Looking at the Chichester Transport Study 2023 and the draft plan together, there is insufficient evidence that the traffic capacity increase proposed in the 2023 Transport Study is any more affordable or technically deliverable, or likely to be sufficiently effective, than those in the past strategy. The evidence more strongly points to the fact that no highways improvements are identifiable or economically deliverable to meet even short term increases in demand for car-borne mobility on most of the network around Chichester.

There are no published strategies or schemes clearly supporting the contention that the objective of improving sustainable modes is technically achievable or deliverable either. The plan makes generalised assertions that such strategies will be devised and implemented only after serious problems emerge from a shortfall in the car-borne transport strategy.

The reference to “monitor and manage” is undefined and unsubstantiated. There are no outcomes stated, no mechanisms specified and no timescales for action.

Our experience today is that network conditions have reached unacceptable and prejudicial levels of severe unpredictable delay. The saturation of the network is already evident well outside the traditional peaks on key sections of highway and at key junctions. External shocks such as the effects of severe weather are becoming more common, leading to delays so extreme as to justify the description of “gridlock”. The plan does not identify a strategy to effectively address this, in particular by consolidating passenger car trips onto more efficient public transport vehicles. This is unacceptable to Stagecoach.

2.4. Local Plan Vision

Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the broad approach in Plan Vision and in particular that by 2039, the Plan will support and enable greater use of sustainable modes. However, there is no link made between reducing the use of private cars, and the need for a step change in the use of sustainable modes. Without a published transport evidence base it is impossible to establish a suitable sustainable transport strategy to support both carbon reduction and alleviation of the problems arising from acute congestion. Even on a very crude basis, to achieve a meaning mode shift on key approaches to the A27 Chichester Bypass will require more than 20% of existing peak car-borne journeys to transfer to other modes. A 10 percentage point transfer to bus (about half this shift) would imply more than doubling peak hour bus passenger boardings.

The Vision is nothing more than an aspiration, that needs to more definitively aim at key outcomes, for the plan to be effective. The Vision should thus be altered to read:

“Get about easily, safely and conveniently with less reliance on private cars –making the greatest possible use of the rail and enhanced bus network, and with more opportunities for active travel including walking and cycling; to materially reduce dependence on private car use.”

Underpinning the Plan’s spatial strategy, the Vision section goes into more specific detail about key localities in the Plan area.

Regarding Chichester, Paragraph 2.39 states: “The emphasis will be upon consolidating and enhancing the role of Chichester city as the plan area’s main centre, whilst also developing the role of key settlements to its east and west. The focus will be upon creating communities with good access to a range of employment opportunities and affordable housing for young people and families to balance the ageing population.”

This is clearly the appropriate focus for meeting the District’s development needs in a sustainable manner. The city and key settlements to the east and west, are those places already able to make use of relevant public transport services, both rail and bus. Especially within and near the City, walking and cycling can credibly present highly relevant choices. This emphasis clear can be expected to address the requirements of sustainable development set out in NPPF and their local application set out in the Plans Strategic Objectives.

However, this needs a robust transport strategy, to avoid a further concentration of development and its traffic impacts occurring on or near some of the most chronically congested parts of the highway network. To date, the absence of intervention has strangled the bus network through further marked deterioration in traffic conditions. This by consequence increases the risk of bus delay or cancellation, lengthens journey time and reduces customer confidence in bus as an attractive alternative mode of travel.

In April 2023, Stagecoach is making significant timetables changes to improve operational resilience in and around Chichester. The biggest such change is the severance of the Portsmouth to Littlehampton section of service 700, at Chichester, with buses operating independently to the east and to the west and ending cross-city links. This is planned to reduce the probability of delay but at the cost of additional vehicle resource (circa £200,000 per annum) which could be better spent providing new or enhanced services. We anticipate a small loss of custom as a direct consequence of the change, but have little choice other than to take negative action so as to fulfil our statutory punctuality obligations.

If the Strategic Objectives of the Plan and its Vision are to be achieved, in the way required by NPPF paragraphs 104-105, a properly-evidenced transport mitigation strategy needs to create the conditions where bus journeys are more reliable than car journeys and thus mobility demand switches as far as can be realistically achieved away from car use, to bus use and other more sustainable modes.

Beyond Chichester, the Plan Vision focuses on key localities beyond to the east and west.

To the west of Chichester a focus on growth at Southbourne is justified at paragraph 2.43: “...the aim is to take advantage of the village’s good

transport links and existing facilities to deliver significant new residential-led development within the broad location for development which will further enhance local facilities and offer opportunities to reinforce and supplement existing public transport, including bus routes.”

We agree this is a very significant opportunity. However, if the requirements of NPPF paragraphs 104-105 are to be met, this demands that effective bus priority is delivered on the A259 corridor, especially eastbound at Fishbourne and westbound approaching Emsworth. Without such measures, the growth committed and planned will serve only to further undermine bus journey time and decrease punctuality on the existing 700 service, entirely contrary to the aims of the Vision.

The emphasis on the A259 corridor served by Stagecoach 700 west of Chichester is reinforced at paragraph 2.45 stating that “Between Chichester and Southbourne, the Plan provides for more moderate levels of growth within the parishes of Fishbourne, Bosham and Chidham & Hambrook, ... with opportunities to support and expand existing facilities and for increased use of public transport options”. We strongly support the principle, but the Plan must follow through with specific public transport priority measures that facilitate rather than prejudice such an outcome.

East of Chichester the focus is at Tangmere, where the existing allocation for about 1000 dwellings is being uplifted by 300. Paragraph 2.44 justifies this among other things recognising the scope for “...improved and additional bus services and cycleways will provide better connections to Chichester city and east to Barnham and the ‘Five Villages’ area in Arun District.” We unequivocally endorse this conclusion. Realising a “game-changing” level of bus service quality, reliability and frequency east of the city, also serving committed and planned development north and south of Oving Road at Shopwhyke, is equally essential, given that all SRN links and junctions are approaching equal saturation.

The National Bus Strategy has given new focus on partnership with West Sussex County Council to discuss and deliver a significant new bus service between Chichester, Shopwhyke, Tangmere, Eastergate and Barnham, supporting committed development and acting as an initial phase of what ought to be a more ambitious longer-term strategy to support growth beyond 2025 in both Chichester and Arun Districts. For these improved bus services to be both deliverable and effective, robust bus prioritisation is unavoidable. No such measures are proposed in the Plan or its evidence base and we therefore suggest inclusion of plans to facilitate safe and efficient bus operation between Tangmere and Nyton/Eastergate, ideally avoiding the need to join A27 through-traffic entirely.

We welcome the clear recognition that these localities identified for growth, benefit from existing relevant public transport services. The Vision also sets an expectation that bus services in particular should be “enhanced” and “reinforced”.

We entirely agree that these opportunities exist, across the broad strategy and strategic allocation proposed by the draft Local Plan. Securing them will be crucial to achieving national and local policy objectives, including the Strategic Objectives. However, to our continuing very great dismay, the Plan goes no further to defining how this will be achieved. As such the Vision is not demonstrable achievable or deliverable.

Accordingly the Plan cannot be considered effective, in the sense of NPPF.

Remedying this, demands specific measures to protect bus services from congestion in the following corridors:

- A259 East of Emsworth
- A259 Fishbourne
- A 259 Via Ravenna/Cathedral Way
- A286 Stockbridge Road north and south of A27
- B2145 Whyke Road/Hunston Road
- A259 Bognor Road, east and west of A27 and extending to the District Boundary
- B2144 Oving Road/Shopwhyke Road east and west of the A27
- A 285 Westhampnett Road/Portfield Way/Stane Street, potentially involving a mode filter at the west end of Stane Street

These must be defined to a sufficient level of detail to assess their effectiveness and deliverability, including costs.

This would then allow West Sussex County Council and Local Transport and Highways Authority, ourselves as the principal bus operator, and where appropriate other organisations that would be directly tasked with delivering the mitigation package, to agree service levels and standards necessary to deliver specified outcomes, including journey times, frequencies, capacity and hours of operation on the network, and also in respect of the strategic allocations and Strategic Locations for Growth.

The agreed mitigations strategy should be set out in an up-to-date Infrastructure Delivery Plan backed by clear funding commitments, including a funding strategy to justify necessary developer contributions.

Where necessary to support evidence of effectiveness and deliverability, clear statements of support, which might include Statements of Common Ground between the LPA, LTA, National Highways and Stagecoach, could be provided.

3. Spatial Strategy Stagecoach Supports

Stagecoach well recognises the constraints outlined in the explanatory narrative at the start of Chapter 3.

In particular we strongly endorse that strategy in that it reflects that the best opportunities to meet housing and employment development requirements sustainably clearly exist in and close to Chichester and on the key east-west movement corridor where – subject to effective measures being delivered to make these modes more attractive, efficient and relevant – sustainable modes can credibly provide for a much higher proportion of movement demands, mitigating most effectively the potential traffic impacts of development.

We agree that the Manhood Peninsula suffers serious environmental constraints, but, added to these, public transport and other sustainable modes cannot provide such attractive alternatives, and significant further development risks merely reinforcing already high levels of car use, aggravated by the carbon impacts of the distances involved – something the plan does very little to evaluate, and makes no reference to.

We endorse the conclusion in paragraph 3.24 that significant development in the part of the District north of the National Park is inappropriate. The rationale is principally on landscape and visual character. This exposes a fundamentally biased approach to plan making that has consistently underplays transport accessibility and carbon issues. In fact, the lack of local services and the extended distances that need to be travelled to fully participate in society in this area, with no realistic prospect of public transport offering relevant choices, ought to rule such a strategy out of play on a far less aesthetic and interpretational basis.

3.1. Policy S1 Spatial Development Strategy Stagecoach Supports

The Spatial Strategy flows clearly and logically from the Spatial Portrait, and the opportunities and constraints identifiable across the Plan area. It represents a logical and justified continuation of the existing Local Plan strategy. In particular the spatial strategy maximises the potential for sustainable modes to contribute to meeting a much higher proportion of all the District’s mobility and accessibility needs.

3.2. Policy S2 Settlement Hierarchy Stagecoach Supports

The settlement hierarchy clearly reflects the service endowment and potential self-containment of the settlements in the District. In particular, the

second tier of settlement hubs includes secondary schools, which are major peak trip generating uses. Service villages, in the main, also benefit from bus services running at least hourly, which can be expected to provide for a degree of mobility for the higher number of trip purposes that cannot be satisfied by walking or cycling within the immediate locality. Thus, a level of development to meet local needs in this tier is relatively sustainable.

There is a quite broad range of settlements in this category. We have concerns that, north of the National Park, the Service Villages have no realistic public transport choice. These include Plaistow/Ifold, Kirdford, Loxwood, and Wisborough Green. Such as exists is typically a 1/bus per day off-peak shoppers service offering up to 90 minutes in Horsham or Guildford and as such any development here even to meet local needs requires each adult to own a car. This contrasts strongly with Service Villages to the south of the National Park, which are greatly more sustainable.

4. Climate Change and the Natural Environment

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This section of the plan is extensive and wide ranging, as should be expected.

However, remarkably, there is no acknowledgement whatever of the role of transport in mitigating climate change or its effects, not of the importance of sustainable movement and access being facilitated across the plan area in addressing anthropogenic impacts on the natural world at a more local level.

This exposes very clearly a troubling level of indifference to transport matters in the production of the Plan, which, while nationally quite common, is neither appropriate nor acceptable. The mitigation of transport impacts is not merely a matter speaking to the social and economic aspects of sustainable development. It is crucial to address the causes and effects of climate change that arise from transport, and personal mobility.

This is now well understood and at the centre of national policy, including the National Decarbonisation Strategy for Transport (July 2021) which at Section 5 commits the government to aligning land use planning and transport strategy much more tightly and effectively to mitigate the carbon emissions associated with the current dependence on cars, and the mode mix; but also to reduce travel distances, both increasing the potential relevance and effectiveness of all sustainable modes, and reducing average journey lengths for residual motorised journeys of all kinds.

National statistics show that well over a third of all domestic carbon emissions arise from land-based transport and of these, the vast majority arise from trips of over 10km – outside the range of large scale use of cycling. In fact, the potential of the plan to materially support carbon emissions reduction from within the plan area lies more in the realm of transport than any other policy theme – including emissions mitigation from buildings, which is in any event an aspatial matter and covered by nationally-binding building regulations. By 2025 something like 40% of all the emissions within the plan-area will be transport related.

There is no evidence supplied to support the plan that addresses the transport carbon impacts of the spatial development strategy in a clear manner.

There is no evidence supplied that sets out the effects of potential worsening of congestion on air quality within the plan area, arising entirely from the excess of passenger car movement demands over available and credibly deliverable highway capacity. This is despite the evidence set out and acknowledged in the explanatory memorandum at paragraph 4.130:

“4.130. The council’s Air Quality Action Plan and the West Sussex Transport Plan 2022-2036 both refer to the air quality issues faced by Chichester. There is currently one Air Quality Management Area (AQMA) in the plan area, located at St Pancras, Chichester. AQMAs are designated where air quality exceeds, or is likely to exceed, national air quality standards and objectives. Development within or impacting these areas, or that likely to cause the declaration of any further AQMAs, will be subject to an air quality assessment by the applicant.”

This is a retroactive approach – it is not “planning”, based on evidence.

We are well aware that air quality issues in and of themselves can render allocated sites to be undeliverable: a good example is in the Vale of White Horse, Oxfordshire, where strategic allocations on the A338 and A420 corridors have been held up for years by air quality issues at Marcham and Frilford, in large measure because agreed transport interventions were considered inadequate or undeliverable a very short time after the Plan was examined and adopted.

There is no evidence that shows how the development strategy can effectively mitigate these impacts as well as the further potential impacts that arise from the development strategy. This is exasperating, as there is clear evidence that could be drawn upon to show that that very substantial opportunities exist to:

- Speed buses up and make them more reliable by the delivery of bus priority on most of the key main corridors. Most of these even today operate relatively frequently
- Improve service frequencies and extend hours of operation.
- Secure significant background mode shift to bus as a result, damping pressure on key links and junctions, by consolidating demands on direct more reliable and more frequent bus services.

The spatial development strategy as submitted is in fact, likely to well conform to such additional evidence.

The allocations require substantial additional transport related work and evidence to demonstrate that the opportunities for sustainable transport have been identified and taken up as required by NPPF paragraphs 104-105.

With regards to specific policy, Policy NE22 should be modified to read:

“Development proposals will be permitted where it can be demonstrated that all the following criteria have been addressed:

1. Development is located and designed to minimise traffic generation and congestion through access to by maximising the relevance and attractiveness of sustainable transport modes, including maximising provision of specific demonstrably effective measures to make pedestrian and cycle and public transport routes and networks more direct, more safe, faster and more reliable;...”

5. Housing

5.1. Policy H1 Meeting Housing Needs

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

The presumption of the planning system is that local planning authorities should seek to meet their objectively assessed development requirements in full. These needs are assessed by a defined Standard Methodology set out in Planning Practice Guidance and elsewhere, that has explicit regard to ensuring that the economic and social effects associated with housing are properly provided for, to avoid exacerbating serious problems that arise from inadequate housing supply.

As a significant local service provider and employer, Stagecoach is concerned that existing issues with housing availability and affordable housing supply are not exacerbated. This has a direct bearing on staff recruitment and retention. It also has an indirect bearing on our cost base.

The existing problems with housing affordability have developed over many decades of undersupply. It should be emphasised that the significant boost to the supply of housing that has been sought by governments over the last 15 years, has only begun to take effect relatively recently in this District. Tackling the problem will require years of consistent attention.

Stagecoach notes that the Council is no longer proposing to meet its identified housing needs in full. Rather than 638/annum the Council is allocating a total that implies an annual delivery rate of 535/annum.

While a number of matters evidently present challenges to the Council in identifying a sustainable development strategy. Paragraph 5.2 indicates that "constraints, particularly the capacity of the A27 has led to the council planning for a housing requirement below the need derived from the standard method..." The blame for being unable to meet housing requirements is thus laid squarely at the door of transport infrastructure and systems.

This conclusion in no way follows from the evidence in the Chichester Transport Study. This, rather, makes the statement that when a higher annualised quantum of 700 dwellings per annum was tested, in the majority of cases the traffic capacity improvement package would perform little differently. To quote the Study:

"5.6.3 The network performance outputs analysed comprising V/C%, Delays (seconds) and Queues (PCU's) suggest that generally the proposed SRN mitigation identified for the Core Scenario, can accommodate in the most part, additional increase in development to 700dpa."

Whether the rest of the local road network is similarly protected is moot.

Irrespective of these results, even if the contention made in the draft plan were true, unlike many other constraints, this is amenable to a suitable effective strategy to address the constraints identified being collaboratively conceived. This is what NPPF expects, as set out in paragraphs 104-106.

Where the A27 is concerned, as part of the SRN, National Highways is now working to a substantially revised approach than that in force at the time to current Local Plan was prepared, or LSS2, or reflected in the Chichester Transport Study. This is set out in DfT WMS 01/22. This document is the policy of the Secretary of State for Transport in relation to the SRN which should be read in conjunction with the National Planning Policy Framework (NPPF). It replaces the policies in the Department for Transport Circular 02/2013 of the same title.

It makes plain that to accommodate additional demands arising from development, National Highways (NHC) expects to meet the requirements of its statutory license in a substantially different manner. With respect to development NHC LTN 01/22 continues to address the tensions between national policy for the environment and carbon mitigation, the ongoing need to substantially boost the supply of housing as well as maintain national economic competitiveness and protect the safety of the public. However, in future, the approach will be to seek first to maximise the impact of demand management measures (reducing the need to travel), and then to accommodate residual additional demands first though maximising the use of sustainable modes, rather than accommodating assumptions about current levels of car dependency and use.

LTN 01/22 much more closely and explicitly aligns with the language of NPPF Chapter 9 paragraphs 104-106. Paragraph 12 states: "New development should be facilitating a reduction in the need to travel by private car and focused on locations that are or can be made sustainable.... Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas." (our emphasis).

It continues at paragraph 13: "where developments are located, how they are designed and how well delivery and public transport services are integrated has a huge impact on people's mode of travel for short journeys. The company will therefore expect strategic policy-making authorities and community groups responsible for preparing local and neighbourhood plans to only promote development at locations that are or can be made sustainable [footnote 8] and where opportunities to maximise walking, wheeling, cycling, public transport and shared travel have been identified." (again, our emphasis)

Stagecoach readily confirms that the draft Plan development strategy conforms well to the first limb of this expectation, in terms of the location of development.

Stagecoach considers that the plan and its evidence base conforms poorly to the second in that the specific opportunities to maximise walking, cycling wheeling and public transport are not clearly identified, and defined, and proven to be effective and deliverable.

The current mitigation strategy for the A27 Chichester area, supporting the adopted Local Plan and for which proportionate developer contributions have and continue to be sought, reflects now-superseded DfT Circular 02/2013. As a direct result, it failed completely to identify any significant effective bus priority measures, despite the fact that frequent services already exist on the key corridor concerned, and that one bus journey can remove, fully seated between 72 and 80 single occupancy car journeys from congested links and across key junctions on the A27. Rather, it sought to implement targeted measures to increase the throughflow of general traffic.

We recognise the realisation that this approach, which was already reliant on some tenuous logic, is simply not technically viable, especially where further development needs are anticipated.

National Highways will now pursue an approach with the planning system that "includes moving away from transport planning based on predicting future demand to provide capacity ('predict and provide') to planning that sets an outcome communities want to achieve and provides the transport solutions to deliver those outcomes (vision-led approaches including 'vision and validate,' 'decide and provide' or 'monitor and manage'). The company will support local authorities in achieving this aim through its engagement with their plan-making and decision-taking stages." (paragraph 15).

Paragraph 23 is at the fulcrum of assessing and defining transport mitigations to accommodate growth on and near the SRN "Capacity enhancements such as modifications to existing junctions or road widening to facilitate development should be determined on a case-by-case basis. The general principle should be accepted where proposals would include measures to improve community connectivity and public transport accessibility, and this will be weighed against any negative safety, traffic flow, environmental and deliverability considerations, impacts on the permeability and attractiveness of local walking, wheeling and cycling routes, and alternative options to manage down the traffic impact of planned development or improve the local road network as a first preference." (our emphasis).

However, no material work has been done that seeks to identify if a bold robustly conceived and suitable judiciously-prepared strategy that seeks to consolidate flows on already densely travelled corridor onto improved bus services, driving mode shift through insulating these services preferentially from already serious queuing. This would be likely to have very substantial impacts on all the key junctions on the A27, and potentially, on the A27 itself. The need for an integrated approach between Shoreham and Emsworth within West Sussex paying particular regard to development requirements in both Arun and Chichester Districts naturally lies at the heart of this, and we would expect to be picked up by the LSS3 Review among other things.

However, the locus of the problems and its causes and effects are obviously well enough known to start work on defining solutions within the plan area

today. We would expect that this work will be essential if National Highways are to support the Plan, especially now given the terms of Circular 01/2022.

Such work could and should start from a "policy off" position: in other words that the Plan should fully accommodate its needs unless it can be proved that a mitigation strategy for the A27 that is compliant with DfT WMS 01/2022 cannot credibly accommodate resulting capacity demands without unacceptable impacts on the safety and efficient operation of the SRN.

This evidence does not exist. In fact the Chichester Transport Strategy 2023, on which the Council solely relies as its transport evidence base, indicates the opposite at para 5.6.3. This is the case before meaningful measures to secure damping of traffic demands through mode reassignment are even considered.

The exception to this is Portfield and Oving Road, which are among the most problematic areas after mitigation even at the Council's chosen 535 dwelling/annum scenario (para 5.6.4.-5). The costly capacity mitigation simply cannot deliver enough benefit. It is admitted that WSCC has indicated that it would prefer a solution that places greater reliance on sustainable modes damping car-borne demand. This is entirely the strategy required by NHC to follow LTN 01/22, of course. Despite the fact that "predict and provide has "run out of road" no attempt has been made to examine what such a solution set credibly could look like. This is unsatisfactory and deeply troubling.

At paragraph 5.4 the draft plan points back again at the West Sussex and Greater Brighton Strategic Planning Board and the future work that has been commissioned, but has barely begun, to update the Local Strategic Statement. This work is to inform the preparation of plans that have horizons beyond the end date of the current LSS in 2030 and properly to meet the Duty to Cooperate. As we said in our response to section 1 of the Plan we fully endorse the conclusion that this is the right mechanism to look at these issues. However, the mechanism has not been effectively applied to the production of this plan. Therefore, the specific evidence that capacity on the A27 in and of itself supports accommodating a lower housing requirement does not exist.

The Plan thus does not conform to NPPF, is not adequately justified and is not effective.

The Plan does not properly meet the statutory Duty to Cooperate.

We will return to this matter in specific representations to Section 7 of the draft plan.

5.2. Policy H2 Strategic Locations/Allocations 2021-2039

Stagecoach Supports

Policy H1 makes plain that the plan, as far as it identifies locations for development has done so in locations that conform with its spatial strategy. All of the strategic allocations to a greater or lesser extent offer clear opportunities to make use of sustainable modes, by virtue of their location. That is not to say that the opportunities to take up these opportunities, and maximise the role of sustainable modes, has been identified, defined and translated properly into the rest of the plan policy suite or Infrastructure Delivery Plan.

As our remaining representations make clear, we support the locations thus far identified as being those that offer the best opportunities to reduce the need to travel, reduce travel distances, and create high quality attractive sustainable travel choices, for both existing residents as well as new ones.

However, the transport impacts of the allocation will individually and cumulatively likely to lead to increasingly severe impacts on the transport network, and on bus services.

Perversely, because these opportunities are not properly identified and secured through the plan and its supporting transport strategy, the opportunities presented by the allocations to secure a substantially more sustainable and lower carbon pattern of movement will not only risk being squandered but may aggravate the wider problems.

5.3. Policy H3 Non-strategic Parish Housing Requirements

Stagecoach Supports

The approach is consistent with the plan's spatial strategy. It generally avoids a dispersal of development to locations likely to be highly car dependent. There is a clear focus on meeting housing needs in the far north-east of the District at the largest and most sustainable settlements, such as Loxwood, Kirdford and Wisborough Green. However, it must be pointed out that public transport availability in this area, provided by the County Council through services it procures, is minimal. These settlements in practice require each adult and child of secondary school age to have access to motorised transport to fully participate in society. This might justify significant measures to secure a boost in the frequency of bus services between Guildford and Billingshurst, passing through these settlements.

Otherwise, existing commitments in the plan area already make provision to meet for local needs. To the degree that there is an unmet local requirement for affordable housing of a small scale – for example to support the rural economy – this could be met through neighbourhood plans or through Rural Exception Sites.

6. Place-making, Health and Wellbeing

6.1. Policy P1 Design principles

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

NPPF requires that proposals should consider transport issues from the earliest possible stage. Designing to properly facilitate safe and efficient access, focusing first on sustainable modes, should be at the heart of development design. Too often it is still an afterthought, notwithstanding this. Policy P1 must include an additional statement to be compliant and effective with NPPF paragraph 104-105 and 112 a):

"Development will be designed to make access and movement using walking, cycling and public transport the natural first choice, and demonstrate through the Design and Access Statement how such modes are afforded the most direct, safe, reliable and efficient routes within to and from the proposals, especially when compared with car use."

6.2. Policy P4 Layout and Access

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

A number of proposals in the plan involve large-scale development. It is essential that where appropriate buses can access and circulate efficiently through development at a suitably early stage. There is no acknowledgement of this anywhere in the policy, contrary to NPPF paragraph 112.

Large-scale development which buses cannot access in an efficient or timely manner, or at all, strongly contributes to high levels of car-dependency. Evidence for this is referred to among other places, in DfT Circular 01/2022. To be compliant with NPPF and properly pursue its strategic Objectives,

Policy P4 needs to be modified to address this point:

"1. Provide safe, direct and attractive conditions for inclusive access, egress and active travel between all locations and providing as good direct high quality links to integrated public transport, and where appropriate efficient access and circulation to bus services, unimpeded by excessive parking, at a suitably early point in the development phasing;

7. Transport and Accessibility

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

The issues related to transport are fundamental to the soundness of the Plan. In particular, the constraints presented by the capacity on the A27 around Chichester and its key junctions, are the paramount reasons why the Council does not consider it can meet its objectively-assessed development needs in full. Thus, the transport issues and potential solutions available and what these mean for the ability of development needs to be accommodated, are matters that go to the heart of the soundness of the Plan.

Paragraph 8.3 sets out the approach taken to date succinctly:

"Increasing the capacity of the road network is key to supporting growth in the Local Plan. However, there is also a need to reduce demand for road transport to achieve net zero in greenhouse gas emissions by 2050 as highlighted in the council's Climate Emergency Action Plan and Strategic Objective 1. In aiming to achieve the ambitions of the action plan, all development is expected to demonstrate how it will support four key objectives to create an integrated transport network which will alleviate pressure on the road network, improve highway safety, encourage sustainable travel behaviours and help reduce transport related impact on air quality, by:

1. Avoiding or reducing the need to travel by car;
2. Enabling access to sustainable means of travel, including public transport, walking and cycling;
3. Managing travel demand; and
4. Mitigating the impacts of travel by car."

However, this approach is unambitious and "lightweight" as it assumes, as does the existing Chichester Transport Strategy on which the current adopted plan relies, that the focus of investment should be, wholly, in highways capacity improvement.

Sustainable modes explicitly are expected to play a greater role to "alleviate pressure" on the local road network, as part of this strategy. To emphasise: to avoid exacerbating congestion, the strategy will have to both remove a significant proportion of existing demands from the network on multiple key approaches to Chichester; and then ensure that travel demands from committed and further new development allocated in the plan does not simply replace these journeys, or, worse, create even greater demands.

This will demand very significant behaviour change. Only by making sustainable modes substantially more attractive, both absolutely, and relative to the same journey made by car, can this be expected to occur. However, the explanatory memorandum as well as the wider policy suite and IDP, well expresses a fundamental unwillingness to taking specific, defined measures to achieve this reduction in car use and material promotion of sustainable modes. It makes plain that sustainable modes, including bus services, will offer a lesser role to which "access will be provided".

Such a vague and weakly defined mechanism will have no effect, at all, on current behaviour and car dependency if the relevance of those choices as a credible alternative to car use, is not substantially boosted. This includes a 5% reduction in trip demand assumed by the Traffic Model at the heart of the Chichester Transport Study 2023.

For this reason. the transport strategy behind the current adopted plan is demonstrably ineffective, as the updated model makes plain. It has not yet been delivered and is yet unclear when or (in the absence of committed funding) even if it can be. It is ineffective to "roll forward" this strategy to support a higher level of planned growth.

We note that a scheme for addressing congestion on the A27 at Chichester has been included in Roads Investment Period 3 (2025-2030) – well within the horizon of this Plan. However, recent history provides compelling evidence that off-line improvement to the north is not politically supported and arguably even technically or economically deliverable. It is not funded, nor at this stage can it be hypothesised if an economically deliverable scheme is achievable sufficient to warrant the necessary investment.

An on-line improvement of the A27, including junction improvements, is likely to favour longer distance east-west through movements, which are of greater significance to the national economy, at the expense of local movements crossing the SRN- a conundrum that largely sums up the dilemma that is faced by NHC and the County as Highways and Transport Authority. It is one that is played out in many places, but rarely is the tension so stark as at Chichester.

Every local route crossing the A27 at grade around Chichester accommodates a regular bus service - or shortly will do (Oving Road area is expected to follow in 2023, though bus services are likely to not use the modified crossroads but to use the left-in-left-out facilities provided as part of the Shopwhyke Lakes development). The impact of these issues on the entire bus operation are serious and increasingly severe.

By the same token, boosting the relevance and reliability of each of these services substantially consolidating as much demand as possible onto a much smaller number of vehicles, is clearly a strategy that ought to support the effective capacity of each of these junctions being greatly augmented, at the same time as reducing equally substantially, the energy- and carbon intensity of mobility in the plan area. Addressing the A27 should not be considered some kind of "zero-sum" game.

Furthermore, the approach of National Highways in its dealings with development and the planning system now reflect a substantial change in Government Policy set out in DfT Circular 01/2022, which we separately cover in these representations, that entirely aligns with an approach that seeks to appropriately invest in more active and rational management of scarce highways capacity, on both the SRN and local roads.

For environmental, economic and social reasons – including public health, the issues presented by the A27 and its interface with local roads around Chichester stands out, nationally, as an example of where the approach taken to accommodating and mitigating development impacts needs to make a clear break with previous "predict and provide" approaches to meet forecast unconstrained car use as LTN 02/2022 makes clear as a principle. Policy in the West Sussex LTP to 2036 itself makes plain that "shared mobility" – including bus services – must play a much greater role in this area.

The existing Chichester Area Transport Strategy is focused on justifying capital contributions from committed development to fund highways capacity improvement – with nothing included to make bus services more attractive, or importantly more reliable. Indeed this "cars first" approach is so costly, that there is already accepted by WSCC to be insufficient land value remaining to be captured to put into substantial improvements for public transport. That much is very evident, and transparent, from paragraph 8.12 and 8.14, where south of Chichester "This (one) package of works (of several improvements needed) would be between £57.23 and £82.79 million to deliver in full and would not be capable of being funded by development

contributions alone.” This assumes the scheme is otherwise deliverable, which on the evidence in the public domain for some time, has been considered challengeable.

The draft Local Plan and a modestly updated infrastructure package that flows from the 2023 Chichester Transport Study, pursues exactly the same approach.

This strategy is also even more ineffective having regard to the roll forward of the Plan to 2039. It cannot deliver the key Strategic Objectives of the Plan; and in particular this is explicitly recognised by the Council in the failure of the draft Plan to accommodate the OAN in full.

It is also obsolete, as it does not align, from first principles, with national policy (including the National Decarbonisation Strategy for Transport) and DfT Circular 01/22; nor the Council’s own declared Climate Emergency.

As a result, draft Policies T1 and T2 are both unsound, as we will separately explain.

Owing to the lack of evidence about the implications of this for adjoining authorities – especially Adur District – in the absence of the review of the Local Strategic Statement – this has implications for fulfilling the Statutory Duty to Co-operate.

The absence of any meaningfully comprehensive refresh of the transport evidence base means that there are no meaningful schemes of any kind, defined in the plan or its IDP, to indicate either what level of growth can be accommodated, by delivering a change in travel behaviour. This would be aimed to secure a sufficient effective increase in junction throughput (measured in terms of person trips as opposed to passenger car unit movements (PCUs)). Such evidence would propose measure to achieve that outcome and assess the efficacy and costs of such improvements, across all modes.

Paragraphs 8.10-8.13 inclusive indicate that the Council “has moved away from ‘predict and provide’” and invites the reader to conclude this has translated into a programme of interventions that can be funded to deliver specific, credibly predictable outcomes. Such a programme should be clear in paragraph 8.11. and the IDP. There is no such clarity and this conclusion would be false.

It would also be evident in the language of the Chichester Transport Study 2023 and its refreshed proposals. Only the most token of lip service is paid to the matter. It is a plainly car-focused, predict and provide methodology to support a “predict and provide” strategy. In fact, it is a brazenly car-focused approach, to the exclusion of all else.

The statements in the Plan regarding any other approach, read properly, offer nothing more than a vague commitment to look post-adoption, and implementation, at unspecified measures, based on problems that may arise in future that will be decided by a committee: the Traffic and Infrastructure Management Group (TIMG). This does not yet exist and is obviously an attempt to posit a mechanism that retroactively will cover for the lack of serious multi-party engagement to address the existing and future issues. Such a group should, in our view, also include the public transport operators, not least if the requirements of NPPF Para 106c) are to be satisfied, and the strategy and measures to be adopted are material to supporting the Local Plan, as of course the purpose of the TIMG has as its core *raison d’être*.

The approach proposed by the draft plan is plainly ineffective and unsound in justifying the draft Plan.

It is more widely unacceptable to Stagecoach. The issues are severe today and well-known, already serving to jeopardise the delivery of buses relied on by existing residents, much less attract new ones.

We also consider that HM Planning Inspectorate are likely to be quite resistant to accepting this aspect of the plan’s transport strategy, nor will it be appropriate for the Council, West Sussex County Council, or National Highways, to define such measures after the submission of the Plan during the Examination process. The Examination in Public of a local plan has no purpose to improve plans, or remedy deficiencies clearly evident prior to submission.

The examination of the West of England Joint Strategic Plan in 2019, and the Uttlesford Local Plan in 2021, among several others, demonstrates especially clearly that the Planning System and the Examination process is not amenable to post-hoc retrofitting of transport evidence and strategies to support a development strategy.

7.1. Transport Evidence Base

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Most of Stagecoach’s serious concerns about the soundness of the plan arise from the fact that it has been prepared in advance of any up-to-date transport evidence and suitably robust transport mitigation strategy being advanced to support it. In essence, the Council has rolled forward the existing plan by 9 years, adding some additional sources of housing supply, while still relying implicitly on a transport evidence base that was prepared 10 years ago.

This led to the formulation at that time of what can only be described as an attempt to develop an effective car-based mitigation strategy, creating capacity for general traffic added to accommodate unconstrained additional demands on an already over-taxed highways network – the Chichester Area Transport Strategy. Despite language in support of sustainable modes, no deliverable measures were identified to support either the extension of the bus network to serve allocated sites, and much less to create a vital improvement to the quality and reliability of public transport services. This approach reflected the approach set out in DfT Ministerial Circular 02/2013 “Development and the Strategic Highways Network”, applicable since the A27, which is the focus of the most severe difficulties, forms part of the national Strategic Roads Network.

This approach has proven ineffective even before substantial elements of housing land supply in the current plan come forward – in particular West of Chichester and West of Tangmere.

In addition, Circular 02/2013 has now been replaced by a new Ministerial Statement of 23/12/2022, DfT Circular 01/2022.

On both counts the transport evidence base and strategy needs to be properly revisited and established to provide effective mitigation for the plan, including current commitments that are being rolled forward.

The language of the current Ministerial Circular 01/2022 offers a highly condensed synoptic view of the proper approach to addressing transport matters in the planning system notwithstanding that it is directly concerned with the Strategic Roads Network. *Videlicet*:

“31. The NPPF expects local plans and spatial development strategies to be underpinned by a clear and transparent evidence base which informs the authority’s preferred approach to land use and strategic transport options, and the formulation of policies and allocations that will be subject to public consultation. The authority will expect this process to explore all options to reduce a reliance on the SRN for local journeys including a reduction in the need to travel and integrating land use considerations with the need to maximise opportunities for walking, wheeling, cycling, public transport and

shared travel.

32. The Transport Decarbonisation Plan indicates that carbon emissions from car and van use is the largest component of the United Kingdom's total transport emissions. While action is being taken to decarbonise transport such that all new cars and vans will be fully zero emission at the tailpipe from 2035, the proposed location of growth in current plan periods and whether new developments would be genuinely sustainable remain important factors in demonstrating that a local authority area is on a pathway to net zero by 2050 and therefore compliant with the requirements of the Climate Change Act 2008.

33. Alongside this, the local authority should identify the key issues within their study area regarding transport provision and accessibility, setting out how the plan or strategy can address these key issues in consultation with (National Highways, and other transport stakeholders identified in NPPF paragraph 106b). It is the responsibility of the local authority undertaking its strategic policy-making function to present a robust transport evidence base in support of its plan or strategy. The company can review measures that would help to avoid or significantly reduce the need for additional infrastructure on the SRN where development can be delivered through identified improvements to the local transport network, to include infrastructure that promotes walking, wheeling, cycling, public transport and shared travel. A robust evidence base will be required, including demand forecasting models, which inform analysis of alternatives by accounting for the effects of possible mitigation scenarios that shift demand into less carbon-intensive forms of travel." (our emphasis)

Within the text quoted above, references to National Highways and "the Company" can quite legitimately be extended, given the statements in NPPF paragraph 16, 25, 26 and 106b, to include all the relevant transport infrastructure and service providers in the plan area. Circular 01/2022 also has the weight of secondary legislation as a Written Ministerial Statement and thus should be considered to be highly material.

To date there has been little attempt to explore, to the degree necessary, strategies that conform to Circular 01/2022. It is thus not possible to conclude, as the Council has done, that the issues on the A27 that present a constraint to development, are insuperable.

In line with comments made elsewhere in the response to this pre-submission draft, the Plan thus requires substantial further work to be undertaken with key stakeholders to establish a suitably effective and demonstrably deliverable transport mitigation strategy, to sustainably meet the District's identifiable development needs and where apparent and appropriate, also ensure that wider cross boundary strategic issues are appropriately addressed, in conformity inter alia, with the Duty to Cooperate, NPPF paragraph 16 and 104-111 inclusive, and DfT Circular 01/2022 and to ensure the Plan's own Strategic Objectives can be met.

7.2. Policy T1 Transport infrastructure

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

As described in comments elsewhere, Stagecoach does not see that a suitable proportionate and up-to-date basis exists to properly and appropriately address the transport issues in the plan area.

The 2023 Transport Study does not perform this role adequately but, contrary to the explanatory memorandum, is a scheme intended only to facilitate car-borne movements through some of the key junctions. There is no evidence that an holistic integrated and strategic approach to transport mitigations has been prepared. Certainly Stagecoach has not been involved in any of the discussion about appropriate transport measures in support of the plan, including the Transport Study 2023, contrary to the expectations set out in NPPF at paragraph 16 and 106.

Notwithstanding out fundamental concerns about the transport evidence case and mitigations strategy, Policy T1 reflects a weak and ineffective approach, that seeks to try and define a strategy post-adoption.

Contrary even to the explanatory memorandum for the policy, which seeks to maximise the contribution of sustainable modes, the policy is phased in such a way that it gives basis for previous "predict and provide" solutions to facilitate and support current levels of car dependency – already shown to be undeliverable and unaffordable – will nevertheless be the first rather than the last resort. There is no commitment to seek to maximise the contribution made by sustainable modes to meeting mobility needs. Nor is there any recognition that current chronic congestion and lack of network resilience jeopardises the ongoing attractiveness and long- term sustainability of the current public transport offer.

To be effective and create alignment with national policy, and also provide for an up-to-date transport evidence base and strategy to be adduced, Policy T1 should be modified to read:

"Integrated transport measures will be developed to mitigate the impact of planned development on the highways network, improve highway safety and air quality, promote more sustainable travel patterns and through providing in the first instance, new and improved infrastructure and services that will be credible effective in maximising the encourage increased use of sustainable modes of travel, such as public transport, cycling and walking.

To achieve this, the council will work with National Highways, West Sussex County Council, other transport and service providers (including through the Traffic and Infrastructure Management Group) and developers to provide a better integrated transport network and to improve accessibility to key services and facilities...

All parties, including applicants, are expected to support these objectives by:

1. Ensuring that new development is well located and designed to avoid or minimise the need for travel, encourages maximises the use of sustainable modes of travel as an a credible alternative to the private car and directly provides or contributes towards new or improved transport infrastructure;
2. Working with relevant transport infrastructure and service providers to improve accessibility to key services and facilities with primary emphasis on sustainable modes, and to ensure that new facilities are easily accessible by sustainable modes of travel;
3. Targeting investment to provide local travel options as an that represent a clearly credible alternative to the car use, focusing on the delivery of improved integrated bus and train services, and improved pedestrian and cycling networks, including the public rights of way network, based on the routes and projects identified in the Local Transport Plan, West Sussex Bus Service Improvement Plan, Local Cycling and Walking Infrastructure Plan (LCWIP) and the Infrastructure Delivery Plan;
4. Planning to achieve the timely delivery of transport infrastructure on and approaching the A27 and elsewhere on the network, needed to support new housing, employment and other development identified in this plan;
5. Phasing the delivery of new development to align with and where possible facilitate the provision of new and improved transport infrastructure and services and the outcomes of monitoring travel demand on the network, including that arising from areas immediately adjoining the plan area. It may also be Where necessary to achieve this alignment proactively phase development will be phased to take into account the monitoring and effectiveness of travel plans demands on the network and to ensure that measures are implemented to support the highest possible level of encourage sustainable

travel behaviour.;

6. Using demand management measures, such as travel plans, to manage robust methodologies to assess travel demand and minimise the need for new or improved transport infrastructure as part of the monitor and manage process.

7. Delivering a coordinated package of infrastructure improvements at and approaching to junctions on the A27 Chichester Bypass along with other small-scale junction improvements interventions within the city and elsewhere, as identified through the monitor and manage process. These will increase road capacity, reduce traffic congestion, improve safety and air quality, and improve access to Chichester city from surrounding areas, first by maximising the contribution of sustainable modes to meeting mobility demands, then, and only as evidenced by robust modelling and option testing, providing increased highway capacity for general traffic.

..."

7.3. Policy T2 Transport and Development

Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Section 1 b) of T2 will be ineffective as, absent measures to ensure buses can run reliably and efficiently, improved bus services will not be possible, in support of the plan's own stated broad approach to transport mitigation, as well as wider local and national policy.

The draft policy does not require improvements to the quality of services such that sustainable choices will be materially more attractive than car use for many local journeys. Without this the Plan's Strategic Objectives cannot be fulfilled and the objectives of the Plan and this policy, read in its own terms, will not be realised, where reduction in private car use is concerned. It is thus ineffective.

Absent measures to make bus services more reliable and more efficient, by insulating them from chronic congestion as far as possible, still further operating resource and therefore costs, will be needed to just to reliably run existing service frequencies, and capacity, as vehicle productivity continues to be more and more adversely affected by chronic delay. This will be further aggravated by increasing incidence of severe unpredictable service breakdown arising from incidents of diverse kinds on the network, especially on or around the A27, including that arising from more regular severe weather events. Longer journey times can only be expected to lead to relative disadvantage of bus services compared to personal car use, entirely contrary to the objectives of national and local policy, including Policy T1. It can also expect to lead to a dampening effect not on car use, but on bus patronage, threatening the ongoing viability of bus services across the plan area.

Section 1 b) of T2 should be modified to read:

"b) Maximise opportunities for the use of sustainable travel modes through provision of direct and efficient access both to either the existing networks or and through providing such new infrastructure or public transport services, as can be credibly expected to reduce reliance on the private car and work towards achieving net zero in greenhouse gas emissions by 2050;"

Section 1 d) of T2 will be ineffective as the location of development is fixed by this plan. We commend the fact that all the strategic allocations are or will be served by regular bus services.

However, the use of public transport services, where available, depends on the relevance and reliability of these services. Furthermore, provision of services without them generating sufficient patronage to support their long-term operation also threatens the sustainability of the plan and its supporting transport strategy. This is especially true of new services such as those intended to serve West of Chichester and Tangmere and East of Chichester Strategic Allocations.

This can only be assured by the plan being supported by specific measures to ensure buses can operate efficiently and reliably on the existing and projected services intended to serve the developments concerned, and also at the same time secure behavioural change from existing development.

To be sound and effective, the policy T2 1 d.) should be changed to read:

"d) Ensure major development is located to proposals and the supporting mitigation measures enable the use delivery of high-quality, reliable and effective public transport to present the most relevant possible choice to access local services and facilities including employment, leisure and education facilities";

The Policy T2 makes no provision for buses, where necessary, to enter and make efficient and safe progress through major development sites. The plan is thus out of conformity with NPPF paragraphs 104-106. It makes no provision to ensure that penetration of bus services is achieved at a suitably early point in the development trajectory, undermining the achievement of the goals of the Plan and this specific policy. As a good example, West of Chichester Phase 1, currently under construction, cannot be served by buses as a strategy to effect interim bus penetration was never made.

Policy T2 1 f.) should therefore be amended to read:

f) Ensure that the layout and design of the site development proposals provides effective penetration of the site by sustainable modes, at all points in the development build-out, including public transport where appropriate; and sufficient space for all vehicles to manoeuvre without compromising the safety of pedestrians and cyclists, the efficiency of bus services, or the ability to provide an appropriate level of landscaping across the site"

Policy T2 3.) regarding Travel Planning depends entirely on its effectiveness on the quality and relative attractiveness of sustainable alternatives over car use. In the absence of efficient frequent, reliable and direct public transport services (or similarly, high quality facilities for active travel, Travel Plans will continue to be the entirely ineffective "tick box" exercises that they generally are today, evidenced by much lower levels of public transport use in most new developments than it seen in nearby established neighbourhoods, as demonstrated broadly by Census data in 2011, 2011 and 2021.

For this policy to be effective an up-to date transport evidence base and strategy, underpinning a series of specified interventions to promote the relevance and effectiveness of all sustainable does including public transport in particular, needs to be put in place.

8. Chapter 9 Infrastructure – Policy I1 Infrastructure provision

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Policy I1 could not expect to be effective without a clear understanding of the effectiveness and costs of a defined series of measures that are laid out in this Plan and its IDP, to mitigate the transport impacts of the development strategy.

Where the Chichester Transport Study is concerned the only meaningful work has focused on the definition and delivery of a range of highways

capacity schemes mainly on the A27 around Chichester.

As we have discussed elsewhere the effectiveness of these schemes is insufficient as set out at Tables 8.1 and 8.2 of the Chichester Transport Study 2023. The plan itself admits that the deliverability of this package cannot be afforded by developer contributions alone.

The Chichester Transport Study 2023 does not attempt provide a realistic assessment of costs to deliver these schemes, despite the fact that they have been under evaluation for many years. Nor does it offer any assurance that the schemes are technically achievable. Rather, it states the opposite:

“9.2.3 No investigation has been carried out into specific land ownership details, or into the location details or cost of moving statutory undertakers and utility apparatus within the areas of the scheme. No design assessments were carried out at this stage to ascertain the deliverability of the proposals except where any Health and Safety concerns were raised.”

Thus on the grounds of effectiveness, deliverability and affordability, the measures on which the Plan relies must at the very least be considered to involve an exceptionally high level of risk. Since Policy I1 is founded on these assumptions, it cannot be considered effective.

As we set out elsewhere, the Plan has been advanced on the basis that if any additional sustainable transport measures are required, these mitigations should be retroactively considered and defined after adoption of the Plan. In the light of the doubts that are apparent of both the deliverability, affordability and effectiveness of the Chichester Transport strategy this is especially unsatisfactory even if existing baseline conditions were reasonably acceptable.

However, the Chichester Transport Study 2023, as did its predecessors, makes plain that that existing problems are acute, and can rightly be considered “severe” in the sense of NPPF paragraph 111. Waiting to define deliverable affordable alternatives is an entirely inappropriate approach to the local plan transport mitigation strategy. Such an approach also makes it impossible to consider prior to adoption how far the transport impacts of the plan can be cost-effectively mitigated by alternative means, or whether they are deliverable having regard to technical achievability, land control, development viability, or any combination of the above. Thus, the plan cannot be considered justified, or effective.

Given the mutual dependence of development strategies in Chichester and Arun in particular on these measures this should be seen as crucial of the fulfilment of the Duty to Cooperate.

The remedy for this is ultimately to put in place a suitable transport mitigation strategy following a strategic appraisal of options through review of the LSS. This then must be supplemented by more detailed development specific and localised scheme definition, including, where necessary, bus priority and other measures to support the substantial promotion of the attractiveness of public transport in key bus corridors over private car use. This would then be reflected by costed proposals in the IDP.

Leaving these fundamental weaknesses to one side, even if such a strategy and mitigation package were defined, there is no mention of public transport in the policy even though it is clearly a key part of the policy environment and mitigation strategy for the plan as expressed in the explanatory memorandum for I1, but also at Policies T1 and T2. I1 thus does not effectively support the realisation of the intent of Policies T1 and T2.

Policy I1 iii) should therefore be modified to read:

“(iii) Safeguard the requirements of infrastructure providers, having regard to requirements within and where appropriate across the boundaries of the plan area, including but not limited to:

...
• Highways including specific measures to accommodate improved active travel and public transport level of service and cycle lanes, and...”

At limb v) the Policy expects developers to meet the “in perpetuity costs of operating and maintaining infrastructure”. This shackles development management decisions to developers assuming what are infinite costs – given that “in perpetuity”, read properly, can only mean “without any limit in time”. This means that it is impossible to meet the statutory tests on developer obligations set out in the Community Infrastructure Levy Regulations 2010 (as amended) at Regulation 122, also repeated in NPPF. This policy cannot be lawfully implemented and it is thus ineffective.

In the absence of an up-to-date transport mitigation strategy that is fit for purpose, at the point the Plan is examined these costs of any additional infrastructure are not known in any case. The strategy and its costs, including its affordability and deliverability, are crucial to assessing if the Plan is sound.

Subject to an appropriate defined transport mitigation strategy being arrived at, to be sound, the Policy I1 v) should be modified as follows:

(v) To consider and meet as appropriate the in-perpetuity delivery costs of infrastructure and, where appropriate, improved services, to the point where its long-term operational sustainability is credibly assured from mainstream sources. Where adoption is not envisaged by local authorities, that must include arrangements for its future ongoing management and maintenance;

9. Strategic and Area Based Policies

9.1. Policy A1 City Centre Development Principles

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Chichester City centre is rightly identified at 10.2 and 10.4 as the commercial and service hub of the District. It is also acknowledged to be the most accessible place in the District by sustainable modes, public transport in particular.

Boosting the vitality of the city centre is something that Stagecoach strongly supports. Irrespective, the enhancement of the commercial and cultural life of the District in the place where these opportunities can be accessed broadly by sustainable modes, is one that has long been at the heart of national planning policy for town centres, reflected in the “town centre first” approach to locating major trip generating uses.

Paragraph 10.5 exposes an unbalanced and unsound preoccupation with aesthetic matters in its approach to the town centre, and far too little to ensuring that the central place function is enhanced through protecting and enhancing the quality of public transport access.

The city is relatively small but at the heart of an extensive hinterland, and thus the role of bus in supporting sustainable access to and enhanced city centre venue is one that needs appropriate recognition and emphasis. It is important to note that a dominant number of key service and facilities such as the General Hospital are relatively close to the city centre. This directly contributes to driving travel demand into the city, causing congestion. Most importantly, it also makes the task of mitigation simpler, given the impact a suite of active and sustainable measures can have within the same close proximity.

Policy A1 does not provide this. As such, achieving the strategic objectives of the plan is seriously threatened, and the plan is thus not effective.

The Plan needs to ensure that the approach to city centre regeneration maintains and enhances public transport access, interchange and inter-modal connectivity. It also needs to ensure that bus service stopping and interchange facilities are able to address increases in future demand, anticipated by the clear intent expressed elsewhere in the Plan that public transport should be meeting a greater proportion of mobility needs, in a growing district. Achieving this demands an ambitious approach to the location, quality and capacity of bus stop and interchange.

We have been in discussions with the District Council about this, alongside West Sussex County Council, for a very considerable period. Stagecoach has always been keen to help facilitate the Council's aspirations for the city centre, and we continue to hold this intention. However, this cannot be at the expense of a material diminishing of the convenience and fitness-for-purpose of bus stop infrastructure and interchange. Stagecoach has significant concerns that current proposals to remove the bus station and have all bus services operate from the street kerbside, on an inner distributor road with similar or reduced net stop capacity, fall short of promoting attractive, convenient bus access to the central area as a destination.

For the longer term and where the objectives of the draft plan are concerned looking ahead to 2039, they clearly fall short of enhancing the convenience and attractiveness of public transport use. Much less do they make sufficient provision for a material increase in bus frequency, connectivity, and interchange convenience, on which the draft plan explicitly relies. It is vital that the District Council is clear in policy about its objectives for public transport in the city centre. These objectives must also carry sufficient weight when held in tension with other aspirations for the centre and the constraints on achieving them.

For the Plan to be sound, properly effective and compliant with NPPF, the approach to the City centre cannot ignore its role in the provision of sustainable transport service and connectivity.

Policy A1 should therefore be modified to properly reflect this crucial function, on which the vitality of the city centre must increasingly depend if unacceptable impacts on congestion, air quality and amenity are not to arise. This is still more crucial if wider aspirations to secure a more sustainable society and mitigate carbon are to be achieved.

"...This will include provision for development and proposals that:

- Support and strengthen the vitality and viability of the city centre and its role as a shopping/visitor destination, employment centre, public transport hub and a place to live;
- Support and promote facilitate improved access to the city and with increased emphasis on sustainable modes of travel, with particular regard to enhancing the public transport interchange role of the city centre area, in accordance with the transport strategy for the city and..."

9.2. Policy A3 Southern Gateway Development principles Chichester Bus Station, Bus Depot and Basin Road Car Park
Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

There has been aspiration to redevelop the bus station and nearby bus depot from many years. Stagecoach has been engaged with detailed discussion with the District Council on this matter over a very extended period. We confirm that these discussions have reached a relatively mature stage, however at the time of writing are not concluded.

Stagecoach recognises and supports in principle the Council's wider aspirations for the "Southern Gateway", and this has governed our approach to the Council to date. We continue to have no "in principle" objection to relocating our administrative, engineering, operational and customer service facilities.

Leaving our proprietary interests entirely to one side, it remains vital that in so doing, the effectiveness, attractiveness and convenience of these facilities is not compromised, as we have outlined in our representations to Policy A1, if wider national and local transport policy, and the local plan strategy itself, are to be effectively achieved.

The depot is crucial infrastructure to support the safe, reliable and legally-compliant operation of Stagecoach bus services over a very extensive area covering the entirety of the District and beyond. Without securing equivalent facilities, that are fit-for-purpose, many of our services would have to cease.

If buses are to provide a greater and more attractive level of service (still more so if they are to be electrified) larger, more capable depot facilities, and city centre bus interchange facilities will be necessary.

Notwithstanding that the bus station and depot sites are leased from the District Council, these leases terminate well beyond the end of the plan period.

Finding suitable sites for a replacement bus depot in Chichester, in common with all similar localities especially in southern England, is extremely challenging. As a sui generis use, bus depots do not automatically benefit from policy support on land allocated for employment uses. Most bus depots benefit from being legacy assets established under very different economic conditions. That is the case here. The value of a depot site for redevelopment net of demolition and remediation costs, rarely approximates to that able to sustain the acquisition of land in a tight wider employment land market, and the construction of suitable new facilities.

Furthermore, the costs of operating bus services are sensitive to the parasitic costs of vehicle and staff hours and mileage associated with "dead running" to a remote depot location from the operational network. Here, the existing depot site is ideal, and any replacement will unavoidable add ongoing operational costs to the operation that cannot be directly recovered.

We confirm that a replacement depot site has been identified and has in principle been agreed, subject to overcoming issues with the disposition of existing and future structures on the site. However, the site is recognised as not capable of accommodating meaningful operational expansion. This is just one of the most important foundational reasons why a positive transformation of bus productivity needs to be achieved, across the plan area and beyond, to support delivery of greater bus mileage and frequencies with the same level of operational resource. At the time of writing, we are not fully convinced that the proposals for the relocation will be sufficiently fit-for-purpose in the event the above is not achieved. Thus, we must raise a concern that the bus depot site might not be available during the plan period. While there is a strong probability it will be, the certainty surrounding the availability of the site, especially within the first 5 years of the plan, needs to be made transparent.

9.3. Policy A4 Southern Gateway - Chichester Bus Station, Bus Depot and Basin Road Car Park
Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Regarding the removal of the bus station, without equivalent replacement, Stagecoach has significant concerns. Pressures and conflicts at the current bus station site have been gradually rising for several years, arising from increasing use and the need for additional scheduled vehicle layover periods to reduce the risks of accumulated late running from traffic congestion. Peak passenger volumes have recovered strongly on several routes, however passenger accumulations resulting from more frequent delays and disruption have added substantial further pressure on limited space.

Under current plans, buses and bus passengers will be displaced to bus stops at new locations outside the city centre, along Avenue de Chartres. This road was always intended to be a relatively high-speed traffic route, outside the historic core of the city. The city centre has evolved in the subsequent years to reinforce already strong natural severance, with the highway lying beyond the city walls and the green space along the Lavant. It is a traffic dominated, unsurveyed and unattractive environment, reflecting the intended function of the road as an efficient movement corridor for high traffic volume, and nothing more. Avenue de Chartres is relatively close to the rail station and pedestrian connectivity can be provided at broadly equivalent distance to the current bus station, but again it is unsurveyed and currently unpleasant, lacking natural legibility or any sense of prominence.

We understand kerbside capacity on Avenue de Chartres will be strained even to accommodate current levels of service, with no expansion possible. There is therefore a strong probability that to accommodate more frequencies and key new routes, such as West of Tangmere, East of Chichester and West of Chichester allocations, additional future bus stops must occupy a different location. This makes interchange between routes and rail services substantially challenging and less attractive.

The emerging arrangements risk marginalising public transport and public transport users substantially. This strongly undermines achievement of the wider plan objectives and delivery of a significantly greater role for public transport. If substantial public transport growth is to be accommodated in a growing city and hinterland, as the draft plan anticipates, then a more ambitious strategic approach must be taken. This should plan for additional and improved facilities to accommodate all services predicted to be required, whilst enhancing the passenger experience to ensure meaningful and attractive modal choice.

There is therefore a need for the plan to evidence how these issues will be appropriately resolved, having regard to a suitably ambitious approach that properly supports clear objectives to boost the relevance of public transport. The current policy is weak, unspecific and indifferent to achieving the strategic objectives of the plan, including a transport strategy in support of the plan, and as such it is ineffective.

Policy A3 should therefore be modified to read:

" ...
 • Be designed to encourage and facilitate substantial increase in the use of active travel and public transport to, from and through the city centre.
 ..."

In line with the commentary above Policy A4 should also be modified to read:

3. Enhance the public interchange function of the immediate area, the public realm, particularly connections to the railway station and the city centre via South Street, Southgate and Basin Road for pedestrians, cyclists and public transport users, and to National Cycle Route 2 and Route 88 which run close by. Suitable replacement bus stops and layover facilities should be provided to replace those at the bus station in line with reflecting the objectives of the West Sussex Bus Service Improvement Plan, and to facilitate growth to meet the requirements of the plan's development strategy. Routes and crossings should reflect pedestrian desire lines, and public art should be incorporated to create a sense of place;

4. Enhance the public realm, in support of this and wider objectives, incorporating public art and other measures to create a strong and attractive sense of place.

...(renumber remaining points)

9.4. Policy A6 Land West of Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

This is an existing Local Plan allocation. The public transport strategy for the site depends on the delivery of the second phase which Stagecoach notes is the subject of several applications now awaiting review and determination by the Council.

The site represents a compact form of development adjoining the city, as the most sustainable settlement, meeting housing needs close to where they arise, and affording very good opportunities for the use of sustainable modes, especially walking and cycling.

It is vital that a bus service is delivered to serve the site at the earliest potential. This was anticipated to be at the start of Phase 2 and will require the early delivery of the entire length of the spine road between the Old Broyle Road and Westgate and making it available for bus services.

It is not clear if the costs of pump-priming the service mentioned in the draft policy are anticipated to be met by the developer. Without such funding, the service will not be deliverable as years of losses will never credibly be covered from future profit. It is likely that the current wording will be interpreted by the developer as meaning that they have no such obligation binding upon them. Not does policy set out any specification for this service, thus its costs and the basis for securing developer contributions does not exist.

As such any wider transport strategy, that seeks to secure a greater role for the use of public transport, and the aspiration for this allocation cannot demonstrably be met. The policy is ineffective.

Policy A6 should be modified to read:

" ...
 10. Make provision to accommodate and secure delivery of for regular bus services linking running through the site to Chichester city centre operating at least every 30 minutes Monday-Saturday, and new and improved cycle and pedestrian routes linking the site with the city,
 ..."

9.5. Policy A7 Land at Shopwhyke

Stagecoach Supports

This is an existing Local Plan allocation, largely built-out, that benefits from an existing set of permissions.

The public transport strategy for the site depends on the delivery of effective bus priority at Oving Crossroads. The current recently implemented scheme, undertaken by National Highways, makes no provision for effective bus priority and needs considerable re-evaluation.

The site represents a compact form of development adjoining the city, as the most sustainable settlement, meeting housing needs close to where they arise, and affording very good opportunities for the use of sustainable modes, especially walking and cycling. It lies on a new bus corridor that will shortly be put in place, running to Tangmere via Shopwhyke. The allocation is being significantly consolidated by further development in the immediate vicinity which strongly supports the potential for this new service.

As we explain in our representations for East of Chichester proposed allocation A8, and West of Tangmere Allocation A14, a clear corridor strategy to effect bus priority is needed, that should be delivered in support of that further growth, and that at Tangmere SDL. However this allocation is a near complete commitment and there is no scope through policy regarding this land to effect this outcome.

It is notable that Point 6) of policy A7 makes mention of a bus service. This language reflects the currently adopted Local Plan policy and has underpinned the existing permissions. The failure of any bus service to be delivered demonstrates from first principles that this Policy has been entirely ineffective. It is important that lessons are learned from this in the Local Plan Review.

9.6. Policy A8 Land East of Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This proposed allocation lies next to unallocated land that is already consented as a departure from the adopted development plan, with 143 units near completion south of Oving Road (20/02471/FUL). Additional land, also unallocated but similarly consented, has now commenced north of Oving Road (88 units under 21/02197/FUL). This and the allocation site consolidates earlier development at Shopwhyke brought forward under the current Local Plan, and allocated again as draft policy A7.

Development at Shopwhyke was brought forward on the basis of a premise that the developer would provide or somehow arrange a bus service, that was reflected in the policies of the current Local Plan. This was secured by an unenforceable condition. No bus service has been provided, as there was inadequate clarity regarding the basis on which the costs of establishing such a service would be met by the developer, and the expectations of policy on the developer. The site does however lie on a logical new bus corridor between Chichester and West of Tangmere along the Oving Road.

In addition, an expectation that modifications to the Oving Crossroads would effect bus advantage have proven false – the arrangements put buses into a similar or longer queue than if they use the route available to general traffic to and from the A27.

Stagecoach strongly supports the principle of bringing this land forward. However, the soundness of the site depends on deliverability of a regular, reliable and direct bus service along the Oving Road, taking advantage of effective bus priority.

Given the failure of existing policy in the adopted Local Plan covering the proposed A7 allocation to deliver a bus service, it is of great concern that there is no draft policy to adequately address the issue. The policy is out of conformity with NPPF paragraph 104-105 in that sustainable modes do not offer realistic choices, much less an attractive one, and as such also does not secure the objectives of national policy nor of the plan itself.

Currently the proposed allocation is not served at all by public transport. Policy needs to ensure there is a policy basis to secure contributions to deliver such a service, which may well take the form of a proportionate contribution to deliver a new service or enhance provision that is put in place between Chichester along the Shopwhyke Road to west of Tangmere.

To become sound Policy A8 must be modified to read:

“ ...

12. Provide for improved high quality connectivity by sustainable travel modes and focused in particular on a corridor between Chichester city centre and Tangmere along Shopwhyke Road, including new improved cycle and pedestrian routes, and a frequent bus service including linkages with Chichester taking advantage of effective bus priority measures on Oving Road at the A27;

”

9.7. Policy A9 Land at Westhampnett/North East Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This land is already allocated and consented as part of the existing 2016 Local Plan. All reserved matters are determined.

The site lies on service 55 between Chichester, Westhampnett and Tangmere. This established service benefits from additional demand from the development at Phase 1. Phase 2 which is currently well underway, does not benefit directly from bus services. However it is a compact and logical form of development where walking and cycling to local facilities and employment is a credible option.

The existing allocation rolls forward policies in the 2015 Local Plan. In so doing it is possible to see which have been effective.

Point 9. regarding bus service and routing has not been effective. In particular the potential for a bus only link between the site and Graylingwell has not been established as policy anticipated. Given congestion around the Portfield area acutely affects public transport this, or alternative methods to secure bus priority over private car use, a clear and unequivocal policy steer is required.

The lack of an up-to-date transport evidence base is ultimately at the root of these issues. Arguably the policy and allocation can only be made sound once this refreshed evidence base in place.

However, it is possible that the allocation could be made sound by modification of Policy A9 as follows:

“ ...

9. Make provision for regular, direct and reliable bus services linking the site with Chichester city centre, and new and improved safe and convenient cycle and pedestrian routes linking the site with Chichester city, the South Downs National Park and other strategic developments to the east of Chichester city including Tangmere. These objectives could include exploring the potential for a bus only route require a deliverable scheme to afford bus priority through Portfield, and potentially linking the development with the Graylingwell area through use of a modal filter;

”

9.8. Policy A10 Land at Maudlin Farm

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing public transport route. It is relatively close to the city and very near substantial centres of employment and services that can be reached by active travel modes, helping damp the demand for car use. It is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services at Portfield and over a wider area. In fact, the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan.

They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A10 should accordingly be modified to read:

" ...

5. Provide safe and suitable access points for all users, including a main vehicle access from Old Arundel Road and, subject to further assessment, a secondary vehicle access from Dairy Lane. The development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes;

" ...

9.9. Policy A11 Bosham – Land at Highgrove Farm

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Bosham Station. It is relatively close to the city and very near substantial centres of employment and services that can be reached by public transport and cycling, offering strong potential to materially damp the demand for car use.

There are serious risks that development in the A259 corridor west of Chichester could place further demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular to bus services.

Nevertheless, given the potential to effect bus priority on the approaches to Fishbourne Roundabout, it is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A11 should accordingly be modified to read:

" ...

8. Provide safe and suitable access points for all users, including a main vehicle access from the A259. The development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys crossing the A27 at Fishbourne;

9.10. Policy A12 Chidham and Hambrook

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Nutbourne Station. Substantial centres of employment and services that can be reached by public transport and cycling, offering strong potential to materially damp the demand for car use.

There are serious risks that development in the A259 corridor west of Chichester could place further demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular to bus services.

Nevertheless, given the potential to effect bus priority on the approaches to Fishbourne Roundabout, it is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A12 should accordingly be modified to read:

" ...

7. Development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys along the A259, crossing the A27 at Fishbourne and where necessary on the approaches to Emsworth;

8. Facilitate improved sustainable travel modes, and new improved cycle and pedestrian routes, including linkages with Chichester city and settlement along the East/West Corridor;

9.11. Policy A13 Southbourne Broad Location for Development

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach agrees unequivocally that Southbourne is a location that could accommodate growth on a strategic scale. It has a substantial range of service available within the settlement, including secondary education. It is well connected by bus and rail service to key destinations, including Chichester, lying to the east and west.

This is one of the few locations identified for growth that represents substantial additional development in a new location to the strategy in the existing Local Plan adopted in 2015. Thus, the transport impacts of development on the substantial scale envisaged at Southbourne are not covered or accommodated by the Chichester Area Transport Strategy that lies behind the existing plan. This demands, from first principles, that substantial further transport mitigation measures are required.

We recognise and endorse fully that the intent of the draft plan for Southbourne as a Broad Location for Development on a strategic scale, includes “Maximising the potential for sustainable travel links through improved public transport, including consideration of opportunities to reduce community severance caused by the railway line as well as the inclusion of cycling and pedestrian routes.” (our emphasis).

The existing railway station at Southbourne is served regularly, however, it is not within the power of this plan to improve rail services. It is, however, well within the scope of action of the Local Planning and Highways Authority to work with bus operators to achieve a step change in the journey time, reliability, frequency and connectivity of bus services, and in particular the major corridor operated as service 700 by Stagecoach along the A259 between Havant and Chichester through Southbourne.

Notwithstanding the clear potential for sustainable connectivity in the western A259 corridor, there are very serious risks that development in the A259 corridor west of Chichester will place further significant car-borne demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular bus services, having the opposite effect to that intended: longer, less reliable and less frequent bus services, leading to a spiral of slowly declining use.

These risks, while very serious, look credibly likely to be entirely mitigated subject to carefully conceived and robust specified actions on the local highway network. It is perplexing to us that this potential still has not been identified, as part of a comprehensive “first principles” review of the transport evidence base. In particular given the former trunk status of the A259, there is evident potential to effect bus priority on the A259, including on the approaches to Fishbourne Roundabout.

With appropriate measures, including but not limited to this, to substantially boost the relevance and attractiveness of sustainable travel choices, strategic development at Southbourne could well be made highly sustainable.

In the absence of a refreshed transport strategy and transport evidence base, the draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact, the only reference that is made in Policy is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A12 should accordingly be modified to read:

“...Development should be comprehensively masterplanned to achieve a high-quality design and layout that integrates well with the surrounding built and natural environments to enable a high degree of connectivity with them, particularly for pedestrians and cyclists, and provides good the highest possible quality of access to facilities and sustainable forms of improved public transport services.

...

4. Provide a suitable means of access to the site(s), and securing secure necessary off-site transport infrastructure and service improvements (including highways in particular to the A259 corridor between Emsworth and Chichester) in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development) to promote sustainable transport options prioritising delivery of high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes;

...”

9.12. Policy A14 Land West of Tangmere

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach strongly supports the principle of intensifying the level of development at the Strategic Development Location already identified and allocated West of Tangmere in the existing Local Plan. This serves to consolidate development at a location where effective and attractive public transport choices could be provided. It also conforms closely with the principle expressed in NPPF that the best possible use should be made of land on sites that are judged to be sustainable, or potentially sustainable locations for development.

It must be stressed that the current policy suite for the SDL has to date not brought forward development in this location. We recognise that a Master Plan has been adopted by the Council, and that a planning application (20/02893/OUT) for the full larger quantum of 1300 dwellings proposed in the draft plan has received a resolution to grant by the Council.

However, we are not aware that a sustainable transport strategy has been finalised.

Land West of Tangmere is not served by any existing regular bus services. Rather, an entirely new bus service corridor is anticipated to operate in the near term from Chichester through Tangmere and beyond towards Barnham. This would serve proposed allocations A7, A8 and West of Tangmere (A14) included in the draft Plan.

This is reflected in the language of the explanatory memorandum to Policy A14 at paragraph 10.65:

“Opportunities, in partnership with relevant authorities, to provide improved sustainable public transport routes linking the village with Chichester city, to improve cycle routes to the city, and better transport links to Barnham rail station and the ‘Five Villages’ area in Arun District; and..”

Initiating this service will be costly and will in large measure be funded not by developer contributions, but by DfT monies awarded through the West Sussex Bus Service Improvement Plan. It is crucial this service is both sustainable in the longer term without revenue support, and that the success of the service can be built on by scalable frequency improvements as strategic development comes forward in both Chichester District, and proposed allocations A7 A8 and A14, and in Arun District, in particular at Barnham, Eastergate and Westergate (BEW).

This demands measures to effect safe, direct and swift operation of the service especially within the city centre, where it approaches and crosses the

A27 at Oving crossroads and on the eastern fringes of the District east and west of Tangmere. Without these measures, bus journey time and reliability will be severely compromised and the impact of this service to damped car trip demands will be very substantially compromised. No such measures are proposed in the draft plan or its evidence base.

Changes to Oving Crossroads have recently taken place which, amongst other intentions, ostensibly provide bus advantage between Chichester and Shopwhyke. The junction in its current form does not offer material gain in bus journey time, as movements involve a less-direct route towards the city over an increased operating distance, much of which involves passage through heavily congested sections of the A27 and Westhampnett Road. A refreshed transport strategy supporting plan-led growth must revisit this area to secure an effective solution which offers bus customers the fastest and most reliable trip-time to and from the city.

In addition, the extension of public transport connectivity towards BEW and Barnham, including key links to secondary education and a logical railhead for journeys beyond towards Brighton and London as provided at Barnham Station, needs to facilitate bus priority between Tangmere and Nyton – whether using the A27, or preferably avoiding it altogether. There are significant safety concerns associated with the at-grade uncontrolled right-hand A27 exit onto the B2233 Nyton Road at Crockerhill Turn. This movement is also prone to extreme delay owing to the conflict with approaching westbound traffic on the A27, travelling at speed, which has priority. Our concerns with this junction in its current form can be expected to worsen with the increased traffic volumes predicted from new residential developments to the west of the city.

A solution providing a suitable short length of highway available only to sustainable modes, between Tangmere and Easthampnett, could provide a very effective solution to this. This would be deliverable within the scope of the separate proposed allocation at A19 Chichester Business Park, Tangmere. We comment on this separately.

Howsoever effected, a reliable direct and delay-free bus corridor between Barnham, BEW, Tangmere and Chichester could expect to secure very substantial elevation of the relative attractiveness of public transport over car use on the entire corridor and serve to effectively damp growth-related demands on this section of the A27. West of Tangmere, in the longer term, there is evident scope for the route corridor to operate as two branches – one via Shopwhyke and one via Westhampnett, effectively serving all the strategic developments proposed in the plan and transforming wider public transport connectivity to key employment destinations and services within and east of Chichester.

However, in common with all the other proposed allocations, the plan proposes no specific measures to provide, much less improve public transport or other sustainable modes to the site. This leaves the draft plan out of conformity with NPPF, especially paragraphs 104-106. The plan is inadequately evidenced and to the degree that public transport measures are identified and emergent, their successful implementation in the near and longer term will be jeopardised without clear measures to provide a safe as well as efficient bus route towards BEW and the Five Village area within Arun. The Duty to Cooperate is not effectively met and effective cross boundary collaboration on these strategic issues through the review of LSS is not demonstrated, despite the current version which identifies the issues.

To be made sound the LSS Review and a subsequent urgent review of the transport evidence base and strategy needs to take place. The strategic issues are especially critical east of Chichester, in our view.

Notwithstanding this foundational deficiency, to be made sound, Policy A14 should be modified to read:

“... ”

8. Subject to detailed transport assessment, provide primary road access to the site from the slip-road roundabout at the A27/A285 junction to the west of Tangmere providing a spine road link with secondary access from Tangmere Road. Development will be required to provide or fund mitigation for potential off-site traffic impacts through a package of measures in conformity with Policy T1 (Transport Infrastructure) and T2 (Transport and Development) and DfT Circular 01/2022 that maximise the relevance and use of sustainable travel modes, in particular bus services;

9. Make provision for improved sustainable travel modes between Tangmere and Chichester city, in partnership with relevant authorities, including improved direct, seamless safe and reliable and additional bus and cycle routes linking Tangmere with Chichester city, Shopwhyke and Westhampnett. In conjunction with measures in support of Allocation A19, Opportunities should also be explored contributions shall also be sought for providing improving high quality cycling and bus service transport links with the 'Five Villages' area and Barnham rail station in Arun District; and...”

10. Concluding comments

Stagecoach recognises its role as a key stakeholder in the plan, as well as a local employer and corporate citizen. We recognise the primacy of the plan-led system as the mechanism intended to resolve complex challenges, including the proper alignment of transport and spatial planning, which as the National Decarbonisation Strategy for Transport among other policies makes clear, has never been more vital.

In making our representations, we emphasise that we are entirely supportive of the Local Planning Authority and the relevant Highways and Transport Authorities, in their efforts to properly manage the amount and pattern of development to secure vital policy objectives. We recognise that balancing delivery of assessed development needs with a wide variety of other constraints is a very difficult task.

The transport issues faced by the plan are recognised in the draft plan as being serious and long-standing. We believe that there are ways to arrive at a suitable transport mitigation strategy that has regard to wider strategic issues and resolves existing problems in a much more effective way than those pursued to date.

We support the spatial strategy of the plan as it evidently provides the basis to secure the necessary step change in the quality and use of sustainable transport modes, as it explicitly seeks to do. However thus far, there has been insufficient work done to define the measures that will credibly secure these outcomes.

Stagecoach therefore urges the authorities to draw us into the necessary effective ongoing collaborations that is expected by NPPF paragraph 16 and 106; and DfT Circular 01/022, to do this work, prior to, rather than after the submission of the draft plan. We look forward to being approached to initiate this dialogue at the earliest opportunity.

Change suggested by respondent:

Policy A12 should accordingly be modified to read:

“... ”

7. Development should make the requisite contributions for off-site improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys along the A259, crossing the A27 at Fishbourne and where necessary on the approaches to Emsworth;

Document Element: Policy A12 Chidham and Hambrook**Respondent:** The Bosham Association (Mr Richard Pratt, Joint Chair) [7835]**Summary:**

Objection grounds similar to those for A11, including:

- i) non-compliance with NE16 due to insufficient wastewater treatment capacity for housing proposed, and adverse impact on water quality of Chichester Harbour; no guarantee or timetabled plan for upgrades;
- ii) lack of road network capacity (esp. Fishbourne roundabout), associated impacts on congestion and air quality, and no guaranteed major improvements;
- iii) lack of primary education capacity; schools inaccessible via walking/public transport;
- iv) inappropriate proposed community facilities and inadequate existing rural amenities;
- v) significant public and local opposition to proposal.

Full text:

There are hundreds of objections locally to this site's inclusion. There was permission given for 50 houses which appear to have been land banked by the developer to try and force through planning permission using the tilted balance approach. Now that the government is changing the NPPF to give communities greater input into development in their area, the objections of our 435 members and the objections of the hundreds of other families in our small community, the objections of our parish council and neighbouring parish councils which are in the summary below and attached document should be considered and carry weight.

Change suggested by respondent:

Policy A12 should be removed for similar reasons to those given in the document attached.

There should be a moratorium on development until wastewater treatment can be guaranteed and the mitigation needed for the A27 junctions can be guaranteed.

Document Element: Policy A12 Chidham and Hambrook

Respondent: Mrs Donna-Maria Thomas [7822]

Summary:

Objection against A12 on grounds of: nitrate neutrality; wastewater pollution and treatment; congestion; road network; air pollution; loss of greenfield/agricultural land; lack of infrastructure. See full submission and attachments.

Full text:

I am emailing as a member of the public who has been invited to make comments on the proposed new Chichester District Council Local Plan. Firstly, I have been invited to comment on whether the plan is legally compliant. With this in mind, I would question whether it is. I am aware that there is legislation which is designed to protect Chichester Harbour, namely, I believe, the Chichester Harbour Conservancy Act 1971. This legislation gives the Harbour Conservancy a duty to conserve, maintain and improve the harbour. In the proposed local plan it states:

"4.120. In February 2018 the Chichester Harbour designated Site of Special Scientific Interest (SSSI) was downgraded from 'Unfavourable – recovering' to 'Unfavourable – no change'. Further assessment during 2019/20 found that more than 3000ha of the intertidal parts of Chichester Harbour were now 'Unfavourable – declining'. A specific policy is therefore required to address this issue. Nitrates finding their way into the Harbour (from a variety of sources) cause algal growth which is harmful to wildlife. Although the proportion of total nitrogen originating from new development is very small, it is important that this source is addressed whilst other measures, such as catchment management, are undertaken to reduce other inputs and recover wildlife."

Concerning nitrate mitigation, I note that the South Downs National Park Authority (SDNPA) are not able to guarantee any further land to offset nitrates and this will impact the number of houses which can be built in the area. The SDNPA has made this clear in the letter they have submitted in consultation regarding Policy A11

(attached). There are, I believe, several proposed sites in the local plan which will need to be able to show they have nutrient neutrality and at present, they cannot do this. With this in mind, I suggest that it would be wrong to propose the site referred to in Policy A11 and any other sites where this matter applies.

In addition to the issue of nitrates, there is also the issue of water pollution which is blighting the harbour. Building over 10,000 new houses in the district is going to exacerbate both nitrate and wastewater pollution. A study by Chichester Clean Harbours Partnership (attached) shows that at five sites which were tested within Chichester Harbour, all failed tests for E.coli and Feral Streptococci levels which suggests water quality in the harbour is being impacted by the constant outflows of sewage which are happening across the thirteen outlets which Southern Water control and discharge directly into the harbour. Last year's data shows that Southern Water spent over 19% of the year releasing untreated sewage into the Chichester Harbour waters. This is evidence that Southern Water is either unable or unwilling to cope with treating the wastewater generated by the housing in the district so to propose 10,000 further houses with no guaranteed upgrades to the wastewater treatment seems ludicrous and a dereliction of the statutory legislation designed to protect the harbour. For these reasons I would question whether the plan can be judged as legally compliant.

The second area I have been invited to consider is whether the proposed plan is 'sound'. To this, I would suggest that there are so many contradictions between what the plan proposes and what is found in the National Planning Policy Framework (NPPF), other consultation documentation and the plan itself that I believe the plan cannot be found to be sound. As an example two examples referred to above:

Allowing building to go ahead on land without being able to guarantee nitrate offset brings the plan into conflict with itself. (Policies NE12, NE13, NE19)

To allow building to go ahead which is guaranteed to increase sewage outflow into the harbour brings the plan into conflict with itself. (Policies NE12, NE13, NE16, NE17)

The focus of most of the plan seems to be on providing housing. However, the NPPF makes it clear that house building needs to be sustainable and include infrastructure in order to meet the economic objective and that there is an environmental objective to be considered both of which I do not believe this plan is meeting.

The proposed local plan does not include any guaranteed upgrades to the strategic road network but does refer to the fact that the congestion on the roads is a major concern for the residents of the Chichester District. (Proposed Local Plan Point 8.3) I am aware that the strategic road network is an issue outside of the Council's control but again, to propose adding 10,000 plus housing to the area when they are aware of the serious congestion problem seems nonsensical, especially now in the light of the government removing mandatory house building targets. The main issue the Chichester District seems to have is that within the boundary, there is a large percentage of land which is protected from development as SDNP and AONB land. What this plan seems to be doing is trying to cram 90% of the original government-proposed allocation of housing into 23% of the land in the district. It stands to

reason that this will have a detrimental impact on the road network. In addition, Chichester District Council are aware that the major junctions on the A27 have been operating at capacity since the last local plan was written and in their transport assessment published in January 2023, they have made reference to the major junctions now all operating well over capacity (CDC Local Plan Transport Assessment 2039 Point 11.2.1) and have made reference to the fact that there has been no mitigation which was proposed in the previous local plan to most of the junctions (CDC Local Plan Transport Assessment 2039 Point 1.3.2). Therefore building more housing without guaranteed upgrades to the road network would seem both unfair to the residents and businesses who are already suffering the daily challenge of congestion and unethical in the light of the plan which contains several policies referring to minimising the climate crisis, reducing pollution and only allowing development which does not exacerbate congestion and road use. Once again this brings the plan into conflict with itself because the additional congestion is going to impact both pollution in general and air pollution specifically (Policies NE20, NE22)

The NPPF suggests that there is a presumption in favour of sustainable development but I would argue that trying to fit too many houses into a small, already over-congested area, is not sustainable and does nothing to enhance the lives of people who already live in the area. Of the three objectives in the NPPF (economic, social and environmental) this plan only seems to address the social objective of providing more housing. It does not address the economic objective because of the strain building 10,000 further houses will create on already weak infrastructure. More importantly, it does nothing to address the environmental objective because it will increase pollution and exacerbate problems with the sewage network and the road network which already exist.

In conclusion, with reference to whether the plan is sound, I do not believe it can be judged as sound because, aside from contradicting itself and not fulfilling the objectives outlined in the NPPF as I have highlighted above, the plan is not taking into account local people's wishes. There have been several action groups set up and demonstrations against further building in the area on the large-scale proposed here. Neighbourhood Plans have been completely disregarded and people in the area have genuine concerns about the impact of pollution on the harbour, the relentless building with no additional infrastructure and the detrimental impact of building on farmland and the implications for biodiversity and agricultural security as well as coalescence of our villages and strain on already overburdened resources such as doctors, schools and village shops.

I can speak concerning Policy A11 because this directly affects where I live but I will also try to highlight below other policies where I know the proposed sites conflict with what is in the neighbourhood plan and conflict with statements in the local plan.

Our neighbourhood plan has been ignored and the site proposed was the site deemed least suitable for development and conflicts with the statements in the local plan in the following ways:

1) The site is greenfield land and there is brownfield land available capable of being used for smaller-scale development (Burns Shipyard). This would appear to be the case with most of the proposed sites being greenfield land. (Policies A6, A10, A11, A12 A13 and A14). The NPPF states that where possible preference should be given to using brownfield land for development before allowing development on Greenfield or agricultural land.

2) The site is wholly outside of the Bosham settlement boundary which in the plan would define this as the countryside. The local plan states in Chapter 3, that development in the countryside should be 'restricted' to what is essential and meets the proposed needs as defined by policy NE10. The site chosen does not meet the criteria set in policy NE10 and proposing

the site, therefore, puts it into contradiction with the plan.

3) The site proposed for Policy A11 is grade 1 and 2 productive agricultural land. The local plan states that it will seek to protect the best and most versatile agricultural land from large-scale, inappropriate or unsustainable non-agricultural development proposals that are not in accordance with the Development Plan. (Local Plan Point 4.8) However for the sites A1, A12 and A14 this does not seem to be the case. In the case of some of the land proposed from Policy A14, I believe the land has been compulsorily purchased from farmers. A large majority of the land proposed for development in the local plan is viable and productive agricultural land.

4) The site's overflow wastewater discharges from the Bosham outlet into the Bosham channel. This outlet has been the most compromised in 2022 and has discharged for the largest amount of hours out of all 13 outlets that discharge into Chichester Harbour.

5) The site proposed for Policy A11 has no proposed primary school provision. The local village school is at capacity and is unable to be expanded on its current site because there is no land available. Instead, the children from this proposed development will be expected to go to school outside of the village and this will inevitably lead to more cars on the roads as the proposed schools with places are not accessible by public transport or within walking/cycling distance. Again, this is a theme common to Policy A12.

6) The site proposed in Policy A11 suggests that the land is likely to suffer from groundwater and surface runoff flooding. The likelihood of flooding is greatest along the western boundary of the site which abuts the existing development of Brooks Lane. Brooks Lane already suffers periods of flooding. The NPPF says that new development should not increase the likelihood of flooding at existing developments.

7) The vehicle access to the A259 is via one vehicle access point only, which is likely to exacerbate air pollution at peak times with cars idling to access the A259.

8) The proposed additions to the village will be a fourth community hall, which there is no desire or need for and no end-user has been identified to maintain, allotments which were specifically proposed at the initial consultation and rejected as the least popular choice of an additional community facility and a mini football pitch which has been hastily added and squeezed onto the site of inadequate size and with inadequate parking provision to make it a usable asset.

For all of these reasons, I believe that the proposed local plan cannot be judged to be sound. There were several hundred objections to Policy A11 and I believe there would be true for most of the sites proposed. Our local neighbourhood plans have not been taken into account when producing this plan and this is against what is stated in the NPPF which suggests that Neighbourhood Plans give communities the power to develop a shared vision for their area. (NPPF Point 29) The last area I have been invited to consider is if the proposed local plan meets the duty to co-operate. In this respect, I feel that the duty to co-operate seems to have been viewed as more a 'duty to consult' Whilst there has arguably been consultation between appropriate bodies and other local authorities, I do not believe the plan reflects the advice that has been given. Again, coming back to Policy A11 as an example the SDNPA, Chichester Harbour Conservancy, Southern Water and National Highways have all raised reservations about the proposed scale of development and the impact it will have on the Bosham area and local infrastructure. However, the reservations have not been heeded and the proposed development is still much the same as it was at the outset. Again, local plans have been ignored and local voices have not been heard. Whilst I am aware that the duty to co-operate is not a duty to agree, if every aspect of a consultation is ignored, I would argue this can hardly equate to co-operation.

In conclusion, I understand the importance of having a local plan and I understand the constraints that Chichester District Council is under due to the available land infrastructure constraints it faces which are largely outside of its control. However, because of the above, and that they have now been given the freedom to deviate from mandatory government house building targets, I would ask you to pay scrutiny to the number of houses in the proposed plan and recommend to Chichester District Council that they need to go back and rewrite the plan to reduce house building to a sustainable level of 23.5% of the government proposed allocation to reflect the percentage of land which is available in the district for development. I also recommend that there be a moratorium on further development in the district until the issues of water pollution by nitrates and sewage can be addressed and until there are the mitigation measures proposed in the transport assessment to allow for further house building.

Change suggested by respondent:

Document Element: Policy A12 Chidham and Hambrook

Respondent: Mrs Jane Towers [7058]

Summary:

Use of cars for everyday needs is rising and will rise even further. N & H is simply too far from facilities to expect people to walk and cycling is not safe. Thornham Waste Water Treatment Plant has very limited capacity left and no certainty of any upgrades. This is a semi rural area which has already had far in excess of the 25 houses identified in the last Local Plan and in the NP. Putting a combined total of 600 houses (with Bosham) to boost the housing numbers is totally wrong

Full text:

Nutbourne and Hambrook simply cannot absorb an additional 156 homes to the 144 that have already been given permission. It would mean approving development within settlement gaps, on good grade agricultural land, within wild life corridors, close to the AONB setting , obliterating long-distance views or in open countryside. Policies throughout the Plan refer to all these as needing the highest protection, Policy A13 is , therefore, in direct conflict. Facilities are very few, with no medical or retail; public transport is unreliable, infrequent and irregular. Use of cars for everyday needs is rising and will rise even further. N & H is simply too far from facilities to expect people to walk and cycling is not safe. Thornham Waste Water Treatment Plant has very limited capacity left and no certainty of any upgrades. This is a semi rural area which has already had far in excess of the 25 houses identified in the last Local Plan and in the NP. Putting a combined total of 600 houses (with Bosham) to boost the housing numbers is totally wrong

Document Element: Southbourne, 10.52**Respondent:** GoVia Thameslink Railway (Nigel Searle) [8197]**Summary:**

Southbourne is a good location for development being located within active travel distance of Southbourne railway station, with its good train service that currently has 3 trains per hour to Chichester, 2 per hour to Portsmouth and 1 per hour to London, Brighton and Southampton.

Development at Southbourne is consistent with the rail industry West Sussex Connectivity Modular Plan and GTR strategy for West Coastway to be consulted later in 2023

10.52 Suggests that Southbourne would be a suitable location for development in the later part of the plan period.

However, with its good train service, and rail industry strategy Southbourne will be a good location for development before many of the other locations in the plan where access is more challenging, distant from good public transport links and will inevitably be dominated by car access or location extending smaller location, but not by enough to justify increasing the train service.

Document Element: Policy A13 Southbourne Broad Location for Development**Respondent:** Chichester Harbour Trust (Nicky Horter, Trust Administrator) [7286]**Summary:**

The Chichester Harbour Trust objects to the allocation at A13 at Southbourne. This proposal represents major development adjacent to the Chichester Harbour AONB and is disproportionate to the size and facilities of the existing settlement. It is within the 5.6km zone of influence for Chichester Harbour SSSI. It is our observation that this allocation represents a conflict with the policies outlined in the Plan

Full text:

The Chichester Harbour Trust objects to the allocation at A13 at Southbourne. This proposal represents major development adjacent to the Chichester Harbour AONB and is disproportionate to the size and facilities of the existing settlement. It is within the 5.6km zone of influence for Chichester Harbour SSSI. It is our observation that this allocation represents a conflict with the policies outlined in the Plan chapter 4 on the natural environment, which makes it hard to justify the soundness of the Plan, particularly: Policy NE2 Natural Landscape Policy NE3 Landscape Gaps between settlements Policy NE6 Chichester's Internationally and Nationally Designated Habitats Policy NE7 Development and Disturbance of Birds in Chichester and Langstone Harbours, Pagham Harbour, Solent and Dorset Coast Special Protection Areas and Medmerry Compensatory Habitat Policy NE13 Chichester Harbour Area of Outstanding Natural Beauty Policy NE16 Water Management and Water Quality

It is difficult to make an assessment of the impact of housing development in the broad location without specific site allocation plans, which we understand would come through the neighbourhood plan process. However our general concerns about the allocation relate to: - the impact on the sensitive landscape setting of the AONB and loss of open views to the South Downs

- the over-reliance on developing greenfield sites, mostly on grade 1 & 2 agricultural land leading to concerns about unsustainable loss of countryside and impact on food production and food security
- the inadequate waste water treatment infrastructure at Thornham WWTW and lack of funded improvements in the timescales required
- the additional flood risk and ground water issues raised by construction on low lying coastal plain sites
- the impact on biodiversity and species that rely on the interconnectivity between the protected landscapes
- the additional recreational pressure within the SSSI zone of influence
- the inevitable increase in air, noise, and soil pollution

Overall, we feel that the allocation does not reflect emerging government rhetoric (which may soon translate to policy through the NPPF) about overdevelopment of countryside in the South East of England, and that the timescale is not compatible with the NPPF review which may lead to an alternative method of determining housing allocations in the district. For this reason we find the plan to be unsound.

Change suggested by respondent:

We would need to have a clearer idea of housing location to comment in more depth however would wish to see a reduction in the allocation at this location.

Document Element: Policy A13 Southbourne Broad Location for Development**Respondent:** Church Commissioners for England [1858]**Agent:** Lichfields (Tara Johnston, Planner) [7506]

Summary:

CCE supports draft Policy A13 and the allocation of a Broad Location for Development in Southbourne for a mixed-use form of development including 1,050 dwellings. CCE has significant landholdings around Southbourne which is suitable, available and developable. The

land to the north and west of Southbourne measures 70ha and is wholly within CCE's control. The land adjoins the existing settlement and provides an opportunity for a sustainable extension to Southbourne with the potential to deliver c. 1,200 homes for the village, as well as employment, community uses and a significant amount of new public space and green open space. A new Vision Document is enclosed which explains one way in which this opportunity could be realised. Importantly, it is considered that there are no technical impediments that would prevent development from coming forward on this site.

[Further details within attached representation]

Full text:

We write in response to the above consultation on behalf of our client, the Church Commissioners for England (CCE). CCE owns a large amount of land in the area largely to the south, west and east of Chichester.

We welcome the opportunity to further engage with the Local Plan process. Whilst we support some aspects of the Local Plan, we consider that some changes are likely to be necessary to ensure that the Plan can be found sound.

By way of background, CCE submitted several sites for consideration as part of the Housing Economic Land Availability Assessment (HELAA) in 2021. These sites were previously promoted as part of the Preferred Approach Local Plan Regulation 18 Consultation in 2019.

As part of these representations, we take the opportunity to re-promote a number of CCE's sites, which could assist the Council in delivering much needed housing for the district. CCE has updated its technical work and provide Vision Documents in relation to its landholdings in Southbourne, Oving, and Hunston Parishes to demonstrate how additional housing can be delivered. These Vision Documents are enclosed.

We consider this and other aspects of the emerging Local Plan below.

Chapter 2: Vision & Strategic Objectives

The Local Plan Vision details a positive approach to supporting sustainable development in the context of the climate emergency. CCE welcomes the Vision for Chichester, particularly the importance placed on the delivery of new homes in 'Objective 3' and the delivery of new infrastructure to support the new development in 'Objective 7'.

Chapter 3: Spatial Strategy and Settlement Hierarchy

The Spatial Strategy builds on the previous Local Plan by focussing growth on Chichester city as the main sub-regional centre. Outside Chichester city and its closest settlements, development will focus on the two settlement hubs within the east-west corridor at Tangmere and Southbourne. This approach is supported by CCE.

Policy S1 Spatial Development Strategy

Draft Policy S1 (Spatial Development Strategy) identifies the broad approach to providing sustainable development in the plan area, which includes ensuring that new residential development is distributed in line with the settlement hierarchy, with a greater proportion of development in the larger and more sustainable settlements. We support this strategy, with particular support for development at the settlement hubs of Southbourne (Policy A13) and Tangmere (Policy A14). We also support that provision is made for extant Site Allocations and the Tangmere strategic site remains allocated under draft Policy A14.

Policy A14 continues to allocate Land West of Tangmere for 1,300 dwellings. CCE questions the Council's decision to not amend the existing settlement boundary of Tangmere to include the land subject to the allocation. Without amending the settlement boundary, the future growth of Tangmere may be hindered. As such, the settlement boundary of Tangmere should be amended to include the allocated site to ensure that the plan is justified.

Draft Policy S1 also refers to development in service villages such as Bosham, Hambrook and Loxwood.

Hunston is excluded from the Spatial Strategy but is identified as a Service Village within the Settlement Hierarchy in draft Policy SP2 (Settlement Hierarchy). The draft Local Plan suggests that the allocation of homes in Hunston has been removed as a result of growth in the Manhood Peninsula. CCE acknowledges that the overall housing numbers across the district have been reduced as a result of local constraints but reiterate that their landholding in Hunston remains a suitable site for housing should the Council need to identify more land for housing. This is discussed further below.

Policy S2 Settlement Hierarchy

As stated in paragraph 3.31 of the draft local plan, 'The NPPF encourages housing delivery where it will enhance or maintain the vitality of rural communities'. Paragraph 79 of the NPPF (2021) states that 'To promote sustainable development in rural areas, housing should be located where it will enhance or maintain the vitality of rural communities. Planning policies should identify opportunities for villages to grow and thrive, especially where this will support local services. Where there are groups of smaller settlements, development in one village may support services in a village nearby'.

CCE owns substantial land holdings in South Mundham, which is in close proximity to North Mundham/Runcton which is defined as a Service Village. As such, whilst South Mundham does not contain any services, development in the hamlet would enable sustainable growth to support facilities in North Mundham and Runcton. To ensure that the draft plan is consistent with national policy, South Mundham should be considered as part of North Mundham as a Service Village when considering the future pairing/grouping of some settlements where the facilities and services could be shared to capitalise on the close connections some settlements have.

Development outside the settlements listed in the hierarchy in SP2 is restricted to proposals which require a countryside location or meet an essential local rural local need or supports rural diversification in accordance with Policy NE10. To this end, CCE has smaller land holdings in Tangmere, Oving, South Mundham, Birdham, Chidham and Sidlesham, which may be suitable for conversion for residential use or via windfall housing. Location plans for each of the sites can be found in Appendices 1-8.

Chapter 4: Climate Change and the Natural Environment**Policy NE4 Strategic Wildlife Corridors**

The East of City strategic wildlife corridor has been relocated to the eastern side of proposed Site Allocation A8 (Land to the East of Chichester). The relocation of this wildlife corridor follows additional evidence that shows that the commuting route for Barbastelle Bats is along Drayton Lane.

CCE owns land to the east of Drayton Lane (immediately adjacent to the wildlife corridor and to the east of draft allocation A8) and surrounding the village of Oving. Its land has been identified in the HELAA (2021) as being developable, including site HOV0017 (Drayton Lane). The land east of Drayton Lane is sustainably located being close to Chichester and its amenities. The site provides an opportunity to sensitively and sustainably provide additional homes for the District. In accordance with Draft Policy NE4, the proposals for the Land East of Drayton Lane will not have an adverse impact

on the integrity and function of the wildlife corridor and will not undermine the connectivity and ecological value of the corridor. This Vision Document will be shared under separate cover.

The eastern edge of the relocated wildlife corridor encroaches into CCE land. Any proposal on this land would be required to take the statutory protection for bats and other protected species into consideration and managed as part of a sensitive masterplan for development and on this basis, it is considered unnecessary to extend the wildlife corridor to encroach into the CCE site.

It is also considered that the detail of policy NE4 goes beyond the purpose of the policy, which should be to safeguard wildlife rich habitats and wider ecological networks. The policy is clear that development should only be permitted where it would not create an adverse effect upon the ecological value, function, integrity and connectivity of the corridors. It does not resist development in principle. This therefore makes redundant policy text 1, which seeks to introduce a sequential test for preferable sites outside of a wildlife corridor. It is considered that this test conflicts with the underlying purpose of the policy, which is to safeguard wildlife corridors from harmful impacts that cannot be mitigated, and should therefore be deleted.

Policy NE7 Development and Disturbance of Birds

CCE is broadly supportive of Policy NE7. However, they would like to note that the situation regarding the national guidance on nutrient neutrality is still evolving and therefore, this policy is only relevant to current legislation. Policy NE7 may therefore not be relevant throughout the entirety of the plan period. As such, CCE considers that it is necessary in this instance to ensure that an appropriate reference to changing legislation is included within the policy to prevent it from becoming out of date and would also ensure that the policy remains effective once adopted.

Policy NE10 The Countryside

CCE is supportive of the inclusion of a policy referencing the conversion of existing buildings in the countryside, however, we believe that Policy NE10 is not consistent with national policy. Policy NE10 criteria B states that proposals for the conversion of buildings in the countryside will be permitted where 'it has been demonstrated that economic and community uses have been considered before residential, with residential uses only permitted if economic and community uses are shown to be inappropriate and unviable'. This policy is not in accordance with Paragraph 152 of the NPPF (2021) which states that the reuse of existing resources should be encouraged, including 'the conversion of existing buildings'. Under paragraph 152, there is no prerequisite to adopt a sequential approach, or to give preference to other uses. As such, criteria B should be omitted from Policy NE10. Reference to criteria B should also be removed from criteria C.

Chapter 5: Housing

Policy H1 Meeting Housing Needs

The Preferred Approach Local Plan was based on meeting the identified objectively assessed housing needs of the plan area of 638 dwellings per annum. However, due to constraints, particularly the capacity of the A27, the Submission Version of the Local Plan has planned for a housing requirement below the need derived from the standard method. The Plan proposes to deliver 535 dpa in the southern plan area and a further 40 dpa in the northern plan area, a total supply of 10,350 dwellings over the plan period from 2021 – 2039 (575 dpa).

The Planning Inspectorate has previously asked the Council to determine what level of housing could be achieved based on deliverable improvements to the A27 and to consider whether the full housing needs could be met another way. It is acknowledged that the Council has carried out the additional work required and the local constraints have resulted in a proposed lower housing requirement.

The NPPF (2021) confirms that to determine the minimum number of homes needed, strategic policies should be informed by a local housing need assessment, conducted using the standard method in national planning guidance – unless exceptional circumstances justify an alternative approach (para. 61). CCE acknowledges that that housing numbers have been reduced as a result of local constraints and it will be down to the Inspector to determine whether the Council's exceptional circumstances justify this. Should the Planning Inspector find that the Council requires additional land to meet the housing need using the standard method, CCE's land at Southbourne, Oving, Drayton Land and Hunston are suitable, available and developable for housing. In addition, CCE's rural development sites could also contribute to meeting the housing need.

Policy H2 Strategic Allocations

Draft Policy H2 confirms that the Tangmere Strategic Development Location is carried forward from the 2015 Local Plan and this is supported by CCE. Strong support is also given for the Broad Location of Development in Southbourne (Policy A13) for up to 1,050 dwellings.

Policy H5 Housing Mix

Draft Policy H5 confirms that the housing mix for a development will be based on the most up to date HEDNA to address identified local needs and market demands. We suggest that the Council considers a range of criteria, including site characteristics, when determining the housing mix for individual sites and this should be reflected in wording of Policy H5.

Policy H7 Rural and First Homes Exception Sites

Draft Policy H7 relates to rural and first homes exception sites. CCE is supportive of the principle of the inclusion of a rural exceptions policy. However, we have concerns over criteria contained within the policy which limits the amount of development that can be delivered under it.

The NPPF (2021) at paragraph 78 states that planning policies and decisions should be responsive to local circumstances and support housing development that reflect local needs. Furthermore it also states that 'local planning authorities should support opportunities to bring forward rural exception sites that will provide affordable housing to meet identified local needs'.

The key aspect of the policy is to enable the delivery of rural exception sites which would address an identified local need. Within the policy, there is no limit on the amount of development that can be delivered and therefore, it is considered that if Policy H7 is limited to a maximum of 30 dwellings it could serve to hinder development (especially on slightly larger sites), which would otherwise be sustainable. As such, we consider that the amount of development should not be limited and rather should be dictated on a site and need specific basis. CCE considers that for Policy H7 to be positively prepared and in accordance with National Policy, criteria 2 should be removed.

In addition, criteria 6 states that proposals for affordable housing on rural exception sites will only be supported where 'the site is located adjacent or as close as possible to the existing settlement boundary and does not result in scattered or isolated development in rural areas'. The NPPF (2021) does not specify the location of rural exception sites. As such, to be consistent with national policy, criteria 6 should also be omitted.

Furthermore, Policy H7 states that 'applications for first homes exception sites that propose the inclusion of a small proportion of market housing will be expected to provide robust evidence...'.

However, in the policy there is no allowance for the provision of market housing on rural exception sites in addition to first homes exception sites. As a result of this, the requirements of the policy are again not consistent with national policy. Paragraph 78 of the NPPF (2021) is supportive of 'some market housing' where it would facilitate the delivery of rural exception sites. As such, CCE considers that Policy H7 should be amended as follows:

'Applications for rural and first homes exceptions sites that propose the inclusion of a small proportion of market housing will be expected to provide robust evidence that the site would be unviable without such housing being included'.

Policy H8 Specialist Accommodation

Draft Policy H8 confirms that all housing sites over 200 units, including those allocated in this plan, will be required to provide specialist accommodation for older people with a support or care component. We request that this policy is amended to add 'where appropriate and viable', acknowledging that viability and site-specific factors need to be taken into consideration.

Chapter 6: Place-making

Policy P3 Density

We support the objective of Draft Policy P3 (Density) to make the most efficient use of land and follow a design led approach to achieve the optimum density for a site. The Policy does not prescribe an appropriate density for the District and this is supported. However, we consider that reference should be made to the fact that density may vary depending upon site specific circumstances and could be higher where transport links and access to services is good.

Chapter 7: Employment and Economy

Policy E3 and E4 Horticultural Development

Chapter 7 of the draft Local Plan confirms that 67 hectares of land is identified to meet the future horticultural land need within four Horticultural Development Areas (HDAs) over the plan period. It is confirmed that an additional 137 hectares of horticultural land is also forecast to be required outside of HDAs to meet future need.

CCE has significant landholdings which could assist the Council in addressing the insufficient availability within the current HDAs. The CCE sites which are considered suitable for horticulture development are listed below and location plans for each of the sites can be found in Appendices 9-13.

- Somerley Farm, NE East Wittering, PO20 7JB
- Fisher Farm, South Mundham, PO20 1ND
- Church & Haise Farm, Sidlesham
- Cowdry Farm, Birdham
- Groves Farm, nr Merston, PO20 2DX / Colworth Manor Farm PO20 2DU.

CCE supports draft Policy E3 which confirms that "approximately 137 hectares of land is also needed outside of HDAs to meet anticipated horticultural and ancillary development land need for the plan period." Support is also given for draft Policy E4 in relation to land outside HDAs. This Policy confirms that proposals for horticultural development can come forward outside the HDAs, subject to a set of criteria. We would welcome continued discussion with the Council on how these sites could help meet the districts horticultural needs in the future.

Chapter 10: Strategic and Area Based Policies

CCE supports Chichester District Council's proposal to allocate additional land for housing at Southbourne and to maintain the existing allocation at Tangmere. We also consider that CCE's land at Hunston and Oving could assist the Council in meeting its housing needs, should additional housing be required. We consider these opportunities in turn below.

Policy A13 Southbourne Broad Location for Development

CCE supports draft Policy A13 and the allocation of a Broad Location for Development in Southbourne for a mixed-use form of development including 1,050 dwellings.

CCE has significant landholdings around Southbourne which is suitable, available and developable. The land to the north and west of Southbourne measures 70ha and is wholly within CCE's control. The land adjoins the existing settlement and provides an opportunity for a sustainable extension to Southbourne with the potential to deliver c. 1,200 homes for the village, as well as employment, community uses and a significant amount of new public space and green open space. A new Vision Document is enclosed which explains one way in which this opportunity could be realised. Importantly, it is considered that there are no technical impediments that would prevent development from coming forward on this site.

This site has been promoted throughout the Southbourne Neighbourhood Plan process, most recently in the December 2022 consultation. The new Vision Document demonstrates that the CCE site presents the opportunity to provide a comprehensive development that would contain strategic housing growth, significant areas of green infrastructure and open space in a sustainable location. The key access strategy for the site is to provide two new access points from the south A259 Main Road and the east Stein Road. These access points would connect to a spine road which would form a continuous vehicle route around the north-western edge of Southbourne.

The site almost entirely comprises a Secondary Support Area under the Solent Waders and Brent Goose Strategy (SWBGS), which aims to protect the network of non-designated terrestrial wader and brent goose sites that support the Solent Special Protection Areas (SPA) from land take and recreational pressure associated with new development. Due to the designation of the site, discussion was undertaken with the Hampshire and Isle of Wight Wildlife Trust with a view to determine a suitable approach for the scheme and an appropriate survey effort to establish the use of the site by designated birds. As a result of these discussions, wintering bird surveys are taking place. The aim of these surveys is to explore opportunities for mitigation for this SWBGS support area such that development within the red line can proceed without adverse impacts to the bird populations noted within this strategy. Following the survey, the results and approach will be presented to Natural England for further discussion.

In relation to viability, we note that Policy A13 sets several policy objectives for development at Southbourne. The NPPF (2021) notes that where there are up-to-date policies which have set out the contributions expected from development, planning applications that comply with them should be assumed to be viable (para. 58). With this in mind the policy objectives outlined within Policy A13 will require viability testing to be undertaken to ensure a policy compliant scheme is both viable and deliverable. This is necessary to ensure that the policy is sound.

The Policy suggests that employment opportunities are required to be delivered as part of the allocation but there is no specific reference to the amount of use required. CCE supports this proposed approach as it is sufficiently flexible to enable an amount of employment land to be proposed in response to market conditions at the appropriate time and this will help to support delivery of the allocation.

The scale of development proposed has been reduced from 1,250 to 1,050 dwellings to reflect the proportionate reduction in housing numbers across the parishes in the east west corridor as a consequence of the limit on numbers in the southern plan area. If the Inspector finds that additional housing is required, the Vision Document submitted demonstrates that the CCE site in Southbourne could deliver c. 1,200 homes and so could increase housing without needing to identify additional land for development elsewhere.

To summarise, the site could accommodate approximately 1,200 homes which could be delivered on a phased basis early in the plan period. There are no overriding physical or technical constraints that would act as an impediment to development. There is also a clear access arrangement proposed.

Policy A14 Land West of Tangmere

CCE supports that Policy A14 is carried forward into this Local Plan to facilitate the delivery of a residential-led development of at least 1,300 dwellings.

Additional sites

Hunston

CCE further promotes land (15.31ha) located east of the B2145 Selsey Road in Hunston for 240 new homes. The land is deliverable and is fully within CCE's control. The site is highly accessible, located within a maximum of 5-6 minutes walking distance to Selsey Road, where several bus routes connect the village to Chichester.

CCE notes that the Council assessed the HELAA site (ref. HHN0016) as 'developable'. A Vision Document has previously been prepared and submitted to demonstrate the commitment to it being brought forward for residential development within the plan period. This document is enclosed.

To address the Council's concerns in relation to flooding, following publication of the Chichester Strategic Flood Risk Assessment (SFRA), we have prepared an updated Flood Risk Scoping Study which provides an overview of flood risk constraints across the site from a range of sources. Various mitigation measures are recommended in line with recommendations of the Chichester SFRA and prevailing local and national guidance and best practice. With these measures in place, it is likely that the flood risk could be managed effectively in accordance with the requirements of the NPPF. Detailed data has also been requested from the Environment Agency, which will feed into further technical work that is being carried out.

Should the Inspector conclude that additional housing is required, CCE considers that their site is the most appropriate and sustainable location for development in Hunston. The site provides an opportunity to sensitively and sustainably extend the existing village boundary to provide additional homes to meet an identified housing need.

Land East of Drayton Lane

CCE owns land to the east of Drayton Lane which is bound by Tangmere Road to the north and crosses Oving Road and the railway line to the south. The site is c.1km from the centre of Chichester and comprises 49ha. The site was assessed in the HELAA 2021 as developable 'HOV0017'. A Vision Document has been prepared and was presented to the Council in 2022. This includes a detailed analysis of the site and its surroundings and provided justification as to why the site is suitable for development. This technical review of the site concludes there are no technical impediments to development.

The Vision Document demonstrates how the proposals for the land east of Drayton Lane could be developed as an extension to the draft allocation A8 (Land to the east of Chichester) for up to 700 new homes. The land east of Drayton Lane is fully within the CCE's control, is available for development now and is deliverable with some development achievable within the first five years of the plan period. It represents an opportunity to provide new homes, facilities and significant community benefits, through a sensitively designed development that integrates into the surrounding landscape.

The Vision for this site is a landscape and ecology led masterplan which would celebrate the rich wildlife characters of the different surrounding landscapes and uses the connection between countryside and community to generate its character and identity. The Vision Document demonstrates that this is a suitable location for development.

Should the Inspector conclude that additional housing is required, CCE considers that the land east of Drayton Lane would form a natural extension to allocation A8 and is an appropriate and sustainable location for new development.

Appendix C Additional Guidance

Appendix C provides additional guidance on evidence which needs to be submitted in support of certain planning applications related mainly to development in the countryside. As mentioned in the comments above provided in response to Policy NE10, there is no prerequisite contained within the NPPF (2021) that requires an applicant to demonstrate that previous uses were proven unviable prior to the conversion of a building in the countryside to residential use. As such, to be in accordance with national policy, reference to Policy NE10 should be omitted from Appendix C.

Conclusion

CCE welcomes the opportunity to comment on the Local Plan and is keen to continue to engage with the Council, especially in relation to the Broad Location for Development in Southbourne. CCE is supportive of the Council's aspirations in the Local Plan. However, the changes set out above are considered likely to be necessary to ensure the plan is sound.

CCE is a considerable landowner in Chichester with land largely to the south, west and east of Chichester which could assist the Council in meeting their housing and development needs throughout the plan period.

See attachments for site information.

Change suggested by respondent:

In relation to viability, we note that Policy A13 sets several policy objectives for development at Southbourne. The NPPF (2021) notes that where there are up-to-date policies which have set out the contributions expected from development, planning applications that comply with them should be assumed to be viable (para. 58). With this in mind the policy objectives outlined within Policy A13 will require viability testing to be undertaken to ensure a policy compliant scheme is both viable and deliverable. This is necessary to ensure that the policy is sound.

Object

Document Element: Policy A13 Southbourne Broad Location for Development**Respondent:** Forestry Commission (Richard Cobb) [8202]**Summary:**

Forestry Commission provides advice, does not support or object.

We note that more detailed proposals will emerge as part of a Neighbourhood plans. We would like to highlight that this area contains some parcels of ancient woodland which is an irreplaceable and high priority habitat according to the NPPF and Government Policy (see attached Annex and below for more guidance on this). The policy could be improved by highlighting its importance and high priority as part of efforts to protect, enhance, expand and connect habitats as part of a wider ecological network and the strategic wildlife corridor. Developments within this area could contribute pockets of woodland and linear planting to help connect existing trees and woodland as part of a mosaic of habitats throughout the wildlife corridor and wider area. The requirement to ensure development does not have an adverse impact on the strategic wildlife corridor is also welcome but could be strengthened by requiring developments to significantly contribute to its enhancement, expansion and connectivity including with green infrastructure provided by development.

Full text:

Please note that as a Non-Ministerial Government Department, we provide no opinion supporting or objecting to planning applications or local plans including their soundness or legal compliance.

Rather we are including advice and information that we advise the Council consider to ensure their pre-submission local plan avoids potential impacts and promote enhancements/expansion as part of the proposed local plan regarding trees and woodland, including ancient woodland. We acknowledge that the purpose of Regulation 19 consultations does not usually extend to making substantial changes which are not related to soundness so we offer our advice as helpful guidance to ensure the local plan takes every opportunity to secure the protection, enhancement and expansion of Chichester's valuable trees and woodlands to comply with planning policy, good practice and to make the most of the many benefits they provide to the environment, local economy and community.

Overall Comments

Ancient woodlands, veteran and ancient trees are irreplaceable habitats, and it is essential that they are considered appropriately to avoid any direct or indirect effects that could cause their loss or deterioration, in line with Government Standing Advice. Ancient Woodland has very high potential ecological value and should act as integral focal points, alongside other locally and nationally designated sites, as part of delivering landscape scale nature recovery.

Any development or plan that include these irreplaceable habitats on or near to the site should aim to deliver high standards of net gains and ecological connectivity that supports wider ecological networks, in line with good practice. This will also be a requirement as part of the local nature recovery strategies being driven by the Environment Act 2021 and we advise that plans should anticipate this to maximise environmental benefits to contribute to reversing the national trend of ecological decline as part of broader nature recovery networks. The Local Plan should be considered as a crucial and timely opportunity to secure significant and strategic, plan-led environmental gains due to their scope and scale, particularly given the timescales of development being influenced that coincide with UK Government commitments regarding halving emissions and protecting 30% of nature by 2030, towards a net-zero carbon and nature positive economy.

The development strategy should prioritise the protection of trees and woodlands with the highest priority being given to ancient woodland, ancient and veteran trees as individual habitats and as part of wider ecological networks.

Site Allocation comments:**Policy A7 Land at Shopwyke (Oving Parish)**

Site specific considerations could recognise the existing trees, hedgerows and woodland and prioritise their protection, enhancement and expansion as part of biodiversity net gains. Acoustic screening referred to could also use trees to make the most of multi-functional benefits they bring.

Policy A8 Land East of Chichester

We welcome efforts to bolster the existing woodland and the proposed strategic wildlife corridor to the East and the enhancements that development could bring.

Policy A11 Highgrove Farm, Bosham

Bolster planting to North, South and East is welcome. This policy could be improved by requiring bolster planting to the West as well, where there appears to be an existing line of trees, making it well placed to further contribute to wider connectivity with existing and additional planting.

Policy A12 Chidham and Hambrook and Policy A13 Southbourne Broad Location for Development

We note that more detailed proposals will emerge as part of a Neighbourhood plans. We would like to highlight that this area contains some parcels of ancient woodland which is an irreplaceable and high priority habitat according to the NPPF and Government Policy (see attached Annex and below for more guidance on this). The policy could be improved by highlighting its importance and high priority as part of efforts to protect, enhance, expand and connect habitats as part of a wider ecological network and the strategic wildlife corridor. Developments within this area could contribute pockets of woodland and linear planting to help connect existing trees and woodland as part of a mosaic of habitats throughout the wildlife corridor and wider area. The requirement to ensure development does not have an adverse impact on the strategic wildlife corridor is also welcome but could be strengthened by requiring developments to significantly contribute to its enhancement, expansion and connectivity including with green infrastructure provided by development

Policy A14 Land West of Tangmere

The requirement for significant levels of green infrastructure is welcome. This policy could be strengthened by requiring development to retain and bolster existing hedgerows and trees wherever possible.

Policy A16 Goodwood Motor Circuit and Airfield and Policy A17 Development within the vicinity of Goodwood Motor Circuit and Airfield

This policy could be improved by recognising the significant amount of ancient woodland and non-ancient woodland to North of the area. We would encourage any development in the area to protect, enhance and expand the woodland in the area as part of delivering net gains.

Policy A21 Land east of Rolls Royce

This area contains areas of existing trees, hedgerow and woodland which are not currently mentioned by the policy. We would encourage any development to be sensitive to this and provide additional planting where possible.

Overarching comments

We would welcome the consideration of incorporating large and small pockets of multi-functional woodland as part of green infrastructure provision for development, particularly given the relatively low proportion of woodland found throughout the District, and the benefits this can have as 'stepping stones' between habitats as part of the Local Plan's welcome vision of strategic wildlife corridors.

We also encourage the Council to appraise the plan against the following advice to maximise the benefits from protection, enhancement and expansion of woodlands, trees and connectivity throughout the District:

Additional improvements to consider

- Tree/hedgerow removal is considered as a last resort but where it is justified, we advise that developments can aim to deliver no net deforestation to help encourage development that provides an overall environmental gain. Where trees are required to be removed, additional tree planting will be made to compensate for this loss and we would advise that additional planting should be made to help compensate for the loss of habitat in the time it takes for new trees to mature.
- Long term management and maintenance of planted trees and woodland creation to give them every chance to becoming established and where trees do fail, they are replaced
- A minimum standard for tree canopy cover for new developments (e.g. for large-scale developments) as it provides a targetable level of green infrastructure in relation to trees for the numerous ecosystem services they provide.
- Precautions should be incorporated into any woodland design and tree planting to ensure that habitat creation is established successfully and that potential impacts from deer are managed on site and in the surrounding area as appropriate. See here for further guidance that should be followed for managing impacts from deer as part of woodland creation and tree planting: <https://www.gov.uk/government/publications/woodland-creation-and-mitigating-the-impacts-of-deer/woodland-creation-and-mitigating-the-impacts-of-deer> Some good practice advice is also provided in Appendix 1 of this letter.
- We advise that any tree planting should meet the following:
 - o Trees should be healthy and good practice biosecurity should be followed to prevent the risk of spreading pests and disease, in line with Government advice: <https://www.gov.uk/government/collections/tree-pests-and-diseases>. More information on the plant healthy can be found at: Welcome to Plant Healthy - Plant Healthy
 - o Created or restored habitat should be managed in perpetuity in line with a robust management plan that follows good practice to ensure assumed benefits of created habitats are delivered in practice (see Standing Advice referred to on page 1). We recommend meeting the UK Forestry Standard to demonstrate this.
- To help mitigate climate and support local economy would urge council to develop local plan policy that makes use of locally sourced timber. This has multiple benefits as it can help store carbon within development, reduce impact from transportation, reduce embodied carbon from alternative materials and support local economies and communities.
- Where developments incorporate District Heating, consider locally and sustainably sourced wood-fuels for the benefits this can have for renewable energy and towards a local, circular economy
- Use tree planting as part of nature based solutions for managing flood risk as well as other multi-functional benefits from green infrastructure as part of any development (e.g. Trees and woodlands provide £400 million of value in flood protection)
- We encourage the Council to refine their strategy to trees and woodlands using the recently launched 'Trees and Woodland Strategy Toolkit' available here: <https://treecouncil.org.uk/what-we-do/science-and-research/tree-strategies/> to design and deliver a local tree strategy to harness the long-term benefits that trees can bring to local communities. The local plan should be developed with tree/woodlands in mind as an integral part, alongside other supplementary strategies for the environment including biodiversity, green infrastructure, nature recovery and climate change.

Key guidance regarding trees, woodland and development

Ancient woodlands, ancient trees and veteran trees are irreplaceable habitats. Paragraph 180(c) of the NPPF sets out that development resulting in the loss or deterioration of irreplaceable habitats should be refused unless there are wholly exceptional reasons and a suitable compensation strategy exists. In considering the impacts of the development on Ancient Woodland, Ancient and Veteran trees, the planning authority should consider direct and indirect impacts resulting from both construction and operational phases.

Please refer to Natural England and Forestry Commission joint Standing Advice for Ancient Woodland and Ancient and Veteran Trees, updated in January 2022. The Standing Advice can be a material consideration for planning decisions, and contains advice and guidance on assessing the effects of development, and how to avoid and mitigate impacts. It also includes an Assessment Guide which can help planners assess the impact of the proposed development on ancient woodland or ancient and veteran trees in line with the NPPF.

Existing trees should be retained wherever possible, and opportunities should be taken to incorporate trees into development. Trees and woodlands provide multiple benefits to society such as storing carbon, regulating temperatures, strengthening flood resilience and reducing noise and air pollution.[1] Paragraph 131 of the NPPF seeks to ensure new streets are tree lined, that opportunities should be taken to incorporate trees elsewhere in developments, and that existing trees are retained wherever possible. Appropriate measures should be in place to secure the long-term maintenance of newly planted trees. The Forestry Commission may be able to give further support in developing appropriate conditions in relation to woodland creation, management or mitigation.

Biodiversity Net Gain (BNG): Paragraph 174(d) of the NPPF sets out that planning (policies and) decisions should minimise impacts on and provide net gains for biodiversity. Paragraph 180(d) encourages development design to integrate opportunities to improve biodiversity, especially where this can

secure net gains for biodiversity. A requirement for most development to deliver a minimum of 10% BNG is expected to become mandatory from November 2023. The planning authority should consider the wide range of benefits trees, hedgerows and woodlands provide as part of delivering good practice biodiversity net gain requirements. Losses of irreplaceable or very high distinctiveness habitat cannot adequately be accounted for through BNG.

Change suggested by respondent:

The policy could be improved by highlighting its importance and high priority as part of efforts to protect, enhance, expand and connect habitats as part of a wider ecological network and the strategic wildlife corridor. Developments within this area could contribute pockets of woodland and linear planting to help connect existing trees and woodland as part of a mosaic of habitats throughout the wildlife corridor and wider area. The requirement to ensure development does not have an adverse impact on the strategic wildlife corridor is also welcome but could be strengthened by requiring developments to significantly contribute to its enhancement, expansion and connectivity including with green infrastructure provided by development.

Object

Document Element: Policy A13 Southbourne Broad Location for Development

Respondent: Hallam Land Management Limited [1696]

Agent: LRM Planning Ltd (Miss Kate Coventry, Senior Planner) [6627]

Summary:

Disappointing to see phrase "a minimum of" has been removed. Conflicts with flexibility, reduces potential of making effective use of land for housing that will assist in meeting overall need. Allocation of 1,050 dwellings is in part, appropriate. However, policy should allow for delivery of small or medium scale parcels of land, in accordance with NPPF at early stage of delivery of wider allocation to enable prompt and timely housing at Southbourne whilst infrastructure upgrades are commenced. Identify and allocate smaller scale sites to ensure these can come forward early in plan period. See amendments proposed.

Key Diagram suggests new development is to be located to west and east of Southbourne, remedying previously unsuccessful approach of focusing development only to the east. Similarly, the Key Diagram acknowledges need for development to south of railway line, facilitating development north of railway line.

Full text:

1 Introduction

1.1 These Representations have been prepared on behalf of Hallam Land Management Limited (hereafter 'Hallam'), in response to the Chichester Local Plan Review Proposed Submission Plan consultation.

1.2 Hallam is a strategic land promotion company operating throughout England, Wales and Scotland delivering land for new employment and commercial premises, housing, including specialist elderly housing, and mixed-use developments. Hallam has been acquiring, promoting, developing and trading in land since 1990. During that time, the company has established an outstanding record in resolving complex planning and associated technical problems in order to secure planning permissions for a whole range of different land uses to facilitate the delivery of new development.

1.3 Hallam control land to the west of Southbourne, to the north of the A259 and south of the railway line. Development of this land for new housing including specialist elderly accommodation, as shown in the accompanying Vision Document, would be consistent with the established Spatial Strategy; which is rightly retained in the consultation document. Similarly, development would contribute towards meeting the future housing needs of the District within the proposed Broad Location for Development (BLD) at Southbourne.

1.4 These Representations set out our support for the BLD drawn on the key diagram to the west and east of Southbourne. However, Hallam are seeking amendments to Policies S1, H1, H2, H8 and A13 to ensure that: the overall housing needs are met across the District, including early delivery and specialist accommodation; the flexibility sought early in the Submission Plan, at Policy S2 and H1, is carried through to the strategic allocations and locations; and, the BLD is distributed to the west and east of Southbourne.

1.5 Moreover, Hallam are proposing the allocation of small and medium scale sites at Southbourne within the Local Plan, to enable early delivery of housing and infrastructure, with the land under their control a suitable site for this allocation. Should the Council not allocate these sites, then the strategic allocations/locations policies need to be updated to reflect the requirement for the delivery of small and medium scale parcels which could form part of the larger sites.

1.6 In the context of the above, it is instructive to note that Chichester District has an older population than national average, which has been predicted to increase by 42% between 2021- 2039. The increasing need for specialist accommodation should be addressed through specific allocations within the Local Plan, rather than the proposed approach of Policy H8.

1.7 Our response is focused on the following matters:

- The Spatial Strategy, settlement hierarchy and the distribution of development across the District;
- The overall amount of new housing required within the new plan period;
- The need for specialist accommodation;
- The status of Southbourne and the role and function it plays; and
- The strategic allocation proposed at Southbourne in Policy AL13.

1.8 In preparing the Local Plan Review, the Council will need to ensure that it complies with paragraph 35 of the National Planning Policy Framework (NPPF) (2021) which sets out four tests to ensure the plan is 'sound'. These are as follows:

- Positively prepared – providing a strategy which, as a minimum, seeks to meet the area's objectively assessed needs, and is informed by agreements with other authorities, so that unmet needs from neighbouring areas are accommodated where it is practical to do so and is consistent with achieving sustainable development;
- Justified – an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence;
- Effective – deliverable over the plan period, and based on effective joint working on cross- boundary strategic matters that have been dealt with rather than deferred, as evidenced by statements of common ground; and
- Consistent with national policy – enabling the delivery of sustainable development in accordance with the policies in this Framework.

1.9 We are mindful that the Government has recently published a consultation concerning potential amendments to the NPPF. Paragraph 1 of that consultation document indicates that the government is committed to "building more homes" whilst Paragraph 6 explains that the government "remains committed to delivering 300,000 homes a year by the mid-2020s".

1.10 In the proposed revisions, paragraph 1 makes clear that the NPPF provides “a framework within which locally-prepared plans can provide for sufficient housing and other development in a sustainable manner.” At paragraph 60 the overall aim of a Local Plan is identified as meet[ing] as much housing need as possible with an appropriate mix of housing types to meet the needs of communities.

1.11 It is clear therefore that the potential amendments to the NPPF firmly intend that Local Plans, including this one, continue to provide a sufficient supply of housing land to meet identified needs.

2 Objectives and Spatial Strategy

Objectives of the Local Plan

2.1 The Submission Plan has identified key challenges and opportunities that influence future planning, across the three areas of the District, and how it aims to address these through planning policies and proposals.

2.2 Within the consultation document, the strategic objectives presented by the Council are structured into specific categories, ensuring housing and neighbourhood objectives are clearly set out for the plan period.

2.3 Amongst these is the objective to increase housing supply; increase provision of affordable housing; and promote the development of mixed, balanced and well-integrated communities. These are consistent with the NPPF’s policy objective to significantly boost the supply of housing in paragraph 60. In this context, it is right that the Local Plan’s development strategy is founded on this objective, ensuring sustainable development which responds to social, economic and environmental considerations that meets the needs of the plan area.

2.4 These objectives frame the policies and proposals for future development across the plan area to create sustainable neighbourhoods; this demonstrates, as a matter of principle, that the Local Plan intends to be positively prepared and justified, albeit there are limitations on how this is achieved in practice when the policies and proposals are considered.

2.5 The NPPF states at paragraph 22 that strategic policies should look ahead over a minimum 15 year period from the date of the Plan’s adoption. The Local Plan aims to cover the period of 2021- 2039, which is 18 years. However, this plan has not been adopted yet and it is considered unlikely that this Local Plan will be adopted before 2024-25. Therefore, the Plan may not cover the required plan period of 15 years and the Council should extend the plan period to at least 2040 to ensure this requirement is met.

Policy S1: Spatial Strategy

2.6 The Spatial Strategy is accompanied by the Key Diagram (Map 3.1), identifying the distribution of development and infrastructure provision across the plan area.

2.7 The strategy aims to build on the existing Local Plan, focusing growth at Chichester city, as the main sub-regional centre, and at two settlement hubs along the east-west corridor at Tangmere and Southbourne.

2.8 Policy S1 specifically identifies the broad approach to providing sustainable development, in accordance with the Local Plan Objectives, ensuring development is focused principally along the east-west corridor. It aims to distribute development in line with the settlement hierarchy, ensuring development is located in the larger and more sustainable settlements.

2.9 This accords with paragraph 20 of the NPPF which requires strategic policies to set out an overall strategy for the pattern, scale and quality of development, and make sufficient provision for housing, infrastructure, community facilities along with policies that seek to conserve and enhance the environment.

2.10 Paragraph 105 of the NPPF states that the planning system should actively manage patterns of growth in support of these objectives. With significant development being focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes.

2.11 Paragraph 69 of the NPPF sets out how small and medium scale sites can make an important contribution to meeting the housing requirement. Part d) identifies how working with developers to encourage the sub division of large sites could help to speed up the delivery of homes.

2.12 In this context, Policy S1 (6) outlines how non-strategic provision is made for small scale housing developments consistent with the indicative housing numbers set out in Policy H3, however this does not identify an approach to medium scale sites. Consequently, the Local Plan should allocate small and medium scale sites for residential development.

2.13 Should the Local Plan not allocate these scale sites, then there should be parcels within the BLDs identified as medium scale sites for early delivery in the plan period without prejudicing the BLDs. Policy S1 should be amended to include medium scale sites and to require flexibility to the housing target. This is discussed further in respect of Policy A13.

2.14 Policy S1 (7) states that strategic allocations and locations will be made through either this emerging Local Plan, the extant Site Allocation Development Plan 2014-2019 (or subsequent Site Allocation Development Plan Document (DPD)) and through Neighbourhood Plans. Notwithstanding the allocations in the emerging Local Plan, the most appropriate future mechanism is the Site Allocations DPD, which has to meet the ‘tests of soundness’ rather than ‘basic conditions’. This more rigorous approach to plan making is better able to address the site selection process and assessment of delivery requirements that a strategic allocation will need to demonstrate, particularly when taking account of the scale of growth proposed at Southbourne.

2.15 Lastly, the final paragraph of Policy S1 states that to ensure that the Plan’s housing requirement is delivered, “the distribution of development may need to be flexibly applied, within the overall context of seeking to ensure that the majority of new housing is developed in accordance with this Strategy”. The wording of this should be amended to state flexibility will be needed rather than may be needed, to ensure there is the ability to mitigate delays on allocations being brought forward by alternative proposals in order to meet the housing requirement over the plan period.

2.16 The use of the Authority Monitoring Report to control this is considered an acceptable approach, and policies A6 to A15 should reflect this requirement for flexibility. In practical terms, the LPA will need to consider performance in bringing forward and delivering large-scale development and enable alternative solutions where the required outcomes are not being achieved. This is discussed later in relation to Policy A13 specifically.

Policy S2: Settlement Hierarchy

2.17 The consultation document sets out a Settlement Hierarchy which is to serve as the framework for the Council to achieve its vision for the plan area, meet the scale of development required and enhance the quality of the built natural, historic, social and cultural environments, whilst sustaining the vitality of communities. This hierarchy seeks to deliver sustainable development that will support the role and function of different places within the plan area.

2.18 In this regard, Policy S2 is consistent with the NPPF acknowledging how “significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. This can help to reduce congestion and emissions, improve air quality and public health.” (paragraph 105 refers). The Settlement Hierarchy ensures that new development is located in areas where residents have access to facilities and services and a range of public transport networks.

2.19 Chichester city is identified as the Sub-Regional Centre, with four Settlement Hubs being identified at East Wittering/Bracklesham; Selsey; Southbourne and Tangmere. This is a continuation of the existing spatial strategy in the Adopted Local Plan and consistent with the principle of locating new development at the most sustainable locations.

2.20 Southbourne is rightly identified as a Settlement Hub due to its range of local services and facilities, key public transport connections and employment/educational opportunities accessible via non vehicular methods of travel. The approach to Southbourne is discussed later at Section 4 and at Policy A13.

2.21 Accordingly, this strategic policy is positively prepared and justified, and is consistent with national policy promoting sustainable patterns of development.

3 Overall amount of Housing

Policy H1 Meeting Housing Needs Housing Need

3.1 Paragraphs 60 and 61 of the NPPF state that to determine the minimum number of homes needed, strategic policies should be informed by a local housing need assessment, conducted using the standard method in national planning guidance.

3.2 Only in exceptional circumstances could an alternative approach be justified. But even then, that alternative approach will also need to reflect current and future demographic trends and market signals.

3.3 Policy H1 identifies the need for the Plan to make provision for at least 10,350 dwellings within the plan period, amounting to 575dpa.

3.4 This is lower than both a. the standard method figure of 638 dpa; and, b. the Preferred Approach figure in the previous consultation, of 650 dpa which included accommodating some unmet need arising from the South Downs National Park (SDNP) area. This shortfall will amount to over 1,100 dwellings across the plan period. Without any Statements of Common Ground being published by the Council or evidence of the shortfall being accommodated elsewhere, this remains unaddressed.

3.5 It is highly germane that the current Local Plan adopted a lower housing figure than the identified need of 505dpa, proposing instead to deliver 435dpa.

Affordability in Chichester

3.6 The affordability ratios have risen from 12.38 in 2015, when the current Local Plan was adopted, to 14.61 in 2021 for Chichester, which is significantly higher than the current 9.1 national average, increasing the need for affordable housing within Chichester.

3.7 Between the 2011 and 2021 census, the number of people ages 50 to 64 years rose by over 3,100 (an increase of 13.4%), while the number of residents between 35 and 49 years fell by approximately 1,900 (8.5% decrease).

3.8 Chichester's worsening affordability ratios and aging population, which typically occurs in line with house price increases, demonstrate the clear need to increase the housing delivery to meet current and future needs (in line with the NPPF), and maximise the potential for housing in this District. The current strategy to suppress housing provision will only exacerbate these problems.

3.9 With the Submission Plan proposing to not meet the identified need, this once again will be an issue which moves onto the next Local Plan, failing to tackle key issues across the District such as affordability and lack of housing land supply. These issues cannot simply be moved onto the next Local Plan, they should be addressed now.

Constraints for development

3.10 The lower figure of 575dpa reflects both the infrastructure constraints along the A27 and at the

Waste Water Treatment Works, but also no longer accommodating unmet need from SDNP.

3.11 The Transport Study (January 2023) assesses the capacity levels, with particular focus on the A27. Although the Council state that 535dpa is the highest level of development per year achievable, the conclusions of this latest Study state, at paragraphs 5.6.5 and 11.2.3, that development of 700 dpa could be accommodated (in the southern plan area) through the mitigation proposed in the previous scenario of 535dpa with some additional mitigation at the Portfield and Oving roundabout.

3.12 This Transport Study (2023) was published following the preparation of the Sustainability Appraisal which refers to the 2018 study, therefore the latest evidence on highways matters has not been considered within the preparation of this Local Plan.

3.13 This is fundamental to the Plan's approach – increasing the housing requirement could assist with funding those additional highway improvements, in line with the recommendations of the Transport Study at Section 9.3 to prioritise junctions to avoid delays to housing delivery. This should be further reviewed by the Council to ensure the District's need is not being understated. It is recommended the housing need figure is reviewed in line with this evidence and the need to meet the minimum of the standard method figure of 638dpa, and aim to return to the 650dpa previously proposed.

Duty to Co-Operate

3.14 Paragraph 24 of the NPPF outlines the need for co-operation between local planning authorities on strategic matters that cross administrative boundaries.

3.15 The East Hampshire Local Plan Review has identified 100dpa for the SDNP area of the District, below the identified need of 112dpa for the District's area and the overall requirement of 447dpa for the SDNP (Housing and Economic Development Needs Assessment 2017). In effect, in combination with Chichester, the National Park is needing to accommodate some 30 more dwellings per annum without any assessment as yet as to whether this can be achieved given the statutory protection that is afforded to it.

3.16 Whilst a Statement of Common Ground is referred to, it has not been published and therefore it is not possible to determine whether the decision not to make a provision for the National Park area is soundly based.

3.17 Previous evidence for the Preferred Approach demonstrated how the figure of 650dpa was achievable and necessary to help with the worsening affordability ratios across Chichester and the neighbouring authorities. Having removed provision for unmet need it is considered this plan has not been positively prepared.

Summary

3.18 Policy H1 clearly sets out how the majority of housing is to be delivered along the east-west corridor, with 535dpa in the southern plan area and 40dpa in the northern plan area. This is consistent with the Spatial Strategy and the Settlement Hierarchy, Policies S1 and S2, and the overarching objective of locating new housing at the most sustainable locations in the plan area.

3.19 By limiting the amount of housing there will be fewer schemes contributing to the required infrastructure improvements. Without developer contributions to fund wholesale upgrades to this infrastructure there is a risk of pushing the problem down the line for the next Local Plan to address, whilst problems with affordability and an aging population are further exacerbated.

3.20 All future schemes will be required to mitigate their impact on infrastructure including highways and utilities, and there is an opportunity for small to medium scale sites to be delivered in the short term whilst the larger allocations and/or the majority of the larger allocations await the upgrading of these works.

3.21 Currently, the proposal to reduce the overall housing supply for the new plan period is not supported, and the Council should review the Transport Study with the intention of meeting the assessed level of local housing need in full. Without the identified housing requirement being met in full the problem of the younger population being unable to afford to remain in Chichester will continue, further growing the gap in workforce and an increasingly aging population.

3.22 Therefore, this policy is not positively prepared, justified or consistent with the NPPF.

Policy H2 Strategic Locations/Allocations 2021-2039

3.23 The wording of 'at least' within Policy H1 provides flexibility on the ability to achieve the minimum amount of housing considered necessary by the Council, in line with Policy S2. Although this quantum is not agreed, the approach using 'at least' is considered a sensible approach to allow the achievement rather than under delivery of much needed open and market housing.

3.24 The strategic locations/allocations set out in Policy H2 do not reflect this flexible approach. Instead, the sites are fixed as exact number of dwellings for those locations.

3.25 Paragraph 119 of the NPPF requires planning policies to promote an effective use of land in meeting the need for homes, while safeguarding and improving the environment and ensuring safe and healthy living conditions.

3.26 Policy A13 is a BLD and is fixed at 1,050 dwellings within Policy H2, this does not allow for the masterplanning approach to further assess the actual capacity and the best use of this land.

3.27 As such flexibility should be embedded into the wording of Policy H2 to ensure that the intention of Policy S2 is achieved; the housing target of at least 10,350 dwellings across the plan period (Policy H1) is met; and the land identified for development is most effectively used.

3.28 Therefore, it is suggested that Policy H2 includes the wording "at least" before the quantum of development for any strategic location or allocation. For example, Policy A13 would instead state "at least".

Policy H8 Specialist accommodation for older people and those with specialised needs

3.29 National Planning Practice Guidance for Housing for Older and Disabled People states how plan-making authorities should set clear policies to address the housing needs for groups with particular needs such as older and disabled people.

3.30 The Housing and Economic Development Needs Assessment (HEDNA) (April 2022) assesses the period between 2021-2039 for older people and those with a disability.

3.31 This concludes that there will be a 42% increase in the population above 65 years old, amounting to 67% of the total population growth.

3.32 The HEDNA sets out how the East-West Corridor has a higher percentage of over 65 year olds (24.7%) compared to both Chichester City (24.2%) and the Plan Area North area (23.4%).

3.33 The needs arising from this, amounts to between 2,131 and 2,872 additional dwellings with support or care, and a need for 429-800 additional nursing and residential care bedspaces. This equates to approximately 17-24% of all homes needing to be some form of specialist accommodation for older people.

3.34 In this context, the HEDNA makes an important recommendation that the Council allocate specific sites for housing with care to ensure the identified needs are met. In contrast Policy H8 is a criteria based policy that seeks specialist accommodation for older people on housing sites over 200 units based on evidence of local need.

3.35 As written, there is no confirmation on the quantum of specialist accommodation that this policy or other site allocations will secure and how the specific need for each application is calculated. Policy H8 fails to address the identified overall need clearly, as required by National guidance. Therefore, it is recommended the Local Plan allocates sites to deliver this type of accommodation as intended by the HEDNA.

3.36 This approach risks the land on these sites being unable to deliver both the expected market/affordable housing and the specialist accommodation on site.

3.37 The land under Hallam's control would be a suitable site for this type of accommodation, which is situated along the east-west corridor in a sustainable location on the edge of Southbourne.

4 Southbourne

4.1 Southbourne is a key area in the District, in terms of existing development, its status as a Settlement Hub and its potential to accommodate future development.

Role of Southbourne

4.2 Southbourne is identified as a Settlement Hub within Policy S2.

4.3 Southbourne is located within the east-west corridor with a range of existing facilities, good transport links, and employment opportunities both to the east and the west.

4.4 As set out in the Submission Plan, Southbourne has good access to educational facilities serving the residents, including primary schools, junior schools and secondary schools. There are a number of convenience stores and other community services and facilities such as a GP practice, pharmacy and places of worship.

4.5 The Bourne Community Leisure Centre provides local residents with access to community sports facilities. Access to public open space is also good through connections to Southbourne Recreation Ground. There is potential for more open space to be provided for local residents within the Local Plan Review and the strategic allocation proposed and this approach is embedded within our own Vision Document.

4.6 A key focus of the Sustainability Appraisal and the Submission Plan is for schemes to promote a modal shift in transportation. The strong public transport links within Southbourne to the wider surrounding area allows access to employment opportunities within the east-west corridor. Southbourne has strong public transport connections to the local and wider area, through bus and train services, to areas including: Chichester, Portsmouth, Havant, Littlehampton, Brighton, Southampton and London.

4.7 For these reasons, Southbourne is rightly designated as a Settlement Hub and is eminently suitable to serve as a BLD.

4.8 The Southbourne Level Crossing Report May 2021 analyses the options for delivering the railway crossing at Southbourne. It concludes that circa 750 dwellings can be delivered north of the railway line before triggering the requirement for a new crossing. The report highlights how sites south of the rail line are not likely to impact on the level crossing and can therefore be delivered earlier than await the railway line improvements.

4.9 Therefore, in this context it would be appropriate to allocate small and medium scale sites to the south of the railway, which is less constrained by the capacity restriction on the railway crossing.

4.10 The land under Hallam's control is to the south of the railway line, would help facilitate a future new railway crossing to the north of the site, and would be of a medium scale to deliver housing early in the period plan.

Strategic Allocation A13

4.11 The Key Diagram appears to suggest that new development is to be located to the west and east of Southbourne, remedying the previously unsuccessful approach of focusing development only to the east. Similarly, the Key Diagram acknowledges the need for development to the south of the railway line, facilitating development north of the railway line. It is recommended the wording of the policy should be updated to reflect this diagram, as suggested below:

Provision will be made for a mixed use development within the broad location for development to the west and east of Southbourne, as shown on the Key Diagram.

4.12 Previously, the Preferred Approach consultation document set out at Policy AL13 a minimum of 1,250 dwellings at Southbourne and to be identified in the revised Southbourne Neighbourhood Plan. (emphasis added)

4.13 The Submission Plan now allocates Policy A13 for 1,050 dwellings and will be established through the making of allocation(s) in the future Site Allocation DPD or the revised Southbourne NP. This strategic allocation is to act as a mixed use extension to the existing settlement.

4.14 It is acknowledged that the land north of Cooks Lane (Application number: 22/00157/REM) received Reserved Matters approval in August 2022 for 199 dwellings, with the reduction in quantum of development for the BLD reflecting this committed development. A practical effect of this is that this consent will not contribute to the wider infrastructure requirements associated with a larger scale of development.

4.15 It is disappointing to see the phrase "a minimum of" has been removed. This conflicts with the flexibility set out earlier in the consultation document, and also reduces the potential of making effective use of the land for housing that will assist in meeting the overall need of the District.

4.16 Policy A13 prescribes a number of requirements that must be met (criterion 1 – 16). These are considerations that reflect principles of place making and sustainable development and provide a sound framework for the preparation of the allocation through either mechanism.

4.17 One of these requirements states that future development "Provide[s] any required mitigation to ensure there is no adverse impact on the safety of existing or planned railway crossings." The existing Southbourne Neighbourhood Plan, at Objective 9, outlines the issues relating to the railway crossing and the plans for addressing this challenge in the future.

4.18 Related to this is the need for the provision of "suitable means of access to the site(s), securing necessary off-site improvements (including highways) ... to promote sustainable transport options."

4.19 The combination of the requirements relating to the railway crossing and the provision of a suitable means of access show the importance of accessibility to the A27, A259 and the east-west railway line, which are the principal public transport corridors for Southbourne.

4.20 Development will be well connected to Southbourne via footway and cycle connections to the east and offers the opportunity to help realise the construction of a new strategic road and bridge link over the West Coastway Rail Line through provision of land and proportionate contributions to this scheme.

4.21 Criteria 13 ensures there will be sufficient capacity within the relevant wastewater infrastructure before the delivery of development, which addresses (for Southbourne) the identified constraints for the District in relation to housing delivery.

4.22 The remaining requirements of Policy A13 cover the quality and range of development, the provision of education, community and transport facilities, provision of public open space and green infrastructure, and the impact of development on the landscape. These are each appropriate considerations for the Site Allocations DPD.

4.23 Having regard to the above, the allocation of 1,050 dwellings for Southbourne is, in part, appropriate.

4.24 However, this policy should allow for the delivery of small or medium scale parcels of land, in accordance with the NPPF at an early stage of delivery of the wider allocation to enable prompt and timely housing at Southbourne whilst infrastructure upgrades are commenced. The Local Plan should identify and allocate these smaller scale sites to ensure these can come forward early in the plan period.

4.25 A new criteria is proposed to be included in the wording of Policy A13, stating:

(17) To identify land for early delivery on small to medium scale sites which are not constrained by the need for a new railway crossing.

4.26 Therefore, the principle of a strategic allocation for mixed use housing is considered appropriate but amendments should be made to the wording of the policy to reflect the approach to flexibility, the inclusion of small and medium scale sites, and the dispersion of development to both the west and east of Southbourne.

Southbourne Neighbourhood Plan

4.27 As set out in the paragraph 10.56 of the Submission Plan, development phasing is a key issue to address through the allocation of development sites for this BLD.

4.28 Paragraph 70 of the NPPF states that "Neighbourhood planning groups should also consider the opportunities for allocating small and medium-sized sites suitable for housing in their area." Southbourne Parish Council should be aware of this when allocating the strategic sites, to ensure that there are a mix of housing sites, that could come forward sooner than the principal element of the larger strategic site.

4.29 Through the preparation of the Neighbourhood Plan, the Parish Council should take into account the allocation of smaller sites, which could come forward as part of and alongside the larger strategic site. This will ensure that there is not a delay in the provision of housing within Southbourne and the plan area.

4.30 As set out previously, the most suitable mechanism for progressing the Southbourne BLD would be the Site Allocation DPD. Whether the sites are allocated through the Site Allocations DPD or the NP, there is a requirement to identify small and medium scale site.

Land to the north of Gosden Green

4.31 The land under Hallam's control to the north of Gosden Green, should either be allocated in the Local Plan as a medium scale site or should be a key component of the BLD. The site can deliver both market/affordable residential units and specialist elderly accommodation. The site will create flexibility in achieving the housing requirement of the plan area early on in the plan period.

4.32 The accompanying Vision Document demonstrates how as an early development parcel for the wider BLD, a series of key benefits in accordance with the 13 criteria of Policy A13 will be achieved.

4.33 The Proposed Submission Plan at Policy H8 identifies the need for specialist accommodation for older people and those with specialist needs. Although not set out in the Vision Document, this site can deliver, early in the plan period, much needed specialist elderly accommodation.

4.34 Figure 3 of the Vision Document presents the scheme's ability to connect into a wider masterplan for the strategic development, as it comes forward in the future. However, at the same time has the ability to come forward at an earlier rate being physically unconstrained and a well contained parcel of land.

4.35 Figure 9 provides context on connectivity, and the modal shift this scheme aims to achieve. The ability to walk to a range of services and facilities, including the train station further demonstrates the ability for the early delivery of this parcel of the BLD.

4.36 The impact of the highways network has been assessed for both a full residential scheme and specialist elderly housing, highlighting how the residential scheme will introduce approximately 55 new vehicles to the network at peak times, resulting in less than 1 car per minute in the peak hour. Either scheme will have a negligible impact on the highway network and would have a negligible impact on A27.

4.37 The site is to the south of the railway line, as previously mentioned, and would be unconstrained by the capacity constraint of the existing railway crossing.

4.38 For these reasons, the land under Hallam's control should be allocated within the Local Plan.

5 Conclusion

5.1 These representations are submitted on behalf of Hallam Land Management Limited.

5.2 In the context of national, local and neighbourhood planning policies, the Local Plan has an important role in providing policies and proposals for residential development to meet future needs.

5.3 The proposed objectively assessed need for housing across the plan area is not agreed, and the Council should review the latest transport evidence which currently do not demonstrate how there are exception circumstances, in accordance with paragraph 62 of the NPPF. The Council should also extend the plan period to ensure it meets the requirements of a minimum of 15 years in the NPPF.

5.4 Consistent with the established strategy to focus development in the District's east-west corridor, the Broad Location for Development to Southbourne as a Settlement Hub is, as a matter of principle, a sound proposition. Importantly the Key Diagram identifies the broad location for this development to the west and east of the settlement.

5.5 As discussed, there should be flexibility embedded into all strategic allocations, in particular those which are Broad Locations for Development through the use of the wording "at least". This will ensure that the "at least" quantum of housing delivery is met and affords flexibility to all housing sites coming forward.

5.6 The responsibility for allocating additional development land to meet this requirement has been given to either the Parish Council through the preparation of a new Neighbourhood Plan or through the Council reviewing the Site Allocations DPD. It is recommended that for the larger strategic allocations and locations the Site Allocations DPD is the more suitable mechanism for identifying land given the need to ensure that proposals are sound.

5.7 Whilst the scale of development proposed is strategic in nature, it is entirely appropriate to consider how different development parcels might contribute towards that and in particular early opportunities that facilitate larger scale development later in the plan period.

5.8 To this end, land to the west of Southbourne and south of the railway line could be allocated as the first phase of the strategic site allocation, as a medium size site, so that this southern section of the new link road is built to enable access to land to the north. This will reduce the pressure placed on the centre of Southbourne, the highway capacity on the A27, and the existing railway crossing.

5.9 By allocating small to medium scale sites in the Local Plan, this will bring forward development at a quicker pace and ensure that the objectively assessed needs for housing across the plan area are met each year. These can be delivered without prejudice to the larger strategic allocations and locations.

5.10 Currently, the Submission Plan fails to address the increasing need for specialist accommodation, with Policy H8 failing to secure specific delivery of such housing, instead moving this matter into major development schemes with no mechanism for assessing need at that stage. It is recommended that the Local Plan allocates sites for specialist accommodation.

5.11 Hallam control land to the west of Southbourne, which adjoins the land at Gosden Green which has already been built. The land controlled by Hallam could be: allocated as a medium scale site within the Local Plan; included as part of the western strategic allocation of Broad Location for Development at Southbourne; or could be allocated for specialist elderly accommodation, ensuring land is readily available for development early in the plan period to address identified needs.

5.12 This would be consistent with the development strategy for the Plan and positively contribute towards meeting future development needs of the plan area.

5.13 These representations have demonstrated that in part the Submission Plan has been positively prepared and justified, however the key recommendations in these Representations should be followed to ensure the plan preparation accords with Paragraph 35 of the NPPF.

Change suggested by respondent:

It is recommended wording of policy should be updated to reflect key diagram: "Provision will be made for a mixed use development within the broad location for development to the west and east of Southbourne, as shown on the Key Diagram."

A new criteria is proposed to be included in the wording of Policy A13: "(17) To identify land for early delivery on small to medium scale sites which are not constrained by the need for a new railway crossing."

Propose land to north of Gosden Green should either be allocated in Local Plan as medium scale site or should be a key component of BLD.

Document Element: Policy A13 Southbourne Broad Location for Development

Respondent: Hampshire County Council (Emily Howbrook, Head of Spatial Planning) [8161]

Summary:

Southbourne settlement hub will require its own Transport Assessment at planning application stage in order to fully identify local and cross-boundary impacts on A259 route crossing into Hampshire. Masterplanning of Southbourne settlement hub beneficial to prevent high levels of car dependency and to ensure site has connections to public transport and new facilities/services can be accessed by walking and cycling trips by new residents and those from adjacent residential areas. Closer attention to masterplanning of new sites for high quality neighbourhoods and for needs of all road users to be assessed using a Road User Utility Framework are key policy components of Hampshire's emerging Local Transport Plan 4.

Full text:

Thank you for consulting Hampshire County Council on the Chichester District Council Local Plan. The County Council in its capacity as a neighbouring highway authority has focussed this response on the potential implications of the cross-boundary transport issues associated with the Chichester local plan spatial development strategy, and the potential impact on the Hampshire local highway network and wider Solent area.

Transport evidence base

The transport evidence is provided by two studies; the Strategic Development Options and Sustainable Transport Measures (December 2018) which looked at three local plan scenarios, followed by the Chichester Transport Study (Jan 2023) which assessed one local plan spatial scenario. Hampshire County Council was not engaged in discussions on the scope of either of the transport studies. The studies assessed the impact of local plan development allocations on the highway network within Chichester district and in the neighbouring Hampshire districts. They looked at the highway impact on the A27 and A3 trunk roads in Hampshire, but as these roads are part of the Strategic Road Network, they are the responsibility of National Highways.

The main cross boundary route is the A259 which runs from the A27 Warblington junction in Hampshire eastwards through Emsworth towards Brighton. The A259 section in Hampshire is the responsibility of Hampshire County Council, but neither of the transport studies give an assessment of the highway impact on the section of the A259 within Hampshire. Instead, the conclusion of the Transport study (2018) states that for Hampshire there is a negligible impact on the operation of the A27 Havant Bypass roundabout and the A3(M)/A27 junction and that the majority of traffic projected within Hampshire was identified to travel east west and north south along the A3(M) and the A27.

Hampshire County Council does not consider that the studies give sufficient evidence to substantiate this conclusion. The subsequent Transport study (2023) then concludes that with mitigation in place within Chichester district the impacts of the emerging local plan development on network performance in Hampshire are likely to be comparable to the baseline scenario. There is no mention or indication of the cross-boundary impact on the A259 or other routes in Hampshire.

Hampshire County Council assert that there is insufficient evidence to provide a full understanding of the scale of impact on the local highway network in Hampshire, or to say definitively that there is not a severe impact on the A259 in Hampshire. The County Council would therefore support a dialogue with Chichester District to discuss the cross-boundary transport issues specifically those associated with the A259 route within Hampshire.

Proposed Southbourne settlement hub (policy A13)

The local plan proposes a new settlement hub of 1,050 dwellings (policy A13) located in Southbourne along the A259 and just east of the Hampshire boundary. To travel westwards from Southbourne to the A27 Warblington junction in Hampshire the only direct route is along the A259 which crosses into Hampshire. The transport studies do not state how the highway impact of the proposed Southbourne settlement hub was assessed and whether this included an assessment of the A259 corridor into Hampshire.

It is the County Council's view that the transport evidence does not, at this stage, provide an adequate consideration of the impact on the local highway network in Hampshire, and specifically on the A259.

The Southbourne settlement hub will require its own Transport Assessment at the planning application stage in order to fully identify the local and cross-boundary impacts on the A259 route which crosses into Hampshire.

Masterplanning of the Southbourne settlement hub would also be beneficial to prevent high levels of car dependency and to ensure that the site has connections to public transport and that the new facilities and services can be accessed by walking and cycling trips both by the new residents and those from the adjacent residential areas. A closer attention to masterplanning of new sites for high quality neighbourhoods and for the needs of all road users to be assessed using a Road User Utility Framework are key policy components of Hampshire's emerging Local Transport Plan 4.

Transport mitigation

The proposed mitigation in the transport studies focuses on highway capacity improvements along the A27 corridor within Chichester district. There is no mitigation proposed on the Hampshire highway network.

In addition to highway capacity mitigation, several options for sustainable transport mitigation were considered for the medium to long term. A proposal for a strategic cycle route from Chichester to Emsworth (the 'Chem route') along the A259 is included in the Chichester IDP and West Sussex LTP. The County Council recognise that there is potential for this scheme to provide a high-quality cycle corridor for walking and cycling trips and to serve the proposed Southbourne settlement hub. However, the Chem route as presented ends at the Hampshire boundary and fails to consider the continuation of the cycle route along the A259 into Hampshire. Continuing the Chem route into Hampshire would connect with the cycle routes in the Havant LCWIP and provide a key cross-boundary sustainable transport route and links to key destinations in Hampshire.

Document Element: Policy A13 Southbourne Broad Location for Development**Respondent:** Reverend D A Hider [6451]**Summary:**

Concern that location of BLD is ill defined.
 Objection to level of housing proposed, including due to lack of infrastructure, particularly transport.
 Concern that proposal is unrealistic.

Full text:

I have read the published documentation on the above subject as carefully as is possible, given the restrictions on cross-referencing whilst using a screen. My reaction is that the report is really about the immediate area of Chichester and that, where I live in Southbourne, is of less importance. Should this not be the case, perhaps you could tell me why, please, that so little space and detail is given to an area which is designated to take more than 10% of the housing requirements for the area?

Two paragraphs seem to sum up reasons why. I shall quote them below:

Southbourne and Tangmere will continue to grow and develop their role as settlement hubs by widening the range and improving the quality of public open space, leisure and community facilities for their respective local areas. For Southbourne, the aim is to take advantage of the village's good transport links and existing facilities to deliver significant new residential-led development within the broad location for development which will further enhance local facilities and offer opportunities to reinforce and supplement existing public transport, including bus routes.

Southbourne is a 'Settlement Hub' with a good range of services and facilities, and rail connectivity. As a sustainable settlement, Southbourne has been identified as a location suitable for a comprehensively masterplanned mixed use development of 1,050 dwellings, with local employment, education provision and appropriate community facilities. The Plan identifies a broad location for development (BLD) at Southbourne, which means that the development site boundary will be determined at a later stage, either through a site allocations development plan document or through the neighbourhood plan.

I guess that the definitions 'Settlement Hub' and 'BLD' - whatever they mean - give licence to the Council to 'balance their books' by dumping the excess housing needs over what other areas can take into Southbourne without definition of the 'where' such provision is expected to be met, especially given your claim that the area has been 'identified' for such purpose. This is not good enough! The plan should show detail of sites proposed. Anyway, the sheer number of houses is objectionable.

But, I do complement the Council for their humour. The suggestion that Southbourne enjoys good transport links is a real LOL moment! It also shows that the report's authors do not live in Southbourne, or have ever tried to get to appointments using either public transport or the local road system. Even allowing for the current disruptions caused by strikes, maintenance works, lack of staff, etc., the service provided on both rail and bus networks is very poor and unreliable. So much so that even we have been forced to return to use of the car where timing is important. And, then, of course, we meet the problem of the road system with its huge inadequacies and under provision. Not your finest moment.

I could go on but you have, probably, stopped reading by now as this is not the stuff you want to read.

- My overall verdict on the document is that it is poor.
- My overall verdict on the proposals is 'dream on'.
- My overall expectation on the outcome is that it matters not a jot what I (or anyone else when it comes to it!) says, as we shall be stuffed with whatever the Council decides, come what may. After all, it is financially rewarding the them (via the Council Tax levy) to build as many properties as possible and in areas where 'the take' is enhanced, like Southbourne.

Change suggested by respondent:

Plan should show details of sites proposed within BLD.

Document Element: Policy A13 Southbourne Broad Location for Development**Respondent:** Landowner at Champions Farm, Wisborough Green [8136]**Agent:** Southern Planning Practice (Alice Drew, Principal Planning Consultant) [8135]**Summary:**

The Southbourne allocation has been talked of for some time, however it has not yet come to fruition. The new allocation has significantly increased housing numbers since the current Local Plan policy and is too vague in its current form. It is impossible to deduce how the figure of 1,050 dwellings is arrived at. There is a reliance on sites coming forward within this broad allocation, however there is no guarantee of this even over the later stages of the plan. The identification of sites as Broad Locations does not guarantee that they will be released for housing. There should be a reasonable prospect that the site is available and could be viably developed. If the development comes forward in a piecemeal way this could impact on affordable housing provision.

Full text:

Summary

Southern Planning Practice Ltd are instructed by the landowner to submit representations to the Proposed Submission version of the Chichester Local Plan 2021- 2039, published in February 2023. Shorewood Homes, a local developer, have an interest in land at Champions Farm, Wisborough Green and are currently working collaboratively with the landowner.

The site is located to the south of Newpound Lane and to the north of Billingshurst Road (A272) in Wisborough Green. The site is located within the northern area of the district and is closely related to the main urban area of Billingshurst, which is located in the neighbouring authority Horsham District Council.

It is understood that the site has not been previously promoted through the Local Plan process. We can confirm on behalf of our client that the site is now available for development.

In order for the Proposed Submission Local Plan to meet the 'positively prepared' test of soundness as required by paragraph 35 a) of the National Planning Policy Framework (NPPF), the Local Plan Review must:

"provide (ing) a strategy which, as a minimum, seeks to meet the area's objectively assessed needs; and is informed by agreements with other authorities, so that unmet need from neighbouring areas is accommodated where it is practical to do so and is consistent with achieving sustainable development".

Whilst the constraints of the northern area of the district are appreciated, there are several sustainable sites, outside of the National Park and other constrained landscapes, which would assist Chichester to meet their identified housing needs. One such site is the land at Champions Farm in Wisborough Green. The western section of the site could be delivered in the short-medium term and the eastern section could be delivered in the longer term which would contribute to Chichester's future housing supply.

Any new residential development on land at Champions Farm would contribute to the achievement of the 7 strategic objectives of the Local Plan and would also help to boost the housing supply in the short-medium term.

Change suggested by respondent:

We consider that the council should be less reliant on major strategic allocations and look to allocate a range of additional small, medium, and large sites to provide a more flexible, responsive, and deliverable range of allocations. As recognised above, such an approach is encouraged at Paragraph 69 of the National Planning Policy Framework which acknowledges that small and medium sized sites can make an important contribution to meeting the housing requirement of an area and are often built-out relatively quickly.

By allocating more sites for housing development, the Council will bolster their housing land supply. Through the allocation of more sustainable sites in service villages, the Council will provide support for the rural, northern area of the district. We therefore encourage the Council to review their site allocations in line with their spatial strategy and together with the policy requirements of Policy H3 to ensure they are planning for the right homes in the right places over the plan period and beyond.

Object

Document Element: Policy A13 Southbourne Broad Location for Development**Respondent:** Mayday! Action Group (John Garrett) [7163]**Summary:**

This equates to the current number of homes in the Parish of Chidham and Hambrook, before the current building ongoing. Local services will suffer, with the population in the surrounding villages suffering harm as a direct result as constraints in the supply of said services. Southbourne surgery is already seriously under pressure with long wait times to make an appointment. With an aging population and increasing population, the situation will get worse. Given the scale of building proposed in addition to the houses already built or in the process of being built, inter-visibility has already been effected and will become increasingly effected, resulting in a degradation to the character of the area.

Full text:

Executive Summary

The Local Plan as written lacks ambition and vision, and will be detrimental to the landscape within which the district lies. It is a plan borne out of a need to produce a legal document which will satisfy the regulatory authorities. In terms of Urban Planning it fails "To meet the needs of the present without compromising the ability of future generations to meet their own needs" (NPPF).

The development that will consequentially arise from the deployment of such a made Local Plan is not sustainable. It will adversely affect the Character, Amenity and Safety of the built environment, throughout our district.

In particular, the Local Plan is inadequate for the needs of the people in the district both at present and in the future because –

1. It has been written in advance of the District having a properly formed and agreed Climate Emergency Action Plan. It is inconceivable that such a key document will not shape our Local Plan. It is this Action Plan that is needed first in order to provide the long-term strategic view as to how and what the District will look like in the future; this, in turn, will help form and shape the policies outlined in any prospective, Local Plan. The Plan as proposed is

moribund, as a result of “cart before the horse” thinking.

2. The Local Plan as written does not adequately address how infrastructure, transport and services are going to be materially and strategically improved to meet the predicted growth and shift to a significantly ageing population. There is presently insufficient capacity to supply services and to have adequate people and environmentally friendly connectivity, as a direct result of decades of neglect towards investing in infrastructure and services to meet the needs of the District’s population. We are led to believe that developers through increased levies in order to gain permission to build will fulfil this need, but all that this will result in is an uncoordinated, dysfunctional mess completely lacking in any future-proof master planning approach. We contend that this will do nothing for the quality of life of Chichester District residents and it will create a vacuum whereby few if indeed any can be held accountable or indeed found liable for shortcomings in the future.

3. The Local Plan as written does not state how it will go about addressing the need to create affordable homes. The District Council’s record on this matter since the last made plan has been inadequate and now the creation of affordable homes has become urgent as political/economic/social factors drive an ever increasing rate of change within the District.

4. Flood risks assessments used in forming the Plan are out of date (last completed in 2018) and any decision to allocate sites is contrary to Environment Agency policy. Additionally, since March 2021 Natural England established a position in relationship to ‘Hold the Line’ vs. ‘Managed Retreat’ in environmentally sensitive areas, of which the Chichester Harbour AONB is a significant example. CDC have failed to set out an appropriate policy within the proposed Local Plan that addresses this requirement.

5. The A27 needs significant investment in order to yield significant benefits for those travelling through the East-West corridor; this is unfunded. Essential improvements to the A27 are key to the success of any Local Plan particularly as the city’s ambitions are to expand significantly in the next two decades. But any ambitions will fall flat if the A27 is not improved before such plans are implemented. The A259 is an increasingly dangerous so-called ‘resilient road’ with a significant increase in accidents and fatalities in recent years. In 2011, the BBC named the road as the “most crash prone A road” in the UK. There is nothing in the Local Plan that addresses this issue. There is no capacity within the strategic road network serving our district to accommodate the increase in housing planned, and the Local Plan does not guarantee it.

6. There is insufficient wastewater treatment capacity in the District to support the current houses let alone more. The tankering of wastewater from recent developments that Southern Water has not been able to connect to their network and in recent months the required emergency use of tankers to pump out overflowing sewers within our City/District reflects the gross weakness of short-termism dominated thinking at its worst and is an indictment of how broken our water system is. The provision of wastewater treatment is absolutely critical and essential to the well-being of all our residents and the long-term safety of our built environment. The abdication by those in authority, whether that be nationally, regionally or locally, is causing serious harm to the people to whom those in power owe a duty of care and their lack of urgency in dealing properly with this issue is seriously jeopardizing the environment in which we and all wildlife co-exist.

7. Settlement Boundaries should be left to the determination of Parish Councils to make and nobody else. The proposed policy outlined in the Local Plan to allow development on plots of land adjacent to existing settlement boundaries is ill-conceived and will lead to coalescence which is in contradiction of Policy NE3.

8. All the sites allocated in the Strategic Area Based Policies appear to be in the majority of cases Greenfield Sites. The plan makes little, if any reference to the development of Brownfield sites. In fact, there is not a Policy that relates to this source of land within the Local Plan as proposed. Whilst in the 2021 HELAA Report sites identified as being suitable for development in the District as being Brownfield sites were predicted to yield over 4000 new dwellings. Why would our Local Plan not seek to develop these sites ahead of Greenfield sites?

9. The Local Plan does not define the minimum size that a wildlife corridor should be in width. What does close proximity to a wildlife corridor mean? How can you have a policy (NE 4) that suggests you can have development within a wildlife corridor? These exceptions need to have clear measures and accountability for providing evidence of no adverse impact on the wildlife corridor where a development is proposed. Our view is quite clear. Wildlife and indeed nature in the UK is under serious and in the case of far too many species, potentially terminal threat. Natural England has suggested that a Wildlife Corridor should not be less than 100metres wide. The proposed Wildlife Corridors agreed to by CDC must be enlarged and fully protected from any development. This is essential and urgent for those Wildlife Corridors which allow wildlife to achieve essential connectivity between the Chichester Harbour AONB and the South Downs National Park.

10. Biodiversity Policy NE5 - This is an absolute nonsense. If biodiversity is going to be harmed there should be no ability to mitigate or for developers to be able to buy their way out of this situation. This mindset is exactly why we are seeing a significant decline in biodiversity in the District which should be a rich in biodiversity area and why the World Economic Forum Report (2023) cites the UK as one of the worst countries in the world for destroying its biodiversity.

11. In many cases as set out in the Policies the strategic requirements lack being SMART in nature – particularly the M Measurable. These need to be explicit and clear: “you get what you measure”.

12. 65% of the perimeter of the District of Chichester south of the SDNP is coastal in nature. The remainder being land-facing. Policy NE11 does not sufficiently address the impact of building property in close proximity to the area surrounding the harbour, something acknowledged by the Harbour Conservancy in a published report in 2018 reflecting upon how surrounding the harbour with housing was detrimental to its long-term health. And here we are 5 years on and all of the organizations that CDC are saying that they are working in collaboration with, to remedy the decline in the harbour’s condition, are failing to implement the actions necessary in a reasonable timescale. CDC are following when they should be actually taking the lead on the issue. Being followers rather than leaders makes it easy to abdicate responsibility. There must be full and transparent accountability.

13. The very significant space constraints for the plan area must be taken into account. The standard methodology need no longer apply where there are exceptional circumstances and we are certain that our District should be treated as a special case because of the developable land area is severely reduced by the South Downs National Park (SDNP) to the north and the unique marine AONB of Chichester Harbour to the south. A target of 535dpa is way too high. This number should be reduced to reflect the fact that only 30% of the area can be developed and much of that is rural/semi-rural land which provides essential connectivity for wildlife via a number of wildlife corridors running between the SDNP and the AONB. Excessive housebuilding will do irretrievable damage to the environment and lead to a significant deterioration in quality of life for all who reside within the East / West corridor.

14. Many of the sites identified in the Strategic & Area Based Policies could result in Grade 1 ^ 2 farmland being built upon. The UK is not self-sufficient in our food security. It is short-sighted to expect the world to return to what we have come to expect. Our good quality agricultural land should not all be covered with non-environmentally friendly designed homes.

Document Element: Policy A13 Southbourne Broad Location for Development**Respondent:** National Highways (Mr Marius Pieters, Spatial Planning Manager) [8127]**Summary:**

[National Highways letter dated 24/07/23 confirmed representation should be categorised as Comment - Noting the need for a master plan and to collaborate]. Reinforce that a master planning process presents an opportunity for the Council, and early consultation/working with key stakeholders, to

- consider traffic associated with the developments using, accessing, and exiting the A27
- consider viable alternatives to the private car and the possible travel routes
- understand future infrastructure requirements
- develop a package of mitigation measures with detailed costing
- utilise Travel Plan monitoring strategies triggered through phased development
- collect appropriate mitigation funding

Full text:

We have reviewed the publicly available Local Plan documents and provided comments in the attached letter, in relation to the transport implications of the plan for the safety and operation of the SRN.

Our comments include issues to resolve, comments, requests for further information and recommendations. A brief summary of our main comments are:

- the reliance on the delivery of the A27 Chichester bypass improvements project.
- the requirements for new, additional, and adapted processes and assessments, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments.
- collaborative working between agencies in combination with a robust monitor and manage policy.

We hope our comments assist.

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSSC) and we will continue to work with the Council and other key stakeholders. We look forward to continuing to participate in future consultations and discussions. Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Background

National Highways has been appointed by the Secretary of State for Transport as strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the strategic road network (SRN).

National Highways is responsible for operating, maintaining, and improving the Strategic Road Network (SRN) i.e., the Trunk Road and Motorway Network in England, as laid down in Department for Transport (DfT) Circular 01/2022 (Strategic Road Network and the delivery of sustainable development).

The SRN is a critical national asset and as such we work to ensure that it operates and is managed in the public interest, both in respect of current activities and needs as well as in providing effective stewardship of its long-term operation and integrity.

Our responses to Local Plan consultations are guided by relevant policy and guidance including the National Planning Policy Framework (2021) (NPPF):

- Transport issues should be considered from the earliest stages of plan-making and development proposals so that the potential impact of development on transport networks can be addressed (para 104).
- The planning system should actively manage patterns of growth such that significant development is focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. (para 105).

- Planning policies should be prepared with the active involvement of highways authorities and other transport infrastructure providers so that strategies and investments for supporting sustainable transport and development patterns are aligned. (para 106).
- In terms of identifying the necessity of transport infrastructure, NPPF confirms that development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe. (para 111).
- Planning policies and decisions should support development that makes efficient use of land, taking into account the availability and capacity of infrastructure and services – both existing and proposed – as well as their potential for further improvement and the scope to promote sustainable travel modes that limit future car use. (para 124).

In relation to the tests of soundness set out at paragraph 35 of the NPPF, in the context of transport, these are interpreted as meaning:

- Positively prepared - has the transport strategy been prepared with the active involvement of the highway authorities, other transport infrastructure providers and operators and neighbouring councils?
- Justified – Is the transport strategy based on a robust evidence base prepared with the agreement in partnership, or with the support of the highway authorities?
- Effective – Does the transport strategy and policy satisfy the transport needs of the plan and is it deliverable at a pace which provides for and accommodates the proposed progress and implementation of the plan?
- Consistent with national policy – Does the transport strategy support the economic, social, and environmental objectives of the Plan and the NPPF/NPPG?

We will be concerned with proposals that have the potential to impact on the safe and efficient operation of the SRN; in this case, the A27 trunk road (Chichester Bypass and its junctions) which is the main access route in the Chichester area. We have particular interest in any allocation, policy or proposals which could have implications for the A27 and the wider SRN network. We are interested as to whether there would be any adverse road safety or operational implications for the SRN. The latter would include a material increase in queuing or delay or reduction in journey time reliability during the construction or operation of the development set out in the plan.

National Highways is a key delivery partner for sustainable development promoted through the plan-led system, and as a statutory consultee we have a duty to cooperate with local authorities to support the preparation and implementation of development plan documents.

In accordance with national planning and transport policy and our operating licence, we are entirely neutral on the principle of development as it is for the local planning authority to determine whether development should be allocated or permitted; albeit it must comply with national policy on locating development in locations that are or can be made sustainable. Therefore, while always seeking early and fulsome engagement with local plans and/or developers, we will simply be assessing the transport and related implications of plans or proposals and agreeing any necessary transport improvements and relevant development management policy.

In progressing Local Plans, we will seek to agree the following:

- Assessment tools and methodology
- Baseline Assessment i.e., to demonstrate that the assessment tool accurately reflects current transport conditions
- Comparator case assessment i.e., to forecast the transport conditions that would occur in the absence of the plan
- Forecast modelling i.e., to forecast the transport conditions that would arise with the plan in place, this will include an assessment at the end of the Plan period; and, if required, at full build out if that occurs after the end of the Plan period
- Outputs and outcomes of modelling, demonstrating, as appropriate, what transport infrastructure is necessary to support the plan o It should be noted that a suite of transport modelling tools may be required. This includes strategic modelling covering an area at least one major junction beyond the district boundary, localised network modelling where several links/junctions are close together and/or individual junction modelling
 - o A DMRB (Design Manual for Roads and Bridges) compliancy assessment may also be required for certain highway features, such as Merge/Diverge assessment at Grade separated junctions, link capacity assessments, and others.
- The design of any necessary transport infrastructure, to an extent suitable for establishing deliverability during the plan period at the time that it becomes necessary for the purpose of ensuring that unacceptable road safety impacts or severe operational impacts do not arise as a result of development. This may be to at least General Arrangement design stage or preliminary design stage. Whichever degree of detail is agreed, the products must be in full compliance with the DMRB.
- Industry standard transport intervention costings.
- The delivery/funding mechanisms for necessary transport interventions. It should not be assumed that National Highways will have any responsibility to identify or deliver necessary transport interventions.
- If considered appropriate, a "Monitor & Manage" (M&M) framework, aimed at managing the pace of development in line with the pace of funding and delivery of necessary highway interventions in a manner which responds to the realworld impacts of development may be agreed for inclusion in the plan subject to the adequacy of risk control measures included therein. This can include the move from a 'predict & provide' style of delivery to 'a vision & validate' style.
 - o Any M&M framework must be based on a "worst case scenario" whereby necessary mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. It must be translated into development management plan policy and policy relating to development allocations.

Further detail on the above can be provided by National Highways.

While ideally all the above should be agreed prior to the Submission of the Local Plan for examination, we recognise that this is not always possible. However, all parties should work towards all matters being agreed and reflected in a Statement of Common Ground (SoCG) by the start of the Local Plan Examination at the latest. Ideally the SoCG between the Council and National Highways would be prepared well in advance of plan submission in order to guide resource input and to track progress towards final agreement on all relevant matters starting from the earliest plan iterations until the final version is agreed.

It is acknowledged that Government policy places much emphasis on housing delivery as a means for ensuring economic growth and addressing the current national shortage of housing. The NPPF is very clear that: "Strategic policy-making authorities should establish a housing requirement figure for their whole area, which shows the extent to which their identified housing need (and any needs that cannot be met within neighbouring areas) can be met over the plan period."

However, new DfT C1/22 and the NPPF are equally clear that any development, including housing delivery, must be tempered by the requirement to ensure that the associated transport demand can be accommodated without unacceptable impacts on the safety of the SRN or severe impacts on the operation of the SRN including reliability and congestion. Therefore, as necessary and appropriate, any plan and/or development must be accompanied by suitable mitigation in the right places at the right time, that is to the required design standards and is deliverable in terms of land availability, constructability and funding.

We would also draw your attention to the then Highways England document 'The Strategic Road Network, Planning for the Future: A guide to working with National

Highways on planning matters' (September 2015). This document sets out how National Highways intends to work with local planning authorities and developers to support the preparation of sound documents which enable the delivery of sustainable development.

https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/461023/N150227-_Highways_England_Planning_Document_FINAL-lo.pdf

Responses to Local Plan consultations are also guided by National Planning Policy Framework (NPPF) revised on 20 July 2021 which sets out the government's planning policies for England and how these are expected to be applied.

Updated Circular (01/2022)

It should be noted that since the start of the Local Plan consultation process, on the 23 December 2022, the Department for Transport released a new circular on the 'Strategic road network and the delivery of sustainable development' (Circular 01/2022), which replaces all of the policies in Circular 02/2013 of the same name. These representations take account of the new circular and the requirements in terms of the Local Plan evidence base and process.

We request that the Local Plan is prepared in line with all aspects of the new circular. Particularly, the principles of sustainable development (paragraphs 11 to 17), new connections and capacity enhancements (paragraphs 18 to 25), and engagement with plan-making (paragraphs 26 to 38).

Regulation 18 submission

In our Regulation 18 submission we noted several matters including:

- The need to mitigate the adverse impacts of strategic development traffic to the A27 Chichester Bypass and its junctions at Portfield Roundabout, Bognor Road Roundabout, Whyke Roundabout, Stockbridge Roundabout and Fishbourne Roundabout and Oving junction.
- The need to identify a mechanism to calculate contributions towards the delivery of the previously agreed Local Plan A27 improvements
- The need to confirm the number of dwellings needed within the plan period
- The need to establish National Highways acceptance of the traffic model reference and future case scenarios
- The need to confirm costs, viability, and funding associated with mitigating the safety and congestion impacts of the development included within the plan.

Local Plan context

This Local Plan (Chichester Local Plan 2021 – 2039), prepared by the Local Planning Authority (LPA) Chichester District Council, sets out the vision for future development in the district and will be used to help decide on planning applications and other planning related decisions including shaping infrastructure investments.

The draft sets out how the district should be developed over the next 18-years to 2039 including for the full Plan period (1 April 2021 to 31 March 2039) the total supply of

- 10,359 dwellings

- 114,652 net additional sqm new floorspace

Minus the completions this is equivalent to around 530 dwellings and 6,150 sqm of floorspace a year.

National Highways Representations

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders.

We have undertaken a review of the Chichester Local Plan 2021-2039 proposed submission version and accompanying evidence documents, our comments are set out in the tables below (following pages). [see table within attachment]

Summary

We have reviewed the publicly available Local Plan documents and provided comments above in relation to the transport implications of the plan for the safety and operation of the SRN. We understand that other technical information is available, but this was not presented as part of this consultation. Chichester, and the A27, are already heavily congested, infrastructure in the existing Local Plan remains undelivered and the growth set out in the new Plan will further increase travel demand.

As presented, satisfying the transport needs of the plan is clearly reliant on the delivery of the A27 Chichester bypass improvements project. The A27 Chichester bypass improvements project is one of 32 pipeline schemes being considered for possible inclusion in National Highways third Road Investment Strategy (RIS3) covering 1 April 2025 to 31 March 2030.

On 9 March 2023 the UK Transport Secretary ensured record funding would be invested in the country's transport network, sustainably driving growth across the country while managing the pressures of inflation. The announcement cited the A27 Arundel Bypass as being deferred from RIS2 to RIS 3 (covering 2025-2030). The transport secretary also identified a number of challenges to the delivery of the road investment strategy and cited the benefit of allowing extra time to ensure schemes are better planned and efficient schemes can be deployed more effectively.

At present, there is no commitment by DfT to carry out the A27 Chichester bypass improvements project. Until the A27 Chichester bypass improvements project is published in the RIS3, consented and a decision to invest is made it cannot be assumed to be a committed project.

We note that the Plan does not address any uncertainty of delivery of the A27 Chichester bypass improvements project and we strongly recommend that there is either no reliance placed on RIS3 to realise capacity for growth in the Plan or that contingency measures are included to cover the eventuality that RIS3 funding is not forthcoming within the plan period. It is not clear that the potential impact of development on transport networks can be addressed in the absence of the A27 Chichester bypass improvements project.

Achieving net zero, reducing emissions reduction, acting on climate, and supporting thousands of new homes and new employment developments will be problematic with existing processes. New, additional, and adapted processes and assessments will likely be required, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments. We acknowledge that change is complex, expensive, and time-consuming, especially for smaller district level Councils. But the hard work will deliver benefits for the Council and residents in the longer-term.

National Highways seeks to continue working with the Council and WSCC to progress coordinated and deliverable packages of interim mitigation measures and alternative transport solutions while a long-term strategic solution is considered by government. This must however be in combination with a robust monitor and manage policy that appropriately manages the risk of unacceptable road impacts resulting from new housing and other development over the Plan period.

We have been in discussion with Chichester District Council regarding their proposed Monitor and Manage Strategy. At present, we do not consider the current strategy to be robust and we seek further information and detail especially on who, when and when monitoring and management will be undertaken. Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas. Any M&M framework must be based on a "worst case scenario" whereby necessary transport mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. The M&M framework must set out that the alternative to mitigation not being delivered is that development does not proceed where that development would give rise to unacceptable road safety risk or severe cumulative impacts on the road network in the absence of that mitigation. The M&M framework must be translated into development management plan policy and policy relating to development allocations.

As we have reiterated throughout our comments, we welcome the opportunity to work with you to address these outstanding matters and we will

continue to liaise over submitted Transport Assessment, Travel Plan policy and Monitor and Manage Policy to help to work towards a viable plan. We hope our comments assist. We look forward to continuing to participate in future consultations and discussions. Please do continue to consult us as the Plan progresses so that we can remain aware of, and comment as required on, its contents. Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Legally compliant: Not specified**Sound:** Not specified**Comply with duty:** Not specified**Attachments:** HRA Advice - <https://chichester.oc2.uk/a/t53>**5964****Object****Document Element:** Policy A13 Southbourne Broad Location for Development**Respondent:** Network Rail (Sam Bhatti, Graduate Surveyor) [8048]**Summary:**

Policy A13, which proposes 1050 new homes, will result in significant upturns in use of the Penny Lane and Church [level] crossings, which are currently public footpath crossings and have high risk factors. Large-scale development could therefore warrant closure or installation of a footbridge.

The Council should be aware of this as these projects are costly and would require requisite funding. Network Rail are in the process of completing a risk assessment on the affected crossings. However, for context we recently reviewed the Copse level crossing (located approximately 1.9km eastwards from Penny Lane) which resulted in a 300% use increase from a 112home development (Planning Application SB/22/01283/FULEIA).

Full text:

Thank you for consulting Network Rail on the above consultation, I can confirm we wish to make the following comments.

Network Rail is the statutory undertaker for maintaining and operating railway infrastructure of England, Scotland, and Wales. As statutory undertaker, Network Rail is under license from the Department for Transport (DfT) and Transport Scotland (TS) and regulated by the Office of Rail and Road (ORR) to maintain and enhance the operational railway and its assets, ensuring the provision of a safe operational railway.

Having been in consultation with the train operating company, Southeastern Rail, of particular interest to Network Rail is the need to integrate active travel infrastructure and promote First and Last Mile principles. In addition, the impact of development on train stations and existing level crossings.

First and Last Mile Considerations

We encourage the Council to consider not only the impact of development on the railway itself, but also on the first and last mile element of passengers' journeys. This factors in access to and from the railway, as well as how other transport modes are integrated and how well communities are connected.

Failure to integrate this represents an issue for rail travel as people who start journeys by car will likely continue to drive rather than stop to change to the train, as the cost and time of parking and train tickets offer no benefit to them.

Developing access to the railway using first and last mile principles has several benefits, including:

- Aligning with local and national policy to reduce carbon emissions and meet netzero targets, by encouraging more active modes of transport such as walking and cycling
- Providing a seamless journey experience where various modes of transport are integrated, including bus and rail services
- Providing an accessible and inclusive offering of transport modes to both local residents and visitors
- Improving connections between communities which may not be as well-served by public transport

While infrastructure and transport services may be identified as areas for improvement, there may be other, smaller scale enhancements that can be made such as better provision of information or additional cycle racks. Network Rail's Planning team welcome further discussions with the council to gain a better understanding of how we can work together to improve access to the railway and integrate first and last mile thinking into the scheme plans, taking into account the various component parts of passengers' journeys and wider plans for the local area.

Policy T3 Active Travel – this has the broad support of Network Rail but should be strengthened to reflect walking/cycling as the first choice for local journeys; and for longer journeys part of an integrated bus/train transport chain that allows people to continue seamlessly.

Network Rail will support planning schemes within active travel distance of railway stations that provide continuous, direct and safe pedestrian/cycle routes that will serve rail passengers. Pedestrian routes should be prioritised over vehicles, meaning all schemes should be designed so that vehicles wait for walkers/cyclists, not the other way around.

Transport Infrastructure

Accessibility should be built into new development in the form of active travel networks, which will enhance permeability in people's transitions between areas. Development requiring additional road capacity should not go ahead, except as a last resort.

Policy T1 – in general this is supported. References to a 'coordinated package of infrastructure improvements' along the A27 should be replaced with a 'coordinated package of active travel and public transport improvements infrastructure', as this is more specific in emphasising that car transport should be minimised as much as possible.

Policies T2 and I1 – in general these are supported in the sense they promote seamless and continuous active travel arrangement and minimise car use. However, references should be made to the concept of 15–20-minute neighbourhoods that provide a wide range of services within this walk time. The provision of amenities and leisure facilities within a 15-minute walk should be a cornerstone idea that drives mid to long term infrastructure goals for Chichester. Owing to the considerable amount of development anticipated by the Council, there is ample opportunity for local businesses and retailers to provide services within these local neighbourhoods.

Railway Station Considerations

As a public funded company, Network Rail has responsibilities to spend public funds efficiently which consequently means we do not have the funds available to mitigate the impact of third-party development on railway stations. Where a significant amount of rail trips are generated by a third-party development, Network Rail expect that the development provides a contribution to mitigate the addition usage, ensuring that the rail network can continue to operate effectively. The contributions will encourage greater use of public transport by enhancing the rail experience for passengers.

The Local Plan has proposed site allocations across the district, for this reason the resulting increase to the use of stations should be recognized and mitigated against so that rail travel remains an attractive mode of transport. Failure to upgrade stations will result in less rail passengers which is counter productive to the Council's goals of a thriving public transport system.

Southbourne and Fishbourne Stations - Network Rail have concerns about the impact of future development on Southbourne and Fishbourne stations. As the stations themselves are small-sized, large-scale accessibility improvements would be potentially difficult. As a result, the provision of cycle parking facilities at both stations should be considered as crucial by the Council to ensure the station environment continues to modernize and encourage passenger use. This also ensures the stations integrate with proposed cycle/pedestrian routes across the area.

Level Crossing Considerations

As part of Network Rail's license to operate and manage Britain's railway infrastructure, Network Rail have the legal duty to protect rail passengers, the public, the railway workforce, and to reduce risk at our level crossings so far as is reasonably practicable. Improving Level Crossing safety is therefore one of Network Rail's key priorities.

Closing level crossings is the only way to fully eradicate the risk. However, it is not always possible or practicable to immediately close all level crossings. Aside from financial and practical constraints, user convenience still needs to be a key consideration. A broad range of targeted interventions and initiatives are therefore needed to manage safety at crossings which remain open.

Any new development would need to provide an assessment of the impact on any nearby Level Crossings and in some cases, planning obligations may be required to mitigate the impacts on it.

Policy A13 Southbourne Broad Location for Development - Several strategic sites have been identified across the district, with a significant amount west of Chichester which require consideration. Policy A13, which proposes 1050 new homes, will result in significant upturns in use of the Penny Lane and Church crossings, which are currently public footpath crossings and have high risk factors. Large-scale development could therefore warrant closure or installation of a footbridge. The Council should be aware of this as these projects are costly and would require requisite funding.

Network Rail are in the process of completing a risk assessment on the affected crossings. However, for context we recently reviewed the Copse level crossing (located approximately 1.9km eastwards from Penny Lane) which resulted in a 300% use increase from a 112home development (Planning Application SB/22/01283/FULEIA).

Object

Document Element: Policy A13 Southbourne Broad Location for Development

Respondent: Obsidian Strategic [7973]

Agent: Andrew Black Consulting (Mr Andrew Black, MD) [7597]

Summary:

Concerns that a made Southbourne Neighbourhood Plan will make the allocation of additional housing in the parish less likely rather than more likely;

Considers that CDC should have tested the allocation of other alternative sites (such as Main Road, Hermitage) as part of Southbourne proposed approach determination;

Considers the expectation of delivery from a broad area at Southbourne is overly ambitious and the broad location approach is not rational, sufficiently specific, effective or justified.

Full text:

I write in response to the regulation 19 consultation version of the Chichester Local Plan 20212039 on behalf of my client Obsidian Strategic.

Obsidian Strategic have an interest in a site to the South of Main Road, in Hermitage, within the Southbourne Neighbourhood Plan Area. Further details in relation to the site are set out within the appendices of these representations and referred to throughout.

Housing Requirement

The identified housing need for Chichester District Council (CDC) as calculated by the standard method is 638 dwellings per annum (dpa). However, the local plan only seeks to provide 575 dpa or a total supply of 10,350 over the plan period (2021-2039). As result the proposed strategy represents an under supply of 1,134 over the plan period. Furthermore, the undersupply means that CDC is unable to accommodate the unmet arising from the South Downs National Park.

In recent years CDC has not been able to demonstrate a five year housing land supply nor has it delivered housing against the requirements of the Housing Delivery Test. It is therefore important that the unmet need is made up within the early part of the plan period.

Paragraph 5.2 of the plan states that the under supply is due to constraints across the district particularly the capacity of the A27.

Policy H1 (Meeting Housing Needs) sets out the housing target of 10,350 dwellings to be delivered over the plan period 2021-2039. Considering the existing commitments, allocations and permissions this gives a remaining figure without planning permission of 3,056 homes for allocation in the Local Plan.

Strategic Allocations

Policy H2 of the reg 19 plan sets out the following strategic site allocations which are carried forward from the 2015 Local Plan:

****Table****

Table 11 of the latest Annual Monitoring Report (AMR) (produced in November 2022) show the progress of delivery from these allocations:

****Table****

Table 12 of the AMR sets out the progress of the large sites towards future delivery as follows:

****Table****

The Housing Trajectory as set out in Appendix E of the Local Plan shows delivery of the existing allocations as set out under policy H2. Given that the Land at Shopwyke (A7) and the Land at Westhampnett/North-East Chichester (A9) already have permission for the number of dwellings in the allocation and construction has already started, there is no objection to the predicted levels of delivery as set out in the trajectory. However, the housing trajectory sets out delivery from the Land West of Chichester (Phase 2) (A6) and Tangmere SDL as follows:

****Table****

Given that neither of these sites have outline permission then the delivery of units from both sites in a little over 5 years from the adoption of the plan is considered wholly unachievable.

CDC has presented no evidence to justify how this timeframe would be achieved and it is considered that the trajectory is unreliable as a result.

The Local Plan sets out a Broad Location for Development at Southbourne which would be delivered through either the Neighbourhood Plan process or a Site Allocation DPD:

****Table****

The Housing Trajectory as set out in appendix E of the Local Plan sets out the following delivery from this site:

****Table****

Given that policy A13 remains as a 'broad area for development' it is not considered that there is adequate justification for the trajectory as set out. Notwithstanding the effectiveness of allocating a site in this way, an exact location for the housing is yet to be defined, nor is delivery through the neighbourhood plan/DPD confirmed (further details on this is set out within the reps). Until a more detailed site can be defined and delivery confirmed it is not considered that CDC is able to guarantee delivery of dwellings in the housing trajectory as it has done so within the plan.

Non-Strategic Parish Housing Requirements

Policy H3 sets out the following housing requirements from individual parishes.

****Table****

The supporting text of policy H3 sets out that if draft neighbourhood plans making provision for at least the minimum housing numbers of the relevant area have not made demonstrable progress the council will allocate sites for development within a development plan document in order to meet the requirements of this Local Plan.

Table 13 of AMR identifies that there has been historically poor delivery of net housing completions from parishes:

****Table****

The overall strategy as set out by CDC in the plan is highly dependent on the delivery of housing from Neighbourhood Plan areas. Whilst this approach is not un-sound in itself, it is considered that the plan in its current form allows for little mitigation or alternatives should delivery not come forward in the neighbourhood plan areas.

In order for the plan to be considered positively prepared and justified it is recommended that additional wording is added to policy H3 to state that individual applications can come forward on sustainable sites outside of existing settlement boundaries in parishes should delivery not come forward within the first five years of the plan period. Priority should be given to any sites already identified within draft versions of Neighbourhood Plans.

on sustainable sites outside of existing settlement boundaries in parishes should delivery not come forward within the first five years of the plan period. Priority should be given to any sites already identified within draft versions of Neighbourhood Plans.

Southbourne

As set out, the Local Plan proposes a 'Broad Location for Development' at Southbourne for the delivery of 1,050 dwellings. This approach follows the withdrawal of the previously draft version of Neighbourhood Plan after it was found not to comply with basis conditions following examination in early 2022. Southbourne Parish Council is now pursuing a revised Neighbourhood Plan which has been submitted to CDC for a regulation 16 consultation. Obsidian previously responded to the regulation 14 consultation in late 2022 and these are appended to these representations.

The revised Southbourne Neighbourhood Plan does not seek to allocate any new housing allocations and instead takes a protectionist stance against

any new development as an interim position whilst the Local Plan is prepared. However, once the Neighbourhood Plan is made, it would form part of the development plan for CDC. It is highly likely that a made Neighbourhood Plan in the form currently proposed by Southbourne would make the allocation of additional housing in the parish less likely rather than more likely.

The Sustainability Appraisal (SA) as prepared for the regulation 19 of the Local Plan sets out the proposed approach to Southbourne as follows:

3.1. With the decision of Southbourne Parish Council to no longer proceed with the inclusion of a strategic allocation in their neighbourhood plan, the Council considered three options for taking forward development in Southbourne, namely:

- Option 1 - redistribute the housing number elsewhere
- Option 2 - allocate a strategic site
- Option 3 - identify a Broad Location for Development

The SA goes on to set out the reason for option 1, for redistributing the housing number elsewhere, being discounted as follows:

3.2. As set out in the Housing Background Paper, the preferred spatial strategy is to focus the majority of growth at Chichester and the east west corridor, with a focus on the Settlement Hubs within the corridor. To redistribute the housing number to other parts of the plan area would not be consistent with the preferred spatial strategy nor reflective of the role of Southbourne as one of the more sustainable locations in the plan area capable of delivering strategic scale development. The ability to redistribute the number to other locations within the east/west corridor is also severely limited due to infrastructure constraints (impact on A27 junctions) or environmental restrictions (wastewater treatment capacity). For these reasons, Option 1 was discounted.

Whilst it is accepted that the redistribution of the entire requirement of 1,050 homes would be problematic, it is considered that CDC should have tested the allocation of other alternative sites such as that at Main Road, Hermitage and other suitable alternative sites.

The SA goes on to set out consideration of option 2 as follows:

3.3. In order to allocate a site in a Local Plan, it needs to have gone through a rigorous process to ensure that the Council can demonstrate that the allocated site is suitable, given reasonable alternatives, and is based on proportionate evidence. Given there is more than one site or combination of sites that could come forward as an allocation in Southbourne, a clear process setting out for why one site was chosen over another would be needed, informed by site specific technical information.

This is correct and it is therefore not accepted that an approach to allocate a broad area for development would be robust, deliverable or effective. The SA goes on to state:

3.5. The allocation of a strategic site at Southbourne would also be a significant change in approach at a late stage of the Local Plan preparation process. The additional technical evidence that would need to be undertaken to justify a Local Plan allocation at this stage would impact significantly in terms of delay to the finalisation of the Regulation 19 Local Plan and its subsequent submission to the Secretary of State for examination. For these reasons Option 2 was discounted.

This provides further weight to the position set out within these representations that the expectation of delivery from the 'broad area' at Southbourne is overly ambitious and it is clear there is significant technical work to undertake on the delivery of homes from the allocation as part of the future plan making process.

The SA goes on to set out the justification of option 3 as follows:

3.6. The identification of a BLD is consistent with the National Planning Policy Framework (NPPF). Paragraph 68 states that for years 6 -10 of the plan, local authorities should through their planning policies identify a supply of 'specific, developable sites or broad locations for growth'.

3.7. There is no definition of 'broad locations' in national policy. It is generally taken to be an area within which housebuilding could reasonably be expected to take place based on the availability of land having regard to the Housing and Economic Land Availability Assessment (HELAA). A BLD does not have a specific geographic location or physical boundary. Areas are identified as broad locations because at that stage it is not yet possible to identify the precise boundaries of a site until further detailed site work has been done. By identifying a broad location gives flexibility and may increase the prospect of appropriate and effective growth i.e. where there is some doubt as to the most effective site boundary could prevent growth coming forward or prevent the most sustainable solution. However, a broad location might be expected to accommodate a significant amount of development; in some cases a single site may be of a sufficient size to accommodate all of the potential development or a number of sites that abut other sites may be considered together.

This is not considered a rational approach to take. Whilst there is no definition of 'broad location' within national policy it is considered that the words 'specific' and 'developable' must be taken at their basic meaning and indeed as set out in the glossary of the framework. It is not considered that the allocation of such a large area for a 'broad location' would be specific, effective or justified against the tests of soundness in the NPPF.

The allocation of Southbourne under policy A13 would represent over 10% of the total housing delivery in the plan. This is considered too significant to leave to a broad location for development.

As set out, Southbourne Parish Council is already at advanced stages of a revised Neighbourhood Plan which does not include the allocation of any of the development parcel envisaged under policy A13. In terms of delivery through the Site Allocations DPD, the timetable for this is set out within the most recent Local Development Scheme (January 2023) which sets out the following:

****Table****

As set out, the housing trajectory assumes delivery of dwellings from the allocation at Southbourne in 2028/29. Given that the Site Allocation DPD would not be delivered until Winter 26/27 at the earliest, and the delivery through the Neighbourhood Plan has been discounted by the progression of a NP without the allocation, then the deliverability of any development at Southbourne remains wholly unjustified within the plan period.

The SA goes on to set out the approach to alternative sites in Southbourne Parish as follows:

4.3. The 2021 HELAA assessed 41 sites in Southbourne Parish (see Appendix 1). Of these, 18 sites were discounted because the site either had planning permission/were under construction (five sites); it was within the Chichester Harbour Area of Outstanding Natural Beauty (AONB) (eight sites); there was insurmountable access issues (two sites); it was in Flood Zone 3 (one site); or there was a legal restriction on the site use (in this case a Section 106 Agreement restricting use to open space) (two sites). These sites were not considered further for inclusion within the BLD.

The land at Main Road was one of the sites discounted due to being located in the AONB. For the reasons set out within subsequent sections of these representation, it is not considered that it was necessary to discount sites within the AONB as other councils have taken the decision to use such sites to meet housing need and not considered the AONB as an absolute constraint.

Specialist Accommodation for Older People

Para 5.41 of the regulation 19 of the Plan sets out the following:

The Housing and Economic Development Needs Assessment (HEDNA) 2022 estimates the greatest population increase in the district by 2039 to be those in age groups 75 and over. To support an ageing population there should be provision of suitable housing options for the differing needs of individuals, including:

- Sufficient adaptable and/or accessible market housing stock so that those wishing to remain in their own homes can do so as their needs change.
- Smaller homes, for those wishing to downsize, and bungalows.
- Extra care housing, for those able to live relatively independently but requiring on-site support.
- Care homes, for those needing additional support.

Table 8.1 of the HEDNA sets out the current population breakdown for separate groups over 65 and demonstrates that CDC has a significantly higher percentage in all age groups over 65 than the average in West Sussex, the South East or England:

****Table****

Policy 8.12 of the HEDNA goes on to set out the need for different groups as follows:

****Table****

The HEDNA sets out the following commentary in this regard:

8.41 It can be seen by 2039 there is an estimated need for between 2,131 and 2,872 additional dwellings with support or care across the whole study

area. In addition, there is a need for 429-800 additional nursing and residential care bedspaces.

8.42 Typically for bedspaces it is conventional to convert to dwellings using a standard multiplier (1.80 bedspaces per dwelling for older persons accommodation) and this would therefore equate to around 238-445 dwellings.

8.43 In total, the older persons analysis points towards a need for around 2,369-3,317 units over the 2021-39 period (132-184 per annum) – the older person need equates to some 17-24% of all homes needing to be some form of specialist accommodation for older people.

Given the significant need for Specialist Housing Accommodation across the district it is vital that this is planned for adequately within the emerging Local Plan. The Planning Practice Guidance sets out why it is important to plan for housing needs of older people as follows:

The need to provide housing for older people is critical. People are living longer lives and the proportion of older people in the population is increasing. In mid-2016 there were 1.6 million people aged 85 and over; by mid-2041 this is projected to double to 3.2 million. Offering older people a better choice of accommodation to suit their changing needs can help them live independently for longer, feel more connected to their communities and help reduce costs to the social care and health systems. Therefore, an understanding of how the ageing population affects housing needs is something to be considered from the early stages of plan-making through to decision-taking.

Paragraph: 001 Reference ID: 63-001-20190626 Revision date: 26 June 2019

The PPG goes on to state how housing requirements of such groups should be addressed in plans:

Plan-making authorities should set clear policies to address the housing needs of groups with particular needs such as older and disabled people.

These policies can set out how the planmaking authority will consider proposals for the different types of housing that these groups are likely to require. They could also provide indicative figures or a range for the number of units of specialist housing for older people needed across the plan area throughout the plan period.

Paragraph: 006 Reference ID: 63-006-20190626 Revision date: 26 June 2019

Policy H8 states:

All housing sites over 200 units, including those allocated in this plan, will be required to provide specialist accommodation for older people to include a support or care component. The specific type and amount of accommodation required will depend on the size and location of the site.

Proposals for specialist housing, such as homes for older people, student, HMOs or essential worker accommodation, and other groups requiring specifically designed accommodation will be supported where the following criteria are met:

- 1) There is an identified need;
- 2) It will not lead to a concentration of similar uses in an area that would be detrimental to the character or function of an area and / or residential amenity;
- 3) It is in close proximity to everyday services, connecting by safe and suitable walking / cycling routes or public transport for the intended occupier;
- 4) It can be demonstrated that the development is designed to provide the most appropriate types of support for the target resident;
- 5) It can be demonstrated that revenue funding can be secured to maintain the longterm viability of the scheme (if relevant to the type of accommodation proposed); and
- 6) The scheme is supported by the relevant agencies (if relevant to the accommodation type to be provided).

Proposals which may result in the loss of specialist needs accommodation will not be permitted unless it can be demonstrated that there is no longer a need for such accommodation in the plan area, or alternative provision is being made available locally through replacement or new facilities.

Whilst this approach goes some way to addressing the care needs it is felt that the policy lacks effectiveness and should take a far more constructive and positive approach to the provision of housing for older people.

The wide range of different housing typologies is set out within the Planning Practice Guidance as follows:

- Age-restricted general market housing: This type of housing is generally for people aged 55 and over and the active elderly. It may include some shared amenities such as communal gardens, but does not include support or care services.
- Retirement living or sheltered housing: This usually consists of purpose-built flats or bungalows with limited communal facilities such as a lounge, laundry room and guest room. It does not generally provide care services, but provides some support to enable residents to live independently. This can include 24 hour on-site assistance (alarm) and a warden or house manager.
- Extra care housing or housing-with-care: This usually consists of purpose-built or adapted flats or bungalows with a medium to high level of care available if required, through an onsite care agency registered through the Care Quality Commission (CQC). Residents are able to live independently with 24 hour access to support services and staff, and meals are also available. There are often extensive communal areas, such as space to socialise or a wellbeing centre. In some cases, these developments are known as retirement communities or villages - the intention is for residents to benefit from varying levels of care as time progresses.
- Residential care homes and nursing homes: These have individual rooms within a residential building and provide a high level of care meeting all activities of daily living. They do not usually include support services for independent living. This type of housing can also include dementia care homes.

[Paragraph: 010 Reference ID: 63-010-20190626].

It is considered that a residential care home (including housing for dementia needs) could be developed on the Land South of Main Road without causing harm to the AONB and this would provide for a clear need within the village whilst also providing employment to local workers.

Development in AONB

The NPPF sets out the following in relation to development in the AONB at paragraph 172 as follows:

Great weight should be given to conserving and enhancing landscape and scenic beauty in National Parks, the Broads and Areas of Outstanding Natural Beauty, which have the highest status of protection in relation to these issues. The conservation and enhancement of wildlife and cultural heritage are also important considerations in these areas, and should be given great weight in National Parks and the Broads. The scale and extent of development within these designated areas should be limited. Planning permission should be refused for major development⁵⁵ other than in exceptional circumstances, and where it can be demonstrated that the development is in the public interest. Consideration of such applications should include an assessment of:

- a) the need for the development, including in terms of any national considerations, and the impact of permitting it, or refusing it, upon the local economy;
- b) the cost of, and scope for, developing outside the designated area, or meeting the need for it in some other way; and
- c) any detrimental effect on the environment, the landscape and recreational opportunities, and the extent to which that could be moderated

Footnote 55 of paragraph 172 is relevant for the consideration of what is considered as major development and states:

For the purposes of paragraphs 172 and 173, whether a proposal is 'major development' is a matter for the decision maker, taking into account its nature, scale and setting, and whether it could have a significant adverse impact on the purposes for which the area has been designated or defined.

No evidence is set out within the Local Plan or supporting evidence base to state what is considered to be a major development site in the district.

Neither the Chichester Harbour AONB: State of the AONB Report (May 2018) or the Chichester Harbour AONB Landscape Character Assessment (April 2019) contain any references to what is considered to constitute a major development.

This is a matter which has been considered at length within other Local Plan examinations. As part of the evidence for its Local Plan, the South Downs National Park sought successive legal opinions from James Maurici QC on what should be considered as 'Major Development' in the AONB and have subsequently become widely known as the 'Maurici Opinions' in other Local Plan examinations. The opinions set out the following conclusions:

- It is a matter of planning judgement to be decided by the decision maker.
- Major development is to be given its ordinary meaning, and it would be wrong to apply the definition of major development contained within the Town and Country Planning (Development Management Procedure) (England) Order 2015. It would also be wrong to apply any set or rigid criteria for defining major development, and the definition should not be restricted to development proposals that raise issues of national significance.

- The decision maker may consider whether the proposed development has the potential to cause a significant adverse impact on the purposes for which the area has been designated or defined, rather than whether there will indeed be a significant adverse impact from the proposed development.
- The decision maker may consider the proposed development in its local context as a matter of planning judgement.
- There may be other considerations but which may not determine whether a proposed development is major development. For example, if the proposed development is Environmental Impact Assessment (EIA) development.
- The ordinary sense of the word 'major' is important and the decision maker should take a common sense view as to whether the proposed development could be considered major development.

In the Mid Sussex District Council Site Allocations DPD Evidence Base there is a topic paper setting out consideration of Major Development in the AONB and concludes that several of the allocations, in some cases up to 70 dwellings, would not be classed as major development in the AONB following a detailed review of each of the factors as set out in footnote 55 of the NPPF against each proposed allocation.

It is considered that this approach should have been undertaken for each of the individual sites discounted in the Local Plan (including Main Road, Hermitage), rather than simply discounting on the sole fact that they were in the AONB.

Sustainability Appraisal

The legal frameworks for SAs are set out within section 19 of the Planning and Compulsory Purchase Act 2004 which states that the authority must prepare a plan with the objective of contributing to the achievement of sustainable development. Moreover, the requirements of the Environmental Assessment of Plans and Programmes Regulations 2004 states that SAs must ensure that the potential environmental effects are given full consideration alongside social and economic issues.

It is not considered that the council has given full consideration to all effects nor are the conclusions of the SA in respect of those impacts robust and logical.

Paragraph 32 of the framework goes on to state that the SA should demonstrate how the plan has addressed relevant economic, social and environmental objectives (including opportunities for net gains). Significant adverse impacts on these objectives should be avoided and, wherever possible, alternative options which reduce or eliminate such impacts should be pursued. Where significant adverse impacts are unavoidable, suitable mitigation measures should be proposed (or, where this is not possible, compensatory measures should be considered).

The SA sets out whether it was reasonable to explore higher growth scenarios as follows:

5.2.12 As discussed above, the PPG on Housing and Economic Needs Assessment sets out reasons for providing for 'above LHN' through local plans, referring to situations where there are "growth strategies for the area... (e.g. Housing Deals); strategic infrastructure improvements that are likely to drive an increase in [need]; or an authority agreeing to take on unmet need from neighbouring authorities..." Also, affordable housing needs can serve as a reason for considering setting the housing requirement at a figure above LHN, with the PPG stating: "An increase in the total housing figures included in the plan may need to be considered where it could help deliver the required number of affordable homes."

5.2.13 However, in the Chichester context there is little or no argument for exploring scenarios whereby the housing requirement is set at a figure above LHN, given the issues discussed above at paragraph 5.2.11. Unmet housing needs are a widespread issue across the sub-region, but there is no realistic potential to provide for unmet housing needs within Chichester. At the time of the Preferred Approach consultation (2018/19), the proposal was to provide for both locally arising housing needs in full and a proportion of the unmet needs arising from the SDNP (41 dpa). Also, it is noted that the SA report published as part of the consultation considered scenarios – considered to be 'reasonable' at that point in time – that would see the housing requirement set at figures significantly above LHN (800 dpa and 1,000 dpa were tested). However, at the current time, in light of the latest available evidence, scenarios involving setting the housing requirement at a figure above LHN can be safely ruled out as unreasonable.

It is not considered that a figure at or above the LHN would be considered unreasonable and that this matter has not been given full consideration (as per the requirements of the SA regulations), particularly in regard to the social impacts of not meeting housing need in full.

Appendix V of the SA sets out commentary in regard to Parish Scenarios. This sets out the following in relation to Southbourne (with emphasis added):

With regards to the extent of the broad location, this matter is considered fairly uncontroversial (for the current purposes of arriving at reasonable growth scenarios). Specifically, the proposal is to identify an area of search that includes developable HELAA sites that relate relatively well to the Southbourne settlement edge and avoid the Strategic Wildlife Corridor associated with the Ham Brook, also naturally mindful of the need to maintain a landscape gap to settlements within Chidham and Hambrook Parish, to the east. It is important to note that the total theoretical capacity of developable HELAA sites within this broad area is far in excess of the number of homes that would need delivered under any reasonably foreseeable scenario.

The broad location provides flexibility to identify a detailed allocation either through a Site Allocations Plan or, should the Parish Council wish to do so, a revised Southbourne Parish Neighbourhood Plan. Site selection considerations will likely include: transport and access (including mindful of links to the train station and by car to Portsmouth); accessibility and community infrastructure (mindful of the secondary school, recreation ground and employment area at the western edge of the village); heritage (e.g. there is a historic rural lane to the east, associated with two listed buildings), topography and landscape (including any visual links to the SDNP and/or the AONB) and the potential to secure a strategic scheme that delivers more than just new market homes, and potentially significant 'planning gain' for the local community.

With regards to the number of homes that should be supported, there is logic to further exploring the scale of growth that was previously considered through the now withdrawn Southbourne NP, and it is not clear that there is an argument for considering lower growth. Additionally, there is a clear argument for exploring the possibility of higher growth, to ensure a suitably comprehensive scheme, with a high level of 'planning gain'.

In conclusion, there are two scenarios for Southbourne Parish, namely completions, commitments and windfall plus either: 1) a broad location for 1,050 homes; or

2) a broad location for ~1,500 homes.

As set out, it is not considered that the SA has considered adequate reasonable alternatives to growth at Southbourne which would include allocation of sites elsewhere in the village including within the AONB that can deliver in the early part of the plan period.

Conclusions

There are significant concerns on the soundness of the plan in terms of whether it is effective, justified, positively prepared or consistent with national policy in accordance with paragraph 35 of the NPPF.

It is not considered that the Council has justified the extent of the under supply of housing against the established housing need. There are significant concerns over the delivery of housing from the strategic allocations within the unjustified timescales as set out within the trajectory contained in the plan.

The Council has not adequately considered reasonable alternatives through the Sustainability Appraisal as published alongside the plan which should have included consideration to the allocation of the site in order to deliver housing in the early part of the plan period.

The plan fails to adequately consider the need for housing for older people, given that the population over 65 across CDC is significantly in excess of the average in the county, south east and county as a whole.

CDC discounted all sites within the AONB, including the site at Main Road, Hermitage, at an early stage of the plan making process. This is not considered effective or consistent with national policy which does not class such sites as an absolute constraint. Other local authorities have allocated such sites in order to deliver the full objectively assessed needs.

ABC will continue to make further representations on the deliverability of the site as part of the plan making progress.

Object

Document Element: Policy A13 Southbourne Broad Location for Development**Respondent:** Seaward Strategic Land Ltd and Owners of Land on Cooks Lane, Southbourne [8034]**Agent:** Luken Beck MDP Ltd (Mr Ian Johnson) [111]**Summary:**

Object on grounds that: draft policy wording predetermines how NP/Site Allocations DPD should distribute identified local housing need - inconsistent with 'presumption in favour of sustainable development'; wording of policy assumes single site will come forward whereas number of smaller sites could collectively meet policy requirements with early delivery - Land at Cooks Lane promoted; extent of BLD not considered to offer suitable location for development as likely to lead to coalescence of settlements and have greater impact on setting of AONB and SDNP.

Full text:

The draft policy wording predetermines how the emerging Neighbourhood Plan or future Site Allocations DPD should distribute the identified local housing need and associated development. The draft policy is not consistent with the strategic objective of the emerging Plan to meet the local housing needs of the District and apply the 'presumption in favour of sustainable development' (ref. Paragraph 11, NPPF).

We welcome the identification of Southbourne as a 'Strategic Development Location'. This recognises the range of key services and facilities located within Southbourne such as those referred to in the supporting text. Notwithstanding the above we wish to draw the Council's attention to the potential conflict in the draft policy wording with the ability of the emerging Plan to meet the local housing needs of the District and apply the 'presumption in favour of sustainable development' (ref. Paragraph 11, NPPF). Whilst we support the draft policy objective to deliver housing, employment, retail, social and community facilities at Southbourne, the policy wording predetermines how the emerging Neighbourhood Plan or future Site Allocations DPD should distribute the identified local housing need and associated development. The requirement in the wording for development to address all 16 criteria within the BLD assumes a single site will come forward, as opposed to a number of sites which collectively could meet the 16 requirements, if planned for in advance. Proposals for sustainable urban extensions where land is 'available' and 'achievable' in Settlement Hubs such as Southbourne, are a sustainable way to meet the local housing need in the early years of the Plan period and support the long-term vitality of existing communities. A number of smaller sites can collectively bring the benefits of a single major large-scale development, with the added benefit of early delivery, provided a strategic approach to infrastructure delivery is taken and coordinated through the emerging Plan and Infrastructure Delivery Plan. This is recognised in Paragraph 69 of the NPPF where by the important contributions of small and medium sized sites can make in meeting the housing requirements of an area and are often built-out relatively quickly. The 'Land at Cooks Lane' is identified in consecutive versions of the Chichester SHLAAs and HELAAs as 'available', 'achievable' and 'suitable' during years 0-5 of the Plan period. The site is located outside of the AONB and could collectively contribute to Community, Blue and Green Infrastructure and recreation opportunities, such as the 'Green Ring' initiative being carried forward through the Neighbourhood Plan process. It also has the added benefit from proximity to Southbourne Railway Station providing connections to Chichester, Portsmouth/Southampton and the wider region and formal support from Network Rail in relation to the Southbourne level-crossing. In order to meet the housing needs of Southbourne over the Plan period and provide sufficient flexibility to achieve early delivery, should other sites and / or allocations be delayed, the policy wording would also allow development to be dispersed around the settlement to allow the phasing of well-integrated high quality sustainable urban extensions providing good access to facilities and sustainable forms of transport. Through the implementation of the IDP all development proposals would be required make proportionate contributions towards the delivery of the necessary infrastructure in a timely manner. The current wording and approach to the BLD would not achieve this. With regard to the extent of the BLD the entire area shown on the Key Diagram is not considered to offer a suitable location for development within the context of the NPPF. The land to the north of Southbourne and within the landscape gap with Hermitage to the west does not present a suitable location for a single major residential-led development. Such a large scale development in this location would be more likely to lead to coalescence of the two settlements and have a greater impact on the setting of the AONB and National Park than a development to the east, or a series of smaller sites delivering incremental growth and new infrastructure to the urban area.

We welcome the identification of Southbourne as a 'Strategic Development Location'. This recognises the range of key services and facilities located within Southbourne such as those referred to in the supporting text.

Notwithstanding the above we wish to draw the Council's attention to the potential conflict in the draft policy wording with the ability of the emerging Plan to meet the local housing needs of the District and apply the 'presumption in favour of sustainable development' (ref. Paragraph 11, NPPF).

Whilst we support the draft policy objective to deliver housing, employment, retail, social and community facilities at Southbourne, the policy wording predetermines how the emerging Neighbourhood Plan or future Site Allocations DPD should distribute the identified local housing need and associated development. The requirement in the wording for development to address all 16 criteria within the BLD assumes a single site will come forward, as opposed to a number of sites which collectively could meet the 16 requirements, if planned for in advance.

Proposals for sustainable urban extensions where land is 'available' and 'achievable' in Settlement Hubs such as Southbourne, are a sustainable way to meet the local housing need in the early years of the Plan period and support the long-term vitality of existing communities. A number of smaller sites can collectively bring the benefits of a single major large-scale development, with the added benefit of early delivery, provided a strategic approach to infrastructure delivery is taken and coordinated through the emerging Plan and Infrastructure Delivery Plan. This is recognised in Paragraph 69 of the NPPF where by the important contributions of small and medium sized sites can make in meeting the housing requirements of an area and are often built-out relatively quickly.

The 'Land at Cooks Lane' is identified in consecutive versions of the Chichester SHLAAs and HELAAs as 'available', 'achievable' and 'suitable' during years 0-5 of the Plan period. Respondent: Seaward Strategic Land Ltd and Owners of Land on Penny Lane, Hermitage [8035]

Agent: Luken Beck MDP Ltd (Mr Ian Johnson) [111]

Summary:

Object on grounds that: draft policy wording predetermines how NP/Site Allocations DPD should distribute identified local housing need - inconsistent with 'presumption in favour of sustainable development'; wording of policy assumes single site will come forward whereas number of smaller sites could collectively meet policy requirements with early delivery - Land North of Penny Lane, Hermitage promoted; extent of BLD not considered to offer suitable location for development as likely to lead to coalescence of settlements and have greater impact on setting of AONB and SDNP.

Full text:

The draft policy wording would result in a conflict between meeting the local housing needs of the District and the 'presumption in favour of sustainable development' (ref. Paragraph 11, NPPF).

We welcome the identification of Southbourne as a 'Strategic Development Location'. This recognises the range of key services and facilities located within Southbourne such as those referred to in the supporting text. Our client represents the freehold owners of the Land North of Penny Lane, Hermitage (c 5.4 ha), which has been identified as a 'deliverable' site within consecutive versions of the Chichester Housing and Employment Land Availability Assessment (HELAA). Our client welcomes the inclusion of this site within the Broad Location of Development (BLD) and has recently submitted a planning application on the site for up to 84 dwellings (CDC ref. SB/23/00024/OUT).

Notwithstanding the above we wish to draw the Council's attention to the potential conflict in the draft policy wording with the ability of the emerging Plan to meet the local housing needs of the District and apply the 'presumption in favour of sustainable development' (ref. Paragraph 11, NPPF).

Whilst we support the draft policy objective to deliver housing, employment, retail, social and community facilities at Southbourne, the policy wording predetermines how the emerging Neighbourhood Plan or future Site Allocations DPD should distribute the identified local housing need and associated development. The requirement in the wording for development to address all 16 criteria within the BLD assumes a single site will come forward, as opposed to a number of sites which collectively could meet the 16 requirements, if planned for in advance.

Proposals for sustainable urban extensions where land is 'available' and 'achievable' in Settlement Hubs such as Southbourne, are a sustainable way to meet the local housing need in the early years of the Plan period and support the long-term vitality of existing communities.

Notwithstanding the benefits of a single eastern extension in the mid to later years of the Plan period, as supported in previous drafts of the Southbourne Neighbourhood Plan, a number of smaller sites can collectively bring the benefits of a single major large-scale development. This approach would have the added benefit of early delivery, provided a strategic approach to infrastructure delivery is taken and coordinated through the emerging Plan and Infrastructure Delivery Plan. This is recognised in Paragraph 69 of the NPPF where by the important contributions of small and medium sized sites can make in meeting the housing requirements of an area and are often built-out relatively quickly.

Smaller sites can also play an important role in sustaining key services and facilities within Hermitage, Southbourne and Emsworth, which have been in decline in recent years due to changing shopping habits and community displacement from increasing affordably gaps, in part due to constrained housing supply. In allowing such sites to come forward the Parish could also be facilitating new community infrastructure through the IDP and funded through CIL and / or S106 Legal Agreements.

We therefore encourage the Council to revise the approach toward the BLD and pursue a strategy of allowing some limited dispersal of development in suitable locations as the most sustainable strategy for the distribution of housing in Southbourne Parish over the Plan period.

With regard to the extent of the BLD the entire area shown on the Key Diagram is not considered to offer a suitable location for development within the context of the NPPF. The land to the north of Southbourne and within the landscape gap with Hermitage to the west does not present a suitable location for a single major residential-led development. Such a large scale development in this location would be more likely to lead to coalescence of the two settlements and have a greater impact on the setting of the AONB and National Park than a development to the east, or a series of smaller sites delivering incremental growth and new infrastructure to the urban area.

Change suggested by respondent:

Revise approach toward BLD and pursue strategy of allowing some limited dispersal of development in suitable locations as the most sustainable strategy for the distribution of housing in Southbourne Parish over plan period.

In principle, the PC supports the proposed BLD at Southbourne. Southbourne village has been identified as a settlement hub due to the facilities it offers, even though a number of these are currently inadequate. Paragraph.6.89 of this Local Plan states that the proposed development provides the opportunity to make good the existing shortfalls (eg open space, para.6.85) and to provide well-serviced new development. This development must be achieved through comprehensive masterplanning. There has been, and continues to be, pressure for piecemeal proposals. These must be rejected to secure a properly planned expansion which maximises the provision of timely accompanying infrastructure.

Document Element: Policy A13 Southbourne Broad Location for Development**Respondent:** Southbourne Parish Council (Mrs Maria Carvajal-Neal, Deputy Clerk) [7805]**Summary:**

Bullet 9

Summary: At present the Wildlife Corridor area shown around the Ham Brook differs between the Local Plan and the Neighbourhood Plan. The Wildlife Corridor should be larger as shown in the Southbourne Parish Neighbourhood Plan, Submission Modified Plan 2014 – 2029 Ham Brook Strategic Wildlife Corridor Map (Plan D, page 47). The results of surveys commissioned by the District Council confirm this, as do the more thorough surveys commissioned by the Parish Council and validated by the Sussex Biodiversity Record Centre.

It is not clear whether the Map prepared by the District Council is definitive, or a strategic guideline. The Local Plan (Policy NE4, Map NE4a and para. 4.16) appears to confirm that the boundaries are definitive. However, District Council officers in discussion with officers of the South Downs National Park (Duty to Cooperate Statement of Compliance Jan 2023, page 38) it appears that that it was agreed that details would be agreed through Neighbourhood Plans. This conflict requires rectification.

Conclusion - The Wildlife corridor should be extended to include the area shown in the Neighbourhood Plan on the basis of the evidence secured by both District and Parish Councils. Confirmation is required about whether boundaries are defined in the Local Plan or in Neighbourhood Plans.

Full text:

Document Element: Policy A13 Southbourne Broad Location for Development**Respondent:** Southbourne Parish Council (Mrs Maria Carvajal-Neal, Deputy Clerk) [7805]**Summary:**

Bullet 2

Legal Compliance – The Parish Council was not consulted about this part of Policy A13 or Policies H11, H12, H13 or H14 until now. Parish Councils are listed as one of the bodies the District Council must consult under the Town and Country Planning (Local Planning) (England) Regulations 2012. (See also Para. 3.4 of the Local Plan Statement of Community Involvement).

Soundness – The proposed intensification of the site at Sunrise in Southbourne is not deliverable (Policy H12 – Proposed 1 additional pitch at Sunrise as shown in Local Plan Appendix I).

Full text:

See representations attached.

Change suggested by respondent:

H11, H13, H14 - It has not been possible to consult the community in Southbourne to obtain a view on these policies in the time allotted. This places the Parish Council in a difficult position. However, 12 new pitches and 12 new plots is a considerable number to accommodate in addition to those already occupied within the parish and therefore it is considered appropriate to raise objection unless the District Council can provide sufficient assurances about the location and proposed management of these sites.

H12 – The site identified as Sunrise in the Local Plan is already fully occupied. This includes the controversial encroachment, reinforced by two meter high boundary fencing, over a significant length of a Public Right of Way (Footpath 212), which now follows an unpleasant confined route adjacent to the correct route. In addition, an unauthorised park home dwelling has been recently located over the original route of the Public Right of Way. There is no room for a further pitch. It appears that the District Council is attempting to use this proposal to regularise unauthorised development, which is not acceptable. It is strongly recommended that the Inspector visits this site and that the proposal at Sunrise is deleted from the Local Plan.

Document Element: Policy A13 Southbourne Broad Location for Development**Respondent:** Southbourne Parish Council (Mrs Maria Carvajal-Neal, Deputy Clerk) [7805]**Summary:****Bullet 1**

The evidence explaining why there has been a reduction from 1250 to 1050 dwellings as set out in the District Council "Southbourne Broad Location for Development Background Paper (Jan 2023)" is incorrect. Should the housing numbers for the Local Plan be increased across the parishes for any reason, it is important that they are not increased in Southbourne. This is because it has been acknowledged by the District Council that 1050 additional dwellings are the most that should be accommodated in the period to 2039. The Parish Council considers that more than 1050 dwellings would be likely to compromise other policies in the Local Plan, probably give rise to market saturation locally and also pose problems integrating new residents with those already living in the village.

Full text:

See representations attached.

Change suggested by respondent:

SUMMARY Para. 2.4 is correct, but para. 2.5 states that the number has "been reduced to 1050 dwellings to reflect the proportionate reduction in housing numbers across the parishes in the east west corridor as a consequence of the limit on numbers in the southern plan area." This should be amended to read ".....been reduced to 1050 dwellings due to an exception made by the District Council to take account of a planning permission for 199 dwellings at Cooks Lane granted in 2020."

Document Element: Policy A13 Southbourne Broad Location for Development**Respondent:** Stagecoach South (Rob Vince) [8141]**Summary:**

In the absence of a refreshed transport strategy and transport evidence base, the draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact, the only reference that is made in Policy is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan . They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Full text:

Chichester District Local Plan 2039 – Pre-Submission (Regulation 19) Consultation

1. Introductory Comments

Stagecoach South is the main commercial public transport operator across Chichester District. The Company has headquarters in the city, which is also the principal public transport hub for the District and it's rather wider travel-to-work area encompassing much of the Arun District. Our services extend throughout and beyond the District boundaries, as far as Littlehampton, Midhurst, Havant and Portsmouth. The vast majority of services operate on a commercial basis – that is to say, sustained by passenger use and fare revenue, including concessionary reimbursement.

While the role of the railway is significant in much of the District, especially the east-west Coastway line, yet bus services account for more boardings locally than the railway, with Chichester depot services carrying over 3.5m passengers each year.

Unlike bus services in other parts of the country, the local network has recovered strongly after the pandemic with fare-paying passenger numbers over 95% of 2019 levels, albeit with concession patronage somewhat lower. This has helped secure not only a stable but growing bus network even during this period of rapidly rising operational costs, avoiding the need for the service contractions seen in other regions. Indeed, during the second quarter of 2023 Stagecoach will invest £5.5m in brand-new vehicles for high-profile coastal Service 700 – one of the largest vehicle investments for Stagecoach Group this year.

Our services are therefore critical to existing and future local connectivity. As the Plan acknowledges, mobility demands do not respect planning authority boundaries. The role of our services is especially high to settlements in the broad A27 corridor, within the District and beyond. This includes major settlements in Arun District such as Pagham and suburban Bognor Regis, where bus is the only mass public transport option. As the Council is well aware, there is an even higher level and rate of committed development envisaged in these locations in the Arun District Local Plan than in Chichester.

It is already evident to the planning authorities, West Sussex County Council and National Highways, as proprietor of the A27 Trunk Road, that accommodating growing mobility demands across Chichester District and especially around Chichester itself, is becoming increasingly challenging to the point of being seriously problematic.

Stagecoach has a particular interest in this Plan arising from:

- The already clear and highly deleterious impact of congestion affecting our operations and their reliability and attractiveness to the public. The effects of these on the approaches to Chichester, and around the A27 bypass are especially severe. If public transport is to retain its existing role – even before the needs of any meaningful growth both in Chichester and neighbouring authorities is considered, are considered – the Council and the Highways Authority need to arrive at clearly-defined measures to protect buses from chronic delay and the damaging impacts arising from the lack of bus network resilience and customer journey times.
- In connection with the above, the need to properly consider the predictable impacts of committed development in Arun District on the transport network and in particular the operation of bus services. The duty to cooperate on cross-border strategic matters is not limited merely to accommodating housing requirements.
- The fact that our entire business premises and operational base at Chichester is the subject of allocation for redevelopment within the Plan period. Specifically, this includes our Head Office, the Bus Station as the operational hub of the network and the key interchange for passenger journeys – including those that involve the railway – and the bus depot required to support the entire operation. Notwithstanding many years of discussions, there is as yet no agreed deliverable strategy to replace these facilities either in the Draft Plan or elsewhere.

Stagecoach broadly supports the vision and priorities of the draft plan. In most respects, Stagecoach supports strongly the spatial strategy and the identified site allocations that flow from it, and the evidence.

However, it has serious concerns about the soundness of the plan as proposed for submission, for important regards outlined in this response. These are made in the light of requirements set by the National Planning Policy Framework (NPPF), in particular at paragraphs 15 and 16; 35, 105-109 inclusive and having due regard to the need for allocations to satisfy 110-112 inclusive in due course as development permission is sought; and

paragraph 174.

Paragraph 16c) of NPPF makes plain that strategic plans and policies should “be shaped by early, proportionate and effective engagement between plan-makers and communities, local organisations, businesses, infrastructure providers and operators and statutory consultees” (our emphasis). This makes plain that collaborative and ongoing involvement of public transport operators is both necessary, and separate and in addition to the engagement with statutory consultees. This has not taken place.

Para 1.25 of the draft plan states that “the council has engaged constructively, actively and on an ongoing basis with other local authorities and organisations to address key strategic matters.” Despite the requirements in NPPF and contrary to the statement made, Stagecoach has not been approached or involved in a meaningful, collaborative or ongoing way in the preparation of the Plan.

Our main concerns centre around the fact that the plan strategy is neither backed by sufficient transport evidence. Even more importantly, the plan relies on a wholly car-based transport mitigation strategy despite policy stating that this is not the case, and the track record of the existing Local Plan, based on a very similar strategy, that has failed to bring forward meaningful mitigations to date to prevent traffic conditions substantially worsening. There is no support in policy for the achievement of the Strategic Objectives in the Plan. Nor is there definition of any measures in the 2023 Transport Study to make provision for sustainable transport infrastructure or services – much less materially improve them.

Finally, to the extent that updated transport evidence has been provided in the form of the 2023 Chichester Transport Study, arising from updated traffic modelling, it does not support the contention that highways capacity constraints on and around the A27 justify not meeting the objectively-assessed development needs of the area, as the draft plan contends.

2. Vision and Strategic Objectives

2.1. Issues and Opportunities

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant, proportionate and up to date evidence

Stagecoach recognises the important role of the West Sussex and Greater Brighton Strategic Planning Board which agreed a Local Strategic Statement (LSS2) in early 2016 to identify spatial planning issues across the wider area. This established strategic priorities and policies to guide longer term strategic growth in a coordinated and well considered matter. This institutional framework and the purpose of the LSS is a highly significant one and is at the heart of efforts to properly fulfil the statutory Duty to Co-operate, including with regard to strategic infrastructure issues, as NPPF requires.

Given the long period of time elapsed since the 2018 Reg 18 consultation and the already very clear constraints on strategic infrastructure capacity, it is of great concern to Stagecoach that the LSS2 has not been updated to reflect emerging issues in the intervening period. A review and update of the LSS2 has only just commenced. This includes a study of projected housing and employment needs, transport impact, infrastructure and spatial options to deliver the required development in the period after 2030. This Chichester District draft plan covers a period extending to 2039 – therefore well beyond 2030 and the nominal currency of LSS2.

However, infrastructure needs are pressing today. Stagecoach is presented with severe highway operational problems on a near-daily basis. During the winter of 2022-23 we have, for example, seen key road links impacted for many weeks by acute disruption arising from flood events. Unpredictable, but seemingly more-frequent, exogenous events expose a lack of resilience in the highway network around Chichester and its travel-to-work area. However, serious, chronic, unpredictable delay has been normalised over recent years, with peak-time congestion having quickly returned after the pandemic. The existing development strategy has failed to bring forward measures having any impact on this to date, and key commitments – notably at west of Chichester Phase 2 and at Tangmere – have yet to commence to further aggravate the issue.

We have no confidence in the transport mitigations proposed in the existing Local Plan and LSS2 being sufficiently effective, even if deliverable at all. Indeed, the existing adopted Local Plan does little more than make vague speculations about the sustainable transport measures that might be achievable. The draft local plan review is no different. It has no ambitions at all for sustainable modes and thus, makes no meaningful provision to meet them.

This is especially relevant in light of the fact that the approach to resolving issues on the A27 around Chichester that were anticipated in 2015-16 have fallen away. LSS2 is thus currently inadequate to act as a part of an up-to-date, proportionate, and relevant evidence base for the Plan.

An update of a traffic model lies at the heart of a 2023 Chichester Transport Study. This talks no account of the existing role of non-car modes, nor can it do so. It is unable to properly evaluate the nature of problems or solutions that involve public transport, or for that matter, other sustainable modes.

Therefore, we consider that the combination of committed and additional development needs that must be accommodated over the whole plan period between 2022 and 2039, in both the Chichester and Arun Districts, require a “first principles” review. This must be based on a refreshed transport evidence baseline of no earlier than 2022 – given that the effects of COVID distort 2020-22 – and the transport infrastructure and service requirements to sustainably support those needs.

Key issues – including substantial changes with regards to transport issues and challenges, as well as potential solutions – thus do not form part of the evidence base that steers this plan. Given long term changes in travel patterns, and mode share that took place during COVID, as well as a local and national policy context that seeks to radically reduce and then eliminate transport-related carbon emissions, this is especially problematic.

The specific problems of congestion and network resilience that are evident on the A27 and the approaches to Chichester remain a set of especially difficult problems that disproportionately affect the efficiency, reliability and attractiveness of the bus network, that evidently demand larger-scale strategic responses involving multiple stakeholders, including bus operators.

Where the effects of development on the national Strategic Roads Network (SRN) are concerned, the approach of National Highways to addressing and responding to the mobility needs of development has now substantially changed following the promulgation of the DfT Written Ministerial Statement LTN01/22. This makes it clear that adding highways capacity is no longer the first or only strategy that should be pursued, but one subordinate this to maximising the potential of non-car modes and sustainable travel.

“Effective and ongoing collaboration” on transport matters has not led to solutions being agreed and published for public scrutiny as part of the plan evidence base. Whatever the approach to modelling and “highways improvements” that may be agreed or pending agreement with the County Highways Authority and National Highways, Stagecoach is neither participant or sighted. This is despite the clear requirements set out in NPPF Para 106 b) that “Planning policies should ... be prepared with the active involvement of local highways authorities, other transport infrastructure providers and operators and neighbouring councils, so that strategies and investments for supporting sustainable transport and development patterns are aligned.” (our emphasis).

We therefore consider that the Council has failed to comply with the requirements of NPPF paragraph 25 and 26 that “relevant bodies” are involved in

plan-making, especially with regard to addressing the needs for infrastructure. Public transport services and the infrastructure that supports its operation and use clearly fall within matters relevant to plan-making. This is explicit in NPPF Chapter 9 and indeed within the plan itself – for example reference to public transport and sustainable modes in the Vision for the plan.

It should be stressed that the Regulation 18 “Preferred Approach” consultation took place in December 2018 – over 4 years ago and prior to COVID, based on LSS2. The inordinate length of time that has elapsed between the Regulation 18 and Regulation 19 stages greatly challenges the LSS2 and other parts of the evidence base, especially as the pause straddles the COVID epidemic. That would include the transport modelling baseline, and key assumptions in any traffic modelling that took place prior to mid-2022, which is a point at which a reasonable “new normal” post-COVID might be considered to have become established. In that period, Arun District has also adopted its own Local Plan development strategy that accommodates an unprecedented quantum of development immediately east and south-east of the District Boundary – creating additional substantial transport impacts directly affecting the A27 and multiple major approaches to Chichester crossing it.

The established mechanism to fulfil the Duty to Co-operate has thus not operated effectively. The Plan is not founded on a relevant, proportionate and up-to date evidence base and is thus inadequately justified.

2.2. Spatial Portrait

The spatial portrait is generally succinct and accurate. However, it makes no mention of road-based public transport, the role of the City as a public transport hub, or the range of bus services that provide local connectivity (Section 2.4 and 2.5). The complete concentration of post-16 education in the City itself as just one example of the peculiarities of transport demands in the area, is not highlighted, though this has a profound influence on peak time travel demands affecting the most congested parts of the highway network. Among other things, the role of bus services in supporting the educational system of the plan area is very great indeed.

The potential role of bus in addressing the already-severe transport problems of the plan area and beyond seems entirely overlooked. The spatial portrait is thus clearly inadequate and incomplete.

2.3. Strategic Objectives

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Chapter 9 of NPPF and paragraphs 104 and 105 in particular require that plans should:

“Transport issues should be considered from the earliest stages of plan-making and development proposals, so that:

- a) the potential impacts of development on transport networks can be addressed;
- b) opportunities from existing or proposed transport infrastructure, and changing transport technology and usage, are realised – for example in relation to the scale, location or density of development that can be accommodated;
- c) opportunities to promote walking, cycling and public transport use are identified and pursued;
- d) the environmental impacts of traffic and transport infrastructure can be identified, assessed and taken into account – including appropriate opportunities for avoiding and mitigating any adverse effects, and for net environmental gains;...

...The planning system should actively manage patterns of growth in support of these objectives. Significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. This can help to reduce congestion and emissions, and improve air quality and public health...”

The Strategic Objectives do not conform with NPPF in these foundational requirements adequately, to transparently steer the plan strategy. They should therefore be amended to read:

“Plan to provide local infrastructure to support new development and seek opportunities to address existing identifiable infrastructure problems deficits, such as in particular those relating to the A27 and its junctions and wastewater treatment.”

Paragraph 2.36 states, in the context of the Climate Emergency and the National Trajectory to “Net Zero” that “The council will enable the delivery of infrastructure, jobs, accessible local services and housing for future generations while protecting, conserving and enhancing the historic and natural environment.”

Naturally, we support this intent.

However, there is no acknowledgement of the role current patterns of transport use contribute to carbon emissions, nor that substantial mode shift is necessary to address sustainably an acute lack of capacity on the local network and the SRN, especially around Chichester. This is especially concerning as the basic conceptual link is not made between the fact that the greatest such problems lie on the A27 corridor and around Chichester, while these are also at the same time present many of the most sustainable locations for development, and where the opportunities to secure much greater use of sustainable modes also exists.

Strategic Objective 7 “Strategic Infrastructure” includes the following statement:

“To work with infrastructure providers to ensure the timely delivery of key infrastructure to support delivery of new development. New development will be supported by sufficient provision of infrastructure to enable the sustainable delivery of the development strategy for the plan area. Key infrastructure to support the Local Plan will include improvements to transport, ...

A sustainable and integrated transport system will be achieved through improvements to walking and cycling networks and links to accessible public transport. Highway improvements will be delivered to mitigate congestion, including measures to mitigate potential impacts on the A27 through a monitor and manage process.”

The latest transport evidence in the Chichester Transport Study makes no pretence to define much less to deliver a “sustainable or integrated” transport system. It is wholly devoted to sustaining current levels of car use across the District, to and through Chichester area.

It is no more than the lightest of touches to the approach taken to supporting the adopted Local Plan, an approach that is already almost 10 years beyond the date of its gestation but has yet to deliver any significant capacity improvement schemes, much less any measures that sustain even current levels of public transport journey times and reliability in the face of increasing congestion – much less any betterment.

Of the six key junctions on the A27 around Chichester, recognised to require significant mitigation given they are saturated for extended periods, five accommodate regular bus services - indeed frequent ones at least every 20 minutes in several cases. The sixth at Oving Road, relates directly to a key corridor where bus services are needed to support strategic growth currently being delivered at Shopwhyke, as well as substantial further growth West of Tangmere (proposed allocation A14) and “East of Chichester” (A8), south of Shopwhyke Road.

As stated at p12 of the Study Summary “The modelling shows that all the junctions on the A27 Chichester bypass are well over capacity, even before adding in the Local Plan development and with the exception of Portfield Roundabout are actually shown to be over capacity in the base model year

(2014) in one or both peaks". This much has indeed been evident for years from delay and periodic even more severe disruption arising to Stagecoach services from the lack of network resilience.

The reassignment of through and local traffic through Chichester to avoid the A27 bypass is an especially serious issue for bus services that penetrate the city. This is leading to consequential saturation of a range of junctions used by buses. Rising delay and unpredictable running times are at the root of our decision to sever the long-established Portsmouth to Littlehampton service in 2023, which will in future no longer run across Chichester, but terminate to provide additional dwell time to mitigate the impacts of congestion.

While this congestion affects all road users including businesses and freight traffic, the effect on scheduled bus services is greatly higher, as such services cannot reassign route to 'beat the queue'. Traffic congestion often encourages greater car use for this reason, in tandem that people are happier to sit for extended periods in their own vehicle on a seamless door-to-door journey than wait at the roadside for a delayed bus making slower progress in lengthy queues.

As the Study admits at para. 1.3.2 "Although, there have been works at the Portfield Roundabout in this timeline, no other mitigation schemes have been completed along the A27 corridor, as such the mitigation schemes defined in this report will also be required to consider the development from this plan period."

In other words, in the 8 years since the current Local Plan was adopted in 2015, there has been minimal progress in delivering the traffic mitigations. There is no clarity at all when any such mitigations will be brought forward. It is hardly surprising then, that traffic conditions have deteriorated. The "predict and provide" transport strategy supporting the current plan has failed.

Despite this, the Draft Local Plan Review proposed to "double down" on exactly this strategy. It represents, like the rest of the evidence base, a "rolling forward" of the current car-based strategy by 9 years, with the lightest of touches to attempt to accommodate car trip demands from a relatively modest additional development quantum.

Nevertheless, the Study requires a global 5% reduction in trip demands arising from unspecified "credible" (paragraph 4.1.2) sustainable transport and travel planning measures. It is unclear why use of non-car modes will see disproportionate growth when no measures are in place to make them more attractive. This 5% increase in use translates to a doubling in the modal share of bus services. There is no evidence nationally, anywhere, that simple ignorance of alternatives to the car is the main barrier to uptake.

The outputs of the 2023 Chichester Area Traffic (SATURN) model are set out at Table 5.1 (am peak) and 5.2 (pm peak) without mitigation. These betray just how seriously compromised the whole network around Chichester is, and will be in future, even with implementation of a mitigation package to increase traffic capacity that is understood to cost between £92m and £164m – and which the Study and the draft plan acknowledge cannot be delivered through developer funding sources alone. Unspecified external funding presumably from HM Treasury through DfT is required.

Even if this provided and the schemes are delivered, Tables 8.1 and 8.2 indicate these will provide minimal relief. The final columns suggest key junctions, including Portfield, Fishbourne Road and Cathedral Way East will remain at well over 100% ratio of flow to capacity (90% is considered the point at which saturation is approached, with the onset of increasing delay above that figure). RFCs in tables 8.1 and 8.2 are some of the highest we have ever seen in a local transport evidence base for a post-mitigation scenario. While the serious potential risk of reassignment across Chichester City is greatly reduced, which is important and welcome given its impact on bus services, Tables 8.1 and 8.2 show the extent of post-mitigation saturation is also egregious, covering a very large number of key links and junctions.

On every measure and criterion, then, including cost deliverability and effectiveness, the revised Transport Strategy falls well short of evidence to suggest the transport impacts of the plan can be properly addressed by this means.

Despite the repeated statements about sustainable modes throughout the draft plan and Chichester Transport Study, only 2 paragraphs at Section 6.2 within the Study are devoted to public transport:

"6.2.7 The funds generated from the parking management schemes, local/nation funding schemes and developer contributions could also be utilised to fund potential public transport enhancements within the city centre including an expansion of the bus priority lane system within Chichester City Centre. This could reduce reliance on the car in the longer term towards sustainable public transport. A park and ride scheme could be incorporated within a bus priority lane network in the future depending on the uptake and successfulness of early bus priority trials.

6.2.8 Chichester City centre has a constrained existing public highway network. Therefore, any proposed dedicated public transport or light transit corridors that could be implemented would be at the expense of existing highway. This could be managed through a time-based system where certain routes are restricted to public transport only during specific times. E.g., peak hours."

There is some very high-level consideration of Park and Ride following this section. None can be considered a serious practical evaluation of consolidating car-borne trips onto bus services, including existing ones, for example local mobility hubs, more frequent bus corridors, delivery of specific bus priorities.

None of the discussion of alternatives to "predicting and providing" for unconstrained traffic growth is rooted in a deliverable evidence base, or proper evaluation of options and specific projects.

To take just one aspect of the few specifics that can be picked out, a workplace parking levy is hypothesised. This would apply only to "offices", in Chichester city centre (para 6.2.3), without consideration given as to how this could be practically achieved or even that a meaningful amount of office based employment would qualify. Much less is any consideration given to how far focusing a strategy only on office-based workers would actually deliver a particularly significant effect, apart from to create a strong incentive to relocate offices out of the city centre to places out of reach by public transport.

Looking at the Chichester Transport Study 2023 and the draft plan together, there is insufficient evidence that the traffic capacity increase proposed in the 2023 Transport Study is any more affordable or technically deliverable, or likely to be sufficiently effective, than those in the past strategy. The evidence more strongly points to the fact that no highways improvements are identifiable or economically deliverable to meet even short term increases in demand for car-borne mobility on most of the network around Chichester.

There are no published strategies or schemes clearly supporting the contention that the objective of improving sustainable modes is technically achievable or deliverable either. The plan makes generalised assertions that such strategies will be devised and implemented only after serious problems emerge from a shortfall in the car-borne transport strategy.

The reference to "monitor and manage" is undefined and unsubstantiated. There are no outcomes stated, no mechanisms specified and no timescales for action.

Our experience today is that network conditions have reached unacceptable and prejudicial levels of severe unpredictable delay. The saturation of the network is already evident well outside the traditional peaks on key sections of highway and at key junctions. External shocks such as the effects of severe weather are becoming more common, leading to delays so extreme as to justify the description of "gridlock". The plan does not identify a

strategy to effectively address this, in particular by consolidating passenger car trips onto more efficient public transport vehicles. This is unacceptable to Stagecoach.

2.4. Local Plan Vision

Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the broad approach in Plan Vision and in particular that by 2039, the Plan will support and enable greater use of sustainable modes. However, there is no link made between reducing the use of private cars, and the need for a step change in the use of sustainable modes. Without a published transport evidence base it is impossible to establish a suitable sustainable transport strategy to support both carbon reduction and alleviation of the problems arising from acute congestion. Even on a very crude basis, to achieve a meaning mode shift on key approaches to the A27 Chichester Bypass will require more than 20% of existing peak car-borne journeys to transfer to other modes. A 10 percentage point transfer to bus (about half this shift) would imply more than doubling peak hour bus passenger boardings.

The Vision is nothing more than an aspiration, that needs to more definitively aim at key outcomes, for the plan to be effective. The Vision should thus be altered to read:

"Get about easily, safely and conveniently with less reliance on private cars –making the greatest possible use of the rail and enhanced bus network, and with more opportunities for active travel including walking and cycling; to materially reduce dependence on private car use."

Underpinning the Plan's spatial strategy, the Vision section goes into more specific detail about key localities in the Plan area.

Regarding Chichester, Paragraph 2.39 states: "The emphasis will be upon consolidating and enhancing the role of Chichester city as the plan area's main centre, whilst also developing the role of key settlements to its east and west. The focus will be upon creating communities with good access to a range of employment opportunities and affordable housing for young people and families to balance the ageing population."

This is clearly the appropriate focus for meeting the District's development needs in a sustainable manner. The city and key settlements to the east and west, are those places already able to make use of relevant public transport services, both rail and bus. Especially within and near the City, walking and cycling can credibly present highly relevant choices. This emphasis clear can be expected to address the requirements of sustainable development set out in NPPF and their local application set out in the Plans Strategic Objectives.

However, this needs a robust transport strategy, to avoid a further concentration of development and its traffic impacts occurring on or near some of the most chronically congested parts of the highway network. To date, the absence of intervention has strangled the bus network through further marked deterioration in traffic conditions. This by consequence increases the risk of bus delay or cancellation, lengthens journey time and reduces customer confidence in bus as an attractive alternative mode of travel.

In April 2023, Stagecoach is making significant timetables changes to improve operational resilience in and around Chichester. The biggest such change is the severance of the Portsmouth to Littlehampton section of service 700, at Chichester, with buses operating independently to the east and to the west and ending cross-city links. This is planned to reduce the probability of delay but at the cost of additional vehicle resource (circa £200,000 per annum) which could be better spent providing new or enhanced services. We anticipate a small loss of custom as a direct consequence of the change, but have little choice other than to take negative action so as to fulfil our statutory punctuality obligations.

If the Strategic Objectives of the Plan and its Vision are to be achieved, in the way required by NPPF paragraphs 104-105, a properly-evidenced transport mitigation strategy needs to create the conditions where bus journeys are more reliable than car journeys and thus mobility demand switches as far as can be realistically achieved away from car use, to bus use and other more sustainable modes.

Beyond Chichester, the Plan Vision focuses on key localities beyond to the east and west.

To the west of Chichester a focus on growth at Southbourne is justified at paragraph 2.43: "...the aim is to take advantage of the village's good transport links and existing facilities to deliver significant new residential-led development within the broad location for development which will further enhance local facilities and offer opportunities to reinforce and supplement existing public transport, including bus routes."

We agree this is a very significant opportunity. However, if the requirements of NPPF paragraphs 104-105 are to be met, this demands that effective bus priority is delivered on the A259 corridor, especially eastbound at Fishbourne and westbound approaching Emsworth. Without such measures, the growth committed and planned will serve only to further undermine bus journey time and decrease punctuality on the existing 700 service, entirely contrary to the aims of the Vision.

The emphasis on the A259 corridor served by Stagecoach 700 west of Chichester is reinforced at paragraph 2.45 stating that "Between Chichester and Southbourne, the Plan provides for more moderate levels of growth within the parishes of Fishbourne, Bosham and Chidham & Hambrook, ... with opportunities to support and expand existing facilities and for increased use of public transport options". We strongly support the principle, but the Plan must follow through with specific public transport priority measures that facilitate rather than prejudice such an outcome.

East of Chichester the focus is at Tangmere, where the existing allocation for about 1000 dwellings is being uplifted by 300. Paragraph 2.44 justifies this among other things recognising the scope for "...improved and additional bus services and cycleways will provide better connections to Chichester city and east to Barnham and the 'Five Villages' area in Arun District." We unequivocally endorse this conclusion. Realising a "game-changing" level of bus service quality, reliability and frequency east of the city, also serving committed and planned development north and south of Oving Road at Shopwhyke, is equally essential, given that all SRN links and junctions are approaching equal saturation.

The National Bus Strategy has given new focus on partnership with West Sussex County Council to discuss and deliver a significant new bus service between Chichester, Shopwhyke, Tangmere, Eastergate and Barnham, supporting committed development and acting as an initial phase of what ought to be a more ambitious longer-term strategy to support growth beyond 2025 in both Chichester and Arun Districts. For these improved bus services to be both deliverable and effective, robust bus prioritisation is unavoidable. No such measures are proposed in the Plan or its evidence base and we therefore suggest inclusion of plans to facilitate safe and efficient bus operation between Tangmere and Nyton/Eastergate, ideally avoiding the need to join A27 through-traffic entirely.

We welcome the clear recognition that these localities identified for growth, benefit from existing relevant public transport services. The Vision also sets an expectation that bus services in particular should be "enhanced" and "reinforced".

We entirely agree that these opportunities exist, across the broad strategy and strategic allocation proposed by the draft Local Plan. Securing them will be crucial to achieving national and local policy objectives, including the Strategic Objectives. However, to our continuing very great dismay, the Plan goes no further to defining how this will be achieved. As such the Vision is not demonstrable achievable or deliverable.

Accordingly the Plan cannot be considered effective, in the sense of NPPF.

Remedying this, demands specific measures to protect bus services from congestion in the following corridors:

- A259 East of Emsworth
- A259 Fishbourne
- A 259 Via Ravenna/Cathedral Way
- A286 Stockbridge Road north and south of A27
- B2145 Whyke Road/Hunston Road
- A259 Bognor Road, east and west of A27 and extending to the District Boundary
- B2144 Oving Road/Shopwhyke Road east and west of the A27
- A 285 Westhampnett Road/Portfield Way/Stane Street, potentially involving a mode filter at the west end of Stane Street

These must be defined to a sufficient level of detail to assess their effectiveness and deliverability, including costs.

This would then allow West Sussex County Council and Local Transport and Highways Authority, ourselves as the principal bus operator, and where appropriate other organisations that would be directly tasked with delivering the mitigation package, to agree service levels and standards necessary to deliver specified outcomes, including journey times, frequencies, capacity and hours of operation on the network, and also in respect of the strategic allocations and Strategic Locations for Growth.

The agreed mitigations strategy should be set out in an up-to-date Infrastructure Delivery Plan backed by clear funding commitments, including a funding strategy to justify necessary developer contributions.

Where necessary to support evidence of effectiveness and deliverability, clear statements of support, which might include Statements of Common Ground between the LPA, LTA, National Highways and Stagecoach, could be provided.

3. Spatial Strategy

Stagecoach Supports

Stagecoach well recognises the constraints outlined in the explanatory narrative at the start of Chapter 3.

In particular we strongly endorse that strategy in that it reflects that the best opportunities to meet housing and employment development requirements sustainably clearly exist in and close to Chichester and on the key east-west movement corridor where – subject to effective measures being delivered to make these modes more attractive, efficient and relevant – sustainable modes can credibly provide for a much higher proportion of movement demands, mitigating most effectively the potential traffic impacts of development.

We agree that the Manhood Peninsula suffers serious environmental constraints, but, added to these, public transport and other sustainable modes cannot provide such attractive alternatives, and significant further development risks merely reinforcing already high levels of car use, aggravated by the carbon impacts of the distances involved – something the plan does very little to evaluate, and makes no reference to.

We endorse the conclusion in paragraph 3.24 that significant development in the part of the District north of the National Park is inappropriate. The rationale is principally on landscape and visual character. This exposes a fundamentally biased approach to plan making that has consistently underplays transport accessibility and carbon issues. In fact, the lack of local services and the extended distances that need to be travelled to fully participate in society in this area, with no realistic prospect of public transport offering relevant choices, ought to rule such a strategy out of play on a far less aesthetic and interpretational basis.

3.1. Policy S1 Spatial Development Strategy

Stagecoach Supports

The Spatial Strategy flows clearly and logically from the Spatial Portrait, and the opportunities and constraints identifiable across the Plan area. It represents a logical and justified continuation of the existing Local Plan strategy. In particular the spatial strategy maximises the potential for sustainable modes to contribute to meeting a much higher proportion of all the District's mobility and accessibility needs.

3.2. Policy S2 Settlement Hierarchy

Stagecoach Supports

The settlement hierarchy clearly reflects the service endowment and potential self-containment of the settlements in the District. In particular, the second tier of settlement hubs includes secondary schools, which are major peak trip generating uses. Service villages, in the main, also benefit from bus services running at least hourly, which can be expected to provide for a degree of mobility for the higher number of trip purposes that cannot be satisfied by walking or cycling within the immediate locality. Thus, a level of development to meet local needs in this tier is relatively sustainable.

There is a quite broad range of settlements in this category. We have concerns that, north of the National Park, the Service Villages have no realistic public transport choice. These include Plaistow/Ifold, Kirdford, Loxwood, and Wisborough Green. Such as exists is typically a 1/bus per day off-peak shoppers service offering up to 90 minutes in Horsham or Guildford and as such any development here even to meet local needs requires each adult to own a car. This contrasts strongly with Service Villages to the south of the National Park, which are greatly more sustainable.

4. Climate Change and the Natural Environment

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This section of the plan is extensive and wide ranging, as should be expected.

However, remarkably, there is no acknowledgement whatever of the role of transport in mitigating climate change or its effects, not of the importance of sustainable movement and access being facilitated across the plan area in addressing anthropogenic impacts on the natural world at a more local level.

This exposes very clearly a troubling level of indifference to transport matters in the production of the Plan, which, while nationally quite common, is neither appropriate nor acceptable. The mitigation of transport impacts is not merely a matter speaking to the social and economic aspects of sustainable development. It is crucial to address the causes and effects of climate change that arise from transport, and personal mobility.

This is now well understood and at the centre of national policy, including the National Decarbonisation Strategy for Transport (July 2021) which at Section 5 commits the government to aligning land use planning and transport strategy much more tightly and effectively to mitigate the carbon emissions associated with the current dependence on cars, and the mode mix; but also to reduce travel distances, both increasing the potential relevance and effectiveness of all sustainable modes, and reducing average journey lengths for residual motorised journeys of all kinds.

National statistics show that well over a third of all domestic carbon emissions arise from land-based transport and of these, the vast majority arise from trips of over 10km – outside the range of large scale use of cycling. In fact, the potential of the plan to materially support carbon emissions reduction from within the plan area lies more in the realm of transport than any other policy theme – including emissions mitigation from buildings, which is in any event an aspatial matter and covered by nationally-binding building regulations. By 2025 something like 40% of all the emissions within the plan-area will be transport related.

There is no evidence supplied to support the plan that addresses the transport carbon impacts of the spatial development strategy in a clear manner.

There is no evidence supplied that sets out the effects of potential worsening of congestion on air quality within the plan area, arising entirely from the excess of passenger car movement demands over available and credibly deliverable highway capacity. This is despite the evidence set out and acknowledged in the explanatory memorandum at paragraph 4.130:

"4.130. The council's Air Quality Action Plan and the West Sussex Transport Plan 2022-2036 both refer to the air quality issues faced by Chichester. There is currently one Air Quality Management Area (AQMA) in the plan area, located at St Pancras, Chichester. AQMAs are designated where air quality exceeds, or is likely to exceed, national air quality standards and objectives. Development within or impacting these areas, or that likely to cause the declaration of any further AQMAs, will be subject to an air quality assessment by the applicant."

This is a retroactive approach – it is not "planning", based on evidence.

We are well aware that air quality issues in and of themselves can render allocated sites to be undeliverable: a good example is in the Vale of White Horse, Oxfordshire, where strategic allocations on the A338 and A420 corridors have been held up for years by air quality issues at Marcham and Frilford, in large measure because agreed transport interventions were considered inadequate or undeliverable a very short time after the Plan was examined and adopted.

There is no evidence that shows how the development strategy can effectively mitigate these impacts as well as the further potential impacts that arise from the development strategy. This is exasperating, as there is clear evidence that could be drawn upon to show that that very substantial opportunities exist to:

- Speed buses up and make them more reliable by the delivery of bus priority on most of the key main corridors. Most of these even today operate relatively frequently
- Improve service frequencies and extend hours of operation.
- Secure significant background mode shift to bus as a result, damping pressure on key links and junctions, by consolidating demands on direct more reliable and more frequent bus services.

The spatial development strategy as submitted is in fact, likely to well conform to such additional evidence.

The allocations require substantial additional transport related work and evidence to demonstrate that the opportunities for sustainable transport have been identified and taken up as required by NPPF paragraphs 104-105.

With regards to specific policy, Policy NE22 should be modified to read:

"Development proposals will be permitted where it can be demonstrated that all the following criteria have been addressed:

1. Development is located and designed to minimise traffic generation and congestion through access to by maximising the relevance and attractiveness of sustainable transport modes, including maximising provision of specific demonstrably effective measures to make pedestrian and cycle and public transport routes and networks more direct, more safe, faster and more reliable;..."

5. Housing

5.1. Policy H1 Meeting Housing Needs

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

The presumption of the planning system is that local planning authorities should seek to meet their objectively assessed development requirements in full. These needs are assessed by a defined Standard Methodology set out in Planning Practice Guidance and elsewhere, that has explicit regard to ensuring that the economic and social effects associated with housing are properly provided for, to avoid exacerbating serious problems that arise from inadequate housing supply.

As a significant local service provider and employer, Stagecoach is concerned that existing issues with housing availability and affordable housing supply are not exacerbated. This has a direct bearing on staff recruitment and retention. It also has an indirect bearing on our cost base.

The existing problems with housing affordability have developed over many decades of undersupply. It should be emphasised that the significant boost to the supply of housing that has been sought by governments over the last 15 years, has only begun to take effect relatively recently in this District. Tackling the problem will require years of consistent attention.

Stagecoach notes that the Council is no longer proposing to meet its identified housing needs in full. Rather than 638/annum the Council is allocating a total that implies an annual delivery rate of 535/annum.

While a number of matters evidently present challenges to the Council in identifying a sustainable development strategy. Paragraph 5.2 indicates that "constraints, particularly the capacity of the A27 has led to the council planning for a housing requirement below the need derived from the standard method..." The blame for being unable to meet housing requirements is thus laid squarely at the door of transport infrastructure and systems.

This conclusion in no way follows from the evidence in the Chichester Transport Study. This, rather, makes the statement that when a higher annualised quantum of 700 dwellings per annum was tested, in the majority of cases the traffic capacity improvement package would perform little differently. To quote the Study:

"5.6.3 The network performance outputs analysed comprising V/C%, Delays (seconds) and Queues (PCU's) suggest that generally the proposed SRN mitigation identified for the Core Scenario, can accommodate in the most part, additional increase in development to 700dpa."

Whether the rest of the local road network is similarly protects is moot.

Irrespective of these results, even if the contention made in the draft plan were true, unlike many other constraints, this is amenable to a suitable effective strategy to address the constraints identified being collaboratively conceived. This is what NPPF expects, as set out in paragraphs 104-106.

Where the A27 is concerned, as part of the SRN, National Highways is now working to a substantially revised approach than that in force at the time to current Local Plan was prepared, or LSS2, or reflected in the Chichester Transport Study. This is set out in DfT WMS 01/22. This document is the policy of the Secretary of State for Transport in relation to the SRN which should be read in conjunction with the National Planning Policy Framework (NPPF). It replaces the policies in the Department for Transport Circular 02/2013 of the same title.

It makes plain that to accommodate additional demands arising from development, National Highways (NHC) expects to meet the requirements of its statutory license in a substantially different manner. With respect to development NHC LTN 01/22 continues to address the tensions between national policy for the environment and carbon mitigation, the ongoing need to substantially boost the supply of housing as well as maintain national economic competitiveness and protect the safety of the public. However, in future, the approach will be to seek first to maximise the impact of demand

management measures (reducing the need to travel), and then to accommodate residual additional demands first though maximising the use of sustainable modes, rather than accommodating assumptions about current levels of car dependency and use.

LTN 01/22 much more closely and explicitly aligns with the language of NPPF Chapter 9 paragraphs 104-106. Paragraph 12 states: "New development should be facilitating a reduction in the need to travel by private car and focused on locations that are or can be made sustainable.... Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas." (our emphasis).

It continues at paragraph 13: "where developments are located, how they are designed and how well delivery and public transport services are integrated has a huge impact on people's mode of travel for short journeys. The company will therefore expect strategic policy-making authorities and community groups responsible for preparing local and neighbourhood plans to only promote development at locations that are or can be made sustainable [footnote 8] and where opportunities to maximise walking, wheeling, cycling, public transport and shared travel have been identified." (again, our emphasis)

Stagecoach readily confirms that the draft Plan development strategy conforms well to the first limb of this expectation, in terms of the location of development.

Stagecoach considers that the plan and its evidence base conforms poorly to the second in that the specific opportunities to maximise walking, cycling wheeling and public transport are not clearly identified, and defined, and proven to be effective and deliverable.

The current mitigation strategy for the A27 Chichester area, supporting the adopted Local Plan and for which proportionate developer contributions have and continue to be sought, reflects now-superseded DfT Circular 02/2013. As a direct result, it failed completely to identify any significant effective bus priority measures, despite the fact that frequent services already exist on the key corridor concerned, and that one bus journey can remove, fully seated between 72 and 80 single occupancy car journeys from congested links and across key junctions on the A27. Rather, it sought to implement targeted measures to increase the throughflow of general traffic.

We recognise the realisation that this approach, which was already reliant on some tenuous logic, is simply not technically viable, especially where further development needs are anticipated.

National Highways will now pursue an approach with the planning system that "includes moving away from transport planning based on predicting future demand to provide capacity ('predict and provide') to planning that sets an outcome communities want to achieve and provides the transport solutions to deliver those outcomes (vision-led approaches including 'vision and validate,' 'decide and provide' or 'monitor and manage'). The company will support local authorities in achieving this aim through its engagement with their plan-making and decision-taking stages." (paragraph 15).

Paragraph 23 is at the fulcrum of assessing and defining transport mitigations to accommodate growth on and near the SRN "Capacity enhancements such as modifications to existing junctions or road widening to facilitate development should be determined on a case-by-case basis. The general principle should be accepted where proposals would include measures to improve community connectivity and public transport accessibility, and this will be weighed against any negative safety, traffic flow, environmental and deliverability considerations, impacts on the permeability and attractiveness of local walking, wheeling and cycling routes, and alternative options to manage down the traffic impact of planned development or improve the local road network as a first preference." (our emphasis).

However, no material work has been done that seeks to identify if a bold robustly conceived and suitable judiciously-prepared strategy that seeks to consolidate flows on already densely travelled corridor onto improved bus services, driving mode shift through insulating these services preferentially from already serious queuing. This would be likely to have very substantial impacts on all the key junctions on the A27, and potentially, on the A27 itself. The need for an integrated approach between Shoreham and Emsworth within West Sussex paying particular regard to development requirements in both Arun and Chichester Districts naturally lies at the heart of this, and we would expect to be picked up by the LSS3 Review among other things.

However, the locus of the problems and its causes and effects are obviously well enough known to start work on defining solutions within the plan area today. We would expect that this work will be essential if National Highways are to support the Plan, especially now given the terms of Circular 01/2022.

Such work could and should start from a "policy off" position: in other words that the Plan should fully accommodate its needs unless it can be proved that a mitigation strategy for the A27 that is compliant with DfT WMS 01/2022 cannot credibly accommodate resulting capacity demands without unacceptable impacts on the safety and efficient operation of the SRN.

This evidence does not exist. In fact the Chichester Transport Strategy 2023, on which the Council solely relies as its transport evidence base, indicates the opposite at para 5.6.3. This is the case before meaningful measures to secure damping of traffic demands through mode reassignment are even considered.

The exception to this is Portfield and Oving Road, which are among the most problematic areas after mitigation even at the Council's chosen 535 dwelling/annum scenario (para 5.6.4.-5). The costly capacity mitigation simply cannot deliver enough benefit. It is admitted that WSCC has indicated that it would prefer a solution that places greater reliance on sustainable modes damping car-borne demand. This is entirely the strategy required by NHC to follow LTN 01/22, of course. Despite the fact that "predict and provide" has "run out of road" no attempt has been made to examine what such a solution set credibly could look like. This is unsatisfactory and deeply troubling.

At paragraph 5.4 the draft plan points back again at the West Sussex and Greater Brighton Strategic Planning Board and the future work that has been commissioned, but has barely begun, to update the Local Strategic Statement. This work is to inform the preparation of plans that have horizons beyond the end date of the current LSS in 2030 and properly to meet the Duty to Cooperate. As we said in our response to section 1 of the Plan we fully endorse the conclusion that this is the right mechanism to look at these issues. However, the mechanism has not been effectively applied to the production of this plan. Therefore, the specific evidence that capacity on the A27 in and of itself supports accommodating a lower housing requirement does not exist.

The Plan thus does not conform to NPPF, is not adequately justified and is not effective.

The Plan does not properly meet the statutory Duty to Cooperate.

We will return to this matter in specific representations to Section 7 of the draft plan.

5.2. Policy H2 Strategic Locations/Allocations 2021-2039

Stagecoach Supports

Policy H1 makes plain that the plan, as far as it identifies locations for development has done so in locations that conform with its spatial strategy. All of the strategic allocations to a greater or lesser extent offer clear opportunities to make use of sustainable modes, by virtue of their location. That is not to say that the opportunities to take up these opportunities, and maximise the role of sustainable modes, has been identified, defined and translated properly into the rest of the plan policy suite or Infrastructure Delivery Plan.

As our remaining representations make clear, we support the locations thus far identified as being those that offer the best opportunities to reduce the need to travel, reduce travel distances, and create high quality attractive sustainable travel choices, for both existing residents as well as new ones.

However, the transport impacts of the allocation will individually and cumulatively likely to lead to increasingly severe impacts on the transport network, and on bus services.

Perversely, because these opportunities are not properly identified and secured through the plan and its supporting transport strategy, the opportunities presented by the allocations to secure a substantially more sustainable and lower carbon pattern of movement will not only risk being squandered but may aggravate the wider problems.

5.3. Policy H3 Non-strategic Parish Housing Requirements

Stagecoach Supports

The approach is consistent with the plan's spatial strategy. It generally avoids a dispersal of development to locations likely to be highly car dependent. There is a clear focus on meeting housing needs in the far north-east of the District at the largest and most sustainable settlements, such as Loxwood, Kirdford and Wisborough Green. However, it must be pointed out that public transport availability in this area, provided by the County Council through services it procures, is minimal. These settlements in practice require each adult and child of secondary school age to have access to motorised transport to fully participate in society. This might justify significant measures to secure a boost in the frequency of bus services between Guildford and Billingshurst, passing through these settlements.

Otherwise, existing commitments in the plan area already make provision to meet for local needs. To the degree that there is an unmet local requirement for affordable housing of a small scale – for example to support the rural economy – this could be met through neighbourhood plans or through Rural Exception Sites.

6. Place-making, Health and Wellbeing

6.1. Policy P1 Design principles

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

NPPF requires that proposals should consider transport issues from the earliest possible stage. Designing to properly facilitate safe and efficient access, focusing first on sustainable modes, should be at the heart of development design. Too often it is still an afterthought, notwithstanding this. Policy P1 must include an additional statement to be compliant and effective with NPPF paragraph 104-105 and 112 a):

“Development will be designed to make access and movement using walking, cycling and public transport the natural first choice, and demonstrate through the Design and Access Statement how such modes are afforded the most direct, safe, reliable and efficient routes within to and from the proposals, especially when compared with car use.”

6.2. Policy P4 Layout and Access

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

A number of proposals in the plan involve large-scale development. It is essential that where appropriate buses can access and circulate efficiently through development at a suitably early stage. There is no acknowledgement of this anywhere in the policy, contrary to NPPF paragraph 112.

Large-scale development which buses cannot access in an efficient or timely manner, or at all, strongly contributes to high levels of car-dependency. Evidence for this is referred to among other places, in DfT Circular 01/2022. To be compliant with NPPF and properly pursue its strategic Objectives, Policy P4 needs to be modified to address this point:

“1. Provide safe, direct and attractive conditions for inclusive access, egress and active travel between all locations and providing as good direct high quality links to integrated public transport, and where appropriate efficient access and circulation to bus services, unimpeded by excessive parking, at a suitably early point in the development phasing;

7. Transport and Accessibility

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

The issues related to transport are fundamental to the soundness of the Plan. In particular, the constraints presented by the capacity on the A27 around Chichester and its key junctions, are the paramount reasons why the Council does not consider it can meet its objectively-assessed development needs in full. Thus, the transport issues and potential solutions available and what these mean for the ability of development needs to be accommodated, are matters that go to the heart of the soundness of the Plan.

Paragraph 8.3 sets out the approach taken to date succinctly:

“Increasing the capacity of the road network is key to supporting growth in the Local Plan. However, there is also a need to reduce demand for road transport to achieve net zero in greenhouse gas emissions by 2050 as highlighted in the council's Climate Emergency Action Plan and Strategic Objective 1. In aiming to achieve the ambitions of the action plan, all development is expected to demonstrate how it will support four key objectives to create an integrated transport network which will alleviate pressure on the road network, improve highway safety, encourage sustainable travel behaviours and help reduce transport related impact on air quality, by:

1. Avoiding or reducing the need to travel by car;
2. Enabling access to sustainable means of travel, including public transport, walking and cycling;
3. Managing travel demand; and
4. Mitigating the impacts of travel by car.”

However, this approach is unambitious and “lightweight” as it assumes, as does the existing Chichester Transport Strategy on which the current adopted plan relies, that the focus of investment should be, wholly, in highways capacity improvement.

Sustainable modes explicitly are expected to play a greater role to “alleviate pressure” on the local road network, as part of this strategy. To emphasise: to avoid exacerbating congestion, the strategy will have to both remove a significant proportion of existing demands from the network on multiple key

approaches to Chichester; and then ensure that travel demands from committed and further new development allocated in the plan does not simply replace these journeys, or, worse, create even greater demands.

This will demand very significant behaviour change. Only by making sustainable modes substantially more attractive, both absolutely, and relative to the same journey made by car, can this be expected to occur. However, the explanatory memorandum as well as the wider policy suite and IDP, well expresses a fundamental unwillingness to taking specific, defined measures to achieve this reduction in car use and material promotion of sustainable modes. It makes plain that sustainable modes, including bus services, will offer a lesser role to which "access will be provided".

Such a vague and weakly defined mechanism will have no effect, at all, on current behaviour and car dependency if the relevance of those choices as a credible alternative to car use, is not substantially boosted. This includes a 5% reduction in trip demand assumed by the Traffic Model at the heart of the Chichester Transport Study 2023.

For this reason, the transport strategy behind the current adopted plan is demonstrably ineffective, as the updated model makes plain. It has not yet been delivered and is yet unclear when or (in the absence of committed funding) even if it can be. It is ineffective to "roll forward" this strategy to support a higher level of planned growth.

We note that a scheme for addressing congestion on the A27 at Chichester has been included in Roads Investment Period 3 (2025-2030) – well within the horizon of this Plan. However, recent history provides compelling evidence that off-line improvement to the north is not politically supported and arguably even technically or economically deliverable. It is not funded, nor at this stage can it be hypothesised if an economically deliverable scheme is achievable sufficient to warrant the necessary investment.

An on-line improvement of the A27, including junction improvements, is likely to favour longer distance east-west through movements, which are of greater significance to the national economy, at the expense of local movements crossing the SRN- a conundrum that largely sums up the dilemma that is faced by NHC and the County as Highways and Transport Authority. It is one that is played out in many places, but rarely is the tension so stark as at Chichester.

Every local route crossing the A27 at grade around Chichester accommodates a regular bus service - or shortly will do (Oving Road area is expected to follow in 2023, though bus services are likely to not use the modified crossroads but to use the left-in-left-out facilities provided as part of the Shopwhyke Lakes development). The impact of these issues on the entire bus operation are serious and increasingly severe.

By the same token, boosting the relevance and reliability of each of these services substantially consolidating as much demand as possible onto a much smaller number of vehicles, is clearly a strategy that ought to support the effective capacity of each of these junctions being greatly augmented, at the same time as reducing equally substantially, the energy- and carbon intensity of mobility in the plan area. Addressing the A27 should not be considered some kind of "zero-sum" game.

Furthermore, the approach of National Highways in its dealings with development and the planning system now reflect a substantial change in Government Policy set out in DfT Circular 01/2022, which we separately cover in these representations, that entirely aligns with an approach that seeks to appropriately invest in more active and rational management of scarce highways capacity, on both the SRN and local roads.

For environmental, economic and social reasons – including public health, the issues presented by the A27 and its interface with local roads around Chichester stands out, nationally, as an example of where the approach taken to accommodating and mitigating development impacts needs to make a clear break with previous "predict and provide" approaches to meet forecast unconstrained car use as LTN 02/2022 makes clear as a principle. Policy in the West Sussex LTP to 2036 itself makes plain that "shared mobility" – including bus services – must play a much greater role in this area.

The existing Chichester Area Transport Strategy is focused on justifying capital contributions from committed development to fund highways capacity improvement – with nothing included to make bus services more attractive, or importantly more reliable. Indeed this "cars first" approach is so costly, that there is already accepted by WSCC to be insufficient land value remaining to be captured to put into substantial improvements for public transport. That much is very evident, and transparent, from paragraph 8.12 and 8.14, where south of Chichester "This (one) package of works (of several improvements needed) would be between £57.23 and £82.79 million to deliver in full and would not be capable of being funded by development contributions alone." This assumes the scheme is otherwise deliverable, which on the evidence in the public domain for some time, has been considered challengeable.

The draft Local Plan and a modestly updated infrastructure package that flows from the 2023 Chichester Transport Study, pursues exactly the same approach.

This strategy is also even more ineffective having regard to the roll forward of the Plan to 2039. It cannot deliver the key Strategic Objectives of the Plan; and in particular this is explicitly recognised by the Council in the failure of the draft Plan to accommodate the OAN in full.

It is also obsolete, as it does not align, from first principles, with national policy (including the National Decarbonisation Strategy for Transport) and DfT Circular 01/22; nor the Council's own declared Climate Emergency.

As a result, draft Policies T1 and T2 are both unsound, as we will separately explain.

Owing to the lack of evidence about the implications of this for adjoining authorities – especially Adur District – in the absence of the review of the Local Strategic Statement – this has implications for fulfilling the Statutory Duty to Co-operate.

The absence of any meaningfully comprehensive refresh of the transport evidence base means that there are no meaningful schemes of any kind, defined in the plan or its IDP, to indicate either what level of growth can be accommodated, by delivering a change in travel behaviour. This would be aimed to secure a sufficient effective increase in junction throughput (measured in terms of person trips as opposed to passenger car unit movements (PCUs)). Such evidence would propose measure to achieve that outcome and assess the efficacy and costs of such improvements, across all modes.

Paragraphs 8.10-8.13 inclusive indicate that the Council "has moved away from 'predict and provide'" and invites the reader to conclude this has translated into a programme of interventions that can be funded to deliver specific, credibly predictable outcomes. Such a programme should be clear in paragraph 8.11. and the IDP. There is no such clarity and this conclusion would be false.

It would also be evident in the language of the Chichester Transport Study 2023 and its refreshed proposals. Only the most token of lip service is paid to the matter. It is a plainly car-focused, predict and provide methodology to support a "predict and provide" strategy. In fact, it is a brazenly car-focused approach, to the exclusion of all else.

The statements in the Plan regarding any other approach, read properly, offer nothing more than a vague commitment to look post-adoption, and implementation, at unspecified measures, based on problems that may arise in future that will be decided by a committee: the Traffic and Infrastructure Management Group (TIMG). This does not yet exist and is obviously an attempt to posit a mechanism that retroactively will cover for the lack of serious multi-party engagement to address the existing and future issues. Such a group should, in our view, also include the public transport operators, not least if the requirements of NPPF Para 106c) are to be satisfied, and the strategy and measures to be adopted are material to supporting the Local Plan, as of course the purpose of the TIMG has as its core *raison d'être*.

The approach proposed by the draft plan is plainly ineffective and unsound in justifying the draft Plan.

It is more widely unacceptable to Stagecoach. The issues are severe today and well-known, already serving to jeopardise the delivery of buses relied on by existing residents, much less attract new ones.

We also consider that HM Planning Inspectorate are likely to be quite resistant to accepting this aspect of the plan's transport strategy, nor will it be appropriate for the Council, West Sussex County Council, or National Highways, to define such measures after the submission of the Plan during the Examination process. The Examination in Public of a local plan has no purpose to improve plans, or remedy deficiencies clearly evident prior to submission.

The examination of the West of England Joint Strategic Plan in 2019, and the Uttlesford Local Plan in 2021, among several others, demonstrates especially clearly that the Planning System and the Examination process is not amenable to post-hoc retrofitting of transport evidence and strategies to support a development strategy.

7.1. Transport Evidence Base

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Most of Stagecoach's serious concerns about the soundness of the plan arise from the fact that it has been prepared in advance of any up-to-date transport evidence and suitably robust transport mitigation strategy being advanced to support it. In essence, the Council has rolled forward the existing plan by 9 years, adding some additional sources of housing supply, while still relying implicitly on a transport evidence base that was prepared 10 years ago.

This led to the formulation at that time of what can only be described as an attempt to develop an effective car-based mitigation strategy, creating capacity for general traffic added to accommodate unconstrained additional demands on an already over-taxed highways network – the Chichester Area Transport Strategy. Despite language in support of sustainable modes, no deliverable measures were identified to support either the extension of the bus network to serve allocated sites, and much less to create a vital improvement to the quality and reliability of public transport services. This approach reflected the approach set out in DfT Ministerial Circular 02/2013 "Development and the Strategic Highways Network", applicable since the A27, which is the focus of the most severe difficulties, forms part of the national Strategic Roads Network.

This approach has proven ineffective even before substantial elements of housing land supply in the current plan come forward – in particular West of Chichester and West of Tangmere.

In addition, Circular 02/2013 has now been replaced by a new Ministerial Statement of 23/12/2022, DfT Circular 01/2022.

On both counts the transport evidence base and strategy needs to be properly revisited and established to provide effective mitigation for the plan, including current commitments that are being rolled forward.

The language of the current Ministerial Circular 01/2022 offers a highly condensed synoptic view of the proper approach to addressing transport matters in the planning system notwithstanding that it is directly concerned with the Strategic Roads Network. Videlicet:

"31. The NPPF expects local plans and spatial development strategies to be underpinned by a clear and transparent evidence base which informs the authority's preferred approach to land use and strategic transport options, and the formulation of policies and allocations that will be subject to public consultation. The company will expect this process to explore all options to reduce a reliance on the SRN for local journeys including a reduction in the need to travel and integrating land use considerations with the need to maximise opportunities for walking, wheeling, cycling, public transport and shared travel.

32. The Transport Decarbonisation Plan indicates that carbon emissions from car and van use is the largest component of the United Kingdom's total transport emissions. While action is being taken to decarbonise transport such that all new cars and vans will be fully zero emission at the tailpipe from 2035, the proposed location of growth in current plan periods and whether new developments would be genuinely sustainable remain important factors in demonstrating that a local authority area is on a pathway to net zero by 2050 and therefore compliant with the requirements of the Climate Change Act 2008.

33. Alongside this, the local authority should identify the key issues within their study area regarding transport provision and accessibility, setting out how the plan or strategy can address these key issues in consultation with (National Highways, and other transport stakeholders identified in NPPF paragraph 106b). It is the responsibility of the local authority undertaking its strategic policy-making function to present a robust transport evidence base in support of its plan or strategy. The company can review measures that would help to avoid or significantly reduce the need for additional infrastructure on the SRN where development can be delivered through identified improvements to the local transport network, to include infrastructure that promotes walking, wheeling, cycling, public transport and shared travel. A robust evidence base will be required, including demand forecasting models, which inform analysis of alternatives by accounting for the effects of possible mitigation scenarios that shift demand into less carbon-intensive forms of travel." (our emphasis)

Within the text quoted above, references to National Highways and "the Company" can quite legitimately be extended, given the statements in NPPF paragraph 16, 25, 26 and 106b, to include all the relevant transport infrastructure and service providers in the plan area. Circular 01/2022 also has the weight of secondary legislation as a Written Ministerial Statement and thus should be considered to be highly material.

To date there has been little attempt to explore, to the degree necessary, strategies that conform to Circular 01/2022. It is thus not possible to conclude, as the Council has done, that the issues on the A27 that present a constraint to development, are insuperable.

In line with comments made elsewhere in the response to this pre-submission draft, the Plan thus requires substantial further work to be undertaken with key stakeholders to establish a suitably effective and demonstrably deliverable transport mitigation strategy, to sustainably meet the District's identifiable development needs and where apparent and appropriate, also ensure that wider cross boundary strategic issues are appropriately addressed, in conformity inter alia, with the Duty to Cooperate, NPPF paragraph 16 and 104-111 inclusive, and DfT Circular 01/2022 and to ensure the Plan's own Strategic Objectives can be met.

7.2. Policy T1 Transport infrastructure

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

As described in comments elsewhere, Stagecoach does not see that a suitable proportionate and up-to-date basis exists to properly and appropriately address the transport issues in the plan area.

The 2023 Transport Study does not perform this role adequately but, contrary to the explanatory memorandum, is a scheme intended only to facilitate car-borne movements through some of the key junctions. There is no evidence that an holistic integrated and strategic approach to transport mitigations has been prepared. Certainly Stagecoach has not been involved in any of the discussion about appropriate transport measures in support of the plan, including the Transport Study 2023, contrary to the expectations set out in NPPF at paragraph 16 and 106.

Notwithstanding out fundamental concerns about the transport evidence case and mitigations strategy, Policy T1 reflects a weak and ineffective approach, that seeks to try and define a strategy post-adoption.

Contrary even to the explanatory memorandum for the policy, which seeks to maximise the contribution of sustainable modes, the policy is phased in such a way that it gives basis for previous "predict and provide" solutions to facilitate and support current levels of car dependency – already shown to be undeliverable and unaffordable – will nevertheless be the first rather than the last resort. There is no commitment to seek to maximise the contribution made by sustainable modes to meeting mobility needs. Nor is there any recognition that current chronic congestion and lack of network resilience jeopardises the ongoing attractiveness and long-term sustainability of the current public transport offer.

To be effective and create alignment with national policy, and also provide for an up-to-date transport evidence base and strategy to be adduced, Policy T1 should be modified to read:

"Integrated transport measures will be developed to mitigate the impact of planned development on the highways network, improve highway safety and air quality, promote more sustainable travel patterns and through providing in the first instance, new and improved infrastructure and services that will be credible effective in maximising the encourage increased use of sustainable modes of travel, such as public transport, cycling and walking.

To achieve this, the council will work with National Highways, West Sussex County Council, other transport and service providers (including through the Traffic and Infrastructure Management Group) and developers to provide a better integrated transport network and to improve accessibility to key services and facilities...

All parties, including applicants, are expected to support these objectives by:

1. Ensuring that new development is well located and designed to avoid or minimise the need for travel, encourages maximises the use of sustainable modes of travel as an a credible alternative to the private car and directly provides or contributes towards new or improved transport infrastructure;
2. Working with relevant transport infrastructure and service providers to improve accessibility to key services and facilities with primary emphasis on sustainable modes, and to ensure that new facilities are easily accessible by sustainable modes of travel;
3. Targeting investment to provide local travel options as an that represent a clearly credible alternative to the car use, focusing on the delivery of improved integrated bus and train services, and improved pedestrian and cycling networks, including the public rights of way network, based on the routes and projects identified in the Local Transport Plan, West Sussex Bus Service Improvement Plan, Local Cycling and Walking Infrastructure Plan (LCWIP) and the Infrastructure Delivery Plan;
4. Planning to achieve the timely delivery of transport infrastructure on and approaching the A27 and elsewhere on the network, needed to support new housing, employment and other development identified in this plan;
5. Phasing the delivery of new development to align with and where possible facilitate the provision of new and improved transport infrastructure and services and the outcomes of monitoring travel demand on the network, including that arising from areas immediately adjoining the plan area. It may also be Where necessary to achieve this alignment proactively phase development will be phased to take into account the monitoring and effectiveness of travel plans demands on the network and to ensure that measures are implemented to support the highest possible level of encourage sustainable travel behaviour.;
6. Using demand management measures, such as travel plans, to manage robust methodologies to assess travel demand and minimise the need for new or improved transport infrastructure as part of the monitor and manage process.
7. Delivering a coordinated package of infrastructure improvements at and approaching to junctions on the A27 Chichester Bypass along with other small-scale junction improvements interventions within the city and elsewhere, as identified through the monitor and manage process. These will increase road capacity, reduce traffic congestion, improve safety and air quality, and improve access to Chichester city from surrounding areas, first by maximising the contribution of sustainable modes to meeting mobility demands, then, and only as evidenced by robust modelling and option testing, providing increased highway capacity for general traffic.

..."

7.3. Policy T2 Transport and Development

Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Section 1 b) of T2 will be ineffective as, absent measures to ensure buses can run reliably and efficiently, improved bus services will not be possible, in support of the plan's own stated broad approach to transport mitigation, as well as wider local and national policy.

The draft policy does not require improvements to the quality of services such that sustainable choices will be materially more attractive than car use for many local journeys. Without this the Plan's Strategic Objectives cannot be fulfilled and the objectives of the Plan and this policy, read in its own terms, will not be realised, where reduction in private car use is concerned. It is thus ineffective.

Absent measures to make bus services more reliable and more efficient, by insulating them from chronic congestion as far as possible, still further operating resource and therefore costs, will be needed to just to reliably run existing service frequencies, and capacity, as vehicle productivity continues to be more and more adversely affected by chronic delay. This will be further aggravated by increasing incidence of severe unpredictable service breakdown arising from incidents of diverse kinds on the network, especially on or around the A27, including that arising from more regular severe weather events. Longer journey times can only be expected to lead to relative disadvantage of bus services compared to personal car use, entirely contrary to the objectives of national and local policy, including Policy T1. It can also expect to lead to a dampening effect not on car use, but on bus patronage, threatening the ongoing viability of bus services across the plan area.

Section 1 b) of T2 should be modified to read:

"b) Maximise opportunities for the use of sustainable travel modes through provision of direct and efficient access both to either the existing networks or and through providing such new infrastructure or public transport services, as can be credibly expected to reduce reliance on the private car and

work towards achieving net zero in greenhouse gas emissions by 2050;”

Section 1 d) of T2 will be ineffective as the location of development is fixed by this plan. We commend the fact that all the strategic allocations are or will be served by regular bus services.

However, the use of public transport services, where available, depends on the relevance and reliability of these services. Furthermore, provision of services without them generating sufficient patronage to support their long-term operation also threatens the sustainability of the plan and its supporting transport strategy. This is especially true of new services such as those intended to serve West of Chichester and Tangmere and East of Chichester Strategic Allocations.

This can only be assured by the plan being supported by specific measures to ensure buses can operate efficiently and reliably on the existing and projected services intended to serve the developments concerned, and also at the same time secure behavioural change from existing development.

To be sound and effective, the policy T2 1 d.) should be changed to read:

“d) Ensure major development is located to proposals and the supporting mitigation measures enable the use delivery of high-quality, reliable and effective public transport to present the most relevant possible choice to access local services and facilities including employment, leisure and education facilities”;

The Policy T2 makes no provision for buses, where necessary, to enter and make efficient and safe progress through major development sites. The plan is thus out of conformity with NPPF paragraphs 104-106. It makes no provision to ensure that penetration of bus services is achieved at a suitably early point in the development trajectory, undermining the achievement of the goals of the Plan and this specific policy. As a good example, West of Chichester Phase 1, currently under construction, cannot be served by buses as a strategy to effect interim bus penetration was never made.

Policy T2 1 f.) should therefore be amended to read:

f) Ensure that the layout and design of the site development proposals provides effective penetration of the site by sustainable modes, at all points in the development build-out, including public transport where appropriate; and sufficient space for all vehicles to manoeuvre without compromising the safety of pedestrians and cyclists, the efficiency of bus services, or the ability to provide an appropriate level of landscaping across the site”

Policy T2 3.) regarding Travel Planning depends entirely on its effectiveness on the quality and relative attractiveness of sustainable alternatives over car use. In the absence of efficient frequent, reliable and direct public transport services (or similarly, high quality facilities for active travel, Travel Plans will continue to be the entirely ineffective “tick box” exercises that they generally are today, evidenced by much lower levels of public transport use in most new developments than it seen in nearby established neighbourhoods, as demonstrated broadly by Census data in 2011, 2011 and 2021.

For this policy to be effective an up-to date transport evidence base and strategy, underpinning a series of specified interventions to promote the relevance and effectiveness of all sustainable does including public transport in particular, needs to be put in place.

8. Chapter 9 Infrastructure – Policy I1 Infrastructure provision

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Policy I1 could not expect to be effective without a clear understanding of the effectiveness and costs of a defined series of measures that are laid out in this Plan and its IDP, to mitigate the transport impacts of the development strategy.

Where the Chichester Transport Study is concerned the only meaningful work has focused on the definition and delivery of a range of highways capacity schemes mainly on the A27 around Chichester.

As we have discussed elsewhere the effectiveness of these schemes is insufficient as set out at Tables 8.1 and 8.2 of the Chichester Transport Study 2023. The plan itself admits that the deliverability of this package cannot be afforded by developer contributions alone.

The Chichester Transport Study 2023 does not attempt provide a realistic assessment of costs to deliver these schemes, despite the fact that they have been under evaluation for many years. Nor does it offer any assurance that the schemes are technically achievable. Rather, it states the opposite:

“9.2.3 No investigation has been carried out into specific land ownership details, or into the location details or cost of moving statutory undertakers and utility apparatus within the areas of the scheme. No design assessments were carried out at this stage to ascertain the deliverability of the proposals except where any Health and Safety concerns were raised.”

Thus on the grounds of effectiveness, deliverability and affordability, the measures on which the Plan relies must at the very least be considered to involve an exceptionally high level of risk. Since Policy I1 is founded on these assumptions, it cannot be considered effective.

As we set out elsewhere, the Plan has been advanced on the basis that if any additional sustainable transport measures are required, these mitigations should be retroactively considered and defined after adoption of the Plan. In the light of the doubts that are apparent of both the deliverability, affordability and effectiveness of the Chichester Transport strategy this is especially unsatisfactory even if existing baseline conditions were reasonably acceptable.

However, the Chichester Transport Study 2023, as did its predecessors, makes plain that that existing problems are acute, and can rightly be considered “severe” in the sense of NPPF paragraph 111. Waiting to define deliverable affordable alternatives is an entirely inappropriate approach to the local plan transport mitigation strategy. Such an approach also makes it impossible to consider prior to adoption how far the transport impacts of the plan can be cost-effectively mitigated by alternative means, or whether they are deliverable having regard to technical achievability, land control, development viability, or any combination of the above. Thus, the plan cannot be considered justified, or effective.

Given the mutual dependence of development strategies in Chichester and Arun in particular on these measures this should be seen as crucial of the fulfilment of the Duty to Cooperate.

The remedy for this is ultimately to put in place a suitable transport mitigation strategy following a strategic appraisal of options through review of the LSS. This then must be supplemented by more detailed development specific and localised scheme definition, including, where necessary, bus priority and other measures to support the substantial promotion of the attractiveness of public transport in key bus corridors over private car use. This would then be reflected by costed proposals in the IDP.

Leaving these fundamental weaknesses to one side, even if such a strategy and mitigation package were defined, there is no mention of public transport in the policy even though it is clearly a key part of the policy environment and mitigation strategy for the plan as expressed in the explanatory

memorandum for I1, but also at Policies T1 and T2. I1 thus does not effectively support the realisation of the intent of Policies T1 and T2.

Policy I1 iii) should therefore be modified to read:

“(iii) Safeguard the requirements of infrastructure providers, having regard to requirements within and where appropriate across the boundaries of the plan area, including but not limited to:

...
 • Highways including specific measures to accommodate improved active travel and public transport level of service and cycle lanes, and...”

At limb v) the Policy expects developers to meet the “in perpetuity costs of operating and maintaining infrastructure”. This shackles development management decisions to developers assuming what are infinite costs – given that “in perpetuity”, read properly, can only mean “without any limit in time”. This means that it is impossible to meet the statutory tests on developer obligations set out in the Community Infrastructure Levy Regulations 2010 (as amended) at Regulation 122, also repeated in NPPF. This policy cannot be lawfully implemented and it is thus ineffective.

In the absence of an up-to-date transport mitigation strategy that is fit for purpose, at the point the Plan is examined these costs of any additional infrastructure are not known in any case. The strategy and its costs, including its affordability and deliverability, are crucial to assessing if the Plan is sound.

Subject to an appropriate defined transport mitigation strategy being arrived at, to be sound, the Policy I1 v) should be modified as follows:

(v) To consider and meet as appropriate the in-perpetuity delivery costs of infrastructure and, where appropriate, improved services, to the point where its long-term operational sustainability is credibly assured from mainstream sources. Where adoption is not envisaged by local authorities, that must include arrangements for its future ongoing management and maintenance;

9. Strategic and Area Based Policies

9.1. Policy A1 City Centre Development Principles

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Chichester City centre is rightly identified at 10.2 and 10.4 as the commercial and service hub of the District. It is also acknowledged to be the most accessible place in the District by sustainable modes, public transport in particular.

Boosting the vitality of the city centre is something that Stagecoach strongly supports. Irrespective, the enhancement of the commercial and cultural life of the District in the place where these opportunities can be accessed broadly by sustainable modes, is one that has long been at the heart of national planning policy for town centres, reflected in the “town centre first” approach to locating major trip generating uses.

Paragraph 10.5 exposes an unbalanced and unsound preoccupation with aesthetic matters in its approach to the town centre, and far too little to ensuring that the central place function is enhanced through protecting and enhancing the quality of public transport access.

The city is relatively small but at the heart of an extensive hinterland, and thus the role of bus in supporting sustainable access to and enhanced city centre venue is one that needs appropriate recognition and emphasis. It is important to note that a dominant number of key service and facilities such as the General Hospital are relatively close to the city centre. This directly contributes to driving travel demand into the city, causing congestion. Most importantly, it also makes the task of mitigation simpler, given the impact a suite of active and sustainable measures can have within the same close proximity.

Policy A1 does not provide this. As such, achieving the strategic objectives of the plan is seriously threatened, and the plan is thus not effective.

The Plan needs to ensure that the approach to city centre regeneration maintains and enhances public transport access, interchange and inter-modal connectivity. It also needs to ensure that bus service stopping and interchange facilities are able to address increases in future demand, anticipated by the clear intent expressed elsewhere in the Plan that public transport should be meeting a greater proportion of mobility needs, in a growing district. Achieving this demands an ambitious approach to the location, quality and capacity of bus stop and interchange.

We have been in discussions with the District Council about this, alongside West Sussex County Council, for a very considerable period. Stagecoach has always been keen to help facilitate the Council’s aspirations for the city centre, and we continue to hold this intention. However, this cannot be at the expense of a material diminishing of the convenience and fitness-for-purpose of bus stop infrastructure and interchange. Stagecoach has significant concerns that current proposals to remove the bus station and have all bus services operate from the street kerbside, on an inner distributor road with similar of reduced net stop capacity, fall short of promoting attractive, convenient bus access to the central area as a destination.

For the longer term and where the objectives of the draft plan are concerned looking ahead to 2039, they clearly fall short of enhancing the convenience and attractiveness of public transport use. Much less do they make sufficient provision for a material increase in bus frequency, connectivity, and interchange convenience, on which the draft plan explicitly relies. It is vital that the District Council is clear in policy about its objectives for public transport in the city centre. These objectives must also carry sufficient weight when held in tension with other aspirations for the centre and the constraints on achieving them.

For the Plan to be sound, properly effective and compliant with NPPF, the approach to the City centre cannot ignore its role in the provision of sustainable transport service and connectivity.

Policy A1 should therefore be modified to properly reflect this crucial function, on which the vitality of the city centre must increasingly depend if unacceptable impacts on congestion, air quality and amenity are not to arise. This is still more crucial if wider aspirations to secure a more sustainable society and mitigate carbon are to be achieved.

“...This will include provision for development and proposals that:

- Support and strengthen the vitality and viability of the city centre and its role as a shopping/visitor destination, employment centre, public transport hub and a place to live;
- Support and promote facilitate improved access to the city and with increased emphasis on sustainable modes of travel, with particular regard to enhancing the public transport interchange role of the city centre area, in accordance with the transport strategy for the city and...”

9.2. Policy A3 Southern Gateway Development principles Chichester Bus Station, Bus Depot and Basin Road Car Park

Stagecoach Objects because the Plan:

- is not effective

- is unsound because it is not based on relevant proportionate and up to date evidence

There has been aspiration to redevelop the bus station and nearby bus depot from many years. Stagecoach has been engaged with detailed discussion with the District Council on this matter over a very extended period. We confirm that these discussions have reached a relatively mature stage, however at the time of writing are not concluded.

Stagecoach recognises and supports in principle the Council's wider aspirations for the "Southern Gateway", and this has governed our approach to the Council to date. We continue to have no "in principle" objection to relocating our administrative, engineering, operational and customer service facilities.

Leaving our proprietary interests entirely to one side, it remains vital that in so doing, the effectiveness, attractiveness and convenience of these facilities is not compromised, as we have outlined in our representations to Policy A1, if wider national and local transport policy, and the local plan strategy itself, are to be effectively achieved.

The depot is crucial infrastructure to support the safe, reliable and legally-compliant operation of Stagecoach bus services over a very extensive area covering the entirety of the District and beyond. Without securing equivalent facilities, that are fit-for-purpose, many of our services would have to cease.

If buses are to provide a greater and more attractive level of service (still more so if they are to be electrified) larger, more capable depot facilities, and city centre bus interchange facilities will be necessary.

Notwithstanding that the bus station and depot sites are leased from the District Council, these leases terminate well beyond the end of the plan period.

Finding suitable sites for a replacement bus depot in Chichester, in common with all similar localities especially in southern England, is extremely challenging. As a sui generis use, bus depots do not automatically benefit from policy support on land allocated for employment uses. Most bus depots benefit from being legacy assets established under very different economic conditions. That is the case here. The value of a depot site for redevelopment net of demolition and remediation costs, rarely approximates to that able to sustain the acquisition of land in a tight wider employment land market, and the construction of suitable new facilities.

Furthermore, the costs of operating bus services are sensitive to the parasitic costs of vehicle and staff hours and mileage associated with "dead running" to a remote depot location from the operational network. Here, the existing depot site is ideal, and any replacement will unavoidable add ongoing operational costs to the operation that cannot be directly recovered.

We confirm that a replacement depot site has been identified and has in principle been agreed, subject to overcoming issues with the disposition of existing and future structures on the site. However, the site is recognised as not capable of accommodating meaningful operational expansion. This is just one of the most important foundational reasons why a positive transformation of bus productivity needs to be achieved, across the plan area and beyond, to support delivery of greater bus mileage and frequencies with the same level of operational resource. At the time of writing, we are not fully convinced that the proposals for the relocation will be sufficiently fit-for-purpose in the event the above is not achieved. Thus, we must raise a concern that the bus depot site might not be available during the plan period. While there is a strong probability it will be, the certainty surrounding the availability of the site, especially within the first 5 years of the plan, needs to be made transparent.

9.3. Policy A4 Southern Gateway - Chichester Bus Station, Bus Depot and Basin Road Car Park
Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Regarding the removal of the bus station, without equivalent replacement, Stagecoach has significant concerns. Pressures and conflicts at the current bus station site have been gradually rising for several years, arising from increasing use and the need for additional scheduled vehicle layover periods to reduce the risks of accumulated late running from traffic congestion. Peak passenger volumes have recovered strongly on several routes, however passenger accumulations resulting from more frequent delays and disruption have added substantial further pressure on limited space.

Under current plans, buses and bus passengers will be displaced to bus stops at new locations outside the city centre, along Avenue de Chartres. This road was always intended to be a relatively high-speed traffic route, outside the historic core of the city. The city centre has evolved in the subsequent years to reinforce already strong natural severance, with the highway lying beyond the city walls and the green space along the Lavant. It is a traffic dominated, un surveilled and unattractive environment, reflecting the intended function of the road as an efficient movement corridor for high traffic volume, and nothing more. Avenue de Chartres is relatively close to the rail station and pedestrian connectivity can be provided at broadly equivalent distance to the current bus station, but again it is un surveilled and currently unpleasant, lacking natural legibility or any sense of prominence.

We understand kerbside capacity on Avenue de Chartres will be strained even to accommodate current levels of service, with no expansion possible. There is therefore a strong probability that to accommodate more frequencies and key new routes, such as West of Tangmere, East of Chichester and West of Chichester allocations, additional future bus stops must occupy a different location. This makes interchange between routes and rail services substantially challenging and less attractive.

The emerging arrangements risk marginalising public transport and public transport users substantially. This strongly undermines achievement of the wider plan objectives and delivery of a significantly greater role for public transport. If substantial public transport growth is to be accommodated in a growing city and hinterland, as the draft plan anticipates, then a more ambitious strategic approach must be taken. This should plan for additional and improved facilities to accommodate all services predicted to be required, whilst enhancing the passenger experience to ensure meaningful and attractive modal choice.

There is therefore a need for the plan to evidence how these issues will be appropriately resolved, having regard to a suitably ambitious approach that properly supports clear objectives to boost the relevance of public transport. The current policy is weak, un specific and indifferent to achieving the strategic objectives of the plan, including a transport strategy in support of the plan, and as such it is ineffective.

Policy A3 should therefore be modified to read:

- " ...
 • Be designed to encourage and facilitate substantial increase in the use of active travel and public transport to, from and through the city centre.
 " ...

In line with the commentary above Policy A4 should also be modified to read:

3. Enhance the public interchange function of the immediate area, the public realm, particularly connections to the railway station and the city centre via South Street, Southgate and Basin Road for pedestrians, cyclists and public transport users, and to National Cycle Route 2 and Route 88 which run close by. Suitable replacement bus stops and layover facilities should be provided to replace those at the bus station in line with reflecting the objectives of the West Sussex Bus Service Improvement Plan, and to facilitate growth to meet the requirements of the plan's development strategy. Routes and crossings should reflect pedestrian desire lines, and public art should be incorporated to create a sense of place;

4. Enhance the public realm, in support of this and wider objectives, incorporating public art and other measures to create a strong and attractive sense of place.

...(renumber remaining points)

9.4. Policy A6 Land West of Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

This is an existing Local Plan allocation. The public transport strategy for the site depends on the delivery of the second phase which Stagecoach notes is the subject of several applications now awaiting review and determination by the Council.

The site represents a compact form of development adjoining the city, as the most sustainable settlement, meeting housing needs close to where they arise, and affording very good opportunities for the use of sustainable modes, especially walking and cycling.

It is vital that a bus service is delivered to serve the site at the earliest potential. This was anticipated to be at the start of Phase 2 and will require the early delivery of the entire length of the spine road between the Old Broyle Road and Westgate and making it available for bus services.

It is not clear if the costs of pump-priming the service mentioned in the draft policy are anticipated to be met by the developer. Without such funding, the service will not be deliverable as years of losses will never credibly be covered from future profit. It is likely that the current wording will be interpreted by the developer as meaning that they have no such obligation binding upon them. Not does policy set out any specification for this service, thus its costs and the basis for securing developer contributions does not exist.

As such any wider transport strategy, that seeks to secure a greater role for the use of public transport, and the aspiration for this allocation cannot demonstrably be met. The policy is ineffective.

Policy A6 should be modified to read:

" ...

10. Make provision to accommodate and secure delivery of for regular bus services linking running through the site to Chichester city centre operating at least every 30 minutes Monday-Saturday, and new and improved cycle and pedestrian routes linking the site with the city,

" ..."

9.5. Policy A7 Land at Shopwhyke

Stagecoach Supports

This is an existing Local Plan allocation, largely built-out, that benefits from an existing set of permissions.

The public transport strategy for the site depends on the delivery of effective bus priority at Oving Crossroads. The current recently implemented scheme, undertaken by National Highways, makes no provision for effective bus priority and needs considerable re-evaluation.

The site represents a compact form of development adjoining the city, as the most sustainable settlement, meeting housing needs close to where they arise, and affording very good opportunities for the use of sustainable modes, especially walking and cycling. It lies on a new bus corridor that will shortly be put in place, running to Tangmere via Shopwhyke. The allocation is being significantly consolidated by further development in the immediate vicinity which strongly supports the potential for this new service.

As we explain in our representations for East of Chichester proposed allocation A8, and West of Tangmere Allocation A14, a clear corridor strategy to effect bus priority is needed, that should be delivered in support of that further growth, and that at Tangmere SDL. However this allocation is a near complete commitment and there is no scope through policy regarding this land to effect this outcome.

It is notable that Point 6) of policy A7 makes mention of a bus service. This language reflects the currently adopted Local Plan policy and has underpinned the existing permissions. The failure of any bus service to be delivered demonstrates from first principles that this Policy has been entirely ineffective. It is important that lessons are learned from this in the Local Plan Review.

9.6. Policy A8 Land East of Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This proposed allocation lies next to unallocated land that is already consented as a departure from the adopted development plan, with 143 units near completion south of Oving Road (20/02471/FUL). Additional land, also unallocated but similarly consented, has now commenced north of Oving Road (88 units under 21/02197/FUL). This and the allocation site consolidates earlier development at Shopwhyke brought forward under the current Local Plan, and allocated again as draft policy A7.

Development at Shopwhyke was brought forward on the basis of a premise that the developer would provide or somehow arrange a bus service, that was reflected in the policies of the current Local Plan. This was secured by an unenforceable condition. No bus service has been provided, as there was inadequate clarity regarding the basis on which the costs of establishing such a service would be met by the developer, and the expectations of policy on the developer. The site does however lie on a logical new bus corridor between Chichester and West of Tangmere along the Oving Road.

In addition, an expectation that modifications to the Oving Crossroads would effect bus advantage have proven false – the arrangements put buses into a similar or longer queue than if they use the route available to general traffic to and from the A27.

Stagecoach strongly supports the principle of bringing this land forward. However, the soundness of the site depends on deliverability of a regular, reliable and direct bus service along the Oving Road, taking advantage of effective bus priority.

Given the failure of existing policy in the adopted Local Plan covering the proposed A7 allocation to deliver a bus service, it is of great concern that there is no draft policy to adequately address the issue. The policy is out of conformity with NPPF paragraph 104-105 in that sustainable modes do not offer realistic choices, much less an attractive one, and as such also does not secure the objectives of national policy nor of the plan itself.

Currently the proposed allocation is not served at all by public transport. Policy needs to ensure there is a policy basis to secure contributions to deliver such a service, which may well take the form of a proportionate contribution to deliver a new service or enhance provision that is put in place between Chichester along the Shopwhyke Road to west of Tangmere.

To become sound Policy A8 must be modified to read:

" ...

12. Provide for improved high quality connectivity by sustainable travel modes and focused in particular on a corridor between Chichester city centre and Tangmere along Shopwhyke Road, including new improved cycle and pedestrian routes, and a frequent bus service including linkages with Chichester taking advantage of effective bus priority measures on Oving Road at the A27;

“

9.7. Policy A9 Land at Westhampnett/North East Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This land is already allocated and consented as part of the existing 2016 Local Plan. All reserved matters are determined.

The site lies on service 55 between Chichester, Westhampnett and Tangmere. This established service benefits from additional demand from the development at Phase 1. Phase 2 which is currently well underway, does not benefit directly from bus services. However it is a compact and logical form of development where walking and cycling to local facilities and employment is a credible option.

The existing allocation rolls forward policies in the 2015 Local Plan. In so doing it is possible to see which have been effective.

Point 9. regarding bus service and routing has not been effective. In particular the potential for a bus only link between the site and Graylingwell has not been established as policy anticipated. Given congestion around the Portfield area acutely affects public transport this, or alternative methods to secure bus priority over private car use, a clear and unequivocal policy steer is required.

The lack of an up-to-date transport evidence base is ultimately at the root of these issues. Arguably the policy and allocation can only be made sound once this refreshed evidence base in place.

However, it is possible that the allocation could be made sound by modification of Policy A9 as follows:

“

9. Make provision for regular, direct and reliable bus services linking the site with Chichester city centre, and new and improved safe and convenient cycle and pedestrian routes linking the site with Chichester city, the South Downs National Park and other strategic developments to the east of Chichester city including Tangmere. These objectives could include exploring the potential for a bus only route require a deliverable scheme to afford bus priority through Portfield, and potentially linking the development with the Graylingwell area through use of a modal filter;

“

9.8. Policy A10 Land at Maudlin Farm

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing public transport route. It is relatively close to the city and very near substantial centres of employment and services that can be reached by active travel modes, helping damp the demand for car use. It is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services at Portfield and over a wider area. In fact, the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A10 should accordingly be modified to read:

“

5. Provide safe and suitable access points for all users, including a main vehicle access from Old Arundel Road and, subject to further assessment, a secondary vehicle access from Dairy Lane. The development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes;

“

9.9. Policy A11 Bosham – Land at Highgrove Farm

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Bosham Station. It is relatively close to the city and very near substantial centres of employment and services that can be reached by public transport and cycling, offering strong potential to materially damp the demand for car use.

There are serious risks that development in the A259 corridor west of Chichester could place further demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular to bus services.

Nevertheless, given the potential to effect bus priority on the approaches to Fishbourne Roundabout, it is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A11 should accordingly be modified to read:

" ...

8. Provide safe and suitable access points for all users, including a main vehicle access from the A259. The development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys crossing the A27 at Fishbourne;

9.10. Policy A12 Chidham and Hambrook

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Nutbourne Station. Substantial centres of employment and services that can be reached by public transport and cycling, offering strong potential to materially damp the demand for car use.

There are serious risks that development in the A259 corridor west of Chichester could place further demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular to bus services.

Nevertheless, given the potential to effect bus priority on the approaches to Fishbourne Roundabout, it is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A12 should accordingly be modified to read:

" ...

7. Development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys along the A259, crossing the A27 at Fishbourne and where necessary on the approaches to Emsworth;

8. Facilitate improved sustainable travel modes, and new improved cycle and pedestrian routes, including linkages with Chichester city and settlement along the East/West Corridor;

9.11. Policy A13 Southbourne Broad Location for Development

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach agrees unequivocally that Southbourne is a location that could accommodate growth on a strategic scale. It has a substantial range of service available within the settlement, including secondary education. It is well connected by bus and rail service to key destinations, including Chichester, lying to the east and west.

This is one of the few locations identified for growth that represents substantial additional development in a new location to the strategy in the existing Local Plan adopted in 2015. Thus, the transport impacts of development on the substantial scale envisaged at Southbourne are not covered or accommodated by the Chichester Area Transport Strategy that lies behind the existing plan. This demands, from first principles, that substantial further transport mitigation measures are required.

We recognise and endorse fully that the intent of the draft plan for Southbourne as a Broad Location for Development on a strategic scale, includes "Maximising the potential for sustainable travel links through improved public transport, including consideration of opportunities to reduce community severance caused by the railway line as well as the inclusion of cycling and pedestrian routes." (our emphasis).

The existing railway station at Southbourne is served regularly, however, it is not within the power of this plan to improve rail services. It is, however, well within the scope of action of the Local Planning and Highways Authority to work with bus operators to achieve a step change in the journey time, reliability, frequency and connectivity of bus services, and in particular the major corridor operated as service 700 by Stagecoach along the A259 between Havant and Chichester through Southbourne.

Notwithstanding the clear potential for sustainable connectivity in the western A259 corridor, there are very serious risks that development in the A259 corridor west of Chichester will place further significant car-borne demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular bus services, having the opposite effect to that intended: longer, less reliable and less frequent bus services, leading to a spiral of slowly declining use.

These risks, while very serious, look credibly likely to be entirely mitigated subject to carefully conceived and robust specified actions on the local highway network. It is perplexing to us that this potential still has not been identified, as part of a comprehensive "first principles" review of the transport evidence base. In particular given the former trunk status of the A259, there is evident potential to effect bus priority on the A259, including on the approaches to Fishbourne Roundabout.

With appropriate measures, including but not limited to this, to substantially boost the relevance and attractiveness of sustainable travel choices, strategic development at Southbourne could well be made highly sustainable.

In the absence of a refreshed transport strategy and transport evidence base, the draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact, the only

reference that is made in Policy is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A12 should accordingly be modified to read:

"...Development should be comprehensively masterplanned to achieve a high-quality design and layout that integrates well with the surrounding built and natural environments to enable a high degree of connectivity with them, particularly for pedestrians and cyclists, and provides good the highest possible quality of access to facilities and sustainable forms of improved public transport services.

...

4. Provide a suitable means of access to the site(s), and securing secure necessary off-site transport infrastructure and service improvements (including highways in particular to the A259 corridor between Emsworth and Chichester) in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development) to promote sustainable transport options prioritising delivery of high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes;

..."

9.12. Policy A14 Land West of Tangmere

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach strongly supports the principle of intensifying the level of development at the Strategic Development Location already identified and allocated West of Tangmere in the existing Local Plan. This serves to consolidate development at a location where effective and attractive public transport choices could be provided. It also conforms closely with the principle expressed in NPPF that the best possible use should be made of land on sites that are judged to be sustainable, or potentially sustainable locations for development.

It must be stressed that the current policy suite for the SDL has to date not brought forward development in this location. We recognise that a Master Plan has been adopted by the Council, and that a planning application (20/02893/OUT) for the full larger quantum of 1300 dwellings proposed in the draft plan has received a resolution to grant by the Council.

However, we are not aware that a sustainable transport strategy has been finalised.

Land West of Tangmere is not served by any existing regular bus services. Rather, an entirely new bus service corridor is anticipated to operate in the near term from Chichester through Tangmere and beyond towards Barnham. This would serve proposed allocations A7, A8 and West of Tangmere (A14) included in the draft Plan.

This is reflected in the language of the explanatory memorandum to Policy A14 at paragraph 10.65:

"Opportunities, in partnership with relevant authorities, to provide improved sustainable public transport routes linking the village with Chichester city, to improve cycle routes to the city, and better transport links to Barnham rail station and the 'Five Villages' area in Arun District; and.."

Initiating this service will be costly and will in large measure be funded not by developer contributions, but by DfT monies awarded through the West Sussex Bus Service Improvement Plan. It is crucial this service is both sustainable in the longer term without revenue support, and that the success of the service can be built on by scalable frequency improvements as strategic development comes forward in both Chichester District, and proposed allocations A7 A8 and A14, and in Arun District, in particular at Barnham, Eastergate and Westergate (BEW).

This demands measures to effect safe, direct and swift operation of the service especially within the city centre, where it approaches and crosses the A27 at Oving crossroads and on the eastern fringes of the District east and west of Tangmere. Without these measures, bus journey time and reliability will be severely compromised and the and impact of this service to damped car trip demands will be very substantially compromised. No such measures are proposed in the draft plan or its evidence base.

Changes to Oving Crossroads have recently taken place which, amongst other intentions, ostensibly provide bus advantage between Chichester and Shopwhyke. The junction in its current form does not offer material gain in bus journey time, as movements involve a less-direct route towards the city over an increased operating distance, much of which involves passage through heavily congested sections of the A27 and Westhampnett Road. A refreshed transport strategy supporting plan-led growth must revisit this area to secure an effective solution which offers bus customers the fastest and most reliable trip-time to and from the city.

In addition, the extension of public transport connectivity towards BEW and Barnham, including key links to secondary education and a logical railhead for journeys beyond towards Brighton and London as provided at Barnham Station, needs to facilitate bus priority between Tangmere and Nyton – whether using the A27, or preferably avoiding it altogether. There are significant safety concerns associated with the at-grade uncontrolled right-hand A27 exit onto the B2233 Nyton Road at Crockerhill Turn. This movement is also prone to extreme delay owing to the conflict with approaching westbound traffic on the A27, travelling at speed, which has priority. Our concerns with this junction in its current form can be expected to worsen with the increased traffic volumes predicted from new residential developments to the west of the city.

A solution providing a suitable short length of highway available only to sustainable modes, between Tangmere and Easthampnett, could provide a very effective solution to this. This would be deliverable within the scope of the separate proposed allocation at A19 Chichester Business Park, Tangmere. We comment on this separately.

Howsoever effected, a reliable direct and delay-free bus corridor between Barnham, BEW, Tangmere and Chichester could expect to secure very substantial elevation of the relative attractiveness of public transport over car use on the entire corridor and serve to effectively damp growth-related demands on this section of the A27. West of Tangmere, in the longer term, there is evident scope for the route corridor to operate as two branches – one via Shopwhyke and one via Westhampnett, effectively serving all the strategic developments proposed in the plan and transforming wider public transport connectivity to key employment destinations and services within and east of Chichester.

However, in common with all the other proposed allocations, the plan proposes no specific measures to provide, much less improve public transport or other sustainable modes to the site. This leaves the draft plan out of conformity with NPPF, especially paragraphs 104-106. The plan is inadequately evidenced and to the degree that public transport measures are identified and emergent, their successful implementation in the near and longer term will be jeopardised without clear measures to provide a safe as well as efficient bus route towards BEW and the Five Village area within Arun. The Duty to Cooperate is not effectively met and effective cross boundary collaboration on these strategic issues through the review of LSS is not demonstrated, despite the current version which identifies the issues.

To be made sound the LSS Review and a subsequent urgent review of the transport evidence base and strategy needs to take place. The strategic issues are especially critical east of Chichester, in our view.

Notwithstanding this foundational deficiency, to be made sound, Policy A14 should be modified to read:

“... ”

8. Subject to detailed transport assessment, provide primary road access to the site from the slip-road roundabout at the A27/A285 junction to the west of Tangmere providing a spine road link with secondary access from Tangmere Road. Development will be required to provide or fund mitigation for potential off-site traffic impacts through a package of measures in conformity with Policy T1 (Transport Infrastructure) and T2 (Transport and Development) and DfT Circular 01/2022 that maximise the relevance and use of sustainable travel modes, in particular bus services;

9. Make provision for improved sustainable travel modes between Tangmere and Chichester city, in partnership with relevant authorities, including improved direct, seamless safe and reliable and additional bus and cycle routes linking Tangmere with Chichester city, Shopwhyke and Westhampnett. In conjunction with measures in support of Allocation A19, Opportunities should also be explored contributions shall also be sought for providing improving high quality cycling and bus service transport links with the 'Five Villages' area and Barnham rail station in Arun District; and...”

10. Concluding comments

Stagecoach recognises its role as a key stakeholder in the plan, as well as a local employer and corporate citizen. We recognise the primacy of the plan-led system as the mechanism intended to resolve complex challenges, including the proper alignment of transport and spatial planning, which as the National Decarbonisation Strategy for Transport among other policies makes clear, has never been more vital.

In making our representations, we emphasise that we are entirely supportive of the Local Planning Authority and the relevant Highways and Transport Authorities, in their efforts to properly manage the amount and pattern of development to secure vital policy objectives. We recognise that balancing delivery of assessed development needs with a wide variety of other constraints is a very difficult task.

The transport issues faced by the plan are recognised in the draft plan as being serious and long-standing. We believe that there are ways to arrive at a suitable transport mitigation strategy that has regard to wider strategic issues and resolves existing problems in a much more effective way than those pursued to date.

We support the spatial strategy of the plan as it evidently provides the basis to secure the necessary step change in the quality and use of sustainable transport modes, as it explicitly seeks to do. However thus far, there has been insufficient work done to define the measures that will credibly secure these outcomes.

Stagecoach therefore urges the authorities to draw us into the necessary effective ongoing collaborations that is expected by NPPF paragraph 16 and 106; and DfT Circular 01/022, to do this work, prior to, rather than after the submission of the draft plan. We look forward to being approached to initiate this dialogue at the earliest opportunity.

Change suggested by respondent:

Policy A13 should accordingly be modified to read:

“...Development should be comprehensively masterplanned to achieve a high-quality design and layout that integrates well with the surrounding built and natural environments to enable a high degree of connectivity with them, particularly for pedestrians and cyclists, and provides the highest possible quality of access to facilities and improved public transport services.

“... ”

4. Provide a suitable means of access to the site(s), and securing secure necessary off-site transport infrastructure and service improvements (in particular to the A259 corridor between Emsworth and Chichester) in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development) to prioritising delivery of high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes;

“... ”

Document Element: Policy A13 Southbourne Broad Location for Development

Respondent: Sussex Wildlife Trust (Laura Brook) [7654]

Summary:

The information we have been able to obtain by looking at this plan does not enable SWT to give effective feedback on the impacts on biodiversity from development at this scale in this broad location. We are encouraged to see the supporting text acknowledging the importance of master planning when considering suitability of development in that location.

We feel that this policy is inconsistent with other policies in the draft Local Plan. While bullet point 9 references no adverse impacts to wildlife, it fails to acknowledge the requirement to leave biodiversity in a better state via the delivery of BNG.

Full text:

See attached representation.

Change suggested by respondent:

Amend policy to acknowledge the addition of BNG to ensure the policy is consistent with national policy, 179b NPPF 2021:

9) Demonstrate that development would not have an adverse impact on the nature conservation interest of identified sites and habitats including the strategic wildlife corridors; Deliver biodiversity net gain that facilitates habitat connectivity.

Document Element: Policy A13 Southbourne Broad Location for Development**Respondent:** Mrs Sue Talbot [6219]**Summary:**

Policy A13 proposes "... a comprehensive and coordinated approach, piecemeal or unplanned development proposals within the area which are likely to prejudice its delivery including the infrastructure for the area will not be permitted." The Council's housing supply figure was 4.74 years (April 2022), thus activating its "Interim Position Statement for Housing". This Statement may be withdrawn on approval of the new Local Plan (date unknown) but it could be retained. The Statement steers development towards individually assessed "sustainable locations" which conflicts with the masterplanning intended in Policy A13. The Interim Statement should be withdrawn immediately in respect of Southbourne.

Full text:

The HEELA 2021 shows the District Council's assessment of the potential for housing in Southbourne to be well over 4000 dwellings. However, the parish is not capable of accommodating an unlimited amount of housing.

The parish is under great pressure and this was acknowledged by the reduction of the strategic allocation from 1250 to 1050 in the Council's letter dated 26th November 2020. The District Council reduced the strategic allocation to take account of an appeal which allowed 199 dwellings on a site in Cooks Lane, Southbourne on 2nd March 2020. (199 dwellings App. No. 18/03/03145/OUT). A letter from the District Council to the Parish Council dated 26th November 2020 stated "... the revised distribution we are testing includes a proposed level of development of 1,250 dwellings for your parish. The working assumption therefore is that your parish council will bring forward a neighbourhood plan identifying sites (of five or more dwellings) to deliver this level of development for the period 2019-2037. Typically, any sites or schemes which already have planning permission, allocated in the existing Local Plan or a "made" Neighbourhood Plan as at 1 April 2020 would not count towards this figure. Nor would development on sites of less than five dwellings, as they count towards the "windfall" figure for the Local Plan Review and so cannot be double counted. The exception to this is the 199 dwellings which have planning permission on the Cook's Lane site, which I can confirm are envisaged will count towards the 1,250 total." It appears that, quite rightly, the District Council made this exception because it was recognised that more than 1250 dwellings could not be sustained in the parish.

This pressure continues. There are currently four large applications pending in Southbourne. Those at Penny Lane (23/00024/OUT – 84 dwellings), and Four Acre Nursery (22/01903/OUT – 40 dwellings) lie within the BLD. Hopefully these will be refused as approval would prejudice the intention of Policy A13. A third lies outside the BLD at Gosden Green Nursery (21/02238/FULEIA – 29 dwellings) and the outcome of an appeal is awaited. The fourth (21/01910/OUT – 63 dwellings) lies outside the BLD and close to Hambrook. "The Interim Position Statement for Housing" has been invoked in three of these applications. If approved, these "piecemeal and unplanned" applications as submitted will chip away at the strategic allocation figure and the proposed masterplanning without providing the infrastructure so badly needed in the parish. The Interim Position Statement has weight as Supplementary Planning Guidance and the Local Plan Review also has weight having reached its Regulation 19 stage, it is not clear which has precedence.

The period of greatest pressure is likely to be experienced before the approval of the Local Plan and therefore the "Chichester Interim Position Statement for Housing" should be amended to exclude Southbourne parish now.

(Please note the uploaded document "Chichester Interim Position Statement for Housing" is dated 2020 as the 2022 version does not appear to be on the CDC website)

Change suggested by respondent:

Policy A13 should include the following "Due to the circumstances which require a BLD to be proposed for Southbourne, the provisions of the Council's 'Interim Position Statement for Housing April 2022' will not be applied in Southbourne parish". A similar statement needs to be added to the "Interim Position Statement for Housing" for consistency.

Document Element: Policy A13 Southbourne Broad Location for Development**Respondent:** The Bosham Association (Mr Richard Pratt, Joint Chair) [7835]**Summary:**

Objection grounds similar to other strategic allocations proposed within east-west corridor (i.e. A11 and A12), including:

- i) insufficient wastewater treatment capacity for housing proposed, and adverse impact on water quality of Chichester Harbour; no guarantee or timetabled plan for upgrades;
- ii) lack of road network capacity (esp. Fishbourne roundabout), associated impacts on congestion and air quality, and no guaranteed major improvements.

Full text:

Building 84% (8717 houses) of the allocated housing along the east-west corridor is not justifiable. There are no guaranteed upgrades to the sewage network or the strategic road network in this area. The areas proposed rely on wastewater treatment facilities which are already over capacity. The road network cannot cope and there are modelled peak time delays of 29 minutes to access the Fishbourne roundabout if this scale of development goes ahead. The Fishbourne roundabout has been over-capacity since 2014 and no measures have been taken to improve the situation. There is nothing guaranteed in the plan to address this.

Change suggested by respondent:

Policy A13 should be limited to 300 houses.

Object to provision of 12 gypsy and traveller pitches;

Object to provision of travelling showpeople site;

Concerns raised regarding future capacity improvements of Apuldram WwTW:

Propose an amendment to be made to Policy H2 to allow for the provision of circa (or a minimum of) 1,250 dwellings at Southbourne;

Propose removal of need for contributions to CIL and undertake direct commitment to ensure infrastructure improvements to Southbourne.

Full text:

We broadly support the sixteen development requirements included within the allocation wording of emerging policy A13; these are briefly addressed in turn below;

Provide an appropriate mix of housing types, sizes and tenures to meet evidenced local need including affordable housing and specific provision to meet specialised housing needs including 16 serviced self/custom build plots, accommodation for older people and accessible and adaptable homes in accordance with relevant Plan policies; The scheme would present an emerging policy compliant mix of housing types and tenures. We would look to work closely with the local community to identify the appropriate location and phasing for self and/or custom build plots within the Masterplan to ensure the plots come forward in a suitable location that has been considered alongside the wider masterplanning exercise.

Provide 12 gypsy and traveller pitches in accordance with Policy H11; Whilst we recognise the need for the provision of G&T pitches within the District; based on the previous discussions with the Neighbourhood Planning group and local community we feel that the Council would benefit from exploring more appropriate areas for new sites and/or the intensification of nearby sites.

Provide a serviced site(s) for travelling showpeople which should deliver 12 plots, each of sufficient size to allow for the provision of accommodation and equipment plus storage/maintenance, in accordance with Policy H11; As above.

Provide a suitable means of access to the site(s), securing necessary off-site improvements (including highways) in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development) to promote sustainable transport options; The comprehensive masterplanning approach that has been and will continue to be taken with the scheme will ensure a cohesive layout and access arrangement to best integrate with the existing community. Paragraphs 2.20-4 above outline our recommendation to the Council with regards to infrastructure improvements and we maintain that the most effective way of securing on- and off-site improvements is to place the onus on the developer to ensure their delivery and integration with the local community.

Provide any required mitigation to ensure there is no adverse impact on the safety of existing or planned railway crossings; Any submission will be supported by a robust transport assessment and mitigation strategy.

Ensure adequate provision of supporting infrastructure including education provision, community facilities and transport in accordance with the most up to date Infrastructure Delivery Plan; We support the need for supporting infrastructure, which forms a primary objective of the proposals on last east of Southbourne. We feel that their delivery will be most appropriately secured outside of the limitations of CIL.

Give detailed consideration of the impact of development on the surrounding landscape, including the South Downs National Park and Chichester Harbour AONB and their settings. Development should be designed to protect long-distance views to the South Downs National Park; We support the desire to protect these areas and their settings. Any submission will be supported by a full landscape and visual impact assessment to demonstrate that the scheme east of Southbourne can be a cohesive visual element into the existing built form of the village and avoid any element of incongruousness or harmful impact on the surrounding protected areas.

Ensure that multifunctional green infrastructure provision is well related to the overall layout and character of the development as well as providing opportunities to extend into the wider countryside and surroundings; The proposed scheme to the east of Southbourne would be capable of delivering a significant portion of the Green Ring, originally allocated in the Southbourne Neighbourhood Plan 2015. The Consortium is also supportive of a central feature through the site and the approach to align the Green Ring with the north-south public right of way which connects with the green infrastructure on the eastern edge of the neighbouring Cooks Lane development. This approach would allow the green ring to be cohesive with the neighbouring green infrastructure, whilst also maintaining the public rights of way, in conformity with paragraph 98 of the NPPF. Whilst this central 'Inner' Green Ring could include play, gym trail, walking and cycling, benches and a variety of greenspace (amenity and natural), which would create a varied and engaging corridor, we would work with the Neighbourhood Plan Group to identify the best mechanism to position sports and allotments through a masterplanned approach.

Demonstrate that development would not have an adverse impact on the nature conservation interest of identified sites and habitats including the strategic wildlife corridors; We support the desire to protect key habitats and the scheme will be informed by extensive habitat surveys and mitigation strategies.

Provide mitigation to ensure the avoidance of adverse effects on the SPA, SAC and Ramsar site at Chichester Harbour including contributing to any strategic access management issues, loss of functionally linked supporting habitat and water quality issues relating to runoff into a European designated site; We echo the need to avoid adverse effects on the SPA, SAC and Ramsar site at Chichester Harbour and all necessary mitigation will be provided on- and off-site where required.

Protect any other key views; We support the desire to protect the key views of the wider area. Any submission will be supported by a full landscape and visual impact assessment.

Ensure that allocations and policies accord with the sequential approach to flood risk, and that development will be safe for its lifetime, taking account of climate change impacts, as per the requirements set out in national policy and having due regard to the council's latest Strategic Flood Risk Assessment; We support this requirement and discussions with the Environment Agency and the LLFA will inform the most effective flood mitigation and drainage strategy for the site.

Ensure sufficient capacity within the relevant wastewater infrastructure before the delivery of development as required; Addressed in Paragraphs 2.5-10 above, we have concerns regarding the emerging plan's wording around the future capacity improvements of WwTW in the Apuldrum catchment.

Demonstrate that development would not have an adverse impact on the significance of heritage assets or their settings; Any submission will be supported by a full heritage assessment and the layout and scale will be adjusted accordingly to best protect any nearby heritage assets.

Maintain the character and integrity of existing settlements and provide clear separation between new development and neighbouring settlements including through the definition and protection of landscape gaps. The consortiums approach allows for the masterplan to be designed to best protect the existing settlement of Southbourne from any coalescence with surrounding hamlets. The location of development to the east of the village and the inclusion of the Green Ring is the most appropriate and effective way to protect the village's visual separation and identity.

Consider the Minerals Safeguarding Area and in line with the West Sussex Joint Minerals Local Plan, a minerals resource assessment may be required to assess if the land contained a mineral resource that would require extraction prior to development. Account should also be taken of the West Sussex Waste Local Plan and associated guidance in relation to safeguarding policy W2. We support this inclusion, and any proposal will be accompanied by a minerals resource assessment if needed.

In general, we support the comprehensive masterplanning approach for development in Southbourne. Our proposals are the result of a complete collaboration between landowners and reiterate that the Consortium has always maintained a desire to deliver a comprehensive development that secures substantial benefits to the existing community. It is obviously important that any landowners included within the proposed allocation are required to work collaboratively with others and the local community, sharing the overall infrastructure and policy requirements fairly and proportionately.

We strongly support an amendment to be made to Policy H2 to allow for the provision of circa (or a minimum of) 1,250 dwellings at Southbourne. The accompanying sustainability appraisal, discussed later, supports a larger quantum of development on this site, with benefits realised of accessibility, environmental quality, climate change mitigation, community enhancement, health, historic environment and landscape. A major element of our proposals at Southbourne are in the infrastructure and community improvements to the local residents and increasing the overall housing numbers by less than 20% on this site is key in the wider delivery of package of the infrastructure improvements associated with the scheme.

There is no intention to deliver piecemeal development proposals within the area, which would likely prejudice the delivery including infrastructure delivery. We maintain the most effective way to ensure the infrastructure improvements associated with the scheme would come forward at an effective and appropriate time would be to remove the need for the proposals to contribute to CIL and instead have a direct commitment between the scheme and the improvements to Southbourne.

Change suggested by respondent:

We strongly support an amendment to be made to Policy H2 to allow for the provision of circa (or a minimum of) 1,250 dwellings at Southbourne; Propose removal of need for contributions to CIL and undertake direct commitment to ensure infrastructure improvements to Southbourne.

Document Element: Policy A13 Southbourne Broad Location for Development**Respondent:** Wates Developments and Seaward Properties [8052]**Agent:** Barton Willmore now Stantec (Mr Oli Haydon) [8051]**Summary:**

The total number of dwellings allocated to Southbourne should be 1,250. Further, it is recommended that a specific location is selected within Southbourne, to align with all other allocations within Chapter 10 and to avoid a significant risk to the delivery of housing. No rationale is presented as to why development in Southbourne should be delayed until the adoption of a subsequent DPD or Neighbourhood Plan. The long-term assessment and findings of the Neighbourhood Plan group and the plan examiner remain sound and should be respected and reflected in a specific and precise housing allocation for the village.

Full text:

REPRESENTATION SUMMARY

CDC fails on a number of counts to provide a sound reason for constraining development delivery to 535 dwellings per annum. We find that the Council's failure to adhere to the OAN on the basis of ineffective evidence results in plan that has not been positively prepared and adopts a strategy that is not justified. We believe the plan is capable promoting a greater level of housing delivery which will, in turn, help bring the estimated infrastructure contribution per dwelling to a more deliverable and realistic level.

This representation provides continued support and draft policy context for the development on land east of Southbourne. We consider it to provide a suitable and sustainable location for large-scale strategic residential growth and substantial associated infrastructure improvements.

The area was due for allocation within the Southbourne Neighbourhood Plan, having been initially allocated 1,250 dwellings on 'land east of Southbourne', prior to its removal post Examination (based on concerns of the Examiner over a pre-emption of the emerging local plan). Importantly, the Examiner did not conclude that the proposed allocation was unsustainable for growth or inappropriate in size, but simply that the timing of the Neighbourhood Plan was too early against the emerging Local Plan timetable which had unfortunately been delayed.

We continue to recommend that the land east of Southbourne (Policy A13 in the emerging LP) provides the most appropriate location for development at Southbourne. Indeed, the land to the east of the settlement was chosen as the most appropriate location, as opposed to the land to the west which is more constrained by the A27 and would likely result in amalgamation with the settlement of Emsworth.

We consider that the increase in the quantum of development at Southbourne from 1,050 to c1,250 not only ensures the highest level of community enhancements and infrastructure improvements for Southbourne and the wider area but also helps mitigate certain aspects of the emerging plan that risk being found unsound, including the potential for delays in housing delivery across the largest strategic sites and the potential for Chichester District to accommodate unmet need across neighbouring authorities (and within SDNP).

Considering the above, and in terms of specific policy amendments, we recommend the following policies be reworded to ensure the plan's overall soundness:

Policy H1 – Meeting Housing Needs – The housing requirement (10,350) for the plan period 2021-2039 must reflect Objectively Assessed Need to avoid the risk of failing to be seen as positively prepared. The evidence base on which the justification for a reduction in housing delivery is flawed and not credible. The plan fails the tests of soundness to this regard and Policy H1 should be amended in line with a reassessment of highway constraints.

Policy H2 – Strategic Locations/Allocations 2021-2039 – The quantum of development at Southbourne (A13) should be 1,250 to reflect the conclusions of the sustainability appraisal, the capacity within the land east of Southbourne and the importance in bringing forward all infrastructure improvements to the village and wider area.

Policy A13 – Southbourne Broad Location for Development - In line with the above, the total number of dwellings allocated to Southbourne should be 1,250. Further, it is recommended that a specific location is selected within Southbourne, to align with all other allocations within Chapter 10 and to avoid a significant risk to the delivery of housing. No rationale is presented as to why development in Southbourne should be delayed until the adoption of a subsequent DPD or Neighbourhood Plan. The long-term assessment and findings of the Neighbourhood Plan group and the plan examiner remain sound and should be respected and reflected in a specific and precise housing allocation for the village. We recommend this policy is rewritten to allocate 1,250 dwellings on land east of Southbourne and to align with the comprehensive masterplanning exercise that has been completed to-date. These representations bring to light a number of recommended reconsiderations with regards to the emerging local plan, these include a reassessment of the quantum of development in Southbourne, the mechanism for infrastructure funding and delivery, the contingency planning around wastewater treatment capacity and the supporting of Vision & Validate as an approach for encouraging safe, efficient and sustainable transport.

For the reasons outlined throughout, these representations also raise significant concerns that the plan as drafted, in particular the housing delivery strategy, risks being found 'unsound' on the grounds of failing to be positively prepared and lacking a fully considered highways evidence base. We believe the changes outlined above with regards to reflecting OAN and adding realistic capacity and specificity to the proposed allocation in Southbourne will help address these concerns.

Change suggested by respondent:

We recommend this policy is rewritten to allocate 1,250 dwellings on land east of Southbourne and to align with the comprehensive masterplanning exercise that has been completed to-date.

Object

Document Element: Policy A13 Southbourne Broad Location for Development**Respondent:** West Sussex County Council (Tracey Flitcroft, Principal Planning Officer) [8119]

Summary:

Scale of development at Southbourne BLD will be partially dependent on capacity of transport network to accommodate associated traffic. As BLD spans railway line, many traffic movements would need to cross here. Concerned insufficient capacity at existing level crossings (Stein Road) to accommodate additional traffic. Could mean cumulative impact of development on traffic network is severe which is inconsistent with Paragraph 111 of the NPPF. Transport evidence does not provide sufficient assurance that proposed scale of development can be accommodated. Base level of traffic flow has not been compared to local traffic counts, either in initial validation of strategic model or through a new count which WSCC previously requested, assumptions about level crossing downtimes have not been validated against observed data. Concerned that assessment of capacity of local road network to accommodate the quantum of dwellings proposed for BLD may be over-optimistic by underestimating existing flow levels and duration of level crossing downtime. As a consequence, proposed quantum may not be deliverable without unacceptable impacts to conditions on Stein Road and to level of traffic seeking to use rural lanes to the north of village to avoid level crossing.

Full text:

The comments included below from WSCC are Holding Objections. We will continue to work with Chichester District Council and as further work is completed will consider if objections can be withdrawn.

Transport Overview

The County Council has worked with Chichester District Council to develop the Chichester Local Plan and its supporting evidence base and will continue to do so. Although the overall direction of the Local Plan is supported, from a highways and transport perspective, there are three key issues remaining that need to be addressed in order to demonstrate that the Plan is sound:

1. There is insufficient evidence to demonstrate that key infrastructure (i.e. Terminus Road Diversion) will be deliverable;
2. The package of sustainable transport infrastructure and measures is not yet sufficiently well-developed to demonstrate that it is deliverable as part of the monitor and manage process; and
3. There is insufficient evidence to demonstrate that the capacity of the transport network can accommodate the scale of development proposed as part of the Southbourne Broad Location for Development.

The following sections explain: a) the reasons for these issues; b) why they affect the soundness of the Local Plan; and, c) what changes should be made to the Local Plan to remedy the issues.

Deliverability of Key Infrastructure

The recommended transport mitigation strategy, as assessed using the Chichester Area Transport Model for 2039 has been demonstrated to be capable in-principle to prevent the development from resulting in severe residual cumulative impacts on the highways and transport network. However, there are significant risks to deliverability of junction mitigation measures, which have required further work to be undertaken on developing a short to medium term strategy based on phased prioritisation of infrastructure and sustainable transport improvements, to be governed under a monitor and manage approach.

There are three locations where new highway alignments are proposed outside of existing highways boundaries. Two of these may include significant earthworks or structures to be delivered, being Stockbridge Link Road and Terminus Road diversion. The cost of the mitigation strategy exceeds the likely value of developer contributions and additional funding has not yet been secured.

At the Regulation 18 consultation stage in December 2018 to January 2019 the County Council identified delivery risks with the Stockbridge Link Road and Terminus Road Diversion schemes due to the earthworks likely to be required and to confirm the extent of land take required for both schemes. The County Council stated that feasibility work would need to be undertaken for these improvements prior to Plan submission to confirm that the schemes are deliverable. A brief for such a feasibility study was agreed in 2019, but to date, this work has not been commissioned. It is the County Council's view that Stockbridge Link Road (SLR) should be disregarded as a potential part of a long-term transport mitigation strategy for 2039 and beyond until such time as it can be demonstrated that the scheme is deliverable. Paragraph 8.14 of the Local Plan acknowledges that the SLR is not deliverable as part of the Local Plan mitigation package.

The Terminus Road Diversion is still identified as part of the highest priority in the Local Plan mitigation package (i.e. A27 Fishbourne Junction) which is expected to be delivered once sufficient funding is collected. The County Council considers that in the absence of this feasibility work, the deliverability of the Terminus Road Diversion cannot be confirmed. In particular, given the recent impacts of inflation in the construction industry, this work will need to robustly estimate the costs and confirm delivery arrangements. In the absence of this feasibility work, there is currently insufficient evidence to confirm that the Local Plan complies with Paragraphs 11 and 106 of the NPPF as key infrastructure does not appear to be deliverable.

In order to remedy this issue regarding the Terminus Road Diversion, the County Council requests that feasibility work is undertaken prior to the examination to confirm deliverability of the proposed Terminus Road Diversion.

Sustainable Transport Infrastructure & Measures

The transport study modelling for end of Plan period also includes some proposed highways mitigation schemes within Chichester City. The County Council has previously requested that these be replaced by sustainable transport improvements to comply with the West Sussex Transport Plan 2022-2036. However, only limited modification has been made to these proposed schemes, with a suggestion in text at paragraph 7.3.2 of the main transport study that the costs for these schemes can be reallocated to sustainable transport improvements which are not specified. Although this does help to explain how sustainable transport infrastructure schemes and measures can be at least partially funded, it is rare that schemes will be fully funded using developer contributions. Furthermore, funding is not the only issue that needs to be overcome to secure delivery of these schemes and measures.

The Infrastructure Delivery Plan (IDP) lists the proposed mitigation measures and in some cases provides information on the rationale, phasing, cost, funding and delivery arrangements. However, there are still many gaps in the information, probably because schemes are currently at an early conceptual stage. The County Council's experience is that it is unlikely that schemes will be fully funded using developer contributions (because doing so would not be compliant with the CIL regulations) so delivery of these schemes will be partially dependent on securing funding from central Government or other sources. The IDP currently fails to identify the scheme-specific requirements for additional funding and the overall scale of additional funding required.

The County Council considers the level of information currently available on the sustainable transport package to be insufficient to demonstrate deliverability of a credible and coordinated sustainable transport package of improved infrastructure and services. Therefore, there is insufficient evidence to confirm that the Local Plan complies with Paragraphs 11 and 106 of the NPPF.

In order to remedy this issue, the County Council requests that further technical work is undertaken to develop the schemes and measures in the sustainable transport package prior to the examination. In particular, this should focus on the following schemes and measures and some cases, this will build on work that has already taken place:

1. St. Paul's & Parklands cycle routes
2. Improving existing public transport services towards Madgwick Lane
3. Provision of improved bus services for the village serving the development areas of Southbourne Parish
4. Improving cycling connectivity to link the built-out areas of Shopwhyke Lakes with Tangmere and Oving etc

As not all the severely impacted A27 junctions have a reasonable prospect of being physically improved in the Plan period, more investigation into potential public transport enhancements is also required, particularly to strengthen routes that cross the bypass. This may require further amendments to the IDP.

This work should aim to identify options for sustainable transport schemes that can be a priority for investment, provide information to enable safeguarding of routes (e.g. cycle routes) from development and provide a basis for applications for third party funding to support their delivery. The relative priority of such measures would need to be considered under the monitor and manage approach by the proposed Traffic and Infrastructure Management Group for implementation in addition to the proposed improvement at the A27/A259 Fishbourne junction.

To address this issue and support delivery of the sustainable transport package, the County Council also recommends the following minor amendments to Policy T1: Transport Infrastructure:

At bullet point .7 change "other small-scale junction improvements" to read "other sustainable transport and safety focused improvements, including at junctions" and change "These will increase road capacity, reduce traffic congestion, improve safety and air quality, and improve access to Chichester city from surrounding areas" to "These will increase road capacity on strategic roads, and on both strategic and local roads reduce traffic congestion, improve safety and air quality, and improve access to Chichester city from surrounding areas notably by encouraging and prioritising sustainable modes."

Southbourne Broad Location for Development

The scale of development that can be accommodated at the Southbourne Broad Location will be, at least partially, dependent on the capacity of the transport network to accommodate the associated traffic movements. As the Broad Location spans the railway line, many of these traffic movements would need to cross the railway line. The County Council is concerned that there is currently insufficient capacity of the existing level crossings, notably at Stein Road, to accommodate the additional traffic movements. This could mean that the cumulative impact of development on the traffic network is severe, which is not consistent with Paragraph 111 of the NPPF.

The transport evidence base does not yet provide sufficient assurance that the proposed scale of development can be accommodated. This is because the base level of traffic flow has not been compared to local traffic counts, either in the initial validation of the strategic model or through a new count which the County Council has previously requested, and the assumptions about level crossing downtimes have not been validated against observed data. The County Council is concerned that the assessment of capacity of the local road network to accommodate the quantum of dwellings proposed for the Broad Location may be overoptimistic by underestimating existing flow levels and the duration of level crossing downtime. As a consequence, the proposed quantum may not be deliverable without unacceptable impacts to the conditions on Stein Road and to the level of traffic seeking to use rural lanes to the north of the village to avoid the level crossing.

In order to remedy this issue, the County Council requests that either additional transport evidence is provided prior to the examination to demonstrate that the proposed scale of development is deliverable, or that Policy A13 is changed to remove the proposed scale of development until such evidence is provided.

The following comments from education, minerals and waste, Adults Services and Health, highways & transport and public rights of way, do not affect the soundness of the Plan. However, Chichester District Council should take these into account and, where possible, make minor amendments to the Local Plan and/or evidence base studies before submission of the Local Plan for examination. Officers are happy to meet and discuss any of these comments, and proposed minor amendments to address these comments, ahead of submission:

1) Education

Land West of Chichester

Previous comments have been made requesting that the policy refers to 'Phase 2 should include expansion of the primary school for the further 1FE of teaching accommodation with nursery and SEND provision'. While it is recognised that reference is made to this in the IDP this is a supporting document to the Local Plan and should not be solely relied on. It is requested that paragraph 10.19 is amended to read: 'a local centre with retail, community and employment uses (minimum of approximately 2500 sqm E(g)(i) Use Class), two form entry (2FE) primary school and one form entry (1FE) teaching accommodation with nursery and SEND, informal and formal open space (including a country park), allotments,....'

This should also be included in the 3rd bullet point of Policy A6 or the wording of the policy should be drafted to reflect more recent policy requirements i.e. Provide for infrastructure and community facilities in accordance with the most recent Infrastructure Delivery Plan.

There are some inconsistencies with the wording of the strategic policies, not every policy includes the criterion 'Provide for infrastructure and community facilities in accordance with the most recent Infrastructure Delivery Plan.' While this may be due to some policies being carried through from the adopted local plan it is inconsistent.

Policy A8 Land East of Chichester

As an education authority WSCC do not request 1FE schools in line with government guidance. As per our earlier comments and discussions we requested a 2 FE primary school for the site.

3rd bullet point of Policy A8 should be amended to read: 'A neighbourhood centre incorporating local shops, a community centre, flexible space for employment/ small-scale leisure uses and a one-form (expandable to two-form) two form entry primary school with provision for early years/ childcare and special educational needs and disability...'

2) Minerals and Waste

The references to safeguarding minerals is inconsistent and it is suggested that the wording in the email sent to CDC (attached) in relation to Policy AL3 should be used in the policies for the other sites for consistency. Reference to safeguarding minerals and waste infrastructure should also be included in some other policies as previously indicated:

- Policy A2 – needs to include reference to safeguarding minerals and waste infrastructure.
- Policy A7 – needs to include reference to safeguarding waste infrastructure.
- Policy A15 (Loxwood) – needs to include reference to minerals safeguarding as within the clay MSA.
- Policy A21 – needs to include reference to minerals safeguarding.

Also, the reference to the safeguarding guidance needs to be checked to ensure that it is worded correctly as 'Minerals and Waste Safeguarding Guidance'.

3) Older Person Housing

It is noted that the plan refers to older person housing as specialist housing. WSCC strategy supports the provision of 'extra care housing' while this might be similar development it enables younger people to access the accommodation for whatever medical reason i.e. MS, strokes rather than limiting it to a certain age group. Officers are happy to meet and discuss this further.

4) Highways and Transport

Public Transport Priority Infrastructure

The Public Transport section of the main transport study report starting at paragraph 6.2.7 requires revisiting. There is reference to "an expansion of the bus priority lane system within Chichester City Centre" which does not match the existing bus provision in the City which does not provide bus priority lanes on street. It does have restrictions on motor traffic in the adjoining parts of South Street and West Street which provide for bus and cycle only access in both directions of travel plus access for essential goods vehicle loading in the westbound direction only. In addition, the suggestion in the following paragraph for "a time-based system where certain routes are restricted to public transport only during specific times" is not evidenced or developed and as such considered unlikely to be practical and enforceable at most locations used by bus routes in the City. More developed proposals for additional bus priority, improvements to bus passenger facilities or testing of specific locations for bus-only access would be welcomed as part of developing a costed sustainable transport mitigation package.

Park and Ride

The discussion of possible park and ride facilities for the City at paragraphs 6.2.9 to 6.2.16 of the main transport study should also acknowledge. An important part of making park and ride well used by motorists is increasing the price of city centre parking to provide a financial incentive to take up significantly cheaper park and ride charges for parking and travel. However, if park and ride sites are not provided accessible to all major approach routes to the city, such a charging strategy would not be seen to be equitable, whereas only a single site is proposed in the District Council's emerging parking strategy and the report acknowledges at 6.2.11 that "locations for potential park and ride sites are also deemed to be limited". The bullet at 6.2.15 "Cost of schemes compared to benefit are likely to be initially lower than highway schemes" may have been incorrectly worded given that this is listed as an issue rather than a benefit. The text may have been intended to say that the ratio of benefit to cost for park and ride schemes may be lower than for conventional highway schemes?

A286 New Park Road / A286 St Pancras Road (Junction 7)

This junction scheme includes pedestrian crossing facilities which are welcomed and also includes a length of advisory cycle lane starting in the middle of the junction for cyclists remaining on St Pancras. However, the approach to the junction on St Pancras from Eastgate Square remains intimidating to cyclists, so further measures would need to be added to make the layout cycle-friendly or the cycle facility is likely to be of limited benefit. This could include decreasing traffic speeds. Until this is done the conclusion at 8.4.4 of the main transport study; "The mitigation scheme includes improvements for pedestrians and cyclists which will lead to increased use of active travel modes and reduce the need for physical mitigation here" is only supported for pedestrians, not for cyclists.

A259 Via Ravenna / A259 Cathedral Way Roundabout (Junction 8)

It is stated at 7.3.8 of the main transport study that "the mitigation may be required to avoid queuing back towards the A27, as well as for capacity issues". In light of this potential safety issue for the previous junction on Cathedral Way and for the A27 Fishbourne junction, the proposal at 7.3.6 that the scheme delivery should be tied to the monitor and manage regime to see if and when it is required is accepted. This is different to the approach for other junctions in the City because of the potential safety issue. This monitoring approach would be likely to follow after the A259 Cathedral Way / Fishbourne Road East / Terminus Road (as diverted) (Junction 10) improvement, which is to be brought forward as an integral part of the A27 Fishbourne roundabout mitigation scheme, but may allow for increased eastbound flows on Cathedral Way.

A286 Northgate Gyratory

An additional mitigation scheme is proposed at paragraph 7.3.134 of the main transport study for the A286 Northgate Gyratory along its southern arm from Oaklands Way to Orchard Street. The proposal to add traffic signals is welcomed in concept as it can help to control traffic speeds making the junction more friendly for cyclists and pedestrians. However, the layout shown at figure 7-8 does not maximise the opportunity to improve convenience and safety for pedestrians by providing a priority link to reach the central island, which contains employment space and the fire station, nor to assist crossing the exit towards Orchard Street. The scheme would benefit from further development to prioritise active travel movements and should also be fitted with transponders for bus priority.

Fishbourne Road West / Appledram Lane South (Junction 11)

At paragraphs 7.4.1 to 7.4.2 of the main transport study, the junction of Fishbourne Road West / Appledram Lane South (Junction 11) is considered. The proposal to mitigate impacts at this junction through delivery of the Stockbridge Link Road scheme is not considered deliverable, so the approach at this location requires re-thinking. The County Council would not support measures to increase capacity for through traffic on Appledram Lane South, the approach should be to reduce severance and improve safety and comfort for active travel on Appledram Lane by reducing vehicle speeds and as far as possible volume. This should consider the needs of pedestrians and cyclists both for local access and for users of the Salterns Way leisure cycling route.

TEMPro Background Traffic Growth Comparisons

At section 10.2 of the main transport study a comparison is made of the TEMPro 7.2 growth rates used in the study for external traffic with new TEMPro 8.0 growth rates since released by the Department for Transport, which notes that the TEMPro 8.0 rates are significantly lower, if these rates were used then the level of transport impacts could be lower. Unfortunately, a number of highways authorities in the Transport for the South East (TfSE) area including the County Council and Hampshire County Council have concerns that the planning assumptions used in TEMPro v8 core growth scenario underestimate the numbers of additional households forecasted compared to targets in adopted Local Plans for delivering new dwellings. TfSE are currently raising these collective concerns with DfT with a view to obtaining an early update to TEMPro 8 planning assumptions. Although for the purposes of this study TEMPro is not applied to trips produced in Chichester District, from the County Council's analysis TEMPro v8 core underestimates the increase in households per year in Arun District by over 50% and in Horsham District by 30% when compared with adopted development plans. On this basis it may be useful to instead compare TEMPro 7.2 with TEMPro 8.0 high growth scenario.

North of District Spatial Scenarios Testing

For the Northern Spatial Scenarios Test provided as an appendix to the main transport study, this had not been updated for the final preferred spatial strategy or in light of the County Council's previous comments on the March 2022 issue to the District Council. The spatial strategy now is similar but not identical to the Scenario 4: Significant Growth 1 option in the reported tests, totalling 370 dwellings across the four northern parishes, compared to 410 in the test. In both cases the largest allocation is at Loxwood; 220 dwellings were proposed in the Scenario 4 as compared to 200 in this test. Some other tests proposed higher numbers.

The testing in the northern part of the district had used the same trip generation rates per dwelling as in the South of the District, but the County Council considers that in practice private motor vehicle trip generation per dwelling is likely to be higher due to the rural nature of the area, including a lack of local facilities and shops within walking distance of development, a very low level of public transport services and lack of surfaced cycle routes. The level of development proposed is not at the level capable of delivering transformative transport improvements to match the trip making patterns around Chichester and the A259 corridor to Bosham and Southbourne. This may be offset in part by the lower total amount of development compared to the tested scenario 4. Nonetheless, it would be helpful to adjust the scenario for the spatial strategy now proposed and to provide information on additional traffic movements per peak hour from these parishes using the A272 at junctions at Wisborough Green and reaching the A272/A29 junction

at Billingshurst and the A272/A283 junction at the north of Petworth.

Neutral Month and Summer Month Comparison Technical Note

The Neutral Month and Summer Month Comparison Technical Note in the main transport study treats July as a neutral month rather than a summer month. Paragraph 1.3.1 states "The flows were analysed by looking at traffic data for August 2019 this being considered to represent summer traffic. This was compared against traffic data from the neutral months of June, July, September and October also from 2019." The County Council does not accept this methodology as school summer holidays start part way through July and education traffic is also affected by the formal exam period, whilst there is typically a high level of seasonal leisure traffic including summer outdoor events in this month. It is acceptable to use August alone as the summer comparator month. However, July traffic should be removed from the neutral months analysis and should be substituted with May traffic data from the same year of 2019, provided that sufficient data is available from that month.

5) Public Rights of Way (PRoW)

It is a positive step to see PRoW acknowledged as valued by communities and as part of the area's green infrastructure. Whilst Policy P14 (Green Infrastructure) states that development proposals should not be detrimental to the network of public rights of way and bridleways (please note bridleways are Public Rights of Way), a more proactively positive approach that seeks enhancements to the network as mitigation, would be welcomed. The improvement, upgrading of existing PRoW and creation of new PRoW where possible, to allow for a greater number of users to access the network would be beneficial. This is somewhat addressed in Policy T1 which refers only to routes identified in the Local Transport Plan, Local Cycling and Walking Infrastructure Plan (LCWIP) and the Infrastructure Delivery Plan. Opportunities to these, should not be limited if they arise elsewhere. It is surprising to see there is no mention of PRoW within Chapter 8 under Active Travel – Walking and Cycling. The PRoW network provides extensive walking and cycling opportunities, often off-road, and important links between places and non-PRoW routes.

Change suggested by respondent:

In order to remedy this issue, the County Council requests that either additional transport evidence is provided prior to the examination to demonstrate that the proposed scale of development is deliverable, or that Policy A13 is changed to remove the proposed scale of development until such evidence is provided.

Document Element: Land West of Tangmere, 10.59**Respondent:** Morag Mills [8155]**Summary:**

Plan unsound due to strain of additional housing on existing infrastructure including: road network and congestion; GP surgery at capacity; impact on air quality.

Full text:

The plan is not sound because it does not consider the additional burden 1300 houses will place on the infrastructure around Saxon meadow and the village of Tangmere which is already at breaking point and under enormous pressure. For example, the roads are inadequate to deal with the existing traffic, the GPs' surgery is full which means it is already difficult to get an appointment - how will it cope with additional demand. Also the access to the ambulance distribution points needs to remain clear and the amount of traffic caused by the sheer volume and number of cars without proper investment in the roads will create gridlock/congestion. Insufficient consideration of the infrastructure and investment in it to cater for the additional homes proposed means the policy is not sound Increase traffic will impact on the quality of air.

Change suggested by respondent:

Significantly reduce the density of the planned building and reduce the number of homes proposed. Invest properly in road infrastructure to cater for the increased demand and provide alternative options for transport e.g. a railway to give people a viable option other than using their cars. A proper survey about the impact of the development on existing infrastructure should be carried out.

Legally compliant: Not specified**Sound:** No**Comply with duty:** Not specified**Attachments:** Morag Mills - redacted - <https://chichester.oc2.uk/a/sz4>

4538

Object

Document Element: Land West of Tangmere, 10.59**Respondent:** Mr John Newsom [7971]**Summary:**

The plan is not sound because the increased traffic and number of cars using Tangmere Road will impact on the dangers of the T-junction at Tangmere Road (with Church Lane). There are already incidents at this junction and the sheer volume of traffic is likely to increase the number of incidents/accidents at this junction. The volume of traffic in relation to the proposed 1300 houses given that each home is likely to have at least one car owner (conservative estimate) will impact on the dangers posed by the T junction to road users. The visibility is [word unclear] poor at this T junction (Church lane and Tangmere Road).

Full text:

See representations

Change suggested by respondent:

Road safety around this T junction needs to be [words unclear] for traffic/road usage to improve the visibility around it to minimise the potential for an increase in accidents as a direct result of increased traffic and road use. The sheer density of the traffic from the development means that improved visibility and road safety around it is paramount. A detailed analysis [word unclear] needs to be done to assess how best to improve road safety at this junction for all road users (drivers, pedestrians, cyclists etc).

Legally compliant: Not specified**Sound:** No**Comply with duty:** Not specified**Attachments:** Para-4.91 - <https://chichester.oc2.uk/a/s6t>
Para-10.59 - <https://chichester.oc2.uk/a/s63>

4133

Object

Document Element: Land West of Tangmere, 10.59**Respondent:** Mr Matthew Rees [7841]**Summary:**

Not sound because it fails to provide essential information needed understand how the proposed scale of new development of 1,300 homes compares to the existing location, so this must be modified to reference that Tangmere had 1,156 dwellings (Tangmere Neighbourhood Plan 2016). This is needed to draw out the important comparator of the prospect of an increase of more than 100%. References to road A27 cannot be used in the plan without clear reference to the high levels of traffic congestion that are present development, which is a material consideration that the plan state cannot be addressed through developer contributions alone (para 8.4) and funding is not guaranteed (para 8.5). Not sound unless it acknowledges that there is 20ha of unmet demand for horticultural land in Tangmere.

Full text:

There is much to commend in this document and the supporting technical documents that accompany it, and I have listed in the appendix to this letter 26 such paragraphs and policies. I am happy for my support to be registered against these sections of your consultation document. There is also much upon which I must represent a concern, so I attach representations relating to 22 paragraphs or policies.

I am happy to participate in a hearing session, and I would flag at this stage that the common theme that links all of these representations is the need to safeguard the natural and built environment in and around Saxon Meadow, Tangmere from the risks of unsustainable development, I consider that the independent examiner should focus their review on the aspects of the local plan that relate to this matter.

Appendix 1: list of policies that I support

1. P14, 1.23, 1.24: Duty to cooperate
2. P24, para 2.30 "the council declared a climate emergency in July 2019"
3. P24, para 2.32 – "all proposal for new development should be considered in the context of a climate emergency"
4. P30: Objective 2: natural environment: "development will achieve net gains in biodiversity"
5. P43, 4.1 "National policy promotes increasing energy efficiency, the minimisation of energy consumption and the development of renewable energy sources"
6. P43, 4.3: "Some renewable energy projects provide significant opportunities to enhance biodiversity"
7. P53, Policy NE5: Biodiversity and Biodiversity Net Gain
8. P62, Para 4.42: Hedgerows and some types of woodlands are identified as a priority habitat
9. P62, Policy NE8: Proposals should have a minimum buffer zone of 15 metres from the boundary of ancient woodland or veteran trees to avoid root damage (known as the root protection area)
10. P68, Policy NE10: Criteria for Development in the Countryside - Does not prejudice viable agricultural operations or other viable uses
11. P80, Para 4.91: There are serious concerns about the impact of flooding, both in respect of current properties at risk but also the long-term management of the area.
12. 4.92: any development in the plan area must therefore have regard to flood and erosion risk.
13. 4.94: built development can lead to increased surface water run-off; therefore, new development should include SuDS to help cope with intense rainfall events
14. P81, Para 4.96: Environment Agency consent is required for any works within 16 m of tidal waters and 8m of fluvial watercourses in line with the Environmental Permitting Regulations 2016. This strip is required for access. The policy includes a setback requirement to ensure this access strip is not obstructed.
15. P80, 4.92, Any development in the plan area must therefore have regard to flood and erosion risk, now and in the future, by way of location and specific measures, such as additional flood alleviation, which will protect people, properties and vulnerable habitats from flooding. Recent changes to national guidance highlight the importance of considering flood risk from all sources, and this is particularly significant for the plan area as large parts of it are at risk from groundwater flooding, which needs to be recognised in development decisions alongside the well-established risks in relation to tidal, fluvial and surface water flooding. Appropriate mapping of all sources of flood risks is still evolving, and is likely to develop further over the plan period
16. P93, Policy NE20 Pollution: Development proposals must be designed to protect, and where possible, improve upon the amenities of existing and future residents, occupiers of buildings and the environment generally. Development proposals will need to address the criteria contained in, but not limited to, the policies concerning water quality; flood risk and water management; nutrient mitigation; lighting; air quality; noise; and contaminated land. Where development is likely to generate significant adverse impacts by reason of pollution, the council will require that the impacts are minimised and/or mitigated to an acceptable level within appropriate local/national standards, guidance, legislation and/or objectives.
17. P94, 4.127, Light pollution caused by excessive brightness can lead to annoyance, disturbance and impact wildlife, notably nocturnal animals. The design of lighting schemes should be carefully considered in development proposals to prevent light spillage and glare.
18. P94, 4.128, Dark skies are important for the conservation of natural habitats, cultural heritage and astronomy. The plan area includes three 'Dark Sky Discovery Site' designations, all located within the Chichester Harbour AONB; Eames Farm on Thorney Island, Maybush Copse in Chidham; and north of the John Q Davis footpath in West Itchenor. Development within or directly impacting these areas will be subject to particular scrutiny in terms of their impact on dark skies. The entire SDNPA area is also declared as an International Dark Sky Reserve. Development directly impacting this area will be subject to similar scrutiny.
19. P96, Policy NE22 Air Quality
20. P97, Policy NE-23 Noise
21. P142, Para 6.29, Amenity: Private space, shared space and the design quality and construction of communal spaces all contribute to amenity
22. P155-6, Policy P11: Conservation Areas "protecting the setting (including views into and out of the area)"
23. P55, Para 4.26 - The council is under a legal duty to protect designated habitats, by ensuring that new development does not have an adverse impact on important areas of nature conservation, and by requiring mitigation to negate the harm caused.
24. P58, Para 4.33 The council is under a legal duty to protect their designated bird populations and supporting habitats
25. P95, Para 4.129 The council has a duty to review and assess air quality within the district
26. P301, Conservation Area: An area of special architectural or historic interest, designated under the Planning (Listed Buildings & Conservation Areas) Act 1990. There is a statutory duty to preserve or enhance the character, appearance, or setting of these areas.

Change suggested by respondent:

Modification is required to incorporate the missing facts that make the statement sound:

10.59 Tangmere is the largest village in the area to the east of Chichester city, has 1,156 dwellings, one convenience store, a shop that sells wedding dresses, fuel station, primary school, GP surgery and village hall, and road accessibility via the congested A27. There are extensive site-specific constraints at this site with land being used currently for viable agriculture, and there is unmet demand for 20ha of horticulture land in Tangmere.

Document Element: Land West of Tangmere, 10.59

Respondent: Mr John Wolfenden [7853]

Summary:

The range of facilities is limited to small Co-op grocery store with combined post office and a wedding dress shop. You have vastly underestimated the needs for a community you propose to double in size. The only provision is for a 5-7 year old nursery. Vastly inadequate, no consideration for upper schooling. GP Surgery is currently not taking any new patients, inadequate resource for proposed expansion. Road access not good - with extra 2500 cars requiring access.

Full text:

The range of the facilities is limited to small Co-Op grocery store with combined post office and a a wedding dress shop. You have vastly underestimated the needs for a community you propose to double in size. The only provision is for a 5-7 year old nursery. Vastly inadequate, no consideration for upper schooling. GP Surgery is currently no taking any new patients, inadequate resource for proposed expansion. Road access Not good - with extra 2500 cars requiring access.

Change suggested by respondent:

You need to recognise the complete inadequacy of the existing grocery shops for an additional 2500 -3000 people. You need to make provision for upper school places. You need to develop a expanded medical centre plan. Your traffic estimates will need revision to your access to M27. You have no policing plan. What about Dental amenities? Flooding issues in Church Lane not addressed. No consideration in the plan for protected wildlife species newts and bats. Allotments move to Church Lane has been heavily opposed by allotment folk due to flooding of the proposed new site.

Document Element: Land West of Tangmere, 10.60

Respondent: Mr Matthew Rees [7841]

Summary:

The local plan is not legally compliant because it fails to make provision for the necessary infrastructure, nor provide a genuine choice of transport modes, despite the clear recognition that investment and capacity would be needed in relation to both road and rail, which may not be compatible with para 73 of the National Planning Policy Framework.

The policy is not sound because it fails to address both road and rail issues and provides no genuine alternatives, which is not an effective approach considering Objective 7 (page 32) requires the council to deliver strategic infrastructure on a timely basis, and so falls far short of what it is reasonable for the council to do in this planning period.

Full text:

There is much to commend in this document and the supporting technical documents that accompany it, and I have listed in the appendix to this letter 26 such paragraphs and policies. I am happy for my support to be registered against these sections of your consultation document. There is also much upon which I must represent a concern, so I attach representations relating to 22 paragraphs or policies.

I am happy to participate in a hearing session, and I would flag at this stage that the common theme that links all of these representations is the need to safeguard the natural and built environment in and around Saxon Meadow, Tangmere from the risks of unsustainable development, I consider that the independent examiner should focus their review on the aspects of the local plan that relate to this matter.

Appendix 1: list of policies that I support

1. P14, 1.23, 1.24: Duty to cooperate
2. P24, para 2.30 "the council declared a climate emergency in July 2019"
3. P24, para 2.32 – "all proposal for new development should be considered in the context of a climate emergency"
4. P30: Objective 2: natural environment: "development will achieve net gains in biodiversity"
5. P43, 4.1 "National policy promotes increasing energy efficiency, the minimisation of energy consumption and the development of renewable energy sources"
6. P43, 4.3: "Some renewable energy projects provide significant opportunities to enhance biodiversity"
7. P53, Policy NE5: Biodiversity and Biodiversity Net Gain
8. P62, Para 4.42: Hedgerows and some types of woodlands are identified as a priority habitat
9. P62, Policy NE8: Proposals should have a minimum buffer zone of 15 metres from the boundary of ancient woodland or veteran trees to avoid root damage (known as the root protection area)
10. P68, Policy NE10: Criteria for Development in the Countryside - Does not prejudice viable agricultural operations or other viable uses
11. P80, Para 4.91: There are serious concerns about the impact of flooding, both in respect of current properties at risk but also the long-term management of the area.
12. 4.92: any development in the plan area must therefore have regard to flood and erosion risk.
13. 4.94: built development can lead to increased surface water run-off; therefore, new development should include SuDS to help cope with intense rainfall events
14. P81, Para 4.96: Environment Agency consent is required for any works within 16 m of tidal waters and 8m of fluvial watercourses in line with the Environmental Permitting Regulations 2016. This strip is required for access. The policy includes a setback requirement to ensure this access strip is not obstructed.
15. P80, 4.92, Any development in the plan area must therefore have regard to flood and erosion risk, now and in the future, by way of location and specific measures, such as additional flood alleviation, which will protect people, properties and vulnerable habitats from flooding. Recent changes to national guidance highlight the importance of considering flood risk from all sources, and this is particularly significant for the plan area as large parts of it are at risk from groundwater flooding, which needs to be recognised in development decisions alongside the well-established risks in relation to tidal, fluvial and surface water flooding. Appropriate mapping of all sources of flood risks is still evolving, and is likely to develop further over the plan period
16. P93, Policy NE20 Pollution: Development proposals must be designed to protect, and where possible, improve upon the amenities of existing and future residents, occupiers of buildings and the environment generally. Development proposals will need to address the criteria contained in, but not limited to, the policies concerning water quality; flood risk and water management; nutrient mitigation; lighting; air quality; noise; and contaminated land. Where development is likely to generate significant adverse impacts by reason of pollution, the council will require that the impacts are minimised and/or mitigated to an acceptable level within appropriate local/national standards, guidance, legislation and/or objectives.
17. P94, 4.127, Light pollution caused by excessive brightness can lead to annoyance, disturbance and impact wildlife, notably nocturnal animals. The design of lighting schemes should be carefully considered in development proposals to prevent light spillage and glare.
18. P94, 4.128, Dark skies are important for the conservation of natural habitats, cultural heritage and astronomy. The plan area includes three 'Dark Sky Discovery Site' designations, all located within the Chichester Harbour AONB; Eames Farm on Thorney Island, Maybush Copse in Chidham; and north of the John Q Davis footpath in West Itchenor. Development within or directly impacting these areas will be subject to particular scrutiny in terms of their impact on dark skies. The entire SDNPA area is also declared as an International Dark Sky Reserve. Development directly impacting this area will be subject to similar scrutiny.
19. P96, Policy NE22 Air Quality
20. P97, Policy NE-23 Noise
21. P142, Para 6.29, Amenity: Private space, shared space and the design quality and construction of communal spaces all contribute to amenity
22. P155-6, Policy P11: Conservation Areas "protecting the setting (including views into and out of the area)"
23. P55, Para 4.26 - The council is under a legal duty to protect designated habitats, by ensuring that new development does not have an adverse impact on important areas of nature conservation, and by requiring mitigation to negate the harm caused.
24. P58, Para 4.33 The council is under a legal duty to protect their designated bird populations and supporting habitats
25. P95, Para 4.129 The council has a duty to review and assess air quality within the district
26. P301, Conservation Area: An area of special architectural or historic interest, designated under the Planning (Listed Buildings & Conservation Areas) Act 1990. There is a statutory duty to preserve or enhance the character, appearance, or setting of these areas.

Change suggested by respondent:

Modification is required to incorporate the missing facts that make the plan sound and legally compliant:

10.60 The Local Plan identifies Tangmere as being capable of accommodating further sustainable growth to enhance and develop its role as a settlement hub, through the provision of new housing and infrastructure to support the new development and the existing village but this would need to be consistent with sustainable development, as defined by NPPF. The council will work to ensure that there is timely delivery of road and train services to provide a genuine choice of transport modes to support growth.

Document Element: Land West of Tangmere, 10.60

Respondent: Mr John Wolfenden [7853]

Summary:

To take a community of 3000 people and double it to 6000 in one plan is totally unacceptable and requires more than marketing statements to achieve. The assumption of adequate infrastructure in proposed road and minor adjustment to schools is insultingly inadequate. The existing 'village' will be consumed by such an expansion and its social and economic make up completely obliterated. Bringing in vast social housing tenants into an entrepreneurial neighbourhood will not be a comfortable integration. A consultation with the police would be worthwhile to understand the increase in crime that is predictable.

Full text:

To take a community of 3000 people and double it to 6000 in one plan is totally unacceptable and requires more than marketing statements to achieve. The assumption of adequate infrastructure in proposed road and minor adjustment to schools, is insultingly inadequate. The existing 'village' will be consumed by such an expansion and its social and economic make up completely obliterated. Bring in vast social housing tenants into an entrepreneurial neighbourhood will not be a comfortable integration. A consultation epithet the police would be worthwhile to understand the increase in crime that is predictable.

Change suggested by respondent:

You need to consult with

Police - predictable increase in crime rates and policing needs

Hydrologists - ground water studies and proposal for flood avoidance

Social services - impact of social mix change

NHS - to create midwife and district nursing strategy

Doctors - to plan for rapid expansion of available GPs

Dentists - to create NHS dentist to cater for social housing influx

Schools - build a long term plan for primary and secondary education services.

Allotments - create plan to listen to current objections and make funds available for proper move of the existing allotment members.

Water boards - get proper groundwater runoff and foul water plan

Geologists - understand the geological issues in building on an out-washed, high water level, post Pliocene plain.

Qualified urban planners - to look at the socioeconomic mix of dwellings and use best practices for integration of diverse communities

Statisticians - to work out traffic flows and parking requirements

BT OpenReach - engage with them to upgrade all telecommunications and move them from 30 mbs to Superfast fibre.

Ambulance and Fire service - establish changes required to their infrastructure to cope with 3000 more people

The National Grid - to establish the capability to provide 1000 plus 100watt charging points to cater for the new green energy world. Current National grid will struggle to provide such capability, who will pay?

Special Conservation Area - make sure there are no satellite dishes, log burners, solar panels, noise producing ground source pumps etc all outlawed in the conservation area.

4138

Object

Document Element: Land West of Tangmere, 10.61**Respondent:** Mr Matthew Rees [7841]**Summary:**

Not sound because material changes have occurred to the housing market but have not been reflected in the plan.

Not legally compliant because fails to apply the Statement of Community Involvement principles, through the omission of a clear and transparent reason why CDC ignored 2016 Tangmere Neighbourhood plan by proposing 30% more homes and is not justified given events since 2019.

Not legally compliant because CDC failed to demonstrate accountability through inclusive and accessible consultation by only writing to notify 2 deceased residents of Saxon Meadow, Tangmere. CDC should have done more to consult the current residents of Saxon Meadow .

The current master plan is not sound, not sustainable, incompatible with protection of conservation areas P 11 as it would not protect important views into and out of the site

Document Element: Land West of Tangmere, 10.61

Respondent: Mr John Wolfenden [7853]

Summary:

Your plan has not demonstrated a capability to increase magically from an arbitrary figure of 1000 to 1300 without severe increase in density since you whitewashed the image in the original plan. This increase undermines ALL of the underlying assumptions of adequacy of infrastructure services. This appears to be a blatantly cyclical uplift in density for purely profit motives rather for a sustainable and balanced community.

Full text:

Your plan has not demonstrated a capability to increase magically from an arbitrary figure of 1000 to 1300 without severe increase in density since you whitewashed the image in the original plan. This increase undermines ALL of the underlying assumptions of adequacy of infrastructure services. This appears to be a blatantly cyclical uplift in density for purely profit motives rather for a sustainable and balanced community.

Change suggested by respondent:

The additional 300 dwellings should be removed from the plan forthwith. It is an unexpected and totally absurd addition to an already onerous and overpowering displacement to our existing community. Instead a clear amenities and other facilities plan should be developed to show how Tangmere could possibly cope with doubling of size with 1000 new homes.

Document Element: Land West of Tangmere, 10.62

Respondent: Mr Matthew Rees [7841]

Summary:

The paragraph is not sound because the reference to a "spine road" is incompatible with Policies N22, NE20, NE23 given that the spine road connecting the A27 to Tangmere Road would cause an unacceptable increase in traffic congestion, noise pollution, light pollution, reductions in air quality and will harm health and well-being. This would harm the residents of Saxon Meadow because it will be seen and heard from their properties, in place of unrestricted views over agricultural land. At present, a very attractive feature of Saxon Meadow is stargazing and I am very concerned that this benefit will be lost through the blight caused by the new development. **See photo within attached pdf**

7. P53, Policy NE5: Biodiversity and Biodiversity Net Gain
8. P62, Para 4.42: Hedgerows and some types of woodlands are identified as a priority habitat
9. P62, Policy NE8: Proposals should have a minimum buffer zone of 15 metres from the boundary of ancient woodland or veteran trees to avoid root damage (known as the root protection area)
10. P68, Policy NE10: Criteria for Development in the Countryside - Does not prejudice viable agricultural operations or other viable uses
11. P80, Para 4.91: There are serious concerns about the impact of flooding, both in respect of current properties at risk but also the long-term management of the area.
12. 4.92: any development in the plan area must therefore have regard to flood and erosion risk.
13. 4.94: built development can lead to increased surface water run-off; therefore, new development should include SuDS to help cope with intense rainfall events
14. P81, Para 4.96: Environment Agency consent is required for any works within 16 m of tidal waters and 8m of fluvial watercourses in line with the Environmental Permitting Regulations 2016. This strip is required for access. The policy includes a setback requirement to ensure this access strip is not obstructed.
15. P80, 4.92, Any development in the plan area must therefore have regard to flood and erosion risk, now and in the future, by way of location and specific measures, such as additional flood alleviation, which will protect people, properties and vulnerable habitats from flooding. Recent changes to national guidance highlight the importance of considering flood risk from all sources, and this is particularly significant for the plan area as large parts of it are at risk from groundwater flooding, which needs to be recognised in development decisions alongside the well-established risks in relation to tidal, fluvial and surface water flooding. Appropriate mapping of all sources of flood risks is still evolving, and is likely to develop further over the plan period
16. P93, Policy NE20 Pollution: Development proposals must be designed to protect, and where possible, improve upon the amenities of existing and future residents, occupiers of buildings and the environment generally. Development proposals will need to address the criteria contained in, but not limited to, the policies concerning water quality; flood risk and water management; nutrient mitigation; lighting; air quality; noise; and contaminated land. Where development is likely to generate significant adverse impacts by reason of pollution, the council will require that the impacts are minimised and/or mitigated to an acceptable level within appropriate local/national standards, guidance, legislation and/or objectives.
17. P94, 4.127, Light pollution caused by excessive brightness can lead to annoyance, disturbance and impact wildlife, notably nocturnal animals. The design of lighting schemes should be carefully considered in development proposals to prevent light spillage and glare.
18. P94, 4.128, Dark skies are important for the conservation of natural habitats, cultural heritage and astronomy. The plan area includes three 'Dark Sky Discovery Site' designations, all located within the Chichester Harbour AONB; Eames Farm on Thorney Island, Maybush Cope in Chidham; and north of the John Q Davis footpath in West Itchenor. Development within or directly impacting these areas will be subject to particular scrutiny in terms of their impact on dark skies. The entire SDNPA area is also declared as an International Dark Sky Reserve. Development directly impacting this area will be subject to similar scrutiny.
19. P96, Policy NE22 Air Quality
20. P97, Policy NE-23 Noise
21. P142, Para 6.29, Amenity: Private space, shared space and the design quality and construction of communal spaces all contribute to amenity
22. P155-6, Policy P11: Conservation Areas "protecting the setting (including views into and out of the area)"
23. P55, Para 4.26 - The council is under a legal duty to protect designated habitats, by ensuring that new development does not have an adverse impact on important areas of nature conservation, and by requiring mitigation to negate the harm caused.
24. P58, Para 4.33 The council is under a legal duty to protect their designated bird populations and supporting habitats
25. P95, Para 4.129 The council has a duty to review and assess air quality within the district
26. P301, Conservation Area: An area of special architectural or historic interest, designated under the Planning (Listed Buildings & Conservation Areas) Act 1990. There is a statutory duty to preserve or enhance the character, appearance, or setting of these areas.

Change suggested by respondent:

Amend the plan to include the following in order to make it sound:

10.62 The development location is situated around the western and southern edges of the village, south of the A27 and north of Tangmere Road. The site comprises approximately 73 hectares of land predominantly used for agriculture. If housing development were to take place on this site it will be accessed from either the A27/A285 grade separated junction, or Tangmere Road to the south, but there will be no direct link between the A27/A285 and Tangmere Road to respect policies NE20, P16, NE23 and avoid this being used as a short cut, and every effort possible will be made to reduce the residual harm.

Document Element: Land West of Tangmere, 10.62

Respondent: Mr John Wolfenden [7853]

Summary:

You are using high grade arable land vital to the sustainability of national food chain supplies. This plan will change forever the social economic makeup of the population. This community will be at the expense of the habitat for wild life along with reducing the permeability of the ground to increase flooding will all have profound impact. Flooding will increase, wild deer will no longer be seen across the fields, bats will disappear, newts in the ponds will disappear. This precise location ignores the Tangmere conservation Area and will make a mockery of prior legislation. There is an alternative.

Document Element: Land West of Tangmere, 10.63

Respondent: Mr Matthew Rees [7841]

Summary:

Not legally compliant because CDC has not had sufficient regard to the individual needs of the residents of 28 dwellings in Saxon Meadow who face the prospect of decade of blight leading to a development that is nearly 50x bigger. CDC has not been sufficiently clear, inclusive, accessible, transparent or accountable, which is a legal requirement.

Not accountable on the basis the reference to 1,000 homes in the Tangmere Neighbourhood Plan 2016 has been omitted here, and because CDC intends to unilaterally increase the target (para. 1.20), The plan is not sound, because rather than being positively prepared, it has incorporated an increase of +30% in the planned number of houses to an unsustainable number which represents over-development.

Full text:

There is much to commend in this document and the supporting technical documents that accompany it, and I have listed in the appendix to this letter 26 such paragraphs and policies. I am happy for my support to be registered against these sections of your consultation document. There is also much upon which I must represent a concern, so I attach representations relating to 22 paragraphs or policies.

I am happy to participate in a hearing session, and I would flag at this stage that the common theme that links all of these representations is the need to safeguard the natural and built environment in and around Saxon Meadow, Tangmere from the risks of unsustainable development, I consider that the independent examiner should focus their review on the aspects of the local plan that relate to this matter.

Appendix 1: list of policies that I support

1. P14, 1.23, 1.24: Duty to cooperate
2. P24, para 2.30 "the council declared a climate emergency in July 2019"
3. P24, para 2.32 – "all proposal for new development should be considered in the context of a climate emergency"
4. P30: Objective 2: natural environment: "development will achieve net gains in biodiversity"
5. P43, 4.1 "National policy promotes increasing energy efficiency, the minimisation of energy consumption and the development of renewable energy sources"
6. P43, 4.3: "Some renewable energy projects provide significant opportunities to enhance biodiversity"
7. P53, Policy NE5: Biodiversity and Biodiversity Net Gain
8. P62, Para 4.42: Hedgerows and some types of woodlands are identified as a priority habitat
9. P62, Policy NE8: Proposals should have a minimum buffer zone of 15 metres from the boundary of ancient woodland or veteran trees to avoid root damage (known as the root protection area)
10. P68, Policy NE10: Criteria for Development in the Countryside - Does not prejudice viable agricultural operations or other viable uses
11. P80, Para 4.91: There are serious concerns about the impact of flooding, both in respect of current properties at risk but also the long-term management of the area.
12. 4.92: any development in the plan area must therefore have regard to flood and erosion risk.
13. 4.94: built development can lead to increased surface water run-off; therefore, new development should include SuDS to help cope with intense rainfall events
14. P81, Para 4.96: Environment Agency consent is required for any works within 16 m of tidal waters and 8m of fluvial watercourses in line with the Environmental Permitting Regulations 2016. This strip is required for access. The policy includes a setback requirement to ensure this access strip is not obstructed.
15. P80, 4.92, Any development in the plan area must therefore have regard to flood and erosion risk, now and in the future, by way of location and specific measures, such as additional flood alleviation, which will protect people, properties and vulnerable habitats from flooding. Recent changes to national guidance highlight the importance of considering flood risk from all sources, and this is particularly significant for the plan area as large parts of it are at risk from groundwater flooding, which needs to be recognised in development decisions alongside the well-established risks in relation to tidal, fluvial and surface water flooding. Appropriate mapping of all sources of flood risks is still evolving, and is likely to develop further over the plan period
16. P93, Policy NE20 Pollution: Development proposals must be designed to protect, and where possible, improve upon the amenities of existing and future residents, occupiers of buildings and the environment generally. Development proposals will need to address the criteria contained in, but not limited to, the policies concerning water quality; flood risk and water management; nutrient mitigation; lighting; air quality; noise; and contaminated land. Where development is likely to generate significant adverse impacts by reason of pollution, the council will require that the impacts are minimised and/or mitigated to an acceptable level within appropriate local/national standards, guidance, legislation and/or objectives.
17. P94, 4.127, Light pollution caused by excessive brightness can lead to annoyance, disturbance and impact wildlife, notably nocturnal animals. The design of lighting schemes should be carefully considered in development proposals to prevent light spillage and glare.
18. P94, 4.128, Dark skies are important for the conservation of natural habitats, cultural heritage and astronomy. The plan area includes three 'Dark Sky Discovery Site' designations, all located within the Chichester Harbour AONB; Eames Farm on Thorney Island, Maybush Cope in Chidham; and north of the John Q Davis footpath in West Itchenor. Development within or directly impacting these areas will be subject to particular scrutiny in terms of their impact on dark skies. The entire SDNPA area is also declared as an International Dark Sky Reserve. Development directly impacting this area will be subject to similar scrutiny.
19. P96, Policy NE22 Air Quality
20. P97, Policy NE-23 Noise
21. P142, Para 6.29, Amenity: Private space, shared space and the design quality and construction of communal spaces all contribute to amenity
22. P155-6, Policy P11: Conservation Areas "protecting the setting (including views into and out of the area)"
23. P55, Para 4.26 - The council is under a legal duty to protect designated habitats, by ensuring that new development does not have an adverse impact on important areas of nature conservation, and by requiring mitigation to negate the harm caused.
24. P58, Para 4.33 The council is under a legal duty to protect their designated bird populations and supporting habitats
25. P95, Para 4.129 The council has a duty to review and assess air quality within the district
26. P301, Conservation Area: An area of special architectural or historic interest, designated under the Planning (Listed Buildings & Conservation Areas) Act 1990. There is a statutory duty to preserve or enhance the character, appearance, or setting of these areas.

Change suggested by respondent:

Change the plan as follows:

10.63. The Tangmere Neighbourhood Plan (made in July 2016) identifies the site for strategic development and provides design guidance and several policy aspirations to inform the masterplanning process. In particular, the Neighbourhood Plan places significant emphasis on achieving a 'village' approach where the new development will be integrated within the existing village but the lack of a train station at Tangmere is an important consideration (Sustainability appraisal, page 89) and the road network is 'operating at or close to designed capacity' (para 8.23) with no funding or upgrade plan confirmed address existing congestion and cannot be met through developer contributions alone (8.4). Strategic infrastructure will be required on a timely basis to deliver sustainable housing development at this location. But the local conditions, including the conservation area and heritage value of the area mean that development on the land to the west of Tangmere should avoid damaging what features that make it so attractive.

Document Element: Land West of Tangmere, 10.63

Respondent: Mr John Wolfenden [7853]

Summary:

'One village' soundbite marketing slogan is a poor representation of what is really going on. You are proposing to double the population of 'the village' by compulsory purchase, not by consensus. You leave a historic 'village' in a worse position than when you started. It is no longer a 'village' overnight you are making a heartless 'Hub' of two distinct and unintegrated settlements. Your plan fails to even integrate roads! It destroys ponds, natural habitats and veteran trees. It ignores the recommendations of the Tangmere Conservation Plan 2014.

Full text:

'one village' soundbite marketing slogan is a poor representation of what is really going on. You are proposing to double the population of 'the village' by compulsory purchase, not by consensus. You leave a historic 'village' in a worse position than when you started. It is no longer a 'village' overnight you are making a heartless 'Hub' of two distinct and unintegrated settlements. Your plan fails to even integrate roads! It destroys ponds, natural habitats and veteran trees. It ignores the recommendations of the Tangmere Conservation Plan 2014.

Change suggested by respondent:

You need to provide a plan that is designed to integrate not over power and override the existing community.

Take note of lack of facilities and infrastructure in the existing 'village'.

Preservation of the local heritage.

Keep the pond, move the cycle path.

Keep the veteran tree, move the cycle path.

Maintain the wildlife habitats, move the cycle path.

There are many such unnecessary actions that this plan proposes, that could be vastly improved.

The unsustainable increased of traffic flows along the narrowest of roads 'Tangmere High Street' is a planning failure, this CPO authorises such destruction. A new road is required.

Document Element: Land West of Tangmere, 10.64

Respondent: Mr Matthew Rees [7841]

Summary:

Not legally compliant as it signals the intention to use CPO powers that do not satisfy the relevant statutory requirement as this action is not necessary and not in the public interest.

Not justified as it results in disproportionate harm to the residents of Saxon Meadow, by removing rights of way to their own property and amenity space and value, in a constrained site that lacks private gardens and limited parking spaces and the naive sketches included in the outline planning fail to consider key issues including buffer zones for veteran trees (15m), water courses (8m) and the conservation area considerations on this site,

Not effective as there is no requirement to acquire the meadow from Saxon Meadow Tangmere Ltd, nor the land that provides access to Saxon Meadow from Church Lane for residents and visitors. Would result in further harms to the working population who live in Saxon Meadow who need to park their specialised vehicles used in the energy and agriculture sectors within a reasonable distance of their homes. There is a lack of suitable alternative parking in Saxon Meadow due to the absence of suitable parking, driveways or garages for these vehicles on this constrained site.

Not legally compliant as this sorry state of affairs demonstrates that CDC has failed to apply the principles set out in the statement of community involvement.

10. P68, Policy NE10: Criteria for Development in the Countryside - Does not prejudice viable agricultural operations or other viable uses
11. P80, Para 4.91: There are serious concerns about the impact of flooding, both in respect of current properties at risk but also the long-term management of the area.
12. 4.92: any development in the plan area must therefore have regard to flood and erosion risk.
13. 4.94: built development can lead to increased surface water run-off; therefore, new development should include SuDS to help cope with intense rainfall events
14. P81, Para 4.96: Environment Agency consent is required for any works within 16 m of tidal waters and 8m of fluvial watercourses in line with the Environmental Permitting Regulations 2016. This strip is required for access. The policy includes a setback requirement to ensure this access strip is not obstructed.
15. P80, 4.92, Any development in the plan area must therefore have regard to flood and erosion risk, now and in the future, by way of location and specific measures, such as additional flood alleviation, which will protect people, properties and vulnerable habitats from flooding. Recent changes to national guidance highlight the importance of considering flood risk from all sources, and this is particularly significant for the plan area as large parts of it are at risk from groundwater flooding, which needs to be recognised in development decisions alongside the well-established risks in relation to tidal, fluvial and surface water flooding. Appropriate mapping of all sources of flood risks is still evolving, and is likely to develop further over the plan period
16. P93, Policy NE20 Pollution: Development proposals must be designed to protect, and where possible, improve upon the amenities of existing and future residents, occupiers of buildings and the environment generally. Development proposals will need to address the criteria contained in, but not limited to, the policies concerning water quality; flood risk and water management; nutrient mitigation; lighting; air quality; noise; and contaminated land. Where development is likely to generate significant adverse impacts by reason of pollution, the council will require that the impacts are minimised and/or mitigated to an acceptable level within appropriate local/national standards, guidance, legislation and/or objectives.
17. P94, 4.127, Light pollution caused by excessive brightness can lead to annoyance, disturbance and impact wildlife, notably nocturnal animals. The design of lighting schemes should be carefully considered in development proposals to prevent light spillage and glare.
18. P94, 4.128, Dark skies are important for the conservation of natural habitats, cultural heritage and astronomy. The plan area includes three 'Dark Sky Discovery Site' designations, all located within the Chichester Harbour AONB; Eames Farm on Thorney Island, Maybush Copse in Chidham; and north of the John Q Davis footpath in West Itchenor. Development within or directly impacting these areas will be subject to particular scrutiny in terms of their impact on dark skies. The entire SDNPA area is also declared as an International Dark Sky Reserve. Development directly impacting this area will be subject to similar scrutiny.
19. P96, Policy NE22 Air Quality
20. P97, Policy NE-23 Noise
21. P142, Para 6.29, Amenity: Private space, shared space and the design quality and construction of communal spaces all contribute to amenity
22. P155-6, Policy P11: Conservation Areas "protecting the setting (including views into and out of the area)"
23. P55, Para 4.26 - The council is under a legal duty to protect designated habitats, by ensuring that new development does not have an adverse impact on important areas of nature conservation, and by requiring mitigation to negate the harm caused.
24. P58, Para 4.33 The council is under a legal duty to protect their designated bird populations and supporting habitats
25. P95, Para 4.129 The council has a duty to review and assess air quality within the district
26. P301, Conservation Area: An area of special architectural or historic interest, designated under the Planning (Listed Buildings & Conservation Areas) Act 1990. There is a statutory duty to preserve or enhance the character, appearance, or setting of these areas.

Change suggested by respondent:

These modifications are required to the plan:

The policy must be stop to halt all attempts to acquire, by means of CPO or any other means, any land owned by Saxon Meadow Tangmere Ltd and land used by residents / visitors for access to Saxon Meadow via Church Lane.

10.64 The site has an endorsed Masterplan (reference 19/02836/MAS) which was developed in accordance with the Chichester Local Plan, emerging Local Plan Review but is +30% more than the 1,000 homes identified in the Tangmere Neighbourhood Plan and demonstrates how the policy aspirations of the development plan will be achieved but will need to be changed to maintain the existing rights and benefits at Saxon Meadow, Tangmere to preserve and respect their right of way to and from Church Lane, customary rights over this land, and their retention of the full meadow that is part of their estate and provides important amenity value because none of the properties have their own garden. The site also benefits from outline resolution to grant Permission (reference 20/02893/OUT) but this may not be sustainable development consistent with the National Planning Policy Framework given that is a large development that lacks 2 viable modes of transport given the lack of road capacity and lack of rail services at Tangere. CDC regrets that so far is has fallen short in the application of the principles set out in its statement of community involvement will commit to reset the relationship with the residents of Saxon Meadow. CDC will cease the CPO and any other attempt to acquire, by any means, land owned by Saxon Meadow Tangmere Ltd or land that is used for the access to Saxon Meadow properties via Church Lane Tangmere or for other amenities, given that none of this land is needed for housing. CDC will engage with Saxon Meadow Tangmere Ltd, its representatives and residents to seek to respond positively to the requests that have been made to reset relationships and work constructively with them to reach a position of common ground that has the support of the residents.

Document Element: Land West of Tangmere, 10.64

Respondent: Mr John Wolfenden [7853]

Summary:

Your plan is incorrect. My shareholding in Saxon Meadow shows a very different plan. Saxon Meadow Ltd (I am a shareholder) owns a field you have cut in half and drawn some trees.

The field owned by Saxon Meadow Tangmere is for the community residing in the 28 properties and represents our garden.

It is fully maintained as a meadow with our own fruit trees.

It is not required for the development and should be dropped as a part of this CPO.

Full text:

Your plan is incorrect. My shareholding in Saxon Meadow shows a very different plan. Saxon Meadow Ltd (I am a shareholder) owns a field you have cut in half and draw some trees.

The field owned by Saxon Meadow Tangmere is for the community residing in the 28 properties and represents our garden.

It is fully maintained as a meadow with our own fruit trees.

It is not required for the development and should be dropped as a part of this CPO.

Change suggested by respondent:

You need to reflect that the current ownership achieves the custodianship and maintains green space for the benefit of some 28 dwellings that do not have private gardens. It is our community garden.

You are using this CPO inappropriately.

Put an orchard on your own designated green areas.

Document Element: Land West of Tangmere, 10.65

Respondent: Mr Matthew Rees [7841]

Summary:

This long list of factors is not sound because it fails to take account of important matters and is therefore not sound.

The section is not legally compliant because there has been a failure to apply the principles in the statement of community involvement.

Full text:

There is much to commend in this document and the supporting technical documents that accompany it, and I have listed in the appendix to this letter 26 such paragraphs and policies. I am happy for my support to be registered against these sections of your consultation document. There is also much upon which I must represent a concern, so I attach representations relating to 22 paragraphs or policies.

I am happy to participate in a hearing session, and I would flag at this stage that the common theme that links all of these representations is the need to safeguard the natural and built environment in and around Saxon Meadow, Tangmere from the risks of unsustainable development, I consider that the independent examiner should focus their review on the aspects of the local plan that relate to this matter.

Appendix 1: list of policies that I support

1. P14, 1.23, 1.24: Duty to cooperate
2. P24, para 2.30 "the council declared a climate emergency in July 2019"
3. P24, para 2.32 – "all proposal for new development should be considered in the context of a climate emergency"
4. P30: Objective 2: natural environment: "development will achieve net gains in biodiversity"
5. P43, 4.1 "National policy promotes increasing energy efficiency, the minimisation of energy consumption and the development of renewable energy sources"
6. P43, 4.3: "Some renewable energy projects provide significant opportunities to enhance biodiversity"
7. P53, Policy NE5: Biodiversity and Biodiversity Net Gain
8. P62, Para 4.42: Hedgerows and some types of woodlands are identified as a priority habitat
9. P62, Policy NE8: Proposals should have a minimum buffer zone of 15 metres from the boundary of ancient woodland or veteran trees to avoid root damage (known as the root protection area)
10. P68, Policy NE10: Criteria for Development in the Countryside - Does not prejudice viable agricultural operations or other viable uses
11. P80, Para 4.91: There are serious concerns about the impact of flooding, both in respect of current properties at risk but also the long-term management of the area.
12. 4.92: any development in the plan area must therefore have regard to flood and erosion risk.
13. 4.94: built development can lead to increased surface water run-off; therefore, new development should include SuDS to help cope with intense rainfall events
14. P81, Para 4.96: Environment Agency consent is required for any works within 16 m of tidal waters and 8m of fluvial watercourses in line with the Environmental Permitting Regulations 2016. This strip is required for access. The policy includes a setback requirement to ensure this access strip is not obstructed.
15. P80, 4.92, Any development in the plan area must therefore have regard to flood and erosion risk, now and in the future, by way of location and specific measures, such as additional flood alleviation, which will protect people, properties and vulnerable habitats from flooding. Recent changes to national guidance highlight the importance of considering flood risk from all sources, and this is particularly significant for the plan area as large parts of it are at risk from groundwater flooding, which needs to be recognised in development decisions alongside the well-established risks in relation to tidal, fluvial and surface water flooding. Appropriate mapping of all sources of flood risks is still evolving, and is likely to develop further over the plan period
16. P93, Policy NE20 Pollution: Development proposals must be designed to protect, and where possible, improve upon the amenities of existing and future residents, occupiers of buildings and the environment generally. Development proposals will need to address the criteria contained in, but not limited to, the policies concerning water quality; flood risk and water management; nutrient mitigation; lighting; air quality; noise; and contaminated land. Where development is likely to generate significant adverse impacts by reason of pollution, the council will require that the impacts are minimised and/or mitigated to an acceptable level within appropriate local/national standards, guidance, legislation and/or objectives.
17. P94, 4.127, Light pollution caused by excessive brightness can lead to annoyance, disturbance and impact wildlife, notably nocturnal animals. The design of lighting schemes should be carefully considered in development proposals to prevent light spillage and glare.
18. P94, 4.128, Dark skies are important for the conservation of natural habitats, cultural heritage and astronomy. The plan area includes three 'Dark Sky Discovery Site' designations, all located within the Chichester Harbour AONB; Eames Farm on Thorney Island, Maybush Copse in Chidham; and north of the John Q Davis footpath in West Itchenor. Development within or directly impacting these areas will be subject to particular scrutiny in terms of their impact on dark skies. The entire SDNPA area is also declared as an International Dark Sky Reserve. Development directly impacting this area will be subject to similar scrutiny.
19. P96, Policy NE22 Air Quality
20. P97, Policy NE-23 Noise
21. P142, Para 6.29, Amenity: Private space, shared space and the design quality and construction of communal spaces all contribute to amenity
22. P155-6, Policy P11: Conservation Areas "protecting the setting (including views into and out of the area)"
23. P55, Para 4.26 - The council is under a legal duty to protect designated habitats, by ensuring that new development does not have an adverse impact on important areas of nature conservation, and by requiring mitigation to negate the harm caused.
24. P58, Para 4.33 The council is under a legal duty to protect their designated bird populations and supporting habitats
25. P95, Para 4.129 The council has a duty to review and assess air quality within the district
26. P301, Conservation Area: An area of special architectural or historic interest, designated under the Planning (Listed Buildings & Conservation Areas) Act 1990. There is a statutory duty to preserve or enhance the character, appearance, or setting of these areas.

Change suggested by respondent:

Changes to the plan are provided below:

10.65 There are a number of site-specific issues which should be considered when planning the development and site layout in this location, including:

Taking account of the Tangmere Neighbourhood Plan including the 'One Village' aspiration to integrate the new development with the existing village, and the other design considerations contained in the Neighbourhood Plan;

Local community aspirations for new/improved facilities serving the village, including transforming the existing village centre into a local centre focused around a village main street, primary education, and enhanced recreation;

The need to addressing requirements of existing dwellings in relation to strategic infrastructure prior to development, including addressing the flooding on Church Lane, and the need for the developer to provide surface water run-off infrastructure at Saxon Meadow given that these existing dwellings rely on soak-away on the surrounding agricultural land;

The need for Southern Water to fully adopted waste water infrastructure; and the requirement for full fibre internet and modern telecommunication services to be available to residents of Saxon Meadow;

Potential physical constraints such as landscape sensitivities, particularly external views from the surrounding area including the Tangmere conservation area itself, Oving, the South Downs National Park;

High groundwater levels, particularly in the southern part of the site and Church Lane, and the need for noise mitigation measures for residential properties on the A27, for example through the use of acoustic screening;

Conserving, enhancing and better revealing the known archaeological assets within the site, to advance understanding of the significance of the assets;

Conserving and enhancing the setting of the historic village, particularly the Conservation Area and the views from within it looking out;

Appropriate separation distances from new properties, and need to avoid segmenting existing open spaces into small plots that reduce amenity value;

The archaeological and heritage assets within the surrounding area, and preserving the heritage of the World War II airfield, Commonwealth War Graves, including provision for the relocation of existing allotment space that could facilitate the expansion or relocation of the Tangmere Military Aviation Museum;

The opportunity to provide off-site green links with existing and planned development at Tangmere, and with the South Downs National Park and Chichester city, and the potential to develop strategic green infrastructure in conjunction with other planned development to the east of Chichester City;

Opportunities, in partnership with relevant authorities, to provide improved sustainable public transport routes linking the village with Chichester city, to improve cycle routes to the city, and better transport links to Barnham rail station and the 'Five Villages' area in Arun District and the reinstatement of a train stop between Oving and Tangmere on the existing train line; and

The availability of minerals in the vicinity and the need to take account of the Minerals Safeguarding Area.

Document Element: Land West of Tangmere, 10.65**Respondent:** Mr John Wolfenden [7853]**Summary:**

The 'one village' is a 'sham' as explained 10.63.

The only improvement to new facilities is two year primary school of no specified size.

A playing / recreation area needs definition there is already a recreation space.

You have ignored / forgotten increased policing required, lack of local health facilities, higher groundwater levels

Conservation area - why have rules not been expanded to new development. No dishes, aerial's, solar panels, windows facing open ground, wood burners, etc

Allotments - majority have objected, issues (sheds, poly tunnels, compost bins, cold frames, paving, ground clearance, fencing, water supply).

Change suggested by respondent:

You need to reduce the proposed from 1300 to a more sustainable and realistic increase bearing in mind the doubling of the size of the community without proper regard to infrastructure in schooling , green space, environmental impact , social impact of highly mixed lower income community with higher density and increased social issues.

This plan does not go far enough in the assurance of any of these issues.

Object

Document Element: Policy A14 Land West of Tangmere**Respondent:** Mr Gary Axon [8150]**Summary:**

The plan is not legally compliant because it is inconsistent with the Sustainability Appraisal and there is a failure to take sufficient account of the aim to achieve environmental objectives. Saxon Meadow is a conservation area and the plan does not protect or enhance this part of Tangmere with its rich heritage around the church and the old farm buildings which are now Saxon Meadow.

It is not sound as the size of the proposed development is not sympathetic to this conservation area and is extremely out of keeping with it. Not sufficient evidence of seeking alternative areas which will not impact on an area of such beauty and tranquility.

Support

Document Element: Policy A14 Land West of Tangmere

Respondent: Church Commissioners for England [1858]

Agent: Lichfields (Tara Johnston, Planner) [7506]

Summary:

CCE supports that Policy A14 is carried forward into this Local Plan to facilitate the delivery of a residential-led development of at least 1,300 dwellings.

Full text:

We write in response to the above consultation on behalf of our client, the Church Commissioners for England (CCE). CCE owns a large amount of land in the area largely to the south, west and east of Chichester.

We welcome the opportunity to further engage with the Local Plan process. Whilst we support some aspects of the Local Plan, we consider that some changes are likely to be necessary to ensure that the Plan can be found sound.

By way of background, CCE submitted several sites for consideration as part of the Housing Economic Land Availability Assessment (HELAA) in 2021. These sites were previously promoted as part of the Preferred Approach Local Plan Regulation 18 Consultation in 2019.

As part of these representations, we take the opportunity to re-promote a number of CCE's sites, which could assist the Council in delivering much needed housing for the district. CCE has updated its technical work and provide Vision Documents in relation to its landholdings in Southbourne, Oving, and Hunston Parishes to demonstrate how additional housing can be delivered. These Vision Documents are enclosed.

We consider this and other aspects of the emerging Local Plan below.

Chapter 2: Vision & Strategic Objectives

The Local Plan Vision details a positive approach to supporting sustainable development in the context of the climate emergency. CCE welcomes the Vision for Chichester, particularly the importance placed on the delivery of new homes in 'Objective 3' and the delivery of new infrastructure to support the new development in 'Objective 7'.

Chapter 3: Spatial Strategy and Settlement Hierarchy

The Spatial Strategy builds on the previous Local Plan by focussing growth on Chichester city as the main sub-regional centre. Outside Chichester city and its closest settlements, development will focus on the two settlement hubs within the east-west corridor at Tangmere and Southbourne. This approach is supported by CCE.

Policy S1 Spatial Development Strategy

Draft Policy S1 (Spatial Development Strategy) identifies the broad approach to providing sustainable development in the plan area, which includes ensuring that new residential development is distributed in line with the settlement hierarchy, with a greater proportion of development in the larger and more sustainable settlements. We support this strategy, with particular support for development at the settlement hubs of Southbourne (Policy A13) and Tangmere (Policy A14). We also support that provision is made for extant Site Allocations and the Tangmere strategic site remains allocated under draft Policy A14.

Policy A14 continues to allocate Land West of Tangmere for 1,300 dwellings. CCE questions the Council's decision to not amend the existing settlement boundary of Tangmere to include the land subject to the allocation. Without amending the settlement boundary, the future growth of Tangmere may be hindered. As such, the settlement boundary of Tangmere should be amended to include the allocated site to ensure that the plan is justified.

Draft Policy S1 also refers to development in service villages such as Bosham, Hambrook and Loxwood.

Hunston is excluded from the Spatial Strategy but is identified as a Service Village within the Settlement Hierarchy in draft Policy SP2 (Settlement Hierarchy). The draft Local Plan suggests that the allocation of homes in Hunston has been removed as a result of growth in the Manhood Peninsula. CCE acknowledges that the overall housing numbers across the district have been reduced as a result of local constraints but reiterate that their landholding in Hunston remains a suitable site for housing should the Council need to identify more land for housing. This is discussed further below.

Policy S2 Settlement Hierarchy

As stated in paragraph 3.31 of the draft local plan, 'The NPPF encourages housing delivery where it will enhance or maintain the vitality of rural communities'. Paragraph 79 of the NPPF (2021) states that 'To promote sustainable development in rural areas, housing should be located where it will enhance or maintain the vitality of rural communities. Planning policies should identify opportunities for villages to grow and thrive, especially where this will support local services. Where there are groups of smaller settlements, development in one village may support services in a village nearby'.

CCE owns substantial land holdings in South Mundham, which is in close proximity to North Mundham/Runcton which is defined as a Service Village. As such, whilst South Mundham does not contain any services, development in the hamlet would enable sustainable growth to support facilities in North Mundham and Runcton. To ensure that the draft plan is consistent with national policy, South Mundham should be considered as part of North Mundham as a Service Village when considering the future pairing/grouping of some settlements where the facilities and services could be shared to capitalise on the close connections some settlements have.

Development outside the settlements listed in the hierarchy in SP2 is restricted to proposals which require a countryside location or meet an essential local rural local need or supports rural diversification in accordance with Policy NE10. To this end, CCE has smaller land holdings in Tangmere, Oving, South Mundham, Birdham, Chidham and Sidlesham, which may be suitable for conversion for residential use or via windfall housing. Location plans for each of the sites can be found in Appendices 1-8.

Chapter 4: Climate Change and the Natural Environment

Policy NE4 Strategic Wildlife Corridors

The East of City strategic wildlife corridor has been relocated to the eastern side of proposed Site Allocation A8 (Land to the East of Chichester). The relocation of this wildlife corridor follows additional evidence that shows that the commuting route for Barbastelle Bats is along Drayton Lane.

CCE owns land to the east of Drayton Lane (immediately adjacent to the wildlife corridor and to the east of draft allocation A8) and surrounding the village of Oving. Its land has been identified in the HELAA (2021) as being developable, including site HOV0017 (Drayton Lane). The land east of Drayton Lane is sustainably located being close to Chichester and its amenities. The site provides an opportunity to sensitively and sustainably provide additional homes for the District. In accordance with Draft Policy NE4, the proposals for the Land East of Drayton Lane will not have an adverse impact on the integrity and function of the wildlife corridor and will not undermine the connectivity and ecological value of the corridor. This Vision Document will be shared under separate cover.

The eastern edge of the relocated wildlife corridor encroaches into CCE land. Any proposal on this land would be required to take the statutory protection for bats and other protected species into consideration and managed as part of a sensitive masterplan for development and on this basis, it is considered unnecessary to extend the wildlife corridor to encroach into the CCE site.

It is also considered that the detail of policy NE4 goes beyond the purpose of the policy, which should be to safeguard wildlife rich habitats and wider ecological networks. The policy is clear that development should only be permitted where it would not create an adverse effect upon the ecological value, function, integrity and connectivity of the corridors. It does not resist development in principle. This therefore makes redundant policy text 1, which seeks to introduce a sequential test for preferable sites outside of a wildlife corridor. It is considered that this test conflicts with the underlying purpose of the policy, which is to safeguard wildlife corridors from harmful impacts that cannot be mitigated, and should therefore be deleted.

Policy NE7 Development and Disturbance of Birds

CCE is broadly supportive of Policy NE7. However, they would like to note that the situation regarding the national guidance on nutrient neutrality is still evolving and therefore, this policy is only relevant to current legislation. Policy NE7 may therefore not be relevant throughout the entirety of the plan period. As such, CCE considers that it is necessary in this instance to ensure that an appropriate reference to changing legislation is included within the policy to prevent it from becoming out of date and would also ensure that the policy remains effective once adopted.

Policy NE10 The Countryside

CCE is supportive of the inclusion of a policy referencing the conversion of existing buildings in the countryside, however, we believe that Policy NE10 is not consistent with national policy. Policy NE10 criteria B states that proposals for the conversion of buildings in the countryside will be permitted where 'it has been demonstrated that economic and community uses have been considered before residential, with residential uses only permitted if economic and community uses are shown to be inappropriate and unviable'. This policy is not in accordance with Paragraph 152 of the NPPF (2021) which states that the reuse of existing resources should be encouraged, including 'the conversion of existing buildings'. Under paragraph 152, there is no prerequisite to adopt a sequential approach, or to give preference to other uses. As such, criteria B should be omitted from Policy NE10. Reference to criteria B should also be removed from criteria C.

Chapter 5: Housing

Policy H1 Meeting Housing Needs

The Preferred Approach Local Plan was based on meeting the identified objectively assessed housing needs of the plan area of 638 dwellings per annum. However, due to constraints, particularly the capacity of the A27, the Submission Version of the Local Plan has planned for a housing requirement below the need derived from the standard method. The Plan proposes to deliver 535 dpa in the southern plan area and a further 40 dpa in the northern plan area, a total supply of 10,350 dwellings over the plan period from 2021 – 2039 (575 dpa).

The Planning Inspectorate has previously asked the Council to determine what level of housing could be achieved based on deliverable improvements to the A27 and to consider whether the full housing needs could be met another way. It is acknowledged that the Council has carried out the additional work required and the local constraints have resulted in a proposed lower housing requirement.

The NPPF (2021) confirms that to determine the minimum number of homes needed, strategic policies should be informed by a local housing need assessment, conducted using the standard method in national planning guidance – unless exceptional circumstances justify an alternative approach (para. 61). CCE acknowledges that that housing numbers have been reduced as a result of local constraints and it will be down to the Inspector to determine whether the Council's exceptional circumstances justify this. Should the Planning Inspector find that the Council requires additional land to meet the housing need using the standard method, CCE's land at Southbourne, Oving, Drayton Land and Hunston are suitable, available and developable for housing. In addition, CCE's rural development sites could also contribute to meeting the housing need.

Policy H2 Strategic Allocations

Draft Policy H2 confirms that the Tangmere Strategic Development Location is carried forward from the 2015 Local Plan and this is supported by CCE. Strong support is also given for the Broad Location of Development in Southbourne (Policy A13) for up to 1,050 dwellings.

Policy H5 Housing Mix

Draft Policy H5 confirms that the housing mix for a development will be based on the most up to date HEDNA to address identified local needs and market demands. We suggest that the Council considers a range of criteria, including site characteristics, when determining the housing mix for individual sites and this should be reflected in wording of Policy H5.

Policy H7 Rural and First Homes Exception Sites

Draft Policy H7 relates to rural and first homes exception sites. CCE is supportive of the principle of the inclusion of a rural exceptions policy. However, we have concerns over criteria contained within the policy which limits the amount of development that can be delivered under it.

The NPPF (2021) at paragraph 78 states that planning policies and decisions should be responsive to local circumstances and support housing development that reflect local needs. Furthermore it also states that 'local planning authorities should support opportunities to bring forward rural exception sites that will provide affordable housing to meet identified local needs'.

The key aspect of the policy is to enable the delivery of rural exception sites which would address an identified local need. Within the policy, there is no limit on the amount of development that can be delivered and therefore, it is considered that if Policy H7 is limited to a maximum of 30 dwellings it could serve to hinder development (especially on slightly larger sites), which would otherwise be sustainable. As such, we consider that the amount of development should not be limited and rather should be dictated on a site and need specific basis. CCE considers that for Policy H7 to be positively prepared and in accordance with National Policy, criteria 2 should be removed.

In addition, criteria 6 states that proposals for affordable housing on rural exception sites will only be supported where 'the site is located adjacent or as close as possible to the existing settlement boundary and does not result in scattered or isolated development in rural areas'. The NPPF (2021) does not specify the location of rural exception sites. As such, to be consistent with national policy, criteria 6 should also be omitted.

Furthermore, Policy H7 states that 'applications for first homes exception sites that propose the inclusion of a small proportion of market housing will be expected to provide robust evidence...'

However, in the policy there is no allowance for the provision of market housing on rural exception sites in addition to first homes exception sites. As a result of this, the requirements of the policy are again not consistent with national policy. Paragraph 78 of the NPPF (2021) is supportive of 'some market housing' where it would facilitate the delivery of rural exception sites. As such, CCE considers that Policy H7 should be amended as follows:

'Applications for rural and first homes exceptions sites that propose the inclusion of a small proportion of market housing will be expected to provide robust evidence that the site would be unviable without such housing being included'.

Policy H8 Specialist Accommodation

Draft Policy H8 confirms that all housing sites over 200 units, including those allocated in this plan, will be required to provide specialist

accommodation for older people with a support or care component. We request that this policy is amended to add 'where appropriate and viable', acknowledging that viability and site-specific factors need to be taken into consideration.

Chapter 6: Place-making

Policy P3 Density

We support the objective of Draft Policy P3 (Density) to make the most efficient use of land and follow a design led approach to achieve the optimum density for a site. The Policy does not prescribe an appropriate density for the District and this is supported. However, we consider that reference should be made to the fact that density may vary depending upon site specific circumstances and could be higher where transport links and access to services is good.

Chapter 7: Employment and Economy

Policy E3 and E4 Horticultural Development

Chapter 7 of the draft Local Plan confirms that 67 hectares of land is identified to meet the future horticultural land need within four Horticultural Development Areas (HDAs) over the plan period. It is confirmed that an additional 137 hectares of horticultural land is also forecast to be required outside of HDAs to meet future need.

CCE has significant landholdings which could assist the Council in addressing the insufficient availability within the current HDAs. The CCE sites which are considered suitable for horticulture development are listed below and location plans for each of the sites can be found in Appendices 9-13.

- Somerley Farm, NE East Wittering, PO20 7JB
- Fisher Farm, South Mundham, PO20 1ND
- Church & Haise Farm, Sidlesham
- Cowdry Farm, Birdham
- Groves Farm, nr Merston, PO20 2DX / Colworth Manor Farm PO20 2DU.

CCE supports draft Policy E3 which confirms that "approximately 137 hectares of land is also needed outside of HDAs to meet anticipated horticultural and ancillary development land need for the plan period." Support is also given for draft Policy E4 in relation to land outside HDAs. This Policy confirms that proposals for horticultural development can come forward outside the HDAs, subject to a set of criteria. We would welcome continued discussion with the Council on how these sites could help meet the districts horticultural needs in the future.

Chapter 10: Strategic and Area Based Policies

CCE supports Chichester District Council's proposal to allocate additional land for housing at Southbourne and to maintain the existing allocation at Tangmere. We also consider that CCE's land at Hunston and Oving could assist the Council in meeting its housing needs, should additional housing be required. We consider these opportunities in turn below.

Policy A13 Southbourne Broad Location for Development

CCE supports draft Policy A13 and the allocation of a Broad Location for Development in Southbourne for a mixed-use form of development including 1,050 dwellings.

CCE has significant landholdings around Southbourne which is suitable, available and developable. The land to the north and west of Southbourne measures 70ha and is wholly within CCE's control. The land adjoins the existing settlement and provides an opportunity for a sustainable extension to Southbourne with the potential to deliver c. 1,200 homes for the village, as well as employment, community uses and a significant amount of new public space and green open space. A new Vision Document is enclosed which explains one way in which this opportunity could be realised. Importantly, it is considered that there are no technical impediments that would prevent development from coming forward on this site.

This site has been promoted throughout the Southbourne Neighbourhood Plan process, most recently in the December 2022 consultation. The new Vision Document demonstrates that the CCE site presents the opportunity to provide a comprehensive development that would contain strategic housing growth, significant areas of green infrastructure and open space in a sustainable location. The key access strategy for the site is to provide two new access points from the south A259 Main Road and the east Stein Road. These access points would connect to a spine road which would form a continuous vehicle route around the north-western edge of Southbourne.

The site almost entirely comprises a Secondary Support Area under the Solent Waders and Brent Goose Strategy (SWBGS), which aims to protect the network of non-designated terrestrial wader and brent goose sites that support the Solent Special Protection Areas (SPA) from land take and recreational pressure associated with new development. Due to the designation of the site, discussion was undertaken with the Hampshire and Isle of Wight Wildlife Trust with a view to determine a suitable approach for the scheme and an appropriate survey effort to establish the use of the site by designated birds. As a result of these discussions, wintering bird surveys are taking place. The aim of these surveys is to explore opportunities for mitigation for this SWBGS support area such that development within the red line can proceed without adverse impacts to the bird populations noted within this strategy. Following the survey, the results and approach will be presented to Natural England for further discussion.

In relation to viability, we note that Policy A13 sets several policy objectives for development at Southbourne. The NPPF (2021) notes that where there are up-to-date policies which have set out the contributions expected from development, planning applications that comply with them should be assumed to be viable (para. 58). With this in mind the policy objectives outlined within Policy A13 will require viability testing to be undertaken to ensure a policy compliant scheme is both viable and deliverable. This is necessary to ensure that the policy is sound.

The Policy suggests that employment opportunities are required to be delivered as part of the allocation but there is no specific reference to the amount of use required. CCE supports this proposed approach as it is sufficiently flexible to enable an amount of employment land to be proposed in response to market conditions at the appropriate time and this will help to support delivery of the allocation.

The scale of development proposed has been reduced from 1,250 to 1,050 dwellings to reflect the proportionate reduction in housing numbers across the parishes in the east west corridor as a consequence of the limit on numbers in the southern plan area. If the Inspector finds that additional housing is required, the Vision Document submitted demonstrates that the CCE site in Southbourne could deliver c. 1,200 homes and so could increase housing without needing to identify additional land for development elsewhere.

To summarise, the site could accommodate approximately 1,200 homes which could be delivered on a phased basis early in the plan period. There are no overriding physical or technical constraints that would act as an impediment to development. There is also a clear access arrangement proposed.

Policy A14 Land West of Tangmere

CCE supports that Policy A14 is carried forward into this Local Plan to facilitate the delivery of a residential-led development of at least 1,300 dwellings.

Additional sites

Hunston

CCE further promotes land (15.31ha) located east of the B2145 Selsey Road in Hunston for 240 new homes. The land is deliverable and is fully within CCE's control. The site is highly accessible, located within a maximum of 5-6 minutes walking distance to Selsey Road, where several bus routes connect the village to Chichester.

CCE notes that the Council assessed the HELAA site (ref. HHN0016) as 'developable'. A Vision Document has previously been prepared and submitted to demonstrate the commitment to it being brought forward for residential development within the plan period. This document is enclosed.

To address the Council's concerns in relation to flooding, following publication of the Chichester Strategic Flood Risk Assessment (SFRA), we have prepared an updated Flood Risk Scoping Study which provides an overview of flood risk constraints across the site from a range of sources. Various mitigation measures are recommended in line with recommendations of the Chichester SFRA and prevailing local and national guidance and best practice. With these measures in place, it is likely that the flood risk could be managed effectively in accordance with the requirements of the NPPF. Detailed data has also been requested from the Environment Agency, which will feed into further technical work that is being carried out.

Should the Inspector conclude that additional housing is required, CCE considers that their site is the most appropriate and sustainable location for development in Hunston. The site provides an opportunity to sensitively and sustainably extend the existing village boundary to provide additional homes to meet an identified housing need.

Land East of Drayton Lane

CCE owns land to the east of Drayton Lane which is bound by Tangmere Road to the north and crosses Oving Road and the railway line to the south. The site is c.1km from the centre of Chichester and comprises 49ha. The site was assessed in the HELAA 2021 as developable 'HOV0017'. A Vision Document has been prepared and was presented to the Council in 2022. This includes a detailed analysis of the site and its surroundings and provided justification as to why the site is suitable for development. This technical review of the site concludes there are no technical impediments to development.

The Vision Document demonstrates how the proposals for the land east of Drayton Lane could be developed as an extension to the draft allocation A8 (Land to the east of Chichester) for up to 700 new homes. The land east of Drayton Lane is fully within the CCE's control, is available for development now and is deliverable with some development achievable within the first five years of the plan period. It represents an opportunity to provide new homes, facilities and significant community benefits, through a sensitively designed development that integrates into the surrounding landscape.

The Vision for this site is a landscape and ecology led masterplan which would celebrate the rich wildlife characters of the different surrounding landscapes and uses the connection between countryside and community to generate its character and identity. The Vision Document demonstrates that this is a suitable location for development.

Should the Inspector conclude that additional housing is required, CCE considers that the land east of Drayton Lane would form a natural extension to allocation A8 and is an appropriate and sustainable location for new development.

Appendix C Additional Guidance

Appendix C provides additional guidance on evidence which needs to be submitted in support of certain planning applications related mainly to development in the countryside. As mentioned in the comments above provided in response to Policy NE10, there is no prerequisite contained within the NPPF (2021) that requires an applicant to demonstrate that previous uses were proven unviable prior to the conversion of a building in the countryside to residential use. As such, to be in accordance with national policy, reference to Policy NE10 should be omitted from Appendix C.

Conclusion

CCE welcomes the opportunity to comment on the Local Plan and is keen to continue to engage with the Council, especially in relation to the Broad Location for Development in Southbourne. CCE is supportive of the Council's aspirations in the Local Plan. However, the changes set out above are considered likely to be necessary to ensure the plan is sound.

CCE is a considerable landowner in Chichester with land largely to the south, west and east of Chichester which could assist the Council in meeting their housing and development needs throughout the plan period.

Object

Document Element: Policy A14 Land West of Tangmere**Respondent:** Mrs A Cobby [5712]**Summary:**

Not sound as current predictions relating to the housing market have not been taken into consideration. Current BOE base rate of 4% expected to rise further on 23 March. Further increases in 2023 will further depress the housing situation.

The development proposed is 46 times larger than the 28 dwellings of Saxon Meadow. This would seriously impact the area i.e. detrimental effect on surface water, drainage, traffic already congested roads and completely blight this conservation area. I therefore consider proposal not legally compliant.

Object

Document Element: Policy A14 Land West of Tangmere**Respondent:** Ms Lindsay Davey [7844]**Summary:**

21 metre minimum separation distance as per Policy P6 would impact health and wellbeing, property value, conservation area and biodiversity.

Full text:

See representation

Change suggested by respondent:

- Reduce and or alter the housing density of the propose plan in the south/south east area of the [Tangmere] development so to enable more green space to be created.

- Shift the proposed housing in the south/south-east area further south towards the Tangmere Road and this increase the greenspace border between the housing and Saxon Meadow.

The above would all help to reduce the detrimental amenity impact and help redress the damage to outlook and views to and from Saxon Meadow residences, health and well being and sense of enclosure. It would extend and expand the greenspace/corridors around the Conservation Area this help reducing the negative effects to wildlife/biodiversity.

5576

Object

Document Element: Policy A14 Land West of Tangmere**Respondent:** Mr Roger Downham [8158]**Summary:**

CDC would appear to be proposing 30% more homes which would compromise leaving a natural strategic gap between the current development and the village of Tangmere. Specifically, the are of Saxon meadow and the church forms a natural and historical barrier that conserves a band of bio-diverse old countryside. Without this, wildlife, ecosystems, and the identity of a village with intact historical boundaries, buildings, aesthetics and air force history would be endangered and become part of an unstoppable sprawl continuous with Chichester. This would also negatively effect the value of my property. It could also negatively impact my health due to increased air pollution, loss of exercise and recreation space and increased light pollution.

Full text:

See attached representations.

Change suggested by respondent:

No development on land owned or in current use by residents of Saxon Meadow - plot 9 and 7. Particularly the field west of Saxon Meadow. Limited development on other areas. To make it legally compliant and sound a suggestion is:

Increased level of consultation with the residents of Saxon meadow. Otherwise adequate engagement with the public is not being fulfilled.

Object

Document Element: Policy A14 Land West of Tangmere**Respondent:** Forestry Commission (Richard Cobb) [8202]**Summary:**

Forestry Commission provides advice, does not support or object.

The requirement for significant levels of green infrastructure is welcome. This policy could be strengthened by requiring development to retain and bolster existing hedgerows and trees wherever possible.

Full text:

Please note that as a Non-Ministerial Government Department, we provide no opinion supporting or objecting to planning applications or local plans including their soundness or legal compliance.

Rather we are including advice and information that we advise the Council consider to ensure their pre-submission local plan avoids potential impacts and promote enhancements/expansion as part of the proposed local plan regarding trees and woodland, including ancient woodland. We acknowledge that the purpose of Regulation 19 consultations does not usually extend to making substantial changes which are not related to soundness so we offer our advice as helpful guidance to ensure the local plan takes every opportunity to secure the protection, enhancement and expansion of Chichester's valuable trees and woodlands to comply with planning policy, good practice and to make the most of the many benefits they provide to the environment, local economy and community.

Overall Comments

Ancient woodlands, veteran and ancient trees are irreplaceable habitats, and it is essential that they are considered appropriately to avoid any direct or indirect effects that could cause their loss or deterioration, in line with Government Standing Advice. Ancient Woodland has very high potential ecological value and should act as integral focal points, alongside other locally and nationally designated sites, as part of delivering landscape scale nature recovery.

Any development or plan that include these irreplaceable habitats on or near to the site should aim to deliver high standards of net gains and ecological connectivity that supports wider ecological networks, in line with good practice. This will also be a requirement as part of the local nature recovery strategies being driven by the Environment Act 2021 and we advise that plans should anticipate this to maximise environmental benefits to contribute to reversing the national trend of ecological decline as part of broader nature recovery networks. The Local Plan should be considered as a crucial and timely opportunity to secure significant and strategic, plan-led environmental gains due to their scope and scale, particularly given the timescales of development being influenced that coincide with UK Government commitments regarding halving emissions and protecting 30% of nature by 2030, towards a net-zero carbon and nature positive economy.

The development strategy should prioritise the protection of trees and woodlands with the highest priority being given to ancient woodland, ancient and veteran trees as individual habitats and as part of wider ecological networks.

Site Allocation comments:

Policy A7 Land at Shopwyke (Oving Parish)

Site specific considerations could recognise the existing trees, hedgerows and woodland and prioritise their protection, enhancement and expansion as part of biodiversity net gains. Acoustic screening referred to could also use trees to make the most of multi-functional benefits they bring.

Policy A8 Land East of Chichester

We welcome efforts to bolster the existing woodland and the proposed strategic wildlife corridor to the East and the enhancements that development could bring.

Policy A11 Highgrove Farm, Bosham

Bolster planting to North, South and East is welcome. This policy could be improved by requiring bolster planting to the West as well, where there appears to be an existing line of trees, making it well placed to further contribute to wider connectivity with existing and additional planting.

Policy A12 Chidham and Hambrook and Policy A13 Southbourne Broad Location for Development

We note that more detailed proposals will emerge as part of a Neighbourhood plans. We would like to highlight that this area contains some parcels of ancient woodland which is an irreplaceable and high priority habitat according to the NPPF and Government Policy (see attached Annex and below for more guidance on this). The policy could be improved by highlighting its importance and high priority as part of efforts to protect, enhance, expand and connect habitats as part of a wider ecological network and the strategic wildlife corridor. Developments within this area could contribute pockets of woodland and linear planting to help connect existing trees and woodland as part of a mosaic of habitats throughout the wildlife corridor and wider area. The requirement to ensure development does not have an adverse impact on the strategic wildlife corridor is also welcome but could be strengthened by requiring developments to significantly contribute to its enhancement, expansion and connectivity including with green infrastructure provided by development

Policy A14 Land West of Tangmere

The requirement for significant levels of green infrastructure is welcome. This policy could be strengthened by requiring development to retain and bolster existing hedgerows and trees wherever possible.

Policy A16 Goodwood Motor Circuit and Airfield and Policy A17 Development within the vicinity of Goodwood Motor Circuit and Airfield

This policy could be improved by recognising the significant amount of ancient woodland and non-ancient woodland to North of the area. We would encourage any development in the area to protect, enhance and expand the woodland in the area as part of delivering net gains.

Policy A21 Land east of Rolls Royce

This area contains areas of existing trees, hedgerow and woodland which are not currently mentioned by the policy. We would encourage any development to be sensitive to this and provide additional planting where possible.

Overarching comments

We would welcome the consideration of incorporating large and small pockets of multi-functional woodland as part of green infrastructure provision for development, particularly given the relatively low proportion of woodland found throughout the District, and the benefits this can have as 'stepping stones' between habitats as part of the Local Plan's welcome vision of strategic wildlife corridors.

We also encourage the Council to appraise the plan against the following advice to maximise the benefits from protection, enhancement and expansion of woodlands, trees and connectivity throughout the District:

Additional improvements to consider

- Tree/hedgerow removal is considered as a last resort but where it is justified, we advise that developments can aim to deliver no net deforestation to help encourage development that provides an overall environmental gain. Where trees are required to be removed, additional tree planting will be made to compensate for this loss and we would advise that additional planting should be made to help compensate for the loss of habitat in the time it takes for new trees to mature.
- Long term management and maintenance of planted trees and woodland creation to give them every chance to becoming established and where trees do fail, they are replaced
- A minimum standard for tree canopy cover for new developments (e.g. for large-scale developments) as it provides a targetable level of green infrastructure in relation to trees for the numerous ecosystem services they provide.
- Precautions should be incorporated into any woodland design and tree planting to ensure that habitat creation is established successfully and that potential impacts from deer are managed on site and in the surrounding area as appropriate. See here for further guidance that should be followed for managing impacts from deer as part of woodland creation and tree planting: <https://www.gov.uk/government/publications/woodland-creation-and-mitigating-the-impacts-of-deer/woodland-creation-and-mitigating-the-impacts-of-deer> Some good practice advice is also provided in Appendix 1 of this letter.
- We advise that any tree planting should meet the following:
 - o Trees should be healthy and good practice biosecurity should be followed to prevent the risk of spreading pests and disease, in line with Government

advice: <https://www.gov.uk/government/collections/tree-pests-and-diseases>. More information on the plant healthy can be found at: Welcome to Plant Healthy - Plant Healthy

o Created or restored habitat should be managed in perpetuity in line with a robust management plan that follows good practice to ensure assumed benefits of created habitats are delivered in practice (see Standing Advice referred to on page 1). We recommend meeting the UK Forestry Standard to demonstrate this.

- To help mitigate climate and support local economy would urge council to develop local plan policy that makes use of locally sourced timber. This has multiple benefits as it can help store carbon within development, reduce impact from transportation, reduce embodied carbon from alternative materials and support local economies and communities.
- Where developments incorporate District Heating, consider locally and sustainably sourced wood-fuels for the benefits this can have for renewable energy and towards a local, circular economy
- Use tree planting as part of nature based solutions for managing flood risk as well as other multi-functional benefits from green infrastructure as part of any development (e.g. Trees and woodlands provide £400 million of value in flood protection)
- We encourage the Council to refine their strategy to trees and woodlands using the recently launched 'Trees and Woodland Strategy Toolkit' available here: <https://treecouncil.org.uk/what-we-do/science-and-research/tree-strategies/> to design and deliver a local tree strategy to harness the long-term benefits that trees can bring to local communities. The local plan should be developed with tree/woodlands in mind as an integral part, alongside other supplementary strategies for the environment including biodiversity, green infrastructure, nature recovery and climate change.

Key guidance regarding trees, woodland and development

Ancient woodlands, ancient trees and veteran trees are irreplaceable habitats. Paragraph 180(c) of the NPPF sets out that development resulting in the loss or deterioration of irreplaceable habitats should be refused unless there are wholly exceptional reasons and a suitable compensation strategy exists. In considering the impacts of the development on Ancient Woodland, Ancient and Veteran trees, the planning authority should consider direct and indirect impacts resulting from both construction and operational phases.

Please refer to Natural England and Forestry Commission joint Standing Advice for Ancient Woodland and Ancient and Veteran Trees, updated in January 2022. The Standing Advice can be a material consideration for planning decisions, and contains advice and guidance on assessing the effects of development, and how to avoid and mitigate impacts. It also includes an Assessment Guide which can help planners assess the impact of the proposed development on ancient woodland or ancient and veteran trees in line with the NPPF.

Existing trees should be retained wherever possible, and opportunities should be taken to incorporate trees into development. Trees and woodlands provide multiple benefits to society such as storing carbon, regulating temperatures, strengthening flood resilience and reducing noise and air pollution.[1] Paragraph 131 of the NPPF seeks to ensure new streets are tree lined, that opportunities should be taken to incorporate trees elsewhere in developments, and that existing trees are retained wherever possible. Appropriate measures should be in place to secure the long-term maintenance of newly planted trees. The Forestry Commission may be able to give further support in developing appropriate conditions in relation to woodland creation, management or mitigation.

Biodiversity Net Gain (BNG): Paragraph 174(d) of the NPPF sets out that planning (policies and) decisions should minimise impacts on and provide net gains for biodiversity. Paragraph 180(d) encourages development design to integrate opportunities to improve biodiversity, especially where this can secure net gains for biodiversity. A requirement for most development to deliver a minimum of 10% BNG is expected to become mandatory from November 2023. The planning authority should consider the wide range of benefits trees, hedgerows and woodlands provide as part of delivering good practice biodiversity net gain requirements. Losses of irreplaceable or very high distinctiveness habitat cannot adequately be accounted for through BNG.

Change suggested by respondent:

This policy could be strengthened by requiring development to retain and bolster existing hedgerows and trees wherever possible.

[DUPLICATION OF 5584 - NE5]

The plan is not legally compliant because it does not protect or enhance the natural environment in the proposal to include the access from Saxon Meadow to Church Lane as it does not allow a 15 metre buffer zone from veteran trees. It would also require the removal of the pond. [see attached representation].

Document Element: Policy A14 Land West of Tangmere**Respondent:** Richard Hedgecock [8159]**Summary:**

There is 'over development' as stated in the sustainability assessment (p90) which makes the Local Plan not legally compliant. Tangmere Parish Council has the figure of [unclear] houses in the village of Tangmere as a whole at 1156. The sheer number of proposed houses (increased to 1300) is disproportionate and excessive - it will increase the number of houses in one area by over double. This is an overdevelopment and not in keeping or sympathetic with an area which has conservation status.

Full text:

Executive Summary

The Local Plan as written lacks ambition and vision, and will be detrimental to the landscape within which the district lies. It is a plan borne out of a need to produce a legal document which will satisfy the regulatory authorities. In terms of Urban Planning it fails "To meet the needs of the present without compromising the ability of future generations to meet their own needs" (NPPF).

The development that will consequentially arise from the deployment of such a made Local Plan is not sustainable. It will adversely affect the Character, Amenity and Safety of the built environment, throughout our district.

In particular, the Local Plan is inadequate for the needs of the people in the district both at present and in the future because –

1. It has been written in advance of the District having a properly formed and agreed Climate Emergency Action Plan. It is inconceivable that such a key document will not shape our Local Plan. It is this Action Plan that is needed first in order to provide the long-term strategic view as to how and what the District will look like in the future; this, in turn, will help form and shape the policies outlined in any prospective, Local Plan. The Plan as proposed is moribund, as a result of "cart before the horse" thinking.

2. The Local Plan as written does not adequately address how infrastructure, transport and services are going to be materially and strategically improved to meet the predicted growth and shift to a significantly ageing population. There is presently insufficient capacity to supply services and to have adequate people and environmentally friendly connectivity, as a direct result of decades of neglect towards investing in infrastructure and services to meet the needs of the District's population. We are led to believe that developers through increased levies in order to gain permission to build will fulfil this need, but all that this will result in is an uncoordinated, dysfunctional mess completely lacking in any future-proof master planning approach. We contend that this will do nothing for the quality of life of Chichester District residents and it will create a vacuum whereby few if indeed any can be held accountable or indeed found liable for shortcomings in the future.

3. The Local Plan as written does not state how it will go about addressing the need to create affordable homes. The District Council's record on this matter since the last made plan has been inadequate and now the creation of affordable homes has become urgent as political/economic/social factors drive an ever increasing rate of change within the District.

4. Flood risks assessments used in forming the Plan are out of date (last completed in 2018) and any decision to allocate sites is contrary to Environment Agency policy. Additionally, since March 2021 Natural England established a position in relationship to 'Hold the Line' vs. 'Managed Retreat' in environmentally sensitive areas, of which the Chichester Harbour AONB is a significant example. CDC have failed to set out an appropriate policy within the proposed Local Plan that addresses this requirement.

5. The A27 needs significant investment in order to yield significant benefits for those travelling through the East-West corridor; this is unfunded. Essential improvements to the A27 are key to the success of any Local Plan particularly as the city's ambitions are to expand significantly in the next two decades. But any ambitions will fall flat if the A27 is not improved before such plans are implemented.. The A259 is an increasingly dangerous so-called 'resilient road' with a significant increase in accidents and fatalities in recent years. In 2011, the BBC named the road as the "most crash prone A road" in the UK. There is nothing in the Local Plan that addresses this issue. There is no capacity within the strategic road network serving our district

to accommodate the increase in housing planned, and the Local Plan does not guarantee it.

6. There is insufficient wastewater treatment capacity in the District to support the current houses let alone more. The tankering of wastewater from recent developments that Southern Water has not been able to connect to their network and in recent months the required emergency use of tankers to pump out overflowing sewers within our City/District reflects the gross weakness of short-termism dominated thinking at its worst and is an indictment of how broken our water system is. The provision of wastewater treatment is absolutely critical and essential to the well-being of all our residents and the long-term safety of our built environment. The abdication by those in authority, whether that be nationally, regionally or locally, is causing serious harm to the people to whom those in power owe a duty of care and their lack of urgency in dealing properly with this issue is seriously jeopardizing the environment in which we and all wildlife co-exist.

7. Settlement Boundaries should be left to the determination of Parish Councils to make and nobody else. The proposed policy outlined in the Local Plan to allow development on plots of land adjacent to existing settlement boundaries is ill-conceived and will lead to coalescence which is in contradiction of Policy NE3.

8. All the sites allocated in the Strategic Area Based Policies appear to be in the majority of cases Greenfield Sites. The plan makes little, if any reference to the development of Brownfield sites. In fact, there is not a Policy that relates to this source of land within the Local Plan as proposed. Whilst in the 2021 HELAA Report sites identified as being suitable for development in the District as being Brownfield sites were predicted to yield over 4000 new dwellings. Why would our Local Plan not seek to develop these sites ahead of Greenfield sites?

9. The Local Plan does not define the minimum size that a wildlife corridor should be in width. What does close proximity to a wildlife corridor mean? How can you have a policy (NE 4) that suggests you can have development within a wildlife corridor? These exceptions need to have clear measures and accountability for providing evidence of no adverse impact on the wildlife corridor where a development is proposed. Our view is quite clear. Wildlife and indeed nature in the UK is under serious and in the case of far too many species, potentially terminal threat. Natural England has suggested that a Wildlife Corridor should not be less than 100metres wide. The proposed Wildlife Corridors agreed to by CDC must be enlarged and fully protected from any development. This is essential and urgent for those Wildlife Corridors which allow wildlife to achieve essential connectivity between the Chichester Harbour AONB and the South Downs National Park.

10. Biodiversity Policy NE5 - This is an absolute nonsense. If biodiversity is going to be harmed there should be no ability to mitigate or for developers to be able to buy their way out of this situation. This mindset is exactly why we are seeing a significant decline in biodiversity in the District which should be a rich in biodiversity area and why the World Economic Forum Report (2023) cites the UK as one of the worst countries in the world for destroying its biodiversity.

11. In many cases as set out in the Policies the strategic requirements lack being SMART in nature – particularly the M Measurable. These need to be explicit and clear: “you get what you measure”.

12. 65% of the perimeter of the District of Chichester south of the SDNP is coastal in nature. The remainder being land-facing. Policy NE11 does not sufficiently address the impact of building property in close proximity to the area surrounding the harbour, something acknowledged by the Harbour Conservancy in a published report in 2018 reflecting upon how surrounding the harbour with housing was detrimental to its long-term health. And here we are 5 years on and all of the organizations that CDC are saying that they are working in collaboration with, to remedy the decline in the harbour's condition, are failing to implement the actions necessary in a reasonable timescale. CDC are following when they should be actually taking the lead on the issue. Being followers rather than leaders makes it easy to abdicate responsibility. There must be full and transparent accountability.

13. The very significant space constraints for the plan area must be taken into account. The standard methodology need no longer apply where there are exceptional circumstances and we are certain that our District should be treated as a special case because of the developable land area is severely reduced by the South Downs National Park (SDNP) to the north and the unique marine AONB of Chichester Harbour to the south. A target of 535dpa is way too high. This number should be reduced to reflect the fact that only 30% of the area can be developed and much of that is rural/semi-rural land which provides essential connectivity for wildlife via a number of wildlife corridors running between the SDNP and the AONB. Excessive housebuilding will do irretrievable damage to the environment and lead to a significant deterioration in quality of life for all who reside within the East / West corridor.

14. Many of the sites identified in the Strategic & Area Based Policies could result in Grade 1 ^ 2 farmland being built upon. The UK is not self-sufficient in our food security. It is short-sighted to expect the world to return to what we have come to expect. Our good quality agricultural land should not all be covered with non-environmentally friendly designed homes.

Respondent: National Highways (Mr Marius Pieters, Spatial Planning Manager) [8127]

Summary:

[National Highways letter dated 24/07/23 confirmed representation should be categorised as Comment - Noting the need for master-planning and collaboration]. Reinforce that a master planning process presents an opportunity for the Council, and early consultation/working with key stakeholders, to

- consider traffic associated with the developments using, accessing, and exiting the A27
- consider viable alternatives to the private car and the possible travel routes
- understand future infrastructure requirements
- develop a package of mitigation measures with detailed costing
- utilise Travel Plan monitoring strategies triggered through phased development
- collect appropriate mitigation funding

Full text:

We have reviewed the publicly available Local Plan documents and provided comments in the attached letter, in relation to the transport implications of the plan for the safety and operation of the SRN.

Our comments include issues to resolve, comments, requests for further information and recommendations. A brief summary of our main comments are:

- the reliance on the delivery of the A27 Chichester bypass improvements project.
- the requirements for new, additional, and adapted processes and assessments, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments.

- collaborative working between agencies in combination with a robust monitor and manage policy.

We hope our comments assist.

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders. We look forward to continuing to participate in future consultations and discussions. Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Background

National Highways has been appointed by the Secretary of State for Transport as strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the strategic road network (SRN).

National Highways is responsible for operating, maintaining, and improving the Strategic Road Network (SRN) i.e., the Trunk Road and Motorway Network in England, as laid down in Department for Transport (DfT) Circular 01/2022 (Strategic Road Network and the delivery of sustainable development).

The SRN is a critical national asset and as such we work to ensure that it operates and is managed in the public interest, both in respect of current activities and needs as well as in providing effective stewardship of its long-term operation and integrity.

Our responses to Local Plan consultations are guided by relevant policy and guidance including the National Planning Policy Framework (2021) (NPPF):

- Transport issues should be considered from the earliest stages of plan-making and development proposals so that the potential impact of development on transport networks can be addressed (para 104).
- The planning system should actively manage patterns of growth such that significant development is focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. (para 105).
- Planning policies should be prepared with the active involvement of highways authorities and other transport infrastructure providers so that strategies and investments for supporting sustainable transport and development patterns are aligned. (para 106).
- In terms of identifying the necessity of transport infrastructure, NPPF confirms that development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe. (para 111).
- Planning policies and decisions should support development that makes efficient use of land, taking into account the availability and capacity of infrastructure and services – both existing and proposed – as well as their potential for further improvement and the scope to promote sustainable travel modes that limit future car use. (para 124).

In relation to the tests of soundness set out at paragraph 35 of the NPPF, in the context of transport, these are interpreted as meaning:

- a) Positively prepared - has the transport strategy been prepared with the active involvement of the highway authorities, other transport infrastructure providers and operators and neighbouring councils?
- b) Justified – Is the transport strategy based on a robust evidence base prepared with the agreement in partnership, or with the support of the highway authorities?
- c) Effective – Does the transport strategy and policy satisfy the transport needs of the plan and is it deliverable at a pace which provides for and accommodates the proposed progress and implementation of the plan?
- d) Consistent with national policy – Does the transport strategy support the economic, social, and environmental objectives of the Plan and the NPPF/NPPG?

We will be concerned with proposals that have the potential to impact on the safe and efficient operation of the SRN; in this case, the A27 trunk road (Chichester Bypass and its junctions) which is the main access route in the Chichester area. We have particular interest in any allocation, policy or proposals which could have implications for the A27 and the wider SRN network. We are interested as to whether there would be any adverse road safety or operational implications for the SRN. The latter would include a material increase in queueing or delay or reduction in journey time reliability during the construction or operation of the development set out in the plan.

National Highways is a key delivery partner for sustainable development promoted through the plan-led system, and as a statutory consultee we have a duty to cooperate with local authorities to support the preparation and implementation of development plan documents.

In accordance with national planning and transport policy and our operating licence, we are entirely neutral on the principle of development as it is for the local planning authority to determine whether development should be allocated or permitted; albeit it must comply with national policy on locating development in locations that are or can be made sustainable. Therefore, while always seeking early and fulsome engagement with local plans and/or developers, we will simply be assessing the transport and related implications of plans or proposals and agreeing any necessary transport improvements and relevant development management policy.

In progressing Local Plans, we will seek to agree the following:

- Assessment tools and methodology
- Baseline Assessment i.e., to demonstrate that the assessment tool accurately reflects current transport conditions
- Comparator case assessment i.e., to forecast the transport conditions that would occur in the absence of the plan
- Forecast modelling i.e., to forecast the transport conditions that would arise with the plan in place, this will include an assessment at the end of the Plan period; and, if required, at full build out if that occurs after the end of the Plan period
- Outputs and outcomes of modelling, demonstrating, as appropriate, what transport infrastructure is necessary to support the plan o It should be noted that a suite of transport modelling tools may be required. This includes strategic modelling covering an area at least one major junction beyond the district boundary, localised network modelling where several links/junctions are close together and/or individual junction modelling
 - o A DMRB (Design Manual for Roads and Bridges) compliancy assessment may also be required for certain highway features, such as Merge/Diverge assessment at Grade separated junctions, link capacity assessments, and others.
- The design of any necessary transport infrastructure, to an extent suitable for establishing deliverability during the plan period at the time that it becomes necessary for the purpose of ensuring that unacceptable road safety impacts or severe operational impacts do not arise as a result of development. This may be to at least General Arrangement design stage or preliminary design stage. Whichever degree of detail is agreed, the products must be in full compliance with the DMRB.
- Industry standard transport intervention costings.
- The delivery/funding mechanisms for necessary transport interventions. It should not be assumed that National Highways will have any responsibility to identify or deliver necessary transport interventions.
- If considered appropriate, a "Monitor & Manage" (M&M) framework, aimed at managing the pace of development in line with the pace of funding and delivery of necessary highway interventions in a manner which responds to the realworld impacts of development may be agreed for inclusion in the plan subject to the adequacy of risk control measures included therein. This can include the move from a 'predict & provide' style of delivery to 'a vision

& validate' style. o Any M&M framework must be based on a "worst case scenario" whereby necessary mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. It must be translated into development management plan policy and policy relating to development allocations.

Further detail on the above can be provided by National Highways.

While ideally all the above should be agreed prior to the Submission of the Local Plan for examination, we recognise that this is not always possible. However, all parties should work towards all matters being agreed and reflected in a Statement of Common Ground (SoCG) by the start of the Local Plan Examination at the latest. Ideally the SoCG between the Council and National Highways would be prepared well in advance of plan submission in order to guide resource input and to track progress towards final agreement on all relevant matters starting from the earliest plan iterations until the final version is agreed.

It is acknowledged that Government policy places much emphasis on housing delivery as a means for ensuring economic growth and addressing the current national shortage of housing. The NPPF is very clear that:
"Strategic policy-making authorities should establish a housing requirement figure for their whole area, which shows the extent to which their identified housing need (and any needs that cannot be met within neighbouring areas) can be met over the plan period."

However, new DfT C1/22 and the NPPF are equally clear that any development, including housing delivery, must be tempered by the requirement to ensure that the associated transport demand can be accommodated without unacceptable impacts on the safety of the SRN or severe impacts on the operation of the SRN including reliability and congestion. Therefore, as necessary and appropriate, any plan and/or development must be accompanied by suitable mitigation in the right places at the right time, that is to the required design standards and is deliverable in terms of land availability, constructability and funding.

We would also draw your attention to the then Highways England document 'The Strategic Road Network, Planning for the Future: A guide to working with National

Highways on planning matters' (September 2015). This document sets out how National Highways intends to work with local planning authorities and developers to support the preparation of sound documents which enable the delivery of sustainable development.

https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/461023/N150227_-_Highways_England_Planning_Document_FINAL-lo.pdf

Responses to Local Plan consultations are also guided by National Planning Policy Framework (NPPF) revised on 20 July 2021 which sets out the government's planning policies for England and how these are expected to be applied.

Updated Circular (01/2022)

It should be noted that since the start of the Local Plan consultation process, on the 23 December 2022, the Department for Transport released a new circular on the 'Strategic road network and the delivery of sustainable development' (Circular 01/2022), which replaces all of the policies in Circular 02/2013 of the same name. These representations take account of the new circular and the requirements in terms of the Local Plan evidence base and process.

We request that the Local Plan is prepared in line with all aspects of the new circular. Particularly, the principles of sustainable development (paragraphs 11 to 17), new connections and capacity enhancements (paragraphs 18 to 25), and engagement with plan-making (paragraphs 26 to 38).

Regulation 18 submission

In our Regulation 18 submission we noted several matters including:

- The need to mitigate the adverse impacts of strategic development traffic to the A27 Chichester Bypass and its junctions at Portfield Roundabout, Bognor Road Roundabout, Whyke Roundabout, Stockbridge Roundabout and Fishbourne Roundabout and Oving junction.
- The need to identify a mechanism to calculate contributions towards the delivery of the previously agreed Local Plan A27 improvements
- The need to confirm the number of dwellings needed within the plan period
- The need to establish National Highways acceptance of the traffic model reference and future case scenarios
- The need to confirm costs, viability, and funding associated with mitigating the safety and congestion impacts of the development included within the plan.

Local Plan context

This Local Plan (Chichester Local Plan 2021 – 2039), prepared by the Local Planning Authority (LPA) Chichester District Council, sets out the vision for future development in the district and will be used to help decide on planning applications and other planning related decisions including shaping infrastructure investments.

The draft sets out how the district should be developed over the next 18-years to 2039 including for the full Plan period (1 April 2021 to 31 March 2039) the total supply of

- 10,359 dwellings

- 114,652 net additional sqm new floorspace

Minus the completions this is equivalent to around 530 dwellings and 6,150 sqm of floorspace a year.

National Highways Representations

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders.

We have undertaken a review of the Chichester Local Plan 2021-2039 proposed submission version and accompanying evidence documents, our comments are set out in the tables below (following pages). [see table within attachment]

Summary

We have reviewed the publicly available Local Plan documents and provided comments above in relation to the transport implications of the plan for the safety and operation of the SRN. We understand that other technical information is available, but this was not presented as part of this consultation. Chichester, and the A27, are already heavily congested, infrastructure in the existing Local Plan remains undelivered and the growth set out in the new Plan will further increase travel demand.

As presented, satisfying the transport needs of the plan is clearly reliant on the delivery of the A27 Chichester bypass improvements project. The A27 Chichester bypass improvements project is one of 32 pipeline schemes being considered for possible inclusion in National Highways third Road Investment Strategy (RIS3) covering 1 April 2025 to 31 March 2030.

On 9 March 2023 the UK Transport Secretary ensured record funding would be invested in the country's transport network, sustainably driving growth across the country while managing the pressures of inflation. The announcement cited the A27 Arundel Bypass as being deferred from RIS2 to RIS 3 (covering 2025-2030). The transport secretary also identified a number of challenges to the delivery of the road investment strategy and cited the benefit of allowing extra time to ensure schemes are better planned and efficient schemes can be deployed more effectively.

At present, there is no commitment by DfT to carry out the A27 Chichester bypass improvements project. Until the A27 Chichester bypass

improvements project is published in the RIS3, consented and a decision to invest is made it cannot be assumed to be a committed project. We note that the Plan does not address any uncertainty of delivery of the A27 Chichester bypass improvements project and we strongly recommend that there is either no reliance placed on RIS3 to realise capacity for growth in the Plan or that contingency measures are included to cover the eventuality that RIS3 funding is not forthcoming within the plan period. It is not clear that the potential impact of development on transport networks can be addressed in the absence of the A27 Chichester bypass improvements project. Achieving net zero, reducing emissions reduction, acting on climate, and supporting thousands of new homes and new employment developments will be problematic with existing processes. New, additional, and adapted processes and assessments will likely be required, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments. We acknowledge that change is complex, expensive, and time-consuming, especially for smaller district level Councils. But the hard work will deliver benefits for the Council and residents in the longer-term. National Highways seeks to continue working with the Council and WSCC to progress coordinated and deliverable packages of interim mitigation measures and alternative transport solutions while a long-term strategic solution is considered by government. This must however be in combination with a robust monitor and manage policy that appropriately manages the risk of unacceptable road impacts resulting from new housing and other development over the Plan period.

We have been in discussion with Chichester District Council regarding their proposed Monitor and Manage Strategy. At present, we do not consider the current strategy to be robust and we seek further information and detail especially on who, when and when monitoring and management will be undertaken. Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas. Any M&M framework must be based on a "worst case scenario" whereby necessary transport mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. The M&M framework must set out that the alternative to mitigation not being delivered is that development does not proceed where that development would give rise to unacceptable road safety risk or severe cumulative impacts on the road network in the absence of that mitigation. The M&M framework must be translated into development management plan policy and policy relating to development allocations.

As we have reiterated throughout our comments, we welcome the opportunity to work with you to address these outstanding matters and we will continue to liaise over submitted Transport Assessment, Travel Plan policy and Monitor and Manage Policy to help to work towards a viable plan. We hope our comments assist.

We look forward to continuing to participate in future consultations and discussions. Please do continue to consult us as the Plan progresses so that we can remain aware of, and comment as required on, its contents.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

4321

Object

Document Element: Policy A14 Land West of Tangmere

Respondent: Mr Matthew Rees [7841]

Summary:

Para 5 of page 256 it is not legally compliant in reference to "community orchard". The policy deprives residents of amenity value of the wildflower meadow and is incompatible with para 629 and it does not promote health and wellbeing (sustainability requirement), it is not sound nor justified because it could become a source of anti-social behaviour causing detriment to Saxon Meadow residents. It is not justified because there are no private gardens for the 28 dwellings and a more appropriate plan is to support allotment holders to cultivate fruit trees in the proposed site for allotments if they so desire.

The plan is not justified or legally compliant because there are missing references to Policy P11, in relation to the protection of the setting and views into and out of the area, and there are not sufficient provisions to ensure sufficient separation distances between Saxon Meadow and the new homes, or how the site plan will protect existing views to Chichester, Oving and the South Downs.

Full text:

There is much to commend in this document and the supporting technical documents that accompany it, and I have listed in the appendix to this letter 26 such paragraphs and policies. I am happy for my support to be registered against these sections of your consultation document. There is also much upon which I must represent a concern, so I attach representations relating to 22 paragraphs or policies.

I am happy to participate in a hearing session, and I would flag at this stage that the common theme that links all of these representations is the need to safeguard the natural and built environment in and around Saxon Meadow, Tangmere from the risks of unsustainable development, I consider that the independent examiner should focus their review on the aspects of the local plan that relate to this matter.

Appendix 1: list of policies that I support

1. P14, 1.23, 1.24: Duty to cooperate
2. P24, para 2.30 "the council declared a climate emergency in July 2019"
3. P24, para 2.32 – "all proposal for new development should be considered in the context of a climate emergency"
4. P30: Objective 2: natural environment: "development will achieve net gains in biodiversity"
5. P43, 4.1 "National policy promotes increasing energy efficiency, the minimisation of energy consumption and the development of renewable energy sources"
6. P43, 4.3: "Some renewable energy projects provide significant opportunities to enhance biodiversity"
7. P53, Policy NE5: Biodiversity and Biodiversity Net Gain
8. P62, Para 4.42: Hedgerows and some types of woodlands are identified as a priority habitat
9. P62, Policy NE8: Proposals should have a minimum buffer zone of 15 metres from the boundary of ancient woodland or veteran trees to avoid root damage (known as the root protection area)
10. P68, Policy NE10: Criteria for Development in the Countryside - Does not prejudice viable agricultural operations or other viable uses
11. P80, Para 4.91: There are serious concerns about the impact of flooding, both in respect of current properties at risk but also the long-term management of the area.
12. 4.92: any development in the plan area must therefore have regard to flood and erosion risk.
13. 4.94: built development can lead to increased surface water run-off; therefore, new development should include SuDS to help cope with intense rainfall events
14. P81, Para 4.96: Environment Agency consent is required for any works within 16 m of tidal waters and 8m of fluvial watercourses in line with the Environmental Permitting Regulations 2016. This strip is required for access. The policy includes a setback requirement to ensure this access strip is not obstructed.
15. P80, 4.92, Any development in the plan area must therefore have regard to flood and erosion risk, now and in the future, by way of location and specific measures, such as additional flood alleviation, which will protect people, properties and vulnerable habitats from flooding. Recent changes to national guidance highlight the importance of considering flood risk from all sources, and this is particularly significant for the plan area as large parts of it are at risk from groundwater flooding, which needs to be recognised in development decisions alongside the well-established risks in relation to tidal, fluvial and surface water flooding. Appropriate mapping of all sources of flood risks is still evolving, and is likely to develop further over the plan period
16. P93, Policy NE20 Pollution: Development proposals must be designed to protect, and where possible, improve upon the amenities of existing and future residents, occupiers of buildings and the environment generally. Development proposals will need to address the criteria contained in, but not limited to, the policies concerning water quality; flood risk and water management; nutrient mitigation; lighting; air quality; noise; and contaminated land. Where development is likely to generate significant adverse impacts by reason of pollution, the council will require that the impacts are minimised and/or mitigated to an acceptable level within appropriate local/national standards, guidance, legislation and/or objectives.
17. P94, 4.127, Light pollution caused by excessive brightness can lead to annoyance, disturbance and impact wildlife, notably nocturnal animals. The design of lighting schemes should be carefully considered in development proposals to prevent light spillage and glare.
18. P94, 4.128, Dark skies are important for the conservation of natural habitats, cultural heritage and astronomy. The plan area includes three 'Dark Sky Discovery Site' designations, all located within the Chichester Harbour AONB; Eames Farm on Thorney Island, Maybush Copse in Chidham; and north of the John Q Davis footpath in West Itchenor. Development within or directly impacting these areas will be subject to particular scrutiny in terms of their impact on dark skies. The entire SDNPA area is also declared as an International Dark Sky Reserve. Development directly impacting this area will be subject to similar scrutiny.
19. P96, Policy NE22 Air Quality
20. P97, Policy NE-23 Noise
21. P142, Para 6.29, Amenity: Private space, shared space and the design quality and construction of communal spaces all contribute to amenity
22. P155-6, Policy P11: Conservation Areas "protecting the setting (including views into and out of the area)"
23. P55, Para 4.26 - The council is under a legal duty to protect designated habitats, by ensuring that new development does not have an adverse impact on important areas of nature conservation, and by requiring mitigation to negate the harm caused.
24. P58, Para 4.33 The council is under a legal duty to protect their designated bird populations and supporting habitats
25. P95, Para 4.129 The council has a duty to review and assess air quality within the district
26. P301, Conservation Area: An area of special architectural or historic interest, designated under the Planning (Listed Buildings & Conservation Areas) Act 1990. There is a statutory duty to preserve or enhance the character, appearance, or setting of these areas.

Change suggested by respondent:

Text below should be added and policies adjusted or implemented accordingly

Policy A14

Subject to an evaluation of the economic, social and environmental benefits of safeguarding 73 hectares of land to the west of Tangmere to provide agriculture and / or viticulture / horticulture, the residual parcel of land to the west of Tangmere is allocated for residential development of not more than 1,000 dwellings, community facilities and open space. If development were to proceed in this location it will be expected to address the following site-specific requirements:

1. Be planned as an extension to Tangmere village, that is well integrated with the existing village and provides good access to existing facilities
2. A range of types, sizes and tenures of residential accommodation to include specific provision to meet specialised housing needs, including accommodation for older people;
3. Incorporate new or expanded community facilities, including transforming the existing village centre into a new local centre providing new village centre amenities and not reduce any of the existing amenities enjoyed by existing residents including the right of way to their properties and their meadow;
4. Make provision to accommodate a new two-form entry primary school and associated development, including provision for an early years setting and a special support centre. Further land shall be safeguarded to facilitate the potential expansion of the two-form entry primary school to three-form entry;
5. Incorporate open space and green infrastructure, including parks, playing pitches, sports pavilion and new allotments and community orchard located adjacent to the allotments and, for the avoidance of doubt, not on the land owned by Saxon Meadow Tangmere Ltd, enabling the relocation of the existing allotments at the Tangmere Military Aviation Museum.
6. Make provision for green links to Tangmere village, and the South Downs National Park and Chichester city. Opportunities should be explored for provision of integrated green infrastructure in conjunction with the other strategic sites to the east of the city;
7. Respect important existing views of Chichester Cathedral spire and reduce any impact on views from within the South Downs National Park, particularly sensitive locations such as the Tangmere conservation area itself, views of St Andrews Church Oving from Saxon Meadow, the Trundle and Halnaker Hill and protect the setting, including views into and out of the Tangmere conservation area, consistent with policy P11.
8. Subject to detailed transport assessment, provide primary road access to the site from the slip-road roundabout at the A27/A285 junction to the west of Tangmere providing a road link with no direct link to Tangmere Road to respect policies NE23, NE20, P16. Development will be required to provide or fund mitigation for potential off-site traffic impacts through a package of measures in conformity with Policy TI (Transport Infrastructure) and T2 (Transport and Development);
9. Make provision for improved sustainable travel modes between Tangmere and Chichester city, in partnership with relevant authorities, including improved and additional cycle routes linking Tangmere with Chichester city, Shopwhyke and Westhampnett. Opportunities should also be explored for improving transport links with the 'Five Villages' area and Barnham rail station in Arun District; and CDC work with relevant authorities to deliver the reinstatement of a train stop to serve Tangmere and Oving on the existing rail line.
10. Conserve or enhance the heritage and archaeological interest of the site, the historic village and its setting (particularly that of the Conservation Area which includes a meadow that will not be divided into smaller lots) and the World War II airfield, Commonwealth War Graves and other commemorative structures, including making provision for the relocation of existing allotment space to facilitate the potential expansion or relocation of the Tangmere Military Aviation Museum;
11. Occupation of development will be phased to address the existing issues of flooding at Church Lane, and requirements of existing dwellings, particularly in relation to drainage infrastructure at Saxon Meadow which must be improved by the developer given that these dwellings rely on soakaway across agricultural land for run-off. Strategic infrastructure will also include full adoption by Southern Water of the wastewater infrastructure at Saxon Meadow, and align with the delivery of infrastructure for adequate wastewater conveyance and treatment to meet strict environmental standards;
12. Proposals for the development should have regard to the West Sussex County Council Minerals Safeguarding Area and associated guidance.

Object

Document Element: Policy A14 Land West of Tangmere

Respondent: Mr Matthew Rees [7841]

Summary:

[DUPLICATION OF 4104]

Plan not sound as:

- i) does not reference HRA findings in relation of foraging distances of barbastelle bats (up to 20km)
- ii) Policy A14 (Land West of Tangmere) within foraging range of barbastelle bats from Singleton Tunnels (12km buffer).

Full text:

There is much to commend in this document and the supporting technical documents that accompany it, and I have listed in the appendix to this letter 26 such paragraphs and policies. I am happy for my support to be registered against these sections of your consultation document. There is also much upon which I must represent a concern, so I attach representations relating to 22 paragraphs or policies.

I am happy to participate in a hearing session, and I would flag at this stage that the common theme that links all of these representations is the need to safeguard the natural and built environment in and around Saxon Meadow, Tangmere from the risks of unsustainable development, I consider that the independent examiner should focus their review on the aspects of the local plan that relate to this matter.

Appendix 1: list of policies that I support

1. P14, 1.23, 1.24: Duty to cooperate
2. P24, para 2.30 "the council declared a climate emergency in July 2019"
3. P24, para 2.32 – "all proposal for new development should be considered in the context of a climate emergency"
4. P30: Objective 2: natural environment: "development will achieve net gains in biodiversity"
5. P43, 4.1 "National policy promotes increasing energy efficiency, the minimisation of energy consumption and the development of renewable energy sources"
6. P43, 4.3: "Some renewable energy projects provide significant opportunities to enhance biodiversity"
7. P53, Policy NE5: Biodiversity and Biodiversity Net Gain
8. P62, Para 4.42: Hedgerows and some types of woodlands are identified as a priority habitat
9. P62, Policy NE8: Proposals should have a minimum buffer zone of 15 metres from the boundary of ancient woodland or veteran trees to avoid root damage (known as the root protection area)
10. P68, Policy NE10: Criteria for Development in the Countryside - Does not prejudice viable agricultural operations or other viable uses
11. P80, Para 4.91: There are serious concerns about the impact of flooding, both in respect of current properties at risk but also the long-term management of the area.
12. 4.92: any development in the plan area must therefore have regard to flood and erosion risk.
13. 4.94: built development can lead to increased surface water run-off; therefore, new development should include SuDS to help cope with intense rainfall events
14. P81, Para 4.96: Environment Agency consent is required for any works within 16 m of tidal waters and 8m of fluvial watercourses in line with the Environmental Permitting Regulations 2016. This strip is required for access. The policy includes a setback requirement to ensure this access strip is not obstructed.
15. P80, 4.92, Any development in the plan area must therefore have regard to flood and erosion risk, now and in the future, by way of location and specific measures, such as additional flood alleviation, which will protect people, properties and vulnerable habitats from flooding. Recent changes to national guidance highlight the importance of considering flood risk from all sources, and this is particularly significant for the plan area as large parts of it are at risk from groundwater flooding, which needs to be recognised in development decisions alongside the well-established risks in relation to tidal, fluvial and surface water flooding. Appropriate mapping of all sources of flood risks is still evolving, and is likely to develop further over the plan period
16. P93, Policy NE20 Pollution: Development proposals must be designed to protect, and where possible, improve upon the amenities of existing and future residents, occupiers of buildings and the environment generally. Development proposals will need to address the criteria contained in, but not limited to, the policies concerning water quality; flood risk and water management; nutrient mitigation; lighting; air quality; noise; and contaminated land. Where development is likely to generate significant adverse impacts by reason of pollution, the council will require that the impacts are minimised and/or mitigated to an acceptable level within appropriate local/national standards, guidance, legislation and/or objectives.
17. P94, 4.127, Light pollution caused by excessive brightness can lead to annoyance, disturbance and impact wildlife, notably nocturnal animals. The design of lighting schemes should be carefully considered in development proposals to prevent light spillage and glare.
18. P94, 4.128, Dark skies are important for the conservation of natural habitats, cultural heritage and astronomy. The plan area includes three 'Dark Sky Discovery Site' designations, all located within the Chichester Harbour AONB; Eames Farm on Thorney Island, Maybush Copse in Chidham; and north of the John Q Davis footpath in West Itchenor. Development within or directly impacting these areas will be subject to particular scrutiny in terms of their impact on dark skies. The entire SDNPA area is also declared as an International Dark Sky Reserve. Development directly impacting this area will be subject to similar scrutiny.
19. P96, Policy NE22 Air Quality
20. P97, Policy NE-23 Noise
21. P142, Para 6.29, Amenity: Private space, shared space and the design quality and construction of communal spaces all contribute to amenity
22. P155-6, Policy P11: Conservation Areas "protecting the setting (including views into and out of the area)"
23. P55, Para 4.26 - The council is under a legal duty to protect designated habitats, by ensuring that new development does not have an adverse impact on important areas of nature conservation, and by requiring mitigation to negate the harm caused.
24. P58, Para 4.33 The council is under a legal duty to protect their designated bird populations and supporting habitats
25. P95, Para 4.129 The council has a duty to review and assess air quality within the district
26. P301, Conservation Area: An area of special architectural or historic interest, designated under the Planning (Listed Buildings & Conservation Areas) Act 1990. There is a statutory duty to preserve or enhance the character, appearance, or setting of these areas.

Change suggested by respondent:

To make this sound, add text to 4.32 as follows:

The Mens, Ebernoe Common and Singleton & Cocking Tunnels SACs are designated habitats for their Bechstein's and barbastelle bat populations. Applicants intending to submit proposals for development within the functionally linked conservation zones, as specified in the policy, should have regard to the Draft Sussex Bat Special Area of Conservation Planning and Landscape Scale Enhancement Protocol (Natural England, 2018), or any subsequent equivalent document, and Policy NE6. It is noted that the masterplan relating to Tangmere is less than 12km from Singleton tunnel. "Barbastelle bats are known to travel substantial distances from their roosts to feeding sites. A study on barbastelle bats determined that home range distances show considerable inter-individual differences, with bats traveling between 1 and 20km to reach their foraging areas" (para 3.40, HAR), which means that the land to the west of Tangmere is within their foraging range.

Object

Document Element: Policy A14 Land West of Tangmere

Respondent: Mrs Elspeth Rendall [8164]

Summary:

Object on grounds that planned pavilion and houses will block views to South Downs (see attached photo); alter nature of conservation area; para 10.64 inconsistent with policy P11; negative impact on tranquility and quietness currently enjoyed; doesn't comply with NE24; concerns re; parking for pavilion.

Full text:

The planned sports pavilion (please see attached map where it is marked with a blue star) and houses will entirely block views to the South Downs as will the proposed house building. The pavilion and houses will entirely block the view from my property that we currently enjoy of the South Downs (see attached photo of sunset view). This will entirely alter the nature of the conservation area around Saxon Meadow and the ambience around the historical saxon church of St Andrews. Paragraph 10.64 is inconsistent with Policy P11 (conservation area) in this regard. The pavilion being placed where it is and its height will impact negatively on the current tranquillity and quietness that residents currently enjoy and is not in keeping with Policy NE24 (noise pollution). Indeed the peacefulness surrounding Saxon Meadow at the moment is important for residents' mental health and anti-stress stress management. One of the reasons I moved from London was to reduce stress.

This current quiet and calmness around Saxon Meadow is in keeping with the commonwealth war graves in the church yard of St Andrews church and I feel that it would be disrespectful to those laying at rest to have this tranquillity destroyed. Visitors frequently visit the graves out of respect for relatives.

I am also concerned as to where all those visiting the pavilion will park.

Change suggested by respondent:

Pavilion should be moved to a location where there are existing parking facilities – could be moved to the lake which would be an appropriate location to encourage water sports etc. Reduce height of pavilion and reduce number of houses. Ideally do not build houses to block view and move their location to more urban rather than semirural location of this part of Tangmere. Extend South Downs National Park to take in Tangmere and Oving.

Object

Document Element: Policy A14 Land West of Tangmere**Respondent:** Mrs Elspeth Rendall [8164]**Summary:**

Policy P11 protects views into and out of an area, in this case, the area is Saxon meadow, a designated conservation area. Plan is not legally compliant as it fails to take into account protection of existing views which include views that take in Chichester cathedral spire, Oving church spire and south downs. Sheer density, proximity and positioning of new builds will block these views so Policy P11 has not been satisfied. (see photos and diagram in attachment)

Full text:

Policy P11 protects views into and out of an area, in this case, the area is Saxon meadow a designated conservation area. The plan is not legally compliant as it fails to take into account properly the protection of the existing views which include views that take in Chichester cathedral spire, Oving church spire and the south downs. The sheer density, proximity and positioning of the new builds will block these views so

Policy P11 has not been satisfied. (please see photos of views of Oving church spire and south downs and the graphic diagram which shows with black arrows the views that should be protected for the plan to be fully compliant.)

Change suggested by respondent:

Views of Chichester cathedral spire, Oving church Spire and south downs are within conservation area and should be protected. Saxon meadow is within a conservation area, this should be extended to protect these views and the open space which surrounds them. This would make plan compliant with P11. Alternative more appropriate brownfield sites should be used rather than destroying historical views. Saxon meadow is set within a semi-rural area – maintain rural surroundings and do not build on good agricultural land. Council needs to select existing sites that are brownfield and urban -what about the city centre of Chichester – all those unused shops and buildings post covid?

Object

Document Element: Policy A14 Land West of Tangmere**Respondent:** Mrs Elspeth Rendall [8164]**Summary:**

CPO legally flawed. Both CPOs not required for proposed building. Access to Saxon Meadow for residents and visitors unlawful and incorrect use of CPO powers. CPO for meadow to west will deprive residents of open space; unjustified "land grab". See plans and photos accompanying submission.

Full text:

I think that the CPO is legally flawed. My understanding is that a CPO is a last-ditch process where it is deemed to be in the public interest and is needed for the proposed building. Both CPOs (the piece of land at the entrance of Saxon Meadow) and the Meadow land (behind Saxon Meadow to the west) are NOT required for the proposed building.

In respect of the access (it is the ONLY access) to Saxon Meadow for residents and visitors I think this would be deemed unlawful and an incorrect use of the powers for which CPOs were designed. Why? Because if it were to proceed as on the plans how can denying access to residents to their own properties be deemed to be in the public interest?

The CPO in relation to the meadow (to the west) will deprive residents of an open space which is used for the residents social activities and relaxation and provides an important amenity to residents who do not have their own designated gardens. We are in the process of reintroducing our bee hives and creating a wildflower meadow to create bio diversity and a beautiful space for residents to relax and enjoy – important for their well-being and mental health.

Putting half of the meadow under a CPO is effectively a cynical and unjustified "land grab", I suspect to justify the requirement of a certain percentage of the obligatory "green space" in a building plan which is over densely populated with houses – up 30% from 1000 to 1,300 (more than double of the entire housing currently in the village of Tangmere.) This piece of land (half the meadow) is not needed for building.

Please see two plans and photos of the access and meadow (to the west).

Change suggested by respondent:

Access road from Church Lane into Saxon Meadow should NOT be included in planned development. Meadow should also NOT be included (or half of it) should not be included in the planned development. Neither are a pre-requisite to planned building. Neither of these two "land grabs" is legally compliant so the only way to make them legally compliant is for them not to happen and the CPOs to fall away.

Legally compliant: No**Sound:** Not specified**Comply with duty:** Not specified**Attachments:** Supporting Document - <https://chichester.oc2.uk/a/szy>

5636

Object

Document Element: Policy A14 Land West of Tangmere

Respondent: Mrs Elspeth Rendall [8164]

Summary:

Object on grounds that CPO of access to Saxon Meadow is unsound; proposed removal of mature trees and pond for cycle route/highway from entrance via Church Lane to Saxon Meadow poses threat to wildlife; potential noise and disturbance of tranquillity of area; Council has duty to protect conservation areas.

Full text:

The CPO of the access to Saxon Meadow is unsound and I think it is linked to the unsound proposed location of a cycle route /highway from the entrance via Church Lane to Saxon Meadow to behind no 28 Saxon Meadow which will necessitate taking out mature trees and a pond which encourages insects, birds etc. The proposed cycle path /highway will cut through Tangmere village's "historic core". You might as well rip the heart out of the village.

Currently there is a small pathway behind number 28 Saxon Meadow used by residents of Saxon Meadow and the village of Tangmere to access the fields for walking, dog walking, flying model aircraft etc. and this is in keeping with the rural tranquillity of Saxon Meadow and its recognised status as a conservation area. Whilst I appreciate that other modes of transport other than cars should be encouraged and I am all for cycles being part of this, the proposed positioning of the cycle route/highway is unsound given that it will disturb wildlife habitats, necessitate the taking down of mature trees including a willow tree and the filling up of the pond next door to the church. It will cause noise and disturb the tranquillity of the area around Saxon Meadow and the churchyard of St Andrews Saxon Church where there are important world war II graves which should be treated with the respect they are due.

I think this is one of the reasons behind a cynical land grab by virtue of a CPO which cannot be demonstrated to be in the public interest given the negative impact it will have on Tangmere's designated conservation area. The council is under a duty to protect its conservation areas.

Change suggested by respondent:

Proposed location of cycle path/ highway should not be where it is currently proposed but should be moved to a location outside the conservation area and the "historic core" of Tangmere village along Church Lane and Saxon Meadow. Better location would be either along Malcolm Road where there are existing village services and amenities or around the edge of Tangmere village.

The CPO of the piece of land at the entrance to Saxon Meadow should not form part of the CPO and that should fall away.

Legally compliant: Not specified

Sound: No

Comply with duty: Not specified

Attachments: Supporting Document - <https://chichester.oc2.uk/a/szm>

5635

Object

Document Element: Policy A14 Land West of Tangmere**Respondent:** Mrs Elspeth Rendall [8164]**Summary:**

Object on grounds that Council has ignored and disregarded Character Appraisal for Tangmere; Commonwealth graves situated in St Andrew's Churchyard deserve to be surrounded with tranquillity and treated with respect; links with WW11, the battle of Britain and Douglas Barder should be noted; Farm land and historic views both into and out of Saxon Meadow should be protected (including views of spires of linked churches); rural nature around church lane - its wide open vistas and arable farm land should be "preserved and protected".

Full text:

Local authorities are required by law to preserve or enhance their Conservation Areas and part of that is to process is the production of a character appraisal to explain what is important about the area. I think that policy 11 has not been legally complied with as the council has failed in that its building plan fails to "preserve and enhance" its conservation area. In fact, far from being legally compliant, the council has ignored and disregarded the Character Appraisal carried out for it which concludes: "that the most significant features of the Tangmere Conservation Area are:

- Tranquil and rural character of the earlier historic core along Church Lane." (see relevant marked page from the Character appraisal) and extract from page 10 Tangmere Conservation Area (character appraisal and management proposals 2014)

The heritage of the "historic core" centres around the Saxon church (mentioned in the Domesday Book) and its immediate environs i.e. Saxon Meadow and the fields surrounding it and Saxon Meadow.

The commonwealth graves situated in St Andrew's Churchyard are of national importance and deserve to be surrounded with tranquillity and treated with respect. The links with WW11, the battle of Britain and Douglas Barder should be noted.

The views into and from Saxon Meadow include wide open farmland with vistas that include Oving Church Spire and Chichester Cathedral spires, as well as the South Downs. This farm land and the historic views within in both into and out of Saxon Meadow are worth saving and protecting for future generations. Indeed, the Saxon church of St Andrew's Tangmere has an historical link with St Andrew's Church, Oving which is situated along Church Lane in Oving. The fact that you can see the spire of the linked churches i.e from Oving you can see Tangmere church spire and vice versa is of import as there is an historical link between the two churches.

The rural nature of the historic tangmere around church lane, its wide open vistas and good arable farm land should be "preserved and protected" not destroyed. The plan is in total contrast this legal duty. The size, density and proximity of the buildings in a rural setting is unsympathetic and will destroy what I would have thought a conservation area was established to preserve.

For the reasons above the plan is also unsound.

See extracts and photos

Change suggested by respondent:

Move away from conservation area otherwise Council will be acting unlawfully. To protect and preserve the views, farmland and rural nature of historic Tangmere, the conservation area needs to be extended to incorporate Tangmere and Oving.

Object

Document Element: Policy A14 Land West of Tangmere**Respondent:** Stagecoach South (Rob Vince) [8141]

Summary:

Stagecoach strongly supports the principle of intensifying the level of development at the Strategic Development Location already identified and allocated West of Tangmere in the existing Local Plan.

Land West of Tangmere is not served by any existing regular bus services. Rather, an entirely new bus service corridor is anticipated to operate in the near term from Chichester through Tangmere and beyond towards Barnham. This would serve proposed allocations A7, A8 and West of Tangmere (A14) included in the draft Plan.

Initiating this service will be costly and will in large measure be funded not by developer contributions, but by DfT monies awarded through the West Sussex Bus Service Improvement Plan. It is crucial this service is both sustainable in the longer term without revenue support, and that the success of the service can be built on by scalable frequency improvements as strategic development comes forward in both Chichester District and in Arun District.

This demands measures to effect safe, direct and swift operation of the service especially within the city centre, where it approaches and crosses the A27 at Oving crossroads and on the eastern fringes of the District east and west of Tangmere. Without these measures, bus journey time and reliability will be severely compromised and the impact of this service to damped car trip demands will be very substantially compromised. No such measures are proposed in the draft plan or its evidence base.

However, in common with all the other proposed allocations, the plan proposes no specific measures to provide, much less improve public transport or other sustainable modes to the site. This leaves the draft plan out of conformity with NPPF, especially paragraphs 104-106. The plan is inadequately evidenced and to the degree that public transport measures are identified and emergent, their successful implementation in the near and longer term will be jeopardised without clear measures to provide a safe as well as efficient bus route towards BEW and the Five Village area within Arun. The Duty to Cooperate is not effectively met and effective cross boundary collaboration on these strategic issues through the review of LSS is not demonstrated, despite the current version which identifies the issues.

Chichester District Local Plan 2039 – Pre-Submission (Regulation 19) Consultation

1. Introductory Comments

Stagecoach South is the main commercial public transport operator across Chichester District. The Company has headquarters in the city, which is also the principal public transport hub for the District and it's rather wider travel-to-work area encompassing much of the Arun District. Our services extend throughout and beyond the District boundaries, as far as Littlehampton, Midhurst, Havant and Portsmouth. The vast majority of services operate on a commercial basis – that is to say, sustained by passenger use and fare revenue, including concessionary reimbursement.

While the role of the railway is significant in much of the District, especially the east-west Coastway line, yet bus services account for more boardings locally than the railway, with Chichester depot services carrying over 3.5m passengers each year.

Unlike bus services in other parts of the country, the local network has recovered strongly after the pandemic with fare-paying passenger numbers over 95% of 2019 levels, albeit with concession patronage somewhat lower. This has helped secure not only a stable but growing bus network even during this period of rapidly rising operational costs, avoiding the need for the service contractions seen in other regions. Indeed, during the second quarter of 2023 Stagecoach will invest £5.5m in brand-new vehicles for high-profile coastal Service 700 – one of the largest vehicle investments for Stagecoach Group this year.

Our services are therefore critical to existing and future local connectivity. As the Plan acknowledges, mobility demands do not respect planning authority boundaries. The role of our services is especially high to settlements in the broad A27 corridor, within the District and beyond. This includes major settlements in Arun District such as Pagham and suburban Bognor Regis, where bus is the only mass public transport option. As the Council is well aware, there is an even higher level and rate of committed development envisaged in these locations in the Arun District Local Plan than in Chichester.

It is already evident to the planning authorities, West Sussex County Council and National Highways, as proprietor of the A27 Trunk Road, that accommodating growing mobility demands across Chichester District and especially around Chichester itself, is becoming increasingly challenging to the point of being seriously problematic.

Stagecoach has a particular interest in this Plan arising from:

- The already clear and highly deleterious impact of congestion affecting our operations and their reliability and attractiveness to the public. The effects of these on the approaches to Chichester, and around the A27 bypass are especially severe. If public transport is to retain its existing role – even before the needs of any meaningful growth both in Chichester and neighbouring authorities is considered, are considered – the Council and the Highways Authority need to arrive at clearly-defined measures to protect buses from chronic delay and the damaging impacts arising from the lack of bus network resilience and customer journey times.
- In connection with the above, the need to properly consider the predictable impacts of committed development in Arun District on the transport network and in particular the operation of bus services. The duty to cooperate on cross-border strategic matters is not limited merely to accommodating housing requirements.
- The fact that our entire business premises and operational base at Chichester is the subject of allocation for redevelopment within the Plan period. Specifically, this includes our Head Office, the Bus Station as the operational hub of the network and the key interchange for passenger journeys – including those that involve the railway – and the bus depot required to support the entire operation. Notwithstanding many years of discussions, there is as yet no agreed deliverable strategy to replace these facilities either in the Draft Plan or elsewhere.

Stagecoach broadly supports the vision and priorities of the draft plan. In most respects, Stagecoach supports strongly the spatial strategy and the identified site allocations that flow from it, and the evidence.

However, it has serious concerns about the soundness of the plan as proposed for submission, for important regards outlined in this response. These are made in the light of requirements set by the National Planning Policy Framework (NPPF), in particular at paragraphs 15 and 16; 35, 105-109 inclusive and having due regard to the need for allocations to satisfy 110-112 inclusive in due course as development permission is sought; and paragraph 174.

Paragraph 16c) of NPPF makes plain that strategic plans and policies should “be shaped by early, proportionate and effective engagement between plan-makers and communities, local organisations, businesses, infrastructure providers and operators and statutory consultees” (our emphasis). This makes plain that collaborative and ongoing involvement of public transport operators is both necessary, and separate and in addition to the engagement with statutory consultees. This has not taken place.

Para 1.25 of the draft plan states that “the council has engaged constructively, actively and on an ongoing basis with other local authorities and organisations to address key strategic matters.” Despite the requirements in NPPF and contrary to the statement made, Stagecoach has not been approached or involved in a meaningful, collaborative or ongoing way in the preparation of the Plan.

Our main concerns centre around the fact that the plan strategy is neither backed by sufficient transport evidence. Even more importantly, the plan

relies on a wholly car-based transport mitigation strategy despite policy stating that this is not the case, and the track record of the existing Local Plan, based on a very similar strategy, that has failed to bring forward meaningful mitigations to date to prevent traffic conditions substantially worsening. There is no support in policy for the achievement of the Strategic Objectives in the Plan. Nor is there definition of any measures in the 2023 Transport Study to make provision for sustainable transport infrastructure or services – much less materially improve them.

Finally, to the extent that updated transport evidence has been provided in the form of the 2023 Chichester Transport Study, arising from updated traffic modelling, it does not support the contention that highways capacity constraints on and around the A27 justify not meeting the objectively-assessed development needs of the area, as the draft plan contends.

2. Vision and Strategic Objectives

2.1. Issues and Opportunities

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant, proportionate and up to date evidence

Stagecoach recognises the important role of the West Sussex and Greater Brighton Strategic Planning Board which agreed a Local Strategic Statement (LSS2) in early 2016 to identify spatial planning issues across the wider area. This established strategic priorities and policies to guide longer term strategic growth in a coordinated and well considered matter. This institutional framework and the purpose of the LSS is a highly significant one and is at the heart of efforts to properly fulfil the statutory Duty to Co-operate, including with regard to strategic infrastructure issues, as NPPF requires.

Given the long period of time elapsed since the 2018 Reg 18 consultation and the already very clear constraints on strategic infrastructure capacity, it is of great concern to Stagecoach that the LSS2 has not been updated to reflect emerging issues in the intervening period. A review and update of the LSS2 has only just commenced. This includes a study of projected housing and employment needs, transport impact, infrastructure and spatial options to deliver the required development in the period after 2030. This Chichester District draft plan covers a period extending to 2039 – therefore well beyond 2030 and the nominal currency of LSS2.

However, infrastructure needs are pressing today. Stagecoach is presented with severe highway operational problems on a near-daily basis. During the winter of 2022-23 we have, for example, seen key road links impacted for many weeks by acute disruption arising from flood events. Unpredictable, but seemingly more-frequent, exogenous events expose a lack of resilience in the highway network around Chichester and its travel-to-work area. However, serious, chronic, unpredictable delay has been normalised over recent years, with peak-time congestion having quickly returned after the pandemic. The existing development strategy has failed to bring forward measures having any impact on this to date, and key commitments – notably at west of Chichester Phase 2 and at Tangmere – have yet to commence to further aggravate the issue.

We have no confidence in the transport mitigations proposed in the existing Local Plan and LSS2 being sufficiently effective, even if deliverable at all. Indeed, the existing adopted Local Plan does little more than make vague speculations about the sustainable transport measures that might be achievable. The draft local plan review is no different. It has no ambitions at all for sustainable modes and thus, makes no meaningful provision to meet them.

This is especially relevant in light of the fact that the approach to resolving issues on the A27 around Chichester that were anticipated in 2015-16 have fallen away. LSS2 is thus currently inadequate to act as a part of an up-to-date, proportionate, and relevant evidence base for the Plan.

An update of a traffic model lies at the heart of a 2023 Chichester Transport Study. This talks no account of the existing role of non-car modes, nor can it do so. It is unable to properly evaluate the nature of problems or solutions that involve public transport, or for that matter, other sustainable modes.

Therefore, we consider that the combination of committed and additional development needs that must be accommodated over the whole plan period between 2022 and 2039, in both the Chichester and Arun Districts, require a “first principles” review. This must be based on a refreshed transport evidence baseline of no earlier than 2022 – given that the effects of COVID distort 2020-22 – and the transport infrastructure and service requirements to sustainably support those needs.

Key issues – including substantial changes with regards to transport issues and challenges, as well as potential solutions – thus do not form part of the evidence base that steers this plan. Given long term changes in travel patterns, and mode share that took place during COVID, as well as a local and national policy context that seeks to radically reduce and then eliminate transport-related carbon emissions, this is especially problematic.

The specific problems of congestion and network resilience that are evident on the A27 and the approaches to Chichester remain a set of especially difficult problems that disproportionately affect the efficiency, reliability and attractiveness of the bus network, that evidently demand larger-scale strategic responses involving multiple stakeholders, including bus operators.

Where the effects of development on the national Strategic Roads Network (SRN) are concerned, the approach of National Highways to addressing and responding to the mobility needs of development has now substantially changed following the promulgation of the DfT Written Ministerial Statement LTN01/22. This makes it clear that adding highways capacity is no longer the first or only strategy that should be pursued, but one subordinate this to maximising the potential of non-car modes and sustainable travel.

“Effective and ongoing collaboration” on transport matters has not led to solutions being agreed and published for public scrutiny as part of the plan evidence base. Whatever the approach to modelling and “highways improvements” that may be agreed or pending agreement with the County Highways Authority and National Highways, Stagecoach is neither participant or sighted. This is despite the clear requirements set out in NPPF Para 106 b) that “Planning policies should ... be prepared with the active involvement of local highways authorities, other transport infrastructure providers and operators and neighbouring councils, so that strategies and investments for supporting sustainable transport and development patterns are aligned.” (our emphasis).

We therefore consider that the Council has failed to comply with the requirements of NPPF paragraph 25 and 26 that “relevant bodies” are involved in plan-making, especially with regard to addressing the needs for infrastructure. Public transport services and the infrastructure that supports its operation and use clearly fall within matters relevant to plan-making. This is explicit in NPPF Chapter 9 and indeed within the plan itself – for example reference to public transport and sustainable modes in the Vision for the plan.

It should be stressed that the Regulation 18 “Preferred Approach” consultation took place in December 2018 – over 4 years ago and prior to COVID, based on LSS2. The inordinate length of time that has elapsed between the Regulation 18 and Regulation 19 stages greatly challenges the LSS2 and other parts of the evidence base, especially as the pause straddles the COVID epidemic. That would include the transport modelling baseline, and key assumptions in any traffic modelling that took place prior to mid-2022, which is a point at which a reasonable “new normal” post-COVID might be considered to have become established. In that period, Arun District has also adopted its own Local Plan development strategy that accommodates an unprecedented quantum of development immediately east and south-east of the District Boundary – creating additional substantial transport impacts directly affecting the A27 and multiple major approaches to Chichester crossing it.

The established mechanism to fulfil the Duty to Co-operate has thus not operated effectively. The Plan is not founded on a relevant, proportionate and up-to date evidence base and is thus inadequately justified.

2.2. Spatial Portrait

The spatial portrait is generally succinct and accurate. However, it makes no mention of road-based public transport, the role of the City as a public transport hub, or the range of bus services that provide local connectivity (Section 2.4 and 2.5). The complete concentration of post-16 education in the City itself as just one example of the peculiarities of transport demands in the area, is not highlighted, though this has a profound influence on peak time travel demands affecting the most congested parts of the highway network. Among other things, the role of bus services in supporting the educational system of the plan area is very great indeed.

The potential role of bus in addressing the already-severe transport problems of the plan area and beyond seems entirely overlooked. The spatial portrait is thus clearly inadequate and incomplete.

2.3. Strategic Objectives

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Chapter 9 of NPPF and paragraphs 104 and 105 in particular require that plans should:

"Transport issues should be considered from the earliest stages of plan-making and development proposals, so that:

- a) the potential impacts of development on transport networks can be addressed;
- b) opportunities from existing or proposed transport infrastructure, and changing transport technology and usage, are realised – for example in relation to the scale, location or density of development that can be accommodated;
- c) opportunities to promote walking, cycling and public transport use are identified and pursued;
- d) the environmental impacts of traffic and transport infrastructure can be identified, assessed and taken into account – including appropriate opportunities for avoiding and mitigating any adverse effects, and for net environmental gains;...

...The planning system should actively manage patterns of growth in support of these objectives. Significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. This can help to reduce congestion and emissions, and improve air quality and public health..."

The Strategic Objectives do not conform with NPPF in these foundational requirements adequately, to transparently steer the plan strategy. They should therefore be amended to read:

"Plan to provide local infrastructure to support new development and seek opportunities to address existing identifiable infrastructure problems deficits, such as in particular those relating to the A27 and its junctions and wastewater treatment."

Paragraph 2.36 states, in the context of the Climate Emergency and the National Trajectory to "Net Zero" that "The council will enable the delivery of infrastructure, jobs, accessible local services and housing for future generations while protecting, conserving and enhancing the historic and natural environment."

Naturally, we support this intent.

However, there is no acknowledgement of the role current patterns of transport use contribute to carbon emissions, nor that substantial mode shift is necessary to address sustainably an acute lack of capacity on the local network and the SRN, especially around Chichester. This is especially concerning as the basic conceptual link is not made between the fact that the greatest such problems lie on the A27 corridor and around Chichester, while these are also at the same time present many of the most sustainable locations for development, and where the opportunities to secure much greater use of sustainable modes also exists.

Strategic Objective 7 "Strategic Infrastructure" includes the following statement:

"To work with infrastructure providers to ensure the timely delivery of key infrastructure to support delivery of new development. New development will be supported by sufficient provision of infrastructure to enable the sustainable delivery of the development strategy for the plan area. Key infrastructure to support the Local Plan will include improvements to transport, ...

A sustainable and integrated transport system will be achieved through improvements to walking and cycling networks and links to accessible public transport. Highway improvements will be delivered to mitigate congestion, including measures to mitigate potential impacts on the A27 through a monitor and manage process."

The latest transport evidence in the Chichester Transport Study makes no pretence to define much less to deliver a "sustainable or integrated" transport system. It is wholly devoted to sustaining current levels of car use across the District, to and through Chichester area.

It is no more than the lightest of touches to the approach taken to supporting the adopted Local Plan, an approach that is already almost 10 years beyond the date of its gestation but has yet to deliver any significant capacity improvement schemes, much less any measures that sustain even current levels of public transport journey times and reliability in the face of increasing congestion – much less any betterment.

Of the six key junctions on the A27 around Chichester, recognised to require significant mitigation given they are saturated for extended periods, five accommodate regular bus services - indeed frequent ones at least every 20 minutes in several cases. The sixth at Oving Road, relates directly to a key corridor where bus services are needed to support strategic growth currently being delivered at Shopwhyke, as well as substantial further growth West of Tangmere (proposed allocation A14) and "East of Chichester" (A8), south of Shopwhyke Road.

As stated at p12 of the Study Summary "The modelling shows that all the junctions on the A27 Chichester bypass are well over capacity, even before adding in the Local Plan development and with the exception of Portfield Roundabout are actually shown to be over capacity in the base model year (2014) in one or both peaks". This much has indeed been evident for years from delay and periodic even more severe disruption arising to Stagecoach services from the lack of network resilience.

The reassignment of through and local traffic through Chichester to avoid the A27 bypass is an especially serious issue for bus services that penetrate the city. This is leading to consequential saturation of a range of junctions used by buses. Rising delay and unpredictable running times are at the root of our decision to sever the long-established Portsmouth to Littlehampton service in 2023, which will in future no longer run across Chichester, but terminate to provide additional dwell time to mitigate the impacts of congestion.

While this congestion affects all road users including businesses and freight traffic, the effect on scheduled bus services is greatly higher, as such services cannot reassign route to 'beat the queue'. Traffic congestion often encourages greater car use for this reason, in tandem that people are happier to sit for extended periods in their own vehicle on a seamless door-to-door journey than wait at the roadside for a delayed bus making slower progress in lengthy queues.

As the Study admits at para. 1.3.2 “Although, there have been works at the Portfield Roundabout in this timeline, no other mitigation schemes have been completed along the A27 corridor, as such the mitigation schemes defined in this report will also be required to consider the development from this plan period.”

In other words, in the 8 years since the current Local Plan was adopted in 2015, there has been minimal progress in delivering the traffic mitigations. There is no clarity at all when any such mitigations will be brought forward. It is hardly surprising then, that traffic conditions have deteriorated. The “predict and provide” transport strategy supporting the current plan has failed.

Despite this, the Draft Local Plan Review proposed to “double down” on exactly this strategy. It represents, like the rest of the evidence base, a “rolling forward” of the current car-based strategy by 9 years, with the lightest of touches to attempt to accommodate car trip demands from a relatively modest additional development quantum.

Nevertheless, the Study requires a global 5% reduction in trip demands arising from unspecified “credible” (paragraph 4.1.2) sustainable transport and travel planning measures. It is unclear why use of non-car modes will see disproportionate growth when no measures are in place to make them more attractive. This 5% increase in use translates to a doubling in the modal share of bus services. There is no evidence nationally, anywhere, that simple ignorance of alternatives to the car is the main barrier to uptake.

The outputs of the 2023 Chichester Area Traffic (SATURN) model are set out at Table 5.1 (am peak) and 5.2 (pm peak) without mitigation. These betray just how seriously compromised the whole network around Chichester is, and will be in future, even with implementation of a mitigation package to increase traffic capacity that is understood to cost between £92m and £164m – and which the Study and the draft plan acknowledge cannot be delivered through developer funding sources alone. Unspecified external funding presumably from HM Treasury through DfT is required.

Even if this provided and the schemes are delivered, Tables 8.1 and 8.2 indicate these will provide minimal relief. The final columns suggest key junctions, including Portfield, Fishbourne Road and Cathedral Way East will remain at well over 100% ratio of flow to capacity (90% is considered the point at which saturation is approached, with the onset of increasing delay above that figure). RFCs in tables 8.1 and 8.2 are some of the highest we have ever seen in a local transport evidence base for a post-mitigation scenario. While the serious potential risk of reassignment across Chichester City is greatly reduced, which is important and welcome given its impact on bus services, Tables 8.1 and 8.2 show the extent of post-mitigation saturation is also egregious, covering a very large number of key links and junctions.

On every measure and criterion, then, including cost deliverability and effectiveness, the revised Transport Strategy falls well short of evidence to suggest the transport impacts of the plan can be properly addressed by this means.

Despite the repeated statements about sustainable modes throughout the draft plan and Chichester Transport Study, only 2 paragraphs at Section 6.2 within the Study are devoted to public transport:

“6.2.7 The funds generated from the parking management schemes, local/nation funding schemes and developer contributions could also be utilised to fund potential public transport enhancements within the city centre including an expansion of the bus priority lane system within Chichester City Centre. This could reduce reliance on the car in the longer term towards sustainable public transport. A park and ride scheme could be incorporated within a bus priority lane network in the future depending on the uptake and successfulness of early bus priority trials.

6.2.8 Chichester City centre has a constrained existing public highway network. Therefore, any proposed dedicated public transport or light transit corridors that could be implemented would be at the expense of existing highway. This could be managed through a time-based system where certain routes are restricted to public transport only during specific times. E.g., peak hours.”

There is some very high-level consideration of Park and Ride following this section. None can be considered a serious practical evaluation of consolidating car-borne trips onto bus services, including existing ones, for example local mobility hubs, more frequent bus corridors, delivery of specific bus priorities.

None of the discussion of alternatives to “predicting and providing” for unconstrained traffic growth is rooted in a deliverable evidence base, or proper evaluation of options and specific projects.

To take just one aspect of the few specifics that can be picked out, a workplace parking levy is hypothesised. This would apply only to “offices”, in Chichester city centre (para 6.2.3), without consideration given as to how this could be practically achieved or even that a meaningful amount of office based employment would qualify. Much less is any consideration given to how far focusing a strategy only on office-based workers would actually deliver a particularly significant effect, apart from to create a strong incentive to relocate offices out of the city centre to places out of reach by public transport.

Looking at the Chichester Transport Study 2023 and the draft plan together, there is insufficient evidence that the traffic capacity increase proposed in the 2023 Transport Study is any more affordable or technically deliverable, or likely to be sufficiently effective, than those in the past strategy. The evidence more strongly points to the fact that no highway improvements are identifiable or economically deliverable to meet even short term increases in demand for car-borne mobility on most of the network around Chichester.

There are no published strategies or schemes clearly supporting the contention that the objective of improving sustainable modes is technically achievable or deliverable either. The plan makes generalised assertions that such strategies will be devised and implemented only after serious problems emerge from a shortfall in the car-borne transport strategy.

The reference to “monitor and manage” is undefined and unsubstantiated. There are no outcomes stated, no mechanisms specified and no timescales for action.

Our experience today is that network conditions have reached unacceptable and prejudicial levels of severe unpredictable delay. The saturation of the network is already evident well outside the traditional peaks on key sections of highway and at key junctions. External shocks such as the effects of severe weather are becoming more common, leading to delays so extreme as to justify the description of “gridlock”. The plan does not identify a strategy to effectively address this, in particular by consolidating passenger car trips onto more efficient public transport vehicles. This is unacceptable to Stagecoach.

2.4. Local Plan Vision

Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the broad approach in Plan Vision and in particular that by 2039, the Plan will support and enable greater use of sustainable modes. However, there is no link made between reducing the use of private cars, and the need for a step change in the use of sustainable modes. Without a published transport evidence base it is impossible to establish a suitable sustainable transport strategy to support both carbon reduction and alleviation of the problems arising from acute congestion. Even on a very crude basis, to achieve a meaningful mode shift on key approaches to the A27

Chichester Bypass will require more than 20% of existing peak car-borne journeys to transfer to other modes. A 10 percentage point transfer to bus (about half this shift) would imply more than doubling peak hour bus passenger boardings.

The Vision is nothing more than an aspiration, that needs to more definitively aim at key outcomes, for the plan to be effective. The Vision should thus be altered to read:

"Get about easily, safely and conveniently with less reliance on private cars –making the greatest possible use of the rail and enhanced bus network, and with more opportunities for active travel including walking and cycling; to materially reduce dependence on private car use."

Underpinning the Plan's spatial strategy, the Vision section goes into more specific detail about key localities in the Plan area.

Regarding Chichester, Paragraph 2.39 states: "The emphasis will be upon consolidating and enhancing the role of Chichester city as the plan area's main centre, whilst also developing the role of key settlements to its east and west. The focus will be upon creating communities with good access to a range of employment opportunities and affordable housing for young people and families to balance the ageing population."

This is clearly the appropriate focus for meeting the District's development needs in a sustainable manner. The city and key settlements to the east and west, are those places already able to make use of relevant public transport services, both rail and bus. Especially within and near the City, walking and cycling can credibly present highly relevant choices. This emphasis clear can be expected to address the requirements of sustainable development set out in NPPF and their local application set out in the Plans Strategic Objectives.

However, this needs a robust transport strategy, to avoid a further concentration of development and its traffic impacts occurring on or near some of the most chronically congested parts of the highway network. To date, the absence of intervention has strangled the bus network through further marked deterioration in traffic conditions. This by consequence increases the risk of bus delay or cancellation, lengthens journey time and reduces customer confidence in bus as an attractive alternative mode of travel.

In April 2023, Stagecoach is making significant timetables changes to improve operational resilience in and around Chichester. The biggest such change is the severance of the Portsmouth to Littlehampton section of service 700, at Chichester, with buses operating independently to the east and to the west and ending cross-city links. This is planned to reduce the probability of delay but at the cost of additional vehicle resource (circa £200,000 per annum) which could be better spent providing new or enhanced services. We anticipate a small loss of custom as a direct consequence of the change, but have little choice other than to take negative action so as to fulfil our statutory punctuality obligations.

If the Strategic Objectives of the Plan and its Vision are to be achieved, in the way required by NPPF paragraphs 104-105, a properly-evidenced transport mitigation strategy needs to create the conditions where bus journeys are more reliable than car journeys and thus mobility demand switches as far as can be realistically achieved away from car use, to bus use and other more sustainable modes.

Beyond Chichester, the Plan Vision focuses on key localities beyond to the east and west.

To the west of Chichester a focus on growth at Southbourne is justified at paragraph 2.43: "...the aim is to take advantage of the village's good transport links and existing facilities to deliver significant new residential-led development within the broad location for development which will further enhance local facilities and offer opportunities to reinforce and supplement existing public transport, including bus routes."

We agree this is a very significant opportunity. However, if the requirements of NPPF paragraphs 104-105 are to be met, this demands that effective bus priority is delivered on the A259 corridor, especially eastbound at Fishbourne and westbound approaching Emsworth. Without such measures, the growth committed and planned will serve only to further undermine bus journey time and decrease punctuality on the existing 700 service, entirely contrary to the aims of the Vision.

The emphasis on the A259 corridor served by Stagecoach 700 west of Chichester is reinforced at paragraph 2.45 stating that "Between Chichester and Southbourne, the Plan provides for more moderate levels of growth within the parishes of Fishbourne, Bosham and Chidham & Hambrook, ... with opportunities to support and expand existing facilities and for increased use of public transport options". We strongly support the principle, but the Plan must follow through with specific public transport priority measures that facilitate rather than prejudice such an outcome.

East of Chichester the focus is at Tangmere, where the existing allocation for about 1000 dwellings is being uplifted by 300. Paragraph 2.44 justifies this among other things recognising the scope for "...improved and additional bus services and cycleways will provide better connections to Chichester city and east to Barnham and the 'Five Villages' area in Arun District." We unequivocally endorse this conclusion. Realising a "game-changing" level of bus service quality, reliability and frequency east of the city, also serving committed and planned development north and south of Oving Road at Shopwhyke, is equally essential, given that all SRN links and junctions are approaching equal saturation.

The National Bus Strategy has given new focus on partnership with West Sussex County Council to discuss and deliver a significant new bus service between Chichester, Shopwhyke, Tangmere, Eastergate and Barnham, supporting committed development and acting as an initial phase of what ought to be a more ambitious longer-term strategy to support growth beyond 2025 in both Chichester and Arun Districts. For these improved bus services to be both deliverable and effective, robust bus prioritisation is unavoidable. No such measures are proposed in the Plan or its evidence base and we therefore suggest inclusion of plans to facilitate safe and efficient bus operation between Tangmere and Nyton/Eastergate, ideally avoiding the need to join A27 through-traffic entirely.

We welcome the clear recognition that these localities identified for growth, benefit from existing relevant public transport services. The Vision also sets an expectation that bus services in particular should be "enhanced" and "reinforced".

We entirely agree that these opportunities exist, across the broad strategy and strategic allocation proposed by the draft Local Plan. Securing them will be crucial to achieving national and local policy objectives, including the Strategic Objectives. However, to our continuing very great dismay, the Plan goes no further to defining how this will be achieved. As such the Vision is not demonstrable achievable or deliverable.

Accordingly the Plan cannot be considered effective, in the sense of NPPF.

Remedying this, demands specific measures to protect bus services from congestion in the following corridors:

- A259 East of Emsworth
- A259 Fishbourne
- A 259 Via Ravenna/Cathedral Way
- A286 Stockbridge Road north and south of A27
- B2145 Whyke Road/Hunston Road
- A259 Bognor Road, east and west of A27 and extending to the District Boundary
- B2144 Oving Road/Shopwhyke Road east and west of the A27
- A 285 Westhampnett Road/Portfield Way/Stane Street, potentially involving a mode filter at the west end of Stane Street

These must be defined to a sufficient level of detail to assess their effectiveness and deliverability, including costs.

This would then allow West Sussex County Council and Local Transport and Highways Authority, ourselves as the principal bus operator, and where

appropriate other organisations that would be directly tasked with delivering the mitigation package, to agree service levels and standards necessary to deliver specified outcomes, including journey times, frequencies, capacity and hours of operation on the network, and also in respect of the strategic allocations and Strategic Locations for Growth.

The agreed mitigations strategy should be set out in an up-to-date Infrastructure Delivery Plan backed by clear funding commitments, including a funding strategy to justify necessary developer contributions.

Where necessary to support evidence of effectiveness and deliverability, clear statements of support, which might include Statements of Common Ground between the LPA, LTA, National Highways and Stagecoach, could be provided.

3. Spatial Strategy

Stagecoach Supports

Stagecoach well recognises the constraints outlined in the explanatory narrative at the start of Chapter 3.

In particular we strongly endorse that strategy in that it reflects that the best opportunities to meet housing and employment development requirements sustainably clearly exist in and close to Chichester and on the key east-west movement corridor where – subject to effective measures being delivered to make these modes more attractive, efficient and relevant – sustainable modes can credibly provide for a much higher proportion of movement demands, mitigating most effectively the potential traffic impacts of development.

We agree that the Manhood Peninsula suffers serious environmental constraints, but, added to these, public transport and other sustainable modes cannot provide such attractive alternatives, and significant further development risks merely reinforcing already high levels of car use, aggravated by the carbon impacts of the distances involved – something the plan does very little to evaluate, and makes no reference to.

We endorse the conclusion in paragraph 3.24 that significant development in the part of the District north of the National Park is inappropriate. The rationale is principally on landscape and visual character. This exposes a fundamentally biased approach to plan making that has consistently underplays transport accessibility and carbon issues. In fact, the lack of local services and the extended distances that need to be travelled to fully participate in society in this area, with no realistic prospect of public transport offering relevant choices, ought to rule such a strategy out of play on a far less aesthetic and interpretational basis.

3.1. Policy S1 Spatial Development Strategy

Stagecoach Supports

The Spatial Strategy flows clearly and logically from the Spatial Portrait, and the opportunities and constraints identifiable across the Plan area. It represents a logical and justified continuation of the existing Local Plan strategy. In particular the spatial strategy maximises the potential for sustainable modes to contribute to meeting a much higher proportion of all the District's mobility and accessibility needs.

3.2. Policy S2 Settlement Hierarchy

Stagecoach Supports

The settlement hierarchy clearly reflects the service endowment and potential self-containment of the settlements in the District. In particular, the second tier of settlement hubs includes secondary schools, which are major peak trip generating uses. Service villages, in the main, also benefit from bus services running at least hourly, which can be expected to provide for a degree of mobility for the higher number of trip purposes that cannot be satisfied by walking or cycling within the immediate locality. Thus, a level of development to meet local needs in this tier is relatively sustainable.

There is a quite broad range of settlements in this category. We have concerns that, north of the National Park, the Service Villages have no realistic public transport choice. These include Plaistow/Ifold, Kirdford, Loxwood, and Wisborough Green. Such as exists is typically a 1/bus per day off-peak shoppers service offering up to 90 minutes in Horsham or Guildford and as such any development here even to meet local needs requires each adult to own a car. This contrasts strongly with Service Villages to the south of the National Park, which are greatly more sustainable.

4. Climate Change and the Natural Environment

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This section of the plan is extensive and wide ranging, as should be expected.

However, remarkably, there is no acknowledgement whatever of the role of transport in mitigating climate change or its effects, not of the importance of sustainable movement and access being facilitated across the plan area in addressing anthropogenic impacts on the natural world at a more local level.

This exposes very clearly a troubling level of indifference to transport matters in the production of the Plan, which, while nationally quite common, is neither appropriate nor acceptable. The mitigation of transport impacts is not merely a matter speaking to the social and economic aspects of sustainable development. It is crucial to address the causes and effects of climate change that arise from transport, and personal mobility.

This is now well understood and at the centre of national policy, including the National Decarbonisation Strategy for Transport (July 2021) which at Section 5 commits the government to aligning land use planning and transport strategy much more tightly and effectively to mitigate the carbon emissions associated with the current dependence on cars, and the mode mix; but also to reduce travel distances, both increasing the potential relevance and effectiveness of all sustainable modes, and reducing average journey lengths for residual motorised journeys of all kinds.

National statistics show that well over a third of all domestic carbon emissions arise from land-based transport and of these, the vast majority arise from trips of over 10km – outside the range of large scale use of cycling. In fact, the potential of the plan to materially support carbon emissions reduction from within the plan area lies more in the realm of transport than any other policy theme – including emissions mitigation from buildings, which is in any event an aspatial matter and covered by nationally-binding building regulations. By 2025 something like 40% of all the emissions within the plan-area will be transport related.

There is no evidence supplied to support the plan that addresses the transport carbon impacts of the spatial development strategy in a clear manner.

There is no evidence supplied that sets out the effects of potential worsening of congestion on air quality within the plan area, arising entirely from the excess of passenger car movement demands over available and credibly deliverable highway capacity. This is despite the evidence set out and acknowledged in the explanatory memorandum at paragraph 4.130:

"4.130. The council's Air Quality Action Plan and the West Sussex Transport Plan 2022-2036 both refer to the air quality issues faced by Chichester. There is currently one Air Quality Management Area (AQMA) in the plan area, located at St Pancras, Chichester. AQMAs are designated where air quality exceeds, or is likely to exceed, national air quality standards and objectives. Development within or impacting these areas, or that likely to cause the declaration of any further AQMAs, will be subject to an air quality assessment by the applicant."

This is a retroactive approach – it is not "planning", based on evidence.

We are well aware that air quality issues in and of themselves can render allocated sites to be undeliverable: a good example is in the Vale of White

Horse, Oxfordshire, where strategic allocations on the A338 and A420 corridors have been held up for years by air quality issues at Marcham and Frilford, in large measure because agreed transport interventions were considered inadequate or undeliverable a very short time after the Plan was examined and adopted.

There is no evidence that shows how the development strategy can effectively mitigate these impacts as well as the further potential impacts that arise from the development strategy. This is exasperating, as there is clear evidence that could be drawn upon to show that that very substantial opportunities exist to:

- Speed buses up and make them more reliable by the delivery of bus priority on most of the key main corridors. Most of these even today operate relatively frequently
- Improve service frequencies and extend hours of operation.
- Secure significant background mode shift to bus as a result, damping pressure on key links and junctions, by consolidating demands on direct more reliable and more frequent bus services.

The spatial development strategy as submitted is in fact, likely to well conform to such additional evidence.

The allocations require substantial additional transport related work and evidence to demonstrate that the opportunities for sustainable transport have been identified and taken up as required by NPPF paragraphs 104-105.

With regards to specific policy, Policy NE22 should be modified to read:

"Development proposals will be permitted where it can be demonstrated that all the following criteria have been addressed:

1. Development is located and designed to minimise traffic generation and congestion through access to by maximising the relevance and attractiveness of sustainable transport modes, including maximising provision of specific demonstrably effective measures to make pedestrian and cycle and public transport routes and networks more direct, more safe, faster and more reliable;..."

5. Housing

5.1. Policy H1 Meeting Housing Needs

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

The presumption of the planning system is that local planning authorities should seek to meet their objectively assessed development requirements in full. These needs are assessed by a defined Standard Methodology set out in Planning Practice Guidance and elsewhere, that has explicit regard to ensuring that the economic and social effects associated with housing are properly provided for, to avoid exacerbating serious problems that arise from inadequate housing supply.

As a significant local service provider and employer, Stagecoach is concerned that existing issues with housing availability and affordable housing supply are not exacerbated. This has a direct bearing on staff recruitment and retention. It also has an indirect bearing on our cost base.

The existing problems with housing affordability have developed over many decades of undersupply. It should be emphasised that the significant boost to the supply of housing that has been sought by governments over the last 15 years, has only begun to take effect relatively recently in this District. Tackling the problem will require years of consistent attention.

Stagecoach notes that the Council is no longer proposing to meet its identified housing needs in full. Rather than 638/annum the Council is allocating a total that implies an annual delivery rate of 535/annum.

While a number of matters evidently present challenges to the Council in identifying a sustainable development strategy. Paragraph 5.2 indicates that "constraints, particularly the capacity of the A27 has led to the council planning for a housing requirement below the need derived from the standard method..." The blame for being unable to meet housing requirements is thus laid squarely at the door of transport infrastructure and systems.

This conclusion in no way follows from the evidence in the Chichester Transport Study. This, rather, makes the statement that when a higher annualised quantum of 700 dwellings per annum was tested, in the majority of cases the traffic capacity improvement package would perform little differently. To quote the Study:

"5.6.3 The network performance outputs analysed comprising V/C%, Delays (seconds) and Queues (PCU's) suggest that generally the proposed SRN mitigation identified for the Core Scenario, can accommodate in the most part, additional increase in development to 700dpa."

Whether the rest of the local road network is similarly protects is moot.

Irrespective of these results, even if the contention made in the draft plan were true, unlike many other constraints, this is amenable to a suitable effective strategy to address the constraints identified being collaboratively conceived. This is what NPPF expects, as set out in paragraphs 104-106.

Where the A27 is concerned, as part of the SRN, National Highways is now working to a substantially revised approach than that in force at the time to current Local Plan was prepared, or LSS2, or reflected in the Chichester Transport Study. This is set out in DfT WMS 01/22. This document is the policy of the Secretary of State for Transport in relation to the SRN which should be read in conjunction with the National Planning Policy Framework (NPPF). It replaces the policies in the Department for Transport Circular 02/2013 of the same title.

It makes plain that to accommodate additional demands arising from development, National Highways (NHC) expects to meet the requirements of its statutory license in a substantially different manner. With respect to development NHC LTN 01/22 continues to address the tensions between national policy for the environment and carbon mitigation, the ongoing need to substantially boost the supply of housing as well as maintain national economic competitiveness and protect the safety of the public. However, in future, the approach will be to seek first to maximise the impact of demand management measures (reducing the need to travel), and then to accommodate residual additional demands first though maximising the use of sustainable modes, rather than accommodating assumptions about current levels of car dependency and use.

LTN 01/22 much more closely and explicitly aligns with the language of NPPF Chapter 9 paragraphs 104-106. Paragraph 12 states: "New development should be facilitating a reduction in the need to travel by private car and focused on locations that are or can be made sustainable.... Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas." (our emphasis).

It continues at paragraph 13: "where developments are located, how they are designed and how well delivery and public transport services are integrated has a huge impact on people's mode of travel for short journeys. The company will therefore expect strategic policy-making authorities and community groups responsible for preparing local and neighbourhood plans to only promote development at locations that are or can be made sustainable [footnote 8] and where opportunities to maximise walking, wheeling, cycling, public transport and shared travel have been identified."

(again, our emphasis)

Stagecoach readily confirms that the draft Plan development strategy conforms well to the first limb of this expectation, in terms of the location of development.

Stagecoach considers that the plan and its evidence base conforms poorly to the second in that the specific opportunities to maximise walking, cycling wheeling and public transport are not clearly identified, and defined, and proven to be effective and deliverable.

The current mitigation strategy for the A27 Chichester area, supporting the adopted Local Plan and for which proportionate developer contributions have and continue to be sought, reflects now-superseded DfT Circular 02/2013. As a direct result, it failed completely to identify any significant effective bus priority measures, despite the fact that frequent services already exist on the key corridor concerned, and that one bus journey can remove, fully seated between 72 and 80 single occupancy car journeys from congested links and across key junctions on the A27. Rather, it sought to implement targeted measures to increase the throughflow of general traffic.

We recognise the realisation that this approach, which was already reliant on some tenuous logic, is simply not technically viable, especially where further development needs are anticipated.

National Highways will now pursue an approach with the planning system that "includes moving away from transport planning based on predicting future demand to provide capacity ('predict and provide') to planning that sets an outcome communities want to achieve and provides the transport solutions to deliver those outcomes (vision-led approaches including 'vision and validate,' 'decide and provide' or 'monitor and manage'). The company will support local authorities in achieving this aim through its engagement with their plan-making and decision-taking stages." (paragraph 15).

Paragraph 23 is at the fulcrum of assessing and defining transport mitigations to accommodate growth on and near the SRN "Capacity enhancements such as modifications to existing junctions or road widening to facilitate development should be determined on a case-by-case basis. The general principle should be accepted where proposals would include measures to improve community connectivity and public transport accessibility, and this will be weighed against any negative safety, traffic flow, environmental and deliverability considerations, impacts on the permeability and attractiveness of local walking, wheeling and cycling routes, and alternative options to manage down the traffic impact of planned development or improve the local road network as a first preference." (our emphasis).

However, no material work has been done that seeks to identify if a bold robustly conceived and suitable judiciously-prepared strategy that seeks to consolidate flows on already densely travelled corridor onto improved bus services, driving mode shift through insulating these services preferentially from already serious queuing. This would be likely to have very substantial impacts on all the key junctions on the A27, and potentially, on the A27 itself. The need for an integrated approach between Shoreham and Emsworth within West Sussex paying particular regard to development requirements in both Arun and Chichester Districts naturally lies at the heart of this, and we would expect to be picked up by the LSS3 Review among other things.

However, the locus of the problems and its causes and effects are obviously well enough known to start work on defining solutions within the plan area today. We would expect that this work will be essential if National Highways are to support the Plan, especially now given the terms of Circular 01/2022.

Such work could and should start from a "policy off" position: in other words that the Plan should fully accommodate its needs unless it can be proved that a mitigation strategy for the A27 that is compliant with DfT WMS 01/2022 cannot credibly accommodate resulting capacity demands without unacceptable impacts on the safety and efficient operation of the SRN.

This evidence does not exist. In fact the Chichester Transport Strategy 2023, on which the Council solely relies as its transport evidence base, indicates the opposite at para 5.6.3. This is the case before meaningful measures to secure damping of traffic demands through mode reassignment are even considered.

The exception to this is Portfield and Oving Road, which are among the most problematic areas after mitigation even at the Council's chosen 535 dwelling/annum scenario (para 5.6.4.-5). The costly capacity mitigation simply cannot deliver enough benefit. It is admitted that WSCC has indicated that it would prefer a solution that places greater reliance on sustainable modes damping car-borne demand. This is entirely the strategy required by NHC to follow LTN 01/22, of course. Despite the fact that "predict and provide has "run out of road" no attempt has been made to examine what such a solution set credibly could look like. This is unsatisfactory and deeply troubling.

At paragraph 5.4 the draft plan points back again at the West Sussex and Greater Brighton Strategic Planning Board and the future work that has been commissioned, but has barely begun, to update the Local Strategic Statement. This work is to inform the preparation of plans that have horizons beyond the end date of the current LSS in 2030 and properly to meet the Duty to Cooperate. As we said in our response to section 1 of the Plan we fully endorse the conclusion that this is the right mechanism to look at these issues. However, the mechanism has not been effectively applied to the production of this plan. Therefore, the specific evidence that capacity on the A27 in and of itself supports accommodating a lower housing requirement does not exist.

The Plan thus does not conform to NPPF, is not adequately justified and is not effective.

The Plan does not properly meet the statutory Duty to Cooperate.

We will return to this matter in specific representations to Section 7 of the draft plan.

5.2. Policy H2 Strategic Locations/Allocations 2021-2039

Stagecoach Supports

Policy H1 makes plain that the plan, as far as it identifies locations for development has done so in locations that conform with its spatial strategy. All of the strategic allocations to a greater or lesser extent offer clear opportunities to make use of sustainable modes, by virtue of their location. That is not to say that the opportunities to take up these opportunities, and maximise the role of sustainable modes, has been identified, defined and translated properly into the rest of the plan policy suite or Infrastructure Delivery Plan.

As our remaining representations make clear, we support the locations thus far identified as being those that offer the best opportunities to reduce the need to travel, reduce travel distances, and create high quality attractive sustainable travel choices, for both existing residents as well as new ones.

However, the transport impacts of the allocation will individually and cumulatively likely to lead to increasingly severe impacts on the transport network, and on bus services.

Perversely, because these opportunities are not properly identified and secured through the plan and its supporting transport strategy, the opportunities presented by the allocations to secure a substantially more sustainable and lower carbon pattern of movement will not only risk being squandered but may aggravate the wider problems.

5.3. Policy H3 Non-strategic Parish Housing Requirements

Stagecoach Supports

The approach is consistent with the plan's spatial strategy. It generally avoids a dispersal of development to locations likely to be highly car dependent. There is a clear focus on meeting housing needs in the far north-east of the District at the largest and most sustainable settlements, such as Loxwood, Kirdford and Wisborough Green. However, it must be pointed out that public transport availability in this area, provided by the County Council through services it procures, is minimal. These settlements in practice require each adult and child of secondary school age to have access to motorised transport to fully participate in society. This might justify significant measures to secure a boost in the frequency of bus services between Guildford and Billingshurst, passing through these settlements.

Otherwise, existing commitments in the plan area already make provision to meet for local needs. To the degree that there is an unmet local requirement for affordable housing of a small scale – for example to support the rural economy – this could be met through neighbourhood plans or through Rural Exception Sites.

6. Place-making, Health and Wellbeing

6.1. Policy P1 Design principles

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

NPPF requires that proposals should consider transport issues from the earliest possible stage. Designing to properly facilitate safe and efficient access, focusing first on sustainable modes, should be at the heart of development design. Too often it is still an afterthought, notwithstanding this. Policy P1 must include an additional statement to be compliant and effective with NPPF paragraph 104-105 and 112 a):

“Development will be designed to make access and movement using walking, cycling and public transport the natural first choice, and demonstrate through the Design and Access Statement how such modes are afforded the most direct, safe, reliable and efficient routes within to and from the proposals, especially when compared with car use.”

6.2. Policy P4 Layout and Access

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

A number of proposals in the plan involve large-scale development. It is essential that where appropriate buses can access and circulate efficiently through development at a suitably early stage. There is no acknowledgement of this anywhere in the policy, contrary to NPPF paragraph 112.

Large-scale development which buses cannot access in an efficient or timely manner, or at all, strongly contributes to high levels of car-dependency. Evidence for this is referred to among other places, in DfT Circular 01/2022. To be compliant with NPPF and properly pursue its strategic Objectives, Policy P4 needs to be modified to address this point:

“1. Provide safe, direct and attractive conditions for inclusive access, egress and active travel between all locations and providing as good direct high quality links to integrated public transport, and where appropriate efficient access and circulation to bus services, unimpeded by excessive parking, at a suitably early point in the development phasing;

7. Transport and Accessibility

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

The issues related to transport are fundamental to the soundness of the Plan. In particular, the constraints presented by the capacity on the A27 around Chichester and its key junctions, are the paramount reasons why the Council does not consider it can meet its objectively-assessed development needs in full. Thus, the transport issues and potential solutions available and what these mean for the ability of development needs to be accommodated, are matters that go to the heart of the soundness of the Plan.

Paragraph 8.3 sets out the approach taken to date succinctly:

“Increasing the capacity of the road network is key to supporting growth in the Local Plan. However, there is also a need to reduce demand for road transport to achieve net zero in greenhouse gas emissions by 2050 as highlighted in the council's Climate Emergency Action Plan and Strategic Objective 1. In aiming to achieve the ambitions of the action plan, all development is expected to demonstrate how it will support four key objectives to create an integrated transport network which will alleviate pressure on the road network, improve highway safety, encourage sustainable travel behaviours and help reduce transport related impact on air quality, by:

1. Avoiding or reducing the need to travel by car;
2. Enabling access to sustainable means of travel, including public transport, walking and cycling;
3. Managing travel demand; and
4. Mitigating the impacts of travel by car.”

However, this approach is unambitious and “lightweight” as it assumes, as does the existing Chichester Transport Strategy on which the current adopted plan relies, that the focus of investment should be, wholly, in highways capacity improvement.

Sustainable modes explicitly are expected to play a greater role to “alleviate pressure” on the local road network, as part of this strategy. To emphasise: to avoid exacerbating congestion, the strategy will have to both remove a significant proportion of existing demands from the network on multiple key approaches to Chichester; and then ensure that travel demands from committed and further new development allocated in the plan does not simply replace these journeys, or, worse, create even greater demands.

This will demand very significant behaviour change. Only by making sustainable modes substantially more attractive, both absolutely, and relative to the same journey made by car, can this be expected to occur. However, the explanatory memorandum as well as the wider policy suite and IDP, well expresses a fundamental unwillingness to taking specific, defined measures to achieve this reduction in car use and material promotion of sustainable modes. It makes plain that sustainable modes, including bus services, will offer a lesser role to which “access will be provided”.

Such a vague and weakly defined mechanism will have no effect, at all, on current behaviour and car dependency if the relevance of those choices as a credible alternative to car use, is not substantially boosted. This includes a 5% reduction in trip demand assumed by the Traffic Model at the heart of the Chichester Transport Study 2023.

For this reason, the transport strategy behind the current adopted plan is demonstrably ineffective, as the updated model makes plain. It has not yet been delivered and is yet unclear when or (in the absence of committed funding) even if it can be. It is ineffective to “roll forward” this strategy to support a higher level of planned growth.

We note that a scheme for addressing congestion on the A27 at Chichester has been included in Roads Investment Period 3 (2025-2030) – well within the horizon of this Plan. However, recent history provides compelling evidence that off-line improvement to the north is not politically supported and arguably even technically or economically deliverable. It is not funded, nor at this stage can it be hypothesised if an economically deliverable scheme is achievable sufficient to warrant the necessary investment.

An on-line improvement of the A27, including junction improvements, is likely to favour longer distance east-west through movements, which are of greater significance to the national economy, at the expense of local movements crossing the SRN- a conundrum that largely sums up the dilemma that is faced by NHC and the County as Highways and Transport Authority. It is one that is played out in many places, but rarely is the tension so stark as at Chichester.

Every local route crossing the A27 at grade around Chichester accommodates a regular bus service - or shortly will do (Oving Road area is expected to follow in 2023, though bus services are likely to not use the modified crossroads but to use the left-in-left-out facilities provided as part of the Shopwhyke Lakes development). The impact of these issues on the entire bus operation are serious and increasingly severe.

By the same token, boosting the relevance and reliability of each of these services substantially consolidating as much demand as possible onto a much smaller number of vehicles, is clearly a strategy that ought to support the effective capacity of each of these junctions being greatly augmented, at the same time as reducing equally substantially, the energy- and carbon intensity of mobility in the plan area. Addressing the A27 should not be considered some kind of “zero-sum” game.

Furthermore, the approach of National Highways in its dealings with development and the planning system now reflect a substantial change in Government Policy set out in DfT Circular 01/2022, which we separately cover in these representations, that entirely aligns with an approach that seeks to appropriately invest in more active and rational management of scarce highways capacity, on both the SRN and local roads.

For environmental, economic and social reasons – including public health, the issues presented by the A27 and its interface with local roads around Chichester stands out, nationally, as an example of where the approach taken to accommodating and mitigating development impacts needs to make a clear break with previous “predict and provide” approaches to meet forecast unconstrained car use as LTN 02/2022 makes clear as a principle. Policy in the West Sussex LTP to 2036 itself makes plain that “shared mobility” – including bus services – must play a much greater role in this area.

The existing Chichester Area Transport Strategy is focused on justifying capital contributions from committed development to fund highways capacity improvement – with nothing included to make bus services more attractive, or importantly more reliable. Indeed this “cars first” approach is so costly, that there is already accepted by WSCC to be insufficient land value remaining to be captured to put into substantial improvements for public transport. That much is very evident, and transparent, from paragraph 8.12 and 8.14, where south of Chichester “This (one) package of works (of several improvements needed) would be between £57.23 and £82.79 million to deliver in full and would not be capable of being funded by development contributions alone.” This assumes the scheme is otherwise deliverable, which on the evidence in the public domain for some time, has been considered challengeable.

The draft Local Plan and a modestly updated infrastructure package that flows from the 2023 Chichester Transport Study, pursues exactly the same approach.

This strategy is also even more ineffective having regard to the roll forward of the Plan to 2039. It cannot deliver the key Strategic Objectives of the Plan; and in particular this is explicitly recognised by the Council in the failure of the draft Plan to accommodate the OAN in full.

It is also obsolete, as it does not align, from first principles, with national policy (including the National Decarbonisation Strategy for Transport) and DfT Circular 01/22; nor the Council’s own declared Climate Emergency.

As a result, draft Policies T1 and T2 are both unsound, as we will separately explain.

Owing to the lack of evidence about the implications of this for adjoining authorities – especially Adur District – in the absence of the review of the Local Strategic Statement – this has implications for fulfilling the Statutory Duty to Co-operate.

The absence of any meaningfully comprehensive refresh of the transport evidence base means that there are no meaningful schemes of any kind, defined in the plan or its IDP, to indicate either what level of growth can be accommodated, by delivering a change in travel behaviour. This would be aimed to secure a sufficient effective increase in junction throughput (measured in terms of person trips as opposed to passenger car unit movements (PCUs)). Such evidence would propose measure to achieve that outcome and assess the efficacy and costs of such improvements, across all modes.

Paragraphs 8.10-8.13 inclusive indicate that the Council “has moved away from ‘predict and provide’” and invites the reader to conclude this has translated into a programme of interventions that can be funded to deliver specific, credibly predictable outcomes. Such a programme should be clear in paragraph 8.11. and the IDP. There is no such clarity and this conclusion would be false.

It would also be evident in the language of the Chichester Transport Study 2023 and its refreshed proposals. Only the most token of lip service is paid to the matter. It is a plainly car-focused, predict and provide methodology to support a “predict and provide” strategy. In fact, it is a brazenly car-focused approach, to the exclusion of all else.

The statements in the Plan regarding any other approach, read properly, offer nothing more than a vague commitment to look post-adoption, and implementation, at unspecified measures, based on problems that may arise in future that will be decided by a committee: the Traffic and Infrastructure Management Group (TIMG). This does not yet exist and is obviously an attempt to posit a mechanism that retroactively will cover for the lack of serious multi-party engagement to address the existing and future issues. Such a group should, in our view, also include the public transport operators, not least if the requirements of NPPF Para 106c) are to be satisfied, and the strategy and measures to be adopted are material to supporting the Local Plan, as of course the purpose of the TIMG has as its core *raison d’être*.

The approach proposed by the draft plan is plainly ineffective and unsound in justifying the draft Plan.

It is more widely unacceptable to Stagecoach. The issues are severe today and well-known, already serving to jeopardise the delivery of buses relied on by existing residents, much less attract new ones.

We also consider that HM Planning Inspectorate are likely to be quite resistant to accepting this aspect of the plan’s transport strategy, nor will it be appropriate for the Council, West Sussex County Council, or National Highways, to define such measures after the submission of the Plan during the Examination process. The Examination in Public of a local plan has no purpose to improve plans, or remedy deficiencies clearly evident prior to submission.

The examination of the West of England Joint Strategic Plan in 2019, and the Uttlesford Local Plan in 2021, among several others, demonstrates

especially clearly that the Planning System and the Examination process is not amenable to post-hoc retrofitting of transport evidence and strategies to support a development strategy.

7.1. Transport Evidence Base

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Most of Stagecoach's serious concerns about the soundness of the plan arise from the fact that it has been prepared in advance of any up-to-date transport evidence and suitably robust transport mitigation strategy being advanced to support it. In essence, the Council has rolled forward the existing plan by 9 years, adding some additional sources of housing supply, while still relying implicitly on a transport evidence base that was prepared 10 years ago.

This led to the formulation at that time of what can only be described as an attempt to develop an effective car-based mitigation strategy, creating capacity for general traffic added to accommodate unconstrained additional demands on an already over-taxed highways network – the Chichester Area Transport Strategy. Despite language in support of sustainable modes, no deliverable measures were identified to support either the extension of the bus network to serve allocated sites, and much less to create a vital improvement to the quality and reliability of public transport services. This approach reflected the approach set out in DfT Ministerial Circular 02/2013 "Development and the Strategic Highways Network", applicable since the A27, which is the focus of the most severe difficulties, forms part of the national Strategic Roads Network.

This approach has proven ineffective even before substantial elements of housing land supply in the current plan come forward – in particular West of Chichester and West of Tangmere.

In addition, Circular 02/2013 has now been replaced by a new Ministerial Statement of 23/12/2022, DfT Circular 01/2022.

On both counts the transport evidence base and strategy needs to be properly revisited and established to provide effective mitigation for the plan, including current commitments that are being rolled forward.

The language of the current Ministerial Circular 01/2022 offers a highly condensed synoptic view of the proper approach to addressing transport matters in the planning system notwithstanding that it is directly concerned with the Strategic Roads Network. *Videlicet*:

"31. The NPPF expects local plans and spatial development strategies to be underpinned by a clear and transparent evidence base which informs the authority's preferred approach to land use and strategic transport options, and the formulation of policies and allocations that will be subject to public consultation. The company will expect this process to explore all options to reduce a reliance on the SRN for local journeys including a reduction in the need to travel and integrating land use considerations with the need to maximise opportunities for walking, wheeling, cycling, public transport and shared travel.

32. The Transport Decarbonisation Plan indicates that carbon emissions from car and van use is the largest component of the United Kingdom's total transport emissions. While action is being taken to decarbonise transport such that all new cars and vans will be fully zero emission at the tailpipe from 2035, the proposed location of growth in current plan periods and whether new developments would be genuinely sustainable remain important factors in demonstrating that a local authority area is on a pathway to net zero by 2050 and therefore compliant with the requirements of the Climate Change Act 2008.

33. Alongside this, the local authority should identify the key issues within their study area regarding transport provision and accessibility, setting out how the plan or strategy can address these key issues in consultation with (National Highways, and other transport stakeholders identified in NPPF paragraph 106b). It is the responsibility of the local authority undertaking its strategic policy-making function to present a robust transport evidence base in support of its plan or strategy. The company can review measures that would help to avoid or significantly reduce the need for additional infrastructure on the SRN where development can be delivered through identified improvements to the local transport network, to include infrastructure that promotes walking, wheeling, cycling, public transport and shared travel. A robust evidence base will be required, including demand forecasting models, which inform analysis of alternatives by accounting for the effects of possible mitigation scenarios that shift demand into less carbon-intensive forms of travel." (our emphasis)

Within the text quoted above, references to National Highways and "the Company" can quite legitimately be extended, given the statements in NPPF paragraph 16, 25, 26 and 106b, to include all the relevant transport infrastructure and service providers in the plan area. Circular 01/2022 also has the weight of secondary legislation as a Written Ministerial Statement and thus should be considered to be highly material.

To date there has been little attempt to explore, to the degree necessary, strategies that conform to Circular 01/2022. It is thus not possible to conclude, as the Council has done, that the issues on the A27 that present a constraint to development, are insuperable.

In line with comments made elsewhere in the response to this pre-submission draft, the Plan thus requires substantial further work to be undertaken with key stakeholders to establish a suitably effective and demonstrably deliverable transport mitigation strategy, to sustainably meet the District's identifiable development needs and where apparent and appropriate, also ensure that wider cross boundary strategic issues are appropriately addressed, in conformity *inter alia*, with the Duty to Cooperate, NPPF paragraph 16 and 104-111 inclusive, and DfT Circular 01/2022 and to ensure the Plan's own Strategic Objectives can be met.

7.2. Policy T1 Transport infrastructure

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

As described in comments elsewhere, Stagecoach does not see that a suitable proportionate and up-to-date basis exists to properly and appropriately address the transport issues in the plan area.

The 2023 Transport Study does not perform this role adequately but, contrary to the explanatory memorandum, is a scheme intended only to facilitate car-borne movements through some of the key junctions. There is no evidence that an holistic integrated and strategic approach to transport mitigations has been prepared. Certainly Stagecoach has not been involved in any of the discussion about appropriate transport measures in support of the plan, including the Transport Study 2023, contrary to the expectations set out in NPPF at paragraph 16 and 106.

Notwithstanding out fundamental concerns about the transport evidence case and mitigations strategy, Policy T1 reflects a weak and ineffective approach, that seeks to try and define a strategy post-adoption.

Contrary even to the explanatory memorandum for the policy, which seeks to maximise the contribution of sustainable modes, the policy is phased in

such a way that it gives basis for previous “predict and provide” solutions to facilitate and support current levels of car dependency – already shown to be undeliverable and unaffordable – will nevertheless be the first rather than the last resort. There is no commitment to seek to maximise the contribution made by sustainable modes to meeting mobility needs. Nor is there any recognition that current chronic congestion and lack of network resilience jeopardises the ongoing attractiveness and long- term sustainability of the current public transport offer.

To be effective and create alignment with national policy, and also provide for an up-to-date transport evidence base and strategy to be adduced, Policy T1 should be modified to read:

“Integrated transport measures will be developed to mitigate the impact of planned development on the highways network, improve highway safety and air quality, promote more sustainable travel patterns and through providing in the first instance, new and improved infrastructure and services that will be credible effective in maximising the encourage increased use of sustainable modes of travel, such as public transport, cycling and walking.

To achieve this, the council will work with National Highways, West Sussex County Council, other transport and service providers (including through the Traffic and Infrastructure Management Group) and developers to provide a better integrated transport network and to improve accessibility to key services and facilities...

All parties, including applicants, are expected to support these objectives by:

1. Ensuring that new development is well located and designed to avoid or minimise the need for travel, encourages maximises the use of sustainable modes of travel as a credible alternative to the private car and directly provides or contributes towards new or improved transport infrastructure;
2. Working with relevant transport infrastructure and service providers to improve accessibility to key services and facilities with primary emphasis on sustainable modes, and to ensure that new facilities are easily accessible by sustainable modes of travel;
3. Targeting investment to provide local travel options as an that represent a clearly credible alternative to the car use, focusing on the delivery of improved integrated bus and train services, and improved pedestrian and cycling networks, including the public rights of way network, based on the routes and projects identified in the Local Transport Plan, West Sussex Bus Service Improvement Plan, Local Cycling and Walking Infrastructure Plan (LCWIP) and the Infrastructure Delivery Plan;
4. Planning to achieve the timely delivery of transport infrastructure on and approaching the A27 and elsewhere on the network, needed to support new housing, employment and other development identified in this plan;
5. Phasing the delivery of new development to align with and where possible facilitate the provision of new and improved transport infrastructure and services and the outcomes of monitoring travel demand on the network, including that arising from areas immediately adjoining the plan area. It may also be Where necessary to achieve this alignment proactively phase development will be phased to take into account the monitoring and effectiveness of travel plans demands on the network and to ensure that measures are implemented to support the highest possible level of encourage sustainable travel behaviour.;
6. Using demand management measures, such as travel plans, to manage robust methodologies to assess travel demand and minimise the need for new or improved transport infrastructure as part of the monitor and manage process.
7. Delivering a coordinated package of infrastructure improvements at and approaching to junctions on the A27 Chichester Bypass along with other small-scale junction improvements interventions within the city and elsewhere, as identified through the monitor and manage process. These will increase road capacity, reduce traffic congestion, improve safety and air quality, and improve access to Chichester city from surrounding areas, first by maximising the contribution of sustainable modes to meeting mobility demands, then, and only as evidenced by robust modelling and option testing, providing increased highway capacity for general traffic.

...”

7.3. Policy T2 Transport and Development

Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Section 1 b) of T2 will be ineffective as, absent measures to ensure buses can run reliably and efficiently, improved bus services will not be possible, in support of the plan’s own stated broad approach to transport mitigation, as well as wider local and national policy.

The draft policy does not require improvements to the quality of services such that sustainable choices will be materially more attractive than car use for many local journeys. Without this the Plan’s Strategic Objectives cannot be fulfilled and the objectives of the Plan and this policy, read in its own terms, will not be realised, where reduction in private car use is concerned. It is thus ineffective.

Absent measures to make bus services more reliable and more efficient, by insulating them from chronic congestion as far as possible, still further operating resource and therefore costs, will be needed to just to reliably run existing service frequencies, and capacity, as vehicle productivity continues to be more and more adversely affected by chronic delay. This will be further aggravated by increasing incidence of severe unpredictable service breakdown arising from incidents of diverse kinds on the network, especially on or around the A27, including that arising from more regular severe weather events. Longer journey times can only be expected to lead to relative disadvantage of bus services compared to personal car use, entirely contrary to the objectives of national and local policy, including Policy T1. It can also expect to lead to a dampening effect not on car use, but on bus patronage, threatening the ongoing viability of bus services across the plan area.

Section 1 b) of T2 should be modified to read:

“b) Maximise opportunities for the use of sustainable travel modes through provision of direct and efficient access both to either the existing networks or and through providing such new infrastructure or public transport services, as can be credibly expected to reduce reliance on the private car and work towards achieving net zero in greenhouse gas emissions by 2050;”

Section 1 d) of T2 will be ineffective as the location of development is fixed by this plan. We commend the fact that all the strategic allocations are or will be served by regular bus services.

However, the use of public transport services, where available, depends on the relevance and reliability of these services. Furthermore, provision of services without them generating sufficient patronage to support their long-term operation also threatens the sustainability of the plan and its supporting transport strategy. This is especially true of new services such as those intended to serve West of Chichester and Tangmere and East of Chichester Strategic Allocations.

This can only be assured by the plan being supported by specific measures to ensure buses can operate efficiently and reliably on the existing and

projected services intended to serve the developments concerned, and also at the same time secure behavioural change from existing development.

To be sound and effective, the policy T2 1 d.) should be changed to read:

“d) Ensure major development is located to proposals and the supporting mitigation measures enable the use delivery of high-quality, reliable and effective public transport to present the most relevant possible choice to access local services and facilities including employment, leisure and education facilities”;

The Policy T2 makes no provision for buses, where necessary, to enter and make efficient and safe progress through major development sites. The plan is thus out of conformity with NPPF paragraphs 104-106. It makes no provision to ensure that penetration of bus services is achieved at a suitably early point in the development trajectory, undermining the achievement of the goals of the Plan and this specific policy. As a good example, West of Chichester Phase 1, currently under construction, cannot be served by buses as a strategy to effect interim bus penetration was never made.

Policy T2 1 f.) should therefore be amended to read:

f) Ensure that the layout and design of the site development proposals provides effective penetration of the site by sustainable modes, at all points in the development build-out, including public transport where appropriate; and sufficient space for all vehicles to manoeuvre without compromising the safety of pedestrians and cyclists, the efficiency of bus services, or the ability to provide an appropriate level of landscaping across the site”

Policy T2 3.) regarding Travel Planning depends entirely on its effectiveness on the quality and relative attractiveness of sustainable alternatives over car use. In the absence of efficient frequent, reliable and direct public transport services (or similarly, high quality facilities for active travel, Travel Plans will continue to be the entirely ineffective “tick box” exercises that they generally are today, evidenced by much lower levels of public transport use in most new developments than it seen in nearby established neighbourhoods, as demonstrated broadly by Census data in 2011, 2011 and 2021.

For this policy to be effective an up-to date transport evidence base and strategy, underpinning a series of specified interventions to promote the relevance and effectiveness of all sustainable does including public transport in particular, needs to be put in place.

8. Chapter 9 Infrastructure – Policy I1 Infrastructure provision

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Policy I1 could not expect to be effective without a clear understanding of the effectiveness and costs of a defined series of measures that are laid out in this Plan and its IDP, to mitigate the transport impacts of the development strategy.

Where the Chichester Transport Study is concerned the only meaningful work has focused on the definition and delivery of a range of highways capacity schemes mainly on the A27 around Chichester.

As we have discussed elsewhere the effectiveness of these schemes is insufficient as set out at Tables 8.1 and 8.2 of the Chichester Transport Study 2023. The plan itself admits that the deliverability of this package cannot be afforded by developer contributions alone.

The Chichester Transport Study 2023 does not attempt provide a realistic assessment of costs to deliver these schemes, despite the fact that they have been under evaluation for many years. Nor does it offer any assurance that the schemes are technically achievable. Rather, it states the opposite:

“9.2.3 No investigation has been carried out into specific land ownership details, or into the location details or cost of moving statutory undertakers and utility apparatus within the areas of the scheme. No design assessments were carried out at this stage to ascertain the deliverability of the proposals except where any Health and Safety concerns were raised.”

Thus on the grounds of effectiveness, deliverability and affordability, the measures on which the Plan relies must at the very least be considered to involve an exceptionally high level of risk. Since Policy I1 is founded on these assumptions, it cannot be considered effective.

As we set out elsewhere, the Plan has been advanced on the basis that if any additional sustainable transport measures are required, these mitigations should be retroactively considered and defined after adoption of the Plan. In the light of the doubts that are apparent of both the deliverability, affordability and effectiveness of the Chichester Transport strategy this is especially unsatisfactory even if existing baseline conditions were reasonably acceptable.

However, the Chichester Transport Study 2023, as did its predecessors, makes plain that that existing problems are acute, and can rightly be considered “severe” in the sense of NPPF paragraph 111. Waiting to define deliverable affordable alternatives is an entirely inappropriate approach to the local plan transport mitigation strategy. Such an approach also makes it impossible to consider prior to adoption how far the transport impacts of the plan can be cost-effectively mitigated by alternative means, or whether they are deliverable having regard to technical achievability, land control, development viability, or any combination of the above. Thus, the plan cannot be considered justified, or effective.

Given the mutual dependence of development strategies in Chichester and Arun in particular on these measures this should be seen as crucial of the fulfilment of the Duty to Cooperate.

The remedy for this is ultimately to put in place a suitable transport mitigation strategy following a strategic appraisal of options through review of the LSS. This then must be supplemented by more detailed development specific and localised scheme definition, including, where necessary, bus priority and other measures to support the substantial promotion of the attractiveness of public transport in key bus corridors over private car use. This would then be reflected by costed proposals in the IDP.

Leaving these fundamental weaknesses to one side, even if such a strategy and mitigation package were defined, there is no mention of public transport in the policy even though it is clearly a key part of the policy environment and mitigation strategy for the plan as expressed in the explanatory memorandum for I1, but also at Policies T1 and T2. I1 thus does not effectively support the realisation of the intent of Policies T1 and T2.

Policy I1 iii) should therefore be modified to read:

“(iii) Safeguard the requirements of infrastructure providers, having regard to requirements within and where appropriate across the boundaries of the plan area, including but not limited to:

- Highways including specific measures to accommodate improved active travel and public transport level of service and cycle lanes, and...”

At limb v) the Policy expects developers to meet the “in perpetuity costs of operating and maintaining infrastructure”. This shackles development management decisions to developers assuming what are infinite costs – given that “in perpetuity”, read properly, can only mean “without any limit in time”. This means that it is impossible to meet the statutory tests on developer obligations set out in the Community Infrastructure Levy Regulations

2010 (as amended) at Regulation 122, also repeated in NPPF. This policy cannot be lawfully implemented and it is thus ineffective.

In the absence of an up-to-date transport mitigation strategy that is fit for purpose, at the point the Plan is examined these costs of any additional infrastructure are not known in any case. The strategy and its costs, including its affordability and deliverability, are crucial to assessing if the Plan is sound.

Subject to an appropriate defined transport mitigation strategy being arrived at, to be sound, the Policy I1 v) should be modified as follows:

(v) To consider and meet as appropriate the in-perpetuity delivery costs of infrastructure and, where appropriate, improved services, to the point where its long-term operational sustainability is credibly assured from mainstream sources. Where adoption is not envisaged by local authorities, that must include arrangements for its future ongoing management and maintenance;

9. Strategic and Area Based Policies

9.1. Policy A1 City Centre Development Principles

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Chichester City centre is rightly identified at 10.2 and 10.4 as the commercial and service hub of the District. It is also acknowledged to be the most accessible place in the District by sustainable modes, public transport in particular.

Boosting the vitality of the city centre is something that Stagecoach strongly supports. Irrespective, the enhancement of the commercial and cultural life of the District in the place where these opportunities can be accessed broadly by sustainable modes, is one that has long been at the heart of national planning policy for town centres, reflected in the "town centre first" approach to locating major trip generating uses.

Paragraph 10.5 exposes an unbalanced and unsound preoccupation with aesthetic matters in its approach to the town centre, and far too little to ensuring that the central place function is enhanced through protecting and enhancing the quality of public transport access.

The city is relatively small but at the heart of an extensive hinterland, and thus the role of bus in supporting sustainable access to and enhanced city centre venue is one that needs appropriate recognition and emphasis. It is important to note that a dominant number of key service and facilities such as the General Hospital are relatively close to the city centre. This directly contributes to driving travel demand into the city, causing congestion. Most importantly, it also makes the task of mitigation simpler, given the impact a suite of active and sustainable measures can have within the same close proximity.

Policy A1 does not provide this. As such, achieving the strategic objectives of the plan is seriously threatened, and the plan is thus not effective.

The Plan needs to ensure that the approach to city centre regeneration maintains and enhances public transport access, interchange and inter-modal connectivity. It also needs to ensure that bus service stopping and interchange facilities are able to address increases in future demand, anticipated by the clear intent expressed elsewhere in the Plan that public transport should be meeting a greater proportion of mobility needs, in a growing district. Achieving this demands an ambitious approach to the location, quality and capacity of bus stop and interchange.

We have been in discussions with the District Council about this, alongside West Sussex County Council, for a very considerable period. Stagecoach has always been keen to help facilitate the Council's aspirations for the city centre, and we continue to hold this intention. However, this cannot be at the expense of a material diminishing of the convenience and fitness-for-purpose of bus stop infrastructure and interchange. Stagecoach has significant concerns that current proposals to remove the bus station and have all bus services operate from the street kerbside, on an inner distributor road with similar or reduced net stop capacity, fall short of promoting attractive, convenient bus access to the central area as a destination.

For the longer term and where the objectives of the draft plan are concerned looking ahead to 2039, they clearly fall short of enhancing the convenience and attractiveness of public transport use. Much less do they make sufficient provision for a material increase in bus frequency, connectivity, and interchange convenience, on which the draft plan explicitly relies. It is vital that the District Council is clear in policy about its objectives for public transport in the city centre. These objectives must also carry sufficient weight when held in tension with other aspirations for the centre and the constraints on achieving them.

For the Plan to be sound, properly effective and compliant with NPPF, the approach to the City centre cannot ignore its role in the provision of sustainable transport service and connectivity.

Policy A1 should therefore be modified to properly reflect this crucial function, on which the vitality of the city centre must increasingly depend if unacceptable impacts on congestion, air quality and amenity are not to arise. This is still more crucial if wider aspirations to secure a more sustainable society and mitigate carbon are to be achieved.

"...This will include provision for development and proposals that:

- Support and strengthen the vitality and viability of the city centre and its role as a shopping/visitor destination, employment centre, public transport hub and a place to live;
- Support and promote facilitate improved access to the city and with increased emphasis on sustainable modes of travel, with particular regard to enhancing the public transport interchange role of the city centre area, in accordance with the transport strategy for the city and..."

9.2. Policy A3 Southern Gateway Development principles Chichester Bus Station, Bus Depot and Basin Road Car Park

Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

There has been aspiration to redevelop the bus station and nearby bus depot from many years. Stagecoach has been engaged with detailed discussion with the District Council on this matter over a very extended period. We confirm that these discussions have reached a relatively mature stage, however at the time of writing are not concluded.

Stagecoach recognises and supports in principle the Council's wider aspirations for the "Southern Gateway", and this has governed our approach to the Council to date. We continue to have no "in principle" objection to relocating our administrative, engineering, operational and customer service facilities.

Leaving our proprietary interests entirely to one side, it remains vital that in so doing, the effectiveness, attractiveness and convenience of these facilities is not compromised, as we have outlined in our representations to Policy A1, if wider national and local transport policy, and the local plan strategy itself, are to be effectively achieved.

The depot is crucial infrastructure to support the safe, reliable and legally-compliant operation of Stagecoach bus services over a very extensive area covering the entirety of the District and beyond. Without securing equivalent facilities, that are fit-for-purpose, many of our services would have to cease.

If buses are to provide a greater and more attractive level of service (still more so if they are to be electrified) larger, more capable depot facilities, and city centre bus interchange facilities will be necessary.

Notwithstanding that the bus station and depot sites are leased from the District Council, these leases terminate well beyond the end of the plan period.

Finding suitable sites for a replacement bus depot in Chichester, in common with all similar localities especially in southern England, is extremely challenging. As a sui generis use, bus depots do not automatically benefit from policy support on land allocated for employment uses. Most bus depots benefit from being legacy assets established under very different economic conditions. That is the case here. The value of a depot site for redevelopment net of demolition and remediation costs, rarely approximates to that able to sustain the acquisition of land in a tight wider employment land market, and the construction of suitable new facilities.

Furthermore, the costs of operating bus services are sensitive to the parasitic costs of vehicle and staff hours and mileage associated with "dead running" to a remote depot location from the operational network. Here, the existing depot site is ideal, and any replacement will unavoidably add ongoing operational costs to the operation that cannot be directly recovered.

We confirm that a replacement depot site has been identified and has in principle been agreed, subject to overcoming issues with the disposition of existing and future structures on the site. However, the site is recognised as not capable of accommodating meaningful operational expansion. This is just one of the most important foundational reasons why a positive transformation of bus productivity needs to be achieved, across the plan area and beyond, to support delivery of greater bus mileage and frequencies with the same level of operational resource. At the time of writing, we are not fully convinced that the proposals for the relocation will be sufficiently fit-for-purpose in the event the above is not achieved. Thus, we must raise a concern that the bus depot site might not be available during the plan period. While there is a strong probability it will be, the certainty surrounding the availability of the site, especially within the first 5 years of the plan, needs to be made transparent.

9.3. Policy A4 Southern Gateway - Chichester Bus Station, Bus Depot and Basin Road Car Park

Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Regarding the removal of the bus station, without equivalent replacement, Stagecoach has significant concerns. Pressures and conflicts at the current bus station site have been gradually rising for several years, arising from increasing use and the need for additional scheduled vehicle layover periods to reduce the risks of accumulated late running from traffic congestion. Peak passenger volumes have recovered strongly on several routes, however passenger accumulations resulting from more frequent delays and disruption have added substantial further pressure on limited space.

Under current plans, buses and bus passengers will be displaced to bus stops at new locations outside the city centre, along Avenue de Chartres. This road was always intended to be a relatively high-speed traffic route, outside the historic core of the city. The city centre has evolved in the subsequent years to reinforce already strong natural severance, with the highway lying beyond the city walls and the green space along the Lavant. It is a traffic dominated, unsurveyed and unattractive environment, reflecting the intended function of the road as an efficient movement corridor for high traffic volume, and nothing more. Avenue de Chartres is relatively close to the rail station and pedestrian connectivity can be provided at broadly equivalent distance to the current bus station, but again it is unsurveyed and currently unpleasant, lacking natural legibility or any sense of prominence.

We understand kerbside capacity on Avenue de Chartres will be strained even to accommodate current levels of service, with no expansion possible. There is therefore a strong probability that to accommodate more frequencies and key new routes, such as West of Tangmere, East of Chichester and West of Chichester allocations, additional future bus stops must occupy a different location. This makes interchange between routes and rail services substantially challenging and less attractive.

The emerging arrangements risk marginalising public transport and public transport users substantially. This strongly undermines achievement of the wider plan objectives and delivery of a significantly greater role for public transport. If substantial public transport growth is to be accommodated in a growing city and hinterland, as the draft plan anticipates, then a more ambitious strategic approach must be taken. This should plan for additional and improved facilities to accommodate all services predicted to be required, whilst enhancing the passenger experience to ensure meaningful and attractive modal choice.

There is therefore a need for the plan to evidence how these issues will be appropriately resolved, having regard to a suitably ambitious approach that properly supports clear objectives to boost the relevance of public transport. The current policy is weak, unspecific and indifferent to achieving the strategic objectives of the plan, including a transport strategy in support of the plan, and as such it is ineffective.

Policy A3 should therefore be modified to read:

- " ...
 • Be designed to encourage and facilitate substantial increase in the use of active travel and public transport to, from and through the city centre.
 ..."

In line with the commentary above Policy A4 should also be modified to read:

3. Enhance the public interchange function of the immediate area, the public realm, particularly connections to the railway station and the city centre via South Street, Southgate and Basin Road for pedestrians, cyclists and public transport users, and to National Cycle Route 2 and Route 88 which run close by. Suitable replacement bus stops and layover facilities should be provided to replace those at the bus station in line with reflecting the objectives of the West Sussex Bus Service Improvement Plan, and to facilitate growth to meet the requirements of the plan's development strategy. Routes and crossings should reflect pedestrian desire lines, and public art should be incorporated to create a sense of place;

4. Enhance the public realm, in support of this and wider objectives, incorporating public art and other measures to create a strong and attractive sense of place.

...(renumber remaining points)

9.4. Policy A6 Land West of Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

This is an existing Local Plan allocation. The public transport strategy for the site depends on the delivery of the second phase which Stagecoach notes is the subject of several applications now awaiting review and determination by the Council.

The site represents a compact form of development adjoining the city, as the most sustainable settlement, meeting housing needs close to where they arise, and affording very good opportunities for the use of sustainable modes, especially walking and cycling.

It is vital that a bus service is delivered to serve the site at the earliest potential. This was anticipated to be at the start of Phase 2 and will require the early delivery of the entire length of the spine road between the Old Broyle Road and Westgate and making it available for bus services.

It is not clear if the costs of pump-priming the service mentioned in the draft policy are anticipated to be met by the developer. Without such funding, the service will not be deliverable as years of losses will never credibly be covered from future profit. It is likely that the current wording will be interpreted by the developer as meaning that they have no such obligation binding upon them. Not does policy set out any specification for this service, thus its costs and the basis for securing developer contributions does not exist.

As such any wider transport strategy, that seeks to secure a greater role for the use of public transport, and the aspiration for this allocation cannot demonstrably be met. The policy is ineffective.

Policy A6 should be modified to read:

" ...
10. Make provision to accommodate and secure delivery of for regular bus services linking running through the site to Chichester city centre operating at least every 30 minutes Monday-Saturday, and new and improved cycle and pedestrian routes linking the site with the city,
..."

9.5. Policy A7 Land at Shopwhyke

Stagecoach Supports

This is an existing Local Plan allocation, largely built-out, that benefits from an existing set of permissions.

The public transport strategy for the site depends on the delivery of effective bus priority at Oving Crossroads. The current recently implemented scheme, undertaken by National Highways, makes no provision for effective bus priority and needs considerable re-evaluation.

The site represents a compact form of development adjoining the city, as the most sustainable settlement, meeting housing needs close to where they arise, and affording very good opportunities for the use of sustainable modes, especially walking and cycling. It lies on a new bus corridor that will shortly be put in place, running to Tangmere via Shopwhyke. The allocation is being significantly consolidated by further development in the immediate vicinity which strongly supports the potential for this new service.

As we explain in our representations for East of Chichester proposed allocation A8, and West of Tangmere Allocation A14, a clear corridor strategy to effect bus priority is needed, that should be delivered in support of that further growth, and that at Tangmere SDL. However this allocation is a near complete commitment and there is no scope through policy regarding this land to effect this outcome.

It is notable that Point 6) of policy A7 makes mention of a bus service. This language reflects the currently adopted Local Plan policy and has underpinned the existing permissions. The failure of any bus service to be delivered demonstrates from first principles that this Policy has been entirely ineffective. It is important that lessons are learned from this in the Local Plan Review.

9.6. Policy A8 Land East of Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This proposed allocation lies next to unallocated land that is already consented as a departure from the adopted development plan, with 143 units near completion south of Oving Road (20/02471/FUL). Additional land, also unallocated but similarly consented, has now commenced north of Oving Road (88 units under 21/02197/FUL). This and the allocation site consolidates earlier development at Shopwhyke brought forward under the current Local Plan, and allocated again as draft policy A7.

Development at Shopwhyke was brought forward on the basis of a premise that the developer would provide or somehow arrange a bus service, that was reflected in the policies of the current Local Plan. This was secured by an unenforceable condition. No bus service has been provided, as there was inadequate clarity regarding the basis on which the costs of establishing such a service would be met by the developer, and the expectations of policy on the developer. The site does however lie on a logical new bus corridor between Chichester and West of Tangmere along the Oving Road.

In addition, an expectation that modifications to the Oving Crossroads would effect bus advantage have proven false – the arrangements put buses into a similar or longer queue than if they use the route available to general traffic to and from the A27.

Stagecoach strongly supports the principle of bringing this land forward. However, the soundness of the site depends on deliverability of a regular, reliable and direct bus service along the Oving Road, taking advantage of effective bus priority.

Given the failure of existing policy in the adopted Local Plan covering the proposed A7 allocation to deliver a bus service, it is of great concern that there is no draft policy to adequately address the issue. The policy is out of conformity with NPPF paragraph 104-105 in that sustainable modes do not offer realistic choices, much less an attractive one, and as such also does not secure the objectives of national policy nor of the plan itself.

Currently the proposed allocation is not served at all by public transport. Policy needs to ensure there is a policy basis to secure contributions to deliver such a service, which may well take the form of a proportionate contribution to deliver a new service or enhance provision that is put in place between Chichester along the Shopwhyke Road to west of Tangmere.

To become sound Policy A8 must be modified to read:

" ...
12. Provide for improved high quality connectivity by sustainable travel modes and focused in particular on a corridor between Chichester city centre and Tangmere along Shopwhyke Road, including new improved cycle and pedestrian routes, and a frequent bus service including linkages with Chichester taking advantage of effective bus priority measures on Oving Road at the A27;
..."

9.7. Policy A9 Land at Westhampnett/North East Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This land is already allocated and consented as part of the existing 2016 Local Plan. All reserved matters are determined.

The site lies on service 55 between Chichester, Westhampnett and Tangmere. This established service benefits from additional demand from the development at Phase 1. Phase 2 which is currently well underway, does not benefit directly from bus services. However it is a compact and logical form of development where walking and cycling to local facilities and employment is a credible option.

The existing allocation rolls forward policies in the 2015 Local Plan. In so doing it is possible to see which have been effective.

Point 9. regarding bus service and routing has not been effective. In particular the potential for a bus only link between the site and Graylingwell has not been established as policy anticipated. Given congestion around the Portfield area acutely affects public transport this, or alternative methods to secure bus priority over private car use, a clear and unequivocal policy steer is required.

The lack of an up-to-date transport evidence base is ultimately at the root of these issues. Arguably the policy and allocation can only be made sound once this refreshed evidence base in place.

However, it is possible that the allocation could be made sound by modification of Policy A9 as follows:

"...

9. Make provision for regular, direct and reliable bus services linking the site with Chichester city centre, and new and improved safe and convenient cycle and pedestrian routes linking the site with Chichester city, the South Downs National Park and other strategic developments to the east of Chichester city including Tangmere. These objectives could include exploring the potential for a bus only route require a deliverable scheme to afford bus priority through Portfield, and potentially linking the development with the Graylingwell area through use of a modal filter;

"..."

9.8. Policy A10 Land at Maudlin Farm

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing public transport route. It is relatively close to the city and very near substantial centres of employment and services that can be reached by active travel modes, helping damp the demand for car use. It is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services at Portfield and over a wider area. In fact, the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A10 should accordingly be modified to read:

"...

5. Provide safe and suitable access points for all users, including a main vehicle access from Old Arundel Road and, subject to further assessment, a secondary vehicle access from Dairy Lane. The development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes;

"..."

9.9. Policy A11 Bosham – Land at Highgrove Farm

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Bosham Station. It is relatively close to the city and very near substantial centres of employment and services that can be reached by public transport and cycling, offering strong potential to materially damp the demand for car use.

There are serious risks that development in the A259 corridor west of Chichester could place further demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular to bus services.

Nevertheless, given the potential to effect bus priority on the approaches to Fishbourne Roundabout, it is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A11 should accordingly be modified to read:

"...

8. Provide safe and suitable access points for all users, including a main vehicle access from the A259. The development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys crossing the A27 at Fishbourne;

9.10. Policy A12 Chidham and Hambrook

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework

4. Provide a suitable means of access to the site(s), and securing secure necessary off-site transport infrastructure and service improvements (including highways in particular to the A259 corridor between Emsworth and Chichester) in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development) to promote sustainable transport options prioritising delivery of high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes;

...

9.12. Policy A14 Land West of Tangmere

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach strongly supports the principle of intensifying the level of development at the Strategic Development Location already identified and allocated West of Tangmere in the existing Local Plan. This serves to consolidate development at a location where effective and attractive public transport choices could be provided. It also conforms closely with the principle expressed in NPPF that the best possible use should be made of land on sites that are judged to be sustainable, or potentially sustainable locations for development.

It must be stressed that the current policy suite for the SDL has to date not brought forward development in this location. We recognise that a Master Plan has been adopted by the Council, and that a planning application (20/02893/OUT) for the full larger quantum of 1300 dwellings proposed in the draft plan has received a resolution to grant by the Council.

However, we are not aware that a sustainable transport strategy has been finalised.

Land West of Tangmere is not served by any existing regular bus services. Rather, an entirely new bus service corridor is anticipated to operate in the near term from Chichester through Tangmere and beyond towards Barnham. This would serve proposed allocations A7, A8 and West of Tangmere (A14) included in the draft Plan.

This is reflected in the language of the explanatory memorandum to Policy A14 at paragraph 10.65:

“Opportunities, in partnership with relevant authorities, to provide improved sustainable public transport routes linking the village with Chichester city, to improve cycle routes to the city, and better transport links to Barnham rail station and the ‘Five Villages’ area in Arun District; and..”

Initiating this service will be costly and will in large measure be funded not by developer contributions, but by DfT monies awarded through the West Sussex Bus Service Improvement Plan. It is crucial this service is both sustainable in the longer term without revenue support, and that the success of the service can be built on by scalable frequency improvements as strategic development comes forward in both Chichester District, and proposed allocations A7 A8 and A14, and in Arun District, in particular at Barnham, Eastergate and Westergate (BEW).

This demands measures to effect safe, direct and swift operation of the service especially within the city centre, where it approaches and crosses the A27 at Oving crossroads and on the eastern fringes of the District east and west of Tangmere. Without these measures, bus journey time and reliability will be severely compromised and the and impact of this service to damped car trip demands will be very substantially compromised. No such measures are proposed in the draft plan or its evidence base.

Changes to Oving Crossroads have recently taken place which, amongst other intentions, ostensibly provide bus advantage between Chichester and Shopwhyke. The junction in its current form does not offer material gain in bus journey time, as movements involve a less-direct route towards the city over an increased operating distance, much of which involves passage through heavily congested sections of the A27 and Westhampnett Road. A refreshed transport strategy supporting plan-led growth must revisit this area to secure an effective solution which offers bus customers the fastest and most reliable trip-time to and from the city.

In addition, the extension of public transport connectivity towards BEW and Barnham, including key links to secondary education and a logical railhead for journeys beyond towards Brighton and London as provided at Barnham Station, needs to facilitate bus priority between Tangmere and Nyton – whether using the A27, or preferably avoiding it altogether. There are significant safety concerns associated with the at-grade uncontrolled right-hand A27 exit onto the B2233 Nyton Road at Crockerhill Turn. This movement is also prone to extreme delay owing to the conflict with approaching westbound traffic on the A27, travelling at speed, which has priority. Our concerns with this junction in its current form can be expected to worsen with the increased traffic volumes predicted from new residential developments to the west of the city.

A solution providing a suitable short length of highway available only to sustainable modes, between Tangmere and Easthampnett, could provide a very effective solution to this. This would be deliverable within the scope of the separate proposed allocation at A19 Chichester Business Park, Tangmere. We comment on this separately.

Howsoever effected, a reliable direct and delay-free bus corridor between Barnham, BEW, Tangmere and Chichester could expect to secure very substantial elevation of the relative attractiveness of public transport over car use on the entire corridor and serve to effectively damp growth-related demands on this section of the A27. West of Tangmere, in the longer term, there is evident scope for the route corridor to operate as two branches – one via Shopwhyke and one via Westhampnett, effectively serving all the strategic developments proposed in the plan and transforming wider public transport connectivity to key employment destinations and services within and east of Chichester.

However, in common with all the other proposed allocations, the plan proposes no specific measures to provide, much less improve public transport or other sustainable modes to the site. This leaves the draft plan out of conformity with NPPF, especially paragraphs 104-106. The plan is inadequately evidenced and to the degree that public transport measures are identified and emergent, their successful implementation in the near and longer term will be jeopardised without clear measures to provide a safe as well as efficient bus route towards BEW and the Five Village area within Arun. The Duty to Cooperate is not effectively met and effective cross boundary collaboration on these strategic issues through the review of LSS is not demonstrated, despite the current version which identifies the issues.

To be made sound the LSS Review and a subsequent urgent review of the transport evidence base and strategy needs to take place. The strategic issues are especially critical east of Chichester, in our view.

Notwithstanding this foundational deficiency, to be made sound, Policy A14 should be modified to read:

...

8. Subject to detailed transport assessment, provide primary road access to the site from the slip-road roundabout at the A27/A285 junction to the west of Tangmere providing a spine road link with secondary access from Tangmere Road. Development will be required to provide or fund mitigation for potential off-site traffic impacts through a package of measures in conformity with Policy T1 (Transport Infrastructure) and T2 (Transport and Development) and DfT Circular 01/2022 that maximise the relevance and use of sustainable travel modes, in particular bus services;

9. Make provision for improved sustainable travel modes between Tangmere and Chichester city, in partnership with relevant authorities, including improved direct, seamless safe and reliable and additional bus and cycle routes linking Tangmere with Chichester city, Shopwhyke and Westhampnett. In conjunction with measures in support of Allocation A19, Opportunities should also be explored contributions shall also be sought for providing improving high quality cycling and bus service transport links with the ‘Five Villages’ area and Barnham rail station in Arun District; and...”

10. Concluding comments

Stagecoach recognises its role as a key stakeholder in the plan, as well as a local employer and corporate citizen. We recognise the primacy of the plan-led system as the mechanism intended to resolve complex challenges, including the proper alignment of transport and spatial planning, which as the National Decarbonisation Strategy for Transport among other policies makes clear, has never been more vital.

In making our representations, we emphasise that we are entirely supportive of the Local Planning Authority and the relevant Highways and Transport Authorities, in their efforts to properly manage the amount and pattern of development to secure vital policy objectives. We recognise that balancing delivery of assessed development needs with a wide variety of other constraints is a very difficult task.

The transport issues faced by the plan are recognised in the draft plan as being serious and long-standing. We believe that there are ways to arrive at a suitable transport mitigation strategy that has regard to wider strategic issues and resolves existing problems in a much more effective way than those pursued to date.

We support the spatial strategy of the plan as it evidently provides the basis to secure the necessary step change in the quality and use of sustainable transport modes, as it explicitly seeks to do. However thus far, there has been insufficient work done to define the measures that will credibly secure these outcomes.

Stagecoach therefore urges the authorities to draw us into the necessary effective ongoing collaborations that is expected by NPPF paragraph 16 and 106; and DfT Circular 01/022, to do this work, prior to, rather than after the submission of the draft plan. We look forward to being approached to initiate this dialogue at the earliest opportunity.

Change suggested by respondent:

Notwithstanding this foundational deficiency, to be made sound, Policy A14 should be modified to read:

"...

8. Subject to detailed transport assessment, provide primary road access to the site from the slip-road roundabout at the A27/A285 junction to the west of Tangmere providing a spine road link with secondary access from Tangmere Road. Development will be required to provide or fund mitigation for potential off-site traffic impacts through a package of measures in conformity with Policy T1 (Transport Infrastructure) and T2 (Transport and Development) and DfT Circular 01/2022 that maximise the relevance and use of sustainable travel modes, in particular bus services;

9. Make provision for improved sustainable travel modes between Tangmere and Chichester city, in partnership with relevant authorities, including direct, seamless safe and reliable bus and cycle routes linking Tangmere with Chichester city, Shopwhyke and Westhampnett. In conjunction with measures in support of Allocation A19, contributions shall also be sought for providing high quality cycling and bus service transport links with the 'Five Villages' area and Barnham rail station in Arun District; and..."

Document Element: Policy A14 Land West of Tangmere

Respondent: Sussex Wildlife Trust (Laura Brook) [7654]

Summary:

SWT feels that this policy is inconsistent with other policies in the draft Local Plan and the NPPF. The policy fails to acknowledge the requirement to leave biodiversity in a better state via the delivery of BNG. As such, we recommend an amendment to this policy to acknowledge the addition of BNG to ensure the policy is consistent with national policy, 179b NPPF 2021.

Full text:

See attached representation.

Change suggested by respondent:

Amend policy with an additional bullet point:

Ensure that development avoids harm to protected species and existing important habitat features; facilitates the achievement of a minimum of 10% biodiversity net gain; and facilitates the creation of high levels of habitat connectivity within the site and to the wider green infrastructure network and identified strategic wildlife corridors. This includes the provision of appropriate buffers as necessary in relation to important habitats which are being retained and/or created.

Full text:

I write to object to the Chichester Local Plan published in February 2023 for public consultation. There are a number of points that I feel have not been addressed correctly and which concern Loxwood in particular. In general, I object to the fact that so many new houses have to be built in and around this area. We do suffer from the fact that large land owners occupy much of the mid-West Sussex landscape and the South Downs National Park occupies this as well, making development opportunities restricted to north and south. I am a regular visitor to Chichester and am appalled at the number of new homes being built there making the roads impossible at key times. Loxwood has no infrastructure for further development other than that proposed in the local Neighbourhood Plan. There is not a shop other than one, fundamentally a butcher's shop and very 'high end' and is too expensive for regular purchases of staple goods. There are no buses other than one bus servicing Godalming Sixth Form College which terminates in Guildford. There is one bus returning. There are limited employment facilities in Loxwood and the surrounding villages. People living here would travel to work in cars making an already-busy B road more dangerous than it is. There was a RTA at the junction of Station Road with the High Street yesterday (26th March 2023) necessitating visits by police cars and ambulances. Both the local primary school and the doctors' surgery have declared that they are at full capacity. The problem of sewage spewing on to the road from new developments has been witnessed by me with raw sewage spilling on to the main road out of an outlet drain. Regarding wildlife, the countryside around Loxwood supports plants such as orchids and bluebells and other wild flowers, and bats and newts and kingfishers can be seen here. Regarding the development proposed on farmland, there is an owl box fitted in a tree bordering one of the footpaths, but hidden from view. This has been supporting a family of barn owls for the 4 years it has been in situ. They are nesting there now and thrive. "Wild barn owls are given the highest level of legal protection possible under the 1981 Wildlife and Countryside Act. Penalties that can be imposed for criminal offences in respect of a single bird, nest or egg contrary to the Wildlife and Countryside Act 1981 are an unlimited fine, up to six months imprisonment or both." There are so many other objections to over-development that they are too numerous to mention here and are well documented by other replies, I am sure. The area is becoming so crowded in terms of road use, water use and I feel strongly that more development is simply not sustainable.

Document Element: Policy A15 Loxwood**Respondent:** Artemis Land and Agriculture Limited [7943]**Agent:** Mr Jack Allenby [7942]**Summary:**

Policy is unsound due to there being evidence (set out in the Council's own evidence base and within this representation) demonstrating that additional housing could be delivered in the North of the Plan Area to meet future needs, particularly in the parish of Plaistow and Ifold at Crouchlands Farm.

Furthermore, policy is unsound as not justified or effective, but overly reliant on the delivery of additional homes in the North of the Plan Area on sites allocated in neighbourhood plans for the respective parishes when there is no evidence to demonstrate that any sites are likely to be allocated, nor even that neighbourhood plans will be prepared by each of the parishes in the plan period.

Full text:**A. SUMMARY AND CONCLUSION**

1. The Council's emerging Local Plan is unsound as:

- proposed Policy S1, Spatial Development Strategy (Appendix LPD1, page 38-39), focuses most future growth in the south of Chichester district in an area that is highly constrained in planning terms, with only a moderate amount of growth proposed in the North of the Plan Area which is objectively and comparatively less-constrained;
- proposed Policy H1, Meeting Housing Needs (Appendix LPD1, page 100), sets out a total housing supply of 10,359 homes for the plan period of 1 April 2021 to 31 March 2039, equivalent to 575 homes per year (an already capped figure due to highway constraints in the south). This is a shortfall of 1,134 homes for the plan period, or 63 homes per year, against the Council's minimum local housing need as calculated by the Government's standard housing method and set out in the Council's Housing and Economic Development Needs Assessment (Appendix LPD2, page 42);
- the Council proposes a similar spatial strategy and shortfall in supply of housing against its full housing need to that for the previous (adopted) Local Plan (Appendix LPD3, pages 40 – 41, and 49). This has resulted in the Council being unable to demonstrate a five year housing land supply and manage proposals for speculative development, reflected in some 87% of new housing coming from windfall sites (Appendix LPD4, page 12), so is proven to be unsound;
- despite the historic and proposed shortfall in its housing supply, the Council presents insufficient evidence to demonstrate that the impacts of meeting more of the local housing need would significantly and demonstrably outweigh the benefits when assessed against the policies in the National Planning Policy Framework (2021), taken as a whole;
- the Council's Sustainability Appraisal (Appendix LPD5, page 26) assesses growth scenarios in the North of the Plan Area. A growth scenario including Crouchlands Farm for 1,114 homes (or 62 per year) is found to be most sustainable (Appendix LPD5, page 34) but is discounted without clear and robust reasoning, and a blended growth scenario for 720 homes (or 40 per year) is proposed in the Local Plan (Appendix LPD5, page 40). It is wholly unclear how the Council has arrived at its decision;
- the Water Neutrality Mitigation Strategy (Appendix LPD6, page VI) and Emerging policy NE17 (Appendix LPD1, page 89) allows for 1,796 homes in the North of the Plan Area, of which scenarios 1a and 2a, including Crouchlands Farm, are less than. Water Neutrality is therefore not a constraint when considering a higher level of development in the North of the Plan Area; and

• Crouchlands Farm was also assessed in the Council's Housing and Economic Land Availability Assessment (Appendix LPD7, page 134) as being suitable, achievable and available for rural enterprise-led development / residential mix of up to 600 homes (HELAA ID HPI009).

2. The emerging Local Plan, therefore, is unsound due to it not being positively prepared by the Council in proposing a shortfall of housing supply against its minimum local housing need, where there are no exceptional circumstances to justify this, as well as there being evidence to support additional sites for housing, including at Crouchlands Farm. There is no coherent basis for the Council not taking forward Crouchlands Farm to increase future housing supply given the shortfall.

3. As a result, the Council should be asked to allocate more sites to help bridge the gap in the extent of its housing shortfall and Crouchlands Farm should be considered the obvious first choice given the deliverability of Rickman's Green Village, as demonstrated by the Council's evidence base (Appendix LPD5, page 34, and Appendix LPD7, page 134).

4. In addition, a wealth of technical work has been undertaken to prepare and submit three planning applications for Rickman's Green Village (Chichester District Council reference 22/01735/FULEIA, 22/03114/FULEIA, and 22/03131/OUTEIA) that are currently awaiting determination. These applications further demonstrate the suitability of Crouchlands Farm as a highly sustainable site, capable of delivering up to 600 homes alongside a primary school (or other suitable community facility), village hub with farm shop, cookery school, glamping and retail and commercial units, and open space provision, such that it should be allocated in the emerging Local Plan.

5. Artemis, or a representative thereof, therefore wishes to participate in the future hearing sessions for the emerging Local Plan. It is considered that as Crouchlands Farm is the only specific alternative considered in the Sustainability Appraisal, it merits its own hearing session.

B. EMERGING LOCAL PLAN ANALYSIS

Introduction

6. This representation has been prepared by DLBP Ltd, on behalf of Artemis Land and Agriculture Limited ("Artemis"), to object to the soundness of the Chichester Local Plan 2021-2039: Proposed Submission ("the emerging Local Plan") prepared by Chichester District Council ("the Council") for public consultation between 3 February to 17 March 2023 under Regulation 19 of the Town and Country Planning (Local Planning) (England) Regulations 2012.

7. Artemis is the owner and operator of Crouchlands Farm, Rickman's Lane, Plaistow, Billingshurst, West Sussex RH14 0LE, a 197 hectare livestock farm in the north of Chichester district partly proposed as the site of a new settlement, known as Rickman's Green Village.

8. The representation is based on the adopted National Planning Policy Framework (2021). There is a draft version currently being consulted on, but even if approved as drafted, it will not apply to a Local Plan that has reached Regulation 19 at this point. Therefore, the draft policies are not referred to.

9. In the interests of conciseness, the appendices list is not exhaustive. For example, only a selection of the planning applications documents, or executive summaries of these, have been included. The planning applications are available on Chichester District Council's website (planning refs 22/01735/FULEIA, PS/22/03114/FULEIA and 22/03131/OUTEIA), or a full suite of documents can be provided upon request.

Spatial Strategy

10. Proposed Policy S1, Spatial Development Strategy (Appendix LPD1, page 38 – 39), is unsound.

11. Proposed Policy S1 builds on the spatial strategy of the previous (adopted) Local Plan (Appendix LPD3, page 40 – 41) by focusing growth in the south of the District on sites in and around Chichester city, and the east-west corridor. The south of the district, however, is known to be highly constrained in planning-terms. Key constraints identified by the Council are the (lack of) capacity of the A27, flood risk, and the need to protect environmental designations, landscape quality, the historic environment and settlement character (Appendix LPD1, paragraph 3.5).

12. Due to the constraints in the south, in particular capacity issues of the A27, the Council proposes a moderate level of growth in the North of the Plan Area.

13. Previous advice from the Planning Inspectorate (Appendix LPD8, page 4) concluded that the Council should reassess its adopted spatial strategy and distribution of development in other parts of the District to establish whether the housing need could be met in another way. The emerging Local Plan, however, does not reassess the distribution of development sufficiently.

14. Proposed Policy S1 is unsound as the Council's evidence base demonstrates that additional housing could be delivered in the comparatively less-constrained North of the Plan Area, including at Crouchlands Farm, so the proposed policy is not positively prepared, and nor is it appropriately justified. This is expanded upon further below.

North of the Plan Area

15. Proposed Policies A15, Loxwood (Appendix LPD1, page 260) and H3, Non-Strategic Parish Housing Requirements 2021 – 2039 (Appendix LPD1, page 103) are also unsound.

16. The emerging Local Plan proposes one allocation for housing in the North of the Plan Area, Policy A15, Loxwood, for a minimum of 220 homes to come forward over the plan period, all through the neighbourhood plan process.

17. Proposed Policy H3 sets out non-strategic targets for 25 new homes to be delivered over the plan period in Plaistow and Ifold Parish, 50 in Kirdford Parish, and 75 in Wisborough Green, all through neighbourhood plans (of which Plaistow and Ifold does not even have a draft Neighbourhood Plan) or subsequent development plans (which have not even begun preparation yet).

18. It is clear, when looking at the District's population data alone that the North of the Plan area should, proportionately, take on more housing. This is because:

- the population for the entire District (excluding the South Downs National Park area) is 89,982, which comprises 8,396 in the North of the Plan Area and 81,586 in the remaining south of the District;
- the emerging Local Plan proposes 10,359 homes over the Plan period, comprising 370 in the North of the Plan Area and 9,989 in the remaining south of the District;
- if the proposed housing was to be distributed evenly across the District, one home should be allocated per 11.5 people. An even distribution would therefore result in 966 homes in the North of the Plan Area;
- however, the Local Plan only proposes 370 homes in the North of the Plan Area. This is a shortfall of 596 homes against what should be provided (966 homes) if it were to be evenly distributed, which equates to a 161% shortfall.

19. Proposed Policies S1, H3 and A15 should be found unsound due to there being evidence (set out in the Council's own evidence base and within this representation) demonstrating that additional housing could be delivered in the North of the Plan Area to meet future needs, particularly in the parish of Plaistow and Ifold at Crouchlands Farm.

20. Furthermore, proposed Policies S1, H3 and A15 are unsound as they are not justified or effective, but are overly reliant on the delivery of additional homes in the North of the Plan Area on sites allocated in neighbourhood plans for the respective parishes when there is no evidence to demonstrate that any sites are likely to be allocated, nor even that neighbourhood plans will be prepared by each of the parishes in the plan period. For example, proposed Policy H3 seeks to deliver 25 new homes in Plaistow and Ifold parish, however work to prepare its neighbourhood plan has ceased indefinitely.

Sustainability Appraisal

21. The Council's Sustainability Appraisal (Appendix LPD5, page 34) considered the following six growth scenarios to determine the number of homes to be delivered across the four parishes (Kirdford, Loxwood, Plaistow and Ifold, Wisborough Green) in the North of the Plan Area:

- i) 1, lower growth of only the four parishes providing 514 homes (29 homes per year);
- ii) 1a, lower growth of the four parishes plus Crouchlands Farm, providing 1,114 homes (62 homes per year);
- iii) 2, higher growth of only the four parishes, providing 1,139 homes (63 homes per year);
- iv) 2a, higher growth of the four parishes plus Crouchlands Farm, providing 1,514 homes (84 homes per year);
- v) 3, highest growth of only the four parishes, providing 1,964 homes (109 homes per year); and
- vi) 3a, highest growth of the four parishes plus Crouchlands Farm, providing 2,564 homes (143 homes per year).

22. The Council's Sustainability Appraisal concluded that the Council is supportive of a blend of Scenarios 1 and 2 (Appendix LPD5, page 40).

23. To reflect this, proposed Policy H3 Non-Strategic Parish Housing Requirements 2021 – 2039 (Appendix LPD1, page 103) therefore seeks:

- i) lower growth at Kirdford (50 homes) and Plaistow and Ifold (25 homes) on unallocated sites; and
- ii) higher growth at Loxwood and Wisborough Green through a combination of one allocated site for 220 homes (proposed Policy A15) and other unallocated sites (75 homes).

24. However, Figure 1 of the Council's Sustainability Appraisal (Appendix LPD5, page 34), above, very clearly shows that scenario 1a (lower growth of only the four parishes plus Crouchlands Farm) scores the best overall i.e., is the most sustainable option. This is due to scenario 1a scoring highest in regard to the site's accessibility, communities and health, lack of heritage constraints relative to the other scenarios, as well as lack of landscape constraints relative to the other scenarios.

25. With regards to the analysis of the remaining criteria:

- Air Quality and Environmental Quality; Biodiversity; Land, Soils and Resources – whilst we appreciate the information may not be available for the 'other areas' accounted for in each growth scenario, the scoring does not reflect the information within the three planning applications at Crouchlands Farm (e.g. Ecological Impact Assessments (Appendices RGV17 and RGV18), Air Quality Assessments (Appendix RGV8 – RGV10), Environmental Impact Assessments (Appendices RGV21 and RGV22), Agricultural Land Classification Assessment (Appendix RGV7), Land Quality Assessments (Appendices RGV26 and RGV27, etc));
- Housing – the scoring for this category is inconsistent with the other criterion, as it does not exclude option 3a from the ranking. For example, Scenario 1a should therefore score 4, rather than 5, if based purely on the quantity of homes. But page 4 of the Sustainability Appraisal (Appendix LPD5) confirms that the objective is to (our emphasis): "deliver suitable, well designed, energy efficient and affordable housing to meet local needs, in safe and accessible neighbourhoods with mixed and balanced communities". In the absence of supporting evidence on the qualitative elements of this objective, other than at Crouchlands Farm, the method of scoring this criteria is unsound as it does not meet the full objective. When considering the high-quality design of homes at Crouchlands, it is clear that scenarios 1a and 2a should in fact score higher; and
- Economy, employment – the Sustainability Assessment fails to acknowledge the economic benefits proposed at Crouchlands Farm, which will have a significant economic benefit for Chichester District Council and the wider area. This is demonstrated in the Economic Impact Assessment submitted with planning application (Appendix RGV19). A second Economic and Social Value Impact Assessment as also been submitted which considers the scenarios of the whole of the proposal (Appendix RGV20), but we wholly appreciate that the Council did not have access to this at the time of preparing the Sustainability Appraisal.

26. There is a clear disconnect between the scoring of the scenarios, how each scenario and Crouchlands Farm has been assessed by the plan-maker, and how the conclusion to proceed with a blend of scenarios 1 and 2 has been made. Page 34 of the Sustainability Appraisal (Appendix LPD5) clearly states that it "is undertaken without any assumptions regarding the degree of importance, or 'weight', that should be assigned to each of the topics in the 'planning balance'. It is only the Council, as the decision-making authority, that is in a position to arrive at an overall conclusion on the best performing growth scenario on balance". One must therefore assume that the Council has assigned more importance and weight to certain criteria of the scoring. But there is a clear lack of explanation of this weighting exercise, so the results of the testing is not justified.

27. The Council's reasoning for supporting a blend of scenarios 1 and 2 at section 7.3 of the Sustainability Appraisal (Appendix LPD5, page 40) is therefore wholly unclear, not justified, and is unsound.

28. In summary, the Council's position is that:

- the government's standard housing methodology determines an objectively assessed need of 638 dwellings per annum, or 11,484 over the plan period (which is a capped figure at 40% above the 'baseline' need figure);
- the figure is then capped further to the plan area as a whole to 575 dwellings per annum, because:
- capacity constraints associated with the A27 in the south of the plan area results in a resolution that there is capacity for no more than 535 homes per year in the south (i.e. a further capping of its proposed supply);
- this means that 103 homes per year need to be made up in the North of the Plan Area, or 1,854 homes over the plan period;
- a growth scenario (1a) including Crouchlands Farm for 1,114 homes (or 62 per year) is found to be most the sustainable option in the Sustainability Appraisal when considering the score of figure 1 above (Appendix LPD6, page 34) but is discounted without clear and robust reasoning;
- the Council thus proposes only 40 homes per year in the North of the Plan Area due to 'wide ranging planning reasons'.

29. This is wholly unsubstantiated as it means that there is a shortfall of 63 homes per year, or 1,134 homes over the plan period. Also:

- the Sustainability Appraisal (Appendix LPD5, page 16) sets out that water neutrality has implications for the growth quantum in the North of the Plan Area, so this area cannot accommodate the full 63 homes per year (which is already a capped figure);
- but the Water Neutrality Mitigation Strategy (Appendix LPD6, page 15, table 3.1), and the Sustainability Appraisal (Appendix LPD5, page 16), both confirm that the North of the Plan Area can accommodate 1,796 homes (circa 100 homes per year);
- and even if a suitably precautionary approach is taken (considering fewer homes, by 5% or 10%), 5% fewer homes would equate to 1,706 homes, and 10% fewer homes would equate to 1,616 homes;
- therefore, even with the highest buffer (10%) applied, 1,616 homes could be accommodated in the North of the Plan Area over the plan period (circa 90 homes per year). This means that almost the entirety of the actual shortfall (1,854 homes) could be reached in the North of the Plan Area.

30. We accept that the 1,854 homes required to be made up in the North of the Plan Area cannot be accommodated, due to water neutrality constraints and so scenarios 3 and 3a are discounted.

31. However, scenarios 1 (514 total homes), 1a (1,114 total homes), 2 (1,139 total homes), and 2a (1,514 total homes) would all be below the most precautionary approach taken to water neutrality constraint. Taking the highest growth scenario 2a (with Crouchlands Farm), there would still be headroom of 102 homes in terms of the Water Neutrality Mitigation Strategy.

32. Therefore, water neutrality cannot be the determining constraint for discounting scenarios 1a or 2a from the Sustainability Appraisal (Appendix LPD5).

33. Therefore, there is very limited explanation about what the “wide ranging planning reasons” are, and how the resulting shortfall has been reduced from 103 homes per year to 40 homes per year in the North of the Plan Area. Three examples are referenced (with our comments in bold):

- the rurality of the area – whilst we appreciate and wholly recognise this is a designated Rural Area under Section 157 of the Housing Act 1985, so are many of the sites in the south of the plan area that already have, and are planned to, accommodate significant growth. But other than this, a large part of the North of the Plan Area, including Crouchlands Farm, is unconstrained – it is not in the Green Belt, an Area of Outstanding Natural Beauty, a Special Area of Conservation, a Site of Special Scientific Interest, or other constraints. This is accepted by the Council at page 34 of the Sustainability Appraisal (Appendix LPD5);
- the entire area falls within a constrained water resource zone – this is not a constraint. The Council’s own proposed Policy NE17 contradicts this reasoning, as clearly sets out how developers can provide evidence that new development will be water neutral. In addition, Natural England’s Mitigation Strategy (Appendix LPD6, page V - XI) identifies the area as having capacity for 1,784 homes, and growth scenarios 1, 1a, 2 and 2a would all allow for headroom when considered against this (see paragraphs 28 – 32 above); and
- transport-related barriers to growth, whereby Waverley Borough and Horsham District have raised concern – as set out in Section C below, the planning applications at Crouchlands Farm contain a wealth of transport assessments and evidence that there are suitable, reasonable, and proportionate ways of mitigating this. Horsham District and Waverley Borough Councils and have not raised objection to the planning applications, either on transport or any other grounds (Appendices RGV40 and RGV41, respectively). Paragraph 5.2.33 of the Sustainability Appraisal (Appendix LPD5) accepts that the strategic growth options, i.e. Crouchlands Farm, have merit in transport terms.

34. Further details of the Council’s assessment of Crouchlands Farm in the Sustainability Appraisal (Appendix LPD5) are set out in Section C of this representation, alongside our response to each of the points raised by the Council.

40 homes per year

35. A meeting was held between the Council and an Advisory Inspector in October 2022 (Appendix LPD9). This precedes the publication of the Sustainability Appraisal (Appendix LPD5), the growth scenario testing, and the Water Neutrality Mitigation Strategy (Appendix LPD6), which have since concluded that development of up to 1,796 homes can be sustainably achieved in the North of the Plan Area over the plan period. The Sustainability Appraisal (Appendix LPD5) excluded scenario 3a on the basis of this being exceeded (page 26).

36. Nevertheless, paragraph 5 of the Advisory Inspector’s notes (Appendix LPD9) states “[...] the Council consider[s] a housing requirement below the need derived from the standard method (some 535 dwellings per annum (dpa) in the southern plan area and the potential for a further 40 dpa in the northern plan area compared to 638 dpa)”. And paragraph 9 lists a number of potentially constraining factors (e.g. limited public transport, limited facilities, water neutrality etc), which the Advisory Inspector states (our emphasis): “appear to support the Council’s position that a maximum of 600-700 homes could be delivered over the Plan period (or around 40 dpa).”

37. However, it is unclear what evidence informed the figure of 40 homes per year in the Advisory Inspector’s note, particularly as:

- none of the scenarios in the Sustainability Appraisal specifically tested a 40 homes per year scenario; and
- the Water Neutrality Mitigation Strategy, restricting development in the North of the Plan Area to 1,796 homes was not published until December 2022.

38. It is also unclear how the proposed figure of 40 homes per year is reached as a blend of scenarios 1 and 2. For example, when calculating the completions (54), commitments (198), windfall (62) figures at table 5.5, plus the 220 homes at Loxwood, 25 homes at Plaistow and Ifold, 50 homes at Kirdford, and 75 homes at Wisborough Green, the total amounts to 684 homes over the plan period, or 38 homes per year.

39. Despite this, the Emerging Local Plan (Appendix LPD1, pages 99 and 100) sets out a figure of 40 homes per year over the plan period (679 homes in total), accounting for completions, commitments as of December 2022, windfall, allocation at Loxwood, and non-strategic allocations at Kirdford, Plaistow and Ifold, and Wisborough Green. This is contrary to the results of the Sustainability Appraisal.

40. In a previous meeting with the Advisory Inspector regarding water neutrality (September 2022, Appendix LPD10), the Inspector confirms that, prior to submission of a plan (our emphasis added):

“the Inspectorate can only provide advice based on national planning policy and guidance, along with our own personal experience. While it is possible to explore issues in advisory meetings it is not possible to say definitively that the approaches taken will lead to a sound plan. That’s because ultimately each plan will be considered by an Inspector who has been appointed to carry out an independent examination. In doing so they will consider all the evidence to justify the plan, the representations and what was discussed at the hearing sessions.”

41. It is therefore not sufficient reasoning for the Council to submit the Emerging Local Plan, using a blend of scenarios 1 and 2 that happen to match a 40 homes per year figure in the North of the Plan Area, on the basis of the Advisory Inspector’s commentary in October 2022 (Appendix LPD9), which preceded the issuing of the Water Neutrality Mitigation Study (Appendix LPD6) and the Sustainability Appraisal (Appendix LPD5). One can assume there has been no examination of evidence by the Advisory Inspector, just commentary based on the Council’s own - unsound - narrative.

42. For the above reasons, the Council has therefore not positively prepared or justified the reasons for limiting growth in the North of the Plan Area to 40 homes per year.

Development Plan Infrastructure Panel

43. The Sustainability Appraisal (and commentary at the Special Cabinet and Full Council meetings held on 23 and 24 January 2023) makes references to conversations held and decisions made by the Development Plan Infrastructure Panel. A Freedom of Information request was submitted to request the minutes of these meetings, and the response was that the meetings are confidential and so the minutes would need to be heavily redacted.

44. The transparency of this is in question. While the meetings may not be ‘public’ in the sense that the public can attend and watch, the meetings relate to a document that is in the public domain and subject to public consultation, and so there should be transparency into how the decisions and conclusions have been made and justified.

45. In light of the above, proposed Policies S1, H1, and H3 are unsound for not being positively prepared or justified, directing insufficient growth in the North of the Plan Area where there is evidence to support the allocation of additional housing in a more-sustainable way, by including Crouchlands Farm.

Housing Need

Shortfall of supply

46. Proposed Policy H1, Meeting Housing Needs (Appendix LPD1, page 100), is unsound.

47. Paragraph 61 of the National Planning Policy Framework (2021) sets out that “to determine the minimum number of homes needed, strategic policies should be informed by a local housing need assessment, conducted using the standard method in national planning guidance – unless exceptional circumstances justify an alternative approach”.

48. The Council’s Housing and Economic Development Needs Assessment (Appendix LPD2, page 42) identifies a housing need of 763 homes per year based on the Government’s standard method. That figure comprises 125 homes per year for the part of the district in the South Downs National Park and 638 homes per year for the remainder of the district (the plan area). This equates to a total requirement for 11,484 new homes for the plan period of 1 April 2021 to 31 March 2039.

49. Proposed Policy H1, however, sets out the total housing supply of 10,359 homes for the plan period, which equates to 575 homes per year. This is a shortfall in supply of 1,134 homes, or 63 homes per year, against the minimum local housing need as calculated by the Government’s standard method.

50. The Council attempts to justify the proposed shortfall in housing supply due to key constraints in the south (the A27, flood risk, environmental designations) and the north of the district. In the north, the Council identifies key constraints to be the protection of environmental designations, landscape quality, historic environment and settlement character, and water neutrality (Appendix LPD1, paragraph 3.5).

51. We note that this was echoed by the Planning Inspectorate in a Local Plan Advisory Meeting, held on 5 October 2022, who found that: “The northern area is not constrained by the capacity of the A27 but has its own issues. As a predominantly rural area with limited facilities and public transport, it is not an obvious location for significant development. There are also landscape and historic environment constraints. It is also affected by water neutrality requirements and the potential for capacity issues on the wider highway network. These factors appear to support the Council’s position that a maximum of 600-700 homes could be delivered over the Plan period (or around 40 dpa)”. (Appendix LPD9, paragraph 9).

52. However, that advice was issued prior to the Council’s Sustainability Appraisal (Appendix LPD5) and Water Neutrality Mitigation Strategy (Appendix LPD6) being published, which have since concluded that development of up to 1,796 homes in the North of the Plan Area over the plan period can be sustainably achieved.

53. The Council makes no justification that not meeting its housing need in full would significantly and demonstrably outweigh the benefits of meeting the majority of the shortfall of need in the North of the Plan Area, when assessed against the policies in the National Planning Policy Framework (2021) taken as a whole. The Council entirely overlooks the fact that its objectively assessed housing requirement is not being met. The only reason the Council makes for not meeting its housing need in the North of the Plan Area is set out in a Cabinet Report, dated 23 January 2023, which states: In the north of the Plan area, previously, given it is less sustainable compared to Chichester and the east-west corridor, the Local Plan has only provided for only limited growth, focused on enabling these communities to continue to sustain local facilities and contribute towards meeting locally generated housing needs, and support for the rural economy, in line with the settlement hierarchy. However, due to the constraint of the A27 in the south of the plan area (see housing section at para 5.34 onwards below), it is considered that this Plan should provide for a moderate level of growth in the north to help to make up the overall shortfall of dwellings, in order to demonstrate that ‘no stone has been left unturned’ in identifying housing supply.

High levels of growth were considered at Loxwood, Kirdford, Wisborough Green and Plaistow and Ifold, but ruled out due to the need to conserve the rural character of the area and its high quality landscape and to minimise the impact on the historic environment. The spatial strategy therefore includes growth at Kirdford (50 dwellings), Wisborough Green (75 dwellings) and Plaistow and Ifold (25 dwellings). Loxwood is the least constrained settlement in the north of the plan area, and benefits from the most services and facilities, including healthcare. Therefore, a moderate amount of growth is appropriate for Loxwood of 220 dwellings, to come forward through the neighbourhood planning process. The SA of the northern options considered 3 scenarios (plus each scenario with the addition of a potential new settlement at Crouchlands), for low, higher and highest growth. The highest growth scenarios perform poorly and therefore the Local Plan reflects a combination of the low and higher growth scenarios tested, which takes into account the constraints of each settlement and the need to avoid cross boundary traffic and education impacts. A new settlement at Crouchlands has been ruled out as it is not of a sufficient size to be a sustainable new settlement in a rural location and because of the negative impact on the landscape and intrinsic rural character of the area and poor sustainable transport links. (Appendix LPD11, paragraphs 5.19 – 5.21).

54. The Council fails to make a case that the impacts of meeting this need would outweigh the harm cause by not meeting the full housing need, or indeed that impacts of even getting closer to meeting this need would demonstrably outweigh the harm of not meeting housing need.

55. On the contrary, there is evidence to demonstrate that housing supply could be higher by at least 600 homes through the allocation of Crouchlands Farm as a site considered to be suitable, achievable and available by the Council’s Housing and Economic Land Availability Assessment (Appendix LPD7, page 134). The allocation of Crouchlands Farm would be acceptable in water neutrality terms, with both Scenarios 1a and 2a of the Sustainability Appraisal (Appendix LPD5, page 34) delivering new homes below the maximum figure set out in the Water Neutrality Mitigation Report (Appendix LPD6, page VI). Furthermore, there are no heritage and landscape constraints associated with Crouchlands Farm.

56. In addition, the information supporting the applications for Rickman’s Green Village further demonstrate Crouchlands Farm as a highly sustainable site, capable of delivering up to 600 homes alongside a village hub with farm shop, retail and commercial units, office and flexible working space, and open space provision (as well as provision for a primary school or other suitable community facility).

57. Proposed Policy H1 is therefore unsound on the basis that it is not positively prepared or justifiable when accounting for all reasonable alternatives. Historic under-delivery

58. The previous (adopted) Local Plan (Appendix LPD3, page 49) did not provide a sufficient supply of housing to meet the Council’s full housing need at the time of adoption, which is the same approach proposed by the Council for Policy H1.

59. Many of the sites allocated for housing in the previous (adopted) Local Plan on sites in the south of the District have not been delivered, as demonstrated by Appendix 2, Table E of the Council’s Five Year Housing Land Supply Position Statement (Appendix LPD12). This confirms that four sites allocated by the Council previously, with a combined projected supply of 2,210 homes, have not been started, and do not even benefit from planning permission. We understand that none of those sites has come forward due to impediments resulting from site ownership, which raises questions around the approach taken by the Council in allocating sites for housing in the south in the past, which Policy S1 proposes to use again.

60. The Council’s failing to meet its housing supply historically has also resulted in it now being unable to demonstrate a five year housing land supply and so unable to effectively manage proposals for speculative housing developments. This is reflected in a significant proportion – some 87% – of new housing coming from windfall sites (Appendix LPD4, page 12).

61. In addition, the Council introduced a new Interim Position Statement for Housing (Appendix LPD13) which set out a spatial strategy to allow new

development adjacent to settlement boundaries as a way of significantly boosting housing supply (Criterion 1). The Council has not carried this strategy forward into the emerging Local Plan. This is despite the Planning Inspectorate recommending this in a recent appeal decision (Appendix LPD14), stating that the application of Criteria 1 suggested "the Council's [adopted] spatial strategy may be out of date, as a more permissive approach appears necessary to maintain a five-year housing land supply." (paragraph 25).

62. Proposed Policies S1 and H1 are therefore unsound as they follow the same approach of the previous (adopted) Local Plan, which has proven to be ineffective and unsustainable, contrary to national policy, and the recommendations of the Planning Inspectorate.

Longer Term Growth Requirements

63. The emerging Local Plan as originally published (Appendix LPD15), prior to the meetings of the Council's Cabinet and Full Council on 23 and 24 January 2023, respectively, set out "some reservations about whether it will be appropriate in the longer term to continue to rely on existing sources of supply (e.g., urban extensions and urban intensification) indefinitely given the potential for ongoing increased levels of housing needs" (paragraph 5.11).

64. In doing so, it identified that a new settlement of 2,000 – 3,000 dwellings to accommodate potential longer-term growth needs beyond the Plan period (i.e. 2039 onwards) will need to be explored.

65. At the meeting of the Council's Cabinet, a proposed amendment was agreed to remove the above wording and instead insert: "Beyond the Plan period additional planned provision for housing will be required. During the course of preparing this Plan, it has become apparent that it may not be appropriate in the longer term to continue to rely completely on sources of supply such as urban extensions and urban intensification" [...]

"In order to be in a position to update this Local Plan within the next five years the Council will need to consider future population and household growth. At the same time, the requirement for sufficient homes to house a local workforce without relying on excessive in-commuting to the District's workplaces will need to be considered. The continual evolution of National Planning Policy also presents challenges as in what national, regional, sub-regional and plan area strategic planning context any future reviews of this plan may be undertaken." (Appendix LPD1, paragraphs 5.11 – 5.12).

66. Reference is then made to the need to work "bilaterally with neighbouring authorities in seeking to find cross boundary strategic solutions to future growth requirements" (Appendix LPD1, paragraph 5.13).

67. The emerging Local Plan (Appendix LPD1, paragraph 5.14) continues to recognise a need to facilitate the identification of possible new development sites specifically within the Chichester plan area, however solutions to meet that need are not explored fully.

68. The Council states that it would consider sites that (with our commentary in bold):

- i) are of a sufficient scale to support potential long-term development needs arising and support the provision of key infrastructure and community facilities – Rickman's Green Village is of a scale similar to surrounding villages, and will provide all necessary key infrastructure as well as community facilities such as a potential primary school (or other suitable community facility), sports pitches, and shops;
- ii) are comprehensively planned in consultation with existing communities and key stakeholders – significant public engagement has been undertaken, including two in-person public consultation events, and pre-application discussions with West Sussex County Council (on transport, and education) and Chichester District Council;
- iii) provide for a sustainable, inclusive and cohesive community promoting self-sufficiency and with high levels of sustainable transport connectivity – a new bus service connecting Rickman's Green Village to Billingshurst is proposed, and onsite infrastructure is provided to promote self-sufficiency;
- iv) include on-site measures to avoid and mitigate any significant adverse impacts on nearby protected habitats – extensive ecology surveys and assessments have been undertaken to ensure habitats are protected. For example, 10 – 30 m buffers have been incorporated around Ancient Woodland;
- v) provide a mix of uses to meet longer term development needs and contribute towards its distinctive identity – the village hub will provide office spaces, shops, a café, leisure facilities and a potential school or other suitable community facility to meet long term needs of future residents; and
- vi) are of a layout and form that avoids coalescence with existing settlements and does not undermine their separate identity; respects the landscape character and conserves and where possible enhances the character, significance and setting of heritage assets – Rickman's Green Village has been designed to be a new rural village that does not rely on or coalesce with other surrounding villages. The design has been landscape-led and reflects the character of nearby villages, with contemporary features. There are a number of mitigation measures in place to ensure the setting of heritage assets are protected.

69. Proposed Policies S1 and H1 are therefore unsound. The Council acknowledges that there are ways of meeting future housing need, which could include an allocation of Crouchlands Farm, but avoids deploying these now, which is not justified.

Water neutrality

70. Proposed Policies S1, Spatial Development Strategy (Appendix LPD1, page 40 – 41), H1, Meeting Housing Needs (Appendix LPD1, page 100), and H3, Non-Strategic Parish Housing Requirements 2021 – 2039 (Appendix LPD1, page 103) are unsound, and contradictory to proposed Policy NE17, Water Neutrality (Appendix LPD1, page 89)

71. The Council's Sustainability Appraisal (Appendix LPD5), in assessing the proposed growth scenarios for the North of the Plan Area, states that water neutrality remains a "key constraint to higher growth" (page 40), despite a Mitigation Strategy (Appendix LPD6) having been agreed.

72. That Mitigation Strategy (Appendix LPD6) assumes 1,796 homes being delivered in the North of the Plan Area which the Council's Sustainability Appraisal (Appendix LPD5, page 16) states:

"immediately serves to indicate that there is no potential to deliver the high growth target figure of 1,854 homes as the (minimum) level of growth that would be necessary in the northeast plan area, were the local plan housing requirement to be set at LHN [local housing need]."

73. Based on the above, the Council should have discounted the highest growth scenarios for the North of the Plan Area in the Sustainability Appraisal Scenarios 3 and 3a, which propose 1,964 and 2,564 homes, respectively for delivering more than 1,796 homes (Appendix LPD5, page 26). Page 26 of the Council's Sustainability Appraisal (Appendix LPD5) states, however, "On balance, just Scenario 3a [highest growth of the four parishes plus Crouchlands Farm, providing 2,564 homes] is ruled out as unreasonable, on this basis, leaving five reasonable growth scenarios". The Council provides no further justification for the inclusion of Scenario 3.

74. The Sustainability Appraisal (Appendix LPD5) goes on to state that whilst a Mitigation Strategy has been agreed, it "cannot be implemented until further work has been completed in order to design / set up strategic offsetting schemes. In this light, the proposed strategy of restricting growth somewhat [in the North of the Plan Area] is supported" (page 60).

75. That assessment is at odds, however, with proposed Policy NE17, Water Neutrality (Appendix LPD1, page 89), which states that "Development proposals are not required to utilise the planning authority-led offsetting scheme and may bring forward their own offsetting schemes."

76. The Council, therefore, seeks to use water neutrality to limit future growth in the North of the Plan Area, despite proposed Policy NE17 facilitating appropriate development from coming forward, such as that proposed at Crouchlands Farm. Proposed Policies S1, H1 and H3 are unsound for not being positively prepared or justified.

C. CROUCHLANDS FARM

77. Our analysis of the Council's emerging Local Plan shows that it cannot be found sound as the Council proposes a shortfall of supply against its minimum local housing need where there are no exceptional circumstances to justify this, as well as there being evidence to support additional sites for housing.

78. As a result, the Council should be asked to allocate more sites to help bridge the gap in the extent of its housing shortfall and Crouchlands Farm should be considered the obvious first choice given the deliverability of Rickman's Green Village, as demonstrated by the Council's evidence base (Appendix LPD5, page 34, and Appendix LPD7.5, page 134), and the evidence presented below.

Document Element: Policy A15 Loxwood

Respondent: Irene Aspinall [8138]

Summary:

The policy does not achieve CDC's environmental, economic and social objectives due to lack of infrastructure (amenities, sewage capacity, road network) and environmental issues (emissions, loss of hedgerows/ancient woodlands, destruction of habitats and impact on protected species).

I object to any further development in the Loxwood area because it would ruin the nature of the village with detriment to residents already living in the village because there is inadequate infrastructure to support the development, and the negative impact on the natural environment.

Full text:

I write to register my objections to the Local Neighbourhood Plan.

The developments that are already underway should be sufficient. The developments that have taken place over the past 15 years have already changed the nature of the village, making access to the local countryside, one of the intrinsic attractions of living in Loxwood, increasingly difficult. Loxwood was a village but ongoing development is turning it into a town but without improvements to amenities or infrastructure.

CDC is aware that there is limited opportunity for growth in Loxwood and any growth will have a negative impact on the village, its residents and the surrounding area.

My objections relate to Policy A15 and Sections 10.66 to 10.77. The policy would have a direct, negative impact on Loxwood. In my opinion the Local Neighbourhood Plan does not help achieve CDC's environmental, economic and social objectives for the following reasons:

lack of infrastructure
 environmental requirements are not met

There is a lack of amenities in the village at present, it has no Post Office or village convenience store. The local school and doctors' surgery are at capacity and cannot cater for any increase in numbers using their services that would arise from more development. There is a lack of sewage capacity in the area; further development will place that system under further strain. Foul sewage escaping from the system is already blighting the lives of residents. A solution to the capacity issue has been cobbled together, with a holding tank serving the Nursery Green development that needs to be emptied by a tanker multiple times a week. This in itself leads to more HGV traffic through the village. Clearly there is already too much traffic passing through the village due to the introduction of traffic calming measures with new road markings being instated recently. Further development in Loxwood will lead to more traffic using the B2133 with negative impacts on the local environment as a result of more emissions from an increased number of motor vehicles in the area.

A negative impact on the natural environment would arise from the loss of hedgerows and ancient woodlands if development expands across land neighbouring the village, especially to the West. Further development of the village will destroy habitats for wildlife in the area including 79 internationally and nationally protected species that are known to live in the area including bats, newts, dormice, badgers, and other flora and fauna including birds on the Sussex notable bird list.

I object to any further development in the Loxwood area because it would ruin the nature of the village with detriment to residents already living in the village because there is inadequate infrastructure to support the development, and the negative impact on the natural environment.

[RECEIVED LATE]

Object on grounds of:

- ecological impact;
- traffic / limited transport links
- limited existing supporting infrastructure
- water supply and neutrality issue

Full text:

[RECEIVED LATE]

I object to the quantity of properties proposed in the Local Plan on the following grounds:

Ecological impact:

The increased noise, light pollution and traffic will impact negatively on the biodiversity of the area as fragile local animal habitats are destroyed. Rare species of bats, barn owls, deer, butterflies, badgers and countless other animals benefit from the rural environment. Once this tranquil location is disturbed the ecology of the area will suffer beyond repair.

Traffic:

Loxwood district and the surrounding roads are very quiet with many farms and stables in the immediate vicinity. Horse riders, dog walkers, hikers and cyclists frequent this location and the additional traffic associated with the provision of the proposed number of properties would severely impact upon this beautiful rural area, and the safety of its residents.

Due to the rural location there is very limited public transport in this area meaning that new residents in the proposed developments will need to travel in private vehicles.

Infrastructure:

Existing residents are struggling to obtain medical appointments and to secure school places already without exacerbating these issues by increasing the permanent population.

There are also the concerns around water neutrality and the depletion of this valuable resource. This Northern more rural parts of the district are struggling with this already without increasing the strain by the addition of further developments.

[RECEIVED LATE]

Objection on the grounds of:

- Limited supporting infrastructure and transport links in the village;
- Lack of shop promising in previous developments has not materialised;
- Issue with classification as service village;
- Limited access to employment in rural community;
- Consequential impact of proposed housing on flooding;
- Limited capacity of sewage system;
- Poor power and broadband connections, likely overloaded by proposed development;
- Limited education facilities;
- Disregard for Neighbourhood Plan;
- Concern regarding impact on environment and surrounding landscape
- Concern regarding overdevelopment / lack of benefit to local community

Full text:

[RECEIVED LATE]

I am sending to you my objection comments to Chichester Local Plan in respect to Policy A15 Loxwood . This essentially details the plan to build a further 200+ houses in the rural community. Permission has already been granted for 90+ houses, so the new proposal is in addition to this. Please can you ensure my objection comments are submitted .

I am sending this to you as I have been unable to submit my application via the portal. I wonder if this is because I was trying to access this using an iPad? Unfortunately I did not have access to my desk top until after 5pm by which time it appears the option to comment has been removed.

I object to the Policy A15 for the following reasons:

1) Loxwood is a rural village setting with limited infrastructure. The policy refers to developing the existing public transport and Loxwood is well served by transport links. That is totally incorrect . The current bus service is extremely limited only one bus a day on 4 days a week. Clearly for anyone who currently lives in Loxwood, to access employment, social, education, food provision it is a necessity to have a car to access the local towns Billingshurst and Cranleigh which are 5 miles away.

It is unrealistic to suggest the current service can or will be improved to make this viable for the community to be able to access schools/work in neighbouring towns.

2) The nearest train station in Billingshurst is 5 miles away and has minimal parking . There is no public transport to the station so anyone using train routes need their own means to get there. Should 200+ houses be built in Loxwood that is a huge increase in vehicles using the local rural roads.

3) Loxwood has been referred to as a service village. I challenge this as there is no local shop. In previous housing developments a shop was "agreed/promised" . This has not materialised.

4) Employment in this rural community is limited. To access employment in local towns anyone would need to use a car . The local rural roads would not be able to sustain this increased traffic use safely.

5) I am concerned about flooding in this area should future building take place. I have personally experienced my house being flooded in 2013. Increasing building in my view would put pressure on the water flow and further risk of flooding.

6) The sewage system is at capacity . Further housing development would be detrimental to the existing systems.

7) I am concerned about power in the community and internet broadband connections. This is already poor. We do experience power cuts and lack of internet band width. With further housing development the existing facility, will be even more over loaded.

8) I am concerned about education facilities . There is a local primary school, which is at capacity. The secondary school in catchment is over subscribed. It is not clear in any plans whether any provision is being made for this . Building 200+ houses in this community would increase the demand for education. The current provision would not be able to provide a service.

9) Loxwood has had a neighbourhood housing plan, which it appears has been completely ignored by the planning authority in recent planning applications. It is my opinion Loxwood has already, taken more than its fair share of new housing in the County. I remind you again that this is a rural village with limited infrastructure.

10) I am concerned about the impact on the environment with a proposal to build a further 200+ houses, in what is a village within an area of natural beauty.

11) This proposed development has no benefit to the local community and would lead to over development of the village.

Kind regards

Sue Bennett

4788

Object

Document Element: Policy A15 Loxwood**Respondent:** Mr Tim Bennett [8020]**Summary:**

This proposal for additional housing in Loxwood is obscene. Adding this number of houses to an otherwise quiet, rural country village will desecrate our local community

- Lack if infrastructure will not support this level of development
- Roads, sewerage, water, power supply are all insufficient as they are currently
- There is no public transport. 1 bus per day, on only 4 days per week is NOT a "service"
- Flood risk. My house was flooded due to excess run off caused by over development

Full text:

This proposal for additional housing in Loxwood is obscene. Adding this number of houses to an otherwsie quiet, rural country village will desecrate our local community

- Lack if infrastructure will not support this level of development
- Roads, sewerage, water, power supply are all insufficient as they are currently
- There is no public transport. 1 bus per day, on only 4 days per week is NOT a "service"
- Flood risk. My house was flooded due to excess run off caused by over development

Change suggested by respondent:

Stop targetting of Loxwood by WSCC and CDCC. It seems like the village is constantly under siege at the moment from developers

Object to further development - current developments are not able to be built because of considerable ongoing and yet to be remedied issues with sewage, water supply, wastewater, (as previously highlighted by Southern Water and Natural England) lack of facilities, risk of flooding, lack of sensitivity of the history of the village and its surrounding natural environment, no transport infrastructure, total lack of consideration to wildlife, school and doctor surgery at maximum capacity, to name just a few.

Full text:

Please accept this email as an objection to the proposed overdevelopment of Loxwood, and listed below are just a few of the considerable number of reasons further development should be stopped and a Loxwood Plan implemented.

Current developments are not able to be built because of considerable ongoing and yet to be remedied issues with sewage, water supply, wastewater, (as previously highlighted by Southern Water and Natural England) lack of facilities, risk of flooding, lack of sensitivity of the history of the village and its surrounding natural environment, no transport infrastructure, total lack of consideration to wildlife, school and doctor surgery at maximum capacity, to name just a few.

I strongly object to any further development which will only compound issues listed above together with many more, and wish my objections to be noted against Policy A15 section 10.66 to 10.77 within Chapter10 Strategic and Area Based Policies as having a direct impact on the village of Loxwood.

Concerns regarding transparency in relation to preparation of the Local Plan in relation to proposed site allocation with Loxwood. Specific concerns include: merging with surrounding villages and lost of character; severe lack of infrastructure; limited sustainable transport and dependency on cars; limited capacities of utilities.

Full text:

I am concerned there was a lack of transparency on this plan, as a resident of Loxwood I was unaware until the day before deadline. Plan shows Loxwood will significantly increase in size, merging with other surrounding villages such as Ifold, Alfold and Dunsfold to end up being a town and will lose its village character. There is severe lack of infrastructure. The A281 is a single lane road and is constantly jammed at the Bramley and Shalford junctions, due to high traffic and roadworks. It is 12 miles to Guilford and Horsham stations, so difficult is anyone needs to commute, the only option is to drive. There is only one shop and that is closing. The post office has already closed. There is only one surgery and it is near on impossible to get a doctors appointment in 1-2 days. Water, and sewage and electricity capacity is a major concern. There is only one primary school with limited places so children will have to travel away to go to school.

[RECEIVED LATE]

Objection to Policy A15 CDC plan to allocate land for development of additional 220 dwellings in Loxwood (sending this by email as had problems registering my objection on the website)

I object to the A15 CDC plan as:

Loxwood has a distinct lack of appropriate infrastructure to serve extra housing, such as no post office and the village shop closed in 2022.

Loxwood is very poorly served by transport links, there is only a bus service on 4 days a week, and even then, only 1 per day.

Future developments could cause an increased flood risk to existing properties, by there being less undeveloped land to soak up heavy rainfall, the run off from hard standing areas causing further problems. This is unacceptable.

Southern Water have stated that there is no capacity for extra sewage in the existing system from additional housing in the village.

Any sewage overflows into the local streams and river, as a result of this lack of capacity, would create an unacceptable biohazard for local residents, as well as local wildlife.

Local habitats for wildlife will be compromised by over-development of housing in Loxwood. I believe the addition of a further 220 new houses would constitute over-development.

Objection against development in Loxwood. Reasons including:

- lack of consideration of impact of development in village in neighbouring district (Dunsfold);
- lack of existing infrastructure - shops and amenities;
- lack of public transport, dependency on cars;
- lack of capacity within education facilities;
- limitation of utilities infrastructure;
- environmental impact

Full text:

Re. Proposed Forward Plan 2021 to 2039 effect on Loxwood.

Loxwood has had a lot of development over the past decade and with that has come a LOSS OF AMENITIES no GAIN. After all this development which is still ongoing there must be a period of time left before further development and it seems reasonable that Planners should give an approximate time plan for any future release of permission. I believe little if any attention has been given to the fact that Loxwood is on the border with Surrey and the very large development at DUNSFOLD has COMMENCED. Development on villages bordering other Counties MUST BE CONSIDERED as it effects infrastructure, particularly roads, drainage and services.

The proposal goes against many of the National Guidance considerations in that there is extremely little local industry, so the vast majority of new residents will need to travel by car to work and leisure. Piecemeal development of local Villages is an opt-out of providing enhanced facilities for existing residents as well as new residents as has been seen over the past decades. Planning for the future needs to be bold and select a place for a new small town or a big development to an existing village as this then provides finance to assist with the improvement of roads, infrastructure, Schools, services and amenities for existing residents and future residents. It also means many lovely small villages remain without any big development in the near future.

Now coming specifically to Loxwood, which has had piecemeal development has:- LOST ITS GENERAL STORE, LOST ITS POST OFFICE, NO FACILITY TO DRAW CASH, NO CAFE, and NO PHARMACY (except for prescriptions). PUBLIC TRANSPORT is almost non existent and could easily be lost totally (one bus per day to Billingshurst and one to Guildford).

SHOPPING the nearest towns are Horsham and Guildford. Billingshurst has very limited facilities. Therefore Residents are dependant on a Car for Business and Leisure.

TEENAGERS - NO FACILITIES AT ALL.

EDUCATION- Primary School is over grounded and lacks any further adjacent space to expand. Secondary School is in Billingshurst and really that is at capacity and lacks any adjacent space to expand.

Whilst Loxwood has a VILLAGE HALL AND ADJACENT PLAYGROUND this is NOT CENTRAL and it fronts the very busy road through the village which only has very narrow pavements. NOT IDEAL for walking to for younger children at all.

In the plan it seems very little consideration, if any, has been given to Infrastructure Like many Villages, water (supply, use and deposal) and electricity need to be considered very carefully as majority of housing depends on OIL for heating. Lastly but certainly very important is limiting environmental damage to this area of Northern Villages.

Piecemeal development as in the past is NO SOLUTION.

Summary:

Objection to Loxwood figure due to:

Lack of shop
No bus service
Water neutrality and sewage
School capacity
GP capacity
Lack of local employment.

Full text:

I have just heard that there is a planning application in for 220 more houses in Loxwood. I find this extraordinary when you consider all the things we don't have.

1. A shop, I have just driven 3 miles each way to buy a paper.
2. There is no bus service here at all on at least one working day connecting Loxwood to the nearest train station.
3. We are not water neutral and one development has an overflow sewage tank that has to be emptied by a lorry.

We do have:

1. A near capacity school
2. A near capacity surgery
3. No available local employment

There are a lot more examples I could have given as to why this is a bad idea for the area and also for the environment, but I am sure you have heard them all before.

Change suggested by respondent:

Loxwood Plans need to return to and adopt those proposed by the Parish Council. CDC should be working with the Parish Council to develop Loxwood in context to its current setting as an attraction and of benefit to the future not only for residents but in national and world terms for nature and wildlife. Currently has a wide range of wildlife covering the proposed area including bird life such as kites, buzzards, gold crest to protected species such as bats, badgers, dormice, amphibians to name but a few. CDC should be working with recognised groups such as CPRE, Woodland Trust, Wildlife Trusts, the Wey and Arun Canal to ensure the historical, physical and mental benefits can be appreciated and valued by residents and visitors alike for the future, not destroyed. the footpaths and bridleways are well used by individuals, walking groups, dog walkers, cyclists on a strong daily basis. The proposed housing would destroy this completely.

- limited transport links
- lack of sewage capacity
- lack of grid capacity
- impact on important habitats
- impact on landscape and public rights of way
- inconsistent with national policy

Full text:

[RECEIVED LATE]

We are writing to lodge our deep concern regarding the most recent proposed plans for development within our Village of Loxwood . Already there has been a lot of new housing developments within Loxwood and we can see more springing up at present. We are very opposed to this overdevelopment which is eating into the countryside and affecting our Community . The proposed development in question is going to take over farmers fields and is going to ruin the environment for all concerned - farmers and local residents alike. With the recent emphasis on food production within the UK due to the dreadful war in Ukraine and the knock on effect to food production in Europe, we would have thought the emphasis would have been on home grown produce from now on. This means farmland not development for housing. We are aware that the proposed development does not meet environmental requirements either.

Loxwood does not qualify as a service village and is not in a sustainable location. We no longer have a village shop and post office. They closed in August/September 2022. There is a lack of infrastructure such as a limited bus service and the closest train station is over 6 miles away. The local school and surgery are already at capacity and cannot sustain more housing. There is also a lack of sewerage capacity in the area and Southern Water have confirmed this but Chichester Borough Council have denied there is a lack of capacity. There is no wastewater infrastructure either to support the plans. There is also a lack of grid capacity and power cuts are increasing in the local area due to over development.

We feel that the site would be inappropriate It would destroy important habitats which Chichester Borough Council says need to be retained! The plan cannot integrate this housing or mitigate any impacts on the wider landscape character as a result. Important landscape features and key views would be affected from numerous Public Rights of Way both to the East and West of the Village.

Lastly, we have been made aware that the proposed plan is not consistent with National Policy and will not enable delivery of sustainable development.

[RECEIVED LATE]

Considers that the provision of additional housing in Loxwood is unacceptable for a variety of reasons:

- Justification for additional housing is inadequate and tenuous; no need for affordable housing;
- Loxwood ceases to qualify as a service village -inadequate local infrastructure to support sustainable development;
- Inadequate utilities including sewerage, wastewater and water capacity.
- Transport Statement is inaccurate - inadequate transport links, limited capacity of minor road network, and no cycle routes currently;
- Lack of consultation shows inability to cooperate with the village;
- Detrimental impact on village character and surrounding landscape including heritage assets and ancient woodland;
- Detrimental ecological impact;
- Lack of due process/compliance with planning legislation and NPPF

Full text:

[RECEIVED LATE]

I am writing to object to parts of Chichester District Council's local plan which affects the village I live in. My objections relate particularly to Policy A15 and sections 10.66 to 10.77, in Chapter 10 Strategic and Area Based Policies of the plan. this policy would have a damaging impact on the village of Loxwood.

Chichester's Sustainability Appraisal justifies 220 more houses on top of the 91 already in development or being built This means 311 more houses not 220. The justification is inadequate and the argument for the figure is tenuous at best. Chichester's own Sustainability Appraisal report highlights the limited opportunity for growth in Loxwood and the negative impact it would have. The plan will not meet Chichester's Sustainability Appraisal report and it does not help to meet Chichester District councils environmental, economic or social objectives due to a lack of infrastructure a lack of sustainability and being an inappropriate area to redevelop. it does not meet the environmental requirements either.

Chichester have not consulted with Loxwood residents or the Parish council and have shown a lack of due process, an inability to co operate with the village. As such I do not believe it is legally compliant. The local plan does not comply with the Planning and Compulsory Purchase Act 2004 or the Town and Country Planning Regulations 2012. The plan will not enable the delivery of sustainable development in accordance with the policies in the National Planning Policy Framework.

Loxwood has ceased to qualify as a service village and is not in a sustainable location for more development. The village is already overdeveloped and is straining under the pressure of additional houses. There is no village shop. The post office closed in August 2022 and the village shop closed in September 2022. There is a butchers but it does not provide basic necessities required from a village shop. The local school and the local village surgery are both at capacity and cannot sustain any more housing. In addition the surrounding schools are also all full and the two secondary schools in the area are both full.

The transport system is inadequate and Chichester's Transport Statement is wrong in saying Loxwood is well served by transport links. There is a very limited bus service (just one bus per day only and only on four days a week). In addition the nearest train station is at Billingshurst and parking here is a nightmare. Should you wish to take the bus, then there is no chance you would be able to commute into London or other towns. The reason being there are no buses to serve it from Loxwood.

In addition the roads are all minor roads and not capable of taking the additional traffic. The risk of accidents will increase as well as pollution. Speeding is already a problem in the village despite numerous promises of traffic calming measures and sadly I doubt anything will be done until a child or person is hit by a car which is inevitable.

Lastly, on transport, I am surprised Chichester say they will improve cycle routes as there are none to improve! To also say that there are lots of buses is comical.

The utilities capacity in the village is at capacity. In particular, there is no more sewerage capacity, wastewater infrastructure and water capacity which has been highlighted by Southern Water and Natural England. The number of power cuts is increasing in the local area as a result of overdevelopment and despite the promises of new infrastructure by developers it never seems to arrive. there is still no shop for example.

The lack of sewage capacity is highlighted by sewage being emptied by tankers at the newly built Nursery Green and Thakeham sites daily. I have to endure horrible smells of excrement when I take my children to school in the morning, when the HGV lorries come to empty the tanks. Should these tanks ever be connected to the actual sewage system foul sewage would escape into the River Lox and flow into South Downs National Park.

There is no requirement to provide appropriate specialist housing needs (such as for older people or self/custom build) as this need has already established by the Thakeham / Stonewater site I have walked around the new estate and many houses lie empty. The reason is there is not need for any more affordable / social housing in the area.

Loxwood is a beautiful village with numerous listed properties, ancient woodland and ancient trees, Chichester's proposal will kill the aesthetics and character of the village and impacts on the wider landscape character. The Thakeham site has already damaged the views from Merryhills and is not in keeping with the vernacular of the village. We need to protect existing important landscape features and key views, not ruin them even more with more housing. The proposal is not sensitive to the historic village setting in size or location and it does not enhance, protect or complement the natural environment or rural character of the village or surrounding area.

The plans would seriously affect numerous important ecological site including, the South Downs National Park which will be affected by over development impact on water consumption within Sussex North Water supply zone on the Arun valley site. Loxwood sits within 13.5km of the River Arun, which holds the multiple designations of Special Area of Conservation (SAC) and Species Protection Area (SPA). IT also sits within the buffer zones for The Mens and Ebernoe Common SACs. Chiddingfold forest is to the northwest and The SSSI Barberrly Bridge Pasture site is by the village. Any development would impact these habitats which are critical for sustaining populations within these sites.

Over development of the village will also destroy habitats for the local wildlife including Great Crested Newts, Slow worms and snakes which I and my neighbours have seen in our gardens, numerous bat species which are protected including Barbestelle Bats, Mammals including, Dormice and badgers which live in Setts along the hedgerows of the village, rare butterflies and many other rare flora, invertebrates, amphibians, reptiles, mammals and birds on the Sussex notable bird list.

Loxwood is a historic village which sits within an area of outstanding natural beauty and includes numerous national Paths and bridleways as well as the Historic Wey and Arun Canal in close proximity.

Goes against Natural England's policy on water neutrality and their other policies to protect the countryside.

Lastly, there more harm than the public benefit, derived from CDC's proposals for the village which is in danger of being overdeveloped without the infrastructure to support it. Worst of all, a number of public footpaths would be affected by the additional housing. The degradation of local footpaths will have an effect on the mental wellbeing of residents who use these paths.

I hope that Chichester District council reconsiders its plans under policy A15 and removes this potential travesty. Their own report says it is not a suitable site and is only under consideration because of the lack of options available. But in reality, I would hope Chichester if required go back to the Planning inspectorate and make the case that even if they are required to hit an arbitrary housing figure, if there are not enough suitable sites to achieve this then it has to be accepted. It would be highly irresponsible to build somewhere just for the sake of hitting a target especially if the area is wholly unsuitable.

Document Element: Policy A15 Loxwood**Respondent:** Crownhall Estates Limited & Martin Grant Homes [8115]**Agent:** Henry Adams LLP (Mrs Rebecca Tier, Senior Planner) [8116]**Summary:**

Policy A15 is not therefore considered precise and does provide any clear timetable for delivery in housing within Loxwood within the Plan period. It is therefore recommended that the allocation of housing sites in Loxwood should be based on a higher growth scenario of at least 825 homes which should be delivered either through a Local Plan policy allocation or within an SPD, with a clear timetable of when the SPD will be produced by the Council. Site proposed.

Full text:

1 Introduction

1.1 This representation provides a response to the Regulation 19: Local Plan Consultation in relation to the land at Headfoldswood Farm, Loxwood, RH14 0SX, as shown on the attached Masterplan Promotional Document, and hereon referred to as the site.

1.2 This representation will provide a written responses in relation the questions in the Regulation 19 Local Plan Consultation which directly relate to the promotion of our client's land for future development.

2 Comments on Specific Questions/Tests

2.1 In response to the national planning legislation, this Regulation 19 Local Plan Consultation invites comments on three specific questions, and is the final consultation phase, before the Regulation 19 version of the Local Plan is submitted for examination.

2.2 This representation will respond on these specific questions, and then highlight how our client's site could help fulfil the full housing requirement for the District to be delivered through an appropriate strategic allocation policy within the Council's Local Plan or through an Supplementary Planning Document (SPD).

Is the plan 'sound'?

2.3 Paragraph 35 of the National Planning Policy Framework defines the tests for soundness which requires the plan to be positively prepared, justified, effective and consistent with National Policy. These matters will now be considered in further detail in relation to the current consultation on the Regulation 19 version of the Local Plan.

Is the plan positively prepared and justified?

2.4 Policy S1 of the Draft Local Plan sets out the spatial development strategy for the District and how the Council will achieve sustainable growth over the plan period and Policy H1 sets out the housing target in response to the strategy. Both policies have been informed by the Sustainability Appraisal (SA) dated January 2023 and the Plan objectives, which are set out at paragraph 2.5.2 of the SA and the Council's HEDNA (April 2022).

2.5 The SA then goes on to discuss the potential growth scenarios and confirms two points:

- Standard method housing figure for Chichester (excluding SDNP) is 638 dwellings per annum, or 11,484 in total over the Plan period
- The above figure is capped at 40% above the baseline need and that the uncapped figure is significantly higher than this at 884 dwellings per annum (dpa)

2.6 Of particular note is that point ii. above seeks to cap the overall housing increase by no more than 40% above the previously adopted LP housing figure of 435 dpa. The Local Plan then goes on to constrain housing numbers due to an alleged capacity concern along the A27 strategic road network. The Council therefore result in a constrained housing figure by virtue of the standard method 'steps' and also due to infrastructure capacity. It should be noted that the 435 dpa figure within the 2015 Local Plan was similarly constrained and an early review was the only basis for accepting this reduced housing figure. This early review did not take place.

2.7 In terms of the influence of the A27, this is the key matter that constrains growth within the southern part of the District. This is based on the evidence base documents that state that the road network cannot accommodate an annual housing figure of more than 535 dpa. This is a fundamental point and one that we do not agree and believe there is capacity to accommodate at least the local housing need within the highway network, alongside potential improvements identified for the following reason.

2.8 The Transport Study (January 2023) is the key document on which the Council rely upon to constrain their housing figure to 535 dpa. On review of this document, it is clear that the Council's consultants undertook a sensitivity analysis as to whether the core scenario that supports the 535 dpa position in the local plan could accommodate a higher level of growth. The conclusion in paragraph 5.6.5 and 11.2.3 of the Transport Study appears to be that 700 dpa could be accommodated (in the southern plan area) by the mitigation proposed for the 535 dpa core test, with some additional, and as yet undesignated and not costed, mitigation works beyond those highlighted for the Bognor and Fishbourne roundabouts.

2.9 Accordingly, the Council's own evidence base has undertaken the assessment and concluded that a higher growth figure could be accommodated on the A27, subject to appropriate improvement works. Given the testing of the higher growth figure, which appears to accommodate the higher growth figure, the exceptional circumstances to constrain growth, as set out at paragraph 60 on the NPPF do not exist and the Plan could be considered unsound on this point alone.

2.10 As a result of the above, the SA does not consider a scenario where the Council would meet its local housing need, nor a scenario where it exceeds

its local housing need, which is of relevance given the scale of development expected for adjoining authorities, including the highly constrained SDNP.

2.11 It should also be noted that the draft Plan does not therefore address any need in relation to unmet need of neighbouring authorities and it does not contain evidence to suggest that these matters have been discussed with the adjoining Authorities. Notably, Arun District Council have confirmed that they will be objecting to the Plan and currently proposed on the basis that they have a significant housing need themselves. This is likely to be further influenced by unmet need from Chichester, who again are seeking to constrain housing requirements, which was the case in 2015 and the subsequent knock on from that was for Arun to address some of that need in their 2018 Local Plan.

2.12 Given that we do not accept that the A27 capacity matters present a ceiling in terms of housing delivery (based on the Council's Transport Study comments and that of its own consultants), it is not accepted that the Plan and associated SA demonstrates reasonable alternatives have been considered and it is not therefore positively prepared, nor is their approach to housing figures justified.

Effective?

2.13 On the basis of the 535 dpa figure, it is considered that the selected areas for growth and figures are deliverable over the Plan period, however, as set out above, the plan area could accommodate a greater level of growth.

2.14 It should also be noted that the Plan relies on the delivery of Neighbourhood Plan and / or small site allocations DPD. This is set out under Policy H3 in the draft document. This states the following in terms of delivery:

If draft neighbourhood plans making provision for at least the minimum housing numbers of the relevant area have not made demonstrable progress the council will allocate sites for development within a development plan document in order to meet the requirements of this Local Plan.

2.15 The above is not precise and does provide any clear timetable for delivery within the Plan period. Whilst the strategy in the comments above could be effective, the Local Plan needs to give a clear timescale for completion of the supplementary Development Plan documents in order to give a clear timescale for this to be completed.

Is the plan consistent with National Policy?

2.16 On the basis of the comments above, the approach to selected sites for allocation based on the 535 dpa figure is considered to be consistent. However, due to the lack of evidence to demonstrate this, the 535 dpa figure should be capped. Given the A27 capacity points raised, the draft Plan does not appear to meet the exceptional circumstances allowed for at paragraph 61 of the NPPF to justify their alternative approach. The Plan as proposed is therefore inconsistent with NPPF when read as a whole.

3 Development in Loxwood

3.1 Our client's land is located to the west of the village of Loxwood, which is situated to the northeast of the District. The High Street (B2133) runs through the village, connecting the A281 and A272. For a detailed context appraisal of the site and masterplan vision, please see attached the Masterplan Promotional Document. The site was submitted for the Council's call for sites in February 2019 and is included in Council's latest HELAA.

3.2 The Draft Local Plan defines Loxwood as a service village with local facilities and services, these include an infant and junior school, as well as a medical practice, a local shop and community facilities, including a village hall. The village has been identified in the Local Plan as a suitable location for a higher level of growth as it has suitable HELAA sites which could come forward through the Neighbourhood Plan process.

3.3 It is agreed that a strategic expansion to the west of Loxwood is the best option for growth in the north-eastern area of the District as there are fewer constraints within Loxwood in comparison to other villages within the north-eastern area of the District.

3.4 Policy A15 of the Draft Local Plan states that land will be allocated within the revised Loxwood Plan for a minimum of 220 dwellings and supporting facilities and infrastructure. This is based on a downwards adjustment scenario for Loxwood, but it should be noted this figure is closer to the lower growth scenario of 200 dwellings.

3.5 The Council acknowledges in the SA that the highest growth scenario of 1.650 homes could be justified but there are concerns regarding the deliverability of homes due the potential scale of allocations to meet the higher growth figure which in turn could affect the Council's ability to deliver the housing within the five year period. However, the Plan currently seeks

to allocate reasonably sized housing allocations on a number of small-scale housing sites which by this logic could equally affect the Council's ability to meet the Council's five year housing supply. It is recommended that the middle, higher growth scenario of at least 825 homes is sought, which would allow for meaningful growth in order to meet the needs generated by the new community, such as the identified primary school. The higher housing figure would also provide the benefit of more affordable housing provision for the north-eastern area of the District.

3.6 Loxwood Parish Council have produced a revised Draft Neighbourhood Plan which seeks to allocate 126 dwellings plus 17 carried forward from the Made Loxwood Neighbourhood Plan, providing a total of 143 dwellings. The Draft Neighbourhood Plan was submitted to the Council under Regulation 14 in December 2020. It is noted in response to the Reg 19 Local Plan consultation, that Loxwood Parish Council will be objecting to policy A15 and the increased housing numbers of 220 dwellings on sustainability grounds, with specific reference to water neutrality. The recent Parish Council meeting notes also indicate that there is currently little appetite to undergo another Neighbourhood Plan review, which will likely require additional resource and cost.

3.7 There is concern that relying on the Neighbourhood Plan to allocate specific sites in Loxwood, will result in unnecessary delay to delivery of housing in this area given the points raised above. Policy A15 is not therefore considered precise and does provide any clear timetable for delivery in housing within Loxwood within the Plan period. It is therefore recommended that the allocation of housing sites in Loxwood should be based on a higher growth scenario of at least 825 homes which should be delivered either through a Local Plan policy allocation or within an SPD, with a clear timetable of when the SPD will be produced by the Council.

Water Neutrality

3.8 One of the constraints of the north-east of the District is the requirement is for all new development to meet water neutrality, to ensure that any new it does not impact further on the habitat site comprising the Arun Valley Special Area of Conservation (SAC) or the Arun Valley Special Protection Area (SPA) & Ramsar site, in terms of groundwater abstraction within the Sussex North Water Supply Zone. It is anticipated that further advice and a mitigation strategy will be created by the Council and its partners to demonstrate how developments can achieve water neutrality. However, at present applicants are required to provide a water neutrality strategy to demonstrate how the development can achieve water neutrality.

3.9 To provide the Council with reassurance that the site is deliverable despite this constraint, our client has commissioned an initial water strategy based on a development of approximately 250 dwellings which includes provision for offsetting. The initial strategy indicates that water neutrality could be achieved for development on the site through water efficient fixtures and fittings, reuse of harvested water through greywater recycling for flushing toilets and offsetting through water efficiency upgrades on an educational facility located within the Sussex North Water Supply Zone. It would therefore appear on the basis of the work undertaken to date, that it would be possible for future development on this site to achieve water neutrality.

4. General Policy requirements

Policy H11 Meeting Gypsies, Travellers and Travelling Showpeoples' Needs - object

4.1 The above policy sets out a requirement for 124 pitches across the Plan period, which is to be provided for by allocation of pitches on strategic allocation sites proposing 200+ homes.

4.2 Whilst we understand that there may be a district wide need, we understand that the underlying rationale underpinning this strategic approach is that insufficient sites came forward as part of the Council's Call for Sites process. However, whilst this tells us about availability of sites, it doesn't dictate the appropriateness of locations for gypsy traveller provision. It should also be noted that the proposed allocations would not accommodate the overall need and there is no clear quantifiable policy requirement to deliver this need. Accordingly, the approach is not considered to be robust.

4.3 What is clear is that plots are currently available in other areas of the district that have not been taken up by the Council for allocation (namely HELAA ref. HB10028).

4.4 From our understanding there appears to be a clear absence of information regarding the requirements for pitch provision in localities and the site specific needs that are required to be met. We have not yet seen any evidence from the Council in respect of engagement with the gypsy traveller community in respect of a desire to be located on suburban residential sites – which we consider would contradict with the typical locations of gypsy traveller pitches which are located on rural sites on the periphery of rural settlements.

4.5 Due to the scale and form of the site and specific access names (larger HGVs for static homes and touring caravans) it makes it very difficult to design and suitable means of access that does not appear overly engineered, within a residential housing estate. No consideration appears to have been given to how this can be accommodated within such a site.

4.6 At this time, we consider it would not be appropriate to include such provision until further evidence has been provided on suitability of the approach, need in this specific location and suitability as part of housing allocation of this scale, with a single point of access.

4.7 On the basis of the above, we object to the proposed policy requirement.

5. Conclusion

5.1 Our client's land is ideally placed to be able to fulfil the sustainable expansion to the west of Loxwood and the much needed, identified housing within the north-eastern plan area. The site measures 57.334 hectares and can be considered as a strategic housing site, west of Loxwood, that would deliver a higher growth of housing within this village and would appear to be able to meet water neutrality requirements. This would also support the viability of the services and facilities in the northern villages. This could include a sustainable addition to the existing village of Loxwood, result in significant enhancements to its existing services and facilities, improved links along, and connectivity to the Wey & Arun Canal and provision of at least 825 homes.

Change suggested by respondent:

It is therefore recommended that the allocation of housing sites in Loxwood should be based on a higher growth scenario of at least 825 homes which should be delivered either through a Local Plan policy allocation or within an SPD, with a clear timetable of when the SPD will be produced by the Council. Site proposed.

5637**Object**

Document Element: Policy A15 Loxwood

Respondent: Mr Vivian Diggins [6550]

Summary:

The village infrastructure is already lacking shops, transport links, development of sewage and wastewater facilities by Southern Water, as well as current pressures on the school and medical centre.

These all need to be improved BEFORE any new developments are approved and the proposed infrastructure delivery plan in the A15 policy and 10.70 of Chichester's proposed plan is not at all specific and lacking in areas I have mentioned above.

New housing in Loxwood will have a negative effect our local and the wider environment and will fall outside of current government legislation for hedgerow regulations, conservation of species and habitat, as well as the much discussed requirement for water neutrality.

There is so much wrong with these proposals, as I have highlighted that it makes a further 220 houses in Loxwood totally unworkable.

Full text:

I am writing to you with VERY strong feelings against the Chichester Local Plan 2021 to 2039 specifically for Loxwood. As a resident of 45 years, I have experienced the changes, many of which have been negative, that have happened over that period in Loxwood.

Leaving aside the shortcomings of the previous approved housing developments by CDC, I would like to briefly identify the shortcomings in the Local Plan 2021 to 2039 for Loxwood.

Having read the

The village infrastructure is already lacking shops, transport links, development of sewage and wastewater facilities by Southern Water, as well as current pressures on the school and medical centre. These all need to be improved BEFORE and new developments are approved and the proposed infrastructure delivery plan in the A15 policy and 10.70 of Chichesters propose plan is not at all specific and lacking in areas I have mentioned above.

New housing in Loxwood will have a negative effect our local and the wider environment and will fall outside of current government legislation for hedgerow regulations, conservation of species and habitate, as well as the much discussed requirement for water neutrality.

There is so much wrong with these proposals, as I have highlighted that it makes a further 220 houses in Loxwood totally unworkable.

The Environment Agency are due to complete a property level resilience scheme for Loxwood in late 2023. This is a community that have suffered property flooding several times in the last 20 years. Policy requirement 8 is therefore of particular importance.

We are supportive of the policy requirement for suitable phasing to ensure adequate wastewater treatment capacity is available.

Full text:

The Environment Agency are due to complete a property level resilience scheme for Loxwood in late 2023. This is a community that have suffered property flooding several times in the last 20 years. Policy requirement 8 is therefore of particular importance, and we would recommend that there are small additions to this requirement in the policy:

"...and that development will be safe for its lifetime and not increase flood risk elsewhere, taking account of risks from all sources of flooding and climate change impacts, as per..."

As for all site allocations, we are supportive of the policy requirement for suitable phasing to ensure adequate wastewater treatment capacity is available (requirement 9). Developers will need to consult with Southern Water to understand if there is capacity for further connections to the Loxwood WwTW as the works may need improvements to reduce spills from storm overflows.

Change suggested by respondent:

Addition to requirement 8 "...and that development will be safe for its lifetime and not increase flood risk elsewhere, taking account of risks from all sources of flooding and climate change impacts, as per..."

Document Element: Policy A15 Loxwood**Respondent:** Jonathan Gayner [8145]**Summary:**

Object on grounds of lack of infrastructure and local services; sewage spills and lack of capacity in network; high levels of traffic which would increase with further development; increased emissions from additional traffic; potential loss of hedgerows and ancient woodlands; wildlife habitats would be destroyed; detriment caused to current residents' amenity.

Full text:

I write to register my objections to the Local Neighbourhood Plan.

The developments that are already underway should be sufficient. The developments that have taken place over the past 15 years have already changed the nature of the village, making access to the local countryside, one of the intrinsic attractions of living in Loxwood, increasingly difficult. Loxwood was a village but ongoing development is turning it into a town but without improvements to amenities or infrastructure.

CDC is aware that there is limited opportunity for growth in Loxwood and any growth will have a negative impact on the village, its residents and the surrounding area.

My objections relate to Policy A15 and Sections 10.66 to 10.77. The policy would have a direct, negative impact on Loxwood. In my opinion the Local Neighbourhood Plan does not help achieve CDC's environmental, economic and social objectives for the following reasons:

- lack of infrastructure
- environmental requirements are not met

There is a lack of amenities in the village at present, it has no Post Office or village convenience store. The local school and doctors' surgery are at capacity and cannot cater for any increase in numbers using their services that would arise from more development. There is a lack of sewage capacity in the area; further development will place that system under further strain. Foul sewage escaping from the system is already blighting the lives of residents. A solution to the capacity issue has been cobbled together, with a holding tank serving the Nursery Green development that needs to be emptied by a tanker multiple times a week. This in itself leads to more HGV traffic through the village. Clearly there is already too much traffic passing through the village due to the introduction of traffic calming measures with new road markings being instated recently. Further development in Loxwood will lead to more traffic using the B2133 with negative impacts on the local environment as a result of more emissions from an increased number of motor vehicles in the area.

A negative impact on the natural environment would arise from the loss of hedgerows and ancient woodlands if development expands across land neighbouring the village, especially to the West. Further development of the village will destroy habitats for wildlife in the area including 79 internationally and nationally protected species that are known to live in the area including bats, newts, dormice, badgers, and other flora and fauna including birds on the Sussex notable bird list.

I object to any further development in the Loxwood area because it would ruin the nature of the village with detriment to residents already living in the village because there is inadequate infrastructure to support the development, and the negative impact on the natural environment.

Object

Document Element: Policy A15 Loxwood**Respondent:** Miss Kelly Heath [8105]**Summary:**

[RECEIVED LATE]

Objecting on the grounds of:

- Lack of supporting infrastructure in village including school, shop and GP;
- Lack of transport links including limited bus service and no train station;
- Adverse impact of proposed housing development in terms of congestion and pollution;
- Lack of sewage capacity
- Potential consequential impact of flooding
- Destruction of wildlife habitats

Full text:

[RECEIVED LATE]

We wish to object to the Local Plan for the following reasons:-

There is a total lack of infrastructure in Loxwood. We have no village shop, virtually no bus service, and no train station that you do not need to drive to.

Loxwood Primary School is at capacity, as are, as far as I am aware, the next nearest schools out of the catchment area (Wisborough Green, Plaistow & Kirdford, Rudgwick Primary schools). If 220 houses were built, that's likely to bring several hundred school-aged children needing primary and secondary school places, which will not be available. An additional 220 houses would also bring 220-400+ cars to the village, resulting in further traffic issues and pollution (Station Road is near impossible to drive down at school pickup and drop off times due to the excessive number of vehicles using it for parking).

Loxwood Medical Practice is at capacity. Just trying to phone the surgery in the morning would highlight how stretched they are. The surgery could not cope with the several hundred new patients from Loxwood alone.

Lack of sewerage capacity - We were told 10 or so years ago that the sewer system would not cope with the additional houses planned for the land by Farm Close/Loxwood Surgery. The sewer system has not been upgraded, yet there have been two larger developments, as well as a couple of smaller developments which have been built since.

The village flooded quite badly in December 2013, with the Onslow Arms having to be completely refurbished and residents of Burley Close having to be evacuated from their homes. Only one route out of the village was just about passable. Additional homes in the area would have an impact on where this water could go if similar happened in the future, potentially causing even more properties to be affected by flooding. Wildlife habitats would be destroyed causing further decline in numbers of already protected species.

We strongly urge you to vote against this Local Plan.

4331

Object

Document Element: Policy A15 Loxwood**Respondent:** Mrs Alexandra Holloway [7941]**Summary:**

Numbers of houses proposed for the Loxwood area is inappropriate due to:

- major lack of infrastructure
 - lack of employment opportunities
 - lack of transport links
 - the environmental impact
- and would be highly detrimental to the village leading to overdevelopment
- CDC have failed to consult with LPC

Full text:

There is insufficient infrastructure in Loxwood to support the increased number of houses proposed. There is no longer a village shop or post office, the plan incorrectly says that there is a reliable bus route when there really is not - there is inadequate transport services. The doctors and the school are at capacity with the existing numbers of residents and cannot handle more.

There is a major issue with lack of sewerage capacity as confirmed by Southern Water. Foul sewage has to be collected daily from the two newest developments in the village, Nursery Green and Stonewater, which is ridiculous! The system cannot handle more development. There are similar issues with waste water and grid capacity and the recent developments have put undue strain on the village which will worsen if these increased numbers of houses were to be built.

CDC seems to be unfairly targeting Loxwood without realising the serious infrastructure issues that already exist. CDC failed to consult Loxwood Parish Council about the increased numbers of houses proposed for the north of the district and have ignored the local plan submitted by LPC in 2018 and revised in 2020. This plan therefore also contradicts the Localism Act 2011 which devolves power to local areas.

Increased housing numbers in this area would only be possible by destroying areas of countryside affecting existing footpaths and routes which are heavily used and also impacting wildlife habitats. This is not acceptable in this day and age where the environment needs to be protected. The plans are not sensitive to the historic nature of the village and will lead to the village being overdeveloped

Change suggested by respondent:

The numbers of proposed houses for Loxwood needs to be heavily reduced and LPC need to be consulted

Document Element: Policy A15 Loxwood**Respondent:** Horsham District Council (Norman Kwan, Senior Neighbourhood Planning Officer) [8126]**Summary:**

Policy not justified as stands, effectiveness could be improved. Given limited facilities available / to be provided as part of Loxwood allocation, it is considered new residents are likely to be reliant on at least some key facilities in Billingshurst (GP surgery, railway station (and car park), The Weald secondary school and sixth form, library and retail and community facilities, including leisure centre). Within Horsham District, there are potential proposals for strategic scale extensions to Billingshurst/new settlements relatively close to Billingshurst. Whilst no decisions made with respect to local plan, housing growth delivered through own local plan will create potential impacts on existing infrastructure already under significant pressure. Require clear evidence that potential cumulative impacts on settlements in HDC have been considered as part of proposed allocations. Would ask that CDC works collaboratively with HDC and other stakeholders to ensure future pressures on infrastructure in Horsham District is appropriately addressed.

Full text:

Thank you for consulting Horsham District Council on the Chichester Proposed Submission Local Plan 2021-2039. We are grateful for the opportunity to be able to comment on your emerging plan. Overall, we consider that the plan has positively sought to balance the provision of future needs with other wider objectives in a manner that contributes to achieving sustainable development. I would also take the opportunity to reaffirm Horsham District Council's (HDC's) commitment to continued dialogue under the Duty to Cooperate and joint working between our two councils. We have a number of comments on the Proposed Submission Chichester Local Plan 2021 to 2039 to make on individual policies which we have set out below:

Policy S1 Spatial Development Strategy

We support this policy in principle, but consider it is not justified as stands. We note the spatial distribution in the plan period is split into three areas: East – West Corridor, the Manhood Peninsula, and North Plan area (which is the only part of Chichester district which directly adjoins Horsham district). HDC acknowledges Chichester District Council's position that it is not able to meet its entire identified local housing need of 638 dwellings per annum, given the constraints associated with the required upgrades to the strategic road network in order to facilitate growth, potential environmental constraints and wider infrastructure restrictions. It is understood that National Highways requires a cap on growth due to the limited capacity of the A27. The proposed housing supply target is therefore 575 dwellings per annum.

HDC acknowledges and welcomes that significant effort has been put into identifying development capacity in a way that reflects the principle of positive planning. Nevertheless, the NPPF and PPG set a high bar for 'leaving no stone unturned' in respect of meeting development needs. We support that planned growth is directed to sustainable locations where access to local services and access to transport links are easier to access than remote rural areas. It is acknowledged Chichester City is the most populous settlement in the district as well as being most sustainable. We support that growth and future development should be focussed in the East-West Corridor, and in particular in or close to the City, first and foremost. We also acknowledge wider infrastructure deficiencies will need to be addressed in strategic locations before they can accommodate more growth.

We support your continued dialogue with National Highways to support improvements to the strategic road network and note a Statement of Common Ground (SoCG) will be published and updated as part of a continuous dialogue with National Highways. The SoCG is important as part of the justification for a lower housing supply figure and should transparently demonstrate why the constraints on the A27 will not allow higher growth in the East West corridor, in order to evidence that maximum housing needs have been achieved in the City and East West Corridor. This evidence is needed for HDC to inform its own DtC position with Chichester District Council (CDC).

Chichester District is planning below the standard methodology housing target and has therefore asked HDC if it can accommodate some of Chichester's unmet housing need. HDC has confirmed that we are not in a position to accommodate Chichester's unmet development needs because

of our own water neutrality constraint. Furthermore, the primary housing market for Horsham District is the Northern West Sussex HMA, whose development needs are substantially driven by the Gatwick sub-region, and it is this HMA that would be prioritised with respect to meeting unmet development needs.

As a partner in the Sussex North Water Neutrality grouping also impacted by this constraint, CDC jointly owns the relevant evidence, and our two authorities share an ongoing commitment to work on this as our Duty to Cooperate dialogue continues. As ever, the latest position with regards to Water Neutrality and the impact on the delivery of housing and other development needs can be set out in a Statement of Common Ground (SoCG) between our two Councils.

Policy NE16 Water Management and Water Quality

We support this policy which is clear in its encouragement of efficient use of water as part of good management framework.

Policy NE17 Water Neutrality

Water neutrality is a significant issue affecting both our districts. Horsham District Council supports this policy which is derived from the joint work undertaken by Chichester District Council, Horsham District Council and Crawley Borough Council. We look forward to continued working with CDC on the development of the implementation scheme, in order to deliver the JBA Water Neutrality Assessment study. This will ensure all new development is in conformity with the Habitat Regulations and can demonstrate water neutrality.

Policy H1 Meeting Housing Needs

As outlined earlier in this response, we acknowledge that land supply in Chichester is constrained, and that CDC meeting the full housing requirement within its administrative boundary during the plan period up to 2039 would be challenging. Horsham District is not however in a position to accommodate any of Chichester District's unmet housing need because of water neutrality and, looking forward, the need to prioritise meeting unmet needs within our primary housing market: the Northern West Sussex HMA.

Policy H2 Strategic Locations/Allocations 2021 -2039

A significant proportion of CDC's housing supply will be delivered through strategic allocations. Loxwood (220 dwellings) is identified as a strategic allocation and will come forward through the local plan process, with some allocations anticipated to be delivered through local neighbourhood plans. Given the challenges that face Neighbourhood Planning groups in the preparation and delivery of Neighbourhood Plans, (which can potentially delay the delivery of these allocations), we support the identification of strategic sites in the Local Plan, programmed for delivery earlier in the plan period.

As the delivery of strategic allocations requires significant infrastructure planning, including cross-boundary issues relating to the road network, education, healthcare and community facilities, Horsham District Council welcomes continued dialogue with the relevant stakeholders, to ensure development at strategic locations such as Loxwood are delivered in a timely manner and adhere to sustainable development principles. We have some specific concerns relating to strategic allocation policy A15: Loxwood which we have set out under that policy.

Policy H11 Meeting Gypsies, Travellers and Travelling Showpeople's Need.

We note your position and your requirement to provide a number of pitches and plots for the travelling community during plan period. We support your policy position for intensification of existing pitches. Horsham District can't at this point in time accommodate any of CDC's unmet Gypsy, Traveller and Travelling Show people requirement as we are required to first address our own shortfall, and our evidence demonstrates that this alone will be challenging.

We have a body of evidence to support our position and we will continue to share our evidence with you as our Duty to Cooperate dialogue continues over the coming months. As ever, the latest position regarding Gypsy, Traveller and Travelling Showpeople will be set out in the Duty to Cooperate Statement of Common Ground between our two Councils.

Policy A15 Loxwood

We support this policy as it will contribute to meeting Chichester District's unmet housing need, but consider it is not justified as stands and that its effectiveness could be improved. The five villages in the north of the Plan area (Kirdford, Wisborough Green, Loxwood, Ifold and Plaistow) are classified as Service Villages in the emerging Chichester Local Plan. They provide a reasonable range of basic facilities (e.g. primary school, convenience store and post office) to meet the everyday needs of local residents, or are villages that provide fewer of these facilities but that have reasonable access to them in nearby settlements. Loxwood is the strategic site identified to accommodate 220 dwellings over the plan period.

The nearby settlement of Billingshurst, in Horsham District, is considered to be the nearest main settlement to the villages identified above. Given the limited facilities available / or to be provided as part of the Loxwood allocation, it is considered that new residents are likely to be reliant at least some key facilities in Billingshurst, potentially including the GP surgery, the railway station (and rail user car park), The Weald secondary school and sixth form, the library and the retail and community facilities, including the leisure centre. Within Horsham District, there are potential proposals for strategic scale extensions to Billingshurst / new settlements relatively close to Billingshurst. Whilst no decisions have been made with respect to our local plan, housing growth delivered through our own local plan will create potential impacts on existing infrastructure which is already under significant pressure. We therefore require clear evidence that potential cumulative impacts on settlements in HDC have been considered as part of the proposed allocations. We would ask that CDC works collaboratively with HDC and other stakeholders to ensure future pressures on infrastructure in Horsham District is appropriately addressed. Consequently, we seek further clarification in Policy A15: Loxwood to emphasise the importance of collaborative working between stakeholders to mitigate against the potential cumulative impact of development.

I do hope these comments are helpful. I would like to emphasise that they are made in anticipation of further constructive dialogue between our authorities, and with an expectation that matters on which we have flagged concern can be readily addressed, and quite possibly eliminated through our Duty to Cooperate discussions. Should you require any further detail or information in regard to this response please don't hesitate to contact a member of my Strategic Planning team.

Change suggested by respondent:

Seek further clarification in Policy A15: Loxwood to emphasise importance of collaborative working between stakeholders to mitigate against the potential cumulative impact of development.

Document Element: Policy A15 Loxwood**Respondent:** Mrs Claire Hume [7937]**Summary:**

The village of Loxwood does not currently support residents with the current lack of infrastructure. Therefore the proposed 220 plus homes are not justified without a local shop, transport links and for schools and doctors to provide the service. Both schools and doctors are over subscribed. The drainage is an issue. To add to this with additional homes would not benefit current residents or new.

Document Element: Policy A15 Loxwood**Respondent:** Sandra Imrie [8173]**Summary:**

Loxwood Ward is an under-funded, under-serviced rural area. I fail to understand how the housing numbers mentioned in this Local Plan can be seriously considered for this rural area where there are so many ongoing issues waiting to be addressed. These problems have been created by the recent expansion of housing in the ward. It is irresponsible planning to propose further expansion until existing infrastructure is improved to cope with the current level of housing and population.

Full text:

Loxwood Ward is an under-funded, under-serviced rural area. I fail to understand how the housing numbers mentioned in this Local Plan can be seriously considered for this rural area where there are so many ongoing issues waiting to be addressed. These problems have been created by the recent expansion of housing in the ward.

It is irresponsible planning to propose further expansion until existing infrastructure is improved to cope with the current level of housing and population. Loxwood and the surrounding villages are in danger of being swamped. Public transport. Employment. Schools. GP surgery. Water neutrality. These are not small things to be dismissed as 'easily dealt with' in the bigger picture of this Local Plan. These things affect the daily lives NOW of all of us who live in this Ward and must be addressed.

Infrequent and rarely seen public transport. Increasing traffic usage on often narrow rural roads and the accompanying reduction in air quality. Vehicles that ignore speed limits and endanger other road users [walkers, children walking home from the school bus stop, joggers, cyclists, horse riders]. I have lost count of the times I have walked to Ifold Stores along Plaistow Road and have been passed within 1ft by cars and vans exceeding 30mph. Not to mention the seriously overwhelmed and under-staffed GP surgery.

Loxwood is not a 'service town' with transport links, it is a small village without a shop selling basic groceries. We have seen a succession of housing plans submitted locally that boast water neutrality but without evidence of how this will realistically be achieved. Developers are looking to get rich at the expense of residents.

It is scandalous that the CDC should allow this to happen without due oversight and consideration of the local population. The draft of this Local Plan should be compiled after repeated on-site visits and thorough research, in consultation with local representatives, and not by someone sitting at a desk in Chichester using Google.

Document Element: Policy A15 Loxwood**Respondent:** Mrs Helen Jewell [8004]**Summary:**

Loxwood does not have the infrastructure to support an increased population, already increased beyond the targets for housing agreed in the previous Neighbourhood Plan by recent additional developments. We no longer have a village shop or post office so infrastructure has deteriorated since that Plan was approved by the village.

Loxwood Parish Council has not been consulted.

The village looks North for most work shopping and recreation but congestion will significantly worsen as a consequence of Waverley Plans.

There is reason to be very concerned about the capacity of sewerage and surface water management contrary to statements by CDC.

Document Element: Policy A15 Loxwood**Respondent:** Mr James Jewell [6721]**Summary:**

A policy to mitigate the adverse consequences in Loxwood of failing to provide a commutable bus service whilst still building additional housing leads to attempting to control the car when it is the only means of transport available to residents. The substantial developments planned by Waverley will seriously congest the A281 and the junction with it at Alfold for Loxwood residents for whom this is the main transport link for employment shopping and leisure.

Full text:

I recognise the predominant concerns regarding the A27 and urban areas and that mine is a local focus on the North and particularly Loxwood. Travel from this village is primarily towards and through Waverley District for employment, shopping and leisure and access to the A281 is crucial. Waverley has extensive housing development planned that will add significantly to traffic on the A281 with increased difficulty of access to it and longer travel times along it. If a daily commutable bus service does not exist then policies to manage, ie discourage, car use are seriously disadvantageous to a population dependent on it. To permit the planned additional housing without recognising this issue is a nonsense. To require a significant proportion of those to be social housing is also ridiculous as these occupants will be leased able to afford cars. Social Housing also reduces the CIL contribution which in the circumstances is sorely needed to help cope with issues like these. If the new houses are to the south of this village they will add substantially to the traffic flow through the high street.

Change suggested by respondent:

To make any additional housing in Loxwood conditional on a commutable bus service.

Object

Document Element: Policy A15 Loxwood**Respondent:** Mrs Anne Keates [7967]**Summary:**

Lack of consultation.
 Overriding the the local neighbourhood plan, contrary to the devolving of powers to local areas (Localism Act 2011)
 Minimal public transport
 No village shop and indefinite delay on planned village shop
 Sewage system does not support existing housing
 Increased risk of flooding
 Water neutrality issue exacerbated
 Increased traffic on narrow country lanes
 Existing social housing remaining unsold
 Detrimental impact on rural nature of the village, scale of proposed development is not proportionate to the size of the village
 Negative environmental impact on the countryside - ancient hedgerows, woodland borders, footpaths, bridleways and and protected species at risk.

LPC have already produced a Revised Neighbourhood Plan which allocates 126 houses plus 17 carried forward from the Made Neighbourhood Plan giving 143 houses. It has reached Regulation 14 consultation stage and is based upon the Preferred Approach Local Plan consultation. The residents of the Parish and Loxwood Parish Council have satisfied themselves through evidence gathered that 126 homes is a sustainable allocation given the constraints that exist.

Full text:

The question of legality cannot easily be determined by those without the necessary specific technical legal expertise. However it would seem that the local plan is not in line with the Localism Act 2011 where power was devolved to local areas.
 There has been a failure in consultation, a promised study in growth scenarios did not materialise. The local neighbourhood plan has been ignored and the concerns raised on sewerage issues caused by the current level of development in Loxwood and the surrounding villages disregarded. The Nursey Green and existing Stonewater developments are serviced by daily sewage collection tankers due to a lack of appropriate waster water infrastructure. As there are no plans to develop the infrastructure adding more houses will further stress an already over stressed system with an even higher risk of sewage overflow and more tanker traffic through the village. Building which requires waster water management of this type cannot be considered sustainable or environmentally sound. Loxwood cannot be construed as a service village. The village shop and post office closed in 2022 and the proposed shop development delayed due to the known water neutrality issues in the village. Transport links are minimal, the frequency of the buses and the journey duration do not support those needing to get to work. The local roads are not built to support the volume of traffic today, more houses will mean more traffic not just from Loxwood but from the surrounding villages.
 The Stonewater development did not take the rural character of the area into consideration and has had a detrimental impact on the essence of a countryside village with its scale and position. Additional development will further degrade the countryside and its local habitat putting ancient hedgerows, woodland borders, footpaths, bridleways and and protected species at risk.
 The requirement for specialist housing needs is questionable with the large Stonewater site already over catering for this as some plots remain unsold. Increased risk of flooding due to changes in watercourses caused by additional building
 The Council itself recognises that this part of the plan area would not normally be identified for higher levels of growth, but instead of raising legitimate concerns on quotas with the government on the constraints in the district due to the A27, and the South Downs National Park, the council has chosen instead to put the burden onto Loxwood to justify why it should not be subject to development above and beyond what has been included and shared in a well thought out neighbourhood plan which was developed through a consultative process.

Change suggested by respondent:

Policy A15 should be removed and Policies H2 and H3 amended to reflect an allocation of 125 houses

Change suggested by respondent:

These additional homes need to be cited close or in an urban area where there are sustainable transport options available and a functioning sewage system which overflows whenever there is heavy rain. If additional houses are required the total should be massively [reduced]. Also the date from which new applications count towards numbers should include the 50 council/housing association properties built off Pond Copse Lane. Scandalous that these have not been included in any housing numbers

Object

Document Element: Policy A15 Loxwood**Respondent:** Alison Laker [7193]**Summary:**

Approved development on Loxwood's boundary areas including Dunsfold new village of 2600 new homes and the ongoing development of the village of Billingshurst will put further pressure on Loxwood's limited infrastructure which is already failing to cope with current levels including surface water run off from the surrounding water catchment area, sewage water and increasingly heavy and fast through traffic on a rural B road which in the centre of our village is one car wide.

The plan mis-represents the functional size of Loxwood referring to it as a 'service town'. How can a rural village with no daily public transport/bus route, no village shop, no capacity for further employment other than the limited existing employers, no services beyond a church, small primary school and GP surgery which services all local villages (including patients from Rudgwick who are moving to Loxwood Surgery because their GP now lives in Cornwall and works from home so is not available for a face-to-face consultation) be called a service town.

Full text:

Loxwood is on the county boundary with Surrey. Just the other side of the boundary there is major development by way of Dunsfold new village with 2600 new homes and associated infrastructure. In Loxwood we have existing issues with surface water drainage and sewage water treatment which are impacted by development in the surrounding area. We also have an increasing issue with heavy traffic using the village as a North/South route which will be increased when Dunsfold village and development in surrounding villages is completed (for example Billingshurst which is a village and still being developed). There is no evidence that the environmental and infrastructure impact of these development plans have been considered in the proposal to allocate a further 220 homes in Loxwood.

Change suggested by respondent:

There needs to be an honest, transparent and fair assessment of the current and future demands on Loxwood in respect to environmental impact. They have worsened in recent years so it is unrealistic to place greater demand by further development in the village itself.

Document Element: Policy A15 Loxwood**Respondent:** Mrs Jean Lightman [7062]**Summary:**

Objection to Loxwood figure due to infrastructure:

1. No shops.
2. No bus service.
3. School capacity.
4. Water and sewage.
5. GP capacity.
6. Road condition and congestion.

Full text:

I am writing to comment on the allocation of 220 houses in the Local Plan for Loxwood.

Astounded are my thoughts that the powers that be think that we can cope with 220 more houses on top of an influx we have already received. My various reasons why our infrastructure cannot cope I list below.

1. We have no shops other than butchers and hairdressers. I know there is a plan for a new shop in the village but this has been going for some time and I cannot believe it will actually happen.
2. The village has no bus service to speak off.
3. The school cannot cope with the extra pupils that would be generated.
4. We already have problems with water and sewage in the village and this has not been adequately dealt with.
5. The Doctors Surgery is struggling already.
6. The roads are already in a very poor state and could not cope with the extra traffic.

It feels that as we are on the edge of Chichesters area we are like the forgotten people and are becoming a ground for dumping any extra housing with no real justification that the area can cope.

Document Element: Policy A15 Loxwood**Respondent:** Dr and Mrs P Longthorne [8208]**Summary:**

[RECEIVED LATE]

We would like to add our concerns regarding the additional housing which has been allocated to this area. Enlarging these beautiful villages will significantly alter the character of the local area. There is almost no public transport to these villages and the surgery at Loxwood is already under pressure. The environmental impact of building more houses in an area of natural beauty would also be significant. It is not clear how much consideration has been given to infrastructure requirements - schools, employment, transport.

Once these beautiful villages are expanded and developed there is no going back and they are lost forever along with the attendant reduction in quality of life for the people who live there.

In addition to this seek to reiterate that proposed dwelling allocations within the Draft Local Plan should be specifically allocated by Chichester at a District level, in order to ensure the uptake of appropriate deliverable sites, and not be delegated at a neighbourhood plan level.

The Revised Neighbourhood Plan for Loxwood has omitted this site from their neighbourhood plan, creating a piecemeal plot outside of the Settlement Boundary. The failure to allocate an appropriate site at neighbourhood plan level means that the housing delivery over the plan period is unlikely to be met. As such, the Draft Local Plan is considered 'unjustified' by relying on the delegation of parish allocations.

Full text:

As has been discussed across these Draft Local Plan Representations, we support the proposed growth of Loxwood. However, we wish to object to Policy A15, highlighting that the proposed figure of 220 dwellings will not sufficiently meet the objectively assessed need for housing within the Chichester District.

This figure should be increased to allow greater housing provision in the North of the Plan Area. In line with our comments on Policy H1 – Meeting Housing Needs, we propose a greater allocation of dwellings to the sustainable settlement of Loxwood, with a minimum of 300 dwellings, based on the findings of the Sustainability Appraisal (Jan 2023).

In addition to this seek to reiterate that proposed dwelling allocations within the Draft Local Plan should be specifically allocated by Chichester at a District level, in order to ensure the uptake of appropriate deliverable sites, and not be delegated at a neighbourhood plan level.

Paragraphs 68 and 69 of the NPPF identify the need for strategic housing sites, with paragraph 69 outlining the importance of smaller scale sites, such as Land to the South West of Willetts Way. These paragraphs state that 'planning policies should identify a sufficient supply and mix of sites, taking into account their availability, suitability and likely economic viability'. This has been appropriately shown for the site via the HELAA 2012 and outlines that the site is suitable, available and achievable for up to 10 dwellings.

The Revised Neighbourhood Plan for Loxwood has omitted this site from their neighbourhood plan, creating a piecemeal plot outside of the Settlement Boundary. The failure to allocate an appropriate site at neighbourhood plan level means that the housing delivery over the plan period is unlikely to be met. As such, the Draft Local Plan is considered 'unjustified' by relying on the delegation of parish allocations.

We ask that these policies be reworded to increase the housing provision for the 'Service Village' of Loxwood, and remove the reliance on Neighbourhood Plan making, with sites allocated at a District level to ensure the appropriate uptake of sites and settlement boundaries, and help Chichester Council achieve the objectively assessed housing need of the District.

Change suggested by respondent:

Document Element: Policy A15 Loxwood**Respondent:** Loxwood Parish Council (Ms Jane Bromley, Clerk) [7872]**Summary:**

At Examination the 220 allocation should be looked at in detail and the Inspector should be satisfied that the allocation is sustainable due to not only water neutrality constraints but also lack of capacity in the sewerage infrastructure within the Parish and surrounding area. Inundation of the system releases sewerage into gardens. The speculative development which has arisen uses a cesspit solution for the removal of sewerage from new homes. The traffic to be generated feeding onto the B2133 running through the village is a concern for a road which is already dangerous for pedestrians walking on narrow pavements.

LPC have already produced a Revised Neighbourhood Plan which allocates 126 houses plus 17 carried forward from the Made Neighbourhood Plan giving 143 houses. It has reached Regulation 14 consultation stage and is based upon the Preferred Approach Local Plan consultation. The residents of the Parish and Loxwood Parish Council have satisfied themselves through evidence gathered that 126 homes is a sustainable allocation given the constraints that exist.

This approach will conserve all the hard work put in by Loxwood Parish Council in producing its Revised Neighbourhood Plan and restore the confidence that Loxwood residents have in the Neighbourhood Planning Process.

Full text:

Loxwood Parish Council has a number of concerns regarding Policy A15 of the emerging CDC Local Plan.

Loxwood Parish Council was advised of an estimated housing allocation of 125 homes in 2021 upon which it based a Revised Neighbourhood Plan which has been consulted upon at Regulation 14. This consultation gave rise to a submission plan which was submitted to CDC at Regulation 15. The revised Neighbourhood Plan did not proceed beyond Regulation 15 to Regulation 16 as housing numbers could not be confirmed at that time by CDC due to the water neutrality issue.

CDC sent a letter to the north eastern parishes dated January 2022 laying out 5 scenarios for growth to be tested and evidence gathered. The results although promised for Easter 2022 were not forthcoming until January 2023 due to the problem of establishing a mitigation strategy for water neutrality.

The mitigation strategy for water neutrality relies heavily on investment by Southern Water. Southern Water in the past have neglected infrastructure in the district and have not set aside capital provision for such investment in their current 5-year infrastructure plan. They have accepted the mitigation strategy but Parishes have little confidence in delivery.

Loxwood Parish Council was surprised to be informed that the allocation of housing to their parish in the light of this water shortage for the area, was an additional 95 homes from what was envisaged before the realisation of the water neutrality issue. In addition, on top of the 220 homes to be found Loxwood Parish Council has suffered, in the interim, from speculative development amounting to 91 homes where planning was given permission before 1st April 2021 but outside of the Made Neighbourhood Plan due to a lack of five-year housing supply within the district.

Loxwood Parish Council ask that at Examination the 220 allocation be looked at in great detail for sustainability and that the Inspector satisfies him or herself that the allocation is sustainable due to not only the water neutrality constraints but also due to the lack of sewerage infrastructure that exists within the Parish and surrounding neighbours. Frequent inundation of the system releases sewerage into gardens. The speculative development which has arisen recently has returned to a cesspit solution for the removal of sewerage from these new homes. These developments have been unable to connect to the sewerage system over lack of capacity. Unbelievably Southern Water have no plans for an upgrade of the system in the near future despite this archaic situation.

Change suggested by respondent:

Policy A15 should be removed and Policies H2 and H3 amended to reflect an allocation of 125 houses

Document Element: Policy A15 Loxwood**Respondent:** Loxwood Society (Mr Tony Colling, CO Chair) [1127]**Summary:**

LPC have produced a revised NP with allocated 125 houses in accordance with CDC Preferred approach Local Plan. Submitted to CDC for regulation 14 consultation in Jan 2021. Held due to Water Neutrality. Letter to parish Jan 2022. 5 growth scenarios. Study completion easter 2022 with consultation. Did not happen.
Actual housing numbers 220 + 91= 311 due cut off date of 1/4/21 and unmet allocation in Made NP.
Parish is rural, very poor transport provision and major sewerage issues. Southern Water will not allow any new connections. Loxwood has no post office and shop thus not a Service village.

Full text:

Policy A15 is not Sound.
The Preferred Approach Local Plan allocated 125 houses in Loxwood. Loxwood Parish Council (LPC) produced a Revised Neighbourhood Plan (NP) based on this allocation. It was Submitted to CDC in December 2021 for Regulation 14 consultation. CDC would not allow NP to proceed due to the Water Neutrality issues.
No consultation or feedback received until the letter to northern parishes dated January 2022 laying out 5 growth scenarios. Results on study promised for easter 2022 together with consultation. This did not happen!
In January 2023, LPC told by CDC via Zoom meeting that Loxwood would be a strategic site with an allocation of 220 houses with a cut-off date of April 2021 for planning consents. Taking into account planning applications granted prior to this date plus unmet allocation in Made NP, actual number of houses is 220 + 91 = 311 houses.
Loxwood is a rural parish with very poor public transport infrastructure, major sewerage infrastructure issues. Southern Water will not allow any new connections until network upgraded. This will take at least 5 to 10 years (southern Water estimate).
Loxwood does not have a post office and shop. Closed September 2022 and thus does not meet CDC definition of Service Village
The Sustainability Appraisal with respect to Loxwood and the allocation of 220 plus houses is weak and does not adequately justify the allocation. It does not address the transport and environmental issues and in fact, any number of houses could be plucked from the narrative.

Change suggested by respondent:

Policy A15 should be scrapped and Policies H2 and H3 amended to reflect an allocation of 125 houses

The most efficient way forward would be for the housing allocation for Loxwood to be changed back to the Preferred Approach Local Plan allocation of 125 houses and let the Loxwood Neighbourhood Plan proceed to the next stage of the process. A difference of 94 houses between the two allocations will not make much difference to the overall housing allocation for the district.

Document Element: Policy A15 Loxwood**Respondent:** Mr William MacGeagh [5889]**Summary:**

The policy approach does not reflect an understanding and appreciation of the particular potential of the area. It leaves it vulnerable to inappropriate homogeneous large scale housing estate development that does little to broaden local housing choice and support economic / social life.

Full text:

The policy approach lets the northern part of the district down because it does not reflect an understanding and appreciation of the particular potential of the local area and its distinct social, environmental, economic and settlement characteristics including demographics.

The lack of a positive approach to the distinct nature of the north sub area leaves it vulnerable to inappropriate homogeneous large scale housing estate development that does little to broaden housing choice in the local area. Such development provision is evident at larger nearby centres such at Billingshurst in Horsham District.

Communities in Loxwood and the north of the district are ready to embrace opportunities and growth of a proportionate scale that serves to organically evolve and grow the settlements maximising support for local businesses, facilities and self reliant strong sustainable communities.

Change suggested by respondent:

A revised approach for Loxwood and the north of the plan area with a focus on self build and small - medium sized sites that embraces and reflects available local insights and information.

Document Element: Policy A15 Loxwood**Respondent:** Lars Mansson [7099]**Summary:**

[RECEIVED LATE] -

Objection to Loxwood figure due to insufficient infrastructure.

The problem in Loxwood is that the infrastructure has been neglected.

- Waste and sewage inadequate.
- Public transport non existent. We have to rely on cars or kindly neighbours giving lifts.
- we were promised a local shop to replace the old post-office store.
- the road network is insufficient. Recently we had heavy lorries racing down Spy Lane for a whole week.

Full text:

I have been studying the latest Local Plan and I find to my horror that CDC has decided to allow 240 new houses in Loxwood.

Nearby areas like Wisborough Green and Kirdford have been allocated considerably less houses.

The problem in Loxwood is that the infrastructure has been neglected.

- Waste and sewage inadequate.
- Public transport non existent. We have to rely on cars or kindly neighbours giving lifts.
- we were promised a local shop to replace the old post-office store.
- the road network is insufficient. Recently we had heavy lorries racing down Spy Lane for a whole week.

Luckily we managed to Stop the Clay Pit. We hope the Loxwood clay pit people don't come back with another plan.

I would expect you to ask the CDC to consider the number of houses they want to build in Loxwood. And more importantly, they deliver the infrastructure improvements.

Executive Summary

The Local Plan as written lacks ambition and vision, and will be detrimental to the landscape within which the district lies. It is a plan borne out of a need to produce a legal document which will satisfy the regulatory authorities. In terms of Urban Planning it fails "To meet the needs of the present without compromising the ability of future generations to meet their own needs" (NPPF).

The development that will consequentially arise from the deployment of such a made Local Plan is not sustainable. It will adversely affect the Character, Amenities and Safety of the built environment, throughout our district.

In particular, the Local Plan is inadequate for the needs of the people in the district both at present and in the future because –

1. It has been written in advance of the District having a properly formed and agreed Climate Emergency Action Plan. It is inconceivable that such a key document will not shape our Local Plan. It is this Action Plan that is needed first in order to provide the long-term strategic view as to how and what the District will look like in the future; this, in turn, will help form and shape the policies outlined in any prospective, Local Plan. The Plan as proposed is

moribund, as a result of “cart before the horse” thinking.

2. The Local Plan as written does not adequately address how infrastructure, transport and services are going to be materially and strategically improved to meet the predicted growth and shift to a significantly ageing population. There is presently insufficient capacity to supply services and to have adequate people and environmentally friendly connectivity, as a direct result of decades of neglect towards investing in infrastructure and services to meet the needs of the District’s population. We are led to believe that developers through increased levies in order to gain permission to build will fulfil this need, but all that this will result in is an uncoordinated, dysfunctional mess completely lacking in any future-proof master planning approach. We contend that this will do nothing for the quality of life of Chichester District residents and it will create a vacuum whereby few if indeed any can be held accountable or indeed found liable for shortcomings in the future.

3. The Local Plan as written does not state how it will go about addressing the need to create affordable homes. The District Council’s record on this matter since the last made plan has been inadequate and now the creation of affordable homes has become urgent as political/economic/social factors drive an ever increasing rate of change within the District.

4. Flood risks assessments used in forming the Plan are out of date (last completed in 2018) and any decision to allocate sites is contrary to Environment Agency policy. Additionally, since March 2021 Natural England established a position in relationship to ‘Hold the Line’ vs. ‘Managed Retreat’ in environmentally sensitive areas, of which the Chichester Harbour AONB is a significant example. CDC have failed to set out an appropriate policy within the proposed Local Plan that addresses this requirement.

5. The A27 needs significant investment in order to yield significant benefits for those travelling through the East-West corridor; this is unfunded. Essential improvements to the A27 are key to the success of any Local Plan particularly as the city’s ambitions are to expand significantly in the next two decades. But any ambitions will fall flat if the A27 is not improved before such plans are implemented. The A259 is an increasingly dangerous so-called ‘resilient road’ with a significant increase in accidents and fatalities in recent years. In 2011, the BBC named the road as the “most crash prone A road” in the UK. There is nothing in the Local Plan that addresses this issue. There is no capacity within the strategic road network serving our district to accommodate the increase in housing planned, and the Local Plan does not guarantee it.

6. There is insufficient wastewater treatment capacity in the District to support the current houses let alone more. The tankering of wastewater from recent developments that Southern Water has not been able to connect to their network and in recent months the required emergency use of tankers to pump out overflowing sewers within our City/District reflects the gross weakness of short-termism dominated thinking at its worst and is an indictment of how broken our water system is. The provision of wastewater treatment is absolutely critical and essential to the well-being of all our residents and the long-term safety of our built environment. The abdication by those in authority, whether that be nationally, regionally or locally, is causing serious harm to the people to whom those in power owe a duty of care and their lack of urgency in dealing properly with this issue is seriously jeopardizing the environment in which we and all wildlife co-exist.

7. Settlement Boundaries should be left to the determination of Parish Councils to make and nobody else. The proposed policy outlined in the Local Plan to allow development on plots of land adjacent to existing settlement boundaries is ill-conceived and will lead to coalescence which is in contradiction of Policy NE3.

8. All the sites allocated in the Strategic Area Based Policies appear to be in the majority of cases Greenfield Sites. The plan makes little, if any reference to the development of Brownfield sites. In fact, there is not a Policy that relates to this source of land within the Local Plan as proposed. Whilst in the 2021 HELAA Report sites identified as being suitable for development in the District as being Brownfield sites were predicted to yield over 4000 new dwellings. Why would our Local Plan not seek to develop these sites ahead of Greenfield sites?

9. The Local Plan does not define the minimum size that a wildlife corridor should be in width. What does close proximity to a wildlife corridor mean? How can you have a policy (NE 4) that suggests you can have development within a wildlife corridor? These exceptions need to have clear measures and accountability for providing evidence of no adverse impact on the wildlife corridor where a development is proposed. Our view is quite clear. Wildlife and indeed nature in the UK is under serious and in the case of far too many species, potentially terminal threat. Natural England has suggested that a Wildlife Corridor should not be less than 100metres wide. The proposed Wildlife Corridors agreed to by CDC must be enlarged and fully protected from any development. This is essential and urgent for those Wildlife Corridors which allow wildlife to achieve essential connectivity between the Chichester Harbour AONB and the South Downs National Park.

10. Biodiversity Policy NE5 - This is an absolute nonsense. If biodiversity is going to be harmed there should be no ability to mitigate or for developers to be able to buy their way out of this situation. This mindset is exactly why we are seeing a significant decline in biodiversity in the District which should be a rich in biodiversity area and why the World Economic Forum Report (2023) cites the UK as one of the worst countries in the world for destroying its biodiversity.

11. In many cases as set out in the Policies the strategic requirements lack being SMART in nature – particularly the M Measurable. These need to be explicit and clear: “you get what you measure”.

12. 65% of the perimeter of the District of Chichester south of the SDNP is coastal in nature. The remainder being land-facing. Policy NE11 does not sufficiently address the impact of building property in close proximity to the area surrounding the harbour, something acknowledged by the Harbour Conservancy in a published report in 2018 reflecting upon how surrounding the harbour with housing was detrimental to its long-term health. And here we are 5 years on and all of the organizations that CDC are saying that they are working in collaboration with, to remedy the decline in the harbour’s condition, are failing to implement the actions necessary in a reasonable timescale. CDC are following when they should be actually taking the lead on the issue. Being followers rather than leaders makes it easy to abdicate responsibility. There must be full and transparent accountability.

13. The very significant space constraints for the plan area must be taken into account. The standard methodology need no longer apply where there are exceptional circumstances and we are certain that our District should be treated as a special case because of the developable land area is severely reduced by the South Downs National Park (SDNP) to the north and the unique marine AONB of Chichester Harbour to the south. A target of 535dpa is way too high. This number should be reduced to reflect the fact that only 30% of the area can be developed and much of that is rural/semi-rural land which provides essential connectivity for wildlife via a number of wildlife corridors running between the SDNP and the AONB. Excessive housebuilding will do irretrievable damage to the environment and lead to a significant deterioration in quality of life for all who reside within the East / West corridor.

14. Many of the sites identified in the Strategic & Area Based Policies could result in Grade 1 ^ 2 farmland being built upon. The UK is not self-sufficient in our food security. It is short-sighted to expect the world to return to what we have come to expect. Our good quality agricultural land should not all be covered with non-environmentally friendly designed homes.

[RECEIVED LATE]

Raises alleged inaccuracies within Local Plan regarding:

1. Adequacy of transport links in Loxwood;
2. Capacity of waste water treatment facilities;
3. Existence of cycle routes.

Also raises issues regarding capacity of local infrastructure, water supply, and legislative requirements according to the Localism Act 2011.

Full text:

As a resident of Loxwood I am reacting to the CDC local plan.

This plan contains three untruths which fact indicates bad research on CDC's part.

1. The Transport Statement tells us we are well served. We have one bus per day on only four days a week. Any other busses spotted by your researcher are part of the School Run service.
2. CDC claims there is no issue of capacity with sewage. Southern Water have confirmed there is no extra capacity in the sewage system.
3. Cycle Routes do not exist at present, so the notion that 200 extra houses will provide improvement is nothing less than fanciful.

Another three points of contention -

- We have no shop and the School and Doctor's Surgery are at full capacity.
- Southern Water have highlighted a lack of water capacity.
- This local plan ignores the terms of the Localism Act 2011.

I might expect this sort of roughshop treatment in China or Russia but not in West Sussex.

Document Element: Policy A15 Loxwood**Respondent:** Linda Mott [8148]**Summary:**

- Loxwood is NOT a service village.
- Village shop closed.
 - Public transport very limited and often cancelled.
 - Doctor's surgery at capacity.
 - Surrounding roads cannot cope with additional traffic.
 - No additional capacity for sewage.
 - Lack of water capacity.
 - Too many new builds which are stretching resources.
 - Risk of flooding if further building work is carried out.
 - Further housing for low income families and the elderly is short sighted as they will need their own transport to carry out their daily lives.
 - No cycle routes.
 - Footpaths would be reduced.
 - Wildlife habitats will be destroyed.

Full text:

I wish to strongly object to the recently published local plan. My reasons for this are:

- 1 Loxwood is NOT a service village.
- Our village shop has closed.
 - Public transport is very limited and often cancelled with no warning or communication.
 - The doctor's surgery is at full capacity.
 - The surrounding (narrow country) roads cannot cope with additional traffic.
 - There is no additional capacity for sewage.
 - There is a lack of water capacity.
 - We have too many new builds which are stretching the resources of this little village.
 - There is a risk of flooding if further building work is carried out.
 - Further housing for low income families and the elderly is short sighted as they will need their own transport to carry out their daily lives (there is no village shop and few buses).
 - We have no cycle routes (my husband and I are keen cyclists – we would have noticed if there were).
 - Footpaths would be reduced ... a key attraction of this area is the walking opportunities.
 - Wildlife habitats will be destroyed.

5549

Object

Document Element: Policy A15 Loxwood**Respondent:** Mrs Bente Salt [7963]**Summary:**

- Loxwood has developed its own plan which has been approved.
- Over-developing the countryside will not improve low biodiversity scores.
- Does not comply with various regulations.
- Infrastructure will not be able to cope with the significant increase of houses and residents.
- The sewage network will not be able to cope.
- The flood risk associated with over-development should not be underestimated.
- Water already an issue and unless proposed properties have a rainwater collection tank, will see greater pressure on our water infrastructure.
- Traffic calming insufficient.
- There is no meaningful public transport.
- Instead of building more houses on the proposed sites should be putting up solar panels.
- Local footpaths and bridleways will be affected to the detriment of frequent users.

Full text:

- I would like to object to the changes to the Chichester Local Plan 2021-39 covering the Loxwood ward on the following grounds.
- Loxwood has developed its own plan which has been approved. Overriding this plan makes a mockery of local decision making, which the local community has spent significant time developing.
 - Chichester should look at converting the significant number of vacant retail and office properties in town and city centres into accommodation to serve an aging population that will require better access to services rather than converting the countryside into an urban sprawl.
 - As a country with one of the lowest bio-diversity scores in Europe, over-developing the countryside will not improve this. We are increasingly pushing wildlife to the margins, including endangered species.
 - The plan does not comply with various regulations and should therefore not go ahead.
 - The infrastructure in Loxwood will not be able to cope with the significant increase in the number of houses and residents. There is no shop, the school and medical practice are already at full capacity.
 - The sewage network will not be able to cope. On occasions I have witnessed raw sewage running down Guildford Road from Nursery Green. Southern water will not be increasing capacity for a long time.
 - The flood risk associated with over-development should not be underestimated. The local water courses cannot cope.
 - Water is already an issue and unless each of the proposed properties have a rainwater collection tank, which the developers will never agree to, we will see greater pressure on our water infrastructure.
 - We are constantly promised that developments will generate some benefits for the local residents, but these benefits rarely materialise. Traffic calming only amounts to some flashing signs that do not deter drivers from speeding and the road markings recently introduced have not made any difference. Frankly, it's lip service and a complete waste of money.
 - There is no meaningful public transport. No one who works outside the village 9-5 would never be able to get public transport to work. You would have to leave home Friday lunchtime to make it to work by 9am Monday morning if you do not work in Loxwood.
 - Instead of building more houses on the proposed sites we should be putting up solar panels. That would benefit the local community and wildlife would be able to live alongside this.
 - Local footpaths and bridleways will be affected to the detriment of frequent users.

Change suggested by respondent:

Reduce allocation at Loxwood. Reg 14 NP uses numbers from Preferred Approach Plan.

Chichester should look at converting the significant number of vacant retail and office properties in town and city centres into accommodation to serve an aging population.

Document Element: Policy A15 Loxwood**Respondent:** GoVia Thameslink Railway (Nigel Searle) [8197]**Summary:**

This is a small development in an area with poor sustainable access and transport and therefore dominated by cars. Any development in Loxwood should only go ahead if there is a focus on providing what people need in their local communities and providing sustainable transport links to larger communities and railway stations.

6 and 7. If a development increases car use it is conflicting with Chichester District Council Climate Emergency and should not go ahead, with development focused on areas where people can access their needs without cars, therefore remove requirement for off-site highway improvements and replace with, "Provide safe and suitable access points for all users, including provision of local amenities to reduce the need to travel, provide or fund frequent, reliable affordable bus services, including provision of bus, priority and bus lanes direct to Horsham, Billingshurst and neighbouring communities.

provide Continuous, direct, safe, attractive, comfortable walking and cycling routes between the development and neighbouring communities with cycle route linking Horsham, Billingshurst and Guildford via Cranleigh and Downslink.

If these requirements are unaffordable, development at Loxwood is not sustainable and should not proceed.

The information available in the consultation documents does not seem to define the area and as such, does not enable SWT to give effective feedback on the impacts on biodiversity from development at this scale in this broad location. We do note that that supporting policy wording requires impacts to biodiversity and protected sites to be avoided, and the delivery of Biodiversity Net Gain, in line with section 174 on the NPPF 2021.

However, we highlight that such a broad allocation policy does not enable important features that maybe present to be captured, and as such attention to this should be considered when the DPD allocation document is produced.

Document Element: Policy A15 Loxwood**Respondent:** Mrs T P Swann [7253]**Summary:**

How are families without their own transport able to get to and from Horsham or Guildford for work? There are no employment opportunities, the surgery is at capacity, flooding is already an issue, power cuts are increasing and there is a lack of water capacity and waste water plans. This is a beautiful rural area, full of wildlife and green space - this needs protecting rather than building on. The families who have recently moved in with children have voiced feeling cut off and isolated with no access to the facilities they need as they do not have cars.

LPC have spent time and effort to create a Revised Neighbourhood Plan which allocates 126 houses plus 17 carried forward from the Made Neighbourhood Plan giving 143 houses. It has reached Regulation 14 consultation stage and is based upon the Preferred Approach Local Plan consultation. The residents of the Parish and Loxwood Parish Council have satisfied themselves through evidence gathered that 126 homes is a sustainable allocation given the constraints that exist and it should not be ignored due to water neutrality issues, let alone the transport and services issues.

This protects the village and the community and reflects the importance of Neighborhood plans for Loxwood and the rest of the country - Loxwood is a historic small village with limited services and it should be understood and respected as such.

Full text:

Loxwood is not capable of sustaining a further 220 houses due to its lack of infrastructure. Families who have recently been moved into the new housing development are now walking over 4 miles to the next village (and back again along a dangerous road without a pavement), Rudgwick, in order to buy food from the Co-op as they do not have access to a car. Loxwood village does not have a general shop, only a highly priced butcher. The bus service is not viable for families who have children in school and who need to return within a reasonable amount of time to collect them - it is not servicable for work purposes.

Change suggested by respondent:

Policy A15 should be removed and Policies H2 and H3 amended to reflect a realistic allocation of 125 houses which is still generous compared to other local area with better services.

Loxwood should not be deemed to be a strategic location as it is a small rural village

Full text:

I feel very strongly the local plan is ill thought through and a unbalanced distribution of houses that doesn't reflect the nature of rural villages. Loxwood is a rural village with no public transport links that are usable for the working population, no work opportunities, a serious lack of sewage capacity, no local grocery shop and yet the council deem it suitable for over 312 houses which will give a 50% increase in dwellings and a potential for significantly more as a 'strategic' location-it is completely bonkers. We are not a town!

It is also very disrespectful of the council to ignore our latest neighbourhood plan-we have accepted the national need for additional houses and have spent significant time and funds to produce this. It has completely demoralized the parish council and make a mockery of the whole process.

I have included my comments below why i believe this is not a viable plan for the council.

CDC have not consulted on revised housing numbers in North of the district-it quote the restrictions of the A27 which prevents the southern development however the A281 is a bigger constraint which will also have Dunsfold adding pressure.

Allocation of 220 houses plus a further 91 houses on already allocated sites is not sustainable in rural Loxwood-it a huge Percentage increase and will destroy the village.

CDC Sustainability Appraisal is weak in its justification for allocation of 220 houses

There is no viable bus, lack of sewerage capacity, a village school, shops to support large increase in housing

Policy A15 should be removed and Policies H2 and H3 amended to reflect a realistic allocation of 125 houses which is still generous compared to other local area with better services.

Loxwood should not be deemed to be a strategic location-it is a small rural village

- Impact on landscape and flood risk
- Impact on natural environment
- Lack of consideration of Neighbourhood Plan

Full text:

[RECEIVED LATE]

I would like to register my strong objections to the Local Plan published on 3rd February last, which sets out proposals to develop 220 new homes in Loxwood in addition to the 91 that are under development.

My principle cause for concern about these plans are that it is already demonstrably clear that the infrastructure in Loxwood cannot adequately support the existing developments, let alone this proposal, which contains no mention of any attempts to improve it.

This includes but is not limited to:-

Water & Sewerage: Southern Water have admitted that the capacity in Loxwood is insufficient to deal with even current demand and has no plans to increase it.

I have personally experienced sewage backflow on my property on a number of occasions in the last twelve months, which has been rectified recently by the fitting of a valve system which shifts the problem elsewhere. Furthermore, the "workarounds" in place for recent housing developments lead to unpleasant odours and risk of discharge into the water courses.

Services: Loxwood has no village shop, its school and medical practice are at capacity and there is negligible public transport serving the village. Over development is placing a strain on the electrical grid supply leading to instances of power disruption.

Landscape and flood risk: The conversion of the significant amount of land involved with this proposal from fields to housing plots will add further pressure from rain water flow on the capacity of the River Lox and Loxwood stream, thereby increasing the risk of flooding to many properties (including my own) in the village.

The proposals dig deep into the natural environment that defines the character of the village and its surroundings with footpaths, vistas and natural habitats permanently degraded as a consequence.

Loxwood PC developed a Neighbourhood Plan in 2018 which was revised in 2020; this seems to have been ignored completely by CDC despite central government encouragement of such plans. It appears that CDC's desire to focus more housing development in the North of its district is leading to draconian disregard for the considered views of local residents reflected in the Neighbourhood Plan.

I ask that you take my points into consideration when this Local Plan Proposal is refined further.

Document Element: Policy A15 Loxwood**Respondent:** Mrs Diana Vettese [8006]**Summary:**

The village has already been over developed with lots of new housing without the necessary infrastructure. We were promised a local shop with Nursery Green, this never happened. The school hasn't been improved - there is limited public transport. The road through our village is getting more and more busy with regular accidents at the junction of station road. Our precious wildlife and ancient woodland will be put at even more risk and I can't see any benefit to the local community especially as the plan contradicts the localist Act 2011 devolving power to local areas.

Full text:

The plan will not meet the CDC's objectives due to Loxwood's lack of infrastructure. There is not the necessary infrastructure to support the number of houses that have been recently built and these existing developments have already created problems in the village with sewage, lack of grid capacity with powercuts. Our post office and local shop recently closed. Public transports in Loxwood is very poor and there is very limited employment options locally. The lack of water capacity in our area has been highlighted by Natural England and Southern water. Also the CDC did not consult with the LPC on the revised housing numbers and the revised Neighbourhood Plan from 2020 has not been able to go ahead because of water neutrality issues. Building works for future developments could increase the risk of floods in the village. The plan would have a devastating effect on our countryside, destroy ancient woodland and the wildlife it supports including protected species eg Barbestelle bats, doormice and may other species.

Change suggested by respondent:

Loxwood has already has 91 houses currently in development and any further development would have a huge negative impact on the village which doesn't have the necessary infrastructure.

Legally compliant: No**Sound:** No**Comply with duty:** No**Attachments:** None

4677

Object

Document Element: Policy A15 Loxwood**Respondent:** Mr Marco Vettese [8008]**Summary:**

The CDC did not consult the LPC on revised housing numbers and the allocation of 220 houses plus a further 91 houses on already allocated sites is not sustainable in rural Loxwood for the following reasons:
- we don't have the transport infrastructure; the sewerage system is already at capacity; our local PO office has recently closed and we have no shops; the school is not big enough to support the number of houses proposed; this is a rural community and the development will put our wildlife at risk and destroy ancient woodlands and affect our bridalways and footpaths.

Full text:

The CDC did not consult the LPC on revised housing numbers and the allocation of 220 houses plus a further 91 houses on already allocated sites is not sustainable in rural Loxwood for the following reasons:
- we don't have the transport infrastructure; the sewerage system is already at capacity; our local PO office has recently closed and we have no shops; the school is not big enough to support the number of houses proposed; this is a rural community and the development will put our wildlife at risk and destroy ancient woodlands and affect our bridalways and footpaths.

For the reasons listed about the plan does not adhere to the CDCs environmental, economic and social objectives in terms of infrastructure and environmental requirements. The CDC did not consult with the Loxwood Parish Council on revised housing numbers and ignored the Neighbourhood plan submitted by the LPC in 2018 and the revised Neighbourhood plan in 2020 hasn't been able to progress due ot water neutrality issues. The local plan contradicts the Localism Act of 2011 and needs to take into account the government legislation around the Wildlife and Countryside Act1981 and other legislation for conservation of species and habitat. All these controventions go to show how the this plan totally inappropriate for our village. Our voices are being sytematically ignored by CDC. Loxwood is a rural village and the plan will negatively impact the residents and community and the wildlife that surrounds it.

Document Element: Policy A15 Loxwood**Respondent:** West Sussex County Council (Tracey Flitcroft, Principal Planning Officer) [8119]**Summary:**

The references to safeguarding minerals is inconsistent and it is suggested that the wording in the email sent to CDC (attached) in relation to Policy AL3 should be used in the policies for the other sites for consistency. Reference to safeguarding minerals and waste infrastructure should also be included in some other policies as previously indicated:

Full text:

The comments included below from WSCC are Holding Objections. We will continue to work with Chichester District Council and as further work is completed will consider if objections can be withdrawn.

Transport Overview

The County Council has worked with Chichester District Council to develop the Chichester Local Plan and its supporting evidence base and will continue to do so. Although the overall direction of the Local Plan is supported, from a highways and transport perspective, there are three key issues remaining that need to be addressed in order to demonstrate that the Plan is sound:

1. There is insufficient evidence to demonstrate that key infrastructure (i.e. Terminus Road Diversion) will be deliverable;
2. The package of sustainable transport infrastructure and measures is not yet sufficiently well-developed to demonstrate that it is deliverable as part of the monitor and manage process; and

3. There is insufficient evidence to demonstrate that the capacity of the transport network can accommodate the scale of development proposed as part of the Southbourne Broad Location for Development.

The following sections explain; a) the reasons for these issues; b) why they affect the soundness of the Local Plan; and, c) what changes should be made to the Local Plan to remedy the issues.

Deliverability of Key Infrastructure

The recommended transport mitigation strategy, as assessed using the Chichester Area Transport Model for 2039 has been demonstrated to be capable in-principle to prevent the development from resulting in severe residual cumulative impacts on the highways and transport network. However, there are significant risks to deliverability of junction mitigation measures, which have required further work to be undertaken on developing a short to medium term strategy based on phased prioritisation of infrastructure and sustainable transport improvements, to be governed under a monitor and manage approach.

There are three locations where new highway alignments are proposed outside of existing highways boundaries. Two of these may include significant earthworks or structures to be delivered, being Stockbridge Link Road and Terminus Road diversion. The cost of the mitigation strategy exceeds the likely value of developer contributions and additional funding has not yet been secured.

At the Regulation 18 consultation stage in December 2018 to January 2019 the County Council identified delivery risks with the Stockbridge Link Road and Terminus Road Diversion schemes due to the earthworks likely to be required and to confirm the extent of land take required for both schemes. The County Council stated that feasibility work would need to be undertaken for these improvements prior to Plan submission to confirm that the schemes are deliverable. A brief for such a feasibility study was agreed in 2019, but to date, this work has not been commissioned. It is the County Council's view that Stockbridge Link Road (SLR) should be disregarded as a potential part of a long-term transport mitigation strategy for 2039 and beyond until such time as it can be demonstrated that the scheme is deliverable. Paragraph 8.14 of the Local Plan acknowledges that the SLR is not deliverable as part of the Local Plan mitigation package.

The Terminus Road Diversion is still identified as part of the highest priority in the Local Plan mitigation package (i.e. A27 Fishbourne Junction) which is expected to be delivered once sufficient funding is collected. The County Council considers that in the absence of this feasibility work, the deliverability of the Terminus Road Diversion cannot be confirmed. In particular, given the recent impacts of inflation in the construction industry, this work will need to robustly estimate the costs and confirm delivery arrangements. In the absence of this feasibility work, there is currently insufficient evidence to confirm that the Local Plan complies with Paragraphs 11 and 106 of the NPPF as key infrastructure does not appear to be deliverable.

In order to remedy this issue regarding the Terminus Road Diversion, the County Council requests that feasibility work is undertaken prior to the examination to confirm deliverability of the proposed Terminus Road Diversion.

Sustainable Transport Infrastructure & Measures

The transport study modelling for end of Plan period also includes some proposed highways mitigation schemes within Chichester City. The County Council has previously requested that these be replaced by sustainable transport improvements to comply with the West Sussex Transport Plan 2022-2036. However, only limited modification has been made to these proposed schemes, with a suggestion in text at paragraph 7.3.2 of the main transport study that the costs for these schemes can be reallocated to sustainable transport improvements which are not specified. Although this does help to explain how sustainable transport infrastructure schemes and measures can be at least partially funded, it is rare that schemes will be fully funded using developer contributions. Furthermore, funding is not the only issue that needs to be overcome to secure delivery of these schemes and measures.

The Infrastructure Delivery Plan (IDP) lists the proposed mitigation measures and in some cases provides information on the rationale, phasing, cost, funding and delivery arrangements. However, there are still many gaps in the information, probably because schemes are currently at an early conceptual stage. The County Council's experience is that it is unlikely that schemes will be fully funded using developer contributions (because doing so would not be compliant with the CIL regulations) so delivery of these schemes will be partially dependent on securing funding from central Government or other sources. The IDP currently fails to identify the scheme-specific requirements for additional funding and the overall scale of additional funding required.

The County Council considers the level of information currently available on the sustainable transport package to be insufficient to demonstrate deliverability of a credible and coordinated sustainable transport package of improved infrastructure and services. Therefore, there is insufficient evidence to confirm that the Local Plan complies with Paragraphs 11 and 106 of the NPPF.

In order to remedy this issue, the County Council requests that further technical work is undertaken to develop the schemes and measures in the sustainable transport package prior to the examination. In particular, this should focus on the following schemes and measures and some cases, this will build on work that has already taken place:

1. St. Paul's & Parklands cycle routes
2. Improving existing public transport services towards Madgwick Lane
3. Provision of improved bus services for the village serving the development areas of Southbourne Parish
4. Improving cycling connectivity to link the built-out areas of Shopwhyke Lakes with Tangmere and Oving etc

As not all the severely impacted A27 junctions have a reasonable prospect of being physically improved in the Plan period, more investigation into potential public transport enhancements is also required, particularly to strengthen routes that cross the bypass. This may require further amendments to the IDP.

This work should aim to identify options for sustainable transport schemes that can be a priority for investment, provide information to enable safeguarding of routes (e.g. cycle routes) from development and provide a basis for applications for third party funding to support their delivery. The relative priority of such measures would need to be considered under the monitor and manage approach by the proposed Traffic and Infrastructure Management Group for implementation in addition to the proposed improvement at the A27/A259 Fishbourne junction.

To address this issue and support delivery of the sustainable transport package, the County Council also recommends the following minor amendments to Policy T1: Transport Infrastructure:

At bullet point .7 change "other small-scale junction improvements" to read "other sustainable transport and safety focused improvements, including at junctions" and change "These will increase road capacity, reduce traffic congestion, improve safety and air quality, and improve access to Chichester city from surrounding areas" to "These will increase road capacity on strategic roads, and on both strategic and local roads reduce traffic congestion, improve safety and air quality, and improve access to Chichester city from surrounding areas notably by encouraging and prioritising sustainable modes."

Southbourne Broad Location for Development

The scale of development that can be accommodated at the Southbourne Broad Location will be, at least partially, dependent on the capacity of the transport network to accommodate the associated traffic movements. As the Broad Location spans the railway line, many of these traffic movements

would need to cross the railway line. The County Council is concerned that there is currently insufficient capacity of the existing level crossings, notably at Stein Road, to accommodate the additional traffic movements. This could mean that the cumulative impact of development on the traffic network is severe, which is not consistent with Paragraph 111 of the NPPF.

The transport evidence base does not yet provide sufficient assurance that the proposed scale of development can be accommodated. This is because the base level of traffic flow has not been compared to local traffic counts, either in the initial validation of the strategic model or through a new count which the County Council has previously requested, and the assumptions about level crossing downtimes have not been validated against observed data. The County Council is concerned that the assessment of capacity of the local road network to accommodate the quantum of dwellings proposed for the Broad Location may be overoptimistic by underestimating existing flow levels and the duration of level crossing downtime. As a consequence, the proposed quantum may not be deliverable without unacceptable impacts to the conditions on Stein Road and to the level of traffic seeking to use rural lanes to the north of the village to avoid the level crossing.

In order to remedy this issue, the County Council requests that either additional transport evidence is provided prior to the examination to demonstrate that the proposed scale of development is deliverable, or that Policy A13 is changed to remove the proposed scale of development until such evidence is provided.

The following comments from education, minerals and waste, Adults Services and Health, highways & transport and public rights of way, do not affect the soundness of the Plan. However, Chichester District Council should take these into account and, where possible, make minor amendments to the Local Plan and/or evidence base studies before submission of the Local Plan for examination. Officers are happy to meet and discuss any of these comments, and proposed minor amendments to address these comments, ahead of submission:

1) Education

Land West of Chichester

Previous comments have been made requesting that the policy refers to 'Phase 2 should include expansion of the primary school for the further 1FE of teaching accommodation with nursery and SEND provision'. While it is recognised that reference is made to this in the IDP this is a supporting document to the Local Plan and should not be solely relied on. It is requested that paragraph 10.19 is amended to read: 'a local centre with retail, community and employment uses (minimum of approximately 2500 sqm E(g)(i) Use Class), two form entry (2FE) primary school and one form entry (1FE) teaching accommodation with nursery and SEND, informal and formal open space (including a country park), allotments...'

This should also be included in the 3rd bullet point of Policy A6 or the wording of the policy should be drafted to reflect more recent policy requirements i.e. Provide for infrastructure and community facilities in accordance with the most recent Infrastructure Delivery Plan.

There are some inconsistencies with the wording of the strategic policies, not every policy includes the criterion 'Provide for infrastructure and community facilities in accordance with the most recent Infrastructure Delivery Plan.' While this may be due to some policies being carried through from the adopted local plan it is inconsistent.

Policy A8 Land East of Chichester

As an education authority WSCC do not request 1FE schools in line with government guidance. As per our earlier comments and discussions we requested a 2 FE primary school for the site.

3rd bullet point of Policy A8 should be amended to read: 'A neighbourhood centre incorporating local shops, a community centre, flexible space for employment/ small-scale leisure uses and a one-form (expandable to two-form) two form entry primary school with provision for early years/ childcare and special educational needs and disability...'

2) Minerals and Waste

The references to safeguarding minerals is inconsistent and it is suggested that the wording in the email sent to CDC (attached) in relation to Policy AL3 should be used in the policies for the other sites for consistency. Reference to safeguarding minerals and waste infrastructure should also be included in some other policies as previously indicated:

- Policy A2 – needs to include reference to safeguarding minerals and waste infrastructure.
- Policy A7 – needs to include reference to safeguarding waste infrastructure.
- Policy A15 (Loxwood) – needs to include reference to minerals safeguarding as within the clay MSA.
- Policy A21 – needs to include reference to minerals safeguarding.

Also, the reference to the safeguarding guidance needs to be checked to ensure that it is worded correctly as 'Minerals and Waste Safeguarding Guidance'.

3) Older Person Housing

It is noted that the plan refers to older person housing as specialist housing. WSCC strategy supports the provision of 'extra care housing' while this might be similar development it enables younger people to access the accommodation for whatever medical reason i.e. MS, strokes rather than limiting it to a certain age group. Officers are happy to meet and discuss this further.

4) Highways and Transport

Public Transport Priority Infrastructure

The Public Transport section of the main transport study report starting at paragraph 6.2.7 requires revisiting. There is reference to "an expansion of the bus priority lane system within Chichester City Centre" which does not match the existing bus provision in the City which does not provide bus priority lanes on street. It does have restrictions on motor traffic in the adjoining parts of South Street and West Street which provide for bus and cycle only access in both directions of travel plus access for essential goods vehicle loading in the westbound direction only. In addition, the suggestion in the following paragraph for "a time-based system where certain routes are restricted to public transport only during specific times" is not evidenced or developed and as such considered unlikely to be practical and enforceable at most locations used by bus routes in the City. More developed proposals for additional bus priority, improvements to bus passenger facilities or testing of specific locations for bus-only access would be welcomed as part of developing a costed sustainable transport mitigation package.

Park and Ride

The discussion of possible park and ride facilities for the City at paragraphs 6.2.9 to 6.2.16 of the main transport study should also acknowledge. An important part of making park and ride well used by motorists is increasing the price of city centre parking to provide a financial incentive to take up significantly cheaper park and ride charges for parking and travel. However, if park and ride sites are not provided accessible to all major approach

routes to the city, such a charging strategy would not be seen to be equitable, whereas only a single site is proposed in the District Council's emerging parking strategy and the report acknowledges at 6.2.11 that "locations for potential park and ride sites are also deemed to be limited". The bullet at 6.2.15 "Cost of schemes compared to benefit are likely to be initially lower than highway schemes" may have been incorrectly worded given that this is listed as an issue rather than a benefit. The text may have been intended to say that the ratio of benefit to cost for park and ride schemes may be lower than for conventional highway schemes?

A286 New Park Road / A286 St Pancras Road (Junction 7)

This junction scheme includes pedestrian crossing facilities which are welcomed and also includes a length of advisory cycle lane starting in the middle of the junction for cyclists remaining on St Pancras. However, the approach to the junction on St Pancras from Eastgate Square remains intimidating to cyclists, so further measures would need to be added to make the layout cycle-friendly or the cycle facility is likely to be of limited benefit. This could include decreasing traffic speeds. Until this is done the conclusion at 8.4.4 of the main transport study; "The mitigation scheme includes improvements for pedestrians and cyclists which will lead to increased use of active travel modes and reduce the need for physical mitigation here" is only supported for pedestrians, not for cyclists.

A259 Via Ravenna / A259 Cathedral Way Roundabout (Junction 8)

It is stated at 7.3.8 of the main transport study that "the mitigation may be required to avoid queuing back towards the A27, as well as for capacity issues". In light of this potential safety issue for the previous junction on Cathedral Way and for the A27 Fishbourne junction, the proposal at 7.3.6 that the scheme delivery should be tied to the monitor and manage regime to see if and when it is required is accepted. This is different to the approach for other junctions in the City because of the potential safety issue. This monitoring approach would be likely to follow after the A259 Cathedral Way / Fishbourne Road East / Terminus Road (as diverted) (Junction 10) improvement, which is to be brought forward as an integral part of the A27 Fishbourne roundabout mitigation scheme, but may allow for increased eastbound flows on Cathedral Way.

A286 Northgate Gyratory

An additional mitigation scheme is proposed at paragraph 7.3.134 of the main transport study for the A286 Northgate Gyratory along its southern arm from Oaklands Way to Orchard Street. The proposal to add traffic signals is welcomed in concept as it can help to control traffic speeds making the junction more friendly for cyclists and pedestrians. However, the layout shown at figure 7-8 does not maximise the opportunity to improve convenience and safety for pedestrians by providing a priority link to reach the central island, which contains employment space and the fire station, nor to assist crossing the exit towards Orchard Street. The scheme would benefit from further development to prioritise active travel movements and should also be fitted with transponders for bus priority.

Fishbourne Road West / Appledram Lane South (Junction 11)

At paragraphs 7.4.1 to 7.4.2 of the main transport study, the junction of Fishbourne Road West / Appledram Lane South (Junction 11) is considered. The proposal to mitigate impacts at this junction through delivery of the Stockbridge Link Road scheme is not considered deliverable, so the approach at this location requires re-thinking. The County Council would not support measures to increase capacity for through traffic on Appledram Lane South, the approach should be to reduce severance and improve safety and comfort for active travel on Appledram Lane by reducing vehicle speeds and as far as possible volume. This should consider the needs of pedestrians and cyclists both for local access and for users of the Salterns Way leisure cycling route.

TEMPro Background Traffic Growth Comparisons

At section 10.2 of the main transport study a comparison is made of the TEMPro 7.2 growth rates used in the study for external traffic with new TEMPro 8.0 growth rates since released by the Department for Transport, which notes that the TEMPro 8.0 rates are significantly lower, if these rates were used then the level of transport impacts could be lower. Unfortunately, a number of highways authorities in the Transport for the South East (TfSE) area including the County Council and Hampshire County Council have concerns that the planning assumptions used in TEMPro v8 core growth scenario underestimate the numbers of additional households forecasted compared to targets in adopted Local Plans for delivering new dwellings. TfSE are currently raising these collective concerns with DfT with a view to obtaining an early update to TEMPro 8 planning assumptions. Although for the purposes of this study TEMPro is not applied to trips produced in Chichester District, from the County Council's analysis TEMPro v8 core underestimates the increase in households per year in Arun District by over 50% and in Horsham District by 30% when compared with adopted development plans. On this basis it may be useful to instead compare TEMPro 7.2 with TEMPro 8.0 high growth scenario.

North of District Spatial Scenarios Testing

For the Northern Spatial Scenarios Test provided as an appendix to the main transport study, this had not been updated for the final preferred spatial strategy or in light of the County Council's previous comments on the March 2022 issue to the District Council. The spatial strategy now is similar but not identical to the Scenario 4: Significant Growth 1 option in the reported tests, totalling 370 dwellings across the four northern parishes, compared to 410 in the test. In both cases the largest allocation is at Loxwood; 220 dwellings were proposed in the Scenario 4 as compared to 200 in this test. Some other tests proposed higher numbers.

The testing in the northern part of the district had used the same trip generation rates per dwelling as in the South of the District, but the County Council considers that in practice private motor vehicle trip generation per dwelling is likely to be higher due to the rural nature of the area, including a lack of local facilities and shops within walking distance of development, a very low level of public transport services and lack of surfaced cycle routes. The level of development proposed is not at the level capable of delivering transformative transport improvements to match the trip making patterns around Chichester and the A259 corridor to Bosham and Southbourne. This may be offset in part by the lower total amount of development compared to the tested scenario 4. Nonetheless, it would be helpful to adjust the scenario for the spatial strategy now proposed and to provide information on additional traffic movements per peak hour from these parishes using the A272 at junctions at Wisborough Green and reaching the A272/A29 junction at Billingshurst and the A272/A283 junction at the north of Petworth.

Neutral Month and Summer Month Comparison Technical Note

The Neutral Month and Summer Month Comparison Technical Note in the main transport study treats July as a neutral month rather than a summer month. Paragraph 1.3.1 states "The flows were analysed by looking at traffic data for August 2019 this being considered to represent summer traffic. This was compared against traffic data from the neutral months of June, July, September and October also from 2019." The County Council does not accept this methodology as school summer holidays start part way through July and education traffic is also affected by the formal exam period, whilst there is typically a high level of seasonal leisure traffic including summer outdoor events in this month. It is acceptable to use August alone as the summer comparator month. However, July traffic should be removed from the neutral months analysis and should be substituted with May traffic data from the same year of 2019, provided that sufficient data is available from that month.

5) Public Rights of Way (PRoW)

It is a positive step to see PRoW acknowledged as valued by communities and as part of the area's green infrastructure. Whilst Policy P14 (Green Infrastructure) states that development proposals should not be detrimental to the network of public rights of way and bridleways (please note bridleways are Public Rights of Way), a more proactively positive approach that seeks enhancements to the network as mitigation, would be welcomed. The improvement, upgrading of existing PRoW and creation of new PRoW where possible, to allow for a greater number of users to access the network would be beneficial. This is somewhat addressed in Policy T1 which refers only to routes identified in the Local Transport Plan, Local Cycling and Walking Infrastructure Plan (LCWIP) and the Infrastructure Delivery Plan. Opportunities to these, should not be limited if they arise elsewhere. It is surprising to see there is no mention of PRoW within Chapter 8 under Active Travel – Walking and Cycling. The PRoW network provides extensive walking and cycling opportunities, often off-road, and important links between places and non-PRoW routes.

Change suggested by respondent:

- Policy A15 (Loxwood) – needs to include reference to minerals safeguarding as within the clay MSA.

4510

Object

Document Element: Policy A15 Loxwood

Respondent: Mr Glyn Woodage [6653]

Summary:

Loxwood is not suitable for a further escalation of development on this scale, due to the many sustainability issues. The village is not ideally located and is totally car dependent. All Infrastructure in the village is historically weak and continues to be so. Development on this planned scale would destroy the villages character and vernacular, without a meaningful benefit to the area as a whole.

Full text:

The plan for Loxwood has not realistically assessed the villages suitability or capability to accommodate this huge increase in housing numbers and only refers to an already over subscribed health-centre as the main attribute. I don't believe that sustainability was seriously considered in reaching your numbers and aspirations of this scale. I need not remind you Loxwood does not currently have a village shop and lacks any major employment opportunities. Therefore only a car journey of not much under a minimum of 30 minutes each way, one hour in total is needed to facilitate this and if Crawley is your destination this can be doubled. The location of Loxwood is remote and requires using a transport method that is not aligned with the climate emergency on a road network that quite frankly is seriously lacking!

Change suggested by respondent:

The group of so called "North villages" once formed part of the Petworth district. Petworth has enormous potential to offer easily all of this housing requirement in a sensitive development to the South-west of the current town. The town, could be regenerated and provide all including the aging population of the area, with a great place to live, that absorbs most of the outlined pressures of a balanced solution.

Object

Document Element: Policy A15 Loxwood

Respondent: Mrs Shelley Woodage [8042]

Summary:

The proposed scale on top of the existing commitments (both completed and in progress) will ruin the village and create a dormitory car dependent settlement. The village is not equipped or enabled to facilitate these additional houses and lacks scalable infrastructure to cope with the ensuing demands such scale will bring. Loxwood is comparatively a remote location and is totally unsuitable for this huge increase.

Other locations would better absorb these numbers without the environmental consequences and associated climate emergency, which is much highlighted in your plan! Valuable and productive farmland loss, should also be considered here as an issue.

Change suggested by respondent:

Look at a scheme which minimises car use and maximizes the available of employment, infrastructure, amenities and proximity to other major conurbations. Consider although outside your remit, Petworth, as a huge historically underdeveloped opportunity which cannot be ignored when reviewing this area.

Object

Document Element: Policy A15 Loxwood**Respondent:** Mr Keith Woods [7921]**Summary:**

The number of houses allocated to Loxwood should be revised to reflect an allocation of 125 houses as per the NP.

Whatever numbers are allocated no building work should commence until the required infrastructure work is scheduled with guaranteed delivery before any occupation of the homes.

Full text:

Loxwood PC have prepared a revised Neighbourhood Plan (NP) including provision of 126 homes plus 17 carried forward from the previous Made NP. This was developed in 2021 – 2022 in consultation with the parish and CDC. Due to CDC's lack of a 5 year housing supply there has been approval of additional speculative development of 91 houses.

The number of 126 houses was identified as the maximum that can be sustained in view of the infrastructure constraints impacting drainage, sewerage and water neutrality as well as the other obvious environmental impacts on wildlife, quality of life etc.

Recent speculative development of houses in Loxwood have resorted to a cesspit solution with daily collections of sewage waste. While this is intended to be a temporary solution the infrastructure provider (Southern Water) has no plans to upgrade the sewerage system.

Whatever number of houses are allocated to Loxwood none should be occupied until proper sewerage, drainage and water neutrality infrastructure has been scheduled with guaranteed delivery before occupation.

It seems that the increased numbers in the Local Plan are required to off-set a shortfall in numbers in the South of the district around Chichester. However, while growth in employment is projected in the south, none is expected in the north of the district and certainly none is provided for in the Water Neutrality Strategy. It is not sustainable to expect people to live in Loxwood and commute for work 25 miles away in Chichester.

Wherever Loxwood residents commute to work it is not possible using public transport. This is due to the lack of a viable regular bus service. While the plan suggests improvements to the bus service the reality is that bus services are being reduced throughout the country and it is not realistic to think Loxwood will be different. While the roads are reasonably safe for cyclists outside of the morning and evening 'rush hours' they are not safe for commuting. These limitations further constrain the viability of development in Loxwood.

Change suggested by respondent:

The number of houses allocated to Loxwood should be revised to reflect an allocation of 125 houses as per the NP.

Whatever numbers are allocated no building work should commence until the required infrastructure work is scheduled with guaranteed delivery before any occupation of the homes.

Object

Document Element: Policy A15 Loxwood**Respondent:** Mrs Valerie Woods [7923]**Summary:**

There has to be very careful consideration given to the allocation of 220 houses, with regard to the overwhelmed sewerage and the need for careful usage of water in the area.

Full text:

Loxwood Parish Council undertook a revised Neighbourhood Plan. It consulted on an estimation of 125 houses in 2021. Numbers advised by Chichester District Council. The Neighbourhood Plan could not proceed through all the stages as there was no Chichester Local Plan. The delay has been detrimental to the village as a speculative developer was able to build as there was no Chichester Local Plan. However, the sewerage system in Loxwood is overwhelmed and was identified in 2004 as requiring an upgrade. None has taken place. This speculative developer has what can be best described as a cess pit needing frequent emptying.

Change suggested by respondent:

Reduce the number of house allocation to 125.

Take account of 17 houses carried forward from the previous Made Neighbourhood Plan.

Recognise that the community believes that 126 houses is possible given the issues relating to sewerage and Water neutrality.

Legally compliant: Yes**Sound:** No**Comply with duty:** No**Attachments:** None

Object

Document Element: Policy A15 Loxwood**Respondent:** Mrs Joanna Wright [7831]**Summary:**

Objection to Loxwood number due to:

- We are on a junction of two B-roads, not big enough for big housing development
- The school is full, with a waiting list and no room to expand
- The doctors surgery is full to bursting
- Loxwood floods badly
- The sewers are too small to cope with the village as it now is
- We have ongoing water neutrality issue that do not fit with plans to bring more houses to the village
- Fresh water supplies are stretched to the maximum as it now is
- There is no gas
- There is no shop
- There is no public transport
- We are entirely car-dependant, and more homes bring more cars and air pollution

Full text:

Please add our names to the objectors list regarding the plan to add another 220 houses in LOXWOOD, our village in your constituency.

We are being threatened on all sides, and we have no facility for expansion. There are plenty of building opportunities that are adjacent to larger roads, we are small village community.

In summary, my objections are these:

- We are on a junction of two B-roads, not big enough for big housing development
- The school is full, with a waiting list and no room to expand
- The doctors surgery is full to bursting
- Loxwood floods badly
- The sewers are too small to cope with the village as it now is
- We have ongoing water neutrality issue that do not fit with plans to bring more houses to the village
- Fresh water supplies are stretched to the maximum as it now is
- There is no gas
- There is no shop
- There is no public transport
- We are entirely car-dependant, and more homes bring more cars and air pollution

Document Element: Goodwood Motor Circuit and Airfield, 10.71**Respondent:** The Goodwood Estates Company Limited [7922]**Agent:** HMPC Ltd (Mr Haydn Morris) [112]**Summary:**

The Estate supports the local plan in recognising the importance to the district of the Goodwood Motor Circuit and Airfield, but it will be helpful for the plan to acknowledge the two distinct business areas, which have different requirements in terms of local plan policy.

Full text:

Local Plan Paragraphs 10.71 – 10.75 The Estate supports the local plan in recognising the importance to the district of the Goodwood Motor Circuit and Airfield. The Estate similarly supports Policies A16 and A17 and changes to Local Plan Maps, A9a, and both A16a. While the airfield and motor circuit occupy the same area of land (Map A16a) it will be helpful for the plan to acknowledge the two distinct business areas, which have different requirements in terms of local plan policy.

Accompanying Footnote 51 should be changed to more appropriately reflect the contribution of the Goodwood Estate to the local, regional and National economy. The Estate has shared with the planning authority the LSE report commissioned to research the contribution of Goodwood (LSE "The Goodwood Estate: Estimating Socioeconomic Contribution January 2020").

This document providing evidence from all Good businesses over a period of time, should be referenced in paragraph 10.71, rather than the one-off event mentioned. It will be appreciated that if a single event generates a significant local and National turnover of some £60M in 2014, the combined turnover from all Goodwood businesses will be of far greater significance. It is this most important and significant contribution to local, regional and National economics, that must be protected, enhanced and sustained through policies of the local plan. The report is being updated and will be shared with the planning authority when available (expected before the Local Plan Examination)

Change suggested by respondent:

Object

Document Element: Policy A16 Goodwood Motor Circuit and Airfield**Respondent:** Forestry Commission (Richard Cobb) [8202]**Summary:**

Forestry Commission provides advice, does not support or object.

This policy could be improved by recognising the significant amount of ancient woodland and non-ancient woodland to North of the area. We would encourage any development in the area to protect, enhance and expand the woodland in the area as part of delivering net gains.

Full text:

Please note that as a Non-Ministerial Government Department, we provide no opinion supporting or objecting to planning applications or local plans including their soundness or legal compliance.

Rather we are including advice and information that we advise the Council consider to ensure their pre-submission local plan avoids potential impacts and promote enhancements/expansion as part of the proposed local plan regarding trees and woodland, including ancient woodland. We acknowledge that the purpose of Regulation 19 consultations does not usually extend to making substantial changes which are not related to soundness so we offer our advice as helpful guidance to ensure the local plan takes every opportunity to secure the protection, enhancement and expansion of Chichester's valuable trees and woodlands to comply with planning policy, good practice and to make the most of the many benefits they provide to the environment, local economy and community.

Overall Comments

Ancient woodlands, veteran and ancient trees are irreplaceable habitats, and it is essential that they are considered appropriately to avoid any direct or indirect effects that could cause their loss or deterioration, in line with Government Standing Advice. Ancient Woodland has very high potential ecological value and should act as integral focal points, alongside other locally and nationally designated sites, as part of delivering landscape scale nature recovery.

Any development or plan that include these irreplaceable habitats on or near to the site should aim to deliver high standards of net gains and ecological connectivity that supports wider ecological networks, in line with good practice. This will also be a requirement as part of the local nature recovery strategies being driven by the Environment Act 2021 and we advise that plans should anticipate this to maximise environmental benefits to contribute to reversing the national trend of ecological decline as part of broader nature recovery networks. The Local Plan should be considered as a crucial and timely opportunity to secure significant and strategic, plan-led environmental gains due to their scope and scale, particularly given the timescales of development being influenced that coincide with UK Government commitments regarding halving emissions and protecting 30% of nature by 2030, towards a net-zero carbon and nature positive economy.

The development strategy should prioritise the protection of trees and woodlands with the highest priority being given to ancient woodland, ancient and veteran trees as individual habitats and as part of wider ecological networks.

Site Allocation comments:**Policy A7 Land at Shopwyke (Oving Parish)**

Site specific considerations could recognise the existing trees, hedgerows and woodland and prioritise their protection, enhancement and expansion as part of biodiversity net gains. Acoustic screening referred to could also use trees to make the most of multi-functional benefits they bring.

Policy A8 Land East of Chichester

We welcome efforts to bolster the existing woodland and the proposed strategic wildlife corridor to the East and the enhancements that development could bring.

Policy A11 Highgrove Farm, Bosham

Bolster planting to North, South and East is welcome. This policy could be improved by requiring bolster planting to the West as well, where there appears to be an existing line of trees, making it well placed to further contribute to wider connectivity with existing and additional planting.

Policy A12 Chidham and Hambrook and Policy A13 Southbourne Broad Location for Development

We note that more detailed proposals will emerge as part of a Neighbourhood plans. We would like to highlight that this area contains some parcels of ancient woodland which is an irreplaceable and high priority habitat according to the NPPF and Government Policy (see attached Annex and below for more guidance on this). The policy could be improved by highlighting its importance and high priority as part of efforts to protect, enhance, expand and connect habitats as part of a wider ecological network and the strategic wildlife corridor. Developments within this area could contribute pockets of woodland and linear planting to help connect existing trees and woodland as part of a mosaic of habitats throughout the wildlife corridor and wider area. The requirement to ensure development does not have an adverse impact on the strategic wildlife corridor is also welcome but could be strengthened by requiring developments to significantly contribute to its enhancement, expansion and connectivity including with green infrastructure

provided by development

Policy A14 Land West of Tangmere

The requirement for significant levels of green infrastructure is welcome. This policy could be strengthened by requiring development to retain and bolster existing hedgerows and trees wherever possible.

Policy A16 Goodwood Motor Circuit and Airfield and Policy A17 Development within the vicinity of Goodwood Motor Circuit and Airfield

This policy could be improved by recognising the significant amount of ancient woodland and non-ancient woodland to North of the area. We would encourage any development in the area to protect, enhance and expand the woodland in the area as part of delivering net gains.

Policy A21 Land east of Rolls Royce

This area contains areas of existing trees, hedgerow and woodland which are not currently mentioned by the policy. We would encourage any development to be sensitive to this and provide additional planting where possible.

Overarching comments

We would welcome the consideration of incorporating large and small pockets of multi-functional woodland as part of green infrastructure provision for development, particularly given the relatively low proportion of woodland found throughout the District, and the benefits this can have as 'stepping stones' between habitats as part of the Local Plan's welcome vision of strategic wildlife corridors.

We also encourage the Council to appraise the plan against the following advice to maximise the benefits from protection, enhancement and expansion of woodlands, trees and connectivity throughout the District:

Additional improvements to consider

- Tree/hedgerow removal is considered as a last resort but where it is justified, we advise that developments can aim to deliver no net deforestation to help encourage development that provides an overall environmental gain. Where trees are required to be removed, additional tree planting will be made to compensate for this loss and we would advise that additional planting should be made to help compensate for the loss of habitat in the time it takes for new trees to mature.
- Long term management and maintenance of planted trees and woodland creation to give them every chance to becoming established and where trees do fail, they are replaced
- A minimum standard for tree canopy cover for new developments (e.g. for large-scale developments) as it provides a targetable level of green infrastructure in relation to trees for the numerous ecosystem services they provide.
- Precautions should be incorporated into any woodland design and tree planting to ensure that habitat creation is established successfully and that potential impacts from deer are managed on site and in the surrounding area as appropriate. See here for further guidance that should be followed for managing impacts from deer as part of woodland creation and tree planting: <https://www.gov.uk/government/publications/woodland-creation-and-mitigating-the-impacts-of-deer/woodland-creation-and-mitigating-the-impacts-of-deer> Some good practice advice is also provided in Appendix 1 of this letter.
- We advise that any tree planting should meet the following:
 - o Trees should be healthy and good practice biosecurity should be followed to prevent the risk of spreading pests and disease, in line with Government advice: <https://www.gov.uk/government/collections/tree-pests-and-diseases>. More information on the plant healthy can be found at: Welcome to Plant Healthy - Plant Healthy
 - o Created or restored habitat should be managed in perpetuity in line with a robust management plan that follows good practice to ensure assumed benefits of created habitats are delivered in practice (see Standing Advice referred to on page 1). We recommend meeting the UK Forestry Standard to demonstrate this.
- To help mitigate climate and support local economy would urge council to develop local plan policy that makes use of locally sourced timber. This has multiple benefits as it can help store carbon within development, reduce impact from transportation, reduce embodied carbon from alternative materials and support local economies and communities.
- Where developments incorporate District Heating, consider locally and sustainably sourced wood-fuels for the benefits this can have for renewable energy and towards a local, circular economy
- Use tree planting as part of nature based solutions for managing flood risk as well as other multi-functional benefits from green infrastructure as part of any development (e.g. Trees and woodlands provide £400 million of value in flood protection)
- We encourage the Council to refine their strategy to trees and woodlands using the recently launched 'Trees and Woodland Strategy Toolkit' available here: <https://treecouncil.org.uk/what-we-do/science-and-research/tree-strategies/> to design and deliver a local tree strategy to harness the long-term benefits that trees can bring to local communities. The local plan should be developed with tree/woodlands in mind as an integral part, alongside other supplementary strategies for the environment including biodiversity, green infrastructure, nature recovery and climate change.

Key guidance regarding trees, woodland and development

Ancient woodlands, ancient trees and veteran trees are irreplaceable habitats. Paragraph 180(c) of the NPPF sets out that development resulting in the loss or deterioration of irreplaceable habitats should be refused unless there are wholly exceptional reasons and a suitable compensation strategy exists. In considering the impacts of the development on Ancient Woodland, Ancient and Veteran trees, the planning authority should consider direct and indirect impacts resulting from both construction and operational phases.

Please refer to Natural England and Forestry Commission joint Standing Advice for Ancient Woodland and Ancient and Veteran Trees, updated in January 2022. The Standing Advice can be a material consideration for planning decisions, and contains advice and guidance on assessing the effects of development, and how to avoid and mitigate impacts. It also includes an Assessment Guide which can help planners assess the impact of the proposed development on ancient woodland or ancient and veteran trees in line with the NPPF.

Existing trees should be retained wherever possible, and opportunities should be taken to incorporate trees into development. Trees and woodlands provide multiple benefits to society such as storing carbon, regulating temperatures, strengthening flood resilience and reducing noise and air pollution.[1] Paragraph 131 of the NPPF seeks to ensure new streets are tree lined, that opportunities should be taken to incorporate trees elsewhere in developments, and that existing trees are retained wherever possible. Appropriate measures should be in place to secure the long-term maintenance of newly planted trees. The Forestry Commission may be able to give further support in developing appropriate conditions in relation to woodland creation, management or mitigation.

Biodiversity Net Gain (BNG): Paragraph 174(d) of the NPPF sets out that planning (policies and) decisions should minimise impacts on and provide net gains for biodiversity. Paragraph 180(d) encourages development design to integrate opportunities to improve biodiversity, especially where this can secure net gains for biodiversity. A requirement for most development to deliver a minimum of 10% BNG is expected to become mandatory from November 2023. The planning authority should consider the wide range of benefits trees, hedgerows and woodlands provide as part of delivering good practice biodiversity net gain requirements. Losses of irreplaceable or very high distinctiveness habitat cannot adequately be accounted for through BNG.

Document Element: Policy A16 Goodwood Motor Circuit and Airfield

Respondent: John Newman [8169]

Summary:

Re Policy A16, I write as a resident of Summersdale who finds the behaviour of Goodwood the one blighting factor of living there. Fortunately it is only really bad for a few weekends each year (and otherwise the grass mound built on their border opposite to us does really help), but on those occasions the noise from unsilenced cars that would otherwise be illegal and also of the tannoy system is intolerable. I know of people who feel driven from their homes on those weekends. It also occurs to me to ask what an authority that purports to care for the environment is doing to allow such high levels of noise and air pollution. I think that it should be looking after its citizens better than that rather than arguably being obsequious to the aristocracy. At least, mercifully, the latter means that a northern bypass will never be built!!!

Document Element: Policy A16 Goodwood Motor Circuit and Airfield

Respondent: GoVia Thameslink Railway (Nigel Searle) [8197]

Summary:

Support this policy in principle. However, a lot more needs to be done to reduce the amount of people arriving by car for events which impacts a very wide area with serious congestion pollution and climate damage.

Therefore, before there is any further development it is critical that measures are taken to facilitate reliable journey times by bus and coach, especially from local railway stations. Pricing measures need to be put in place to reflect the economic cost of travelling by car and encourage travel by public transport. Event organisers should be encouraged to provide free bus and coach travel from railway stations paid for by parking fees.

Document Element: Policy A16 Goodwood Motor Circuit and Airfield

Respondent: The Goodwood Estates Company Limited [7922]

Agent: HMPC Ltd (Mr Haydn Morris) [112]

Summary:

Motor Circuit. The Estate requires a specific site policy to provide flexibility in operation and development whilst retaining an appropriate level of control to protect local residential and other amenities.

Airfield Policy content relating to Goodwood Airfield is supported but we ask that it is expanded to include specific reference to the safeguarding of runways and their operation, and support the changing role of General Aviation airfields and their future operations, including new technologies and STEM-related activities, in accordance with Government policy.

Full text:

Policy A16 Motor Circuit. The Estate has discussed the need for a specific site policy with the planning authority for some time, to provide flexibility in operation and development whilst retaining an appropriate level of control to protect local residential and other amenities.

Site activity, for the Motor Circuit in particular, is controlled through a planning permission, which while seeking to provide some flexibility, is proving difficult to use in practice when minor changes are required on an ad hoc basis or in response to consumer demand, even when the proposed change is within the spirit and intent of the permission. By its nature the permission is too precise to accommodate a business which requires flexibility, often at short notice.

An over-arching policy providing flexibility but also imposing firm parameters is a sound way forward and Policy A16 is supported as providing a robust starting point for further discussion and consideration. The Estate is keen to continue its engagement with the planning authority on this matter, ideally in advance of the Local Plan examination, to better understand the reasoning behind and likely interpretation of the four criteria listed in Policy A16. The Estate does not have issues with the criteria per se, but believes interpretation between the Estate and authority could be markedly different, particularly with regard changes to existing operations, rather than new development, to which the Policy responds appropriately.

The Estate has on a number of occasions, had to seek temporary changes to the planning permission, or reach agreement as permitted by the permission with the local authority in order to host events and activities which fall outside of the stated permission parameters, but which fit within the overarching intent and purpose of the consent. While this procedure retains planning control, it can be disproportionately time consuming, carries risk and lacks sufficient comfort when making investment decisions for events, long before there is any certainty of the proposal to take to the planning authority.

The Estate wishes to discuss how the requirement for flexibility within an existing scope of permitted activity can be achieved through a modification to Policy A16, and how the Policy criteria, supported as suitable for application to new development proposals, can be applied equally to existing activities and operations.

.....

Policy A16 Airfield Policy content relating to Goodwood Airfield is supported generally but we ask that it is expanded to include reference to the safeguarding of runways and their operation, and support the changing role of General Aviation airfields and their future operations, including new technologies and STEM-related activities.

A safeguarding agreement with the planning authority has been in existence since 2015, following on-going dialogue with County and District authorities since before 1979 when a noise study was commissioned to understand operations and noise associated with the airfield, and which made specific reference to planning policies and noise sensitive developments in and around the Airfield.

Within the 2015 safeguarding agreement there are very clear buffers on height restriction in relation to runways and the other safeguarded surfaces around the Aerodrome. These are parameters to be considered in response to planning applications, yet are not referenced through the local plan, and we request these are included. This oversight places the future viability of the Aerodrome in question if these and other safeguarding requirements are not introduced through planning policy and overlooked.

This matter was highlighted in respect of the proposed housing development north of Madgwick Lane, which itself would remove one of few remaining open areas that can be used in the case of aircraft emergency, and would place housing directly beneath flight paths of aircraft at very low heights. A factor dismissed by the applicant on grounds of flimsy assumptions, far from proven. The risk that housing might yet materialise, or the absence of robust planning policy to resist any future development proposals, within safeguarded areas is sufficient to already cause aerodrome companies to consider their future.

Also absent and equally important for the consideration of planning applications is any reference to agreed Noise Routeings (NPRs). These routes stem from the original 1979 study (see extract attached by way of introduction to the document) and have been developed over many years through on-going discussions between the local authority, operators and the local community. Their effectiveness is monitored on a regular basis by a committee made up of those bodies.

The NPRs are a key material consideration in planning decisions locally. The NPRs are long established routes (since 1979) over largely undeveloped land for the reason of minimising noise and disturbance to the local community. Whilst the level of activity is variable, but explainable, in the intervening years, it is important for the Plan to acknowledge that the District Council and WSCC recognised then, and should continue to recognise the importance now, that noise routeings carrying aircraft away from noise sensitive areas, should be developed and maintained in the community interest

In recent years the NPRs without due policy protection have been encroached unreasonably and are becoming increasingly compromised, coming into conflict with the NPPF (paragraph 106f). If further land within an existing NPR is selected for development, it is not possible, as has been achieved in the past, to relocate the NPR to other open land. Now any movement will introduce many more households into a noise sensitive area. An Aerodrome such as Goodwood can only survive with the support of the local community that surrounds it, and introducing additional homes or other similar sensitive development into, or close to, an NPR is entirely against the philosophy of how an NPR is designed, constructed and should be used.

Reference to NPRs for Goodwood Airfield within the local plan is critical, with appropriate policy being offered to control development within or adjoining those routes. Within this reference attention should be drawn to the circuits flown from each runway of the airfield, and there should be a distinction between rotary and fixed wing operations due to the differing impacts on the surrounding community

To date the NPRs have helped minimise noise impact from departing aeroplanes, but the traffic pattern flown around the runways, even at points 2nm from the runways, should be a consideration in development decisions. This is not only from a noise perspective but also blight from continually overflying traffic (e.g housing at Tangemere will be so affected).

The policy should include references to its compliance with NPPF guidance, particularly Paragraph 106(f) and to align generally with Government policy about the importance of UK GA airfields.

Change suggested by respondent:

Policies affecting the Motor Circuit should provide flexibility in operation and development, whilst retaining an appropriate level of control to protect local residential and other amenities.

Policy affecting Goodwood Airfield should be expanded to include reference to the safeguarding in all forms of runways and their operation, and support the changing role of General Aviation airfields and their future operations as required by Government, including provision for new technologies and STEM-related activities.

Development parameters set by the 2015 safeguarding agreement should be included within planning policy for use in development decisions.

NPRs must be recognised and given weight in development decisions through their inclusion in planning policy

Document Element: Policy A17 Development within the vicinity of Goodwood Motor Circuit and Airfield**Respondent:** Pam Clingan [7180]**Agent:** Eric Brandwood [8114]**Summary:**

Policy impacts respondent's land to the south of Madgwick Lane, Westhampnett;
 Land discounted for housing development due to Goodwood safeguarding flight path;
 Decision based on an unsound and legal assumption that flight path crosses land;
 Collated evidence shows decision (based on joining two separate land parcels) was flawed;

The Council are using this policy, or its current form in the Adopted Local Plan, to illegally exclude my Land from legitimate Housing Development.

Previous assessment under the HELAA/SHLAA arrangements accepted the Land as two entities and allocated housing numbers. (see HELAA 2014/2018 in attached document)

Full text:**Policy A17**

This Policy impacts my Land to the south of Madgwick Lane, Westhampnett' The Land was discounted for housing development and the reason given was, Goodwood safeguarding flight path.' This decision was based on an unsound and legal assumption that the flight path crosses my land. Evidence has been collated in the attached report prepared by my Agent, to show clearly that the decision was flawed as the flight path quite clearly crosses the roundabout at Claypit Lane and does not cross my Land. The Council by illegally joining together my two parcels of Land into one, by extension applied this reason for discounting the Land for housing. The two parcels of Land are registered with Land Registry under two legal entities.

Policy A17 states that , 'Where noise sensitive development is proposed within this area, or BELOW NOISE PREFERRED ROUTES, planning permission will only be granted where the noise impact assessment clearly shows that: para 3, in accordance with the 'agent of change' principle outlined in the National Planning Policy Framework.

The Council are using this policy, or its current form in the Adopted Local Plan, to exclude illegally my Land from legitimate Housing Development. Previous assessment under the HELAA/SHLAA arrangements accepted the Land as two entities and allocated housing numbers. (see HELAA 2014/2018 in attached document).

Change suggested by respondent:

Correction of an unsound, and illegal procedure, flawed, factually incorrect decision to rescind HELAA.

To prevent such decisions being made to exclude legitimate sites for development. See the attached document stating reasons for reinstating unsound exclusion of site for inclusion in the HELAA/SHLAA assessments.

Document Element: Policy A17 Development within the vicinity of Goodwood Motor Circuit and Airfield**Respondent:** Forestry Commission (Richard Cobb) [8202]**Summary:**

Forestry Commission provides advice, does not support or object.

This policy could be improved by recognising the significant amount of ancient woodland and non-ancient woodland to North of the area. We would encourage any development in the area to protect, enhance and expand the woodland in the area as part of delivering net gains.

Full text:

Please note that as a Non-Ministerial Government Department, we provide no opinion supporting or objecting to planning applications or local plans including their soundness or legal compliance.

Rather we are including advice and information that we advise the Council consider to ensure their pre-submission local plan avoids potential impacts and promote enhancements/expansion as part of the proposed local plan regarding trees and woodland, including ancient woodland. We acknowledge that the purpose of Regulation 19 consultations does not usually extend to making substantial changes which are not related to soundness so we offer our advice as helpful guidance to ensure the local plan takes every opportunity to secure the protection, enhancement and expansion of Chichester's valuable trees and woodlands to comply with planning policy, good practice and to make the most of the many benefits they provide to the environment, local economy and community.

Overall Comments

Ancient woodlands, veteran and ancient trees are irreplaceable habitats, and it is essential that they are considered appropriately to avoid any direct or indirect effects that could cause their loss or deterioration, in line with Government Standing Advice. Ancient Woodland has very high potential ecological value and should act as integral focal points, alongside other locally and nationally designated sites, as part of delivering landscape scale nature recovery.

Any development or plan that include these irreplaceable habitats on or near to the site should aim to deliver high standards of net gains and ecological connectivity that supports wider ecological networks, in line with good practice. This will also be a requirement as part of the local nature recovery strategies being driven by the Environment Act 2021 and we advise that plans should anticipate this to maximise environmental benefits to contribute to reversing the national trend of ecological decline as part of broader nature recovery networks. The Local Plan should be considered as a crucial and timely opportunity to secure significant and strategic, plan-led environmental gains due to their scope and scale, particularly given the timescales of development being influenced that coincide with UK Government commitments regarding halving emissions and protecting 30% of nature by 2030, towards a net-zero carbon and nature positive economy.

The development strategy should prioritise the protection of trees and woodlands with the highest priority being given to ancient woodland, ancient and veteran trees as individual habitats and as part of wider ecological networks.

Site Allocation comments:

Policy A7 Land at Shopwyke (Oving Parish)

Site specific considerations could recognise the existing trees, hedgerows and woodland and prioritise their protection, enhancement and expansion as part of biodiversity net gains. Acoustic screening referred to could also use trees to make the most of multi-functional benefits they bring.

Policy A8 Land East of Chichester

We welcome efforts to bolster the existing woodland and the proposed strategic wildlife corridor to the East and the enhancements that development could bring.

Policy A11 Highgrove Farm, Bosham

Bolster planting to North, South and East is welcome. This policy could be improved by requiring bolster planting to the West as well, where there appears to be an existing line of trees, making it well placed to further contribute to wider connectivity with existing and additional planting.

Policy A12 Chidham and Hambrook and Policy A13 Southbourne Broad Location for Development

We note that more detailed proposals will emerge as part of a Neighbourhood plans. We would like to highlight that this area contains some parcels of ancient woodland which is an irreplaceable and high priority habitat according to the NPPF and Government Policy (see attached Annex and below for more guidance on this). The policy could be improved by highlighting its importance and high priority as part of efforts to protect, enhance, expand and connect habitats as part of a wider ecological network and the strategic wildlife corridor. Developments within this area could contribute pockets of woodland and linear planting to help connect existing trees and woodland as part of a mosaic of habitats throughout the wildlife corridor and wider area. The requirement to ensure development does not have an adverse impact on the strategic wildlife corridor is also welcome but could be strengthened by requiring developments to significantly contribute to its enhancement, expansion and connectivity including with green infrastructure provided by development

Policy A14 Land West of Tangmere

The requirement for significant levels of green infrastructure is welcome. This policy could be strengthened by requiring development to retain and bolster existing hedgerows and trees wherever possible.

Policy A16 Goodwood Motor Circuit and Airfield and Policy A17 Development within the vicinity of Goodwood Motor Circuit and Airfield

This policy could be improved by recognising the significant amount of ancient woodland and non-ancient woodland to North of the area. We would encourage any development in the area to protect, enhance and expand the woodland in the area as part of delivering net gains.

Policy A21 Land east of Rolls Royce

This area contains areas of existing trees, hedgerow and woodland which are not currently mentioned by the policy. We would encourage any development to be sensitive to this and provide additional planting where possible.

Overarching comments

We would welcome the consideration of incorporating large and small pockets of multi-functional woodland as part of green infrastructure provision for development, particularly given the relatively low proportion of woodland found throughout the District, and the benefits this can have as 'stepping stones' between habitats as part of the Local Plan's welcome vision of strategic wildlife corridors.

We also encourage the Council to appraise the plan against the following advice to maximise the benefits from protection, enhancement and expansion of woodlands, trees and connectivity throughout the District:

Additional improvements to consider

- Tree/hedgerow removal is considered as a last resort but where it is justified, we advise that developments can aim to deliver no net deforestation to help encourage development that provides an overall environmental gain. Where trees are required to be removed, additional tree planting will be made to compensate for this loss and we would advise that additional planting should be made to help compensate for the loss of habitat in the time it takes for new trees to mature.
- Long term management and maintenance of planted trees and woodland creation to give them every chance to becoming established and where trees do fail, they are replaced
- A minimum standard for tree canopy cover for new developments (e.g. for large-scale developments) as it provides a targetable level of green infrastructure in relation to trees for the numerous ecosystem services they provide.
- Precautions should be incorporated into any woodland design and tree planting to ensure that habitat creation is established successfully and that potential impacts from deer are managed on site and in the surrounding area as appropriate. See here for further guidance that should be followed for managing impacts from deer as part of woodland creation and tree planting: <https://www.gov.uk/government/publications/woodland-creation-and-mitigating-the-impacts-of-deer/woodland-creation-and-mitigating-the-impacts-of-deer> Some good practice advice is also provided in Appendix 1 of this letter.
- We advise that any tree planting should meet the following:
 - o Trees should be healthy and good practice biosecurity should be followed to prevent the risk of spreading pests and disease, in line with Government advice: <https://www.gov.uk/government/collections/tree-pests-and-diseases>. More information on the plant healthy can be found at: Welcome to Plant Healthy - Plant Healthy
 - o Created or restored habitat should be managed in perpetuity in line with a robust management plan that follows good practice to ensure assumed benefits of created habitats are delivered in practice (see Standing Advice referred to on page 1). We recommend meeting the UK Forestry Standard to demonstrate this.
- To help mitigate climate and support local economy would urge council to develop local plan policy that makes use of locally sourced timber. This has multiple benefits as it can help store carbon within development, reduce impact from transportation, reduce embodied carbon from alternative materials and support local economies and communities.
- Where developments incorporate District Heating, consider locally and sustainably sourced wood-fuels for the benefits this can have for renewable energy and towards a local, circular economy
- Use tree planting as part of nature based solutions for managing flood risk as well as other multi-functional benefits from green infrastructure as part of any development (e.g. Trees and woodlands provide £400 million of value in flood protection)
- We encourage the Council to refine their strategy to trees and woodlands using the recently launched 'Trees and Woodland Strategy Toolkit' available here: <https://treecouncil.org.uk/what-we-do/science-and-research/tree-strategies/> to design and deliver a local tree strategy to harness the long-term benefits that trees can bring to local communities. The local plan should be developed with tree/woodlands in mind as an integral part, alongside other supplementary strategies for the environment including biodiversity, green infrastructure, nature recovery and climate change.

Key guidance regarding trees, woodland and development

Ancient woodlands, ancient trees and veteran trees are irreplaceable habitats. Paragraph 180(c) of the NPPF sets out that development resulting in the loss or deterioration of irreplaceable habitats should be refused unless there are wholly exceptional reasons and a suitable compensation strategy exists. In considering the impacts of the development on Ancient Woodland, Ancient and Veteran trees, the planning authority should consider direct and indirect impacts resulting from both construction and operational phases.

Please refer to Natural England and Forestry Commission joint Standing Advice for Ancient Woodland and Ancient and Veteran Trees, updated in January 2022. The Standing Advice can be a material consideration for planning decisions, and contains advice and guidance on assessing the effects

of development, and how to avoid and mitigate impacts. It also includes an Assessment Guide which can help planners assess the impact of the proposed development on ancient woodland or ancient and veteran trees in line with the NPPF.

Existing trees should be retained wherever possible, and opportunities should be taken to incorporate trees into development. Trees and woodlands provide multiple benefits to society such as storing carbon, regulating temperatures, strengthening flood resilience and reducing noise and air pollution.[1] Paragraph 131 of the NPPF seeks to ensure new streets are tree lined, that opportunities should be taken to incorporate trees elsewhere in developments, and that existing trees are retained wherever possible. Appropriate measures should be in place to secure the long-term maintenance of newly planted trees. The Forestry Commission may be able to give further support in developing appropriate conditions in relation to woodland creation, management or mitigation.

Biodiversity Net Gain (BNG): Paragraph 174(d) of the NPPF sets out that planning (policies and) decisions should minimise impacts on and provide net gains for biodiversity. Paragraph 180(d) encourages development design to integrate opportunities to improve biodiversity, especially where this can secure net gains for biodiversity. A requirement for most development to deliver a minimum of 10% BNG is expected to become mandatory from November 2023. The planning authority should consider the wide range of benefits trees, hedgerows and woodlands provide as part of delivering good practice biodiversity net gain requirements. Losses of irreplaceable or very high distinctiveness habitat cannot adequately be accounted for through BNG.

Change suggested by respondent:

This policy could be improved by recognising the significant amount of ancient woodland and non-ancient woodland to North of the area.

Respondent: Mayday! Action Group (John Garrett) [7163]

Summary:

An Assessment of Motor Circuit and General Aviation Noise Criteria Evaluation for Future Development for Chichester District Council' concluded that, taking into account the complex combination of noise-generating activities taking place within the site, a 400m buffer between the site and any proposals for noise-sensitive development should be maintained.

Within the 400m buffer, a general presumption against noise-sensitive development should be maintained unless it can be clearly demonstrated that the development will achieve acceptable appropriate internal and external amenity standards with regard to noise and disturbance experienced, taking into account the particular characteristics of the noise emanating from the site.

Executive Summary

The Local Plan as written lacks ambition and vision, and will be detrimental to the landscape within which the district lies. It is a plan borne out of a need to produce a legal document which will satisfy the regulatory authorities. In terms of Urban Planning it fails "To meet the needs of the present without compromising the ability of future generations to meet their own needs" (NPPF).

The development that will consequentially arise from the deployment of such a made Local Plan is not sustainable. It will adversely affect the Character, Amenity and Safety of the built environment, throughout our district.

In particular, the Local Plan is inadequate for the needs of the people in the district both at present and in the future because –

1. It has been written in advance of the District having a properly formed and agreed Climate Emergency Action Plan. It is inconceivable that such a key document will not shape our Local Plan. It is this Action Plan that is needed first in order to provide the long-term strategic view as to how and what the District will look like in the future; this, in turn, will help form and shape the policies outlined in any prospective, Local Plan. The Plan as proposed is moribund, as a result of "cart before the horse" thinking.

2. The Local Plan as written does not adequately address how infrastructure, transport and services are going to be materially and strategically improved to meet the predicted growth and shift to a significantly ageing population. There is presently insufficient capacity to supply services and to have adequate people and environmentally friendly connectivity, as a direct result of decades of neglect towards investing in infrastructure and services to meet the needs of the District's population. We are led to believe that developers through increased levies in order to gain permission to build will fulfil this need, but all that this will result in is an uncoordinated, dysfunctional mess completely lacking in any future-proof master planning approach. We contend that this will do nothing for the quality of life of Chichester District residents and it will create a vacuum whereby few if indeed any can be held accountable or indeed found liable for shortcomings in the future.

3. The Local Plan as written does not state how it will go about addressing the need to create affordable homes. The District Council's record on this matter since the last made plan has been inadequate and now the creation of affordable homes has become urgent as political/economic/social factors drive an ever increasing rate of change within the District.

4. Flood risks assessments used in forming the Plan are out of date (last completed in 2018) and any decision to allocate sites is contrary to Environment Agency policy. Additionally, since March 2021 Natural England established a position in relationship to 'Hold the Line' vs. 'Managed Retreat' in environmentally sensitive areas, of which the Chichester Harbour AONB is a significant example. CDC have failed to set out an appropriate policy within the proposed Local Plan that addresses this requirement.

5. The A27 needs significant investment in order to yield significant benefits for those travelling through the East-West corridor; this is unfunded. Essential improvements to the A27 are key to the success of any Local Plan particularly as the city's ambitions are to expand significantly in the next two decades. But any ambitions will fall flat if the A27 is not improved before such plans are implemented. The A259 is an increasingly dangerous so-called 'resilient road' with a significant increase in accidents and fatalities in recent years. In 2011, the BBC named the road as the "most crash prone A road" in the UK. There is nothing in the Local Plan that addresses this issue. There is no capacity within the strategic road network serving our district to accommodate the increase in housing planned, and the Local Plan does not guarantee it.

6. There is insufficient wastewater treatment capacity in the District to support the current houses let alone more. The tankering of wastewater from recent developments that Southern Water has not been able to connect to their network and in recent months the required emergency use of tankers to pump out overflowing sewers within our City/District reflects the gross weakness of short-termism dominated thinking at its worst and is an indictment of how broken our water system is. The provision of wastewater treatment is absolutely critical and essential to the well-being of all our residents and the long-term safety of our built environment. The abdication by those in authority, whether that be nationally, regionally or locally, is causing serious

harm to the people to whom those in power owe a duty of care and their lack of urgency in dealing properly with this issue is seriously jeopardizing the environment in which we and all wildlife co-exist.

7. Settlement Boundaries should be left to the determination of Parish Councils to make and nobody else. The proposed policy outlined in the Local Plan to allow development on plots of land adjacent to existing settlement boundaries is ill-conceived and will lead to coalescence which is in contradiction of Policy NE3.

8. All the sites allocated in the Strategic Area Based Policies appear to be in the majority of cases Greenfield Sites. The plan makes little, if any reference to the development of Brownfield sites. In fact, there is not a Policy that relates to this source of land within the Local Plan as proposed. Whilst in the 2021 HELAA Report sites identified as being suitable for development in the District as being Brownfield sites were predicted to yield over 4000 new dwellings. Why would our Local Plan not seek to develop these sites ahead of Greenfield sites?

9. The Local Plan does not define the minimum size that a wildlife corridor should be in width. What does close proximity to a wildlife corridor mean? How can you have a policy (NE 4) that suggests you can have development within a wildlife corridor? These exceptions need to have clear measures and accountability for providing evidence of no adverse impact on the wildlife corridor where a development is proposed. Our view is quite clear. Wildlife and indeed nature in the UK is under serious and in the case of far too many species, potentially terminal threat. Natural England has suggested that a Wildlife Corridor should not be less than 100metres wide. The proposed Wildlife Corridors agreed to by CDC must be enlarged and fully protected from any development. This is essential and urgent for those Wildlife Corridors which allow wildlife to achieve essential connectivity between the Chichester Harbour AONB and the South Downs National Park.

10. Biodiversity Policy NE5 - This is an absolute nonsense. If biodiversity is going to be harmed there should be no ability to mitigate or for developers to be able to buy their way out of this situation. This mindset is exactly why we are seeing a significant decline in biodiversity in the District which should be a rich in biodiversity area and why the World Economic Forum Report (2023) cites the UK as one of the worst countries in the world for destroying its biodiversity.

11. In many cases as set out in the Policies the strategic requirements lack being SMART in nature – particularly the M Measurable. These need to be explicit and clear: “you get what you measure”.

12. 65% of the perimeter of the District of Chichester south of the SDNP is coastal in nature. The remainder being land-facing. Policy NE11 does not sufficiently address the impact of building property in close proximity to the area surrounding the harbour, something acknowledged by the Harbour Conservancy in a published report in 2018 reflecting upon how surrounding the harbour with housing was detrimental to its long-term health. And here we are 5 years on and all of the organizations that CDC are saying that they are working in collaboration with, to remedy the decline in the harbour’s condition, are failing to implement the actions necessary in a reasonable timescale. CDC are following when they should be actually taking the lead on the issue. Being followers rather than leaders makes it easy to abdicate responsibility. There must be full and transparent accountability.

13. The very significant space constraints for the plan area must be taken into account. The standard methodology need no longer apply where there are exceptional circumstances and we are certain that our District should be treated as a special case because of the developable land area is severely reduced by the South Downs National Park (SDNP) to the north and the unique marine AONB of Chichester Harbour to the south. A target of 535dpa is way too high. This number should be reduced to reflect the fact that only 30% of the area can be developed and much of that is rural/semi-rural land which provides essential connectivity for wildlife via a number of wildlife corridors running between the SDNP and the AONB. Excessive housebuilding will do irretrievable damage to the environment and lead to a significant deterioration in quality of life for all who reside within the East / West corridor.

14. Many of the sites identified in the Strategic & Area Based Policies could result in Grade 1 ^ 2 farmland being built upon. The UK is not self-sufficient in our food security. It is short-sighted to expect the world to return to what we have come to expect. Our good quality agricultural land should not all be covered with non-environmentally friendly designed homes.

Respondent: The Goodwood Estates Company Limited [7922]

Agent: HMPC Ltd (Mr Haydn Morris) [112]

Summary:

The changes proposed in this local plan review are welcomed in so far as they support the Estate's continued opposition to the development, but further changes are believed to be necessary in Chapter 10 to ensure policies safeguarding the airfield and circuit and local communities living around them are robust.

Full text:

Chapter 8 should make reference to the role of aviation in transportation. The NPPF (paragraph 106f) requires local planning policies to: "recognise the importance of maintaining a national network of general aviation airfields, and their need to adapt and change over time – taking into account their economic value in serving business, leisure, training and emergency service needs, and the Government's General Aviation Strategy." The plan does not make such references and is therefore not compliant with the NPPF and consequently is unsound.

Goodwood Aerodrome is a general aviation airfield.

Moreover, the plan should make provision for how aviation is likely to change in the future, with technological advances, not only in terms of being more accessible to the public for sport and recreation, but also the impact of STEM activities and their important role in future aviation and the advance of drone and similar technologies. Goodwood Airfield is closely and actively engaged with developers of such technology and this is likely to become an increasing sector of the Estate's business.

General aviation airfields, such as Goodwood, frequently have sufficient land available for new aviation-related facilities (unlike constrained commercial airfields) and provide a major infrastructure resource. Unfortunately, this benefit is often overlooked in planning policies, and many airfields are subjected to threats of redevelopment – for reasons of viability fuelled by a high demand for housing land- and increasing resistance to developments supporting aerodrome business (such as potential noise and disturbance to adjoining residential areas)

Local political reaction to activities at many general aviation airfields has led to the introduction of restrictive planning policies, many related to noise and disturbance and a fear of expansion. Goodwood airfield is no exception, but it has worked with the local community over many years to reach an operational position that provides a balance between continued operation and protection of local amenities. Unfortunately in recent years, particularly as a result of an ill-founded strategic development allocation in the previous local plan, that operational balance is coming under further strain and cannot be further adjusted.

A position is fast approaching where operations at the airfield and motor circuit could be compromised unacceptably by the encroachment of new development, in particular housing development. This was ably demonstrated by the speculative housing proposal north of Madgwick Lane to which both the Estate and planning authority objected for reason, amongst many others, potential noise disturbance, safety concerns and operational constraints which contributed to an unacceptable 'agent of change' situation.

The proposal was subject to public inquiry and a finely balanced decision was granted in favour of development by the inspector for reason of the benefits of new housing outweighing the potential harm to Goodwood operations, on grounds that the (unproven) mitigation offered by the developer will be both provided and be effective, and we suggest, a misunderstanding of the true impacts of existing operations.

The Estate will continue to oppose the development for sound planning reasons that the mitigation offered and based on inaccurate evidence, will be inadequate and ineffective in addressing the concerns raised by the Estate and planning authority.

Change suggested by respondent:

We suggest (in representations to site-specific policies in Chapter 10) further changes to the local plan which would reinforce the current, workable, arrangements, but also indicate where further developments around the airfield could result in further undue restrictions on operations to the detriment of Estate business and with its very serious consequences for the district economy.

Document Element: Policy A17 Development within the vicinity of Goodwood Motor Circuit and Airfield**Respondent:** The Goodwood Estates Company Limited [7922]**Agent:** HMPC Ltd (Mr Haydn Morris) [112]**Summary:**

Reference to the 400m buffer zone, is welcomed, but a more robust policy should be introduced.

The buffer is too simplistic and interpreted as supporting development proposed up to the 400m limit.

The buffer should respond more appropriately to facts on the ground, and to the existing safeguarding NPRs which exist.

Land immediately to the south of the airfield between it and the river should remain as open land, for aircraft safety and for community amenity and landscape benefits.

Full text:

Reference to the 400m buffer zone, and its inclusion in policy A17 is understood and welcomed, but we question if, as part of this local plan, a more robust area of control can be created. The 400m distance was a useful 'rule of thumb' generated in the absence of any other policy restricting sensitive or particularly harmful development in close proximity to the circuit and airfield, but it is appropriate to replace it with a more considered and robust policy parameter.

It is unfortunate that in drawing a limit on a plan, developers are interpreting the constraint as supporting development at any point beyond 400m from the site boundary. This is too simplistic and gave rise to the problems encountered with the proposed development north of Madgwick Lane, with development proposed up to the 400m limit because it was interpreted as being acceptable in policy terms. On the ground this was not the case with issues of noise and disturbance from overflying aircraft, and aircraft safety issues rendering development beyond the 400m in this location equally unacceptable.

The Estate would welcome the opportunity to discuss and agree with the planning authority a more robust buffer zone around the airfield and motor circuit, that responds more appropriately to facts on the ground, and to the existing safeguarding NPRs which exist.

Development, of a form other than housing, and not sensitive to noise from the circuit and aircraft movements could be developed closer to the site than 400m in some locations, while in others the 400m limit should be extended (following NPRs for example). Land immediately to the south of the airfield between it and the river should however remain as open land, both for aircraft safety considerations and for community amenity and landscape benefits.

Open land around the airfield that is most likely to be used in the case of aircraft emergency, should be included in the development exclusion zone and identified as open space and or land of landscape importance (the area identified as "Land removed from existing site allocation" on Map A9a fits such a category).

Change suggested by respondent:

The 400m buffer should be reconsidered and replaced with a more robust policy that offers a true reflection and response to noise and safety concerns.

Land likely to be used in cases of aircraft emergency should be kept open and free from development.

Executive Summary

The Local Plan as written lacks ambition and vision, and will be detrimental to the landscape within which the district lies. It is a plan borne out of a need to produce a legal document which will satisfy the regulatory authorities. In terms of Urban Planning it fails "To meet the needs of the present without compromising the ability of future generations to meet their own needs" (NPPF).

The development that will consequentially arise from the deployment of such a made Local Plan is not sustainable. It will adversely affect the Character, Amenity and Safety of the built environment, throughout our district.

In particular, the Local Plan is inadequate for the needs of the people in the district both at present and in the future because –

1. It has been written in advance of the District having a properly formed and agreed Climate Emergency Action Plan. It is inconceivable that such a key document will not shape our Local Plan. It is this Action Plan that is needed first in order to provide the long-term strategic view as to how and what the District will look like in the future; this, in turn, will help form and shape the policies outlined in any prospective, Local Plan. The Plan as proposed is moribund, as a result of "cart before the horse" thinking.
2. The Local Plan as written does not adequately address how infrastructure, transport and services are going to be materially and strategically improved to meet the predicted growth and shift to a significantly ageing population. There is presently insufficient capacity to supply services and to have adequate people and environmentally friendly connectivity, as a direct result of decades of neglect towards investing in infrastructure and services to meet the needs of the District's population. We are led to believe that developers through increased levies in order to gain permission to build will fulfil this need, but all that this will result in is an uncoordinated, dysfunctional mess completely lacking in any future-proof master planning approach. We contend that this will do nothing for the quality of life of Chichester District residents and it will create a vacuum whereby few if indeed any can be held accountable or indeed found liable for shortcomings in the future.
3. The Local Plan as written does not state how it will go about addressing the need to create affordable homes. The District Council's record on this matter since the last made plan has been inadequate and now the creation of affordable homes has become urgent as political/economic/social factors drive an ever increasing rate of change within the District.
4. Flood risks assessments used in forming the Plan are out of date (last completed in 2018) and any decision to allocate sites is contrary to Environment Agency policy. Additionally, since March 2021 Natural England established a position in relationship to 'Hold the Line' vs. 'Managed Retreat' in environmentally sensitive areas, of which the Chichester Harbour AONB is a significant example. CDC have failed to set out an appropriate policy within the proposed Local Plan that addresses this requirement.
5. The A27 needs significant investment in order to yield significant benefits for those travelling through the East-West corridor; this is unfunded. Essential improvements to the A27 are key to the success of any Local Plan particularly as the city's ambitions are to expand significantly in the next two decades. But any ambitions will fall flat if the A27 is not improved before such plans are implemented. The A259 is an increasingly dangerous so-called 'resilient road' with a significant increase in accidents and fatalities in recent years. In 2011, the BBC named the road as the "most crash prone A road" in the UK. There is nothing in the Local Plan that addresses this issue. There is no capacity within the strategic road network serving our district to accommodate the increase in housing planned, and the Local Plan does not guarantee it.
6. There is insufficient wastewater treatment capacity in the District to support the current houses let alone more. The tankering of wastewater from recent developments that Southern Water has not been able to connect to their network and in recent months the required emergency use of tankers to pump out overflowing sewers within our City/District reflects the gross weakness of short-termism dominated thinking at its worst and is an indictment of how broken our water system is. The provision of wastewater treatment is absolutely critical and essential to the well-being of all our residents and the long-term safety of our built environment. The abdication by those in authority, whether that be nationally, regionally or locally, is causing serious harm to the people to whom those in power owe a duty of care and their lack of urgency in dealing properly with this issue is seriously jeopardizing the

environment in which we and all wildlife co-exist.

7. Settlement Boundaries should be left to the determination of Parish Councils to make and nobody else. The proposed policy outlined in the Local Plan to allow development on plots of land adjacent to existing settlement boundaries is ill-conceived and will lead to coalescence which is in contradiction of Policy NE3.

8. All the sites allocated in the Strategic Area Based Policies appear to be in the majority of cases Greenfield Sites. The plan makes little, if any reference to the development of Brownfield sites. In fact, there is not a Policy that relates to this source of land within the Local Plan as proposed. Whilst in the 2021 HELAA Report sites identified as being suitable for development in the District as being Brownfield sites were predicted to yield over 4000 new dwellings. Why would our Local Plan not seek to develop these sites ahead of Greenfield sites?

9. The Local Plan does not define the minimum size that a wildlife corridor should be in width. What does close proximity to a wildlife corridor mean? How can you have a policy (NE 4) that suggests you can have development within a wildlife corridor? These exceptions need to have clear measures and accountability for providing evidence of no adverse impact on the wildlife corridor where a development is proposed. Our view is quite clear. Wildlife and indeed nature in the UK is under serious and in the case of far too many species, potentially terminal threat. Natural England has suggested that a Wildlife Corridor should not be less than 100metres wide. The proposed Wildlife Corridors agreed to by CDC must be enlarged and fully protected from any development. This is essential and urgent for those Wildlife Corridors which allow wildlife to achieve essential connectivity between the Chichester Harbour AONB and the South Downs National Park.

10. Biodiversity Policy NE5 - This is an absolute nonsense. If biodiversity is going to be harmed there should be no ability to mitigate or for developers to be able to buy their way out of this situation. This mindset is exactly why we are seeing a significant decline in biodiversity in the District which should be a rich in biodiversity area and why the World Economic Forum Report (2023) cites the UK as one of the worst countries in the world for destroying its biodiversity.

11. In many cases as set out in the Policies the strategic requirements lack being SMART in nature – particularly the M Measurable. These need to be explicit and clear: "you get what you measure".

12. 65% of the perimeter of the District of Chichester south of the SDNP is coastal in nature. The remainder being land-facing. Policy NE11 does not sufficiently address the impact of building property in close proximity to the area surrounding the harbour, something acknowledged by the Harbour Conservancy in a published report in 2018 reflecting upon how surrounding the harbour with housing was detrimental to its long-term health. And here we are 5 years on and all of the organizations that CDC are saying that they are working in collaboration with, to remedy the decline in the harbour's condition, are failing to implement the actions necessary in a reasonable timescale. CDC are following when they should be actually taking the lead on the issue. Being followers rather than leaders makes it easy to abdicate responsibility. There must be full and transparent accountability.

13. The very significant space constraints for the plan area must be taken into account. The standard methodology need no longer apply where there are exceptional circumstances and we are certain that our District should be treated as a special case because of the developable land area is severely reduced by the South Downs National Park (SDNP) to the north and the unique marine AONB of Chichester Harbour to the south. A target of 535dpa is way too high. This number should be reduced to reflect the fact that only 30% of the area can be developed and much of that is rural/semi-rural land which provides essential connectivity for wildlife via a number of wildlife corridors running between the SDNP and the AONB. Excessive housebuilding will do irretrievable damage to the environment and lead to a significant deterioration in quality of life for all who reside within the East / West corridor.

14. Many of the sites identified in the Strategic & Area Based Policies could result in Grade 1 ^ 2 farmland being built upon. The UK is not self-sufficient in our food security. It is short-sighted to expect the world to return to what we have come to expect. Our good quality agricultural land should not all be covered with non-environmentally friendly designed homes.

Document Element: Policy A19 Land at Chichester Business Park, Tangmere**Respondent:** National Highways (Mr Marius Pieters, Spatial Planning Manager) [8127]**Summary:**

[National Highways letter dated 24/07/23 confirmed representation should be categorised as Matter to be addressed]. Concerned that proposed Class B8 (Storage and Distribution) floorspace provision could generate significantly more 24/7 traffic than a typical commercial warehouse.

Trip rates and vehicle trip generation should take account of worst-case trip generation scenarios to ensure 'last mile' impacts and related mitigation measures are fully understood.

Request, in these circumstances, trip rates are submitted to National Highways for consideration and that once agreed, these are fed into the transport evidence base.

Full text:

We have reviewed the publicly available Local Plan documents and provided comments in the attached letter, in relation to the transport implications of the plan for the safety and operation of the SRN.

Our comments include issues to resolve, comments, requests for further information and recommendations. A brief summary of our main comments are:

- the reliance on the delivery of the A27 Chichester bypass improvements project.
- the requirements for new, additional, and adapted processes and assessments, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments.
- collaborative working between agencies in combination with a robust monitor and manage policy.

We hope our comments assist.

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders. We look forward to continuing to participate in future consultations and discussions. Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Background

National Highways has been appointed by the Secretary of State for Transport as strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the strategic road network (SRN).

National Highways is responsible for operating, maintaining, and improving the Strategic Road Network (SRN) i.e., the Trunk Road and Motorway Network in England, as laid down in Department for Transport (DfT) Circular 01/2022 (Strategic Road Network and the delivery of sustainable development).

The SRN is a critical national asset and as such we work to ensure that it operates and is managed in the public interest, both in respect of current activities and needs as well as in providing effective stewardship of its long-term operation and integrity.

Our responses to Local Plan consultations are guided by relevant policy and guidance including the National Planning Policy Framework (2021) (NPPF):

- Transport issues should be considered from the earliest stages of plan-making and development proposals so that the potential impact of development on transport networks can be addressed (para 104).
- The planning system should actively manage patterns of growth such that significant development is focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. (para 105).
- Planning policies should be prepared with the active involvement of highways authorities and other transport infrastructure providers so that strategies and investments for supporting sustainable transport and development patterns are aligned. (para 106).
- In terms of identifying the necessity of transport infrastructure, NPPF confirms that development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe. (para 111).
- Planning policies and decisions should support development that makes efficient use of land, taking into account the availability and capacity of infrastructure and services – both existing and proposed – as well as their potential for further improvement and the scope to promote sustainable travel modes that limit future car use. (para 124).

In relation to the tests of soundness set out at paragraph 35 of the NPPF, in the context of transport, these are interpreted as meaning:

- a) Positively prepared - has the transport strategy been prepared with the active involvement of the highway authorities, other transport infrastructure providers and operators and neighbouring councils?

- b) Justified – Is the transport strategy based on a robust evidence base prepared with the agreement in partnership, or with the support of the highway authorities?
- c) Effective – Does the transport strategy and policy satisfy the transport needs of the plan and is it deliverable at a pace which provides for and accommodates the proposed progress and implementation of the plan?
- d) Consistent with national policy – Does the transport strategy support the economic, social, and environmental objectives of the Plan and the NPPF/NPPG?

We will be concerned with proposals that have the potential to impact on the safe and efficient operation of the SRN; in this case, the A27 trunk road (Chichester Bypass and its junctions) which is the main access route in the Chichester area. We have particular interest in any allocation, policy or proposals which could have implications for the A27 and the wider SRN network. We are interested as to whether there would be any adverse road safety or operational implications for the SRN. The latter would include a material increase in queueing or delay or reduction in journey time reliability during the construction or operation of the development set out in the plan.

National Highways is a key delivery partner for sustainable development promoted through the plan-led system, and as a statutory consultee we have a duty to cooperate with local authorities to support the preparation and implementation of development plan documents.

In accordance with national planning and transport policy and our operating licence, we are entirely neutral on the principle of development as it is for the local planning authority to determine whether development should be allocated or permitted; albeit it must comply with national policy on locating development in locations that are or can be made sustainable. Therefore, while always seeking early and fulsome engagement with local plans and/or developers, we will simply be assessing the transport and related implications of plans or proposals and agreeing any necessary transport improvements and relevant development management policy.

In progressing Local Plans, we will seek to agree the following:

- Assessment tools and methodology
- Baseline Assessment i.e., to demonstrate that the assessment tool accurately reflects current transport conditions
- Comparator case assessment i.e., to forecast the transport conditions that would occur in the absence of the plan
- Forecast modelling i.e., to forecast the transport conditions that would arise with the plan in place, this will include an assessment at the end of the Plan period; and, if required, at full build out if that occurs after the end of the Plan period
- Outputs and outcomes of modelling, demonstrating, as appropriate, what transport infrastructure is necessary to support the plan o It should be noted that a suite of transport modelling tools may be required. This includes strategic modelling covering an area at least one major junction beyond the district boundary, localised network modelling where several links/junctions are close together and/or individual junction modelling
 - o A DMRB (Design Manual for Roads and Bridges) compliancy assessment may also be required for certain highway features, such as Merge/Diverge assessment at Grade separated junctions, link capacity assessments, and others.
- The design of any necessary transport infrastructure, to an extent suitable for establishing deliverability during the plan period at the time that it becomes necessary for the purpose of ensuring that unacceptable road safety impacts or severe operational impacts do not arise as a result of development. This may be to at least General Arrangement design stage or preliminary design stage. Whichever degree of detail is agreed, the products must be in full compliance with the DMRB.
- Industry standard transport intervention costings.
- The delivery/funding mechanisms for necessary transport interventions. It should not be assumed that National Highways will have any responsibility to identify or deliver necessary transport interventions.
- If considered appropriate, a “Monitor & Manage” (M&M) framework, aimed at managing the pace of development in line with the pace of funding and delivery of necessary highway interventions in a manner which responds to the realworld impacts of development may be agreed for inclusion in the plan subject to the adequacy of risk control measures included therein. This can include the move from a ‘predict & provide’ style of delivery to ‘a vision & validate’ style. o Any M&M framework must be based on a “worst case scenario” whereby necessary mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. It must be translated into development management plan policy and policy relating to development allocations.

Further detail on the above can be provided by National Highways.

While ideally all the above should be agreed prior to the Submission of the Local Plan for examination, we recognise that this is not always possible. However, all parties should work towards all matters being agreed and reflected in a Statement of Common Ground (SoCG) by the start of the Local Plan Examination at the latest. Ideally the SoCG between the Council and National Highways would be prepared well in advance of plan submission in order to guide resource input and to track progress towards final agreement on all relevant matters starting from the earliest plan iterations until the final version is agreed.

It is acknowledged that Government policy places much emphasis on housing delivery as a means for ensuring economic growth and addressing the current national shortage of housing. The NPPF is very clear that: “Strategic policy-making authorities should establish a housing requirement figure for their whole area, which shows the extent to which their identified housing need (and any needs that cannot be met within neighbouring areas) can be met over the plan period.”

However, new DfT C1/22 and the NPPF are equally clear that any development, including housing delivery, must be tempered by the requirement to ensure that the associated transport demand can be accommodated without unacceptable impacts on the safety of the SRN or severe impacts on the operation of the SRN including reliability and congestion. Therefore, as necessary and appropriate, any plan and/or development must be accompanied by suitable mitigation in the right places at the right time, that is to the required design standards and is deliverable in terms of land availability, constructability and funding.

We would also draw your attention to the then Highways England document ‘The Strategic Road Network, Planning for the Future: A guide to working with National Highways on planning matters’ (September 2015). This document sets out how National Highways intends to work with local planning authorities and developers to support the preparation of sound documents which enable the delivery of sustainable development. https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/461023/N150227_-_Highways_England_Planning_Document_FINAL-lo.pdf

Responses to Local Plan consultations are also guided by National Planning Policy Framework (NPPF) revised on 20 July 2021 which sets out the government’s planning policies for England and how these are expected to be applied.

Updated Circular (01/2022)

It should be noted that since the start of the Local Plan consultation process, on the 23 December 2022, the Department for Transport released a new circular on the ‘Strategic road network and the delivery of sustainable development’ (Circular 01/2022), which replaces all of the policies in Circular 02/2013 of the same name. These representations take account of the new circular and the requirements in terms of the Local Plan evidence base and process.

We request that the Local Plan is prepared in line with all aspects of the new circular. Particularly, the principles of sustainable development (paragraphs 11 to 17), new connections and capacity enhancements (paragraphs 18 to 25), and engagement with plan-making (paragraphs 26 to 38).

Regulation 18 submission

In our Regulation 18 submission we noted several matters including:

- The need to mitigate the adverse impacts of strategic development traffic to the A27 Chichester Bypass and its junctions at Portfield Roundabout, Bognor Road Roundabout, Whyke Roundabout, Stockbridge Roundabout and Fishbourne Roundabout and Oving junction.
- The need to identify a mechanism to calculate contributions towards the delivery of the previously agreed Local Plan A27 improvements
- The need to confirm the number of dwellings needed within the plan period
- The need to establish National Highways acceptance of the traffic model reference and future case scenarios
- The need to confirm costs, viability, and funding associated with mitigating the safety and congestion impacts of the development included within the plan.

Local Plan context

This Local Plan (Chichester Local Plan 2021 – 2039), prepared by the Local Planning Authority (LPA) Chichester District Council, sets out the vision for future development in the district and will be used to help decide on planning applications and other planning related decisions including shaping infrastructure investments.

The draft sets out how the district should be developed over the next 18-years to 2039 including for the full Plan period (1 April 2021 to 31 March 2039) the total supply of

- 10,359 dwellings

- 114,652 net additional sqm new floorspace

Minus the completions this is equivalent to around 530 dwellings and 6,150 sqm of floorspace a year.

National Highways Representations

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders.

We have undertaken a review of the Chichester Local Plan 2021-2039 proposed submission version and accompanying evidence documents, our comments are set out in the tables below (following pages). [see table within attachment]

Summary

We have reviewed the publicly available Local Plan documents and provided comments above in relation to the transport implications of the plan for the safety and operation of the SRN. We understand that other technical information is available, but this was not presented as part of this consultation. Chichester, and the A27, are already heavily congested, infrastructure in the existing Local Plan remains undelivered and the growth set out in the new Plan will further increase travel demand.

As presented, satisfying the transport needs of the plan is clearly reliant on the delivery of the A27 Chichester bypass improvements project. The A27 Chichester bypass improvements project is one of 32 pipeline schemes being considered for possible inclusion in National Highways third Road Investment Strategy (RIS3) covering 1 April 2025 to 31 March 2030.

On 9 March 2023 the UK Transport Secretary ensured record funding would be invested in the country's transport network, sustainably driving growth across the country while managing the pressures of inflation. The announcement cited the A27 Arundel Bypass as being deferred from RIS2 to RIS 3 (covering 2025-2030). The transport secretary also identified a number of challenges to the delivery of the road investment strategy and cited the benefit of allowing extra time to ensure schemes are better planned and efficient schemes can be deployed more effectively.

At present, there is no commitment by DfT to carry out the A27 Chichester bypass improvements project. Until the A27 Chichester bypass improvements project is published in the RIS3, consented and a decision to invest is made it cannot be assumed to be a committed project.

We note that the Plan does not address any uncertainty of delivery of the A27 Chichester bypass improvements project and we strongly recommend that there is either no reliance placed on RIS3 to realise capacity for growth in the Plan or that contingency measures are included to cover the eventuality that RIS3 funding is not forthcoming within the plan period. It is not clear that the potential impact of development on transport networks can be addressed in the absence of the A27 Chichester bypass improvements project.

Achieving net zero, reducing emissions reduction, acting on climate, and supporting thousands of new homes and new employment developments will be problematic with existing processes. New, additional, and adapted processes and assessments will likely be required, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments. We acknowledge that change is complex, expensive, and time-consuming, especially for smaller district level Councils. But the hard work will deliver benefits for the Council and residents in the longer-term.

National Highways seeks to continue working with the Council and WSCC to progress coordinated and deliverable packages of interim mitigation measures and alternative transport solutions while a long-term strategic solution is considered by government. This must however be in combination with a robust monitor and manage policy that appropriately manages the risk of unacceptable road impacts resulting from new housing and other development over the Plan period.

We have been in discussion with Chichester District Council regarding their proposed Monitor and Manage Strategy. At present, we do not consider the current strategy to be robust and we seek further information and detail especially on who, when and when monitoring and management will be undertaken. Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas. Any M&M framework must be based on a "worst case scenario" whereby necessary transport mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. The M&M framework must set out that the alternative to mitigation not being delivered is that development does not proceed where that development would give rise to unacceptable road safety risk or severe cumulative impacts on the road network in the absence of that mitigation. The M&M framework must be translated into development management plan policy and policy relating to development allocations.

As we have reiterated throughout our comments, we welcome the opportunity to work with you to address these outstanding matters and we will continue to liaise over submitted Transport Assessment, Travel Plan policy and Monitor and Manage Policy to help to work towards a viable plan.

We hope our comments assist.

We look forward to continuing to participate in future consultations and discussions. Please do continue to consult us as the Plan progresses so that we can remain aware of, and comment as required on, its contents.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Document Element: Policy A19 Land at Chichester Business Park, Tangmere**Respondent:** Sussex Wildlife Trust (Laura Brook) [7654]**Summary:**

There is no information to support the suitability of this location for development in relation to impacts on biodiversity. We note that this policy is short in nature and does not give any detail of requirements that would be sought if development proceeded in this location. Just to the north of the allocation boundary, our mapping shows us that there is a field with a water body and considerable wooded edge habitat. Therefore, we suggest that CDC considers if the policy needs detail included that makes it consistent with policy relating to impacts on biodiversity 174 NPPF 2021

Document Element: Policy A20 Land South of Bognor Road**Respondent:** Drayton Investments Limited [8111]**Agent:** Drayton Investments Limited (Mr Ben Christian, Associate Town Planner) [8113]**Summary:**

Plan unsound in respect of employment land provision:

- Existing permissions unlikely to be forthcoming.
- Allocations carried over not delivered since allocated in DPD Site Allocation 2019 or previous Local Plan 2015.
- Policy A20 - significant site constraints including A27 works.

Provision should be achieved through allocation of more, smaller, sites improving chances of delivery/meet immediate market demand (HEDNA [April 2022] and Flude Market Report [July 2022] - specific need for starter units highlighted). Land North of Drayton Waterside A259 Eastbound Merston Oving (22/02202/FUL) could meet demand for employment floorspace, provide starter units and not result in harmful impact to countryside which Policy A20 would create, due to scale.

Full text:

These representations are specifically centred around Chapter 7: Employment and Economy – ‘Meeting Business and Employment Needs’ with particular focus on Policy E1, Map 10.10 and reliance on Chapter 10 Policy A20 (Land to the South of Bognor Road).

These representations are made in the light of a live planning application (22/02202/FUL) for Land North Of Drayton Waterside. The proposed development consists of the erection of employment space [flexible Class B2 (general industry), B8 (storage / distribution), Trade Counter, E(d) (indoor sport / recreation) and Class E(g) (office, research and development, light industry) uses], with associated parking and landscaping. The employment space is provided over 33 units totalling 5,706 sq. m.

These representations will also look in detail at the Countryside policy and compare the proposed single new site (Land to the South of Bognor Road) with a site which is currently subject to a pending planning application (22/02202/FUL) for land which is geographically comparable with the proposed single site only without the implementation issues listed in the proposed Local Plan, as well as being deliverable, achievable and focused on the market requirements for smaller units.

These representations bring into question the ‘tests of soundness’. In particular, the question as to whether it is ‘sound’ on the basis of being ‘positively prepared’, ‘justified’ and ‘effective’ in respect to employment land provision.

These representations seek to highlight that Chapter 7 has not been positively prepared, in so far as it does not provide [1.] “a strategy which, as a minimum, seeks to meet the area’s objectively assessed needs” see the details set out in the accompanying Flude Property Consultants Report together with the details set out below.

It is also considered that Chapter 7 is not justified as the employment strategy is [2.] is inappropriate as it relies on a single new site, with multiple issues some of which are in conflict with other parts of the local plan, plus the site does not appear to have been included in the previous Local Plan consultations.

Chapter 7 is also not justified with respect to its provisions do not [3.] take into account reasonable alternatives. And that the provision for a single site

not previously seen in any Regulation 18 consultation, is not [4.] based on proportionate evidence.

With respect to whether Chapter 7 is effective is questionable in terms of soundness given that the proposed allocation highlights a number of issues with the site set out in more detail below.

It is considered on the basis of the other factors highlighted in these representations and the accompanying Flude Report that the proposed employment land provision is not 'Consistent with national policy' as the proposed provision does not enable the delivery of sustainable development. It is considered that the proposed plans are contrary to the NPPF paragraph 16a, 16b, 16c, 16d and paragraph 20a.

With respect of general employment allocations and provisions in Chichester there are a number of areas of concern raised below and in the accompanying Flude Property Consultants Report which looks in detail at the Chichester property market.

It is also relevant to note that the Flude Report (dated July 2022) not only assesses the supply and demand in the local market for employment land, it objectively assesses the most recent evidence set out by the Local Planning Authority within the April 2022 Chichester Housing and Economic Development Needs Assessment (HEDNA).

Both the HEDNA and Flude Report independently advise that there is a lack of suitable employment space supply in Chichester, particularly for starter units between 750 and 2000 sq. ft.

The Policy E1 table sets out a number of floorspace calculations. None of which are identified by their Use Class.

Land West of Chichester

This site is a reallocation of the current Local Plan Policy 15. The new policy is Policy A6. The original allocation was adopted in 2015 and this therefore raises concerns in respect of deliverability of the proposed employment floorspace.

Notwithstanding the concerns around deliverability, the uses identified in the 'submission local plan' Policy A6 states: "6 hectares of employment land (suitable for E(g)(i)/(ii) Business uses)" and therefore none of the suggested 22,000m² allocation equates to light industrial, general industrial or storage and distribution (i.e. it does not include E(g)(iii), B2 or B8) and therefore does not meet any need for industrial or storage and distribution.

Kingsham Road - DPD Allocation

This site the current DPD allocation (Policy CC5). The allocation was adopted in 2019 and this therefore raises concerns in respect of deliverability of the proposed employment floorspace.

Kingsham Road is a DPD allocation for 7,200m² is for office use, and therefore does not meet any need for industrial or storage and distribution.

Land South of Bognor Road

The Land South of Bognor Road, the single proposed new allocation, not previously set out in the previous Local Plan consultations is looked at in greater detail in the following section of these representations.

Planning Permissions to Date

Chichester Council Planning Policy team have kindly provided a copy of the employment planning permissions to date which make up the 53,655 figure within the employment floorspace Policy E1. From a review of these sites it is apparent that a large number are for specific end users (e.g. Rolls Royce) or for change of use and not for the open market which will not meet the employment floorspace demand locally, particularly for starter units for SME's.

Summary

In summary, Policy E1 is heavily reliant on adding up floor spaces which either may not occur or are not for an employment use which meets the needs for industrial use or storage and distribution use needs.

There are several fundamental issues with the proposed site allocation known as Land to South of Bognor Road (Policy A20), these include:

- The site is new to the Local Plan production process in respect of entering in at Regulation 19 and has therefore not been through any of the previous rounds of consultation.
- The land is Grade 1 agricultural land which is (a) in active use, (b) forms part of wider farmland which is proposed to be separated from the farm buildings therefore potentially limiting the effectiveness of the remainder of the farmland, (c) it conflicts with other parts of the local plan which promote protection of the best agricultural land and food production. (details below)
- There are several site constraints to delivery to the allocation (details below).
- The Policy also seeks to provide plots for Gypsy and Travelling Showpeople the allocations do not require to be part of the same site however they have been placed under the same site policy which implies that the provision for both types of use are in short supply and that the way in which the Local Plan has been produced seeks to address the Gypsy and Traveller sites shortfall on the same allocation as part of the solitary site for employment.
- The size of the site in terms with respect to Natural England's Guide to assessing development proposals on agricultural land (2021).

The Land South of Bognor Road site is both grade 1 agricultural land (the best value) and in active food production. Development on this site would raise conflict with other Local Plan approaches and policies as follows.

The proposed Local Plan at Paragraph 4.8 states that: The council will seek to protect the best and most versatile agricultural land from large scale, inappropriate or unsustainable non-agricultural development proposals that are not in accordance with the Development Plan. For proposals not in accordance with the Development Plan, that will result in the loss or likely cumulative loss of 20 hectares or more of best and most versatile agricultural land, the council will consult with Natural England and have regard to "Natural England's Guide to assessing development proposals on agricultural land (2021)" and any subsequent guidance.

It is noteworthy to mention that the site is 19.5ha and, as with neighbouring land, is owned by West Sussex County Council (WSCC). The outline of the site allocation is odd and appears to sever the remainder of the WSCC land to the south from the WSCC owned land. This both impacts the opportunity to farm the remaining land and raises the question of whether there is an approach to avoid Natural England's 20ha threshold and therefore is the current site area a salami slice of an extended future land promotion.

Land south of Bognor Road - Policy A20 – Site Constraints impacting Delivery

Flood Risk

Policy A20 supporting text paragraph 10.87 outlines that parts of the site are at risk of surface and ground water flooding which would need careful management.

Landscape Impact

The large scale of the site will create a landscape impact that could be considered harmful to the current landscape character and separation between the main conurbation of Chichester and the built form around the Bognor Road/Drayton Lane roundabout. This is further discussed in the Countryside policy assessment below.

Highways

To facilitate development of Policy A20 the supporting text paragraph 10.87 identifies the need for realignment of Vinnetrov Road and works to the Bognor Road roundabout as part of a package of A27 improvements. It is understood that Highways England have pulled funding for these

improvements and that they are to be delivered through a tariff on strategic sites. Therefore, the delivery of this site is reliant on the delivery of other strategic sites and raises concerns around timescales and deliverability.

A planning application (22/02202/FUL) for the construction of business park with associated parking and landscaping is currently pending determination for land north of Drayton Waterside A259 Eastbound Merston Oving. The application is pending further highway research but is supported by no objections from all other consultees including support from the economic development officer and the Oving Parish Council.

The Economic Development Officer comment on the Planning Application is as follows:

'The application site sits directly adjacent to a current business site and will provide units of the size and use class type that are highly sought after in the district. B2 and B8 uses are especially sought after and the amount of available space in this area has dropped from 316,000 sqft in 2017 to 97,500 sqft in 2022 (Source: SHW Industrial Focus 2022) which is a drop of almost 70% in five years.'

Both the HEDNA (April 2022) and Flude Report (July 2022) independently advise that there is a lack of suitable employment space supply in Chichester, particularly for starter units between 750 and 2000 sqft. The proposed development at Drayton Waterside provides this type of employment space and given the current planning application status could provide this floorspace immediately.

In the Housing and Employment Land Availability Assessment (HELAA) 2021, Drayton Waterside and the proposed allocation, Land to the South of Bognor Road, are both considered 'developable' but it is noteworthy to mention that Drayton Waterside (HELAA ID HOV00011) is considered to be able to come forward sooner than the land South of Bognor Road (HELAA ID HNM0017a).

Development in the Countryside Policy (Policy NE10)

Following review of the Drayton Waterside site above a key consideration is its location within the countryside – draft Local Plan Policy NE10. These representations do not directly object to this policy or its wording but some text is included to comment on how the Drayton Waterside site is better aligned with the countryside policy than the proposed land south of Bognor Road allocation (Policy A20).

The first consideration is paragraph 4.51 within the supporting text to Policy NE10 which outlines the role and value of the countryside and why it should be considered for protection subject to a planning balance. These points of consideration are as follows:

1. The countryside is important for food production.

- The land south of Bognor Road is currently farmed and is large enough to support food production. The land south of Bognor Road is also Grade 1 agricultural land.

- The Drayton Waterside site however is too small to support viable food production and is enclosed by uses which are not within agricultural use and as such could not form part of an adjacent agricultural use unlike the Policy A20 site.

2. Countryside is important for landscape character.

- Both sites are not located in either the South Downs National Park or Areas of Outstanding Natural Beauty which cover a large part of the Chichester district.

- The Drayton Waterside site sits adjacent to existing built form currently used for employment use and is partly a brownfield site. The site is also smaller than the Bognor Road South and whilst providing 5,706 sq m compared to the 28,000 sq m provided by the land south of Bognor Road, it should be the Council's priority to look for delivering employment on multiple smaller sites which combined have a lesser landscape impact than that of a single large site.

3. Countryside is important for recreation:

- This role for countryside in respect of both sites is not necessarily relevant but it is noteworthy to mention that the Drayton Waterside site is private land and therefore not open to the public.

4. Countryside is important for biodiversity.

- Whilst the policy requirement for the delivery of the land south of Bognor Road would include a biodiversity enhancement this is yet to be evidenced as no application has been submitted for this site.

- The Drayton Waterside site, by contrast, has a live planning application and a Biodiversity Net Gains Assessment has been undertaken, and demonstrates that proposed development would result in calculated net gain of +12.73% Habitat Units and net gain of +13.45% Hedgerow Units. The Drayton Waterside site therefore demonstrates a substantial increase in biodiversity.

5. Countryside is important for stopping an urbanizing impact.

- The large scale of the land south of Bognor Road would create a noticeable urbanizing impact and whilst it is closer to the main conurbation of Chichester it would remove the separation between the current built form around the roundabout with Drayton Lane and Bognor Road whereas the Drayton Waterside site would neatly fit in within that existing built form and not diminish the gap between Chichester and this existing built form.

The wording of Policy NE10 outlines that sustainable development in the countryside would be permitted if the following considerations were achieved:

- There are sustainable transport links.

- The scale and design is appropriate to the location and not harmful to the rural setting.

- The proposed development preserves and enhances key countryside landscape features and does not impact any designations (Areas of Outstanding Natural Beauty or the South Downs National Park).

- The proposed development relates to an existing group of buildings.

- The proposed development does not prejudice countryside operations e.g., farming.

The Drayton Waterside site is considered to align with the requirements in this policy by:

- having strong sustainable transport links along the Bognor Road, to Chichester, including cycle routes and bus stops.

- The proposed development is of a scale where it would not harm the rural setting due to its relationship with an existing building group and being a relatively small site particularly when compared to the land south of Bognor Road.

- The proposed development is not considered to impact any designations or key features within the current countryside make up in this location and would not impact the current farming operations in the locality.

SUMMARY

The Chichester Draft Local Plan is considered to be unsound in the respect of employment land provision as it is heavily reliant on the sites which have strong valid delivery concerns. This includes:

- Existing permissions that are not likely to be forthcoming.

- Allocations carried over from previous Local Plan documents which have not been delivered since they were allocated in the Development Plan Document Site Allocation in 2019 or worse the previous Local Plan in 2015.

- One new large strategic site allocation (Land South of Bognor Road – Policy A20) that has significant site constraints including works to the A27 where funding has recently been withdrawn by National Highways / Secretary of State for Transport.

Employment land provision should be achieved through the allocation of more, smaller, sites to improve the chances of delivery and to meet market demand which is immediate (as evidenced by the Housing and Economic Development Needs Assessment [April 2022] and the accompanying Flude Market Report [July 2022]).

The market demand set out by the Local Plan evidence base and the Flude Market Report highlights that, whilst there is an employment floorspace need generally, there is a specific need for starter units between 750 and 2000 sqft.

Application reference 22/02202/FUL for the Construction of Business Park with associated parking and landscaping at Land North Of Drayton Waterside A259 Eastbound Merston Oving is considered to be a perfect example of a site that could meet the current market demand for employment floorspace, providing starter units, and not result in a harmful impact to the countryside which Land to the South of Bognor Road (Policy allocation A20)

would create due to the scale of the strategic allocation.

Drayton Investments Limited strongly implore Chichester Planning Policy team to reconsidered the proposed Local Plan employment floorspace provision and allocate more, smaller, sites which, such as Land North of Drayton Waterside, can achieve immediate delivery of employment market floorspace demand.

Change suggested by respondent:

Employment land provision should be achieved through the allocation of more, smaller, sites to improve the chances of delivery and to meet market demand which is immediate (as evidenced by the Housing and Economic Development Needs Assessment [April 2022] and the accompanying Flude Market Report [July 2022]).

Document Element: Policy A20 Land South of Bognor Road

Respondent: National Highways (Mr Marius Pieters, Spatial Planning Manager) [8127]

Summary:

[National Highways letter dated 24/07/23 confirmed representation should be categorised as Comment - Seeking clarity]. The planning of this site is dependent on considering a number of site-specific issues including the need for realignment of Vinnetrow Road and works to Bognor Round roundabout as part of a package of A27 improvements. The A259 Bognor Road/ Vinnetrow Road Link is safeguarded (as shown in the Transport Study 2023) to ensure that the A27 improvements can be delivered, unless it can be demonstrated that they are no longer required.

We seek to understand on what happens if this is not delivered or can't be funded.

Full text:

We have reviewed the publicly available Local Plan documents and provided comments in the attached letter, in relation to the transport implications of the plan for the safety and operation of the SRN.

Our comments include issues to resolve, comments, requests for further information and recommendations. A brief summary of our main comments are:

- the reliance on the delivery of the A27 Chichester bypass improvements project.
- the requirements for new, additional, and adapted processes and assessments, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments.
- collaborative working between agencies in combination with a robust monitor and manage policy.

We hope our comments assist.

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders. We look forward to continuing to participate in future consultations and discussions. Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Background

National Highways has been appointed by the Secretary of State for Transport as strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the strategic road network (SRN).

National Highways is responsible for operating, maintaining, and improving the Strategic Road Network (SRN) i.e., the Trunk Road and Motorway Network in England, as laid down in Department for Transport (DfT) Circular 01/2022 (Strategic Road Network and the delivery of sustainable development).

The SRN is a critical national asset and as such we work to ensure that it operates and is managed in the public interest, both in respect of current activities and needs as well as in providing effective stewardship of its long-term operation and integrity.

Our responses to Local Plan consultations are guided by relevant policy and guidance including the National Planning Policy Framework (2021) (NPPF):

- Transport issues should be considered from the earliest stages of plan-making and development proposals so that the potential impact of development on transport networks can be addressed (para 104).
- The planning system should actively manage patterns of growth such that significant development is focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. (para 105).
- Planning policies should be prepared with the active involvement of highways authorities and other transport infrastructure providers so that strategies and investments for supporting sustainable transport and development patterns are aligned. (para 106).
- In terms of identifying the necessity of transport infrastructure, NPPF confirms that development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe. (para 111).
- Planning policies and decisions should support development that makes efficient use of land, taking into account the availability and capacity of infrastructure and services – both existing and proposed – as well as their potential for further improvement and the scope to promote sustainable travel modes that limit future car use. (para 124).

In relation to the tests of soundness set out at paragraph 35 of the NPPF, in the context of transport, these are interpreted as meaning:

- a) Positively prepared - has the transport strategy been prepared with the active involvement of the highway authorities, other transport infrastructure providers and operators and neighbouring councils?
- b) Justified – Is the transport strategy based on a robust evidence base prepared with the agreement in partnership, or with the support of the highway authorities?
- c) Effective – Does the transport strategy and policy satisfy the transport needs of the plan and is it deliverable at a pace which provides for and accommodates the proposed progress and implementation of the plan?
- d) Consistent with national policy – Does the transport strategy support the economic, social, and environmental objectives of the Plan and the NPPF/NPPG?

We will be concerned with proposals that have the potential to impact on the safe and efficient operation of the SRN; in this case, the A27 trunk road (Chichester Bypass and its junctions) which is the main access route in the Chichester area. We have particular interest in any allocation, policy or proposals which could have implications for the A27 and the wider SRN network. We are interested as to whether there would be any adverse road safety or operational implications for the SRN. The latter would include a material increase in queueing or delay or reduction in journey time reliability during the construction or operation of the development set out in the plan.

National Highways is a key delivery partner for sustainable development promoted through the plan-led system, and as a statutory consultee we have a duty to cooperate with local authorities to support the preparation and implementation of development plan documents.

In accordance with national planning and transport policy and our operating licence, we are entirely neutral on the principle of development as it is for the local planning authority to determine whether development should be allocated or permitted; albeit it must comply with national policy on locating development in locations that are or can be made sustainable. Therefore, while always seeking early and fulsome engagement with local plans and/or developers, we will simply be assessing the transport and related implications of plans or proposals and agreeing any necessary transport improvements and relevant development management policy.

In progressing Local Plans, we will seek to agree the following:

- Assessment tools and methodology
- Baseline Assessment i.e., to demonstrate that the assessment tool accurately reflects current transport conditions
- Comparator case assessment i.e., to forecast the transport conditions that would occur in the absence of the plan
- Forecast modelling i.e., to forecast the transport conditions that would arise with the plan in place, this will include an assessment at the end of the Plan period; and, if required, at full build out if that occurs after the end of the Plan period
- Outputs and outcomes of modelling, demonstrating, as appropriate, what transport infrastructure is necessary to support the plan o It should be noted that a suite of transport modelling tools may be required. This includes strategic modelling covering an area at least one major junction beyond the district boundary, localised network modelling where several links/junctions are close together and/or individual junction modelling
- o A DMRB (Design Manual for Roads and Bridges) compliancy assessment may also be required for certain highway features, such as Merge/Diverge assessment at Grade separated junctions, link capacity assessments, and others.
- The design of any necessary transport infrastructure, to an extent suitable for establishing deliverability during the plan period at the time that it becomes necessary for the purpose of ensuring that unacceptable road safety impacts or severe operational impacts do not arise as a result of development. This may be to at least General Arrangement design stage or preliminary design stage. Whichever degree of detail is agreed, the products must be in full compliance with the DMRB.
- Industry standard transport intervention costings.
- The delivery/funding mechanisms for necessary transport interventions. It should not be assumed that National Highways will have any responsibility to identify or deliver necessary transport interventions.
- If considered appropriate, a "Monitor & Manage" (M&M) framework, aimed at managing the pace of development in line with the pace of funding and delivery of necessary highway interventions in a manner which responds to the realworld impacts of development may be agreed for inclusion in the plan subject to the adequacy of risk control measures included therein. This can include the move from a 'predict & provide' style of delivery to 'a vision & validate' style. o Any M&M framework must be based on a "worst case scenario" whereby necessary mitigation is understood, as well as setting out the desired alternative scenario. o It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. It must be translated into development management plan policy and policy relating to development allocations.

Further detail on the above can be provided by National Highways.

While ideally all the above should be agreed prior to the Submission of the Local Plan for examination, we recognise that this is not always possible. However, all parties should work towards all matters being agreed and reflected in a Statement of Common Ground (SoCG) by the start of the Local Plan Examination at the latest. Ideally the SoCG between the Council and National Highways would be prepared well in advance of plan submission in order to guide resource input and to track progress towards final agreement on all relevant matters starting from the earliest plan iterations until the final version is agreed.

It is acknowledged that Government policy places much emphasis on housing delivery as a means for ensuring economic growth and addressing the current national shortage of housing. The NPPF is very clear that:

"Strategic policy-making authorities should establish a housing requirement figure for their whole area, which shows the extent to which their identified housing need (and any needs that cannot be met within neighbouring areas) can be met over the plan period."

However, new DfT C1/22 and the NPPF are equally clear that any development, including housing delivery, must be tempered by the requirement to ensure that the associated transport demand can be accommodated without unacceptable impacts on the safety of the SRN or severe impacts on the operation of the SRN including reliability and congestion. Therefore, as necessary and appropriate, any plan and/or development must be accompanied by suitable mitigation in the right places at the right time, that is to the required design standards and is deliverable in terms of land availability, constructability and funding.

We would also draw your attention to the then Highways England document 'The Strategic Road Network, Planning for the Future: A guide to working with National

Highways on planning matters' (September 2015). This document sets out how National Highways intends to work with local planning authorities and developers to support the preparation of sound documents which enable the delivery of sustainable development.

https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_t_data/file/461023/N150227_-_Highways_England_Planning_Document_FINAL-lo.pdf

Responses to Local Plan consultations are also guided by National Planning Policy Framework (NPPF) revised on 20 July 2021 which sets out the government's planning policies for England and how these are expected to be applied.

Updated Circular (01/2022)

It should be noted that since the start of the Local Plan consultation process, on the 23 December 2022, the Department for Transport released a new circular on the 'Strategic road network and the delivery of sustainable development' (Circular 01/2022), which replaces all of the policies in Circular 02/2013 of the same name. These representations take account of the new circular and the requirements in terms of the Local Plan evidence base and process.

We request that the Local Plan is prepared in line with all aspects of the new circular. Particularly, the principles of sustainable development (paragraphs 11 to 17), new connections and capacity enhancements (paragraphs 18 to 25), and engagement with plan-making (paragraphs 26 to 38).

Regulation 18 submission

In our Regulation 18 submission we noted several matters including:

- The need to mitigate the adverse impacts of strategic development traffic to the A27 Chichester Bypass and its junctions at Portfield Roundabout, Bognor Road Roundabout, Whyke Roundabout, Stockbridge Roundabout and Fishbourne Roundabout and Oving junction.
- The need to identify a mechanism to calculate contributions towards the delivery of the previously agreed Local Plan A27 improvements
- The need to confirm the number of dwellings needed within the plan period

- The need to establish National Highways acceptance of the traffic model reference and future case scenarios
- The need to confirm costs, viability, and funding associated with mitigating the safety and congestion impacts of the development included within the plan.

Local Plan context

This Local Plan (Chichester Local Plan 2021 – 2039), prepared by the Local Planning Authority (LPA) Chichester District Council, sets out the vision for future development in the district and will be used to help decide on planning applications and other planning related decisions including shaping infrastructure investments.

The draft sets out how the district should be developed over the next 18-years to 2039 including for the full Plan period (1 April 2021 to 31 March 2039) the total supply of

- 10,359 dwellings

- 114,652 net additional sqm new floorspace

Minus the completions this is equivalent to around 530 dwellings and 6,150 sqm of floorspace a year.

National Highways Representations

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders.

We have undertaken a review of the Chichester Local Plan 2021-2039 proposed submission version and accompanying evidence documents, our comments are set out in the tables below (following pages). [see table within attachment]

Summary

We have reviewed the publicly available Local Plan documents and provided comments above in relation to the transport implications of the plan for the safety and operation of the SRN. We understand that other technical information is available, but this was not presented as part of this consultation. Chichester, and the A27, are already heavily congested, infrastructure in the existing Local Plan remains undelivered and the growth set out in the new Plan will further increase travel demand.

As presented, satisfying the transport needs of the plan is clearly reliant on the delivery of the A27 Chichester bypass improvements project. The A27 Chichester bypass improvements project is one of 32 pipeline schemes being considered for possible inclusion in National Highways third Road Investment Strategy (RIS3) covering 1 April 2025 to 31 March 2030.

On 9 March 2023 the UK Transport Secretary ensured record funding would be invested in the country's transport network, sustainably driving growth across the country while managing the pressures of inflation. The announcement cited the A27 Arundel Bypass as being deferred from RIS2 to RIS 3 (covering 2025-2030). The transport secretary also identified a number of challenges to the delivery of the road investment strategy and cited the benefit of allowing extra time to ensure schemes are better planned and efficient schemes can be deployed more effectively.

At present, there is no commitment by DfT to carry out the A27 Chichester bypass improvements project. Until the A27 Chichester bypass improvements project is published in the RIS3, consented and a decision to invest is made it cannot be assumed to be a committed project.

We note that the Plan does not address any uncertainty of delivery of the A27 Chichester bypass improvements project and we strongly recommend that there is either no reliance placed on RIS3 to realise capacity for growth in the Plan or that contingency measures are included to cover the eventuality that RIS3 funding is not forthcoming within the plan period. It is not clear that the potential impact of development on transport networks can be addressed in the absence of the A27 Chichester bypass improvements project.

Achieving net zero, reducing emissions reduction, acting on climate, and supporting thousands of new homes and new employment developments will be problematic with existing processes. New, additional, and adapted processes and assessments will likely be required, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments. We acknowledge that change is complex, expensive, and time-consuming, especially for smaller district level Councils. But the hard work will deliver benefits for the Council and residents in the longer-term.

National Highways seeks to continue working with the Council and WSCC to progress coordinated and deliverable packages of interim mitigation measures and alternative transport solutions while a long-term strategic solution is considered by government. This must however be in combination with a robust monitor and manage policy that appropriately manages the risk of unacceptable road impacts resulting from new housing and other development over the Plan period.

We have been in discussion with Chichester District Council regarding their proposed Monitor and Manage Strategy. At present, we do not consider the current strategy to be robust and we seek further information and detail especially on who, when and when monitoring and management will be undertaken. Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas. Any M&M framework must be based on a "worst case scenario" whereby necessary transport mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. The M&M framework must set out that the alternative to mitigation not being delivered is that development does not proceed where that development would give rise to unacceptable road safety risk or severe cumulative impacts on the road network in the absence of that mitigation. The M&M framework must be translated into development management plan policy and policy relating to development allocations.

As we have reiterated throughout our comments, we welcome the opportunity to work with you to address these outstanding matters and we will continue to liaise over submitted Transport Assessment, Travel Plan policy and Monitor and Manage Policy to help to work towards a viable plan.

We hope our comments assist.

We look forward to continuing to participate in future consultations and discussions. Please do continue to consult us as the Plan progresses so that we can remain aware of, and comment as required on, its contents.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Document Element: Policy A20 Land South of Bognor Road**Respondent:** GoVia Thameslink Railway (Nigel Searle) [8197]**Summary:**

As an employment zone it is critical to be linked with the railway station and residential parts of the city by continuous, direct, safe, attractive, comfortable walking and cycle routes. GTR will object to this development if Active Travel routes from the railway station are not provided to the standard outlined in this consultation response before first occupation so that sustainable travel habit are established from the start without having the much greater challenge of enticing people out of their cars. Therefore change 8 and 9. With references to the infrastructure policy being as described in this consultation response policy T1

Full text:

See attached.

Change suggested by respondent:

"Before first occupation, infrastructure must be provided to provide

- continuous, direct, safe, attractive, comfortable walking and cycle routes between this development, railway station, residential parts of the city
- The bridge over the A27 does not follow the desire line, people walking and cycling need to double back on themselves to gain height, therefore add a ramp following the desire line direct into this development
- bus lanes reallocating road space between the railway station this development and along the A259 to Bognor Regis to improve bus reliability and journey times for connecting with trains and for journeys from Bognor Regis to facilitate increases of bus frequency and reduce car traffic.
- Subject to traffic flow analysis consider sharing the bus lanes with Larger Goods Vehicles on the A27 and A259 to ensure reliability of goods vehicles servicing this site, the remaining lanes for small vehicles could then be narrowed. Ensure design builds in bus priority at junctions, including roundabouts and where crossing the small vehicle lanes to gain access to the city residential areas and the railway station"

Document Element: Policy A20 Land South of Bognor Road**Respondent:** West Sussex County Council [1416]**Agent:** Henry Adams LLP (Mrs Dawn Appleton, Senior Planner) [8118]**Summary:**

Support allocation of Land South of Bognor Road for commercial development. Technical work and accompanying Vision Document demonstrate site is capable of delivering 28,000sqm of commercial development during course of plan period. Some concern about ability to provide 5 no. plots for Travelling Showpeople and storage area given constraints on site and need for enhancement in terms of, in particular, biodiversity net gain and drainage.

Full text:

See attachments.

Change suggested by respondent:

More flexibility to be written into policy:

Provide up to 5 no. plots, with need to be determined at time of submission of planning application and dependent on land required to satisfy biodiversity net gain and/or drainage requirements associated with commercial development;

More flexibility for amount of storage area associated with travelling showpeople plots. Flexibility and requirement for an assessment in accordance with Policy H13 should be included in policy wording;

A timescale for marketing of travelling showpeople plots following which it should revert to part of the commercial site.

Request more precise wording is included in criteria 10 and 11 so that expectations are clear.

Support

Document Element: Policy A21 Land east of Rolls Royce**Respondent:** Forestry Commission (Richard Cobb) [8202]**Summary:**

Forestry Commission provides advice, does not support or object.

This area contains areas of existing trees, hedgerow and woodland which are not currently mentioned by the policy. We would encourage any development to be sensitive to this and provide additional planting where possible.

Full text:

Please note that as a Non-Ministerial Government Department, we provide no opinion supporting or objecting to planning applications or local plans including their soundness or legal compliance.

Rather we are including advice and information that we advise the Council consider to ensure their pre-submission local plan avoids potential impacts and promote enhancements/expansion as part of the proposed local plan regarding trees and woodland, including ancient woodland. We acknowledge that the purpose of Regulation 19 consultations does not usually extend to making substantial changes which are not related to soundness so we offer our advice as helpful guidance to ensure the local plan takes every opportunity to secure the protection, enhancement and expansion of Chichester's valuable trees and woodlands to comply with planning policy, good practice and to make the most of the many benefits they provide to the environment, local economy and community.

Overall Comments

Ancient woodlands, veteran and ancient trees are irreplaceable habitats, and it is essential that they are considered appropriately to avoid any direct or indirect effects that could cause their loss or deterioration, in line with Government Standing Advice. Ancient Woodland has very high potential ecological value and should act as integral focal points, alongside other locally and nationally designated sites, as part of delivering landscape scale nature recovery.

Any development or plan that include these irreplaceable habitats on or near to the site should aim to deliver high standards of net gains and ecological connectivity that supports wider ecological networks, in line with good practice. This will also be a requirement as part of the local nature recovery strategies being driven by the Environment Act 2021 and we advise that plans should anticipate this to maximise environmental benefits to contribute to reversing the national trend of ecological decline as part of broader nature recovery networks. The Local Plan should be considered as a crucial and timely opportunity to secure significant and strategic, plan-led environmental gains due to their scope and scale, particularly given the timescales of development being influenced that coincide with UK Government commitments regarding halving emissions and protecting 30% of nature by 2030, towards a net-zero carbon and nature positive economy.

The development strategy should prioritise the protection of trees and woodlands with the highest priority being given to ancient woodland, ancient and veteran trees as individual habitats and as part of wider ecological networks.

Site Allocation comments:

Policy A7 Land at Shopwyke (Oving Parish)

Site specific considerations could recognise the existing trees, hedgerows and woodland and prioritise their protection, enhancement and expansion as part of biodiversity net gains. Acoustic screening referred to could also use trees to make the most of multi-functional benefits they bring.

Policy A8 Land East of Chichester

We welcome efforts to bolster the existing woodland and the proposed strategic wildlife corridor to the East and the enhancements that development could bring.

Policy A11 Highgrove Farm, Bosham

Bolster planting to North, South and East is welcome. This policy could be improved by requiring bolster planting to the West as well, where there appears to be an existing line of trees, making it well placed to further contribute to wider connectivity with existing and additional planting.

Policy A12 Chidham and Hambrook and Policy A13 Southbourne Broad Location for Development

We note that more detailed proposals will emerge as part of a Neighbourhood plans. We would like to highlight that this area contains some parcels of ancient woodland which is an irreplaceable and high priority habitat according to the NPPF and Government Policy (see attached Annex and below for more guidance on this). The policy could be improved by highlighting its importance and high priority as part of efforts to protect, enhance, expand and connect habitats as part of a wider ecological network and the strategic wildlife corridor. Developments within this area could contribute pockets of woodland and linear planting to help connect existing trees and woodland as part of a mosaic of habitats throughout the wildlife corridor and wider area. The requirement to ensure development does not have an adverse impact on the strategic wildlife corridor is also welcome but could be strengthened by requiring developments to significantly contribute to its enhancement, expansion and connectivity including with green infrastructure provided by development

Policy A14 Land West of Tangmere

The requirement for significant levels of green infrastructure is welcome. This policy could be strengthened by requiring development to retain and bolster existing hedgerows and trees wherever possible.

Policy A16 Goodwood Motor Circuit and Airfield and Policy A17 Development within the vicinity of Goodwood Motor Circuit and Airfield

This policy could be improved by recognising the significant amount of ancient woodland and non-ancient woodland to North of the area. We would encourage any development in the area to protect, enhance and expand the woodland in the area as part of delivering net gains.

Policy A21 Land east of Rolls Royce

This area contains areas of existing trees, hedgerow and woodland which are not currently mentioned by the policy. We would encourage any development to be sensitive to this and provide additional planting where possible.

Overarching comments

We would welcome the consideration of incorporating large and small pockets of multi-functional woodland as part of green infrastructure provision for development, particularly given the relatively low proportion of woodland found throughout the District, and the benefits this can have as 'stepping stones' between habitats as part of the Local Plan's welcome vision of strategic wildlife corridors.

We also encourage the Council to appraise the plan against the following advice to maximise the benefits from protection, enhancement and expansion of woodlands, trees and connectivity throughout the District:

Additional improvements to consider

- Tree/hedgerow removal is considered as a last resort but where it is justified, we advise that developments can aim to deliver no net deforestation to help encourage development that provides an overall environmental gain. Where trees are required to be removed, additional tree planting will be made to compensate for this loss and we would advise that additional planting should be made to help compensate for the loss of habitat in the time it takes for new trees to mature.
- Long term management and maintenance of planted trees and woodland creation to give them every chance to becoming established and where trees do fail, they are replaced
- A minimum standard for tree canopy cover for new developments (e.g. for large-scale developments) as it provides a targetable level of green infrastructure in relation to trees for the numerous ecosystem services they provide.
- Precautions should be incorporated into any woodland design and tree planting to ensure that habitat creation is established successfully and that potential impacts from deer are managed on site and in the surrounding area as appropriate. See here for further guidance that should be followed for managing impacts from deer as part of woodland creation and tree planting: <https://www.gov.uk/government/publications/woodland-creation-and-mitigating-the-impacts-of-deer/woodland-creation-and-mitigating-the-impacts-of-deer> Some good practice advice is also provided in Appendix 1 of this letter.
- We advise that any tree planting should meet the following:
 - o Trees should be healthy and good practice biosecurity should be followed to prevent the risk of spreading pests and disease, in line with Government advice: <https://www.gov.uk/government/collections/tree-pests-and-diseases>. More information on the plant healthy can be found at: Welcome to Plant Healthy - Plant Healthy
 - o Created or restored habitat should be managed in perpetuity in line with a robust management plan that follows good practice to ensure assumed benefits of created habitats are delivered in practice (see Standing Advice referred to on page 1). We recommend meeting the UK Forestry Standard to demonstrate this.
- To help mitigate climate and support local economy would urge council to develop local plan policy that makes use of locally sourced timber. This has multiple benefits as it can help store carbon within development, reduce impact from transportation, reduce embodied carbon from alternative materials and support local economies and communities.
- Where developments incorporate District Heating, consider locally and sustainably sourced wood-fuels for the benefits this can have for renewable energy and towards a local, circular economy
- Use tree planting as part of nature based solutions for managing flood risk as well as other multi-functional benefits from green infrastructure as part of any development (e.g. Trees and woodlands provide £400 million of value in flood protection)
- We encourage the Council to refine their strategy to trees and woodlands using the recently launched 'Trees and Woodland Strategy Toolkit' available

here: <https://treecouncil.org.uk/what-we-do/science-and-research/tree-strategies/> to design and deliver a local tree strategy to harness the long-term benefits that trees can bring to local communities. The local plan should be developed with tree/woodlands in mind as an integral part, alongside other supplementary strategies for the environment including biodiversity, green infrastructure, nature recovery and climate change.

Key guidance regarding trees, woodland and development

Ancient woodlands, ancient trees and veteran trees are irreplaceable habitats. Paragraph 180(c) of the NPPF sets out that development resulting in the loss or deterioration of irreplaceable habitats should be refused unless there are wholly exceptional reasons and a suitable compensation strategy exists. In considering the impacts of the development on Ancient Woodland, Ancient and Veteran trees, the planning authority should consider direct and indirect impacts resulting from both construction and operational phases.

Please refer to Natural England and Forestry Commission joint Standing Advice for Ancient Woodland and Ancient and Veteran Trees, updated in January 2022. The Standing Advice can be a material consideration for planning decisions, and contains advice and guidance on assessing the effects of development, and how to avoid and mitigate impacts. It also includes an Assessment Guide which can help planners assess the impact of the proposed development on ancient woodland or ancient and veteran trees in line with the NPPF.

Existing trees should be retained wherever possible, and opportunities should be taken to incorporate trees into development. Trees and woodlands provide multiple benefits to society such as storing carbon, regulating temperatures, strengthening flood resilience and reducing noise and air pollution.[1] Paragraph 131 of the NPPF seeks to ensure new streets are tree lined, that opportunities should be taken to incorporate trees elsewhere in developments, and that existing trees are retained wherever possible. Appropriate measures should be in place to secure the long-term maintenance of newly planted trees. The Forestry Commission may be able to give further support in developing appropriate conditions in relation to woodland creation, management or mitigation.

Biodiversity Net Gain (BNG): Paragraph 174(d) of the NPPF sets out that planning (policies and) decisions should minimise impacts on and provide net gains for biodiversity. Paragraph 180(d) encourages development design to integrate opportunities to improve biodiversity, especially where this can secure net gains for biodiversity. A requirement for most development to deliver a minimum of 10% BNG is expected to become mandatory from November 2023. The planning authority should consider the wide range of benefits trees, hedgerows and woodlands provide as part of delivering good practice biodiversity net gain requirements. Losses of irreplaceable or very high distinctiveness habitat cannot adequately be accounted for through BNG.

Support

Document Element: Policy A21 Land east of Rolls Royce

Respondent: National Highways (Mr Marius Pieters, Spatial Planning Manager) [8127]

Summary:

[National Highways letter dated 24/07/23 confirmed representation should be categorised as Comment - Expect a fully funded Travel Plan]. We agree that any planning application for employment development will need to demonstrate that increased traffic generation is minimised and mitigated by the use of sustainable transport measures.

We would expect a fully funded Travel Plan to be submitted for this development.

Full text:

We have reviewed the publicly available Local Plan documents and provided comments in the attached letter, in relation to the transport implications of the plan for the safety and operation of the SRN.

Our comments include issues to resolve, comments, requests for further information and recommendations. A brief summary of our main comments are:

- the reliance on the delivery of the A27 Chichester bypass improvements project.
- the requirements for new, additional, and adapted processes and assessments, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments.
- collaborative working between agencies in combination with a robust monitor and manage policy.

We hope our comments assist.

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders. We look forward to continuing to participate in future consultations and discussions. Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Background

National Highways has been appointed by the Secretary of State for Transport as strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the strategic road network (SRN).

National Highways is responsible for operating, maintaining, and improving the Strategic Road Network (SRN) i.e., the Trunk Road and Motorway Network in England, as laid down in Department for Transport (DfT) Circular 01/2022 (Strategic Road Network and the delivery of sustainable development).

The SRN is a critical national asset and as such we work to ensure that it operates and is managed in the public interest, both in respect of current activities and needs as well as in providing effective stewardship of its long-term operation and integrity.

Our responses to Local Plan consultations are guided by relevant policy and guidance including the National Planning Policy Framework (2021) (NPPF):

- Transport issues should be considered from the earliest stages of plan-making and development proposals so that the potential impact of development on transport networks can be addressed (para 104).
- The planning system should actively manage patterns of growth such that significant development is focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. (para 105).

- Planning policies should be prepared with the active involvement of highways authorities and other transport infrastructure providers so that strategies and investments for supporting sustainable transport and development patterns are aligned. (para 106).
- In terms of identifying the necessity of transport infrastructure, NPPF confirms that development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe. (para 111).
- Planning policies and decisions should support development that makes efficient use of land, taking into account the availability and capacity of infrastructure and services – both existing and proposed – as well as their potential for further improvement and the scope to promote sustainable travel modes that limit future car use. (para 124).

In relation to the tests of soundness set out at paragraph 35 of the NPPF, in the context of transport, these are interpreted as meaning:

- Positively prepared - has the transport strategy been prepared with the active involvement of the highway authorities, other transport infrastructure providers and operators and neighbouring councils?
- Justified - Is the transport strategy based on a robust evidence base prepared with the agreement in partnership, or with the support of the highway authorities?
- Effective – Does the transport strategy and policy satisfy the transport needs of the plan and is it deliverable at a pace which provides for and accommodates the proposed progress and implementation of the plan?
- Consistent with national policy – Does the transport strategy support the economic, social, and environmental objectives of the Plan and the NPPF/NPPG?

We will be concerned with proposals that have the potential to impact on the safe and efficient operation of the SRN; in this case, the A27 trunk road (Chichester Bypass and its junctions) which is the main access route in the Chichester area. We have particular interest in any allocation, policy or proposals which could have implications for the A27 and the wider SRN network. We are interested as to whether there would be any adverse road safety or operational implications for the SRN. The latter would include a material increase in queueing or delay or reduction in journey time reliability during the construction or operation of the development set out in the plan.

National Highways is a key delivery partner for sustainable development promoted through the plan-led system, and as a statutory consultee we have a duty to cooperate with local authorities to support the preparation and implementation of development plan documents.

In accordance with national planning and transport policy and our operating licence, we are entirely neutral on the principle of development as it is for the local planning authority to determine whether development should be allocated or permitted; albeit it must comply with national policy on locating development in locations that are or can be made sustainable. Therefore, while always seeking early and fulsome engagement with local plans and/or developers, we will simply be assessing the transport and related implications of plans or proposals and agreeing any necessary transport improvements and relevant development management policy.

In progressing Local Plans, we will seek to agree the following:

- Assessment tools and methodology
- Baseline Assessment i.e., to demonstrate that the assessment tool accurately reflects current transport conditions
- Comparator case assessment i.e., to forecast the transport conditions that would occur in the absence of the plan
- Forecast modelling i.e., to forecast the transport conditions that would arise with the plan in place, this will include an assessment at the end of the Plan period; and, if required, at full build out if that occurs after the end of the Plan period
- Outputs and outcomes of modelling, demonstrating, as appropriate, what transport infrastructure is necessary to support the plan o It should be noted that a suite of transport modelling tools may be required. This includes strategic modelling covering an area at least one major junction beyond the district boundary, localised network modelling where several links/junctions are close together and/or individual junction modelling o A DMRB (Design Manual for Roads and Bridges) compliancy assessment may also be required for certain highway features, such as Merge/Diverge assessment at Grade separated junctions, link capacity assessments, and others.
- The design of any necessary transport infrastructure, to an extent suitable for establishing deliverability during the plan period at the time that it becomes necessary for the purpose of ensuring that unacceptable road safety impacts or severe operational impacts do not arise as a result of development. This may be to at least General Arrangement design stage or preliminary design stage. Whichever degree of detail is agreed, the products must be in full compliance with the DMRB.
- Industry standard transport intervention costings.
- The delivery/funding mechanisms for necessary transport interventions. It should not be assumed that National Highways will have any responsibility to identify or deliver necessary transport interventions.
- If considered appropriate, a “Monitor & Manage” (M&M) framework, aimed at managing the pace of development in line with the pace of funding and delivery of necessary highway interventions in a manner which responds to the realworld impacts of development may be agreed for inclusion in the plan subject to the adequacy of risk control measures included therein. This can include the move from a ‘predict & provide’ style of delivery to ‘a vision & validate’ style. o Any M&M framework must be based on a “worst case scenario” whereby necessary mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. It must be translated into development management plan policy and policy relating to development allocations.

Further detail on the above can be provided by National Highways.

While ideally all the above should be agreed prior to the Submission of the Local Plan for examination, we recognise that this is not always possible. However, all parties should work towards all matters being agreed and reflected in a Statement of Common Ground (SoCG) by the start of the Local Plan Examination at the latest. Ideally the SoCG between the Council and National Highways would be prepared well in advance of plan submission in order to guide resource input and to track progress towards final agreement on all relevant matters starting from the earliest plan iterations until the final version is agreed.

It is acknowledged that Government policy places much emphasis on housing delivery as a means for ensuring economic growth and addressing the current national shortage of housing. The NPPF is very clear that: “Strategic policy-making authorities should establish a housing requirement figure for their whole area, which shows the extent to which their identified housing need (and any needs that cannot be met within neighbouring areas) can be met over the plan period.”

However, new DfT C1/22 and the NPPF are equally clear that any development, including housing delivery, must be tempered by the requirement to ensure that the associated transport demand can be accommodated without unacceptable impacts on the safety of the SRN or severe impacts on the operation of the SRN including reliability and congestion. Therefore, as necessary and appropriate, any plan and/or development must be accompanied by suitable mitigation in the right places at the right time, that is to the required design standards and is deliverable in terms of land availability, constructability and funding.

We would also draw your attention to the then Highways England document ‘The Strategic Road Network, Planning for the Future: A guide to working with National Highways on planning matters’ (September 2015). This document sets out how National Highways intends to work with local planning authorities and

developers to support the preparation of sound documents which enable the delivery of sustainable development.
https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/461023/N150227_-_Highways_England_Planning_Document_FINAL-lo.pdf

Responses to Local Plan consultations are also guided by National Planning Policy Framework (NPPF) revised on 20 July 2021 which sets out the government's planning policies for England and how these are expected to be applied.

Updated Circular (01/2022)

It should be noted that since the start of the Local Plan consultation process, on the 23 December 2022, the Department for Transport released a new circular on the 'Strategic road network and the delivery of sustainable development' (Circular 01/2022), which replaces all of the policies in Circular 02/2013 of the same name. These representations take account of the new circular and the requirements in terms of the Local Plan evidence base and process.

We request that the Local Plan is prepared in line with all aspects of the new circular. Particularly, the principles of sustainable development (paragraphs 11 to 17), new connections and capacity enhancements (paragraphs 18 to 25), and engagement with plan-making (paragraphs 26 to 38).

Regulation 18 submission

In our Regulation 18 submission we noted several matters including:

- The need to mitigate the adverse impacts of strategic development traffic to the A27 Chichester Bypass and its junctions at Portfield Roundabout, Bognor Road Roundabout, Whyke Roundabout, Stockbridge Roundabout and Fishbourne Roundabout and Oving junction.
- The need to identify a mechanism to calculate contributions towards the delivery of the previously agreed Local Plan A27 improvements
- The need to confirm the number of dwellings needed within the plan period
- The need to establish National Highways acceptance of the traffic model reference and future case scenarios
- The need to confirm costs, viability, and funding associated with mitigating the safety and congestion impacts of the development included within the plan.

Local Plan context

This Local Plan (Chichester Local Plan 2021 – 2039), prepared by the Local Planning Authority (LPA) Chichester District Council, sets out the vision for future development in the district and will be used to help decide on planning applications and other planning related decisions including shaping infrastructure investments.

The draft sets out how the district should be developed over the next 18-years to 2039 including for the full Plan period (1 April 2021 to 31 March 2039) the total supply of

- 10,359 dwellings

- 114,652 net additional sqm new floorspace

Minus the completions this is equivalent to around 530 dwellings and 6,150 sqm of floorspace a year.

National Highways Representations

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders.

We have undertaken a review of the Chichester Local Plan 2021-2039 proposed submission version and accompanying evidence documents, our comments are set out in the tables below (following pages). [see table within attachment]

Summary

We have reviewed the publicly available Local Plan documents and provided comments above in relation to the transport implications of the plan for the safety and operation of the SRN. We understand that other technical information is available, but this was not presented as part of this consultation. Chichester, and the A27, are already heavily congested, infrastructure in the existing Local Plan remains undelivered and the growth set out in the new Plan will further increase travel demand.

As presented, satisfying the transport needs of the plan is clearly reliant on the delivery of the A27 Chichester bypass improvements project. The A27 Chichester bypass improvements project is one of 32 pipeline schemes being considered for possible inclusion in National Highways third Road Investment Strategy (RIS3) covering 1 April 2025 to 31 March 2030.

On 9 March 2023 the UK Transport Secretary ensured record funding would be invested in the country's transport network, sustainably driving growth across the country while managing the pressures of inflation. The announcement cited the A27 Arundel Bypass as being deferred from RIS2 to RIS 3 (covering 2025-2030). The transport secretary also identified a number of challenges to the delivery of the road investment strategy and cited the benefit of allowing extra time to ensure schemes are better planned and efficient schemes can be deployed more effectively.

At present, there is no commitment by DfT to carry out the A27 Chichester bypass improvements project. Until the A27 Chichester bypass improvements project is published in the RIS3, consented and a decision to invest is made it cannot be assumed to be a committed project.

We note that the Plan does not address any uncertainty of delivery of the A27 Chichester bypass improvements project and we strongly recommend that there is either no reliance placed on RIS3 to realise capacity for growth in the Plan or that contingency measures are included to cover the eventuality that RIS3 funding is not forthcoming within the plan period. It is not clear that the potential impact of development on transport networks can be addressed in the absence of the A27 Chichester bypass improvements project.

Achieving net zero, reducing emissions reduction, acting on climate, and supporting thousands of new homes and new employment developments will be problematic with existing processes. New, additional, and adapted processes and assessments will likely be required, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments. We acknowledge that change is complex, expensive, and time-consuming, especially for smaller district level Councils. But the hard work will deliver benefits for the Council and residents in the longer-term.

National Highways seeks to continue working with the Council and WSCC to progress coordinated and deliverable packages of interim mitigation measures and alternative transport solutions while a long-term strategic solution is considered by government. This must however be in combination with a robust monitor and manage policy that appropriately manages the risk of unacceptable road impacts resulting from new housing and other development over the Plan period.

We have been in discussion with Chichester District Council regarding their proposed Monitor and Manage Strategy. At present, we do not consider the current strategy to be robust and we seek further information and detail especially on who, when and when monitoring and management will be undertaken. Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas. Any M&M framework must be based on a "worst case scenario" whereby necessary transport mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. The M&M framework must set out that the alternative to mitigation not being delivered is that development does not proceed where that development would give rise to unacceptable road safety risk or severe cumulative impacts on the road network in the absence of that mitigation. The M&M framework must be translated into development management plan policy and policy relating to development allocations.

As we have reiterated throughout our comments, we welcome the opportunity to work with you to address these outstanding matters and we will continue to liaise over submitted Transport Assessment, Travel Plan policy and Monitor and Manage Policy to help to work towards a viable plan.

We hope our comments assist.

We look forward to continuing to participate in future consultations and discussions. Please do continue to consult us as the Plan progresses so that we can remain aware of, and comment as required on, its contents.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Object

Document Element: Policy A21 Land east of Rolls Royce

Respondent: Rolls-Royce Motor Cars Limited [8018]

Agent: David Lock Associates (Rukaiya Umaru, Senior Planner/Surveyor) [8016]

Summary:

R-RMC supports draft Policy A21 but suggests it is amended to 'allocate' the site to ensure that the policy is fully effective and sound. This reflects the fact that there is further certainty around R-RMC's expansion plans. R-RMC is developing its emerging proposals, has undertaken a series of technical assessments and intends to submit a planning application in 2023 (and certainly prior to the adoption of the new Local Plan). The Council can therefore be satisfied that there is more certainty regarding the intention to progress with an expansion of R-RMC Goodwood, certainly within the next five years.

Full text:

Rolls-Royce Motor Cars (R-RMC) is highly supportive of the inclusion of Land East of Rolls-Royce (Policy A21) as a site for R-RMC to deliver its vision for the strategic expansion of the existing headquarters of R-RMC at Goodwood (R-RMC Goodwood). R-RMC considers the policy is sound in principle, but one minor modification is suggested to provide greater clarity.

Justification for Policy A21

As a prestigious global manufacturer of luxury motor cars and a major employer within Chichester District, R-RMC's proposed expansion would signify a considerable investment into the local, district and wider UK economy.

Since its arrival in 2003, the Goodwood facility has expanded incrementally and now fully utilises the capacity of the existing site for its manufacturing needs. As part of its continued operations, and to improve its logistics processes, R-RMC requires an increase in manufacturing space to meet manufacturing needs and remain responsive to an evolving market. The proposed expansion would potentially generate additional employment opportunities and further contribute to the local and wider economy, thus helping to strengthen Chichester's economic outlook at a time of national economic uncertainty. R-RMC has made previous representations through the Local Plan process seeking recognition of the importance of this expansion and is pleased that the Council acknowledges these needs through the inclusion of draft Policy A21.

The National Planning Policy Framework (NPPF) has sustainable development at its heart, including economic components. Moreover, paragraph 81-85 make it clear that supporting economic growth and competitiveness is of great importance in the planning system.

As part of these representations, R-RMC has prepared a report demonstrating the suitability, availability and achievability of the proposed expansion site. The report highlights R-RMC's commitment to delivering an expansion within the Plan period, with a suite of technical assessments already undertaken and progress being made towards submission of a planning application later this year. The report, which should be read in conjunction with these representations, demonstrates that the site is in a suitable and sustainable location for development and that there are no significant constraints that would preclude development. R-RMC is confident that, through its emerging proposals, there exists an opportunity to provide development sensitively and with an enhanced landscape setting to satisfy the requirements of the draft policy.

Notwithstanding the above, R-RMC suggest the Policy is improved and made clearer by replacing 'safeguard' with 'allocate' the land for employment development. It is acknowledged that, at earlier stages of the Local Plan process, there was more limited detail available regarding the scope, extent and timescales for delivering an expansion, and it was appropriate at the time to consider the site for safeguarding for future needs. However, as outlined above and in the submitted report, R-RMC is developing its emerging proposals, has undertaken a series of technical assessments and intends to submit a planning application in 2023 (and certainly prior to the adoption of the new Local Plan). The Council can therefore be satisfied that there is more certainty regarding the intention to progress with an expansion of R-RMC Goodwood, certainly within the next five years.

Based on this, we suggest that there is an opportunity to reflect this position through an amendment to draft Policy A21. It is understood that the employment development is 'not included in the [Plan's] employment figures as it relates specifically to future operational needs for Rolls-Royce rather than to the broader employment requirement identified in the HEDNA'. However, the site has been tested through the Local Plan process and is considered through the HELAA and the wider Local Plan evidence base (e.g., the SA the Chichester Transport Study). It has been tested the same as an allocation and it would provide greater clarity and consistency to describe it as such. Notwithstanding this, it is also recognised that the policy as set out does not prevent R-RMC coming forward with its proposals subject to meeting the stated criteria.

In summary R-RMC supports draft Policy A21 but suggests it is amended to 'allocate' the site to ensure that the policy is fully effective and sound.

Change suggested by respondent:

Suggests policy is improved and made clearer by replacing 'safeguard' with 'allocate' the land for employment development.

Support

Document Element: Policy A21 Land east of Rolls Royce**Respondent:** Rolls-Royce Motor Cars Limited [8018]**Agent:** David Lock Associates (Rukaiya Umaru, Senior Planner/Surveyor) [8016]**Summary:**

Support in principle

Full text:

Rolls-Royce Motor Cars (R-RMC) is highly supportive of the inclusion of Land East of Rolls-Royce (Policy A21) as a site for R-RMC to deliver its vision for the strategic expansion of the existing headquarters of R-RMC at Goodwood (R-RMC Goodwood). R-RMC considers the policy is sound in principle, but one minor modification is suggested to provide greater clarity.

Justification for Policy A21

As a prestigious global manufacturer of luxury motor cars and a major employer within Chichester District, R-RMC's proposed expansion would signify a considerable investment into the local, district and wider UK economy.

Since its arrival in 2003, the Goodwood facility has expanded incrementally and now fully utilises the capacity of the existing site for its manufacturing needs. As part of its continued operations, and to improve its logistics processes, R-RMC requires an increase in manufacturing space to meet manufacturing needs and remain responsive to an evolving market. The proposed expansion would potentially generate additional employment opportunities and further contribute to the local and wider economy, thus helping to strengthen Chichester's economic outlook at a time of national economic uncertainty. R-RMC has made previous representations through the Local Plan process seeking recognition of the importance of this expansion and is pleased that the Council acknowledges these needs through the inclusion of draft Policy A21.

The National Planning Policy Framework (NPPF) has sustainable development at its heart, including economic components. Moreover, paragraph 81-85 make it clear that supporting economic growth and competitiveness is of great importance in the planning system.

As part of these representations, R-RMC has prepared a report demonstrating the suitability, availability and achievability of the proposed expansion site. The report highlights R-RMC's commitment to delivering an expansion within the Plan period, with a suite of technical assessments already undertaken and progress being made towards submission of a planning application later this year. The report, which should be read in conjunction with these representations, demonstrates that the site is in a suitable and sustainable location for development and that there are no significant constraints that would preclude development. R-RMC is confident that, through its emerging proposals, there exists an opportunity to provide development sensitively and with an enhanced landscape setting to satisfy the requirements of the draft policy.

Notwithstanding the above, R-RMC suggest the Policy is improved and made clearer by replacing 'safeguard' with 'allocate' the land for employment development. It is acknowledged that, at earlier stages of the Local Plan process, there was more limited detail available regarding the scope, extent and timescales for delivering an expansion, and it was appropriate at the time to consider the site for safeguarding for future needs. However, as outlined above and in the submitted report, R-RMC is developing its emerging proposals, has undertaken a series of technical assessments and intends to submit a planning application in 2023 (and certainly prior to the adoption of the new Local Plan). The Council can therefore be satisfied that there is more certainty regarding the intention to progress with an expansion of R-RMC Goodwood, certainly within the next five years.

Based on this, we suggest that there is an opportunity to reflect this position through an amendment to draft Policy A21. It is understood that the employment development is 'not included in the [Plan's] employment figures as it relates specifically to future operational needs for Rolls-Royce rather than to the broader employment requirement identified in the HEDNA'. However, the site has been tested through the Local Plan process and is considered through the HELAA and the wider Local Plan evidence base (e.g., the SA the Chichester Transport Study). It has been tested the same as an allocation and it would provide greater clarity and consistency to describe it as such. Notwithstanding this, it is also recognised that the policy as set out does not prevent R-RMC coming forward with its proposals subject to meeting the stated criteria.

In summary R-RMC supports draft Policy A21 but suggests it is amended to 'allocate' the site to ensure that the policy is fully effective and sound.

Document Element: Policy A21 Land east of Rolls Royce**Respondent:** West Sussex County Council (Tracey Flitcroft, Principal Planning Officer) [8119]**Summary:**

The references to safeguarding minerals is inconsistent and it is suggested that the wording in the email sent to CDC (attached) in relation to Policy AL3 should be used in the policies for the other sites for consistency. Reference to safeguarding minerals and waste infrastructure should also be included in some other policies as previously indicated:

Full text:

The comments included below from WSCC are Holding Objections. We will continue to work with Chichester District Council and as further work is completed will consider if objections can be withdrawn.

Transport Overview

The County Council has worked with Chichester District Council to develop the Chichester Local Plan and its supporting evidence base and will continue to do so. Although the overall direction of the Local Plan is supported, from a highways and transport perspective, there are three key issues remaining that need to be addressed in order to demonstrate that the Plan is sound:

1. There is insufficient evidence to demonstrate that key infrastructure (i.e. Terminus Road Diversion) will be deliverable;
2. The package of sustainable transport infrastructure and measures is not yet sufficiently well-developed to demonstrate that it is deliverable as part of the monitor and manage process; and
3. There is insufficient evidence to demonstrate that the capacity of the transport network can accommodate the scale of development proposed as part of the Southbourne Broad Location for Development.

The following sections explain; a) the reasons for these issues; b) why they affect the soundness of the Local Plan; and, c) what changes should be made to the Local Plan to remedy the issues.

Deliverability of Key Infrastructure

The recommended transport mitigation strategy, as assessed using the Chichester Area Transport Model for 2039 has been demonstrated to be capable in-principle to prevent the development from resulting in severe residual cumulative impacts on the highways and transport network. However, there are significant risks to deliverability of junction mitigation measures, which have required further work to be undertaken on developing a short to medium term strategy based on phased prioritisation of infrastructure and sustainable transport improvements, to be governed under a monitor and manage approach.

There are three locations where new highway alignments are proposed outside of existing highways boundaries. Two of these may include significant earthworks or structures to be delivered, being Stockbridge Link Road and Terminus Road diversion. The cost of the mitigation strategy exceeds the likely value of developer contributions and additional funding has not yet been secured.

At the Regulation 18 consultation stage in December 2018 to January 2019 the County Council identified delivery risks with the Stockbridge Link Road and Terminus Road Diversion schemes due to the earthworks likely to be required and to confirm the extent of land take required for both schemes. The County Council stated that feasibility work would need to be undertaken for these improvements prior to Plan submission to confirm that the schemes are deliverable. A brief for such a feasibility study was agreed in 2019, but to date, this work has not been commissioned. It is the County Council's view that Stockbridge Link Road (SLR) should be disregarded as a potential part of a long-term transport mitigation strategy for 2039 and beyond until such time as it can be demonstrated that the scheme is deliverable. Paragraph 8.14 of the Local Plan acknowledges that the SLR is not deliverable as part of the Local Plan mitigation package.

The Terminus Road Diversion is still identified as part of the highest priority in the Local Plan mitigation package (i.e. A27 Fishbourne Junction) which is expected to be delivered once sufficient funding is collected. The County Council considers that in the absence of this feasibility work, the deliverability of the Terminus Road Diversion cannot be confirmed. In particular, given the recent impacts of inflation in the construction industry, this work will need to robustly estimate the costs and confirm delivery arrangements. In the absence of this feasibility work, there is currently insufficient evidence to confirm that the Local Plan complies with Paragraphs 11 and 106 of the NPPF as key infrastructure does not appear to be deliverable.

In order to remedy this issue regarding the Terminus Road Diversion, the County Council requests that feasibility work is undertaken prior to the examination to confirm deliverability of the proposed Terminus Road Diversion.

Sustainable Transport Infrastructure & Measures

The transport study modelling for end of Plan period also includes some proposed highways mitigation schemes within Chichester City. The County Council has previously requested that these be replaced by sustainable transport improvements to comply with the West Sussex Transport Plan 2022-2036. However, only limited modification has been made to these proposed schemes, with a suggestion in text at paragraph 7.3.2 of the main transport study that the costs for these schemes can be reallocated to sustainable transport improvements which are not specified. Although this does help to explain how sustainable transport infrastructure schemes and measures can be at least partially funded, it is rare that schemes will be fully funded using developer contributions. Furthermore, funding is not the only issue that needs to be overcome to secure delivery of these schemes and measures.

The Infrastructure Delivery Plan (IDP) lists the proposed mitigation measures and in some cases provides information on the rationale, phasing, cost, funding and delivery arrangements. However, there are still many gaps in the information, probably because schemes are currently at an early conceptual stage. The County Council's experience is that it is unlikely that schemes will be fully funded using developer contributions (because doing so would not be compliant with the CIL regulations) so delivery of these schemes will be partially dependent on securing funding from central Government or other sources. The IDP currently fails to identify the scheme-specific requirements for additional funding and the overall scale of additional funding required.

The County Council considers the level of information currently available on the sustainable transport package to be insufficient to demonstrate deliverability of a credible and coordinated sustainable transport package of improved infrastructure and services. Therefore, there is insufficient evidence to confirm that the Local Plan complies with Paragraphs 11 and 106 of the NPPF.

In order to remedy this issue, the County Council requests that further technical work is undertaken to develop the schemes and measures in the sustainable transport package prior to the examination. In particular, this should focus on the following schemes and measures and some cases, this will build on work that has already taken place:

1. St. Paul's & Parklands cycle routes
2. Improving existing public transport services towards Madgwick Lane
3. Provision of improved bus services for the village serving the development areas of Southbourne Parish
4. Improving cycling connectivity to link the built-out areas of Shopwhyke Lakes with Tangmere and Oving etc

As not all the severely impacted A27 junctions have a reasonable prospect of being physically improved in the Plan period, more investigation into potential public transport enhancements is also required, particularly to strengthen routes that cross the bypass. This may require further amendments to the IDP.

This work should aim to identify options for sustainable transport schemes that can be a priority for investment, provide information to enable safeguarding of routes (e.g. cycle routes) from development and provide a basis for applications for third party funding to support their delivery. The relative priority of such measures would need to be considered under the monitor and manage approach by the proposed Traffic and Infrastructure Management Group for implementation in addition to the proposed improvement at the A27/A259 Fishbourne junction.

To address this issue and support delivery of the sustainable transport package, the County Council also recommends the following minor amendments to Policy T1: Transport Infrastructure:

At bullet point .7 change "other small-scale junction improvements" to read "other sustainable transport and safety focused improvements, including at junctions" and change "These will increase road capacity, reduce traffic congestion, improve safety and air quality, and improve access to Chichester city from surrounding areas" to "These will increase road capacity on strategic roads, and on both strategic and local roads reduce traffic congestion, improve safety and air quality, and improve access to Chichester city from surrounding areas notably by encouraging and prioritising sustainable modes."

Southbourne Broad Location for Development

The scale of development that can be accommodated at the Southbourne Broad Location will be, at least partially, dependent on the capacity of the transport network to accommodate the associated traffic movements. As the Broad Location spans the railway line, many of these traffic movements would need to cross the railway line. The County Council is concerned that there is currently insufficient capacity of the existing level crossings, notably at Stein Road, to accommodate the additional traffic movements. This could mean that the cumulative impact of development on the traffic network is severe, which is not consistent with Paragraph 111 of the NPPF.

The transport evidence base does not yet provide sufficient assurance that the proposed scale of development can be accommodated. This is because the base level of traffic flow has not been compared to local traffic counts, either in the initial validation of the strategic model or through a new count which the County Council has previously requested, and the assumptions about level crossing downtimes have not been validated against observed data. The County Council is concerned that the assessment of capacity of the local road network to accommodate the quantum of dwellings proposed for the Broad Location may be overoptimistic by underestimating existing flow levels and the duration of level crossing downtime. As a consequence, the proposed quantum may not be deliverable without unacceptable impacts to the conditions on Stein Road and to the level of traffic seeking to use rural lanes to the north of the village to avoid the level crossing.

In order to remedy this issue, the County Council requests that either additional transport evidence is provided prior to the examination to demonstrate that the proposed scale of development is deliverable, or that Policy A13 is changed to remove the proposed scale of development until such evidence is provided.

The following comments from education, minerals and waste, Adults Services and Health, highways & transport and public rights of way, do not affect the soundness of the Plan. However, Chichester District Council should take these into account and, where possible, make minor amendments to the Local Plan and/or evidence base studies before submission of the Local Plan for examination. Officers are happy to meet and discuss any of these comments, and proposed minor amendments to address these comments, ahead of submission:

1) Education

Land West of Chichester

Previous comments have been made requesting that the policy refers to 'Phase 2 should include expansion of the primary school for the further 1FE of teaching accommodation with nursery and SEND provision'. While it is recognised that reference is made to this in the IDP this is a supporting document to the Local Plan and should not be solely relied on. It is requested that paragraph 10.19 is amended to read: 'a local centre with retail, community and employment uses (minimum of approximately 2500 sqm E(g)(i) Use Class), two form entry (2FE) primary school and one form entry (1FE) teaching accommodation with nursery and SEND, informal and formal open space (including a country park), allotments,....'

This should also be included in the 3rd bullet point of Policy A6 or the wording of the policy should be drafted to reflect more recent policy requirements i.e. Provide for infrastructure and community facilities in accordance with the most recent Infrastructure Delivery Plan.

There are some inconsistencies with the wording of the strategic policies, not every policy includes the criterion 'Provide for infrastructure and community facilities in accordance with the most recent Infrastructure Delivery Plan.' While this may be due to some policies being carried through from the adopted local plan it is inconsistent.

Policy A8 Land East of Chichester

As an education authority WSCC do not request 1FE schools in line with government guidance. As per our earlier comments and discussions we requested a 2 FE primary school for the site.

3rd bullet point of Policy A8 should be amended to read: 'A neighbourhood centre incorporating local shops, a community centre, flexible space for employment/ small-scale leisure uses and a one-form (expandable to two-form) two form entry primary school with provision for early years/ childcare and special educational needs and disability...'

2) Minerals and Waste

The references to safeguarding minerals is inconsistent and it is suggested that the wording in the email sent to CDC (attached) in relation to Policy AL3 should be used in the policies for the other sites for consistency. Reference to safeguarding minerals and waste infrastructure should also be included in some other policies as previously indicated:

- Policy A2 – needs to include reference to safeguarding minerals and waste infrastructure.
- Policy A7 – needs to include reference to safeguarding waste infrastructure.
- Policy A15 (Loxwood) – needs to include reference to minerals safeguarding as within the clay MSA.
- Policy A21 – needs to include reference to minerals safeguarding.

Also, the reference to the safeguarding guidance needs to be checked to ensure that it is worded correctly as 'Minerals and Waste Safeguarding Guidance'.

3) Older Person Housing

It is noted that the plan refers to older person housing as specialist housing. WSCC strategy supports the provision of 'extra care housing' while this might be similar development it enables younger people to access the accommodation for whatever medical reason i.e. MS, strokes rather than limiting it to a certain age group. Officers are happy to meet and discuss this further.

4) Highways and Transport

Public Transport Priority Infrastructure

The Public Transport section of the main transport study report starting at paragraph 6.2.7 requires revisiting. There is reference to "an expansion of the bus priority lane system within Chichester City Centre" which does not match the existing bus provision in the City which does not provide bus priority lanes on street. It does have restrictions on motor traffic in the adjoining parts of South Street and West Street which provide for bus and cycle only access in both directions of travel plus access for essential goods vehicle loading in the westbound direction only. In addition, the suggestion in the following paragraph for "a time-based system where certain routes are restricted to public transport only during specific times" is not evidenced or developed and as such considered unlikely to be practical and enforceable at most locations used by bus routes in the City. More developed proposals for additional bus priority, improvements to bus passenger facilities or testing of specific locations for bus-only access would be welcomed as part of developing a costed sustainable transport mitigation package.

Park and Ride

The discussion of possible park and ride facilities for the City at paragraphs 6.2.9 to 6.2.16 of the main transport study should also acknowledge. An important part of making park and ride well used by motorists is increasing the price of city centre parking to provide a financial incentive to take up significantly cheaper park and ride charges for parking and travel. However, if park and ride sites are not provided accessible to all major approach routes to the city, such a charging strategy would not be seen to be equitable, whereas only a single site is proposed in the District Council's emerging parking strategy and the report acknowledges at 6.2.11 that "locations for potential park and ride sites are also deemed to be limited". The bullet at 6.2.15 "Cost of schemes compared to benefit are likely to be initially lower than highway schemes" may have been incorrectly worded given that this is listed as an issue rather than a benefit. The text may have been intended to say that the ratio of benefit to cost for park and ride schemes may be lower than for conventional highway schemes?

A286 New Park Road / A286 St Pancras Road (Junction 7)

This junction scheme includes pedestrian crossing facilities which are welcomed and also includes a length of advisory cycle lane starting in the middle of the junction for cyclists remaining on St Pancras. However, the approach to the junction on St Pancras from Eastgate Square remains intimidating to cyclists, so further measures would need to be added to make the layout cycle-friendly or the cycle facility is likely to be of limited benefit. This could include decreasing traffic speeds. Until this is done the conclusion at 8.4.4 of the main transport study; "The mitigation scheme includes improvements for pedestrians and cyclists which will lead to increased use of active travel modes and reduce the need for physical mitigation here" is only supported for pedestrians, not for cyclists.

A259 Via Ravenna / A259 Cathedral Way Roundabout (Junction 8)

It is stated at 7.3.8 of the main transport study that "the mitigation may be required to avoid queuing back towards the A27, as well as for capacity

issues". In light of this potential safety issue for the previous junction on Cathedral Way and for the A27 Fishbourne junction, the proposal at 7.3.6 that the scheme delivery should be tied to the monitor and manage regime to see if and when it is required is accepted. This is different to the approach for other junctions in the City because of the potential safety issue. This monitoring approach would be likely to follow after the A259 Cathedral Way / Fishbourne Road East / Terminus Road (as diverted) (Junction 10) improvement, which is to be brought forward as an integral part of the A27 Fishbourne roundabout mitigation scheme, but may allow for increased eastbound flows on Cathedral Way.

A286 Northgate Gyratory

An additional mitigation scheme is proposed at paragraph 7.3.134 of the main transport study for the A286 Northgate Gyratory along its southern arm from Oaklands Way to Orchard Street. The proposal to add traffic signals is welcomed in concept as it can help to control traffic speeds making the junction more friendly for cyclists and pedestrians. However, the layout shown at figure 7-8 does not maximise the opportunity to improve convenience and safety for pedestrians by providing a priority link to reach the central island, which contains employment space and the fire station, nor to assist crossing the exit towards Orchard Street. The scheme would benefit from further development to prioritise active travel movements and should also be fitted with transponders for bus priority.

Fishbourne Road West / Appledram Lane South (Junction 11)

At paragraphs 7.4.1 to 7.4.2 of the main transport study, the junction of Fishbourne Road West / Appledram Lane South (Junction 11) is considered. The proposal to mitigate impacts at this junction through delivery of the Stockbridge Link Road scheme is not considered deliverable, so the approach at this location requires re-thinking. The County Council would not support measures to increase capacity for through traffic on Appledram Lane South, the approach should be to reduce severance and improve safety and comfort for active travel on Appledram Lane by reducing vehicle speeds and as far as possible volume. This should consider the needs of pedestrians and cyclists both for local access and for users of the Salterns Way leisure cycling route.

TEMPro Background Traffic Growth Comparisons

At section 10.2 of the main transport study a comparison is made of the TEMPro 7.2 growth rates used in the study for external traffic with new TEMPro 8.0 growth rates since released by the Department for Transport, which notes that the TEMPro 8.0 rates are significantly lower, if these rates were used then the level of transport impacts could be lower. Unfortunately, a number of highways authorities in the Transport for the South East (TfSE) area including the County Council and Hampshire County Council have concerns that the planning assumptions used in TEMPro v8 core growth scenario underestimate the numbers of additional households forecasted compared to targets in adopted Local Plans for delivering new dwellings. TfSE are currently raising these collective concerns with DfT with a view to obtaining an early update to TEMPro 8 planning assumptions. Although for the purposes of this study TEMPro is not applied to trips produced in Chichester District, from the County Council's analysis TEMPro v8 core underestimates the increase in households per year in Arun District by over 50% and in Horsham District by 30% when compared with adopted development plans. On this basis it may be useful to instead compare TEMPro 7.2 with TEMPro 8.0 high growth scenario.

North of District Spatial Scenarios Testing

For the Northern Spatial Scenarios Test provided as an appendix to the main transport study, this had not been updated for the final preferred spatial strategy or in light of the County Council's previous comments on the March 2022 issue to the District Council. The spatial strategy now is similar but not identical to the Scenario 4: Significant Growth 1 option in the reported tests, totalling 370 dwellings across the four northern parishes, compared to 410 in the test. In both cases the largest allocation is at Loxwood; 220 dwellings were proposed in the Scenario 4 as compared to 200 in this test. Some other tests proposed higher numbers.

The testing in the northern part of the district had used the same trip generation rates per dwelling as in the South of the District, but the County Council considers that in practice private motor vehicle trip generation per dwelling is likely to be higher due to the rural nature of the area, including a lack of local facilities and shops within walking distance of development, a very low level of public transport services and lack of surfaced cycle routes.

The level of development proposed is not at the level capable of delivering transformative transport improvements to match the trip making patterns around Chichester and the A259 corridor to Bosham and Southbourne. This may be offset in part by the lower total amount of development compared to the tested scenario 4. Nonetheless, it would be helpful to adjust the scenario for the spatial strategy now proposed and to provide information on additional traffic movements per peak hour from these parishes using the A272 at junctions at Wisborough Green and reaching the A272/A29 junction at Billingshurst and the A272/A283 junction at the north of Petworth.

Neutral Month and Summer Month Comparison Technical Note

The Neutral Month and Summer Month Comparison Technical Note in the main transport study treats July as a neutral month rather than a summer month. Paragraph 1.3.1 states "The flows were analysed by looking at traffic data for August 2019 this being considered to represent summer traffic. This was compared against traffic data from the neutral months of June, July, September and October also from 2019." The County Council does not accept this methodology as school summer holidays start part way through July and education traffic is also affected by the formal exam period, whilst there is typically a high level of seasonal leisure traffic including summer outdoor events in this month. It is acceptable to use August alone as the summer comparator month. However, July traffic should be removed from the neutral months analysis and should be substituted with May traffic data from the same year of 2019, provided that sufficient data is available from that month.

5) Public Rights of Way (PRoW)

It is a positive step to see PRoW acknowledged as valued by communities and as part of the area's green infrastructure. Whilst Policy P14 (Green Infrastructure) states that development proposals should not be detrimental to the network of public rights of way and bridleways (please note bridleways are Public Rights of Way), a more proactively positive approach that seeks enhancements to the network as mitigation, would be welcomed. The improvement, upgrading of existing PRoW and creation of new PRoW where possible, to allow for a greater number of users to access the network would be beneficial. This is somewhat addressed in Policy T1 which refers only to routes identified in the Local Transport Plan, Local Cycling and Walking Infrastructure Plan (LCWIP) and the Infrastructure Delivery Plan. Opportunities to these, should not be limited if they arise elsewhere. It is surprising to see there is no mention of PRoW within Chapter 8 under Active Travel – Walking and Cycling. The PRoW network provides extensive walking and cycling opportunities, often off-road, and important links between places and non-PRoW routes.

Change suggested by respondent:

- Policy A21 – needs to include reference to minerals safeguarding.

Also, the reference to the safeguarding guidance needs to be checked to ensure that it is worded correctly as 'Minerals and Waste Safeguarding Guidance'.

Reg 19 WSCC Officer Informal Comments - <https://chichester.oc2.uk/a/sfh>

Agent: Lichfields (Tara Johnston, Planner) [7506]

Summary:

Appendix C provides additional guidance on evidence which needs to be submitted in support of certain planning applications related mainly to development in the countryside. As mentioned in the comments above provided in response to Policy NE10, there is no prerequisite contained within the NPPF (2021) that requires an applicant to demonstrate that previous uses were proven unviable prior to the conversion of a building in the countryside to residential use.

Full text:

We write in response to the above consultation on behalf of our client, the Church Commissioners for England (CCE). CCE owns a large amount of land in the area largely to the south, west and east of Chichester.

We welcome the opportunity to further engage with the Local Plan process. Whilst we support some aspects of the Local Plan, we consider that some changes are likely to be necessary to ensure that the Plan can be found sound.

By way of background, CCE submitted several sites for consideration as part of the Housing Economic Land Availability Assessment (HELAA) in 2021. These sites were previously promoted as part of the Preferred Approach Local Plan Regulation 18 Consultation in 2019.

As part of these representations, we take the opportunity to re-promote a number of CCE's sites, which could assist the Council in delivering much needed housing for the district. CCE has updated its technical work and provide Vision Documents in relation to its landholdings in Southbourne, Oving, and Hunston Parishes to demonstrate how additional housing can be delivered. These Vision Documents are enclosed.

We consider this and other aspects of the emerging Local Plan below.

Chapter 2: Vision & Strategic Objectives

The Local Plan Vision details a positive approach to supporting sustainable development in the context of the climate emergency. CCE welcomes the Vision for Chichester, particularly the importance placed on the delivery of new homes in 'Objective 3' and the delivery of new infrastructure to support the new development in 'Objective 7'.

Chapter 3: Spatial Strategy and Settlement Hierarchy

The Spatial Strategy builds on the previous Local Plan by focussing growth on Chichester city as the main sub-regional centre. Outside Chichester city and its closest settlements, development will focus on the two settlement hubs within the east-west corridor at Tangmere and Southbourne. This approach is supported by CCE.

Policy S1 Spatial Development Strategy

Draft Policy S1 (Spatial Development Strategy) identifies the broad approach to providing sustainable development in the plan area, which includes ensuring that new residential development is distributed in line with the settlement hierarchy, with a greater proportion of development in the larger and more sustainable settlements. We support this strategy, with particular support for development at the settlement hubs of Southbourne (Policy A13) and Tangmere (Policy A14). We also support that provision is made for extant Site Allocations and the Tangmere strategic site remains allocated under draft Policy A14.

Policy A14 continues to allocate Land West of Tangmere for 1,300 dwellings. CCE questions the Council's decision to not amend the existing settlement boundary of Tangmere to include the land subject to the allocation. Without amending the settlement boundary, the future growth of Tangmere may be hindered. As such, the settlement boundary of Tangmere should be amended to include the allocated site to ensure that the plan is justified.

Draft Policy S1 also refers to development in service villages such as Bosham, Hambrook and Loxwood.

Hunston is excluded from the Spatial Strategy but is identified as a Service Village within the Settlement Hierarchy in draft Policy SP2 (Settlement Hierarchy). The draft Local Plan suggests that the allocation of homes in Hunston has been removed as a result of growth in the Manhood Peninsula. CCE acknowledges that the overall housing numbers across the district have been reduced as a result of local constraints but reiterate that their landholding in Hunston remains a suitable site for housing should the Council need to identify more land for housing. This is discussed further below.

Policy S2 Settlement Hierarchy

As stated in paragraph 3.31 of the draft local plan, 'The NPPF encourages housing delivery where it will enhance or maintain the vitality of rural communities'. Paragraph 79 of the NPPF (2021) states that 'To promote sustainable development in rural areas, housing should be located where it will enhance or maintain the vitality of rural communities. Planning policies should identify opportunities for villages to grow and thrive, especially where this will support local services. Where there are groups of smaller settlements, development in one village may support services in a village nearby'.

CCE owns substantial land holdings in South Mundham, which is in close proximity to North Mundham/Runcton which is defined as a Service Village. As such, whilst South Mundham does not contain any services, development in the hamlet would enable sustainable growth to support facilities in North Mundham and Runcton. To ensure that the draft plan is consistent with national policy, South Mundham should be considered as part of North Mundham as a Service Village when considering the future pairing/grouping of some settlements where the facilities and services could be shared to capitalise on the close connections some settlements have.

Development outside the settlements listed in the hierarchy in SP2 is restricted to proposals which require a countryside location or meet an essential local rural local need or supports rural diversification in accordance with Policy NE10. To this end, CCE has smaller land holdings in Tangmere, Oving, South Mundham, Birdham, Chidham and Sidlesham, which may be suitable for conversion for residential use or via windfall housing. Location plans for each of the sites can be found in Appendices 1-8.

Chapter 4: Climate Change and the Natural Environment

Policy NE4 Strategic Wildlife Corridors

The East of City strategic wildlife corridor has been relocated to the eastern side of proposed Site Allocation A8 (Land to the East of Chichester). The relocation of this wildlife corridor follows additional evidence that shows that the commuting route for Barbastelle Bats is along Drayton Lane.

CCE owns land to the east of Drayton Lane (immediately adjacent to the wildlife corridor and to the east of draft allocation A8) and surrounding the village of Oving. Its land has been identified in the HELAA (2021) as being developable, including site HOV0017 (Drayton Lane). The land east of Drayton Lane is sustainably located being close to Chichester and its amenities. The site provides an opportunity to sensitively and sustainably provide additional homes for the District. In accordance with Draft Policy NE4, the proposals for the Land East of Drayton Lane will not have an adverse impact on the integrity and function of the wildlife corridor and will not undermine the connectivity and ecological value of the corridor. This Vision Document will be shared under separate cover.

The eastern edge of the relocated wildlife corridor encroaches into CCE land. Any proposal on this land would be required to take the statutory protection for bats and other protected species into consideration and managed as part of a sensitive masterplan for development and on this basis, it

is considered unnecessary to extend the wildlife corridor to encroach into the CCE site.

It is also considered that the detail of policy NE4 goes beyond the purpose of the policy, which should be to safeguard wildlife rich habitats and wider ecological networks. The policy is clear that development should only be permitted where it would not create an adverse effect upon the ecological value, function, integrity and connectivity of the corridors. It does not resist development in principle. This therefore makes redundant policy text 1, which seeks to introduce a sequential test for preferable sites outside of a wildlife corridor. It is considered that this test conflicts with the underlying purpose of the policy, which is to safeguard wildlife corridors from harmful impacts that cannot be mitigated, and should therefore be deleted.

Policy NE7 Development and Disturbance of Birds

CCE is broadly supportive of Policy NE7. However, they would like to note that the situation regarding the national guidance on nutrient neutrality is still evolving and therefore, this policy is only relevant to current legislation. Policy NE7 may therefore not be relevant throughout the entirety of the plan period. As such, CCE considers that it is necessary in this instance to ensure that an appropriate reference to changing legislation is included within the policy to prevent it from becoming out of date and would also ensure that the policy remains effective once adopted.

Policy NE10 The Countryside

CCE is supportive of the inclusion of a policy referencing the conversion of existing buildings in the countryside, however, we believe that Policy NE10 is not consistent with national policy. Policy NE10 criteria B states that proposals for the conversion of buildings in the countryside will be permitted where 'it has been demonstrated that economic and community uses have been considered before residential, with residential uses only permitted if economic and community uses are shown to be inappropriate and unviable'. This policy is not in accordance with Paragraph 152 of the NPPF (2021) which states that the reuse of existing resources should be encouraged, including 'the conversion of existing buildings'. Under paragraph 152, there is no prerequisite to adopt a sequential approach, or to give preference to other uses. As such, criteria B should be omitted from Policy NE10. Reference to criteria B should also be removed from criteria C.

Chapter 5: Housing

Policy H1 Meeting Housing Needs

The Preferred Approach Local Plan was based on meeting the identified objectively assessed housing needs of the plan area of 638 dwellings per annum. However, due to constraints, particularly the capacity of the A27, the Submission Version of the Local Plan has planned for a housing requirement below the need derived from the standard method. The Plan proposes to deliver 535 dpa in the southern plan area and a further 40 dpa in the northern plan area, a total supply of 10,350 dwellings over the plan period from 2021 – 2039 (575 dpa).

The Planning Inspectorate has previously asked the Council to determine what level of housing could be achieved based on deliverable improvements to the A27 and to consider whether the full housing needs could be met another way. It is acknowledged that the Council has carried out the additional work required and the local constraints have resulted in a proposed lower housing requirement.

The NPPF (2021) confirms that to determine the minimum number of homes needed, strategic policies should be informed by a local housing need assessment, conducted using the standard method in national planning guidance – unless exceptional circumstances justify an alternative approach (para. 61). CCE acknowledges that that housing numbers have been reduced as a result of local constraints and it will be down to the Inspector to determine whether the Council's exceptional circumstances justify this. Should the Planning Inspector find that the Council requires additional land to meet the housing need using the standard method, CCE's land at Southbourne, Oving, Drayton Land and Hunston are suitable, available and developable for housing. In addition, CCE's rural development sites could also contribute to meeting the housing need.

Policy H2 Strategic Allocations

Draft Policy H2 confirms that the Tangmere Strategic Development Location is carried forward from the 2015 Local Plan and this is supported by CCE. Strong support is also given for the Broad Location of Development in Southbourne (Policy A13) for up to 1,050 dwellings.

Policy H5 Housing Mix

Draft Policy H5 confirms that the housing mix for a development will be based on the most up to date HEDNA to address identified local needs and market demands. We suggest that the Council considers a range of criteria, including site characteristics, when determining the housing mix for individual sites and this should be reflected in wording of Policy H5.

Policy H7 Rural and First Homes Exception Sites

Draft Policy H7 relates to rural and first homes exception sites. CCE is supportive of the principle of the inclusion of a rural exceptions policy. However, we have concerns over criteria contained within the policy which limits the amount of development that can be delivered under it.

The NPPF (2021) at paragraph 78 states that planning policies and decisions should be responsive to local circumstances and support housing development that reflect local needs. Furthermore it also states that 'local planning authorities should support opportunities to bring forward rural exception sites that will provide affordable housing to meet identified local needs'.

The key aspect of the policy is to enable the delivery of rural exception sites which would address an identified local need. Within the policy, there is no limit on the amount of development that can be delivered and therefore, it is considered that if Policy H7 is limited to a maximum of 30 dwellings it could serve to hinder development (especially on slightly larger sites), which would otherwise be sustainable. As such, we consider that the amount of development should not be limited and rather should be dictated on a site and need specific basis. CCE considers that for Policy H7 to be positively prepared and in accordance with National Policy, criteria 2 should be removed.

In addition, criteria 6 states that proposals for affordable housing on rural exception sites will only be supported where 'the site is located adjacent or as close as possible to the existing settlement boundary and does not result in scattered or isolated development in rural areas'. The NPPF (2021) does not specify the location of rural exception sites. As such, to be consistent with national policy, criteria 6 should also be omitted.

Furthermore, Policy H7 states that 'applications for first homes exception sites that propose the inclusion of a small proportion of market housing will be expected to provide robust evidence...'

However, in the policy there is no allowance for the provision of market housing on rural exception sites in addition to first homes exception sites. As a result of this, the requirements of the policy are again not consistent with national policy. Paragraph 78 of the NPPF (2021) is supportive of 'some market housing' where it would facilitate the delivery of rural exception sites. As such, CCE considers that Policy H7 should be amended as follows:

'Applications for rural and first homes exceptions sites that propose the inclusion of a small proportion of market housing will be expected to provide robust evidence that the site would be unviable without such housing being included'.

Policy H8 Specialist Accommodation

Draft Policy H8 confirms that all housing sites over 200 units, including those allocated in this plan, will be required to provide specialist accommodation for older people with a support or care component. We request that this policy is amended to add 'where appropriate and viable', acknowledging that viability and site-specific factors need to be taken into consideration.

Chapter 6: Place-making

Policy P3 Density

We support the objective of Draft Policy P3 (Density) to make the most efficient use of land and follow a design led approach to achieve the optimum density for a site. The Policy does not prescribe an appropriate density for the District and this is supported. However, we consider that reference should be made to the fact that density may vary depending upon site specific circumstances and could be higher where transport links and access to services is good.

Chapter 7: Employment and Economy

Policy E3 and E4 Horticultural Development

Chapter 7 of the draft Local Plan confirms that 67 hectares of land is identified to meet the future horticultural land need within four Horticultural Development Areas (HDAs) over the plan period. It is confirmed that an additional 137 hectares of horticultural land is also forecast to be required outside of HDAs to meet future need.

CCE has significant landholdings which could assist the Council in addressing the insufficient availability within the current HDAs. The CCE sites which are considered suitable for horticulture development are listed below and location plans for each of the sites can be found in Appendices 9-13.

- Somerley Farm, NE East Wittering, PO20 7JB
- Fisher Farm, South Mundham, PO20 1ND
- Church & Haise Farm, Sidlesham
- Cowdry Farm, Birdham
- Groves Farm, nr Merston, PO20 2DX / Colworth Manor Farm PO20 2DU.

CCE supports draft Policy E3 which confirms that "approximately 137 hectares of land is also needed outside of HDAs to meet anticipated horticultural and ancillary development land need for the plan period." Support is also given for draft Policy E4 in relation to land outside HDAs. This Policy confirms that proposals for horticultural development can come forward outside the HDAs, subject to a set of criteria. We would welcome continued discussion with the Council on how these sites could help meet the districts horticultural needs in the future.

Chapter 10: Strategic and Area Based Policies

CCE supports Chichester District Council's proposal to allocate additional land for housing at Southbourne and to maintain the existing allocation at Tangmere. We also consider that CCE's land at Hunston and Oving could assist the Council in meeting its housing needs, should additional housing be required. We consider these opportunities in turn below.

Policy A13 Southbourne Broad Location for Development

CCE supports draft Policy A13 and the allocation of a Broad Location for Development in Southbourne for a mixed-use form of development including 1,050 dwellings.

CCE has significant landholdings around Southbourne which is suitable, available and developable. The land to the north and west of Southbourne measures 70ha and is wholly within CCE's control. The land adjoins the existing settlement and provides an opportunity for a sustainable extension to Southbourne with the potential to deliver c. 1,200 homes for the village, as well as employment, community uses and a significant amount of new public space and green open space. A new Vision Document is enclosed which explains one way in which this opportunity could be realised. Importantly, it is considered that there are no technical impediments that would prevent development from coming forward on this site.

This site has been promoted throughout the Southbourne Neighbourhood Plan process, most recently in the December 2022 consultation. The new Vision Document demonstrates that the CCE site presents the opportunity to provide a comprehensive development that would contain strategic housing growth, significant areas of green infrastructure and open space in a sustainable location. The key access strategy for the site is to provide two new access points from the south A259 Main Road and the east Stein Road. These access points would connect to a spine road which would form a continuous vehicle route around the north-western edge of Southbourne.

The site almost entirely comprises a Secondary Support Area under the Solent Waders and Brent Goose Strategy (SWBGS), which aims to protect the network of non-designated terrestrial wader and brent goose sites that support the Solent Special Protection Areas (SPA) from land take and recreational pressure associated with new development. Due to the designation of the site, discussion was undertaken with the Hampshire and Isle of Wight Wildlife Trust with a view to determine a suitable approach for the scheme and an appropriate survey effort to establish the use of the site by designated birds. As a result of these discussions, wintering bird surveys are taking place. The aim of these surveys is to explore opportunities for mitigation for this SWBGS support area such that development within the red line can proceed without adverse impacts to the bird populations noted within this strategy. Following the survey, the results and approach will be presented to Natural England for further discussion.

In relation to viability, we note that Policy A13 sets several policy objectives for development at Southbourne. The NPPF (2021) notes that where there are up-to-date policies which have set out the contributions expected from development, planning applications that comply with them should be assumed to be viable (para. 58). With this in mind the policy objectives outlined within Policy A13 will require viability testing to be undertaken to ensure a policy compliant scheme is both viable and deliverable. This is necessary to ensure that the policy is sound.

The Policy suggests that employment opportunities are required to be delivered as part of the allocation but there is no specific reference to the amount of use required. CCE supports this proposed approach as it is sufficiently flexible to enable an amount of employment land to be proposed in response to market conditions at the appropriate time and this will help to support delivery of the allocation.

The scale of development proposed has been reduced from 1,250 to 1,050 dwellings to reflect the proportionate reduction in housing numbers across the parishes in the east west corridor as a consequence of the limit on numbers in the southern plan area. If the Inspector finds that additional housing is required, the Vision Document submitted demonstrates that the CCE site in Southbourne could deliver c. 1,200 homes and so could increase housing without needing to identify additional land for development elsewhere.

To summarise, the site could accommodate approximately 1,200 homes which could be delivered on a phased basis early in the plan period. There are no overriding physical or technical constraints that would act as an impediment to development. There is also a clear access arrangement proposed.

Policy A14 Land West of Tangmere

CCE supports that Policy A14 is carried forward into this Local Plan to facilitate the delivery of a residential-led development of at least 1,300 dwellings.

Additional sites

Hunston

CCE further promotes land (15.31ha) located east of the B2145 Selsey Road in Hunston for 240 new homes. The land is deliverable and is fully within CCE's control. The site is highly accessible, located within a maximum of 5-6 minutes walking distance to Selsey Road, where several bus routes connect the village to Chichester.

CCE notes that the Council assessed the HELAA site (ref. HHN0016) as 'developable'. A Vision Document has previously been prepared and submitted to demonstrate the commitment to it being brought forward for residential development within the plan period. This document is enclosed.

To address the Council's concerns in relation to flooding, following publication of the Chichester Strategic Flood Risk Assessment (SFRA), we have prepared an updated Flood Risk Scoping Study which provides an overview of flood risk constraints across the site from a range of sources. Various mitigation measures are recommended in line with recommendations of the Chichester SFRA and prevailing local and national guidance and best practice. With these measures in place, it is likely that the flood risk could be managed effectively in accordance with the requirements of the NPPF. Detailed data has also been requested from the Environment Agency, which will feed into further technical work that is being carried out.

Should the Inspector conclude that additional housing is required, CCE considers that their site is the most appropriate and sustainable location for development in Hunston. The site provides an opportunity to sensitively and sustainably extend the existing village boundary to provide additional homes to meet an identified housing need.

Land East of Drayton Lane

CCE owns land to the east of Drayton Lane which is bound by Tangmere Road to the north and crosses Oving Road and the railway line to the south. The site is c.1km from the centre of Chichester and comprises 49ha. The site was assessed in the HELAA 2021 as developable 'HOV0017'. A Vision Document has been prepared and was presented to the Council in 2022. This includes a detailed analysis of the site and its surroundings and provided justification as to why the site is suitable for development. This technical review of the site concludes there are no technical impediments to development.

The Vision Document demonstrates how the proposals for the land east of Drayton Lane could be developed as an extension to the draft allocation A8 (Land to the east of Chichester) for up to 700 new homes. The land east of Drayton Lane is fully within the CCE's control, is available for development now and is deliverable with some development achievable within the first five years of the plan period. It represents an opportunity to provide new homes, facilities and significant community benefits, through a sensitively designed development that integrates into the surrounding landscape.

The Vision for this site is a landscape and ecology led masterplan which would celebrate the rich wildlife characters of the different surrounding landscapes and uses the connection between countryside and community to generate its character and identity. The Vision Document demonstrates that this is a suitable location for development.

Should the Inspector conclude that additional housing is required, CCE considers that the land east of Drayton Lane would form a natural extension to allocation A8 and is an appropriate and sustainable location for new development.

Appendix C Additional Guidance

Appendix C provides additional guidance on evidence which needs to be submitted in support of certain planning applications related mainly to development in the countryside. As mentioned in the comments above provided in response to Policy NE10, there is no prerequisite contained within the NPPF (2021) that requires an applicant to demonstrate that previous uses were proven unviable prior to the conversion of a building in the countryside to residential use. As such, to be in accordance with national policy, reference to Policy NE10 should be omitted from Appendix C.

Conclusion

CCE welcomes the opportunity to comment on the Local Plan and is keen to continue to engage with the Council, especially in relation to the Broad Location for Development in Southbourne. CCE is supportive of the Council's aspirations in the Local Plan. However, the changes set out above are considered likely to be necessary to ensure the plan is sound.

CCE is a considerable landowner in Chichester with land largely to the south, west and east of Chichester which could assist the Council in meeting their housing and development needs throughout the plan period.

There is a need within the emerging plan to secure new allocation sites to commence early in the plan period and the earlier delivery of Southbourne will help relieve pressure arising from the anticipated delivery of both Tangmere SDL and West of Chichester SDL, both expected to commence in 2027/2028 and both of which have experienced substantial delays to their preparation to date.

Full text:

'Proposed Submission' Local Plan Appendix E – Housing Trajectory

Appendix E outlines the indicative housing trajectory for the plan period 2021-2039. The trajectory for delivery of the development in Southbourne has construction commencing in earnest in 2028/2029. Subject to the adoption of the plan within the anticipated timescales and the subsequent early preparation and adoption of a Site Allocations DPD (or neighbourhood plan), alongside the timely determination of planning applications / conditions, we envisage delivery of units on land east of Southbourne to instead commence from 2027/2028. There is a need within the emerging plan to secure new allocation sites to commence early in the plan period and this earlier delivery will help relieve pressure arising from the anticipated delivery of both Tangmere SDL and West of Chichester SDL, both expected to commence in 2027/2028 and both of which have experienced substantial delays to their preparation to date.

RECEIVED LATE: This section requires a firm commitment to monitoring and reporting back, not just a paper one.

Full text:

Thank you for the opportunity to comment on the Draft Chichester District Local Plan 2021-39. We would suggest that there has been insufficient public consultation to date. We commented on the draft Local Plan for 2015, on the Preferred Options in 2019 and there have been many changes in Government policy and commitments since then to include Climate Change, Net Zero and commitments made at COP 26 and 27 to include reducing methane emissions etc. With regards to this consultation we recognise the importance of a plan-led system and support Chichester District Council's (CDC) desire to produce a comprehensive Local Plan. CPRE Sussex wishes to contribute to policies concerning landscape, rural areas, communities, environment and wildlife drawing on evidence and local knowledge.

CONTEXT

1. Examining the previous government consultation which closed on March 2nd, ie the Levelling-up and Regeneration Bill including some aspects of the National Planning Policy Framework, NPPF, there are some issues which would impact on this Local Plan and need consideration.

1.1 That consultation included important changes to the way in which the 5 year housing land supply is calculated, and the timetable for making Local Plans. They are of significance to local councils, especially those with Neighbourhood Plans. Some measures will take effect almost immediately through an update to the existing NPPF in Spring 2023. Others will follow later in the year or in 2024. Surely such consultations should be better phased to make plan development more logical and access to consultations easier?

2. Communities: Our group welcomed the overall shift in emphasis towards communities. Mind you, while the word is used 121 times in the Prospectus it does not appear in the draft NPPF! We would expect much more emphasis on the importance of communities in any forthcoming consultations. Earlier and more effective engagement with communities could help to lead to a less confrontational planning system with an emphasis on active participation.

3 Time required – a lot of time is needed to understand and implement such policies and a searchable on-line version would be very helpful; and, consideration also needs to be extended to those people in the community who are not computerised.

4 We take the word “sufficient” with regard to housing numbers to be equivalent to that which is “needed” and the current Standard Method does not establish that figure. Our MP, the Rt Hon Andrew Griffith, Arundel and South Downs, referred to the approach to developing housing numbers as a mutant algorithm.

4.1 Specifically, the changes to housing targets, to make them ‘advisory’, are welcome. However, we should remind you that the Government continues to insist on using out-of-date projections (2014). The current ONS population estimates are 1 million less people in the population than allowed for in the figures used to so that the reliance on the 2014 figures is completely out of date. The emphasis should always be on using current up to date evidenceand to use those out-of-date figures produces the wrong results and does not conform with the need to use up to date information. In addition, this would require an immediate change to the guidance to insist (as previously) on the most up-to-date projections.

4.2 We also recommended a review of the Standard Method, which does not make housing affordable and simply supports developers to build market homes where they want to. The graph above illustrates the gap between projection and current population figure provided by the Community Planning Association.

4.3 Local Planning Authorities, LPAs, were also given an opportunity to put forward alternatives to the Standard Method and to name the specific constraints faced. Our contribution to that consultation referred to the:

- Reduction of land available to the CDC given the creation of the South Downs National Park, SDNP
- English Channel
- SDNP itself
- Range of internationally important designated sites
- Rare species and habitats
- River flood plains
- Water neutrality in part of the District
- Nutrient neutrality in the Solent
- Sea Level Rise

- Inadequate infrastructure – roads/lanes and local transport; sewage treatment; community facilities such as medical centres, shops; and

4.4 There have already been large housing commitments, loosely put on “flat green land” around Chichester and now CDC is eyeing the “empty” north of the District with allocations being made for Loxwood and an increase in the number of houses being sought in Wisborough Green. Such land supports wildlife which often may not be under recorded as it is private land. Areas in both of those Parishes has been “cleared” of biological interest but the BNG established a baseline of 2020 and google maps can show the state of the environment at that date. The commitment to safeguarding biodiversity needs to be pursued carefully and consistently.

COMMENTS ON THE CDC LOCAL PLAN 2021-2039 REG19 proposed submission comments: the comments cite the para and/or Chapter number

5. At this phase in the local plan process the scope of the invited representations is limited to whether the Plan that has been produced is:

- a) legally compliant (i.e., whether it meets the legal requirements); and
- b) sound (i.e., whether it has been positively prepared, is justified, is effective and is consistent with national policy) and I would ADD whether it is forward thinking enough as it is planned to last until 2039.

5.1 The plan area is split in to three areas, each with different characteristics, landscapes and access to services:

- a) • The East-West Corridor, running across the width of the plan area, is varied in landscape with the inclusion of both larger settlements (including the city) and rural villages. It has the best transport connections and access to facilities in the plan area with the A27 and railway running through-out.
- b) The Manhood Peninsula* MP, located in the south of the plan area, jutting out into the English Channel, is rich in coastal landscapes with the majority of the area covered by environmental designations. It also includes some of the plan area’s larger settlements which rely heavily on limited road accessibility to the north towards Chichester city.
- c) The North of the Plan Area is primarily rural in character with diverse landscapes, rich cultural and heritage assets and a number of dispersed settlements, some of which are relatively isolated and served by narrow lanes with limited public transport

*NB The population on the MP is dispersed in a rural landscape and equals that of Chichester. The description for the North section could just as easily have been used for the MP.

Chapter 2 and Local Plan Vision

These Objectives will need to underlie every aspect of the document.

5.2 P 23: Para 2.25 Replace the word “site” by “area” and insert forming part of a diverse set of wetlands (Ditches, Rifes, Ponds, Saline lagoons and a small section of Canal). Info: The Medmerry site is no longer the largest eg having been overtaken in area by the Steart Marshes, Somerset.

5.3 Include mention of rare habitats and species and the role of Selsey Bill in facilitating arrivals and departures of bats, butterflies and birds. That’s its USP,

6.1 P 25 Local Plan Vision and Strategic Objectives p 30 Objective 1: CLIMATE CHANGE

This section does not reflect the urgency of the issue nor the vulnerability of parts of Sussex. Many scientists are pointing to Sea Level Rise, SLR, speeding up and some of them cite a 10 year window in which to act ie so that before this Local Plan has run its course, areas on the coast including the coastal plain and the Manhood Peninsula could well be adversely affected. This would have an immediate impact on housing, facilities and transport links and could lead to the local population having to move.

6.2 Actions related to this particular objective need to be included in all the following objectives. The south of the District is very vulnerable and the rest of the District will experience very intensive rainfall, water shortages (NE/EA 2013 report) and hot summers.

6.2 Policies need to include not building on areas below 5m high Water Level. The CDC Climate Change officer should host meetings to consider potential plans for putting houses on stilts, moving people to land safe from flooding and re-directing roads, cycle ways and footpaths to facilitate future access.

6.3 Evidence: See the Surging Seas and NASA websites for prediction of Sea Level Rise. Need to include reference to the UK Climate Resilience Programme jointly led by UK Research and Innovation, UKRI, and the Met Office which was set up to fund research “to help understand how to quantify the risks from climate change and build climate resilience for the UK, This research should produce “usable outputs” to “directly support decision-making” by government, local authorities, communities and other stakeholders

6.3.1 Every area of UK society will feel the effects of climate change and, as global emissions continue to rise, pre-paring for life in a warmer world is crucial. Findings were discussed last week by the UK ranging from assessments of elderly people overheating in care homes through to building community-run water storage.

6.3.2 Every area of UK society will feel the effects of climate change and, as global emissions continue to rise, preparing for life in a warmer world is crucial.

6.2.2.i In early March, UKTI and Met office researchers involved with the programme gathered to present and discuss their findings. They ranged from assessments of elderly people overheating in care homes through to building community-run water storage. These items and website need to be referenced in the evidence section.

6.3.3 The key points are intended to help businesses and policymakers adapt to climate change.

6.3.4 Many focused on “climate services” defined as involving the “production, translation, transfer and use of climate knowledge and information in climate-informed decision making”.

6.3.5 Climate services could be an important tool for adaptation because they can provide people with the relevant information to prepare for climate change.

6.3.6 Representatives from the Met Office laid out their recommendations for a UK National Framework for Climate Services. And said they wanted to provide a “driving force” for the nation’s climate services community and help ensure that “adaptation action actually does get done”.

6.4.7 UK ‘SSPs’

“Shared socioeconomic pathways” (SSPs) are tools used by researchers to explore how society will change in the future. This can help them to answer important questions about climate change. As there were no UK-specific versions of SSPs available to complement the UKCP18 climate projections Ref: The importance of Adaptive Resilience Solutions in the Face of Climate Threats.

Recommendation: This report needs to be drawn on and form part of the evidence base.

7.1 Objective 2: NATURAL ENVIRONMENT Work with site managers of the Designated Sites and NGOs in the wider environment. This objective is vitally important and welcome and its importance needs to be reflected in all parts of the plan to include Wildlife Corridors, Biodiversity Net Gain and the Nature Recovery Network.

Sir David Attenborough

"It may sound frightening, but the scientific evidence is that if we have not taken dramatic action within the next decade, we could face irreversible damage to the natural world and the collapse of our societies."

7.1.1 The emergency concerning Biodiversity also needs to be communicated.

Para 2.32: Agree – this (climate emergency) is the most urgent issue facing us all together with the Biodiversity Emergency (declared by IPBWS, 2019).

7.1.2 Info: The ESPACE project European Spatial Planning: Adapting to Climate Events (ESPACE) was a four-year project funded by the European Commission's north-west Europe INTERREG IIIB programme and the ODPM. It produced a Climate Action Plan for the Manhood Peninsula in 2008 and not much action has followed to implement this. Perhaps it needs dusting off and re-visiting and including within the Local Plan?

7.2 Add policy:

PROPOSED Ecosystem Services Policy

7.2.1 CPRE Sussex considers that the Chichester Local Plan 2021 - 2039 should include a policy specifically for Ecosystem Services for the following reasons:

1. NPPF para 174. Planning policies and decisions should contribute to and enhance the natural and local environment by:

a) protecting and enhancing valued landscapes, sites of biodiversity or geological value and soils (in a manner commensurate with their statutory status or identified quality in the development plan);

b) recognising the intrinsic character and beauty of the countryside, and the wider benefits from natural capital and ecosystem services – including the economic and other benefits of the best and most versatile agricultural land, and of trees and woodland

7.2.2 'Natural capital refers to the elements of nature that produce value to people – whether directly or indirectly. Our natural capital 'assets' are the stocks of renewable and non-renewable natural capital such as our soils, freshwater, farmland, forests, atmosphere, oceans, ecological processes and the natural processes that underpin them. The flows of ecosystem services and benefits that our natural capital provides can be very obvious such as food, fuel, clean air, clean water, and opportunities for recreation. Others are much less visible, such as climate regulation, flood defences provided by natural vegetation, the billions of tonnes of carbon stored by peatlands and other habitats and the pollination of crops by insects'. (Sussex Local Nature Partnership <http://sussexlnp.org.uk/natural-capital/>)

7.3 Accordingly, we propose an Ecosystem Services policy (an adaptation of South Downs Park Authority's Core Policy SD2: Ecosystem Services'), be added as follows:

1. Development proposals will be permitted where they have an overall positive impact on the ability of the natural environment to contribute goods and services. This will be achieved by means of high-quality design, and by delivering all opportunities to:

a) Sustainably manage land and water environments;

b) Protect and provide more, better and joined up natural habitats;

c) Conserve water resources and improve water quality;

d) Manage and mitigate the risk of flooding;

e) Improve the District's resilience to, and mitigation of, climate change;

f) Increase the ability to store carbon through the retention of existing woodland, new planting or other means;

g) Conserve and enhance soils, use soils sustainably and protect the best and most versatile agricultural land;

h) Support the sustainable production and use of food, forestry and raw materials;

i) Reduce levels of pollution;

j) Improve opportunities for peoples' health and wellbeing; and

k) Provide opportunities for access to the natural and cultural resources which contribute to the District's special qualities.

2. The Environment Act 2021 will require the production of a Nature Recovery Network and more locally a Local Nature Recovery Strategy. The Strategic Wildlife Corridors in Chichester District will be integral components of that local network. The importance of local networks in Nature Recovery Networks is highlighted in NPPG

7.3.4 Policy NE 4 Strategic Wildlife Corridors

CPRE Sussex supports this policy, Strategic Wildlife Corridors as part of the Local Plan process, conform with section 179 of the NPPF 2021 which is well-evidenced. However, CPRE Sussex wishes to question the size of the corridors ie the width/

Information provided in the 2021 consultation appears to demonstrate that these areas have been downsized such as those put alongside the East of the City Corridor, it appears that there has been a narrowing of the Strategic Wildlife Corridor around the location of the proposed allocations of A8, Chapter 10: Strategic and Area Based Allocations Land East of Chichester and potential A7, Land at Shopwyke. The Corridor to the East of Chichester was proposed for connectivity and functional links to the area for the rare and European Protected Species of Barbastelle Bats. It is shown on CDC technical consultation documents as a bat network

This does not conform with the Natural Environment & Rural Communities Act, NERC, 2006 and Section 40 subsection 3a as it would destroy a habitat over which the Barbastelle Bat has been recorded, a Section 41 species. And it is the DUTY of the Local Authority to safeguard these species. There should be NO recreational use in the buffer zones.

8. Green Infrastructure: p 160 and Policy P 14 d Submission (Regulation 19)

8.1 Local Green Space

6.82. The NPPF includes the concept of Local Green Space designation. This is a discretionary designation and sites may be identified and included in either local or neighbourhood plans. The designation should only be used as defined by the criteria in the NPPF where the land is not extensive, is local in character and reasonably close to the community; and, where it is demonstrably special, for example because of its beauty, historic significance, recreational value (including as a playing field), tranquillity or richness of its wildlife. Any areas which fall outside a neighbour-hood plan area and where such designation is sought, will be considered by the subsequent Site Allocations DPD that will cover the remainder of the plan area. Policies for managing development within a Local Green Space should be consistent with those for Green Belts.

8.2 Parishes should be encouraged to look into such areas to be included in Neighbourhood Plans.

9. Renewable Energy: General policy

9.1 Housing p 103:

CPRE Sussex considers that the Chichester Local Plan should include a policy requiring all new-build homes to be equipped and sold with solar PV panels, roof or wall mounted.

9.2 Although the Chichester District Local Plan, at Para 6.15, states that 'Design proposals should respond to the opportunities a site presents to make best use of solar gain where this can be achieved without compromising good urban design or creating issues of overheating', there is no requirement in the any of the plan's policies for new-build homes to be equipped and sold with roof or wall mounted solar PV.

9.3 Note that West Sussex County Council has advised in their Solar Together initiative that "By generating electricity from the sun, you could reduce your annual carbon emissions by approximately one tonne each year and help West Sussex to become carbon neutral".

Note, too: <https://solartogether.co.uk/westsussex/blog/best-ways-to-increase-solar-self-consumption>

9.4 "According to the University of Oxford findings, UK households with solar PV self-consume 45% of their own solar generation on average and reduce annual electricity demand from the grid by 24%. With additional adjustments, this reduction of 24% can be increased to over 35%".

9.5 New-build homes in Chichester District should therefore be equipped with solar P V panels. We question the statement in Para 6.15 that 'solar gain' could create 'issues of overheating'. Surely this can be prevented by good design?

9.6 There are additional opportunities for solar installations on school rooves (Brighton Sustainable Energy Co-op has many examples), car parks, industrial buildings et al.

10.0 Renewable Energy: Specific location Wisborough Green 75 additional houses. Unacceptable – see CDC Capacity Study sub sections 166+167.

Limitations – Ancient woodland; wildlife – rare habitats and species, river floodplain; Water neutrality; HRA with reference to the Mens Ancient Woodland and presence of European Protected Species, Barbastelle Bats flight paths and foraging across the parish. See Natural England report Site Improvement Report and reports by Frank Greenway, 2008 et al.

10.1 See Page 84: In the north of the plan area, properties within Southern Water's Sussex North Water Resource Zone are supplied with water from a

groundwater abstraction at Pulborough which is currently subject to environmental investigations to ensure there is no adverse impact on environmentally designated sites in the Arun Valley. This may impact on the available supply and alternative sources may need to be considered by Southern Water. Natural England published a position statement in September 2021 requiring developments within the Sussex North Supply Zone to be water neutral – this means that the use of water in the supply area after the development is the same or lower than before. A Water Neutrality Strategy had been prepared jointly with other affected authorities. Natural England's Position Statement sets out an interim approach based on minimising water use in new builds and offsetting the water that is used

10.2 Water consumption target. It is noted that both Ports-mouth Water and Southern Water have targets to reduce water consumption to 100 litres per person per day (lppd) by 2040, a lower figure than the current most stringent Building Regulation target of 110 lppd and not that level which could be required for water neutrality.

10.3 The Local Plan is weak on impacts especially from the largest concentration of caravans at Selsey on Medmerry.

10.4 There is no wildlife corridor running east to west along the Manhood Peninsula ie Pagham to East Head and this undermines the importance of a positive barrier zone to protect the habitat. CDC have used the corridors for this barrier purpose possibly more than as a pathway throughout other parts of the plan.

10.5 Nutrient neutrality exclusion of a large area of the Peninsula from the protection zone is illogical as the same conditions exhibited in Chichester harbour (in the zone) exist at Pagham.

10.6 There is a 'tool' - "nutrient budget calculator March, 2022 version" – which gives an "n" factor for instance to discharges from WWTW. There is no direct mention of its use at Chichester harbour and as the data on Pagham Harbour has yet to be made public, the role of Sidlesham WWTW has not been referred to. The "N" factor would probably be more restrictive on outflows from WWTW than the total discharge permits – and shows a lack of coordinated approach between the Environment Agency and Natural England.

10.7 There are two reports due to be published this month - the West Sussex Coast and Gt Brighton Board and Southern Water overall plan for drainage and waste water-the timing of the LP – is thus unable to take these two influential inputs into account and may have implications for the 'Soundness ' of the plan as it moves forward.

10.8 No mention is included of Sidlesham WSTW which is operating at and beyond capacity resulting in new housing on the Manhood Peninsula dealing with waste water in gardens, in houses etc.

Pages 87 and 88: Paras 4.112 and 4.113 are contradictory.

Appendix F Monitoring Framework

Early in 2020 attended a Public Inquiry representing the Manhood Wildlife and Heritage Group and presented evidence about an application at Easton Farm where the implementation of an application had not been followed up, which had expanded like Topsy and which potentially could damage the Medmerry coastal realignment site with its runoff. CDC had not been on watch possibly through lack of staff and/or a lack of enforcement staff. The site had grown without permission. This section requires a firm commitment to monitoring and reporting back, not just a paper one.

Thank you for your attention.

Agent: Troy Planning + Design (Troy Hayes, Managing Director) [7640]

Summary:

Lack of attention and detail given to Monitoring Framework; no introduction to Framework or how it intends to work with authorities and organisations it identifies in Framework; entirely unclear which 'Target to be achieved', 'Monitoring Indicators' and 'Responsible Agency / Partner' relates to each policy; 'Delivery' refers to policy documents, not what would expect when defining how policies will be delivered; for its WRZ monitoring indicator, targets and indicators will not provide an accurate, on-going and up to date assessment of total water usage in the WRZ region after development takes place compared to water usage in the region before development took place; no mention of joint mitigation strategy to ensure water neutrality in WRZ.

Document Element: Appendix F: Monitoring framework

Respondent: National Highways (Mr Marius Pieters, Spatial Planning Manager) [8127]

Summary:

[National Highways letter dated 24/07/23 confirmed representation should be categorised as Comment - Agree 'in principle' reinforce need for monitoring processes/Seek further information]. We agree 'in principle' to the monitoring methods set out for policies T1 and T2. However, we reinforce our comments regarding the need for establishing monitoring processes and resources (manual or automated) to manage the monitoring regime.

The monitoring for Policy I1 needs to include funding, notably how committed and completed schemes were funded and the percentage of funding from developer contributions, government agencies and/or Council prudential borrowing.

It is critical that the Council, and other key stakeholders, can track how funding was gained (e.g., contributions, borrowing etc) and record this as part updating the IDP

Full text:

We have reviewed the publicly available Local Plan documents and provided comments in the attached letter, in relation to the transport implications of the plan for the safety and operation of the SRN.

Our comments include issues to resolve, comments, requests for further information and recommendations. A brief summary of our main comments

- are:
- the reliance on the delivery of the A27 Chichester bypass improvements project.
 - the requirements for new, additional, and adapted processes and assessments, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments.
 - collaborative working between agencies in combination with a robust monitor and manage policy.

We hope our comments assist.

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders. We look forward to continuing to participate in future consultations and discussions. Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Background

National Highways has been appointed by the Secretary of State for Transport as strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the strategic road network (SRN).

National Highways is responsible for operating, maintaining, and improving the Strategic Road Network (SRN) i.e., the Trunk Road and Motorway Network in England, as laid down in Department for Transport (DfT) Circular 01/2022 (Strategic Road Network and the delivery of sustainable development).

The SRN is a critical national asset and as such we work to ensure that it operates and is managed in the public interest, both in respect of current activities and needs as well as in providing effective stewardship of its long-term operation and integrity.

Our responses to Local Plan consultations are guided by relevant policy and guidance including the National Planning Policy Framework (2021) (NPPF):

- Transport issues should be considered from the earliest stages of plan-making and development proposals so that the potential impact of development on transport networks can be addressed (para 104).
- The planning system should actively manage patterns of growth such that significant development is focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. (para 105).
- Planning policies should be prepared with the active involvement of highways authorities and other transport infrastructure providers so that strategies and investments for supporting sustainable transport and development patterns are aligned. (para 106).
- In terms of identifying the necessity of transport infrastructure, NPPF confirms that development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe. (para 111).
- Planning policies and decisions should support development that makes efficient use of land, taking into account the availability and capacity of infrastructure and services – both existing and proposed – as well as their potential for further improvement and the scope to promote sustainable travel modes that limit future car use. (para 124).

In relation to the tests of soundness set out at paragraph 35 of the NPPF, in the context of transport, these are interpreted as meaning:

- a) Positively prepared - has the transport strategy been prepared with the active involvement of the highway authorities, other transport infrastructure providers and operators and neighbouring councils?
- b) Justified – Is the transport strategy based on a robust evidence base prepared with the agreement in partnership, or with the support of the highway authorities?
- c) Effective – Does the transport strategy and policy satisfy the transport needs of the plan and is it deliverable at a pace which provides for and accommodates the proposed progress and implementation of the plan?
- d) Consistent with national policy – Does the transport strategy support the economic, social, and environmental objectives of the Plan and the NPPF/NPPG?

We will be concerned with proposals that have the potential to impact on the safe and efficient operation of the SRN; in this case, the A27 trunk road (Chichester Bypass and its junctions) which is the main access route in the Chichester area. We have particular interest in any allocation, policy or proposals which could have implications for the A27 and the wider SRN network. We are interested as to whether there would be any adverse road safety or operational implications for the SRN. The latter would include a material increase in queueing or delay or reduction in journey time reliability during the construction or operation of the development set out in the plan.

National Highways is a key delivery partner for sustainable development promoted through the plan-led system, and as a statutory consultee we have a duty to cooperate with local authorities to support the preparation and implementation of development plan documents.

In accordance with national planning and transport policy and our operating licence, we are entirely neutral on the principle of development as it is for the local planning authority to determine whether development should be allocated or permitted; albeit it must comply with national policy on locating development in locations that are or can be made sustainable. Therefore, while always seeking early and fulsome engagement with local plans and/or developers, we will simply be assessing the transport and related implications of plans or proposals and agreeing any necessary transport improvements and relevant development management policy.

In progressing Local Plans, we will seek to agree the following:

- Assessment tools and methodology
- Baseline Assessment i.e., to demonstrate that the assessment tool accurately reflects current transport conditions
- Comparator case assessment i.e., to forecast the transport conditions that would occur in the absence of the plan
- Forecast modelling i.e., to forecast the transport conditions that would arise with the plan in place, this will include an assessment at the end of the Plan period; and, if required, at full build out if that occurs after the end of the Plan period
- Outputs and outcomes of modelling, demonstrating, as appropriate, what transport infrastructure is necessary to support the plan o It should be noted that a suite of transport modelling tools may be required. This includes strategic modelling covering an area at least one major junction beyond the district boundary, localised network modelling where several links/junctions are close together and/or individual junction modelling
 - o A DMRB (Design Manual for Roads and Bridges) compliancy assessment may also be required for certain highway features, such as Merge/Diverge assessment at Grade separated junctions, link capacity assessments, and others.
- The design of any necessary transport infrastructure, to an extent suitable for establishing deliverability during the plan period at the time that it becomes necessary for the purpose of ensuring that unacceptable road safety impacts or severe operational impacts do not arise as a result of development. This may be to at least General Arrangement design stage or preliminary design stage. Whichever degree of detail is agreed, the products must be in full compliance with the DMRB.
- Industry standard transport intervention costings.
- The delivery/funding mechanisms for necessary transport interventions. It should not be assumed that National Highways will have any responsibility

to identify or deliver necessary transport interventions.

- If considered appropriate, a “Monitor & Manage” (M&M) framework, aimed at managing the pace of development in line with the pace of funding and delivery of necessary highway interventions in a manner which responds to the realworld impacts of development may be agreed for inclusion in the plan subject to the adequacy of risk control measures included therein. This can include the move from a ‘predict & provide’ style of delivery to ‘a vision & validate’ style.
 - o Any M&M framework must be based on a “worst case scenario” whereby necessary mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. It must be translated into development management plan policy and policy relating to development allocations.

Further detail on the above can be provided by National Highways.

While ideally all the above should be agreed prior to the Submission of the Local Plan for examination, we recognise that this is not always possible. However, all parties should work towards all matters being agreed and reflected in a Statement of Common Ground (SoCG) by the start of the Local Plan Examination at the latest. Ideally the SoCG between the Council and National Highways would be prepared well in advance of plan submission in order to guide resource input and to track progress towards final agreement on all relevant matters starting from the earliest plan iterations until the final version is agreed.

It is acknowledged that Government policy places much emphasis on housing delivery as a means for ensuring economic growth and addressing the current national shortage of housing. The NPPF is very clear that:

“Strategic policy-making authorities should establish a housing requirement figure for their whole area, which shows the extent to which their identified housing need (and any needs that cannot be met within neighbouring areas) can be met over the plan period.”

However, new DfT C1/22 and the NPPF are equally clear that any development, including housing delivery, must be tempered by the requirement to ensure that the associated transport demand can be accommodated without unacceptable impacts on the safety of the SRN or severe impacts on the operation of the SRN including reliability and congestion. Therefore, as necessary and appropriate, any plan and/or development must be accompanied by suitable mitigation in the right places at the right time, that is to the required design standards and is deliverable in terms of land availability, constructability and funding.

We would also draw your attention to the then Highways England document ‘The Strategic Road Network, Planning for the Future: A guide to working with National

Highways on planning matters’ (September 2015). This document sets out how National Highways intends to work with local planning authorities and developers to support the preparation of sound documents which enable the delivery of sustainable development.

https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/461023/N150227_-_Highways_England_Planning_Document_FINAL-lo.pdf

Responses to Local Plan consultations are also guided by National Planning Policy Framework (NPPF) revised on 20 July 2021 which sets out the government’s planning policies for England and how these are expected to be applied.

Updated Circular (01/2022)

It should be noted that since the start of the Local Plan consultation process, on the 23 December 2022, the Department for Transport released a new circular on the ‘Strategic road network and the delivery of sustainable development’ (Circular 01/2022), which replaces all of the policies in Circular 02/2013 of the same name. These representations take account of the new circular and the requirements in terms of the Local Plan evidence base and process.

We request that the Local Plan is prepared in line with all aspects of the new circular. Particularly, the principles of sustainable development (paragraphs 11 to 17), new connections and capacity enhancements (paragraphs 18 to 25), and engagement with plan-making (paragraphs 26 to 38).

Regulation 18 submission

In our Regulation 18 submission we noted several matters including:

- The need to mitigate the adverse impacts of strategic development traffic to the A27 Chichester Bypass and its junctions at Portfield Roundabout, Bognor Road Roundabout, Whyke Roundabout, Stockbridge Roundabout and Fishbourne Roundabout and Oving junction.
- The need to identify a mechanism to calculate contributions towards the delivery of the previously agreed Local Plan A27 improvements
- The need to confirm the number of dwellings needed within the plan period
- The need to establish National Highways acceptance of the traffic model reference and future case scenarios
- The need to confirm costs, viability, and funding associated with mitigating the safety and congestion impacts of the development included within the plan.

Local Plan context

This Local Plan (Chichester Local Plan 2021 – 2039), prepared by the Local Planning Authority (LPA) Chichester District Council, sets out the vision for future development in the district and will be used to help decide on planning applications and other planning related decisions including shaping infrastructure investments.

The draft sets out how the district should be developed over the next 18-years to 2039 including for the full Plan period (1 April 2021 to 31 March 2039) the total supply of

- 10,359 dwellings

- 114,652 net additional sqm new floorspace

Minus the completions this is equivalent to around 530 dwellings and 6,150 sqm of floorspace a year.

National Highways Representations

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders.

We have undertaken a review of the Chichester Local Plan 2021-2039 proposed submission version and accompanying evidence documents, our comments are set out in the tables below (following pages). [see table within attachment]

Summary

We have reviewed the publicly available Local Plan documents and provided comments above in relation to the transport implications of the plan for the safety and operation of the SRN. We understand that other technical information is available, but this was not presented as part of this consultation. Chichester, and the A27, are already heavily congested, infrastructure in the existing Local Plan remains undelivered and the growth set out in the new Plan will further increase travel demand.

As presented, satisfying the transport needs of the plan is clearly reliant on the delivery of the A27 Chichester bypass improvements project. The A27 Chichester bypass improvements project is one of 32 pipeline schemes being considered for possible inclusion in National Highways third Road Investment Strategy (RIS3) covering 1 April 2025 to 31 March 2030.

On 9 March 2023 the UK Transport Secretary ensured record funding would be invested in the country’s transport network, sustainably driving growth

across the country while managing the pressures of inflation. The announcement cited the A27 Arundel Bypass as being deferred from RIS2 to RIS 3 (covering 2025-2030). The transport secretary also identified a number of challenges to the delivery of the road investment strategy and cited the benefit of allowing extra time to ensure schemes are better planned and efficient schemes can be deployed more effectively.

At present, there is no commitment by DfT to carry out the A27 Chichester bypass improvements project. Until the A27 Chichester bypass improvements project is published in the RIS3, consented and a decision to invest is made it cannot be assumed to be a committed project. We note that the Plan does not address any uncertainty of delivery of the A27 Chichester bypass improvements project and we strongly recommend that there is either no reliance placed on RIS3 to realise capacity for growth in the Plan or that contingency measures are included to cover the eventuality that RIS3 funding is not forthcoming within the plan period. It is not clear that the potential impact of development on transport networks can be addressed in the absence of the A27 Chichester bypass improvements project.

Achieving net zero, reducing emissions reduction, acting on climate, and supporting thousands of new homes and new employment developments will be problematic with existing processes. New, additional, and adapted processes and assessments will likely be required, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments. We acknowledge that change is complex, expensive, and time-consuming, especially for smaller district level Councils. But the hard work will deliver benefits for the Council and residents in the longer-term.

National Highways seeks to continue working with the Council and WSCC to progress coordinated and deliverable packages of interim mitigation measures and alternative transport solutions while a long-term strategic solution is considered by government. This must however be in combination with a robust monitor and manage policy that appropriately manages the risk of unacceptable road impacts resulting from new housing and other development over the Plan period.

We have been in discussion with Chichester District Council regarding their proposed Monitor and Manage Strategy. At present, we do not consider the current strategy to be robust and we seek further information and detail especially on who, when and when monitoring and management will be undertaken. Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas. Any M&M framework must be based on a "worst case scenario" whereby necessary transport mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. The M&M framework must set out that the alternative to mitigation not being delivered is that development does not proceed where that development would give rise to unacceptable road safety risk or severe cumulative impacts on the road network in the absence of that mitigation. The M&M framework must be translated into development management plan policy and policy relating to development allocations.

As we have reiterated throughout our comments, we welcome the opportunity to work with you to address these outstanding matters and we will continue to liaise over submitted Transport Assessment, Travel Plan policy and Monitor and Manage Policy to help to work towards a viable plan. We hope our comments assist.

We look forward to continuing to participate in future consultations and discussions. Please do continue to consult us as the Plan progresses so that we can remain aware of, and comment as required on, its contents.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Object

Document Element: Appendix F: Monitoring framework

Respondent: Sussex Wildlife Trust (Laura Brook) [7654]

Summary:

SWT suggests that the monitoring framework as presented doesn't clearly indicate the monitoring requirement for each policy. As a result, SWT feels it fails to capture some important information to inform the effectiveness of the policies. For example, policy NE5 Biodiversity and Biodiversity Net Gain does not appear to have a monitoring requirement that will capture the percentage of net gain delivered by applications. Given that the Environment Act will bring in mandatory net gain of a minimum of 10% by November 2023, we feel it would be remiss of CDC to miss capturing the effectiveness of their policy against national mandatory requirements. It might also help to build a picture of the feasibility of exceeding that minimum requirement.

We also highlight that Sussex Wildlife Trust is listed as a responsible agency/partner. Can we ask CDC to clarify our role in that? It may be that an amendment is required to more specifically reference the role of the Sussex Biodiversity Record Centre rather than SWT.
