provide’ style of delivery to ‘a vision & validate’ style. o Any M&M framework must be based on a “worst case scenario” whereby necessary mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. It must be translated into development management plan policy and policy relating to development allocations.

Further detail on the above can be provided by National Highways.

While ideally all the above should be agreed prior to the Submission of the Local Plan for examination, we recognise that this is not always possible. However, all parties should work towards all matters being agreed and reflected in a Statement of Common Ground (SoCG) by the start of the Local Plan Examination at the latest. Ideally the SoCG between the Council and National Highways would be prepared well in advance of plan submission in order to guide resource input and to track progress towards final agreement on all relevant matters starting from the earliest plan iterations until the final version is agreed.

It is acknowledged that Government policy places much emphasis on housing delivery as a means for ensuring economic growth and addressing the current national shortage of housing. The NPPF is very clear that:
“Strategic policy-making authorities should establish a housing requirement figure for their whole area, which shows the extent to which their identified housing need (and any needs that cannot be met within neighbouring areas) can be met over the plan period.”

However, new DfT C1/22 and the NPPF are equally clear that any development, including housing delivery, must be tempered by the requirement to ensure that the associated transport demand can be accommodated without unacceptable impacts on the safety of the SRN or severe impacts on the operation of the SRN including reliability and congestion. Therefore, as necessary and appropriate, any plan and/or development must be accompanied by suitable mitigation in the right places at the right time, that is to the required design standards and is deliverable in terms of land availability, constructability and funding.

We would also draw your attention to the then Highways England document ‘The Strategic Road Network, Planning for the Future: A guide to working with National

Highways on planning matters’ (September 2015). This document sets out how National Highways intends to work with local planning authorities and developers to support the preparation of sound documents which enable the delivery of sustainable development.

https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/461023/N150227_-_Highways_England_Planning_Document_FINAL-lo.pdf

Responses to Local Plan consultations are also guided by National Planning Policy Framework (NPPF) revised on 20 July 2021 which sets out the government’s planning policies for England and how these are expected to be applied.

Updated Circular (01/2022)

It should be noted that since the start of the Local Plan consultation process, on the 23 December 2022, the Department for Transport released a new circular on the ‘Strategic road network and the delivery of sustainable development’ (Circular 01/2022), which replaces all of the policies in Circular 02/2013 of the same name. These representations take account of the new circular and the requirements in terms of the Local Plan evidence base and process.

We request that the Local Plan is prepared in line with all aspects of the new circular. Particularly, the principles of sustainable development (paragraphs 11 to 17), new connections and capacity enhancements (paragraphs 18 to 25), and engagement with plan-making (paragraphs 26 to 38).

Regulation 18 submission

In our Regulation 18 submission we noted several matters including:

- The need to mitigate the adverse impacts of strategic development traffic to the A27 Chichester Bypass and its junctions at Portfield Roundabout, Bognor Road Roundabout, Whyke Roundabout, Stockbridge Roundabout and Fishbourne Roundabout and Oving junction.
- The need to identify a mechanism to calculate contributions towards the delivery of the previously agreed Local Plan A27 improvements
- The need to confirm the number of dwellings needed within the plan period
- The need to establish National Highways acceptance of the traffic model reference and future case scenarios
- The need to confirm costs, viability, and funding associated with mitigating the safety and congestion impacts of the development included within the plan.

Local Plan context

This Local Plan (Chichester Local Plan 2021 – 2039), prepared by the Local Planning Authority (LPA) Chichester District Council, sets out the vision for future development in the district and will be used to help decide on planning applications and other planning related decisions including shaping infrastructure investments.

The draft sets out how the district should be developed over the next 18-years to 2039 including for the full Plan period (1 April 2021 to 31 March 2039) the total supply of

- 10,359 dwellings

- 114,652 net additional sqm new floorspace

Minus the completions this is equivalent to around 530 dwellings and 6,150 sqm of floorspace a year.

National Highways Representations

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders.

We have undertaken a review of the Chichester Local Plan 2021-2039 proposed submission version and accompanying evidence documents, our comments are set out in the tables below (following pages). [see table within attachment]

Summary

We have reviewed the publicly available Local Plan documents and provided comments above in relation to the transport implications of the plan for the safety and operation of the SRN. We understand that other technical information is available, but this was not presented as part of this consultation. Chichester, and the A27, are already heavily congested, infrastructure in the existing Local Plan remains undelivered and the growth set out in the new Plan will further increase travel demand.

As presented, satisfying the transport needs of the plan is clearly reliant on the delivery of the A27 Chichester bypass improvements project. The A27 Chichester bypass improvements project is one of 32 pipeline schemes being considered for possible inclusion in National Highways third Road Investment Strategy (RIS3) covering 1 April 2025 to 31 March 2030.

On 9 March 2023 the UK Transport Secretary ensured record funding would be invested in the country's transport network, sustainably driving growth across the country while managing the pressures of inflation. The announcement cited the A27 Arundel Bypass as being deferred from RIS2 to RIS 3 (covering 2025-2030). The transport secretary also identified a number of challenges to the delivery of the road investment strategy and cited the benefit of allowing extra time to ensure schemes are better planned and efficient schemes can be deployed more effectively.

At present, there is no commitment by DfT to carry out the A27 Chichester bypass improvements project. Until the A27 Chichester bypass improvements project is published in the RIS3, consented and a decision to invest is made it cannot be assumed to be a committed project.

We note that the Plan does not address any uncertainty of delivery of the A27 Chichester bypass improvements project and we strongly recommend that there is either no reliance placed on RIS3 to realise capacity for growth in the Plan or that contingency measures are included to cover the eventuality that RIS3 funding is not forthcoming within the plan period. It is not clear that the potential impact of development on transport networks can be addressed in the absence of the A27 Chichester bypass improvements project.

Achieving net zero, reducing emissions reduction, acting on climate, and supporting thousands of new homes and new employment developments will be problematic with existing processes. New, additional, and adapted processes and assessments will likely be required, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments. We acknowledge that change is complex, expensive, and time-consuming, especially for smaller district level Councils. But the hard work will deliver benefits for the Council and residents in the longer-term.

National Highways seeks to continue working with the Council and WSCC to progress coordinated and deliverable packages of interim mitigation measures and alternative transport solutions while a long-term strategic solution is considered by government. This must however be in combination with a robust monitor and manage policy that appropriately manages the risk of unacceptable road impacts resulting from new housing and other development over the Plan period.

We have been in discussion with Chichester District Council regarding their proposed Monitor and Manage Strategy. At present, we do not consider the current strategy to be robust and we seek further information and detail especially on who, when and when monitoring and management will be undertaken. Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas. Any M&M framework must be based on a "worst case scenario" whereby necessary transport mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. The M&M framework must set out that the alternative to mitigation not being delivered is that development does not proceed where that development would give rise to unacceptable road safety risk or severe cumulative impacts on the road network in the absence of that mitigation. The M&M framework must be translated into development management plan policy and policy relating to development allocations.

As we have reiterated throughout our comments, we welcome the opportunity to work with you to address these outstanding matters and we will continue to liaise over submitted Transport Assessment, Travel Plan policy and Monitor and Manage Policy to help to work towards a viable plan.

We hope our comments assist.

We look forward to continuing to participate in future consultations and discussions. Please do continue to consult us as the Plan progresses so that we can remain aware of, and comment as required on, its contents.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Document Element: Policy H7 Rural and First Homes Exception Sites**Respondent:** Mr Graham Pick [8079]**Agent:** Batcheller Monkhouse (Miss Clare Bartlett, Head of Planning) [7032]**Summary:**

Policy H7 supports the provision of affordable housing on rural sites as an exception to countryside policies. National policy sets out that First Homes can be classified as affordable housing and that First Home exception sites need to be 'primarily' for First Homes, and hence can include a small market housing component. This should be reflected in the wording of Policy H7 which currently only refers to market housing in the context of a viability assessment being required where such housing is proposed.

Document Element: Policy H7 Rural and First Homes Exception Sites**Respondent:** Thakeham Homes (Tristan Robinson, Planner) [8163]**Summary:**

Thakeham does not object to the content of the policy, however in order to be robust we believe Policy NE10 (Development in the Countryside) should reflect Policy H7. If a site is within the countryside it is often considered rural and therefore Policy NE10 should acknowledge the requirements within Policy H7 (see also rep no 5619 on Policy NE10).

Document Element: Policy H7 Rural and First Homes Exception Sites**Respondent:** The Goodwood Estates Company Limited [7922]**Agent:** HMPC Ltd (Mr Haydn Morris) [112]**Summary:**

The Goodwood Estate has traditionally provided housing for its workers to run estates traditionally and its associated farming practices.

With a change of role and practice, the Estate would like to explore the possibility of providing new housing for staff employed in its hospitality and non agricultural and forestry ventures. Such an initiative is frustrated by general rural housing policies.

Full text:

The Goodwood Estate has traditionally provided housing for its workers. Like many other estates as fewer staff were employed to run estates and its farming practices, Goodwood sold off properties for welcome income used to sustain and maintain the Estate as a whole.

With income generated by its wide-range of world-renowned activities, the Estate has in recent years (Covid excepted) been able to reinvest and buy back land and buildings previously sold off (the former sculpture park being a recent example, and the Goodwood Hotel previously). In the same vein the Estate would like to explore the possibility of providing new housing for staff, particularly those employed in its hospitality and non agricultural and forestry ventures. Such an initiative is frustrated by general rural housing policies.

Change suggested by respondent:

Criterion 1 should acknowledge local need as including the needs of large estates seeking to provide for staff accommodation, as these are different generally from the provision made through Policy H9.

Document Element: Policy H7 Rural and First Homes Exception Sites**Respondent:** Willowfield Farm (Mr Thomas Procter, Director) [8063]**Summary:**

I believe that this policy rules out exception sites from coming forward. The local plan is supposed to cater for both existing and future need across the whole district, but if there is existing need within a Parish that is not being built either due to future loading of district houses or because applications are not being built out or even coming forward then exception sites should be allowed. I do not believe this is how the NPPF is intended to be interpreted.

I believe that this policy rules out exception sites from coming forward. The local plan is supposed to cater for both existing and future need across the whole district, but if there is existing need within a Parish that is not being built either due to future loading of district houses or because applications are not being built out or even coming forward then exception sites should be allowed. I do not believe this is how the NPPF is intended to be interpreted.

Change suggested by respondent:

1. Should be modified to remove 'or future' as a future plan may not deal with existing (today) need with in a Parish such as Bosham where no affordable units have been built in over 10 years. The other constraints 2-7 would stop a large exception site coming forward anyway so we are only talking 5-25 units ish.

9. Similarly this seems to suggest that if homes are being planned elsewhere then exception sites cannot be built. i do not feel that is correct.

Document Element: Housing for older people, 5.41**Respondent:** National Highways (Mr Marius Pieters, Spatial Planning Manager) [8127]**Summary:**

[National Highways letter dated 24/07/23 confirmed representation should be categorised as Comment - Seeking to understand Council's approach.] Those age groups 75 and over (Para 5.41) or with specialised mobility needs (Para 5.42) are less likely to use walking / cycling routes than younger persons.

Department for Transport data suggests that there has been a 20-40% change (decrease) in bus vehicle miles across West Sussex since the pandemic. Bus networks are shrinking across the UK and services are being cut or rationalised.

Considering these changes, and the typical inability of the aged to walk or cycle longer distances, we seek to understand how the Council will demonstrate that revenue funding can be secured to maintain the longterm viability of the public transport in proximity of the specialist accommodation for older people and those with specialist needs and how this may affect the viability of the overall sustainable transport package.

Impacts arising from such developments and the funding of transport infrastructure modifications should be fully assessed at the planning application stage.

Full text:

We have reviewed the publicly available Local Plan documents and provided comments in the attached letter, in relation to the transport implications of the plan for the safety and operation of the SRN.

Our comments include issues to resolve, comments, requests for further information and recommendations. A brief summary of our main comments are:

- the reliance on the delivery of the A27 Chichester bypass improvements project.
- the requirements for new, additional, and adapted processes and assessments, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments.
- collaborative working between agencies in combination with a robust monitor and manage policy.

We hope our comments assist.

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders. We look forward to continuing to participate in future consultations and discussions. Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Background

National Highways has been appointed by the Secretary of State for Transport as strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the strategic road network (SRN).

National Highways is responsible for operating, maintaining, and improving the Strategic Road Network (SRN) i.e., the Trunk Road and Motorway Network in England, as laid down in Department for Transport (DfT) Circular 01/2022 (Strategic Road Network and the delivery of sustainable development).

The SRN is a critical national asset and as such we work to ensure that it operates and is managed in the public interest, both in respect of current activities and needs as well as in providing effective stewardship of its long-term operation and integrity.

Our responses to Local Plan consultations are guided by relevant policy and guidance including the National Planning Policy Framework (2021) (NPPF):

- Transport issues should be considered from the earliest stages of plan-making and development proposals so that the potential impact of development on transport networks can be addressed (para 104).
- The planning system should actively manage patterns of growth such that significant development is focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. (para 105).
- Planning policies should be prepared with the active involvement of highways authorities and other transport infrastructure providers so that strategies and investments for supporting sustainable transport and development patterns are aligned. (para 106).
- In terms of identifying the necessity of transport infrastructure, NPPF confirms that development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe. (para 111).
- Planning policies and decisions should support development that makes efficient use of land, taking into account the availability and capacity of infrastructure and services – both existing and proposed – as well as their potential for further improvement and the scope to promote sustainable travel modes that limit future car use. (para 124).

In relation to the tests of soundness set out at paragraph 35 of the NPPF, in the context of transport, these are interpreted as meaning:

- a) Positively prepared - has the transport strategy been prepared with the active involvement of the highway authorities, other transport infrastructure providers and operators and neighbouring councils?
- b) Justified – Is the transport strategy based on a robust evidence base prepared with the agreement in partnership, or with the support of the highway authorities?
- c) Effective – Does the transport strategy and policy satisfy the transport needs of the plan and is it deliverable at a pace which provides for and accommodates the proposed progress and implementation of the plan?
- d) Consistent with national policy – Does the transport strategy support the economic, social, and environmental objectives of the Plan and the NPPF/NPPG?

We will be concerned with proposals that have the potential to impact on the safe and efficient operation of the SRN; in this case, the A27 trunk road (Chichester Bypass and its junctions) which is the main access route in the Chichester area. We have particular interest in any allocation, policy or proposals which could have implications for the A27 and the wider SRN network. We are interested as to whether there would be any adverse road safety or operational implications for the SRN. The latter would include a material increase in queuing or delay or reduction in journey time reliability during the construction or operation of the development set out in the plan.

National Highways is a key delivery partner for sustainable development promoted through the plan-led system, and as a statutory consultee we have a duty to cooperate with local authorities to support the preparation and implementation of development plan documents.

In accordance with national planning and transport policy and our operating licence, we are entirely neutral on the principle of development as it is for the local planning authority to determine whether development should be allocated or permitted; albeit it must comply with national policy on locating development in locations that are or can be made sustainable. Therefore, while always seeking early and fulsome engagement with local plans and/or developers, we will simply be assessing the transport and related implications of plans or proposals and agreeing any necessary transport improvements and relevant development management policy.

In progressing Local Plans, we will seek to agree the following:

- Assessment tools and methodology
- Baseline Assessment i.e., to demonstrate that the assessment tool accurately reflects current transport conditions
- Comparator case assessment i.e., to forecast the transport conditions that would occur in the absence of the plan
- Forecast modelling i.e., to forecast the transport conditions that would arise with the plan in place, this will include an assessment at the end of the Plan period; and, if required, at full build out if that occurs after the end of the Plan period
- Outputs and outcomes of modelling, demonstrating, as appropriate, what transport infrastructure is necessary to support the plan o It should be noted that a suite of transport modelling tools may be required. This includes strategic modelling covering an area at least one major junction beyond the district boundary, localised network modelling where several links/junctions are close together and/or individual junction modelling o A DMRB (Design Manual for Roads and Bridges) compliancy assessment may also be required for certain highway features, such as Merge/Diverge assessment at Grade separated junctions, link capacity assessments, and others.
- The design of any necessary transport infrastructure, to an extent suitable for establishing deliverability during the plan period at the time that it becomes necessary for the purpose of ensuring that unacceptable road safety impacts or severe operational impacts do not arise as a result of development. This may be to at least General Arrangement design stage or preliminary design stage. Whichever degree of detail is agreed, the products must be in full compliance with the DMRB.
- Industry standard transport intervention costings.
- The delivery/funding mechanisms for necessary transport interventions. It should not be assumed that National Highways will have any responsibility to identify or deliver necessary transport interventions.
- If considered appropriate, a “Monitor & Manage” (M&M) framework, aimed at managing the pace of development in line with the pace of funding and delivery of necessary highway interventions in a manner which responds to the realworld impacts of development may be agreed for inclusion in the plan subject to the adequacy of risk control measures included therein. This can include the move from a ‘predict & provide’ style of delivery to ‘a vision & validate’ style. o Any M&M framework must be based on a “worst case scenario” whereby necessary mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. It must be translated into development management plan policy and policy relating to development allocations.

Further detail on the above can be provided by National Highways.

While ideally all the above should be agreed prior to the Submission of the Local Plan for examination, we recognise that this is not always possible. However, all parties should work towards all matters being agreed and reflected in a Statement of Common Ground (SoCG) by the start of the Local Plan Examination at the latest. Ideally the SoCG between the Council and National Highways would be prepared well in advance of plan submission in order to guide resource input and to track progress towards final agreement on all relevant matters starting from the earliest plan iterations until the

final version is agreed.

It is acknowledged that Government policy places much emphasis on housing delivery as a means for ensuring economic growth and addressing the current national shortage of housing. The NPPF is very clear that:

“Strategic policy-making authorities should establish a housing requirement figure for their whole area, which shows the extent to which their identified housing need (and any needs that cannot be met within neighbouring areas) can be met over the plan period.”

However, new DfT C1/22 and the NPPF are equally clear that any development, including housing delivery, must be tempered by the requirement to ensure that the associated transport demand can be accommodated without unacceptable impacts on the safety of the SRN or severe impacts on the operation of the SRN including reliability and congestion. Therefore, as necessary and appropriate, any plan and/or development must be accompanied by suitable mitigation in the right places at the right time, that is to the required design standards and is deliverable in terms of land availability, constructability and funding.

We would also draw your attention to the then Highways England document ‘The Strategic Road Network, Planning for the Future: A guide to working with National

Highways on planning matters’ (September 2015). This document sets out how National Highways intends to work with local planning authorities and developers to support the preparation of sound documents which enable the delivery of sustainable development.

https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_t_data/file/461023/N150227-_Highways_England_Planning_Document_FINAL-lo.pdf

Responses to Local Plan consultations are also guided by National Planning Policy Framework (NPPF) revised on 20 July 2021 which sets out the government’s planning policies for England and how these are expected to be applied.

Updated Circular (01/2022)

It should be noted that since the start of the Local Plan consultation process, on the 23 December 2022, the Department for Transport released a new circular on the ‘Strategic road network and the delivery of sustainable development’ (Circular 01/2022), which replaces all of the policies in Circular 02/2013 of the same name. These representations take account of the new circular and the requirements in terms of the Local Plan evidence base and process.

We request that the Local Plan is prepared in line with all aspects of the new circular. Particularly, the principles of sustainable development (paragraphs 11 to 17), new connections and capacity enhancements (paragraphs 18 to 25), and engagement with plan-making (paragraphs 26 to 38).

Regulation 18 submission

In our Regulation 18 submission we noted several matters including:

- The need to mitigate the adverse impacts of strategic development traffic to the A27 Chichester Bypass and its junctions at Portfield Roundabout, Bognor Road Roundabout, Whyke Roundabout, Stockbridge Roundabout and Fishbourne Roundabout and Oving junction.
- The need to identify a mechanism to calculate contributions towards the delivery of the previously agreed Local Plan A27 improvements
- The need to confirm the number of dwellings needed within the plan period
- The need to establish National Highways acceptance of the traffic model reference and future case scenarios
- The need to confirm costs, viability, and funding associated with mitigating the safety and congestion impacts of the development included within the plan.

Local Plan context

This Local Plan (Chichester Local Plan 2021 – 2039), prepared by the Local Planning Authority (LPA) Chichester District Council, sets out the vision for future development in the district and will be used to help decide on planning applications and other planning related decisions including shaping infrastructure investments.

The draft sets out how the district should be developed over the next 18-years to 2039 including for the full Plan period (1 April 2021 to 31 March 2039) the total supply of

- 10,359 dwellings

- 114,652 net additional sqm new floorspace

Minus the completions this is equivalent to around 530 dwellings and 6,150 sqm of floorspace a year.

National Highways Representations

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders.

We have undertaken a review of the Chichester Local Plan 2021-2039 proposed submission version and accompanying evidence documents, our comments are set out in the tables below (following pages). [see table within attachment]

Summary

We have reviewed the publicly available Local Plan documents and provided comments above in relation to the transport implications of the plan for the safety and operation of the SRN. We understand that other technical information is available, but this was not presented as part of this consultation. Chichester, and the A27, are already heavily congested, infrastructure in the existing Local Plan remains undelivered and the growth set out in the new Plan will further increase travel demand.

As presented, satisfying the transport needs of the plan is clearly reliant on the delivery of the A27 Chichester bypass improvements project. The A27 Chichester bypass improvements project is one of 32 pipeline schemes being considered for possible inclusion in National Highways third Road Investment Strategy (RIS3) covering 1 April 2025 to 31 March 2030.

On 9 March 2023 the UK Transport Secretary ensured record funding would be invested in the country’s transport network, sustainably driving growth across the country while managing the pressures of inflation. The announcement cited the A27 Arundel Bypass as being deferred from RIS2 to RIS 3 (covering 2025-2030). The transport secretary also identified a number of challenges to the delivery of the road investment strategy and cited the benefit of allowing extra time to ensure schemes are better planned and efficient schemes can be deployed more effectively.

At present, there is no commitment by DfT to carry out the A27 Chichester bypass improvements project. Until the A27 Chichester bypass improvements project is published in the RIS3, consented and a decision to invest is made it cannot be assumed to be a committed project.

We note that the Plan does not address any uncertainty of delivery of the A27 Chichester bypass improvements project and we strongly recommend that there is either no reliance placed on RIS3 to realise capacity for growth in the Plan or that contingency measures are included to cover the eventuality that RIS3 funding is not forthcoming within the plan period. It is not clear that the potential impact of development on transport networks can be addressed in the absence of the A27 Chichester bypass improvements project.

Achieving net zero, reducing emissions reduction, acting on climate, and supporting thousands of new homes and new employment developments will be problematic with existing processes. New, additional, and adapted processes and assessments will likely be required, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments. We acknowledge that change is complex, expensive, and time-consuming, especially for smaller district level Councils. But the hard work will deliver benefits for the Council and residents in the longer-term.

National Highways seeks to continue working with the Council and WSCC to progress coordinated and deliverable packages of interim mitigation

measures and alternative transport solutions while a long-term strategic solution is considered by government. This must however be in combination with a robust monitor and manage policy that appropriately manages the risk of unacceptable road impacts resulting from new housing and other development over the Plan period.

We have been in discussion with Chichester District Council regarding their proposed Monitor and Manage Strategy. At present, we do not consider the current strategy to be robust and we seek further information and detail especially on who, when and when monitoring and management will be undertaken. Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas. Any M&M framework must be based on a "worst case scenario" whereby necessary transport mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. The M&M framework must set out that the alternative to mitigation not being delivered is that development does not proceed where that development would give rise to unacceptable road safety risk or severe cumulative impacts on the road network in the absence of that mitigation. The M&M framework must be translated into development management plan policy and policy relating to development allocations.

As we have reiterated throughout our comments, we welcome the opportunity to work with you to address these outstanding matters and we will continue to liaise over submitted Transport Assessment, Travel Plan policy and Monitor and Manage Policy to help to work towards a viable plan. We hope our comments assist.

We look forward to continuing to participate in future consultations and discussions. Please do continue to consult us as the Plan progresses so that we can remain aware of, and comment as required on, its contents.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Respondent: National Highways (Mr Marius Pieters, Spatial Planning Manager) [8127]

Summary:

[National Highways letter dated 24/07/23 confirmed representation should be categorised as Comment -Seek clarity]. Local Plan evidence - Housing and Economic Development Needs Assessment (HEDNA) Final Report – April 2022

The Executive Summary Para 13 states "The District has a notably older age structure than seen regionally or nationally, with 28% of the population estimated to be aged 65 and over in 2020 (compared to a national average of 19%). The Manhood Peninsula sub-area sees a particularly old population (33% aged 65+)"

We seek clarity on how these demographics are addressed in the Plan and their transport needs managed.

Full text:

We have reviewed the publicly available Local Plan documents and provided comments in the attached letter, in relation to the transport implications of the plan for the safety and operation of the SRN.

Our comments include issues to resolve, comments, requests for further information and recommendations. A brief summary of our main comments are:

- the reliance on the delivery of the A27 Chichester bypass improvements project.
- the requirements for new, additional, and adapted processes and assessments, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments.
- collaborative working between agencies in combination with a robust monitor and manage policy.

We hope our comments assist.

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders. We look forward to continuing to participate in future consultations and discussions. Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Background

National Highways has been appointed by the Secretary of State for Transport as strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the strategic road network (SRN).

National Highways is responsible for operating, maintaining, and improving the Strategic Road Network (SRN) i.e., the Trunk Road and Motorway Network in England, as laid down in Department for Transport (DfT) Circular 01/2022 (Strategic Road Network and the delivery of sustainable development).

The SRN is a critical national asset and as such we work to ensure that it operates and is managed in the public interest, both in respect of current activities and needs as well as in providing effective stewardship of its long-term operation and integrity.

Our responses to Local Plan consultations are guided by relevant policy and guidance including the National Planning Policy Framework (2021) (NPPF):

- Transport issues should be considered from the earliest stages of plan-making and development proposals so that the potential impact of development on transport networks can be addressed (para 104).
- The planning system should actively manage patterns of growth such that significant development is focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. (para 105).
- Planning policies should be prepared with the active involvement of highways authorities and other transport infrastructure providers so that strategies and investments for supporting sustainable transport and development patterns are aligned. (para 106).
- In terms of identifying the necessity of transport infrastructure, NPPF confirms that development should only be prevented or refused on highways

grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe. (para 111).

• Planning policies and decisions should support development that makes efficient use of land, taking into account the availability and capacity of infrastructure and services – both existing and proposed – as well as their potential for further improvement and the scope to promote sustainable travel modes that limit future car use. (para 124).

In relation to the tests of soundness set out at paragraph 35 of the NPPF, in the context of transport, these are interpreted as meaning:

- a) Positively prepared - has the transport strategy been prepared with the active involvement of the highway authorities, other transport infrastructure providers and operators and neighbouring councils?
- b) Justified – Is the transport strategy based on a robust evidence base prepared with the agreement in partnership, or with the support of the highway authorities?
- c) Effective – Does the transport strategy and policy satisfy the transport needs of the plan and is it deliverable at a pace which provides for and accommodates the proposed progress and implementation of the plan?
- d) Consistent with national policy – Does the transport strategy support the economic, social, and environmental objectives of the Plan and the NPPF/NPPG?

We will be concerned with proposals that have the potential to impact on the safe and efficient operation of the SRN; in this case, the A27 trunk road (Chichester Bypass and its junctions) which is the main access route in the Chichester area. We have particular interest in any allocation, policy or proposals which could have implications for the A27 and the wider SRN network. We are interested as to whether there would be any adverse road safety or operational implications for the SRN. The latter would include a material increase in queueing or delay or reduction in journey time reliability during the construction or operation of the development set out in the plan.

National Highways is a key delivery partner for sustainable development promoted through the plan-led system, and as a statutory consultee we have a duty to cooperate with local authorities to support the preparation and implementation of development plan documents.

In accordance with national planning and transport policy and our operating licence, we are entirely neutral on the principle of development as it is for the local planning authority to determine whether development should be allocated or permitted; albeit it must comply with national policy on locating development in locations that are or can be made sustainable. Therefore, while always seeking early and fulsome engagement with local plans and/or developers, we will simply be assessing the transport and related implications of plans or proposals and agreeing any necessary transport improvements and relevant development management policy.

In progressing Local Plans, we will seek to agree the following:

- Assessment tools and methodology
- Baseline Assessment i.e., to demonstrate that the assessment tool accurately reflects current transport conditions
- Comparator case assessment i.e., to forecast the transport conditions that would occur in the absence of the plan
- Forecast modelling i.e., to forecast the transport conditions that would arise with the plan in place, this will include an assessment at the end of the Plan period; and, if required, at full build out if that occurs after the end of the Plan period
- Outputs and outcomes of modelling, demonstrating, as appropriate, what transport infrastructure is necessary to support the plan o It should be noted that a suite of transport modelling tools may be required. This includes strategic modelling covering an area at least one major junction beyond the district boundary, localised network modelling where several links/junctions are close together and/or individual junction modelling
- o A DMRB (Design Manual for Roads and Bridges) compliance assessment may also be required for certain highway features, such as Merge/Diverge assessment at Grade separated junctions, link capacity assessments, and others.
- The design of any necessary transport infrastructure, to an extent suitable for establishing deliverability during the plan period at the time that it becomes necessary for the purpose of ensuring that unacceptable road safety impacts or severe operational impacts do not arise as a result of development. This may be to at least General Arrangement design stage or preliminary design stage. Whichever degree of detail is agreed, the products must be in full compliance with the DMRB.
- Industry standard transport intervention costings.
- The delivery/funding mechanisms for necessary transport interventions. It should not be assumed that National Highways will have any responsibility to identify or deliver necessary transport interventions.
- If considered appropriate, a “Monitor & Manage” (M&M) framework, aimed at managing the pace of development in line with the pace of funding and delivery of necessary highway interventions in a manner which responds to the realworld impacts of development may be agreed for inclusion in the plan subject to the adequacy of risk control measures included therein. This can include the move from a ‘predict & provide’ style of delivery to ‘a vision & validate’ style. o Any M&M framework must be based on a “worst case scenario” whereby necessary mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. It must be translated into development management plan policy and policy relating to development allocations.

Further detail on the above can be provided by National Highways.

While ideally all the above should be agreed prior to the Submission of the Local Plan for examination, we recognise that this is not always possible. However, all parties should work towards all matters being agreed and reflected in a Statement of Common Ground (SoCG) by the start of the Local Plan Examination at the latest. Ideally the SoCG between the Council and National Highways would be prepared well in advance of plan submission in order to guide resource input and to track progress towards final agreement on all relevant matters starting from the earliest plan iterations until the final version is agreed.

It is acknowledged that Government policy places much emphasis on housing delivery as a means for ensuring economic growth and addressing the current national shortage of housing. The NPPF is very clear that:

“Strategic policy-making authorities should establish a housing requirement figure for their whole area, which shows the extent to which their identified housing need (and any needs that cannot be met within neighbouring areas) can be met over the plan period.”

However, new DfT C1/22 and the NPPF are equally clear that any development, including housing delivery, must be tempered by the requirement to ensure that the associated transport demand can be accommodated without unacceptable impacts on the safety of the SRN or severe impacts on the operation of the SRN including reliability and congestion. Therefore, as necessary and appropriate, any plan and/or development must be accompanied by suitable mitigation in the right places at the right time, that is to the required design standards and is deliverable in terms of land availability, constructability and funding.

We would also draw your attention to the then Highways England document ‘The Strategic Road Network, Planning for the Future: A guide to working with National

Highways on planning matters’ (September 2015). This document sets out how National Highways intends to work with local planning authorities and developers to support the preparation of sound documents which enable the delivery of sustainable development.

https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/461023/N150227_-_Highways_England_Planning_Document_FINAL-lo.pdf

Responses to Local Plan consultations are also guided by National Planning Policy Framework (NPPF) revised on 20 July 2021 which sets out the government's planning policies for England and how these are expected to be applied.

Updated Circular (01/2022)

It should be noted that since the start of the Local Plan consultation process, on the 23 December 2022, the Department for Transport released a new circular on the 'Strategic road network and the delivery of sustainable development' (Circular 01/2022), which replaces all of the policies in Circular 02/2013 of the same name. These representations take account of the new circular and the requirements in terms of the Local Plan evidence base and process.

We request that the Local Plan is prepared in line with all aspects of the new circular. Particularly, the principles of sustainable development (paragraphs 11 to 17), new connections and capacity enhancements (paragraphs 18 to 25), and engagement with plan-making (paragraphs 26 to 38).

Regulation 18 submission

In our Regulation 18 submission we noted several matters including:

- The need to mitigate the adverse impacts of strategic development traffic to the A27 Chichester Bypass and its junctions at Portfield Roundabout, Bognor Road Roundabout, Whyke Roundabout, Stockbridge Roundabout and Fishbourne Roundabout and Oving junction.
- The need to identify a mechanism to calculate contributions towards the delivery of the previously agreed Local Plan A27 improvements
- The need to confirm the number of dwellings needed within the plan period
- The need to establish National Highways acceptance of the traffic model reference and future case scenarios
- The need to confirm costs, viability, and funding associated with mitigating the safety and congestion impacts of the development included within the plan.

Local Plan context

This Local Plan (Chichester Local Plan 2021 – 2039), prepared by the Local Planning Authority (LPA) Chichester District Council, sets out the vision for future development in the district and will be used to help decide on planning applications and other planning related decisions including shaping infrastructure investments.

The draft sets out how the district should be developed over the next 18-years to 2039 including for the full Plan period (1 April 2021 to 31 March 2039) the total supply of

- 10,359 dwellings
- 114,652 net additional sqm new floorspace

Minus the completions this is equivalent to around 530 dwellings and 6,150 sqm of floorspace a year.

National Highways Representations

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders.

We have undertaken a review of the Chichester Local Plan 2021-2039 proposed submission version and accompanying evidence documents, our comments are set out in the tables below (following pages). [see table within attachment]

Summary

We have reviewed the publicly available Local Plan documents and provided comments above in relation to the transport implications of the plan for the safety and operation of the SRN. We understand that other technical information is available, but this was not presented as part of this consultation. Chichester, and the A27, are already heavily congested, infrastructure in the existing Local Plan remains undelivered and the growth set out in the new Plan will further increase travel demand.

As presented, satisfying the transport needs of the plan is clearly reliant on the delivery of the A27 Chichester bypass improvements project. The A27 Chichester bypass improvements project is one of 32 pipeline schemes being considered for possible inclusion in National Highways third Road Investment Strategy (RIS3) covering 1 April 2025 to 31 March 2030.

On 9 March 2023 the UK Transport Secretary ensured record funding would be invested in the country's transport network, sustainably driving growth across the country while managing the pressures of inflation. The announcement cited the A27 Arundel Bypass as being deferred from RIS2 to RIS 3 (covering 2025-2030). The transport secretary also identified a number of challenges to the delivery of the road investment strategy and cited the benefit of allowing extra time to ensure schemes are better planned and efficient schemes can be deployed more effectively.

At present, there is no commitment by DfT to carry out the A27 Chichester bypass improvements project. Until the A27 Chichester bypass improvements project is published in the RIS3, consented and a decision to invest is made it cannot be assumed to be a committed project.

We note that the Plan does not address any uncertainty of delivery of the A27 Chichester bypass improvements project and we strongly recommend that there is either no reliance placed on RIS3 to realise capacity for growth in the Plan or that contingency measures are included to cover the eventuality that RIS3 funding is not forthcoming within the plan period. It is not clear that the potential impact of development on transport networks can be addressed in the absence of the A27 Chichester bypass improvements project.

Achieving net zero, reducing emissions reduction, acting on climate, and supporting thousands of new homes and new employment developments will be problematic with existing processes. New, additional, and adapted processes and assessments will likely be required, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments. We acknowledge that change is complex, expensive, and time-consuming, especially for smaller district level Councils. But the hard work will deliver benefits for the Council and residents in the longer-term.

National Highways seeks to continue working with the Council and WSCC to progress coordinated and deliverable packages of interim mitigation measures and alternative transport solutions while a long-term strategic solution is considered by government. This must however be in combination with a robust monitor and manage policy that appropriately manages the risk of unacceptable road impacts resulting from new housing and other development over the Plan period.

We have been in discussion with Chichester District Council regarding their proposed Monitor and Manage Strategy. At present, we do not consider the current strategy to be robust and we seek further information and detail especially on who, when and when monitoring and management will be undertaken. Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas. Any M&M framework must be based on a "worst case scenario" whereby necessary transport mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. The M&M framework must set out that the alternative to mitigation not being delivered is that development does not proceed where that development would give rise to unacceptable road safety risk or severe cumulative impacts on the road network in the absence of that mitigation. The M&M framework must be translated into development management plan policy and policy relating to development allocations.

As we have reiterated throughout our comments, we welcome the opportunity to work with you to address these outstanding matters and we will continue to liaise over submitted Transport Assessment, Travel Plan policy and Monitor and Manage Policy to help to work towards a viable plan. We hope our comments assist.

We look forward to continuing to participate in future consultations and discussions. Please do continue to consult us as the Plan progresses so that we can remain aware of, and comment as required on, its contents.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related

matters and agree how to progress any required evidence gathering or other work.

Support

Document Element: Housing for older people, 5.41

Respondent: John Newman [8169]

Summary:

I am very pleased to see this section.

It should also be borne in mind that there is an ever-expanding number of senior citizens who opt for the gentle climate south of the Downs. In this context it is surely predictable, for instance, that more rather than fewer care homes will be needed in the next decade as my baby-boomer generation ages even more!

I also think it very noticeable how few bungalows there are in Chichester and would add that, if you would to persuade people like me to leave my long-time family home, there is not the supply of bungalows, which would be my obvious next step, all the more so as I do not fancy living in a flat (and have no idea how typical I am in that).

I am one of the baby-boomer generation, and there are a lot of us - an extra form had to be put on to my grammar school when I arrived there in 1957. We are now in our early or mid 70s, and the potential impact of our hitting first retirement and then moving further into retirement has been so predictable. The planners need to prepare now for the impact of most of us attaining our 80s!

Object

Document Element: Housing for older people, 5.41

Respondent: The Planning Bureau on behalf of McCarthy Stone [8093]

Agent: Miss Natasha Styles [8040]

Summary:

To be consistent with national policy and the plan's own evidence the definitions used in para 5.41 should be amended to ensure consistency with national policy and to not eliminate an important element of older persons housing that being retirement living or sheltered accommodation.

To be consistent with national policy, positively prepared, effective and justified para 5.41 should be amended in line with our recommendations.

Full text:**Para 5.41 - Housing for older people**

Thank you for the opportunity to comment on the Chichester Local Plan 2021-2039 Proposed Submission Draft (Regulation 19) consultation. McCarthy Stone is the leading provider of specialist housing for older people.

Para 5.41 identifies that the Chichester Housing and Economic Development Needs Assessment, 2022, Icení (HEDNA) 'estimates the greatest population increase in the district by 2039 to be those in age groups 75 and over'. The paragraph then continues to confirm the kind of housing that may be suitable and this includes 'Sufficient adaptable and/or accessible market housing stock so that those wishing, to remain in their own homes can do so as their needs change, Smaller homes, for those wishing to downsize, and bungalows, Extra care housing, for those able to live relatively independently but requiring onsite support, Care homes, for those needing additional support'.

Government's policy, as set out in the revised NPPF, is to boost significantly, the supply of housing. Paragraph 60 reads:

"To support the Government's objective of significantly boosting the supply of homes, it is important that a sufficient amount and variety of land can come forward where it is needed, that the needs of groups with specific housing requirements are addressed and that land with permission is developed without unnecessary delay."

The revised NPPF looks at delivering a sufficient supply of homes, Paragraph 62 identifies within this context, the size, and type and tenure of housing needed for different groups in the community should be assessed and reflected in planning policies including older people.

In June 2019 the PPG was updated to include a section on Housing for Older and Disabled People, recognising the need to provide housing for older people. Paragraph 001 Reference ID: 63-001-20190626 states:

"The need to provide housing for older people is critical. People are living longer lives and the proportion of older people in the population is increasing. In mid-2016 there were 1.6 million people aged 85 and over; by mid-2041 this is projected to double to 3.2 million. Offering older people a better choice of accommodation to suit their changing needs can help them live independently for longer, feel more connected to their communities and help reduce costs to the social care and health systems. Therefore, an understanding of how the ageing population affects housing needs is something to be considered from the early stages of plan-making through to decision-taking" (emphasis added)

Paragraph 003 Reference ID: 63-003-20190626 recognises that:

"the health and lifestyles of older people will differ greatly, as will their housing needs, which can range from accessible and adaptable general needs housing to specialist housing with high levels of care and support. For plan-making purposes, strategic policy-making authorities will need to determine the needs of people who will be approaching or reaching retirement over the plan period, as well as the existing population of older people."

Thus, a range of provision needs to be planned for. Paragraph 006 Reference ID: 63-006-20190626 sets out:

"plan-making authorities should set clear policies to address the housing needs of groups with particular needs such as older and disabled people. These policies can set out how the plan-making authority will consider proposals for the different types of housing that these groups are likely to require. They could also provide indicative figures or a range for the number of units of specialist housing for older people needed across the plan area throughout the plan period.."

Need for Older Persons' Housing

It is well documented that the UK faces an ageing population. Life expectancy is greater than it used to be and as set out above by 2032 the number of people in the UK aged over 80 is set to increase from 3.2 million to 5 million (ONS mid 2018 population estimates).

It is generally recognised (for example The Homes for Later Living Report September 2019). That there is a need to deliver 30,000 retirement and extra care houses a year in the UK to keep pace with demand.

The Chichester HEDNA, 2022 update, Icení, April 2022 at paragraph 8.43 identifies that 'In total, the older persons analysis points towards a need for around 2,369 to 3,317 units over the 2021-39 period (132-184 per annum) – the older person need equates to some 17-24% of all homes needing to be some form of specialist accommodation for older people'.

It is therefore clear there will be a significant amount of specialist housing required to meet the needs of older people over the plan period and the provision of suitable housing and care to meet the needs of this demographic should be more of a priority of the emerging Local Plan in order for it to be positively prepared, effective and consistent with national policy. Para 5.41 should therefore be amended to identify this need.

Para 5.41 also identifies the kinds of housing that may be suitable to meet the housing needs of older people. However, these differ to the PPG on 'housing for older and disabled people' that at Paragraph: 010 Reference ID: 63-010-20190626 defines the different types of specialist housing for older people as being 'age restricted general market housing, Retirement living or sheltered housing, extra care housing or housing with care, residential care homes and nursing homes'. Para 8.23 of the Chichester HEDNA also uses the definitions within the PPG. Therefore, to be consistent with national policy and the plans own evidence the definitions used in para 5.41 should also be amended to ensure consistency with national policy and to not eliminate an important element of older persons housing that being retirement living or sheltered accommodation.

Change suggested by respondent:**Recommendation**

To be consistent with national policy, positively prepared, effective and justified para 5.41 should be amended as follows:

Amend para so it reads 5.41 as follows:

5.41. The Housing and Economic Development Needs Assessment (HEDNA) 2022 estimates the greatest population increase in the district by 2039 to be those in age groups 75 and over. To support an ageing population there should be provision around 2,369-3,317 units of specialist housing to meet the needs of older people delivered in Chichester over the plan period. This amounts to around 132-184 units per annum some 17% to 24% of all homes. Suitable housing options for the differing needs of individuals, include:

- age restricted general market housing,
- Retirement living or sheltered housing,
- extra care housing or housing with care,
- residential care homes and nursing homes

Legally compliant: Yes

Sound: No

Comply with duty: Yes

Attachments: None

Document Element: Housing for older people, 5.42

Respondent: National Highways (Mr Marius Pieters, Spatial Planning Manager) [8127]

Summary:

[National Highways letter dated 24/07/23 confirmed representation should be categorised as Comment - Seeking to understand Council's approach.] Those age groups 75 and over (Para 5.41) or with specialised mobility needs (Para 5.42) are less likely to use walking / cycling routes than younger persons.

Department for Transport data suggests that there has been a 20-40% change (decrease) in bus vehicle miles across West Sussex since the pandemic. Bus networks are shrinking across the UK and services are being cut or rationalised.

Considering these changes, and the typical inability of the aged to walk or cycle longer distances, we seek to understand how the Council will demonstrate that revenue funding can be secured to maintain the longterm viability of the public transport in proximity of the specialist accommodation for older people and those with specialist needs and how this may affect the viability of the overall sustainable transport package.

Impacts arising from such developments and the funding of transport infrastructure modifications should be fully assessed at the planning application stage.

Full text:

We have reviewed the publicly available Local Plan documents and provided comments in the attached letter, in relation to the transport implications of the plan for the safety and operation of the SRN.

Our comments include issues to resolve, comments, requests for further information and recommendations. A brief summary of our main comments are:

- the reliance on the delivery of the A27 Chichester bypass improvements project.
- the requirements for new, additional, and adapted processes and assessments, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments.
- collaborative working between agencies in combination with a robust monitor and manage policy.

We hope our comments assist.

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders. We look forward to continuing to participate in future consultations and discussions. Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Background

National Highways has been appointed by the Secretary of State for Transport as strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the strategic road network (SRN).

National Highways is responsible for operating, maintaining, and improving the Strategic Road Network (SRN) i.e., the Trunk Road and Motorway Network in England, as laid down in Department for Transport (DfT) Circular 01/2022 (Strategic Road Network and the delivery of sustainable development).

The SRN is a critical national asset and as such we work to ensure that it operates and is managed in the public interest, both in respect of current activities and needs as well as in providing effective stewardship of its long-term operation and integrity.

Our responses to Local Plan consultations are guided by relevant policy and guidance including the National Planning Policy Framework (2021) (NPPF):

- Transport issues should be considered from the earliest stages of plan-making and development proposals so that the potential impact of development on transport networks can be addressed (para 104).
- The planning system should actively manage patterns of growth such that significant development is focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. (para 105).
- Planning policies should be prepared with the active involvement of highways authorities and other transport infrastructure providers so that strategies and investments for supporting sustainable transport and development patterns are aligned. (para 106).
- In terms of identifying the necessity of transport infrastructure, NPPF confirms that development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe. (para 111).
- Planning policies and decisions should support development that makes efficient use of land, taking into account the availability and capacity of infrastructure and services – both existing and proposed – as well as their potential for further improvement and the scope to promote sustainable travel modes that limit future car use. (para 124).

In relation to the tests of soundness set out at paragraph 35 of the NPPF, in the context of transport, these are interpreted as meaning:

- a) Positively prepared - has the transport strategy been prepared with the active involvement of the highway authorities, other transport infrastructure providers and operators and neighbouring councils?
- b) Justified – Is the transport strategy based on a robust evidence base prepared with the agreement in partnership, or with the support of the highway authorities?
- c) Effective – Does the transport strategy and policy satisfy the transport needs of the plan and is it deliverable at a pace which provides for and accommodates the proposed progress and implementation of the plan?
- d) Consistent with national policy – Does the transport strategy support the economic, social, and environmental objectives of the Plan and the NPPF/NPPG?

We will be concerned with proposals that have the potential to impact on the safe and efficient operation of the SRN; in this case, the A27 trunk road (Chichester Bypass and its junctions) which is the main access route in the Chichester area. We have particular interest in any allocation, policy or proposals which could have implications for the A27 and the wider SRN network. We are interested as to whether there would be any adverse road safety or operational implications for the SRN. The latter would include a material increase in queuing or delay or reduction in journey time reliability during the construction or operation of the development set out in the plan.

National Highways is a key delivery partner for sustainable development promoted through the plan-led system, and as a statutory consultee we have a duty to cooperate with local authorities to support the preparation and implementation of development plan documents.

In accordance with national planning and transport policy and our operating licence, we are entirely neutral on the principle of development as it is for the local planning authority to determine whether development should be allocated or permitted; albeit it must comply with national policy on locating

development in locations that are or can be made sustainable. Therefore, while always seeking early and fulsome engagement with local plans and/or developers, we will simply be assessing the transport and related implications of plans or proposals and agreeing any necessary transport improvements and relevant development management policy.

In progressing Local Plans, we will seek to agree the following:

- Assessment tools and methodology
- Baseline Assessment i.e., to demonstrate that the assessment tool accurately reflects current transport conditions
- Comparator case assessment i.e., to forecast the transport conditions that would occur in the absence of the plan
- Forecast modelling i.e., to forecast the transport conditions that would arise with the plan in place, this will include an assessment at the end of the Plan period; and, if required, at full build out if that occurs after the end of the Plan period
- Outputs and outcomes of modelling, demonstrating, as appropriate, what transport infrastructure is necessary to support the plan o It should be noted that a suite of transport modelling tools may be required. This includes strategic modelling covering an area at least one major junction beyond the district boundary, localised network modelling where several links/junctions are close together and/or individual junction modelling
 - o A DMRB (Design Manual for Roads and Bridges) compliancy assessment may also be required for certain highway features, such as Merge/Diverge assessment at Grade separated junctions, link capacity assessments, and others.
- The design of any necessary transport infrastructure, to an extent suitable for establishing deliverability during the plan period at the time that it becomes necessary for the purpose of ensuring that unacceptable road safety impacts or severe operational impacts do not arise as a result of development. This may be to at least General Arrangement design stage or preliminary design stage. Whichever degree of detail is agreed, the products must be in full compliance with the DMRB.
- Industry standard transport intervention costings.
- The delivery/funding mechanisms for necessary transport interventions. It should not be assumed that National Highways will have any responsibility to identify or deliver necessary transport interventions.
- If considered appropriate, a "Monitor & Manage" (M&M) framework, aimed at managing the pace of development in line with the pace of funding and delivery of necessary highway interventions in a manner which responds to the realworld impacts of development may be agreed for inclusion in the plan subject to the adequacy of risk control measures included therein. This can include the move from a 'predict & provide' style of delivery to 'a vision & validate' style.
 - o Any M&M framework must be based on a "worst case scenario" whereby necessary mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. It must be translated into development management plan policy and policy relating to development allocations.

Further detail on the above can be provided by National Highways.

While ideally all the above should be agreed prior to the Submission of the Local Plan for examination, we recognise that this is not always possible. However, all parties should work towards all matters being agreed and reflected in a Statement of Common Ground (SoCG) by the start of the Local Plan Examination at the latest. Ideally the SoCG between the Council and National Highways would be prepared well in advance of plan submission in order to guide resource input and to track progress towards final agreement on all relevant matters starting from the earliest plan iterations until the final version is agreed.

It is acknowledged that Government policy places much emphasis on housing delivery as a means for ensuring economic growth and addressing the current national shortage of housing. The NPPF is very clear that:
 "Strategic policy-making authorities should establish a housing requirement figure for their whole area, which shows the extent to which their identified housing need (and any needs that cannot be met within neighbouring areas) can be met over the plan period."

However, new DfT C1/22 and the NPPF are equally clear that any development, including housing delivery, must be tempered by the requirement to ensure that the associated transport demand can be accommodated without unacceptable impacts on the safety of the SRN or severe impacts on the operation of the SRN including reliability and congestion. Therefore, as necessary and appropriate, any plan and/or development must be accompanied by suitable mitigation in the right places at the right time, that is to the required design standards and is deliverable in terms of land availability, constructability and funding.

We would also draw your attention to the then Highways England document 'The Strategic Road Network, Planning for the Future: A guide to working with National

Highways on planning matters' (September 2015). This document sets out how National Highways intends to work with local planning authorities and developers to support the preparation of sound documents which enable the delivery of sustainable development.

https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/461023/N150227_-_Highways_England_Planning_Document_FINAL-lo.pdf

Responses to Local Plan consultations are also guided by National Planning Policy Framework (NPPF) revised on 20 July 2021 which sets out the government's planning policies for England and how these are expected to be applied.

Updated Circular (01/2022)

It should be noted that since the start of the Local Plan consultation process, on the 23 December 2022, the Department for Transport released a new circular on the 'Strategic road network and the delivery of sustainable development' (Circular 01/2022), which replaces all of the policies in Circular 02/2013 of the same name. These representations take account of the new circular and the requirements in terms of the Local Plan evidence base and process.

We request that the Local Plan is prepared in line with all aspects of the new circular. Particularly, the principles of sustainable development (paragraphs 11 to 17), new connections and capacity enhancements (paragraphs 18 to 25), and engagement with plan-making (paragraphs 26 to 38).

Regulation 18 submission

In our Regulation 18 submission we noted several matters including:

- The need to mitigate the adverse impacts of strategic development traffic to the A27 Chichester Bypass and its junctions at Portfield Roundabout, Bognor Road Roundabout, Whyke Roundabout, Stockbridge Roundabout and Fishbourne Roundabout and Oving junction.
- The need to identify a mechanism to calculate contributions towards the delivery of the previously agreed Local Plan A27 improvements
- The need to confirm the number of dwellings needed within the plan period
- The need to establish National Highways acceptance of the traffic model reference and future case scenarios
- The need to confirm costs, viability, and funding associated with mitigating the safety and congestion impacts of the development included within the plan.

Local Plan context

This Local Plan (Chichester Local Plan 2021 – 2039), prepared by the Local Planning Authority (LPA) Chichester District Council, sets out the vision for future development in the district and will be used to help decide on planning applications and other planning related decisions including shaping infrastructure investments.

The draft sets out how the district should be developed over the next 18-years to 2039 including for the full Plan period (1 April 2021 to 31 March 2039) the total supply of

- 10,359 dwellings
 - 114,652 net additional sqm new floorspace
 Minus the completions this is equivalent to around 530 dwellings and 6,150 sqm of floorspace a year.

National Highways Representations

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders.

We have undertaken a review of the Chichester Local Plan 2021-2039 proposed submission version and accompanying evidence documents, our comments are set out in the tables below (following pages). [see table within attachment]

Summary

We have reviewed the publicly available Local Plan documents and provided comments above in relation to the transport implications of the plan for the safety and operation of the SRN. We understand that other technical information is available, but this was not presented as part of this consultation. Chichester, and the A27, are already heavily congested, infrastructure in the existing Local Plan remains undelivered and the growth set out in the new Plan will further increase travel demand.

As presented, satisfying the transport needs of the plan is clearly reliant on the delivery of the A27 Chichester bypass improvements project. The A27 Chichester bypass improvements project is one of 32 pipeline schemes being considered for possible inclusion in National Highways third Road Investment Strategy (RIS3) covering 1 April 2025 to 31 March 2030.

On 9 March 2023 the UK Transport Secretary ensured record funding would be invested in the country's transport network, sustainably driving growth across the country while managing the pressures of inflation. The announcement cited the A27 Arundel Bypass as being deferred from RIS2 to RIS 3 (covering 2025-2030). The transport secretary also identified a number of challenges to the delivery of the road investment strategy and cited the benefit of allowing extra time to ensure schemes are better planned and efficient schemes can be deployed more effectively.

At present, there is no commitment by DfT to carry out the A27 Chichester bypass improvements project. Until the A27 Chichester bypass improvements project is published in the RIS3, consented and a decision to invest is made it cannot be assumed to be a committed project. We note that the Plan does not address any uncertainty of delivery of the A27 Chichester bypass improvements project and we strongly recommend that there is either no reliance placed on RIS3 to realise capacity for growth in the Plan or that contingency measures are included to cover the eventuality that RIS3 funding is not forthcoming within the plan period. It is not clear that the potential impact of development on transport networks can be addressed in the absence of the A27 Chichester bypass improvements project.

Achieving net zero, reducing emissions reduction, acting on climate, and supporting thousands of new homes and new employment developments will be problematic with existing processes. New, additional, and adapted processes and assessments will likely be required, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments. We acknowledge that change is complex, expensive, and time-consuming, especially for smaller district level Councils. But the hard work will deliver benefits for the Council and residents in the longer-term.

National Highways seeks to continue working with the Council and WSCC to progress coordinated and deliverable packages of interim mitigation measures and alternative transport solutions while a long-term strategic solution is considered by government. This must however be in combination with a robust monitor and manage policy that appropriately manages the risk of unacceptable road impacts resulting from new housing and other development over the Plan period.

We have been in discussion with Chichester District Council regarding their proposed Monitor and Manage Strategy. At present, we do not consider the current strategy to be robust and we seek further information and detail especially on who, when and when monitoring and management will be undertaken. Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas. Any M&M framework must be based on a "worst case scenario" whereby necessary transport mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. The M&M framework must set out that the alternative to mitigation not being delivered is that development does not proceed where that development would give rise to unacceptable road safety risk or severe cumulative impacts on the road network in the absence of that mitigation. The M&M framework must be translated into development management plan policy and policy relating to development allocations.

As we have reiterated throughout our comments, we welcome the opportunity to work with you to address these outstanding matters and we will continue to liaise over submitted Transport Assessment, Travel Plan policy and Monitor and Manage Policy to help to work towards a viable plan. We hope our comments assist.

We look forward to continuing to participate in future consultations and discussions. Please do continue to consult us as the Plan progresses so that we can remain aware of, and comment as required on, its contents.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Chichester Local Plan – Proposed Submission

Duty to Co-operate

The Statutory Housing Authority welcomes the opportunity to comment on the Chichester Local Plan 2021 – 2039 and strongly commends the Local Planning Authority on progressing with its plan-making activities at a time when a number of Local Planning Authorities across the country have stalled owing to a state of flux in the national policy picture.

Chichester District Council Housing Authority considers that the Chichester Planning Policy Team have engaged in a pro-active manner in an ongoing basis to meet the needs of our communities. Furthermore, the authority has been consulted throughout in the crafting of the proposed housing policies H1 – H10 and confirm that the Duty to Co-operate has been met in this regard.

Is it legally compliant?

The Housing Authority consider the plan as presented, to be legally compliant and have no specific comments in relation to the Sustainability Appraisal, Habitats Regulations Assessment or the Statement of Community Involvement.

Soundness

The Housing Authority is satisfied that the plan is positively prepared and seeks to meet the housing need for both market and affordable housing, so far as is practicable, whilst having consideration for the various constraints of the plan area including AONB designation, heritage matters, flooding matters and infrastructure capacity issues. The Housing Authority believe the plan seeks to balance between these competing demands in a sustainable and realistic manner for the plan period 2021 -2039.

The Housing Authority consider the plan provides for a reasonable evidence based strategy which is consistent with national planning policy and guidance and contributes to the delivery of sustainable development, having regard to the reasonable alternatives available.

Meeting housing need

The Housing Authority considers the plan meets housing need so far as is realistically possible considering the constraints of the plan area.

Policy H1, including the Broad Spatial Distribution - is noted.

Policy H2, the strategic locations are broadly located in areas where the Council held Housing Register indicates the highest level of housing need.

Policy H3 - is noted.

Policy H4 – The Housing Authority fully endorse and support the provisions contained in Policy H4.

Policy H5 - The Housing Authority is supportive of the housing mix outlined in policy H5 and the ability to reflect local need where it is appropriate to do so. Furthermore it is right to provide this level of certainty, whilst allowing for some degree of flexibility.

Policy H6 - The Housing Authority are in full support of this policy and fully endorse the opportunity for Neighbourhood Planning groups to bring forward Self and Custom Build serviced plots. The Housing Authority are encouraged by the potential that may arise with the call for sites for such plots. We look forward to working with our colleagues and communities to bring forward Self and Custom Build opportunities within the plan area.

Policy H7 - The Housing Authority recognise the difficulties in bringing forward exception sites for affordable housing and welcome this policy which seeks to enable the needs of our rural communities to be met.

Policy H8 - The Housing Authority strongly advocate for the inclusion of specialist accommodation for older people, and the intention is to secure affordable housing across all specialist accommodation for older people, including Extra Care to meet the needs of those unable to secure such accommodation in the open market.

H9 – The Housing Authority support the policy to retain accommodation for rural workers.

H10-H14 – The Housing Authority has no observations to make in relation to these policies.

Document Element: Policy H8 Specialist accommodation for older people and those with specialised needs**Respondent:** Church Commissioners for England [1858]**Agent:** Lichfields (Tara Johnston, Planner) [7506]**Summary:**

Draft Policy H8 confirms that all housing sites over 200 units, including those allocated in this plan, will be required to provide specialist accommodation for older people with a support or care component.

Full text:

We write in response to the above consultation on behalf of our client, the Church Commissioners for England (CCE). CCE owns a large amount of land in the area largely to the south, west and east of Chichester.

We welcome the opportunity to further engage with the Local Plan process. Whilst we support some aspects of the Local Plan, we consider that some changes are likely to be necessary to ensure that the Plan can be found sound.

By way of background, CCE submitted several sites for consideration as part of the Housing Economic Land Availability Assessment (HELAA) in 2021. These sites were previously promoted as part of the Preferred Approach Local Plan Regulation 18 Consultation in 2019.

As part of these representations, we take the opportunity to re-promote a number of CCE's sites, which could assist the Council in delivering much needed housing for the district. CCE has updated its technical work and provide Vision Documents in relation to its landholdings in Southbourne, Oving, and Hunston Parishes to demonstrate how additional housing can be delivered. These Vision Documents are enclosed.

We consider this and other aspects of the emerging Local Plan below.

Chapter 2: Vision & Strategic Objectives

The Local Plan Vision details a positive approach to supporting sustainable development in the context of the climate emergency. CCE welcomes the Vision for Chichester, particularly the importance placed on the delivery of new homes in 'Objective 3' and the delivery of new infrastructure to support

the new development in 'Objective 7'.

Chapter 3: Spatial Strategy and Settlement Hierarchy

The Spatial Strategy builds on the previous Local Plan by focussing growth on Chichester city as the main sub-regional centre. Outside Chichester city and its closest settlements, development will focus on the two settlement hubs within the east-west corridor at Tangmere and Southbourne. This approach is supported by CCE.

Policy S1 Spatial Development Strategy

Draft Policy S1 (Spatial Development Strategy) identifies the broad approach to providing sustainable development in the plan area, which includes ensuring that new residential development is distributed in line with the settlement hierarchy, with a greater proportion of development in the larger and more sustainable settlements. We support this strategy, with particular support for development at the settlement hubs of Southbourne (Policy A13) and Tangmere (Policy A14). We also support that provision is made for extant Site Allocations and the Tangmere strategic site remains allocated under draft Policy A14.

Policy A14 continues to allocate Land West of Tangmere for 1,300 dwellings. CCE questions the Council's decision to not amend the existing settlement boundary of Tangmere to include the land subject to the allocation. Without amending the settlement boundary, the future growth of Tangmere may be hindered. As such, the settlement boundary of Tangmere should be amended to include the allocated site to ensure that the plan is justified.

Draft Policy S1 also refers to development in service villages such as Bosham, Hambrook and Loxwood. Hunston is excluded from the Spatial Strategy but is identified as a Service Village within the Settlement Hierarchy in draft Policy SP2 (Settlement Hierarchy). The draft Local Plan suggests that the allocation of homes in Hunston has been removed as a result of growth in the Manhood Peninsula. CCE acknowledges that the overall housing numbers across the district have been reduced as a result of local constraints but reiterates that their landholding in Hunston remains a suitable site for housing should the Council need to identify more land for housing. This is discussed further below.

Policy S2 Settlement Hierarchy

As stated in paragraph 3.31 of the draft local plan, 'The NPPF encourages housing delivery where it will enhance or maintain the vitality of rural communities'. Paragraph 79 of the NPPF (2021) states that 'To promote sustainable development in rural areas, housing should be located where it will enhance or maintain the vitality of rural communities. Planning policies should identify opportunities for villages to grow and thrive, especially where this will support local services. Where there are groups of smaller settlements, development in one village may support services in a village nearby'.

CCE owns substantial land holdings in South Mundham, which is in close proximity to North Mundham/Runcton which is defined as a Service Village. As such, whilst South Mundham does not contain any services, development in the hamlet would enable sustainable growth to support facilities in North Mundham and Runcton. To ensure that the draft plan is consistent with national policy, South Mundham should be considered as part of North Mundham as a Service Village when considering the future pairing/grouping of some settlements where the facilities and services could be shared to capitalise on the close connections some settlements have.

Development outside the settlements listed in the hierarchy in SP2 is restricted to proposals which require a countryside location or meet an essential local rural local need or supports rural diversification in accordance with Policy NE10. To this end, CCE has smaller land holdings in Tangmere, Oving, South Mundham, Birdham, Chidham and Sidlesham, which may be suitable for conversion for residential use or via windfall housing. Location plans for each of the sites can be found in Appendices 1-8.

Chapter 4: Climate Change and the Natural Environment

Policy NE4 Strategic Wildlife Corridors

The East of City strategic wildlife corridor has been relocated to the eastern side of proposed Site Allocation A8 (Land to the East of Chichester). The relocation of this wildlife corridor follows additional evidence that shows that the commuting route for Barbastelle Bats is along Drayton Lane.

CCE owns land to the east of Drayton Lane (immediately adjacent to the wildlife corridor and to the east of draft allocation A8) and surrounding the village of Oving. Its land has been identified in the HELAA (2021) as being developable, including site HOV0017 (Drayton Lane). The land east of Drayton Lane is sustainably located being close to Chichester and its amenities. The site provides an opportunity to sensitively and sustainably provide additional homes for the District. In accordance with Draft Policy NE4, the proposals for the Land East of Drayton Lane will not have an adverse impact on the integrity and function of the wildlife corridor and will not undermine the connectivity and ecological value of the corridor. This Vision Document will be shared under separate cover.

The eastern edge of the relocated wildlife corridor encroaches into CCE land. Any proposal on this land would be required to take the statutory protection for bats and other protected species into consideration and managed as part of a sensitive masterplan for development and on this basis, it is considered unnecessary to extend the wildlife corridor to encroach into the CCE site.

It is also considered that the detail of policy NE4 goes beyond the purpose of the policy, which should be to safeguard wildlife rich habitats and wider ecological networks. The policy is clear that development should only be permitted where it would not create an adverse effect upon the ecological value, function, integrity and connectivity of the corridors. It does not resist development in principle. This therefore makes redundant policy text 1, which seeks to introduce a sequential test for preferable sites outside of a wildlife corridor. It is considered that this test conflicts with the underlying purpose of the policy, which is to safeguard wildlife corridors from harmful impacts that cannot be mitigated, and should therefore be deleted.

Policy NE7 Development and Disturbance of Birds

CCE is broadly supportive of Policy NE7. However, they would like to note that the situation regarding the national guidance on nutrient neutrality is still evolving and therefore, this policy is only relevant to current legislation. Policy NE7 may therefore not be relevant throughout the entirety of the plan period. As such, CCE considers that it is necessary in this instance to ensure that an appropriate reference to changing legislation is included within the policy to prevent it from becoming out of date and would also ensure that the policy remains effective once adopted.

Policy NE10 The Countryside

CCE is supportive of the inclusion of a policy referencing the conversion of existing buildings in the countryside, however, we believe that Policy NE10 is not consistent with national policy. Policy NE10 criteria B states that proposals for the conversion of buildings in the countryside will be permitted where 'it has been demonstrated that economic and community uses have been considered before residential, with residential uses only permitted if economic and community uses are shown to be inappropriate and unviable'. This policy is not in accordance with Paragraph 152 of the NPPF (2021) which states that the reuse of existing resources should be encouraged, including 'the conversion of existing buildings'. Under paragraph 152, there is no prerequisite to adopt a sequential approach, or to give preference to other uses. As such, criteria B should be omitted from Policy NE10. Reference to criteria B should also be removed from criteria C.

Chapter 5: Housing

Policy H1 Meeting Housing Needs

The Preferred Approach Local Plan was based on meeting the identified objectively assessed housing needs of the plan area of 638 dwellings per annum. However, due to constraints, particularly the capacity of the A27, the Submission Version of the Local Plan has planned for a housing requirement below the need derived from the standard method. The Plan proposes to deliver 535 dpa in the southern plan area and a further 40 dpa in the northern plan area, a total supply of 10,350 dwellings over the plan period from 2021 – 2039 (575 dpa).

The Planning Inspectorate has previously asked the Council to determine what level of housing could be achieved based on deliverable improvements to the A27 and to consider whether the full housing needs could be met another way. It is acknowledged that the Council has carried out the additional work required and the local constraints have resulted in a proposed lower housing requirement.

The NPPF (2021) confirms that to determine the minimum number of homes needed, strategic policies should be informed by a local housing need assessment, conducted using the standard method in national planning guidance – unless exceptional circumstances justify an alternative approach (para. 61). CCE acknowledges that that housing numbers have been reduced as a result of local constraints and it will be down to the Inspector to determine whether the Council's exceptional circumstances justify this. Should the Planning Inspector find that the Council requires additional land to meet the housing need using the standard method, CCE's land at Southbourne, Oving, Drayton Land and Hunston are suitable, available and developable for housing. In addition, CCE's rural development sites could also contribute to meeting the housing need.

Policy H2 Strategic Allocations

Draft Policy H2 confirms that the Tangmere Strategic Development Location is carried forward from the 2015 Local Plan and this is supported by CCE. Strong support is also given for the Broad Location of Development in Southbourne (Policy A13) for up to 1,050 dwellings.

Policy H5 Housing Mix

Draft Policy H5 confirms that the housing mix for a development will be based on the most up to date HEDNA to address identified local needs and market demands. We suggest that the Council considers a range of criteria, including site characteristics, when determining the housing mix for individual sites and this should be reflected in wording of Policy H5.

Policy H7 Rural and First Homes Exception Sites

Draft Policy H7 relates to rural and first homes exception sites. CCE is supportive of the principle of the inclusion of a rural exceptions policy. However, we have concerns over criteria contained within the policy which limits the amount of development that can be delivered under it.

The NPPF (2021) at paragraph 78 states that planning policies and decisions should be responsive to local circumstances and support housing development that reflect local needs. Furthermore it also states that 'local planning authorities should support opportunities to bring forward rural exception sites that will provide affordable housing to meet identified local needs'.

The key aspect of the policy is to enable the delivery of rural exception sites which would address an identified local need. Within the policy, there is no limit on the amount of development that can be delivered and therefore, it is considered that if Policy H7 is limited to a maximum of 30 dwellings it could serve to hinder development (especially on slightly larger sites), which would otherwise be sustainable. As such, we consider that the amount of development should not be limited and rather should be dictated on a site and need specific basis. CCE considers that for Policy H7 to be positively prepared and in accordance with National Policy, criteria 2 should be removed.

In addition, criteria 6 states that proposals for affordable housing on rural exception sites will only be supported where 'the site is located adjacent or as close as possible to the existing settlement boundary and does not result in scattered or isolated development in rural areas'. The NPPF (2021) does not specify the location of rural exception sites. As such, to be consistent with national policy, criteria 6 should also be omitted.

Furthermore, Policy H7 states that 'applications for first homes exception sites that propose the inclusion of a small proportion of market housing will be expected to provide robust evidence...'.

However, in the policy there is no allowance for the provision of market housing on rural exception sites in addition to first homes exception sites. As a result of this, the requirements of the policy are again not consistent with national policy. Paragraph 78 of the NPPF (2021) is supportive of 'some market housing' where it would facilitate the delivery of rural exception sites. As such, CCE considers that Policy H7 should be amended as follows:

'Applications for rural and first homes exceptions sites that propose the inclusion of a small proportion of market housing will be expected to provide robust evidence that the site would be unviable without such housing being included'.

Policy H8 Specialist Accommodation

Draft Policy H8 confirms that all housing sites over 200 units, including those allocated in this plan, will be required to provide specialist accommodation for older people with a support or care component. We request that this policy is amended to add 'where appropriate and viable', acknowledging that viability and site-specific factors need to be taken into consideration.

Chapter 6: Place-making

Policy P3 Density

We support the objective of Draft Policy P3 (Density) to make the most efficient use of land and follow a design led approach to achieve the optimum density for a site. The Policy does not prescribe an appropriate density for the District and this is supported. However, we consider that reference should be made to the fact that density may vary depending upon site specific circumstances and could be higher where transport links and access to services is good.

Chapter 7: Employment and Economy

Policy E3 and E4 Horticultural Development

Chapter 7 of the draft Local Plan confirms that 67 hectares of land is identified to meet the future horticultural land need within four Horticultural Development Areas (HDAs) over the plan period. It is confirmed that an additional 137 hectares of horticultural land is also forecast to be required outside of HDAs to meet future need.

CCE has significant landholdings which could assist the Council in addressing the insufficient availability within the current HDAs. The CCE sites which are considered suitable for horticulture development are listed below and location plans for each of the sites can be found in Appendices 9-13.

- Somerley Farm, NE East Wittering, PO20 7JB

- Fisher Farm, South Mundham, PO20 1ND
- Church & Haise Farm, Sidlesham
- Cowdry Farm, Birdham
- Groves Farm, nr Merston, PO20 2DX / Colworth Manor Farm PO20 2DU.

CCE supports draft Policy E3 which confirms that “approximately 137 hectares of land is also needed outside of HDAs to meet anticipated horticultural and ancillary development land need for the plan period.” Support is also given for draft Policy E4 in relation to land outside HDAs. This Policy confirms that proposals for horticultural development can come forward outside the HDAs, subject to a set of criteria. We would welcome continued discussion with the Council on how these sites could help meet the districts horticultural needs in the future.

Chapter 10: Strategic and Area Based Policies

CCE supports Chichester District Council’s proposal to allocate additional land for housing at Southbourne and to maintain the existing allocation at Tangmere. We also consider that CCE’s land at Hunston and Oving could assist the Council in meeting its housing needs, should additional housing be required. We consider these opportunities in turn below.

Policy A13 Southbourne Broad Location for Development

CCE supports draft Policy A13 and the allocation of a Broad Location for Development in Southbourne for a mixed-use form of development including 1,050 dwellings.

CCE has significant landholdings around Southbourne which is suitable, available and developable. The land to the north and west of Southbourne measures 70ha and is wholly within CCE’s control. The land adjoins the existing settlement and provides an opportunity for a sustainable extension to Southbourne with the potential to deliver c. 1,200 homes for the village, as well as employment, community uses and a significant amount of new public space and green open space. A new Vision Document is enclosed which explains one way in which this opportunity could be realised. Importantly, it is considered that there are no technical impediments that would prevent development from coming forward on this site.

This site has been promoted throughout the Southbourne Neighbourhood Plan process, most recently in the December 2022 consultation. The new Vision Document demonstrates that the CCE site presents the opportunity to provide a comprehensive development that would contain strategic housing growth, significant areas of green infrastructure and open space in a sustainable location. The key access strategy for the site is to provide two new access points from the south A259 Main Road and the east Stein Road. These access points would connect to a spine road which would form a continuous vehicle route around the north-western edge of Southbourne.

The site almost entirely comprises a Secondary Support Area under the Solent Waders and Brent Goose Strategy (SWBGS), which aims to protect the network of non-designated terrestrial wader and brent goose sites that support the Solent Special Protection Areas (SPA) from land take and recreational pressure associated with new development. Due to the designation of the site, discussion was undertaken with the Hampshire and Isle of Wight Wildlife Trust with a view to determine a suitable approach for the scheme and an appropriate survey effort to establish the use of the site by designated birds. As a result of these discussions, wintering bird surveys are taking place. The aim of these surveys is to explore opportunities for mitigation for this SWBGS support area such that development within the red line can proceed without adverse impacts to the bird populations noted within this strategy. Following the survey, the results and approach will be presented to Natural England for further discussion.

In relation to viability, we note that Policy A13 sets several policy objectives for development at Southbourne. The NPPF (2021) notes that where there are up-to-date policies which have set out the contributions expected from development, planning applications that comply with them should be assumed to be viable (para. 58). With this in mind the policy objectives outlined within Policy A13 will require viability testing to be undertaken to ensure a policy compliant scheme is both viable and deliverable. This is necessary to ensure that the policy is sound.

The Policy suggests that employment opportunities are required to be delivered as part of the allocation but there is no specific reference to the amount of use required. CCE supports this proposed approach as it is sufficiently flexible to enable an amount of employment land to be proposed in response to market conditions at the appropriate time and this will help to support delivery of the allocation.

The scale of development proposed has been reduced from 1,250 to 1,050 dwellings to reflect the proportionate reduction in housing numbers across the parishes in the east west corridor as a consequence of the limit on numbers in the southern plan area. If the Inspector finds that additional housing is required, the Vision Document submitted demonstrates that the CCE site in Southbourne could deliver c. 1,200 homes and so could increase housing without needing to identify additional land for development elsewhere.

To summarise, the site could accommodate approximately 1,200 homes which could be delivered on a phased basis early in the plan period. There are no overriding physical or technical constraints that would act as an impediment to development. There is also a clear access arrangement proposed.

Policy A14 Land West of Tangmere

CCE supports that Policy A14 is carried forward into this Local Plan to facilitate the delivery of a residential-led development of at least 1,300 dwellings.

Additional sites

Hunston

CCE further promotes land (15.31ha) located east of the B2145 Selsey Road in Hunston for 240 new homes. The land is deliverable and is fully within CCE’s control. The site is highly accessible, located within a maximum of 5-6 minutes walking distance to Selsey Road, where several bus routes connect the village to Chichester.

CCE notes that the Council assessed the HELAA site (ref. HHN0016) as ‘developable’. A Vision Document has previously been prepared and submitted to demonstrate the commitment to it being brought forward for residential development within the plan period. This document is enclosed.

To address the Council’s concerns in relation to flooding, following publication of the Chichester Strategic Flood Risk Assessment (SFRA), we have prepared an updated Flood Risk Scoping Study which provides an overview of flood risk constraints across the site from a range of sources. Various mitigation measures are recommended in line with recommendations of the Chichester SFRA and prevailing local and national guidance and best practice. With these measures in place, it is likely that the flood risk could be managed effectively in accordance with the requirements of the NPPF. Detailed data has also been requested from the Environment Agency, which will feed into further technical work that is being carried out.

Should the Inspector conclude that additional housing is required, CCE considers that their site is the most appropriate and sustainable location for development in Hunston. The site provides an opportunity to sensitively and sustainably extend the existing village boundary to provide additional homes to meet an identified housing need.

Land East of Drayton Lane

CCE owns land to the east of Drayton Lane which is bound by Tangmere Road to the north and crosses Oving Road and the railway line to the south. The site is c.1km from the centre of Chichester and comprises 49ha. The site was assessed in the HELAA 2021 as developable 'HOV0017'. A Vision Document has been prepared and was presented to the Council in 2022. This includes a detailed analysis of the site and its surroundings and provided justification as to why the site is suitable for development. This technical review of the site concludes there are no technical impediments to development.

The Vision Document demonstrates how the proposals for the land east of Drayton Lane could be developed as an extension to the draft allocation A8 (Land to the east of Chichester) for up to 700 new homes. The land east of Drayton Lane is fully within the CCE's control, is available for development now and is deliverable with some development achievable within the first five years of the plan period. It represents an opportunity to provide new homes, facilities and significant community benefits, through a sensitively designed development that integrates into the surrounding landscape.

The Vision for this site is a landscape and ecology led masterplan which would celebrate the rich wildlife characters of the different surrounding landscapes and uses the connection between countryside and community to generate its character and identity. The Vision Document demonstrates that this is a suitable location for development.

Should the Inspector conclude that additional housing is required, CCE considers that the land east of Drayton Lane would form a natural extension to allocation A8 and is an appropriate and sustainable location for new development.

Appendix C Additional Guidance

Appendix C provides additional guidance on evidence which needs to be submitted in support of certain planning applications related mainly to development in the countryside. As mentioned in the comments above provided in response to Policy NE10, there is no prerequisite contained within the NPPF (2021) that requires an applicant to demonstrate that previous uses were proven unviable prior to the conversion of a building in the countryside to residential use. As such, to be in accordance with national policy, reference to Policy NE10 should be omitted from Appendix C.

Conclusion

CCE welcomes the opportunity to comment on the Local Plan and is keen to continue to engage with the Council, especially in relation to the Broad Location for Development in Southbourne. CCE is supportive of the Council's aspirations in the Local Plan. However, the changes set out above are considered likely to be necessary to ensure the plan is sound.

CCE is a considerable landowner in Chichester with land largely to the south, west and east of Chichester which could assist the Council in meeting their housing and development needs throughout the plan period.

See attachments for site information.

Change suggested by respondent:

We request that this policy is amended to add 'where appropriate and viable', acknowledging that viability and site-specific factors need to be taken into consideration.

Object

Document Element: Policy H8 Specialist accommodation for older people and those with specialised needs

Respondent: Countryside Properties [7291]

Agent: Turley (Mr Ryan Johnson, Director) [7887]

Summary:

To be consistent with the approach outlined in the first paragraph of Policy H6/H8, it is suggested requirements are set out and justified in relevant site-specific allocation policies. Any specific requirements for non-allocated sites should also be clarified, with appropriate flexibility built in to ensure this can account for specific site circumstances.

Full text:

See attachment.

Change suggested by respondent:

Suggest first paragraph be amended to:

'All New housing sites over 200 units, which are allocated in the Local Plan, will provide specialist accommodation for older people as set out in the relevant site-specific allocation policies. The specific type and amount of accommodation required will depend on the size and location of the site.'

Object

Document Element: Policy H8 Specialist accommodation for older people and those with specialised needs

Respondent: Hallam Land Management Limited [1696]

Agent: LRM Planning Ltd (Miss Kate Coventry, Senior Planner) [6627]

Summary:

No confirmation on the quantum of specialist accommodation that this policy or other site allocations will secure and how the specific need for each application is calculated. Policy H8 fails to address identified overall need clearly, as required by National guidance. It is recommended Local Plan allocates sites to deliver this type of accommodation as intended by the HEDNA. This approach risks land on these sites being unable to deliver both the expected market/affordable housing and the specialist accommodation on site. Site promoted at Land to North of Gosden Green as suitable.

Full text:

1 Introduction

1.1 These Representations have been prepared on behalf of Hallam Land Management Limited (hereafter 'Hallam'), in response to the Chichester Local Plan Review Proposed Submission Plan consultation.

1.2 Hallam is a strategic land promotion company operating throughout England, Wales and Scotland delivering land for new employment and commercial premises, housing, including specialist elderly housing, and mixed-use developments. Hallam has been acquiring, promoting, developing and trading in land since 1990. During that time, the company has established an outstanding record in resolving complex planning and associated technical problems in order to secure planning permissions for a whole range of different land uses to facilitate the delivery of new development.

1.3 Hallam control land to the west of Southbourne, to the north of the A259 and south of the railway line. Development of this land for new housing including specialist elderly accommodation, as shown in the accompanying Vision Document, would be consistent with the established Spatial Strategy; which is rightly retained in the consultation document. Similarly, development would contribute towards meeting the future housing needs of the District within the proposed Broad Location for Development (BLD) at Southbourne.

1.4 These Representations set out our support for the BLD drawn on the key diagram to the west and east of Southbourne. However, Hallam are seeking amendments to Policies S1, H1, H2, H8 and A13 to ensure that: the overall housing needs are met across the District, including early delivery and specialist accommodation; the flexibility sought early in the Submission Plan, at Policy S2 and H1, is carried through to the strategic allocations and locations; and, the BLD is distributed to the west and east of Southbourne.

1.5 Moreover, Hallam are proposing the allocation of small and medium scale sites at Southbourne within the Local Plan, to enable early delivery of housing and infrastructure, with the land under their control a suitable site for this allocation. Should the Council not allocate these sites, then the strategic allocations/locations/policies need to be updated to reflect the requirement for the delivery of small and medium scale parcels which could form part of the larger sites.

1.6 In the context of the above, it is instructive to note that Chichester District has an older population than national average, which has been predicted to increase by 42% between 2021- 2039. The increasing need for specialist accommodation should be addressed through specific allocations within the Local Plan, rather than the proposed approach of Policy H8.

1.7 Our response is focused on the following matters:

- The Spatial Strategy, settlement hierarchy and the distribution of development across the District;
- The overall amount of new housing required within the new plan period;
- The need for specialist accommodation;
- The status of Southbourne and the role and function it plays; and
- The strategic allocation proposed at Southbourne in Policy AL13.

1.8 In preparing the Local Plan Review, the Council will need to ensure that it complies with paragraph 35 of the National Planning Policy Framework (NPPF) (2021) which sets out four tests to ensure the plan is 'sound'. These are as follows:

- Positively prepared – providing a strategy which, as a minimum, seeks to meet the area's objectively assessed needs, and is informed by agreements with other authorities, so that unmet needs from neighbouring areas are accommodated where it is practical to do so and is consistent with achieving sustainable development;
- Justified – an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence;
- Effective – deliverable over the plan period, and based on effective joint working on cross- boundary strategic matters that have been dealt with rather than deferred, as evidenced by statements of common ground; and
- Consistent with national policy – enabling the delivery of sustainable development in accordance with the policies in this Framework.

1.9 We are mindful that the Government has recently published a consultation concerning potential amendments to the NPPF. Paragraph 1 of that consultation document indicates that the government is committed to "building more homes" whilst Paragraph 6 explains that the government "remains committed to delivering 300,000 homes a year by the mid-2020s".

1.10 In the proposed revisions, paragraph 1 makes clear that the NPPF provides "a framework within which locally-prepared plans can provide for sufficient housing and other development in a sustainable manner." At paragraph 60 the overall aim of a Local Plan is identified as meet[ing] as much housing need as possible with an appropriate mix of housing types to meet the needs of communities.

1.11 It is clear therefore that the potential amendments to the NPPF firmly intend that Local Plans, including this one, continue to provide a sufficient supply of housing land to meet identified needs.

2 Objectives and Spatial Strategy

Objectives of the Local Plan

2.1 The Submission Plan has identified key challenges and opportunities that influence future planning, across the three areas of the District, and how it aims to address these through planning policies and proposals.

2.2 Within the consultation document, the strategic objectives presented by the Council are structured into specific categories, ensuring housing and neighbourhood objectives are clearly set out for the plan period.

2.3 Amongst these is the objective to increase housing supply; increase provision of affordable housing; and promote the development of mixed, balanced and well-integrated communities. These are consistent with the NPPF's policy objective to significantly boost the supply of housing in paragraph 60. In this context, it is right that the Local Plan's development strategy is founded on this objective, ensuring sustainable development which responds to social, economic and environmental considerations that meets the needs of the plan area.

2.4 These objectives frame the policies and proposals for future development across the plan area to create sustainable neighbourhoods; this demonstrates, as a matter of principle, that the Local Plan intends to be positively prepared and justified, albeit there are limitations on how this is achieved in practice when the policies and proposals are considered.

2.5 The NPPF states at paragraph 22 that strategic policies should look ahead over a minimum 15 year period from the date of the Plan's adoption. The Local Plan aims to cover the period of 2021- 2039, which is 18 years. However, this plan has not been adopted yet and it is considered unlikely that this Local Plan will be adopted before 2024-25. Therefore, the Plan may not cover the required plan period of 15 years and the Council should extend the plan period to at least 2040 to ensure this requirement is met.

Policy S1: Spatial Strategy

2.6 The Spatial Strategy is accompanied by the Key Diagram (Map 3.1), identifying the distribution of development and infrastructure provision across the plan area.

2.7 The strategy aims to build on the existing Local Plan, focusing growth at Chichester city, as the main sub-regional centre, and at two settlement

hubs along the east-west corridor at Tangmere and Southbourne.

2.8 Policy S1 specifically identifies the broad approach to providing sustainable development, in accordance with the Local Plan Objectives, ensuring development is focused principally along the east-west corridor. It aims to distribute development in line with the settlement hierarchy, ensuring development is located in the larger and more sustainable settlements.

2.9 This accords with paragraph 20 of the NPPF which requires strategic policies to set out an overall strategy for the pattern, scale and quality of development, and make sufficient provision for housing, infrastructure, community facilities along with policies that seek to conserve and enhance the environment.

2.10 Paragraph 105 of the NPPF states that the planning system should actively manage patterns of growth in support of these objectives. With significant development being focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes.

2.11 Paragraph 69 of the NPPF sets out how small and medium scale sites can make an important contribution to meeting the housing requirement. Part d) identifies how working with developers to encourage the sub division of large sites could help to speed up the delivery of homes.

2.12 In this context, Policy S1 (6) outlines how non-strategic provision is made for small scale housing developments consistent with the indicative housing numbers set out in Policy H3, however this does not identify an approach to medium scale sites. Consequently, the Local Plan should allocate small and medium scale sites for residential development.

2.13 Should the Local Plan not allocate these scale sites, then there should be parcels within the BLDs identified as medium scale sites for early delivery in the plan period without prejudicing the BLDs. Policy S1 should be amended to include medium scale sites and to require flexibility to the housing target. This is discussed further in respect of Policy A13.

2.14 Policy S1 (7) states that strategic allocations and locations will be made through either this emerging Local Plan, the extant Site Allocation Development Plan 2014-2019 (or subsequent Site Allocation Development Plan Document (DPD)) and through Neighbourhood Plans. Notwithstanding the allocations in the emerging Local Plan, the most appropriate future mechanism is the Site Allocations DPD, which has to meet the 'tests of soundness' rather than 'basic conditions'. This more rigorous approach to plan making is better able to address the site selection process and assessment of delivery requirements that a strategic allocation will need to demonstrate, particularly when taking account of the scale of growth proposed at Southbourne.

2.15 Lastly, the final paragraph of Policy S1 states that to ensure that the Plan's housing requirement is delivered, "the distribution of development may need to be flexibly applied, within the overall context of seeking to ensure that the majority of new housing is developed in accordance with this Strategy". The wording of this should be amended to state flexibility will be needed rather than may be needed, to ensure there is the ability to mitigate delays on allocations being brought forward by alternative proposals in order to meet the housing requirement over the plan period.

2.16 The use of the Authority Monitoring Report to control this is considered an acceptable approach, and policies A6 to A15 should reflect this requirement for flexibility. In practical terms, the LPA will need to consider performance in bringing forward and delivering large-scale development and enable alternative solutions where the required outcomes are not being achieved. This is discussed later in relation to Policy A13 specifically.

Policy S2: Settlement Hierarchy

2.17 The consultation document sets out a Settlement Hierarchy which is to serve as the framework for the Council to achieve its vision for the plan area, meet the scale of development required and enhance the quality of the built natural, historic, social and cultural environments, whilst sustaining the vitality of communities. This hierarchy seeks to deliver sustainable development that will support the role and function of different places within the plan area.

2.18 In this regard, Policy S2 is consistent with the NPPF acknowledging how "significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. This can help to reduce congestion and emissions, improve air quality and public health." (paragraph 105 refers). The Settlement Hierarchy ensures that new development is located in areas where residents have access to facilities and services and a range of public transport networks.

2.19 Chichester city is identified as the Sub-Regional Centre, with four Settlement Hubs being identified at East Wittering/Bracklesham; Selsey; Southbourne and Tangmere. This is a continuation of the existing spatial strategy in the Adopted Local Plan and consistent with the principle of locating new development at the most sustainable locations.

2.20 Southbourne is rightly identified as a Settlement Hub due to its range of local services and facilities, key public transport connections and employment/educational opportunities accessible via non vehicular methods of travel. The approach to Southbourne is discussed later at Section 4 and at Policy A13.

2.21 Accordingly, this strategic policy is positively prepared and justified, and is consistent with national policy promoting sustainable patterns of development.

3 Overall amount of Housing

Policy H1 Meeting Housing Needs Housing Need

3.1 Paragraphs 60 and 61 of the NPPF state that to determine the minimum number of homes needed, strategic policies should be informed by a local housing need assessment, conducted using the standard method in national planning guidance.

3.2 Only in exceptional circumstances could an alternative approach be justified. But even then, that alternative approach will also need to reflect current and future demographic trends and market signals.

3.3 Policy H1 identifies the need for the Plan to make provision for at least 10,350 dwellings within the plan period, amounting to 575dpa.

3.4 This is lower than both a. the standard method figure of 638 dpa; and, b. the Preferred Approach figure in the previous consultation, of 650 dpa which included accommodating some unmet need arising from the South Downs National Park (SDNP) area. This shortfall will amount to over 1,100 dwellings across the plan period. Without any Statements of Common Ground being published by the Council or evidence of the shortfall being accommodated elsewhere, this remains unaddressed.

3.5 It is highly germane that the current Local Plan adopted a lower housing figure than the identified need of 505dpa, proposing instead to deliver 435dpa.

Affordability in Chichester

3.6 The affordability ratios have risen from 12.38 in 2015, when the current Local Plan was adopted, to 14.61 in 2021 for Chichester, which is significantly higher than the current 9.1 national average, increasing the need for affordable housing within Chichester.

3.7 Between the 2011 and 2021 census, the number of people ages 50 to 64 years rose by over 3,100 (an increase of 13.4%), while the number of residents between 35 and 49 years fell by approximately 1,900 (8.5% decrease).

3.8 Chichester's worsening affordability ratios and aging population, which typically occurs in line with house price increases, demonstrate the clear need to increase the housing delivery to meet current and future needs (in line with the NPPF), and maximise the potential for housing in this District. The current strategy to suppress housing provision will only exacerbate these problems.

3.9 With the Submission Plan proposing to not meet the identified need, this once again will be an issue which moves onto the next Local Plan, failing to tackle key issues across the District such as affordability and lack of housing land supply. These issues cannot simply be moved onto the next Local Plan, they should be addressed now.

Constraints for development

3.10 The lower figure of 575dpa reflects both the infrastructure constraints along the A27 and at the

Waste Water Treatment Works, but also no longer accommodating unmet need from SDNP.

3.11 The Transport Study (January 2023) assesses the capacity levels, with particular focus on the A27. Although the Council state that 535dpa is the highest level of development per year achievable, the conclusions of this latest Study state, at paragraphs 5.6.5 and 11.2.3, that development of 700 dpa could be accommodated (in the southern plan area) through the mitigation proposed in the previous scenario of 535dpa with some additional mitigation at the Portfield and Oving roundabout.

3.12 This Transport Study (2023) was published following the preparation of the Sustainability Appraisal which refers to the 2018 study, therefore the latest evidence on highways matters has not been considered within the preparation of this Local Plan.

3.13 This is fundamental to the Plan's approach – increasing the housing requirement could assist with funding those additional highway improvements, in line with the recommendations of the Transport Study at Section 9.3 to prioritise junctions to avoid delays to housing delivery. This should be further reviewed by the Council to ensure the District's need is not being understated. It is recommended the housing need figure is reviewed in line with this evidence and the need to meet the minimum of the standard method figure of 638dpa, and aim to return to the 650dpa previously proposed.

Duty to Co-Operate

3.14 Paragraph 24 of the NPPF outlines the need for co-operation between local planning authorities on strategic matters that cross administrative boundaries.

3.15 The East Hampshire Local Plan Review has identified 100dpa for the SDNP area of the District, below the identified need of 112dpa for the District's area and the overall requirement of 447dpa for the SDNP (Housing and Economic Development Needs Assessment 2017). In effect, in combination with Chichester, the National Park is needing to accommodate some 30 more dwellings per annum without any assessment as yet as to whether this can be achieved given the statutory protection that is afforded to it.

3.16 Whilst a Statement of Common Ground is referred to, it has not been published and therefore it is not possible to determine whether the decision not to make a provision for the National Park area is soundly based.

3.17 Previous evidence for the Preferred Approach demonstrated how the figure of 650dpa was achievable and necessary to help with the worsening affordability ratios across Chichester and the neighbouring authorities. Having removed provision for unmet need it is considered this plan has not been positively prepared.

Summary

3.18 Policy H1 clearly sets out how the majority of housing is to be delivered along the east-west corridor, with 535dpa in the southern plan area and 40dpa in the northern plan area. This is consistent with the Spatial Strategy and the Settlement Hierarchy, Policies S1 and S2, and the overarching objective of locating new housing at the most sustainable locations in the plan area.

3.19 By limiting the amount of housing there will be fewer schemes contributing to the required infrastructure improvements. Without developer contributions to fund wholesale upgrades to this infrastructure there is a risk of pushing the problem down the line for the next Local Plan to address, whilst problems with affordability and an aging population are further exacerbated.

3.20 All future schemes will be required to mitigate their impact on infrastructure including highways and utilities, and there is an opportunity for small to medium scale sites to be delivered in the short term whilst the larger allocations and/or the majority of the larger allocations await the upgrading of these works.

3.21 Currently, the proposal to reduce the overall housing supply for the new plan period is not supported, and the Council should review the Transport Study with the intention of meeting the assessed level of local housing need in full. Without the identified housing requirement being met in full the problem of the younger population being unable to afford to remain in Chichester will continue, further growing the gap in workforce and an increasingly aging population.

3.22 Therefore, this policy is not positively prepared, justified or consistent with the NPPF.

Policy H2 Strategic Locations/Allocations 2021-2039

3.23 The wording of 'at least' within Policy H1 provides flexibility on the ability to achieve the minimum amount of housing considered necessary by the Council, in line with Policy S2. Although this quantum is not agreed, the approach using 'at least' is considered a sensible approach to allow the achievement rather than under delivery of much needed open and market housing.

3.24 The strategic locations/allocations set out in Policy H2 do not reflect this flexible approach. Instead, the sites are fixed as exact number of dwellings for those locations.

3.25 Paragraph 119 of the NPPF requires planning policies to promote an effective use of land in meeting the need for homes, while safeguarding and improving the environment and ensuring safe and healthy living conditions.

3.26 Policy A13 is a BLD and is fixed at 1,050 dwellings within Policy H2, this does not allow for the masterplanning approach to further assess the

actual capacity and the best use of this land.

3.27 As such flexibility should be embedded into the wording of Policy H2 to ensure that the intention of Policy S2 is achieved; the housing target of at least 10,350 dwellings across the plan period (Policy H1) is met; and the land identified for development is most effectively used.

3.28 Therefore, it is suggested that Policy H2 includes the wording "at least" before the quantum of development for any strategic location or allocation. For example, Policy A13 would instead state "at least".

Policy H8 Specialist accommodation for older people and those with specialised needs

3.29 National Planning Practice Guidance for Housing for Older and Disabled People states how plan-making authorities should set clear policies to address the housing needs for groups with particular needs such as older and disabled people.

3.30 The Housing and Economic Development Needs Assessment (HEDNA) (April 2022) assesses the period between 2021-2039 for older people and those with a disability.

3.31 This concludes that there will be a 42% increase in the population above 65 years old, amounting to 67% of the total population growth.

3.32 The HEDNA sets out how the East-West Corridor has a higher percentage of over 65 year olds (24.7%) compared to both Chichester City (24.2%) and the Plan Area North area (23.4%).

3.33 The needs arising from this, amounts to between 2,131 and 2,872 additional dwellings with support or care, and a need for 429-800 additional nursing and residential care bedspaces. This equates to approximately 17-24% of all homes needing to be some form of specialist accommodation for older people.

3.34 In this context, the HEDNA makes an important recommendation that the Council allocate specific sites for housing with care to ensure the identified needs are met. In contrast Policy H8 is a criteria based policy that seeks specialist accommodation for older people on housing sites over 200 units based on evidence of local need.

3.35 As written, there is no confirmation on the quantum of specialist accommodation that this policy or other site allocations will secure and how the specific need for each application is calculated. Policy H8 fails to address the identified overall need clearly, as required by National guidance. Therefore, it is recommended the Local Plan allocates sites to deliver this type of accommodation as intended by the HEDNA.

3.36 This approach risks the land on these sites being unable to deliver both the expected market/affordable housing and the specialist accommodation on site.

3.37 The land under Hallam's control would be a suitable site for this type of accommodation, which is situated along the east-west corridor in a sustainable location on the edge of Southbourne.

4 Southbourne

4.1 Southbourne is a key area in the District, in terms of existing development, its status as a Settlement Hub and its potential to accommodate future development.

Role of Southbourne

4.2 Southbourne is identified as a Settlement Hub within Policy S2.

4.3 Southbourne is located within the east-west corridor with a range of existing facilities, good transport links, and employment opportunities both to the east and the west.

4.4 As set out in the Submission Plan, Southbourne has good access to educational facilities serving the residents, including primary schools, junior schools and secondary schools. There are a number of convenience stores and other community services and facilities such as a GP practice, pharmacy and places of worship.

4.5 The Bourne Community Leisure Centre provides local residents with access to community sports facilities. Access to public open space is also good through connections to Southbourne Recreation Ground. There is potential for more open space to be provided for local residents within the Local Plan Review and the strategic allocation proposed and this approach is embedded within our own Vision Document.

4.6 A key focus of the Sustainability Appraisal and the Submission Plan is for schemes to promote a modal shift in transportation. The strong public transport links within Southbourne to the wider surrounding area allows access to employment opportunities within the east-west corridor.

Southbourne has strong public transport connections to the local and wider area, through bus and train services, to areas including: Chichester, Portsmouth, Havant, Littlehampton, Brighton, Southampton and London.

4.7 For these reasons, Southbourne is rightly designated as a Settlement Hub and is eminently suitable to serve as a BLD.

4.8 The Southbourne Level Crossing Report May 2021 analyses the options for delivering the railway crossing at Southbourne. It concludes that circa 750 dwellings can be delivered north of the railway line before triggering the requirement for a new crossing. The report highlights how sites south of the rail line are not likely to impact on the level crossing and can therefore be delivered earlier than await the railway line improvements.

4.9 Therefore, in this context it would be appropriate to allocate small and medium scale sites to the south of the railway, which is less constrained by the capacity restriction on the railway crossing.

4.10 The land under Hallam's control is to the south of the railway line, would help facilitate a future new railway crossing to the north of the site, and would be of a medium scale to deliver housing early in the period plan.

Strategic Allocation A13

4.11 The Key Diagram appears to suggest that new development is to be located to the west and east of Southbourne, remedying the previously unsuccessful approach of focusing development only to the east. Similarly, the Key Diagram acknowledges the need for development to the south of the railway line, facilitating development north of the railway line. It is recommended the wording of the policy should be updated to reflect this diagram, as suggested below:

Provision will be made for a mixed use development within the broad location for development to the west and east of Southbourne, as shown on the Key Diagram.

4.12 Previously, the Preferred Approach consultation document set out at Policy AL13 a minimum of 1,250 dwellings at Southbourne and to be identified in the revised Southbourne Neighbourhood Plan. (emphasis added)

4.13 The Submission Plan now allocates Policy A13 for 1,050 dwellings and will be established through the making of allocation(s) in the future Site Allocation DPD or the revised Southbourne NP. This strategic allocation is to act as a mixed use extension to the existing settlement.

4.14 It is acknowledged that the land north of Cooks Lane (Application number: 22/00157/REM) received Reserved Matters approval in August 2022 for 199 dwellings, with the reduction in quantum of development for the BLD reflecting this committed development. A practical effect of this is that this consent will not contribute to the wider infrastructure requirements associated with a larger scale of development.

4.15 It is disappointing to see the phrase "a minimum of" has been removed. This conflicts with the flexibility set out earlier in the consultation document, and also reduces the potential of making effective use of the land for housing that will assist in meeting the overall need of the District.

4.16 Policy A13 prescribes a number of requirements that must be met (criterion 1 – 16). These are considerations that reflect principles of place making and sustainable development and provide a sound framework for the preparation of the allocation through either mechanism.

4.17 One of these requirements states that future development "Provide[s] any required mitigation to ensure there is no adverse impact on the safety of existing or planned railway crossings." The existing Southbourne Neighbourhood Plan, at Objective 9, outlines the issues relating to the railway crossing and the plans for addressing this challenge in the future.

4.18 Related to this is the need for the provision of "suitable means of access to the site(s), securing necessary off-site improvements (including highways) ... to promote sustainable transport options."

4.19 The combination of the requirements relating to the railway crossing and the provision of a suitable means of access show the importance of accessibility to the A27, A259 and the east-west railway line, which are the principal public transport corridors for Southbourne.

4.20 Development will be well connected to Southbourne via footway and cycle connections to the east and offers the opportunity to help realise the construction of a new strategic road and bridge link over the West Coastway Rail Line through provision of land and proportionate contributions to this scheme.

4.21 Criteria 13 ensures there will be sufficient capacity within the relevant wastewater infrastructure before the delivery of development, which addresses (for Southbourne) the identified constraints for the District in relation to housing delivery.

4.22 The remaining requirements of Policy A13 cover the quality and range of development, the provision of education, community and transport facilities, provision of public open space and green infrastructure, and the impact of development on the landscape. These are each appropriate considerations for the Site Allocations DPD.

4.23 Having regard to the above, the allocation of 1,050 dwellings for Southbourne is, in part, appropriate.

4.24 However, this policy should allow for the delivery of small or medium scale parcels of land, in accordance with the NPPF at an early stage of delivery of the wider allocation to enable prompt and timely housing at Southbourne whilst infrastructure upgrades are commenced. The Local Plan should identify and allocate these smaller scale sites to ensure these can come forward early in the plan period.

4.25 A new criteria is proposed to be included in the wording of Policy A13, stating:

(17) To identify land for early delivery on small to medium scale sites which are not constrained by the need for a new railway crossing.

4.26 Therefore, the principle of a strategic allocation for mixed use housing is considered appropriate but amendments should be made to the wording of the policy to reflect the approach to flexibility, the inclusion of small and medium scale sites, and the dispersion of development to both the west and east of Southbourne.

Southbourne Neighbourhood Plan

4.27 As set out in the paragraph 10.56 of the Submission Plan, development phasing is a key issue to address through the allocation of development sites for this BLD.

4.28 Paragraph 70 of the NPPF states that "Neighbourhood planning groups should also consider the opportunities for allocating small and medium-sized sites suitable for housing in their area." Southbourne Parish Council should be aware of this when allocating the strategic sites, to ensure that there are a mix of housing sites, that could come forward sooner than the principal element of the larger strategic site.

4.29 Through the preparation of the Neighbourhood Plan, the Parish Council should take into account the allocation of smaller sites, which could come forward as part of and alongside the larger strategic site. This will ensure that there is not a delay in the provision of housing within Southbourne and the plan area.

4.30 As set out previously, the most suitable mechanism for progressing the Southbourne BLD would be the Site Allocation DPD. Whether the sites are allocated through the Site Allocations DPD or the NP, there is a requirement to identify small and medium scale site.

Land to the north of Gosden Green

4.31 The land under Hallam's control to the north of Gosden Green, should either be allocated in the Local Plan as a medium scale site or should be a key component of the BLD. The site can deliver both market/affordable residential units and specialist elderly accommodation. The site will create flexibility in achieving the housing requirement of the plan area early on in the plan period.

4.32 The accompanying Vision Document demonstrates how as an early development parcel for the wider BLD, a series of key benefits in accordance with the 13 criteria of Policy A13 will be achieved.

4.33 The Proposed Submission Plan at Policy H8 identifies the need for specialist accommodation for older people and those with specialist needs. Although not set out in the Vision Document, this site can deliver, early in the plan period, much needed specialist elderly accommodation.

4.34 Figure 3 of the Vision Document presents the scheme's ability to connect into a wider masterplan for the strategic development, as it comes forward in the future. However, at the same time has the ability to come forward at an earlier rate being physically unconstrained and a well contained parcel of land.

4.35 Figure 9 provides context on connectivity, and the modal shift this scheme aims to achieve. The ability to walk to a range of services and facilities, including the train station further demonstrates the ability for the early delivery of this parcel of the BLD.

4.36 The impact of the highways network has been assessed for both a full residential scheme and specialist elderly housing, highlighting how the residential scheme will introduce approximately 55 new vehicles to the network at peak times, resulting in less than 1 car per minute in the peak hour. Either scheme will have a negligible impact on the highway network and would have a negligible impact on A27.

4.37 The site is to the south of the railway line, as previously mentioned, and would be unconstrained by the capacity constraint of the existing railway crossing.

4.38 For these reasons, the land under Hallam's control should be allocated within the Local Plan.

5 Conclusion

5.1 These representations are submitted on behalf of Hallam Land Management Limited.

5.2 In the context of national, local and neighbourhood planning policies, the Local Plan has an important role in providing policies and proposals for residential development to meet future needs.

5.3 The proposed objectively assessed need for housing across the plan area is not agreed, and the Council should review the latest transport evidence which currently do not demonstrate how there are exception circumstances, in accordance with paragraph 62 of the NPPF. The Council should also extend the plan period to ensure it meets the requirements of a minimum of 15 years in the NPPF.

5.4 Consistent with the established strategy to focus development in the District's east-west corridor, the Broad Location for Development to Southbourne as a Settlement Hub is, as a matter of principle, a sound proposition. Importantly the Key Diagram identifies the broad location for this development to the west and east of the settlement.

5.5 As discussed, there should be flexibility embedded into all strategic allocations, in particular those which are Broad Locations for Development through the use of the wording "at least". This will ensure that the "at least" quantum of housing delivery is met and affords flexibility to all housing sites coming forward.

5.6 The responsibility for allocating additional development land to meet this requirement has been given to either the Parish Council through the preparation of a new Neighbourhood Plan or through the Council reviewing the Site Allocations DPD. It is recommended that for the larger strategic allocations and locations the Site Allocations DPD is the more suitable mechanism for identifying land given the need to ensure that proposals are sound.

5.7 Whilst the scale of development proposed is strategic in nature, it is entirely appropriate to consider how different development parcels might contribute towards that and in particular early opportunities that facilitate larger scale development later in the plan period.

5.8 To this end, land to the west of Southbourne and south of the railway line could be allocated as the first phase of the strategic site allocation, as a medium size site, so that this southern section of the new link road is built to enable access to land to the north. This will reduce the pressure placed on the centre of Southbourne, the highway capacity on the A27, and the existing railway crossing.

5.9 By allocating small to medium scale sites in the Local Plan, this will bring forward development at a quicker pace and ensure that the objectively assessed needs for housing across the plan area are met each year. These can be delivered without prejudice to the larger strategic allocations and locations.

5.10 Currently, the Submission Plan fails to address the increasing need for specialist accommodation, with Policy H8 failing to secure specific delivery of such housing, instead moving this matter into major development schemes with no mechanism for assessing need at that stage. It is recommended that the Local Plan allocates sites for specialist accommodation.

5.11 Hallam control land to the west of Southbourne, which adjoins the land at Gosden Green which has already been built. The land controlled by Hallam could be: allocated as a medium scale site within the Local Plan; included as part of the western strategic allocation of Broad Location for Development at Southbourne; or could be allocated for specialist elderly accommodation, ensuring land is readily available for development early in the plan period to address identified needs.

5.12 This would be consistent with the development strategy for the Plan and positively contribute towards meeting future development needs of the plan area.

5.13 These representations have demonstrated that in part the Submission Plan has been positively prepared and justified, however the key recommendations in these Representations should be followed to ensure the plan preparation accords with Paragraph 35 of the NPPF.

Change suggested by respondent:

It is recommended Local Plan allocates sites to deliver this type of accommodation as intended by the HEDNA. Site promoted at Land to North of Gosden Green is suitable.

Object

Document Element: Policy H8 Specialist accommodation for older people and those with specialised needs

Respondent: Hanbury Properties [1697]

Agent: Smith Simmons Partners (Paul White) [7650]

Summary:

In our view however, draft Policy H8 doesn't reflect the guidance in the PPG. For instance, although the policy sets out a threshold of provision for specialist housing of housing sites of 200 or more units, there is no guidance on the actual % provision as there is for example, on affordable housing. All it says is the specific type and amount of accommodation required will depend on the size and location of the site.

The supply of specialist housing should not just be focused on large scale housing schemes. The landscape and environmental constraints across the district even outside the national park would not necessarily allow for large 200 plus unit schemes in all locations. To support an ageing population policy should support the provision of suitable specialist housing to meet the differing needs of individuals across a range of options and in a range of locations.

Full text:

The 'tests of soundness' for Local Plan preparation are set out in paragraph 35 of the July 2021 NPPF. They require the 2021-39 Local Plan to have been:

- Positively prepared – providing a strategy which, as a minimum, seeks to meet the area's objectively assessed needs; and is informed by agreements with other authorities, so that unmet need from neighbouring areas is accommodated where it is practical to do so and is consistent with achieving sustainable development;
 - Justified – an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence;
 - Effective – deliverable over the plan period, and based on effective joint working on cross-boundary strategic matters that have been dealt with rather than deferred, as evidenced by the statement of common ground; and
 - Consistent with national policy – enabling the delivery of sustainable development in accordance with the policies in this Framework.
- Local Plan reviews are a legal requirement every 5 years in accordance with Regulation 10A of the 2012 Town and Country Planning (Local Planning)

(England) Regulations. The Regulation 19 Plan is not legally compliant as it has not been reviewed within 5 years of the last Plan adopted in July 2015. It is also disappointing that the failure of the current Regulation 19 Local Plan to meet objectively assessed need (OAN) of 638 dpa outside the national park has not been properly evidenced in any up to date statement of common ground with neighbouring authorities with regards to the 'duty to cooperate'.

At this stage we believe the Plan as drafted therefore fails the 'positively prepared', 'effective', and 'consistent with national policy' tests.

In addition, with regard to the longer term growth requirements and the singular issue of a potential new settlement the plan also fails the 'justified' and 'consistent with national policy' tests of soundness.

Duty to Cooperate

The 2014-2029 Local Plan adopted in 2015 does not meet the full objectively assessed housing needs for the area. But it did recognise that future proposals to improve the capacity of the A27 and wastewater treatment works could facilitate additional housing growth. For this reason, it committed the Council to a review of the Plan within five years to ensure that housing needs could be met. That undertaking to review within 5 years was not met.

In 2021 the Council invited an advisory visit from PINS to advise on how the present Local Plan should be prepared. The inspector advised that if the Plan was prepared which did not meet the full housing needs of the area, it would have to show that it had followed the duty to co-operate with neighbouring authorities in maximising the effectiveness of plan preparation.

The inspector said the Duty to Cooperate was therefore critical in the preparation of the Local Plan Review. At the time of the meeting, the council said discussions with neighbouring authorities had been carried out on the basis that the Local Plan Review would meet the full objectively assessed housing needs (OAN) for the area. However if this was not the case, the inspector said evidence of constructive, active, and on-going engagement to determine whether or not development needs could be met elsewhere would need to be shown. Importantly, the inspector said, 1) 'a failure to meet the Duty to Cooperate cannot be remedied during the examination process because it applies to the preparation of the Plan, which ends upon submission', and 2) local planning authorities should make every effort to secure the necessary cooperation on strategic cross boundary matters before submitting plans for examination.

The Duty to Cooperate Statement of Compliance (January 2023) forms part of the evidence base for the Submission Local Plan. In the event, the Local Plan excluding the national park only provides for 575 dpa against an OAN of 638 dpa. However this under provision against need has not been justified anywhere in discussions with neighbouring authorities before the Plan was submitted. Appendix 1 of the Statement of Compliance lists those authorities that were consulted during the earlier Regulation 18 Preferred Approach consultation. Appendix 2 lists those authorities where Statements of Common Ground have been agreed with Chichester DC for the Regulation Submission 19 Plan. No statements have produced or agreed. Therefore as it stands the under provision of housing against OAN in the Plan has not been justified. The failure to meet the duty to cooperate cannot be remedied because it has already ended with the Submission Plan. The plan therefore fails the positively prepared and justified tests. It also fails to comply with national policy in the NPPF paragraph 24-27 which advises on the duty to cooperate approach.

Local Plan Policies

The remainder of these comments deal with the Settlement Hierarchy policy S2, H1, H2 H3 and H8.

Policy S2 – Settlement Hierarchy

The Settlement Hierarchy background paper prepared for the Regulation 18 draft Local Plan provides the justification for the hierarchy in Policy S2 of the Regulation 19 Local Plan. We agree that the hierarchy prioritising development at Chichester as the sub regional centre, followed by development at the settlement hubs, service villages and the rest of the plan area is reasonable. However, although the distribution of housing amongst the settlements in the current Regulation 19 plan has been updated compared to the last Regulation 18 plan, the background paper itself has not been updated. Nor is there any justification or explanation for the change in the quantum of strategic and non-strategic housing to the different categories of settlement in the background paper or the Local Plan itself.

Policy H1 – Meeting Housing Needs

The identified housing need has been informed by the 2022 Housing and Economic Development Needs Assessment (HEDNA). It explains that based on the standard methodology, since the last HEDNA in 2020, the district wide housing need has increased from 746 dpa to 763 dpa (621 dpa in the Plan Area to 638 dpa) with the balance to be found in the national park. The proposed 638 dpa for the area of the district outside the national park is the figure that will be tested at the forthcoming Examination.

We have already explained why the failure of the Council to plan for the 638 dpa in the Regulation 19 Local Plan has not been justified in connection with the duty to cooperate and no evidence has been presented in any statement of common ground with neighbouring authorities to show how development needs could be met elsewhere.

Policy H2 – Strategic Site Allocations and Policy H3 – Non-Strategic Parish Allocations

Policy H2 identifies strategic scale and policy H3, non-strategic allocations. We have explained above that the Settlement Hierarchy Background Paper was prepared for the 2018 Preferred Options Regulation 18 Local Plan but has not been updated to provide any justification for the revised housing distribution and quantum of development for the named locations and settlements in the Regulation 19 Local Plan.

Policy H8 – Specialist accommodation for Older People

National policy in the online planning practice guidance (PPG) is clear that the need to provide housing for older people is critical. The guidance on the provision of this type of housing states:

- Plan-making authorities should set clear policies to address the housing needs of groups with particular needs such as older and disabled people. These policies can set out how the plan-making authority will consider proposals for the different types of housing that these groups are likely to require.
- They could provide indicative figures or a range for the number of units of specialist housing for older people needed across the plan area throughout the plan period.
- It includes the following within the general definition of specialist housing - age-restricted general market housing, retirement living or sheltered housing, extra care housing or housing-with-care, residential care homes and nursing homes, and senior co-housing communities.
- LPA's can identify sites for co-housing communities and other specialist housing types for older people, because,
- Allocating sites can provide greater certainty for developers and encourage the provision of sites in suitable locations. This may be appropriate where there is an identified unmet need for specialist housing. The location of housing is a key consideration for older people who may be considering whether to move (including moving to more suitable forms of accommodation).

Factors to consider include the proximity of sites to good public transport, local amenities, health services and town centres.

In our view however, draft Policy H8 doesn't reflect the guidance in the PPG. For instance, although the policy sets out a threshold of provision for specialist housing of housing sites of 200 or more units, there is no guidance on the actual % provision as there is for example, on affordable housing. All it says is the specific type and amount of accommodation required will depend on the size and location of the site.

The supply of specialist housing should not just be focused on large scale housing schemes. The landscape and environmental constraints across the district even outside the national park would not necessarily allow for large 200 plus unit schemes in all locations. To support an ageing population policy should support the provision of suitable specialist housing to meet the differing needs of individuals across a range of options and in a range of locations.

The second part of H8 should therefore confirm that proposals for specialist housing, such as homes for older people will be supported without any policy qualification for a site's location within or outside a settlement boundary or within an AONB where a proposal in its local context is not deemed to represent major development.

Rather than rely on the criteria based approach, the policy should also allow for the allocation of sites for specialist accommodation for older people in a Neighbourhood Plan where a site has the support of local people.

Change suggested by respondent:

We propose an amendment to policy H8 to confirm that specialist accommodation for older persons can be supported without any policy qualification for a site's location within or outside a settlement boundary or within an AONB where a proposal in its local context is not deemed to represent major development.

Rather than rely on the criteria based approach, the policy should also allow for the allocation of sites for specialist accommodation for older people in a Neighbourhood Plan where a site has the support of local people.

Object

Document Element: Policy H8 Specialist accommodation for older people and those with specialised needs

Respondent: Home Builders Federation (Mr Mark Behrendt, Local Plans Manager SE and E) [7316]

Summary:

Policy is unsound as it is not effective. Only through site allocations can the Council be certain the needs of older people be met. Important that policy provides: effective mechanism through which decisions on accommodation can be made on basis of need for and supply of such development; sets out how many specialist homes for older people are required in Chichester; commitment is made to monitoring supply against level of need across plan period; presumption in favour of development be applied if supply of land for such development falls below identified annual needs. Needs to be clear as to what is required and how a decision maker should react to ensure those needs are met. By including level of need in policy or supporting text, greater weight will be given to this in decision making, leading to the more positive approach that is required to meet housing the needs of older people.

Support

Document Element: Policy H8 Specialist accommodation for older people and those with specialised needs

Respondent: Mayday! Action Group (John Garrett) [7163]

Summary:

The demographics of our area are different from other areas and it is recognised that our ageing population will grow during the plan period.

It is also clear that more specialist accommodation will be needed in our area for both married and single pensioners.

We support the outlined policy

Paras 5.53 – 5.58 suggest that CDC's Planning team will have a significantly greater workload if they are to vet these applications for delivery on the essential detail. Are they sufficiently resourced? Do they have planners with this specialist knowledge?

Full text:

Executive Summary

The Local Plan as written lacks ambition and vision, and will be detrimental to the landscape within which the district lies. It is a plan borne out of a need to produce a legal document which will satisfy the regulatory authorities. In terms of Urban Planning it fails "To meet the needs of the present without compromising the ability of future generations to meet their own needs" (NPPF).

The development that will consequentially arise from the deployment of such a made Local Plan is not sustainable. It will adversely affect the Character, Amenity and Safety of the built environment, throughout our district.

In particular, the Local Plan is inadequate for the needs of the people in the district both at present and in the future because –

1. It has been written in advance of the District having a properly formed and agreed Climate Emergency Action Plan. It is inconceivable that such a key document will not shape our Local Plan. It is this Action Plan that is needed first in order to provide the long-term strategic view as to how and what the District will look like in the future; this, in turn, will help form and shape the policies outlined in any prospective, Local Plan. The Plan as proposed is moribund, as a result of "cart before the horse" thinking.

2. The Local Plan as written does not adequately address how infrastructure, transport and services are going to be materially and strategically improved to meet the predicted growth and shift to a significantly ageing population. There is presently insufficient capacity to supply services and to have adequate people and environmentally friendly connectivity, as a direct result of decades of neglect towards investing in infrastructure and services to meet the needs of the District's population. We are led to believe that developers through increased levies in order to gain permission to build will fulfil this need, but all that this will result in is an uncoordinated, dysfunctional mess completely lacking in any future-proof master planning approach. We contend that this will do nothing for the quality of life of Chichester District residents and it will create a vacuum whereby few if indeed any can be held accountable or indeed found liable for shortcomings in the future.

3. The Local Plan as written does not state how it will go about addressing the need to create affordable homes. The District Council's record on this matter since the last made plan has been inadequate and now the creation of affordable homes has become urgent as political/economic/social factors drive an ever increasing rate of change within the District.

4. Flood risks assessments used in forming the Plan are out of date (last completed in 2018) and any decision to allocate sites is contrary to Environment Agency policy. Additionally, since March 2021 Natural England established a position in relationship to 'Hold the Line' vs. 'Managed Retreat' in environmentally sensitive areas, of which the Chichester Harbour AONB is a significant example. CDC have failed to set out an appropriate

policy within the proposed Local Plan that addresses this requirement.

5. The A27 needs significant investment in order to yield significant benefits for those travelling through the East-West corridor; this is unfunded. Essential improvements to the A27 are key to the success of any Local Plan particularly as the city's ambitions are to expand significantly in the next two decades. But any ambitions will fall flat if the A27 is not improved before such plans are implemented. The A259 is an increasingly dangerous so-called 'resilient road' with a significant increase in accidents and fatalities in recent years. In 2011, the BBC named the road as the "most crash prone A road" in the UK. There is nothing in the Local Plan that addresses this issue. There is no capacity within the strategic road network serving our district to accommodate the increase in housing planned, and the Local Plan does not guarantee it.

6. There is insufficient wastewater treatment capacity in the District to support the current houses let alone more. The tankering of wastewater from recent developments that Southern Water has not been able to connect to their network and in recent months the required emergency use of tankers to pump out overflowing sewers within our City/District reflects the gross weakness of short-termism dominated thinking at its worst and is an indictment of how broken our water system is. The provision of wastewater treatment is absolutely critical and essential to the well-being of all our residents and the long-term safety of our built environment. The abdication by those in authority, whether that be nationally, regionally or locally, is causing serious harm to the people to whom those in power owe a duty of care and their lack of urgency in dealing properly with this issue is seriously jeopardizing the environment in which we and all wildlife co-exist.

7. Settlement Boundaries should be left to the determination of Parish Councils to make and nobody else. The proposed policy outlined in the Local Plan to allow development on plots of land adjacent to existing settlement boundaries is ill-conceived and will lead to coalescence which is in contradiction of Policy NE3.

8. All the sites allocated in the Strategic Area Based Policies appear to be in the majority of cases Greenfield Sites. The plan makes little, if any reference to the development of Brownfield sites. In fact, there is not a Policy that relates to this source of land within the Local Plan as proposed. Whilst in the 2021 HELAA Report sites identified as being suitable for development in the District as being Brownfield sites were predicted to yield over 4000 new dwellings. Why would our Local Plan not seek to develop these sites ahead of Greenfield sites?

9. The Local Plan does not define the minimum size that a wildlife corridor should be in width. What does close proximity to a wildlife corridor mean? How can you have a policy (NE 4) that suggests you can have development within a wildlife corridor? These exceptions need to have clear measures and accountability for providing evidence of no adverse impact on the wildlife corridor where a development is proposed. Our view is quite clear. Wildlife and indeed nature in the UK is under serious and in the case of far too many species, potentially terminal threat. Natural England has suggested that a Wildlife Corridor should not be less than 100metres wide. The proposed Wildlife Corridors agreed to by CDC must be enlarged and fully protected from any development. This is essential and urgent for those Wildlife Corridors which allow wildlife to achieve essential connectivity between the Chichester Harbour AONB and the South Downs National Park.

10. Biodiversity Policy NE5 - This is an absolute nonsense. If biodiversity is going to be harmed there should be no ability to mitigate or for developers to be able to buy their way out of this situation. This mindset is exactly why we are seeing a significant decline in biodiversity in the District which should be a rich in biodiversity area and why the World Economic Forum Report (2023) cites the UK as one of the worst countries in the world for destroying its biodiversity.

11. In many cases as set out in the Policies the strategic requirements lack being SMART in nature – particularly the M Measurable. These need to be explicit and clear: "you get what you measure".

12. 65% of the perimeter of the District of Chichester south of the SDNP is coastal in nature. The remainder being land-facing. Policy NE11 does not sufficiently address the impact of building property in close proximity to the area surrounding the harbour, something acknowledged by the Harbour Conservancy in a published report in 2018 reflecting upon how surrounding the harbour with housing was detrimental to its long-term health. And here we are 5 years on and all of the organizations that CDC are saying that they are working in collaboration with, to remedy the decline in the harbour's condition, are failing to implement the actions necessary in a reasonable timescale. CDC are following when they should be actually taking the lead on the issue. Being followers rather than leaders makes it easy to abdicate responsibility. There must be full and transparent accountability.

13. The very significant space constraints for the plan area must be taken into account. The standard methodology need no longer apply where there are exceptional circumstances and we are certain that our District should be treated as a special case because of the developable land area is severely reduced by the South Downs National Park (SDNP) to the north and the unique marine AONB of Chichester Harbour to the south. A target of 535dpa is way too high. This number should be reduced to reflect the fact that only 30% of the area can be developed and much of that is rural/semi-rural land which provides essential connectivity for wildlife via a number of wildlife corridors running between the SDNP and the AONB. Excessive housebuilding will do irretrievable damage to the environment and lead to a significant deterioration in quality of life for all who reside within the East / West corridor.

14. Many of the sites identified in the Strategic & Area Based Policies could result in Grade 1 ^ 2 farmland being built upon. The UK is not self-sufficient in our food security. It is short-sighted to expect the world to return to what we have come to expect. Our good quality agricultural land should not all be covered with non-environmentally friendly designed homes.

Object

Document Element: Policy H8 Specialist accommodation for older people and those with specialised needs**Respondent:** Miller Homes and Vistry Group [8065]**Agent:** Tetra Tech (Natalie Wilson) [8256]**Summary:**

Object to policy as currently worded; runs counter to provisions of A6 allocation policy and masterplan; retrospective inclusion would threaten development approach and potentially viability.

Full text:

We object to this policy as currently worded. Whilst recognizing there may be a need for specialist housing for older persons, the policy as worded runs counter to the provisions of the A6 West of Chichester allocation policy and masterplan for the site, neither of which include for specialist accommodation for older persons referenced in the West of Chichester Allocation policy. Miller and Vistry made comments on the regulation 18 plan (DM2 as was) to the same affect but have had no subsequent discussions with CDC about such a requirement. T Notwithstanding the above, in response to comments from the Housing Officer to the phase 2 application, the phase 2 proposals do include a proportion of bungalows to cater for down sizers and older persons.

Change suggested by respondent:

As a solution, and assuming such a policy is justified (on which no comment is made) it is recommended that the policy is reworded in a similar way to Policy H6 (subject to our comments on that policy) to make it clear that provision of specialist accommodation on SDLs will be only expected where allowed for in the relevant allocation policy having been discussed and agreed with the relevant developer or site promoter.

Document Element: Policy H8 Specialist accommodation for older people and those with specialised needs**Respondent:** National Highways (Mr Marius Pieters, Spatial Planning Manager) [8127]**Summary:**

[National Highways letter dated 24/07/23 confirmed representation should be categorised as Comment - Seek to understand/resolve several matters e.g., trip generation.] We seek to understand and resolve several matters including but not limited to:

- reliance on others e.g., service providers to provide the required services
- how, when, and where additional revenue will be sought to cover the cost of services
- how the Council will assess what would be realistic trip generation
- which locations have been considered for specialist accommodation?
- how many facilities have been considered?
- How Over 55's accommodation has been distinguished from aged care accommodation
- How residents in Over 55's accommodation in full-time employment (and still commuting to and from work) have been considered
- what percentage of the population are anticipated to live in these facilities?

Full text:

We have reviewed the publicly available Local Plan documents and provided comments in the attached letter, in relation to the transport implications of the plan for the safety and operation of the SRN.

Our comments include issues to resolve, comments, requests for further information and recommendations. A brief summary of our main comments are:

- the reliance on the delivery of the A27 Chichester bypass improvements project.
- the requirements for new, additional, and adapted processes and assessments, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments.
- collaborative working between agencies in combination with a robust monitor and manage policy.

We hope our comments assist.

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders. We look forward to continuing to participate in future consultations and discussions. Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Background

National Highways has been appointed by the Secretary of State for Transport as strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the strategic road network (SRN).

National Highways is responsible for operating, maintaining, and improving the Strategic Road Network (SRN) i.e., the Trunk Road and Motorway Network in England, as laid down in Department for Transport (DfT) Circular 01/2022 (Strategic Road Network and the delivery of sustainable development).

The SRN is a critical national asset and as such we work to ensure that it operates and is managed in the public interest, both in respect of current activities and needs as well as in providing effective stewardship of its long-term operation and integrity.

Our responses to Local Plan consultations are guided by relevant policy and guidance including the National Planning Policy Framework (2021) (NPPF):

- Transport issues should be considered from the earliest stages of plan-making and development proposals so that the potential impact of development on transport networks can be addressed (para 104).
- The planning system should actively manage patterns of growth such that significant development is focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. (para 105).
- Planning policies should be prepared with the active involvement of highways authorities and other transport infrastructure providers so that strategies and investments for supporting sustainable transport and development patterns are aligned. (para 106).
- In terms of identifying the necessity of transport infrastructure, NPPF confirms that development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe. (para 111).

• Planning policies and decisions should support development that makes efficient use of land, taking into account the availability and capacity of infrastructure and services – both existing and proposed – as well as their potential for further improvement and the scope to promote sustainable travel modes that limit future car use. (para 124).

In relation to the tests of soundness set out at paragraph 35 of the NPPF, in the context of transport, these are interpreted as meaning:

- a) Positively prepared - has the transport strategy been prepared with the active involvement of the highway authorities, other transport infrastructure providers and operators and neighbouring councils?
- b) Justified – Is the transport strategy based on a robust evidence base prepared with the agreement in partnership, or with the support of the highway authorities?
- c) Effective – Does the transport strategy and policy satisfy the transport needs of the plan and is it deliverable at a pace which provides for and accommodates the proposed progress and implementation of the plan?
- d) Consistent with national policy – Does the transport strategy support the economic, social, and environmental objectives of the Plan and the NPPF/NPPG?

We will be concerned with proposals that have the potential to impact on the safe and efficient operation of the SRN; in this case, the A27 trunk road (Chichester Bypass and its junctions) which is the main access route in the Chichester area. We have particular interest in any allocation, policy or proposals which could have implications for the A27 and the wider SRN network. We are interested as to whether there would be any adverse road safety or operational implications for the SRN. The latter would include a material increase in queuing or delay or reduction in journey time reliability during the construction or operation of the development set out in the plan.

National Highways is a key delivery partner for sustainable development promoted through the plan-led system, and as a statutory consultee we have a duty to cooperate with local authorities to support the preparation and implementation of development plan documents.

In accordance with national planning and transport policy and our operating licence, we are entirely neutral on the principle of development as it is for the local planning authority to determine whether development should be allocated or permitted; albeit it must comply with national policy on locating development in locations that are or can be made sustainable. Therefore, while always seeking early and fulsome engagement with local plans and/or developers, we will simply be assessing the transport and related implications of plans or proposals and agreeing any necessary transport improvements and relevant development management policy.

In progressing Local Plans, we will seek to agree the following:

- Assessment tools and methodology
- Baseline Assessment i.e., to demonstrate that the assessment tool accurately reflects current transport conditions
- Comparator case assessment i.e., to forecast the transport conditions that would occur in the absence of the plan
- Forecast modelling i.e., to forecast the transport conditions that would arise with the plan in place, this will include an assessment at the end of the Plan period; and, if required, at full build out if that occurs after the end of the Plan period
- Outputs and outcomes of modelling, demonstrating, as appropriate, what transport infrastructure is necessary to support the plan o It should be noted that a suite of transport modelling tools may be required. This includes strategic modelling covering an area at least one major junction beyond the district boundary, localised network modelling where several links/junctions are close together and/or individual junction modelling
 - o A DMRB (Design Manual for Roads and Bridges) compliancy assessment may also be required for certain highway features, such as Merge/Diverge assessment at Grade separated junctions, link capacity assessments, and others.
- The design of any necessary transport infrastructure, to an extent suitable for establishing deliverability during the plan period at the time that it becomes necessary for the purpose of ensuring that unacceptable road safety impacts or severe operational impacts do not arise as a result of development. This may be to at least General Arrangement design stage or preliminary design stage. Whichever degree of detail is agreed, the products must be in full compliance with the DMRB.
- Industry standard transport intervention costings.
- The delivery/funding mechanisms for necessary transport interventions. It should not be assumed that National Highways will have any responsibility to identify or deliver necessary transport interventions.
- If considered appropriate, a “Monitor & Manage” (M&M) framework, aimed at managing the pace of development in line with the pace of funding and delivery of necessary highway interventions in a manner which responds to the realworld impacts of development may be agreed for inclusion in the plan subject to the adequacy of risk control measures included therein. This can include the move from a ‘predict & provide’ style of delivery to ‘a vision & validate’ style.
 - o Any M&M framework must be based on a “worst case scenario” whereby necessary mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. It must be translated into development management plan policy and policy relating to development allocations.

Further detail on the above can be provided by National Highways.

While ideally all the above should be agreed prior to the Submission of the Local Plan for examination, we recognise that this is not always possible. However, all parties should work towards all matters being agreed and reflected in a Statement of Common Ground (SoCG) by the start of the Local Plan Examination at the latest. Ideally the SoCG between the Council and National Highways would be prepared well in advance of plan submission in order to guide resource input and to track progress towards final agreement on all relevant matters starting from the earliest plan iterations until the final version is agreed.

It is acknowledged that Government policy places much emphasis on housing delivery as a means for ensuring economic growth and addressing the current national shortage of housing. The NPPF is very clear that:

“Strategic policy-making authorities should establish a housing requirement figure for their whole area, which shows the extent to which their identified housing need (and any needs that cannot be met within neighbouring areas) can be met over the plan period.”

However, new DfT C1/22 and the NPPF are equally clear that any development, including housing delivery, must be tempered by the requirement to ensure that the associated transport demand can be accommodated without unacceptable impacts on the safety of the SRN or severe impacts on the operation of the SRN including reliability and congestion. Therefore, as necessary and appropriate, any plan and/or development must be accompanied by suitable mitigation in the right places at the right time, that is to the required design standards and is deliverable in terms of land availability, constructability and funding.

We would also draw your attention to the then Highways England document ‘The Strategic Road Network, Planning for the Future: A guide to working with National

Highways on planning matters’ (September 2015). This document sets out how National Highways intends to work with local planning authorities and developers to support the preparation of sound documents which enable the delivery of sustainable development.

https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/461023/N150227_-_Highways_England_Planning_Document_FINAL-lo.pdf

Responses to Local Plan consultations are also guided by National Planning Policy Framework (NPPF) revised on 20 July 2021 which sets out the government’s planning policies for England and how these are expected to be applied.

Updated Circular (01/2022)

It should be noted that since the start of the Local Plan consultation process, on the 23 December 2022, the Department for Transport released a new circular on the 'Strategic road network and the delivery of sustainable development' (Circular 01/2022), which replaces all of the policies in Circular 02/2013 of the same name. These representations take account of the new circular and the requirements in terms of the Local Plan evidence base and process.

We request that the Local Plan is prepared in line with all aspects of the new circular. Particularly, the principles of sustainable development (paragraphs 11 to 17), new connections and capacity enhancements (paragraphs 18 to 25), and engagement with plan-making (paragraphs 26 to 38).

Regulation 18 submission

In our Regulation 18 submission we noted several matters including:

- The need to mitigate the adverse impacts of strategic development traffic to the A27 Chichester Bypass and its junctions at Portfield Roundabout, Bognor Road Roundabout, Whyke Roundabout, Stockbridge Roundabout and Fishbourne Roundabout and Oving junction.
- The need to identify a mechanism to calculate contributions towards the delivery of the previously agreed Local Plan A27 improvements
- The need to confirm the number of dwellings needed within the plan period
- The need to establish National Highways acceptance of the traffic model reference and future case scenarios
- The need to confirm costs, viability, and funding associated with mitigating the safety and congestion impacts of the development included within the plan.

Local Plan context

This Local Plan (Chichester Local Plan 2021 – 2039), prepared by the Local Planning Authority (LPA) Chichester District Council, sets out the vision for future development in the district and will be used to help decide on planning applications and other planning related decisions including shaping infrastructure investments.

The draft sets out how the district should be developed over the next 18-years to 2039 including for the full Plan period (1 April 2021 to 31 March 2039) the total supply of

- 10,359 dwellings

- 114,652 net additional sqm new floorspace

Minus the completions this is equivalent to around 530 dwellings and 6,150 sqm of floorspace a year.

National Highways Representations

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders.

We have undertaken a review of the Chichester Local Plan 2021-2039 proposed submission version and accompanying evidence documents, our comments are set out in the tables below (following pages). [see table within attachment]

Summary

We have reviewed the publicly available Local Plan documents and provided comments above in relation to the transport implications of the plan for the safety and operation of the SRN. We understand that other technical information is available, but this was not presented as part of this consultation. Chichester, and the A27, are already heavily congested, infrastructure in the existing Local Plan remains undelivered and the growth set out in the new Plan will further increase travel demand.

As presented, satisfying the transport needs of the plan is clearly reliant on the delivery of the A27 Chichester bypass improvements project. The A27 Chichester bypass improvements project is one of 32 pipeline schemes being considered for possible inclusion in National Highways third Road Investment Strategy (RIS3) covering 1 April 2025 to 31 March 2030.

On 9 March 2023 the UK Transport Secretary ensured record funding would be invested in the country's transport network, sustainably driving growth across the country while managing the pressures of inflation. The announcement cited the A27 Arundel Bypass as being deferred from RIS2 to RIS 3 (covering 2025-2030). The transport secretary also identified a number of challenges to the delivery of the road investment strategy and cited the benefit of allowing extra time to ensure schemes are better planned and efficient schemes can be deployed more effectively.

At present, there is no commitment by DfT to carry out the A27 Chichester bypass improvements project. Until the A27 Chichester bypass improvements project is published in the RIS3, consented and a decision to invest is made it cannot be assumed to be a committed project.

We note that the Plan does not address any uncertainty of delivery of the A27 Chichester bypass improvements project and we strongly recommend that there is either no reliance placed on RIS3 to realise capacity for growth in the Plan or that contingency measures are included to cover the eventuality that RIS3 funding is not forthcoming within the plan period. It is not clear that the potential impact of development on transport networks can be addressed in the absence of the A27 Chichester bypass improvements project.

Achieving net zero, reducing emissions reduction, acting on climate, and supporting thousands of new homes and new employment developments will be problematic with existing processes. New, additional, and adapted processes and assessments will likely be required, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments. We acknowledge that change is complex, expensive, and time-consuming, especially for smaller district level Councils. But the hard work will deliver benefits for the Council and residents in the longer-term.

National Highways seeks to continue working with the Council and WSCC to progress coordinated and deliverable packages of interim mitigation measures and alternative transport solutions while a long-term strategic solution is considered by government. This must however be in combination with a robust monitor and manage policy that appropriately manages the risk of unacceptable road impacts resulting from new housing and other development over the Plan period.

We have been in discussion with Chichester District Council regarding their proposed Monitor and Manage Strategy. At present, we do not consider the current strategy to be robust and we seek further information and detail especially on who, when and when monitoring and management will be undertaken. Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas. Any M&M framework must be based on a "worst case scenario" whereby necessary transport mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. The M&M framework must set out that the alternative to mitigation not being delivered is that development does not proceed where that development would give rise to unacceptable road safety risk or severe cumulative impacts on the road network in the absence of that mitigation. The M&M framework must be translated into development management plan policy and policy relating to development allocations.

As we have reiterated throughout our comments, we welcome the opportunity to work with you to address these outstanding matters and we will continue to liaise over submitted Transport Assessment, Travel Plan policy and Monitor and Manage Policy to help to work towards a viable plan. We hope our comments assist.

We look forward to continuing to participate in future consultations and discussions. Please do continue to consult us as the Plan progresses so that we can remain aware of, and comment as required on, its contents.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Object

Document Element: Policy H8 Specialist accommodation for older people and those with specialised needs
Respondent: Obsidian Strategic [7973]
Agent: Andrew Black Consulting (Mr Andrew Black, MD) [7597]

Summary:

The plan fails to adequately consider the need for housing for older people, given that the population over 65 across CDC is significantly in excess of the average in the county, south east and county as a whole.

Whilst this approach goes some way to addressing the care needs it is felt that the policy lacks effectiveness and should take a far more constructive and positive approach to the provision of housing for older people.

Full text:

I write in response to the regulation 19 consultation version of the Chichester Local Plan 20212039 on behalf of my client Obsidian Strategic.

Obsidian Strategic have an interest in a site to the South of Main Road, in Hermitage, within the Southbourne Neighbourhood Plan Area. Further details in relation to the site are set out within the appendices of these representations and referred to throughout.

Housing Requirement

The identified housing need for Chichester District Council (CDC) as calculated by the standard method is 638 dwellings per annum (dpa). However, the local plan only seeks to provide 575 dpa or a total supply of 10,350 over the plan period (2021-2039). As result the proposed strategy represents an under supply of 1,134 over the plan period. Furthermore, the undersupply means that CDC is unable to accommodate the unmet arising from the South Downs National Park.

In recent years CDC has not been able to demonstrate a five year housing land supply nor has it delivered housing against the requirements of the Housing Delivery Test. It is therefore important that the unmet need is made up within the early part of the plan period.

Paragraph 5.2 of the plan states that the under supply is due to constraints across the district particularly the capacity of the A27.

Policy H1 (Meeting Housing Needs) sets out the housing target of 10,350 dwellings to be delivered over the plan period 2021-2039. Considering the existing commitments, allocations and permissions this gives a remaining figure without planning permission of 3,056 homes for allocation in the Local Plan.

Strategic Allocations

Policy H2 of the reg 19 plan sets out the following strategic site allocations which are carried forward from the 2015 Local Plan:

****Table****

Table 11 of the latest Annual Monitoring Report (AMR) (produced in November 2022) show the progress of delivery from these allocations:

****Table****

Table 12 of the AMR sets out the progress of the large sites towards future delivery as follows:

****Table****

The Housing Trajectory as set out in Appendix E of the Local Plan shows delivery of the existing allocations as set out under policy H2. Given that the Land at Shopwyke (A7) and the Land at Westhampnett/North-East Chichester (A9) already have permission for the number of dwellings in the allocation and construction has already started, there is no objection to the predicted levels of delivery as set out in the trajectory. However, the housing trajectory sets out delivery from the Land West of Chichester (Phase 2) (A6) and Tangmere SDL as follows:

****Table****

Given that neither of these sites have outline permission then the delivery of units from both sites in a little over 5 years from the adoption of the plan is considered wholly unachievable.

CDC has presented no evidence to justify how this timeframe would be achieved and it is considered that the trajectory is unreliable as a result.

The Local Plan sets out a Broad Location for Development at Southbourne which would be delivered through either the Neighbourhood Plan process or a Site Allocation DPD:

****Table****

The Housing Trajectory as set out in appendix E of the Local Plan sets out the following delivery from this site:

****Table****

Given that policy A13 remains as a 'broad area for development' it is not considered that there is adequate justification for the trajectory as set out. Notwithstanding the effectiveness of allocating a site in this way, an exact location for the housing is yet to be defined, nor is delivery through the neighbourhood plan/DPD confirmed (further details on this is set out within the reps). Until a more detailed site can be defined and delivery confirmed it is not considered that CDC is able to guarantee delivery of dwellings in the housing trajectory as it has done so within the plan.

Non-Strategic Parish Housing Requirements

Policy H3 sets out the following housing requirements from individual parishes.

****Table****

The supporting text of policy H3 sets out that if draft neighbourhood plans making provision for at least the minimum housing numbers of the relevant area have not made demonstrable progress the council will allocate sites for development within a development plan document in order to meet the requirements of this Local Plan.

Table 13 of AMR identifies that there has been historically poor delivery of net housing completions from parishes:

****Table****

The overall strategy as set out by CDC in the plan is highly dependent on the delivery of housing from Neighbourhood Plan areas. Whilst this approach is not un-sound in itself, it is considered that the plan in its current form allows for little mitigation or alternatives should delivery not come forward in the neighbourhood plan areas.

In order for the plan to be considered positively prepared and justified it is recommended that additional wording is added to policy H3 to state that individual applications can come forward on sustainable sites outside of existing settlement boundaries in parishes should delivery not come forward within the first five years of the plan period. Priority should be given to any sites already identified within draft versions of Neighbourhood Plans.

on sustainable sites outside of existing settlement boundaries in parishes should delivery not come forward within the first five years of the plan period. Priority should be given to any sites already identified within draft versions of Neighbourhood Plans.

Southbourne

As set out, the Local Plan proposes a 'Broad Location for Development' at Southbourne for the delivery of 1,050 dwellings. This approach follows the withdrawal of the previously draft version of Neighbourhood Plan after it was found not to comply with basis conditions following examination in early 2022. Southbourne Parish Council is now pursuing a revised Neighbourhood Plan which has been submitted to CDC for a regulation 16 consultation. Obsidian previously responded to the regulation 14 consultation in late 2022 and these are appended to these representations.

The revised Southbourne Neighbourhood Plan does not seek to allocate any new housing allocations and instead takes a protectionist stance against any new development as an interim position whilst the Local Plan is prepared. However, once the Neighbourhood Plan is made, it would form part of the development plan for CDC. It is highly likely that a made Neighbourhood Plan in the form currently proposed by Southbourne would make the allocation of additional housing in the parish less likely rather than more likely.

The Sustainability Appraisal (SA) as prepared for the regulation 19 of the Local Plan sets out the proposed approach to Southbourne as follows:

3.1. With the decision of Southbourne Parish Council to no longer proceed with the inclusion of a strategic allocation in their neighbourhood plan, the Council considered three options for taking forward development in Southbourne, namely:

- Option 1 - redistribute the housing number elsewhere
- Option 2 - allocate a strategic site
- Option 3 - identify a Broad Location for Development

The SA goes on to set out the reason for option 1, for redistributing the housing number elsewhere, being discounted as follows:

3.2. As set out in the Housing Background Paper, the preferred spatial strategy is to focus the majority of growth at Chichester and the east west corridor, with a focus on the Settlement Hubs within the corridor. To redistribute the housing number to other parts of the plan area would not be consistent with the preferred spatial strategy nor reflective of the role of Southbourne as one of the more sustainable locations in the plan area capable of delivering strategic scale development. The ability to redistribute the number to other locations within the east/west corridor is also severely limited due to infrastructure constraints (impact on A27 junctions) or environmental restrictions (wastewater treatment capacity). For these reasons, Option 1 was discounted.

Whilst it is accepted that the redistribution of the entire requirement of 1,050 homes would be problematic, it is considered that CDC should have tested the allocation of other alternative sites such as that at Main Road, Hermitage and other suitable alternative sites.

The SA goes on to set out consideration of option 2 as follows:

3.3. In order to allocate a site in a Local Plan, it needs to have gone through a rigorous process to ensure that the Council can demonstrate that the allocated site is suitable, given reasonable alternatives, and is based on proportionate evidence. Given there is more than one site or combination of sites that could come forward as an allocation in Southbourne, a clear process setting out for why one site was chosen over another would be needed, informed by site specific technical information.

This is correct and it is therefore not accepted that an approach to allocate a broad area for development would be robust, deliverable or effective. The SA goes on to state:

3.5. The allocation of a strategic site at Southbourne would also be a significant change in approach at a late stage of the Local Plan preparation process. The additional technical evidence that would need to be undertaken to justify a Local Plan allocation at this stage would impact significantly in terms of delay to the finalisation of the Regulation 19 Local Plan and its subsequent submission to the Secretary of State for examination. For these reasons Option 2 was discounted.

This provides further weight to the position set out within these representations that the expectation of delivery from the 'broad area' at Southbourne is overly ambitious and it is clear there is significant technical work to undertake on the delivery of homes from the allocation as part of the future plan making process.

The SA goes on to set out the justification of option 3 as follows:

3.6. The identification of a BLD is consistent with the National Planning Policy Framework (NPPF). Paragraph 68 states that for years 6 -10 of the plan, local authorities should through their planning policies identify a supply of 'specific, developable sites or broad locations for growth'.

3.7. There is no definition of 'broad locations' in national policy. It is generally taken to be an area within which housebuilding could reasonably be expected to take place based on the availability of land having regard to the Housing and Economic Land Availability Assessment (HELAA). A BLD does not have a specific geographic location or physical boundary. Areas are identified as broad locations because at that stage it is not yet possible to identify the precise boundaries of a site until further detailed site work has been done. By identifying a broad location gives flexibility and may increase the prospect of appropriate and effective growth i.e. where there is some doubt as to the most effective site boundary could prevent growth coming

forward or prevent the most sustainable solution. However, a broad location might be expected to accommodate a significant amount of development; in some cases a single site may be of a sufficient size to accommodate all of the potential development or a number of sites that about other sites may be considered together.

This is not considered a rational approach to take. Whilst there is no definition of 'broad location' within national policy it is considered that the words 'specific' and 'developable' must be taken at their basic meaning and indeed as set out in the glossary of the framework. It is not considered that the allocation of such a large area for a 'broad location' would be specific, effective or justified against the tests of soundness in the NPPF.

The allocation of Southbourne under policy A13 would represent over 10% of the total housing delivery in the plan. This is considered too significant to leave to a broad location for development.

As set out, Southbourne Parish Council is already at advanced stages of a revised Neighbourhood Plan which does not include the allocation of any of the development parcel envisaged under policy A13. In terms of delivery through the Site Allocations DPD, the timetable for this is set out within the most recent Local Development Scheme (January 2023) which sets out the following:

****Table****

As set out, the housing trajectory assumes delivery of dwellings from the allocation at Southbourne in 2028/29. Given that the Site Allocation DPD would not be delivered until Winter 26/27 at the earliest, and the delivery through the Neighbourhood Plan has been discounted by the progression of a NP without the allocation, then the deliverability of any development at Southbourne remains wholly unjustified within the plan period.

The SA goes on to set out the approach to alternative sites in Southbourne Parish as follows:

4.3. The 2021 HELAA assessed 41 sites in Southbourne Parish (see Appendix 1). Of these, 18 sites were discounted because the site either had planning permission/were under construction (five sites); it was within the Chichester Harbour Area of Outstanding Natural Beauty (AONB) (eight sites); there was insurmountable access issues (two sites); it was in Flood Zone 3 (one site); or there was a legal restriction on the site use (in this case a Section 106 Agreement restricting use to open space) (two sites). These sites were not considered further for inclusion within the BLD.

The land at Main Road was one of the sites discounted due to being located in the AONB. For the reasons set out within subsequent sections of these representation, it is not considered that it was necessary to discount sites within the AONB as other councils have taken the decision to use such sites to meet housing need and not considered the AONB as an absolute constraint.

Specialist Accommodation for Older People

Para 5.41 of the regulation 19 of the Plan sets out the following:

The Housing and Economic Development Needs Assessment (HEDNA) 2022 estimates the greatest population increase in the district by 2039 to be those in age groups 75 and over. To support an ageing population there should be provision of suitable housing options for the differing needs of individuals, including:

- Sufficient adaptable and/or accessible market housing stock so that those wishing to remain in their own homes can do so as their needs change.
- Smaller homes, for those wishing to downsize, and bungalows.
- Extra care housing, for those able to live relatively independently but requiring on-site support.
- Care homes, for those needing additional support.

Table 8.1 of the HEDNA sets out the current population breakdown for separate groups over 65 and demonstrates that CDC has a significantly higher percentage in all age groups over 65 than the average in West Sussex, the South East or England:

****Table****

Policy 8.12 of the HEDNA goes on to set out the need for different groups as follows:

****Table****

The HEDNA sets out the following commentary in this regard:

8.41 It can be seen by 2039 there is an estimated need for between 2,131 and 2,872 additional dwellings with support or care across the whole study area. In addition, there is a need for 429-800 additional nursing and residential care bedspaces.

8.42 Typically for bedspaces it is conventional to convert to dwellings using a standard multiplier (1.80 bedspaces per dwelling for older persons accommodation) and this would therefore equate to around 238-445 dwellings.

8.43 In total, the older persons analysis points towards a need for around 2,369-3,317 units over the 2021-39 period (132-184 per annum) – the older person need equates to some 17-24% of all homes needing to be some form of specialist accommodation for older people.

Given the significant need for Specialist Housing Accommodation across the district it is vital that this is planned for adequately within the emerging Local Plan. The Planning Practice Guidance sets out why it is important to plan for housing needs of older people as follows:

The need to provide housing for older people is critical. People are living longer lives and the proportion of older people in the population is increasing. In mid-2016 there were 1.6 million people aged 85 and over; by mid-2041 this is projected to double to 3.2 million. Offering older people a better choice of accommodation to suit their changing needs can help them live independently for longer, feel more connected to their communities and help reduce costs to the social care and health systems. Therefore, an understanding of how the ageing population affects housing needs is something to be considered from the early stages of plan-making through to decision-taking.

Paragraph: 001 Reference ID: 63-001-20190626 Revision date: 26 June 2019

The PPG goes on to state how housing requirements of such groups should be addressed in plans:

Plan-making authorities should set clear policies to address the housing needs of groups with particular needs such as older and disabled people.

These policies can set out how the planmaking authority will consider proposals for the different types of housing that these groups are likely to require. They could also provide indicative figures or a range for the number of units of specialist housing for older people needed across the plan area throughout the plan period.

Paragraph: 006 Reference ID: 63-006-20190626 Revision date: 26 June 2019

Policy H8 states:

All housing sites over 200 units, including those allocated in this plan, will be required to provide specialist accommodation for older people to include a support or care component. The specific type and amount of accommodation required will depend on the size and location of the site.

Proposals for specialist housing, such as homes for older people, student, HMOs or essential worker accommodation, and other groups requiring specifically designed accommodation will be supported where the following criteria are met:

- 1) There is an identified need;
- 2) It will not lead to a concentration of similar uses in an area that would be detrimental to the character or function of an area and / or residential amenity;
- 3) It is in close proximity to everyday services, connecting by safe and suitable walking / cycling routes or public transport for the intended occupier;
- 4) It can be demonstrated that the development is designed to provide the most appropriate types of support for the target resident;
- 5) It can be demonstrated that revenue funding can be secured to maintain the longterm viability of the scheme (if relevant to the type of accommodation proposed); and
- 6) The scheme is supported by the relevant agencies (if relevant to the accommodation type to be provided).

Proposals which may result in the loss of specialist needs accommodation will not be permitted unless it can be demonstrated that there is no longer a need for such accommodation in the plan area, or alternative provision is being made available locally through replacement or new facilities.

Whilst this approach goes some way to addressing the care needs it is felt that the policy lacks effectiveness and should take a far more constructive and positive approach to the provision of housing for older people.

The wide range of different housing typologies is set out within the Planning Practice Guidance as follows:

- Age-restricted general market housing: This type of housing is generally for people aged 55 and over and the active elderly. It may include some shared amenities such as communal gardens, but does not include support or care services.
- Retirement living or sheltered housing: This usually consists of purpose-built flats or bungalows with limited communal facilities such as a lounge, laundry room and guest room. It does not generally provide care services, but provides some support to enable residents to live independently. This can include 24 hour on-site assistance (alarm) and a warden or house manager.
- Extra care housing or housing-with-care: This usually consists of purpose-built or adapted flats or bungalows with a medium to high level of care available if required, through an onsite care agency registered through the Care Quality Commission (CQC). Residents are able to live independently with 24 hour access to support services and staff, and meals are also available. There are often extensive communal areas, such as space to socialise or a wellbeing centre. In some cases, these developments are known as retirement communities or villages - the intention is for residents to benefit from varying levels of care as time progresses.
- Residential care homes and nursing homes: These have individual rooms within a residential building and provide a high level of care meeting all activities of daily living. They do not usually include support services for independent living. This type of housing can also include dementia care homes.

[Paragraph: 010 Reference ID: 63-010-20190626].

It is considered that a residential care home (including housing for dementia needs) could be developed on the Land South of Main Road without causing harm to the AONB and this would provide for a clear need within the village whilst also providing employment to local workers.

Development in AONB

The NPPF sets out the following in relation to development in the AONB at paragraph 172 as follows:

Great weight should be given to conserving and enhancing landscape and scenic beauty in National Parks, the Broads and Areas of Outstanding Natural Beauty, which have the highest status of protection in relation to these issues. The conservation and enhancement of wildlife and cultural heritage are also important considerations in these areas, and should be given great weight in National Parks and the Broads. The scale and extent of development within these designated areas should be limited. Planning permission should be refused for major development⁵⁵ other than in exceptional circumstances, and where it can be demonstrated that the development is in the public interest. Consideration of such applications should include an assessment of:

- a) the need for the development, including in terms of any national considerations, and the impact of permitting it, or refusing it, upon the local economy;
- b) the cost of, and scope for, developing outside the designated area, or meeting the need for it in some other way; and
- c) any detrimental effect on the environment, the landscape and recreational opportunities, and the extent to which that could be moderated

Footnote 55 of paragraph 172 is relevant for the consideration of what is considered as major development and states:

For the purposes of paragraphs 172 and 173, whether a proposal is 'major development' is a matter for the decision maker, taking into account its nature, scale and setting, and whether it could have a significant adverse impact on the purposes for which the area has been designated or defined.

No evidence is set out within the Local Plan or supporting evidence base to state what is considered to be a major development site in the district.

Neither the Chichester Harbour AONB: State of the AONB Report (May 2018) or the Chichester Harbour AONB Landscape Character Assessment (April 2019) contain any references to what is considered to constitute a major development.

This is a matter which has been considered at length within other Local Plan examinations. As part of the evidence for its Local Plan, the South Downs National Park sought successive legal opinions from James Maurici QC on what should be considered as 'Major Development' in the AONB and have subsequently become widely known as the 'Maurici Opinions' in other Local Plan examinations. The opinions set out the following conclusions:

- It is a matter of planning judgement to be decided by the decision maker.
- Major development is to be given its ordinary meaning, and it would be wrong to apply the definition of major development contained within the Town and Country Planning (Development Management Procedure) (England) Order 2015. It would also be wrong to apply any set or rigid criteria for defining major development, and the definition should not be restricted to development proposals that raise issues of national significance.
- The decision maker may consider whether the proposed development has the potential to cause a significant adverse impact on the purposes for which the area has been designated or defined, rather than whether there will indeed be a significant adverse impact from the proposed development.
- The decision maker may consider the proposed development in its local context as a matter of planning judgement.
- There may be other considerations but which may not determine whether a proposed development is major development. For example, if the proposed development is Environmental Impact Assessment (EIA) development.
- The ordinary sense of the word 'major' is important and the decision maker should take a common sense view as to whether the proposed development could be considered major development.

In the Mid Sussex District Council Site Allocations DPD Evidence Base there is a topic paper setting out consideration of Major Development in the AONB and concludes that several of the allocations, in some cases up to 70 dwellings, would not be classed as major development in the AONB following a detailed review of each of the factors as set out in footnote 55 of the NPPF against each proposed allocation.

It is considered that this approach should have been undertaken for each of the individual sites discounted in the Local Plan (including Main Road, Hermitage), rather than simply discounting on the sole fact that they were in the AONB.

Sustainability Appraisal

The legal frameworks for SAs are set out within section 19 of the Planning and Compulsory Purchase Act 2004 which states that the authority must prepare a plan with the objective of contributing to the achievement of sustainable development. Moreover, the requirements of the Environmental Assessment of Plans and Programmes Regulations 2004 states that SAs must ensure that the potential environmental effects are given full consideration alongside social and economic issues.

It is not considered that the council has given full consideration to all effects nor are the conclusions of the SA in respect of those impacts robust and logical.

Paragraph 32 of the framework goes on to state that the SA should demonstrate how the plan has addressed relevant economic, social and environmental objectives (including opportunities for net gains). Significant adverse impacts on these objectives should be avoided and, wherever possible, alternative options which reduce or eliminate such impacts should be pursued. Where significant adverse impacts are unavoidable, suitable mitigation measures should be proposed (or, where this is not possible, compensatory measures should be considered).

The SA sets out whether it was reasonable to explore higher growth scenarios as follows:

5.2.12 As discussed above, the PPG on Housing and Economic Needs Assessment sets out reasons for providing for 'above LHN' through local plans, referring to situations where there are "growth strategies for the area... (e.g. Housing Deals); strategic infrastructure improvements that are likely to drive an increase in [need]; or an authority agreeing to take on unmet need from neighbouring authorities..." Also, affordable housing needs can serve as a reason for considering setting the housing requirement at a figure above LHN, with the PPG stating: "An increase in the total housing figures included in the plan may need to be considered where it could help deliver the required number of affordable homes."

5.2.13 However, in the Chichester context there is little or no argument for exploring scenarios whereby the housing requirement is set at a figure above LHN, given the issues discussed above at paragraph 5.2.11. Unmet housing needs are a widespread issue across the sub-region, but there is no realistic potential to provide for unmet housing needs within Chichester. At the time of the Preferred Approach consultation (2018/19), the proposal was to provide for both locally arising housing needs in full and a proportion of the unmet needs arising from the SDNP (41 dpa). Also, it is noted that the SA report published as part of the consultation considered scenarios – considered to be 'reasonable' at that point in time – that would see the housing requirement set at figures significantly above LHN (800 dpa and 1,000 dpa were tested). However, at the current time, in light of the latest available evidence, scenarios involving setting the housing requirement at a figure above LHN can be safely ruled out as unreasonable.

It is not considered that a figure at or above the LHN would be considered unreasonable and that this matter has not been given full consideration (as per the requirements of the SA regulations), particularly in regard to the social impacts of not meeting housing need in full.

Appendix V of the SA sets out commentary in regard to Parish Scenarios. This sets out the following in relation to Southbourne (with emphasis added):

With regards to the extent of the broad location, this matter is considered fairly uncontentious (for the current purposes of arriving at reasonable growth scenarios). Specifically, the proposal is to identify an area of search that includes developable HELAA sites that relate relatively well to the Southbourne settlement edge and avoid the Strategic Wildlife Corridor associated with the Ham Brook, also naturally mindful of the need to maintain a landscape gap to settlements within Chidham and Hambrook Parish, to the east. It is important to note that the total theoretical capacity of developable HELAA sites within this broad area is far in excess of the number of homes that would need delivered under any reasonably foreseeable scenario.

The broad location provides flexibility to identify a detailed allocation either through a Site Allocations Plan or, should the Parish Council wish to do so, a revised Southbourne Parish Neighbourhood Plan. Site selection considerations will likely include: transport and access (including mindful of links to the train station and by car to Portsmouth); accessibility and community infrastructure (mindful of the secondary school, recreation ground and employment area at the western edge of the village); heritage (e.g. there is a historic rural lane to the east, associated with two listed buildings), topography and landscape (including any visual links to the SDNP and/or the AONB) and the potential to secure a strategic scheme that delivers more than just new market homes, and potentially significant 'planning gain' for the local community.

With regards to the number of homes that should be supported, there is logic to further exploring the scale of growth that was previously considered through the now withdrawn Southbourne NP, and it is not clear that there is an argument for considering lower growth. Additionally, there is a clear argument for exploring the possibility of higher growth, to ensure a suitably comprehensive scheme, with a high level of 'planning gain'.

In conclusion, there are two scenarios for Southbourne Parish, namely completions, commitments and windfall plus either: 1) a broad location for 1,050 homes; or

2) a broad location for ~1,500 homes.

As set out, it is not considered that the SA has considered adequate reasonable alternatives to growth at Southbourne which would include allocation of sites elsewhere in the village including within the AONB that can deliver in the early part of the plan period.

Conclusions

There are significant concerns on the soundness of the plan in terms of whether it is effective, justified, positively prepared or consistent with national policy in accordance with paragraph 35 of the NPPF.

It is not considered that the Council has justified the extent of the under supply of housing against the established housing need. There are significant concerns over the delivery of housing from the strategic allocations within the unjustified timescales as set out within the trajectory contained in the plan.

The Council has not adequately considered reasonable alternatives through the Sustainability Appraisal as published alongside the plan which should have included consideration to the allocation of the site in order to deliver housing in the early part of the plan period.

The plan fails to adequately consider the need for housing for older people, given that the population over 65 across CDC is significantly in excess of the average in the county, south east and county as a whole.

CDC discounted all sites within the AONB, including the site at Main Road, Hermitage, at an early stage of the plan making process. This is not considered effective or consistent with national policy which does not class such sites as an absolute constraint. Other local authorities have allocated such sites in order to deliver the full objectively assessed needs.

ABC will continue to make further representations on the deliverability of the site as part of the plan making progress.

Change suggested by respondent:

It is considered that a residential care home (including housing for dementia needs) could be developed on the Land South of Main Road without causing harm to the AONB and this would provide for a clear need within the village whilst also providing employment to local workers.

Document Element: Policy H8 Specialist accommodation for older people and those with specialised needs

Respondent: The Planning Bureau on behalf of McCarthy Stone [8093]

Agent: Miss Natasha Styles [8040]

Summary:

In order for Policy H8 to be more positively prepared to assist in delivering the substantial need for specialist housing for older people, policy H8 should be amended in line with our recommendation. This should ensure that some of the substantial need for specialist housing for older people is delivered without applicants having to consider policy requirements that would not be relevant for such schemes.

In addition, developers of older people's housing schemes should not be required to demonstrate need given the substantial need identified

Full text:

Policy H8 Specialist accommodation for older people and those with specialised needs

Thank you for the opportunity to comment on the Chichester Local Plan 2021-2039 Proposed Submission Draft (Regulation 19) consultation. McCarthy Stone is the leading provider of specialist housing for older people.

Whilst we are encouraged by 'Policy H8 Specialist accommodation for older people and those with specialised needs' we feel that trying to combine a policy on encouraging specialist housing for older people and specialist accommodation has resulted in a confusing policy that is not positively prepared. Given the substantial need for specialist housing for older people identified within the Chichester Housing and Economic Development Needs Assessment, 2022, Icen (HEDNA) we feel the policy should be redrafted to make it clearer and more consistent with national policy as detailed in our response to policy H5 Housing Mix and specifically paragraphs 001 Reference ID: 63-001-20190626, 003 Reference ID: 63-003-20190626 and 006 Reference ID: 63-006-20190626 of PPG Housing for Older and Disabled People. This should ensure that some of the substantial need for specialist housing for older people is delivered without applicants having to consider policy requirements that would not be relevant for such schemes.

In addition, developers of older people's housing schemes should not be required to demonstrate need given the substantial need identified.

Change suggested by respondent:

Recommendation

In order for Policy H8 to be more positively prepared to assist in delivering the substantial need for specialist housing for older people, policy H8 should be amended so that it reads as follows:

Policy H8 Specialist accommodation for older people and those with specialised needs

Specialist housing for older people

All housing sites over 200 units, including those allocated in this plan, will be required to provide specialist accommodation housing for older people.

The Council will also support proposals delivering specialist housing for older people across all tenures in sustainable locations. Specialist housing for older people should be located in in close proximity to everyday services, be well connected by safe and suitable walking / cycling routes or public transport for the intended occupier.

Specialist housing

Proposals for specialist housing, such as homes for, students, HMOs or essential worker accommodation³⁷, and other groups requiring specifically designed accommodation will be supported where the following criteria are met:

1. There is an identified need;
2. It will not lead to a concentration of similar uses in an area that would be detrimental to the character or function of an area and / or residential amenity;
3. It is in close proximity to everyday services, connecting by safe and suitable walking / cycling routes or public transport for the intended occupier;
4. It can be demonstrated that the development is designed to provide the most appropriate types of support for the target resident;
5. It can be demonstrated that revenue funding can be secured to maintain the long-term viability of the scheme (if relevant to the type of accommodation proposed); and
6. The scheme is supported by the relevant agencies (if relevant to the accommodation type to be provided).

Proposals which may result in the loss of specialist needs accommodation will not be permitted unless it can be demonstrated that there is no longer a need for such accommodation in the plan area, or alternative provision is being made available locally through replacement or new facilities.

Document Element: Policy H8 Specialist accommodation for older people and those with specialised needs

Respondent: VIVID (Mr Matthew Turpin, Public Affairs Lead) [8095]

Summary:

We consider this needs to be better defined. Given the demographic changes and if the district wishes to see a greater proportion of specialist older people's housing delivered at low cost, greater clarity is needed.

Full text:

We consider this needs to be better defined. Given the demographic changes and if the district wishes to see a greater proportion of specialist older people's housing delivered at low cost, greater clarity is needed.

Change suggested by respondent:

At present, we do not consider the existing reference to "opportunities should be taken..." to be sufficient to really drive delivery. However, any final policy should allow for flexibility in the provision of suitable housing relative to the site in question. We would also like to see a more universal policy, which takes into account disability and other need requirements.

Object

Document Element: Policy H8 Specialist accommodation for older people and those with specialised needs

Respondent: West Sussex County Council (Tracey Flitcroft, Principal Planning Officer) [8119]

Summary:

It is noted that the plan refers to older person housing as specialist housing. WSCC strategy supports the provision of 'extra care housing' while this might be similar development it enables younger people to access the accommodation for whatever medical reason i.e. MS, strokes rather than limiting it to a certain age group. Officers are happy to meet and discuss this further.

Full text:

The comments included below from WSCC are Holding Objections. We will continue to work with Chichester District Council and as further work is completed will consider if objections can be withdrawn.

Transport Overview

The County Council has worked with Chichester District Council to develop the Chichester Local Plan and its supporting evidence base and will continue to do so. Although the overall direction of the Local Plan is supported, from a highways and transport perspective, there are three key issues remaining that need to be addressed in order to demonstrate that the Plan is sound:

1. There is insufficient evidence to demonstrate that key infrastructure (i.e. Terminus Road Diversion) will be deliverable;
2. The package of sustainable transport infrastructure and measures is not yet sufficiently well-developed to demonstrate that it is deliverable as part of the monitor and manage process; and
3. There is insufficient evidence to demonstrate that the capacity of the transport network can accommodate the scale of development proposed as part of the Southbourne Broad Location for Development.

The following sections explain; a) the reasons for these issues; b) why they affect the soundness of the Local Plan; and, c) what changes should be made to the Local Plan to remedy the issues.

Deliverability of Key Infrastructure

The recommended transport mitigation strategy, as assessed using the Chichester Area Transport Model for 2039 has been demonstrated to be capable in-principle to prevent the development from resulting in severe residual cumulative impacts on the highways and transport network. However, there are significant risks to deliverability of junction mitigation measures, which have required further work to be undertaken on developing a short to medium term strategy based on phased prioritisation of infrastructure and sustainable transport improvements, to be governed under a monitor and manage approach.

There are three locations where new highway alignments are proposed outside of existing highways boundaries. Two of these may include significant earthworks or structures to be delivered, being Stockbridge Link Road and Terminus Road diversion. The cost of the mitigation strategy exceeds the likely value of developer contributions and additional funding has not yet been secured.

At the Regulation 18 consultation stage in December 2018 to January 2019 the County Council identified delivery risks with the Stockbridge Link Road and Terminus Road Diversion schemes due to the earthworks likely to be required and to confirm the extent of land take required for both schemes. The County Council stated that feasibility work would need to be undertaken for these improvements prior to Plan submission to confirm that the schemes are deliverable. A brief for such a feasibility study was agreed in 2019, but to date, this work has not been commissioned. It is the County Council's view that Stockbridge Link Road (SLR) should be disregarded as a potential part of a long-term transport mitigation strategy for 2039 and beyond until such time as it can be demonstrated that the scheme is deliverable. Paragraph 8.14 of the Local Plan acknowledges that the SLR is not deliverable as part of the Local Plan mitigation package.

The Terminus Road Diversion is still identified as part of the highest priority in the Local Plan mitigation package (i.e. A27 Fishbourne Junction) which is expected to be delivered once sufficient funding is collected. The County Council considers that in the absence of this feasibility work, the deliverability of the Terminus Road Diversion cannot be confirmed. In particular, given the recent impacts of inflation in the construction industry, this work will need to robustly estimate the costs and confirm delivery arrangements. In the absence of this feasibility work, there is currently insufficient evidence to confirm that the Local Plan complies with Paragraphs 11 and 106 of the NPPF as key infrastructure does not appear to be deliverable.

In order to remedy this issue regarding the Terminus Road Diversion, the County Council requests that feasibility work is undertaken prior to the examination to confirm deliverability of the proposed Terminus Road Diversion.

Sustainable Transport Infrastructure & Measures

The transport study modelling for end of Plan period also includes some proposed highways mitigation schemes within Chichester City. The County Council has previously requested that these be replaced by sustainable transport improvements to comply with the West Sussex Transport Plan 2022-2036. However, only limited modification has been made to these proposed schemes, with a suggestion in text at paragraph 7.3.2 of the main transport study that the costs for these schemes can be reallocated to sustainable transport improvements which are not specified. Although this does help to explain how sustainable transport infrastructure schemes and measures can be at least partially funded, it is rare that schemes will be fully funded

using developer contributions. Furthermore, funding is not the only issue that needs to be overcome to secure delivery of these schemes and measures.

The Infrastructure Delivery Plan (IDP) lists the proposed mitigation measures and in some cases provides information on the rationale, phasing, cost, funding and delivery arrangements. However, there are still many gaps in the information, probably because schemes are currently at an early conceptual stage. The County Council's experience is that it is unlikely that schemes will be fully funded using developer contributions (because doing so would not be compliant with the CIL regulations) so delivery of these schemes will be partially dependent on securing funding from central Government or other sources. The IDP currently fails to identify the scheme-specific requirements for additional funding and the overall scale of additional funding required.

The County Council considers the level of information currently available on the sustainable transport package to be insufficient to demonstrate deliverability of a credible and coordinated sustainable transport package of improved infrastructure and services. Therefore, there is insufficient evidence to confirm that the Local Plan complies with Paragraphs 11 and 106 of the NPPF.

In order to remedy this issue, the County Council requests that further technical work is undertaken to develop the schemes and measures in the sustainable transport package prior to the examination. In particular, this should focus on the following schemes and measures and some cases, this will build on work that has already taken place:

1. St. Paul's & Parklands cycle routes
2. Improving existing public transport services towards Madgwick Lane
3. Provision of improved bus services for the village serving the development areas of Southbourne Parish
4. Improving cycling connectivity to link the built-out areas of Shopwhyke Lakes with Tangmere and Oving etc

As not all the severely impacted A27 junctions have a reasonable prospect of being physically improved in the Plan period, more investigation into potential public transport enhancements is also required, particularly to strengthen routes that cross the bypass. This may require further amendments to the IDP.

This work should aim to identify options for sustainable transport schemes that can be a priority for investment, provide information to enable safeguarding of routes (e.g. cycle routes) from development and provide a basis for applications for third party funding to support their delivery. The relative priority of such measures would need to be considered under the monitor and manage approach by the proposed Traffic and Infrastructure Management Group for implementation in addition to the proposed improvement at the A27/A259 Fishbourne junction.

To address this issue and support delivery of the sustainable transport package, the County Council also recommends the following minor amendments to Policy T1: Transport Infrastructure:

At bullet point .7 change "other small-scale junction improvements" to read "other sustainable transport and safety focused improvements, including at junctions" and change "These will increase road capacity, reduce traffic congestion, improve safety and air quality, and improve access to Chichester city from surrounding areas" to "These will increase road capacity on strategic roads, and on both strategic and local roads reduce traffic congestion, improve safety and air quality, and improve access to Chichester city from surrounding areas notably by encouraging and prioritising sustainable modes."

Southbourne Broad Location for Development

The scale of development that can be accommodated at the Southbourne Broad Location will be, at least partially, dependent on the capacity of the transport network to accommodate the associated traffic movements. As the Broad Location spans the railway line, many of these traffic movements would need to cross the railway line. The County Council is concerned that there is currently insufficient capacity of the existing level crossings, notably at Stein Road, to accommodate the additional traffic movements. This could mean that the cumulative impact of development on the traffic network is severe, which is not consistent with Paragraph 111 of the NPPF.

The transport evidence base does not yet provide sufficient assurance that the proposed scale of development can be accommodated. This is because the base level of traffic flow has not been compared to local traffic counts, either in the initial validation of the strategic model or through a new count which the County Council has previously requested, and the assumptions about level crossing downtimes have not been validated against observed data. The County Council is concerned that the assessment of capacity of the local road network to accommodate the quantum of dwellings proposed for the Broad Location may be overoptimistic by underestimating existing flow levels and the duration of level crossing downtime. As a consequence, the proposed quantum may not be deliverable without unacceptable impacts to the conditions on Stein Road and to the level of traffic seeking to use rural lanes to the north of the village to avoid the level crossing.

In order to remedy this issue, the County Council requests that either additional transport evidence is provided prior to the examination to demonstrate that the proposed scale of development is deliverable, or that Policy A13 is changed to remove the proposed scale of development until such evidence is provided.

The following comments from education, minerals and waste, Adults Services and Health, highways & transport and public rights of way, do not affect the soundness of the Plan. However, Chichester District Council should take these into account and, where possible, make minor amendments to the Local Plan and/or evidence base studies before submission of the Local Plan for examination. Officers are happy to meet and discuss any of these comments, and proposed minor amendments to address these comments, ahead of submission:

1) Education

Land West of Chichester

Previous comments have been made requesting that the policy refers to 'Phase 2 should include expansion of the primary school for the further 1FE of teaching accommodation with nursery and SEND provision'. While it is recognised that reference is made to this in the IDP this is a supporting document to the Local Plan and should not be solely relied on. It is requested that paragraph 10.19 is amended to read: 'a local centre with retail, community and employment uses (minimum of approximately 2500 sqm E(g)(i) Use Class), two form entry (2FE) primary school and one form entry (1FE) teaching accommodation with nursery and SEND, informal and formal open space (including a country park), allotments,....'

This should also be included in the 3rd bullet point of Policy A6 or the wording of the policy should be drafted to reflect more recent policy requirements i.e. Provide for infrastructure and community facilities in accordance with the most recent Infrastructure Delivery Plan.

There are some inconsistencies with the wording of the strategic policies, not every policy includes the criterion 'Provide for infrastructure and community facilities in accordance with the most recent Infrastructure Delivery Plan.' While this may be due to some policies being carried through from the adopted local plan it is inconsistent.

Policy A8 Land East of Chichester

As an education authority WSCC do not request 1FE schools in line with government guidance. As per our earlier comments and discussions we

requested a 2 FE primary school for the site.

3rd bullet point of Policy A8 should be amended to read: 'A neighbourhood centre incorporating local shops, a community centre, flexible space for employment/ small-scale leisure uses and a one-form (expandable to two-form) two form entry primary school with provision for early years/ childcare and special educational needs and disability...'

2) Minerals and Waste

The references to safeguarding minerals is inconsistent and it is suggested that the wording in the email sent to CDC (attached) in relation to Policy AL3 should be used in the policies for the other sites for consistency. Reference to safeguarding minerals and waste infrastructure should also be included in some other policies as previously indicated:

- Policy A2 – needs to include reference to safeguarding minerals and waste infrastructure.
- Policy A7 – needs to include reference to safeguarding waste infrastructure.
- Policy A15 (Loxwood) – needs to include reference to minerals safeguarding as within the clay MSA.
- Policy A21 – needs to include reference to minerals safeguarding.

Also, the reference to the safeguarding guidance needs to be checked to ensure that it is worded correctly as 'Minerals and Waste Safeguarding Guidance'.

3) Older Person Housing

It is noted that the plan refers to older person housing as specialist housing. WSCC strategy supports the provision of 'extra care housing' while this might be similar development it enables younger people to access the accommodation for whatever medical reason i.e. MS, strokes rather than limiting it to a certain age group. Officers are happy to meet and discuss this further.

4) Highways and Transport

Public Transport Priority Infrastructure

The Public Transport section of the main transport study report starting at paragraph 6.2.7 requires revisiting. There is reference to "an expansion of the bus priority lane system within Chichester City Centre" which does not match the existing bus provision in the City which does not provide bus priority lanes on street. It does have restrictions on motor traffic in the adjoining parts of South Street and West Street which provide for bus and cycle only access in both directions of travel plus access for essential goods vehicle loading in the westbound direction only. In addition, the suggestion in the following paragraph for "a time-based system where certain routes are restricted to public transport only during specific times" is not evidenced or developed and as such considered unlikely to be practical and enforceable at most locations used by bus routes in the City. More developed proposals for additional bus priority, improvements to bus passenger facilities or testing of specific locations for bus-only access would be welcomed as part of developing a costed sustainable transport mitigation package.

Park and Ride

The discussion of possible park and ride facilities for the City at paragraphs 6.2.9 to 6.2.16 of the main transport study should also acknowledge. An important part of making park and ride well used by motorists is increasing the price of city centre parking to provide a financial incentive to take up significantly cheaper park and ride charges for parking and travel. However, if park and ride sites are not provided accessible to all major approach routes to the city, such a charging strategy would not be seen to be equitable, whereas only a single site is proposed in the District Council's emerging parking strategy and the report acknowledges at 6.2.11 that "locations for potential park and ride sites are also deemed to be limited". The bullet at 6.2.15 "Cost of schemes compared to benefit are likely to be initially lower than highway schemes" may have been incorrectly worded given that this is listed as an issue rather than a benefit. The text may have been intended to say that the ratio of benefit to cost for park and ride schemes may be lower than for conventional highway schemes?

A286 New Park Road / A286 St Pancras Road (Junction 7)

This junction scheme includes pedestrian crossing facilities which are welcomed and also includes a length of advisory cycle lane starting in the middle of the junction for cyclists remaining on St Pancras. However, the approach to the junction on St Pancras from Eastgate Square remains intimidating to cyclists, so further measures would need to be added to make the layout cycle-friendly or the cycle facility is likely to be of limited benefit. This could include decreasing traffic speeds. Until this is done the conclusion at 8.4.4 of the main transport study; "The mitigation scheme includes improvements for pedestrians and cyclists which will lead to increased use of active travel modes and reduce the need for physical mitigation here" is only supported for pedestrians, not for cyclists.

A259 Via Ravenna / A259 Cathedral Way Roundabout (Junction 8)

It is stated at 7.3.8 of the main transport study that "the mitigation may be required to avoid queuing back towards the A27, as well as for capacity issues". In light of this potential safety issue for the previous junction on Cathedral Way and for the A27 Fishbourne junction, the proposal at 7.3.6 that the scheme delivery should be tied to the monitor and manage regime to see if and when it is required is accepted. This is different to the approach for other junctions in the City because of the potential safety issue. This monitoring approach would be likely to follow after the A259 Cathedral Way / Fishbourne Road East / Terminus Road (as diverted) (Junction 10) improvement, which is to be brought forward as an integral part of the A27 Fishbourne roundabout mitigation scheme, but may allow for increased eastbound flows on Cathedral Way.

A286 Northgate Gyratory

An additional mitigation scheme is proposed at paragraph 7.3.134 of the main transport study for the A286 Northgate Gyratory along its southern arm from Oaklands Way to Orchard Street. The proposal to add traffic signals is welcomed in concept as it can help to control traffic speeds making the junction more friendly for cyclists and pedestrians. However, the layout shown at figure 7-8 does not maximise the opportunity to improve convenience and safety for pedestrians by providing a priority link to reach the central island, which contains employment space and the fire station, nor to assist crossing the exit towards Orchard Street. The scheme would benefit from further development to prioritise active travel movements and should also be fitted with transponders for bus priority.

Fishbourne Road West / Appledram Lane South (Junction 11)

At paragraphs 7.4.1 to 7.4.2 of the main transport study, the junction of Fishbourne Road West / Appledram Lane South (Junction 11) is considered. The proposal to mitigate impacts at this junction through delivery of the Stockbridge Link Road scheme is not considered deliverable, so the approach at this location requires re-thinking. The County Council would not support measures to increase capacity for through traffic on Appledram Lane South, the approach should be to reduce severance and improve safety and comfort for active travel on Appledram Lane by reducing vehicle speeds and as far as possible volume. This should consider the needs of pedestrians and cyclists both for local access and for users of the Salterns Way leisure cycling route.

TEMPro Background Traffic Growth Comparisons

At section 10.2 of the main transport study a comparison is made of the TEMPro 7.2 growth rates used in the study for external traffic with new TEMPro 8.0 growth rates since released by the Department for Transport, which notes that the TEMPro 8.0 rates are significantly lower, if these rates

were used then the level of transport impacts could be lower. Unfortunately, a number of highways authorities in the Transport for the South East (TfSE) area including the County Council and Hampshire County Council have concerns that the planning assumptions used in TEMPro v8 core growth scenario underestimate the numbers of additional households forecasted compared to targets in adopted Local Plans for delivering new dwellings. TfSE are currently raising these collective concerns with DfT with a view to obtaining an early update to TEMPro 8 planning assumptions. Although for the purposes of this study TEMPro is not applied to trips produced in Chichester District, from the County Council's analysis TEMPro v8 core underestimates the increase in households per year in Arun District by over 50% and in Horsham District by 30% when compared with adopted development plans. On this basis it may be useful to instead compare TEMPro 7.2 with TEMPro 8.0 high growth scenario.

North of District Spatial Scenarios Testing

For the Northern Spatial Scenarios Test provided as an appendix to the main transport study, this had not been updated for the final preferred spatial strategy or in light of the County Council's previous comments on the March 2022 issue to the District Council. The spatial strategy now is similar but not identical to the Scenario 4: Significant Growth 1 option in the reported tests, totalling 370 dwellings across the four northern parishes, compared to 410 in the test. In both cases the largest allocation is at Loxwood; 220 dwellings were proposed in the Scenario 4 as compared to 200 in this test. Some other tests proposed higher numbers.

The testing in the northern part of the district had used the same trip generation rates per dwelling as in the South of the District, but the County Council considers that in practice private motor vehicle trip generation per dwelling is likely to be higher due to the rural nature of the area, including a lack of local facilities and shops within walking distance of development, a very low level of public transport services and lack of surfaced cycle routes. The level of development proposed is not at the level capable of delivering transformative transport improvements to match the trip making patterns around Chichester and the A259 corridor to Bosham and Southbourne. This may be offset in part by the lower total amount of development compared to the tested scenario 4. Nonetheless, it would be helpful to adjust the scenario for the spatial strategy now proposed and to provide information on additional traffic movements per peak hour from these parishes using the A272 at junctions at Wisborough Green and reaching the A272/A29 junction at Billingshurst and the A272/A283 junction at the north of Petworth.

Neutral Month and Summer Month Comparison Technical Note

The Neutral Month and Summer Month Comparison Technical Note in the main transport study treats July as a neutral month rather than a summer month. Paragraph 1.3.1 states "The flows were analysed by looking at traffic data for August 2019 this being considered to represent summer traffic. This was compared against traffic data from the neutral months of June, July, September and October also from 2019." The County Council does not accept this methodology as school summer holidays start part way through July and education traffic is also affected by the formal exam period, whilst there is typically a high level of seasonal leisure traffic including summer outdoor events in this month. It is acceptable to use August alone as the summer comparator month. However, July traffic should be removed from the neutral months analysis and should be substituted with May traffic data from the same year of 2019, provided that sufficient data is available from that month.

5) Public Rights of Way (PRoW)

It is a positive step to see PRoW acknowledged as valued by communities and as part of the area's green infrastructure. Whilst Policy P14 (Green Infrastructure) states that development proposals should not be detrimental to the network of public rights of way and bridleways (please note bridleways are Public Rights of Way), a more proactively positive approach that seeks enhancements to the network as mitigation, would be welcomed. The improvement, upgrading of existing PRoW and creation of new PRoW where possible, to allow for a greater number of users to access the network would be beneficial. This is somewhat addressed in Policy T1 which refers only to routes identified in the Local Transport Plan, Local Cycling and Walking Infrastructure Plan (LCWIP) and the Infrastructure Delivery Plan. Opportunities to these, should not be limited if they arise elsewhere. It is surprising to see there is no mention of PRoW within Chapter 8 under Active Travel – Walking and Cycling. The PRoW network provides extensive walking and cycling opportunities, often off-road, and important links between places and non-PRoW routes.

Chichester Local Plan – Proposed Submission

Duty to Co-operate

The Statutory Housing Authority welcomes the opportunity to comment on the Chichester Local Plan 2021 – 2039 and strongly commends the Local Planning Authority on progressing with its plan-making activities at a time when a number of Local Planning Authorities across the country have stalled owing to a state of flux in the national policy picture.

Chichester District Council Housing Authority considers that the Chichester Planning Policy Team have engaged in a pro-active manner in an ongoing basis to meet the needs of our communities. Furthermore, the authority has been consulted throughout in the crafting of the proposed housing policies H1 – H10 and confirm that the Duty to Co-operate has been met in this regard.

Is it legally compliant?

The Housing Authority consider the plan as presented, to be legally compliant and have no specific comments in relation to the Sustainability Appraisal, Habitats Regulations Assessment or the Statement of Community Involvement.

Soundness

The Housing Authority is satisfied that the plan is positively prepared and seeks to meet the housing need for both market and affordable housing, so far as is practicable, whilst having consideration for the various constraints of the plan area including AONB designation, heritage matters, flooding matters and infrastructure capacity issues. The Housing Authority believe the plan seeks to balance between these competing demands in a sustainable and realistic manner for the plan period 2021 -2039.

The Housing Authority consider the plan provides for a reasonable evidence based strategy which is consistent with national planning policy and guidance and contributes to the delivery of sustainable development, having regard to the reasonable alternatives available.

Meeting housing need

The Housing Authority considers the plan meets housing need so far as is realistically possible considering the constraints of the plan area.

Policy H1, including the Broad Spatial Distribution - is noted.

Policy H2, the strategic locations are broadly located in areas where the Council held Housing Register indicates the highest level of housing need.

Policy H3 - is noted.

Policy H4 – The Housing Authority fully endorse and support the provisions contained in Policy H4.

Policy H5 - The Housing Authority is supportive of the housing mix outlined in policy H5 and the ability to reflect local need where it is appropriate to do so. Furthermore it is right to provide this level of certainty, whilst allowing for some degree of flexibility.

Policy H6 - The Housing Authority are in full support of this policy and fully endorse the opportunity for Neighbourhood Planning groups to bring forward Self and Custom Build serviced plots. The Housing Authority are encouraged by the potential that may arise with the call for sites for such plots. We look forward to working with our colleagues and communities to bring forward Self and Custom Build opportunities within the plan area.

Policy H7 - The Housing Authority recognise the difficulties in bringing forward exception sites for affordable housing and welcome this policy which seeks to enable the needs of our rural communities to be met.

Policy H8 - The Housing Authority strongly advocate for the inclusion of specialist accommodation for older people, and the intention is to secure affordable housing across all specialist accommodation for older people, including Extra Care to meet the needs of those unable to secure such accommodation in the open market.

H9 – The Housing Authority support the policy to retain accommodation for rural workers.

H10-H14 – The Housing Authority has no observations to make in relation to these policies.

Document Element: Policy H9 Accommodation for Agricultural, Horticultural and other Rural Workers**Respondent:** West Sussex Growers' Association (Mr John Hall, Executive Member & Consultant) [7857]**Summary:**

Over the last five years the horticultural industry has seen a chronic shortage of workers at all skills levels. This has been a major problem locally due to the very high accommodation and transport costs in the Chichester area.

Providing new, purpose built staff accommodation facilities on site can solve many of these problems. On site accommodation for workers would attract many people who would otherwise not be able to afford to rent rooms in the wider Chichester area (Havant, Selsey, Bognor Regis and Littlehampton) and would also drastically reduce their transport costs.

Full text:

The Government has tasked Growers to grow more home grown produce, increase productivity, reduce food miles and the UK's reliance on imported food. There is also an increasing need for space to grow plants, shrubs and trees. These aims can be achieved; however, the Horticultural and Food Industries need Local Planning Policies to be in place that enables sustainable development. To this end, more flexibility is needed in the current CDC Local Plan - Horticultural Policy to meet the needs of the Horticultural sector.

Have significant reservations in terms of policy's practicality - compliance with M4(2) typically results in a 10% increase in floorspace over and above standard market house types, with a commensurate increase in build costs - seldom reciprocated in an increase in GDV. Will be important to test implications of requirement on whole plan viability, isn't clear whether this has been modelled. Consider would be more appropriate for only a proportion of dwellings to be M4(2) see draft Gosport Local Plan and Havant Housing Delivery Position Statement. Should M4(2) compliance be enforced through Part M of building regulations, would be inappropriate to duplicate matters covered (paragraph 16f of the NPPF) in National Policy.

Document Element: Policy H10 Accessible and Adaptable Homes**Respondent:** The Planning Bureau on behalf of McCarthy Stone [8093]**Agent:** Miss Natasha Styles [8040]**Summary:**

Ensuring that older residents have the ability to stay in their homes for longer through the provision of wheelchair housing, is not, in itself, an appropriate manner of meeting the housing needs of older people.

A supportive local planning policy framework will be crucial in increasing the delivery of specialist older persons' housing. Although adaptable housing can assist it does not remove the need for specific older person's housing.

Housing built to M4(3) standard may serve to institutionalise an older person's scheme reducing independence.

M4 (2) is to be incorporated into the Building Regulations - there is no need for the plan to repeat this element.

M43b relates to wheelchair accessible housing which can only be required on affordable housing where the Council has nomination rights. This should be clarified.

Full text:

Policy H10 Accessible and Adaptable Homes

The Council should note that ensuring that older residents have the ability to stay in their homes for longer through the provision of wheelchair housing, is not, in itself, an appropriate manner of meeting the housing needs of older people. Adaptable houses do not provide the on-site support, care and companionship of specialist older persons' housing developments nor do they provide the wider community benefits such as releasing under occupied family housing as well as savings to the public purse by reducing the stress of health and social care budgets. The recently published Healthier and Happier Report by WPI Strategy (September 2019) calculated that the average person living in specialist housing for older people saves the NHS and social services £3,490 per year. A supportive local planning policy framework will be crucial in increasing the delivery of specialist older persons' housing and it should be acknowledged that although adaptable housing can assist it does not remove the need for specific older person's housing. Housing particularly built to M4(3) standard may serve to institutionalise an older person's scheme reducing independence contrary to the ethos of older persons and particularly extra care housing.

The Council should note that M4 (2) is to be incorporated into the Building Regulations and therefore there is no need for the plan to repeat this element and this element should be removed from the plan so as not to repeat other government requirements. The Council should also note that M43b relates to wheelchair accessible housing which can only be required on affordable housing where the Council has nomination rights and this should be clarified so that this is clear to the reader.

Change suggested by respondent:

Recommendation:

The policy should be amended to reflect the building regulations so it reads as follows:

Policy H10 Accessible and Adaptable Homes

On all residential development sites:

a. 5% of affordable housing must meet wheelchair accessibility standards M4(3)((2)(b)) where there is an identified need on the Housing Register and the Council will have nomination rights.

Object to policy requirement for 124 pitches across the Plan period, which is to be provided for by allocation of pitches on strategic allocation sites proposing 200+ homes. Proposed allocations would not accommodate the overall need and there is no clear quantifiable policy requirement to deliver this need. Approach is not considered to be robust. Clear absence of information regarding the requirements for pitch provision in localities and the site specific needs that are required to be met.

Full text:

1 Introduction

1.1 This representation provides a response to the Regulation 19: Local Plan Consultation in relation to the land at Headfoldswood Farm, Loxwood, RH14 0SX, as shown on the attached Masterplan Promotional Document, and hereon referred to as the site.

1.2 This representation will provide a written responses in relation the questions in the Regulation 19 Local Plan Consultation which directly relate to the promotion of our client's land for future development.

2 Comments on Specific Questions/Tests

2.1 In response to the national planning legislation, this Regulation 19 Local Plan Consultation invites comments on three specific questions, and is the final consultation phase, before the Regulation 19 version of the Local Plan is submitted for examination.

2.2 This representation will respond on these specific questions, and then highlight how our client's site could help fulfil the full housing requirement for the District to be delivered through an appropriate strategic allocation policy within the Council's Local Plan or through an Supplementary Planning Document (SPD).

Is the plan 'sound'?

2.3 Paragraph 35 of the National Planning Policy Framework defines the tests for soundness which requires the plan to be positively prepared, justified, effective and consistent with National Policy. These matters will now be considered in further detail in relation to the current consultation on the Regulation 19 version of the Local Plan.

Is the plan positively prepared and justified?

2.4 Policy S1 of the Draft Local Plan sets out the spatial development strategy for the District and how the Council will achieve sustainable growth over the plan period and Policy H1 sets out the housing target in response to the strategy. Both policies have been informed by the Sustainability Appraisal (SA) dated January 2023 and the Plan objectives, which are set out at paragraph 2.5.2 of the SA and the Council's HEDNA (April 2022).

2.5 The SA then goes on to discuss the potential growth scenarios and confirms two points:

- Standard method housing figure for Chichester (excluding SDNP) is 638 dwellings per annum, or 11,484 in total over the Plan period
- The above figure is capped at 40% above the baseline need and that the uncapped figure is significantly higher than this at 884 dwellings per annum (dpa)

2.6 Of particular note is that point ii. above seeks to cap the overall housing increase by no more than 40% above the previously adopted LP housing figure of 435 dpa. The Local Plan then goes on to constrain housing numbers due to an alleged capacity concern along the A27 strategic road network. The Council therefore result in a constrained housing figure by virtue of the standard method 'steps' and also due to infrastructure capacity. It should be noted that the 435 dpa figure within the 2015 Local Plan was similarly constrained and an early review was the only basis for accepting this reduced housing figure. This early review did not take place.

2.7 In terms of the influence of the A27, this is the key matter that constrains growth within the southern part of the District. This is based on the evidence base documents that state that the road network cannot accommodate an annual housing figure of more than 535 dpa. This is a fundamental point and one that we do not agree and believe there is capacity to accommodate at least the local housing need within the highway network, alongside potential improvements identified for the following reason.

2.8 The Transport Study (January 2023) is the key document on which the Council rely upon to constrain their housing figure to 535 dpa. On review of this document, it is clear that the Council's consultants undertook a sensitivity analysis as to whether the core scenario that supports the 535 dpa position in the local plan could accommodate a higher level of growth. The conclusion in paragraph 5.6.5 and 11.2.3 of the Transport Study appears to be that 700 dpa could be accommodated (in the southern plan area) by the mitigation proposed for the 535 dpa core test, with some additional, and as yet undesigned and not costed, mitigation works beyond those highlighted for the Bognor and Fishbourne roundabouts.

2.9 Accordingly, the Council's own evidence base has undertaken the assessment and concluded that a higher growth figure could be accommodated on the A27, subject to appropriate improvement works. Given the testing of the higher growth figure, which appears to accommodate the higher growth figure, the exceptional circumstances to constrain growth, as set out at paragraph 60 on the NPPF do not exist and the Plan could be considered unsound on this point alone.

2.10 As a result of the above, the SA does not consider a scenario where the Council would meet its local housing need, nor a scenario where it exceeds its local housing need, which is of relevance given the scale of development expected for adjoining authorities, including the highly constrained SDNP.

2.11 It should also be noted that the draft Plan does not therefore address any need in relation to unmet need of neighbouring authorities and it does not contain evidence to suggest that these matters have been discussed with the adjoining Authorities. Notably, Arun District Council have confirmed that they will be objecting to the Plan and currently proposed on the basis that they have a significant housing need themselves. This is likely to be further influenced by unmet need from Chichester, who again are seeking to constrain housing requirements, which was the case in 2015 and the subsequent knock on from that was for Arun to address some of that need in their 2018 Local Plan.

2.12 Given that we do not accept that the A27 capacity matters present a ceiling in terms of housing delivery (based on the Council's Transport Study comments and that of its own consultants), it is not accepted that the Plan and associated SA demonstrates reasonable alternatives have been considered and it is not therefore positively prepared, nor is their approach to housing figures justified.

Effective?

2.13 On the basis of the 535 dpa figure, it is considered that the selected areas for growth and figures are deliverable over the Plan period, however, as set out above, the plan area could accommodate a greater level of growth.

2.14 It should also be noted that the Plan relies on the delivery of Neighbourhood Plan and / or small site allocations DPD. This is set out under Policy H3 in the draft document. This states the following in terms of delivery:

If draft neighbourhood plans making provision for at least the minimum housing numbers of the relevant area have not made demonstrable progress the council will allocate sites for development within a development plan document in order to meet the requirements of this Local Plan.

2.15 The above is not precise and does not provide any clear timetable for delivery within the Plan period. Whilst the strategy in the comments above could be effective, the Local Plan needs to give a clear timescale for completion of the supplementary Development Plan documents in order to give a clear timescale for this to be completed.

Is the plan consistent with National Policy?

2.16 On the basis of the comments above, the approach to selected sites for allocation based on the 535 dpa figure is considered to be consistent. However, due to the lack of evidence to demonstrate this, the 535 dpa figure should be capped. Given the A27 capacity points raised, the draft Plan does not appear to meet the exceptional circumstances allowed for at paragraph 61 of the NPPF to justify their alternative approach. The Plan as proposed is therefore inconsistent with NPPF when read as a whole.

3 Development in Loxwood

3.1 Our client's land is located to the west of the village of Loxwood, which is situated to the northeast of the District. The High Street (B2133) runs through the village, connecting the A281 and A272. For a detailed context appraisal of the site and masterplan vision, please see attached the Masterplan Promotional Document. The site was submitted for the Council's call for sites in February 2019 and is included in Council's latest HELAA.

3.2 The Draft Local Plan defines Loxwood as a service village with local facilities and services, these include an infant and junior school, as well as a medical practice, a local shop and community facilities, including a village hall. The village has been identified in the Local Plan as a suitable location for a higher level of growth as it has suitable HELAA sites which could come forward through the Neighbourhood Plan process.

3.3 It is agreed that a strategic expansion to the west of Loxwood is the best option for growth in the north-eastern area of the District as there are fewer constraints within Loxwood in comparison to other villages within the north-eastern area of the District.

3.4 Policy A15 of the Draft Local Plan states that land will be allocated within the revised Loxwood Plan for a minimum of 220 dwellings and supporting facilities and infrastructure. This is based on a downwards adjustment scenario for Loxwood, but it should be noted this figure is closer to the lower growth scenario of 200 dwellings.

3.5 The Council acknowledges in the SA that the highest growth scenario of 1.650 homes could be justified but there are concerns regarding the deliverability of homes due to the potential scale of allocations to meet the higher growth figure which in turn could affect the Council's ability to deliver the housing within the five year period. However, the Plan currently seeks

to allocate reasonably sized housing allocations on a number of small-scale housing sites which by this logic could equally affect the Council's ability to meet the Council's five year housing supply. It is recommended that the middle, higher growth scenario of at least 825 homes is sought, which would allow for meaningful growth in order to meet the needs generated by the new community, such as the identified primary school. The higher housing figure would also provide the benefit of more affordable housing provision for the north-eastern area of the District.

3.6 Loxwood Parish Council have produced a revised Draft Neighbourhood Plan which seeks to allocate 126 dwellings plus 17 carried forward from the Made Loxwood Neighbourhood Plan, providing a total of 143 dwellings. The Draft Neighbourhood Plan was submitted to the Council under Regulation 14 in December 2020. It is noted in response to the Reg 19 Local Plan consultation, that Loxwood Parish Council will be objecting to policy A15 and the increased housing numbers of 220 dwellings on sustainability grounds, with specific reference to water neutrality. The recent Parish Council meeting notes also indicate that there is currently little appetite to undergo another Neighbourhood Plan review, which will likely require additional resource and cost.

3.7 There is concern that relying on the Neighbourhood Plan to allocate specific sites in Loxwood, will result in unnecessary delay to delivery of housing in this area given the points raised above. Policy A15 is not therefore considered precise and does not provide any clear timetable for delivery in housing within Loxwood within the Plan period. It is therefore recommended that the allocation of housing sites in Loxwood should be based on a higher growth scenario of at least 825 homes which should be delivered either through a Local Plan policy allocation or within an SPD, with a clear timetable of when the SPD will be produced by the Council.

Water Neutrality

3.8 One of the constraints of the north-east of the District is the requirement for all new development to meet water neutrality, to ensure that any new it does not impact further on the habitat site comprising the Arun Valley Special Area of Conservation (SAC) or the Arun Valley Special Protection Area (SPA) & Ramsar site, in terms of groundwater abstraction within the Sussex North Water Supply Zone. It is anticipated that further advice and a mitigation strategy will be created by the Council and its partners to demonstrate how developments can achieve water neutrality. However, at present applicants are required to provide a water neutrality strategy to demonstrate how the development can achieve water neutrality.

3.9 To provide the Council with reassurance that the site is deliverable despite this constraint, our client has commissioned an initial water strategy based on a development of approximately 250 dwellings which includes provision for offsetting. The initial strategy indicates that water neutrality could be achieved for development on the site through water efficient fixtures and fittings, reuse of harvested water through greywater recycling for flushing toilets and offsetting through water efficiency upgrades on an educational facility located within the Sussex North Water Supply Zone. It would therefore appear on the basis of the work undertaken to date, that it would be possible for future development on this site to achieve water neutrality.

4. General Policy requirements

Policy H11 Meeting Gypsies, Travellers and Travelling Showpeoples' Needs - object

4.1 The above policy sets out a requirement for 124 pitches across the Plan period, which is to be provided for by allocation of pitches on strategic allocation sites proposing 200+ homes.

4.2 Whilst we understand that there may be a district wide need, we understand that the underlying rationale underpinning this strategic approach is that insufficient sites came forward as part of the Council's Call for Sites process. However, whilst this tells us about availability of sites, it doesn't dictate the appropriateness of locations for gypsy traveller provision. It should also be noted that the proposed allocations would not accommodate the overall need and there is no clear quantifiable policy requirement to deliver this need. Accordingly, the approach is not considered to be robust.

4.3 What is clear is that plots are currently available in other areas of the district that have not been taken up by the Council for allocation (namely HELAA ref. HB10028).

4.4 From our understanding there appears to be a clear absence of information regarding the requirements for pitch provision in localities and the site specific needs that are required to be met. We have not yet seen any evidence from the Council in respect of engagement with the gypsy traveller community in respect of a desire to be located on suburban residential sites – which we consider would contradict with the typical locations of gypsy traveller pitches which are located on rural sites on the periphery of rural settlements.

4.5 Due to the scale and form of the site and specific access names (larger HGVs for static homes and touring caravans) it makes it very difficult to design and suitable means of access that does not appear overly engineered, within a residential housing estate. No consideration appears to have been given to how this can be accommodated within such a site.

4.6 At this time, we consider it would not be appropriate to include such provision until further evidence has been provided on suitability of the approach, need in this specific location and suitability as part of housing allocation of this scale, with a single point of access.

4.7 On the basis of the above, we object to the proposed policy requirement.

5. Conclusion

5.1 Our client's land is ideally placed to be able to fulfil the sustainable expansion to the west of Loxwood and the much needed, identified housing within the north-eastern plan area. The site measures 57.334 hectares and can be considered as a strategic housing site, west of Loxwood, that would deliver a higher growth of housing within this village and would appear to be able to meet water neutrality requirements. This would also support the viability of the services and facilities in the northern villages. This could include a sustainable addition to the existing village of Loxwood, result in significant enhancements to its existing services and facilities, improved links along, and connectivity to the Wey & Arun Canal and provision of at least

825 homes.

Support

Document Element: Policy H11 Meeting Gypsies, Travellers and Travelling Showpeoples' Needs

Respondent: Horsham District Council (Norman Kwan, Senior Neighbourhood Planning Officer) [8126]

Summary:

We note your position and your requirement to provide a number of pitches and plots for the travelling community during plan period. We support your policy position for intensification of existing pitches. Horsham District can't at this point in time accommodate any of CDC's unmet Gypsy, Traveller and Travelling Show people requirement as we are required to first address our own shortfall, and our evidence demonstrates that this alone will be challenging.

We have a body of evidence to support our position and we will continue to share our evidence with you as our Duty to Cooperate dialogue continues over the coming months. As ever, the latest position regarding Gypsy, Traveller and Travelling Showpeople will be set out in the Duty to Cooperate Statement of Common Ground between our two Councils.

Full text:

Thank you for consulting Horsham District Council on the Chichester Proposed Submission Local Plan 2021-2039. We are grateful for the opportunity to be able to comment on your emerging plan. Overall, we consider that the plan has positively sought to balance the provision of future needs with other wider objectives in a manner that contributes to achieving sustainable development. I would also take the opportunity to reaffirm Horsham District Council's (HDC's) commitment to continued dialogue under the Duty to Cooperate and joint working between our two councils. We have a number of comments on the Proposed Submission Chichester Local Plan 2021 to 2039 to make on individual policies which we have set out below:

Policy S1 Spatial Development Strategy

We support this policy in principle, but consider it is not justified as stands. We note the spatial distribution in the plan period is split into three areas: East – West Corridor, the Manhood Peninsula, and North Plan area (which is the only part of Chichester district which directly adjoins Horsham district). HDC acknowledges Chichester District Council's position that it is not able to meet its entire identified local housing need of 638 dwellings per annum, given the constraints associated with the required upgrades to the strategic road network in order to facilitate growth, potential environmental constraints and wider infrastructure restrictions. It is understood that National Highways requires a cap on growth due to the limited capacity of the A27. The proposed housing supply target is therefore 575 dwellings per annum.

HDC acknowledges and welcomes that significant effort has been put into identifying development capacity in a way that reflects the principle of positive planning. Nevertheless, the NPPF and PPG set a high bar for 'leaving no stone unturned' in respect of meeting development needs. We support that planned growth is directed to sustainable locations where access to local services and access to transport links are easier to access than remote rural areas. It is acknowledged Chichester City is the most populous settlement in the district as well as being most sustainable. We support that growth and future development should be focussed in the East-West Corridor, and in particular in or close to the City, first and foremost. We also acknowledge wider infrastructure deficiencies will need to be addressed in strategic locations before they can accommodate more growth.

We support your continued dialogue with National Highways to support improvements to the strategic road network and note a Statement of Common Ground (SoCG) will be published and updated as part of a continuous dialogue with National Highways. The SoCG is important as part of the justification for a lower housing supply figure and should transparently demonstrate why the constraints on the A27 will not allow higher growth in the East West corridor, in order to evidence that maximum housing needs have been achieved in the City and East West Corridor. This evidence is needed for HDC to inform its own DtC position with Chichester District Council (CDC).

Chichester District is planning below the standard methodology housing target and has therefore asked HDC if it can accommodate some of Chichester's unmet housing need. HDC has confirmed that we are not in a position to accommodate Chichester's unmet development needs because of our own water neutrality constraint. Furthermore, the primary housing market for Horsham District is the Northern West Sussex HMA, whose development needs are substantially driven by the Gatwick sub-region, and it is this HMA that would be prioritised with respect to meeting unmet development needs.

As a partner in the Sussex North Water Neutrality grouping also impacted by this constraint, CDC jointly owns the relevant evidence, and our two authorities share an ongoing commitment to work on this as our Duty to Cooperate dialogue continues. As ever, the latest position with regards to Water Neutrality and the impact on the delivery of housing and other development needs can be set out in a Statement of Common Ground (SoCG) between our two Councils.

Policy NE16 Water Management and Water Quality

We support this policy which is clear in its encouragement of efficient use of water as part of good management framework.

Policy NE17 Water Neutrality

Water neutrality is a significant issue affecting both our districts. Horsham District Council supports this policy which is derived from the joint work undertaken by Chichester District Council, Horsham District Council and Crawley Borough Council. We look forward to continued working with CDC on the development of the implementation scheme, in order to deliver the JBA Water Neutrality Assessment study. This will ensure all new development is in conformity with the Habitat Regulations and can demonstrate water neutrality.

Policy H1 Meeting Housing Needs

As outlined earlier in this response, we acknowledge that land supply in Chichester is constrained, and that CDC meeting the full housing requirement within its administrative boundary during the plan period up to 2039 would be challenging. Horsham District is not however in a position to accommodate any of Chichester District's unmet housing need because of water neutrality and, looking forward, the need to prioritise meeting unmet

needs within our primary housing market: the Northern West Sussex HMA.

Policy H2 Strategic Locations/Allocations 2021 -2039

A significant proportion of CDC's housing supply will be delivered through strategic allocations. Loxwood (220 dwellings) is identified as a strategic allocation and will come forward through the local plan process, with some allocations anticipated to be delivered through local neighbourhood plans. Given the challenges that face Neighbourhood Planning groups in the preparation and delivery of Neighbourhood Plans, (which can potentially delay the delivery of these allocations), we support the identification of strategic sites in the Local Plan, programmed for delivery earlier in the plan period.

As the delivery of strategic allocations requires significant infrastructure planning, including cross-boundary issues relating to the road network, education, healthcare and community facilities, Horsham District Council welcomes continued dialogue with the relevant stakeholders, to ensure development at strategic locations such as Loxwood are delivered in a timely manner and adhere to sustainable development principles. We have some specific concerns relating to strategic allocation policy A15: Loxwood which we have set out under that policy.

Policy H11 Meeting Gypsies, Travellers and Travelling Showpeople's Need.

We note your position and your requirement to provide a number of pitches and plots for the travelling community during plan period. We support your policy position for intensification of existing pitches. Horsham District can't at this point in time accommodate any of CDC's unmet Gypsy, Traveller and Travelling Show people requirement as we are required to first address our own shortfall, and our evidence demonstrates that this alone will be challenging.

We have a body of evidence to support our position and we will continue to share our evidence with you as our Duty to Cooperate dialogue continues over the coming months. As ever, the latest position regarding Gypsy, Traveller and Travelling Showpeople will be set out in the Duty to Cooperate Statement of Common Ground between our two Councils.

Policy A15 Loxwood

We support this policy as it will contribute to meeting Chichester District's unmet housing need, but consider it is not justified as stands and that its effectiveness could be improved. The five villages in the north of the Plan area (Kirdford, Wisborough Green, Loxwood, Ifold and Plaistow) are classified as Service Villages in the emerging Chichester Local Plan. They provide a reasonable range of basic facilities (e.g. primary school, convenience store and post office) to meet the everyday needs of local residents, or are villages that provide fewer of these facilities but that have reasonable access to them in nearby settlements. Loxwood is the strategic site identified to accommodate 220 dwellings over the plan period.

The nearby settlement of Billingshurst, in Horsham District, is considered to be the nearest main settlement to the villages identified above. Given the limited facilities available / or to be provided as part of the Loxwood allocation, it is considered that new residents are likely to be reliant at least some key facilities in Billingshurst, potentially including the GP surgery, the railway station (and rail user car park), The Weald secondary school and sixth form, the library and the retail and community facilities, including the leisure centre. Within Horsham District, there are potential proposals for strategic scale extensions to Billingshurst / new settlements relatively close to Billingshurst. Whilst no decisions have been made with respect to our local plan, housing growth delivered through our own local plan will create potential impacts on existing infrastructure which is already under significant pressure. We therefore require clear evidence that potential cumulative impacts on settlements in HDC have been considered as part of the proposed allocations. We would ask that CDC works collaboratively with HDC and other stakeholders to ensure future pressures on infrastructure in Horsham District is appropriately addressed. Consequently, we seek further clarification in Policy A15: Loxwood to emphasise the importance of collaborative working between stakeholders to mitigate against the potential cumulative impact of development.

I do hope these comments are helpful. I would like to emphasise that they are made in anticipation of further constructive dialogue between our authorities, and with an expectation that matters on which we have flagged concern can be readily addressed, and quite possibly eliminated through our Duty to Cooperate discussions. Should you require any further detail or information in regard to this response please don't hesitate to contact a member of my Strategic Planning team.

Object

Document Element: Policy H11 Meeting Gypsies, Travellers and Travelling Showpeoples' Needs

Respondent: National Highways (Mr Marius Pieters, Spatial Planning Manager) [8127]

Summary:

[National Highways letter dated 24/07/23 confirmed representation should be categorised as Comment - Seeking to understand further e.g., digital nomads.] This policy does not acknowledge or address Motor Homes, Caravans, Vans, converted Buses, Tiny Homes, or other forms of mobile housing in response to the housing crisis and low rental vacancy rates. Nor does this policy address the rise in nomadic and digital-nomad lifestyles. Both have the potential to generated large numbers of additional vehicle movements on the SRN and to create new impacts, for example van dwellers sleeping in road lay-bys.

Full text:

We have reviewed the publicly available Local Plan documents and provided comments in the attached letter, in relation to the transport implications of the plan for the safety and operation of the SRN.

Our comments include issues to resolve, comments, requests for further information and recommendations. A brief summary of our main comments are:

- the reliance on the delivery of the A27 Chichester bypass improvements project.
 - the requirements for new, additional, and adapted processes and assessments, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments.
 - collaborative working between agencies in combination with a robust monitor and manage policy.
- We hope our comments assist.

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders. We look forward to continuing to participate in future consultations and discussions. Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Background

National Highways has been appointed by the Secretary of State for Transport as strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the strategic road network (SRN).

National Highways is responsible for operating, maintaining, and improving the Strategic Road Network (SRN) i.e., the Trunk Road and Motorway Network in England, as laid down in Department for Transport (DfT) Circular 01/2022 (Strategic Road Network and the delivery of sustainable development).

The SRN is a critical national asset and as such we work to ensure that it operates and is managed in the public interest, both in respect of current activities and needs as well as in providing effective stewardship of its long-term operation and integrity.

Our responses to Local Plan consultations are guided by relevant policy and guidance including the National Planning Policy Framework (2021) (NPPF):

- Transport issues should be considered from the earliest stages of plan-making and development proposals so that the potential impact of development on transport networks can be addressed (para 104).
- The planning system should actively manage patterns of growth such that significant development is focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. (para 105).
- Planning policies should be prepared with the active involvement of highways authorities and other transport infrastructure providers so that strategies and investments for supporting sustainable transport and development patterns are aligned. (para 106).
- In terms of identifying the necessity of transport infrastructure, NPPF confirms that development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe. (para 111).
- Planning policies and decisions should support development that makes efficient use of land, taking into account the availability and capacity of infrastructure and services – both existing and proposed – as well as their potential for further improvement and the scope to promote sustainable travel modes that limit future car use. (para 124).

In relation to the tests of soundness set out at paragraph 35 of the NPPF, in the context of transport, these are interpreted as meaning:

- a) Positively prepared - has the transport strategy been prepared with the active involvement of the highway authorities, other transport infrastructure providers and operators and neighbouring councils?
- b) Justified – Is the transport strategy based on a robust evidence base prepared with the agreement in partnership, or with the support of the highway authorities?
- c) Effective – Does the transport strategy and policy satisfy the transport needs of the plan and is it deliverable at a pace which provides for and accommodates the proposed progress and implementation of the plan?
- d) Consistent with national policy – Does the transport strategy support the economic, social, and environmental objectives of the Plan and the NPPF/NPPG?

We will be concerned with proposals that have the potential to impact on the safe and efficient operation of the SRN; in this case, the A27 trunk road (Chichester Bypass and its junctions) which is the main access route in the Chichester area. We have particular interest in any allocation, policy or proposals which could have implications for the A27 and the wider SRN network. We are interested as to whether there would be any adverse road safety or operational implications for the SRN. The latter would include a material increase in queuing or delay or reduction in journey time reliability during the construction or operation of the development set out in the plan.

National Highways is a key delivery partner for sustainable development promoted through the plan-led system, and as a statutory consultee we have a duty to cooperate with local authorities to support the preparation and implementation of development plan documents.

In accordance with national planning and transport policy and our operating licence, we are entirely neutral on the principle of development as it is for the local planning authority to determine whether development should be allocated or permitted; albeit it must comply with national policy on locating development in locations that are or can be made sustainable. Therefore, while always seeking early and fulsome engagement with local plans and/or developers, we will simply be assessing the transport and related implications of plans or proposals and agreeing any necessary transport improvements and relevant development management policy.

In progressing Local Plans, we will seek to agree the following:

- Assessment tools and methodology
- Baseline Assessment i.e., to demonstrate that the assessment tool accurately reflects current transport conditions
- Comparator case assessment i.e., to forecast the transport conditions that would occur in the absence of the plan
- Forecast modelling i.e., to forecast the transport conditions that would arise with the plan in place, this will include an assessment at the end of the Plan period; and, if required, at full build out if that occurs after the end of the Plan period
- Outputs and outcomes of modelling, demonstrating, as appropriate, what transport infrastructure is necessary to support the plan o It should be noted that a suite of transport modelling tools may be required. This includes strategic modelling covering an area at least one major junction beyond the district boundary, localised network modelling where several links/junctions are close together and/or individual junction modelling o A DMRB (Design Manual for Roads and Bridges) compliancy assessment may also be required for certain highway features, such as Merge/Diverge assessment at Grade separated junctions, link capacity assessments, and others.
- The design of any necessary transport infrastructure, to an extent suitable for establishing deliverability during the plan period at the time that it becomes necessary for the purpose of ensuring that unacceptable road safety impacts or severe operational impacts do not arise as a result of development. This may be to at least General Arrangement design stage or preliminary design stage. Whichever degree of detail is agreed, the products must be in full compliance with the DMRB.
- Industry standard transport intervention costings.
- The delivery/funding mechanisms for necessary transport interventions. It should not be assumed that National Highways will have any responsibility to identify or deliver necessary transport interventions.
- If considered appropriate, a "Monitor & Manage" (M&M) framework, aimed at managing the pace of development in line with the pace of funding and delivery of necessary highway interventions in a manner which responds to the realworld impacts of development may be agreed for inclusion in the plan subject to the adequacy of risk control measures included therein. This can include the move from a 'predict & provide' style of delivery to 'a vision & validate' style. o Any M&M framework must be based on a "worst case scenario" whereby necessary mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. It must be translated into development management plan policy and policy relating to development allocations.

Further detail on the above can be provided by National Highways.

While ideally all the above should be agreed prior to the Submission of the Local Plan for examination, we recognise that this is not always possible.

However, all parties should work towards all matters being agreed and reflected in a Statement of Common Ground (SoCG) by the start of the Local Plan Examination at the latest. Ideally the SoCG between the Council and National Highways would be prepared well in advance of plan submission in order to guide resource input and to track progress towards final agreement on all relevant matters starting from the earliest plan iterations until the final version is agreed.

It is acknowledged that Government policy places much emphasis on housing delivery as a means for ensuring economic growth and addressing the current national shortage of housing. The NPPF is very clear that:
 "Strategic policy-making authorities should establish a housing requirement figure for their whole area, which shows the extent to which their identified housing need (and any needs that cannot be met within neighbouring areas) can be met over the plan period."

However, new DfT C1/22 and the NPPF are equally clear that any development, including housing delivery, must be tempered by the requirement to ensure that the associated transport demand can be accommodated without unacceptable impacts on the safety of the SRN or severe impacts on the operation of the SRN including reliability and congestion. Therefore, as necessary and appropriate, any plan and/or development must be accompanied by suitable mitigation in the right places at the right time, that is to the required design standards and is deliverable in terms of land availability, constructability and funding.

We would also draw your attention to the then Highways England document 'The Strategic Road Network, Planning for the Future: A guide to working with National Highways on planning matters' (September 2015). This document sets out how National Highways intends to work with local planning authorities and developers to support the preparation of sound documents which enable the delivery of sustainable development.
https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/461023/N150227_-_Highways_England_Planning_Document_FINAL-lo.pdf

Responses to Local Plan consultations are also guided by National Planning Policy Framework (NPPF) revised on 20 July 2021 which sets out the government's planning policies for England and how these are expected to be applied.

Updated Circular (01/2022)

It should be noted that since the start of the Local Plan consultation process, on the 23 December 2022, the Department for Transport released a new circular on the 'Strategic road network and the delivery of sustainable development' (Circular 01/2022), which replaces all of the policies in Circular 02/2013 of the same name. These representations take account of the new circular and the requirements in terms of the Local Plan evidence base and process.

We request that the Local Plan is prepared in line with all aspects of the new circular. Particularly, the principles of sustainable development (paragraphs 11 to 17), new connections and capacity enhancements (paragraphs 18 to 25), and engagement with plan-making (paragraphs 26 to 38).

Regulation 18 submission

In our Regulation 18 submission we noted several matters including:

- The need to mitigate the adverse impacts of strategic development traffic to the A27 Chichester Bypass and its junctions at Portfield Roundabout, Bognor Road Roundabout, Whyke Roundabout, Stockbridge Roundabout and Fishbourne Roundabout and Oving junction.
- The need to identify a mechanism to calculate contributions towards the delivery of the previously agreed Local Plan A27 improvements
- The need to confirm the number of dwellings needed within the plan period
- The need to establish National Highways acceptance of the traffic model reference and future case scenarios
- The need to confirm costs, viability, and funding associated with mitigating the safety and congestion impacts of the development included within the plan.

Local Plan context

This Local Plan (Chichester Local Plan 2021 – 2039), prepared by the Local Planning Authority (LPA) Chichester District Council, sets out the vision for future development in the district and will be used to help decide on planning applications and other planning related decisions including shaping infrastructure investments.

The draft sets out how the district should be developed over the next 18-years to 2039 including for the full Plan period (1 April 2021 to 31 March 2039) the total supply of

- 10,359 dwellings
- 114,652 net additional sqm new floorspace

Minus the completions this is equivalent to around 530 dwellings and 6,150 sqm of floorspace a year.

National Highways Representations

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders.

We have undertaken a review of the Chichester Local Plan 2021-2039 proposed submission version and accompanying evidence documents, our comments are set out in the tables below (following pages). [see table within attachment]

Summary

We have reviewed the publicly available Local Plan documents and provided comments above in relation to the transport implications of the plan for the safety and operation of the SRN. We understand that other technical information is available, but this was not presented as part of this consultation. Chichester, and the A27, are already heavily congested, infrastructure in the existing Local Plan remains undelivered and the growth set out in the new Plan will further increase travel demand.

As presented, satisfying the transport needs of the plan is clearly reliant on the delivery of the A27 Chichester bypass improvements project. The A27 Chichester bypass improvements project is one of 32 pipeline schemes being considered for possible inclusion in National Highways third Road Investment Strategy (RIS3) covering 1 April 2025 to 31 March 2030.

On 9 March 2023 the UK Transport Secretary ensured record funding would be invested in the country's transport network, sustainably driving growth across the country while managing the pressures of inflation. The announcement cited the A27 Arundel Bypass as being deferred from RIS2 to RIS 3 (covering 2025-2030). The transport secretary also identified a number of challenges to the delivery of the road investment strategy and cited the benefit of allowing extra time to ensure schemes are better planned and efficient schemes can be deployed more effectively.

At present, there is no commitment by DfT to carry out the A27 Chichester bypass improvements project. Until the A27 Chichester bypass improvements project is published in the RIS3, consented and a decision to invest is made it cannot be assumed to be a committed project.

We note that the Plan does not address any uncertainty of delivery of the A27 Chichester bypass improvements project and we strongly recommend that there is either no reliance placed on RIS3 to realise capacity for growth in the Plan or that contingency measures are included to cover the eventuality that RIS3 funding is not forthcoming within the plan period. It is not clear that the potential impact of development on transport networks can be addressed in the absence of the A27 Chichester bypass improvements project.

Achieving net zero, reducing emissions reduction, acting on climate, and supporting thousands of new homes and new employment developments will be problematic with existing processes. New, additional, and adapted processes and assessments will likely be required, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments. We acknowledge that change is complex,

expensive, and time-consuming, especially for smaller district level Councils. But the hard work will deliver benefits for the Council and residents in the longer-term.

National Highways seeks to continue working with the Council and WSCC to progress coordinated and deliverable packages of interim mitigation measures and alternative transport solutions while a long-term strategic solution is considered by government. This must however be in combination with a robust monitor and manage policy that appropriately manages the risk of unacceptable road impacts resulting from new housing and other development over the Plan period.

We have been in discussion with Chichester District Council regarding their proposed Monitor and Manage Strategy. At present, we do not consider the current strategy to be robust and we seek further information and detail especially on who, when and when monitoring and management will be undertaken. Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas. Any M&M framework must be based on a "worst case scenario" whereby necessary transport mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. The M&M framework must set out that the alternative to mitigation not being delivered is that development does not proceed where that development would give rise to unacceptable road safety risk or severe cumulative impacts on the road network in the absence of that mitigation. The M&M framework must be translated into development management plan policy and policy relating to development allocations.

As we have reiterated throughout our comments, we welcome the opportunity to work with you to address these outstanding matters and we will continue to liaise over submitted Transport Assessment, Travel Plan policy and Monitor and Manage Policy to help to work towards a viable plan. We hope our comments assist.

We look forward to continuing to participate in future consultations and discussions. Please do continue to consult us as the Plan progresses so that we can remain aware of, and comment as required on, its contents.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Document Element: Policy H11 Meeting Gypsies, Travellers and Travelling Showpeoples' Needs**Respondent:** South Downs National Park Authority (Clare Tester, Planning Policy Manager) [8124]**Summary:**

We note the findings of the latest GTAA (2022) which is for the area of Chichester district outside the SDNP. The additional pitch provision needs set out in Table 5.1 and 5.2 are for Chichester outside the SDNP only.

We would highlight that there is limited capacity in the National Park to allocate sites for Gypsies and Travellers through duty to cooperate, given significant landscape constraints. Indeed, the protection afforded to National Parks is such that unmet need in the South Downs National Park may be displaced to other (non-designated) authorities outside the National Park.

Policies H11, H12 and H13 are supported, including the mechanisms for making provision for travellers accommodation, i.e. provision of pitches on new strategic allocations and appropriate intensification of existing authorised sites.

We'd welcome continued joint working between the coastal authorities and the South Downs National Park Authority in regard to addressing the need.

Document Element: Policy H11 Meeting Gypsies, Travellers and Travelling Showpeoples' Needs**Respondent:** Southbourne Parish Council (Mrs Maria Carvajal-Neal, Deputy Clerk) [7805]**Summary:**

Legal Compliance – The Parish Council was not consulted about Policies H11, H12, H13 or H14 (or Policy A13/2 and A13/3). Parish Councils are listed as one of the bodies the District Council must consult under the Town and Country Planning (Local Planning) (England) Regulations 2012 (see also Para. 3.4 of the Local Plan Statement of Community Involvement). It has not been possible to consult the community in Southbourne to obtain a view on these policies in the time allotted. This places the Parish Council in a difficult position. Twelve new pitches and 12 new plots is a considerable number to accommodate in addition to those already occupied within the parish and therefore an objection is being raised.

Document Element: Policy H11 Meeting Gypsies, Travellers and Travelling Showpeoples' Needs**Respondent:** Wates Developments and Seaward Properties [8052]**Agent:** Barton Willmore now Stantec (Mr Oli Haydon) [8051]**Summary:**

Object to provision of 12 gypsy and traveller pitches and provision of travelling showpeople site in relation to Policy A13 site allocation.

Full text:

We broadly support the sixteen development requirements included within the allocation wording of emerging policy A13; these are briefly addressed in turn below;

Provide an appropriate mix of housing types, sizes and tenures to meet evidenced local need including affordable housing and specific provision to meet specialised housing needs including 16 serviced self/custom build plots, accommodation for older people and accessible and adaptable homes in accordance with relevant Plan policies; The scheme would present an emerging policy compliant mix of housing types and tenures. We would look to work closely with the local community to identify the appropriate location and phasing for self and/or custom build plots within the Masterplan to ensure the plots come forward in a suitable location that has been considered alongside the wider masterplanning exercise.

Provide 12 gypsy and traveller pitches in accordance with Policy H11; Whilst we recognise the need for the provision of G&T pitches within the District; based on the previous discussions with the Neighbourhood Planning group and local community we feel that the Council would benefit from exploring more appropriate areas for new sites and/or the intensification of nearby sites.

Provide a serviced site(s) for travelling showpeople which should deliver 12 plots, each of sufficient size to allow for the provision of accommodation and equipment plus storage/maintenance, in accordance with Policy H11; As above.

Provide a suitable means of access to the site(s), securing necessary off-site improvements (including highways) in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development) to promote sustainable transport options; The comprehensive masterplanning approach that has been and will continue to be taken with the scheme will ensure a cohesive layout and access arrangement to best integrate with the existing community. Paragraphs 2.20-4 above outline our recommendation to the Council with regards to infrastructure improvements and we maintain that the most effective way of securing on- and off-site improvements is to place the onus on the developer to ensure their delivery and integration with the local community.

Provide any required mitigation to ensure there is no adverse impact on the safety of existing or planned railway crossings; Any submission will be supported by a robust transport assessment and mitigation strategy.

Ensure adequate provision of supporting infrastructure including education provision, community facilities and transport in accordance with the most up to date Infrastructure Delivery Plan; We support the need for supporting infrastructure, which forms a primary objective of the proposals on last east of Southbourne. We feel that their delivery will be most appropriately secured outside of the limitations of CIL.

Give detailed consideration of the impact of development on the surrounding landscape, including the South Downs National Park and Chichester Harbour AONB and their settings. Development should be designed to protect long-distance views to the South Downs National Park; We support the desire to protect these areas and their settings. Any submission will be supported by a full landscape and visual impact assessment to demonstrate that the scheme east of Southbourne can be a cohesive visual element into the existing built form of the village and avoid any element of incongruousness or harmful impact on the surrounding protected areas.

Ensure that multifunctional green infrastructure provision is well related to the overall layout and character of the development as well as providing opportunities to extend into the wider countryside and surroundings; The proposed scheme to the east of Southbourne would be capable of delivering a significant portion of the Green Ring, originally allocated in the Southbourne Neighbourhood Plan 2015. The Consortium is also supportive of a central feature through the site and the approach to align the Green Ring with the north-south public right of way which connects with the green infrastructure on the eastern edge of the neighbouring Cooks Lane development. This approach would allow the green ring to be cohesive with the neighbouring green infrastructure, whilst also maintaining the public rights of way, in conformity with paragraph 98 of the NPPF. Whilst this central 'Inner' Green Ring could include play, gym trail, walking and cycling, benches and a variety of greenspace (amenity and natural), which would create a varied and engaging corridor, we would work with the Neighbourhood Plan Group to identify the best mechanism to position sports and allotments through a masterplanned approach.

Demonstrate that development would not have an adverse impact on the nature conservation interest of identified sites and habitats including the strategic wildlife corridors; We support the desire to protect key habitats and the scheme will be informed by extensive habitat surveys and mitigation strategies.

Provide mitigation to ensure the avoidance of adverse effects on the SPA, SAC and Ramsar site at Chichester Harbour including contributing to any strategic access management issues, loss of functionally linked supporting habitat and water quality issues relating to runoff into a European designated site; We echo the need to avoid adverse effects on the SPA, SAC and Ramsar site at Chichester Harbour and all necessary mitigation will be provided on- and off-site where required.

Protect any other key views; We support the desire to protect the key views of the wider area. Any submission will be supported by a full landscape and visual impact assessment.

Ensure that allocations and policies accord with the sequential approach to flood risk, and that development will be safe for its lifetime, taking account of climate change impacts, as per the requirements set out in national policy and having due regard to the council's latest Strategic Flood Risk Assessment; We support this requirement and discussions with the Environment Agency and the LLFA will inform the most effective flood mitigation and drainage strategy for the site.

Ensure sufficient capacity within the relevant wastewater infrastructure before the delivery of development as required; Addressed in Paragraphs 2.5-10 above, we have concerns regarding the emerging plan's wording around the future capacity improvements of WwTW in the Apuldram catchment.

Demonstrate that development would not have an adverse impact on the significance of heritage assets or their settings; Any submission will be supported by a full heritage assessment and the layout and scale will be adjusted accordingly to best protect any nearby heritage assets.

Maintain the character and integrity of existing settlements and provide clear separation between new development and neighbouring settlements including through the definition and protection of landscape gaps. The consortiums approach allows for the masterplan to be designed to best protect the existing settlement of Southbourne from any coalescence with surrounding hamlets. The location of development to the east of the village and the inclusion of the Green Ring is the most appropriate and effective way to protect the village's visual separation and identity.

Consider the Minerals Safeguarding Area and in line with the West Sussex Joint Minerals Local Plan, a minerals resource assessment may be required to assess if the land contained a mineral resource that would require extraction prior to development. Account should also be taken of the West Sussex Waste Local Plan and associated guidance in relation to safeguarding policy W2. We support this inclusion, and any proposal will be accompanied by a minerals resource assessment if needed.

In general, we support the comprehensive masterplanning approach for development in Southbourne. Our proposals are the result of a complete collaboration between landowners and reiterate that the Consortium has always maintained a desire to deliver a comprehensive development that secures substantial benefits to the existing community. It is obviously important that any landowners included within the proposed allocation are required to work collaboratively with others and the local community, sharing the overall infrastructure and policy requirements fairly and proportionately.

We strongly support an amendment to be made to Policy H2 to allow for the provision of circa (or a minimum of) 1,250 dwellings at Southbourne. The accompanying sustainability appraisal, discussed later, supports a larger quantum of development on this site, with benefits realised of accessibility, environmental quality, climate change mitigation, community enhancement, health, historic environment and landscape. A major element of our proposals at Southbourne are in the infrastructure and community improvements to the local residents and increasing the overall housing numbers by less than 20% on this site is key in the wider delivery of package of the infrastructure improvements associated with the scheme.

There is no intention to deliver piecemeal development proposals within the area, which would likely prejudice the delivery including infrastructure delivery. We maintain the most effective way to ensure the infrastructure improvements associated with the scheme would come forward at an effective and appropriate time would be to remove the need for the proposals to contribute to CIL and instead have a direct commitment between the scheme and the improvements to Southbourne.

Document Element: Policy H12 Intensification sites**Respondent:** Southbourne Parish Council (Mrs Maria Carvajal-Neal, Deputy Clerk) [7805]**Summary:**

Legal Compliance – The Parish Council was not consulted about Policy H12 (or Policy H11 or Policy A13/2) until now. Parish Councils are listed as one of the bodies the District Council must consult under the Town and Country Planning (Local Planning) (England) Regulations 2012. (See also Para. 3.4 of the Local Plan Statement of Community Involvement).

Soundness – Proposed intensification of the site at Sunrise in Southbourne is not deliverable (Policy H12 – Proposed 1 additional pitch at Sunrise as shown in Local Plan Appendix I). The site identified as Sunrise in the Local Plan is already fully occupied and includes the controversial encroachment over a significant length of a Public Right of Way (Footpath 212). An unauthorised park-home dwelling has been recently located over the original route of the PRoW. The site does not have its own access to fresh water or the sewer system and its permission was granted WITHOUT the requirement for this. It would seem that the District Council is attempting to use this proposed intensification to regularise this unauthorised development. This is not acceptable.

Full text:

See representations attached.

Change suggested by respondent:

It is strongly recommended that the Inspector visits this site and that the proposal at Sunrise is deleted from the Local Plan.

5983

Object

Document Element: Policy H12 Intensification sites**Respondent:** Westbourne Parish Council (Clare Kennett Parish Clerk) [1051]**Summary:**

The Plan indicates that there is a high level of unmet need generally for Gypsy's Travellers and Show People. The high levels of existing and unauthorised pitches in Westbourne is also mentioned in the Plan. The neighbouring parish of Southbourne is also mentioned as a location with high levels of pitches and unmet need. The relevant extract on the approach to meeting this need is as follows. "the council has had to utilise a wide range of options for meeting this need. This entails providing pitches on the strategic housing allocation sites, supporting increases in the density of pitches on existing authorised sites which have been assessed as being acceptable in principle for additional pitches, and allowing pitches to come forward on a case-by-case basis. The council will also consider allocating additional pitches via the forthcoming Allocations DPD."

Westbourne Parish Council is concerned to avoid intensification of the authorised and unauthorised Gypsy and Traveller and Showman's Pitches located within the Parish. Westbourne already has one of the highest concentrations of such uses anywhere in the District and further intensification will have an adverse impact on the balanced and cohesive community that we seek to protect. We would argue that other locations with lower intensities of such use should be sought to meet this need.

The site in Cemetery Lane at Greenacre is identified as a location for an additional four pitches. There have been many enforcement issues in this area with unauthorised pitches and unauthorised industrial and commercial development, and further increases in the quantity of pitches will exacerbate the situation to the detriment of the balanced and cohesive community that the Parish Council seeks to protect and enhance.

Full text:

The Parish Council supports the vision and overall strategic objectives of the Local Plan 2021-2039.

Spatial strategy:

Westbourne is identified as a Service Village and there is a given allocation for new development of 30 dwellings. In general terms this seems like a reasonable level of new growth that can be accommodated. However, the plan recognises that in the general area the scope for new development between the National Park boundary and the A27 is limited outside of Southbourne due to physical and environmental constraints. Given these limited opportunities to find land for new development around the village, which was confirmed in the Neighbourhood Planning process recently completed, the scope for Westbourne to take further development is very limited. The Parish Council would urge the District Council to see this quantity of 30 as a maximum target. We would ask the District Council to confirm that it would not suggest a new strategic development being brought forward in the allocations plan for Westbourne as the constraints of the National Park setting and other countryside policies severely limit the scope for further development.

Policy H4, affordable housing policy:

The existing policy only requires on-site provision of affordable housing for 10 or more dwellings. The proposed changes to require commuted sum payments in defined rural areas on sites for between six to nine dwellings is supported. However, this as drafted currently excludes Westbourne. Westbourne Parish Council would urge the District Council to ensure that this policy applies to Westbourne as it has limited opportunity for larger sites which makes it difficult to bring forward affordable housing and there is a clear need for more affordable housing in the Parish.

Policies H12 and H13:

The Plan indicates that there is a high level of unmet need generally for Gypsy's Travellers and Show People. The high levels of existing and unauthorised pitches in Westbourne is also mentioned in the Plan. The neighbouring parish of Southbourne is also mentioned as a location with high levels of pitches and unmet need. The relevant extract on the approach to meeting this need is as follows. "the council has had to utilise a wide range of options for meeting this need. This entails providing pitches on the strategic housing allocation sites, supporting increases in the density of pitches on existing authorised sites which have been assessed as being acceptable in principle for additional pitches, and allowing pitches to come forward on a case-by-case basis. The council will also consider allocating additional pitches via the forthcoming Allocations DPD."

Westbourne Parish Council is concerned to avoid intensification of the authorised and unauthorised Gypsy and Traveller and Showman's Pitches located within the Parish. Westbourne already has one of the highest concentrations of such uses anywhere in the District and further intensification will have an adverse impact on the balanced and cohesive community that we seek to protect. We would argue that other locations with lower intensities of such use should be sought to meet this need.

The site in Cemetery Lane at Greenacre is identified as a location for an additional four pitches. There have been many enforcement issues in this area with unauthorised pitches and unauthorised industrial and commercial development, and further increases in the quantity of pitches will exacerbate the situation to the detriment of the balanced and cohesive community that the Parish Council seeks to protect and enhance.

Document Element: Policy H13 Accommodation for Gypsies, Travellers and Travelling Showpeople**Respondent:** Natural England (Luke Hasler, Senior Advisor) [8189]**Summary:**

We specifically support the inclusion of criterion 4 in Policy H13 which requires consideration of the potential impact of new pitches on nationally protected lanscapes and nature conservation sites.

Full text:**Summary of advice**

While we have raised some queries and recommended some further modifications to certain policies we do not find the Plan unsound on any grounds relating to our remit.

Natural England has reviewed the Proposed Submission Local Plan and accompanying appendices together with the Habitats Regulations Assessment (HRA) and Sustainability Appraisal (SA). Our detailed comments on the policies and site allocations are provided as follows:

- Annex 1 - Chapter 2 – Vision and Strategic Objectives
- Annex 2 - Chapter 4 – Climate Change and the Natural Environment
- Annex 3 - Chapter 5 (Housing) and Chapter 6 – (Place-making, Health and Well-being)
- Annex 4 - Chapter 7 (Employment and Economy) and Chapter 8 (Transport and Accessibility)

- Annex 5 - Chapter 10 – Strategic and Area Based Policies

Please note that we have not provided comments on all policies but those which have most influence on environmental issues. Natural England has no comment to make on the policies not covered in this response. Other than confirming that we have referred to it when considering our advice on specific policies and site allocations Natural England has no general comments to make on the SA.

Unfortunately due to unforeseen resourcing issues while we have reviewed the associated HRA we are not in a position to provide detailed comment on it as part of this response. We will rectify this as soon as possible and can confirm that we have seen nothing in it that raises any major concerns.

The Plan has many positive aspects including standalone policies on Green Infrastructure (GI) and wildlife corridors and an incredibly extensive suite of natural environment policies more generally.

We are hugely appreciative of the opportunity that we were given to work with you on shaping key policies post-Regulation 18. However, we believe that the plan needs to go further in its recognition of coastal squeeze as a key issue for the district, should include policy hooks for the forthcoming Local Nature Recovery Strategy (LNRS) and make up to date references to both the Environment Act (2021) and the Environmental Improvement Plan (EIP, 2023). Given how recent the publication of the EIP is we would be happy to discuss with your authority how this could best be achieved but we believe given the wealth of natural capital within Chichester District it is vitally important that this latest iteration of the Local Plan is set in its full policy and legislative context.

We have suggested a significant number of amendments and additions to both policies and supporting text throughout the Plan. In our view these could all be taken forward as minor modifications but if they were all acted upon they would leave the Plan much stronger and more coherent in delivering for the natural environment, one of the three central tenets of genuinely sustainable development as set out in the National Planning Policy Framework (NPPF 2021, paragraph 8c).

See attachment for representations on paragraphs/policies.

Full text:**Summary of advice**

While we have raised some queries and recommended some further modifications to certain policies we do not find the Plan unsound on any grounds relating to our remit.

Natural England has reviewed the Proposed Submission Local Plan and accompanying appendices together with the Habitats Regulations Assessment (HRA) and Sustainability Appraisal (SA). Our detailed comments on the policies and site allocations are provided as follows:

- Annex 1 - Chapter 2 – Vision and Strategic Objectives
- Annex 2 - Chapter 4 – Climate Change and the Natural Environment
- Annex 3 - Chapter 5 (Housing) and Chapter 6 – (Place-making, Health and Well-being)
- Annex 4 - Chapter 7 (Employment and Economy) and Chapter 8 (Transport and

Accessibility)

- Annex 5 - Chapter 10 – Strategic and Area Based Policies

Please note that we have not provided comments on all policies but those which have most influence on environmental issues. Natural England has no comment to make on the policies not covered in this response. Other than confirming that we have referred to it when considering our advice on specific policies and site allocations Natural England has no general comments to make on the SA.

Unfortunately due to unforeseen resourcing issues while we have reviewed the associated HRA we are not in a position to provide detailed comment on it as part of this response. We will rectify this as soon as possible and can confirm that we have seen nothing in it that raises any major concerns.

The Plan has many positive aspects including standalone policies on Green Infrastructure (GI) and wildlife corridors and an incredibly extensive suite of natural environment policies more generally.

We are hugely appreciative of the opportunity that we were given to work with you on shaping key policies post-Regulation 18. However, we believe that the plan needs to go further in its recognition of coastal squeeze as a key issue for the district, should include policy hooks for the forthcoming Local Nature Recovery Strategy (LNRS) and make up to date references to both the Environment Act (2021) and the Environmental Improvement Plan (EIP, 2023). Given how recent the publication of the EIP is we would be happy to discuss with your authority how this could best be achieved but we believe given the wealth of natural capital within Chichester District it is vitally important that this latest iteration of the Local Plan is set in its full policy and legislative context.

We have suggested a significant number of amendments and additions to both policies and supporting text throughout the Plan. In our view these could all be taken forward as minor modifications but if they were all acted upon they would leave the Plan much stronger and more coherent in delivering for the natural environment, one of the three central tenets of genuinely sustainable development as set out in the National Planning Policy Framework (NPPF 2021, paragraph 8c).

See attachment for representations on paragraphs/policies.

Change suggested by respondent:

"In all cases, proposals for gypsy, traveller and travelling showpeople's accommodation are expected to contribute to relevant access management strategies to mitigate recreational disturbance to SPAs in accordance with Policy NE6 (Chichester's Internationally and Nationally Designated Habitats), and Policy NE7 (Development and Disturbance of Birds in Chichester, Langstone and Pagham Harbours and Solent and Dorset Coast SPAs, and Medmerry Compensatory Habitat)"

Document Element: Policy H13 Accommodation for Gypsies, Travellers and Travelling Showpeople**Respondent:** South Downs National Park Authority (Clare Tester, Planning Policy Manager) [8124]**Summary:**

We note the findings of the latest GTAA (2022) which is for the area of Chichester district outside the SDNP. The additional pitch provision needs set out in Table 5.1 and 5.2 are for Chichester outside the SDNP only.

We would highlight that there is limited capacity in the National Park to allocate sites for Gypsies and Travellers through duty to cooperate, given significant landscape constraints. Indeed, the protection afforded to National Parks is such that unmet need in the South Downs National Park may be displaced to other (non-designated) authorities outside the National Park.

Policies H11, H12 and H13 are supported, including the mechanisms for making provision for travellers accommodation, i.e. provision of pitches on new strategic allocations and appropriate intensification of existing authorised sites.

We'd welcome continued joint working between the coastal authorities and the South Downs National Park Authority in regard to addressing the need.

Object

Document Element: Policy H13 Accommodation for Gypsies, Travellers and Travelling Showpeople**Respondent:** Westbourne Parish Council (Clare Kennett Parish Clerk) [1051]**Summary:**

The Plan indicates that there is a high level of unmet need generally for Gypsy's Travellers and Show People. The high levels of existing and unauthorised pitches in Westbourne is also mentioned in the Plan. The neighbouring parish of Southbourne is also mentioned as a location with high levels of pitches and unmet need. The relevant extract on the approach to meeting this need is as follows. "the council has had to utilise a wide range of options for meeting this need. This entails providing pitches on the strategic housing allocation sites, supporting increases in the density of pitches on existing authorised sites which have been assessed as being acceptable in principle for additional pitches, and allowing pitches to come forward on a case-by-case basis. The council will also consider allocating additional pitches via the forthcoming Allocations DPD."

Westbourne Parish Council is concerned to avoid intensification of the authorised and unauthorised Gypsy and Traveller and Showman's Pitches located within the Parish. Westbourne already has one of the highest concentrations of such uses anywhere in the District and further intensification will have an adverse impact on the balanced and cohesive community that we seek to protect. We would argue that other locations with lower intensities of such use should be sought to meet this need.

The site in Cemetery Lane at Greenacre is identified as a location for an additional four pitches. There have been many enforcement issues in this area with unauthorised pitches and unauthorised industrial and commercial development, and further increases in the quantity of pitches will exacerbate the situation to the detriment of the balanced and cohesive community that the Parish Council seeks to protect and enhance.

Full text:

The Parish Council supports the vision and overall strategic objectives of the Local Plan 2021-2039.

Spatial strategy:

Westbourne is identified as a Service Village and there is a given allocation for new development of 30 dwellings. In general terms this seems like a reasonable level of new growth that can be accommodated. However, the plan recognises that in the general area the scope for new development between the National Park boundary and the A27 is limited outside of Southbourne due to physical and environmental constraints. Given these limited opportunities to find land for new development around the village, which was confirmed in the Neighbourhood Planning process recently completed, the scope for Westbourne to take further development is very limited. The Parish Council would urge the District Council to see this quantity of 30 as a maximum target. We would ask the District Council to confirm that it would not suggest a new strategic development being brought forward in the allocations plan for Westbourne as the constraints of the National Park setting and other countryside policies severely limit the scope for further development.

Policy H4, affordable housing policy:

The existing policy only requires on-site provision of affordable housing for 10 or more dwellings. The proposed changes to require commuted sum payments in defined rural areas on sites for between six to nine dwellings is supported. However, this as drafted currently excludes Westbourne. Westbourne Parish Council would urge the District Council to ensure that this policy applies to Westbourne as it has limited opportunity for larger sites which makes it difficult to bring forward affordable housing and there is a clear need for more affordable housing in the Parish.

Policies H12 and H13:

The Plan indicates that there is a high level of unmet need generally for Gypsy's Travellers and Show People. The high levels of existing and unauthorised pitches in Westbourne is also mentioned in the Plan. The neighbouring parish of Southbourne is also mentioned as a location with high levels of pitches and unmet need. The relevant extract on the approach to meeting this need is as follows. "the council has had to utilise a wide range of options for meeting this need. This entails providing pitches on the strategic housing allocation sites, supporting increases in the density of pitches on existing authorised sites which have been assessed as being acceptable in principle for additional pitches, and allowing pitches to come forward on a case-by-case basis. The council will also consider allocating additional pitches via the forthcoming Allocations DPD."

Westbourne Parish Council is concerned to avoid intensification of the authorised and unauthorised Gypsy and Traveller and Showman's Pitches located within the Parish. Westbourne already has one of the highest concentrations of such uses anywhere in the District and further intensification will have an adverse impact on the balanced and cohesive community that we seek to protect. We would argue that other locations with lower intensities of such use should be sought to meet this need.

The site in Cemetery Lane at Greenacre is identified as a location for an additional four pitches. There have been many enforcement issues in this area with unauthorised pitches and unauthorised industrial and commercial development, and further increases in the quantity of pitches will exacerbate the situation to the detriment of the balanced and cohesive community that the Parish Council seeks to protect and enhance.

Change suggested by respondent:

We would argue that other locations than Westbourne with lower intensities of such use should be sought to meet this need.

Document Element: Background, 6.3**Respondent:** National Highways (Mr Marius Pieters, Spatial Planning Manager) [8127]**Summary:**

[National Highways letter dated 24/07/23 confirmed representation should be categorised as Comment - Supporting collaborative working.] Achieving good design, particularly for larger scale proposals, requires early engagement with relevant statutory bodies (para 6.3).

We welcome the opportunity be invited to be involved in the pre-application scoping stage and to review Sustainability Statements to reduce impacts associated with traffic.

Full text:

We have reviewed the publicly available Local Plan documents and provided comments in the attached letter, in relation to the transport implications of the plan for the safety and operation of the SRN.

Our comments include issues to resolve, comments, requests for further information and recommendations. A brief summary of our main comments are:

- the reliance on the delivery of the A27 Chichester bypass improvements project.
- the requirements for new, additional, and adapted processes and assessments, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments.
- collaborative working between agencies in combination with a robust monitor and manage policy.

We hope our comments assist.

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders. We look forward to continuing to participate in future consultations and discussions.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Background

National Highways has been appointed by the Secretary of State for Transport as strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the strategic road network (SRN).

National Highways is responsible for operating, maintaining, and improving the Strategic Road Network (SRN) i.e., the Trunk Road and Motorway Network in England, as laid down in Department for Transport (DfT) Circular 01/2022 (Strategic Road Network and the delivery of sustainable development).

The SRN is a critical national asset and as such we work to ensure that it operates and is managed in the public interest, both in respect of current activities and needs as well as in providing effective stewardship of its long-term operation and integrity.

Our responses to Local Plan consultations are guided by relevant policy and guidance including the National Planning Policy Framework (2021) (NPPF):

- Transport issues should be considered from the earliest stages of plan-making and development proposals so that the potential impact of development on transport networks can be addressed (para 104).

- The planning system should actively manage patterns of growth such that significant development is focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. (para 105).
- Planning policies should be prepared with the active involvement of highways authorities and other transport infrastructure providers so that strategies and investments for supporting sustainable transport and development patterns are aligned. (para 106).
- In terms of identifying the necessity of transport infrastructure, NPPF confirms that development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe. (para 111).
- Planning policies and decisions should support development that makes efficient use of land, taking into account the availability and capacity of infrastructure and services – both existing and proposed – as well as their potential for further improvement and the scope to promote sustainable travel modes that limit future car use. (para 124).

In relation to the tests of soundness set out at paragraph 35 of the NPPF, in the context of transport, these are interpreted as meaning:

- a) Positively prepared - has the transport strategy been prepared with the active involvement of the highway authorities, other transport infrastructure providers and operators and neighbouring councils?
- b) Justified – Is the transport strategy based on a robust evidence base prepared with the agreement in partnership, or with the support of the highway authorities?
- c) Effective – Does the transport strategy and policy satisfy the transport needs of the plan and is it deliverable at a pace which provides for and accommodates the proposed progress and implementation of the plan?
- d) Consistent with national policy – Does the transport strategy support the economic, social, and environmental objectives of the Plan and the NPPF/NPPG?

We will be concerned with proposals that have the potential to impact on the safe and efficient operation of the SRN; in this case, the A27 trunk road (Chichester Bypass and its junctions) which is the main access route in the Chichester area. We have particular interest in any allocation, policy or proposals which could have implications for the A27 and the wider SRN network. We are interested as to whether there would be any adverse road safety or operational implications for the SRN. The latter would include a material increase in queueing or delay or reduction in journey time reliability during the construction or operation of the development set out in the plan.

National Highways is a key delivery partner for sustainable development promoted through the plan-led system, and as a statutory consultee we have a duty to cooperate with local authorities to support the preparation and implementation of development plan documents.

In accordance with national planning and transport policy and our operating licence, we are entirely neutral on the principle of development as it is for the local planning authority to determine whether development should be allocated or permitted; albeit it must comply with national policy on locating development in locations that are or can be made sustainable. Therefore, while always seeking early and fulsome engagement with local plans and/or developers, we will simply be assessing the transport and related implications of plans or proposals and agreeing any necessary transport improvements and relevant development management policy.

In progressing Local Plans, we will seek to agree the following:

- Assessment tools and methodology
- Baseline Assessment i.e., to demonstrate that the assessment tool accurately reflects current transport conditions
- Comparator case assessment i.e., to forecast the transport conditions that would occur in the absence of the plan
- Forecast modelling i.e., to forecast the transport conditions that would arise with the plan in place, this will include an assessment at the end of the Plan period; and, if required, at full build out if that occurs after the end of the Plan period
- Outputs and outcomes of modelling, demonstrating, as appropriate, what transport infrastructure is necessary to support the plan o It should be noted that a suite of transport modelling tools may be required. This includes strategic modelling covering an area at least one major junction beyond the district boundary, localised network modelling where several links/junctions are close together and/or individual junction modelling
 - o A DMRB (Design Manual for Roads and Bridges) compliancy assessment may also be required for certain highway features, such as Merge/Diverge assessment at Grade separated junctions, link capacity assessments, and others.
- The design of any necessary transport infrastructure, to an extent suitable for establishing deliverability during the plan period at the time that it becomes necessary for the purpose of ensuring that unacceptable road safety impacts or severe operational impacts do not arise as a result of development. This may be to at least General Arrangement design stage or preliminary design stage. Whichever degree of detail is agreed, the products must be in full compliance with the DMRB.
- Industry standard transport intervention costings.
- The delivery/funding mechanisms for necessary transport interventions. It should not be assumed that National Highways will have any responsibility to identify or deliver necessary transport interventions.
- If considered appropriate, a “Monitor & Manage” (M&M) framework, aimed at managing the pace of development in line

with the pace of funding and delivery of necessary highway interventions in a manner which responds to the realworld impacts of development may be agreed for inclusion in the plan subject to the adequacy of risk control measures included therein. This can include the move from a 'predict & provide' style of delivery to 'a vision & validate' style. o Any M&M framework must be based on a "worst case scenario" whereby necessary mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. It must be translated into development management plan policy and policy relating to development allocations.

Further detail on the above can be provided by National Highways.

While ideally all the above should be agreed prior to the Submission of the Local Plan for examination, we recognise that this is not always possible. However, all parties should work towards all matters being agreed and reflected in a Statement of Common Ground (SoCG) by the start of the Local Plan Examination at the latest. Ideally the SoCG between the Council and National Highways would be prepared well in advance of plan submission in order to guide resource input and to track progress towards final agreement on all relevant matters starting from the earliest plan iterations until the final version is agreed.

It is acknowledged that Government policy places much emphasis on housing delivery as a means for ensuring economic growth and addressing the current national shortage of housing. The NPPF is very clear that: "Strategic policy-making authorities should establish a housing requirement figure for their whole area, which shows the extent to which their identified housing need (and any needs that cannot be met within neighbouring areas) can be met over the plan period."

However, new DfT C1/22 and the NPPF are equally clear that any development, including housing delivery, must be tempered by the requirement to ensure that the associated transport demand can be accommodated without unacceptable impacts on the safety of the SRN or severe impacts on the operation of the SRN including reliability and congestion. Therefore, as necessary and appropriate, any plan and/or development must be accompanied by suitable mitigation in the right places at the right time, that is to the required design standards and is deliverable in terms of land availability, constructability and funding.

We would also draw your attention to the then Highways England document 'The Strategic Road Network, Planning for the Future: A guide to working with National Highways on planning matters' (September 2015). This document sets out how National Highways intends to work with local planning authorities and developers to support the preparation of sound documents which enable the delivery of sustainable development. https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_t_data/file/461023/N150227_-_Highways_England_Planning_Document_FINAL-lo.pdf

Responses to Local Plan consultations are also guided by National Planning Policy Framework (NPPF) revised on 20 July 2021 which sets out the government's planning policies for England and how these are expected to be applied.

Updated Circular (01/2022)

It should be noted that since the start of the Local Plan consultation process, on the 23 December 2022, the Department for Transport released a new circular on the 'Strategic road network and the delivery of sustainable development' (Circular 01/2022), which replaces all of the policies in Circular 02/2013 of the same name. These representations take account of the new circular and the requirements in terms of the Local Plan evidence base and process.

We request that the Local Plan is prepared in line with all aspects of the new circular. Particularly, the principles of sustainable development (paragraphs 11 to 17), new connections and capacity enhancements (paragraphs 18 to 25), and engagement with plan-making (paragraphs 26 to 38).

Regulation 18 submission

In our Regulation 18 submission we noted several matters including:

- The need to mitigate the adverse impacts of strategic development traffic to the A27 Chichester Bypass and its junctions at Portfield Roundabout, Bognor Road Roundabout, Whyke Roundabout, Stockbridge Roundabout and Fishbourne Roundabout and Oving junction.
- The need to identify a mechanism to calculate contributions towards the delivery of the previously agreed Local Plan A27 improvements
- The need to confirm the number of dwellings needed within the plan period
- The need to establish National Highways acceptance of the traffic model reference and future case scenarios
- The need to confirm costs, viability, and funding associated with mitigating the safety and congestion impacts of the development included within the plan.

Local Plan context

This Local Plan (Chichester Local Plan 2021 – 2039), prepared by the Local Planning Authority (LPA) Chichester District Council, sets out the vision for future development in the district and will be used to help decide on planning applications and other planning related decisions including shaping infrastructure investments.

The draft sets out how the district should be developed over the next 18-years to 2039 including for the full Plan period (1 April 2021 to 31 March 2039) the total supply of

- 10,359 dwellings

- 114,652 net additional sqm new floorspace

Minus the completions this is equivalent to around 530 dwellings and 6,150 sqm of floorspace a year.

National Highways Representations

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders.

We have undertaken a review of the Chichester Local Plan 2021-2039 proposed submission version and accompanying evidence documents, our comments are set out in the tables below (following pages). [see table within attachment]

Summary

We have reviewed the publicly available Local Plan documents and provided comments above in relation to the transport implications of the plan for the safety and operation of the SRN. We understand that other technical information is available, but this was not presented as part of this consultation.

Chichester, and the A27, are already heavily congested, infrastructure in the existing Local Plan remains undelivered and the growth set out in the new Plan will further increase travel demand.

As presented, satisfying the transport needs of the plan is clearly reliant on the delivery of the A27 Chichester bypass improvements project. The A27 Chichester bypass improvements project is one of 32 pipeline schemes being considered for possible inclusion in National Highways third Road Investment Strategy (RIS3) covering 1 April 2025 to 31 March 2030.

On 9 March 2023 the UK Transport Secretary ensured record funding would be invested in the country's transport network, sustainably driving growth across the country while managing the pressures of inflation. The announcement cited the A27 Arundel Bypass as being deferred from RIS2 to RIS 3 (covering 2025-2030). The transport secretary also identified a number of challenges to the delivery of the road investment strategy and cited the benefit of allowing extra time to ensure schemes are better planned and efficient schemes can be deployed more effectively.

At present, there is no commitment by DfT to carry out the A27 Chichester bypass improvements project. Until the A27 Chichester bypass improvements project is published in the RIS3, consented and a decision to invest is made it cannot be assumed to be a committed project.

We note that the Plan does not address any uncertainty of delivery of the A27 Chichester bypass improvements project and we strongly recommend that there is either no reliance placed on RIS3 to realise capacity for growth in the Plan or that contingency measures are included to cover the eventuality that RIS3 funding is not forthcoming within the plan period. It is not clear that the potential impact of development on transport networks can be addressed in the absence of the A27 Chichester bypass improvements project.

Achieving net zero, reducing emissions reduction, acting on climate, and supporting thousands of new homes and new employment developments will be problematic with existing processes. New, additional, and adapted processes and assessments will likely be required, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments. We acknowledge that change is complex, expensive, and time-consuming, especially for smaller district level Councils. But the hard work will deliver benefits for the Council and residents in the longer-term.

National Highways seeks to continue working with the Council and WSCC to progress coordinated and deliverable packages of interim mitigation measures and alternative transport solutions while a long-term strategic solution is considered by government. This must however be in combination with a robust monitor and manage policy that appropriately manages the risk of unacceptable road impacts resulting from new housing and other development over the Plan period.

We have been in discussion with Chichester District Council regarding their proposed Monitor and Manage Strategy. At present, we do not consider the current strategy to be robust and we seek further information and detail especially on who, when and when monitoring and management will be undertaken. Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas. Any M&M framework must be based on a "worst case scenario" whereby necessary transport mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. The M&M framework must set out that the alternative to mitigation not being delivered is that development does not proceed where that development would give rise to unacceptable road safety risk or severe cumulative impacts on the road network in the absence of that mitigation. The M&M framework must be translated into development management plan policy and policy relating to development allocations.

As we have reiterated throughout our comments, we welcome the opportunity to work with you to address these outstanding matters and we will continue to liaise over submitted Transport Assessment, Travel Plan policy and Monitor and Manage Policy to help to work towards a viable plan.

We hope our comments assist.

We look forward to continuing to participate in future consultations and discussions. Please do continue to consult us as the Plan progresses so that we can remain aware of, and comment as required on, its contents.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through

all the transport related matters and agree how to progress any required evidence gathering or other work.

Document Element: Policy P1 Design Principles**Respondent:** Bellway Homes (Wessex) Ltd [1573]**Agent:** Chapman Lily Planning (Mr Brett Spiller, Planning Consultancy Director) [8132]**Summary:**

Intent of Policy P1 is supported. Welcome emphasis upon a design led approach to all development and consistency with National Design Guide. Welcome requirement of Sustainability Statement, although question whether this should be required for 'all development proposals' (this is perhaps best elaborated upon in the validation checklist). Point A is welcomed, albeit a proportionate and flexible approach is required, particularly given challenges in sourcing materials. Will be important to allow some freedom and avoid making mechanism for assessment too prescriptive and cumbersome. Considered policy strikes right balance. Contend draft Policy 'P1' has been positively prepared, is fully justified, effective and consistent with the NPPF.

Document Element: Policy P1 Design Principles**Respondent:** Chidham and Hambrook Parish Council (Parish Clerk, Clerk) [7830]**Summary:**

We agree with it but it needs to be tightly controlled. Design & access statements need to be fully considered. We have an enormously diverse range of housing types.

This embraces some sound design principles. Our major concern is that the District Council planning team has sufficient resources to be able at the pre-application phase, to really assess the level of compliance with these ambitious design principles. We feel that it is important in rural and semi-rural locations to pay significant attention to the intended design and quality of new homes. Certain recent housing developments around Chichester have fallen way short of these aims.

RECEIVED LATE: Consider that Local Plan should include a policy requiring all new-build homes to be equipped and sold with solar PV panels, roof or wall mounted.

Full text:

Thank you for the opportunity to comment on the Draft Chichester District Local Plan 2021-39. We would suggest that there has been insufficient public consultation to date. We commented on the draft Local Plan for 2015, on the Preferred Options in 2019 and there have been many changes in Government policy and commitments since then to include Climate Change, Net Zero and commitments made at COP 26 and 27 to include reducing methane emissions etc. With regards to this consultation we recognise the importance of a plan-led system and support Chichester District Council's (CDC) desire to produce a comprehensive Local Plan. CPRE Sussex wishes to contribute to policies concerning landscape, rural areas, communities, environment and wildlife drawing on evidence and local knowledge.

CONTEXT

1. Examining the previous government consultation which closed on March 2nd, ie the Levelling-up and Regeneration Bill including some aspects of the National Planning Policy Framework, NPPF, there are some issues which would impact on this Local Plan and need consideration.

1.1 That consultation included important changes to the way in which the 5 year housing land supply is calculated, and the timetable for making Local Plans. They are of significance to local councils, especially those with Neighbourhood Plans. Some measures will take effect almost immediately through an update to the existing NPPF in Spring 2023. Others will follow later in the year or in 2024. Surely such consultations should be better phased to make plan development more logical and access to consultations easier?

2. Communities: Our group welcomed the overall shift in emphasis towards communities. Mind you, while the word is used 121 times in the Prospectus it does not appear in the draft NPPF! We would expect much more emphasis on the importance of communities in any forthcoming consultations. Earlier and more effective engagement with communities could help to lead to a less confrontational planning system with an emphasis on active participation.

3 Time required – a lot of time is needed to understand and implement such policies and a searchable on-line version would be very helpful; and, consideration also needs to be extended to those people in the community who are not computerised.

4 We take the word "sufficient" with regard to housing numbers to be equivalent to that which is "needed" and the current Standard Method does not establish that figure. Our MP, the Rt Hon Andrew Griffith, Arundel and South Downs, referred to the approach to developing housing numbers as a mutant algorithm.

4.1 Specifically, the changes to housing targets, to make them 'advisory', are welcome. However, we should remind you that the Government continues to insist on using out-of-date projections (2014). The current ONS population estimates are 1 million less people in the population than allowed for in the figures used to so that the reliance on the 2014 figures is completely out of date. The emphasis should always be on using current up to date evidenceand to use those out-

of-date figures produces the wrong results and does not conform with the need to use up to date information. In addition, this would require an immediate change to the guidance to insist (as previously) on the most up-to-date projections.

4.2 We also recommended a review of the Standard Method, which does not make housing affordable and simply supports developers to build market homes where they want to. The graph above illustrates the gap between projection and current population figure provided by the Community Planning Association.

4.3 Local Planning Authorities, LPAs, were also given an opportunity to put forward alternatives to the Standard Method and to name the specific constraints faced. Our contribution to that consultation referred to the:

- Reduction of land available to the CDC given the creation of the South Downs National Park, SDNP
- English Channel
- SDNP itself
- Range of internationally important designated sites
- Rare species and habitats
- River flood plains
- Water neutrality in part of the District
- Nutrient neutrality in the Solent
- Sea Level Rise
- Inadequate infrastructure – roads/lanes and local transport; sewage treatment; community facilities such as medical centres, shops; and

4.4 There have already been large housing commitments, loosely put on “flat green land” around Chichester and now CDC is eyeing the “empty” north of the District with allocations being made for Loxwood and an increase in the number of houses being sought in Wisborough Green. Such land supports wildlife which often may not be under recorded as it is private land. Areas in both of those Parishes has been “cleared” of biological interest but the BNG established a baseline of 2020 and google maps can show the state of the environment at that date. The commitment to safeguarding biodiversity needs to be pursued carefully and consistently.

COMMENTS ON THE CDC LOCAL PLAN 2021-2039 REG19 proposed submission comments: the comments cite the para and/or Chapter number

5. At this phase in the local plan process the scope of the invited representations is limited to whether the Plan that has been produced is:

- a) legally compliant (i.e., whether it meets the legal requirements); and
- b) sound (i.e., whether it has been positively prepared, is justified, is effective and is consistent with national policy) and I would ADD whether it is forward thinking enough as it is planned to last until 2039.

5.1 The plan area is split in to three areas, each with different characteristics, landscapes and access to services:

- a) • The East-West Corridor, running across the width of the plan area, is varied in landscape with the inclusion of both larger settlements (including the city) and rural villages. It has the best transport connections and access to facilities in the plan area with the A27 and railway running through-out.
- b) The Manhood Peninsula* MP, located in the south of the plan area, jutting out into the English Channel, is rich in coastal landscapes with the majority of the area covered by environmental designations. It also includes some of the plan area’s larger settlements which rely heavily on limited road accessibility to the north towards Chichester city.
- c) The North of the Plan Area is primarily rural in character with diverse landscapes, rich cultural and heritage assets and a number of dispersed settlements, some of which are relatively isolated and served by narrow lanes with limited public transport

*NB The population on the MP is dispersed in a rural landscape and equals that of Chichester. The description for the North section could just as easily have been used for the MP.

Chapter 2 and Local Plan Vision

These Objectives will need to underlie every aspect of the document.

5.2 P 23: Para 2.25 Replace the word “site” by “area” and insert forming part of a diverse set of wetlands (Ditches, Rifes, Ponds, Saline lagoons and a small section of Canal). Info: The Medmerry site is no longer the largest eg having been overtaken in area by the Steart Marshes, Somerset.

5.3 Include mention of rare habitats and species and the role of Selsey Bill in facilitating arrivals and departures of bats, butterflies and birds. That’s its USP,

6.1 P 25 Local Plan Vision and Strategic Objectives p 30 Objective 1: CLIMATE CHANGE

This section does not reflect the urgency of the issue nor the vulnerability of parts of Sussex. Many scientists are pointing to Sea Level Rise, SLR, speeding up and some of them cite a 10 year window in which to act ie so that before this Local Plan has run its course, areas on the coast including the coastal plain and the Manhood Peninsula could well be adversely affected. This would have an immediate impact on housing, facilities and transport links and could lead to the local population having to move.

6.2 Actions related to this particular objective need to be included in all the following objectives. The south of the District is very vulnerable and the rest of the District will experience very intensive rainfall, water shortages (NE/EA 2013 report) and hot summers.

6.2 Policies need to include not building on areas below 5m high Water Level. The CDC Climate Change officer should host meetings to consider potential plans for putting houses on stilts, moving people to land safe from flooding and re-directing roads, cycle ways and footpaths to facilitate future access.

6.3 Evidence: See the Surging Seas and NASA websites for prediction of Sea Level Rise. Need to include reference to the UK Climate Resilience Programme jointly led by UK Research and Innovation, UKRI, and the Met Office which was set up to fund research “to help understand how to quantify the risks from climate change and build climate resilience for the UK, This research should produce “usable outputs” to “directly support decision-making” by government, local authorities, communities and other stakeholders

6.3.1 Every area of UK society will feel the effects of climate change and, as global emissions continue to rise, pre-paring

for life in a warmer world is crucial. Findings were discussed last week by the UK ranging from assessments of elderly people overheating in care homes through to building community-run water storage.

6.3.2 Every area of UK society will feel the effects of climate change and, as global emissions continue to rise, preparing for life in a warmer world is crucial.

6.2.2.i In early March, UKTI and Met office researchers involved with the programme gathered to present and discuss their findings. They ranged from assessments of elderly people overheating in care homes through to building community-run water storage. These items and website need to be referenced in the evidence section.

6.3.3 The key points are intended to help businesses and policymakers adapt to climate change.

6.3.4 Many focused on "climate services" defined as involving the "production, translation, transfer and use of climate knowledge and information in climate-informed decision making".

6.3.5 Climate services could be an important tool for adaptation because they can provide people with the relevant information to prepare for climate change.

6.3.6 Representatives from the Met Office laid out their recommendations for a UK National Framework for Climate Services. And said they wanted to provide a "driving force" for the nation's climate services community and help ensure that "adaptation action actually does get done".

6.4.7 UK 'SSPs'

"Shared socioeconomic pathways" (SSPs) are tools used by researchers to explore how society will change in the future. This can help them to answer important questions about climate change. As there were no UK-specific versions of SSPs available to complement the UKCP18 climate projections

Ref: The importance of Adaptive Resilience Solutions in the Face of Climate Threats.

Recommendation: This report needs to be drawn on and form part of the evidence base.

7.1 Objective 2: NATURAL ENVIRONMENT Work with site managers of the Designated Sites and NGOs in the wider environment. This objective is vitally important and welcome and its importance needs to be reflected in all parts of the plan to include Wildlife Corridors, Biodiversity Net Gain and the Nature Recovery Network.

Sir David Attenborough

"It may sound frightening, but the scientific evidence is that if we have not taken dramatic action within the next decade, we could face irreversible damage to the natural world and the collapse of our societies."

7.1.1 The emergency concerning Biodiversity also needs to be communicated.

Para 2.32: Agree – this (climate emergency) is the most urgent issue facing us all together with the Biodiversity Emergency (declared by IPBWS, 2019).

7.1.2 Info: The ESPACE project European Spatial Planning: Adapting to Climate Events (ESPACE) was a four-year project funded by the European Commission's north-west Europe INTERREG IIIB programme and the ODPM. It produced a Climate Action Plan for the Manhood Peninsula in 2008 and not much action has followed to implement this. Perhaps it needs dusting off and re-visiting and including within the Local Plan?

7.2 Add policy:

PROPOSED Ecosystem Services Policy

7.2.1 CPRE Sussex considers that the Chichester Local Plan 2021 - 2039 should include a policy specifically for Ecosystem Services for the following reasons:

1. NPPF para 174. Planning policies and decisions should contribute to and enhance the natural and local environment by:

- a) protecting and enhancing valued landscapes, sites of biodiversity or geological value and soils (in a manner commensurate with their statutory status or identified quality in the development plan);
- b) recognising the intrinsic character and beauty of the countryside, and the wider benefits from natural capital and ecosystem services – including the economic and other benefits of the best and most versatile agricultural land, and of trees and woodland

7.2.2 'Natural capital refers to the elements of nature that produce value to people –whether directly or indirectly. Our natural capital 'assets' are the stocks of renewable and non-renewable natural capital such as our soils, freshwater, farmland, forests, atmosphere, oceans, ecological processes and the natural processes that underpin them. The flows of ecosystem services and benefits that our natural capital provides can be very obvious such as food, fuel, clean air, clean water, and opportunities for recreation. Others are much less visible, such as climate regulation, flood defences provided by natural vegetation, the billions of tonnes of carbon stored by peatlands and other habitats and the pollination of crops by insects'. (Sussex Local Nature Partnership <http://sussexlnp.org.uk/natural-capital/>)

7.3 Accordingly, we propose an Ecosystem Services policy (an adaptation of South Downs Park Authority's Core Policy SD2: Ecosystem Services'), be added as follows:

1. Development proposals will be permitted where they have an overall positive impact on the ability of the natural environment to contribute goods and services. This will be achieved by means of high-quality design, and by delivering all opportunities to:

- a) Sustainably manage land and water environments;
- b) Protect and provide more, better and joined up natural habitats;
- c) Conserve water resources and improve water quality;
- d) Manage and mitigate the risk of flooding;
- e) Improve the District's resilience to, and mitigation of, climate change;
- f) Increase the ability to store carbon through the retention of existing woodland, new planting or other means;
- g) Conserve and enhance soils, use soils sustainably and protect the best and most versatile agricultural land;
- h) Support the sustainable production and use of food, forestry and raw materials;
- i) Reduce levels of pollution;
- j) Improve opportunities for peoples' health and wellbeing; and
- k) Provide opportunities for access to the natural and cultural resources which contribute to the District's special

qualities.

2. The Environment Act 2021 will require the production of a Nature Recovery Network and more locally a Local Nature Recovery Strategy. The Strategic Wildlife Corridors in Chichester District will be integral components of that local network. The importance of local networks in Nature Recovery Networks is highlighted in NPPG

7.3.4 Policy NE 4 Strategic Wildlife Corridors

CPRE Sussex supports this policy, Strategic Wildlife Corridors as part of the Local Plan process, conform with section 179 of the NPPF 2021 which is well-evidenced. However, CPRE Sussex wishes to question the size of the corridors ie the width/

Information provided in the 2021 consultation appears to demonstrate that these areas have been downsized such as those put alongside the East of the City Corridor, it appears that there has been a narrowing of the Strategic Wildlife Corridor around the location of the proposed allocations of A8, Chapter 10: Strategic and Area Based Allocations Land East of Chichester and potential A7, Land at Shopwyke. The Corridor to the East of Chichester was proposed for connectivity and functional links to the area for the rare and European Protected Species of Barbastelle Bats. It is shown on CDC technical consultation documents as a bat network

This does not conform with the Natural Environment & Rural Communities Act, NERC, 2006 and Section 40 subsection 3a as it would destroy a habitat over which the Barbastelle Bat has been recorded, a Section 41 species. And it is the DUTY of the Local Authority to safeguard these species. There should be NO recreational use in the buffer zones.

8. Green Infrastructure: p 160 and Policy P 14 d Submission (Regulation 19)

8.1 Local Green Space

6.82. The NPPF includes the concept of Local Green Space designation. This is a discretionary designation and sites may be identified and included in either local or neighbourhood plans. The designation should only be used as defined by the criteria in the NPPF where the land is not extensive, is local in character and reasonably close to the community; and, where it is demonstrably special, for example because of its beauty, historic significance, recreational value (including as a playing field), tranquillity or richness of its wildlife. Any areas which fall outside a neighbourhood plan area and where such designation is sought, will be considered by the subsequent Site Allocations DPD that will cover the remainder of the plan area. Policies for managing development within a Local Green Space should be consistent with those for Green Belts.

8.2 Parishes should be encouraged to look into such areas to be included in Neighbourhood Plans.

9. Renewable Energy: General policy

9.1 Housing p 103:

CPRE Sussex considers that the Chichester Local Plan should include a policy requiring all new-build homes to be equipped and sold with solar PV panels, roof or wall mounted.

9.2 Although the Chichester District Local Plan, at Para 6.15, states that 'Design proposals should respond to the opportunities a site presents to make best use of solar gain where this can be achieved without compromising good urban design or creating issues of overheating', there is no requirement in the any of the plan's policies for new-build homes to be equipped and sold with roof or wall mounted solar PV.

9.3 Note that West Sussex County Council has advised in their Solar Together initiative that "By generating electricity from the sun, you could reduce your annual carbon emissions by approximately one tonne each year and help West Sussex to become carbon neutral".

Note, too: <https://solartogether.co.uk/westsussex/blog/best-ways-to-increase-solar-self-consumption>

9.4 "According to the University of Oxford findings, UK households with solar PV self-consume 45% of their own solar generation on average and reduce annual electricity demand from the grid by 24%. With additional adjustments, this reduction of 24% can be increased to over 35%".

9.5 New-build homes in Chichester District should therefore be equipped with solar P V panels. We question the statement in Para 6.15 that 'solar gain' could create 'issues of overheating'. Surely this can be prevented by good design?

9.6 There are additional opportunities for solar installations on school rooves (Brighton Sustainable Energy Co-op has many examples), car parks, industrial buildings et al.

10.0 Renewable Energy: Specific location Wisborough Green 75 additional houses. Unacceptable – see CDC Capacity Study sub sections 166+167. Limitations – Ancient woodland; wildlife – rare habitats and species, river floodplain; Water neutrality; HRA with reference to the Mens Ancient Woodland and presence of European Protected Species, Barbastelle Bats flight paths and foraging across the parish. See Natural England report Site Improvement Report and reports by Frank Greenway, 2008 et al.

10.1 See Page 84: In the north of the plan area, properties within Southern Water's Sussex North Water Resource Zone are supplied with water from a groundwater abstraction at Pulborough which is currently subject to environmental investigations to ensure there is no adverse impact on environmentally designated sites in the Arun Valley. This may impact on the available supply and alternative sources may need to be considered by Southern Water. Natural England published a position statement in September 2021 requiring developments within the Sussex North Supply Zone to be water neutral – this means that the use of water in the supply area after the development is the same or lower than before. A Water Neutrality Strategy had been prepared jointly with other affected authorities. Natural England's Position Statement sets out an interim approach based on minimising water use in new builds and offsetting the water that is used

10.2 Water consumption target. It is noted that both Ports-mouth Water and Southern Water have targets to reduce water consumption to 100 litres per person per day (lppd) by 2040, a lower figure than the current most stringent Building Regulation target of 110 lppd and not that level which could be required for water neutrality.

10.3 The Local Plan is weak on impacts especially from the largest concentration of caravans at Selsey on Medmerry.

10.4 There is no wildlife corridor running east to west along the Manhood Peninsula ie Pagham to East Head and this undermines the importance of a positive barrier zone to protect the habitat. CDC have used the corridors for this barrier purpose possibly more than as a pathway throughout other parts of the plan.

10.5 Nutrient neutrality exclusion of a large area of the Peninsula from the protection zone is illogical as the same conditions exhibited in Chichester harbour (in the zone) exist at Pagham.

10.6 There is a 'tool' - "nutrient budget calculator March, 2022 version" – which gives an "n" factor for instance to discharges from WWTW. There is no direct mention of its use at Chichester harbour and as the data on Pagham Harbour has yet to be made public, the role of Sidlesham WWTW has not been referred to. The "N" factor would probably be more restrictive on outflows from WWTW than the total discharge permits – and shows a lack of coordinated approach between the Environment Agency and Natural England.

10.7 There are two reports due to be published this month - the West Sussex Coast and Gt Brighton Board and Southern Water overall plan for drainage and waste water-the timing of the LP – is thus unable to take these two influential inputs into account and may have implications for the 'Soundness ' of the plan as it moves forward.

10.8 No mention is included of Sidlesham WSTW which is operating at and beyond capacity resulting in new housing on the Manhood Peninsula dealing with waste water in gardens, in houses etc.

Pages 87 and 88: Paras 4.112 and 4.113 are contradictory.

Appendix F Monitoring Framework

Early in 2020 attended a Public Inquiry representing the Manhood Wildlife and Heritage Group and presented evidence about an application at Easton Farm where the implementation of an application had not been followed up, which had expanded like Topsy and which potentially could damage the Medmerry coastal realignment site with its runoff. CDC had not been on watch possibly through lack of staff and/or a lack of enforcement staff. The site had grown without permission. This section requires a firm commitment to monitoring and reporting back, not just a paper one.

Thank you for your attention.

Document Element: Policy P1 Design Principles**Respondent:** Kirdford Parish Council [1875]**Agent:** Troy Planning + Design (Troy Hayes, Managing Director) [7640]**Summary:**

Considered to be a 'non-event' of a design policy. Does not go beyond what is already provided in national policy and guidance. Together, P1 and P2 should point to the ability for communities to prepare local design codes through neighbourhood plans and which would then represent a more specific version of the design policies. Policy currently unclear about need for 'major development' to provide a detailed masterplan or design codes or development briefs. Policy focusses solely on Design and Access Statement requirements.

Policy hooks for specific design tools and documents are important for effectiveness and clarity for communities, developers and decision-takers about design process expected from CDC.

Executive Summary

The Local Plan as written lacks ambition and vision, and will be detrimental to the landscape within which the district lies. It is a plan borne out of a need to produce a legal document which will satisfy the regulatory authorities. In terms of Urban Planning it fails "To meet the needs of the present without compromising the ability of future generations to meet their own needs" (NPPF).

The development that will consequentially arise from the deployment of such a made Local Plan is not sustainable. It will adversely affect the Character, Amenity and Safety of the built environment, throughout our district.

In particular, the Local Plan is inadequate for the needs of the people in the district both at present and in the future because –

1. It has been written in advance of the District having a properly formed and agreed Climate Emergency Action Plan. It is inconceivable that such a key document will not shape our Local Plan. It is this Action Plan that is needed first in order to provide the long-term strategic view as to how and what the District will look like in the future; this, in turn, will help form and shape the policies outlined in any prospective, Local Plan. The Plan as proposed is moribund, as a result of “cart before the horse” thinking.
2. The Local Plan as written does not adequately address how infrastructure, transport and services are going to be materially and strategically improved to meet the predicted growth and shift to a significantly ageing population. There is presently insufficient capacity to supply services and to have adequate people and environmentally friendly connectivity, as a direct result of decades of neglect towards investing in infrastructure and services to meet the needs of the District’s population. We are led to believe that developers through increased levies in order to gain permission to build will fulfil this need, but all that this will result in is an uncoordinated, dysfunctional mess completely lacking in any future-proof master planning approach. We contend that this will do nothing for the quality of life of Chichester District residents and it will create a vacuum whereby few if indeed any can be held accountable or indeed found liable for shortcomings in the future.
3. The Local Plan as written does not state how it will go about addressing the need to create affordable homes. The District Council’s record on this matter since the last made plan has been inadequate and now the creation of affordable homes has become urgent as political/economic/social factors drive an ever increasing rate of change within the District.
4. Flood risks assessments used in forming the Plan are out of date (last completed in 2018) and any decision to allocate sites is contrary to Environment Agency policy. Additionally, since March 2021 Natural England established a position in relationship to ‘Hold the Line’ vs. ‘Managed Retreat’ in environmentally sensitive areas, of which the Chichester Harbour AONB is a significant example. CDC have failed to set out an appropriate policy within the proposed Local Plan that addresses this requirement.
5. The A27 needs significant investment in order to yield significant benefits for those travelling through the East-West corridor; this is unfunded. Essential improvements to the A27 are key to the success of any Local Plan particularly as the city’s ambitions are to expand significantly in the next two decades. But any ambitions will fall flat if the A27 is not improved before such plans are implemented.. The A259 is an increasingly dangerous so-called ‘resilient road’ with a significant increase in accidents and fatalities in recent years. In 2011, the BBC named the road as the “most crash prone A road” in the UK. There is nothing in the Local Plan that addresses this issue. There is no capacity within the strategic road network serving our district to accommodate the increase in housing planned, and the Local Plan does not guarantee it.
6. There is insufficient wastewater treatment capacity in the District to support the current houses let alone more. The tankering of wastewater from recent developments that Southern Water has not been able to connect to their network and in recent months the required emergency use of tankers to pump out overflowing sewers within our City/District reflects the gross weakness of short-termism dominated thinking at its worst and is an indictment of how broken our water system is. The provision of wastewater treatment is absolutely critical and essential to the well-being of all our residents and the long-term safety of our built environment. The abdication by those in authority, whether that be nationally, regionally or locally, is causing serious harm to the people to whom those in power owe a duty of care and their lack of urgency in dealing properly with this issue is seriously jeopardizing the environment in which we and all wildlife co-exist.
7. Settlement Boundaries should be left to the determination of Parish Councils to make and nobody else. The proposed policy outlined in the Local Plan to allow development on plots of land adjacent to existing settlement boundaries is ill-conceived and will lead to coalescence which is in contradiction of Policy NE3.
8. All the sites allocated in the Strategic Area Based Policies appear to be in the majority of cases Greenfield Sites. The plan makes little, if any reference to the development of Brownfield sites. In fact, there is not a Policy that relates to this source of land within the Local Plan as proposed. Whilst in the 2021 HELAA Report sites identified as being suitable for development in the District as being Brownfield sites were predicted to yield over 4000 new dwellings. Why would our Local Plan not seek to develop these sites ahead of Greenfield sites?
9. The Local Plan does not define the minimum size that a wildlife corridor should be in width. What does close proximity to a wildlife corridor mean? How can you have a policy (NE 4) that suggests you can have development within a wildlife corridor? These exceptions need to have clear measures and accountability for providing evidence of no adverse impact on the wildlife corridor where a development is proposed. Our view is quite clear. Wildlife and indeed nature in the UK is under serious and in the case of far too many species, potentially terminal threat. Natural England has suggested that a Wildlife Corridor should not be less than 100metres wide. The proposed Wildlife Corridors agreed to by CDC must be enlarged and fully protected from any development. This is essential and urgent for those Wildlife Corridors which allow wildlife to achieve essential connectivity between the Chichester Harbour AONB and the South Downs National Park.

10. Biodiversity Policy NE5 - This is an absolute nonsense. If biodiversity is going to be harmed there should be no ability to mitigate or for developers to be able to buy their way out of this situation. This mindset is exactly why we are seeing a significant decline in biodiversity in the District which should be a rich in biodiversity area and why the World Economic Forum Report (2023) cites the UK as one of the worst countries in the world for destroying its biodiversity.

11. In many cases as set out in the Policies the strategic requirements lack being SMART in nature – particularly the M Measurable. These need to be explicit and clear: “you get what you measure”.

12. 65% of the perimeter of the District of Chichester south of the SDNP is coastal in nature. The remainder being land-facing. Policy NE11 does not sufficiently address the impact of building property in close proximity to the area surrounding the harbour, something acknowledged by the Harbour Conservancy in a published report in 2018 reflecting upon how surrounding the harbour with housing was detrimental to its long-term health. And here we are 5 years on and all of the organizations that CDC are saying that they are working in collaboration with, to remedy the decline in the harbour’s condition, are failing to implement the actions necessary in a reasonable timescale. CDC are following when they should be actually taking the lead on the issue. Being followers rather than leaders makes it easy to abdicate responsibility. There must be full and transparent accountability.

13. The very significant space constraints for the plan area must be taken into account. The standard methodology need no longer apply where there are exceptional circumstances and we are certain that our District should be treated as a special case because of the developable land area is severely reduced by the South Downs National Park (SDNP) to the north and the unique marine AONB of Chichester Harbour to the south. A target of 535dpa is way too high. This number should be reduced to reflect the fact that only 30% of the area can be developed and much of that is rural/semi-rural land which provides essential connectivity for wildlife via a number of wildlife corridors running between the SDNP and the AONB. Excessive housebuilding will do irretrievable damage to the environment and lead to a significant deterioration in quality of life for all who reside within the East / West corridor.

14. Many of the sites identified in the Strategic & Area Based Policies could result in Grade 1 ^ 2 farmland being built upon. The UK is not self-sufficient in our food security. It is short-sighted to expect the world to return to what we have come to expect. Our good quality agricultural land should not all be covered with non-environmentally friendly designed homes.

Document Element: Policy P1 Design Principles**Respondent:** National Gas Transmission [8090]**Agent:** Avison Young (Mr Matt Verlander, Director) [8092]**Summary:**

The increasing pressure for development is leading to more development sites being brought forward through the planning process on land that is crossed by National Gas Transmission infrastructure.

National Gas Transmission advocates the high standards of design and sustainable development forms promoted through national planning policy and understands that contemporary planning and urban design agenda require a creative approach to new development around underground gas transmission pipelines and other National Gas Transmission assets.

Full text:

National Gas Transmission has appointed Avison Young to review and respond to local planning authority Development Plan Document consultations on its behalf. We are instructed by our client to submit the following representation with regard to the current consultation on the above document.

About National Gas Transmission

National Gas Transmission owns and operates the high-pressure gas transmission system across the UK. In the UK, gas leaves the transmission system and enters the UK's four gas distribution networks where pressure is reduced for public use.

Utilities Design Guidance

The increasing pressure for development is leading to more development sites being brought forward through the planning process on land that is crossed by National Gas Transmission infrastructure.

National Gas Transmission advocates the high standards of design and sustainable development forms promoted through national planning policy and understands that contemporary planning and urban design agenda require a creative approach to new development around underground gas transmission pipelines and other National Gas Transmission assets.

Therefore, to ensure that Design Policy P1 is consistent with national policy we would request the inclusion of a policy strand such as:

"x. taking a comprehensive and co-ordinated approach to development including respecting existing site constraints including utilities situated within sites."

Further Advice

National Gas Transmission is happy to provide advice and guidance to the Council concerning their networks.

Change suggested by respondent:

Document Element: Policy P1 Design Principles**Respondent:** National Highways (Mr Marius Pieters, Spatial Planning Manager) [8127]**Summary:**

[National Highways letter dated 24/07/23 confirmed representation should be categorised as Comment - Noting SRN policies and NH processes.] Policy 6 does not cover signage. No reference is currently made to the SRN or National Highways.

It is a requirement of the local planning authority to consult National Highways on the road safety aspects of advertisements proposed alongside the SRN, for example development advertisements.

Advertisements that are likely to distract motorists are unlikely to be approved. Ordinarily we will need to consider location, if visible from the SRN, size, brightness/lighting (if any) and effect on public safety as well as the type of intended advertising.

Full text:

We have reviewed the publicly available Local Plan documents and provided comments in the attached letter, in relation to the transport implications of the plan for the safety and operation of the SRN.

Our comments include issues to resolve, comments, requests for further information and recommendations. A brief summary of our main comments are:

- the reliance on the delivery of the A27 Chichester bypass improvements project.
- the requirements for new, additional, and adapted processes and assessments, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments.
- collaborative working between agencies in combination with a robust monitor and manage policy.

We hope our comments assist.

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex

County Council (WSCC) and we will continue to work with the Council and other key stakeholders. We look forward to continuing to participate in future consultations and discussions.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Background

National Highways has been appointed by the Secretary of State for Transport as strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the strategic road network (SRN).

National Highways is responsible for operating, maintaining, and improving the Strategic Road Network (SRN) i.e., the Trunk Road and Motorway Network in England, as laid down in Department for Transport (DfT) Circular 01/2022 (Strategic Road Network and the delivery of sustainable development).

The SRN is a critical national asset and as such we work to ensure that it operates and is managed in the public interest, both in respect of current activities and needs as well as in providing effective stewardship of its long-term operation and integrity.

Our responses to Local Plan consultations are guided by relevant policy and guidance including the National Planning Policy Framework (2021) (NPPF):

- Transport issues should be considered from the earliest stages of plan-making and development proposals so that the potential impact of development on transport networks can be addressed (para 104).
- The planning system should actively manage patterns of growth such that significant development is focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. (para 105).
- Planning policies should be prepared with the active involvement of highways authorities and other transport infrastructure providers so that strategies and investments for supporting sustainable transport and development patterns are aligned. (para 106).
- In terms of identifying the necessity of transport infrastructure, NPPF confirms that development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe. (para 111).
- Planning policies and decisions should support development that makes efficient use of land, taking into account the availability and capacity of infrastructure and services – both existing and proposed – as well as their potential for further improvement and the scope to promote sustainable travel modes that limit future car use. (para 124).

In relation to the tests of soundness set out at paragraph 35 of the NPPF, in the context of transport, these are interpreted as meaning:

- a) Positively prepared - has the transport strategy been prepared with the active involvement of the highway authorities, other transport infrastructure providers and operators and neighbouring councils?
- b) Justified – Is the transport strategy based on a robust evidence base prepared with the agreement in partnership, or with the support of the highway authorities?
- c) Effective – Does the transport strategy and policy satisfy the transport needs of the plan and is it deliverable at a pace which provides for and accommodates the proposed progress and implementation of the plan?
- d) Consistent with national policy – Does the transport strategy support the economic, social, and environmental objectives of the Plan and the NPPF/NPPG?

We will be concerned with proposals that have the potential to impact on the safe and efficient operation of the SRN; in this case, the A27 trunk road (Chichester Bypass and its junctions) which is the main access route in the Chichester area. We have particular interest in any allocation, policy or proposals which could have implications for the A27 and the wider SRN network. We are interested as to whether there would be any adverse road safety or operational implications for the SRN. The latter would include a material increase in queueing or delay or reduction in journey time reliability during the construction or operation of the development set out in the plan.

National Highways is a key delivery partner for sustainable development promoted through the plan-led system, and as a statutory consultee we have a duty to cooperate with local authorities to support the preparation and implementation of development plan documents.

In accordance with national planning and transport policy and our operating licence, we are entirely neutral on the principle of development as it is for the local planning authority to determine whether development should be allocated or permitted; albeit it must comply with national policy on locating development in locations that are or can be made sustainable. Therefore, while always seeking early and fulsome engagement with local plans and/or developers, we will

simply be assessing the transport and related implications of plans or proposals and agreeing any necessary transport improvements and relevant development management policy.

In progressing Local Plans, we will seek to agree the following:

- Assessment tools and methodology
- Baseline Assessment i.e., to demonstrate that the assessment tool accurately reflects current transport conditions
- Comparator case assessment i.e., to forecast the transport conditions that would occur in the absence of the plan
- Forecast modelling i.e., to forecast the transport conditions that would arise with the plan in place, this will include an assessment at the end of the Plan period; and, if required, at full build out if that occurs after the end of the Plan period
- Outputs and outcomes of modelling, demonstrating, as appropriate, what transport infrastructure is necessary to support the plan o It should be noted that a suite of transport modelling tools may be required. This includes strategic modelling covering an area at least one major junction beyond the district boundary, localised network modelling where several links/junctions are close together and/or individual junction modelling
 - o A DMRB (Design Manual for Roads and Bridges) compliancy assessment may also be required for certain highway features, such as
 - o Merge/Diverge assessment at Grade separated junctions, link capacity assessments, and others.
- The design of any necessary transport infrastructure, to an extent suitable for establishing deliverability during the plan period at the time that it becomes necessary for the purpose of ensuring that unacceptable road safety impacts or severe operational impacts do not arise as a result of development. This may be to at least General Arrangement design stage or preliminary design stage. Whichever degree of detail is agreed, the products must be in full compliance with the DMRB.
- Industry standard transport intervention costings.
- The delivery/funding mechanisms for necessary transport interventions. It should not be assumed that National Highways will have any responsibility to identify or deliver necessary transport interventions.
- If considered appropriate, a "Monitor & Manage" (M&M) framework, aimed at managing the pace of development in line with the pace of funding and delivery of necessary highway interventions in a manner which responds to the realworld impacts of development may be agreed for inclusion in the plan subject to the adequacy of risk control measures included therein. This can include the move from a 'predict & provide' style of delivery to 'a vision & validate' style. o Any M&M framework must be based on a "worst case scenario" whereby necessary mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. It must be translated into development management plan policy and policy relating to development allocations.

Further detail on the above can be provided by National Highways.

While ideally all the above should be agreed prior to the Submission of the Local Plan for examination, we recognise that this is not always possible. However, all parties should work towards all matters being agreed and reflected in a Statement of Common Ground (SoCG) by the start of the Local Plan Examination at the latest. Ideally the SoCG between the Council and National Highways would be prepared well in advance of plan submission in order to guide resource input and to track progress towards final agreement on all relevant matters starting from the earliest plan iterations until the final version is agreed.

It is acknowledged that Government policy places much emphasis on housing delivery as a means for ensuring economic growth and addressing the current national shortage of housing. The NPPF is very clear that: "Strategic policy-making authorities should establish a housing requirement figure for their whole area, which shows the extent to which their identified housing need (and any needs that cannot be met within neighbouring areas) can be met over the plan period."

However, new DfT C1/22 and the NPPF are equally clear that any development, including housing delivery, must be tempered by the requirement to ensure that the associated transport demand can be accommodated without unacceptable impacts on the safety of the SRN or severe impacts on the operation of the SRN including reliability and congestion. Therefore, as necessary and appropriate, any plan and/or development must be accompanied by suitable mitigation in the right places at the right time, that is to the required design standards and is deliverable in terms of land availability, constructability and funding.

We would also draw your attention to the then Highways England document 'The Strategic Road Network, Planning for the Future: A guide to working with National Highways on planning matters' (September 2015). This document sets out how National Highways intends to work with local planning authorities and developers to support the preparation of sound documents which enable the delivery of sustainable development. https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_t_data/file/461023/N150227_-_Highways_England_Planning_Document_FINAL-lo.pdf

Responses to Local Plan consultations are also guided by National Planning Policy Framework (NPPF) revised on 20 July 2021 which sets out the government's planning policies for England and how these are expected to be applied.

Updated Circular (01/2022)

It should be noted that since the start of the Local Plan consultation process, on the 23 December 2022, the Department

for Transport released a new circular on the 'Strategic road network and the delivery of sustainable development' (Circular 01/2022), which replaces all of the policies in Circular 02/2013 of the same name. These representations take account of the new circular and the requirements in terms of the Local Plan evidence base and process.

We request that the Local Plan is prepared in line with all aspects of the new circular. Particularly, the principles of sustainable development (paragraphs 11 to 17), new connections and capacity enhancements (paragraphs 18 to 25), and engagement with plan-making (paragraphs 26 to 38).

Regulation 18 submission

In our Regulation 18 submission we noted several matters including:

- The need to mitigate the adverse impacts of strategic development traffic to the A27 Chichester Bypass and its junctions at Portfield Roundabout, Bognor Road Roundabout, Whyke Roundabout, Stockbridge Roundabout and Fishbourne Roundabout and Oving junction.
- The need to identify a mechanism to calculate contributions towards the delivery of the previously agreed Local Plan A27 improvements
- The need to confirm the number of dwellings needed within the plan period
- The need to establish National Highways acceptance of the traffic model reference and future case scenarios
- The need to confirm costs, viability, and funding associated with mitigating the safety and congestion impacts of the development included within the plan.

Local Plan context

This Local Plan (Chichester Local Plan 2021 – 2039), prepared by the Local Planning Authority (LPA) Chichester District Council, sets out the vision for future development in the district and will be used to help decide on planning applications and other planning related decisions including shaping infrastructure investments.

The draft sets out how the district should be developed over the next 18-years to 2039 including for the full Plan period (1 April 2021 to 31 March 2039) the total supply of

- 10,359 dwellings
- 114,652 net additional sqm new floorspace

Minus the completions this is equivalent to around 530 dwellings and 6,150 sqm of floorspace a year.

National Highways Representations

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders.

We have undertaken a review of the Chichester Local Plan 2021-2039 proposed submission version and accompanying evidence documents, our comments are set out in the tables below (following pages). [see table within attachment]

Summary

We have reviewed the publicly available Local Plan documents and provided comments above in relation to the transport implications of the plan for the safety and operation of the SRN. We understand that other technical information is available, but this was not presented as part of this consultation.

Chichester, and the A27, are already heavily congested, infrastructure in the existing Local Plan remains undelivered and the growth set out in the new Plan will further increase travel demand.

As presented, satisfying the transport needs of the plan is clearly reliant on the delivery of the A27 Chichester bypass improvements project. The A27 Chichester bypass improvements project is one of 32 pipeline schemes being considered for possible inclusion in National Highways third Road Investment Strategy (RIS3) covering 1 April 2025 to 31 March 2030.

On 9 March 2023 the UK Transport Secretary ensured record funding would be invested in the country's transport network, sustainably driving growth across the country while managing the pressures of inflation. The announcement cited the A27 Arundel Bypass as being deferred from RIS2 to RIS 3 (covering 2025-2030). The transport secretary also identified a number of challenges to the delivery of the road investment strategy and cited the benefit of allowing extra time to ensure schemes are better planned and efficient schemes can be deployed more effectively.

At present, there is no commitment by DfT to carry out the A27 Chichester bypass improvements project. Until the A27 Chichester bypass improvements project is published in the RIS3, consented and a decision to invest is made it cannot be assumed to be a committed project.

We note that the Plan does not address any uncertainty of delivery of the A27 Chichester bypass improvements project and we strongly recommend that there is either no reliance placed on RIS3 to realise capacity for growth in the Plan or that contingency measures are included to cover the eventuality that RIS3 funding is not forthcoming within the plan period. It is not clear that the potential impact of development on transport networks can be addressed in the absence of the A27 Chichester bypass improvements project.

Achieving net zero, reducing emissions reduction, acting on climate, and supporting thousands of new homes and new employment developments will be problematic with existing processes. New, additional, and adapted processes and assessments will likely be required, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments. We acknowledge that change is complex, expensive, and time-consuming, especially for smaller district level Councils. But the hard work will deliver benefits for the Council and residents in the longer-term.

National Highways seeks to continue working with the Council and WSCC to progress coordinated and deliverable packages of interim mitigation measures and alternative transport solutions while a long-term strategic solution is considered by government. This must however be in combination with a robust monitor and manage policy that appropriately manages the risk of unacceptable road impacts resulting from new housing and other development over the Plan period.

We have been in discussion with Chichester District Council regarding their proposed Monitor and Manage Strategy. At present, we do not consider the current strategy to be robust and we seek further information and detail especially on who, when and when monitoring and management will be undertaken. Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas. Any M&M framework must be based on a "worst case scenario" whereby necessary transport mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. The M&M framework must set out that the alternative to mitigation not being delivered is that development does not proceed where that development would give rise to unacceptable road safety risk or severe cumulative impacts on the road network in the absence of that mitigation. The M&M framework must be translated into development management plan policy and policy relating to development allocations.

As we have reiterated throughout our comments, we welcome the opportunity to work with you to address these outstanding matters and we will continue to liaise over submitted Transport Assessment, Travel Plan policy and Monitor and Manage Policy to help to work towards a viable plan.

We hope our comments assist.

We look forward to continuing to participate in future consultations and discussions. Please do continue to consult us as the Plan progresses so that we can remain aware of, and comment as required on, its contents.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Support

Document Element: Policy P1 Design Principles

Respondent: Natural England (Luke Hasler, Senior Advisor) [8189]

Summary:

Natural England support this policy and welcome the requirement for development proposals to include a sustainability statement.

Full text:**Summary of advice**

While we have raised some queries and recommended some further modifications to certain policies we do not find the Plan unsound on any grounds relating to our remit.

Natural England has reviewed the Proposed Submission Local Plan and accompanying appendices together with the Habitats Regulations Assessment (HRA) and Sustainability Appraisal (SA). Our detailed comments on the policies and site allocations are provided as follows:

- Annex 1 - Chapter 2 – Vision and Strategic Objectives
- Annex 2 - Chapter 4 – Climate Change and the Natural Environment
- Annex 3 - Chapter 5 (Housing) and Chapter 6 – (Place-making, Health and Well-being)
- Annex 4 - Chapter 7 (Employment and Economy) and Chapter 8 (Transport and

Accessibility)

- Annex 5 - Chapter 10 – Strategic and Area Based Policies

Please note that we have not provided comments on all policies but those which have most influence on environmental issues. Natural England has no comment to make on the policies not covered in this response. Other than confirming that we have referred to it when considering our advice on specific policies and site allocations Natural England has no general comments to make on the SA.

Unfortunately due to unforeseen resourcing issues while we have reviewed the associated HRA we are not in a position to provide detailed comment on it as part of this response. We will rectify this as soon as possible and can confirm that we have seen nothing in it that raises any major concerns.

The Plan has many positive aspects including standalone policies on Green Infrastructure (GI) and wildlife corridors and an incredibly extensive suite of natural environment policies more generally.

We are hugely appreciative of the opportunity that we were given to work with you on shaping key policies post-Regulation 18. However, we believe that the plan needs to go further in its recognition of coastal squeeze as a key issue for the district, should include policy hooks for the forthcoming Local Nature Recovery Strategy (LNRS) and make up to date references to both the Environment Act (2021) and the Environmental Improvement Plan (EIP, 2023). Given how recent the publication of the EIP is we would be happy to discuss with your authority how this could best be achieved but we believe given the wealth of natural capital within Chichester District it is vitally important that this latest iteration of the Local Plan is set in its full policy and legislative context.

We have suggested a significant number of amendments and additions to both policies and supporting text throughout the Plan. In our view these could all be taken forward as minor modifications but if they were all acted upon they would leave the Plan much stronger and more coherent in delivering for the natural environment, one of the three central tenets of genuinely sustainable development as set out in the National Planning Policy Framework (NPPF 2021, paragraph 8c).

See attachment for representations on paragraphs/policies.

Document Element: Policy P1 Design Principles**Respondent:** Stagecoach South (Rob Vince) [8141]**Summary:**

NPPF requires that proposals should consider transport issues from the earliest possible stage. Designing to properly facilitate safe and efficient access, focusing first on sustainable modes, should be at the heart of development design. Too often it is still an afterthought, notwithstanding this.

Policy P1 must include an additional statement to be compliant and effective with NPPF paragraph 104-105 and 112 a): "Development will be designed to make access and movement using walking, cycling and public transport the natural first choice, and demonstrate through the Design and Access Statement how such modes are afforded the most direct, safe, reliable and efficient routes within to and from the proposals, especially when compared with car use."

Chichester District Local Plan 2039 – Pre-Submission (Regulation 19) Consultation

1. Introductory Comments

Stagecoach South is the main commercial public transport operator across Chichester District. The Company has headquarters in the city, which is also the principal public transport hub for the District and it's rather wider travel-to-work area encompassing much of the Arun District. Our services extend throughout and beyond the District boundaries, as far as Littlehampton, Midhurst, Havant and Portsmouth. The vast majority of services operate on a commercial basis – that is to say, sustained by passenger use and fare revenue, including concessionary reimbursement.

While the role of the railway is significant in much of the District, especially the east-west Coastway line, yet bus services account for more boardings locally than the railway, with Chichester depot services carrying over 3.5m passengers each year.

Unlike bus services in other parts of the country, the local network has recovered strongly after the pandemic with fare-paying passenger numbers over 95% of 2019 levels, albeit with concession patronage somewhat lower. This has helped secure not only a stable but growing bus network even during this period of rapidly rising operational costs, avoiding the need for the service contractions seen in other regions. Indeed, during the second quarter of 2023 Stagecoach will invest £5.5m in brand-new vehicles for high-profile coastal Service 700 – one of the largest vehicle investments for Stagecoach Group this year.

Our services are therefore critical to existing and future local connectivity. As the Plan acknowledges, mobility demands do not respect planning authority boundaries. The role of our services is especially high to settlements in the broad A27 corridor, within the District and beyond. This includes major settlements in Arun District such as Pagham and suburban Bognor Regis, where bus is the only mass public transport option. As the Council is well aware, there is an even higher level and rate of committed development envisaged in these locations in the Arun District Local Plan than in Chichester.

It is already evident to the planning authorities, West Sussex County Council and National Highways, as proprietor of the A27 Trunk Road, that accommodating growing mobility demands across Chichester District and especially around Chichester itself, is becoming increasingly challenging to the point of being seriously problematic.

Stagecoach has a particular interest in this Plan arising from:

- The already clear and highly deleterious impact of congestion affecting our operations and their reliability and attractiveness to the public. The effects of these on the approaches to Chichester, and around the A27 bypass are especially severe. If public transport is to retain its existing role – even before the needs of any meaningful growth both in Chichester and neighbouring authorities is considered, are considered – the Council and the Highways Authority need to arrive at clearly-defined measures to protect buses from chronic delay and the damaging impacts arising from the lack of bus network resilience and customer journey times.
- In connection with the above, the need to properly consider the predictable impacts of committed development in Arun District on the transport network and in particular the operation of bus services. The duty to cooperate on cross-border strategic matters is not limited merely to accommodating housing requirements.
- The fact that our entire business premises and operational base at Chichester is the subject of allocation for redevelopment within the Plan period. Specifically, this includes our Head Office, the Bus Station as the operational hub of the network and the key interchange for passenger journeys – including those that involve the railway – and the bus depot required to support the entire operation. Notwithstanding many years of discussions, there is as yet no agreed deliverable strategy to replace these facilities either in the Draft Plan or elsewhere.

Stagecoach broadly supports the vision and priorities of the draft plan. In most respects, Stagecoach supports strongly the spatial strategy and the identified site allocations that flow from it, and the evidence.

However, it has serious concerns about the soundness of the plan as proposed for submission, for important regards outlined in this response. These are made in the light of requirements set by the National Planning Policy Framework (NPPF), in particular at paragraphs 15 and 16; 35, 105-109 inclusive and having due regard to the need for allocations to satisfy 110-112 inclusive in due course as development permission is sought; and paragraph 174.

Paragraph 16c) of NPPF makes plain that strategic plans and policies should “be shaped by early, proportionate and effective engagement between plan-makers and communities, local organisations, businesses, infrastructure providers and operators and statutory consultees” (our emphasis). This makes plain that collaborative and ongoing involvement of public transport operators is both necessary, and separate and in addition to the engagement with statutory consultees. This has not taken place.

Para 1.25 of the draft plan states that “the council has engaged constructively, actively and on an ongoing basis with other local authorities and organisations to address key strategic matters.” Despite the requirements in NPPF and contrary to the statement made, Stagecoach has not been approached or involved in a meaningful, collaborative or ongoing way in the preparation of the Plan.

Our main concerns centre around the fact that the plan strategy is neither backed by sufficient transport evidence. Even more importantly, the plan relies on a wholly car-based transport mitigation strategy despite policy stating that this is not the case, and the track record of the existing Local Plan, based on a very similar strategy, that has failed to bring forward meaningful mitigations to date to prevent traffic conditions substantially worsening. There is no support in policy for the achievement of the Strategic Objectives in the Plan. Nor is there definition of any measures in the 2023 Transport Study to make provision for sustainable transport infrastructure or services – much less materially improve them.

Finally, to the extent that updated transport evidence has been provided in the form of the 2023 Chichester Transport Study, arising from updated traffic modelling, it does not support the contention that highways capacity constraints on and around the A27 justify not meeting the objectively-assessed development needs of the area, as the draft plan contends.

2. Vision and Strategic Objectives

2.1. Issues and Opportunities

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant, proportionate and up to date evidence

Stagecoach recognises the important role of the West Sussex and Greater Brighton Strategic Planning Board which agreed a Local Strategic Statement (LSS2) in early 2016 to identify spatial planning issues across the wider area. This established strategic priorities and policies to guide longer term strategic growth in a coordinated and well considered matter. This institutional framework and the purpose of the LSS is a highly significant one and is at the heart of efforts to properly fulfil the statutory Duty to Co-operate, including with regard to strategic infrastructure issues, as NPPF requires.

Given the long period of time elapsed since the 2018 Reg 18 consultation and the already very clear constraints on strategic infrastructure capacity, it is of great concern to Stagecoach that the LSS2 has not been updated to reflect emerging issues in the intervening period. A review and update of the LSS2 has only just commenced. This includes a study of projected housing and employment needs, transport impact, infrastructure and spatial options to deliver the required development in the period after 2030. This Chichester District draft plan covers a period extending to 2039 – therefore well beyond 2030 and the nominal currency of LSS2.

However, infrastructure needs are pressing today. Stagecoach is presented with severe highway operational problems on a near-daily basis. During the winter of 2022-23 we have, for example, seen key road links impacted for many weeks by acute disruption arising from flood events. Unpredictable, but seemingly more-frequent, exogenous events expose a lack of resilience in the highway network around Chichester and its travel-to-work area. However, serious, chronic, unpredictable delay has been normalised over recent years, with peak-time congestion having quickly returned after the pandemic. The existing development strategy has failed to bring forward measures having any impact on this to date, and key commitments – notably at west of Chichester Phase 2 and at Tangmere – have yet to commence to further aggravate the issue.

We have no confidence in the transport mitigations proposed in the existing Local Plan and LSS2 being sufficiently effective, even if deliverable at all. Indeed, the existing adopted Local Plan does little more than make vague speculations about the sustainable transport measures that might be achievable. The draft local plan review is no different. It has no ambitions at all for sustainable modes and thus, makes no meaningful provision to meet them.

This is especially relevant in light of the fact that the approach to resolving issues on the A27 around Chichester that were anticipated in 2015-16 have fallen away. LSS2 is thus currently inadequate to act as a part of an up-to-date, proportionate, and relevant evidence base for the Plan.

An update of a traffic model lies at the heart of a 2023 Chichester Transport Study. This talks no account of the existing role of non-car modes, nor can it do so. It is unable to properly evaluate the nature of problems or solutions that involve public transport, or for that matter, other sustainable modes.

Therefore, we consider that the combination of committed and additional development needs that must be

accommodated over the whole plan period between 2022 and 2039, in both the Chichester and Arun Districts, require a “first principles” review. This must be based on a refreshed transport evidence baseline of no earlier than 2022 – given that the effects of COVID distort 2020-22 – and the transport infrastructure and service requirements to sustainably support those needs.

Key issues – including substantial changes with regards to transport issues and challenges, as well as potential solutions – thus do not form part of the evidence base that steers this plan. Given long term changes in travel patterns, and mode share that took place during COVID, as well as a local and national policy context that seeks to radically reduce and then eliminate transport-related carbon emissions, this is especially problematic.

The specific problems of congestion and network resilience that are evident on the A27 and the approaches to Chichester remain a set of especially difficult problems that disproportionately affect the efficiency, reliability and attractiveness of the bus network, that evidently demand larger-scale strategic responses involving multiple stakeholders, including bus operators.

Where the effects of development on the national Strategic Roads Network (SRN) are concerned, the approach of National Highways to addressing and responding to the mobility needs of development has now substantially changed following the promulgation of the DfT Written Ministerial Statement LTN01/22. This makes it clear that adding highways capacity is no longer the first or only strategy that should be pursued, but one subordinate this to maximising the potential of non-car modes and sustainable travel.

“Effective and ongoing collaboration” on transport matters has not led to solutions being agreed and published for public scrutiny as part of the plan evidence base. Whatever the approach to modelling and “highways improvements” that may be agreed or pending agreement with the County Highways Authority and National Highways, Stagecoach is neither participant or sighted. This is despite the clear requirements set out in NPPF Para 106 b) that “Planning policies should ... be prepared with the active involvement of local highways authorities, other transport infrastructure providers and operators and neighbouring councils, so that strategies and investments for supporting sustainable transport and development patterns are aligned.” (our emphasis).

We therefore consider that the Council has failed to comply with the requirements of NPPF paragraph 25 and 26 that “relevant bodies” are involved in plan-making, especially with regard to addressing the needs for infrastructure. Public transport services and the infrastructure that supports its operation and use clearly fall within matters relevant to plan-making. This is explicit in NPPF Chapter 9 and indeed within the plan itself – for example reference to public transport and sustainable modes in the Vision for the plan.

It should be stressed that the Regulation 18 “Preferred Approach” consultation took place in December 2018 – over 4 years ago and prior to COVID, based on LSS2. The inordinate length of time that has elapsed between the Regulation 18 and Regulation 19 stages greatly challenges the LSS2 and other parts of the evidence base, especially as the pause straddles the COVID epidemic. That would include the transport modelling baseline, and key assumptions in any traffic modelling that took place prior to mid-2022, which is a point at which a reasonable “new normal” post-COVID might be considered to have become established. In that period, Arun District has also adopted its own Local Plan development strategy that accommodates an unprecedented quantum of development immediately east and south-east of the District Boundary – creating additional substantial transport impacts directly affecting the A27 and multiple major approaches to Chichester crossing it.

The established mechanism to fulfil the Duty to Co-operate has thus not operated effectively.

The Plan is not founded on a relevant, proportionate and up-to date evidence base and is thus inadequately justified.

2.2. Spatial Portrait

The spatial portrait is generally succinct and accurate. However, it makes no mention of road-based public transport, the role of the City as a public transport hub, or the range of bus services that provide local connectivity (Section 2.4 and 2.5). The complete concentration of post-16 education in the City itself as just one example of the peculiarities of transport demands in the area, is not highlighted, though this has a profound influence on peak time travel demands affecting the most congested parts of the highway network. Among other things, the role of bus services in supporting the educational system of the plan area is very great indeed.

The potential role of bus in addressing the already-severe transport problems of the plan area and beyond seems entirely overlooked. The spatial portrait is thus clearly inadequate and incomplete.

2.3. Strategic Objectives

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Chapter 9 of NPPF and paragraphs 104 and 105 in particular require that plans should:

“Transport issues should be considered from the earliest stages of plan-making and development proposals, so that:

- the potential impacts of development on transport networks can be addressed;
- opportunities from existing or proposed transport infrastructure, and changing transport technology and usage, are realised – for example in relation to the scale, location or density of development that can be accommodated;
- opportunities to promote walking, cycling and public transport use are identified and pursued;
- the environmental impacts of traffic and transport infrastructure can be identified, assessed and taken into account – including appropriate opportunities for avoiding and mitigating any adverse effects, and for net environmental gains;...

...The planning system should actively manage patterns of growth in support of these objectives. Significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. This can help to reduce congestion and emissions, and improve air quality and public health...”

The Strategic Objectives do not conform with NPPF in these foundational requirements adequately, to transparently steer the plan strategy. They should therefore be amended to read:

“Plan to provide local infrastructure to support new development and seek opportunities to address existing identifiable infrastructure problems deficits, such as in particular those relating to the A27 and its junctions and wastewater treatment.”

Paragraph 2.36 states, in the context of the Climate Emergency and the National Trajectory to “Net Zero” that “The council will enable the delivery of infrastructure, jobs, accessible local services and housing for future generations while protecting, conserving and enhancing the historic and natural environment.”
Naturally, we support this intent.

However, there is no acknowledgement of the role current patterns of transport use contribute to carbon emissions, nor that substantial mode shift is necessary to address sustainably an acute lack of capacity on the local network and the SRN, especially around Chichester. This is especially concerning as the basic conceptual link is not made between the fact that the greatest such problems lie on the A27 corridor and around Chichester, while these are also at the same time present many of the most sustainable locations for development, and where the opportunities to secure much greater use of sustainable modes also exists.

Strategic Objective 7 “Strategic Infrastructure” includes the following statement:

“To work with infrastructure providers to ensure the timely delivery of key infrastructure to support delivery of new development. New development will be supported by sufficient provision of infrastructure to enable the sustainable delivery of the development strategy for the plan area. Key infrastructure to support the Local Plan will include improvements to transport, ...

A sustainable and integrated transport system will be achieved through improvements to walking and cycling networks and links to accessible public transport. Highway improvements will be delivered to mitigate congestion, including measures to mitigate potential impacts on the A27 through a monitor and manage process.”

The latest transport evidence in the Chichester Transport Study makes no pretence to define much less to deliver a “sustainable or integrated” transport system. It is wholly devoted to sustaining current levels of car use across the District, to and through Chichester area.

It is no more than the lightest of touches to the approach taken to supporting the adopted Local Plan, an approach that is already almost 10 years beyond the date of its gestation but has yet to deliver any significant capacity improvement schemes, much less any measures that sustain even current levels of public transport journey times and reliability in the face of increasing congestion – much less any betterment.

Of the six key junctions on the A27 around Chichester, recognised to require significant mitigation given they are saturated for extended periods, five accommodate regular bus services - indeed frequent ones at least every 20 minutes in several cases. The sixth at Oving Road, relates directly to a key corridor where bus services are needed to support strategic growth currently being delivered at Shopwhyke, as well as substantial further growth West of Tangmere (proposed allocation A14) and “East of Chichester” (A8), south of Shopwhyke Road.

As stated at p12 of the Study Summary “The modelling shows that all the junctions on the A27 Chichester bypass are well over capacity, even before adding in the Local Plan development and with the exception of Portfield Roundabout are actually shown to be over capacity in the base model year (2014) in one or both peaks”. This much has indeed been evident for years from delay and periodic even more severe disruption arising to Stagecoach services from the lack of network resilience.

The reassignment of through and local traffic through Chichester to avoid the A27 bypass is an especially serious issue for bus services that penetrate the city. This is leading to consequential saturation of a range of junctions used by buses. Rising delay and unpredictable running times are at the root of our decision to sever the long-established Portsmouth to Littlehampton service in 2023, which will in future no longer run across Chichester, but terminate to provide additional dwell time to mitigate the impacts of congestion.

While this congestion affects all road users including businesses and freight traffic, the effect on scheduled bus services is greatly higher, as such services cannot reassign route to 'beat the queue'. Traffic congestion often encourages greater car use for this reason, in tandem that people are happier to sit for extended periods in their own vehicle on a seamless door-to-door journey than wait at the roadside for a delayed bus making slower progress in lengthy queues.

As the Study admits at para. 1.3.2 "Although, there have been works at the Portfield Roundabout in this timeline, no other mitigation schemes have been completed along the A27 corridor, as such the mitigation schemes defined in this report will also be required to consider the development from this plan period."

In other words, in the 8 years since the current Local Plan was adopted in 2015, there has been minimal progress in delivering the traffic mitigations. There is no clarity at all when any such mitigations will be brought forward. It is hardly surprising then, that traffic conditions have deteriorated. The "predict and provide" transport strategy supporting the current plan has failed.

Despite this, the Draft Local Plan Review proposed to "double down" on exactly this strategy. It represents, like the rest of the evidence base, a "rolling forward" of the current car-based strategy by 9 years, with the lightest of touches to attempt to accommodate car trip demands from a relatively modest additional development quantum.

Nevertheless, the Study requires a global 5% reduction in trip demands arising from unspecified "credible" (paragraph 4.1.2) sustainable transport and travel planning measures. It is unclear why use of non-car modes will see disproportionate growth when no measures are in place to make them more attractive. This 5% increase in use translates to a doubling in the modal share of bus services. There is no evidence nationally, anywhere, that simple ignorance of alternatives to the car is the main barrier to uptake.

The outputs of the 2023 Chichester Area Traffic (SATURN) model are set out at Table 5.1 (am peak) and 5.2 (pm peak) without mitigation. These betray just how seriously compromised the whole network around Chichester is, and will be in future, even with implementation of a mitigation package to increase traffic capacity that is understood to cost between £92m and £164m – and which the Study and the draft plan acknowledge cannot be delivered through developer funding sources alone. Unspecified external funding presumably from HM Treasury through DfT is required.

Even if this provided and the schemes are delivered, Tables 8.1 and 8.2 indicate these will provide minimal relief. The final columns suggest key junctions, including Portfield, Fishbourne Road and Cathedral Way East will remain at well over 100% ratio of flow to capacity (90% is considered the point at which saturation is approached, with the onset of increasing delay above that figure). RFCs in tables 8.1 and 8.2 are some of the highest we have ever seen in a local transport evidence base for a post-mitigation scenario. While the serious potential risk of reassignment across Chichester City is greatly reduced, which is important and welcome given its impact on bus services, Tables 8.1 and 8.2 show the extent of post-mitigation saturation is also egregious, covering a very large number of key links and junctions.

On every measure and criterion, then, including cost deliverability and effectiveness, the revised Transport Strategy falls well short of evidence to suggest the transport impacts of the plan can be properly addressed by this means.

Despite the repeated statements about sustainable modes throughout the draft plan and Chichester Transport Study, only 2 paragraphs at Section 6.2 within the Study are devoted to public transport:

"6.2.7 The funds generated from the parking management schemes, local/nation funding schemes and developer contributions could also be utilised to fund potential public transport enhancements within the city centre including an expansion of the bus priority lane system within Chichester City Centre. This could reduce reliance on the car in the longer term towards sustainable public transport. A park and ride scheme could be incorporated within a bus priority lane network in the future depending on the uptake and successfulness of early bus priority trials.

6.2.8 Chichester City centre has a constrained existing public highway network. Therefore, any proposed dedicated public transport or light transit corridors that could be implemented would be at the expense of existing highway. This could be managed through a time-based system where certain routes are restricted to public transport only during specific times. E.g., peak hours."

There is some very high-level consideration of Park and Ride following this section. None can be considered a serious practical evaluation of consolidating car-borne trips onto bus services, including existing ones, for example local mobility hubs, more frequent bus corridors, delivery of specific bus priorities.

None of the discussion of alternatives to "predicting and providing" for unconstrained traffic growth is rooted in a deliverable evidence base, or proper evaluation of options and specific projects.

To take just one aspect of the few specifics that can be picked out, a workplace parking levy is hypothesised. This would apply only to "offices", in Chichester city centre (para 6.2.3), without consideration given as to how this could be practically achieved or even that a meaningful amount of office based employment would qualify. Much less is any consideration given to how far focusing a strategy only on office-based workers would actually deliver a particularly significant effect, apart from to create a strong incentive to relocate offices out of the city centre to places out of reach by public transport.

Looking at the Chichester Transport Study 2023 and the draft plan together, there is insufficient evidence that the traffic capacity increase proposed in the 2023 Transport Study is any more affordable or technically deliverable, or likely to be sufficiently effective, than those in the past strategy. The evidence more strongly points to the fact that no highway improvements are identifiable or economically deliverable to meet even short term increases in demand for car-borne mobility on most of the network around Chichester.

There are no published strategies or schemes clearly supporting the contention that the objective of improving sustainable modes is technically achievable or deliverable either. The plan makes generalised assertions that such strategies will be devised and implemented only after serious problems emerge from a shortfall in the car-borne transport strategy.

The reference to “monitor and manage” is undefined and unsubstantiated. There are no outcomes stated, no mechanisms specified and no timescales for action.

Our experience today is that network conditions have reached unacceptable and prejudicial levels of severe unpredictable delay. The saturation of the network is already evident well outside the traditional peaks on key sections of highway and at key junctions. External shocks such as the effects of severe weather are becoming more common, leading to delays so extreme as to justify the description of “gridlock”. The plan does not identify a strategy to effectively address this, in particular by consolidating passenger car trips onto more efficient public transport vehicles. This is unacceptable to Stagecoach.

2.4. Local Plan Vision

Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the broad approach in Plan Vision and in particular that by 2039, the Plan will support and enable greater use of sustainable modes. However, there is no link made between reducing the use of private cars, and the need for a step change in the use of sustainable modes. Without a published transport evidence base it is impossible to establish a suitable sustainable transport strategy to support both carbon reduction and alleviation of the problems arising from acute congestion. Even on a very crude basis, to achieve a meaning mode shift on key approaches to the A27 Chichester Bypass will require more than 20% of existing peak car-borne journeys to transfer to other modes. A 10 percentage point transfer to bus (about half this shift) would imply more than doubling peak hour bus passenger boardings.

The Vision is nothing more than an aspiration, that needs to more definitively aim at key outcomes, for the plan to be effective. The Vision should thus be altered to read:

“Get about easily, safely and conveniently with less reliance on private cars –making the greatest possible use of the rail and enhanced bus network, and with more opportunities for active travel including walking and cycling; to materially reduce dependence on private car use.”

Underpinning the Plan’s spatial strategy, the Vision section goes into more specific detail about key localities in the Plan area.

Regarding Chichester, Paragraph 2.39 states: “The emphasis will be upon consolidating and enhancing the role of Chichester city as the plan area’s main centre, whilst also developing the role of key settlements to its east and west. The focus will be upon creating communities with good access to a range of employment opportunities and affordable housing for young people and families to balance the ageing population.”

This is clearly the appropriate focus for meeting the District’s development needs in a sustainable manner. The city and key settlements to the east and west, are those places already able to make use of relevant public transport services, both rail and bus. Especially within and near the City, walking and cycling can credibly present highly relevant choices. This emphasis clear can be expected to address the requirements of sustainable development set out in NPPF and their local application set out in the Plans Strategic Objectives.

However, this needs a robust transport strategy, to avoid a further concentration of development and its traffic impacts occurring on or near some of the most chronically congested parts of the highway network. To date, the absence of intervention has strangled the bus network through further marked deterioration in traffic conditions. This by consequence increases the risk of bus delay or cancellation, lengthens journey time and reduces customer confidence in bus as an attractive alternative mode of travel.

In April 2023, Stagecoach is making significant timetables changes to improve operational resilience in and around Chichester. The biggest such change is the severance of the Portsmouth to Littlehampton section of service 700, at Chichester, with buses operating independently to the east and to the west and ending cross-city links. This is planned to reduce the probability of delay but at the cost of additional vehicle resource (circa £200,000 per annum) which could be better spent providing new or enhanced services. We anticipate a small loss of custom as a direct consequence of the change, but have little choice other than to take negative action so as to fulfil our statutory punctuality obligations.

If the Strategic Objectives of the Plan and its Vision are to be achieved, in the way required by NPPF paragraphs 104-105, a properly-evidenced transport mitigation strategy needs to create the conditions where bus journeys are more reliable than car journeys and thus mobility demand switches as far as can be realistically achieved away from car use, to bus use and other more sustainable modes.

Beyond Chichester, the Plan Vision focuses on key localities beyond to the east and west.

To the west of Chichester a focus on growth at Southbourne is justified at paragraph 2.43: "...the aim is to take advantage of the village's good transport links and existing facilities to deliver significant new residential-led development within the broad location for development which will further enhance local facilities and offer opportunities to reinforce and supplement existing public transport, including bus routes."

We agree this is a very significant opportunity. However, if the requirements of NPPF paragraphs 104-105 are to be met, this demands that effective bus priority is delivered on the A259 corridor, especially eastbound at Fishbourne and westbound approaching Emsworth. Without such measures, the growth committed and planned will serve only to further undermine bus journey time and decrease punctuality on the existing 700 service, entirely contrary to the aims of the Vision.

The emphasis on the A259 corridor served by Stagecoach 700 west of Chichester is reinforced at paragraph 2.45 stating that "Between Chichester and Southbourne, the Plan provides for more moderate levels of growth within the parishes of Fishbourne, Bosham and Chidham & Hambrook, ... with opportunities to support and expand existing facilities and for increased use of public transport options". We strongly support the principle, but the Plan must follow through with specific public transport priority measures that facilitate rather than prejudice such an outcome.

East of Chichester the focus is at Tangmere, where the existing allocation for about 1000 dwellings is being uplifted by 300. Paragraph 2.44 justifies this among other things recognising the scope for "...improved and additional bus services and cycleways will provide better connections to Chichester city and east to Barnham and the 'Five Villages' area in Arun District." We unequivocally endorse this conclusion. Realising a "game-changing" level of bus service quality, reliability and frequency east of the city, also serving committed and planned development north and south of Oving Road at Shopwhyke, is equally essential, given that all SRN links and junctions are approaching equal saturation.

The National Bus Strategy has given new focus on partnership with West Sussex County Council to discuss and deliver a significant new bus service between Chichester, Shopwhyke, Tangmere, Eastergate and Barnham, supporting committed development and acting as an initial phase of what ought to be a more ambitious longer-term strategy to support growth beyond 2025 in both Chichester and Arun Districts. For these improved bus services to be both deliverable and effective, robust bus prioritisation is unavoidable. No such measures are proposed in the Plan or its evidence base and we therefore suggest inclusion of plans to facilitate safe and efficient bus operation between Tangmere and Nyton/Eastergate, ideally avoiding the need to join A27 through-traffic entirely.

We welcome the clear recognition that these localities identified for growth, benefit from existing relevant public transport services. The Vision also sets an expectation that bus services in particular should be "enhanced" and "reinforced".

We entirely agree that these opportunities exist, across the broad strategy and strategic allocation proposed by the draft Local Plan. Securing them will be crucial to achieving national and local policy objectives, including the Strategic Objectives. However, to our continuing very great dismay, the Plan goes no further to defining how this will be achieved. As such the Vision is not demonstrable achievable or deliverable.

Accordingly the Plan cannot be considered effective, in the sense of NPPF.

Remedying this, demands specific measures to protect bus services from congestion in the following corridors:

- A259 East of Emsworth
- A259 Fishbourne
- A 259 Via Ravenna/Cathedral Way
- A286 Stockbridge Road north and south of A27
- B2145 Whyke Road/Hunston Road
- A259 Bognor Road, east and west of A27 and extending to the District Boundary
- B2144 Oving Road/Shopwhyke Road east and west of the A27
- A 285 Westhampnett Road/Portfield Way/Stane Street, potentially involving a mode filter at the west end of Stane Street

These must be defined to a sufficient level of detail to assess their effectiveness and deliverability, including costs.

This would then allow West Sussex County Council and Local Transport and Highways Authority, ourselves as the principal bus operator, and where appropriate other organisations that would be directly tasked with delivering the mitigation package, to agree service levels and standards necessary to deliver specified outcomes, including journey times, frequencies, capacity and hours of operation on the network, and also in respect of the strategic allocations and

Strategic Locations for Growth.

The agreed mitigations strategy should be set out in an up-to-date Infrastructure Delivery Plan backed by clear funding commitments, including a funding strategy to justify necessary developer contributions.

Where necessary to support evidence of effectiveness and deliverability, clear statements of support, which might include Statements of Common Ground between the LPA, LTA, National Highways and Stagecoach, could be provided.

3. Spatial Strategy

Stagecoach Supports

Stagecoach well recognises the constraints outlined in the explanatory narrative at the start of Chapter 3.

In particular we strongly endorse that strategy in that it reflects that the best opportunities to meet housing and employment development requirements sustainably clearly exist in and close to Chichester and on the key east-west movement corridor where – subject to effective measures being delivered to make these modes more attractive, efficient and relevant – sustainable modes can credibly provide for a much higher proportion of movement demands, mitigating most effectively the potential traffic impacts of development.

We agree that the Manhood Peninsula suffers serious environmental constraints, but, added to these, public transport and other sustainable modes cannot provide such attractive alternatives, and significant further development risks merely reinforcing already high levels of car use, aggravated by the carbon impacts of the distances involved – something the plan does very little to evaluate, and makes no reference to.

We endorse the conclusion in paragraph 3.24 that significant development in the part of the District north of the National Park is inappropriate. The rationale is principally on landscape and visual character. This exposes a fundamentally biased approach to plan making that has consistently underplays transport accessibility and carbon issues. In fact, the lack of local services and the extended distances that need to be travelled to fully participate in society in this area, with no realistic prospect of public transport offering relevant choices, ought to rule such a strategy out of play on a far less aesthetic and interpretational basis.

3.1. Policy S1 Spatial Development Strategy

Stagecoach Supports

The Spatial Strategy flows clearly and logically from the Spatial Portrait, and the opportunities and constraints identifiable across the Plan area. It represents a logical and justified continuation of the existing Local Plan strategy. In particular the spatial strategy maximises the potential for sustainable modes to contribute to meeting a much higher proportion of all the District's mobility and accessibility needs.

3.2. Policy S2 Settlement Hierarchy

Stagecoach Supports

The settlement hierarchy clearly reflects the service endowment and potential self-containment of the settlements in the District. In particular, the second tier of settlement hubs includes secondary schools, which are major peak trip generating uses. Service villages, in the main, also benefit from bus services running at least hourly, which can be expected to provide for a degree of mobility for the higher number of trip purposes that cannot be satisfied by walking or cycling within the immediate locality. Thus, a level of development to meet local needs in this tier is relatively sustainable.

There is a quite broad range of settlements in this category. We have concerns that, north of the National Park, the Service Villages have no realistic public transport choice. These include Plaistow/Ifold, Kirdford, Loxwood, and Wisborough Green. Such as exists is typically a 1/bus per day off-peak shoppers service offering up to 90 minutes in Horsham or Guildford and as such any development here even to meet local needs requires each adult to own a car. This contrasts strongly with Service Villages to the south of the National Park, which are greatly more sustainable.

4. Climate Change and the Natural Environment

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This section of the plan is extensive and wide ranging, as should be expected.

However, remarkably, there is no acknowledgement whatever of the role of transport in mitigating climate change or its effects, not of the importance of sustainable movement and access being facilitated across the plan area in addressing anthropogenic impacts on the natural world at a more local level.

This exposes very clearly a troubling level of indifference to transport matters in the production of the Plan, which, while nationally quite common, is neither appropriate nor acceptable. The mitigation of transport impacts is not merely a matter speaking to the social and economic aspects of sustainable development. It is crucial to address the causes and effects of climate change that arise from transport, and personal mobility.

This is now well understood and at the centre of national policy, including the National Decarbonisation Strategy for Transport (July 2021) which at Section 5 commits the government to aligning land use planning and transport strategy much more tightly and effectively to mitigate the carbon emissions associated with the current dependence on cars, and the mode mix; but also to reduce travel distances, both increasing the potential relevance and effectiveness of all sustainable modes, and reducing average journey lengths for residual motorised journeys of all kinds.

National statistics show that well over a third of all domestic carbon emissions arise from land-based transport and of these, the vast majority arise from trips of over 10km – outside the range of large scale use of cycling. In fact, the potential of the plan to materially support carbon emissions reduction from within the plan area lies more in the realm of transport than any other policy theme – including emissions mitigation from buildings, which is in any event an aspatial matter and covered by nationally-binding building regulations. By 2025 something like 40% of all the emissions within the plan-area will be transport related.

There is no evidence supplied to support the plan that addresses the transport carbon impacts of the spatial development strategy in a clear manner.

There is no evidence supplied that sets out the effects of potential worsening of congestion on air quality within the plan area, arising entirely from the excess of passenger car movement demands over available and credibly deliverable highway capacity. This is despite the evidence set out and acknowledged in the explanatory memorandum at paragraph 4.130:

"4.130. The council's Air Quality Action Plan and the West Sussex Transport Plan 2022-2036 both refer to the air quality issues faced by Chichester. There is currently one Air Quality Management Area (AQMA) in the plan area, located at St Pancras, Chichester. AQMAs are designated where air quality exceeds, or is likely to exceed, national air quality standards and objectives. Development within or impacting these areas, or that likely to cause the declaration of any further AQMAs, will be subject to an air quality assessment by the applicant."

This is a retroactive approach – it is not "planning", based on evidence.

We are well aware that air quality issues in and of themselves can render allocated sites to be undeliverable: a good example is in the Vale of White Horse, Oxfordshire, where strategic allocations on the A338 and A420 corridors have been held up for years by air quality issues at Marcham and Frilford, in large measure because agreed transport interventions were considered inadequate or undeliverable a very short time after the Plan was examined and adopted.

There is no evidence that shows how the development strategy can effectively mitigate these impacts as well as the further potential impacts that arise from the development strategy. This is exasperating, as there is clear evidence that could be drawn upon to show that that very substantial opportunities exist to:

- Speed buses up and make them more reliable by the delivery of bus priority on most of the key main corridors. Most of these even today operate relatively frequently
- Improve service frequencies and extend hours of operation.
- Secure significant background mode shift to bus as a result, damping pressure on key links and junctions, by consolidating demands on direct more reliable and more frequent bus services.

The spatial development strategy as submitted is in fact, likely to well conform to such additional evidence.

The allocations require substantial additional transport related work and evidence to demonstrate that the opportunities for sustainable transport have been identified and taken up as required by NPPF paragraphs 104-105.

With regards to specific policy, Policy NE22 should be modified to read:

"Development proposals will be permitted where it can be demonstrated that all the following criteria have been addressed:

1. Development is located and designed to minimise traffic generation and congestion through access to by maximising the relevance and attractiveness of sustainable transport modes, including maximising provision of specific demonstrably effective measures to make pedestrian and cycle and public transport routes and networks more direct, more safe, faster and more reliable;..."

5. Housing

5.1. Policy H1 Meeting Housing Needs

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

The presumption of the planning system is that local planning authorities should seek to meet their objectively assessed development requirements in full. These needs are assessed by a defined Standard Methodology set out in Planning Practice Guidance and elsewhere, that has explicit regard to ensuring that the economic and social effects associated with housing are properly provided for, to avoid exacerbating serious problems that arise from inadequate housing supply.

As a significant local service provider and employer, Stagecoach is concerned that existing issues with housing availability and affordable housing supply are not exacerbated. This has a direct bearing on staff recruitment and retention. It also has an indirect bearing on our cost base.

The existing problems with housing affordability have developed over many decades of undersupply. It should be emphasised that the significant boost to the supply of housing that has been sought by governments over the last 15 years, has only begun to take effect relatively recently in this District. Tackling the problem will require years of consistent attention.

Stagecoach notes that the Council is no longer proposing to meet its identified housing needs in full. Rather than 638/annum the Council is allocating a total that implies an annual delivery rate of 535/annum.

While a number of matters evidently present challenges to the Council in identifying a sustainable development strategy. Paragraph 5.2 indicates that "constraints, particularly the capacity of the A27 has led to the council planning for a housing requirement below the need derived from the standard method..." The blame for being unable to meet housing requirements is thus laid squarely at the door of transport infrastructure and systems.

This conclusion in no way follows from the evidence in the Chichester Transport Study. This, rather, makes the statement that when a higher annualised quantum of 700 dwellings per annum was tested, in the majority of cases the traffic capacity improvement package would perform little differently. To quote the Study:

"5.6.3 The network performance outputs analysed comprising V/C%, Delays (seconds) and Queues (PCU's) suggest that generally the proposed SRN mitigation identified for the Core Scenario, can accommodate in the most part, additional increase in development to 700dpa."

Whether the rest of the local road network is similarly protects is moot.

Irrespective of these results, even if the contention made in the draft plan were true, unlike many other constraints, this is amenable to a suitable effective strategy to address the constraints identified being collaboratively conceived. This is what NPPF expects, as set out in paragraphs 104-106.

Where the A27 is concerned, as part of the SRN, National Highways is now working to a substantially revised approach than that in force at the time to current Local Plan was prepared, or LSS2, or reflected in the Chichester Transport Study. This is set out in DfT WMS 01/22. This document is the policy of the Secretary of State for Transport in relation to the SRN which should be read in conjunction with the National Planning Policy Framework (NPPF). It replaces the policies in the Department for Transport Circular 02/2013 of the same title.

It makes plain that to accommodate additional demands arising from development, National Highways (NHC) expects to meet the requirements of its statutory license in a substantially different manner. With respect to development NHC LTN 01/22 continues to address the tensions between national policy for the environment and carbon mitigation, the ongoing need to substantially boost the supply of housing as well as maintain national economic competitiveness and protect the safety of the public. However, in future, the approach will be to seek first to maximise the impact of demand management measures (reducing the need to travel), and then to accommodate residual additional demands first though maximising the use of sustainable modes, rather than accommodating assumptions about current levels of car dependency and use.

LTN 01/22 much more closely and explicitly aligns with the language of NPPF Chapter 9 paragraphs 104-106. Paragraph 12 states: "New development should be facilitating a reduction in the need to travel by private car and focused on locations that are or can be made sustainable... Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas." (our emphasis).

It continues at paragraph 13: "where developments are located, how they are designed and how well delivery and public transport services are integrated has a huge impact on people's mode of travel for short journeys. The company will therefore expect strategic policy-making authorities and community groups responsible for preparing local and neighbourhood plans to only promote development at locations that are or can be made sustainable [footnote 8] and where opportunities to maximise walking, wheeling, cycling, public transport and shared travel have been identified." (again, our emphasis)

Stagecoach readily confirms that the draft Plan development strategy conforms well to the first limb of this expectation, in terms of the location of development.

Stagecoach considers that the plan and its evidence base conforms poorly to the second in that the specific opportunities to maximise walking, cycling wheeling and public transport are not clearly identified, and defined, and proven to be effective and deliverable.

The current mitigation strategy for the A27 Chichester area, supporting the adopted Local Plan and for which proportionate developer contributions have and continue to be sought, reflects now-superseded DfT Circular 02/2013. As

a direct result, it failed completely to identify any significant effective bus priority measures, despite the fact that frequent services already exist on the key corridor concerned, and that one bus journey can remove, fully seated between 72 and 80 single occupancy car journeys from congested links and across key junctions on the A27. Rather, it sought to implement targeted measures to increase the throughflow of general traffic.

We recognise the realisation that this approach, which was already reliant on some tenuous logic, is simply not technically viable, especially where further development needs are anticipated.

National Highways will now pursue an approach with the planning system that “includes moving away from transport planning based on predicting future demand to provide capacity (‘predict and provide’) to planning that sets an outcome communities want to achieve and provides the transport solutions to deliver those outcomes (vision-led approaches including ‘vision and validate,’ ‘decide and provide’ or ‘monitor and manage’). The company will support local authorities in achieving this aim through its engagement with their plan-making and decision-taking stages.” (paragraph 15).

Paragraph 23 is at the fulcrum of assessing and defining transport mitigations to accommodate growth on and near the SRN “Capacity enhancements such as modifications to existing junctions or road widening to facilitate development should be determined on a case-by-case basis. The general principle should be accepted where proposals would include measures to improve community connectivity and public transport accessibility, and this will be weighed against any negative safety, traffic flow, environmental and deliverability considerations, impacts on the permeability and attractiveness of local walking, wheeling and cycling routes, and alternative options to manage down the traffic impact of planned development or improve the local road network as a first preference.” (our emphasis).

However, no material work has been done that seeks to identify if a bold robustly conceived and suitable judiciously-prepared strategy that seeks to consolidate flows on already densely travelled corridor onto improved bus services, driving mode shift through insulating these services preferentially from already serious queuing. This would be likely to have very substantial impacts on all the key junctions on the A27, and potentially, on the A27 itself. The need for an integrated approach between Shoreham and Emsworth within West Sussex paying particular regard to development requirements in both Arun and Chichester Districts naturally lies at the heart of this, and we would expect to be picked up by the LSS3 Review among other things.

However, the locus of the problems and its causes and effects are obviously well enough known to start work on defining solutions within the plan area today. We would expect that this work will be essential if National Highways are to support the Plan, especially now given the terms of Circular 01/2022.

Such work could and should start from a “policy off” position: in other words that the Plan should fully accommodate its needs unless it can be proved that a mitigation strategy for the A27 that is compliant with DfT WMS 01/2022 cannot credibly accommodate resulting capacity demands without unacceptable impacts on the safety and efficient operation of the SRN.

This evidence does not exist. In fact the Chichester Transport Strategy 2023, on which the Council solely relies as its transport evidence base, indicates the opposite at para 5.6.3. This is the case before meaningful measures to secure damping of traffic demands through mode reassignment are even considered.

The exception to this is Portfield and Oving Road, which are among the most problematic areas after mitigation even at the Council’s chosen 535 dwelling/annum scenario (para 5.6.4.-5). The costly capacity mitigation simply cannot deliver enough benefit. It is admitted that WSCC has indicated that it would prefer a solution that places greater reliance on sustainable modes damping car-borne demand. This is entirely the strategy required by NHC to follow LTN 01/22, of course. Despite the fact that “predict and provide has “run out of road” no attempt has been made to examine what such a solution set credibly could look like. This is unsatisfactory and deeply troubling.

At paragraph 5.4 the draft plan points back again at the West Sussex and Greater Brighton Strategic Planning Board and the future work that has been commissioned, but has barely begun, to update the Local Strategic Statement. This work is to inform the preparation of plans that have horizons beyond the end date of the current LSS in 2030 and properly to meet the Duty to Cooperate. As we said in our response to section 1 of the Plan we fully endorse the conclusion that this is the right mechanism to look at these issues. However, the mechanism has not been effectively applied to the production of this plan. Therefore, the specific evidence that capacity on the A27 in and of itself supports accommodating a lower housing requirement does not exist.

The Plan thus does not conform to NPPF, is not adequately justified and is not effective.

The Plan does not properly meet the statutory Duty to Cooperate.

We will return to this matter in specific representations to Section 7 of the draft plan.

5.2. Policy H2 Strategic Locations/Allocations 2021-2039

Stagecoach Supports

Policy H1 makes plain that the plan, as far as it identifies locations for development has done so in locations that

conform with its spatial strategy. All of the strategic allocations to a greater or lesser extent offer clear opportunities to make use of sustainable modes, by virtue of their location. That is not to say that the opportunities to take up these opportunities, and maximise the role of sustainable modes, has been identified, defined and translated properly into the rest of the plan policy suite or Infrastructure Delivery Plan.

As our remaining representations make clear, we support the locations thus far identified as being those that offer the best opportunities to reduce the need to travel, reduce travel distances, and create high quality attractive sustainable travel choices, for both existing residents as well as new ones.

However, the transport impacts of the allocation will individually and cumulatively likely to lead to increasingly severe impacts on the transport network, and on bus services.

Perversely, because these opportunities are not properly identified and secured through the plan and its supporting transport strategy, the opportunities presented by the allocations to secure a substantially more sustainable and lower carbon pattern of movement will not only risk being squandered but may aggravate the wider problems.

5.3. Policy H3 Non-strategic Parish Housing Requirements Stagecoach Supports

The approach is consistent with the plan's spatial strategy. It generally avoids a dispersal of development to locations likely to be highly car dependent. There is a clear focus on meeting housing needs in the far north-east of the District at the largest and most sustainable settlements, such as Loxwood, Kirdford and Wisborough Green. However, it must be pointed out that public transport availability in this area, provided by the County Council through services it procures, is minimal. These settlements in practice require each adult and child of secondary school age to have access to motorised transport to fully participate in society. This might justify significant measures to secure a boost in the frequency of bus services between Guildford and Billingshurst, passing through these settlements.

Otherwise, existing commitments in the plan area already make provision to meet for local needs. To the degree that there is an unmet local requirement for affordable housing of a small scale – for example to support the rural economy – this could be met through neighbourhood plans or through Rural Exception Sites.

6. Place-making, Health and Wellbeing

6.1. Policy P1 Design principles

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

NPPF requires that proposals should consider transport issues from the earliest possible stage. Designing to properly facilitate safe and efficient access, focusing first on sustainable modes, should be at the heart of development design. Too often it is still an afterthought, notwithstanding this.

Policy P1 must include an additional statement to be compliant and effective with NPPF paragraph 104-105 and 112 a): "Development will be designed to make access and movement using walking, cycling and public transport the natural first choice, and demonstrate through the Design and Access Statement how such modes are afforded the most direct, safe, reliable and efficient routes within to and from the proposals, especially when compared with car use."

6.2. Policy P4 Layout and Access

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

A number of proposals in the plan involve large-scale development. It is essential that where appropriate buses can access and circulate efficiently through development at a suitably early stage. There is no acknowledgement of this anywhere in the policy, contrary to NPPF paragraph 112.

Large-scale development which buses cannot access in an efficient or timely manner, or at all, strongly contributes to high levels of car-dependency. Evidence for this is referred to among other places, in DfT Circular 01/2022. To be compliant with NPPF and properly pursue its strategic Objectives, Policy P4 needs to be modified to address this point: "1. Provide safe, direct and attractive conditions for inclusive access, egress and active travel between all locations and providing as good direct high quality links to integrated public transport, and where appropriate efficient access and circulation to bus services, unimpeded by excessive parking, at a suitably early point in the development phasing;

7. Transport and Accessibility

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

- is unsound because it is not based on relevant proportionate and up to date evidence

The issues related to transport are fundamental to the soundness of the Plan. In particular, the constraints presented by the capacity on the A27 around Chichester and its key junctions, are the paramount reasons why the Council does not consider it can meet its objectively-assessed development needs in full. Thus, the transport issues and potential solutions available and what these mean for the ability of development needs to be accommodated, are matters that go to the heart of the soundness of the Plan.

Paragraph 8.3 sets out the approach taken to date succinctly:

“Increasing the capacity of the road network is key to supporting growth in the Local Plan. However, there is also a need to reduce demand for road transport to achieve net zero in greenhouse gas emissions by 2050 as highlighted in the council’s Climate Emergency Action Plan and Strategic Objective 1. In aiming to achieve the ambitions of the action plan, all development is expected to demonstrate how it will support four key objectives to create an integrated transport network which will alleviate pressure on the road network, improve highway safety, encourage sustainable travel behaviours and help reduce transport related impact on air quality, by:

1. Avoiding or reducing the need to travel by car;
2. Enabling access to sustainable means of travel, including public transport, walking and cycling;
3. Managing travel demand; and
4. Mitigating the impacts of travel by car.”

However, this approach is unambitious and “lightweight” as it assumes, as does the existing Chichester Transport Strategy on which the current adopted plan relies, that the focus of investment should be, wholly, in highways capacity improvement.

Sustainable modes explicitly are expected to play a greater role to “alleviate pressure” on the local road network, as part of this strategy. To emphasise: to avoid exacerbating congestion, the strategy will have to both remove a significant proportion of existing demands from the network on multiple key approaches to Chichester; and then ensure that travel demands from committed and further new development allocated in the plan does not simply replace these journeys, or, worse, create even greater demands.

This will demand very significant behaviour change. Only by making sustainable modes substantially more attractive, both absolutely, and relative to the same journey made by car, can this be expected to occur. However, the explanatory memorandum as well as the wider policy suite and IDP, well expresses a fundamental unwillingness to taking specific, defined measures to achieve this reduction in car use and material promotion of sustainable modes. It makes plain that sustainable modes, including bus services, will offer a lesser role to which “access will be provided”.

Such a vague and weakly defined mechanism will have no effect, at all, on current behaviour and car dependency if the relevance of those choices as a credible alternative to car use, is not substantially boosted. This includes a 5% reduction in trip demand assumed by the Traffic Model at the heart of the Chichester Transport Study 2023.

For this reason. the transport strategy behind the current adopted plan is demonstrably ineffective, as the updated model makes plain. It has not yet been delivered and is yet unclear when or (in the absence of committed funding) even if it can be. It is ineffective to “roll forward” this strategy to support a higher level of planned growth.

We note that a scheme for addressing congestion on the A27 at Chichester has been included in Roads Investment Period 3 (2025-2030) – well within the horizon of this Plan. However, recent history provides compelling evidence that off-line improvement to the north is not politically supported and arguably even technically or economically deliverable. It is not funded, nor at this stage can it be hypothesised if an economically deliverable scheme is achievable sufficient to warrant the necessary investment.

An on-line improvement of the A27, including junction improvements, is likely to favour longer distance east-west though movements, which are of greater significance to the national economy, at the expense of local movements crossing the SRN- a conundrum that largely sums up the dilemma that is faced by NHC and the County as Highways and Transport Authority. It is one that is played out in many places, but rarely is the tension so stark as at Chichester.

Every local route crossing the A27 at grade around Chichester accommodates a regular bus service - or shortly will do (Oving Road area is expected to follow in 2023, though bus services are likely to not use the modified crossroads but to use the left-in-left-out facilities provided as part of the Shopwhyke Lakes development). The impact of these issues on the entire bus operation are serious and increasingly severe.

By the same token, boosting the relevance and reliability of each of these services substantially consolidating as much demand as possible onto a much smaller number of vehicles, is clearly a strategy that ought to support the effective capacity of each of these junctions being greatly augmented, at the same time as reducing equally substantially, the energy- and carbon intensity of mobility in the plan area. Addressing the A27 should not be considered some kind of “zero-sum” game.

Furthermore, the approach of National Highways in its dealings with development and the planning system now reflect a substantial change in Government Policy set out in DfT Circular 01/2022, which we separately cover in these representations, that entirely aligns with an approach that seeks to appropriately invest in more active and rational management of scarce highways capacity, on both the SRN and local roads.

For environmental, economic and social reasons – including public health, the issues presented by the A27 and its interface with local roads around Chichester stands out, nationally, as an example of where the approach taken to accommodating and mitigating development impacts needs to make a clear break with previous “predict and provide” approaches to meet forecast unconstrained car use as LTN 02/2022 makes clear as a principle. Policy in the West Sussex LTP to 2036 itself makes plain that “shared mobility” – including bus services – must play a much greater role in this area.

The existing Chichester Area Transport Strategy is focused on justifying capital contributions from committed development to fund highways capacity improvement – with nothing included to make bus services more attractive, or importantly more reliable. Indeed this “cars first” approach is so costly, that there is already accepted by WSCC to be insufficient land value remaining to be captured to put into substantial improvements for public transport. That much is very evident, and transparent, from paragraph 8.12 and 8.14, where south of Chichester “This (one) package of works (of several improvements needed) would be between £57.23 and £82.79 million to deliver in full and would not be capable of being funded by development contributions alone.” This assumes the scheme is otherwise deliverable, which on the evidence in the public domain for some time, has been considered challengeable.

The draft Local Plan and a modestly updated infrastructure package that flows from the 2023 Chichester Transport Study, pursues exactly the same approach.

This strategy is also even more ineffective having regard to the roll forward of the Plan to 2039. It cannot deliver the key Strategic Objectives of the Plan; and in particular this is explicitly recognised by the Council in the failure of the draft Plan to accommodate the OAN in full.

It is also obsolete, as it does not align, from first principles, with national policy (including the National Decarbonisation Strategy for Transport) and DfT Circular 01/22; nor the Council’s own declared Climate Emergency.

As a result, draft Policies T1 and T2 are both unsound, as we will separately explain.

Owing to the lack of evidence about the implications of this for adjoining authorities – especially Adur District – in the absence of the review of the Local Strategic Statement – this has implications for fulfilling the Statutory Duty to Co-operate.

The absence of any meaningfully comprehensive refresh of the transport evidence base means that there are no meaningful schemes of any kind, defined in the plan or its IDP, to indicate either what level of growth can be accommodated, by delivering a change in travel behaviour. This would be aimed to secure a sufficient effective increase in junction throughput (measured in terms of person trips as opposed to passenger car unit movements (PCUs). Such evidence would propose measure to achieve that outcome and assess the efficacy and costs of such improvements, across all modes.

Paragraphs 8.10-8.13 inclusive indicate that the Council “has moved away from ‘predict and provide’” and invites the reader to conclude this has translated into a programme of interventions that can be funded to deliver specific, credibly predictable outcomes. Such a programme should be clear in paragraph 8.11. and the IDP. There is no such clarity and this conclusion would be false.

It would also be evident in the language of the Chichester Transport Study 2023 and its refreshed proposals. Only the most token of lip service is paid to the matter. It is a plainly car-focused, predict and provide methodology to support a “predict and provide” strategy. In fact, it is a brazenly car-focused approach, to the exclusion of all else.

The statements in the Plan regarding any other approach, read properly, offer nothing more than a vague commitment to look post-adoption, and implementation, at unspecified measures, based on problems that may arise in future that will be decided by a committee: the Traffic and Infrastructure Management Group (TIMG). This does not yet exist and is obviously an attempt to posit a mechanism that retroactively will cover for the lack of serious multi-party engagement to address the existing and future issues. Such a group should, in our view, also include the public transport operators, not least if the requirements of NPPF Para 106c) are to be satisfied, and the strategy and measures to be adopted are material to supporting the Local Plan, as of course the purpose of the TIMG has as its core *raison d’être*.

The approach proposed by the draft plan is plainly ineffective and unsound in justifying the draft Plan.

It is more widely unacceptable to Stagecoach. The issues are severe today and well-known, already serving to jeopardise the delivery of buses relied on by existing residents, much less attract new ones.

We also consider that HM Planning Inspectorate are likely to be quite resistant to accepting this aspect of the plan’s transport strategy, nor will it be appropriate for the Council, West Sussex County Council, or National Highways, to define

such measures after the submission of the Plan during the Examination process. The Examination in Public of a local plan has no purpose to improve plans, or remedy deficiencies clearly evident prior to submission.

The examination of the West of England Joint Strategic Plan in 2019, and the Uttlesford Local Plan in 2021, among several others, demonstrates especially clearly that the Planning System and the Examination process is not amenable to post-hoc retrofitting of transport evidence and strategies to support a development strategy.

7.1. Transport Evidence Base

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Most of Stagecoach's serious concerns about the soundness of the plan arise from the fact that it has been prepared in advance of any up-to-date transport evidence and suitably robust transport mitigation strategy being advanced to support it. In essence, the Council has rolled forward the existing plan by 9 years, adding some additional sources of housing supply, while still relying implicitly on a transport evidence base that was prepared 10 years ago.

This led to the formulation at that time of what can only be described as an attempt to develop an effective car-based mitigation strategy, creating capacity for general traffic added to accommodate unconstrained additional demands on an already over-taxed highways network – the Chichester Area Transport Strategy. Despite language in support of sustainable modes, no deliverable measures were identified to support either the extension of the bus network to serve allocated sites, and much less to create a vital improvement to the quality and reliability of public transport services. This approach reflected the approach set out in DfT Ministerial Circular 02/2013 "Development and the Strategic Highways Network", applicable since the A27, which is the focus of the most severe difficulties, forms part of the national Strategic Roads Network.

This approach has proven ineffective even before substantial elements of housing land supply in the current plan come forward – in particular West of Chichester and West of Tangmere.

In addition, Circular 02/2013 has now been replaced by a new Ministerial Statement of 23/12/2022, DfT Circular 01/2022.

On both counts the transport evidence base and strategy needs to be properly revisited and established to provide effective mitigation for the plan, including current commitments that are being rolled forward.

The language of the current Ministerial Circular 01/2022 offers a highly condensed synoptic view of the proper approach to addressing transport matters in the planning system notwithstanding that it is directly concerned with the Strategic Roads Network. Videlicet:

"31. The NPPF expects local plans and spatial development strategies to be underpinned by a clear and transparent evidence base which informs the authority's preferred approach to land use and strategic transport options, and the formulation of policies and allocations that will be subject to public consultation. The company will expect this process to explore all options to reduce a reliance on the SRN for local journeys including a reduction in the need to travel and integrating land use considerations with the need to maximise opportunities for walking, wheeling, cycling, public transport and shared travel.

32. The Transport Decarbonisation Plan indicates that carbon emissions from car and van use is the largest component of the United Kingdom's total transport emissions. While action is being taken to decarbonise transport such that all new cars and vans will be fully zero emission at the tailpipe from 2035, the proposed location of growth in current plan periods and whether new developments would be genuinely sustainable remain important factors in demonstrating that a local authority area is on a pathway to net zero by 2050 and therefore compliant with the requirements of the Climate Change Act 2008.

33. Alongside this, the local authority should identify the key issues within their study area regarding transport provision and accessibility, setting out how the plan or strategy can address these key issues in consultation with (National Highways, and other transport stakeholders identified in NPPF paragraph 106b). It is the responsibility of the local authority undertaking its strategic policy-making function to present a robust transport evidence base in support of its plan or strategy. The company can review measures that would help to avoid or significantly reduce the need for additional infrastructure on the SRN where development can be delivered through identified improvements to the local transport network, to include infrastructure that promotes walking, wheeling, cycling, public transport and shared travel. A robust evidence base will be required, including demand forecasting models, which inform analysis of alternatives by accounting for the effects of possible mitigation scenarios that shift demand into less carbon-intensive forms of travel." (our emphasis)

Within the text quoted above, references to National Highways and "the Company" can quite legitimately be extended, given the statements in NPPF paragraph 16, 25, 26 and 106b, to include all the relevant transport infrastructure and

service providers in the plan area. Circular 01/2022 also has the weight of secondary legislation as a Written Ministerial Statement and thus should be considered to be highly material.

To date there has been little attempt to explore, to the degree necessary, strategies that conform to Circular 01/2022. It is thus not possible to conclude, as the Council has done, that the issues on the A27 that present a constraint to development, are insuperable.

In line with comments made elsewhere in the response to this pre-submission draft, the Plan thus requires substantial further work to be undertaken with key stakeholders to establish a suitably effective and demonstrably deliverable transport mitigation strategy, to sustainably meet the District's identifiable development needs and where apparent and appropriate, also ensure that wider cross boundary strategic issues are appropriately addressed, in conformity inter alia, with the Duty to Cooperate, NPPF paragraph 16 and 104-111 inclusive, and DfT Circular 01/2022 and to ensure the Plan's own Strategic Objectives can be met.

7.2. Policy T1 Transport infrastructure

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

As described in comments elsewhere, Stagecoach does not see that a suitable proportionate and up-to-date basis exists to properly and appropriately address the transport issues in the plan area.

The 2023 Transport Study does not perform this role adequately but, contrary to the explanatory memorandum, is a scheme intended only to facilitate car-borne movements through some of the key junctions. There is no evidence that an holistic integrated and strategic approach to transport mitigations has been prepared. Certainly Stagecoach has not been involved in any of the discussion about appropriate transport measures in support of the plan, including the Transport Study 2023, contrary to the expectations set out in NPPF at paragraph 16 and 106.

Notwithstanding out fundamental concerns about the transport evidence case and mitigations strategy, Policy T1 reflects a weak and ineffective approach, that seeks to try and define a strategy post-adoption.

Contrary even to the explanatory memorandum for the policy, which seeks to maximise the contribution of sustainable modes, the policy is phased in such a way that it gives basis for previous "predict and provide" solutions to facilitate and support current levels of car dependency – already shown to be undeliverable and unaffordable – will nevertheless be the first rather than the last resort. There is no commitment to seek to maximise the contribution made by sustainable modes to meeting mobility needs. Nor is there any recognition that current chronic congestion and lack of network resilience jeopardises the ongoing attractiveness and long-term sustainability of the current public transport offer.

To be effective and create alignment with national policy, and also provide for an up-to-date transport evidence base and strategy to be adduced, Policy T1 should be modified to read:

"Integrated transport measures will be developed to mitigate the impact of planned development on the highways network, improve highway safety and air quality, promote more sustainable travel patterns and through providing in the first instance, new and improved infrastructure and services that will be credible effective in maximising the encourage increased use of sustainable modes of travel, such as public transport, cycling and walking.

To achieve this, the council will work with National Highways, West Sussex County Council, other transport and service providers (including through the Traffic and Infrastructure Management Group) and developers to provide a better integrated transport network and to improve accessibility to key services and facilities...

All parties, including applicants, are expected to support these objectives by:

1. Ensuring that new development is well located and designed to avoid or minimise the need for travel, encourages maximises the use of sustainable modes of travel as an a credible alternative to the private car and directly provides or contributes towards new or improved transport infrastructure;
2. Working with relevant transport infrastructure and service providers to improve accessibility to key services and facilities with primary emphasis on sustainable modes, and to ensure that new facilities are easily accessible by sustainable modes of travel;
3. Targeting investment to provide local travel options as an that represent a clearly credible alternative to the car use, focusing on the delivery of improved integrated bus and train services, and improved pedestrian and cycling networks, including the public rights of way network, based on the routes and projects identified in the Local Transport Plan, West Sussex Bus Service Improvement Plan, Local Cycling and Walking Infrastructure Plan (LCWIP) and the Infrastructure Delivery Plan;

4. Planning to achieve the timely delivery of transport infrastructure on and approaching the A27 and elsewhere on the network, needed to support new housing, employment and other development identified in this plan;
5. Phasing the delivery of new development to align with and where possible facilitate the provision of new and improved transport infrastructure and services and the outcomes of monitoring travel demand on the network, including that arising from areas immediately adjoining the plan area. It may also be Where necessary to achieve this alignment proactively phase development will be phased to take into account the monitoring and effectiveness of travel plans demands on the network and to ensure that measures are implemented to support the highest possible level of encourage sustainable travel behaviour.;
6. Using demand management measures, such as travel plans, to manage robust methodologies to assess travel demand and minimise the need for new or improved transport infrastructure as part of the monitor and manage process.
7. Delivering a coordinated package of infrastructure improvements at and approaching to junctions on the A27 Chichester Bypass along with other small-scale junction improvements interventions within the city and elsewhere, as identified through the monitor and manage process. These will increase road capacity, reduce traffic congestion, improve safety and air quality, and improve access to Chichester city from surrounding areas, first by maximising the contribution of sustainable modes to meeting mobility demands, then, and only as evidenced by robust modelling and option testing, providing increased highway capacity for general traffic.
- ..."

7.3. Policy T2 Transport and Development

Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Section 1 b) of T2 will be ineffective as, absent measures to ensure buses can run reliably and efficiently, improved bus services will not be possible, in support of the plan's own stated broad approach to transport mitigation, as well as wider local and national policy.

The draft policy does not require improvements to the quality of services such that sustainable choices will be materially more attractive than car use for many local journeys. Without this the Plan's Strategic Objectives cannot be fulfilled and the objectives of the Plan and this policy, read in its own terms, will not be realised, where reduction in private car use is concerned. It is thus ineffective.

Absent measures to make bus services more reliable and more efficient, by insulating them from chronic congestion as far as possible, still further operating resource and therefore costs, will be needed to just to reliably run existing service frequencies, and capacity, as vehicle productivity continues to be more and more adversely affected by chronic delay. This will be further aggravated by increasing incidence of severe unpredictable service breakdown arising from incidents of diverse kinds on the network, especially on or around the A27, including that arising from more regular severe weather events. Longer journey times can only be expected to lead to relative disadvantage of bus services compared to personal car use, entirely contrary to the objectives of national and local policy, including Policy T1. It can also expect to lead to a dampening effect not on car use, but on bus patronage, threatening the ongoing viability of bus services across the plan area.

Section 1 b) of T2 should be modified to read:

"b) Maximise opportunities for the use of sustainable travel modes through provision of direct and efficient access both to either the existing networks or and through providing such new infrastructure or public transport services, as can be credibly expected to reduce reliance on the private car and work towards achieving net zero in greenhouse gas emissions by 2050;"

Section 1 d) of T2 will be ineffective as the location of development is fixed by this plan. We commend the fact that all the strategic allocations are or will be served by regular bus services.

However, the use of public transport services, where available, depends on the relevance and reliability of these services. Furthermore, provision of services without them generating sufficient patronage to support their long-term operation also threatens the sustainability of the plan and its supporting transport strategy. This is especially true of new services such as those intended to serve West of Chichester and Tangmere and East of Chichester Strategic Allocations.

This can only be assured by the plan being supported by specific measures to ensure buses can operate efficiently and reliably on the existing and projected services intended to serve the developments concerned, and also at the same time secure behavioural change from existing development.

To be sound and effective, the policy T2 1 d.) should be changed to read:

"d) Ensure major development is located to proposals and the supporting mitigation measures enable the use delivery of high-quality, reliable and effective public transport to present the most relevant possible choice to access local services and facilities including employment, leisure and education facilities";

The Policy T2 makes no provision for buses, where necessary, to enter and make efficient and safe progress through major development sites. The plan is thus out of conformity with NPPF paragraphs 104-106. It makes no provision to ensure that penetration of bus services is achieved at a suitably early point in the development trajectory, undermining the achievement of the goals of the Plan and this specific policy. As a good example, West of Chichester Phase 1, currently under construction, cannot be served by buses as a strategy to effect interim bus penetration was never made.

Policy T2 1 f.) should therefore be amended to read:

f) Ensure that the layout and design of the site development proposals provides effective penetration of the site by sustainable modes, at all points in the development build-out, including public transport where appropriate; and sufficient space for all vehicles to manoeuvre without compromising the safety of pedestrians and cyclists, the efficiency of bus services, or the ability to provide an appropriate level of landscaping across the site"

Policy T2 3.) regarding Travel Planning depends entirely on its effectiveness on the quality and relative attractiveness of sustainable alternatives over car use. In the absence of efficient frequent, reliable and direct public transport services (or similarly, high quality facilities for active travel, Travel Plans will continue to be the entirely ineffective "tick box" exercises that they generally are today, evidenced by much lower levels of public transport use in most new developments than it seen in nearby established neighbourhoods, as demonstrated broadly by Census data in 2011, 2011 and 2021.

For this policy to be effective an up-to date transport evidence base and strategy, underpinning a series of specified interventions to promote the relevance and effectiveness of all sustainable does including public transport in particular, needs to be put in place.

8. Chapter 9 Infrastructure – Policy I1 Infrastructure provision

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Policy I1 could not expect to be effective without a clear understanding of the effectiveness and costs of a defined series of measures that are laid out in this Plan and its IDP, to mitigate the transport impacts of the development strategy.

Where the Chichester Transport Study is concerned the only meaningful work has focused on the definition and delivery of a range of highways capacity schemes mainly on the A27 around Chichester.

As we have discussed elsewhere the effectiveness of these schemes is insufficient as set out at Tables 8.1 and 8.2 of the Chichester Transport Study 2023. The plan itself admits that the deliverability of this package cannot be afforded by developer contributions alone.

The Chichester Transport Study 2023 does not attempt provide a realistic assessment of costs to deliver these schemes, despite the fact that they have been under evaluation for many years. Nor does it offer any assurance that the schemes are technically achievable. Rather, it states the opposite:

"9.2.3 No investigation has been carried out into specific land ownership details, or into the location details or cost of moving statutory undertakers and utility apparatus within the areas of the scheme. No design assessments were carried out at this stage to ascertain the deliverability of the proposals except where any Health and Safety concerns were raised."

Thus on the grounds of effectiveness, deliverability and affordability, the measures on which the Plan relies must at the very least be considered to involve an exceptionally high level of risk. Since Policy I1 is founded on these assumptions, it cannot be considered effective.

As we set out elsewhere, the Plan has been advanced on the basis that if any additional sustainable transport measures are required, these mitigations should be retroactively considered and defined after adoption of the Plan. In the light of the doubts that are apparent of both the deliverability, affordability and effectiveness of the Chichester Transport strategy this is especially unsatisfactory even if existing baseline conditions were reasonably acceptable.

However, the Chichester Transport Study 2023, as did its predecessors, makes plain that that existing problems are acute, and can rightly be considered "severe" in the sense of NPPF paragraph 111. Waiting to define deliverable affordable alternatives is an entirely inappropriate approach to the local plan transport mitigation strategy. Such an approach also makes it impossible to consider prior to adoption how far the transport impacts of the plan can be cost-effectively mitigated by alternative means, or whether they are deliverable having regard to technical achievability, land control, development viability, or any combination of the above. Thus, the plan cannot be considered justified, or effective.

Given the mutual dependence of development strategies in Chichester and Arun in particular on these measures this

should be seen as crucial of the fulfilment of the Duty to Cooperate.

The remedy for this is ultimately to put in place a suitable transport mitigation strategy following a strategic appraisal of options through review of the LSS. This then must be supplemented by more detailed development specific and localised scheme definition, including, where necessary, bus priority and other measures to support the substantial promotion of the attractiveness of public transport in key bus corridors over private car use. This would then be reflected by costed proposals in the IDP.

Leaving these fundamental weaknesses to one side, even if such a strategy and mitigation package were defined, there is no mention of public transport in the policy even though it is clearly a key part of the policy environment and mitigation strategy for the plan as expressed in the explanatory memorandum for I1, but also at Policies T1 and T2. I1 thus does not effectively support the realisation of the intent of Policies T1 and T2.

Policy I1 iii) should therefore be modified to read:

“(iii) Safeguard the requirements of infrastructure providers, having regard to requirements within and where appropriate across the boundaries of the plan area, including but not limited to:

...

- Highways including specific measures to accommodate improved active travel and public transport level of service and cycle lanes, and...”

At limb v) the Policy expects developers to meet the “in perpetuity costs of operating and maintaining infrastructure”. This shackles development management decisions to developers assuming what are infinite costs – given that “in perpetuity”, read properly, can only mean “without any limit in time”. This means that it is impossible to meet the statutory tests on developer obligations set out in the Community Infrastructure Levy Regulations 2010 (as amended) at Regulation 122, also repeated in NPPF. This policy cannot be lawfully implemented and it is thus ineffective.

In the absence of an up-to-date transport mitigation strategy that is fit for purpose, at the point the Plan is examined these costs of any additional infrastructure are not known in any case. The strategy and its costs, including its affordability and deliverability, are crucial to assessing if the Plan is sound.

Subject to an appropriate defined transport mitigation strategy being arrived at, to be sound, the Policy I1 v) should be modified as follows:

(v) To consider and meet as appropriate the in-perpetuity delivery costs of infrastructure and, where appropriate, improved services, to the point where its long-term operational sustainability is credibly assured from mainstream sources. Where adoption is not envisaged by local authorities, that must include arrangements for its future ongoing management and maintenance;

9. Strategic and Area Based Policies

9.1. Policy A1 City Centre Development Principles

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Chichester City centre is rightly identified at 10.2 and 10.4 as the commercial and service hub of the District. It is also acknowledged to be the most accessible place in the District by sustainable modes, public transport in particular.

Boosting the vitality of the city centre is something that Stagecoach strongly supports. Irrespective, the enhancement of the commercial and cultural life of the District in the place where these opportunities can be accessed broadly by sustainable modes, is one that has long been at the heart of national planning policy for town centres, reflected in the “town centre first” approach to locating major trip generating uses.

Paragraph 10.5 exposes an unbalanced and unsound preoccupation with aesthetic matters in its approach to the town centre, and far too little to ensuring that the central place function is enhanced through protecting and enhancing the quality of public transport access.

The city is relatively small but at the heart of an extensive hinterland, and thus the role of bus in supporting sustainable access to and enhanced city centre venue is one that needs appropriate recognition and emphasis. It is important to note that a dominant number of key service and facilities such as the General Hospital are relatively close to the city centre. This directly contributes to driving travel demand into the city, causing congestion. Most importantly, it also makes the task of mitigation simpler, given the impact a suite of active and sustainable measures can have within the same close proximity.

Policy A1 does not provide this. As such, achieving the strategic objectives of the plan is seriously threatened, and the

plan is thus not effective.

The Plan needs to ensure that the approach to city centre regeneration maintains and enhances public transport access, interchange and inter-modal connectivity. It also needs to ensure that bus service stopping and interchange facilities are able to address increases in future demand, anticipated by the clear intent expressed elsewhere in the Plan that public transport should be meeting a greater proportion of mobility needs, in a growing district. Achieving this demands an ambitious approach to the location, quality and capacity of bus stop and interchange.

We have been in discussions with the District Council about this, alongside West Sussex County Council, for a very considerable period. Stagecoach has always been keen to help facilitate the Council's aspirations for the city centre, and we continue to hold this intention. However, this cannot be at the expense of a material diminishing of the convenience and fitness-for-purpose of bus stop infrastructure and interchange. Stagecoach has significant concerns that current proposals to remove the bus station and have all bus services operate from the street kerbside, on an inner distributor road with similar or reduced net stop capacity, fall short of promoting attractive, convenient bus access to the central area as a destination.

For the longer term and where the objectives of the draft plan are concerned looking ahead to 2039, they clearly fall short of enhancing the convenience and attractiveness of public transport use. Much less do they make sufficient provision for a material increase in bus frequency, connectivity, and interchange convenience, on which the draft plan explicitly relies. It is vital that the District Council is clear in policy about its objectives for public transport in the city centre. These objectives must also carry sufficient weight when held in tension with other aspirations for the centre and the constraints on achieving them.

For the Plan to be sound, properly effective and compliant with NPPF, the approach to the City centre cannot ignore its role in the provision of sustainable transport service and connectivity.

Policy A1 should therefore be modified to properly reflect this crucial function, on which the vitality of the city centre must increasingly depend if unacceptable impacts on congestion, air quality and amenity are not to arise. This is still more crucial if wider aspirations to secure a more sustainable society and mitigate carbon are to be achieved.

"...This will include provision for development and proposals that:

- Support and strengthen the vitality and viability of the city centre and its role as a shopping/visitor destination, employment centre, public transport hub and a place to live;
- Support and promote facilitate improved access to the city and with increased emphasis on sustainable modes of travel, with particular regard to enhancing the public transport interchange role of the city centre area, in accordance with the transport strategy for the city and..."

9.2. Policy A3 Southern Gateway Development principles Chichester Bus Station, Bus Depot and Basin Road Car Park Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

There has been aspiration to redevelop the bus station and nearby bus depot from many years. Stagecoach has been engaged with detailed discussion with the District Council on this matter over a very extended period. We confirm that these discussions have reached a relatively mature stage, however at the time of writing are not concluded.

Stagecoach recognises and supports in principle the Council's wider aspirations for the "Southern Gateway", and this has governed our approach to the Council to date. We continue to have no "in principle" objection to relocating our administrative, engineering, operational and customer service facilities.

Leaving our proprietary interests entirely to one side, it remains vital that in so doing, the effectiveness, attractiveness and convenience of these facilities is not compromised, as we have outlined in our representations to Policy A1, if wider national and local transport policy, and the local plan strategy itself, are to be effectively achieved.

The depot is crucial infrastructure to support the safe, reliable and legally-compliant operation of Stagecoach bus services over a very extensive area covering the entirety of the District and beyond. Without securing equivalent facilities, that are fit-for-purpose, many of our services would have to cease.

If buses are to provide a greater and more attractive level of service (still more so if they are to be electrified) larger, more capable depot facilities, and city centre bus interchange facilities will be necessary.

Notwithstanding that the bus station and depot sites are leased from the District Council, these leases terminate well beyond the end of the plan period.

Finding suitable sites for a replacement bus depot in Chichester, in common with all similar localities especially in southern England, is extremely challenging. As a sui generis use, bus depots do not automatically benefit from policy support on land allocated for employment uses. Most bus depots benefit from being legacy assets established under

very different economic conditions. That is the case here. The value of a depot site for redevelopment net of demolition and remediation costs, rarely approximates to that able to sustain the acquisition of land in a tight wider employment land market, and the construction of suitable new facilities.

Furthermore, the costs of operating bus services are sensitive to the parasitic costs of vehicle and staff hours and mileage associated with “dead running” to a remote depot location from the operational network. Here, the existing depot site is ideal, and any replacement will unavoidable add ongoing operational costs to the operation that cannot be directly recovered.

We confirm that a replacement depot site has been identified and has in principle been agreed, subject to overcoming issues with the disposition of existing and future structures on the site. However, the site is recognised as not capable of accommodating meaningful operational expansion. This is just one of the most important foundational reasons why a positive transformation of bus productivity needs to be achieved, across the plan area and beyond, to support delivery of greater bus mileage and frequencies with the same level of operational resource. At the time of writing, we are not fully convinced that the proposals for the relocation will be sufficiently fit-for-purpose in the event the above is not achieved. Thus, we must raise a concern that the bus depot site might not be available during the plan period. While there is a strong probability it will be, the certainty surrounding the availability of the site, especially within the first 5 years of the plan, needs to be made transparent.

9.3. Policy A4 Southern Gateway - Chichester Bus Station, Bus Depot and Basin Road Car Park
Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Regarding the removal of the bus station, without equivalent replacement, Stagecoach has significant concerns. Pressures and conflicts at the current bus station site have been gradually rising for several years, arising from increasing use and the need for additional scheduled vehicle layover periods to reduce the risks of accumulated late running from traffic congestion. Peak passenger volumes have recovered strongly on several routes, however passenger accumulations resulting from more frequent delays and disruption have added substantial further pressure on limited space.

Under current plans, buses and bus passengers will be displaced to bus stops at new locations outside the city centre, along Avenue de Chartres. This road was always intended to be a relatively high-speed traffic route, outside the historic core of the city. The city centre has evolved in the subsequent years to reinforce already strong natural severance, with the highway lying beyond the city walls and the green space along the Lavant. It is a traffic dominated, un surveilled and unattractive environment, reflecting the intended function of the road as an efficient movement corridor for high traffic volume, and nothing more. Avenue de Chartres is relatively close to the rail station and pedestrian connectivity can be provided at broadly equivalent distance to the current bus station, but again it is un surveilled and currently unpleasant, lacking natural legibility or any sense of prominence.

We understand kerbside capacity on Avenue de Chartres will be strained even to accommodate current levels of service, with no expansion possible. There is therefore a strong probability that to accommodate more frequencies and key new routes, such as West of Tangmere, East of Chichester and West of Chichester allocations, additional future bus stops must occupy a different location. This makes interchange between routes and rail services substantially challenging and less attractive.

The emerging arrangements risk marginalising public transport and public transport users substantially. This strongly undermines achievement of the wider plan objectives and delivery of a significantly greater role for public transport. If substantial public transport growth is to be accommodated in a growing city and hinterland, as the draft plan anticipates, then a more ambitious strategic approach must be taken. This should plan for additional and improved facilities to accommodate all services predicted to be required, whilst enhancing the passenger experience to ensure meaningful and attractive modal choice.

There is therefore a need for the plan to evidence how these issues will be appropriately resolved, having regard to a suitably ambitious approach that properly supports clear objectives to boost the relevance of public transport. The current policy is weak, un specific and indifferent to achieving the strategic objectives of the plan, including a transport strategy in support of the plan, and as such it is ineffective.

Policy A3 should therefore be modified to read:

- “...
 • Be designed to encourage and facilitate substantial increase in the use of active travel and public transport to, from and through the city centre.
 ...”

In line with the commentary above Policy A4 should also be modified to read:

3. Enhance the public interchange function of the immediate area, the public realm, particularly connections to the railway station and the city centre via South Street, Southgate and Basin Road for pedestrians, cyclists and public

transport users, and to National Cycle Route 2 and Route 88 which run close by. Suitable replacement bus stops and layover facilities should be provided to replace those at the bus station in line with reflecting the objectives of the West Sussex Bus Service Improvement Plan, and to facilitate growth to meet the requirements of the plan's development strategy. Routes and crossings should reflect pedestrian desire lines, and public art should be incorporated to create a sense of place;

4. Enhance the public realm, in support of this and wider objectives, incorporating public art and other measures to create a strong and attractive sense of place.

...(renumber remaining points)

9.4. Policy A6 Land West of Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

This is an existing Local Plan allocation. The public transport strategy for the site depends on the delivery of the second phase which Stagecoach notes is the subject of several applications now awaiting review and determination by the Council.

The site represents a compact form of development adjoining the city, as the most sustainable settlement, meeting housing needs close to where they arise, and affording very good opportunities for the use of sustainable modes, especially walking and cycling.

It is vital that a bus service is delivered to serve the site at the earliest potential. This was anticipated to be at the start of Phase 2 and will require the early delivery of the entire length of the spine road between the Old Broyle Road and Westgate and making it available for bus services.

It is not clear if the costs of pump-priming the service mentioned in the draft policy are anticipated to be met by the developer. Without such funding, the service will not be deliverable as years of losses will never credibly be covered from future profit. It is likely that the current wording will be interpreted by the developer as meaning that they have no such obligation binding upon them. Not does policy set out any specification for this service, thus its costs and the basis for securing developer contributions does not exist.

As such any wider transport strategy, that seeks to secure a greater role for the use of public transport, and the aspiration for this allocation cannot demonstrably be met. The policy is ineffective.

Policy A6 should be modified to read:

"...

10. Make provision to accommodate and secure delivery of for regular bus services linking running through the site to Chichester city centre operating at least every 30 minutes Monday-Saturday, and new and improved cycle and pedestrian routes linking the site with the city,

..."

9.5. Policy A7 Land at Shopwhyke

Stagecoach Supports

This is an existing Local Plan allocation, largely built-out, that benefits from an existing set of permissions.

The public transport strategy for the site depends on the delivery of effective bus priority at Oving Crossroads. The current recently implemented scheme, undertaken by National Highways, makes no provision for effective bus priority and needs considerable re-evaluation.

The site represents a compact form of development adjoining the city, as the most sustainable settlement, meeting housing needs close to where they arise, and affording very good opportunities for the use of sustainable modes, especially walking and cycling. It lies on a new bus corridor that will shortly be put in place, running to Tangmere via Shopwhyke. The allocation is being significantly consolidated by further development in the immediate vicinity which strongly supports the potential for this new service.

As we explain in our representations for East of Chichester proposed allocation A8, and West of Tangmere Allocation A14, a clear corridor strategy to effect bus priority is needed, that should be delivered in support of that further growth, and that at Tangmere SDL. However this allocation is a near complete commitment and there is no scope through policy regarding this land to effect this outcome.

It is notable that Point 6) of policy A7 makes mention of a bus service. This language reflects the currently adopted Local Plan policy and has underpinned the existing permissions. The failure of any bus service to be delivered demonstrates from first principles that this Policy has been entirely ineffective. It is important that lessons are learned from this in the Local Plan Review.

9.6. Policy A8 Land East of Chichester Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This proposed allocation lies next to unallocated land that is already consented as a departure from the adopted development plan, with 143 units near completion south of Oving Road (20/02471/FUL). Additional land, also unallocated but similarly consented, has now commenced north of Oving Road (88 units under 21/02197/FUL). This and the allocation site consolidates earlier development at Shopwhyke brought forward under the current Local Plan, and allocated again as draft policy A7.

Development at Shopwhyke was brought forward on the basis of a premise that the developer would provide or somehow arrange a bus service, that was reflected in the policies of the current Local Plan. This was secured by an unenforceable condition. No bus service has been provided, as there was inadequate clarity regarding the basis on which the costs of establishing such a service would be met by the developer, and the expectations of policy on the developer. The site does however lie on a logical new bus corridor between Chichester and West of Tangmere along the Oving Road.

In addition, an expectation that modifications to the Oving Crossroads would effect bus advantage have proven false – the arrangements put buses into a similar or longer queue than if they use the route available to general traffic to and from the A27.

Stagecoach strongly supports the principle of bringing this land forward. However, the soundness of the site depends on deliverability of a regular, reliable and direct bus service along the Oving Road, taking advantage of effective bus priority.

Given the failure of existing policy in the adopted Local Plan covering the proposed A7 allocation to deliver a bus service, it is of great concern that there is no draft policy to adequately address the issue. The policy is out of conformity with NPPF paragraph 104-105 in that sustainable modes do not offer realistic choices, much less an attractive one, and as such also does not secure the objectives of national policy nor of the plan itself.

Currently the proposed allocation is not served at all by public transport. Policy needs to ensure there is a policy basis to secure contributions to deliver such a service, which may well take the form of a proportionate contribution to deliver a new service or enhance provision that is put in place between Chichester along the Shopwhyke Road to west of Tangmere.

To become sound Policy A8 must be modified to read:

“...
12. Provide for improved high quality connectivity by sustainable travel modes and focused in particular on a corridor between Chichester city centre and Tangmere along Shopwhyke Road, including new improved cycle and pedestrian routes, and a frequent bus service including linkages with Chichester taking advantage of effective bus priority measures on Oving Road at the A27;
...”

9.7. Policy A9 Land at Westhampnett/North East Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This land is already allocated and consented as part of the existing 2016 Local Plan. All reserved matters are determined.

The site lies on service 55 between Chichester, Westhampnett and Tangmere. This established service benefits from additional demand from the development at Phase 1. Phase 2 which is currently well underway, does not benefit directly from bus services. However it is a compact and logical form of development where walking and cycling to local facilities and employment is a credible option.

The existing allocation rolls forward policies in the 2015 Local Plan. In so doing it is possible to see which have been effective.

Point 9. regarding bus service and routing has not been effective. In particular the potential for a bus only link between the site and Graylingwell has not been established as policy anticipated. Given congestion around the Portfield area acutely affects public transport this, or alternative methods to secure bus priority over private car use, a clear and unequivocal policy steer is required.

The lack of an up-to-date transport evidence base is ultimately at the root of these issues. Arguably the policy and allocation can only be made sound once this refreshed evidence base is in place.

However, it is possible that the allocation could be made sound by modification of Policy A9 as follows:

"...

9. Make provision for regular, direct and reliable bus services linking the site with Chichester city centre, and new and improved safe and convenient cycle and pedestrian routes linking the site with Chichester city, the South Downs National Park and other strategic developments to the east of Chichester city including Tangmere. These objectives could include exploring the potential for a bus only route require a deliverable scheme to afford bus priority through Portfield, and potentially linking the development with the Graylingwell area through use of a modal filter;

"...

9.8. Policy A10 Land at Maudlin Farm

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing public transport route. It is relatively close to the city and very near substantial centres of employment and services that can be reached by active travel modes, helping damp the demand for car use. It is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services at Portfield and over a wider area. In fact, the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A10 should accordingly be modified to read:

"...

5. Provide safe and suitable access points for all users, including a main vehicle access from Old Arundel Road and, subject to further assessment, a secondary vehicle access from Dairy Lane. The development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes;

"...

9.9. Policy A11 Bosham – Land at Highgrove Farm

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Bosham Station. It is relatively close to the city and very near substantial centres of employment and services that can be reached by public transport and cycling, offering strong potential to materially damp the demand for car use.

There are serious risks that development in the A259 corridor west of Chichester could place further demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular to bus services.

Nevertheless, given the potential to effect bus priority on the approaches to Fishbourne Roundabout, it is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A11 should accordingly be modified to read:

"...

8. Provide safe and suitable access points for all users, including a main vehicle access

from the A259. The development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys crossing the A27 at Fishbourne;

9.10. Policy A12 Chidham and Hambrook

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Nutbourne Station. Substantial centres of employment and services that can be reached by public transport and cycling, offering strong potential to materially damp the demand for car use.

There are serious risks that development in the A259 corridor west of Chichester could place further demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular to bus services.

Nevertheless, given the potential to effect bus priority on the approaches to Fishbourne Roundabout, it is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A12 should accordingly be modified to read:

"...

7. Development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys along the A259, crossing the A27 at Fishbourne and where necessary on the approaches to Emsworth;

8. Facilitate improved sustainable travel modes, and new improved cycle and pedestrian routes, including linkages with Chichester city and settlement along the East/West Corridor;

9.11. Policy A13 Southbourne Broad Location for Development

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach agrees unequivocally that Southbourne is a location that could accommodate growth on a strategic scale. It has a substantial range of service available within the settlement, including secondary education. It is well connected by bus and rail service to key destinations, including Chichester, lying to the east and west.

This is one of the few locations identified for growth that represents substantial additional development in a new location to the strategy in the existing Local Plan adopted in 2015. Thus, the transport impacts of development on the substantial scale envisaged at Southbourne are not covered or accommodated by the Chichester Area Transport Strategy that lies behind the existing plan. This demands, from first principles, that substantial further transport mitigation measures are required.

We recognise and endorse fully that the intent of the draft plan for Southbourne as a Broad Location for Development on a strategic scale, includes "Maximising the potential for sustainable travel links through improved public transport, including consideration of opportunities to reduce community severance caused by the railway line as well as the inclusion of cycling and pedestrian routes." (our emphasis).

The existing railway station at Southbourne is served regularly, however, it is not within the power of this plan to improve rail services. It is, however, well within the scope of action of the Local Planning and Highways Authority to work with bus operators to achieve a step change in the journey time, reliability, frequency and connectivity of bus services, and in particular the major corridor operated as service 700 by Stagecoach along the A259 between Havant and Chichester through Southbourne.

Notwithstanding the clear potential for sustainable connectivity in the western A259 corridor, there are very serious risks that development in the A259 corridor west of Chichester will place further significant car-borne demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular bus services, having the opposite effect to that intended: longer, less reliable and less frequent bus services, leading to a spiral of slowly declining use.

These risks, while very serious, look credibly likely to be entirely mitigated subject to carefully conceived and robust specified actions on the local highway network. It is perplexing to us that this potential still has not been identified, as part of a comprehensive "first principles" review of the transport evidence base. In particular given the former trunk status of the A259, there is evident potential to effect bus priority on the A259, including on the approaches to Fishbourne Roundabout.

With appropriate measures, including but not limited to this, to substantially boost the relevance and attractiveness of sustainable travel choices, strategic development at Southbourne could well be made highly sustainable.

In the absence of a refreshed transport strategy and transport evidence base, the draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact, the only reference that is made in Policy is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A12 should accordingly be modified to read:

"...Development should be comprehensively masterplanned to achieve a high-quality design and layout that integrates well with the surrounding built and natural environments to enable a high degree of connectivity with them, particularly for pedestrians and cyclists, and provides good the highest possible quality of access to facilities and sustainable forms of improved public transport services.

...

4. Provide a suitable means of access to the site(s), and securing secure necessary off-site transport infrastructure and service improvements (including highways in particular to the A259 corridor between Emsworth and Chichester) in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development) to promote sustainable transport options prioritising delivery of high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes;

..."

9.12. Policy A14 Land West of Tangmere

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach strongly supports the principle of intensifying the level of development at the Strategic Development Location already identified and allocated West of Tangmere in the existing Local Plan. This serves to consolidate development at a location where effective and attractive public transport choices could be provided. It also conforms closely with the principle expressed in NPPF that the best possible use should be made of land on sites that are judged to be sustainable, or potentially sustainable locations for development.

It must be stressed that the current policy suite for the SDL has to date not brought forward development in this location. We recognise that a Master Plan has been adopted by the Council, and that a planning application (20/02893/OUT) for the full larger quantum of 1300 dwellings proposed in the draft plan has received a resolution to grant by the Council.

However, we are not aware that a sustainable transport strategy has been finalised.

Land West of Tangmere is not served by any existing regular bus services. Rather, an entirely new bus service corridor is anticipated to operate in the near term from Chichester through Tangmere and beyond towards Barnham. This would serve proposed allocations A7, A8 and West of Tangmere (A14) included in the draft Plan.

This is reflected in the language of the explanatory memorandum to Policy A14 at paragraph 10.65:

“Opportunities, in partnership with relevant authorities, to provide improved sustainable public transport routes linking the village with Chichester city, to improve cycle routes to the city, and better transport links to Barnham rail station and the ‘Five Villages’ area in Arun District; and..”

Initiating this service will be costly and will in large measure be funded not by developer contributions, but by DfT monies awarded through the West Sussex Bus Service Improvement Plan. It is crucial this service is both sustainable in the longer term without revenue support, and that the success of the service can be built on by scalable frequency improvements as strategic development comes forward in both Chichester District, and proposed allocations A7 A8 and A14, and in Arun District, in particular at Barnham, Eastergate and Westergate (BEW).

This demands measures to effect safe, direct and swift operation of the service especially within the city centre, where it approaches and crosses the A27 at Oving crossroads and on the eastern fringes of the District east and west of Tangmere. Without these measures, bus journey time and reliability will be severely compromised and the impact of this service to damped car trip demands will be very substantially compromised. No such measures are proposed in the draft plan or its evidence base.

Changes to Oving Crossroads have recently taken place which, amongst other intentions, ostensibly provide bus advantage between Chichester and Shopwhyke. The junction in its current form does not offer material gain in bus journey time, as movements involve a less-direct route towards the city over an increased operating distance, much of which involves passage through heavily congested sections of the A27 and Westhampnett Road. A refreshed transport strategy supporting plan-led growth must revisit this area to secure an effective solution which offers bus customers the fastest and most reliable trip-time to and from the city.

In addition, the extension of public transport connectivity towards BEW and Barnham, including key links to secondary education and a logical railhead for journeys beyond towards Brighton and London as provided at Barnham Station, needs to facilitate bus priority between Tangmere and Nyton – whether using the A27, or preferably avoiding it altogether. There are significant safety concerns associated with the at-grade uncontrolled right-hand A27 exit onto the B2233 Nyton Road at Crockerhill Turn. This movement is also prone to extreme delay owing to the conflict with approaching westbound traffic on the A27, travelling at speed, which has priority. Our concerns with this junction in its current form can be expected to worsen with the increased traffic volumes predicted from new residential developments to the west of the city.

A solution providing a suitable short length of highway available only to sustainable modes, between Tangmere and Easthampnett, could provide a very effective solution to this. This would be deliverable within the scope of the separate proposed allocation at A19 Chichester Business Park, Tangmere. We comment on this separately.

Howsoever effected, a reliable direct and delay-free bus corridor between Barnham, BEW, Tangmere and Chichester could expect to secure very substantial elevation of the relative attractiveness of public transport over car use on the entire corridor and serve to effectively damp growth-related demands on this section of the A27. West of Tangmere, in the longer term, there is evident scope for the route corridor to operate as two branches – one via Shopwhyke and one via Westhampnett, effectively serving all the strategic developments proposed in the plan and transforming wider public transport connectivity to key employment destinations and services within and east of Chichester.

However, in common with all the other proposed allocations, the plan proposes no specific measures to provide, much less improve public transport or other sustainable modes to the site. This leaves the draft plan out of conformity with NPPF, especially paragraphs 104-106. The plan is inadequately evidenced and to the degree that public transport measures are identified and emergent, their successful implementation in the near and longer term will be jeopardised without clear measures to provide a safe as well as efficient bus route towards BEW and the Five Village area within Arun. The Duty to Cooperate is not effectively met and effective cross boundary collaboration on these strategic issues through the review of LSS is not demonstrated, despite the current version which identifies the issues.

To be made sound the LSS Review and a subsequent urgent review of the transport evidence base and strategy needs to take place. The strategic issues are especially critical east of Chichester, in our view.

Notwithstanding this foundational deficiency, to be made sound, Policy A14 should be modified to read:

“... ”

8. Subject to detailed transport assessment, provide primary road access to the site from the slip-road roundabout at the A27/A285 junction to the west of Tangmere providing a spine road link with secondary access from Tangmere Road. Development will be required to provide or fund mitigation for potential off-site traffic impacts through a package of measures in conformity with Policy T1 (Transport Infrastructure) and T2 (Transport and Development) and DfT Circular 01/2022 that maximise the relevance and use of sustainable travel modes, in particular bus services;

9. Make provision for improved sustainable travel modes between Tangmere and Chichester city, in partnership with relevant authorities, including improved direct, seamless safe and reliable and additional bus and cycle routes linking Tangmere with Chichester city, Shopwhyke and Westhampnett. In conjunction with measures in support of Allocation A19, Opportunities should also be explored contributions shall also be sought for providing improving high quality cycling and bus service transport links with the ‘Five Villages’ area and Barnham rail station in Arun District; and...”

10. Concluding comments

Stagecoach recognises its role as a key stakeholder in the plan, as well as a local employer and corporate citizen. We recognise the primacy of the plan-led system as the mechanism intended to resolve complex challenges, including the proper alignment of transport and spatial planning, which as the National Decarbonisation Strategy for Transport among other policies makes clear, has never been more vital.

In making our representations, we emphasise that we are entirely supportive of the Local Planning Authority and the relevant Highways and Transport Authorities, in their efforts to properly manage the amount and pattern of development to secure vital policy objectives. We recognise that balancing delivery of assessed development needs with a wide variety of other constraints is a very difficult task.

The transport issues faced by the plan are recognised in the draft plan as being serious and long-standing. We believe that there are ways to arrive at a suitable transport mitigation strategy that has regard to wider strategic issues and resolves existing problems in a much more effective way than those pursued to date.

We support the spatial strategy of the plan as it evidently provides the basis to secure the necessary step change in the quality and use of sustainable transport modes, as it explicitly seeks to do. However thus far, there has been insufficient work done to define the measures that will credibly secure these outcomes.

Stagecoach therefore urges the authorities to draw us into the necessary effective ongoing collaborations that is expected by NPPF paragraph 16 and 106; and DfT Circular 01/022, to do this work, prior to, rather than after the submission of the draft plan. We look forward to being approached to initiate this dialogue at the earliest opportunity.

Change suggested by respondent:

Policy P1 must include an additional statement to be compliant and effective with NPPF paragraph 104-105 and 112 a): "Development will be designed to make access and movement using walking, cycling and public transport the natural first choice, and demonstrate through the Design and Access Statement how such modes are afforded the most direct, safe, reliable and efficient routes within to and from the proposals, especially when compared with car use."

Change suggested by respondent:

The policy should require the adherence to the National Design Guide as a minimum and to local (including specific site) design guides where they exist. Where no design guidance exists or where developments wish to introduce a differing design approach, they must be required to demonstrate why guidance nationally or locally should be set aside.

Policies should require developments to demonstrate with evidence how compliance with guidance is met - it will not be sufficient to rely on generic wording that a development meets the set criteria

Document Element: Policy P2 Local Character and Distinctiveness**Respondent:** Mayday! Action Group (John Garrett) [7163]**Summary:**

Again lots of positive parameters but neither developers nor their contractors are sufficiently policed in respect of their actions at site.

Enforcement should be statutory and not a cost laid at the door of underfunded local councils.

Sites which are cleared of hedgerows and trees BEFORE planning applications are lodged should see the offenders fined when this is discovered.

We have a live example locally of a significant landowner having installed vicious barbed wire fencing and removed many hundreds of metres of mature undergrowth very recently and posted large signage suggesting that the land now fenced off is a nature conservation area.

Points 7. And 8. within Policy P2 will require serious policing if they are ever to be achieved.

Full text:

Executive Summary

The Local Plan as written lacks ambition and vision, and will be detrimental to the landscape within which the district lies. It is a plan borne out of a need to produce a legal document which will satisfy the regulatory authorities. In terms of Urban Planning it fails "To meet the needs of the present without compromising the ability of future generations to meet their own needs" (NPPF).

The development that will consequentially arise from the deployment of such a made Local Plan is not sustainable. It will adversely affect the Character, Amenity and Safety of the built environment, throughout our district.

In particular, the Local Plan is inadequate for the needs of the people in the district both at present and in the future because –

1. It has been written in advance of the District having a properly formed and agreed Climate Emergency Action Plan. It is inconceivable that such a key document will not shape our Local Plan. It is this Action Plan that is needed first in order to provide the long-term strategic view as to how and what the District will look like in the future; this, in turn, will help form and shape the policies outlined in any prospective, Local Plan. The Plan as proposed is moribund, as a result of "cart before the horse" thinking.

2. The Local Plan as written does not adequately address how infrastructure, transport and services are going to be materially and strategically improved to meet the predicted growth and shift to a significantly ageing population. There is presently insufficient capacity to supply services and to have adequate people and environmentally friendly connectivity, as a direct result of decades of neglect towards investing in infrastructure and services to meet the needs of the District's population. We are led to believe that developers through increased levies in order to gain permission to build will fulfil this need, but all that this will result in is an uncoordinated, dysfunctional mess completely lacking in any future-

proof master planning approach. We contend that this will do nothing for the quality of life of Chichester District residents and it will create a vacuum whereby few if indeed any can be held accountable or indeed found liable for shortcomings in the future.

3. The Local Plan as written does not state how it will go about addressing the need to create affordable homes. The District Council's record on this matter since the last made plan has been inadequate and now the creation of affordable homes has become urgent as political/economic/social factors drive an ever increasing rate of change within the District.

4. Flood risks assessments used in forming the Plan are out of date (last completed in 2018) and any decision to allocate sites is contrary to Environment Agency policy. Additionally, since March 2021 Natural England established a position in relationship to 'Hold the Line' vs. 'Managed Retreat' in environmentally sensitive areas, of which the Chichester Harbour AONB is a significant example. CDC have failed to set out an appropriate policy within the proposed Local Plan that addresses this requirement.

5. The A27 needs significant investment in order to yield significant benefits for those travelling through the East-West corridor; this is unfunded. Essential improvements to the A27 are key to the success of any Local Plan particularly as the city's ambitions are to expand significantly in the next two decades. But any ambitions will fall flat if the A27 is not improved before such plans are implemented.. The A259 is an increasingly dangerous so-called 'resilient road' with a significant increase in accidents and fatalities in recent years. In 2011, the BBC named the road as the "most crash prone A road" in the UK. There is nothing in the Local Plan that addresses this issue. There is no capacity within the strategic road network serving our district to accommodate the increase in housing planned, and the Local Plan does not guarantee it.

6. There is insufficient wastewater treatment capacity in the District to support the current houses let alone more. The tankering of wastewater from recent developments that Southern Water has not been able to connect to their network and in recent months the required emergency use of tankers to pump out overflowing sewers within our City/District reflects the gross weakness of short-termism dominated thinking at its worst and is an indictment of how broken our water system is. The provision of wastewater treatment is absolutely critical and essential to the well-being of all our residents and the long-term safety of our built environment. The abdication by those in authority, whether that be nationally, regionally or locally, is causing serious harm to the people to whom those in power owe a duty of care and their lack of urgency in dealing properly with this issue is seriously jeopardizing the environment in which we and all wildlife co-exist.

7. Settlement Boundaries should be left to the determination of Parish Councils to make and nobody else. The proposed policy outlined in the Local Plan to allow development on plots of land adjacent to existing settlement boundaries is ill-conceived and will lead to coalescence which is in contradiction of Policy NE3.

8. All the sites allocated in the Strategic Area Based Policies appear to be in the majority of cases Greenfield Sites. The plan makes little, if any reference to the development of Brownfield sites. In fact, there is not a Policy that relates to this source of land within the Local Plan as proposed. Whilst in the 2021 HELAA Report sites identified as being suitable for development in the District as being Brownfield sites were predicted to yield over 4000 new dwellings. Why would our Local Plan not seek to develop these sites ahead of Greenfield sites?

9. The Local Plan does not define the minimum size that a wildlife corridor should be in width. What does close proximity to a wildlife corridor mean? How can you have a policy (NE 4) that suggests you can have development within a wildlife corridor? These exceptions need to have clear measures and accountability for providing evidence of no adverse impact on the wildlife corridor where a development is proposed. Our view is quite clear. Wildlife and indeed nature in the UK is under serious and in the case of far too many species, potentially terminal threat. Natural England has suggested that a Wildlife Corridor should not be less than 100metres wide. The proposed Wildlife Corridors agreed to by CDC must be enlarged and fully protected from any development. This is essential and urgent for those Wildlife Corridors which allow wildlife to achieve essential connectivity between the Chichester Harbour AONB and the South Downs National Park.

10. Biodiversity Policy NE5 - This is an absolute nonsense. If biodiversity is going to be harmed there should be no ability to mitigate or for developers to be able to buy their way out of this situation. This mindset is exactly why we are seeing a significant decline in biodiversity in the District which should be a rich in biodiversity area and why the World Economic Forum Report (2023) cites the UK as one of the worst countries in the world for destroying its biodiversity.

11. In many cases as set out in the Policies the strategic requirements lack being SMART in nature – particularly the M Measurable. These need to be explicit and clear: "you get what you measure".

12. 65% of the perimeter of the District of Chichester south of the SDNP is coastal in nature. The remainder being land-facing. Policy NE11 does not sufficiently address the impact of building property in close proximity to the area surrounding the harbour, something acknowledged by the Harbour Conservancy in a published report in 2018 reflecting upon how surrounding the harbour with housing was detrimental to its long-term health. And here we are 5 years on and all of the organizations that CDC are saying that they are working in collaboration with, to remedy the decline in the harbour's condition, are failing to implement the actions necessary in a reasonable timescale. CDC are following when they should be actually taking the lead on the issue. Being followers rather than leaders makes it easy to abdicate

responsibility. There must be full and transparent accountability.

13. The very significant space constraints for the plan area must be taken into account. The standard methodology need no longer apply where there are exceptional circumstances and we are certain that our District should be treated as a special case because of the developable land area is severely reduced by the South Downs National Park (SDNP) to the north and the unique marine AONB of Chichester Harbour to the south. A target of 535dpa is way too high. This number should be reduced to reflect the fact that only 30% of the area can be developed and much of that is rural/semi-rural land which provides essential connectivity for wildlife via a number of wildlife corridors running between the SDNP and the AONB. Excessive housebuilding will do irretrievable damage to the environment and lead to a significant deterioration in quality of life for all who reside within the East / West corridor.

14. Many of the sites identified in the Strategic & Area Based Policies could result in Grade 1 ^ 2 farmland being built upon. The UK is not self-sufficient in our food security. It is short-sighted to expect the world to return to what we have come to expect. Our good quality agricultural land should not all be covered with non-environmentally friendly designed homes.

Draft LP Mayday Submission Final - <https://chichester.oc2.uk/a/skf>

5848

Support

Document Element: Policy P2 Local Character and Distinctiveness

Respondent: Natural England (Luke Hasler, Senior Advisor) [8189]

Summary:

Natural England supports this policy and welcome the requirement for developments to respect existing natural features, to retain and enhance and create views, vistas and panoramas of protected landscapes.

Full text:**Summary of advice**

While we have raised some queries and recommended some further modifications to certain policies we do not find the Plan unsound on any grounds relating to our remit.

Natural England has reviewed the Proposed Submission Local Plan and accompanying appendices together with the Habitats Regulations Assessment (HRA) and Sustainability Appraisal (SA). Our detailed comments on the policies and site allocations are provided as follows:

- Annex 1 - Chapter 2 – Vision and Strategic Objectives
- Annex 2 - Chapter 4 – Climate Change and the Natural Environment
- Annex 3 - Chapter 5 (Housing) and Chapter 6 – (Place-making, Health and Well-being)
- Annex 4 - Chapter 7 (Employment and Economy) and Chapter 8 (Transport and Accessibility)

- Annex 5 - Chapter 10 – Strategic and Area Based Policies

Please note that we have not provided comments on all policies but those which have most influence on environmental issues. Natural England has no comment to make on the policies not covered in this response. Other than confirming that we have referred to it when considering our advice on specific policies and site allocations Natural England has no general comments to make on the SA.

Unfortunately due to unforeseen resourcing issues while we have reviewed the associated HRA we are not in a position to provide detailed comment on it as part of this response. We will rectify this as soon as possible and can confirm that we have seen nothing in it that raises any major concerns.

The Plan has many positive aspects including standalone policies on Green Infrastructure (GI) and wildlife corridors and an incredibly extensive suite of natural environment policies more generally.

We are hugely appreciative of the opportunity that we were given to work with you on shaping key policies post-Regulation 18. However, we believe that the plan needs to go further in its recognition of coastal squeeze as a key issue for the district, should include policy hooks for the forthcoming Local Nature Recovery Strategy (LNRS) and make up to date references to both the Environment Act (2021) and the Environmental Improvement Plan (EIP, 2023). Given how recent the publication of the EIP is we would be happy to discuss with your authority how this could best be achieved but we believe given the wealth of natural capital within Chichester District it is vitally important that this latest iteration of the Local Plan is set in its full policy and legislative context.

We have suggested a significant number of amendments and additions to both policies and supporting text throughout the Plan. In our view these could all be taken forward as minor modifications but if they were all acted upon they would leave the Plan much stronger and more coherent in delivering for the natural environment, one of the three central tenets of genuinely sustainable development as set out in the National Planning Policy Framework (NPPF 2021, paragraph 8c).

Policies supporting local character and distinctiveness is supported but the criteria listed should go further to reference design guides that indicate the key elements of an area that define its character and which are desirable to maintain and enhance

Change suggested by respondent:

In addition to the generic requirements set out in criteria 1 – 9, the policy should reference design guides that indicate the key elements of an area that define its character and which are desirable to maintain and enhance.

This policy should correlate with Policies P3 Density, P4 layout and Access, P5 Spaces, P6 Amenity, P7 Extensions, and P8 Materials and detail. All are interconnected and the plan should indicate that a policy cannot be applied in isolation, but as a whole.

Document Element: Policy P3 Density**Respondent:** Church Commissioners for England [1858]**Agent:** Lichfields (Tara Johnston, Planner) [7506]**Summary:**

We support the objective of Draft Policy P3 (Density) to make the most efficient use of land and follow a design led approach to achieve the optimum density for a site. The Policy does not prescribe an appropriate density for the District and this is supported. However, we consider that reference should be made to the fact that density may vary depending upon site specific circumstances and could be higher where transport links and access to services is good.

Full text:

We write in response to the above consultation on behalf of our client, the Church Commissioners for England (CCE). CCE owns a large amount of land in the area largely to the south, west and east of Chichester. We welcome the opportunity to further engage with the Local Plan process. Whilst we support some aspects of the Local Plan, we consider that some changes are likely to be necessary to ensure that the Plan can be found sound.

By way of background, CCE submitted several sites for consideration as part of the Housing Economic Land Availability Assessment (HELAA) in 2021. These sites were previously promoted as part of the Preferred Approach Local Plan Regulation 18 Consultation in 2019.

As part of these representations, we take the opportunity to re-promote a number of CCE's sites, which could assist the Council in delivering much needed housing for the district. CCE has updated its technical work and provide Vision Documents in relation to its landholdings in Southbourne, Oving, and Hunston Parishes to demonstrate how additional housing can be delivered. These Vision Documents are enclosed.

We consider this and other aspects of the emerging Local Plan below.

Chapter 2: Vision & Strategic Objectives

The Local Plan Vision details a positive approach to supporting sustainable development in the context of the climate emergency. CCE welcomes the Vision for Chichester, particularly the importance placed on the delivery of new homes in 'Objective 3' and the delivery of new infrastructure to support the new development in 'Objective 7'.

Chapter 3: Spatial Strategy and Settlement Hierarchy

The Spatial Strategy builds on the previous Local Plan by focussing growth on Chichester city as the main sub-regional centre. Outside Chichester city and its closest settlements, development will focus on the two settlement hubs within the east-west corridor at Tangmere and Southbourne. This approach is supported by CCE.

Policy S1 Spatial Development Strategy

Draft Policy S1 (Spatial Development Strategy) identifies the broad approach to providing sustainable development in the plan area, which includes ensuring that new residential development is distributed in line with the settlement hierarchy, with a greater proportion of development in the larger and more sustainable settlements. We support this strategy, with particular support for development at the settlement hubs of Southbourne (Policy A13) and Tangmere (Policy A14). We also support that provision is made for extant Site Allocations and the Tangmere strategic site remains allocated under draft Policy A14.

Policy A14 continues to allocate Land West of Tangmere for 1,300 dwellings. CCE questions the Council's decision to not amend the existing settlement boundary of Tangmere to include the land subject to the allocation. Without amending the settlement boundary, the future growth of Tangmere may be hindered. As such, the settlement boundary of Tangmere should be amended to include the allocated site to ensure that the plan is justified.

Draft Policy S1 also refers to development in service villages such as Bosham, Hambrook and Loxwood. Hunston is excluded from the Spatial Strategy but is identified as a Service Village within the Settlement Hierarchy in draft Policy SP2 (Settlement Hierarchy). The draft Local Plan suggests that the allocation of homes in Hunston has been removed as a result of growth in the Manhood Peninsula. CCE acknowledges that the overall housing numbers across the district have been reduced as a result of local constraints but reiterate that their landholding in Hunston remains a suitable site for housing should the Council need to identify more land for housing. This is discussed further below.

Policy S2 Settlement Hierarchy

As stated in paragraph 3.31 of the draft local plan, 'The NPPF encourages housing delivery where it will enhance or maintain the vitality of rural communities'. Paragraph 79 of the NPPF (2021) states that 'To promote sustainable development in rural areas, housing should be located where it will enhance or maintain the vitality of rural communities. Planning policies should identify opportunities for villages to grow and thrive, especially where this will support local services. Where there are groups of smaller settlements, development in one village may support services in a village nearby'.

CCE owns substantial land holdings in South Mundham, which is in close proximity to North Mundham/Runcton which is defined as a Service Village. As such, whilst South Mundham does not contain any services, development in the hamlet would enable sustainable growth to support facilities in North Mundham and Runcton. To ensure that the draft plan is consistent with national policy, South Mundham should be considered as part of North Mundham as a Service Village when considering the future pairing/grouping of some settlements where the facilities and services could be shared to capitalise on the close connections some settlements have.

Development outside the settlements listed in the hierarchy in SP2 is restricted to proposals which require a countryside location or meet an essential local rural local need or supports rural diversification in accordance with Policy NE10. To this end, CCE has smaller land holdings in Tangmere, Oving, South Mundham, Birdham, Chidham and Sidlesham, which may be suitable for conversion for residential use or via windfall housing. Location plans for each of the sites can be found in Appendices 1-8.

Chapter 4: Climate Change and the Natural Environment

Policy NE4 Strategic Wildlife Corridors

The East of City strategic wildlife corridor has been relocated to the eastern side of proposed Site Allocation A8 (Land to the East of Chichester). The relocation of this wildlife corridor follows additional evidence that shows that the commuting route for Barbastelle Bats is along Drayton Lane.

CCE owns land to the east of Drayton Lane (immediately adjacent to the wildlife corridor and to the east of draft allocation A8) and surrounding the village of Oving. Its land has been identified in the HELAA (2021) as being developable, including site HOV0017 (Drayton Lane). The land east of Drayton Lane is sustainably located being close to Chichester and its amenities. The site provides an opportunity to sensitively and sustainably provide additional homes for the District. In accordance with Draft Policy NE4, the proposals for the Land East of Drayton Lane will not have an adverse impact on the integrity and function of the wildlife corridor and will not undermine the connectivity and ecological value of the corridor. This Vision Document will be shared under separate cover.

The eastern edge of the relocated wildlife corridor encroaches into CCE land. Any proposal on this land would be required to take the statutory protection for bats and other protected species into consideration and managed as part of a sensitive masterplan for development and on this basis, it is considered unnecessary to extend the wildlife corridor to encroach into the CCE site.

It is also considered that the detail of policy NE4 goes beyond the purpose of the policy, which should be to safeguard wildlife rich habitats and wider ecological networks. The policy is clear that development should only be permitted where it would not create an adverse effect upon the ecological value, function, integrity and connectivity of the corridors. It does not resist development in principle. This therefore makes redundant policy text 1, which seeks to introduce a sequential test for preferable sites outside of a wildlife corridor. It is considered that this test conflicts with the underlying purpose of the policy, which is to safeguard wildlife corridors from harmful impacts that cannot be mitigated, and should therefore be deleted.

Policy NE7 Development and Disturbance of Birds

CCE is broadly supportive of Policy NE7. However, they would like to note that the situation regarding the national guidance on nutrient neutrality is still evolving and therefore, this policy is only relevant to current legislation. Policy NE7 may therefore not be relevant throughout the entirety of the plan period. As such, CCE considers that it is necessary in this instance to ensure that an appropriate reference to changing legislation is included within the policy to prevent it from becoming out of date and would also ensure that the policy remains effective once adopted.

Policy NE10 The Countryside

CCE is supportive of the inclusion of a policy referencing the conversion of existing buildings in the countryside, however, we believe that Policy NE10 is not consistent with national policy. Policy NE10 criteria B states that proposals for the conversion of buildings in the countryside will be permitted where 'it has been demonstrated that economic and community uses have been considered before residential, with residential uses only permitted if economic and community uses are shown to be inappropriate and unviable'. This policy is not in accordance with Paragraph 152 of the NPPF (2021) which states that the reuse of existing resources should be encouraged, including 'the conversion of existing buildings'. Under paragraph 152, there is no prerequisite to adopt a sequential approach, or to give preference to other uses. As such, criteria B should be omitted from Policy NE10. Reference to criteria B should also be removed from criteria C.

Chapter 5: Housing

Policy H1 Meeting Housing Needs

The Preferred Approach Local Plan was based on meeting the identified objectively assessed housing needs of the plan area of 638 dwellings per annum. However, due to constraints, particularly the capacity of the A27, the Submission

Version of the Local Plan has planned for a housing requirement below the need derived from the standard method. The Plan proposes to deliver 535 dpa in the southern plan area and a further 40 dpa in the northern plan area, a total supply of 10,350 dwellings over the plan period from 2021 – 2039 (575 dpa).

The Planning Inspectorate has previously asked the Council to determine what level of housing could be achieved based on deliverable improvements to the A27 and to consider whether the full housing needs could be met another way. It is acknowledged that the Council has carried out the additional work required and the local constraints have resulted in a proposed lower housing requirement.

The NPPF (2021) confirms that to determine the minimum number of homes needed, strategic policies should be informed by a local housing need assessment, conducted using the standard method in national planning guidance – unless exceptional circumstances justify an alternative approach (para. 61). CCE acknowledges that that housing numbers have been reduced as a result of local constraints and it will be down to the Inspector to determine whether the Council's exceptional circumstances justify this. Should the Planning Inspector find that the Council requires additional land to meet the housing need using the standard method, CCE's land at Southbourne, Oving, Drayton Land and Hunston are suitable, available and developable for housing. In addition, CCE's rural development sites could also contribute to meeting the housing need.

Policy H2 Strategic Allocations

Draft Policy H2 confirms that the Tangmere Strategic Development Location is carried forward from the 2015 Local Plan and this is supported by CCE. Strong support is also given for the Broad Location of Development in Southbourne (Policy A13) for up to 1,050 dwellings.

Policy H5 Housing Mix

Draft Policy H5 confirms that the housing mix for a development will be based on the most up to date HEDNA to address identified local needs and market demands. We suggest that the Council considers a range of criteria, including site characteristics, when determining the housing mix for individual sites and this should be reflected in wording of Policy H5.

Policy H7 Rural and First Homes Exception Sites

Draft Policy H7 relates to rural and first homes exception sites. CCE is supportive of the principle of the inclusion of a rural exceptions policy. However, we have concerns over criteria contained within the policy which limits the amount of development that can be delivered under it.

The NPPF (2021) at paragraph 78 states that planning policies and decisions should be responsive to local circumstances and support housing development that reflect local needs. Furthermore it also states that 'local planning authorities should support opportunities to bring forward rural exception sites that will provide affordable housing to meet identified local needs'.

The key aspect of the policy is to enable the delivery of rural exception sites which would address an identified local need. Within the policy, there is no limit on the amount of development that can be delivered and therefore, it is considered that if Policy H7 is limited to a maximum of 30 dwellings it could serve to hinder development (especially on slightly larger sites), which would otherwise be sustainable. As such, we consider that the amount of development should not be limited and rather should be dictated on a site and need specific basis. CCE considers that for Policy H7 to be positively prepared and in accordance with National Policy, criteria 2 should be removed.

In addition, criteria 6 states that proposals for affordable housing on rural exception sites will only be supported where 'the site is located adjacent or as close as possible to the existing settlement boundary and does not result in scattered or isolated development in rural areas'. The NPPF (2021) does not specify the location of rural exception sites. As such, to be consistent with national policy, criteria 6 should also be omitted.

Furthermore, Policy H7 states that 'applications for first homes exception sites that propose the inclusion of a small proportion of market housing will be expected to provide robust evidence...'. However, in the policy there is no allowance for the provision of market housing on rural exception sites in addition to first homes exception sites. As a result of this, the requirements of the policy are again not consistent with national policy. Paragraph 78 of the NPPF (2021) is supportive of 'some market housing' where it would facilitate the delivery of rural exception sites. As such, CCE considers that Policy H7 should be amended as follows:

'Applications for rural and first homes exceptions sites that propose the inclusion of a small proportion of market housing will be expected to provide robust evidence that the site would be unviable without such housing being included'.

Policy H8 Specialist Accommodation

Draft Policy H8 confirms that all housing sites over 200 units, including those allocated in this plan, will be required to provide specialist accommodation for older people with a support or care component. We request that this policy is

amended to add 'where appropriate and viable', acknowledging that viability and site-specific factors need to be taken into consideration.

Chapter 6: Place-making

Policy P3 Density

We support the objective of Draft Policy P3 (Density) to make the most efficient use of land and follow a design led approach to achieve the optimum density for a site. The Policy does not prescribe an appropriate density for the District and this is supported. However, we consider that reference should be made to the fact that density may vary depending upon site specific circumstances and could be higher where transport links and access to services is good.

Chapter 7: Employment and Economy

Policy E3 and E4 Horticultural Development

Chapter 7 of the draft Local Plan confirms that 67 hectares of land is identified to meet the future horticultural land need within four Horticultural Development Areas (HDAs) over the plan period. It is confirmed that an additional 137 hectares of horticultural land is also forecast to be required outside of HDAs to meet future need.

CCE has significant landholdings which could assist the Council in addressing the insufficient availability within the current HDAs. The CCE sites which are considered suitable for horticulture development are listed below and location plans for each of the sites can be found in Appendices 9-13.

- Somerley Farm, NE East Wittering, PO20 7JB
- Fisher Farm, South Mundham, PO20 1ND
- Church & Haise Farm, Sidlesham
- Cowdry Farm, Birdham
- Groves Farm, nr Merston, PO20 2DX / Colworth Manor Farm PO20 2DU.

CCE supports draft Policy E3 which confirms that "approximately 137 hectares of land is also needed outside of HDAs to meet anticipated horticultural and ancillary development land need for the plan period." Support is also given for draft Policy E4 in relation to land outside HDAs. This Policy confirms that proposals for horticultural development can come forward outside the HDAs, subject to a set of criteria. We would welcome continued discussion with the Council on how these sites could help meet the districts horticultural needs in the future.

Chapter 10: Strategic and Area Based Policies

CCE supports Chichester District Council's proposal to allocate additional land for housing at Southbourne and to maintain the existing allocation at Tangmere. We also consider that CCE's land at Hunston and Oving could assist the Council in meeting its housing needs, should additional housing be required. We consider these opportunities in turn below.

Policy A13 Southbourne Broad Location for Development

CCE supports draft Policy A13 and the allocation of a Broad Location for Development in Southbourne for a mixed-use form of development including 1,050 dwellings.

CCE has significant landholdings around Southbourne which is suitable, available and developable. The land to the north and west of Southbourne measures 70ha and is wholly within CCE's control. The land adjoins the existing settlement and provides an opportunity for a sustainable extension to Southbourne with the potential to deliver c. 1,200 homes for the village, as well as employment, community uses and a significant amount of new public space and green open space. A new Vision Document is enclosed which explains one way in which this opportunity could be realised. Importantly, it is considered that there are no technical impediments that would prevent development from coming forward on this site.

This site has been promoted throughout the Southbourne Neighbourhood Plan process, most recently in the December 2022 consultation. The new Vision Document demonstrates that the CCE site presents the opportunity to provide a comprehensive development that would contain strategic housing growth, significant areas of green infrastructure and open space in a sustainable location. The key access strategy for the site is to provide two new access points from the south A259 Main Road and the east Stein Road. These access points would connect to a spine road which would form a continuous vehicle route around the north-western edge of Southbourne.

The site almost entirely comprises a Secondary Support Area under the Solent Waders and Brent Goose Strategy (SWBGS), which aims to protect the network of non-designated terrestrial wader and brent goose sites that support the Solent Special Protection Areas (SPA) from land take and recreational pressure associated with new development. Due to the designation of the site, discussion was undertaken with the Hampshire and Isle of Wight Wildlife Trust with a view to determine a suitable approach for the scheme and an appropriate survey effort to establish the use of the site by designated birds. As a result of these discussions, wintering bird surveys are taking place. The aim of these surveys is to explore opportunities for mitigation for this SWBGS support area such that development within the red line can proceed

without adverse impacts to the bird populations noted within this strategy. Following the survey, the results and approach will be presented to Natural England for further discussion.

In relation to viability, we note that Policy A13 sets several policy objectives for development at Southbourne. The NPPF (2021) notes that where there are up-to-date policies which have set out the contributions expected from development, planning applications that comply with them should be assumed to be viable (para. 58). With this in mind the policy objectives outlined within Policy A13 will require viability testing to be undertaken to ensure a policy compliant scheme is both viable and deliverable. This is necessary to ensure that the policy is sound.

The Policy suggests that employment opportunities are required to be delivered as part of the allocation but there is no specific reference to the amount of use required. CCE supports this proposed approach as it is sufficiently flexible to enable an amount of employment land to be proposed in response to market conditions at the appropriate time and this will help to support delivery of the allocation.

The scale of development proposed has been reduced from 1,250 to 1,050 dwellings to reflect the proportionate reduction in housing numbers across the parishes in the east west corridor as a consequence of the limit on numbers in the southern plan area. If the Inspector finds that additional housing is required, the Vision Document submitted demonstrates that the CCE site in Southbourne could deliver c. 1,200 homes and so could increase housing without needing to identify additional land for development elsewhere.

To summarise, the site could accommodate approximately 1,200 homes which could be delivered on a phased basis early in the plan period. There are no overriding physical or technical constraints that would act as an impediment to development. There is also a clear access arrangement proposed.

Policy A14 Land West of Tangmere

CCE supports that Policy A14 is carried forward into this Local Plan to facilitate the delivery of a residential-led development of at least 1,300 dwellings.

Additional sites

Hunston

CCE further promotes land (15.31ha) located east of the B2145 Selsey Road in Hunston for 240 new homes. The land is deliverable and is fully within CCE's control. The site is highly accessible, located within a maximum of 5-6 minutes walking distance to Selsey Road, where several bus routes connect the village to Chichester.

CCE notes that the Council assessed the HELAA site (ref. HHN0016) as 'developable'. A Vision Document has previously been prepared and submitted to demonstrate the commitment to it being brought forward for residential development within the plan period. This document is enclosed.

To address the Council's concerns in relation to flooding, following publication of the Chichester Strategic Flood Risk Assessment (SFRA), we have prepared an updated Flood Risk Scoping Study which provides an overview of flood risk constraints across the site from a range of sources. Various mitigation measures are recommended in line with recommendations of the Chichester SFRA and prevailing local and national guidance and best practice. With these measures in place, it is likely that the flood risk could be managed effectively in accordance with the requirements of the NPPF. Detailed data has also been requested from the Environment Agency, which will feed into further technical work that is being carried out.

Should the Inspector conclude that additional housing is required, CCE considers that their site is the most appropriate and sustainable location for development in Hunston. The site provides an opportunity to sensitively and sustainably extend the existing village boundary to provide additional homes to meet an identified housing need.

Land East of Drayton Lane

CCE owns land to the east of Drayton Lane which is bound by Tangmere Road to the north and crosses Oving Road and the railway line to the south. The site is c.1km from the centre of Chichester and comprises 49ha. The site was assessed in the HELAA 2021 as developable 'HOV0017'. A Vision Document has been prepared and was presented to the Council in 2022. This includes a detailed analysis of the site and its surroundings and provided justification as to why the site is suitable for development. This technical review of the site concludes there are no technical impediments to development.

The Vision Document demonstrates how the proposals for the land east of Drayton Lane could be developed as an extension to the draft allocation A8 (Land to the east of Chichester) for up to 700 new homes. The land east of Drayton Lane is fully within the CCE's control, is available for development now and is deliverable with some development achievable within the first five years of the plan period. It represents an opportunity to provide new homes, facilities and significant community benefits, through a sensitively designed development that integrates into the surrounding landscape.

The Vision for this site is a landscape and ecology led masterplan which would celebrate the rich wildlife characters of the different surrounding landscapes and uses the connection between countryside and community to generate its character and identity. The Vision Document demonstrates that this is a suitable location for development.

Should the Inspector conclude that additional housing is required, CCE considers that the land east of Drayton Lane would form a natural extension to allocation A8 and is an appropriate and sustainable location for new development.

Appendix C Additional Guidance

Appendix C provides additional guidance on evidence which needs to be submitted in support of certain planning applications related mainly to development in the countryside. As mentioned in the comments above provided in response to Policy NE10, there is no prerequisite contained within the NPPF (2021) that requires an applicant to demonstrate that previous uses were proven unviable prior to the conversion of a building in the countryside to residential use. As such, to be in accordance with national policy, reference to Policy NE10 should be omitted from Appendix C.

Conclusion

CCE welcomes the opportunity to comment on the Local Plan and is keen to continue to engage with the Council, especially in relation to the Broad Location for Development in Southbourne. CCE is supportive of the Council's aspirations in the Local Plan. However, the changes set out above are considered likely to be necessary to ensure the plan is sound.

CCE is a considerable landowner in Chichester with land largely to the south, west and east of Chichester which could assist the Council in meeting their housing and development needs throughout the plan period.

Document Element: Policy P3 Density**Respondent:** Mayday! Action Group (John Garrett) [7163]**Summary:**

Density of 35 dwellings per hectare is absolutely not appropriate in semi-rural areas.

The absence of any reference in the 7 point policy to the importance of both wildlife and biodiversity is absolutely shocking.

Regrettably, without some compulsory purchase orders to secure land for dedicated cycle routes and footpaths, the repeated message in this Draft Local Plan that homeowners must forego their cars and take to a bicycle or their feet will just not happen.

Our area is already crowded and vehicular traffic is growing and WILL NOT REDUCE until and unless regular, affordable rail and bus connections are IN PLACE. Wonderful idealistic thinking but very far removed from reality.

Full text:

Executive Summary

The Local Plan as written lacks ambition and vision, and will be detrimental to the landscape within which the district lies. It is a plan borne out of a need to produce a legal document which will satisfy the regulatory authorities. In terms of Urban Planning it fails "To meet the needs of the present without compromising the ability of future generations to meet their own needs" (NPPF).

The development that will consequentially arise from the deployment of such a made Local Plan is not sustainable. It will adversely affect the Character, Amenity and Safety of the built environment, throughout our district.

In particular, the Local Plan is inadequate for the needs of the people in the district both at present and in the future because –

1. It has been written in advance of the District having a properly formed and agreed Climate Emergency Action Plan. It is inconceivable that such a key document will not shape our Local Plan. It is this Action Plan that is needed first in order to provide the long-term strategic view as to how and what the District will look like in the future; this, in turn, will help

form and shape the policies outlined in any prospective, Local Plan. The Plan as proposed is moribund, as a result of "cart before the horse" thinking.

2. The Local Plan as written does not adequately address how infrastructure, transport and services are going to be materially and strategically improved to meet the predicted growth and shift to a significantly ageing population. There is presently insufficient capacity to supply services and to have adequate people and environmentally friendly connectivity, as a direct result of decades of neglect towards investing in infrastructure and services to meet the needs of the District's population. We are led to believe that developers through increased levies in order to gain permission to build will fulfil this need, but all that this will result in is an uncoordinated, dysfunctional mess completely lacking in any future-proof master planning approach. We contend that this will do nothing for the quality of life of Chichester District residents and it will create a vacuum whereby few if indeed any can be held accountable or indeed found liable for shortcomings in the future.

3. The Local Plan as written does not state how it will go about addressing the need to create affordable homes. The District Council's record on this matter since the last made plan has been inadequate and now the creation of affordable homes has become urgent as political/economic/social factors drive an ever increasing rate of change within the District.

4. Flood risks assessments used in forming the Plan are out of date (last completed in 2018) and any decision to allocate sites is contrary to Environment Agency policy. Additionally, since March 2021 Natural England established a position in relationship to 'Hold the Line' vs. 'Managed Retreat' in environmentally sensitive areas, of which the Chichester Harbour AONB is a significant example. CDC have failed to set out an appropriate policy within the proposed Local Plan that addresses this requirement.

5. The A27 needs significant investment in order to yield significant benefits for those travelling through the East-West corridor; this is unfunded. Essential improvements to the A27 are key to the success of any Local Plan particularly as the city's ambitions are to expand significantly in the next two decades. But any ambitions will fall flat if the A27 is not improved before such plans are implemented.. The A259 is an increasingly dangerous so-called 'resilient road' with a significant increase in accidents and fatalities in recent years. In 2011, the BBC named the road as the "most crash prone A road" in the UK. There is nothing in the Local Plan that addresses this issue. There is no capacity within the strategic road network serving our district to accommodate the increase in housing planned, and the Local Plan does not guarantee it.

6. There is insufficient wastewater treatment capacity in the District to support the current houses let alone more. The tankering of wastewater from recent developments that Southern Water has not been able to connect to their network and in recent months the required emergency use of tankers to pump out overflowing sewers within our City/District reflects the gross weakness of short-termism dominated thinking at its worst and is an indictment of how broken our water system is. The provision of wastewater treatment is absolutely critical and essential to the well-being of all our residents and the long-term safety of our built environment. The abdication by those in authority, whether that be nationally, regionally or locally, is causing serious harm to the people to whom those in power owe a duty of care and their lack of urgency in dealing properly with this issue is seriously jeopardizing the environment in which we and all wildlife co-exist.

7. Settlement Boundaries should be left to the determination of Parish Councils to make and nobody else. The proposed policy outlined in the Local Plan to allow development on plots of land adjacent to existing settlement boundaries is ill-conceived and will lead to coalescence which is in contradiction of Policy NE3.

8. All the sites allocated in the Strategic Area Based Policies appear to be in the majority of cases Greenfield Sites. The plan makes little, if any reference to the development of Brownfield sites. In fact, there is not a Policy that relates to this source of land within the Local Plan as proposed. Whilst in the 2021 HELAA Report sites identified as being suitable for development in the District as being Brownfield sites were predicted to yield over 4000 new dwellings. Why would our Local Plan not seek to develop these sites ahead of Greenfield sites?

9. The Local Plan does not define the minimum size that a wildlife corridor should be in width. What does close proximity to a wildlife corridor mean? How can you have a policy (NE 4) that suggests you can have development within a wildlife corridor? These exceptions need to have clear measures and accountability for providing evidence of no adverse impact on the wildlife corridor where a development is proposed. Our view is quite clear. Wildlife and indeed nature in the UK is under serious and in the case of far too many species, potentially terminal threat. Natural England has suggested that a Wildlife Corridor should not be less than 100metres wide. The proposed Wildlife Corridors agreed to by CDC must be enlarged and fully protected from any development. This is essential and urgent for those Wildlife Corridors which allow wildlife to achieve essential connectivity between the Chichester Harbour AONB and the South Downs National Park.

10. Biodiversity Policy NE5 - This is an absolute nonsense. If biodiversity is going to be harmed there should be no ability to mitigate or for developers to be able to buy their way out of this situation. This mindset is exactly why we are seeing a significant decline in biodiversity in the District which should be a rich in biodiversity area and why the World Economic Forum Report (2023) cites the UK as one of the worst countries in the world for destroying its biodiversity.

11. In many cases as set out in the Policies the strategic requirements lack being SMART in nature – particularly the M

Measurable. These need to be explicit and clear: "you get what you measure".

12. 65% of the perimeter of the District of Chichester south of the SDNP is coastal in nature. The remainder being land-facing. Policy NE11 does not sufficiently address the impact of building property in close proximity to the area surrounding the harbour, something acknowledged by the Harbour Conservancy in a published report in 2018 reflecting upon how surrounding the harbour with housing was detrimental to its long-term health. And here we are 5 years on and all of the organizations that CDC are saying that they are working in collaboration with, to remedy the decline in the harbour's condition, are failing to implement the actions necessary in a reasonable timescale. CDC are following when they should be actually taking the lead on the issue. Being followers rather than leaders makes it easy to abdicate responsibility. There must be full and transparent accountability.

13. The very significant space constraints for the plan area must be taken into account. The standard methodology need no longer apply where there are exceptional circumstances and we are certain that our District should be treated as a special case because of the developable land area is severely reduced by the South Downs National Park (SDNP) to the north and the unique marine AONB of Chichester Harbour to the south. A target of 535dpa is way too high. This number should be reduced to reflect the fact that only 30% of the area can be developed and much of that is rural/semi-rural land which provides essential connectivity for wildlife via a number of wildlife corridors running between the SDNP and the AONB. Excessive housebuilding will do irretrievable damage to the environment and lead to a significant deterioration in quality of life for all who reside within the East / West corridor.

14. Many of the sites identified in the Strategic & Area Based Policies could result in Grade 1 ^ 2 farmland being built upon. The UK is not self-sufficient in our food security. It is short-sighted to expect the world to return to what we have come to expect. Our good quality agricultural land should not all be covered with non-environmentally friendly designed homes.

Document Element: Policy P3 Density

Respondent: National Highways (Mr Marius Pieters, Spatial Planning Manager) [8127]

Summary:

[National Highways letter dated 24/07/23 confirmed representation should be categorised as Comment - Seeking further information.] We support development proposals that make the most efficient use of land however, National Highways seek to understand how constraints, including traffic generation and network capacity will be assessed and reported for optimum density developments. We also seek to understand how 'car-less' and 'carfree' or 'low car' will be managed. Evidence from other UK councils suggests that residents of these developments, and their visitors, park in adjacent or nearby residential streets. When this occurs in close proximity to SRN junctions there is the potential to impact the SRN, for example:

- constraints to junction operations
- safety implications
- limitations to freight movements

Full text:

We have reviewed the publicly available Local Plan documents and provided comments in the attached letter, in relation to the transport implications of the plan for the safety and operation of the SRN.

Our comments include issues to resolve, comments, requests for further information and recommendations. A brief summary of our main comments are:

- the reliance on the delivery of the A27 Chichester bypass improvements project.
- the requirements for new, additional, and adapted processes and assessments, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments.
- collaborative working between agencies in combination with a robust monitor and manage policy.

We hope our comments assist.

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders. We look forward to continuing to participate in future consultations and discussions.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Background

National Highways has been appointed by the Secretary of State for Transport as strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the strategic road network (SRN).

National Highways is responsible for operating, maintaining, and improving the Strategic Road Network (SRN) i.e., the Trunk Road and Motorway Network in England, as laid down in Department for Transport (DfT) Circular 01/2022 (Strategic Road Network and the delivery of sustainable development).

The SRN is a critical national asset and as such we work to ensure that it operates and is managed in the public interest, both in respect of current activities and needs as well as in providing effective stewardship of its long-term operation and integrity.

Our responses to Local Plan consultations are guided by relevant policy and guidance including the National Planning Policy Framework (2021) (NPPF):

- Transport issues should be considered from the earliest stages of plan-making and development proposals so that the potential impact of development on transport networks can be addressed (para 104).
- The planning system should actively manage patterns of growth such that significant development is focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. (para 105).
- Planning policies should be prepared with the active involvement of highways authorities and other transport infrastructure providers so that strategies and investments for supporting sustainable transport and development patterns are aligned. (para 106).
- In terms of identifying the necessity of transport infrastructure, NPPF confirms that development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe. (para 111).
- Planning policies and decisions should support development that makes efficient use of land, taking into account the availability and capacity of infrastructure and services – both existing and proposed – as well as their potential for further improvement and the scope to promote sustainable travel modes that limit future car use. (para 124).

In relation to the tests of soundness set out at paragraph 35 of the NPPF, in the context of transport, these are interpreted as meaning:

- a) Positively prepared - has the transport strategy been prepared with the active involvement of the highway authorities, other transport infrastructure providers and operators and neighbouring councils?

- b) Justified – Is the transport strategy based on a robust evidence base prepared with the agreement in partnership, or with the support of the highway authorities?
- c) Effective – Does the transport strategy and policy satisfy the transport needs of the plan and is it deliverable at a pace which provides for and accommodates the proposed progress and implementation of the plan?
- d) Consistent with national policy – Does the transport strategy support the economic, social, and environmental objectives of the Plan and the NPPF/NPPG?

We will be concerned with proposals that have the potential to impact on the safe and efficient operation of the SRN; in this case, the A27 trunk road (Chichester Bypass and its junctions) which is the main access route in the Chichester area. We have particular interest in any allocation, policy or proposals which could have implications for the A27 and the wider SRN network. We are interested as to whether there would be any adverse road safety or operational implications for the SRN. The latter would include a material increase in queueing or delay or reduction in journey time reliability during the construction or operation of the development set out in the plan.

National Highways is a key delivery partner for sustainable development promoted through the plan-led system, and as a statutory consultee we have a duty to cooperate with local authorities to support the preparation and implementation of development plan documents.

In accordance with national planning and transport policy and our operating licence, we are entirely neutral on the principle of development as it is for the local planning authority to determine whether development should be allocated or permitted; albeit it must comply with national policy on locating development in locations that are or can be made sustainable. Therefore, while always seeking early and fulsome engagement with local plans and/or developers, we will simply be assessing the transport and related implications of plans or proposals and agreeing any necessary transport improvements and relevant development management policy.

In progressing Local Plans, we will seek to agree the following:

- Assessment tools and methodology
- Baseline Assessment i.e., to demonstrate that the assessment tool accurately reflects current transport conditions
- Comparator case assessment i.e., to forecast the transport conditions that would occur in the absence of the plan
- Forecast modelling i.e., to forecast the transport conditions that would arise with the plan in place, this will include an assessment at the end of the Plan period; and, if required, at full build out if that occurs after the end of the Plan period
- Outputs and outcomes of modelling, demonstrating, as appropriate, what transport infrastructure is necessary to support the plan o It should be noted that a suite of transport modelling tools may be required. This includes strategic modelling covering an area at least one major junction beyond the district boundary, localised network modelling where several links/junctions are close together and/or individual junction modelling
- o A DMRB (Design Manual for Roads and Bridges) compliancy assessment may also be required for certain highway features, such as Merge/Diverge assessment at Grade separated junctions, link capacity assessments, and others.
- The design of any necessary transport infrastructure, to an extent suitable for establishing deliverability during the plan period at the time that it becomes necessary for the purpose of ensuring that unacceptable road safety impacts or severe operational impacts do not arise as a result of development. This may be to at least General Arrangement design stage or preliminary design stage. Whichever degree of detail is agreed, the products must be in full compliance with the DMRB.
- Industry standard transport intervention costings.
- The delivery/funding mechanisms for necessary transport interventions. It should not be assumed that National Highways will have any responsibility to identify or deliver necessary transport interventions.
- If considered appropriate, a “Monitor & Manage” (M&M) framework, aimed at managing the pace of development in line with the pace of funding and delivery of necessary highway interventions in a manner which responds to the realworld impacts of development may be agreed for inclusion in the plan subject to the adequacy of risk control measures included therein. This can include the move from a ‘predict & provide’ style of delivery to ‘a vision & validate’ style. o Any M&M framework must be based on a “worst case scenario” whereby necessary mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. It must be translated into development management plan policy and policy relating to development allocations.

Further detail on the above can be provided by National Highways.

While ideally all the above should be agreed prior to the Submission of the Local Plan for examination, we recognise that this is not always possible. However, all parties should work towards all matters being agreed and reflected in a Statement of Common Ground (SoCG) by the start of the Local Plan Examination at the latest. Ideally the SoCG between the Council and National Highways would be prepared well in advance of plan submission in order to guide resource input and to track progress towards final agreement on all relevant matters starting from the earliest plan iterations until the final version is agreed.

It is acknowledged that Government policy places much emphasis on housing delivery as a means for ensuring economic growth and addressing the current national shortage of housing. The NPPF is very clear that: “Strategic policy-making authorities should establish a housing requirement figure for their whole area, which shows the

extent to which their identified housing need (and any needs that cannot be met within neighbouring areas) can be met over the plan period."

However, new DfT C1/22 and the NPPF are equally clear that any development, including housing delivery, must be tempered by the requirement to ensure that the associated transport demand can be accommodated without unacceptable impacts on the safety of the SRN or severe impacts on the operation of the SRN including reliability and congestion. Therefore, as necessary and appropriate, any plan and/or development must be accompanied by suitable mitigation in the right places at the right time, that is to the required design standards and is deliverable in terms of land availability, constructability and funding.

We would also draw your attention to the then Highways England document 'The Strategic Road Network, Planning for the Future: A guide to working with National Highways on planning matters' (September 2015). This document sets out how National Highways intends to work with local planning authorities and developers to support the preparation of sound documents which enable the delivery of sustainable development. https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/461023/N150227_-_Highways_England_Planning_Document_FINAL-lo.pdf

Responses to Local Plan consultations are also guided by National Planning Policy Framework (NPPF) revised on 20 July 2021 which sets out the government's planning policies for England and how these are expected to be applied.

Updated Circular (01/2022)

It should be noted that since the start of the Local Plan consultation process, on the 23 December 2022, the Department for Transport released a new circular on the 'Strategic road network and the delivery of sustainable development' (Circular 01/2022), which replaces all of the policies in Circular 02/2013 of the same name. These representations take account of the new circular and the requirements in terms of the Local Plan evidence base and process.

We request that the Local Plan is prepared in line with all aspects of the new circular. Particularly, the principles of sustainable development (paragraphs 11 to 17), new connections and capacity enhancements (paragraphs 18 to 25), and engagement with plan-making (paragraphs 26 to 38).

Regulation 18 submission

In our Regulation 18 submission we noted several matters including:

- The need to mitigate the adverse impacts of strategic development traffic to the A27 Chichester Bypass and its junctions at Portfield Roundabout, Bognor Road Roundabout, Whyke Roundabout, Stockbridge Roundabout and Fishbourne Roundabout and Oving junction.
- The need to identify a mechanism to calculate contributions towards the delivery of the previously agreed Local Plan A27 improvements
- The need to confirm the number of dwellings needed within the plan period
- The need to establish National Highways acceptance of the traffic model reference and future case scenarios
- The need to confirm costs, viability, and funding associated with mitigating the safety and congestion impacts of the development included within the plan.

Local Plan context

This Local Plan (Chichester Local Plan 2021 – 2039), prepared by the Local Planning Authority (LPA) Chichester District Council, sets out the vision for future development in the district and will be used to help decide on planning applications and other planning related decisions including shaping infrastructure investments.

The draft sets out how the district should be developed over the next 18-years to 2039 including for the full Plan period (1 April 2021 to 31 March 2039) the total supply of

- 10,359 dwellings

- 114,652 net additional sqm new floorspace

Minus the completions this is equivalent to around 530 dwellings and 6,150 sqm of floorspace a year.

National Highways Representations

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders.

We have undertaken a review of the Chichester Local Plan 2021-2039 proposed submission version and accompanying evidence documents, our comments are set out in the tables below (following pages). [see table within attachment]

Summary

We have reviewed the publicly available Local Plan documents and provided comments above in relation to the transport implications of the plan for the safety and operation of the SRN. We understand that other technical information is available, but this was not presented as part of this consultation.

Chichester, and the A27, are already heavily congested, infrastructure in the existing Local Plan remains undelivered and the growth set out in the new Plan will further increase travel demand.

As presented, satisfying the transport needs of the plan is clearly reliant on the delivery of the A27 Chichester bypass

improvements project. The A27 Chichester bypass improvements project is one of 32 pipeline schemes being considered for possible inclusion in National Highways third Road Investment Strategy (RIS3) covering 1 April 2025 to 31 March 2030.

On 9 March 2023 the UK Transport Secretary ensured record funding would be invested in the country's transport network, sustainably driving growth across the country while managing the pressures of inflation. The announcement cited the A27 Arundel Bypass as being deferred from RIS2 to RIS 3 (covering 2025-2030). The transport secretary also identified a number of challenges to the delivery of the road investment strategy and cited the benefit of allowing extra time to ensure schemes are better planned and efficient schemes can be deployed more effectively.

At present, there is no commitment by DfT to carry out the A27 Chichester bypass improvements project. Until the A27 Chichester bypass improvements project is published in the RIS3, consented and a decision to invest is made it cannot be assumed to be a committed project.

We note that the Plan does not address any uncertainty of delivery of the A27 Chichester bypass improvements project and we strongly recommend that there is either no reliance placed on RIS3 to realise capacity for growth in the Plan or that contingency measures are included to cover the eventuality that RIS3 funding is not forthcoming within the plan period. It is not clear that the potential impact of development on transport networks can be addressed in the absence of the A27 Chichester bypass improvements project.

Achieving net zero, reducing emissions reduction, acting on climate, and supporting thousands of new homes and new employment developments will be problematic with existing processes. New, additional, and adapted processes and assessments will likely be required, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments. We acknowledge that change is complex, expensive, and time-consuming, especially for smaller district level Councils. But the hard work will deliver benefits for the Council and residents in the longer-term.

National Highways seeks to continue working with the Council and WSCC to progress coordinated and deliverable packages of interim mitigation measures and alternative transport solutions while a long-term strategic solution is considered by government. This must however be in combination with a robust monitor and manage policy that appropriately manages the risk of unacceptable road impacts resulting from new housing and other development over the Plan period.

We have been in discussion with Chichester District Council regarding their proposed Monitor and Manage Strategy. At present, we do not consider the current strategy to be robust and we seek further information and detail especially on who, when and when monitoring and management will be undertaken. Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas. Any M&M framework must be based on a "worst case scenario" whereby necessary transport mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. The M&M framework must set out that the alternative to mitigation not being delivered is that development does not proceed where that development would give rise to unacceptable road safety risk or severe cumulative impacts on the road network in the absence of that mitigation. The M&M framework must be translated into development management plan policy and policy relating to development allocations.

As we have reiterated throughout our comments, we welcome the opportunity to work with you to address these outstanding matters and we will continue to liaise over submitted Transport Assessment, Travel Plan policy and Monitor and Manage Policy to help to work towards a viable plan.

We hope our comments assist.

We look forward to continuing to participate in future consultations and discussions. Please do continue to consult us as the Plan progresses so that we can remain aware of, and comment as required on, its contents.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Document Element: Policy P3 Density**Respondent:** Thakeham Homes (Tristan Robinson, Planner) [8163]**Summary:**

Thakeham query the wording of paragraph 6.11 as it suggests that CDC require developments to be at a minimum of 35dph to meet their 5YHLS. We would question how this can be applied to sites that would fall below this density, for example where there might be site constraints that mean a lower density is more appropriate to create a well-designed scheme. More clarity should be provided in this paragraph to make it clear and robust.

RECEIVED LATE: Question the statement in Para 6.15 that 'solar gain' could create 'issues of overheating'. Surely this can be prevented by good design?

Full text:

Thank you for the opportunity to comment on the Draft Chichester District Local Plan 2021-39. We would suggest that there has been insufficient public consultation to date. We commented on the draft Local Plan for 2015, on the Preferred Options in 2019 and there have been many changes in Government policy and commitments since then to include Climate Change, Net Zero and commitments made at COP 26 and 27 to include reducing methane emissions etc. With regards to this consultation we recognise the importance of a plan-led system and support Chichester District Council's (CDC) desire to produce a comprehensive Local Plan. CPRE Sussex wishes to contribute to policies concerning landscape, rural areas, communities, environment and wildlife drawing on evidence and local knowledge.

CONTEXT

1. Examining the previous government consultation which closed on March 2nd, ie the Levelling-up and Regeneration Bill including some aspects of the National Planning Policy Framework, NPPF, there are some issues which would impact on this Local Plan and need consideration.

1.1 That consultation included important changes to the way in which the 5 year housing land supply is calculated, and the timetable for making Local Plans. They are of significance to local councils, especially those with Neighbourhood Plans. Some measures will take effect almost immediately through an update to the existing NPPF in Spring 2023. Others

will follow later in the year or in 2024. Surely such consultations should be better phased to make plan development more logical and access to consultations easier?

2. Communities: Our group welcomed the overall shift in emphasis towards communities. Mind you, while the word is used 121 times in the Prospectus it does not appear in the draft NPPF! We would expect much more emphasis on the importance of communities in any forthcoming consultations. Earlier and more effective engagement with communities could help to lead to a less confrontational planning system with an emphasis on active participation.

3 Time required – a lot of time is needed to understand and implement such policies and a searchable on-line version would be very helpful; and, consideration also needs to be extended to those people in the community who are not computerised.

4 We take the word “sufficient” with regard to housing numbers to be equivalent to that which is “needed” and the current Standard Method does not establish that figure. Our MP, the Rt Hon Andrew Griffith, Arundel and South Downs, referred to the approach to developing housing numbers as a mutant algorithm.

4.1 Specifically, the changes to housing targets, to make them ‘advisory’, are welcome. However, we should remind you that the Government continues to insist on using out-of-date projections (2014). The current ONS population estimates are 1 million less people in the population than allowed for in the figures used to so that the reliance on the 2014 figures is completely out of date. The emphasis should always be on using current up to date evidenceand to use those out-of-date figures produces the wrong results and does not conform with the need to use up to date information. In addition, this would require an immediate change to the guidance to insist (as previously) on the most up-to-date projections.

4.2 We also recommended a review of the Standard Method, which does not make housing affordable and simply supports developers to build market homes where they want to. The graph above illustrates the gap between projection and current population figure provided by the Community Planning Association.

4.3 Local Planning Authorities, LPAs, were also given an opportunity to put forward alternatives to the Standard Method and to name the specific constraints faced. Our contribution to that consultation referred to the:

- Reduction of land available to the CDC given the creation of the South Downs National Park, SDNP
- English Channel
- SDNP itself
- Range of internationally important designated sites
- Rare species and habitats
- River flood plains
- Water neutrality in part of the District
- Nutrient neutrality in the Solent
- Sea Level Rise
- Inadequate infrastructure – roads/lanes and local transport; sewage treatment; community facilities such as medical centres, shops; and

4.4 There have already been large housing commitments, loosely put on “flat green land” around Chichester and now CDC is eyeing the “empty” north of the District with allocations being made for Loxwood and an increase in the number of houses being sought in Wisborough Green. Such land supports wildlife which often may not be under recorded as it is private land. Areas in both of those Parishes has been “cleared” of biological interest but the BNG established a baseline of 2020 and google maps can show the state of the environment at that date. The commitment to safeguarding biodiversity needs to be pursued carefully and consistently.

COMMENTS ON THE CDC LOCAL PLAN 2021-2039 REG19 proposed submission comments: the comments cite the para and/or Chapter number

5. At this phase in the local plan process the scope of the invited representations is limited to whether the Plan that has been produced is:

- a) legally compliant (i.e., whether it meets the legal requirements); and
- b) sound (i.e., whether it has been positively prepared, is justified, is effective and is consistent with national policy) and I would ADD whether it is forward thinking enough as it is planned to last until 2039.

5.1 The plan area is split in to three areas, each with different characteristics, landscapes and access to services:

- a) • The East-West Corridor, running across the width of the plan area, is varied in landscape with the inclusion of both larger settlements (including the city) and rural villages. It has the best transport connections and access to facilities in the plan area with the A27 and railway running through-out.
- b) The Manhood Peninsula* MP, located in the south of the plan area, jutting out into the English Channel, is rich in coastal landscapes with the majority of the area covered by environmental designations. It also includes some of the plan area’s larger settlements which rely heavily on limited road accessibility to the north towards Chichester city.
- c) The North of the Plan Area is primarily rural in character with diverse landscapes, rich cultural and heritage assets and a number of dispersed settlements, some of which are relatively isolated and served by narrow lanes with limited public transport

*NB The population on the MP is dispersed in a rural landscape and equals that of Chichester. The description for the North section could just as easily have been used for the MP.

Chapter 2 and Local Plan Vision

These Objectives will need to underlie every aspect of the document.

5.2 P 23: Para 2.25 Replace the word “site” by “area” and insert forming part of a diverse set of wetlands (Ditches, Rifes, Ponds, Saline lagoons and a small section of Canal). Info: The Medmerry site is no longer the largest eg having been overtaken in area by the Steart Marshes, Somerset.

5.3 Include mention of rare habitats and species and the role of Selsey Bill in facilitating arrivals and departures of bats, butterflies and birds. That’s its USP,

6.1 P 25 Local Plan Vision and Strategic Objectives p 30 Objective 1: CLIMATE CHANGE

This section does not reflect the urgency of the issue nor the vulnerability of parts of Sussex. Many scientists are pointing

to Sea Level Rise, SLR, speeding up and some of them cite a 10 year window in which to act ie so that before this Local Plan has run its course, areas on the coast including the coastal plain and the Manhood Peninsula could well be adversely affected. This would have an immediate impact on housing, facilities and transport links and could lead to the local population having to move.

6.2 Actions related to this particular objective need to be included in all the following objectives. The south of the District is very vulnerable and the rest of the District will experience very intensive rainfall, water shortages (NE/EA 2013 report) and hot summers.

6.2 Policies need to include not building on areas below 5m high Water Level. The CDC Climate Change officer should host meetings to consider potential plans for putting houses on stilts, moving people to land safe from flooding and re-directing roads, cycle ways and footpaths to facilitate future access.

6.3 Evidence: See the Surging Seas and NASA websites for prediction of Sea Level Rise. Need to include reference to the UK Climate Resilience Programme jointly led by UK Research and Innovation, UKRI, and the Met Office which was set up to fund research "to help understand how to quantify the risks from climate change and build climate resilience for the UK, This research should produce "usable outputs" to "directly support decision-making" by government, local authorities, communities and other stakeholders

6.3.1 Every area of UK society will feel the effects of climate change and, as global emissions continue to rise, pre-paring for life in a warmer world is crucial. Findings were discussed last week by the UK ranging from assessments of elderly people overheating in care homes through to building community-run water storage.

6.3.2 Every area of UK society will feel the effects of climate change and, as global emissions continue to rise, preparing for life in a warmer world is crucial.

6.2.2.i In early March, UKTI and Met office researchers involved with the programme gathered to present and discuss their findings. They ranged from assessments of elderly people overheating in care homes through to building community-run water storage. These items and website need to be referenced in the evidence section.

6.3.3 The key points are intended to help businesses and policymakers adapt to climate change.

6.3.4 Many focused on "climate services" defined as involving the "production, translation, transfer and use of climate knowledge and information in climate-informed decision making".

6.3.5 Climate services could be an important tool for adaptation because they can provide people with the relevant information to prepare for climate change.

6.3.6 Representatives from the Met Office laid out their recommendations for a UK National Framework for Climate Services. And said they wanted to provide a "driving force" for the nation's climate services community and help ensure that "adaptation action actually does get done".

6.4.7 UK 'SSPs'

"Shared socioeconomic pathways" (SSPs) are tools used by researchers to explore how society will change in the future. This can help them to answer important questions about climate change. As there were no UK-specific versions of SSPs available to complement the UKCP18 climate projections

Ref: The importance of Adaptive Resilience Solutions in the Face of Climate Threats.

Recommendation: This report needs to be drawn on and form part of the evidence base.

7.1 Objective 2: NATURAL ENVIRONMENT Work with site managers of the Designated Sites and NGOs in the wider environment. This objective is vitally important and welcome and its importance needs to be reflected in all parts of the plan to include Wildlife Corridors, Biodiversity Net Gain and the Nature Recovery Network.

Sir David Attenborough

"It may sound frightening, but the scientific evidence is that if we have not taken dramatic action within the next decade, we could face irreversible damage to the natural world and the collapse of our societies."

7.1.1 The emergency concerning Biodiversity also needs to be communicated.

Para 2.32: Agree – this (climate emergency) is the most urgent issue facing us all together with the Biodiversity Emergency (declared by IPBWS, 2019).

7.1.2 Info: The ESPACE project European Spatial Planning: Adapting to Climate Events (ESPACE) was a four-year project funded by the European Commission's north-west Europe INTERREG IIIB programme and the ODPM. It produced a Climate Action Plan for the Manhood Peninsula in 2008 and not much action has followed to implement this. Perhaps it needs dusting off and re-visiting and including within the Local Plan?

7.2 Add policy:

PROPOSED Ecosystem Services Policy

7.2.1 CPRE Sussex considers that the Chichester Local Plan 2021 - 2039 should include a policy specifically for Ecosystem Services for the following reasons:

1. NPPF para 174. Planning policies and decisions should contribute to and enhance the natural and local environment by:

- a) protecting and enhancing valued landscapes, sites of biodiversity or geological value and soils (in a manner commensurate with their statutory status or identified quality in the development plan);
- b) recognising the intrinsic character and beauty of the countryside, and the wider benefits from natural capital and ecosystem services – including the economic and other benefits of the best and most versatile agricultural land, and of trees and woodland

7.2.2 'Natural capital refers to the elements of nature that produce value to people –whether directly or indirectly. Our natural capital 'assets' are the stocks of renewable and non-renewable natural capital such as our soils, freshwater, farmland, forests, atmosphere, oceans, ecological processes and the natural processes that underpin them. The flows of ecosystem services and benefits that our natural capital provides can be very obvious such as food, fuel, clean air, clean water, and opportunities for recreation. Others are much less visible, such as climate regulation, flood defences provided by natural vegetation, the billions of tonnes of carbon stored by peatlands and other habitats and the pollination of crops by insects'. (Sussex Local Nature Partnership <http://sussexlnp.org.uk/natural-capital/>)

7.3 Accordingly, we propose an Ecosystem Services policy (an adaptation of South Downs Park Authority's Core Policy SD2: Ecosystem Services'), be added as follows:

1. Development proposals will be permitted where they have an overall positive impact on the ability of the natural environment to contribute goods and services. This will be achieved by means of high-quality design, and by delivering all opportunities to:

- a) Sustainably manage land and water environments;
- b) Protect and provide more, better and joined up natural habitats;
- c) Conserve water resources and improve water quality;
- d) Manage and mitigate the risk of flooding;
- e) Improve the District's resilience to, and mitigation of, climate change;
- f) Increase the ability to store carbon through the retention of existing woodland, new planting or other means;
- g) Conserve and enhance soils, use soils sustainably and protect the best and most versatile agricultural land;
- h) Support the sustainable production and use of food, forestry and raw materials;
- i) Reduce levels of pollution;
- j) Improve opportunities for peoples' health and wellbeing; and
- k) Provide opportunities for access to the natural and cultural resources which contribute to the District's special qualities.

2. The Environment Act 2021 will require the production of a Nature Recovery Network and more locally a Local Nature Recovery Strategy. The Strategic Wildlife Corridors in Chichester District will be integral components of that local network. The importance of local networks in Nature Recovery Networks is highlighted in NPPG

7.3.4 Policy NE 4 Strategic Wildlife Corridors

CPRE Sussex supports this policy, Strategic Wildlife Corridors as part of the Local Plan process, conform with section 179 of the NPPF 2021 which is well-evidenced. However, CPRE Sussex wishes to question the size of the corridors ie the width/

Information provided in the 2021 consultation appears to demonstrate that these areas have been downsized such as those put alongside the East of the City Corridor, it appears that there has been a narrowing of the Strategic Wildlife Corridor around the location of the proposed allocations of A8, Chapter 10: Strategic and Area Based Allocations Land East of Chichester and potential A7, Land at Shopwyke. The Corridor to the East of Chichester was proposed for connectivity and functional links to the area for the rare and European Protected Species of Barbastelle Bats. It is shown on CDC technical consultation documents as a bat network

This does not conform with the Natural Environment & Rural Communities Act, NERC, 2006 and Section 40 subsection 3a as it would destroy a habitat over which the Barbastelle Bat has been recorded, a Section 41 species. And it is the DUTY of the Local Authority to safeguard these species. There should be NO recreational use in the buffer zones.

8. Green Infrastructure: p 160 and Policy P 14 d Submission (Regulation 19)

8.1 Local Green Space

6.82. The NPPF includes the concept of Local Green Space designation. This is a discretionary designation and sites may be identified and included in either local or neighbourhood plans. The designation should only be used as defined by the criteria in the NPPF where the land is not extensive, is local in character and reasonably close to the community; and, where it is demonstrably special, for example because of its beauty, historic significance, recreational value (including as a playing field), tranquillity or richness of its wildlife. Any areas which fall outside a neighbourhood plan area and where such designation is sought, will be considered by the subsequent Site Allocations DPD that will cover the remainder of the plan area. Policies for managing development within a Local Green Space should be consistent with those for Green Belts.

8.2 Parishes should be encouraged to look into such areas to be included in Neighbourhood Plans.

9. Renewable Energy: General policy

9.1 Housing p 103:

CPRE Sussex considers that the Chichester Local Plan should include a policy requiring all new-build homes to be equipped and sold with solar PV panels, roof or wall mounted.

9.2 Although the Chichester District Local Plan, at Para 6.15, states that 'Design proposals should respond to the opportunities a site presents to make best use of solar gain where this can be achieved without compromising good urban design or creating issues of overheating', there is no requirement in the any of the plan's policies for new-build homes to be equipped and sold with roof or wall mounted solar PV.

9.3 Note that West Sussex County Council has advised in their Solar Together initiative that "By generating electricity from the sun, you could reduce your annual carbon emissions by approximately one tonne each year and help West Sussex to become carbon neutral".

Note, too: <https://solartogether.co.uk/westsussex/blog/best-ways-to-increase-solar-self-consumption>

9.4 "According to the University of Oxford findings, UK households with solar PV self-consume 45% of their own solar generation on average and reduce annual electricity demand from the grid by 24%. With additional adjustments, this reduction of 24% can be increased to over 35%".

9.5 New-build homes in Chichester District should therefore be equipped with solar P V panels. We question the statement in Para 6.15 that 'solar gain' could create 'issues of overheating'. Surely this can be prevented by good design?

9.6 There are additional opportunities for solar installations on school rooves (Brighton Sustainable Energy Co-op has many examples), car parks, industrial buildings et al.

10.0 Renewable Energy: Specific location Wisborough Green 75 additional houses. Unacceptable – see CDC Capacity Study sub sections 166+167. Limitations – Ancient woodland; wildlife – rare habitats and species, river floodplain; Water neutrality; HRA with reference to the Mens Ancient Woodland and presence of European Protected Species, Barbastelle Bats flight paths and foraging across the parish. See Natural England report Site Improvement Report and reports by Frank Greenway, 2008 et al.

10.1 See Page 84: In the north of the plan area, properties within Southern Water's Sussex North Water Resource Zone are supplied with water from a groundwater abstraction at Pulborough which is currently subject to environmental investigations to ensure there is no adverse impact on environmentally designated sites in the Arun Valley. This may impact on the available supply and alternative sources may need to be considered by Southern Water. Natural England published a position statement in September 2021 requiring developments within the Sussex North Supply Zone to be water neutral – this means that the use of water in the supply area after the development is the same or lower than before. A Water Neutrality Strategy had been prepared jointly with other affected authorities. Natural England's Position Statement sets out an interim approach based on minimising water use in new builds and offsetting the water that is used

10.2 Water consumption target. It is noted that both Ports-mouth Water and Southern Water have targets to reduce water consumption to 100 litres per person per day (lppd) by 2040, a lower figure than the current most stringent Building Regulation target of 110 lppd and not that level which could be required for water neutrality.

10.3 The Local Plan is weak on impacts especially from the largest concentration of caravans at Selsey on Medmerry.

10.4 There is no wildlife corridor running east to west along the Manhood Peninsula ie Pagham to East Head and this undermines the importance of a positive barrier zone to protect the habitat. CDC have used the corridors for this barrier purpose possibly more than as a pathway throughout other parts of the plan.

10.5 Nutrient neutrality exclusion of a large area of the Peninsula from the protection zone is illogical as the same conditions exhibited in Chichester harbour (in the zone) exist at Pagham.

10.6 There is a 'tool' - "nutrient budget calculator March, 2022 version" – which gives an "n" factor for instance to discharges from WWTW. There is no direct mention of its use at Chichester harbour and as the data on Pagham Harbour has yet to be made public, the role of Sidlesham WWTW has not been referred to. The "N" factor would probably be more restrictive on outflows from WWTW than the total discharge permits – and shows a lack of coordinated approach between the Environment Agency and Natural England.

10.7 There are two reports due to be published this month - the West Sussex Coast and Gt Brighton Board and Southern Water overall plan for drainage and waste water-the timing of the LP – is thus unable to take these two influential inputs into account and may have implications for the 'Soundness ' of the plan as it moves forward.

10.8 No mention is included of Sidlesham WSTW which is operating at and beyond capacity resulting in new housing on the Manhood Peninsula dealing with waste water in gardens, in houses etc.

Pages 87 and 88: Paras 4.112 and 4.113 are contradictory.

Appendix F Monitoring Framework

Early in 2020 attended a Public Inquiry representing the Manhood Wildlife and Heritage Group and presented evidence about an application at Easton Farm where the implementation of an application had not been followed up, which had expanded like Topsy and which potentially could damage the Medmerry coastal realignment site with its runoff. CDC had not been on watch possibly through lack of staff and/or a lack of enforcement staff. The site had grown without permission. This section requires a firm commitment to monitoring and reporting back, not just a paper one.

Thank you for your attention.

Document Element: Policy P4 Layout and Access**Respondent:** Mayday! Action Group (John Garrett) [7163]**Summary:**

We can only reiterate our earlier comments. The District is nowhere near in a position to provide an integrated public transport solution to its residents. There is no evidence in this Draft Local Plan of Future-Proof masterplan for the City of Chichester or the District. Policy P4 is thus unsound and smacks of Mission Impossible.

Full text:

Executive Summary

The Local Plan as written lacks ambition and vision, and will be detrimental to the landscape within which the district lies. It is a plan borne out of a need to produce a legal document which will satisfy the regulatory authorities. In terms of Urban Planning it fails "To meet the needs of the present without compromising the ability of future generations to meet their own needs" (NPPF).

The development that will consequentially arise from the deployment of such a made Local Plan is not sustainable. It will adversely affect the Character, Amenity and Safety of the built environment, throughout our district.

In particular, the Local Plan is inadequate for the needs of the people in the district both at present and in the future because –

1. It has been written in advance of the District having a properly formed and agreed Climate Emergency Action Plan. It is inconceivable that such a key document will not shape our Local Plan. It is this Action Plan that is needed first in order to provide the long-term strategic view as to how and what the District will look like in the future; this, in turn, will help form and shape the policies outlined in any prospective, Local Plan. The Plan as proposed is moribund, as a result of "cart before the horse" thinking.
2. The Local Plan as written does not adequately address how infrastructure, transport and services are going to be materially and strategically improved to meet the predicted growth and shift to a significantly ageing population. There is presently insufficient capacity to supply services and to have adequate people and environmentally friendly connectivity, as a direct result of decades of neglect towards investing in infrastructure and services to meet the needs of the District's population. We are led to believe that developers through increased levies in order to gain permission to build will fulfil this need, but all that this will result in is an uncoordinated, dysfunctional mess completely lacking in any future-proof master planning approach. We contend that this will do nothing for the quality of life of Chichester District residents and it will create a vacuum whereby few if indeed any can be held accountable or indeed found liable for shortcomings in the future.
3. The Local Plan as written does not state how it will go about addressing the need to create affordable homes. The District Council's record on this matter since the last made plan has been inadequate and now the creation of affordable homes has become urgent as political/economic/social factors drive an ever increasing rate of change within the District.

4. Flood risks assessments used in forming the Plan are out of date (last completed in 2018) and any decision to allocate sites is contrary to Environment Agency policy. Additionally, since March 2021 Natural England established a position in relationship to 'Hold the Line' vs. 'Managed Retreat' in environmentally sensitive areas, of which the Chichester Harbour AONB is a significant example. CDC have failed to set out an appropriate policy within the proposed Local Plan that addresses this requirement.

5. The A27 needs significant investment in order to yield significant benefits for those travelling through the East-West corridor; this is unfunded. Essential improvements to the A27 are key to the success of any Local Plan particularly as the city's ambitions are to expand significantly in the next two decades. But any ambitions will fall flat if the A27 is not improved before such plans are implemented.. The A259 is an increasingly dangerous so-called 'resilient road' with a significant increase in accidents and fatalities in recent years. In 2011, the BBC named the road as the "most crash prone A road" in the UK. There is nothing in the Local Plan that addresses this issue. There is no capacity within the strategic road network serving our district to accommodate the increase in housing planned, and the Local Plan does not guarantee it.

6. There is insufficient wastewater treatment capacity in the District to support the current houses let alone more. The tankering of wastewater from recent developments that Southern Water has not been able to connect to their network and in recent months the required emergency use of tankers to pump out overflowing sewers within our City/District reflects the gross weakness of short-termism dominated thinking at its worst and is an indictment of how broken our water system is. The provision of wastewater treatment is absolutely critical and essential to the well-being of all our residents and the long-term safety of our built environment. The abdication by those in authority, whether that be nationally, regionally or locally, is causing serious harm to the people to whom those in power owe a duty of care and their lack of urgency in dealing properly with this issue is seriously jeopardizing the environment in which we and all wildlife co-exist.

7. Settlement Boundaries should be left to the determination of Parish Councils to make and nobody else. The proposed policy outlined in the Local Plan to allow development on plots of land adjacent to existing settlement boundaries is ill-conceived and will lead to coalescence which is in contradiction of Policy NE3.

8. All the sites allocated in the Strategic Area Based Policies appear to be in the majority of cases Greenfield Sites. The plan makes little, if any reference to the development of Brownfield sites. In fact, there is not a Policy that relates to this source of land within the Local Plan as proposed. Whilst in the 2021 HELAA Report sites identified as being suitable for development in the District as being Brownfield sites were predicted to yield over 4000 new dwellings. Why would our Local Plan not seek to develop these sites ahead of Greenfield sites?

9. The Local Plan does not define the minimum size that a wildlife corridor should be in width. What does close proximity to a wildlife corridor mean? How can you have a policy (NE 4) that suggests you can have development within a wildlife corridor? These exceptions need to have clear measures and accountability for providing evidence of no adverse impact on the wildlife corridor where a development is proposed. Our view is quite clear. Wildlife and indeed nature in the UK is under serious and in the case of far too many species, potentially terminal threat. Natural England has suggested that a Wildlife Corridor should not be less than 100metres wide. The proposed Wildlife Corridors agreed to by CDC must be enlarged and fully protected from any development. This is essential and urgent for those Wildlife Corridors which allow wildlife to achieve essential connectivity between the Chichester Harbour AONB and the South Downs National Park.

10. Biodiversity Policy NE5 - This is an absolute nonsense. If biodiversity is going to be harmed there should be no ability to mitigate or for developers to be able to buy their way out of this situation. This mindset is exactly why we are seeing a significant decline in biodiversity in the District which should be a rich in biodiversity area and why the World Economic Forum Report (2023) cites the UK as one of the worst countries in the world for destroying its biodiversity.

11. In many cases as set out in the Policies the strategic requirements lack being SMART in nature – particularly the M Measurable. These need to be explicit and clear: "you get what you measure".

12. 65% of the perimeter of the District of Chichester south of the SDNP is coastal in nature. The remainder being land-facing. Policy NE11 does not sufficiently address the impact of building property in close proximity to the area surrounding the harbour, something acknowledged by the Harbour Conservancy in a published report in 2018 reflecting upon how surrounding the harbour with housing was detrimental to its long-term health. And here we are 5 years on and all of the organizations that CDC are saying that they are working in collaboration with, to remedy the decline in the harbour's condition, are failing to implement the actions necessary in a reasonable timescale. CDC are following when they should be actually taking the lead on the issue. Being followers rather than leaders makes it easy to abdicate responsibility. There must be full and transparent accountability.

13. The very significant space constraints for the plan area must be taken into account. The standard methodology need no longer apply where there are exceptional circumstances and we are certain that our District should be treated as a special case because of the developable land area is severely reduced by the South Downs National Park (SDNP) to the north and the unique marine AONB of Chichester Harbour to the south. A target of 535dpa is way too high. This number should be reduced to reflect the fact that only 30% of the area can be developed and much of that is rural/semi-rural land which provides essential connectivity for wildlife via a number of wildlife corridors running between the SDNP and the

AONB. Excessive housebuilding will do irretrievable damage to the environment and lead to a significant deterioration in quality of life for all who reside within the East / West corridor.

14. Many of the sites identified in the Strategic & Area Based Policies could result in Grade 1 ^ 2 farmland being built upon. The UK is not self-sufficient in our food security. It is short-sighted to expect the world to return to what we have come to expect. Our good quality agricultural land should not all be covered with non-environmentally friendly designed homes.

Respondent: National Highways (Mr Marius Pieters, Spatial Planning Manager) [8127]

Summary:

[National Highways letter dated 24/07/23 confirmed representation should be categorised as Comment - Seeking clarity on the approach e.g., severance.] Considerations should be given, and evidence provided, on how new active travel links will integrate with the wider network including the existing A27 pedestrian and cycle footbridges and active travel routes along/intersecting the A27 corridor and how new facilities will be funded, monitored, and maintained. This is an important measure to reduce demand on the A27.

We seek clarity on how severance will be addressed and potential severance impacts.

Full text:

We have reviewed the publicly available Local Plan documents and provided comments in the attached letter, in relation to the transport implications of the plan for the safety and operation of the SRN.

Our comments include issues to resolve, comments, requests for further information and recommendations. A brief summary of our main comments are:

- the reliance on the delivery of the A27 Chichester bypass improvements project.

- the requirements for new, additional, and adapted processes and assessments, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments.

- collaborative working between agencies in combination with a robust monitor and manage policy.

We hope our comments assist.

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex

County Council (WSCC) and we will continue to work with the Council and other key stakeholders. We look forward to continuing to participate in future consultations and discussions.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Background

National Highways has been appointed by the Secretary of State for Transport as strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the strategic road network (SRN).

National Highways is responsible for operating, maintaining, and improving the Strategic Road Network (SRN) i.e., the Trunk Road and Motorway Network in England, as laid down in Department for Transport (DfT) Circular 01/2022 (Strategic Road Network and the delivery of sustainable development).

The SRN is a critical national asset and as such we work to ensure that it operates and is managed in the public interest, both in respect of current activities and needs as well as in providing effective stewardship of its long-term operation and integrity.

Our responses to Local Plan consultations are guided by relevant policy and guidance including the National Planning Policy Framework (2021) (NPPF):

- Transport issues should be considered from the earliest stages of plan-making and development proposals so that the potential impact of development on transport networks can be addressed (para 104).
- The planning system should actively manage patterns of growth such that significant development is focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. (para 105).
- Planning policies should be prepared with the active involvement of highways authorities and other transport infrastructure providers so that strategies and investments for supporting sustainable transport and development patterns are aligned. (para 106).
- In terms of identifying the necessity of transport infrastructure, NPPF confirms that development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe. (para 111).
- Planning policies and decisions should support development that makes efficient use of land, taking into account the availability and capacity of infrastructure and services – both existing and proposed – as well as their potential for further improvement and the scope to promote sustainable travel modes that limit future car use. (para 124).

In relation to the tests of soundness set out at paragraph 35 of the NPPF, in the context of transport, these are interpreted as meaning:

- a) Positively prepared - has the transport strategy been prepared with the active involvement of the highway authorities, other transport infrastructure providers and operators and neighbouring councils?
- b) Justified – Is the transport strategy based on a robust evidence base prepared with the agreement in partnership, or with the support of the highway authorities?
- c) Effective – Does the transport strategy and policy satisfy the transport needs of the plan and is it deliverable at a pace which provides for and accommodates the proposed progress and implementation of the plan?
- d) Consistent with national policy – Does the transport strategy support the economic, social, and environmental objectives of the Plan and the NPPF/NPPG?

We will be concerned with proposals that have the potential to impact on the safe and efficient operation of the SRN; in this case, the A27 trunk road (Chichester Bypass and its junctions) which is the main access route in the Chichester area. We have particular interest in any allocation, policy or proposals which could have implications for the A27 and the wider SRN network. We are interested as to whether there would be any adverse road safety or operational implications for the SRN. The latter would include a material increase in queueing or delay or reduction in journey time reliability during the construction or operation of the development set out in the plan.

National Highways is a key delivery partner for sustainable development promoted through the plan-led system, and as a statutory consultee we have a duty to cooperate with local authorities to support the preparation and implementation of development plan documents.

In accordance with national planning and transport policy and our operating licence, we are entirely neutral on the principle of development as it is for the local planning authority to determine whether development should be allocated or permitted; albeit it must comply with national policy on locating development in locations that are or can be made sustainable. Therefore, while always seeking early and fulsome engagement with local plans and/or developers, we will

simply be assessing the transport and related implications of plans or proposals and agreeing any necessary transport improvements and relevant development management policy.

In progressing Local Plans, we will seek to agree the following:

- Assessment tools and methodology
- Baseline Assessment i.e., to demonstrate that the assessment tool accurately reflects current transport conditions
- Comparator case assessment i.e., to forecast the transport conditions that would occur in the absence of the plan
- Forecast modelling i.e., to forecast the transport conditions that would arise with the plan in place, this will include an assessment at the end of the Plan period; and, if required, at full build out if that occurs after the end of the Plan period
- Outputs and outcomes of modelling, demonstrating, as appropriate, what transport infrastructure is necessary to support the plan o It should be noted that a suite of transport modelling tools may be required. This includes strategic modelling covering an area at least one major junction beyond the district boundary, localised network modelling where several links/junctions are close together and/or individual junction modelling
 - o A DMRB (Design Manual for Roads and Bridges) compliancy assessment may also be required for certain highway features, such as
 - o Merge/Diverge assessment at Grade separated junctions, link capacity assessments, and others.
- The design of any necessary transport infrastructure, to an extent suitable for establishing deliverability during the plan period at the time that it becomes necessary for the purpose of ensuring that unacceptable road safety impacts or severe operational impacts do not arise as a result of development. This may be to at least General Arrangement design stage or preliminary design stage. Whichever degree of detail is agreed, the products must be in full compliance with the DMRB.
- Industry standard transport intervention costings.
- The delivery/funding mechanisms for necessary transport interventions. It should not be assumed that National Highways will have any responsibility to identify or deliver necessary transport interventions.
- If considered appropriate, a "Monitor & Manage" (M&M) framework, aimed at managing the pace of development in line with the pace of funding and delivery of necessary highway interventions in a manner which responds to the realworld impacts of development may be agreed for inclusion in the plan subject to the adequacy of risk control measures included therein. This can include the move from a 'predict & provide' style of delivery to 'a vision & validate' style. o Any M&M framework must be based on a "worst case scenario" whereby necessary mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. It must be translated into development management plan policy and policy relating to development allocations.

Further detail on the above can be provided by National Highways.

While ideally all the above should be agreed prior to the Submission of the Local Plan for examination, we recognise that this is not always possible. However, all parties should work towards all matters being agreed and reflected in a Statement of Common Ground (SoCG) by the start of the Local Plan Examination at the latest. Ideally the SoCG between the Council and National Highways would be prepared well in advance of plan submission in order to guide resource input and to track progress towards final agreement on all relevant matters starting from the earliest plan iterations until the final version is agreed.

It is acknowledged that Government policy places much emphasis on housing delivery as a means for ensuring economic growth and addressing the current national shortage of housing. The NPPF is very clear that: "Strategic policy-making authorities should establish a housing requirement figure for their whole area, which shows the extent to which their identified housing need (and any needs that cannot be met within neighbouring areas) can be met over the plan period."

However, new DfT C1/22 and the NPPF are equally clear that any development, including housing delivery, must be tempered by the requirement to ensure that the associated transport demand can be accommodated without unacceptable impacts on the safety of the SRN or severe impacts on the operation of the SRN including reliability and congestion. Therefore, as necessary and appropriate, any plan and/or development must be accompanied by suitable mitigation in the right places at the right time, that is to the required design standards and is deliverable in terms of land availability, constructability and funding.

We would also draw your attention to the then Highways England document 'The Strategic Road Network, Planning for the Future: A guide to working with National Highways on planning matters' (September 2015). This document sets out how National Highways intends to work with local planning authorities and developers to support the preparation of sound documents which enable the delivery of sustainable development. https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_t_data/file/461023/N150227_-_Highways_England_Planning_Document_FINAL-lo.pdf

Responses to Local Plan consultations are also guided by National Planning Policy Framework (NPPF) revised on 20 July 2021 which sets out the government's planning policies for England and how these are expected to be applied.

Updated Circular (01/2022)

It should be noted that since the start of the Local Plan consultation process, on the 23 December 2022, the Department

for Transport released a new circular on the 'Strategic road network and the delivery of sustainable development' (Circular 01/2022), which replaces all of the policies in Circular 02/2013 of the same name. These representations take account of the new circular and the requirements in terms of the Local Plan evidence base and process.

We request that the Local Plan is prepared in line with all aspects of the new circular. Particularly, the principles of sustainable development (paragraphs 11 to 17), new connections and capacity enhancements (paragraphs 18 to 25), and engagement with plan-making (paragraphs 26 to 38).

Regulation 18 submission

In our Regulation 18 submission we noted several matters including:

- The need to mitigate the adverse impacts of strategic development traffic to the A27 Chichester Bypass and its junctions at Portfield Roundabout, Bognor Road Roundabout, Whyke Roundabout, Stockbridge Roundabout and Fishbourne Roundabout and Oving junction.
- The need to identify a mechanism to calculate contributions towards the delivery of the previously agreed Local Plan A27 improvements
- The need to confirm the number of dwellings needed within the plan period
- The need to establish National Highways acceptance of the traffic model reference and future case scenarios
- The need to confirm costs, viability, and funding associated with mitigating the safety and congestion impacts of the development included within the plan.

Local Plan context

This Local Plan (Chichester Local Plan 2021 – 2039), prepared by the Local Planning Authority (LPA) Chichester District Council, sets out the vision for future development in the district and will be used to help decide on planning applications and other planning related decisions including shaping infrastructure investments.

The draft sets out how the district should be developed over the next 18-years to 2039 including for the full Plan period (1 April 2021 to 31 March 2039) the total supply of

- 10,359 dwellings

- 114,652 net additional sqm new floorspace

Minus the completions this is equivalent to around 530 dwellings and 6,150 sqm of floorspace a year.

National Highways Representations

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders.

We have undertaken a review of the Chichester Local Plan 2021-2039 proposed submission version and accompanying evidence documents, our comments are set out in the tables below (following pages). [see table within attachment]

Summary

We have reviewed the publicly available Local Plan documents and provided comments above in relation to the transport implications of the plan for the safety and operation of the SRN. We understand that other technical information is available, but this was not presented as part of this consultation.

Chichester, and the A27, are already heavily congested, infrastructure in the existing Local Plan remains undelivered and the growth set out in the new Plan will further increase travel demand.

As presented, satisfying the transport needs of the plan is clearly reliant on the delivery of the A27 Chichester bypass improvements project. The A27 Chichester bypass improvements project is one of 32 pipeline schemes being considered for possible inclusion in National Highways third Road Investment Strategy (RIS3) covering 1 April 2025 to 31 March 2030.

On 9 March 2023 the UK Transport Secretary ensured record funding would be invested in the country's transport network, sustainably driving growth across the country while managing the pressures of inflation. The announcement cited the A27 Arundel Bypass as being deferred from RIS2 to RIS 3 (covering 2025-2030). The transport secretary also identified a number of challenges to the delivery of the road investment strategy and cited the benefit of allowing extra time to ensure schemes are better planned and efficient schemes can be deployed more effectively.

At present, there is no commitment by DfT to carry out the A27 Chichester bypass improvements project. Until the A27 Chichester bypass improvements project is published in the RIS3, consented and a decision to invest is made it cannot be assumed to be a committed project.

We note that the Plan does not address any uncertainty of delivery of the A27 Chichester bypass improvements project and we strongly recommend that there is either no reliance placed on RIS3 to realise capacity for growth in the Plan or that contingency measures are included to cover the eventuality that RIS3 funding is not forthcoming within the plan period. It is not clear that the potential impact of development on transport networks can be addressed in the absence of the A27 Chichester bypass improvements project.

Achieving net zero, reducing emissions reduction, acting on climate, and supporting thousands of new homes and new employment developments will be problematic with existing processes. New, additional, and adapted processes and assessments will likely be required, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments. We acknowledge that change is complex, expensive, and time-consuming, especially for smaller district level Councils. But the hard work will deliver benefits for the Council and residents in the longer-term.

National Highways seeks to continue working with the Council and WSCC to progress coordinated and deliverable packages of interim mitigation measures and alternative transport solutions while a long-term strategic solution is considered by government. This must however be in combination with a robust monitor and manage policy that appropriately manages the risk of unacceptable road impacts resulting from new housing and other development over the Plan period.

We have been in discussion with Chichester District Council regarding their proposed Monitor and Manage Strategy. At present, we do not consider the current strategy to be robust and we seek further information and detail especially on who, when and when monitoring and management will be undertaken. Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas. Any M&M framework must be based on a "worst case scenario" whereby necessary transport mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. The M&M framework must set out that the alternative to mitigation not being delivered is that development does not proceed where that development would give rise to unacceptable road safety risk or severe cumulative impacts on the road network in the absence of that mitigation. The M&M framework must be translated into development management plan policy and policy relating to development allocations.

As we have reiterated throughout our comments, we welcome the opportunity to work with you to address these outstanding matters and we will continue to liaise over submitted Transport Assessment, Travel Plan policy and Monitor and Manage Policy to help to work towards a viable plan.

We hope our comments assist.

We look forward to continuing to participate in future consultations and discussions. Please do continue to consult us as the Plan progresses so that we can remain aware of, and comment as required on, its contents.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Object

Document Element: Policy P4 Layout and Access

Respondent: Stagecoach South (Rob Vince) [8141]

Summary:

A number of proposals in the plan involve large-scale development. It is essential that where appropriate buses can access and circulate efficiently through development at a suitably early stage. There is no acknowledgement of this anywhere in the policy, contrary to NPPF paragraph 112.

Large-scale development which buses cannot access in an efficient or timely manner, or at all, strongly contributes to high levels of car-dependency. Evidence for this is referred to among other places, in DfT Circular 01/2022. To be compliant with NPPF and properly pursue its strategic Objectives, Policy P4 needs to be modified to address this point: "1. Provide safe, direct and attractive conditions for inclusive access, egress and active travel between all locations and providing as good direct high quality links to integrated public transport, and where appropriate efficient access and circulation to bus services, unimpeded by excessive parking, at a suitably early point in the development phasing;

Full text:

Chichester District Local Plan 2039 – Pre-Submission (Regulation 19) Consultation

1. Introductory Comments

Stagecoach South is the main commercial public transport operator across Chichester District. The Company has headquarters in the city, which is also the principal public transport hub for the District and it's rather wider travel-to-work area encompassing much of the Arun District. Our services extend throughout and beyond the District boundaries, as far as Littlehampton, Midhurst, Havant and Portsmouth. The vast majority of services operate on a commercial basis – that is to say, sustained by passenger use and fare revenue, including concessionary reimbursement.

While the role of the railway is significant in much of the District, especially the east-west Coastway line, yet bus services account for more boardings locally than the railway, with Chichester depot services carrying over 3.5m passengers each year.

Unlike bus services in other parts of the country, the local network has recovered strongly after the pandemic with fare-paying passenger numbers over 95% of 2019 levels, albeit with concession patronage somewhat lower. This has helped secure not only a stable but growing bus network even during this period of rapidly rising operational costs, avoiding the need for the service contractions seen in other regions. Indeed, during the second quarter of 2023 Stagecoach will invest £5.5m in brand-new vehicles for high-profile coastal Service 700 – one of the largest vehicle investments for Stagecoach Group this year.

Our services are therefore critical to existing and future local connectivity. As the Plan acknowledges, mobility demands do not respect planning authority boundaries. The role of our services is especially high to settlements in the broad A27 corridor, within the District and beyond. This includes major settlements in Arun District such as Pagham and suburban Bognor Regis, where bus is the only mass public transport option. As the Council is well aware, there is an even higher level and rate of committed development envisaged in these locations in the Arun District Local Plan than in Chichester.

It is already evident to the planning authorities, West Sussex County Council and National Highways, as proprietor of the A27 Trunk Road, that accommodating growing mobility demands across Chichester District and especially around Chichester itself, is becoming increasingly challenging to the point of being seriously problematic.

Stagecoach has a particular interest in this Plan arising from:

- The already clear and highly deleterious impact of congestion affecting our operations and their reliability and attractiveness to the public. The effects of these on the approaches to Chichester, and around the A27 bypass are especially severe. If public transport is to retain its existing role – even before the needs of any meaningful growth both in Chichester and neighbouring authorities is considered, are considered – the Council and the Highways Authority need to arrive at clearly-defined measures to protect buses from chronic delay and the damaging impacts arising from the lack of bus network resilience and customer journey times.
- In connection with the above, the need to properly consider the predictable impacts of committed development in Arun District on the transport network and in particular the operation of bus services. The duty to cooperate on cross-border strategic matters is not limited merely to accommodating housing requirements.
- The fact that our entire business premises and operational base at Chichester is the subject of allocation for redevelopment within the Plan period. Specifically, this includes our Head Office, the Bus Station as the operational hub of the network and the key interchange for passenger journeys – including those that involve the railway – and the bus depot required to support the entire operation. Notwithstanding many years of discussions, there is as yet no agreed deliverable strategy to replace these facilities either in the Draft Plan or elsewhere.

Stagecoach broadly supports the vision and priorities of the draft plan. In most respects, Stagecoach supports strongly the spatial strategy and the identified site allocations that flow from it, and the evidence.

However, it has serious concerns about the soundness of the plan as proposed for submission, for important regards outlined in this response. These are made in the light of requirements set by the National Planning Policy Framework (NPPF), in particular at paragraphs 15 and 16; 35, 105-109 inclusive and having due regard to the need for allocations to satisfy 110-112 inclusive in due course as development permission is sought; and paragraph 174.

Paragraph 16c) of NPPF makes plain that strategic plans and policies should "be shaped by early, proportionate and effective engagement between plan-makers and communities, local organisations, businesses, infrastructure providers

and operators and statutory consultees” (our emphasis). This makes plain that collaborative and ongoing involvement of public transport operators is both necessary, and separate and in addition to the engagement with statutory consultees. This has not taken place.

Para 1.25 of the draft plan states that “the council has engaged constructively, actively and on an ongoing basis with other local authorities and organisations to address key strategic matters.” Despite the requirements in NPPF and contrary to the statement made, Stagecoach has not been approached or involved in a meaningful, collaborative or ongoing way in the preparation of the Plan.

Our main concerns centre around the fact that the plan strategy is neither backed by sufficient transport evidence. Even more importantly, the plan relies on a wholly car-based transport mitigation strategy despite policy stating that this is not the case, and the track record of the existing Local Plan, based on a very similar strategy, that has failed to bring forward meaningful mitigations to date to prevent traffic conditions substantially worsening. There is no support in policy for the achievement of the Strategic Objectives in the Plan. Nor is there definition of any measures in the 2023 Transport Study to make provision for sustainable transport infrastructure or services – much less materially improve them.

Finally, to the extent that updated transport evidence has been provided in the form of the 2023 Chichester Transport Study, arising from updated traffic modelling, it does not support the contention that highways capacity constraints on and around the A27 justify not meeting the objectively-assessed development needs of the area, as the draft plan contends.

2. Vision and Strategic Objectives

2.1. Issues and Opportunities

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant, proportionate and up to date evidence

Stagecoach recognises the important role of the West Sussex and Greater Brighton Strategic Planning Board which agreed a Local Strategic Statement (LSS2) in early 2016 to identify spatial planning issues across the wider area. This established strategic priorities and policies to guide longer term strategic growth in a coordinated and well considered matter. This institutional framework and the purpose of the LSS is a highly significant one and is at the heart of efforts to properly fulfil the statutory Duty to Co-operate, including with regard to strategic infrastructure issues, as NPPF requires.

Given the long period of time elapsed since the 2018 Reg 18 consultation and the already very clear constraints on strategic infrastructure capacity, it is of great concern to Stagecoach that the LSS2 has not been updated to reflect emerging issues in the intervening period. A review and update of the LSS2 has only just commenced. This includes a study of projected housing and employment needs, transport impact, infrastructure and spatial options to deliver the required development in the period after 2030. This Chichester District draft plan covers a period extending to 2039 – therefore well beyond 2030 and the nominal currency of LSS2.

However, infrastructure needs are pressing today. Stagecoach is presented with severe highway operational problems on a near-daily basis. During the winter of 2022-23 we have, for example, seen key road links impacted for many weeks by acute disruption arising from flood events. Unpredictable, but seemingly more-frequent, exogenous events expose a lack of resilience in the highway network around Chichester and its travel-to-work area. However, serious, chronic, unpredictable delay has been normalised over recent years, with peak-time congestion having quickly returned after the pandemic. The existing development strategy has failed to bring forward measures having any impact on this to date, and key commitments – notably at west of Chichester Phase 2 and at Tangmere – have yet to commence to further aggravate the issue.

We have no confidence in the transport mitigations proposed in the existing Local Plan and LSS2 being sufficiently effective, even if deliverable at all. Indeed, the existing adopted Local Plan does little more than make vague speculations about the sustainable transport measures that might be achievable. The draft local plan review is no different. It has no ambitions at all for sustainable modes and thus, makes no meaningful provision to meet them.

This is especially relevant in light of the fact that the approach to resolving issues on the A27 around Chichester that were anticipated in 2015-16 have fallen away. LSS2 is thus currently inadequate to act as a part of an up-to-date, proportionate, and relevant evidence base for the Plan.

An update of a traffic model lies at the heart of a 2023 Chichester Transport Study. This talks no account of the existing role of non-car modes, nor can it do so. It is unable to properly evaluate the nature of problems or solutions that involve public transport, or for that matter, other sustainable modes.

Therefore, we consider that the combination of committed and additional development needs that must be accommodated over the whole plan period between 2022 and 2039, in both the Chichester and Arun Districts, require a “first principles” review. This must be based on a refreshed transport evidence baseline of no earlier than 2022 – given

that the effects of COVID distort 2020-22 – and the transport infrastructure and service requirements to sustainably support those needs.

Key issues – including substantial changes with regards to transport issues and challenges, as well as potential solutions – thus do not form part of the evidence base that steers this plan. Given long term changes in travel patterns, and mode share that took place during COVID, as well as a local and national policy context that seeks to radically reduce and then eliminate transport-related carbon emissions, this is especially problematic.

The specific problems of congestion and network resilience that are evident on the A27 and the approaches to Chichester remain a set of especially difficult problems that disproportionately affect the efficiency, reliability and attractiveness of the bus network, that evidently demand larger-scale strategic responses involving multiple stakeholders, including bus operators.

Where the effects of development on the national Strategic Roads Network (SRN) are concerned, the approach of National Highways to addressing and responding to the mobility needs of development has now substantially changed following the promulgation of the DfT Written Ministerial Statement LTN01/22. This makes it clear that adding highways capacity is no longer the first or only strategy that should be pursued, but one subordinate this to maximising the potential of non-car modes and sustainable travel.

“Effective and ongoing collaboration” on transport matters has not led to solutions being agreed and published for public scrutiny as part of the plan evidence base. Whatever the approach to modelling and “highways improvements” that may be agreed or pending agreement with the County Highways Authority and National Highways, Stagecoach is neither participant or sighted. This is despite the clear requirements set out in NPPF Para 106 b) that “Planning policies should ... be prepared with the active involvement of local highways authorities, other transport infrastructure providers and operators and neighbouring councils, so that strategies and investments for supporting sustainable transport and development patterns are aligned.” (our emphasis).

We therefore consider that the Council has failed to comply with the requirements of NPPF paragraph 25 and 26 that “relevant bodies” are involved in plan-making, especially with regard to addressing the needs for infrastructure. Public transport services and the infrastructure that supports its operation and use clearly fall within matters relevant to plan-making. This is explicit in NPPF Chapter 9 and indeed within the plan itself – for example reference to public transport and sustainable modes in the Vision for the plan.

It should be stressed that the Regulation 18 “Preferred Approach” consultation took place in December 2018 – over 4 years ago and prior to COVID, based on LSS2. The inordinate length of time that has elapsed between the Regulation 18 and Regulation 19 stages greatly challenges the LSS2 and other parts of the evidence base, especially as the pause straddles the COVID epidemic. That would include the transport modelling baseline, and key assumptions in any traffic modelling that took place prior to mid-2022, which is a point at which a reasonable “new normal” post-COVID might be considered to have become established. In that period, Arun District has also adopted its own Local Plan development strategy that accommodates an unprecedented quantum of development immediately east and south-east of the District Boundary – creating additional substantial transport impacts directly affecting the A27 and multiple major approaches to Chichester crossing it.

The established mechanism to fulfil the Duty to Co-operate has thus not operated effectively.

The Plan is not founded on a relevant, proportionate and up-to date evidence base and is thus inadequately justified.

2.2. Spatial Portrait

The spatial portrait is generally succinct and accurate. However, it makes no mention of road-based public transport, the role of the City as a public transport hub, or the range of bus services that provide local connectivity (Section 2.4 and 2.5). The complete concentration of post-16 education in the City itself as just one example of the peculiarities of transport demands in the area, is not highlighted, though this has a profound influence on peak time travel demands affecting the most congested parts of the highway network. Among other things, the role of bus services in supporting the educational system of the plan area is very great indeed.

The potential role of bus in addressing the already-severe transport problems of the plan area and beyond seems entirely overlooked. The spatial portrait is thus clearly inadequate and incomplete.

2.3. Strategic Objectives

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Chapter 9 of NPPF and paragraphs 104 and 105 in particular require that plans should:

“Transport issues should be considered from the earliest stages of plan-making and development proposals, so that:

a) the potential impacts of development on transport networks can be addressed;

b) opportunities from existing or proposed transport infrastructure, and changing transport technology and usage, are realised – for example in relation to the scale, location or density of development that can be accommodated;
 c) opportunities to promote walking, cycling and public transport use are identified and pursued;
 d) the environmental impacts of traffic and transport infrastructure can be identified, assessed and taken into account – including appropriate opportunities for avoiding and mitigating any adverse effects, and for net environmental gains;...
 ...The planning system should actively manage patterns of growth in support of these objectives. Significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. This can help to reduce congestion and emissions, and improve air quality and public health..."

The Strategic Objectives do not conform with NPPF in these foundational requirements adequately, to transparently steer the plan strategy. They should therefore be amended to read:

"Plan to provide local infrastructure to support new development and seek opportunities to address existing identifiable infrastructure problems deficits, such as in particular those relating to the A27 and its junctions and wastewater treatment."

Paragraph 2.36 states, in the context of the Climate Emergency and the National Trajectory to "Net Zero" that "The council will enable the delivery of infrastructure, jobs, accessible local services and housing for future generations while protecting, conserving and enhancing the historic and natural environment."
 Naturally, we support this intent.

However, there is no acknowledgement of the role current patterns of transport use contribute to carbon emissions, nor that substantial mode shift is necessary to address sustainably an acute lack of capacity on the local network and the SRN, especially around Chichester. This is especially concerning as the basic conceptual link is not made between the fact that the greatest such problems lie on the A27 corridor and around Chichester, while these are also at the same time present many of the most sustainable locations for development, and where the opportunities to secure much greater use of sustainable modes also exists.

Strategic Objective 7 "Strategic Infrastructure" includes the following statement:

"To work with infrastructure providers to ensure the timely delivery of key infrastructure to support delivery of new development. New development will be supported by sufficient provision of infrastructure to enable the sustainable delivery of the development strategy for the plan area. Key infrastructure to support the Local Plan will include improvements to transport, ...

A sustainable and integrated transport system will be achieved through improvements to walking and cycling networks and links to accessible public transport. Highway improvements will be delivered to mitigate congestion, including measures to mitigate potential impacts on the A27 through a monitor and manage process."

The latest transport evidence in the Chichester Transport Study makes no pretence to define much less to deliver a "sustainable or integrated" transport system. It is wholly devoted to sustaining current levels of car use across the District, to and through Chichester area.

It is no more than the lightest of touches to the approach taken to supporting the adopted Local Plan, an approach that is already almost 10 years beyond the date of its gestation but has yet to deliver any significant capacity improvement schemes, much less any measures that sustain even current levels of public transport journey times and reliability in the face of increasing congestion – much less any betterment.

Of the six key junctions on the A27 around Chichester, recognised to require significant mitigation given they are saturated for extended periods, five accommodate regular bus services - indeed frequent ones at least every 20 minutes in several cases. The sixth at Oving Road, relates directly to a key corridor where bus services are needed to support strategic growth currently being delivered at Shopwhyke, as well as substantial further growth West of Tangmere (proposed allocation A14) and "East of Chichester" (A8), south of Shopwhyke Road.

As stated at p12 of the Study Summary "The modelling shows that all the junctions on the A27 Chichester bypass are well over capacity, even before adding in the Local Plan development and with the exception of Portfield Roundabout are actually shown to be over capacity in the base model year (2014) in one or both peaks". This much has indeed been evident for years from delay and periodic even more severe disruption arising to Stagecoach services from the lack of network resilience.

The reassignment of through and local traffic through Chichester to avoid the A27 bypass is an especially serious issue for bus services that penetrate the city. This is leading to consequential saturation of a range of junctions used by buses. Rising delay and unpredictable running times are at the root of our decision to sever the long-established Portsmouth to Littlehampton service in 2023, which will in future no longer run across Chichester, but terminate to provide additional dwell time to mitigate the impacts of congestion.

While this congestion affects all road users including businesses and freight traffic, the effect on scheduled bus services is greatly higher, as such services cannot reassign route to 'beat the queue'. Traffic congestion often encourages greater

car use for this reason, in tandem that people are happier to sit for extended periods in their own vehicle on a seamless door-to-door journey than wait at the roadside for a delayed bus making slower progress in lengthy queues.

As the Study admits at para. 1.3.2 "Although, there have been works at the Portfield Roundabout in this timeline, no other mitigation schemes have been completed along the A27 corridor, as such the mitigation schemes defined in this report will also be required to consider the development from this plan period."

In other words, in the 8 years since the current Local Plan was adopted in 2015, there has been minimal progress in delivering the traffic mitigations. There is no clarity at all when any such mitigations will be brought forward. It is hardly surprising then, that traffic conditions have deteriorated. The "predict and provide" transport strategy supporting the current plan has failed.

Despite this, the Draft Local Plan Review proposed to "double down" on exactly this strategy. It represents, like the rest of the evidence base, a "rolling forward" of the current car-based strategy by 9 years, with the lightest of touches to attempt to accommodate car trip demands from a relatively modest additional development quantum.

Nevertheless, the Study requires a global 5% reduction in trip demands arising from unspecified "credible" (paragraph 4.1.2) sustainable transport and travel planning measures. It is unclear why use of non-car modes will see disproportionate growth when no measures are in place to make them more attractive. This 5% increase in use translates to a doubling in the modal share of bus services. There is no evidence nationally, anywhere, that simple ignorance of alternatives to the car is the main barrier to uptake.

The outputs of the 2023 Chichester Area Traffic (SATURN) model are set out at Table 5.1 (am peak) and 5.2 (pm peak) without mitigation. These betray just how seriously compromised the whole network around Chichester is, and will be in future, even with implementation of a mitigation package to increase traffic capacity that is understood to cost between £92m and £164m – and which the Study and the draft plan acknowledge cannot be delivered through developer funding sources alone. Unspecified external funding presumably from HM Treasury through DfT is required.

Even if this provided and the schemes are delivered, Tables 8.1 and 8.2 indicate these will provide minimal relief. The final columns suggest key junctions, including Portfield, Fishbourne Road and Cathedral Way East will remain at well over 100% ratio of flow to capacity (90% is considered the point at which saturation is approached, with the onset of increasing delay above that figure). RFCs in tables 8.1 and 8.2 are some of the highest we have ever seen in a local transport evidence base for a post-mitigation scenario. While the serious potential risk of reassignment across Chichester City is greatly reduced, which is important and welcome given its impact on bus services, Tables 8.1 and 8.2 show the extent of post-mitigation saturation is also egregious, covering a very large number of key links and junctions.

On every measure and criterion, then, including cost deliverability and effectiveness, the revised Transport Strategy falls well short of evidence to suggest the transport impacts of the plan can be properly addressed by this means.

Despite the repeated statements about sustainable modes throughout the draft plan and Chichester Transport Study, only 2 paragraphs at Section 6.2 within the Study are devoted to public transport:

"6.2.7 The funds generated from the parking management schemes, local/nation funding schemes and developer contributions could also be utilised to fund potential public transport enhancements within the city centre including an expansion of the bus priority lane system within Chichester City Centre. This could reduce reliance on the car in the longer term towards sustainable public transport. A park and ride scheme could be incorporated within a bus priority lane network in the future depending on the uptake and successfulness of early bus priority trials.

6.2.8 Chichester City centre has a constrained existing public highway network. Therefore, any proposed dedicated public transport or light transit corridors that could be implemented would be at the expense of existing highway. This could be managed through a time-based system where certain routes are restricted to public transport only during specific times. E.g., peak hours."

There is some very high-level consideration of Park and Ride following this section. None can be considered a serious practical evaluation of consolidating car-borne trips onto bus services, including existing ones, for example local mobility hubs, more frequent bus corridors, delivery of specific bus priorities.

None of the discussion of alternatives to "predicting and providing" for unconstrained traffic growth is rooted in a deliverable evidence base, or proper evaluation of options and specific projects.

To take just one aspect of the few specifics that can be picked out, a workplace parking levy is hypothesised. This would apply only to "offices", in Chichester city centre (para 6.2.3), without consideration given as to how this could be practically achieved or even that a meaningful amount of office based employment would qualify. Much less is any consideration given to how far focusing a strategy only on office-based workers would actually deliver a particularly significant effect, apart from to create a strong incentive to relocate offices out of the city centre to places out of reach by public transport.

Looking at the Chichester Transport Study 2023 and the draft plan together, there is insufficient evidence that the traffic

capacity increase proposed in the 2023 Transport Study is any more affordable or technically deliverable, or likely to be sufficiently effective, than those in the past strategy. The evidence more strongly points to the fact that no highway improvements are identifiable or economically deliverable to meet even short term increases in demand for car-borne mobility on most of the network around Chichester.

There are no published strategies or schemes clearly supporting the contention that the objective of improving sustainable modes is technically achievable or deliverable either. The plan makes generalised assertions that such strategies will be devised and implemented only after serious problems emerge from a shortfall in the car-borne transport strategy.

The reference to “monitor and manage” is undefined and unsubstantiated. There are no outcomes stated, no mechanisms specified and no timescales for action.

Our experience today is that network conditions have reached unacceptable and prejudicial levels of severe unpredictable delay. The saturation of the network is already evident well outside the traditional peaks on key sections of highway and at key junctions. External shocks such as the effects of severe weather are becoming more common, leading to delays so extreme as to justify the description of “gridlock”. The plan does not identify a strategy to effectively address this, in particular by consolidating passenger car trips onto more efficient public transport vehicles. This is unacceptable to Stagecoach.

2.4. Local Plan Vision

Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the broad approach in Plan Vision and in particular that by 2039, the Plan will support and enable greater use of sustainable modes. However, there is no link made between reducing the use of private cars, and the need for a step change in the use of sustainable modes. Without a published transport evidence base it is impossible to establish a suitable sustainable transport strategy to support both carbon reduction and alleviation of the problems arising from acute congestion. Even on a very crude basis, to achieve a meaning mode shift on key approaches to the A27 Chichester Bypass will require more than 20% of existing peak car-borne journeys to transfer to other modes. A 10 percentage point transfer to bus (about half this shift) would imply more than doubling peak hour bus passenger boardings.

The Vision is nothing more than an aspiration, that needs to more definitively aim at key outcomes, for the plan to be effective. The Vision should thus be altered to read:

“Get about easily, safely and conveniently with less reliance on private cars –making the greatest possible use of the rail and enhanced bus network, and with more opportunities for active travel including walking and cycling; to materially reduce dependence on private car use.”

Underpinning the Plan’s spatial strategy, the Vision section goes into more specific detail about key localities in the Plan area.

Regarding Chichester, Paragraph 2.39 states: “The emphasis will be upon consolidating and enhancing the role of Chichester city as the plan area’s main centre, whilst also developing the role of key settlements to its east and west. The focus will be upon creating communities with good access to a range of employment opportunities and affordable housing for young people and families to balance the ageing population.”

This is clearly the appropriate focus for meeting the District’s development needs in a sustainable manner. The city and key settlements to the east and west, are those places already able to make use of relevant public transport services, both rail and bus. Especially within and near the City, walking and cycling can credibly present highly relevant choices. This emphasis clear can be expected to address the requirements of sustainable development set out in NPPF and their local application set out in the Plans Strategic Objectives.

However, this needs a robust transport strategy, to avoid a further concentration of development and its traffic impacts occurring on or near some of the most chronically congested parts of the highway network. To date, the absence of intervention has strangled the bus network through further marked deterioration in traffic conditions. This by consequence increases the risk of bus delay or cancellation, lengthens journey time and reduces customer confidence in bus as an attractive alternative mode of travel.

In April 2023, Stagecoach is making significant timetables changes to improve operational resilience in and around Chichester. The biggest such change is the severance of the Portsmouth to Littlehampton section of service 700, at Chichester, with buses operating independently to the east and to the west and ending cross-city links. This is planned to reduce the probability of delay but at the cost of additional vehicle resource (circa £200,000 per annum) which could be better spent providing new or enhanced services. We anticipate a small loss of custom as a direct consequence of the change, but have little choice other than to take negative action so as to fulfil our statutory punctuality obligations.

If the Strategic Objectives of the Plan and its Vision are to be achieved, in the way required by NPPF paragraphs 104-105,

a properly-evidenced transport mitigation strategy needs to create the conditions where bus journeys are more reliable than car journeys and thus mobility demand switches as far as can be realistically achieved away from car use, to bus use and other more sustainable modes.

Beyond Chichester, the Plan Vision focuses on key localities beyond to the east and west.

To the west of Chichester a focus on growth at Southbourne is justified at paragraph 2.43: "...the aim is to take advantage of the village's good transport links and existing facilities to deliver significant new residential-led development within the broad location for development which will further enhance local facilities and offer opportunities to reinforce and supplement existing public transport, including bus routes."

We agree this is a very significant opportunity. However, if the requirements of NPPF paragraphs 104-105 are to be met, this demands that effective bus priority is delivered on the A259 corridor, especially eastbound at Fishbourne and westbound approaching Emsworth. Without such measures, the growth committed and planned will serve only to further undermine bus journey time and decrease punctuality on the existing 700 service, entirely contrary to the aims of the Vision.

The emphasis on the A259 corridor served by Stagecoach 700 west of Chichester is reinforced at paragraph 2.45 stating that "Between Chichester and Southbourne, the Plan provides for more moderate levels of growth within the parishes of Fishbourne, Bosham and Chidham & Hambrook, ... with opportunities to support and expand existing facilities and for increased use of public transport options". We strongly support the principle, but the Plan must follow through with specific public transport priority measures that facilitate rather than prejudice such an outcome.

East of Chichester the focus is at Tangmere, where the existing allocation for about 1000 dwellings is being uplifted by 300. Paragraph 2.44 justifies this among other things recognising the scope for "...improved and additional bus services and cycleways will provide better connections to Chichester city and east to Barnham and the 'Five Villages' area in Arun District." We unequivocally endorse this conclusion. Realising a "game-changing" level of bus service quality, reliability and frequency east of the city, also serving committed and planned development north and south of Oving Road at Shopwhyke, is equally essential, given that all SRN links and junctions are approaching equal saturation.

The National Bus Strategy has given new focus on partnership with West Sussex County Council to discuss and deliver a significant new bus service between Chichester, Shopwhyke, Tangmere, Eastergate and Barnham, supporting committed development and acting as an initial phase of what ought to be a more ambitious longer-term strategy to support growth beyond 2025 in both Chichester and Arun Districts. For these improved bus services to be both deliverable and effective, robust bus prioritisation is unavoidable. No such measures are proposed in the Plan or its evidence base and we therefore suggest inclusion of plans to facilitate safe and efficient bus operation between Tangmere and Nyton/Eastergate, ideally avoiding the need to join A27 through-traffic entirely.

We welcome the clear recognition that these localities identified for growth, benefit from existing relevant public transport services. The Vision also sets an expectation that bus services in particular should be "enhanced" and "reinforced".

We entirely agree that these opportunities exist, across the broad strategy and strategic allocation proposed by the draft Local Plan. Securing them will be crucial to achieving national and local policy objectives, including the Strategic Objectives. However, to our continuing very great dismay, the Plan goes no further to defining how this will be achieved. As such the Vision is not demonstrable achievable or deliverable.

Accordingly the Plan cannot be considered effective, in the sense of NPPF.

Remedying this, demands specific measures to protect bus services from congestion in the following corridors:

- A259 East of Emsworth
- A259 Fishbourne
- A 259 Via Ravenna/Cathedral Way
- A286 Stockbridge Road north and south of A27
- B2145 Whyke Road/Hunston Road
- A259 Bognor Road, east and west of A27 and extending to the District Boundary
- B2144 Oving Road/Shopwhyke Road east and west of the A27
- A 285 Westhamnett Road/Portfield Way/Stane Street, potentially involving a mode filter at the west end of Stane Street

These must be defined to a sufficient level of detail to assess their effectiveness and deliverability, including costs.

This would then allow West Sussex County Council and Local Transport and Highways Authority, ourselves as the principal bus operator, and where appropriate other organisations that would be directly tasked with delivering the mitigation package, to agree service levels and standards necessary to deliver specified outcomes, including journey times, frequencies, capacity and hours of operation on the network, and also in respect of the strategic allocations and Strategic Locations for Growth.

The agreed mitigations strategy should be set out in an up-to-date Infrastructure Delivery Plan backed by clear funding commitments, including a funding strategy to justify necessary developer contributions.

Where necessary to support evidence of effectiveness and deliverability, clear statements of support, which might include Statements of Common Ground between the LPA, LTA, National Highways and Stagecoach, could be provided.

3. Spatial Strategy

Stagecoach Supports

Stagecoach well recognises the constraints outlined in the explanatory narrative at the start of Chapter 3.

In particular we strongly endorse that strategy in that it reflects that the best opportunities to meet housing and employment development requirements sustainably clearly exist in and close to Chichester and on the key east-west movement corridor where – subject to effective measures being delivered to make these modes more attractive, efficient and relevant – sustainable modes can credibly provide for a much higher proportion of movement demands, mitigating most effectively the potential traffic impacts of development.

We agree that the Manhood Peninsula suffers serious environmental constraints, but, added to these, public transport and other sustainable modes cannot provide such attractive alternatives, and significant further development risks merely reinforcing already high levels of car use, aggravated by the carbon impacts of the distances involved – something the plan does very little to evaluate, and makes no reference to.

We endorse the conclusion in paragraph 3.24 that significant development in the part of the District north of the National Park is inappropriate. The rationale is principally on landscape and visual character. This exposes a fundamentally biased approach to plan making that has consistently underplays transport accessibility and carbon issues. In fact, the lack of local services and the extended distances that need to be travelled to fully participate in society in this area, with no realistic prospect of public transport offering relevant choices, ought to rule such a strategy out of play on a far less aesthetic and interpretational basis.

3.1. Policy S1 Spatial Development Strategy

Stagecoach Supports

The Spatial Strategy flows clearly and logically from the Spatial Portrait, and the opportunities and constraints identifiable across the Plan area. It represents a logical and justified continuation of the existing Local Plan strategy. In particular the spatial strategy maximises the potential for sustainable modes to contribute to meeting a much higher proportion of all the District's mobility and accessibility needs.

3.2. Policy S2 Settlement Hierarchy

Stagecoach Supports

The settlement hierarchy clearly reflects the service endowment and potential self-containment of the settlements in the District. In particular, the second tier of settlement hubs includes secondary schools, which are major peak trip generating uses. Service villages, in the main, also benefit from bus services running at least hourly, which can be expected to provide for a degree of mobility for the higher number of trip purposes that cannot be satisfied by walking or cycling within the immediate locality. Thus, a level of development to meet local needs in this tier is relatively sustainable.

There is a quite broad range of settlements in this category. We have concerns that, north of the National Park, the Service Villages have no realistic public transport choice. These include Plaistow/Ifold, Kirdford, Loxwood, and Wisborough Green. Such as exists is typically a 1/bus per day off-peak shoppers service offering up to 90 minutes in Horsham or Guildford and as such any development here even to meet local needs requires each adult to own a car. This contrasts strongly with Service Villages to the south of the National Park, which are greatly more sustainable.

4. Climate Change and the Natural Environment

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This section of the plan is extensive and wide ranging, as should be expected.

However, remarkably, there is no acknowledgement whatever of the role of transport in mitigating climate change or its effects, not of the importance of sustainable movement and access being facilitated across the plan area in addressing anthropogenic impacts on the natural world at a more local level.

This exposes very clearly a troubling level of indifference to transport matters in the production of the Plan, which, while nationally quite common, is neither appropriate nor acceptable. The mitigation of transport impacts is not merely a matter speaking to the social and economic aspects of sustainable development. It is crucial to address the causes and effects of climate change that arise from transport, and personal mobility.

This is now well understood and at the centre of national policy, including the National Decarbonisation Strategy for Transport (July 2021) which at Section 5 commits the government to aligning land use planning and transport strategy

much more tightly and effectively to mitigate the carbon emissions associated with the current dependence on cars, and the mode mix; but also to reduce travel distances, both increasing the potential relevance and effectiveness of all sustainable modes, and reducing average journey lengths for residual motorised journeys of all kinds.

National statistics show that well over a third of all domestic carbon emissions arise from land-based transport and of these, the vast majority arise from trips of over 10km – outside the range of large scale use of cycling. In fact, the potential of the plan to materially support carbon emissions reduction from within the plan area lies more in the realm of transport than any other policy theme – including emissions mitigation from buildings, which is in any event an aspatial matter and covered by nationally-binding building regulations. By 2025 something like 40% of all the emissions within the plan-area will be transport related.

There is no evidence supplied to support the plan that addresses the transport carbon impacts of the spatial development strategy in a clear manner.

There is no evidence supplied that sets out the effects of potential worsening of congestion on air quality within the plan area, arising entirely from the excess of passenger car movement demands over available and credibly deliverable highway capacity. This is despite the evidence set out and acknowledged in the explanatory memorandum at paragraph 4.130:

“4.130. The council’s Air Quality Action Plan and the West Sussex Transport Plan 2022-2036 both refer to the air quality issues faced by Chichester. There is currently one Air Quality Management Area (AQMA) in the plan area, located at St Pancras, Chichester. AQMAs are designated where air quality exceeds, or is likely to exceed, national air quality standards and objectives. Development within or impacting these areas, or that likely to cause the declaration of any further AQMAs, will be subject to an air quality assessment by the applicant.”

This is a retroactive approach – it is not “planning”, based on evidence.

We are well aware that air quality issues in and of themselves can render allocated sites to be undeliverable: a good example is in the Vale of White Horse, Oxfordshire, where strategic allocations on the A338 and A420 corridors have been held up for years by air quality issues at Marcham and Frilford, in large measure because agreed transport interventions were considered inadequate or undeliverable a very short time after the Plan was examined and adopted.

There is no evidence that shows how the development strategy can effectively mitigate these impacts as well as the further potential impacts that arise from the development strategy. This is exasperating, as there is clear evidence that could be drawn upon to show that that very substantial opportunities exist to:

- Speed buses up and make them more reliable by the delivery of bus priority on most of the key main corridors. Most of these even today operate relatively frequently
- Improve service frequencies and extend hours of operation.
- Secure significant background mode shift to bus as a result, damping pressure on key links and junctions, by consolidating demands on direct more reliable and more frequent bus services.

The spatial development strategy as submitted is in fact, likely to well conform to such additional evidence.

The allocations require substantial additional transport related work and evidence to demonstrate that the opportunities for sustainable transport have been identified and taken up as required by NPPF paragraphs 104-105.

With regards to specific policy, Policy NE22 should be modified to read:

“Development proposals will be permitted where it can be demonstrated that all the following criteria have been addressed:

1. Development is located and designed to minimise traffic generation and congestion through access to by maximising the relevance and attractiveness of sustainable transport modes, including maximising provision of specific demonstrably effective measures to make pedestrian and cycle and public transport routes and networks more direct, more safe, faster and more reliable;...”

5. Housing

5.1. Policy H1 Meeting Housing Needs

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

The presumption of the planning system is that local planning authorities should seek to meet their objectively assessed development requirements in full. These needs are assessed by a defined Standard Methodology set out in Planning Practice Guidance and elsewhere, that has explicit regard to ensuring that the economic and social effects associated with housing are properly provided for, to avoid exacerbating serious problems that arise from inadequate housing supply.

As a significant local service provider and employer, Stagecoach is concerned that existing issues with housing availability and affordable housing supply are not exacerbated. This has a direct bearing on staff recruitment and

retention. It also has an indirect bearing on our cost base.

The existing problems with housing affordability have developed over many decades of undersupply. It should be emphasised that the significant boost to the supply of housing that has been sought by governments over the last 15 years, has only begun to take effect relatively recently in this District. Tackling the problem will require years of consistent attention.

Stagecoach notes that the Council is no longer proposing to meet its identified housing needs in full. Rather than 638/annum the Council is allocating a total that implies an annual delivery rate of 535/annum.

While a number of matters evidently present challenges to the Council in identifying a sustainable development strategy. Paragraph 5.2 indicates that "constraints, particularly the capacity of the A27 has led to the council planning for a housing requirement below the need derived from the standard method..." The blame for being unable to meet housing requirements is thus laid squarely at the door of transport infrastructure and systems.

This conclusion in no way follows from the evidence in the Chichester Transport Study. This, rather, makes the statement that when a higher annualised quantum of 700 dwellings per annum was tested, in the majority of cases the traffic capacity improvement package would perform little differently. To quote the Study:

"5.6.3 The network performance outputs analysed comprising V/C%, Delays (seconds) and Queues (PCU's) suggest that generally the proposed SRN mitigation identified for the Core Scenario, can accommodate in the most part, additional increase in development to 700dpa."

Whether the rest of the local road network is similarly protected is moot.

Irrespective of these results, even if the contention made in the draft plan were true, unlike many other constraints, this is amenable to a suitable effective strategy to address the constraints identified being collaboratively conceived. This is what NPPF expects, as set out in paragraphs 104-106.

Where the A27 is concerned, as part of the SRN, National Highways is now working to a substantially revised approach than that in force at the time to current Local Plan was prepared, or LSS2, or reflected in the Chichester Transport Study. This is set out in DfT WMS 01/22. This document is the policy of the Secretary of State for Transport in relation to the SRN which should be read in conjunction with the National Planning Policy Framework (NPPF). It replaces the policies in the Department for Transport Circular 02/2013 of the same title.

It makes plain that to accommodate additional demands arising from development, National Highways (NHC) expects to meet the requirements of its statutory license in a substantially different manner. With respect to development NHC LTN 01/22 continues to address the tensions between national policy for the environment and carbon mitigation, the ongoing need to substantially boost the supply of housing as well as maintain national economic competitiveness and protect the safety of the public. However, in future, the approach will be to seek first to maximise the impact of demand management measures (reducing the need to travel), and then to accommodate residual additional demands first though maximising the use of sustainable modes, rather than accommodating assumptions about current levels of car dependency and use.

LTN 01/22 much more closely and explicitly aligns with the language of NPPF Chapter 9 paragraphs 104-106. Paragraph 12 states: "New development should be facilitating a reduction in the need to travel by private car and focused on locations that are or can be made sustainable.... Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas." (our emphasis).

It continues at paragraph 13: "where developments are located, how they are designed and how well delivery and public transport services are integrated has a huge impact on people's mode of travel for short journeys. The company will therefore expect strategic policy-making authorities and community groups responsible for preparing local and neighbourhood plans to only promote development at locations that are or can be made sustainable [footnote 8] and where opportunities to maximise walking, wheeling, cycling, public transport and shared travel have been identified." (again, our emphasis)

Stagecoach readily confirms that the draft Plan development strategy conforms well to the first limb of this expectation, in terms of the location of development.

Stagecoach considers that the plan and its evidence base conforms poorly to the second in that the specific opportunities to maximise walking, cycling wheeling and public transport are not clearly identified, and defined, and proven to be effective and deliverable.

The current mitigation strategy for the A27 Chichester area, supporting the adopted Local Plan and for which proportionate developer contributions have and continue to be sought, reflects now-superseded DfT Circular 02/2013. As a direct result, it failed completely to identify any significant effective bus priority measures, despite the fact that frequent services already exist on the key corridor concerned, and that one bus journey can remove, fully seated between 72 and

80 single occupancy car journeys from congested links and across key junctions on the A27. Rather, it sought to implement targeted measures to increase the throughflow of general traffic.

We recognise the realisation that this approach, which was already reliant on some tenuous logic, is simply not technically viable, especially where further development needs are anticipated.

National Highways will now pursue an approach with the planning system that “includes moving away from transport planning based on predicting future demand to provide capacity (‘predict and provide’) to planning that sets an outcome communities want to achieve and provides the transport solutions to deliver those outcomes (vision-led approaches including ‘vision and validate,’ ‘decide and provide’ or ‘monitor and manage’). The company will support local authorities in achieving this aim through its engagement with their plan-making and decision-taking stages.” (paragraph 15).

Paragraph 23 is at the fulcrum of assessing and defining transport mitigations to accommodate growth on and near the SRN “Capacity enhancements such as modifications to existing junctions or road widening to facilitate development should be determined on a case-by-case basis. The general principle should be accepted where proposals would include measures to improve community connectivity and public transport accessibility, and this will be weighed against any negative safety, traffic flow, environmental and deliverability considerations, impacts on the permeability and attractiveness of local walking, wheeling and cycling routes, and alternative options to manage down the traffic impact of planned development or improve the local road network as a first preference.” (our emphasis).

However, no material work has been done that seeks to identify if a bold robustly conceived and suitable judiciously-prepared strategy that seeks to consolidate flows on already densely travelled corridor onto improved bus services, driving mode shift through insulating these services preferentially from already serious queuing. This would be likely to have very substantial impacts on all the key junctions on the A27, and potentially, on the A27 itself. The need for an integrated approach between Shoreham and Emsworth within West Sussex paying particular regard to development requirements in both Arun and Chichester Districts naturally lies at the heart of this, and we would expect to be picked up by the LSS3 Review among other things.

However, the locus of the problems and its causes and effects are obviously well enough known to start work on defining solutions within the plan area today. We would expect that this work will be essential if National Highways are to support the Plan, especially now given the terms of Circular 01/2022.

Such work could and should start from a “policy off” position: in other words that the Plan should fully accommodate its needs unless it can be proved that a mitigation strategy for the A27 that is compliant with DfT WMS 01/2022 cannot credibly accommodate resulting capacity demands without unacceptable impacts on the safety and efficient operation of the SRN.

This evidence does not exist. In fact the Chichester Transport Strategy 2023, on which the Council solely relies as its transport evidence base, indicates the opposite at para 5.6.3. This is the case before meaningful measures to secure damping of traffic demands through mode reassignment are even considered.

The exception to this is Portfield and Oving Road, which are among the most problematic areas after mitigation even at the Council’s chosen 535 dwelling/annum scenario (para 5.6.4.-5). The costly capacity mitigation simply cannot deliver enough benefit. It is admitted that WSCC has indicated that it would prefer a solution that places greater reliance on sustainable modes damping car-borne demand. This is entirely the strategy required by NHC to follow LTN 01/22, of course. Despite the fact that “predict and provide has “run out of road” no attempt has been made to examine what such a solution set credibly could look like. This is unsatisfactory and deeply troubling.

At paragraph 5.4 the draft plan points back again at the West Sussex and Greater Brighton Strategic Planning Board and the future work that has been commissioned, but has barely begun, to update the Local Strategic Statement. This work is to inform the preparation of plans that have horizons beyond the end date of the current LSS in 2030 and properly to meet the Duty to Cooperate. As we said in our response to section 1 of the Plan we fully endorse the conclusion that this is the right mechanism to look at these issues. However, the mechanism has not been effectively applied to the production of this plan. Therefore, the specific evidence that capacity on the A27 in and of itself supports accommodating a lower housing requirement does not exist.

The Plan thus does not conform to NPPF, is not adequately justified and is not effective.

The Plan does not properly meet the statutory Duty to Cooperate.

We will return to this matter in specific representations to Section 7 of the draft plan.

5.2. Policy H2 Strategic Locations/Allocations 2021-2039

Stagecoach Supports

Policy H1 makes plain that the plan, as far as it identifies locations for development has done so in locations that conform with its spatial strategy. All of the strategic allocations to a greater or lesser extent offer clear opportunities to make use of sustainable modes, by virtue of their location. That is not to say that the opportunities to take up these

opportunities, and maximise the role of sustainable modes, has been identified, defined and translated properly into the rest of the plan policy suite or Infrastructure Delivery Plan.

As our remaining representations make clear, we support the locations thus far identified as being those that offer the best opportunities to reduce the need to travel, reduce travel distances, and create high quality attractive sustainable travel choices, for both existing residents as well as new ones.

However, the transport impacts of the allocation will individually and cumulatively likely to lead to increasingly severe impacts on the transport network, and on bus services.

Perversely, because these opportunities are not properly identified and secured through the plan and its supporting transport strategy, the opportunities presented by the allocations to secure a substantially more sustainable and lower carbon pattern of movement will not only risk being squandered but may aggravate the wider problems.

5.3. Policy H3 Non-strategic Parish Housing Requirements

Stagecoach Supports

The approach is consistent with the plan's spatial strategy. It generally avoids a dispersal of development to locations likely to be highly car dependent. There is a clear focus on meeting housing needs in the far north-east of the District at the largest and most sustainable settlements, such as Loxwood, Kirdford and Wisborough Green. However, it must be pointed out that public transport availability in this area, provided by the County Council through services it procures, is minimal. These settlements in practice require each adult and child of secondary school age to have access to motorised transport to fully participate in society. This might justify significant measures to secure a boost in the frequency of bus services between Guildford and Billingshurst, passing through these settlements.

Otherwise, existing commitments in the plan area already make provision to meet for local needs. To the degree that there is an unmet local requirement for affordable housing of a small scale – for example to support the rural economy – this could be met through neighbourhood plans or through Rural Exception Sites.

6. Place-making, Health and Wellbeing

6.1. Policy P1 Design principles

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

NPPF requires that proposals should consider transport issues from the earliest possible stage. Designing to properly facilitate safe and efficient access, focusing first on sustainable modes, should be at the heart of development design. Too often it is still an afterthought, notwithstanding this.

Policy P1 must include an additional statement to be compliant and effective with NPPF paragraph 104-105 and 112 a): "Development will be designed to make access and movement using walking, cycling and public transport the natural first choice, and demonstrate through the Design and Access Statement how such modes are afforded the most direct, safe, reliable and efficient routes within to and from the proposals, especially when compared with car use."

6.2. Policy P4 Layout and Access

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

A number of proposals in the plan involve large-scale development. It is essential that where appropriate buses can access and circulate efficiently through development at a suitably early stage. There is no acknowledgement of this anywhere in the policy, contrary to NPPF paragraph 112.

Large-scale development which buses cannot access in an efficient or timely manner, or at all, strongly contributes to high levels of car-dependency. Evidence for this is referred to among other places, in DfT Circular 01/2022. To be compliant with NPPF and properly pursue its strategic Objectives, Policy P4 needs to be modified to address this point: "1. Provide safe, direct and attractive conditions for inclusive access, egress and active travel between all locations and providing as good direct high quality links to integrated public transport, and where appropriate efficient access and circulation to bus services, unimpeded by excessive parking, at a suitably early point in the development phasing;

7. Transport and Accessibility

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

The issues related to transport are fundamental to the soundness of the Plan. In particular, the constraints presented by the capacity on the A27 around Chichester and its key junctions, are the paramount reasons why the Council does not consider it can meet its objectively-assessed development needs in full. Thus, the transport issues and potential solutions available and what these mean for the ability of development needs to be accommodated, are matters that go to the heart of the soundness of the Plan.

Paragraph 8.3 sets out the approach taken to date succinctly:

“Increasing the capacity of the road network is key to supporting growth in the Local Plan. However, there is also a need to reduce demand for road transport to achieve net zero in greenhouse gas emissions by 2050 as highlighted in the council’s Climate Emergency Action Plan and Strategic Objective 1. In aiming to achieve the ambitions of the action plan, all development is expected to demonstrate how it will support four key objectives to create an integrated transport network which will alleviate pressure on the road network, improve highway safety, encourage sustainable travel behaviours and help reduce transport related impact on air quality, by:

1. Avoiding or reducing the need to travel by car;
2. Enabling access to sustainable means of travel, including public transport, walking and cycling;
3. Managing travel demand; and
4. Mitigating the impacts of travel by car.”

However, this approach is unambitious and “lightweight” as it assumes, as does the existing Chichester Transport Strategy on which the current adopted plan relies, that the focus of investment should be, wholly, in highways capacity improvement.

Sustainable modes explicitly are expected to play a greater role to “alleviate pressure” on the local road network, as part of this strategy. To emphasise: to avoid exacerbating congestion, the strategy will have to both remove a significant proportion of existing demands from the network on multiple key approaches to Chichester; and then ensure that travel demands from committed and further new development allocated in the plan does not simply replace these journeys, or, worse, create even greater demands.

This will demand very significant behaviour change. Only by making sustainable modes substantially more attractive, both absolutely, and relative to the same journey made by car, can this be expected to occur. However, the explanatory memorandum as well as the wider policy suite and IDP, well expresses a fundamental unwillingness to taking specific, defined measures to achieve this reduction in car use and material promotion of sustainable modes. It makes plain that sustainable modes, including bus services, will offer a lesser role to which “access will be provided”.

Such a vague and weakly defined mechanism will have no effect, at all, on current behaviour and car dependency if the relevance of those choices as a credible alternative to car use, is not substantially boosted. This includes a 5% reduction in trip demand assumed by the Traffic Model at the heart of the Chichester Transport Study 2023.

For this reason. the transport strategy behind the current adopted plan is demonstrably ineffective, as the updated model makes plain. It has not yet been delivered and is yet unclear when or (in the absence of committed funding) even if it can be. It is ineffective to “roll forward” this strategy to support a higher level of planned growth.

We note that a scheme for addressing congestion on the A27 at Chichester has been included in Roads Investment Period 3 (2025-2030) – well within the horizon of this Plan. However, recent history provides compelling evidence that off-line improvement to the north is not politically supported and arguably even technically or economically deliverable. It is not funded, nor at this stage can it be hypothesised if an economically deliverable scheme is achievable sufficient to warrant the necessary investment.

An on-line improvement of the A27, including junction improvements, is likely to favour longer distance east-west though movements, which are of greater significance to the national economy, at the expense of local movements crossing the SRN- a conundrum that largely sums up the dilemma that is faced by NHC and the County as Highways and Transport Authority. It is one that is played out in many places, but rarely is the tension so stark as at Chichester.

Every local route crossing the A27 at grade around Chichester accommodates a regular bus service - or shortly will do (Oving Road area is expected to follow in 2023, though bus services are likely to not use the modified crossroads but to use the left-in-left-out facilities provided as part of the Shopwhyke Lakes development). The impact of these issues on the entire bus operation are serious and increasingly severe.

By the same token, boosting the relevance and reliability of each of these services substantially consolidating as much demand as possible onto a much smaller number of vehicles, is clearly a strategy that ought to support the effective capacity of each of these junctions being greatly augmented, at the same time as reducing equally substantially, the energy- and carbon intensity of mobility in the plan area. Addressing the A27 should not be considered some kind of “zero-sum” game.

Furthermore, the approach of National Highways in its dealings with development and the planning system now reflect a substantial change in Government Policy set out in DfT Circular 01/2022, which we separately cover in these

representations, that entirely aligns with an approach that seeks to appropriately invest in more active and rational management of scarce highways capacity, on both the SRN and local roads.

For environmental, economic and social reasons – including public health, the issues presented by the A27 and its interface with local roads around Chichester stands out, nationally, as an example of where the approach taken to accommodating and mitigating development impacts needs to make a clear break with previous “predict and provide” approaches to meet forecast unconstrained car use as LTN 02/2022 makes clear as a principle. Policy in the West Sussex LTP to 2036 itself makes plain that “shared mobility” – including bus services – must play a much greater role in this area.

The existing Chichester Area Transport Strategy is focused on justifying capital contributions from committed development to fund highways capacity improvement – with nothing included to make bus services more attractive, or importantly more reliable. Indeed this “cars first” approach is so costly, that there is already accepted by WSCC to be insufficient land value remaining to be captured to put into substantial improvements for public transport. That much is very evident, and transparent, from paragraph 8.12 and 8.14, where south of Chichester “This (one) package of works (of several improvements needed) would be between £57.23 and £82.79 million to deliver in full and would not be capable of being funded by development contributions alone.” This assumes the scheme is otherwise deliverable, which on the evidence in the public domain for some time, has been considered challengeable.

The draft Local Plan and a modestly updated infrastructure package that flows from the 2023 Chichester Transport Study, pursues exactly the same approach.

This strategy is also even more ineffective having regard to the roll forward of the Plan to 2039. It cannot deliver the key Strategic Objectives of the Plan; and in particular this is explicitly recognised by the Council in the failure of the draft Plan to accommodate the OAN in full.

It is also obsolete, as it does not align, from first principles, with national policy (including the National Decarbonisation Strategy for Transport) and DfT Circular 01/22; nor the Council’s own declared Climate Emergency.

As a result, draft Policies T1 and T2 are both unsound, as we will separately explain.

Owing to the lack of evidence about the implications of this for adjoining authorities – especially Adur District – in the absence of the review of the Local Strategic Statement – this has implications for fulfilling the Statutory Duty to Co-operate.

The absence of any meaningfully comprehensive refresh of the transport evidence base means that there are no meaningful schemes of any kind, defined in the plan or its IDP, to indicate either what level of growth can be accommodated, by delivering a change in travel behaviour. This would be aimed to secure a sufficient effective increase in junction throughput (measured in terms of person trips as opposed to passenger car unit movements (PCUs)). Such evidence would propose measure to achieve that outcome and assess the efficacy and costs of such improvements, across all modes.

Paragraphs 8.10-8.13 inclusive indicate that the Council “has moved away from ‘predict and provide’” and invites the reader to conclude this has translated into a programme of interventions that can be funded to deliver specific, credibly predictable outcomes. Such a programme should be clear in paragraph 8.11. and the IDP. There is no such clarity and this conclusion would be false.

It would also be evident in the language of the Chichester Transport Study 2023 and its refreshed proposals. Only the most token of lip service is paid to the matter. It is a plainly car-focused, predict and provide methodology to support a “predict and provide” strategy. In fact, it is a brazenly car-focused approach, to the exclusion of all else.

The statements in the Plan regarding any other approach, read properly, offer nothing more than a vague commitment to look post-adoption, and implementation, at unspecified measures, based on problems that may arise in future that will be decided by a committee: the Traffic and Infrastructure Management Group (TIMG). This does not yet exist and is obviously an attempt to posit a mechanism that retroactively will cover for the lack of serious multi-party engagement to address the existing and future issues. Such a group should, in our view, also include the public transport operators, not least if the requirements of NPPF Para 106c) are to be satisfied, and the strategy and measures to be adopted are material to supporting the Local Plan, as of course the purpose of the TIMG has as its core *raison d’être*.

The approach proposed by the draft plan is plainly ineffective and unsound in justifying the draft Plan.

It is more widely unacceptable to Stagecoach. The issues are severe today and well-known, already serving to jeopardise the delivery of buses relied on by existing residents, much less attract new ones.

We also consider that HM Planning Inspectorate are likely to be quite resistant to accepting this aspect of the plan’s transport strategy, nor will it be appropriate for the Council, West Sussex County Council, or National Highways, to define such measures after the submission of the Plan during the Examination process. The Examination in Public of a local plan has no purpose to improve plans, or remedy deficiencies clearly evident prior to submission.

The examination of the West of England Joint Strategic Plan in 2019, and the Uttlesford Local Plan in 2021, among several others, demonstrates especially clearly that the Planning System and the Examination process is not amenable to post-hoc retrofitting of transport evidence and strategies to support a development strategy.

7.1. Transport Evidence Base

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Most of Stagecoach's serious concerns about the soundness of the plan arise from the fact that it has been prepared in advance of any up-to-date transport evidence and suitably robust transport mitigation strategy being advanced to support it. In essence, the Council has rolled forward the existing plan by 9 years, adding some additional sources of housing supply, while still relying implicitly on a transport evidence base that was prepared 10 years ago.

This led to the formulation at that time of what can only be described as an attempt to develop an effective car-based mitigation strategy, creating capacity for general traffic added to accommodate unconstrained additional demands on an already over-taxed highways network – the Chichester Area Transport Strategy. Despite language in support of sustainable modes, no deliverable measures were identified to support either the extension of the bus network to serve allocated sites, and much less to create a vital improvement to the quality and reliability of public transport services. This approach reflected the approach set out in DfT Ministerial Circular 02/2013 "Development and the Strategic Highways Network", applicable since the A27, which is the focus of the most severe difficulties, forms part of the national Strategic Roads Network.

This approach has proven ineffective even before substantial elements of housing land supply in the current plan come forward – in particular West of Chichester and West of Tangmere.

In addition, Circular 02/2013 has now been replaced by a new Ministerial Statement of 23/12/2022, DfT Circular 01/2022.

On both counts the transport evidence base and strategy needs to be properly revisited and established to provide effective mitigation for the plan, including current commitments that are being rolled forward.

The language of the current Ministerial Circular 01/2022 offers a highly condensed synoptic view of the proper approach to addressing transport matters in the planning system notwithstanding that it is directly concerned with the Strategic Roads Network. Videlicet:

"31. The NPPF expects local plans and spatial development strategies to be underpinned by a clear and transparent evidence base which informs the authority's preferred approach to land use and strategic transport options, and the formulation of policies and allocations that will be subject to public consultation. The company will expect this process to explore all options to reduce a reliance on the SRN for local journeys including a reduction in the need to travel and integrating land use considerations with the need to maximise opportunities for walking, wheeling, cycling, public transport and shared travel.

32. The Transport Decarbonisation Plan indicates that carbon emissions from car and van use is the largest component of the United Kingdom's total transport emissions. While action is being taken to decarbonise transport such that all new cars and vans will be fully zero emission at the tailpipe from 2035, the proposed location of growth in current plan periods and whether new developments would be genuinely sustainable remain important factors in demonstrating that a local authority area is on a pathway to net zero by 2050 and therefore compliant with the requirements of the Climate Change Act 2008.

33. Alongside this, the local authority should identify the key issues within their study area regarding transport provision and accessibility, setting out how the plan or strategy can address these key issues in consultation with (National Highways, and other transport stakeholders identified in NPPF paragraph 106b). It is the responsibility of the local authority undertaking its strategic policy-making function to present a robust transport evidence base in support of its plan or strategy. The company can review measures that would help to avoid or significantly reduce the need for additional infrastructure on the SRN where development can be delivered through identified improvements to the local transport network, to include infrastructure that promotes walking, wheeling, cycling, public transport and shared travel. A robust evidence base will be required, including demand forecasting models, which inform analysis of alternatives by accounting for the effects of possible mitigation scenarios that shift demand into less carbon-intensive forms of travel." (our emphasis)

Within the text quoted above, references to National Highways and "the Company" can quite legitimately be extended, given the statements in NPPF paragraph 16, 25, 26 and 106b, to include all the relevant transport infrastructure and service providers in the plan area. Circular 01/2022 also has the weight of secondary legislation as a Written Ministerial Statement and thus should be considered to be highly material.

To date there has been little attempt to explore, to the degree necessary, strategies that conform to Circular 01/2022. It is thus not possible to conclude, as the Council has done, that the issues on the A27 that present a constraint to development, are insuperable.

In line with comments made elsewhere in the response to this pre-submission draft, the Plan thus requires substantial further work to be undertaken with key stakeholders to establish a suitably effective and demonstrably deliverable transport mitigation strategy, to sustainably meet the District's identifiable development needs and where apparent and appropriate, also ensure that wider cross boundary strategic issues are appropriately addressed, in conformity inter alia, with the Duty to Cooperate, NPPF paragraph 16 and 104-111 inclusive, and DfT Circular 01/2022 and to ensure the Plan's own Strategic Objectives can be met.

7.2. Policy T1 Transport infrastructure

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

As described in comments elsewhere, Stagecoach does not see that a suitable proportionate and up-to-date basis exists to properly and appropriately address the transport issues in the plan area.

The 2023 Transport Study does not perform this role adequately but, contrary to the explanatory memorandum, is a scheme intended only to facilitate car-borne movements through some of the key junctions. There is no evidence that an holistic integrated and strategic approach to transport mitigations has been prepared. Certainly Stagecoach has not been involved in any of the discussion about appropriate transport measures in support of the plan, including the Transport Study 2023, contrary to the expectations set out in NPPF at paragraph 16 and 106.

Notwithstanding out fundamental concerns about the transport evidence case and mitigations strategy, Policy T1 reflects a weak and ineffective approach, that seeks to try and define a strategy post-adoption.

Contrary even to the explanatory memorandum for the policy, which seeks to maximise the contribution of sustainable modes, the policy is phased in such a way that it gives basis for previous "predict and provide" solutions to facilitate and support current levels of car dependency – already shown to be undeliverable and unaffordable – will nevertheless be the first rather than the last resort. There is no commitment to seek to maximise the contribution made by sustainable modes to meeting mobility needs. Nor is there any recognition that current chronic congestion and lack of network resilience jeopardises the ongoing attractiveness and long- term sustainability of the current public transport offer.

To be effective and create alignment with national policy, and also provide for an up-to-date transport evidence base and strategy to be adduced, Policy T1 should be modified to read:

"Integrated transport measures will be developed to mitigate the impact of planned development on the highways network, improve highway safety and air quality, promote more sustainable travel patterns and through providing in the first instance, new and improved infrastructure and services that will be credible effective in maximising the encourage increased use of sustainable modes of travel, such as public transport, cycling and walking.

To achieve this, the council will work with National Highways, West Sussex County Council, other transport and service providers (including through the Traffic and Infrastructure Management Group) and developers to provide a better integrated transport network and to improve accessibility to key services and facilities...

All parties, including applicants, are expected to support these objectives by:

1. Ensuring that new development is well located and designed to avoid or minimise the need for travel, encourages maximises the use of sustainable modes of travel as an a credible alternative to the private car and directly provides or contributes towards new or improved transport infrastructure;
2. Working with relevant transport infrastructure and service providers to improve accessibility to key services and facilities with primary emphasis on sustainable modes, and to ensure that new facilities are easily accessible by sustainable modes of travel;
3. Targeting investment to provide local travel options as an that represent a clearly credible alternative to the car use, focusing on the delivery of improved integrated bus and train services, and improved pedestrian and cycling networks, including the public rights of way network, based on the routes and projects identified in the Local Transport Plan, West Sussex Bus Service Improvement Plan, Local Cycling and Walking Infrastructure Plan (LCWIP) and the Infrastructure Delivery Plan;
4. Planning to achieve the timely delivery of transport infrastructure on and approaching the A27 and elsewhere on the network, needed to support new housing, employment and other development identified in this plan;

5. Phasing the delivery of new development to align with and where possible facilitate the provision of new and improved transport infrastructure and services and the outcomes of monitoring travel demand on the network, including that arising from areas immediately adjoining the plan area. It may also be Where necessary to achieve this alignment proactively phase development will be phased to take into account the monitoring and effectiveness of travel plans demands on the network and to ensure that measures are implemented to support the highest possible level of encourage sustainable travel behaviour.;

6. Using demand management measures, such as travel plans, to manage robust methodologies to assess travel demand and minimise the need for new or improved transport infrastructure as part of the monitor and manage process.

7. Delivering a coordinated package of infrastructure improvements at and approaching to junctions on the A27 Chichester Bypass along with other small-scale junction improvements interventions within the city and elsewhere, as identified through the monitor and manage process. These will increase road capacity, reduce traffic congestion, improve safety and air quality, and improve access to Chichester city from surrounding areas, first by maximising the contribution of sustainable modes to meeting mobility demands, then, and only as evidenced by robust modelling and option testing, providing increased highway capacity for general traffic.

..."

7.3. Policy T2 Transport and Development

Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Section 1 b) of T2 will be ineffective as, absent measures to ensure buses can run reliably and efficiently, improved bus services will not be possible, in support of the plan's own stated broad approach to transport mitigation, as well as wider local and national policy.

The draft policy does not require improvements to the quality of services such that sustainable choices will be materially more attractive than car use for many local journeys. Without this the Plan's Strategic Objectives cannot be fulfilled and the objectives of the Plan and this policy, read in its own terms, will not be realised, where reduction in private car use is concerned. It is thus ineffective.

Absent measures to make bus services more reliable and more efficient, by insulating them from chronic congestion as far as possible, still further operating resource and therefore costs, will be needed to just to reliably run existing service frequencies, and capacity, as vehicle productivity continues to be more and more adversely affected by chronic delay. This will be further aggravated by increasing incidence of severe unpredictable service breakdown arising from incidents of diverse kinds on the network, especially on or around the A27, including that arising from more regular severe weather events. Longer journey times can only be expected to lead to relative disadvantage of bus services compared to personal car use, entirely contrary to the objectives of national and local policy, including Policy T1. It can also expect to lead to a dampening effect not on car use, but on bus patronage, threatening the ongoing viability of bus services across the plan area.

Section 1 b) of T2 should be modified to read:

"b) Maximise opportunities for the use of sustainable travel modes through provision of direct and efficient access both to either the existing networks or and through providing such new infrastructure or public transport services, as can be credibly expected to reduce reliance on the private car and work towards achieving net zero in greenhouse gas emissions by 2050;"

Section 1 d) of T2 will be ineffective as the location of development is fixed by this plan. We commend the fact that all the strategic allocations are or will be served by regular bus services.

However, the use of public transport services, where available, depends on the relevance and reliability of these services. Furthermore, provision of services without them generating sufficient patronage to support their long-term operation also threatens the sustainability of the plan and its supporting transport strategy. This is especially true of new services such as those intended to serve West of Chichester and Tangmere and East of Chichester Strategic Allocations.

This can only be assured by the plan being supported by specific measures to ensure buses can operate efficiently and reliably on the existing and projected services intended to serve the developments concerned, and also at the same time secure behavioural change from existing development.

To be sound and effective, the policy T2 1 d.) should be changed to read:

"d) Ensure major development is located to proposals and the supporting mitigation measures enable the use delivery of high-quality, reliable and effective public transport to present the most relevant possible choice to access local services and facilities including employment, leisure and education facilities";

The Policy T2 makes no provision for buses, where necessary, to enter and make efficient and safe progress through

major development sites. The plan is thus out of conformity with NPPF paragraphs 104-106. It makes no provision to ensure that penetration of bus services is achieved at a suitably early point in the development trajectory, undermining the achievement of the goals of the Plan and this specific policy. As a good example, West of Chichester Phase 1, currently under construction, cannot be served by buses as a strategy to effect interim bus penetration was never made.

Policy T2 1 f.) should therefore be amended to read:

f) Ensure that the layout and design of the site development proposals provides effective penetration of the site by sustainable modes, at all points in the development build-out, including public transport where appropriate; and sufficient space for all vehicles to manoeuvre without compromising the safety of pedestrians and cyclists, the efficiency of bus services, or the ability to provide an appropriate level of landscaping across the site"

Policy T2 3.) regarding Travel Planning depends entirely on its effectiveness on the quality and relative attractiveness of sustainable alternatives over car use. In the absence of efficient frequent, reliable and direct public transport services (or similarly, high quality facilities for active travel, Travel Plans will continue to be the entirely ineffective "tick box" exercises that they generally are today, evidenced by much lower levels of public transport use in most new developments than it seen in nearby established neighbourhoods, as demonstrated broadly by Census data in 2011, 2011 and 2021.

For this policy to be effective an up-to date transport evidence base and strategy, underpinning a series of specified interventions to promote the relevance and effectiveness of all sustainable does including public transport in particular, needs to be put in place.

8. Chapter 9 Infrastructure – Policy I1 Infrastructure provision

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Policy I1 could not expect to be effective without a clear understanding of the effectiveness and costs of a defined series of measures that are laid out in this Plan and its IDP, to mitigate the transport impacts of the development strategy.

Where the Chichester Transport Study is concerned the only meaningful work has focused on the definition and delivery of a range of highways capacity schemes mainly on the A27 around Chichester.

As we have discussed elsewhere the effectiveness of these schemes is insufficient as set out at Tables 8.1 and 8.2 of the Chichester Transport Study 2023. The plan itself admits that the deliverability of this package cannot be afforded by developer contributions alone.

The Chichester Transport Study 2023 does not attempt provide a realistic assessment of costs to deliver these schemes, despite the fact that they have been under evaluation for many years. Nor does it offer any assurance that the schemes are technically achievable. Rather, it states the opposite:

"9.2.3 No investigation has been carried out into specific land ownership details, or into the location details or cost of moving statutory undertakers and utility apparatus within the areas of the scheme. No design assessments were carried out at this stage to ascertain the deliverability of the proposals except where any Health and Safety concerns were raised."

Thus on the grounds of effectiveness, deliverability and affordability, the measures on which the Plan relies must at the very least be considered to involve an exceptionally high level of risk. Since Policy I1 is founded on these assumptions, it cannot be considered effective.

As we set out elsewhere, the Plan has been advanced on the basis that if any additional sustainable transport measures are required, these mitigations should be retroactively considered and defined after adoption of the Plan. In the light of the doubts that are apparent of both the deliverability, affordability and effectiveness of the Chichester Transport strategy this is especially unsatisfactory even if existing baseline conditions were reasonably acceptable.

However, the Chichester Transport Study 2023, as did its predecessors, makes plain that that existing problems are acute, and can rightly be considered "severe" in the sense of NPPF paragraph 111. Waiting to define deliverable affordable alternatives is an entirely inappropriate approach to the local plan transport mitigation strategy. Such an approach also makes it impossible to consider prior to adoption how far the transport impacts of the plan can be cost-effectively mitigated by alternative means, or whether they are deliverable having regard to technical achievability, land control, development viability, or any combination of the above. Thus, the plan cannot be considered justified, or effective.

Given the mutual dependence of development strategies in Chichester and Arun in particular on these measures this should be seen as crucial of the fulfilment of the Duty to Cooperate.

The remedy for this is ultimately to put in place a suitable transport mitigation strategy following a strategic appraisal of options through review of the LSS. This then must be supplemented by more detailed development specific and localised scheme definition, including, where necessary, bus priority and other measures to support the substantial promotion of the attractiveness of public transport in key bus corridors over private car use. This would then be reflected by costed proposals in the IDP.

Leaving these fundamental weaknesses to one side, even if such a strategy and mitigation package were defined, there is no mention of public transport in the policy even though it is clearly a key part of the policy environment and mitigation strategy for the plan as expressed in the explanatory memorandum for I1, but also at Policies T1 and T2. I1 thus does not effectively support the realisation of the intent of Policies T1 and T2.

Policy I1 iii) should therefore be modified to read:

“(iii) Safeguard the requirements of infrastructure providers, having regard to requirements within and where appropriate across the boundaries of the plan area, including but not limited to:

...

- Highways including specific measures to accommodate improved active travel and public transport level of service and cycle lanes, and...”

At limb v) the Policy expects developers to meet the “in perpetuity costs of operating and maintaining infrastructure”. This shackles development management decisions to developers assuming what are infinite costs – given that “in perpetuity”, read properly, can only mean “without any limit in time”. This means that it is impossible to meet the statutory tests on developer obligations set out in the Community Infrastructure Levy Regulations 2010 (as amended) at Regulation 122, also repeated in NPPF. This policy cannot be lawfully implemented and it is thus ineffective.

In the absence of an up-to-date transport mitigation strategy that is fit for purpose, at the point the Plan is examined these costs of any additional infrastructure are not known in any case. The strategy and its costs, including its affordability and deliverability, are crucial to assessing if the Plan is sound.

Subject to an appropriate defined transport mitigation strategy being arrived at, to be sound, the Policy I1 v) should be modified as follows:

(v) To consider and meet as appropriate the in-perpetuity delivery costs of infrastructure and, where appropriate, improved services, to the point where its long-term operational sustainability is credibly assured from mainstream sources. Where adoption is not envisaged by local authorities, that must include arrangements for its future ongoing management and maintenance;

9. Strategic and Area Based Policies

9.1. Policy A1 City Centre Development Principles

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Chichester City centre is rightly identified at 10.2 and 10.4 as the commercial and service hub of the District. It is also acknowledged to be the most accessible place in the District by sustainable modes, public transport in particular.

Boosting the vitality of the city centre is something that Stagecoach strongly supports. Irrespective, the enhancement of the commercial and cultural life of the District in the place where these opportunities can be accessed broadly by sustainable modes, is one that has long been at the heart of national planning policy for town centres, reflected in the “town centre first” approach to locating major trip generating uses.

Paragraph 10.5 exposes an unbalanced and unsound preoccupation with aesthetic matters in its approach to the town centre, and far too little to ensuring that the central place function is enhanced through protecting and enhancing the quality of public transport access.

The city is relatively small but at the heart of an extensive hinterland, and thus the role of bus in supporting sustainable access to and enhanced city centre venue is one that needs appropriate recognition and emphasis. It is important to note that a dominant number of key service and facilities such as the General Hospital are relatively close to the city centre. This directly contributes to driving travel demand into the city, causing congestion. Most importantly, it also makes the task of mitigation simpler, given the impact a suite of active and sustainable measures can have within the same close proximity.

Policy A1 does not provide this. As such, achieving the strategic objectives of the plan is seriously threatened, and the plan is thus not effective.

The Plan needs to ensure that the approach to city centre regeneration maintains and enhances public transport access, interchange and inter-modal connectivity. It also needs to ensure that bus service stopping and interchange facilities are able to address increases in future demand, anticipated by the clear intent expressed elsewhere in the Plan that public transport should be meeting a greater proportion of mobility needs, in a growing district. Achieving this demands an ambitious approach to the location, quality and capacity of bus stop and interchange.

We have been in discussions with the District Council about this, alongside West Sussex County Council, for a very considerable period. Stagecoach has always been keen to help facilitate the Council's aspirations for the city centre, and we continue to hold this intention. However, this cannot be at the expense of a material diminishing of the convenience and fitness-for-purpose of bus stop infrastructure and interchange. Stagecoach has significant concerns that current proposals to remove the bus station and have all bus services operate from the street kerbside, on an inner distributor road with similar or reduced net stop capacity, fall short of promoting attractive, convenient bus access to the central area as a destination.

For the longer term and where the objectives of the draft plan are concerned looking ahead to 2039, they clearly fall short of enhancing the convenience and attractiveness of public transport use. Much less do they make sufficient provision for a material increase in bus frequency, connectivity, and interchange convenience, on which the draft plan explicitly relies. It is vital that the District Council is clear in policy about its objectives for public transport in the city centre. These objectives must also carry sufficient weight when held in tension with other aspirations for the centre and the constraints on achieving them.

For the Plan to be sound, properly effective and compliant with NPPF, the approach to the City centre cannot ignore its role in the provision of sustainable transport service and connectivity.

Policy A1 should therefore be modified to properly reflect this crucial function, on which the vitality of the city centre must increasingly depend if unacceptable impacts on congestion, air quality and amenity are not to arise. This is still more crucial if wider aspirations to secure a more sustainable society and mitigate carbon are to be achieved.

"...This will include provision for development and proposals that:

- Support and strengthen the vitality and viability of the city centre and its role as a shopping/visitor destination, employment centre, public transport hub and a place to live;
- Support and promote facilitate improved access to the city and with increased emphasis on sustainable modes of travel, with particular regard to enhancing the public transport interchange role of the city centre area, in accordance with the transport strategy for the city and..."

9.2. Policy A3 Southern Gateway Development principles Chichester Bus Station, Bus Depot and Basin Road Car Park Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

There has been aspiration to redevelop the bus station and nearby bus depot from many years. Stagecoach has been engaged with detailed discussion with the District Council on this matter over a very extended period. We confirm that these discussions have reached a relatively mature stage, however at the time of writing are not concluded.

Stagecoach recognises and supports in principle the Council's wider aspirations for the "Southern Gateway", and this has governed our approach to the Council to date. We continue to have no "in principle" objection to relocating our administrative, engineering, operational and customer service facilities.

Leaving our proprietary interests entirely to one side, it remains vital that in so doing, the effectiveness, attractiveness and convenience of these facilities is not compromised, as we have outlined in our representations to Policy A1, if wider national and local transport policy, and the local plan strategy itself, are to be effectively achieved.

The depot is crucial infrastructure to support the safe, reliable and legally-compliant operation of Stagecoach bus services over a very extensive area covering the entirety of the District and beyond. Without securing equivalent facilities, that are fit-for-purpose, many of our services would have to cease.

If buses are to provide a greater and more attractive level of service (still more so if they are to be electrified) larger, more capable depot facilities, and city centre bus interchange facilities will be necessary.

Notwithstanding that the bus station and depot sites are leased from the District Council, these leases terminate well beyond the end of the plan period.

Finding suitable sites for a replacement bus depot in Chichester, in common with all similar localities especially in southern England, is extremely challenging. As a sui generis use, bus depots do not automatically benefit from policy support on land allocated for employment uses. Most bus depots benefit from being legacy assets established under very different economic conditions. That is the case here. The value of a depot site for redevelopment net of demolition and remediation costs, rarely approximates to that able to sustain the acquisition of land in a tight wider employment

land market, and the construction of suitable new facilities.

Furthermore, the costs of operating bus services are sensitive to the parasitic costs of vehicle and staff hours and mileage associated with “dead running” to a remote depot location from the operational network. Here, the existing depot site is ideal, and any replacement will unavoidable add ongoing operational costs to the operation that cannot be directly recovered.

We confirm that a replacement depot site has been identified and has in principle been agreed, subject to overcoming issues with the disposition of existing and future structures on the site. However, the site is recognised as not capable of accommodating meaningful operational expansion. This is just one of the most important foundational reasons why a positive transformation of bus productivity needs to be achieved, across the plan area and beyond, to support delivery of greater bus mileage and frequencies with the same level of operational resource. At the time of writing, we are not fully convinced that the proposals for the relocation will be sufficiently fit-for-purpose in the event the above is not achieved. Thus, we must raise a concern that the bus depot site might not be available during the plan period. While there is a strong probability it will be, the certainty surrounding the availability of the site, especially within the first 5 years of the plan, needs to be made transparent.

9.3. Policy A4 Southern Gateway - Chichester Bus Station, Bus Depot and Basin Road Car Park
Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Regarding the removal of the bus station, without equivalent replacement, Stagecoach has significant concerns. Pressures and conflicts at the current bus station site have been gradually rising for several years, arising from increasing use and the need for additional scheduled vehicle layover periods to reduce the risks of accumulated late running from traffic congestion. Peak passenger volumes have recovered strongly on several routes, however passenger accumulations resulting from more frequent delays and disruption have added substantial further pressure on limited space.

Under current plans, buses and bus passengers will be displaced to bus stops at new locations outside the city centre, along Avenue de Chartres. This road was always intended to be a relatively high-speed traffic route, outside the historic core of the city. The city centre has evolved in the subsequent years to reinforce already strong natural severance, with the highway lying beyond the city walls and the green space along the Lavant. It is a traffic dominated, un surveilled and unattractive environment, reflecting the intended function of the road as an efficient movement corridor for high traffic volume, and nothing more. Avenue de Chartres is relatively close to the rail station and pedestrian connectivity can be provided at broadly equivalent distance to the current bus station, but again it is un surveilled and currently unpleasant, lacking natural legibility or any sense of prominence.

We understand kerbside capacity on Avenue de Chartres will be strained even to accommodate current levels of service, with no expansion possible. There is therefore a strong probability that to accommodate more frequencies and key new routes, such as West of Tangmere, East of Chichester and West of Chichester allocations, additional future bus stops must occupy a different location. This makes interchange between routes and rail services substantially challenging and less attractive.

The emerging arrangements risk marginalising public transport and public transport users substantially. This strongly undermines achievement of the wider plan objectives and delivery of a significantly greater role for public transport. If substantial public transport growth is to be accommodated in a growing city and hinterland, as the draft plan anticipates, then a more ambitious strategic approach must be taken. This should plan for additional and improved facilities to accommodate all services predicted to be required, whilst enhancing the passenger experience to ensure meaningful and attractive modal choice.

There is therefore a need for the plan to evidence how these issues will be appropriately resolved, having regard to a suitably ambitious approach that properly supports clear objectives to boost the relevance of public transport. The current policy is weak, un specific and indifferent to achieving the strategic objectives of the plan, including a transport strategy in support of the plan, and as such it is ineffective.

Policy A3 should therefore be modified to read:

- “ ...
- Be designed to encourage and facilitate substantial increase in the use of active travel and public transport to, from and through the city centre.
- ...”

In line with the commentary above Policy A4 should also be modified to read:

3. Enhance the public interchange function of the immediate area, the public realm, particularly connections to the railway station and the city centre via South Street, Southgate and Basin Road for pedestrians, cyclists and public transport users, and to National Cycle Route 2 and Route 88 which run close by. Suitable replacement bus stops and layover facilities should be provided to replace those at the bus station in line with reflecting the objectives of the West

Sussex Bus Service Improvement Plan, and to facilitate growth to meet the requirements of the plan's development strategy. Routes and crossings should reflect pedestrian desire lines, and public art should be incorporated to create a sense of place;

4. Enhance the public realm, in support of this and wider objectives, incorporating public art and other measures to create a strong and attractive sense of place.

...(renumber remaining points)

9.4. Policy A6 Land West of Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

This is an existing Local Plan allocation. The public transport strategy for the site depends on the delivery of the second phase which Stagecoach notes is the subject of several applications now awaiting review and determination by the Council.

The site represents a compact form of development adjoining the city, as the most sustainable settlement, meeting housing needs close to where they arise, and affording very good opportunities for the use of sustainable modes, especially walking and cycling.

It is vital that a bus service is delivered to serve the site at the earliest potential. This was anticipated to be at the start of Phase 2 and will require the early delivery of the entire length of the spine road between the Old Broyle Road and Westgate and making it available for bus services.

It is not clear if the costs of pump-priming the service mentioned in the draft policy are anticipated to be met by the developer. Without such funding, the service will not be deliverable as years of losses will never credibly be covered from future profit. It is likely that the current wording will be interpreted by the developer as meaning that they have no such obligation binding upon them. Not does policy set out any specification for this service, thus its costs and the basis for securing developer contributions does not exist.

As such any wider transport strategy, that seeks to secure a greater role for the use of public transport, and the aspiration for this allocation cannot demonstrably be met. The policy is ineffective.

Policy A6 should be modified to read:

"...

10. Make provision to accommodate and secure delivery of for regular bus services linking running through the site to Chichester city centre operating at least every 30 minutes Monday-Saturday, and new and improved cycle and pedestrian routes linking the site with the city,

..."

9.5. Policy A7 Land at Shopwhyke

Stagecoach Supports

This is an existing Local Plan allocation, largely built-out, that benefits from an existing set of permissions.

The public transport strategy for the site depends on the delivery of effective bus priority at Oving Crossroads. The current recently implemented scheme, undertaken by National Highways, makes no provision for effective bus priority and needs considerable re-evaluation.

The site represents a compact form of development adjoining the city, as the most sustainable settlement, meeting housing needs close to where they arise, and affording very good opportunities for the use of sustainable modes, especially walking and cycling. It lies on a new bus corridor that will shortly be put in place, running to Tangmere via Shopwhyke. The allocation is being significantly consolidated by further development in the immediate vicinity which strongly supports the potential for this new service.

As we explain in our representations for East of Chichester proposed allocation A8, and West of Tangmere Allocation A14, a clear corridor strategy to effect bus priority is needed, that should be delivered in support of that further growth, and that at Tangmere SDL. However this allocation is a near complete commitment and there is no scope through policy regarding this land to effect this outcome.

It is notable that Point 6) of policy A7 makes mention of a bus service. This language reflects the currently adopted Local Plan policy and has underpinned the existing permissions. The failure of any bus service to be delivered demonstrates from first principles that this Policy has been entirely ineffective. It is important that lessons are learned from this in the Local Plan Review.

9.6. Policy A8 Land East of Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This proposed allocation lies next to unallocated land that is already consented as a departure from the adopted development plan, with 143 units near completion south of Oving Road (20/02471/FUL). Additional land, also unallocated but similarly consented, has now commenced north of Oving Road (88 units under 21/02197/FUL). This and the allocation site consolidates earlier development at Shopwhyke brought forward under the current Local Plan, and allocated again as draft policy A7.

Development at Shopwhyke was brought forward on the basis of a premise that the developer would provide or somehow arrange a bus service, that was reflected in the policies of the current Local Plan. This was secured by an unenforceable condition. No bus service has been provided, as there was inadequate clarity regarding the basis on which the costs of establishing such a service would be met by the developer, and the expectations of policy on the developer. The site does however lie on a logical new bus corridor between Chichester and West of Tangmere along the Oving Road.

In addition, an expectation that modifications to the Oving Crossroads would effect bus advantage have proven false – the arrangements put buses into a similar or longer queue than if they use the route available to general traffic to and from the A27.

Stagecoach strongly supports the principle of bringing this land forward. However, the soundness of the site depends on deliverability of a regular, reliable and direct bus service along the Oving Road, taking advantage of effective bus priority.

Given the failure of existing policy in the adopted Local Plan covering the proposed A7 allocation to deliver a bus service, it is of great concern that there is no draft policy to adequately address the issue. The policy is out of conformity with NPPF paragraph 104-105 in that sustainable modes do not offer realistic choices, much less an attractive one, and as such also does not secure the objectives of national policy nor of the plan itself.

Currently the proposed allocation is not served at all by public transport. Policy needs to ensure there is a policy basis to secure contributions to deliver such a service, which may well take the form of a proportionate contribution to deliver a new service or enhance provision that is put in place between Chichester along the Shopwhyke Road to west of Tangmere.

To become sound Policy A8 must be modified to read:

“
 ...
 12. Provide for improved high quality connectivity by sustainable travel modes and focused in particular on a corridor between Chichester city centre and Tangmere along Shopwhyke Road, including new improved cycle and pedestrian routes, and a frequent bus service including linkages with Chichester taking advantage of effective bus priority measures on Oving Road at the A27;
 ...”

9.7. Policy A9 Land at Westhampnett/North East Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This land is already allocated and consented as part of the existing 2016 Local Plan. All reserved matters are determined.

The site lies on service 55 between Chichester, Westhampnett and Tangmere. This established service benefits from additional demand from the development at Phase 1. Phase 2 which is currently well underway, does not benefit directly from bus services. However it is a compact and logical form of development where walking and cycling to local facilities and employment is a credible option.

The existing allocation rolls forward policies in the 2015 Local Plan. In so doing it is possible to see which have been effective.

Point 9. regarding bus service and routing has not been effective. In particular the potential for a bus only link between the site and Graylingwell has not been established as policy anticipated. Given congestion around the Portfield area acutely affects public transport this, or alternative methods to secure bus priority over private car use, a clear and unequivocal policy steer is required.

The lack of an up-to-date transport evidence base is ultimately at the root of these issues. Arguably the policy and allocation can only be made sound once this refreshed evidence base in place.

However, it is possible that the allocation could be made sound by modification of Policy A9 as follows:

“
 ...”

9. Make provision for regular, direct and reliable bus services linking the site with Chichester city centre, and new and improved safe and convenient cycle and pedestrian routes linking the site with Chichester city, the South Downs National Park and other strategic developments to the east of Chichester city including Tangmere. These objectives could include exploring the potential for a bus only route require a deliverable scheme to afford bus priority through Portfield, and potentially linking the development with the Graylingwell area through use of a modal filter;

“

9.8. Policy A10 Land at Maudlin Farm
Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing public transport route. It is relatively close to the city and very near substantial centres of employment and services that can be reached by active travel modes, helping damp the demand for car use. It is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services at Portfield and over a wider area. In fact, the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A10 should accordingly be modified to read:

“

5. Provide safe and suitable access points for all users, including a main vehicle access from Old Arundel Road and, subject to further assessment, a secondary vehicle access from Dairy Lane. The development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes;

“

9.9. Policy A11 Bosham – Land at Highgrove Farm

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Bosham Station. It is relatively close to the city and very near substantial centres of employment and services that can be reached by public transport and cycling, offering strong potential to materially damp the demand for car use.

There are serious risks that development in the A259 corridor west of Chichester could place further demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular to bus services.

Nevertheless, given the potential to effect bus priority on the approaches to Fishbourne Roundabout, it is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A11 should accordingly be modified to read:

“

8. Provide safe and suitable access points for all users, including a main vehicle access from the A259. The development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with

the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys crossing the A27 at Fishbourne;

9.10. Policy A12 Chidham and Hambrook

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Nutbourne Station. Substantial centres of employment and services that can be reached by public transport and cycling, offering strong potential to materially damp the demand for car use.

There are serious risks that development in the A259 corridor west of Chichester could place further demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular to bus services.

Nevertheless, given the potential to effect bus priority on the approaches to Fishbourne Roundabout, it is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A12 should accordingly be modified to read:

“ ...

7. Development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys along the A259, crossing the A27 at Fishbourne and where necessary on the approaches to Emsworth;

8. Facilitate improved sustainable travel modes, and new improved cycle and pedestrian routes, including linkages with Chichester city and settlement along the East/West Corridor;

9.11. Policy A13 Southbourne Broad Location for Development

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach agrees unequivocally that Southbourne is a location that could accommodate growth on a strategic scale. It has a substantial range of service available within the settlement, including secondary education. It is well connected by bus and rail service to key destinations, including Chichester, lying to the east and west.

This is one of the few locations identified for growth that represents substantial additional development in a new location to the strategy in the existing Local Plan adopted in 2015. Thus, the transport impacts of development on the substantial scale envisaged at Southbourne are not covered or accommodated by the Chichester Area Transport Strategy that lies behind the existing plan. This demands, from first principles, that substantial further transport mitigation measures are required.

We recognise and endorse fully that the intent of the draft plan for Southbourne as a Broad Location for Development on a strategic scale, includes “Maximising the potential for sustainable travel links through improved public transport, including consideration of opportunities to reduce community severance caused by the railway line as well as the inclusion of cycling and pedestrian routes.” (our emphasis).

The existing railway station at Southbourne is served regularly, however, it is not within the power of this plan to improve

rail services. It is, however, well within the scope of action of the Local Planning and Highways Authority to work with bus operators to achieve a step change in the journey time, reliability, frequency and connectivity of bus services, and in particular the major corridor operated as service 700 by Stagecoach along the A259 between Havant and Chichester through Southbourne.

Notwithstanding the clear potential for sustainable connectivity in the western A259 corridor, there are very serious risks that development in the A259 corridor west of Chichester will place further significant car-borne demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular bus services, having the opposite effect to that intended: longer, less reliable and less frequent bus services, leading to a spiral of slowly declining use.

These risks, while very serious, look credibly likely to be entirely mitigated subject to carefully conceived and robust specified actions on the local highway network. It is perplexing to us that this potential still has not been identified, as part of a comprehensive "first principles" review of the transport evidence base. In particular given the former trunk status of the A259, there is evident potential to effect bus priority on the A259, including on the approaches to Fishbourne Roundabout.

With appropriate measures, including but not limited to this, to substantially boost the relevance and attractiveness of sustainable travel choices, strategic development at Southbourne could well be made highly sustainable.

In the absence of a refreshed transport strategy and transport evidence base, the draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact, the only reference that is made in Policy is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A12 should accordingly be modified to read:

"...Development should be comprehensively masterplanned to achieve a high-quality design and layout that integrates well with the surrounding built and natural environments to enable a high degree of connectivity with them, particularly for pedestrians and cyclists, and provides good the highest possible quality of access to facilities and sustainable forms of improved public transport services.

...

4. Provide a suitable means of access to the site(s), and securing secure necessary off-site transport infrastructure and service improvements (including highways in particular to the A259 corridor between Emsworth and Chichester) in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development) to promote sustainable transport options prioritising delivery of high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes;

..."

9.12. Policy A14 Land West of Tangmere

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach strongly supports the principle of intensifying the level of development at the Strategic Development Location already identified and allocated West of Tangmere in the existing Local Plan. This serves to consolidate development at a location where effective and attractive public transport choices could be provided. It also conforms closely with the principle expressed in NPPF that the best possible use should be made of land on sites that are judged to be sustainable, or potentially sustainable locations for development.

It must be stressed that the current policy suite for the SDL has to date not brought forward development in this location. We recognise that a Master Plan has been adopted by the Council, and that a planning application (20/02893/OUT) for the full larger quantum of 1300 dwellings proposed in the draft plan has received a resolution to grant by the Council.

However, we are not aware that a sustainable transport strategy has been finalised.

Land West of Tangmere is not served by any existing regular bus services. Rather, an entirely new bus service corridor is anticipated to operate in the near term from Chichester through Tangmere and beyond towards Barnham. This would serve proposed allocations A7, A8 and West of Tangmere (A14) included in the draft Plan.

This is reflected in the language of the explanatory memorandum to Policy A14 at paragraph 10.65:

"Opportunities, in partnership with relevant authorities, to provide improved sustainable public transport routes linking

the village with Chichester city, to improve cycle routes to the city, and better transport links to Barnham rail station and the 'Five Villages' area in Arun District; and..”

Initiating this service will be costly and will in large measure be funded not by developer contributions, but by DfT monies awarded through the West Sussex Bus Service Improvement Plan. It is crucial this service is both sustainable in the longer term without revenue support, and that the success of the service can be built on by scalable frequency improvements as strategic development comes forward in both Chichester District, and proposed allocations A7 A8 and A14, and in Arun District, in particular at Barnham, Eastergate and Westergate (BEW).

This demands measures to effect safe, direct and swift operation of the service especially within the city centre, where it approaches and crosses the A27 at Oving crossroads and on the eastern fringes of the District east and west of Tangmere. Without these measures, bus journey time and reliability will be severely compromised and the impact of this service to damped car trip demands will be very substantially compromised. No such measures are proposed in the draft plan or its evidence base.

Changes to Oving Crossroads have recently taken place which, amongst other intentions, ostensibly provide bus advantage between Chichester and Shopwhyke. The junction in its current form does not offer material gain in bus journey time, as movements involve a less-direct route towards the city over an increased operating distance, much of which involves passage through heavily congested sections of the A27 and Westhampnett Road. A refreshed transport strategy supporting plan-led growth must revisit this area to secure an effective solution which offers bus customers the fastest and most reliable trip-time to and from the city.

In addition, the extension of public transport connectivity towards BEW and Barnham, including key links to secondary education and a logical railhead for journeys beyond towards Brighton and London as provided at Barnham Station, needs to facilitate bus priority between Tangmere and Nyton – whether using the A27, or preferably avoiding it altogether. There are significant safety concerns associated with the at-grade uncontrolled right-hand A27 exit onto the B2233 Nyton Road at Crockerhill Turn. This movement is also prone to extreme delay owing to the conflict with approaching westbound traffic on the A27, travelling at speed, which has priority. Our concerns with this junction in its current form can be expected to worsen with the increased traffic volumes predicted from new residential developments to the west of the city.

A solution providing a suitable short length of highway available only to sustainable modes, between Tangmere and Easthampnett, could provide a very effective solution to this. This would be deliverable within the scope of the separate proposed allocation at A19 Chichester Business Park, Tangmere. We comment on this separately.

Howsoever effected, a reliable direct and delay-free bus corridor between Barnham, BEW, Tangmere and Chichester could expect to secure very substantial elevation of the relative attractiveness of public transport over car use on the entire corridor and serve to effectively damp growth-related demands on this section of the A27. West of Tangmere, in the longer term, there is evident scope for the route corridor to operate as two branches – one via Shopwhyke and one via Westhampnett, effectively serving all the strategic developments proposed in the plan and transforming wider public transport connectivity to key employment destinations and services within and east of Chichester.

However, in common with all the other proposed allocations, the plan proposes no specific measures to provide, much less improve public transport or other sustainable modes to the site. This leaves the draft plan out of conformity with NPPF, especially paragraphs 104-106. The plan is inadequately evidenced and to the degree that public transport measures are identified and emergent, their successful implementation in the near and longer term will be jeopardised without clear measures to provide a safe as well as efficient bus route towards BEW and the Five Village area within Arun. The Duty to Cooperate is not effectively met and effective cross boundary collaboration on these strategic issues through the review of LSS is not demonstrated, despite the current version which identifies the issues.

To be made sound the LSS Review and a subsequent urgent review of the transport evidence base and strategy needs to take place. The strategic issues are especially critical east of Chichester, in our view.

Notwithstanding this foundational deficiency, to be made sound, Policy A14 should be modified to read:

“...

8. Subject to detailed transport assessment, provide primary road access to the site from the slip-road roundabout at the A27/A285 junction to the west of Tangmere providing a spine road link with secondary access from Tangmere Road. Development will be required to provide or fund mitigation for potential off-site traffic impacts through a package of measures in conformity with Policy T1 (Transport Infrastructure) and T2 (Transport and Development) and DfT Circular 01/2022 that maximise the relevance and use of sustainable travel modes, in particular bus services;

9. Make provision for improved sustainable travel modes between Tangmere and Chichester city, in partnership with relevant authorities, including improved direct, seamless safe and reliable and additional bus and cycle routes linking Tangmere with Chichester city, Shopwhyke and Westhampnett. In conjunction with measures in support of Allocation A19, Opportunities should also be explored contributions shall also be sought for providing improving high quality cycling and bus service transport links with the 'Five Villages' area and Barnham rail station in Arun District; and...”

10. Concluding comments

Stagecoach recognises its role as a key stakeholder in the plan, as well as a local employer and corporate citizen. We recognise the primacy of the plan-led system as the mechanism intended to resolve complex challenges, including the proper alignment of transport and spatial planning, which as the National Decarbonisation Strategy for Transport among other policies makes clear, has never been more vital.

In making our representations, we emphasise that we are entirely supportive of the Local Planning Authority and the relevant Highways and Transport Authorities, in their efforts to properly manage the amount and pattern of development to secure vital policy objectives. We recognise that balancing delivery of assessed development needs with a wide variety of other constraints is a very difficult task.

The transport issues faced by the plan are recognised in the draft plan as being serious and long-standing. We believe that there are ways to arrive at a suitable transport mitigation strategy that has regard to wider strategic issues and resolves existing problems in a much more effective way than those pursued to date.

We support the spatial strategy of the plan as it evidently provides the basis to secure the necessary step change in the quality and use of sustainable transport modes, as it explicitly seeks to do. However thus far, there has been insufficient work done to define the measures that will credibly secure these outcomes.

Stagecoach therefore urges the authorities to draw us into the necessary effective ongoing collaborations that is expected by NPPF paragraph 16 and 106; and DfT Circular 01/022, to do this work, prior to, rather than after the submission of the draft plan. We look forward to being approached to initiate this dialogue at the earliest opportunity.

Change suggested by respondent:

Policy P4 needs to be modified to address this point:

"1. Provide safe, direct and attractive conditions for inclusive access, egress and active travel between all locations and providing as good direct high quality links to integrated public transport, and where appropriate efficient access and circulation to bus services, unimpeded by excessive parking, at a suitably early point in the development phasing;

Full text:

1 Henry Adams LLP act on behalf of Barratt David Wilson (Client) in respect of Land at Maudlin Farm (the Site). These representations respond to the Regulation 19 Consultation version of the Chichester Local Plan 2021-2039 (Feb 2023), which identifies the site as a Strategic Development allocation through Policy A11 Highgrove Farm, Bosham.

1.2 In this context, our response is focused on the following matters;
 The development strategy, settlement hierarchy and distribution of development,
 The overall amount of new housing required within the new plan period, and
 The strategic allocation proposed at Bosham in Policy A11.

1.3 The Site is subject of a live application which was submitted over 2 years to the Council, following publication of an Interim Housing Statement, which encouraged applications on suitably located sites, including those comprising draft allocations. The Council are yet to determine this application. This submission is accompanied by the design and access statement (Appendix 1) submitted with the live application for the site which focuses on the site opportunities and constraints alongside the design considerations.

In summary, the Client supports the allocation of Highgrove Farm, Bosham for residential development. The technical work and accompanying design and access statement demonstrate that the site is capable of delivering 300 dwellings during the course of the plan period.

6.2 The Client would however request that amendments be made to the wording of the policy to allow for a level of flexibility so that any future development can be aligned with what is appropriate to deliver to meet local needs.

Change suggested by respondent:

It is recommended that this be addressed with an amendment to follow the recommendations of the PPG.

Support

Document Element: Policy P5 Spaces and Landscaping**Respondent:** Natural England (Luke Hasler, Senior Advisor) [8189]**Summary:**

Natural England support the policy criteria which require development proposals to create opportunities to promote biodiversity and to positively contribute to Green Infrastructure connectedness.

Full text:**Summary of advice**

While we have raised some queries and recommended some further modifications to certain policies we do not find the Plan unsound on any grounds relating to our remit.

Natural England has reviewed the Proposed Submission Local Plan and accompanying appendices together with the Habitats Regulations Assessment (HRA) and Sustainability Appraisal (SA). Our detailed comments on the policies and site allocations are provided as follows:

- Annex 1 - Chapter 2 – Vision and Strategic Objectives
- Annex 2 - Chapter 4 – Climate Change and the Natural Environment
- Annex 3 - Chapter 5 (Housing) and Chapter 6 – (Place-making, Health and Well-being)
- Annex 4 - Chapter 7 (Employment and Economy) and Chapter 8 (Transport and

Accessibility)

- Annex 5 - Chapter 10 – Strategic and Area Based Policies

Please note that we have not provided comments on all policies but those which have most influence on environmental issues. Natural England has no comment to make on the policies not covered in this response. Other than confirming that we have referred to it when considering our advice on specific policies and site allocations Natural England has no general comments to make on the SA.

Unfortunately due to unforeseen resourcing issues while we have reviewed the associated HRA we are not in a position to provide detailed comment on it as part of this response. We will rectify this as soon as possible and can confirm that we have seen nothing in it that raises any major concerns.

The Plan has many positive aspects including standalone policies on Green Infrastructure (GI) and wildlife corridors and an incredibly extensive suite of natural environment policies more generally.

We are hugely appreciative of the opportunity that we were given to work with you on shaping key policies post-Regulation 18. However, we believe that the plan needs to go further in its recognition of coastal squeeze as a key issue for the district, should include policy hooks for the forthcoming Local Nature Recovery Strategy (LNRS) and make up to date references to both the Environment Act (2021) and the Environmental Improvement Plan (EIP, 2023). Given how recent the publication of the EIP is we would be happy to discuss with your authority how this could best be achieved but we believe given the wealth of natural capital within Chichester District it is vitally important that this latest iteration of the Local Plan is set in its full policy and legislative context.

We have suggested a significant number of amendments and additions to both policies and supporting text throughout the Plan. In our view these could all be taken forward as minor modifications but if they were all acted upon they would leave the Plan much stronger and more coherent in delivering for the natural environment, one of the three central tenets of genuinely sustainable development as set out in the National Planning Policy Framework (NPPF 2021, paragraph 8c).

See attachment for representations on paragraphs/policies.

Document Element: Policy P5 Spaces and Landscaping**Respondent:** Thakeham Homes (Tristan Robinson, Planner) [8163]**Summary:**

Paragraph 6.20 appears to be asking for brick walls on boundaries that face the public realm or shared parking areas. These are not only costly and often quite a hard, engineered approach that can often be more sensitively designed with a fence and/or planting. In Thakeham's view planting should be encouraged over brick walls, not only for aesthetic reasons, but for wildlife and Biodiversity Net Gain benefits.

Support intent of Policy albeit many criteria (a-g) overlap with other policies. Scope for consolidation. Requirement for new homes to meet NDSS acknowledged, important to test implications of requirement on whole plan viability. Should be recognised that requirement to meet NDSS in combination with M4(2) will influence overall density achieved on a site and could serve to limit overall number of homes delivered. Approach to external amenity space welcomed, cross over with earlier policies re; noise pollution/odour. Rigid adherence to 21m separation distance between directly facing principal windows of habitable rooms can result in unintended consequences and jar with creation of distinctive places exhibiting a tighter grain. Pleased to see flexibility afforded.

Object

Document Element: Policy P6 Amenity**Respondent:** Ms Lindsay Davey [7844]**Summary:**

Policy 6 is inconsistent with the sustainability appraisal; it does not protect or enhance the natural environment; does not promote health and wellbeing; nor does it protect and enhance heritage.

As a resident of Saxon Meadow the 21 metre separation distance has an unacceptable impact on my amenity, health and wellbeing, my property's future value. It also has an unacceptable impact on the surrounding biodiversity and the Conservation Area.

Inadequate outlook would lead to a sense of enclosure and also cause increased light pollution due to the close proximity of new housing to Saxon meadow. [see attached representation for further details].

Full text:

See representation

Change suggested by respondent:

- Reduce and or alter the housing density of the propose plan in the south/south east area of the [Tangmere] development so to enable more green space to be created.
- Shift the proposed housing in the south/south-east area further south towards the Tangmere Road and this increase the greenspace border between the housing and Saxon Meadow.

The above would all help to reduce the detrimental amenity impact and help redress the damage to outlook and views to and from Saxon Meadow residences, health and well being and sense of enclosure. It would extend and expand the greenspace/corridors around the Conservation Area this help reducing the negative effects to wildlife/biodiversity.

We agree with the need to provide suitable amenity standards for residents. However, a number of the policy points are replicated elsewhere, for example in relation to noise and lighting requirements.

Change suggested by respondent:

In respect of Space Standards, whilst the phase 2 of Chichester is intending to meet NDSS standards, any such policy requirement needs appropriate justification as set out in footnote 49 of the NPPF.

In respect of separation distances, it is suggested that the 21 meter back to back distance be clarified that this is between first floor windows. Lower separation distances may be acceptable between single storey dwellings such as bungalows.

Object

Document Element: Policy P6 Amenity**Respondent:** Mr Matthew Rees [7841]

Summary:

This policy is not sound because it not effective, and is not legal given that does not make a specific reference to policy P11 (which gives protection to views into and out of the area) over and above separation distances, and the failure to recognise this could result harm to conservation and heritage benefits of conservation areas, such as Saxon Meadow, which is currently surrounded by agricultural fields and is threatened with overdevelopment, encroachment. This risk seems to be playing out in the masterplan.

Full text:

There is much to commend in this document and the supporting technical documents that accompany it, and I have listed in the appendix to this letter 26 such paragraphs and policies. I am happy for my support to be registered against these sections of your consultation document. There is also much upon which I must represent a concern, so I attach representations relating to 22 paragraphs or policies.

I am happy to participate in a hearing session, and I would flag at this stage that the common theme that links all of these representations is the need to safeguard the natural and built environment in and around Saxon Meadow, Tangmere from the risks of unsustainable development, I consider that the independent examiner should focus their review on the aspects of the local plan that relate to this matter.

Appendix 1: list of policies that I support

1. P14, 1.23, 1.24: Duty to cooperate
2. P24, para 2.30 "the council declared a climate emergency in July 2019"
3. P24, para 2.32 – "all proposal for new development should be considered in the context of a climate emergencV'
4. P30: Objective 2: natural environment: "development will achieve net gains in biodiversity'
5. P43, 4.1 "National policy promotes increasing energy efficiency, the minimisation of energy consumption and the development of renewable energy sources"
6. P43, 4.3: "Some renewable energy projects provide significant opportunities to enhance biodiversitV'
7. P53, Policy NE5: Biodiversity and Biodiversity Net Gain
8. P62, Para 4.42: Hedgerows and some types of woodlands are identified as a priority habitat
9. P62, Policy NE8: Proposals should have a minimum buffer zone of 15 metres from the boundary of ancient woodland or veteran trees to avoid root damage (known as the root protection area)
10. P68, Policy NE10: Criteria for Development in the Countryside - Does not prejudice viable agricultural operations or other viable uses
11. P80, Para 4.91: There are serious concerns about the impact of flooding, both in respect of current properties at risk but also the long-term management of the area.
12. 4.92: any development in the plan area must therefore have regard to flood and erosion risk.
13. 4.94: built development can lead to increased surface water run-off; therefore, new development should include SuDS to help cope with intense rainfall events
14. P81, Para 4.96: Environment Agency consent is required for any works within 16 m of tidal waters and 8m of fluvial watercourses in line with the Environmental Permitting Regulations 2016. This strip is required for access. The policy includes a setback requirement to ensure this access strip is not obstructed.
15. P80, 4.92, Any development in the plan area must therefore have regard to flood and erosion risk, now and in the future, by way of location and specific measures, such as additional flood alleviation, which will protect people, properties and vulnerable habitats from flooding. Recent changes to national guidance highlight the importance of considering flood risk from all sources, and this is particularly significant for the plan area as large parts of it are at risk from groundwater flooding, which needs to be recognised in development decisions alongside the well-established risks in relation to tidal, fluvial and surface water flooding. Appropriate mapping of all sources of flood risks is still evolving, and is likely to develop further over the plan period
16. P93, Policy NE20 Pollution: Development proposals must be designed to protect, and where possible, improve upon the amenities of existing and future residents, occupiers of buildings and the environment generally. Development proposals will need to address the criteria contained in, but not limited to, the policies concerning water quality; flood risk and water management; nutrient mitigation; lighting; air quality; noise; and contaminated land. Where development is likely to generate significant adverse impacts by reason of pollution, the council will require that the impacts are minimised and/or mitigated to an acceptable level within appropriate local/national standards, guidance, legislation and/or objectives.
17. P94, 4.127, Light pollution caused by excessive brightness can lead to annoyance, disturbance and impact wildlife, notably nocturnal animals. The design of lighting schemes should be carefully considered in development proposals to prevent light spillage and glare.
18. P94, 4.128, Dark skies are important for the conservation of natural habitats, cultural heritage and astronomy. The plan area includes three 'Dark Sky Discovery Site' designations, all located within the Chichester Harbour AONB; Eames Farm on Thorney Island, Maybush Copse in Chidham; and north of the John Q Davis footpath in West Itchenor. Development within or directly impacting these areas will be subject to particular scrutiny in terms of their impact on dark skies. The entire SDNPA area is also declared as an International Dark Sky Reserve. Development directly impacting this area will be subject to similar scrutiny.
19. P96, Policy NE22 Air Quality
20. P97, Policy NE-23 Noise
21. P142, Para 6.29, Amenity: Private space, shared space and the design quality and construction of communal spaces all contribute to amenity
22. P155-6, Policy P11: Conservation Areas "protecting the setting (including views into and out of the area)"
23. P55, Para 4.26 - The council is under a legal duty to protect designated habitats, by ensuring that new development

does not have an adverse impact on important areas of nature conservation, and by requiring mitigation to negate the harm caused.

24. P58, Para 4.33 The council is under a legal duty to protect their designated bird populations and supporting habitats

25. P95, Para 4.129 The council has a duty to review and assess air quality within the district

26. P301, Conservation Area: An area of special architectural or historic interest, designated under the Planning (Listed Buildings & Conservation Areas) Act 1990. There is a statutory duty to preserve or enhance the character, appearance, or setting of these areas.

Change suggested by respondent:

The separation distances proposed in the masterplan are not sufficient and need to be increased materially.

Local plan should also be changed as follows:

Separation distances

Development shall maintain suitable separation distances between the windows of habitable rooms in dwellings (principal living rooms, principal dining areas, bedrooms and kitchens where there is not separate dining room) and the windows and walls of other properties to ensure that an appropriate level of amenity is provided and retained for all residential occupiers. It will generally be expected that no less than 21 metres is proposed between facing principal windows of habitable residential rooms and windows of other uses that could result in significant overlooking.

Appropriate distances will be considered on an individual site and design basis considering aspects such as density, scale, height differences and site levels. In circumstances where land levels vary or the difference in building heights is greater than one storey or new development is proposed next to a conservation area longer separation distances will be ordinarily required to support the delivery of policy PI 1. Shorter distances will be permitted where they are necessary to secure the positive reuse of a historic building or are consistent with the character of the local area subject to it being demonstrated that an appropriate level of amenity for existing and future occupiers would be achieved.

Document Element: Policy P8 Materials and Detailing**Respondent:** Miller Homes and Vistry Group [8065]**Agent:** Tetra Tech (Natalie Wilson) [8256]**Summary:**

Whilst Miller and Vistry are committed to using high quality, sustainable materials, we have concerns about policy P8. Policy P8 is particularly prescriptive in regards to what materials and detailing should be used, for example on the types of cladding that can be used (point 9) or suggesting the avoidance of commonly used upvc windows (point 11). Such prescription within planning policy is likely to stifle innovation and is not justified and any such points should be removed. The reference to 'value engineering approaches' is also not required or justified. Each application should be assessed on its own merits.

Document Element: Policy P8 Materials and Detailing**Respondent:** Thakeham Homes (Tristan Robinson, Planner) [8163]**Summary:**

Point 6 - If features such as chimneys are desired to be incorporated into a scheme, then they need to be GRP. GRP chimneys can be in keeping with existing character of an area and should not be dismissed with a blanket policy such as this.

Point 9 - fibre cement boarding can be a visually attractive design within a development. If cladding is to be used it is preferred to be fibre cement due to safety benefits. Timber is combustible and even if it has been treated poses a fire risk. Timber is not recommended by Building Regulations, further support of this is within The Building Safety Act.

Point 10 - would recommend this is assessed on a case-by-case basis depending on what blocks are put forward at design stage.

Point 11 - uPVC provides a robust and reliable material at a reasonable price which is highly popular in the housing market. It is also a product that house buyers would commonly expect to find on a new-build and are familiar with.

Full text:

See attached representation.

Change suggested by respondent:

Reconsider wording of point 6 of Policy P8. Either remove point 11 or amend as follows: "The use of uPVC will not be unsupported, however the use of alternative materials with environmental benefits will be encouraged".

Document Element: Policy P9 The Historic Environment**Respondent:** Historic England (Alan Byrne, Historic Environment Planning Adviser) [1084]**Summary:**

We welcome the inclusion of policies for the historic environment in the local plan at Policies P9 - P13 that, along with other policies, meet the obligation for preparing the positive strategy required by the NPPF. The key test of the soundness of the plan and the achievement of sustainable development as defined in the NPPF in respect of the elements that relate to the historic environment (paragraph 190), in our view, have been met

Full text:

As the Government's adviser on the historic environment Historic England is keen to ensure that the protection of the historic environment is fully taken into account at all stages of the planning process. This includes formulation of local development policy and plans, supplementary planning documents, area and site proposals, and the on-going review of policies and plans.

There are many issues and matters in the consultation document that are beyond the remit and concern of Historic England and our comments are, as required, limited to matters relating to the historic environment and heritage assets. In our previous comments (by online submissions dated 1 - 6 February 2019), Historic England focused on the objective of the National Planning Policy Framework to set out a positive strategy for the conservation, enjoyment and enhancement of the historic environment (now Paragraph 190, NPPF); and contain policies to deliver the conservation and enhancement of the historic environment (now Paragraph 190a, NPPF).

Our comments on the Regulation 18 stage draft Local Plan largely have been addressed in the current Publication version or are, in our view, not now likely to affect the soundness of the Local Plan.

We welcome the inclusion of policies for the historic environment in the local plan at Policies P9 - P13 that, along with other policies, meet the obligation for preparing the positive strategy required by the NPPF. The key test of the soundness of the plan and the achievement of sustainable development as defined in the NPPF in respect of the elements that relate to the historic environment (paragraph 190), in our view, have been met.

Object

Document Element: Policy P11 Conservation Areas**Respondent:** Mrs Elspeth Rendall [8164]**Summary:**

Council fails in plan to preserve and enhance conservation areas; ignored and disregarded Character Appraisal for Tangmere.

Full text:

Local authorities are required by law to preserve or enhance their Conservation Areas and part of that is to process is the production of a character appraisal to explain what is important about the area. I think that policy 11 has not been legally complied with as the council has failed in that its building plan fails to "preserve and enhance" its conservation area. In fact, far from being legally compliant, the council has ignored and disregarded the Character Appraisal carried out for it which concludes: "that the most significant features of the Tangmere Conservation Area are:

- Tranquil and rural character of the earlier historic core along Church Lane." (see relevant marked page from the Character appraisal) and extract from page 10 Tangmere Conservation Area (character appraisal and management proposals 2014)

The heritage of the "historic core" centres around the Saxon church (mentioned in the Domesday Book) and its immediate environs i.e. Saxon Meadow and the fields surrounding it and Saxon Meadow.

The commonwealth graves situated in St Andrew's Churchyard are of national importance and deserve to be surrounded with tranquillity and treated with respect. The links with WW11, the battle of Britain and Douglas Bader should be noted.

The views into and from Saxon Meadow include wide open farmland with vistas that include Oving Church Spire and Chichester Cathedral spires, as well as the South Downs. This farm land and the historic views within in both into and out of Saxon Meadow are worth saving and protecting for future generations. Indeed, the Saxon church of St Andrew's Tangmere has an historical link with St Andrew's Church, Oving which is situated along Church Lane in Oving. The fact that you can see the spire of the linked churches I,e from Oving you can see Tangmere church spire and vice versa is of import as there is an historical link between the two churches.

The rural nature of the historic tangmere around church lane, its wide open vistas and good arable farm land should be "preserved and protected" not destroyed. The plan is in total contrast this legal duty. The size, density and proximity of the buildings in a rural setting is unsympathetic and will destroy what I would have thought a conservation area was established to preserve.

For the reasons above the plan is also unsound.

See extracts and photos

Change suggested by respondent:

Plan needs move away from conservation areas otherwise Council will be acting unlawfully. To protect and preserve views, farmland and rural nature of historic Tangmere, conservation area needs to be extended to incorporate Tangmere and Oving. Council should look to use brownfield sites rather than destroy greenfield sites. Council should prioritise using unused buildings within city centre and urban sites to comply with its legal obligations under P11.

Document Element: Policy P12 Non-Designated Heritage Assets**Respondent:** Bellway Homes (Wessex) Ltd [1573]**Agent:** Chapman Lily Planning (Mr Brett Spiller, Planning Consultancy Director) [8132]**Summary:**

Support intent of Policy 12 - consider it aids interpretation of national planning policies recognising importance of historic environment. Surprised by first section of criteria 2(c) in so far as implies non-designated heritage assets could be designated solely based on their contribution towards their surroundings. Would appear to be more a matter of townscape / character than heritage per-se. Note inclusion of archaeology in policy but would be surprised if criteria 4(a-c) need apply to all developments (even minor applications) that involve excavation and ground works. Perhaps more appropriately addressed through validation checklist.

RECEIVED LATE: Parishes should be encouraged to look into such areas to be included in Neighbourhood Plans.

Full text:

Thank you for the opportunity to comment on the Draft Chichester District Local Plan 2021-39. We would suggest that there has been insufficient public consultation to date. We commented on the draft Local Plan for 2015, on the Preferred Options in 2019 and there have been many changes in Government policy and commitments since then to include Climate Change, Net Zero and commitments made at COP 26 and 27 to include reducing methane emissions etc. With regards to this consultation we recognise the importance of a plan-led system and support Chichester District Council's

(CDC) desire to produce a comprehensive Local Plan. CPRE Sussex wishes to contribute to policies concerning landscape, rural areas, communities, environment and wildlife drawing on evidence and local knowledge.

CONTEXT

1. Examining the previous government consultation which closed on March 2nd, ie the Levelling-up and Regeneration Bill including some aspects of the National Planning Policy Framework, NPPF, there are some issues which would impact on this Local Plan and need consideration.

1.1 That consultation included important changes to the way in which the 5 year housing land supply is calculated, and the timetable for making Local Plans. They are of significance to local councils, especially those with Neighbourhood Plans. Some measures will take effect almost immediately through an update to the existing NPPF in Spring 2023. Others will follow later in the year or in 2024. Surely such consultations should be better phased to make plan development more logical and access to consultations easier?

2. Communities: Our group welcomed the overall shift in emphasis towards communities. Mind you, while the word is used 121 times in the Prospectus it does not appear in the draft NPPF! We would expect much more emphasis on the importance of communities in any forthcoming consultations. Earlier and more effective engagement with communities could help to lead to a less confrontational planning system with an emphasis on active participation.

3 Time required – a lot of time is needed to understand and implement such policies and a searchable on-line version would be very helpful; and, consideration also needs to be extended to those people in the community who are not computerised.

4 We take the word “sufficient” with regard to housing numbers to be equivalent to that which is “needed” and the current Standard Method does not establish that figure. Our MP, the Rt Hon Andrew Griffith, Arundel and South Downs, referred to the approach to developing housing numbers as a mutant algorithm.

4.1 Specifically, the changes to housing targets, to make them ‘advisory’, are welcome. However, we should remind you that the Government continues to insist on using out-of-date projections (2014). The current ONS population estimates are 1 million less people in the population than allowed for in the figures used to so that the reliance on the 2014 figures is completely out of date. The emphasis should always be on using current up to date evidenceand to use those out-of-date figures produces the wrong results and does not conform with the need to use up to date information. In addition, this would require an immediate change to the guidance to insist (as previously) on the most up-to-date projections.

4.2 We also recommended a review of the Standard Method, which does not make housing affordable and simply supports developers to build market homes where they want to. The graph above illustrates the gap between projection and current population figure provided by the Community Planning Association.

4.3 Local Planning Authorities, LPAs, were also given an opportunity to put forward alternatives to the Standard Method and to name the specific constraints faced. Our contribution to that consultation referred to the:

- Reduction of land available to the CDC given the creation of the South Downs National Park, SDNP
- English Channel
- SDNP itself
- Range of internationally important designated sites
- Rare species and habitats
- River flood plains
- Water neutrality in part of the District
- Nutrient neutrality in the Solent
- Sea Level Rise
- Inadequate infrastructure – roads/lanes and local transport; sewage treatment; community facilities such as medical centres, shops; and

4.4 There have already been large housing commitments, loosely put on “flat green land” around Chichester and now CDC is eyeing the “empty” north of the District with allocations being made for Loxwood and an increase in the number of houses being sought in Wisborough Green. Such land supports wildlife which often may not be under recorded as it is private land. Areas in both of those Parishes has been “cleared” of biological interest but the BNG established a baseline of 2020 and google maps can show the state of the environment at that date. The commitment to safeguarding biodiversity needs to be pursued carefully and consistently.

COMMENTS ON THE CDC LOCAL PLAN 2021-2039 REG19 proposed submission comments: the comments cite the para and/or Chapter number

5. At this phase in the local plan process the scope of the invited representations is limited to whether the Plan that has been produced is:

- a) legally compliant (i.e., whether it meets the legal requirements); and
- b) sound (i.e., whether it has been positively prepared, is justified, is effective and is consistent with national policy) and I would ADD whether it is forward thinking enough as it is planned to last until 2039.

5.1 The plan area is split in to three areas, each with different characteristics, landscapes and access to services:

- a) • The East-West Corridor, running across the width of the plan area, is varied in landscape with the inclusion of both larger settlements (including the city) and rural villages. It has the best transport connections and access to facilities in the plan area with the A27 and railway running through-out.
- b) The Manhood Peninsula* MP, located in the south of the plan area, jutting out into the English Channel, is rich in coastal landscapes with the majority of the area covered by environmental designations. It also includes some of the plan area’s larger settlements which rely heavily on limited road accessibility to the north towards Chichester city.
- c) The North of the Plan Area is primarily rural in character with diverse landscapes, rich cultural and heritage assets and a number of dispersed settlements, some of which are relatively isolated and served by narrow lanes with limited public transport

*NB The population on the MP is dispersed in a rural landscape and equals that of Chichester. The description for the North section could just as easily have been used for the MP.

Chapter 2 and Local Plan Vision

These Objectives will need to underlie every aspect of the document.

5.2 P 23: Para 2.25 Replace the word "site" by "area" and insert forming part of a diverse set of wetlands (Ditches, Rifes, Ponds, Saline lagoons and a small section of Canal). Info: The Medmerry site is no longer the largest eg having been overtaken in area by the Steart Marshes, Somerset.

5.3 Include mention of rare habitats and species and the role of Selsey Bill in facilitating arrivals and departures of bats, butterflies and birds. That's its USP,

6.1 P 25 Local Plan Vision and Strategic Objectives p 30 Objective 1: CLIMATE CHANGE

This section does not reflect the urgency of the issue nor the vulnerability of parts of Sussex. Many scientists are pointing to Sea Level Rise, SLR, speeding up and some of them cite a 10 year window in which to act ie so that before this Local Plan has run its course, areas on the coast including the coastal plain and the Manhood Peninsula could well be adversely affected. This would have an immediate impact on housing, facilities and transport links and could lead to the local population having to move.

6.2 Actions related to this particular objective need to be included in all the following objectives. The south of the District is very vulnerable and the rest of the District will experience very intensive rainfall, water shortages (NE/EA 2013 report) and hot summers.

6.2 Policies need to include not building on areas below 5m high Water Level. The CDC Climate Change officer should host meetings to consider potential plans for putting houses on stilts, moving people to land safe from flooding and re-directing roads, cycle ways and footpaths to facilitate future access.

6.3 Evidence: See the Surging Seas and NASA websites for prediction of Sea Level Rise. Need to include reference to the UK Climate Resilience Programme jointly led by UK Research and Innovation, UKRI, and the Met Office which was set up to fund research "to help understand how to quantify the risks from climate change and build climate resilience for the UK, This research should produce "usable outputs" to "directly support decision-making" by government, local authorities, communities and other stakeholders

6.3.1 Every area of UK society will feel the effects of climate change and, as global emissions continue to rise, pre-paring for life in a warmer world is crucial. Findings were discussed last week by the UK ranging from assessments of elderly people overheating in care homes through to building community-run water storage.

6.3.2 Every area of UK society will feel the effects of climate change and, as global emissions continue to rise, preparing for life in a warmer world is crucial.

6.2.2.i In early March, UKTI and Met office researchers involved with the programme gathered to present and discuss their findings. They ranged from assessments of elderly people overheating in care homes through to building community-run water storage. These items and website need to be referenced in the evidence section.

6.3.3 The key points are intended to help businesses and policymakers adapt to climate change.

6.3.4 Many focused on "climate services" defined as involving the "production, translation, transfer and use of climate knowledge and information in climate-informed decision making".

6.3.5 Climate services could be an important tool for adaptation because they can provide people with the relevant information to prepare for climate change.

6.3.6 Representatives from the Met Office laid out their recommendations for a UK National Framework for Climate Services. And said they wanted to provide a "driving force" for the nation's climate services community and help ensure that "adaptation action actually does get done".

6.4.7 UK 'SSPs'

"Shared socioeconomic pathways" (SSPs) are tools used by researchers to explore how society will change in the future. This can help them to answer important questions about climate change. As there were no UK-specific versions of SSPs available to complement the UKCP18 climate projections

Ref: The importance of Adaptive Resilience Solutions in the Face of Climate Threats.

Recommendation: This report needs to be drawn on and form part of the evidence base.

7.1 Objective 2: NATURAL ENVIRONMENT Work with site managers of the Designated Sites and NGOs in the wider environment. This objective is vitally important and welcome and its importance needs to be reflected in all parts of the plan to include Wildlife Corridors, Biodiversity Net Gain and the Nature Recovery Network.

Sir David Attenborough

"It may sound frightening, but the scientific evidence is that if we have not taken dramatic action within the next decade, we could face irreversible damage to the natural world and the collapse of our societies."

7.1.1 The emergency concerning Biodiversity also needs to be communicated.

Para 2.32: Agree – this (climate emergency) is the most urgent issue facing us all together with the Biodiversity Emergency (declared by IPBWS, 2019).

7.1.2 Info: The ESPACE project European Spatial Planning: Adapting to Climate Events (ESPACE) was a four-year project funded by the European Commission's north-west Europe INTERREG IIIB programme and the ODPM. It produced a Climate Action Plan for the Manhood Peninsula in 2008 and not much action has followed to implement this. Perhaps it needs dusting off and re-visiting and including within the Local Plan?

7.2 Add policy:

PROPOSED Ecosystem Services Policy

7.2.1 CPRE Sussex considers that the Chichester Local Plan 2021 - 2039 should include a policy specifically for Ecosystem Services for the following reasons:

1. NPPF para 174. Planning policies and decisions should contribute to and enhance the natural and local environment by:

a) protecting and enhancing valued landscapes, sites of biodiversity or geological value and soils (in a manner commensurate with their statutory status or identified quality in the development plan);

b) recognising the intrinsic character and beauty of the countryside, and the wider benefits from natural capital and

ecosystem services – including the economic and other benefits of the best and most versatile agricultural land, and of trees and woodland

7.2.2 'Natural capital refers to the elements of nature that produce value to people –whether directly or indirectly. Our natural capital 'assets' are the stocks of renewable and non-renewable natural capital such as our soils, freshwater, farmland, forests, atmosphere, oceans, ecological processes and the natural processes that underpin them. The flows of ecosystem services and benefits that our natural capital provides can be very obvious such as food, fuel, clean air, clean water, and opportunities for recreation. Others are much less visible, such as climate regulation, flood defences provided by natural vegetation, the billions of tonnes of carbon stored by peatlands and other habitats and the pollination of crops by insects'. (Sussex Local Nature Partnership <http://sussexlnp.org.uk/natural-capital/>)

7.3 Accordingly, we propose an Ecosystem Services policy (an adaptation of South Downs Park Authority's Core Policy SD2: Ecosystem Services'), be added as follows:

1. Development proposals will be permitted where they have an overall positive impact on the ability of the natural environment to contribute goods and services. This will be achieved by means of high-quality design, and by delivering all opportunities to:

- a) Sustainably manage land and water environments;
- b) Protect and provide more, better and joined up natural habitats;
- c) Conserve water resources and improve water quality;
- d) Manage and mitigate the risk of flooding;
- e) Improve the District's resilience to, and mitigation of, climate change;
- f) Increase the ability to store carbon through the retention of existing woodland, new planting or other means;
- g) Conserve and enhance soils, use soils sustainably and protect the best and most versatile agricultural land;
- h) Support the sustainable production and use of food, forestry and raw materials;
- i) Reduce levels of pollution;
- j) Improve opportunities for peoples' health and wellbeing; and
- k) Provide opportunities for access to the natural and cultural resources which contribute to the District's special qualities.

2. The Environment Act 2021 will require the production of a Nature Recovery Network and more locally a Local Nature Recovery Strategy. The Strategic Wildlife Corridors in Chichester District will be integral components of that local network. The importance of local networks in Nature Recovery Networks is highlighted in NPPG

7.3.4 Policy NE 4 Strategic Wildlife Corridors

CPRE Sussex supports this policy, Strategic Wildlife Corridors as part of the Local Plan process, conform with section 179 of the NPPF 2021 which is well-evidenced. However, CPRE Sussex wishes to question the size of the corridors ie the width/

Information provided in the 2021 consultation appears to demonstrate that these areas have been downsized such as those put alongside the East of the City Corridor, it appears that there has been a narrowing of the Strategic Wildlife Corridor around the location of the proposed allocations of A8, Chapter 10: Strategic and Area Based Allocations Land East of Chichester and potential A7, Land at Shopwyke. The Corridor to the East of Chichester was proposed for connectivity and functional links to the area for the rare and European Protected Species of Barbastelle Bats. It is shown on CDC technical consultation documents as a bat network

This does not conform with the Natural Environment & Rural Communities Act, NERC, 2006 and Section 40 subsection 3a as it would destroy a habitat over which the Barbastelle Bat has been recorded, a Section 41 species. And it is the DUTY of the Local Authority to safeguard these species. There should be NO recreational use in the buffer zones.

8. Green Infrastructure: p 160 and Policy P 14 d Submission (Regulation 19)

8.1 Local Green Space

6.82. The NPPF includes the concept of Local Green Space designation. This is a discretionary designation and sites may be identified and included in either local or neighbourhood plans. The designation should only be used as defined by the criteria in the NPPF where the land is not extensive, is local in character and reasonably close to the community; and, where it is demonstrably special, for example because of its beauty, historic significance, recreational value (including as a playing field), tranquillity or richness of its wildlife. Any areas which fall outside a neighbourhood plan area and where such designation is sought, will be considered by the subsequent Site Allocations DPD that will cover the remainder of the plan area. Policies for managing development within a Local Green Space should be consistent with those for Green Belts.

8.2 Parishes should be encouraged to look into such areas to be included in Neighbourhood Plans.

9. Renewable Energy: General policy

9.1 Housing p 103:

CPRE Sussex considers that the Chichester Local Plan should include a policy requiring all new-build homes to be equipped and sold with solar PV panels, roof or wall mounted.

9.2 Although the Chichester District Local Plan, at Para 6.15, states that 'Design proposals should respond to the opportunities a site presents to make best use of solar gain where this can be achieved without compromising good urban design or creating issues of overheating', there is no requirement in the any of the plan's policies for new-build homes to be equipped and sold with roof or wall mounted solar PV.

9.3 Note that West Sussex County Council has advised in their Solar Together initiative that "By generating electricity from the sun, you could reduce your annual carbon emissions by approximately one tonne each year and help West Sussex to become carbon neutral".

Note, too: <https://solartogether.co.uk/westsussex/blog/best-ways-to-increase-solar-self-consumption>

9.4 "According to the University of Oxford findings, UK households with solar PV self-consume 45% of their own solar generation on average and reduce annual electricity demand from the grid by 24%. With additional adjustments, this reduction of 24% can be increased to over 35%".

9.5 New-build homes in Chichester District should therefore be equipped with solar P V panels. We question the statement in Para 6.15 that 'solar gain' could create 'issues of overheating'. Surely this can be prevented by good design?

9.6 There are additional opportunities for solar installations on school rooves (Brighton Sustainable Energy Co-op has many examples), car parks, industrial buildings et al.

10.0 Renewable Energy: Specific location Wisborough Green 75 additional houses. Unacceptable – see CDC Capacity Study sub sections 166+167. Limitations – Ancient woodland; wildlife – rare habitats and species, river floodplain; Water neutrality; HRA with reference to the Mens Ancient Woodland and presence of European Protected Species, Barbastelle Bats flight paths and foraging across the parish. See Natural England report Site Improvement Report and reports by Frank Greenway, 2008 et al.

10.1 See Page 84: In the north of the plan area, properties within Southern Water's Sussex North Water Resource Zone are supplied with water from a groundwater abstraction at Pulborough which is currently subject to environmental investigations to ensure there is no adverse impact on environmentally designated sites in the Arun Valley. This may impact on the available supply and alternative sources may need to be considered by Southern Water. Natural England published a position statement in September 2021 requiring developments within the Sussex North Supply Zone to be water neutral – this means that the use of water in the supply area after the development is the same or lower than before. A Water Neutrality Strategy had been prepared jointly with other affected authorities. Natural England's Position Statement sets out an interim approach based on minimising water use in new builds and offsetting the water that is used

10.2 Water consumption target. It is noted that both Ports-mouth Water and Southern Water have targets to reduce water consumption to 100 litres per person per day (lppd) by 2040, a lower figure than the current most stringent Building Regulation target of 110 lppd and not that level which could be required for water neutrality.

10.3 The Local Plan is weak on impacts especially from the largest concentration of caravans at Selsey on Medmerry.

10.4 There is no wildlife corridor running east to west along the Manhood Peninsula ie Pagham to East Head and this undermines the importance of a positive barrier zone to protect the habitat. CDC have used the corridors for this barrier purpose possibly more than as a pathway throughout other parts of the plan.

10.5 Nutrient neutrality exclusion of a large area of the Peninsula from the protection zone is illogical as the same conditions exhibited in Chichester harbour (in the zone) exist at Pagham.

10.6 There is a 'tool' - "nutrient budget calculator March, 2022 version" – which gives an "n" factor for instance to discharges from WWTW. There is no direct mention of its use at Chichester harbour and as the data on Pagham Harbour has yet to be made public, the role of Sidlesham WWTW has not been referred to. The "N" factor would probably be more restrictive on outflows from WWTW than the total discharge permits – and shows a lack of coordinated approach between the Environment Agency and Natural England.

10.7 There are two reports due to be published this month - the West Sussex Coast and Gt Brighton Board and Southern Water overall plan for drainage and waste water-the timing of the LP – is thus unable to take these two influential inputs into account and may have implications for the 'Soundness' of the plan as it moves forward.

10.8 No mention is included of Sidlesham WSTW which is operating at and beyond capacity resulting in new housing on the Manhood Peninsula dealing with waste water in gardens, in houses etc.

Pages 87 and 88: Paras 4.112 and 4.113 are contradictory.

Appendix F Monitoring Framework

Early in 2020 attended a Public Inquiry representing the Manhood Wildlife and Heritage Group and presented evidence about an application at Easton Farm where the implementation of an application had not been followed up, which had expanded like Topsy and which potentially could damage the Medmerry coastal realignment site with its runoff. CDC had not been on watch possibly through lack of staff and/or a lack of enforcement staff. The site had grown without permission. This section requires a firm commitment to monitoring and reporting back, not just a paper one.

Thank you for your attention.

Document Element: Policy P14 Green Infrastructure**Respondent:** Countryside Properties [7291]**Agent:** Turley (Mr Ryan Johnson, Director) [7887]**Summary:**

The wording 'and beyond the site boundaries' in Criterion 2 is sufficiently ambiguous to compromise its effectiveness. Could imply a requirement to meet needs beyond that required to satisfy the statutory tests in regulation 122 (as amended by the 2011 and 2019 Regulations) and policy tests in the National Planning Policy Framework.

Document Element: Policy P14 Green Infrastructure

Respondent: National Highways (Mr Marius Pieters, Spatial Planning Manager) [8127]

Summary:

[National Highways letter dated 24/07/23 confirmed representation should be categorised as Comment - Suggest proposals should support non-car trips.] As Policy P4, proposals should maximise opportunities to link with the wider network including the existing A27 pedestrian and cycle footbridges and active travel routes along/intersecting the A27 corridor and how new facilities will be funded, monitored, and maintained.

This is an important measure to reduce demand on the A27.

Full text:

We have reviewed the publicly available Local Plan documents and provided comments in the attached letter, in relation to the transport implications of the plan for the safety and operation of the SRN.

Our comments include issues to resolve, comments, requests for further information and recommendations. A brief summary of our main comments are:

- the reliance on the delivery of the A27 Chichester bypass improvements project.
- the requirements for new, additional, and adapted processes and assessments, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments.
- collaborative working between agencies in combination with a robust monitor and manage policy.

We hope our comments assist.

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders. We look forward to continuing to participate in future consultations and discussions.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Background

National Highways has been appointed by the Secretary of State for Transport as strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the strategic road network (SRN).

National Highways is responsible for operating, maintaining, and improving the Strategic Road Network (SRN) i.e., the Trunk Road and Motorway Network in England, as laid down in Department for Transport (DfT) Circular 01/2022 (Strategic Road Network and the delivery of sustainable development).

The SRN is a critical national asset and as such we work to ensure that it operates and is managed in the public interest, both in respect of current activities and needs as well as in providing effective stewardship of its long-term operation and integrity.

Our responses to Local Plan consultations are guided by relevant policy and guidance including the National Planning Policy Framework (2021) (NPPF):

- Transport issues should be considered from the earliest stages of plan-making and development proposals so that the potential impact of development on transport networks can be addressed (para 104).
- The planning system should actively manage patterns of growth such that significant development is focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. (para 105).
- Planning policies should be prepared with the active involvement of highways authorities and other transport infrastructure providers so that strategies and investments for supporting sustainable transport and development patterns are aligned. (para 106).
- In terms of identifying the necessity of transport infrastructure, NPPF confirms that development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe. (para 111).
- Planning policies and decisions should support development that makes efficient use of land, taking into account the availability and capacity of infrastructure and services – both existing and proposed – as well as their potential for further improvement and the scope to promote sustainable travel modes that limit future car use. (para 124).

In relation to the tests of soundness set out at paragraph 35 of the NPPF, in the context of transport, these are interpreted as meaning:

- a) Positively prepared - has the transport strategy been prepared with the active involvement of the highway authorities,

other transport infrastructure providers and operators and neighbouring councils?

b) Justified – Is the transport strategy based on a robust evidence base prepared with the agreement in partnership, or with the support of the highway authorities?

c) Effective – Does the transport strategy and policy satisfy the transport needs of the plan and is it deliverable at a pace which provides for and accommodates the proposed progress and implementation of the plan?

d) Consistent with national policy – Does the transport strategy support the economic, social, and environmental objectives of the Plan and the NPPF/NPPG?

We will be concerned with proposals that have the potential to impact on the safe and efficient operation of the SRN; in this case, the A27 trunk road (Chichester Bypass and its junctions) which is the main access route in the Chichester area. We have particular interest in any allocation, policy or proposals which could have implications for the A27 and the wider SRN network. We are interested as to whether there would be any adverse road safety or operational implications for the SRN. The latter would include a material increase in queueing or delay or reduction in journey time reliability during the construction or operation of the development set out in the plan.

National Highways is a key delivery partner for sustainable development promoted through the plan-led system, and as a statutory consultee we have a duty to cooperate with local authorities to support the preparation and implementation of development plan documents.

In accordance with national planning and transport policy and our operating licence, we are entirely neutral on the principle of development as it is for the local planning authority to determine whether development should be allocated or permitted; albeit it must comply with national policy on locating development in locations that are or can be made sustainable. Therefore, while always seeking early and fulsome engagement with local plans and/or developers, we will simply be assessing the transport and related implications of plans or proposals and agreeing any necessary transport improvements and relevant development management policy.

In progressing Local Plans, we will seek to agree the following:

- Assessment tools and methodology
- Baseline Assessment i.e., to demonstrate that the assessment tool accurately reflects current transport conditions
- Comparator case assessment i.e., to forecast the transport conditions that would occur in the absence of the plan
- Forecast modelling i.e., to forecast the transport conditions that would arise with the plan in place, this will include an assessment at the end of the Plan period; and, if required, at full build out if that occurs after the end of the Plan period
- Outputs and outcomes of modelling, demonstrating, as appropriate, what transport infrastructure is necessary to support the plan o It should be noted that a suite of transport modelling tools may be required. This includes strategic modelling covering an area at least one major junction beyond the district boundary, localised network modelling where several links/junctions are close together and/or individual junction modelling
 - o A DMRB (Design Manual for Roads and Bridges) compliancy assessment may also be required for certain highway features, such as Merge/Diverge assessment at Grade separated junctions, link capacity assessments, and others.
- The design of any necessary transport infrastructure, to an extent suitable for establishing deliverability during the plan period at the time that it becomes necessary for the purpose of ensuring that unacceptable road safety impacts or severe operational impacts do not arise as a result of development. This may be to at least General Arrangement design stage or preliminary design stage. Whichever degree of detail is agreed, the products must be in full compliance with the DMRB.
- Industry standard transport intervention costings.
- The delivery/funding mechanisms for necessary transport interventions. It should not be assumed that National Highways will have any responsibility to identify or deliver necessary transport interventions.
- If considered appropriate, a “Monitor & Manage” (M&M) framework, aimed at managing the pace of development in line with the pace of funding and delivery of necessary highway interventions in a manner which responds to the realworld impacts of development may be agreed for inclusion in the plan subject to the adequacy of risk control measures included therein. This can include the move from a ‘predict & provide’ style of delivery to ‘a vision & validate’ style. o Any M&M framework must be based on a “worst case scenario” whereby necessary mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. It must be translated into development management plan policy and policy relating to development allocations.

Further detail on the above can be provided by National Highways.

While ideally all the above should be agreed prior to the Submission of the Local Plan for examination, we recognise that this is not always possible. However, all parties should work towards all matters being agreed and reflected in a Statement of Common Ground (SoCG) by the start of the Local Plan Examination at the latest. Ideally the SoCG between the Council and National Highways would be prepared well in advance of plan submission in order to guide resource input and to track progress towards final agreement on all relevant matters starting from the earliest plan iterations until the final version is agreed.

It is acknowledged that Government policy places much emphasis on housing delivery as a means for ensuring economic growth and addressing the current national shortage of housing. The NPPF is very clear that:

“Strategic policy-making authorities should establish a housing requirement figure for their whole area, which shows the extent to which their identified housing need (and any needs that cannot be met within neighbouring areas) can be met over the plan period.”

However, new DfT C1/22 and the NPPF are equally clear that any development, including housing delivery, must be tempered by the requirement to ensure that the associated transport demand can be accommodated without unacceptable impacts on the safety of the SRN or severe impacts on the operation of the SRN including reliability and congestion. Therefore, as necessary and appropriate, any plan and/or development must be accompanied by suitable mitigation in the right places at the right time, that is to the required design standards and is deliverable in terms of land availability, constructability and funding.

We would also draw your attention to the then Highways England document ‘The Strategic Road Network, Planning for the Future: A guide to working with National Highways on planning matters’ (September 2015). This document sets out how National Highways intends to work with local planning authorities and developers to support the preparation of sound documents which enable the delivery of sustainable development. https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_t_data/file/461023/N150227_-_Highways_England_Planning_Document_FINAL-lo.pdf

Responses to Local Plan consultations are also guided by National Planning Policy Framework (NPPF) revised on 20 July 2021 which sets out the government’s planning policies for England and how these are expected to be applied.

Updated Circular (01/2022)

It should be noted that since the start of the Local Plan consultation process, on the 23 December 2022, the Department for Transport released a new circular on the ‘Strategic road network and the delivery of sustainable development’ (Circular 01/2022), which replaces all of the policies in Circular 02/2013 of the same name. These representations take account of the new circular and the requirements in terms of the Local Plan evidence base and process.

We request that the Local Plan is prepared in line with all aspects of the new circular. Particularly, the principles of sustainable development (paragraphs 11 to 17), new connections and capacity enhancements (paragraphs 18 to 25), and engagement with plan-making (paragraphs 26 to 38).

Regulation 18 submission

In our Regulation 18 submission we noted several matters including:

- The need to mitigate the adverse impacts of strategic development traffic to the A27 Chichester Bypass and its junctions at Portfield Roundabout, Bognor Road Roundabout, Whyke Roundabout, Stockbridge Roundabout and Fishbourne Roundabout and Oving junction.
- The need to identify a mechanism to calculate contributions towards the delivery of the previously agreed Local Plan A27 improvements
- The need to confirm the number of dwellings needed within the plan period
- The need to establish National Highways acceptance of the traffic model reference and future case scenarios
- The need to confirm costs, viability, and funding associated with mitigating the safety and congestion impacts of the development included within the plan.

Local Plan context

This Local Plan (Chichester Local Plan 2021 – 2039), prepared by the Local Planning Authority (LPA) Chichester District Council, sets out the vision for future development in the district and will be used to help decide on planning applications and other planning related decisions including shaping infrastructure investments.

The draft sets out how the district should be developed over the next 18-years to 2039 including for the full Plan period (1 April 2021 to 31 March 2039) the total supply of

- 10,359 dwellings

- 114,652 net additional sqm new floorspace

Minus the completions this is equivalent to around 530 dwellings and 6,150 sqm of floorspace a year.

National Highways Representations

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders.

We have undertaken a review of the Chichester Local Plan 2021-2039 proposed submission version and accompanying evidence documents, our comments are set out in the tables below (following pages). [see table within attachment]

Summary

We have reviewed the publicly available Local Plan documents and provided comments above in relation to the transport implications of the plan for the safety and operation of the SRN. We understand that other technical information is available, but this was not presented as part of this consultation.

Chichester, and the A27, are already heavily congested, infrastructure in the existing Local Plan remains undelivered and the growth set out in the new Plan will further increase travel demand.

As presented, satisfying the transport needs of the plan is clearly reliant on the delivery of the A27 Chichester bypass improvements project. The A27 Chichester bypass improvements project is one of 32 pipeline schemes being considered for possible inclusion in National Highways third Road Investment Strategy (RIS3) covering 1 April 2025 to 31 March 2030.

On 9 March 2023 the UK Transport Secretary ensured record funding would be invested in the country's transport network, sustainably driving growth across the country while managing the pressures of inflation. The announcement cited the A27 Arundel Bypass as being deferred from RIS2 to RIS 3 (covering 2025-2030). The transport secretary also identified a number of challenges to the delivery of the road investment strategy and cited the benefit of allowing extra time to ensure schemes are better planned and efficient schemes can be deployed more effectively.

At present, there is no commitment by DfT to carry out the A27 Chichester bypass improvements project. Until the A27 Chichester bypass improvements project is published in the RIS3, consented and a decision to invest is made it cannot be assumed to be a committed project.

We note that the Plan does not address any uncertainty of delivery of the A27 Chichester bypass improvements project and we strongly recommend that there is either no reliance placed on RIS3 to realise capacity for growth in the Plan or that contingency measures are included to cover the eventuality that RIS3 funding is not forthcoming within the plan period. It is not clear that the potential impact of development on transport networks can be addressed in the absence of the A27 Chichester bypass improvements project.

Achieving net zero, reducing emissions reduction, acting on climate, and supporting thousands of new homes and new employment developments will be problematic with existing processes. New, additional, and adapted processes and assessments will likely be required, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments. We acknowledge that change is complex, expensive, and time-consuming, especially for smaller district level Councils. But the hard work will deliver benefits for the Council and residents in the longer-term.

National Highways seeks to continue working with the Council and WSCC to progress coordinated and deliverable packages of interim mitigation measures and alternative transport solutions while a long-term strategic solution is considered by government. This must however be in combination with a robust monitor and manage policy that appropriately manages the risk of unacceptable road impacts resulting from new housing and other development over the Plan period.

We have been in discussion with Chichester District Council regarding their proposed Monitor and Manage Strategy. At present, we do not consider the current strategy to be robust and we seek further information and detail especially on who, when and when monitoring and management will be undertaken. Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas. Any M&M framework must be based on a "worst case scenario" whereby necessary transport mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. The M&M framework must set out that the alternative to mitigation not being delivered is that development does not proceed where that development would give rise to unacceptable road safety risk or severe cumulative impacts on the road network in the absence of that mitigation. The M&M framework must be translated into development management plan policy and policy relating to development allocations.

As we have reiterated throughout our comments, we welcome the opportunity to work with you to address these outstanding matters and we will continue to liaise over submitted Transport Assessment, Travel Plan policy and Monitor and Manage Policy to help to work towards a viable plan.

We hope our comments assist.

We look forward to continuing to participate in future consultations and discussions. Please do continue to consult us as the Plan progresses so that we can remain aware of, and comment as required on, its contents.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Document Element: Policy P14 Green Infrastructure**Respondent:** Natural England (Luke Hasler, Senior Advisor) [8189]**Summary:**

Natural England welcome the inclusion of a dedicated policy on Green Infrastructure (GI) which seeks to protect and enhance the GI network, recognising both the strategic significance of its provision and its multi-functional nature (NPPF paras 20c, 92c and 186). We welcome the expectation that development proposals have regard for the Natural England National Framework of Green Infrastructure Standards.

Full text:

Summary of advice

While we have raised some queries and recommended some further modifications to certain policies we do not find the Plan unsound on any grounds relating to our remit.

Natural England has reviewed the Proposed Submission Local Plan and accompanying appendices together with the Habitats Regulations Assessment (HRA) and Sustainability Appraisal (SA). Our detailed comments on the policies and site allocations are provided as follows:

- Annex 1 - Chapter 2 – Vision and Strategic Objectives
- Annex 2 - Chapter 4 – Climate Change and the Natural Environment
- Annex 3 - Chapter 5 (Housing) and Chapter 6 – (Place-making, Health and Well-being)
- Annex 4 - Chapter 7 (Employment and Economy) and Chapter 8 (Transport and Accessibility)
- Annex 5 - Chapter 10 – Strategic and Area Based Policies

Please note that we have not provided comments on all policies but those which have most influence on environmental issues. Natural England has no comment to make on the policies not covered in this response. Other than confirming that we have referred to it when considering our advice on specific policies and site allocations Natural England has no general comments to make on the SA.

Unfortunately due to unforeseen resourcing issues while we have reviewed the associated HRA we are not in a position to provide detailed comment on it as part of this response. We will rectify this as soon as possible and can confirm that we have seen nothing in it that raises any major concerns.

The Plan has many positive aspects including standalone policies on Green Infrastructure (GI) and wildlife corridors and an incredibly extensive suite of natural environment policies more generally.

We are hugely appreciative of the opportunity that we were given to work with you on shaping key policies post-Regulation 18. However, we believe that the plan needs to go further in it's recognition of coastal squeeze as a key issue for the district, should include policy hooks for the forthcoming Local Nature Recovery Strategy (LNRS) and make up to date references to both the Environment Act (2021) and the Environmental Improvement Plan (EIP, 2023). Given how recent the publication of the EIP is we would be happy to discuss with your authority how this could best be achieved but we believe given the wealth of natural capital within Chichester District it is vitally important that this latest iteration of the Local Plan is set in its full policy and legislative context.

We have suggested a significant number of amendments and additions to both policies and supporting text throughout the Plan. In our view these could all be taken forward as minor modifications but if they were all acted upon they would leave the Plan much stronger and more coherent in delivering for the natural environment, one of the three central tenets of genuinely sustainable development as set out in the National Planning Policy Framework (NPPF 2021, paragraph 8c).

Document Element: Policy P14 Green Infrastructure**Respondent:** West Sussex County Council (Tracey Flitcroft, Principal Planning Officer) [8119]**Summary:**

Whilst Policy P14 (Green Infrastructure) states that development proposals should not be detrimental to the network of public rights of way and bridleways (please note bridleways are Public Rights of Way), a more proactively positive approach that seeks enhancements to the network as mitigation, would be welcomed. The improvement, upgrading of existing PRoW and creation of new PRoW where possible, to allow for a greater number of users to access the network would be beneficial.

Full text:

The comments included below from WSCC are Holding Objections. We will continue to work with Chichester District Council and as further work is completed will consider if objections can be withdrawn.

Transport Overview

The County Council has worked with Chichester District Council to develop the Chichester Local Plan and its supporting evidence base and will continue to do so. Although the overall direction of the Local Plan is supported, from a highways and transport perspective, there are three key issues remaining that need to be addressed in order to demonstrate that the Plan is sound:

1. There is insufficient evidence to demonstrate that key infrastructure (i.e. Terminus Road Diversion) will be deliverable;
2. The package of sustainable transport infrastructure and measures is not yet sufficiently well-developed to demonstrate that it is deliverable as part of the monitor and manage process; and
3. There is insufficient evidence to demonstrate that the capacity of the transport network can accommodate the scale of development proposed as part of the Southbourne Broad Location for Development.

The following sections explain; a) the reasons for these issues; b) why they affect the soundness of the Local Plan; and, c) what changes should be made to the Local Plan to remedy the issues.

Deliverability of Key Infrastructure

The recommended transport mitigation strategy, as assessed using the Chichester Area Transport Model for 2039 has been demonstrated to be capable in-principle to prevent the development from resulting in severe residual cumulative impacts on the highways and transport network. However, there are significant risks to deliverability of junction mitigation measures, which have required further work to be undertaken on developing a short to medium term strategy based on phased prioritisation of infrastructure and sustainable transport improvements, to be governed under a monitor and manage approach.

There are three locations where new highway alignments are proposed outside of existing highways boundaries. Two of these may include significant earthworks or structures to be delivered, being Stockbridge Link Road and Terminus Road diversion. The cost of the mitigation strategy exceeds the likely value of developer contributions and additional funding has not yet been secured.

At the Regulation 18 consultation stage in December 2018 to January 2019 the County Council identified delivery risks with the Stockbridge Link Road and Terminus Road Diversion schemes due to the earthworks likely to be required and to confirm the extent of land take required for both schemes. The County Council stated that feasibility work would need to be undertaken for these improvements prior to Plan submission to confirm that the schemes are deliverable. A brief for such a feasibility study was agreed in 2019, but to date, this work has not been commissioned. It is the County Council's view that Stockbridge Link Road (SLR) should be disregarded as a potential part of a long-term transport mitigation strategy for 2039 and beyond until such time as it can be demonstrated that the scheme is deliverable. Paragraph 8.14 of the Local Plan acknowledges that the SLR is not deliverable as part of the Local Plan mitigation package.

The Terminus Road Diversion is still identified as part of the highest priority in the Local Plan mitigation package (i.e. A27 Fishbourne Junction) which is expected to be delivered once sufficient funding is collected. The County Council considers that in the absence of this feasibility work, the deliverability of the Terminus Road Diversion cannot be confirmed. In particular, given the recent impacts of inflation in the construction industry, this work will need to robustly estimate the costs and confirm delivery arrangements. In the absence of this feasibility work, there is currently insufficient evidence to confirm that the Local Plan complies with Paragraphs 11 and 106 of the NPPF as key infrastructure does not appear to be deliverable.

In order to remedy this issue regarding the Terminus Road Diversion, the County Council requests that feasibility work is undertaken prior to the examination to confirm deliverability of the proposed Terminus Road Diversion.

Sustainable Transport Infrastructure & Measures

The transport study modelling for end of Plan period also includes some proposed highways mitigation schemes within Chichester City. The County Council has previously requested that these be replaced by sustainable transport improvements to comply with the West Sussex Transport Plan 2022-2036. However, only limited modification has been made to these proposed schemes, with a suggestion in text at paragraph 7.3.2 of the main transport study that the costs for these schemes can be reallocated to sustainable transport improvements which are not specified. Although this does help to explain how sustainable transport infrastructure schemes and measures can be at least partially funded, it is rare that schemes will be fully funded using developer contributions. Furthermore, funding is not the only issue that needs to be overcome to secure delivery of these schemes and measures.

The Infrastructure Delivery Plan (IDP) lists the proposed mitigation measures and in some cases provides information on the rationale, phasing, cost, funding and delivery arrangements. However, there are still many gaps in the information, probably because schemes are currently at an early conceptual stage. The County Council's experience is that it is unlikely that schemes will be fully funded using developer contributions (because doing so would not be compliant with the CIL regulations) so delivery of these schemes will be partially dependent on securing funding from central Government or other sources. The IDP currently fails to identify the scheme-specific requirements for additional funding and the overall scale of additional funding required.

The County Council considers the level of information currently available on the sustainable transport package to be

insufficient to demonstrate deliverability of a credible and coordinated sustainable transport package of improved infrastructure and services. Therefore, there is insufficient evidence to confirm that the Local Plan complies with Paragraphs 11 and 106 of the NPPF.

In order to remedy this issue, the County Council requests that further technical work is undertaken to develop the schemes and measures in the sustainable transport package prior to the examination. In particular, this should focus on the following schemes and measures and some cases, this will build on work that has already taken place:

1. St. Paul's & Parklands cycle routes
2. Improving existing public transport services towards Madgwick Lane
3. Provision of improved bus services for the village serving the development areas of Southbourne Parish
4. Improving cycling connectivity to link the built-out areas of Shopwhyke Lakes with Tangmere and Oving etc

As not all the severely impacted A27 junctions have a reasonable prospect of being physically improved in the Plan period, more investigation into potential public transport enhancements is also required, particularly to strengthen routes that cross the bypass. This may require further amendments to the IDP.

This work should aim to identify options for sustainable transport schemes that can be a priority for investment, provide information to enable safeguarding of routes (e.g. cycle routes) from development and provide a basis for applications for third party funding to support their delivery. The relative priority of such measures would need to be considered under the monitor and manage approach by the proposed Traffic and Infrastructure Management Group for implementation in addition to the proposed improvement at the A27/A259 Fishbourne junction.

To address this issue and support delivery of the sustainable transport package, the County Council also recommends the following minor amendments to Policy T1: Transport Infrastructure:

At bullet point .7 change "other small-scale junction improvements" to read "other sustainable transport and safety focused improvements, including at junctions" and change "These will increase road capacity, reduce traffic congestion, improve safety and air quality, and improve access to Chichester city from surrounding areas" to "These will increase road capacity on strategic roads, and on both strategic and local roads reduce traffic congestion, improve safety and air quality, and improve access to Chichester city from surrounding areas notably by encouraging and prioritising sustainable modes."

Southbourne Broad Location for Development

The scale of development that can be accommodated at the Southbourne Broad Location will be, at least partially, dependent on the capacity of the transport network to accommodate the associated traffic movements. As the Broad Location spans the railway line, many of these traffic movements would need to cross the railway line. The County Council is concerned that there is currently insufficient capacity of the existing level crossings, notably at Stein Road, to accommodate the additional traffic movements. This could mean that the cumulative impact of development on the traffic network is severe, which is not consistent with Paragraph 111 of the NPPF.

The transport evidence base does not yet provide sufficient assurance that the proposed scale of development can be accommodated. This is because the base level of traffic flow has not been compared to local traffic counts, either in the initial validation of the strategic model or through a new count which the County Council has previously requested, and the assumptions about level crossing downtimes have not been validated against observed data. The County Council is concerned that the assessment of capacity of the local road network to accommodate the quantum of dwellings proposed for the Broad Location may be overoptimistic by underestimating existing flow levels and the duration of level crossing downtime. As a consequence, the proposed quantum may not be deliverable without unacceptable impacts to the conditions on Stein Road and to the level of traffic seeking to use rural lanes to the north of the village to avoid the level crossing.

In order to remedy this issue, the County Council requests that either additional transport evidence is provided prior to the examination to demonstrate that the proposed scale of development is deliverable, or that Policy A13 is changed to remove the proposed scale of development until such evidence is provided.

The following comments from education, minerals and waste, Adults Services and Health, highways & transport and public rights of way, do not affect the soundness of the Plan. However, Chichester District Council should take these into account and, where possible, make minor amendments to the Local Plan and/or evidence base studies before submission of the Local Plan for examination. Officers are happy to meet and discuss any of these comments, and proposed minor amendments to address these comments, ahead of submission:

1) Education

Land West of Chichester

Previous comments have been made requesting that the policy refers to 'Phase 2 should include expansion of the primary school for the further 1FE of teaching accommodation with nursery and SEND provision'. While it is recognised that reference is made to this in the IDP this is a supporting document to the Local Plan and should not be solely relied

on. It is requested that paragraph 10.19 is amended to read: 'a local centre with retail, community and employment uses (minimum of approximately 2500 sqm E(g)(i) Use Class), two form entry (2FE) primary school and one form entry (1FE) teaching accommodation with nursery and SEND, informal and formal open space (including a country park), allotments, ...'

This should also be included in the 3rd bullet point of Policy A6 or the wording of the policy should be drafted to reflect more recent policy requirements i.e. Provide for infrastructure and community facilities in accordance with the most recent Infrastructure Delivery Plan.

There are some inconsistencies with the wording of the strategic policies, not every policy includes the criterion 'Provide for infrastructure and community facilities in accordance with the most recent Infrastructure Delivery Plan.' While this may be due to some policies being carried through from the adopted local plan it is inconsistent.

Policy A8 Land East of Chichester

As an education authority WSCC do not request 1FE schools in line with government guidance. As per our earlier comments and discussions we requested a 2 FE primary school for the site.

3rd bullet point of Policy A8 should be amended to read: 'A neighbourhood centre incorporating local shops, a community centre, flexible space for employment/ small-scale leisure uses and a one-form (expandable to two-form) two form entry primary school with provision for early years/ childcare and special educational needs and disability...'

2) Minerals and Waste

The references to safeguarding minerals is inconsistent and it is suggested that the wording in the email sent to CDC (attached) in relation to Policy AL3 should be used in the policies for the other sites for consistency. Reference to safeguarding minerals and waste infrastructure should also be included in some other policies as previously indicated:

- Policy A2 – needs to include reference to safeguarding minerals and waste infrastructure.
- Policy A7 – needs to include reference to safeguarding waste infrastructure.
- Policy A15 (Loxwood) – needs to include reference to minerals safeguarding as within the clay MSA.
- Policy A21 – needs to include reference to minerals safeguarding.

Also, the reference to the safeguarding guidance needs to be checked to ensure that it is worded correctly as 'Minerals and Waste Safeguarding Guidance'.

3) Older Person Housing

It is noted that the plan refers to older person housing as specialist housing. WSCC strategy supports the provision of 'extra care housing' while this might be similar development it enables younger people to access the accommodation for whatever medical reason i.e. MS, strokes rather than limiting it to a certain age group. Officers are happy to meet and discuss this further.

4) Highways and Transport

Public Transport Priority Infrastructure

The Public Transport section of the main transport study report starting at paragraph 6.2.7 requires revisiting. There is reference to "an expansion of the bus priority lane system within Chichester City Centre" which does not match the existing bus provision in the City which does not provide bus priority lanes on street. It does have restrictions on motor traffic in the adjoining parts of South Street and West Street which provide for bus and cycle only access in both directions of travel plus access for essential goods vehicle loading in the westbound direction only. In addition, the suggestion in the following paragraph for "a time-based system where certain routes are restricted to public transport only during specific times" is not evidenced or developed and as such considered unlikely to be practical and enforceable at most locations used by bus routes in the City. More developed proposals for additional bus priority, improvements to bus passenger facilities or testing of specific locations for bus-only access would be welcomed as part of developing a costed sustainable transport mitigation package.

Park and Ride

The discussion of possible park and ride facilities for the City at paragraphs 6.2.9 to 6.2.16 of the main transport study should also acknowledge. An important part of making park and ride well used by motorists is increasing the price of city centre parking to provide a financial incentive to take up significantly cheaper park and ride charges for parking and travel. However, if park and ride sites are not provided accessible to all major approach routes to the city, such a charging strategy would not be seen to be equitable, whereas only a single site is proposed in the District Council's emerging parking strategy and the report acknowledges at 6.2.11 that "locations for potential park and ride sites are also deemed to be limited". The bullet at 6.2.15 "Cost of schemes compared to benefit are likely to be initially lower than highway schemes" may have been incorrectly worded given that this is listed as an issue rather than a benefit. The text

may have been intended to say that the ratio of benefit to cost for park and ride schemes may be lower than for conventional highway schemes?

A286 New Park Road / A286 St Pancras Road (Junction 7)

This junction scheme includes pedestrian crossing facilities which are welcomed and also includes a length of advisory cycle lane starting in the middle of the junction for cyclists remaining on St Pancras. However, the approach to the junction on St Pancras from Eastgate Square remains intimidating to cyclists, so further measures would need to be added to make the layout cycle-friendly or the cycle facility is likely to be of limited benefit. This could include decreasing traffic speeds. Until this is done the conclusion at 8.4.4 of the main transport study; "The mitigation scheme includes improvements for pedestrians and cyclists which will lead to increased use of active travel modes and reduce the need for physical mitigation here" is only supported for pedestrians, not for cyclists.

A259 Via Ravenna / A259 Cathedral Way Roundabout (Junction 8)

It is stated at 7.3.8 of the main transport study that "the mitigation may be required to avoid queuing back towards the A27, as well as for capacity issues". In light of this potential safety issue for the previous junction on Cathedral Way and for the A27 Fishbourne junction, the proposal at 7.3.6 that the scheme delivery should be tied to the monitor and manage regime to see if and when it is required is accepted. This is different to the approach for other junctions in the City because of the potential safety issue. This monitoring approach would be likely to follow after the A259 Cathedral Way / Fishbourne Road East / Terminus Road (as diverted) (Junction 10) improvement, which is to be brought forward as an integral part of the A27 Fishbourne roundabout mitigation scheme, but may allow for increased eastbound flows on Cathedral Way.

A286 Northgate Gyratory

An additional mitigation scheme is proposed at paragraph 7.3.134 of the main transport study for the A286 Northgate Gyratory along its southern arm from Oaklands Way to Orchard Street. The proposal to add traffic signals is welcomed in concept as it can help to control traffic speeds making the junction more friendly for cyclists and pedestrians. However, the layout shown at figure 7-8 does not maximise the opportunity to improve convenience and safety for pedestrians by providing a priority link to reach the central island, which contains employment space and the fire station, nor to assist crossing the exit towards Orchard Street. The scheme would benefit from further development to prioritise active travel movements and should also be fitted with transponders for bus priority.

Fishbourne Road West / Appledram Lane South (Junction 11)

At paragraphs 7.4.1 to 7.4.2 of the main transport study, the junction of Fishbourne Road West / Appledram Lane South (Junction 11) is considered. The proposal to mitigate impacts at this junction through delivery of the Stockbridge Link Road scheme is not considered deliverable, so the approach at this location requires re-thinking. The County Council would not support measures to increase capacity for through traffic on Appledram Lane South, the approach should be to reduce severance and improve safety and comfort for active travel on Appledram Lane by reducing vehicle speeds and as far as possible volume. This should consider the needs of pedestrians and cyclists both for local access and for users of the Salterns Way leisure cycling route.

TEMPro Background Traffic Growth Comparisons

At section 10.2 of the main transport study a comparison is made of the TEMPro 7.2 growth rates used in the study for external traffic with new TEMPro 8.0 growth rates since released by the Department for Transport, which notes that the TEMPro 8.0 rates are significantly lower, if these rates were used then the level of transport impacts could be lower. Unfortunately, a number of highways authorities in the Transport for the South East (TfSE) area including the County Council and Hampshire County Council have concerns that the planning assumptions used in TEMPro v8 core growth scenario underestimate the numbers of additional households forecasted compared to targets in adopted Local Plans for delivering new dwellings. TfSE are currently raising these collective concerns with DfT with a view to obtaining an early update to TEMPro 8 planning assumptions. Although for the purposes of this study TEMPro is not applied to trips produced in Chichester District, from the County Council's analysis TEMPro v8 core underestimates the increase in households per year in Arun District by over 50% and in Horsham District by 30% when compared with adopted development plans. On this basis it may be useful to instead compare TEMPro 7.2 with TEMPro 8.0 high growth scenario.

North of District Spatial Scenarios Testing

For the Northern Spatial Scenarios Test provided as an appendix to the main transport study, this had not been updated for the final preferred spatial strategy or in light of the County Council's previous comments on the March 2022 issue to the District Council. The spatial strategy now is similar but not identical to the Scenario 4: Significant Growth 1 option in the reported tests, totalling 370 dwellings across the four northern parishes, compared to 410 in the test. In both cases the largest allocation is at Loxwood; 220 dwellings were proposed in the Scenario 4 as compared to 200 in this test. Some other tests proposed higher numbers.

The testing in the northern part of the district had used the same trip generation rates per dwelling as in the South of the District, but the County Council considers that in practice private motor vehicle trip generation per dwelling is likely to be higher due to the rural nature of the area, including a lack of local facilities and shops within walking distance of development, a very low level of public transport services and lack of surfaced cycle routes.

The level of development proposed is not at the level capable of delivering transformative transport improvements to match the trip making patterns around Chichester and the A259 corridor to Bosham and Southbourne. This may be offset in part by the lower total amount of development compared to the tested scenario 4. Nonetheless, it would be helpful to adjust the scenario for the spatial strategy now proposed and to provide information on additional traffic movements per

peak hour from these parishes using the A272 at junctions at Wisborough Green and reaching the A272/A29 junction at Billingshurst and the A272/A283 junction at the north of Petworth.

Neutral Month and Summer Month Comparison Technical Note

The Neutral Month and Summer Month Comparison Technical Note in the main transport study treats July as a neutral month rather than a summer month. Paragraph 1.3.1 states “The flows were analysed by looking at traffic data for August 2019 this being considered to represent summer traffic. This was compared against traffic data from the neutral months of June, July, September and October also from 2019.” The County Council does not accept this methodology as school summer holidays start part way through July and education traffic is also affected by the formal exam period, whilst there is typically a high level of seasonal leisure traffic including summer outdoor events in this month. It is acceptable to use August alone as the summer comparator month. However, July traffic should be removed from the neutral months analysis and should be substituted with May traffic data from the same year of 2019, provided that sufficient data is available from that month.

5) Public Rights of Way (PRoW)

It is a positive step to see PRoW acknowledged as valued by communities and as part of the area’s green infrastructure. Whilst Policy P14 (Green Infrastructure) states that development proposals should not be detrimental to the network of public rights of way and bridleways (please note bridleways are Public Rights of Way), a more proactively positive approach that seeks enhancements to the network as mitigation, would be welcomed. The improvement, upgrading of existing PRoW and creation of new PRoW where possible, to allow for a greater number of users to access the network would be beneficial. This is somewhat addressed in Policy T1 which refers only to routes identified in the Local Transport Plan, Local Cycling and Walking Infrastructure Plan (LCWIP) and the Infrastructure Delivery Plan. Opportunities to these, should not be limited if they arise elsewhere.

It is surprising to see there is no mention of PRoW within Chapter 8 under Active Travel – Walking and Cycling. The PRoW network provides extensive walking and cycling opportunities, often off-road, and important links between places and non-PRoW routes.

Support

Document Element: Policy P14 Green Infrastructure

Respondent: West Sussex County Council (Tracey Flitcroft, Principal Planning Officer) [8119]

Summary:

Support in principle. It is a positive step to see PRoW acknowledged as valued by communities and as part of the area’s green infrastructure.

Full text:

The comments included below from WSCC are Holding Objections. We will continue to work with Chichester District Council and as further work is completed will consider if objections can be withdrawn.

Transport Overview

The County Council has worked with Chichester District Council to develop the Chichester Local Plan and its supporting evidence base and will continue to do so. Although the overall direction of the Local Plan is supported, from a highways and transport perspective, there are three key issues remaining that need to be addressed in order to demonstrate that the Plan is sound:

1. There is insufficient evidence to demonstrate that key infrastructure (i.e. Terminus Road Diversion) will be deliverable;
2. The package of sustainable transport infrastructure and measures is not yet sufficiently well-developed to demonstrate that it is deliverable as part of the monitor and manage process; and
3. There is insufficient evidence to demonstrate that the capacity of the transport network can accommodate the scale of development proposed as part of the Southbourne Broad Location for Development.

The following sections explain; a) the reasons for these issues; b) why they affect the soundness of the Local Plan; and, c) what changes should be made to the Local Plan to remedy the issues.

Deliverability of Key Infrastructure

The recommended transport mitigation strategy, as assessed using the Chichester Area Transport Model for 2039 has been demonstrated to be capable in-principle to prevent the development from resulting in severe residual cumulative

impacts on the highways and transport network. However, there are significant risks to deliverability of junction mitigation measures, which have required further work to be undertaken on developing a short to medium term strategy based on phased prioritisation of infrastructure and sustainable transport improvements, to be governed under a monitor and manage approach.

There are three locations where new highway alignments are proposed outside of existing highways boundaries. Two of these may include significant earthworks or structures to be delivered, being Stockbridge Link Road and Terminus Road diversion. The cost of the mitigation strategy exceeds the likely value of developer contributions and additional funding has not yet been secured.

At the Regulation 18 consultation stage in December 2018 to January 2019 the County Council identified delivery risks with the Stockbridge Link Road and Terminus Road Diversion schemes due to the earthworks likely to be required and to confirm the extent of land take required for both schemes. The County Council stated that feasibility work would need to be undertaken for these improvements prior to Plan submission to confirm that the schemes are deliverable. A brief for such a feasibility study was agreed in 2019, but to date, this work has not been commissioned. It is the County Council's view that Stockbridge Link Road (SLR) should be disregarded as a potential part of a long-term transport mitigation strategy for 2039 and beyond until such time as it can be demonstrated that the scheme is deliverable. Paragraph 8.14 of the Local Plan acknowledges that the SLR is not deliverable as part of the Local Plan mitigation package.

The Terminus Road Diversion is still identified as part of the highest priority in the Local Plan mitigation package (i.e. A27 Fishbourne Junction) which is expected to be delivered once sufficient funding is collected. The County Council considers that in the absence of this feasibility work, the deliverability of the Terminus Road Diversion cannot be confirmed. In particular, given the recent impacts of inflation in the construction industry, this work will need to robustly estimate the costs and confirm delivery arrangements. In the absence of this feasibility work, there is currently insufficient evidence to confirm that the Local Plan complies with Paragraphs 11 and 106 of the NPPF as key infrastructure does not appear to be deliverable.

In order to remedy this issue regarding the Terminus Road Diversion, the County Council requests that feasibility work is undertaken prior to the examination to confirm deliverability of the proposed Terminus Road Diversion.

Sustainable Transport Infrastructure & Measures

The transport study modelling for end of Plan period also includes some proposed highways mitigation schemes within Chichester City. The County Council has previously requested that these be replaced by sustainable transport improvements to comply with the West Sussex Transport Plan 2022-2036. However, only limited modification has been made to these proposed schemes, with a suggestion in text at paragraph 7.3.2 of the main transport study that the costs for these schemes can be reallocated to sustainable transport improvements which are not specified. Although this does help to explain how sustainable transport infrastructure schemes and measures can be at least partially funded, it is rare that schemes will be fully funded using developer contributions. Furthermore, funding is not the only issue that needs to be overcome to secure delivery of these schemes and measures.

The Infrastructure Delivery Plan (IDP) lists the proposed mitigation measures and in some cases provides information on the rationale, phasing, cost, funding and delivery arrangements. However, there are still many gaps in the information, probably because schemes are currently at an early conceptual stage. The County Council's experience is that it is unlikely that schemes will be fully funded using developer contributions (because doing so would not be compliant with the CIL regulations) so delivery of these schemes will be partially dependent on securing funding from central Government or other sources. The IDP currently fails to identify the scheme-specific requirements for additional funding and the overall scale of additional funding required.

The County Council considers the level of information currently available on the sustainable transport package to be insufficient to demonstrate deliverability of a credible and coordinated sustainable transport package of improved infrastructure and services. Therefore, there is insufficient evidence to confirm that the Local Plan complies with Paragraphs 11 and 106 of the NPPF.

In order to remedy this issue, the County Council requests that further technical work is undertaken to develop the schemes and measures in the sustainable transport package prior to the examination. In particular, this should focus on the following schemes and measures and some cases, this will build on work that has already taken place:

1. St. Paul's & Parklands cycle routes
2. Improving existing public transport services towards Madgwick Lane
3. Provision of improved bus services for the village serving the development areas of Southbourne Parish
4. Improving cycling connectivity to link the built-out areas of Shopwhyke Lakes with Tangmere and Oving etc

As not all the severely impacted A27 junctions have a reasonable prospect of being physically improved in the Plan period, more investigation into potential public transport enhancements is also required, particularly to strengthen routes that cross the bypass. This may require further amendments to the IDP.

This work should aim to identify options for sustainable transport schemes that can be a priority for investment, provide information to enable safeguarding of routes (e.g. cycle routes) from development and provide a basis for applications

for third party funding to support their delivery. The relative priority of such measures would need to be considered under the monitor and manage approach by the proposed Traffic and Infrastructure Management Group for implementation in addition to the proposed improvement at the A27/A259 Fishbourne junction.

To address this issue and support delivery of the sustainable transport package, the County Council also recommends the following minor amendments to Policy T1: Transport Infrastructure:

At bullet point .7 change "other small-scale junction improvements" to read "other sustainable transport and safety focused improvements, including at junctions" and change "These will increase road capacity, reduce traffic congestion, improve safety and air quality, and improve access to Chichester city from surrounding areas" to "These will increase road capacity on strategic roads, and on both strategic and local roads reduce traffic congestion, improve safety and air quality, and improve access to Chichester city from surrounding areas notably by encouraging and prioritising sustainable modes."

Southbourne Broad Location for Development

The scale of development that can be accommodated at the Southbourne Broad Location will be, at least partially, dependent on the capacity of the transport network to accommodate the associated traffic movements. As the Broad Location spans the railway line, many of these traffic movements would need to cross the railway line. The County Council is concerned that there is currently insufficient capacity of the existing level crossings, notably at Stein Road, to accommodate the additional traffic movements. This could mean that the cumulative impact of development on the traffic network is severe, which is not consistent with Paragraph 111 of the NPPF.

The transport evidence base does not yet provide sufficient assurance that the proposed scale of development can be accommodated. This is because the base level of traffic flow has not been compared to local traffic counts, either in the initial validation of the strategic model or through a new count which the County Council has previously requested, and the assumptions about level crossing downtimes have not been validated against observed data. The County Council is concerned that the assessment of capacity of the local road network to accommodate the quantum of dwellings proposed for the Broad Location may be overoptimistic by underestimating existing flow levels and the duration of level crossing downtime. As a consequence, the proposed quantum may not be deliverable without unacceptable impacts to the conditions on Stein Road and to the level of traffic seeking to use rural lanes to the north of the village to avoid the level crossing.

In order to remedy this issue, the County Council requests that either additional transport evidence is provided prior to the examination to demonstrate that the proposed scale of development is deliverable, or that Policy A13 is changed to remove the proposed scale of development until such evidence is provided.

The following comments from education, minerals and waste, Adults Services and Health, highways & transport and public rights of way, do not affect the soundness of the Plan. However, Chichester District Council should take these into account and, where possible, make minor amendments to the Local Plan and/or evidence base studies before submission of the Local Plan for examination. Officers are happy to meet and discuss any of these comments, and proposed minor amendments to address these comments, ahead of submission:

1) Education

Land West of Chichester

Previous comments have been made requesting that the policy refers to 'Phase 2 should include expansion of the primary school for the further 1FE of teaching accommodation with nursery and SEND provision'. While it is recognised that reference is made to this in the IDP this is a supporting document to the Local Plan and should not be solely relied on. It is requested that paragraph 10.19 is amended to read: 'a local centre with retail, community and employment uses (minimum of approximately 2500 sqm E(g)(i) Use Class), two form entry (2FE) primary school and one form entry (1FE) teaching accommodation with nursery and SEND, informal and formal open space (including a country park), allotments, ...'

This should also be included in the 3rd bullet point of Policy A6 or the wording of the policy should be drafted to reflect more recent policy requirements i.e. Provide for infrastructure and community facilities in accordance with the most recent Infrastructure Delivery Plan.

There are some inconsistencies with the wording of the strategic policies, not every policy includes the criterion 'Provide for infrastructure and community facilities in accordance with the most recent Infrastructure Delivery Plan.' While this may be due to some policies being carried through from the adopted local plan it is inconsistent.

Policy A8 Land East of Chichester

As an education authority WSCC do not request 1FE schools in line with government guidance. As per our earlier comments and discussions we requested a 2 FE primary school for the site.

3rd bullet point of Policy A8 should be amended to read: 'A neighbourhood centre incorporating local shops, a community centre, flexible space for employment/ small-scale leisure uses and a one-form (expandable to two-form) two form entry primary school with provision for early years/ childcare and special educational needs and disability...'

2) Minerals and Waste

The references to safeguarding minerals is inconsistent and it is suggested that the wording in the email sent to CDC (attached) in relation to Policy AL3 should be used in the policies for the other sites for consistency. Reference to safeguarding minerals and waste infrastructure should also be included in some other policies as previously indicated:

- Policy A2 – needs to include reference to safeguarding minerals and waste infrastructure.
- Policy A7 – needs to include reference to safeguarding waste infrastructure.
- Policy A15 (Loxwood) – needs to include reference to minerals safeguarding as within the clay MSA.
- Policy A21 – needs to include reference to minerals safeguarding.

Also, the reference to the safeguarding guidance needs to be checked to ensure that it is worded correctly as 'Minerals and Waste Safeguarding Guidance'.

3) Older Person Housing

It is noted that the plan refers to older person housing as specialist housing. WSCC strategy supports the provision of 'extra care housing' while this might be similar development it enables younger people to access the accommodation for whatever medical reason i.e. MS, strokes rather than limiting it to a certain age group. Officers are happy to meet and discuss this further.

4) Highways and Transport

Public Transport Priority Infrastructure

The Public Transport section of the main transport study report starting at paragraph 6.2.7 requires revisiting. There is reference to "an expansion of the bus priority lane system within Chichester City Centre" which does not match the existing bus provision in the City which does not provide bus priority lanes on street. It does have restrictions on motor traffic in the adjoining parts of South Street and West Street which provide for bus and cycle only access in both directions of travel plus access for essential goods vehicle loading in the westbound direction only. In addition, the suggestion in the following paragraph for "a time-based system where certain routes are restricted to public transport only during specific times" is not evidenced or developed and as such considered unlikely to be practical and enforceable at most locations used by bus routes in the City. More developed proposals for additional bus priority, improvements to bus passenger facilities or testing of specific locations for bus-only access would be welcomed as part of developing a costed sustainable transport mitigation package.

Park and Ride

The discussion of possible park and ride facilities for the City at paragraphs 6.2.9 to 6.2.16 of the main transport study should also acknowledge. An important part of making park and ride well used by motorists is increasing the price of city centre parking to provide a financial incentive to take up significantly cheaper park and ride charges for parking and travel. However, if park and ride sites are not provided accessible to all major approach routes to the city, such a charging strategy would not be seen to be equitable, whereas only a single site is proposed in the District Council's emerging parking strategy and the report acknowledges at 6.2.11 that "locations for potential park and ride sites are also deemed to be limited". The bullet at 6.2.15 "Cost of schemes compared to benefit are likely to be initially lower than highway schemes" may have been incorrectly worded given that this is listed as an issue rather than a benefit. The text may have been intended to say that the ratio of benefit to cost for park and ride schemes may be lower than for conventional highway schemes?

A286 New Park Road / A286 St Pancras Road (Junction 7)

This junction scheme includes pedestrian crossing facilities which are welcomed and also includes a length of advisory cycle lane starting in the middle of the junction for cyclists remaining on St Pancras. However, the approach to the junction on St Pancras from Eastgate Square remains intimidating to cyclists, so further measures would need to be added to make the layout cycle-friendly or the cycle facility is likely to be of limited benefit. This could include decreasing traffic speeds. Until this is done the conclusion at 8.4.4 of the main transport study; "The mitigation scheme includes improvements for pedestrians and cyclists which will lead to increased use of active travel modes and reduce the need for physical mitigation here" is only supported for pedestrians, not for cyclists.

A259 Via Ravenna / A259 Cathedral Way Roundabout (Junction 8)

It is stated at 7.3.8 of the main transport study that "the mitigation may be required to avoid queuing back towards the A27, as well as for capacity issues". In light of this potential safety issue for the previous junction on Cathedral Way and for the A27 Fishbourne junction, the proposal at 7.3.6 that the scheme delivery should be tied to the monitor and manage regime to see if and when it is required is accepted. This is different to the approach for other junctions in the City because of the potential safety issue. This monitoring approach would be likely to follow after the A259 Cathedral Way /

Fishbourne Road East / Terminus Road (as diverted) (Junction 10) improvement, which is to be brought forward as an integral part of the A27 Fishbourne roundabout mitigation scheme, but may allow for increased eastbound flows on Cathedral Way.

A286 Northgate Gyratory

An additional mitigation scheme is proposed at paragraph 7.3.134 of the main transport study for the A286 Northgate Gyratory along its southern arm from Oaklands Way to Orchard Street. The proposal to add traffic signals is welcomed in concept as it can help to control traffic speeds making the junction more friendly for cyclists and pedestrians. However, the layout shown at figure 7-8 does not maximise the opportunity to improve convenience and safety for pedestrians by providing a priority link to reach the central island, which contains employment space and the fire station, nor to assist crossing the exit towards Orchard Street. The scheme would benefit from further development to prioritise active travel movements and should also be fitted with transponders for bus priority.

Fishbourne Road West / Appledram Lane South (Junction 11)

At paragraphs 7.4.1 to 7.4.2 of the main transport study, the junction of Fishbourne Road West / Appledram Lane South (Junction 11) is considered. The proposal to mitigate impacts at this junction through delivery of the Stockbridge Link Road scheme is not considered deliverable, so the approach at this location requires re-thinking. The County Council would not support measures to increase capacity for through traffic on Appledram Lane South, the approach should be to reduce severance and improve safety and comfort for active travel on Appledram Lane by reducing vehicle speeds and as far as possible volume. This should consider the needs of pedestrians and cyclists both for local access and for users of the Salterns Way leisure cycling route.

TEMPro Background Traffic Growth Comparisons

At section 10.2 of the main transport study a comparison is made of the TEMPro 7.2 growth rates used in the study for external traffic with new TEMPro 8.0 growth rates since released by the Department for Transport, which notes that the TEMPro 8.0 rates are significantly lower, if these rates were used then the level of transport impacts could be lower. Unfortunately, a number of highways authorities in the Transport for the South East (TfSE) area including the County Council and Hampshire County Council have concerns that the planning assumptions used in TEMPro v8 core growth scenario underestimate the numbers of additional households forecasted compared to targets in adopted Local Plans for delivering new dwellings. TfSE are currently raising these collective concerns with DfT with a view to obtaining an early update to TEMPro 8 planning assumptions. Although for the purposes of this study TEMPro is not applied to trips produced in Chichester District, from the County Council's analysis TEMPro v8 core underestimates the increase in households per year in Arun District by over 50% and in Horsham District by 30% when compared with adopted development plans. On this basis it may be useful to instead compare TEMPro 7.2 with TEMPro 8.0 high growth scenario.

North of District Spatial Scenarios Testing

For the Northern Spatial Scenarios Test provided as an appendix to the main transport study, this had not been updated for the final preferred spatial strategy or in light of the County Council's previous comments on the March 2022 issue to the District Council. The spatial strategy now is similar but not identical to the Scenario 4: Significant Growth 1 option in the reported tests, totalling 370 dwellings across the four northern parishes, compared to 410 in the test. In both cases the largest allocation is at Loxwood; 220 dwellings were proposed in the Scenario 4 as compared to 200 in this test. Some other tests proposed higher numbers.

The testing in the northern part of the district had used the same trip generation rates per dwelling as in the South of the District, but the County Council considers that in practice private motor vehicle trip generation per dwelling is likely to be higher due to the rural nature of the area, including a lack of local facilities and shops within walking distance of development, a very low level of public transport services and lack of surfaced cycle routes.

The level of development proposed is not at the level capable of delivering transformative transport improvements to match the trip making patterns around Chichester and the A259 corridor to Bosham and Southbourne. This may be offset in part by the lower total amount of development compared to the tested scenario 4. Nonetheless, it would be helpful to adjust the scenario for the spatial strategy now proposed and to provide information on additional traffic movements per peak hour from these parishes using the A272 at junctions at Wisborough Green and reaching the A272/A29 junction at Billingshurst and the A272/A283 junction at the north of Petworth.

Neutral Month and Summer Month Comparison Technical Note

The Neutral Month and Summer Month Comparison Technical Note in the main transport study treats July as a neutral month rather than a summer month. Paragraph 1.3.1 states "The flows were analysed by looking at traffic data for August 2019 this being considered to represent summer traffic. This was compared against traffic data from the neutral months of June, July, September and October also from 2019." The County Council does not accept this methodology as school summer holidays start part way through July and education traffic is also affected by the formal exam period, whilst there is typically a high level of seasonal leisure traffic including summer outdoor events in this month. It is acceptable to use August alone as the summer comparator month. However, July traffic should be removed from the neutral months analysis and should be substituted with May traffic data from the same year of 2019, provided that sufficient data is available from that month.

5) Public Rights of Way (PRoW)

It is a positive step to see PRoW acknowledged as valued by communities and as part of the area's green infrastructure. Whilst Policy P14 (Green Infrastructure) states that development proposals should not be detrimental to the network of

public rights of way and bridleways (please note bridleways are Public Rights of Way), a more proactively positive approach that seeks enhancements to the network as mitigation, would be welcomed. The improvement, upgrading of existing PRow and creation of new PRow where possible, to allow for a greater number of users to access the network would be beneficial. This is somewhat addressed in Policy T1 which refers only to routes identified in the Local Transport Plan, Local Cycling and Walking Infrastructure Plan (LCWIP) and the Infrastructure Delivery Plan. Opportunities to these, should not be limited if they arise elsewhere.

It is surprising to see there is no mention of PRow within Chapter 8 under Active Travel – Walking and Cycling. The PRow network provides extensive walking and cycling opportunities, often off-road, and important links between places and non-PRow routes.

[National Highways letter dated 24/07/23 confirmed representation should be categorised as Comment - Noting lifestyle changes since pandemic]. Local Plan evidence - Open space, sport facilities, recreation study and playing pitch strategy - June/July 2018

We note that these documents are from 2018 and have not been updated to address the changes in behaviours and increase in active transport participation during and since the COVID-19 global pandemic.

Full text:

We have reviewed the publicly available Local Plan documents and provided comments in the attached letter, in relation to the transport implications of the plan for the safety and operation of the SRN.

Our comments include issues to resolve, comments, requests for further information and recommendations. A brief summary of our main comments are:

- the reliance on the delivery of the A27 Chichester bypass improvements project.
- the requirements for new, additional, and adapted processes and assessments, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments.
- collaborative working between agencies in combination with a robust monitor and manage policy.

We hope our comments assist.

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders. We look forward to continuing to participate in future consultations and discussions.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Background

National Highways has been appointed by the Secretary of State for Transport as strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the strategic road network (SRN).

National Highways is responsible for operating, maintaining, and improving the Strategic Road Network (SRN) i.e., the Trunk Road and Motorway Network in England, as laid down in Department for Transport (DfT) Circular 01/2022 (Strategic Road Network and the delivery of sustainable development).

The SRN is a critical national asset and as such we work to ensure that it operates and is managed in the public interest, both in respect of current activities and needs as well as in providing effective stewardship of its long-term operation and integrity.

Our responses to Local Plan consultations are guided by relevant policy and guidance including the National Planning Policy Framework (2021) (NPPF):

- Transport issues should be considered from the earliest stages of plan-making and development proposals so that the potential impact of development on transport networks can be addressed (para 104).
- The planning system should actively manage patterns of growth such that significant development is focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. (para 105).
- Planning policies should be prepared with the active involvement of highways authorities and other transport infrastructure providers so that strategies and investments for supporting sustainable transport and development patterns are aligned. (para 106).
- In terms of identifying the necessity of transport infrastructure, NPPF confirms that development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe. (para 111).
- Planning policies and decisions should support development that makes efficient use of land, taking into account the availability and capacity of infrastructure and services – both existing and proposed – as well as their potential for further improvement and the scope to promote sustainable travel modes that limit future car use. (para 124).

In relation to the tests of soundness set out at paragraph 35 of the NPPF, in the context of transport, these are interpreted as meaning:

- a) Positively prepared - has the transport strategy been prepared with the active involvement of the highway authorities, other transport infrastructure providers and operators and neighbouring councils?
- b) Justified – Is the transport strategy based on a robust evidence base prepared with the agreement in partnership, or with the support of the highway authorities?
- c) Effective – Does the transport strategy and policy satisfy the transport needs of the plan and is it deliverable at a pace which provides for and accommodates the proposed progress and implementation of the plan?
- d) Consistent with national policy – Does the transport strategy support the economic, social, and environmental objectives of the Plan and the NPPF/NPPG?

We will be concerned with proposals that have the potential to impact on the safe and efficient operation of the SRN; in this case, the A27 trunk road (Chichester Bypass and its junctions) which is the main access route in the Chichester area. We have particular interest in any allocation, policy or proposals which could have implications for the A27 and the wider SRN network. We are interested as to whether there would be any adverse road safety or operational implications for the SRN. The latter would include a material increase in queueing or delay or reduction in journey time reliability during the construction or operation of the development set out in the plan.

National Highways is a key delivery partner for sustainable development promoted through the plan-led system, and as a statutory consultee we have a duty to cooperate with local authorities to support the preparation and implementation of development plan documents.

In accordance with national planning and transport policy and our operating licence, we are entirely neutral on the principle of development as it is for the local planning authority to determine whether development should be allocated or permitted; albeit it must comply with national policy on locating development in locations that are or can be made sustainable. Therefore, while always seeking early and fulsome engagement with local plans and/or developers, we will simply be assessing the transport and related implications of plans or proposals and agreeing any necessary transport improvements and relevant development management policy.

In progressing Local Plans, we will seek to agree the following:

- Assessment tools and methodology
- Baseline Assessment i.e., to demonstrate that the assessment tool accurately reflects current transport conditions
- Comparator case assessment i.e., to forecast the transport conditions that would occur in the absence of the plan
- Forecast modelling i.e., to forecast the transport conditions that would arise with the plan in place, this will include an assessment at the end of the Plan period; and, if required, at full build out if that occurs after the end of the Plan period
- Outputs and outcomes of modelling, demonstrating, as appropriate, what transport infrastructure is necessary to support the plan o It should be noted that a suite of transport modelling tools may be required. This includes strategic modelling covering an area at least one major junction beyond the district boundary, localised network modelling where several links/junctions are close together and/or individual junction modelling
- o A DMRB (Design Manual for Roads and Bridges) compliancy assessment may also be required for certain highway

features, such as

Merge/Diverge assessment at Grade separated junctions, link capacity assessments, and others.

- The design of any necessary transport infrastructure, to an extent suitable for establishing deliverability during the plan period at the time that it becomes necessary for the purpose of ensuring that unacceptable road safety impacts or severe operational impacts do not arise as a result of development. This may be to at least General Arrangement design stage or preliminary design stage. Whichever degree of detail is agreed, the products must be in full compliance with the DMRB.
- Industry standard transport intervention costings.
- The delivery/funding mechanisms for necessary transport interventions. It should not be assumed that National Highways will have any responsibility to identify or deliver necessary transport interventions.
- If considered appropriate, a "Monitor & Manage" (M&M) framework, aimed at managing the pace of development in line with the pace of funding and delivery of necessary highway interventions in a manner which responds to the realworld impacts of development may be agreed for inclusion in the plan subject to the adequacy of risk control measures included therein. This can include the move from a 'predict & provide' style of delivery to 'a vision & validate' style. o Any M&M framework must be based on a "worst case scenario" whereby necessary mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. It must be translated into development management plan policy and policy relating to development allocations.

Further detail on the above can be provided by National Highways.

While ideally all the above should be agreed prior to the Submission of the Local Plan for examination, we recognise that this is not always possible. However, all parties should work towards all matters being agreed and reflected in a Statement of Common Ground (SoCG) by the start of the Local Plan Examination at the latest. Ideally the SoCG between the Council and National Highways would be prepared well in advance of plan submission in order to guide resource input and to track progress towards final agreement on all relevant matters starting from the earliest plan iterations until the final version is agreed.

It is acknowledged that Government policy places much emphasis on housing delivery as a means for ensuring economic growth and addressing the current national shortage of housing. The NPPF is very clear that:

"Strategic policy-making authorities should establish a housing requirement figure for their whole area, which shows the extent to which their identified housing need (and any needs that cannot be met within neighbouring areas) can be met over the plan period."

However, new DfT C1/22 and the NPPF are equally clear that any development, including housing delivery, must be tempered by the requirement to ensure that the associated transport demand can be accommodated without unacceptable impacts on the safety of the SRN or severe impacts on the operation of the SRN including reliability and congestion. Therefore, as necessary and appropriate, any plan and/or development must be accompanied by suitable mitigation in the right places at the right time, that is to the required design standards and is deliverable in terms of land availability, constructability and funding.

We would also draw your attention to the then Highways England document 'The Strategic Road Network, Planning for the Future: A guide to working with National Highways on planning matters' (September 2015). This document sets out how National Highways intends to work with local planning authorities and developers to support the preparation of sound documents which enable the delivery of sustainable development. https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_t_data/file/461023/N150227_-_Highways_England_Planning_Document_FINAL-lo.pdf

Responses to Local Plan consultations are also guided by National Planning Policy Framework (NPPF) revised on 20 July 2021 which sets out the government's planning policies for England and how these are expected to be applied.

Updated Circular (01/2022)

It should be noted that since the start of the Local Plan consultation process, on the 23 December 2022, the Department for Transport released a new circular on the 'Strategic road network and the delivery of sustainable development' (Circular 01/2022), which replaces all of the policies in Circular 02/2013 of the same name. These representations take account of the new circular and the requirements in terms of the Local Plan evidence base and process.

We request that the Local Plan is prepared in line with all aspects of the new circular. Particularly, the principles of sustainable development (paragraphs 11 to 17), new connections and capacity enhancements (paragraphs 18 to 25), and engagement with plan-making (paragraphs 26 to 38).

Regulation 18 submission

In our Regulation 18 submission we noted several matters including:

- The need to mitigate the adverse impacts of strategic development traffic to the A27 Chichester Bypass and its junctions at Portfield Roundabout, Bognor Road Roundabout, Whyke Roundabout, Stockbridge Roundabout and Fishbourne Roundabout and Oving junction.
- The need to identify a mechanism to calculate contributions towards the delivery of the previously agreed Local Plan

A27 improvements

- The need to confirm the number of dwellings needed within the plan period
- The need to establish National Highways acceptance of the traffic model reference and future case scenarios
- The need to confirm costs, viability, and funding associated with mitigating the safety and congestion impacts of the development included within the plan.

Local Plan context

This Local Plan (Chichester Local Plan 2021 – 2039), prepared by the Local Planning Authority (LPA) Chichester District Council, sets out the vision for future development in the district and will be used to help decide on planning applications and other planning related decisions including shaping infrastructure investments.

The draft sets out how the district should be developed over the next 18-years to 2039 including for the full Plan period (1 April 2021 to 31 March 2039) the total supply of

- 10,359 dwellings

- 114,652 net additional sqm new floorspace

Minus the completions this is equivalent to around 530 dwellings and 6,150 sqm of floorspace a year.

National Highways Representations

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders.

We have undertaken a review of the Chichester Local Plan 2021-2039 proposed submission version and accompanying evidence documents, our comments are set out in the tables below (following pages). [see table within attachment]

Summary

We have reviewed the publicly available Local Plan documents and provided comments above in relation to the transport implications of the plan for the safety and operation of the SRN. We understand that other technical information is available, but this was not presented as part of this consultation.

Chichester, and the A27, are already heavily congested, infrastructure in the existing Local Plan remains undelivered and the growth set out in the new Plan will further increase travel demand.

As presented, satisfying the transport needs of the plan is clearly reliant on the delivery of the A27 Chichester bypass improvements project. The A27 Chichester bypass improvements project is one of 32 pipeline schemes being considered for possible inclusion in National Highways third Road Investment Strategy (RIS3) covering 1 April 2025 to 31 March 2030.

On 9 March 2023 the UK Transport Secretary ensured record funding would be invested in the country's transport network, sustainably driving growth across the country while managing the pressures of inflation. The announcement cited the A27 Arundel Bypass as being deferred from RIS2 to RIS 3 (covering 2025-2030). The transport secretary also identified a number of challenges to the delivery of the road investment strategy and cited the benefit of allowing extra time to ensure schemes are better planned and efficient schemes can be deployed more effectively.

At present, there is no commitment by DfT to carry out the A27 Chichester bypass improvements project. Until the A27 Chichester bypass improvements project is published in the RIS3, consented and a decision to invest is made it cannot be assumed to be a committed project.

We note that the Plan does not address any uncertainty of delivery of the A27 Chichester bypass improvements project and we strongly recommend that there is either no reliance placed on RIS3 to realise capacity for growth in the Plan or that contingency measures are included to cover the eventuality that RIS3 funding is not forthcoming within the plan period. It is not clear that the potential impact of development on transport networks can be addressed in the absence of the A27 Chichester bypass improvements project.

Achieving net zero, reducing emissions reduction, acting on climate, and supporting thousands of new homes and new employment developments will be problematic with existing processes. New, additional, and adapted processes and assessments will likely be required, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments. We acknowledge that change is complex, expensive, and time-consuming, especially for smaller district level Councils. But the hard work will deliver benefits for the Council and residents in the longer-term.

National Highways seeks to continue working with the Council and WSCC to progress coordinated and deliverable packages of interim mitigation measures and alternative transport solutions while a long-term strategic solution is considered by government. This must however be in combination with a robust monitor and manage policy that appropriately manages the risk of unacceptable road impacts resulting from new housing and other development over the Plan period.

We have been in discussion with Chichester District Council regarding their proposed Monitor and Manage Strategy. At present, we do not consider the current strategy to be robust and we seek further information and detail especially on who, when and when monitoring and management will be undertaken. Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas. Any M&M framework must be based on a "worst case scenario" whereby necessary transport mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired

alternatives are not ultimately achievable. The M&M framework must set out that the alternative to mitigation not being delivered is that development does not proceed where that development would give rise to unacceptable road safety risk or severe cumulative impacts on the road network in the absence of that mitigation. The M&M framework must be translated into development management plan policy and policy relating to development allocations.

As we have reiterated throughout our comments, we welcome the opportunity to work with you to address these outstanding matters and we will continue to liaise over submitted Transport Assessment, Travel Plan policy and Monitor and Manage Policy to help to work towards a viable plan.

We hope our comments assist.

We look forward to continuing to participate in future consultations and discussions. Please do continue to consult us as the Plan progresses so that we can remain aware of, and comment as required on, its contents.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.
