

Chichester Local Plan 2021 - 2039

Regulation 19 Representations (in Plan order)

5342

Object

Document Element: Chapter 1: Introduction, 1.1**Respondent:** Mr Paul Bedford [5302]**Summary:**

The Legal status of the Plan is proven but because of the protracted course of the plan's preparation some stages are now dated and raise the question that they should be refreshed. This is the particular case in respect of public participation. There have also been significant changes in legislation that guides the plan's formulation that would have benefited from revised statement of legislative/legal context.

Full text:

These comments are confined to the three areas set out in the consultation - Legal, Soundness and Duty to Cooperate and to two documents - the draft Local Plan and the Sustainability Assessment.

Legal Status

The Legal status of the Plan is proven but because of the protracted course of the plan's preparation some stages are now dated and raise the question that they should be refreshed. This is the particular case in respect of public participation. There have also been significant changes in legislation that guides the plan's formulation that would have benefited from revised statement of legislative/legal context.

Soundness

In the SA it is stated that the key issue for the plan is the A27 and its capacity. This statement is fundamental in that it is realistically outside the scope of the local planning authorities (CDC and West Sussex CC) to have any direct control over. Unless National Highways position is changed from their previous statements on time scales and what might be included in their assessment no consideration of A27 will be made until RIS3 taking any even initial action into the next decade.

So fundamental and influential is the A27 that assessment of Local Housing Need (LHN), a key component of the whole plan, is reduced from 638 units pa to 535. This position must have an impact on the plan's 'Soundness and crucially the phasing of development.

It is worthy of note that three recent housing appeal decisions unfortunately focused primarily on the lack of a 5yr housing supply base on the 638 higher figure. More pressing were issues of sewage system capacity, coastal inundation and fluvial flooding and nutrient neutrality.

The reduction of housing requirements that the Reg19 LP now promotes is very welcomed.

The reduction on the Manhood Peninsula appears to be derived because of recent housing approvals on appeal bringing forward housing that achieves the revised target based on the 535 figure. Two points arise none of these sites are in locations that CDC indicated in documents such as the HELAA and SHELAA as positively sustainable and as all other significant Peninsula housing is dropped do these sites exceed what would have been planned totals.

The SA 'Framework' only addresses 'Water- protection of resources' this is highly appropriate given the problems experienced in the north eastern part of the district in the summer of 2022 and will become more pressing in the south. Resolution of this issue that stopped planning applications seems to be by reducing water usage at least to 110 ltr ppd or lower this is when Southern Water only hope to achieve 125ltr by 2050.

Consideration in the framework should extend to the 'Water Cycle' and particularly address the acute problems of sewage system network capacity, polluting WWTW outfalls, nutrient neutrality. These systems are already currently stressed/ completely overloaded with current levels of use without new development coming on stream and discharges of untreated sewage are a significant and growing problem to Chichester, Langston and Pagham Harbours- this situation must be set against Defra- Storm Overflow Discharge Reduction Plan's statement "Protecting the Environment-water companies shall only be permitted to discharge from a storm overflow where they can demonstrate that there is no local ecological impact". Damage to Chichester/ Langstone Harbours is documented by a damning Natural England report and by that expected for Pagham Harbour all the sites of national significance for biodiversity and protected habitats.

Whilst para 5.2.34 and Box 5.1 of the SA summarise the position no direct statement of intervention is made. Reliance on a 'Statement of Common Ground' that is referred to offers no positive programme of future capital investment by Southern Water (SW) especially when set against SW's overall regional programme its cost and priorities as set out in their draft DWMP- the final version of which is due for release in March this year- does the Plan reflect this documents information that is so crucial to supporting the infrastructure need for the scale of development envisaged is challenging to the plan's 'Soundness'

Time scale of the crucial improvements to infrastructure and particularly sewer and IWWTW capacity is of particular concern. SW's Drainage and Wastewater Management Plan v1 May 2020 set out in very comprehensive way what needs to be achieved and indication of time scale - placing most in AMP8 the next 5 yr business cycle and OFWAT approval would be needed for the scale of expenditure that is many hundred of millions. These time scale constraints should be reflected in the phasing of any housing development that will have to utilise the network. There is no direct indication that such phasing will be actively enforced.

The lack of inclusion in a key background supporting document -Strategic Flood Risk Assessment (SFRA) -of the Planning Practice Guidance on Flood Risk and Coastal Change that has important bearing on issues particularly for the southern plan area and specifically mentions the importance of the phasing of development to infrastructure provision is a concern especially when it was published in August 2022. These omission again have an impact on the Plan's overall 'Soundness'.

A significant consideration in the plan that supports the need for more housing supply is the need to address affordability. The district has one of the highest ratio of median earnings to house prices of 14 times and despite substantial house building during the period 2013 -2022 the ratio has increased from 10.55. It is clear that the type of housing that has occurred and continues to be proposed in the district has done little if anything to impact on affordability and address the need for social/lower cost housing. Based on the 2011 census the district experienced 1,505 inward migration(only Brighton and Hove being higher in the West Sussex/ Gt Brighton area) - this trend has been expected to have continued and accelerated as the pandemic increased the popularity of coastal property and raised market cost of property. Just building more houses without policy intervention to prioritise social shared ownership housing will most probably prove to further increase the extent of unaffordability with the resultant consequences on workforce -especially to support the district ageing population- and supporting young people to remain in the area they have grown up in or have come to be educated. This aspect is cause concern over the Plan's 'Soundness'.

Considerable emphasis is placed on the issues of nutrient neutrality, damage to biodiversity and pollution of Chichester Harbour AONB but such emphasis is not extended to Pagham Harbour that has a similar ecological status to Chichester and suffers the same degradation issues.

Although Pagham is outside of the nutrient protection zone the factors contributing to nutrient problems are apparent feeding into Pagham. The delayed report on condition for Pagham from Natural England mirroring that for Chichester Hb gives every indication it will indicate the same levels of detriment as those in Chichester Hb. This assumption being supported by condition reports for instance for rife and ditch condition known reports. Added to these factors are known issues relating to untreated discharges from Sidlesham WWTW. The Local Plans's lack of affording Pagham similar consideration to Chichester Hb is an issue that impacts on the Local Plan's overall 'Soundness'.

Duty to cooperate

The West Sussex and Greater Brighton Strategic Planning Board (WSGBSPB) provides a context for integrated planning along the coast plain area. It is stated that this board is due to issue a review of its 2016 report next month -does the Plan address any issues that this review may raise? . Housing needs are a major feature of the area and the need to transfer unmet housing demand to adjoining authorities is characteristic feature of past policy.. The SA quite categorically states that there would be no realistic potential to meet unmet housing need above the now established LHN figure. Should the WSGBSPB's report signal the need for the district to absorb housing from other areas there may be problems as the Plan does not appear to offer any contingency or process how such pressure might be mitigated.

The highly restricted housing numbers in the South Downs National Park Local Plan and the closeness of its boundary to the 'coastal strip' are contributing factors to the area's carrying and overall capacity to support development. Further constraint is imposed by the Chichester Harbour Area of Outstanding Natural Beauty (AONB) and the geographical physical restrictions of the Manhood Peninsula creating 'coastal squeeze'.

Document Element: Chapter 1: Introduction, 1.1**Respondent:** Berkeley Strategic Group (Mr Charlie Rollet-Manus) [7916]**Summary:**

This representation has been submitted by Berkeley Strategic ("Berkeley") in response to the current consultation on the Regulation 19 Chichester Local Plan.

Berkeley control approximately 3.67 hectares acres of land to the south of Chichester. The site is located adjacent to Fishbourne Roundabout and is referred to in the Housing and Economic Land Availability Assessment as HFB0027. The site was previously included in Policy AL6 as part of a wider employment development parcel.

Berkeley support the preparation of the Local Plan and welcomes the opportunity to comment on the plan at this early stage of its preparation.

Document Element: Chapter 1: Introduction, 1.1**Respondent:** Mr David Lock and Ms Melanie Jenkins [7930]**Agent:** Mr Jonathan Lambert [7926]**Summary:**

This representation has been submitted by Berkeley Strategic ("Berkeley") on behalf of David Lock and Melanie Jenkins, who own approximately 40 acres of land to the north of Chichester known as Raughmere Farm (HELAA reference HLV0007).

Berkeley supports the Spatial Strategy, which seeks to focus a majority of growth at Chichester City given its status as the largest settlement and most sustainable location for development in the district, and its identification as a Sub-Regional Centre at the top of settlement hierarchy.

Full text:

This representation has been submitted in response to consultation on the Regulation 19 Chichester Local Plan by Berkeley Strategic ("Berkeley") on behalf of David Lock and Melanie Jenkins who own approximately 40 acres of land to the north of Chichester known as Raughmere Farm.

The land at Raughmere Farm is located adjacent to the built up edge of the city and is referred to in the Housing and Economic Land Availability Assessment as HLV0007. The site has previously been promoted as a suitable location on the edge of Chichester City for a development of circa 140 dwellings.

Berkeley support the preparation of the Local Plan and welcomes the opportunity to comment on the plan at this early stage of its preparation.

Please see attached representations made on behalf of David Lock and Melanie Jenkins in full.

Document Element: Chapter 1: Introduction, 1.1**Respondent:** Royal Society for the Protection of Birds (RSPB) (Mr Jack Thompson, Conservation Officer) [7905]**Summary:**

The RSPB thanks Chichester District Council for the opportunity to comment on its Regulation 19 Submission of the Local Plan. The RSPB has many important interests and priorities within the district, including the Eastern Solent and Arun Valley and the internationally important designations within. The RSPB regards the protection and enhancement of the SPAs, SACs, and their associated and surrounding SSSIs as being among the highest priorities for our work nationally.

Full text:

Thank you for consulting the Royal Society for the Protection of Birds (RSPB) on the above document. We have received the Chichester Local Plan 2021-2039: Proposed Submission (Regulation 19) ("the Local Plan") document and would like to provide the following comments of the 'soundness' of the Local Plan.

The Chichester District area lies within the Eastern Solent and Arun Valley, a Focus Area of work for the RSPB. This is one of our highest priority places in the UK for the promotion of conservation at a landscape-scale, adopting the principles advocated by the Lawton report Making Space for Nature (2010) , which recommended (in simple terms) more, bigger, better and more joined up protected areas.

A substantial part of the Council's area boundary is subject to a wide range of statutory nature conservation designations. This includes (but not limited to) the Arun Valley Special Protection Area (SPA), Chichester and Langstone Harbours SPA, Pagham Harbour SPA, Medmerry Compensatory Habitat, and Solent and Dorset Coast SPA; Arun Valley Special Area of Conservation (SAC) and Solent Maritime SAC; and a number of Sites of Special Scientific Interest (SSSIs). The RSPB regards the protection and enhancement of the SPAs, SACs, and their associated and surrounding SSSIs as being among the highest priorities for our work nationally.

Document Element: Chapter 1: Introduction, 1.1**Respondent:** Rydon Homes Limited [1499]**Agent:** DMH Stallard LLP (Mr Mark Walker, Planner) [7918]**Summary:**

Overall, we feel that CDC should be meeting their identified housing need and we disagree with the Council's justification on meeting a sub-identified need that there is insufficient capacity (due to constraints) within parts of the District.

Furthermore, we feel that the Plan is unsound. It does not adequately meet current housing need. House prices in the Chichester District are 14 times the average earnings for those working within it and there is a need for 200 social and affordable rented houses per annum for the Plan period to 2039.

Object

Document Element: Chapter 1: Introduction, 1.1**Respondent:** Mr Matthew Taylor [7977]**Summary:**

The strategy of the Plan has changed in such a way that that the public should have an opportunity to comment on those changes before a Reg 19 consultation. As we can only comment on tests of soundness there is not an opportunity for appropriate public engagement. There is not an opportunity to comment on new allocations, the suitability of the sites, or content of the policy. It is not felt that there is an intention for meaningful engagement.

We cannot make comments on new allocations, or changes to strategy i.e. introducing Gypsy and Traveller sites on all allocations at a Reg 19 stage of a Local Plan. It feels as though the Plan has been rushed through in order to tick boxes rather than producing a Plan where the public can meaningfully comment and shape our communities.

Full text:

I would question whether the Plan should be a Reg 19 consultation. The Plan contains changes to strategy and approach which the general public have not had the opportunity to comment on. As this is a 'technical consultation' where we can only comment on issues relating to the test of soundness it hardly gives the general public an opportunity for genuine public engagement.

The strategy of the Plan has changed for example:

- removal of all allocations on the Manhood Peninsula
- the identification of additional sites i.e. Maudlin Farm , Rolls Royce etc with no opportunity to comment on their suitability or policy requirements
- the inclusion of Gypsy and Traveller sites on all allocations again without an opportunity to comment on the suitability of this approach or policy requirements
- amendments to the wildlife corridors without an opportunity to comment on this. Given that changes now enable development in some areas ie Maudlin this could be seen as a cynical move.

Change suggested by respondent:

The Plan should be paused and time given for public engagement at a meaningful level.

Document Element: Chapter 1: Introduction, 1.1**Respondent:** The Goodwood Estates Company Limited [7922]**Agent:** HMPC Ltd (Mr Haydn Morris) [112]**Summary:**

Support in principle.

Full text:

The LP is supported. The district has been subject to inappropriate speculative developments without corresponding infrastructure and service improvements. Developments have been self-centred, failing to acknowledge consequences on the long-term attractiveness, viability and sustainability of the District. Each development has impacted the ability to provide enhancements and much-needed infrastructure.

To be sound the plan must meet NPPF tests and we find the plan sound in terms of it being reasonable and capable of being delivered. However it lacks soundness in terms of its vision and protection and enhancement of economic, heritage and environmental assets.

Document Element: Chapter 1: Introduction, 1.1**Respondent:** Wates Developments and Seaward Properties [8052]**Agent:** Barton Willmore now Stantec (Mr Oli Haydon) [8051]**Summary:**

These representations raise significant concerns that the plan as drafted, in particular the housing delivery strategy, risks being found 'unsound' on the grounds of failing to be positively prepared and lacking a fully considered highways evidence base. We believe the changes outlined above with regards to reflecting OAN and adding realistic capacity and specificity to the proposed allocation in Southbourne will help address these concerns.

Full text:**REPRESENTATION SUMMARY**

CDC fails on a number of counts to provide a sound reason for constraining development delivery to 535 dwellings per annum. We find that the Council's failure to adhere to the OAN on the basis of ineffective evidence results in plan that has not been positively prepared and adopts a strategy that is not justified. We believe the plan is capable promoting a greater level of housing delivery which will, in turn, help bring the estimated infrastructure contribution per dwelling to a more deliverable and realistic level.

This representation provides continued support and draft policy context for the development on land east of Southbourne. We consider it to provide a suitable and sustainable location for large-scale strategic residential growth and substantial associated infrastructure improvements.

The area was due for allocation within the Southbourne Neighbourhood Plan, having been initially allocated 1,250 dwellings on 'land east of Southbourne', prior to its removal post Examination (based on concerns of the Examiner over a pre-emption of the emerging local plan). Importantly, the Examiner did not conclude that the proposed allocation was unsustainable for growth or inappropriate in size, but simply that the timing of the Neighbourhood Plan was too early against the emerging Local Plan timetable which had unfortunately been delayed.

We continue to recommend that the land east of Southbourne (Policy A13 in the emerging LP) provides the most appropriate location for development at Southbourne. Indeed, the land to the east of the settlement was chosen as the most appropriate location, as opposed to the land to the west which is more constrained by the A27 and would likely result in amalgamation with the settlement of Emsworth.

We consider that the increase in the quantum of development at Southbourne from 1,050 to c1,250 not only ensures the highest level of community enhancements and infrastructure improvements for Southbourne and the wider area but also helps mitigate certain aspects of the emerging plan that risk being found unsound, including the potential for delays in housing delivery across the largest strategic sites and the potential for Chichester District to accommodate unmet need across neighbouring authorities (and within SDNP).

Considering the above, and in terms of specific policy amendments, we recommend the following policies be reworded to ensure the plan's overall soundness:

Policy H1 – Meeting Housing Needs – The housing requirement (10,350) for the plan period 2021-2039 must reflect Objectively Assessed Need to avoid the risk of failing to be seen as positively prepared. The evidence base on which the justification for a reduction in housing delivery is flawed and not credible. The plan fails the tests of soundness to this regard and Policy H1 should be amended in line with a reassessment of highway constraints.

Policy H2 – Strategic Locations/Allocations 2021-2039 – The quantum of development at Southbourne (A13) should be 1,250 to reflect the conclusions of the sustainability appraisal, the capacity within the land east of Southbourne and the importance in bringing forward all infrastructure improvements to the village and wider area.

Policy A13 – Southbourne Broad Location for Development - In line with the above, the total number of dwellings allocated to Southbourne should be 1,250. Further, it is recommended that a specific location is selected within Southbourne, to align with all other allocations within Chapter 10 and to avoid a significant risk to the delivery of housing. No rationale is presented as to why development in Southbourne should be delayed until the adoption of a subsequent DPD or Neighbourhood Plan. The long-term assessment and findings of the Neighbourhood Plan group and the plan examiner remain sound and should be respected and reflected in a specific and precise housing allocation for the village. We recommend this policy is rewritten to allocate 1,250 dwellings on land east of Southbourne and to align with the comprehensive masterplanning exercise that has been completed to-date.

These representations bring to light a number of recommended reconsiderations with regards to the emerging local plan, these include a reassessment of the quantum of development in Southbourne, the mechanism for infrastructure funding and delivery, the contingency planning around wastewater treatment capacity and the supporting of Vision & Validate as an approach for encouraging safe, efficient and sustainable transport.

For the reasons outlined throughout, these representations also raise significant concerns that the plan as drafted, in particular the housing delivery strategy, risks being found 'unsound' on the grounds of failing to be positively prepared and lacking a fully considered highways evidence base. We believe the changes outlined above with regards to reflecting OAN and adding realistic capacity and specificity to the proposed allocation in Southbourne will help address these concerns.

Change suggested by respondent:

Considering the above, and in terms of specific policy amendments, we recommend the following policies be reworded to ensure the plan's overall soundness:

Policy H1 – Meeting Housing Needs – The housing requirement (10,350) for the plan period 2021-2039 must reflect Objectively Assessed Need to avoid the risk of failing to be seen as positively prepared. The evidence base on which the justification for a reduction in housing delivery is flawed and not credible. The plan fails the tests of soundness to this regard and Policy H1 should be amended in line with a reassessment of highway constraints.

Policy H2 – Strategic Locations/Allocations 2021-2039 – The quantum of development at Southbourne (A13) should be 1,250 to reflect the conclusions of the sustainability appraisal, the capacity within the land east of Southbourne and the importance in bringing forward all infrastructure improvements to the village and wider area.

Policy A13 – Southbourne Broad Location for Development - In line with the above, the total number of dwellings allocated to Southbourne should be 1,250. Further, it is recommended that a specific location is selected within Southbourne, to align with all other allocations within Chapter 10 and to avoid a significant risk to the delivery of housing. No rationale is presented as to why development in Southbourne should be delayed until the adoption of a subsequent DPD or Neighbourhood Plan. The long-term assessment and findings of the Neighbourhood Plan group and the plan examiner remain sound and should be respected and reflected in a specific and precise housing allocation for the village. We recommend this policy is rewritten to allocate 1,250 dwellings on land east of Southbourne and to align with the comprehensive masterplanning exercise that has been completed to-date.

Respondent: West Sussex Growers' Association (Mr John Hall, Executive Member & Consultant) [7857]

Summary:

The Government has tasked Growers to grow more home grown produce, increase productivity, reduce food miles and the UK's reliance on imported food. There is also an increasing need for space to grow plants, shrubs and trees. These aims can be achieved; however, the Horticultural and Food Industries need Local Planning Policies to be in place that enables sustainable development. To this end, more flexibility is needed in the current CDC Local Plan - Horticultural Policy to meet the needs of the Horticultural sector.

To this end, more flexibility is needed in the current CDC Local Plan - Horticultural Policy to meet the needs of the Horticultural sector.

Change suggested by respondent:

Over the coming years, more provision of space for nurseries, high-tech glasshouses, packhouses and reservoirs will be required; however, there will also be an increased need for ancillary development, such as: Vertical Farming Projects, Research & Development Facilities, Alternative Energy Centres, Logistics and Distribution Centres, Engineering and Technical Support Facilities.

The West Sussex Coastal Plain, with its exceptionally high winter light levels and all year round beneficial climate, is the preferred location for horticultural production in the UK.

The Horticultural Industry, concentrated around Chichester and Bognor Regis, generates annual turnover that exceeds £1 billion pounds and employs more than 10,000 full time equivalent staff.

Boxgrove Parish Council supports the plan overall and that the plan is legally compliant and sound, but feels that the Local Plan consultation period has not allowed sufficient time for proper local consultation and includes proposals that have never previously been consulted upon in Boxgrove.

We do not understand how so many of the sites, previously discounted in the 2018 HELAA, for various reasons, are now designated in the 2021 HELAA as having 'no known constraints' to development on the same sites.

Document Element: Purpose of the Plan, 1.4**Respondent:** Hallam Land Management Limited [1696]**Agent:** LRM Planning Ltd (Miss Kate Coventry, Senior Planner) [6627]**Summary:**

The NPPF states at paragraph 22 that strategic policies should look ahead over a minimum 15 year period from the date of the Plan's adoption. The Local Plan aims to cover the period of 2021- 2039, which is 18 years. However, this plan has not been adopted yet and it is considered unlikely that this Local Plan will be adopted before 2024-25. Therefore, the Plan may not cover the required plan period of 15 years and the Council should extend the plan period to at least 2040 to ensure this requirement is met.

Full text:

1 Introduction

1.1 These Representations have been prepared on behalf of Hallam Land Management Limited (hereafter 'Hallam'), in response to the Chichester Local Plan Review Proposed Submission Plan consultation.

1.2 Hallam is a strategic land promotion company operating throughout England, Wales and Scotland delivering land for new employment and commercial premises, housing, including specialist elderly housing, and mixed-use developments. Hallam has been acquiring, promoting, developing and trading in land since 1990. During that time, the company has established an outstanding record in resolving complex planning and associated technical problems in order to secure planning permissions for a whole range of different land uses to facilitate the delivery of new development.

1.3 Hallam control land to the west of Southbourne, to the north of the A259 and south of the railway line. Development of this land for new housing including specialist elderly accommodation, as shown in the accompanying Vision Document, would be consistent with the established Spatial Strategy; which is rightly retained in the consultation document. Similarly, development would contribute towards meeting the future housing needs of the District within the proposed Broad Location for Development (BLD) at Southbourne.

1.4 These Representations set out our support for the BLD drawn on the key diagram to the west and east of Southbourne. However, Hallam are seeking amendments to Policies S1, H1, H2, H8 and A13 to ensure that: the overall housing needs are met across the District, including early delivery and specialist accommodation; the flexibility sought early in the Submission Plan, at Policy S2 and H1, is carried through to the strategic allocations and locations; and, the BLD is distributed to the west and east of Southbourne.

1.5 Moreover, Hallam are proposing the allocation of small and medium scale sites at Southbourne within the Local Plan, to enable early delivery of housing and infrastructure, with the land under their control a suitable site for this allocation. Should the Council not allocate these sites, then the strategic allocations/locations policies need to be updated to reflect the requirement for the delivery of small and medium scale parcels which could form part of the larger sites.

1.6 In the context of the above, it is instructive to note that Chichester District has an older population than national average, which has been predicted to increase by 42% between 2021- 2039. The increasing need for specialist accommodation should be addressed through specific allocations within the Local Plan, rather than the proposed approach of Policy H8.

1.7 Our response is focused on the following matters:

- The Spatial Strategy, settlement hierarchy and the distribution of development across the District;
- The overall amount of new housing required within the new plan period;
- The need for specialist accommodation;
- The status of Southbourne and the role and function it plays; and
- The strategic allocation proposed at Southbourne in Policy AL13.

1.8 In preparing the Local Plan Review, the Council will need to ensure that it complies with paragraph 35 of the National Planning Policy Framework (NPPF) (2021) which sets out four tests to ensure the plan is 'sound'. These are as follows:

- Positively prepared – providing a strategy which, as a minimum, seeks to meet the area's objectively assessed needs, and is informed by agreements with other authorities, so that unmet needs from neighbouring areas are accommodated where it is practical to do so and is consistent with achieving sustainable development;
- Justified – an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence;
- Effective – deliverable over the plan period, and based on effective joint working on cross- boundary strategic matters that have been dealt with rather than deferred, as evidenced by statements of common ground; and
- Consistent with national policy – enabling the delivery of sustainable development in accordance with the policies in this Framework.

1.9 We are mindful that the Government has recently published a consultation concerning potential amendments to the NPPF. Paragraph 1 of that consultation document indicates that the government is committed to "building more homes" whilst Paragraph 6 explains that the government "remains committed to delivering 300,000 homes a year by the mid-2020s".

1.10 In the proposed revisions, paragraph 1 makes clear that the NPPF provides "a framework within which locally-prepared plans can provide for sufficient housing and other development in a sustainable manner." At paragraph 60 the overall aim of a Local Plan is identified as meet[ing] as much housing need as possible with an appropriate mix of housing types to meet the needs of communities.

1.11 It is clear therefore that the potential amendments to the NPPF firmly intend that Local Plans, including this one, continue to provide a sufficient supply of housing land to meet identified needs.

2 Objectives and Spatial Strategy

Objectives of the Local Plan

2.1 The Submission Plan has identified key challenges and opportunities that influence future planning, across the three areas of the District, and how it aims to address these through planning policies and proposals.

2.2 Within the consultation document, the strategic objectives presented by the Council are structured into specific categories, ensuring housing and neighbourhood objectives are clearly set out for the plan period.

2.3 Amongst these is the objective to increase housing supply; increase provision of affordable housing; and promote the development of mixed, balanced and well-integrated communities. These are consistent with the NPPF's policy objective

to significantly boost the supply of housing in paragraph 60. In this context, it is right that the Local Plan's development strategy is founded on this objective, ensuring sustainable development which responds to social, economic and environmental considerations that meets the needs of the plan area.

2.4 These objectives frame the policies and proposals for future development across the plan area to create sustainable neighbourhoods; this demonstrates, as a matter of principle, that the Local Plan intends to be positively prepared and justified, albeit there are limitations on how this is achieved in practice when the policies and proposals are considered.

2.5 The NPPF states at paragraph 22 that strategic policies should look ahead over a minimum 15 year period from the date of the Plan's adoption. The Local Plan aims to cover the period of 2021- 2039, which is 18 years. However, this plan has not been adopted yet and it is considered unlikely that this Local Plan will be adopted before 2024-25. Therefore, the Plan may not cover the required plan period of 15 years and the Council should extend the plan period to at least 2040 to ensure this requirement is met.

Policy S1: Spatial Strategy

2.6 The Spatial Strategy is accompanied by the Key Diagram (Map 3.1), identifying the distribution of development and infrastructure provision across the plan area.

2.7 The strategy aims to build on the existing Local Plan, focusing growth at Chichester city, as the main sub-regional centre, and at two settlement hubs along the east-west corridor at Tangmere and Southbourne.

2.8 Policy S1 specifically identifies the broad approach to providing sustainable development, in accordance with the Local Plan Objectives, ensuring development is focused principally along the east-west corridor. It aims to distribute development in line with the settlement hierarchy, ensuring development is located in the larger and more sustainable settlements.

2.9 This accords with paragraph 20 of the NPPF which requires strategic policies to set out an overall strategy for the pattern, scale and quality of development, and make sufficient provision for housing, infrastructure, community facilities along with policies that seek to conserve and enhance the environment.

2.10 Paragraph 105 of the NPPF states that the planning system should actively manage patterns of growth in support of these objectives. With significant development being focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes.

2.11 Paragraph 69 of the NPPF sets out how small and medium scale sites can make an important contribution to meeting the housing requirement. Part d) identifies how working with developers to encourage the sub division of large sites could help to speed up the delivery of homes.

2.12 In this context, Policy S1 (6) outlines how non-strategic provision is made for small scale housing developments consistent with the indicative housing numbers set out in Policy H3, however this does not identify an approach to medium scale sites. Consequently, the Local Plan should allocate small and medium scale sites for residential development.

2.13 Should the Local Plan not allocate these scale sites, then there should be parcels within the BLDs identified as medium scale sites for early delivery in the plan period without prejudicing the BLDs. Policy S1 should be amended to include medium scale sites and to require flexibility to the housing target. This is discussed further in respect of Policy A13.

2.14 Policy S1 (7) states that strategic allocations and locations will be made through either this emerging Local Plan, the extant Site Allocation Development Plan 2014-2019 (or subsequent Site Allocation Development Plan Document (DPD)) and through Neighbourhood Plans. Notwithstanding the allocations in the emerging Local Plan, the most appropriate future mechanism is the Site Allocations DPD, which has to meet the 'tests of soundness' rather than 'basic conditions'. This more rigorous approach to plan making is better able to address the site selection process and assessment of delivery requirements that a strategic allocation will need to demonstrate, particularly when taking account of the scale of growth proposed at Southbourne.

2.15 Lastly, the final paragraph of Policy S1 states that to ensure that the Plan's housing requirement is delivered, "the distribution of development may need to be flexibly applied, within the overall context of seeking to ensure that the majority of new housing is developed in accordance with this Strategy". The wording of this should be amended to state flexibility will be needed rather than may be needed, to ensure there is the ability to mitigate delays on allocations being brought forward by alternative proposals in order to meet the housing requirement over the plan period.

2.16 The use of the Authority Monitoring Report to control this is considered an acceptable approach, and policies A6 to A15 should reflect this requirement for flexibility. In practical terms, the LPA will need to consider performance in bringing forward and delivering large-scale development and enable alternative solutions where the required outcomes are not being achieved. This is discussed later in relation to Policy A13 specifically.

Policy S2: Settlement Hierarchy

2.17 The consultation document sets out a Settlement Hierarchy which is to serve as the framework for the Council to achieve its vision for the plan area, meet the scale of development required and enhance the quality of the built natural,

historic, social and cultural environments, whilst sustaining the vitality of communities. This hierarchy seeks to deliver sustainable development that will support the role and function of different places within the plan area.

2.18 In this regard, Policy S2 is consistent with the NPPF acknowledging how “significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. This can help to reduce congestion and emissions, improve air quality and public health.” (paragraph 105 refers). The Settlement Hierarchy ensures that new development is located in areas where residents have access to facilities and services and a range of public transport networks.

2.19 Chichester city is identified as the Sub-Regional Centre, with four Settlement Hubs being identified at East Wittering/Bracklesham; Selsey; Southbourne and Tangmere. This is a continuation of the existing spatial strategy in the Adopted Local Plan and consistent with the principle of locating new development at the most sustainable locations.

2.20 Southbourne is rightly identified as a Settlement Hub due to its range of local services and facilities, key public transport connections and employment/educational opportunities accessible via non vehicular methods of travel. The approach to Southbourne is discussed later at Section 4 and at Policy A13.

2.21 Accordingly, this strategic policy is positively prepared and justified, and is consistent with national policy promoting sustainable patterns of development.

3 Overall amount of Housing

Policy H1 Meeting Housing Needs Housing Need

3.1 Paragraphs 60 and 61 of the NPPF state that to determine the minimum number of homes needed, strategic policies should be informed by a local housing need assessment, conducted using the standard method in national planning guidance.

3.2 Only in exceptional circumstances could an alternative approach be justified. But even then, that alternative approach will also need to reflect current and future demographic trends and market signals.

3.3 Policy H1 identifies the need for the Plan to make provision for at least 10,350 dwellings within the plan period, amounting to 575dpa.

3.4 This is lower than both a. the standard method figure of 638 dpa; and, b. the Preferred Approach figure in the previous consultation, of 650 dpa which included accommodating some unmet need arising from the South Downs National Park (SDNP) area. This shortfall will amount to over 1,100 dwellings across the plan period. Without any Statements of Common Ground being published by the Council or evidence of the shortfall being accommodated elsewhere, this remains unaddressed.

3.5 It is highly germane that the current Local Plan adopted a lower housing figure than the identified need of 505dpa, proposing instead to deliver 435dpa.

Affordability in Chichester

3.6 The affordability ratios have risen from 12.38 in 2015, when the current Local Plan was adopted, to 14.61 in 2021 for Chichester, which is significantly higher than the current 9.1 national average, increasing the need for affordable housing within Chichester.

3.7 Between the 2011 and 2021 census, the number of people ages 50 to 64 years rose by over 3,100 (an increase of 13.4%), while the number of residents between 35 and 49 years fell by approximately 1,900 (8.5% decrease).

3.8 Chichester’s worsening affordability ratios and aging population, which typically occurs in line with house price increases, demonstrate the clear need to increase the housing delivery to meet current and future needs (in line with the NPPF), and maximise the potential for housing in this District. The current strategy to suppress housing provision will only exacerbate these problems.

3.9 With the Submission Plan proposing to not meet the identified need, this once again will be an issue which moves onto the next Local Plan, failing to tackle key issues across the District such as affordability and lack of housing land supply. These issues cannot simply be moved onto the next Local Plan, they should be addressed now.

Constraints for development

3.10 The lower figure of 575dpa reflects both the infrastructure constraints along the A27 and at the

Waste Water Treatment Works, but also no longer accommodating unmet need from SDNP.

3.11 The Transport Study (January 2023) assesses the capacity levels, with particular focus on the A27. Although the Council state that 535dpa is the highest level of development per year achievable, the conclusions of this latest Study state, at paragraphs 5.6.5 and 11.2.3, that development of 700 dpa could be accommodated (in the southern plan area) through the mitigation proposed in the previous scenario of 535dpa with some additional mitigation at the Portfield and Oving roundabout.

3.12 This Transport Study (2023) was published following the preparation of the Sustainability Appraisal which refers to the 2018 study, therefore the latest evidence on highways matters has not be considered within the preparation of this Local Plan.

3.13 This is fundamental to the Plan's approach – increasing the housing requirement could assist with funding those additional highway improvements, in line with the recommendations of the Transport Study at Section 9.3 to prioritise junctions to avoid delays to housing delivery. This should be further reviewed by the Council to ensure the District's need is not being understated. It is recommended the housing need figure is reviewed in line with this evidence and the need to meet the minimum of the standard method figure of 638dpa, and aim to return to the 650dpa previously proposed.

Duty to Co-Operate

3.14 Paragraph 24 of the NPPF outlines the need for co-operation between local planning authorities on strategic matters that cross administrative boundaries.

3.15 The East Hampshire Local Plan Review has identified 100dpa for the SDNP area of the District, below the identified need of 112dpa for the District's area and the overall requirement of 447dpa for the SDNP (Housing and Economic Development Needs Assessment 2017). In effect, in combination with Chichester, the National Park is needing to accommodate some 30 more dwellings per annum without any assessment as yet as to whether this can be achieved given the statutory protection that is afforded to it.

3.16 Whilst a Statement of Common Ground is referred to, it has not been published and therefore it is not possible to determine whether the decision not to make a provision for the National Park area is soundly based.

3.17 Previous evidence for the Preferred Approach demonstrated how the figure of 650dpa was achievable and necessary to help with the worsening affordability ratios across Chichester and the neighbouring authorities. Having removed provision for unmet need it is considered this plan has not been positively prepared.

Summary

3.18 Policy H1 clearly sets out how the majority of housing is to be delivered along the east-west corridor, with 535dpa in the southern plan area and 40dpa in the northern plan area. This is consistent with the Spatial Strategy and the Settlement Hierarchy, Policies S1 and S2, and the overarching objective of locating new housing at the most sustainable locations in the plan area.

3.19 By limiting the amount of housing there will be fewer schemes contributing to the required infrastructure improvements. Without developer contributions to fund wholesale upgrades to this infrastructure there is a risk of pushing the problem down the line for the next Local Plan to address, whilst problems with affordability and an aging population are further exacerbated.

3.20 All future schemes will be required to mitigate their impact on infrastructure including highways and utilities, and there is an opportunity for small to medium scale sites to be delivered in the short term whilst the larger allocations and/or the majority of the larger allocations await the upgrading of these works.

3.21 Currently, the proposal to reduce the overall housing supply for the new plan period is not supported, and the Council should review the Transport Study with the intention of meeting the assessed level of local housing need in full. Without the identified housing requirement being met in full the problem of the younger population being unable to afford to remain in Chichester will continue, further growing the gap in workforce and an increasingly aging population.

3.22 Therefore, this policy is not positively prepared, justified or consistent with the NPPF.

Policy H2 Strategic Locations/Allocations 2021-2039

3.23 The wording of 'at least' within Policy H1 provides flexibility on the ability to achieve the minimum amount of housing considered necessary by the Council, in line with Policy S2. Although this quantum is not agreed, the approach using 'at least' is considered a sensible approach to allow the achievement rather than under delivery of much needed open and market housing.

3.24 The strategic locations/allocations set out in Policy H2 do not reflect this flexible approach. Instead, the sites are fixed as exact number of dwellings for those locations.

3.25 Paragraph 119 of the NPPF requires planning policies to promote an effective use of land in meeting the need for

homes, while safeguarding and improving the environment and ensuring safe and healthy living conditions.

3.26 Policy A13 is a BLD and is fixed at 1,050 dwellings within Policy H2, this does not allow for the masterplanning approach to further assess the actual capacity and the best use of this land.

3.27 As such flexibility should be embedded into the wording of Policy H2 to ensure that the intention of Policy S2 is achieved; the housing target of at least 10,350 dwellings across the plan period (Policy H1) is met; and the land identified for development is most effectively used.

3.28 Therefore, it is suggested that Policy H2 includes the wording "at least" before the quantum of development for any strategic location or allocation. For example, Policy A13 would instead state "at least".

Policy H8 Specialist accommodation for older people and those with specialised needs

3.29 National Planning Practice Guidance for Housing for Older and Disabled People states how plan-making authorities should set clear policies to address the housing needs for groups with particular needs such as older and disabled people.

3.30 The Housing and Economic Development Needs Assessment (HEDNA) (April 2022) assesses the period between 2021-2039 for older people and those with a disability.

3.31 This concludes that there will be a 42% increase in the population above 65 years old, amounting to 67% of the total population growth.

3.32 The HEDNA sets out how the East-West Corridor has a higher percentage of over 65 year olds (24.7%) compared to both Chichester City (24.2%) and the Plan Area North area (23.4%).

3.33 The needs arising from this, amounts to between 2,131 and 2,872 additional dwellings with support or care, and a need for 429-800 additional nursing and residential care bedspaces. This equates to approximately 17-24% of all homes needing to be some form of specialist accommodation for older people.

3.34 In this context, the HEDNA makes an important recommendation that the Council allocate specific sites for housing with care to ensure the identified needs are met. In contrast Policy H8 is a criteria based policy that seeks specialist accommodation for older people on housing sites over 200 units based on evidence of local need.

3.35 As written, there is no confirmation on the quantum of specialist accommodation that this policy or other site allocations will secure and how the specific need for each application is calculated. Policy H8 fails to address the identified overall need clearly, as required by National guidance. Therefore, it is recommended the Local Plan allocates sites to deliver this type of accommodation as intended by the HEDNA.

3.36 This approach risks the land on these sites being unable to deliver both the expected market/affordable housing and the specialist accommodation on site.

3.37 The land under Hallam's control would be a suitable site for this type of accommodation, which is situated along the east-west corridor in a sustainable location on the edge of Southbourne.

4 Southbourne

4.1 Southbourne is a key area in the District, in terms of existing development, its status as a Settlement Hub and its potential to accommodate future development.

Role of Southbourne

4.2 Southbourne is identified as a Settlement Hub within Policy S2.

4.3 Southbourne is located within the east-west corridor with a range of existing facilities, good transport links, and employment opportunities both to the east and the west.

4.4 As set out in the Submission Plan, Southbourne has good access to educational facilities serving the residents, including primary schools, junior schools and secondary schools. There are a number of convenience stores and other community services and facilities such as a GP practice, pharmacy and places of worship.

4.5 The Bourne Community Leisure Centre provides local residents with access to community sports facilities. Access to public open space is also good through connections to Southbourne Recreation Ground. There is potential for more open space to be provided for local residents within the Local Plan Review and the strategic allocation proposed and this approach is embedded within our own Vision Document.

4.6 A key focus of the Sustainability Appraisal and the Submission Plan is for schemes to promote a modal shift in transportation. The strong public transport links within Southbourne to the wider surrounding area allows access to employment opportunities within the east-west corridor. Southbourne has strong public transport connections to the local and wider area, through bus and train services, to areas including: Chichester, Portsmouth, Havant, Littlehampton, Brighton, Southampton and London.

4.7 For these reasons, Southbourne is rightly designated as a Settlement Hub and is eminently suitable to serve as a BLD.

4.8 The Southbourne Level Crossing Report May 2021 analyses the options for delivering the railway crossing at Southbourne. It concludes that circa 750 dwellings can be delivered north of the railway line before triggering the requirement for a new crossing. The report highlights how sites south of the rail line are not likely to impact on the level crossing and can therefore be delivered earlier than await the railway line improvements.

4.9 Therefore, in this context it would be appropriate to allocate small and medium scale sites to the south of the railway, which is less constrained by the capacity restriction on the railway crossing.

4.10 The land under Hallam's control is to the south of the railway line, would help facilitate a future new railway crossing to the north of the site, and would be of a medium scale to deliver housing early in the period plan.

Strategic Allocation A13

4.11 The Key Diagram appears to suggest that new development is to be located to the west and east of Southbourne, remedying the previously unsuccessful approach of focusing development only to the east. Similarly, the Key Diagram acknowledges the need for development to the south of the railway line, facilitating development north of the railway line. It is recommended the wording of the policy should be updated to reflect this diagram, as suggested below:

Provision will be made for a mixed use development within the broad location for development to the west and east of Southbourne, as shown on the Key Diagram.

4.12 Previously, the Preferred Approach consultation document set out at Policy AL13 a minimum of 1,250 dwellings at Southbourne and to be identified in the revised Southborne Neighbourhood Plan. (emphasis added)

4.13 The Submission Plan now allocates Policy A13 for 1,050 dwellings and will be established through the making of allocation(s) in the future Site Allocation DPD or the revised Southbourne NP. This strategic allocation is to act as a mixed use extension to the existing settlement.

4.14 It is acknowledged that the land north of Cooks Lane (Application number: 22/00157/REM) received Reserved Matters approval in August 2022 for 199 dwellings, with the reduction in quantum of development for the BLD reflecting this committed development. A practical effect of this is that this consent will not contribute to the wider infrastructure requirements associated with a larger scale of development.

4.15 It is disappointing to see the phrase "a minimum of" has been removed. This conflicts with the flexibility set out earlier in the consultation document, and also reduces the potential of making effective use of the land for housing that will assist in meeting the overall need of the District.

4.16 Policy A13 prescribes a number of requirements that must be met (criterion 1 – 16). These are considerations that reflect principles of place making and sustainable development and provide a sound framework for the preparation of the allocation through either mechanism.

4.17 One of these requirements states that future development "Provide[s] any required mitigation to ensure there is no adverse impact on the safety of existing or planned railway crossings." The existing Southbourne Neighbourhood Plan, at Objective 9, outlines the issues relating to the railway crossing and the plans for addressing this challenge in the future.

4.18 Related to this is the need for the provision of "suitable means of access to the site(s), securing necessary off-site improvements (including highways) ... to promote sustainable transport options."

4.19 The combination of the requirements relating to the railway crossing and the provision of a suitable means of access show the importance of accessibility to the A27, A259 and the east-west railway line, which are the principal public transport corridors for Southbourne.

4.20 Development will be well connected to Southbourne via footway and cycle connections to the east and offers the opportunity to help realise the construction of a new strategic road and bridge link over the West Coastway Rail Line through provision of land and proportionate contributions to this scheme.

4.21 Criteria 13 ensures there will be sufficient capacity within the relevant wastewater infrastructure before the delivery of development, which addresses (for Southbourne) the identified constraints for the District in relation to housing delivery.

4.22 The remaining requirements of Policy A13 cover the quality and range of development, the provision of education, community and transport facilities, provision of public open space and green infrastructure, and the impact of development on the landscape. These are each appropriate considerations for the Site Allocations DPD.

4.23 Having regard to the above, the allocation of 1,050 dwellings for Southbourne is, in part, appropriate.

4.24 However, this policy should allow for the delivery of small or medium scale parcels of land, in accordance with the NPPF at an early stage of delivery of the wider allocation to enable prompt and timely housing at Southbourne whilst

infrastructure upgrades are commenced. The Local Plan should identify and allocate these smaller scale sites to ensure these can come forward early in the plan period.

4.25 A new criteria is proposed to be included in the wording of Policy A13, stating:

(17) To identify land for early delivery on small to medium scale sites which are not constrained by the need for a new railway crossing.

4.26 Therefore, the principle of a strategic allocation for mixed use housing is considered appropriate but amendments should be made to the wording of the policy to reflect the approach to flexibility, the inclusion of small and medium scale sites, and the dispersion of development to both the west and east of Southbourne.

Southbourne Neighbourhood Plan

4.27 As set out in the paragraph 10.56 of the Submission Plan, development phasing is a key issue to address through the allocation of development sites for this BLD.

4.28 Paragraph 70 of the NPPF states that "Neighbourhood planning groups should also consider the opportunities for allocating small and medium-sized sites suitable for housing in their area." Southbourne Parish Council should be aware of this when allocating the strategic sites, to ensure that there are a mix of housing sites, that could come forward sooner than the principal element of the larger strategic site.

4.29 Through the preparation of the Neighbourhood Plan, the Parish Council should take into account the allocation of smaller sites, which could come forward as part of and alongside the larger strategic site. This will ensure that there is not a delay in the provision of housing within Southbourne and the plan area.

4.30 As set out previously, the most suitable mechanism for progressing the Southbourne BLD would be the Site Allocation DPD. Whether the sites are allocated through the Site Allocations DPD or the NP, there is a requirement to identify small and medium scale site.

Land to the north of Gosden Green

4.31 The land under Hallam's control to the north of Gosden Green, should either be allocated in the Local Plan as a medium scale site or should be a key component of the BLD. The site can deliver both market/affordable residential units and specialist elderly accommodation. The site will create flexibility in achieving the housing requirement of the plan area early on in the plan period.

4.32 The accompanying Vision Document demonstrates how as an early development parcel for the wider BLD, a series of key benefits in accordance with the 13 criteria of Policy A13 will be achieved.

4.33 The Proposed Submission Plan at Policy H8 identifies the need for specialist accommodation for older people and those with specialist needs. Although not set out in the Vision Document, this site can deliver, early in the plan period, much needed specialist elderly accommodation.

4.34 Figure 3 of the Vision Document presents the scheme's ability to connect into a wider masterplan for the strategic development, as it comes forward in the future. However, at the same time has the ability to come forward at an earlier rate being physically unconstrained and a well contained parcel of land.

4.35 Figure 9 provides context on connectivity, and the modal shift this scheme aims to achieve. The ability to walk to a range of services and facilities, including the train station further demonstrates the ability for the early delivery of this parcel of the BLD.

4.36 The impact of the highways network has been assessed for both a full residential scheme and specialist elderly housing, highlighting how the residential scheme will introduce approximately 55 new vehicles to the network at peak times, resulting in less than 1 car per minute in the peak hour. Either scheme will have a negligible impact on the highway network and would have a negligible impact on A27.

4.37 The site is to the south of the railway line, as previously mentioned, and would be unconstrained by the capacity constraint of the existing railway crossing.

4.38 For these reasons, the land under Hallam's control should be allocated within the Local Plan.

5 Conclusion

5.1 These representations are submitted on behalf of Hallam Land Management Limited.

5.2 In the context of national, local and neighbourhood planning policies, the Local Plan has an important role in providing policies and proposals for residential development to meet future needs.

5.3 The proposed objectively assessed need for housing across the plan area is not agreed, and the Council should review the latest transport evidence which currently do not demonstrate how there are exception circumstances, in accordance with paragraph 62 of the NPPF. The Council should also extend the plan period to ensure it meets the requirements of a minimum of 15 years in the NPPF.

5.4 Consistent with the established strategy to focus development in the District's east-west corridor, the Broad Location for Development to Southbourne as a Settlement Hub is, as a matter of principle, a sound proposition. Importantly the Key Diagram identifies the broad location for this development to the west and east of the settlement.

5.5 As discussed, there should be flexibility embedded into all strategic allocations, in particular those which are Broad Locations for Development through the use of the wording "at least". This will ensure that the "at least" quantum of housing delivery is met and affords flexibility to all housing sites coming forward.

5.6 The responsibility for allocating additional development land to meet this requirement has been given to either the Parish Council through the preparation of a new Neighbourhood Plan or through the Council reviewing the Site Allocations DPD. It is recommended that for the larger strategic allocations and locations the Site Allocations DPD is the more suitable mechanism for identifying land given the need to ensure that proposals are sound.

5.7 Whilst the scale of development proposed is strategic in nature, it is entirely appropriate to consider how different development parcels might contribute towards that and in particular early opportunities that facilitate larger scale development later in the plan period.

5.8 To this end, land to the west of Southbourne and south of the railway line could be allocated as the first phase of the strategic site allocation, as a medium size site, so that this southern section of the new link road is built to enable access to land to the north. This will reduce the pressure placed on the centre of Southbourne, the highway capacity on the A27, and the existing railway crossing.

5.9 By allocating small to medium scale sites in the Local Plan, this will bring forward development at a quicker pace and ensure that the objectively assessed needs for housing across the plan area are met each year. These can be delivered without prejudice to the larger strategic allocations and locations.

5.10 Currently, the Submission Plan fails to address the increasing need for specialist accommodation, with Policy H8 failing to secure specific delivery of such housing, instead moving this matter into major development schemes with no mechanism for assessing need at that stage. It is recommended that the Local Plan allocates sites for specialist accommodation.

5.11 Hallam control land to the west of Southbourne, which adjoins the land at Gosden Green which has already been built. The land controlled by Hallam could be: allocated as a medium scale site within the Local Plan; included as part of the western strategic allocation of Broad Location for Development at Southbourne; or could be allocated for specialist elderly accommodation, ensuring land is readily available for development early in the plan period to address identified needs.

5.12 This would be consistent with the development strategy for the Plan and positively contribute towards meeting future development needs of the plan area.

5.13 These representations have demonstrated that in part the Submission Plan has been positively prepared and justified, however the key recommendations in these Representations should be followed to ensure the plan preparation accords with Paragraph 35 of the NPPF.

Change suggested by respondent:

The Council should extend the plan period to at least 2040 to ensure this requirement is met.

Object

Document Element: Purpose of the Plan, 1.5**Respondent:** Kingsbridge Estates Limited & Landlink Estates Limited [8084]**Agent:** Savills (Mr William Price, Planner) [7783]**Summary:**

The Local Plan is not positively prepared. The proposed expansion of HDAs is welcome. However the council's current approach to restrictions on co-location of functionally linked businesses and activities within the food park/cluster is impacting on business competitiveness and efficiency.

Full text:

Object- The proposed local plan has not been positively prepared and will fail to meet the economic needs of the Horticultural Industry. Specifically, the Regulation 19 Local Plan fails to take account of evidence that is critical to the Plan achieving the following criteria:

- Identifying the amount of development needed;
- Identifying development opportunities and infrastructure required to support and foster business enterprises and entrepreneurship;
- Providing opportunities to create new dwellings and jobs for present and future generations, with accessible facilities that support the needs of strong, vibrant and healthy communities;

The Horticultural Industry is a well-established and successful indigenous industry in the south of England. An especially high concentration of constituent elements of the industry are located within the administrative boundary area of Chichester District Council. Every effort should be made during the plan period to accommodate efficiencies that will foster economic growth and improve the competitiveness of the food cluster in the interests of promoting local economic growth and job creation as well as the resilience of the UK food supply. This will be achieved through ensuring that local development plan policies facilitate the expansion of the industry in terms of both land take (through planning policy allocations and subsequent development management decisions), as well as providing an environment in which associated elements of the food cluster (such as research development, logistics and distribution and linked administrative functions) can thrive (this will be achieved through the flexible wording of planning policy and subsequent decision making by development management).

The economic potential of the horticultural industry in Chichester is clearly acknowledged in the Council's evidence base, including the 2018, 2020 and 2022 HEDNAs, Government reports and various industry reports. Accordingly, these representations assert that the findings of these research reports, in addition to a custom piece of research on Runcton HDA (Produced by Savills Economics Research (Savills SREBR), have not been but must be incorporated in full into the Council's Local Plan submission to the Secretary of State in order to demonstrate that the Local Plan submission meets the definition of 'sound' as outlined within paragraph 35 of the NPPF.

Change suggested by respondent:

Reference to 'ancillary' with regard to the HDAs in relevant policies and supporting text should be modified to 'functionally linked' and include explanatory text clarifying that 'functionally linked' uses can include a range of activities including: food-related distribution; food manufacturing linked to the HDAs food preparation; on-site renewable energy to serve on-site activities; and R&D.

Full text:

While the Plan recognises climate change there is no forecast scenario of what climate the Plan is designed to cater for either in 2039 or any intervening years.

Change suggested by respondent:

The Plan should be revised to forecast how climate change may alter land use planning requirements over the period of the plan and demonstrate how the Plan is sufficiently flexible to the changes which will occur albeit the timing of these changes are uncertain. As an example it is clear that some existing areas of housing in the Manhood Peninsular are very vulnerable to flooding due to storm surges. Climate change will bring an increasing risk of such events and some housing areas should be identified in the Plan for such displacement to take place.

Document Element: How to Use the Plan, 1.10**Respondent:** Juliet Robertson [7022]**Summary:**

Loxwood developed a local plan that first allowed for 60 houses, followed by a further 121 houses. The village is now faced with a minimum of a further 220 rising to 311. This additional volume ignores the Neighbourhood Plan prepared by the Parish Council and residents.

It takes no account of the already inadequate sewage infrastructure which is not planned to be rectified.

There is no regular public transport or long term job opportunities so the pressure of commuter traffic will increase substantially on already heavily utilised roads.

The scale of the proposals will change the nature of the village.

Respondent: Chidham and Hambrook Parish Council (Parish Clerk, Clerk) [7830]

Summary:

[RECEIVED LATE]

- Concerns raised regarding consultation process in relation to Parish Council, neighbourhood planning and local community support.

See full representation/statement within attachment.

Full text:

[RECEIVED LATE]

Statement from Chidham & Hambrook Parish Council
concerning the Chichester Local Plan 2021-2029 Proposed Submission Consultation

The current Local Plan was made in 2016. It would be reviewed within five years. Consultation on the Preferred Approach Plan was undertaken between December 2018 and February 2019. Our residents profoundly disagreed with the change in the proposed housing allocation for the Parish which had risen from 25 (Objective Assessment indicative housing number) in the previous Local Plan (2014-2029) to 500 (2024-2039) Since then, despite our arguments, the number has only been reduced to 300 i.e. 12 times our previous housing allocation. There has been no explanation from Chichester District Council about what has been changed/retained as a result of the consultation or for what reasons. The figure of 300 has not been justified. Our arguments have not been addressed. Furthermore, there is a Southbourne planning application for 63 houses on the immediate north-west border of the parish with the only access through Chidham & Hambrook, but this, if approved, would be in addition to the allocation determined by CDC. This application would impact a protected chalk stream destroy the rural edge of the village and landscape and exacerbate local concerns about development levels. Despite these issues, this development would have little if any practical connection with Southbourne.

We have been asked to comment on the Regulation 19 Submission Plan which includes brand new Policies which have been introduced apparently without any local consultation. The response submission process is on-line only, complicated and time-consuming. Residents are limited to three reasons for objecting – legal compliance, soundness and duty to cooperate. They are restricted to a comment of only 100 words. Only four supporting documents can be attached. This consultation process seems undemocratic. We realise that the government makes the rules, and the Council has to keep to the rules, but this is not an acceptable or democratic form of Consultation.

In the period 2014 - 2017 of the previous Local Plan there was a substantial amount of development in Chidham & Hambrook: the 25 properties increased to 144 new properties permitted by the end of 2019, many 'on appeal', and a further 148 in the period to 2022 of which 144 count towards the new Local Plan. This means a further 156 houses are required.

Currently a further 239 houses are the subject of planning applications which have gone to appeal.

The Council's original assertion of the status of the parish as a relatively high ranking service village was only justified by the theoretical ranking system, but not in our view, as expressed to the council, by practical, comparative, qualitative reality. Although this ranking has disappeared from the current draft it must have contributed to the appeal decision in 2021 for 118 houses in Hambrook which was not contested by the Council, and allowed at a time when the Council could not demonstrate a 5 year housing land supply.

Our residents are understandably incensed. It is difficult to present an argument for a Neighbourhood Plan that requires so many houses, and any new plan will be required to get residents approval in a referendum. Our current experience is of increasing housing numbers for a parish where travel by car is necessary because of the distances, infrequency, inconvenience and cost of buses or trains.

How can CDC expect support from local communities for their Local Plan involving future development if they disregard concerns about the current situation in terms of the limitations of the infrastructure? Just as importantly the parish is midway between the SDNP and the Chichester Harbour AONB. Building in the parish degrades the links between, and therefore the habitats themselves, of these two important and legally protected environmental areas. This is economically counterproductive because of the importance of tourism and leisure, and farming to the area, and the historic and chronic underinvestment in basic wastewater treatment capacity locally.

4073**Object**

Document Element: Relationship between Neighbourhood Plans and the Local Plan, 1.17

Respondent: Mr Matthew Rees [7841]

Summary:

Not sound because it cannot be effective to make decision based on incomplete or out of date plans without making additional enquiries of local residents and land users who have a better understanding of the local area.

Full text:

There is much to commend in this document and the supporting technical documents that accompany it, and I have listed in the appendix to this letter 26 such paragraphs and policies. I am happy for my support to be registered against these sections of your consultation document. There is also much upon which I must represent a concern, so I attach representations relating to 22 paragraphs or policies.

I am happy to participate in a hearing session, and I would flag at this stage that the common theme that links all of these representations is the need to safeguard the natural and built environment in and around Saxon Meadow, Tangmere from the risks of unsustainable development, I consider that the independent examiner should focus their review on the aspects of the local plan that relate to this matter.

Appendix 1: list of policies that I support

1. P14, 1.23, 1.24: Duty to cooperate
2. P24, para 2.30 "the council declared a climate emergency in July 2019"
3. P24, para 2.32 – "all proposal for new development should be considered in the context of a climate emergencV"
4. P30: Objective 2: natural environment: "development will achieve net gains in biodiversity"
5. P43, 4.1 "National policy promotes increasing energy efficiency, the minimisation of energy consumption and the development of renewable energy sources"
6. P43, 4.3: "Some renewable energy projects provide significant opportunities to enhance biodiversitV"
7. P53, Policy NE5: Biodiversity and Biodiversity Net Gain
8. P62, Para 4.42: Hedgerows and some types of woodlands are identified as a priority habitat
9. P62, Policy NE8: Proposals should have a minimum buffer zone of 15 metres from the boundary of ancient woodland or veteran trees to avoid rood damage (known as the root protection area)
10. P68, Policy NE10: Criteria for Development in the Countryside - Does not prejudice viable agricultural operations or other viable uses
11. P80, Para 4.91: There are serious concerns about the impact of flooding, both in respect of current properties at risk but also the long-term management of the area.
12. 4.92: any development in the plan area must therefore have regard to flood and erosion risk.
13. 4.94: built development can lead to increased surface water run-off; therefore, new development should include SuDS to help cope with intense rainfall events
14. P81, Para 4.96: Environment Agency consent is required for any works within 16 m of tidal waters and 8m of fluvial watercourses in line with the Environmental Permitting Regulations 2016. This strip is required for access. The policy includes a setback requirement to ensure this access strip is not obstructed.
15. P80, 4.92, Any development in the plan area must therefore have regard to flood and erosion risk, now and in the future, by way of location and specific measures, such as additional flood alleviation, which will protect people, properties and vulnerable habitats from flooding. Recent changes to national guidance highlight the importance of considering flood risk from all sources, and this is particularly significant for the plan area as large parts of it are at risk from groundwater flooding, which needs to be recognised in development decisions alongside the well-established risks in relation to tidal, fluvial and surface water flooding. Appropriate mapping of all sources of flood risks is still evolving, and is likely to develop further over the plan period
16. P93, Policy NE20 Pollution: Development proposals must be designed to protect, and where possible, improve upon the amenities of existing and future residents, occupiers of buildings and the environment generally. Development proposals will need to address the criteria contained in, but not limited to, the policies concerning water quality; flood risk and water management; nutrient mitigation; lighting; air quality; noise; and contaminated land. Where development is likely to generate significant adverse impacts by reason of pollution, the council will require that the impacts are minimised and/or mitigated to an acceptable level within appropriate local/national standards, guidance, legislation and/or objectives.
17. P94, 4.127, Light pollution caused by excessive brightness can lead to annoyance, disturbance and impact wildlife, notably nocturnal animals. The design of lighting schemes should be carefully considered in development proposals to prevent light spillage and glare.
18. P94, 4.128, Dark skies are important for the conservation of natural habitats, cultural heritage and astronomy. The plan area includes three 'Dark Sky Discovery Site' designations, all located within the Chichester Harbour AONB; Eames Farm on Thorney Island, Maybush Copse in Chidham; and north of the John Q Davis footpath in West Itchenor. Development within or directly impacting these areas will be subject to particular scrutiny in terms of their impact on dark skies. The entire SDNPA area is also declared as an International Dark Sky Reserve. Development directly impacting this area will be subject to similar scrutiny.
19. P96, Policy NE22 Air Quality
20. P97, Policy NE-23 Noise
21. P142, Para 6.29, Amenity: Private space, shared space and the design quality and construction of communal spaces all contribute to amenity
22. P155-6, Policy P11: Conservation Areas "protecting the setting (including views into and out of the area)"
23. P55, Para 4.26 - The council is under a legal duty to protect designated habitats, by ensuring that new development does not have an adverse impact on important areas of nature conservation, and by requiring mitigation to negate the harm caused.
24. P58, Para 4.33 The council is under a legal duty to protect their designated bird populations and supporting habitats

25. P95, Para 4.129 The council has a duty to review and assess air quality within the district
26. P301, Conservation Area: An area of special architectural or historic interest, designated under the Planning (Listed Buildings & Conservation Areas) Act 1990. There is a statutory duty to preserve or enhance the character, appearance, or setting of these areas.

Change suggested by respondent:

Insert additional text after the first sentence: Working with parish councils, in compliance with the principles set out in the statement of community involvement is a legal requirement for the council and it would be inappropriate for the council to override existing neighbourhood plans with material increases in house building targets (e.g. increase around 30%) unless there is strong local support evidences by a local referendum with representative participation rates.

Support – with qualification

WGPC agree that Chichester District requires an effective adopted Local Plan to protect the district, and especially villages, from speculative development. However, WGPC has concerns about the methodology for the housing allocation. Wisborough Green cannot take further (significant in percentage terms) housing allocation without a detrimental impact on its rural and historic character - contrary to Local Plan objectives.

Support – with qualification

A reviewed Neighbourhood Plan has been prepared for Wisborough Green. In Autumn 2018, CDC advised that the Regulation 14 consultation for a revised NP must be started by January 2020 if the village was to allocate sites. Despite the tight timetable for a volunteer group to complete, the process was started, substantial work completed before CDC's subsequent delay which provided little information or support.

WG's original housing allocation was 25, increased to 40 in November 2020, before being increased to 75 in January 2023.

Local Parishes can assist the supply of land for development needs, "in the right place and of the right kind" They should not be locations for no change, but managed change through Neighbourhood Plans (NPs)

A finer grain is required to the sustainability appraisal through NPs. to provide opportunities for limited, appropriate growth, in smaller settlements.

Specific policies should protect land within Parishes adjoining the National Park from inappropriate development.

The requirement that Parish housing figures in the Plan should be treated as a minimum is supported, although it is questioned whether the figures proposed through the Plan represent the true potential of the area or the needs of the community.

Full text:

Local Parishes can assist the supply of land for development needs, "in the right place and of the right kind."

Development needs should not be confined to housing, although this is expected to be the more significant development form that must be planned and not left to speculation.

All change within a Parish should result in positive enhancement of economic assets, including local need, its sense of place, heritage and environment.

We acknowledge the work done through the sustainability appraisal (AECOM January 2023) and while its general methodology and aim is supported (including the consideration of all HELAA sites) we encourage the Council to work with all Parishes to take that appraisal to a finer grained level to identify short and longer term additional development opportunities, and to firmly identify and plan for areas of little or no change, and environmental and general enhancement that adds positively to the district's sustainability.

Growth priority in Parishes to the west of Chichester and along the A27 corridor is supported as a strategic priority, providing such growth is supported by deliverable infrastructure to not only meet its direct need, but provide enhancement to the wider community, and should not exacerbate existing issues and infrastructure deficiencies.

Growth generally, and new developments individually, should not be located where future infrastructure improvements will be compromised; this is particularly important in Parishes and on development sites adjoining key strategic routes such as the A27.

Despite important environmental designations, there is greater capacity available within Parishes to the south of the city, that can be identified through a finer grain assessment in Neighbourhood Plans. Many constraints are 'jumped upon' and applied too freely in the south to resist even appropriate developments, forcing other areas to accommodate 'displaced developments' in less than appropriate locations.

To the north, opportunities exist but are constrained by the proximity of the National Park, and the over-arching landscape and environmental need to protect and enhance its boundaries and environs.

The value of the National Park and its importance Nationally (economically and environmentally) extends further than its physical boundaries. The plan should introduce specific policies that seek to protect land within Parishes adjoining the National Park from inappropriate development which will undermine the importance and significance of the National Park. These peripheral areas of protection and enhancement should be defined through neighbourhood plans.

Change suggested by respondent:

The plan must encourage each Parish neighbourhood plan to actively pursue the long-term growth and sustainability of its area, not only planning for a minimum growth, but through further, on the ground, analysis of the sustainability appraisal (AECOM January 2023) to identify additional opportunities that plan for a true and sustainable balance between growth and protection/enhancement.

The plan should confirm that planning for 'no change' in a Parish is not acceptable.

The plan must examine strategic infrastructure needs and ensure that enhancement opportunities are identified and protected through appropriate policy designations to ensure new developments do not compromise the ability to deliver. Further development of housing sites immediately adjacent to the A27 should be resisted unless provision is made within the application for appropriate upgrading of that route (this is most important in locations close to existing or potential junctions.)

Document Element: Duty to Co-operate, 1.23**Respondent:** Mr Paul Bedford [5302]**Summary:**

The West Sussex and Greater Brighton Strategic Planning Board (WSGBSPB) provides a context for integrated planning along the coast plain area. It is stated that this board is due to issue a review of its 2016 report next month - does the Plan address any issues that this review may raise? . Housing needs are a major feature of the area and the need to transfer unmet housing demand to adjoining authorities is characteristic feature of past policy.. The SA quite categorically states that there would be no realistic potential to meet unmet housing need above the now established LHN figure. Should the WSGBSPB's report signal the need for the district to absorb housing from other areas there may be problems as the Plan does not appear to offer any contingency or process how such pressure might be mitigated.

The highly restricted housing numbers in the South Downs National Park Local Plan and the closeness of its boundary to the 'coastal strip' are contributing factors to the area's carrying and overall capacity to support development. Further constraint is imposed by the Chichester Harbour Area of Outstanding Natural Beauty (AONB) and the geographical physical restrictions of the Manhood Peninsula creating 'coastal squeeze'.

Full text:

These comments are confined to the three areas set out in the consultation - Legal, Soundness and Duty to Cooperate and to two documents -the draft Local Plan and the Sustainability Assessment.

Legal Status

The Legal status of the Plan is proven but because of the protracted course of the plan's preparation some stages are now dated and raise the question that they should be refreshed. This is the particular case in respect of public participation. There have also been significant changes in legislation that guides the plan's formulation that would have benefited from revised statement of legislative/legal context.

Soundness

In the SA it is stated that the key issue for the plan is the A27 and its capacity. This statement is fundamental in that it is realistically outside the scope of the local planning authorities (CDC and West Sussex CC) to have any direct control over. Unless National Highways position is changed from their previous statements on time scales and what might be included in their assessment no consideration of A27 will be made until RIS3 taking any even initial action into the next decade.

So fundamental and influential is the A27 that assessment of Local Housing Need (LHN), a key component of the whole plan, is reduced from 638 units pa to 535. This position must have an impact on the plan's 'Soundness and crucially the phasing of development.

It is worthy of note that three recent housing appeal decisions unfortunately focused primarily on the lack of a 5yr housing supply base on the 638 higher figure. More pressing were issues of sewage system capacity, coastal inundation and fluvial flooding and nutrient neutrality.

The reduction of housing requirements that the Reg19 LP now promotes is very welcomed.

The reduction on the Manhood Peninsula appears to be derived because of recent housing approvals on appeal

bringing forward housing that achieves the revised target based on the 535 figure. Two points arise none of these sites are in locations that CDC indicated in documents such as the HELAA and SHELAA as positively sustainable and as all other significant Peninsula housing is dropped do these sites exceed what would have been planned totals.

The SA 'Framework' only addresses 'Water- protection of resources' this is highly appropriate given the problems experienced in the north eastern part of the district in the summer of 2022 and will become more pressing in the south. Resolution of this issue that stopped planning applications seems to be by reducing water usage at least to 110 ltr ppd or lower this is when Southern Water only hope to achieve 125ltr by 2050. Consideration in the framework should extend to the 'Water Cycle' and particularly address the acute problems of sewage system network capacity, polluting WWTW outfalls, nutrient neutrality. These systems are already currently stressed/ completely overloaded with current levels of use without new development coming on stream and discharges of untreated sewage are a significant and growing problem to Chichester, Langston and Pagham Harbours- this situation must be set against Defra- Storm Overflow Discharge Reduction Plan's statement "Protecting the Environment-water companies shall only be permitted to discharge from a storm overflow where they can demonstrate that there is no local ecological impact". Damage to Chichester/ Langstone Harbours is documented by a damning Natural England report and by that expected for Pagham Harbour all the sites of national significance for biodiversity and protected habitats. Whilst para 5.2.34 and Box 5.1 of the SA summarise the position no direct statement of intervention is made. Reliance on a 'Statement of Common Ground' that is referred to offers no positive programme of future capital investment by Southern Water (SW) especially when set against SW's overall regional programme its cost and priorities as set out in their draft DWMP-the final version of which is due for release in March this year- does the Plan reflect this documents information that is so crucial to supporting the infrastructure need for the scale of development envisaged is challenging to the plan's 'Soundness'

Time scale of the crucial improvements to infrastructure and particularly sewer and IWWTW capacity is of particular concern. SW's Drainage and Wastewater Management Plan v1 May 2020 set out in very comprehensive way what needs to be achieved and indication of time scale -placing most in AMP8 the next 5 yr business cycle and OFWAT approval would be needed for the scale of expenditure that is many hundred of millions. These time scale constraints should be reflected in the phasing of any housing development that will have to utilise the network. There is no direct indication that such phasing will be actively enforced.

The lack of inclusion in a key background supporting document -Strategic Flood Risk Assessment (SFRA) -of the Planning Practice Guidance on Flood Risk and Coastal Change that has important bearing on issues particularly for the southern plan area and specifically mentions the importance of the phasing of development to infrastructure provision is a concern especially when it was published in August 2022. These omission again have an impact on the Plan's overall 'Soundness'.

A significant consideration in the plan that supports the need for more housing supply is the need to address affordability. The district has one of the highest ratio of median earnings to house prices of 14 times and despite substantial house building during the period 2013 -2022 the ratio has increased from 10.55. It is clear that the type of housing that has occurred and continues to be proposed in the district has done little if anything to impact on affordability and address the need for social/lower cost housing. Based on the 2011 census the district experienced 1,505 inward migration(only Brighton and Hove being higher in the West Sussex/ Gt Brighton area) - this trend has been expected to have continued and accelerated as the pandemic increased the popularity of coastal property and raised market cost of property. Just building more houses without policy intervention to prioritise social shared ownership housing will most probably prove to further increase the extent of unaffordability with the resultant consequences on workforce -especially to support the district ageing population- and supporting young people to remain in the area they have grown up in or have come to be educated. This aspect is cause concern over the Plan's 'Soundness'.

Considerable emphasis is placed on the issues of nutrient neutrality, damage to biodiversity and pollution of Chichester Harbour AONB but such emphasis is not extended to Pagham Harbour that has a similar ecological status to Chichester and suffers the same degradation issues.

Although Pagham is outside of the nutrient protection zone the factors contributing to nutrient problems are apparent feeding into Pagham. The delayed report on condition for Pagham from Natural England mirroring that for Chichester Hb gives every indication it will indicate the same levels of detriment as those in Chichester Hb. This assumption being supported by condition reports for instance for rife and ditch condition known reports. Added to these factors are known issues relating to untreated discharges from Sidlesham WWTW. The Local Plans's lack of affording Pagham similar consideration to Chichester Hb is an issue that impacts on the Local Plan's overall 'Soundness'.

Duty to cooperate

The West Sussex and Greater Brighton Strategic Planning Board (WSGBSPB) provides a context for integrated planning along the coast plain area. It is stated that this board is due to issue a review of its 2016 report next month -does the Plan address any issues that this review may raise? . Housing needs are a major feature of the area and the need to transfer unmet housing demand to adjoining authorities is characteristic feature of past policy. The SA quite categorically states that there would be no realistic potential to meet unmet housing need above the now established LHN figure. Should the WSGBSPB's report signal the need for the district to absorb housing from other areas there may be problems as the Plan does not appear to offer any contingency or process how such pressure might be mitigated.

The highly restricted housing numbers in the South Downs National Park Local Plan and the closeness of its boundary to the 'coastal strip' are contributing factors to the area's carrying and overall capacity to support development. Further

constraint is imposed by the Chichester Harbour Area of Outstanding Natural Beauty (AONB) and the geographical physical restrictions of the Manhood Peninsula creating 'coastal squeeze'.

Object

Document Element: Duty to Co-operate, 1.23

Respondent: Domusea [1816]

Agent: Smith Simmons Partners (Paul White) [7650]

Summary:

In 2021 the Council invited an advisory visit from PINS to advise on how the present Local Plan should be prepared. The inspector advised that if the Plan was prepared which did not meet the full housing needs of the area, it would have to show that it had followed the duty to co-operate with neighbouring authorities in maximising the effectiveness of plan preparation.

The inspector said the Duty to Cooperate was therefore critical in the preparation of the Local Plan Review.

The Duty to Cooperate Statement of Compliance (January 2023) forms part of the evidence base for the Submission Local Plan. In the event, the Local Plan excluding the national park only provides for 575 dpa against an OAN of 638 dpa. However this under provision against need has not been justified anywhere in discussions with neighbouring authorities before the Plan was submitted.

No statements have produced or agreed. Therefore as it stands the under provision of housing against OAN in the Plan has not been justified. The failure to meet the duty to cooperate cannot be remedied because it has already ended with the Submission Plan. The plan therefore fails the positively prepared and justified tests. It also fails to comply with national policy in the NPPF paragraph 24-27 which advises on the duty to cooperate approach.

Full text:

The 'tests of soundness' for Local Plan preparation are set out in paragraph 35 of the July 2021 NPPF. They require the 2021-39 Local Plan to have been:

- Positively prepared – providing a strategy which, as a minimum, seeks to meet the area's objectively assessed needs; and is informed by agreements with other authorities, so that unmet need from neighbouring areas is accommodated where it is practical to do so and is consistent with achieving sustainable development;
- Justified – an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate

evidence;

- Effective – deliverable over the plan period, and based on effective joint working on cross-boundary strategic matters that have been dealt with rather than deferred, as evidenced by the statement of common ground; and
- Consistent with national policy – enabling the delivery of sustainable development in accordance with the policies in this Framework.

Local Plan reviews are a legal requirement every 5 years in accordance with Regulation 10A of the 2012 Town and Country Planning (Local Planning) (England) Regulations. The Regulation 19 Plan is not legally compliant as it has not been reviewed within 5 years of the last Plan adopted in July 2015. It is also disappointing that the failure of the current Regulation 19 Local Plan to meet objectively assessed need (OAN) of 638 dpa outside the national park has not been properly evidenced in any up to date statement of common ground with neighbouring authorities with regards to the 'duty to cooperate'.

At this stage we believe the Plan as drafted therefore fails the positively prepared, effective, and consistent with national planning policy tests.

Duty to Cooperate

The 2014-2029 Local Plan adopted in 2015 does not meet the full objectively assessed housing needs for the area. But it did recognise that future proposals to improve the capacity of the A27 and wastewater treatment works could facilitate additional housing growth. For this reason, it committed the Council to a review of the Plan within five years to ensure that housing needs could be met. That undertaking to review within 5 years was not met.

In 2021 the Council invited an advisory visit from PINS to advise on how the present Local Plan should be prepared. The inspector advised that if the Plan was prepared which did not meet the full housing needs of the area, it would have to show that it had followed the duty to co-operate with neighbouring authorities in maximising the effectiveness of plan preparation.

The inspector said the Duty to Cooperate was therefore critical in the preparation of the Local Plan Review. At the time of the meeting, the council said discussions with neighbouring authorities had been carried out on the basis that the Local Plan Review would meet the full objectively assessed housing needs (OAN) for the area. However if this was not the case, the inspector said evidence of constructive, active, and on-going engagement to determine whether or not development needs could be met elsewhere would need to be shown. Importantly, the inspector said, 1) 'a failure to meet the Duty to Cooperate cannot be remedied during the examination process because it applies to the preparation of the Plan, which ends upon submission', and 2) local planning authorities should make every effort to secure the necessary cooperation on strategic cross boundary matters before submitting plans for examination.

The Duty to Cooperate Statement of Compliance (January 2023) forms part of the evidence base for the Submission Local Plan. In the event, the Local Plan excluding the national park only provides for 575 dpa against an OAN of 638 dpa. However this under provision against need has not been justified anywhere in discussions with neighbouring authorities before the Plan was submitted. Appendix 1 of the Statement of Compliance lists those authorities that were consulted during the earlier Regulation 18 Preferred Approach consultation. Appendix 2 lists those authorities where Statements of Common Ground have been agreed with Chichester DC for the Regulation Submission 19 Plan. No statements have produced or agreed. Therefore as it stands the under provision of housing against OAN in the Plan has not been justified. The failure to meet the duty to cooperate cannot be remedied because it has already ended with the Submission Plan. The plan therefore fails the positively prepared and justified tests. It also fails to comply with national policy in the NPPF paragraph 24-27 which advises on the duty to cooperate approach.

Local Plan Policies

The remainder of these comments deal with the proposed Settlement Hierarchy - policy S2, policy H1 – Meeting Housing Need, Non-Strategic Housing Sites – Policy H3 and T1 Transport Infrastructure.

Policy S2 – Settlement Hierarchy

The Settlement Hierarchy background paper prepared for the Regulation 18 draft Local Plan provides the justification for the hierarchy in Policy S2 of the Regulation 19 Local Plan. We agree that Plaistow & Ifold has been properly identified as a service village in the settlement hierarchy.

Policy H1 – Meeting Housing Needs

The identified housing need has been informed by the 2022 Housing and Economic Development Needs Assessment (HEDNA). It explains that based on the standard methodology, since the last HEDNA in 2020, the district wide housing need has increased from 746 dpa to 763 dpa (621 dpa in the Plan Area to 638 dpa) with the balance to be found in the national park. The proposed 638 dpa for the area of the district outside the national park is the figure that will be tested at the forthcoming Examination.

We have already explained why the failure of the Council to plan for the 638 dpa in the Regulation 19 Local Plan has not been justified in connection with the duty to cooperate and no evidence has been presented in any statement of common

ground with neighbouring authorities to show how development needs could be met elsewhere.

We note from policy H1 that the components of housing supply include outstanding housing commitments without planning permission from the 2015 adopted Local Plan, the Site Allocations DPD, and 'made' Neighbourhood Plans. However, it is unclear how the above housing supply components have been calculated and how they have translated into the strategic and non-strategic allocations in policies H2 and H3.

In the case of Plaistow and Ifold, the last adopted 2015 Local Plan identified the settlement with an allocation of 10 dwellings. The subsequent Site Allocation DPD identified land north of Little Springfield Farm for 10 no. units. A Neighbourhood Plan for Plaistow and Ifold was produced but was withdrawn and no site allocations were confirmed. The allocated site north of Little Springfield Farm remains undeveloped.

With specific reference to Plaistow & Ifold we would therefore query whether 1) the existing housing commitments without planning permission in the 2015 Local Plan and the Site Allocations DPD have been double counted, and 2) whether the non-implementation of the 10 units from the 2015 Local Plan have been ring fenced to count against the new proposed allocation of 25 dwellings at the settlement? In which case, we would question why a further 15 dwellings are only proposed at a service village in the hierarchy compared to other service villages in the NE part of the district which are proposed for higher levels of development (Loxwood 220 dwellings, Kirdford 50 dwellings and Wisborough Green 75 dwellings).

If the 25 dwelling allocation at Plaistow & Ifold is intended to be additional to the 10 units identified in the last 2015 Local Plan, then the allocation should be increased to 35 dwellings as a minimum to reflect the non-implementation of the 2015 allocation.

Policy H3 – Non-Strategic Parish Allocations

Policy H3 identifies non-strategic parish allocations. We have explained above our queries with the 25 dwelling allocation to Plaistow & Ifold, whether it has allowed for the non-implementation of the 10 units in the last 2015 Plan and why it compares so unfavourably with much higher levels of development for the other service villages in the NE part of the district.

We would also query why the options outlined in the PINS advisory visit of 2021 have not been more thoroughly tested for increased housing provision in the north part of the district to increase the supply of housing to meet OAN. There is no updated Settlement Hierarchy background paper, and the revised housing distribution has not been justified anywhere in the evidence base for the Regulation 19 Local Plan.

Policy T1 – Transport Infrastructure

The policy objectives to ensure new development is well located and designed to avoid or minimise the need for travel and encourage the use of sustainable modes of travel as an alternative to the private car are supported. However, the proposed contribution of £7.7k per dwelling towards A27 highway improvements applies to new housing across the district even in the NE part of the district where impacts from development on the A27 will be less than developments in the south of the district.

In any event it is unclear how the contributions are justified when the responsibility for trunk road infrastructure improvements rests with National Highways.

The proposed contribution in T1 is therefore questioned and in our view, flawed. The level of contribution set out in the policy and the principle of a contribution will therefore require further testing at the forthcoming Examination.

Domusea Reg 19 - <https://chichester.oc2.uk/a/sf5>

4935

Object

Document Element: Duty to Co-operate, 1.23**Respondent:** Gleeson Strategic Land (Mr Peter Rawlinson, Strategic Planner) [855]**Summary:**

There are concerns that the Plan strategy, specifically the 'constrained' housing requirement figure has led to discussions with Neighbouring Authorities focused on meeting Chichester's unmet need rather than the ability of Chichester to meet the unmet need of neighbouring authorities. It is suggested that the Council should revisit its discussions with neighbouring authorities, particularly the South Downs National Park, to understand any unmet need that can be accommodated within Chichester District, and there is no justified rationale for a suppressed housing requirement figure.

Full text:

2.2 Section 110 of the Localism Act 2011 sets out the 'duty to co-operate'. This requires Local Planning Authorities, County Councils and a number of other public bodies to co-operate in relation to strategic cross-boundary matters in the preparation of Development Plans.

2.3 The NPPF (2021) confirms in paragraphs 24 – 27 that LPA's have a duty to cooperate with each other and other prescribed bodies on a range of cross-boundary strategic issues in an effective and continuous manner.

2.4 In terms of the strategic matters, Planning Policy Guidance clarifies that this is a duty to discuss and not a duty to agree. However, LPA's should make the effort in seeking and securing necessary cooperation on cross-boundary issues.

2.5 The consultation is supported by a Duty to Cooperate Statement of Compliance (January 2023), which summarises engagement undertaken up to the point of the Regulation 19 consultation with relevant bodies, including neighbouring authorities.

2.6 In respect of neighbouring authorities, these comprise:

- Arun District Council (ADC);
- East Hampshire District Council (EHDC);
- Havant Borough Council (HBC);
- Horsham District Council (HDC);
- South Downs National Park Authority (SDNPA); and
- Waverley Borough Council (WBC)

2.7 All are at various stages of Plan-making.

2.8 Whilst the Council has demonstrated ongoing engagement with the referenced authorities and other relevant bodies, we are concerned that the Plan strategy, specifically the 'constrained' housing requirement figure, has focused some of these conversations with neighbouring authorities on meeting Chichester's unmet need rather than the ability of Chichester to meet the unmet need of those authorities, most notably the South Downs National Park.

2.9 This is backwards step from the Preferred Approaches consultation (December 2018) which sought to address an element of unmet need through agreement with South Downs National Park.

2.10 As detailed below, we consider there is no justified rationale for a suppressed housing requirement figure and the Council should re-visit its discussions with neighbouring authorities, particular the South Downs National Park, to understand any unmet need which can be accommodated within Chichester District.

Change suggested by respondent:

The Council should re-visit its discussions with neighbouring authorities.

Object on grounds that: Undertaking to review within 5 years not met; failure to meet duty to cooperate; under provision against need not justified anywhere in discussions with neighbouring authorities.

Full text:

The 'tests of soundness' for Local Plan preparation are set out in paragraph 35 of the July 2021 NPPF. They require the 2021-39 Local Plan to have been:

- Positively prepared – providing a strategy which, as a minimum, seeks to meet the area's objectively assessed needs; and is informed by agreements with other authorities, so that unmet need from neighbouring areas is accommodated where it is practical to do so and is consistent with achieving sustainable development;
- Justified – an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence;
- Effective – deliverable over the plan period, and based on effective joint working on cross-boundary strategic matters that have been dealt with rather than deferred, as evidenced by the statement of common ground; and
- Consistent with national policy – enabling the delivery of sustainable development in accordance with the policies in this Framework.

Local Plan reviews are a legal requirement every 5 years in accordance with Regulation 10A of the 2012 Town and Country Planning (Local Planning) (England) Regulations. The Regulation 19 Plan is not legally compliant as it has not been reviewed within 5 years of the last Plan adopted in July 2015. It is also disappointing that the failure of the current Regulation 19 Local Plan to meet objectively assessed need (OAN) of 638 dpa outside the national park has not been properly evidenced in any up to date statement of common ground with neighbouring authorities with regards to the 'duty to cooperate'.

At this stage we believe the Plan as drafted therefore fails the 'positively prepared', 'effective', and 'consistent with national policy' tests.

In addition, with regard to the longer term growth requirements and the singular issue of a potential new settlement the plan also fails the 'justified' and 'consistent with national policy' tests of soundness.

Duty to Cooperate

The 2014-2029 Local Plan adopted in 2015 does not meet the full objectively assessed housing needs for the area. But it did recognise that future proposals to improve the capacity of the A27 and wastewater treatment works could facilitate additional housing growth. For this reason, it committed the Council to a review of the Plan within five years to ensure that housing needs could be met. That undertaking to review within 5 years was not met.

In 2021 the Council invited an advisory visit from PINS to advise on how the present Local Plan should be prepared. The inspector advised that if the Plan was prepared which did not meet the full housing needs of the area, it would have to show that it had followed the duty to co-operate with neighbouring authorities in maximising the effectiveness of plan preparation.

The inspector said the Duty to Cooperate was therefore critical in the preparation of the Local Plan Review. At the time of the meeting, the council said discussions with neighbouring authorities had been carried out on the basis that the Local Plan Review would meet the full objectively assessed housing needs (OAN) for the area. However if this was not the case, the inspector said evidence of constructive, active, and on-going engagement to determine whether or not development needs could be met elsewhere would need to be shown. Importantly, the inspector said, 1) 'a failure to meet the Duty to Cooperate cannot be remedied during the examination process because it applies to the preparation of the Plan, which ends upon submission', and 2) local planning authorities should make every effort to secure the necessary cooperation on strategic cross boundary matters before submitting plans for examination.

The Duty to Cooperate Statement of Compliance (January 2023) forms part of the evidence base for the Submission Local Plan. In the event, the Local Plan excluding the national park only provides for 575 dpa against an OAN of 638 dpa. However this under provision against need has not been justified anywhere in discussions with neighbouring authorities before the Plan was submitted. Appendix 1 of the Statement of Compliance lists those authorities that were consulted during the earlier Regulation 18 Preferred Approach consultation. Appendix 2 lists those authorities where Statements of Common Ground have been agreed with Chichester DC for the Regulation Submission 19 Plan. No statements have been produced or agreed. Therefore as it stands the under provision of housing against OAN in the Plan has not been justified. The failure to meet the duty to cooperate cannot be remedied because it has already ended with the Submission Plan. The plan therefore fails the positively prepared and justified tests. It also fails to comply with national policy in the NPPF paragraph 24-27 which advises on the duty to cooperate approach.

Local Plan Policies

The remainder of these comments deal with the Settlement Hierarchy policy S2, H1, H2 H3 and H8.

Policy S2 – Settlement Hierarchy

The Settlement Hierarchy background paper prepared for the Regulation 18 draft Local Plan provides the justification for the hierarchy in Policy S2 of the Regulation 19 Local Plan. We agree that the hierarchy prioritising development at Chichester as the sub regional centre, followed by development at the settlement hubs, service villages and the rest of the plan area is reasonable. However, although the distribution of housing amongst the settlements in the current Regulation 19 plan has been updated compared to the last Regulation 18 plan, the background paper itself has not been updated. Nor is there any justification or explanation for the change in the quantum of strategic and non-strategic housing to the different categories of settlement in the background paper or the Local Plan itself.

Policy H1 – Meeting Housing Needs

The identified housing need has been informed by the 2022 Housing and Economic Development Needs Assessment (HEDNA). It explains that based on the standard methodology, since the last HEDNA in 2020, the district wide housing need has increased from 746 dpa to 763 dpa (621 dpa in the Plan Area to 638 dpa) with the balance to be found in the national park. The proposed 638 dpa for the area of the district outside the national park is the figure that will be tested at the forthcoming Examination.

We have already explained why the failure of the Council to plan for the 638 dpa in the Regulation 19 Local Plan has not been justified in connection with the duty to cooperate and no evidence has been presented in any statement of common ground with neighbouring authorities to show how development needs could be met elsewhere.

Policy H2 – Strategic Site Allocations and Policy H3 – Non-Strategic Parish Allocations

Policy H2 identifies strategic scale and policy H3, non-strategic allocations. We have explained above that the Settlement Hierarchy Background Paper was prepared for the 2018 Preferred Options Regulation 18 Local Plan but has not been updated to provide any justification for the revised housing distribution and quantum of development for the named locations and settlements in the Regulation 19 Local Plan.

Policy H8 – Specialist accommodation for Older People

National policy in the online planning practice guidance (PPG) is clear that the need to provide housing for older people is critical. The guidance on the provision of this type of housing states:

- Plan-making authorities should set clear policies to address the housing needs of groups with particular needs such as older and disabled people. These policies can set out how the plan-making authority will consider proposals for the different types of housing that these groups are likely to require.
 - They could provide indicative figures or a range for the number of units of specialist housing for older people needed across the plan area throughout the plan period.
 - It includes the following within the general definition of specialist housing - age-restricted general market housing, retirement living or sheltered housing, extra care housing or housing-with-care, residential care homes and nursing homes, and senior co-housing communities.
 - LPA's can identify sites for co-housing communities and other specialist housing types for older people, because,
 - Allocating sites can provide greater certainty for developers and encourage the provision of sites in suitable locations.
- This may be appropriate where there is an identified unmet need for specialist housing. The location of housing is a key consideration for older people who may be considering whether to move (including moving to more suitable forms of accommodation).

Factors to consider include the proximity of sites to good public transport, local amenities, health services and town centres.

In our view however, draft Policy H8 doesn't reflect the guidance in the PPG. For instance, although the policy sets out a threshold of provision for specialist housing of housing sites of 200 or more units, there is no guidance on the actual % provision as there is for example, on affordable housing. All it says is the specific type and amount of accommodation required will depend on the size and location of the site.

The supply of specialist housing should not just be focused on large scale housing schemes. The landscape and environmental constraints across the district even outside the national park would not necessarily allow for large 200 plus unit schemes in all locations. To support an ageing population policy should support the provision of suitable specialist housing to meet the differing needs of individuals across a range of options and in a range of locations.

The second part of H8 should therefore confirm that proposals for specialist housing, such as homes for older people will be supported without any policy qualification for a site's location within or outside a settlement boundary or within an AONB where a proposal in its local context is not deemed to represent major development.

Rather than rely on the criteria based approach, the policy should also allow for the allocation of sites for specialist accommodation for older people in a Neighbourhood Plan where a site has the support of local people.

Document Element: Duty to Co-operate, 1.23**Respondent:** Home Builders Federation (Mr Mark Behrendt, Local Plans Manager SE and E) [7316]**Summary:**

Whilst the Council have set out their activities with regard to the duty to co-operate within the compliance statement this document also notes that a none of the required Statements of Common Ground have been agreed, with many are still being drafted. Given that paragraph 26 of the NPPF expects these to be in place throughout the plan making process it is concerning that these are not available for this consultation providing clarity between Chichester District Council (CDC) and relevant parties as to the key issues and the co-operation that has taken place to address these issues.

What is disappointing is that whilst the West Sussex authorities have established mechanism for joint working through the West Sussex and Greater Brighton Planning Board no progress has been made in actually addressing the unmet needs of this area. The Local Strategic Statement (LSS) includes an objective of meeting housing needs for a growing population, yet little has been achieved with the Council suggesting that these matters will be considered in next LSS for 2030 to 2050. The HBF recognises that the area is constrained by the national park and its coastal location but seemingly nothing has been achieved in seeking to move forward. As such we would question whether the mechanisms established in this area have maximised the effectiveness of the preparation of this local plan in addressing the issue of unmet housing needs. The expectation is that cross boundary issues are not pushed forward to future plans or plan reviews, yet this is clearly what is being done in the West Sussex and Greater Brighton area.

Document Element: Duty to Co-operate, 1.23**Respondent:** Wisborough Green Parish Council (Mrs Louise Davies, Parish Clerk) [1064]**Summary:**

Horsham District Council plans demonstrate development advancing towards the WGPC boundary along the Arun River, and there is a real prospect of many hundreds of additional houses. Additional proposed major developments nearby at Dunsfold, in Waverley BC, Surrey, will also have incremental pressure on infrastructure local to Wisborough Green. Development in WG will aggregate with the growth of Billingshurst, and other local areas, and should be assessed together, especially with regard to all aspects of infrastructure. WGPC do not believe that spatial planning issues across local authority boundaries are being correctly considered. Incremental gains in WG, a sensitive rural village appear pointless set against the vast developments over the village boundary – poor coordination? CDC's duty of co-ordination with neighbouring authorities seem to only be considered at macro level, ignoring this cumulative effect of development outside CDC NE plan area.

Document Element: Duty to Co-operate, 1.24

Respondent: The Goodwood Estates Company Limited [7922]

Agent: HMPC Ltd (Mr Haydn Morris) [112]

Summary:

The plan should explain in greater detail the findings of co-operative working with neighbouring authorities to achieve a more sustainable spatial strategy, that provides a "joined up" spatial vision.

Full text:

We support generally the work the planning authority has undertaken in co-operation with neighbouring authorities, but consider weaknesses remain in the sustainable distribution of housing and other development needs that reduces the need for commuting and unnecessary travel.

The plan should explain in greater detail the findings of co-operative working with neighbouring authorities to achieve a more sustainable spatial strategy, that provides a "joined up" spatial vision and does not follow a 'silo-mentality' of providing only for district needs.

The growth of suburbia, beloved by volume housebuilders, and exacerbated by the Government's unduly simplistic approach to meeting local housing need quickly, serves only to exacerbate many of the problems the local plan seeks to address.

Evidence of co-operative working and a step-change from 'more of the same' in terms of housing provision, will make the Plan more sound. It is essential if the plan area is to be protected from inappropriate speculative housing promoted solely on grounds of housing numbers.

The ability of neighbouring authorities, including the National Park, to provide for appropriate, further growth, including that generated within Chichester District but using employment and service opportunities beyond district boundaries, should be explained and reflected in policies and allocations.

Change suggested by respondent:

The plan should explain in greater detail the findings of co-operative working with neighbouring authorities to achieve a more sustainable spatial strategy, that provides a "joined up" spatial vision.

Not legally compliant as the residents of Tangmere have reported to CDC already.

The council has engaged constructively, actively and on an ongoing basis with other local authorities and organisations to address key strategic matters but needs to reset the relationship with the residents of Saxon Meadow in order to comply with the principles set out in its principles of community involvement. Statements of Common Ground with relevant strategic policy-making authorities are currently being prepared and will be made available for review on the council's website. These statements will be kept under review and updated with progress made on addressing identified key issues, along with any new evidence available.

Full text:

There is much to commend in this document and the supporting technical documents that accompany it, and I have listed in the appendix to this letter 26 such paragraphs and policies. I am happy for my support to be registered against these sections of your consultation document. There is also much upon which I must represent a concern, so I attach representations relating to 22 paragraphs or policies.

I am happy to participate in a hearing session, and I would flag at this stage that the common theme that links all of these representations is the need to safeguard the natural and built environment in and around Saxon Meadow, Tangmere from the risks of unsustainable development, I consider that the independent examiner should focus their

review on the aspects of the local plan that relate to this matter.

Appendix 1: list of policies that I support

1. P14, 1.23, 1.24: Duty to cooperate
2. P24, para 2.30 "the council declared a climate emergency in July 2019"
3. P24, para 2.32 – "all proposal for new development should be considered in the context of a climate emergency"
4. P30: Objective 2: natural environment: "development will achieve net gains in biodiversity"
5. P43, 4.1 "National policy promotes increasing energy efficiency, the minimisation of energy consumption and the development of renewable energy sources"
6. P43, 4.3: "Some renewable energy projects provide significant opportunities to enhance biodiversity"
7. P53, Policy NE5: Biodiversity and Biodiversity Net Gain
8. P62, Para 4.42: Hedgerows and some types of woodlands are identified as a priority habitat
9. P62, Policy NE8: Proposals should have a minimum buffer zone of 15 metres from the boundary of ancient woodland or veteran trees to avoid root damage (known as the root protection area)
10. P68, Policy NE10: Criteria for Development in the Countryside - Does not prejudice viable agricultural operations or other viable uses
11. P80, Para 4.91: There are serious concerns about the impact of flooding, both in respect of current properties at risk but also the long-term management of the area.
12. 4.92: any development in the plan area must therefore have regard to flood and erosion risk.
13. 4.94: built development can lead to increased surface water run-off; therefore, new development should include SuDS to help cope with intense rainfall events
14. P81, Para 4.96: Environment Agency consent is required for any works within 16 m of tidal waters and 8m of fluvial watercourses in line with the Environmental Permitting Regulations 2016. This strip is required for access. The policy includes a setback requirement to ensure this access strip is not obstructed.
15. P80, 4.92, Any development in the plan area must therefore have regard to flood and erosion risk, now and in the future, by way of location and specific measures, such as additional flood alleviation, which will protect people, properties and vulnerable habitats from flooding. Recent changes to national guidance highlight the importance of considering flood risk from all sources, and this is particularly significant for the plan area as large parts of it are at risk from groundwater flooding, which needs to be recognised in development decisions alongside the well-established risks in relation to tidal, fluvial and surface water flooding. Appropriate mapping of all sources of flood risks is still evolving, and is likely to develop further over the plan period
16. P93, Policy NE20 Pollution: Development proposals must be designed to protect, and where possible, improve upon the amenities of existing and future residents, occupiers of buildings and the environment generally. Development proposals will need to address the criteria contained in, but not limited to, the policies concerning water quality; flood risk and water management; nutrient mitigation; lighting; air quality; noise; and contaminated land. Where development is likely to generate significant adverse impacts by reason of pollution, the council will require that the impacts are minimised and/or mitigated to an acceptable level within appropriate local/national standards, guidance, legislation and/or objectives.
17. P94, 4.127, Light pollution caused by excessive brightness can lead to annoyance, disturbance and impact wildlife, notably nocturnal animals. The design of lighting schemes should be carefully considered in development proposals to prevent light spillage and glare.
18. P94, 4.128, Dark skies are important for the conservation of natural habitats, cultural heritage and astronomy. The plan area includes three 'Dark Sky Discovery Site' designations, all located within the Chichester Harbour AONB; Eames Farm on Thorney Island, Maybush Copse in Chidham; and north of the John Q Davis footpath in West Itchenor. Development within or directly impacting these areas will be subject to particular scrutiny in terms of their impact on dark skies. The entire SDNPA area is also declared as an International Dark Sky Reserve. Development directly impacting this area will be subject to similar scrutiny.
19. P96, Policy NE22 Air Quality
20. P97, Policy NE-23 Noise
21. P142, Para 6.29, Amenity: Private space, shared space and the design quality and construction of communal spaces all contribute to amenity
22. P155-6, Policy P11: Conservation Areas "protecting the setting (including views into and out of the area)"
23. P55, Para 4.26 - The council is under a legal duty to protect designated habitats, by ensuring that new development does not have an adverse impact on important areas of nature conservation, and by requiring mitigation to negate the harm caused.
24. P58, Para 4.33 The council is under a legal duty to protect their designated bird populations and supporting habitats
25. P95, Para 4.129 The council has a duty to review and assess air quality within the district
26. P301, Conservation Area: An area of special architectural or historic interest, designated under the Planning (Listed Buildings & Conservation Areas) Act 1990. There is a statutory duty to preserve or enhance the character, appearance, or setting of these areas.

Change suggested by respondent:

Reset the relationship with the residents of Saxon Meadow in order to comply with the principles set out in its principles of community involvement .

Object

Document Element: Duty to Co-operate, 1.25

Respondent: Stagecoach South (Rob Vince) [8141]

Summary:

Para 1.25 of the draft plan states that “the council has engaged constructively, actively and on an ongoing basis with other local authorities and organisations to address key strategic matters.” Despite the requirements in NPPF and contrary to the statement made, Stagecoach has not been approached or involved in a meaningful, collaborative or ongoing way in the preparation of the Plan.

Full text:

Chichester District Local Plan 2039 – Pre-Submission (Regulation 19) Consultation

1. Introductory Comments

Stagecoach South is the main commercial public transport operator across Chichester District. The Company has headquarters in the city, which is also the principal public transport hub for the District and it’s rather wider travel-to-work area encompassing much of the Arun District. Our services extend throughout and beyond the District boundaries, as far as Littlehampton, Midhurst, Havant and Portsmouth. The vast majority of services operate on a commercial basis – that is to say, sustained by passenger use and fare revenue, including concessionary reimbursement.

While the role of the railway is significant in much of the District, especially the east-west Coastway line, yet bus services account for more boardings locally than the railway, with Chichester depot services carrying over 3.5m passengers each year.

Unlike bus services in other parts of the country, the local network has recovered strongly after the pandemic with fare-paying passenger numbers over 95% of 2019 levels, albeit with concession patronage somewhat lower. This has helped secure not only a stable but growing bus network even during this period of rapidly rising operational costs, avoiding the need for the service contractions seen in other regions. Indeed, during the second quarter of 2023 Stagecoach will invest £5.5m in brand-new vehicles for high-profile coastal Service 700 – one of the largest vehicle investments for Stagecoach Group this year.

Our services are therefore critical to existing and future local connectivity. As the Plan acknowledges, mobility demands do not respect planning authority boundaries. The role of our services is especially high to settlements in the broad A27 corridor, within the District and beyond. This includes major settlements in Arun District such as Pagham and suburban Bognor Regis, where bus is the only mass public transport option. As the Council is well aware, there is an even higher level and rate of committed development envisaged in these locations in the Arun District Local Plan than in Chichester.

It is already evident to the planning authorities, West Sussex County Council and National Highways, as proprietor of the A27 Trunk Road, that accommodating growing mobility demands across Chichester District and especially around Chichester itself, is becoming increasingly challenging to the point of being seriously problematic.

Stagecoach has a particular interest in this Plan arising from:

- The already clear and highly deleterious impact of congestion affecting our operations and their reliability and attractiveness to the public. The effects of these on the approaches to Chichester, and around the A27 bypass are especially severe. If public transport is to retain its existing role – even before the needs of any meaningful growth both in Chichester and neighbouring authorities is considered, are considered – the Council and the Highways Authority need to arrive at clearly-defined measures to protect buses from chronic delay and the damaging impacts arising from the lack of bus network resilience and customer journey times.
- In connection with the above, the need to properly consider the predictable impacts of committed development in Arun District on the transport network and in particular the operation of bus services. The duty to cooperate on cross-border strategic matters is not limited merely to accommodating housing requirements.
- The fact that our entire business premises and operational base at Chichester is the subject of allocation for redevelopment within the Plan period. Specifically, this includes our Head Office, the Bus Station as the operational hub of the network and the key interchange for passenger journeys – including those that involve the railway – and the bus depot required to support the entire operation. Notwithstanding many years of discussions, there is as yet no agreed deliverable strategy to replace these facilities either in the Draft Plan or elsewhere.

Stagecoach broadly supports the vision and priorities of the draft plan. In most respects, Stagecoach supports strongly the spatial strategy and the identified site allocations that flow from it, and the evidence.

However, it has serious concerns about the soundness of the plan as proposed for submission, for important regards outlined in this response. These are made in the light of requirements set by the National Planning Policy Framework (NPPF), in particular at paragraphs 15 and 16; 35, 105-109 inclusive and having due regard to the need for allocations to satisfy 110-112 inclusive in due course as development permission is sought; and paragraph 174.

Paragraph 16c) of NPPF makes plain that strategic plans and policies should “be shaped by early, proportionate and effective engagement between plan-makers and communities, local organisations, businesses, infrastructure providers and operators and statutory consultees” (our emphasis). This makes plain that collaborative and ongoing involvement of public transport operators is both necessary, and separate and in addition to the engagement with statutory consultees. This has not taken place.

Para 1.25 of the draft plan states that “the council has engaged constructively, actively and on an ongoing basis with other local authorities and organisations to address key strategic matters.” Despite the requirements in NPPF and contrary to the statement made, Stagecoach has not been approached or involved in a meaningful, collaborative or ongoing way in the preparation of the Plan.

Our main concerns centre around the fact that the plan strategy is neither backed by sufficient transport evidence. Even more importantly, the plan relies on a wholly car-based transport mitigation strategy despite policy stating that this is not the case, and the track record of the existing Local Plan, based on a very similar strategy, that has failed to bring forward meaningful mitigations to date to prevent traffic conditions substantially worsening. There is no support in policy for the achievement of the Strategic Objectives in the Plan. Nor is there definition of any measures in the 2023 Transport Study to make provision for sustainable transport infrastructure or services – much less materially improve them.

Finally, to the extent that updated transport evidence has been provided in the form of the 2023 Chichester Transport Study, arising from updated traffic modelling, it does not support the contention that highways capacity constraints on and around the A27 justify not meeting the objectively-assessed development needs of the area, as the draft plan contends.

2. Vision and Strategic Objectives

2.1. Issues and Opportunities

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant, proportionate and up to date evidence

Stagecoach recognises the important role of the West Sussex and Greater Brighton Strategic Planning Board which agreed a Local Strategic Statement (LSS2) in early 2016 to identify spatial planning issues across the wider area. This established strategic priorities and policies to guide longer term strategic growth in a coordinated and well considered matter. This institutional framework and the purpose of the LSS is a highly significant one and is at the heart of efforts to properly fulfil the statutory Duty to Co-operate, including with regard to strategic infrastructure issues, as NPPF requires.

Given the long period of time elapsed since the 2018 Reg 18 consultation and the already very clear constraints on strategic infrastructure capacity, it is of great concern to Stagecoach that the LSS2 has not been updated to reflect emerging issues in the intervening period. A review and update of the LSS2 has only just commenced. This includes a study of projected housing and employment needs, transport impact, infrastructure and spatial options to deliver the required development in the period after 2030. This Chichester District draft plan covers a period extending to 2039 – therefore well beyond 2030 and the nominal currency of LSS2.

However, infrastructure needs are pressing today. Stagecoach is presented with severe highway operational problems on

a near-daily basis. During the winter of 2022-23 we have, for example, seen key road links impacted for many weeks by acute disruption arising from flood events. Unpredictable, but seemingly more-frequent, exogenous events expose a lack of resilience in the highway network around Chichester and its travel-to-work area. However, serious, chronic, unpredictable delay has been normalised over recent years, with peak-time congestion having quickly returned after the pandemic. The existing development strategy has failed to bring forward measures having any impact on this to date, and key commitments – notably at west of Chichester Phase 2 and at Tangmere – have yet to commence to further aggravate the issue.

We have no confidence in the transport mitigations proposed in the existing Local Plan and LSS2 being sufficiently effective, even if deliverable at all. Indeed, the existing adopted Local Plan does little more than make vague speculations about the sustainable transport measures that might be achievable. The draft local plan review is no different. It has no ambitions at all for sustainable modes and thus, makes no meaningful provision to meet them.

This is especially relevant in light of the fact that the approach to resolving issues on the A27 around Chichester that were anticipated in 2015-16 have fallen away. LSS2 is thus currently inadequate to act as a part of an up-to-date, proportionate, and relevant evidence base for the Plan.

An update of a traffic model lies at the heart of a 2023 Chichester Transport Study. This talks no account of the existing role of non-car modes, nor can it do so. It is unable to properly evaluate the nature of problems or solutions that involve public transport, or for that matter, other sustainable modes.

Therefore, we consider that the combination of committed and additional development needs that must be accommodated over the whole plan period between 2022 and 2039, in both the Chichester and Arun Districts, require a “first principles” review. This must be based on a refreshed transport evidence baseline of no earlier than 2022 – given that the effects of COVID distort 2020-22 – and the transport infrastructure and service requirements to sustainably support those needs.

Key issues – including substantial changes with regards to transport issues and challenges, as well as potential solutions – thus do not form part of the evidence base that steers this plan. Given long term changes in travel patterns, and mode share that took place during COVID, as well as a local and national policy context that seeks to radically reduce and then eliminate transport-related carbon emissions, this is especially problematic.

The specific problems of congestion and network resilience that are evident on the A27 and the approaches to Chichester remain a set of especially difficult problems that disproportionately affect the efficiency, reliability and attractiveness of the bus network, that evidently demand larger-scale strategic responses involving multiple stakeholders, including bus operators.

Where the effects of development on the national Strategic Roads Network (SRN) are concerned, the approach of National Highways to addressing and responding to the mobility needs of development has now substantially changed following the promulgation of the DfT Written Ministerial Statement LTN01/22. This makes it clear that adding highways capacity is no longer the first or only strategy that should be pursued, but one subordinate this to maximising the potential of non-car modes and sustainable travel.

“Effective and ongoing collaboration” on transport matters has not led to solutions being agreed and published for public scrutiny as part of the plan evidence base. Whatever the approach to modelling and “highways improvements” that may be agreed or pending agreement with the County Highways Authority and National Highways, Stagecoach is neither participant or sighted. This is despite the clear requirements set out in NPPF Para 106 b) that “Planning policies should ... be prepared with the active involvement of local highways authorities, other transport infrastructure providers and operators and neighbouring councils, so that strategies and investments for supporting sustainable transport and development patterns are aligned.” (our emphasis).

We therefore consider that the Council has failed to comply with the requirements of NPPF paragraph 25 and 26 that “relevant bodies” are involved in plan-making, especially with regard to addressing the needs for infrastructure. Public transport services and the infrastructure that supports its operation and use clearly fall within matters relevant to plan-making. This is explicit in NPPF Chapter 9 and indeed within the plan itself – for example reference to public transport and sustainable modes in the Vision for the plan.

It should be stressed that the Regulation 18 “Preferred Approach” consultation took place in December 2018 – over 4 years ago and prior to COVID, based on LSS2. The inordinate length of time that has elapsed between the Regulation 18 and Regulation 19 stages greatly challenges the LSS2 and other parts of the evidence base, especially as the pause straddles the COVID epidemic. That would include the transport modelling baseline, and key assumptions in any traffic modelling that took place prior to mid-2022, which is a point at which a reasonable “new normal” post-COVID might be considered to have become established. In that period, Arun District has also adopted its own Local Plan development strategy that accommodates an unprecedented quantum of development immediately east and south-east of the District Boundary – creating additional substantial transport impacts directly affecting the A27 and multiple major approaches to Chichester crossing it.

The established mechanism to fulfil the Duty to Co-operate has thus not operated effectively.

The Plan is not founded on a relevant, proportionate and up-to date evidence base and is thus inadequately justified.

2.2. Spatial Portrait

The spatial portrait is generally succinct and accurate. However, it makes no mention of road-based public transport, the role of the City as a public transport hub, or the range of bus services that provide local connectivity (Section 2.4 and 2.5). The complete concentration of post-16 education in the City itself as just one example of the peculiarities of transport demands in the area, is not highlighted, though this has a profound influence on peak time travel demands affecting the most congested parts of the highway network. Among other things, the role of bus services in supporting the educational system of the plan area is very great indeed.

The potential role of bus in addressing the already-severe transport problems of the plan area and beyond seems entirely overlooked. The spatial portrait is thus clearly inadequate and incomplete.

2.3. Strategic Objectives

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Chapter 9 of NPPF and paragraphs 104 and 105 in particular require that plans should:

“Transport issues should be considered from the earliest stages of plan-making and development proposals, so that:

- a) the potential impacts of development on transport networks can be addressed;
 - b) opportunities from existing or proposed transport infrastructure, and changing transport technology and usage, are realised – for example in relation to the scale, location or density of development that can be accommodated;
 - c) opportunities to promote walking, cycling and public transport use are identified and pursued;
 - d) the environmental impacts of traffic and transport infrastructure can be identified, assessed and taken into account – including appropriate opportunities for avoiding and mitigating any adverse effects, and for net environmental gains;...
- ...The planning system should actively manage patterns of growth in support of these objectives. Significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. This can help to reduce congestion and emissions, and improve air quality and public health...”

The Strategic Objectives do not conform with NPPF in these foundational requirements adequately, to transparently steer the plan strategy. They should therefore be amended to read:

“Plan to provide local infrastructure to support new development and seek opportunities to address existing identifiable infrastructure problems deficits, such as in particular those relating to the A27 and its junctions and wastewater treatment.”

Paragraph 2.36 states, in the context of the Climate Emergency and the National Trajectory to “Net Zero” that “The council will enable the delivery of infrastructure, jobs, accessible local services and housing for future generations while protecting, conserving and enhancing the historic and natural environment.”

Naturally, we support this intent.

However, there is no acknowledgement of the role current patterns of transport use contribute to carbon emissions, nor that substantial mode shift is necessary to address sustainably an acute lack of capacity on the local network and the SRN, especially around Chichester. This is especially concerning as the basic conceptual link is not made between the fact that the greatest such problems lie on the A27 corridor and around Chichester, while these are also at the same time present many of the most sustainable locations for development, and where the opportunities to secure much greater use of sustainable modes also exists.

Strategic Objective 7 “Strategic Infrastructure” includes the following statement:

“To work with infrastructure providers to ensure the timely delivery of key infrastructure to support delivery of new development. New development will be supported by sufficient provision of infrastructure to enable the sustainable delivery of the development strategy for the plan area. Key infrastructure to support the Local Plan will include improvements to transport, ...

A sustainable and integrated transport system will be achieved through improvements to walking and cycling networks and links to accessible public transport. Highway improvements will be delivered to mitigate congestion, including measures to mitigate potential impacts on the A27 through a monitor and manage process.”

The latest transport evidence in the Chichester Transport Study makes no pretence to define much less to deliver a “sustainable or integrated” transport system. It is wholly devoted to sustaining current levels of car use across the District, to and through Chichester area.

It is no more than the lightest of touches to the approach taken to supporting the adopted Local Plan, an approach that is

already almost 10 years beyond the date of its gestation but has yet to deliver any significant capacity improvement schemes, much less any measures that sustain even current levels of public transport journey times and reliability in the face of increasing congestion – much less any betterment.

Of the six key junctions on the A27 around Chichester, recognised to require significant mitigation given they are saturated for extended periods, five accommodate regular bus services - indeed frequent ones at least every 20 minutes in several cases. The sixth at Oving Road, relates directly to a key corridor where bus services are needed to support strategic growth currently being delivered at Shopwhyke, as well as substantial further growth West of Tangmere (proposed allocation A14) and “East of Chichester” (A8), south of Shopwhyke Road.

As stated at p12 of the Study Summary “The modelling shows that all the junctions on the A27 Chichester bypass are well over capacity, even before adding in the Local Plan development and with the exception of Portfield Roundabout are actually shown to be over capacity in the base model year (2014) in one or both peaks”. This much has indeed been evident for years from delay and periodic even more severe disruption arising to Stagecoach services from the lack of network resilience.

The reassignment of through and local traffic through Chichester to avoid the A27 bypass is an especially serious issue for bus services that penetrate the city. This is leading to consequential saturation of a range of junctions used by buses. Rising delay and unpredictable running times are at the root of our decision to sever the long-established Portsmouth to Littlehampton service in 2023, which will in future no longer run across Chichester, but terminate to provide additional dwell time to mitigate the impacts of congestion.

While this congestion affects all road users including businesses and freight traffic, the effect on scheduled bus services is greatly higher, as such services cannot reassign route to ‘beat the queue’. Traffic congestion often encourages greater car use for this reason, in tandem that people are happier to sit for extended periods in their own vehicle on a seamless door-to-door journey than wait at the roadside for a delayed bus making slower progress in lengthy queues.

As the Study admits at para. 1.3.2 “Although, there have been works at the Portfield Roundabout in this timeline, no other mitigation schemes have been completed along the A27 corridor, as such the mitigation schemes defined in this report will also be required to consider the development from this plan period.”

In other words, in the 8 years since the current Local Plan was adopted in 2015, there has been minimal progress in delivering the traffic mitigations. There is no clarity at all when any such mitigations will be brought forward. It is hardly surprising then, that traffic conditions have deteriorated. The “predict and provide” transport strategy supporting the current plan has failed.

Despite this, the Draft Local Plan Review proposed to “double down” on exactly this strategy. It represents, like the rest of the evidence base, a “rolling forward” of the current car-based strategy by 9 years, with the lightest of touches to attempt to accommodate car trip demands from a relatively modest additional development quantum.

Nevertheless, the Study requires a global 5% reduction in trip demands arising from unspecified “credible” (paragraph 4.1.2) sustainable transport and travel planning measures. It is unclear why use of non-car modes will see disproportionate growth when no measures are in place to make them more attractive. This 5% increase in use translates to a doubling in the modal share of bus services. There is no evidence nationally, anywhere, that simple ignorance of alternatives to the car is the main barrier to uptake.

The outputs of the 2023 Chichester Area Traffic (SATURN) model are set out at Table 5.1 (am peak) and 5.2 (pm peak) without mitigation. These betray just how seriously compromised the whole network around Chichester is, and will be in future, even with implementation of a mitigation package to increase traffic capacity that is understood to cost between £92m and £164m – and which the Study and the draft plan acknowledge cannot be delivered through developer funding sources alone. Unspecified external funding presumably from HM Treasury through DfT is required.

Even if this provided and the schemes are delivered, Tables 8.1 and 8.2 indicate these will provide minimal relief. The final columns suggest key junctions, including Portfield, Fishbourne Road and Cathedral Way East will remain at well over 100% ratio of flow to capacity (90% is considered the point at which saturation is approached, with the onset of increasing delay above that figure). RFCs in tables 8.1 and 8.2 are some of the highest we have ever seen in a local transport evidence base for a post-mitigation scenario. While the serious potential risk of reassignment across Chichester City is greatly reduced, which is important and welcome given its impact on bus services, Tables 8.1 and 8.2 show the extent of post-mitigation saturation is also egregious, covering a very large number of key links and junctions.

On every measure and criterion, then, including cost deliverability and effectiveness, the revised Transport Strategy falls well short of evidence to suggest the transport impacts of the plan can be properly addressed by this means.

Despite the repeated statements about sustainable modes throughout the draft plan and Chichester Transport Study, only 2 paragraphs at Section 6.2 within the Study are devoted to public transport:

“6.2.7 The funds generated from the parking management schemes, local/nation funding schemes and developer contributions could also be utilised to fund potential public transport enhancements within the city centre including an

expansion of the bus priority lane system within Chichester City Centre. This could reduce reliance on the car in the longer term towards sustainable public transport. A park and ride scheme could be incorporated within a bus priority lane network in the future depending on the uptake and successfulness of early bus priority trials.

6.2.8 Chichester City centre has a constrained existing public highway network. Therefore, any proposed dedicated public transport or light transit corridors that could be implemented would be at the expense of existing highway. This could be managed through a time-based system where certain routes are restricted to public transport only during specific times. E.g., peak hours.”

There is some very high-level consideration of Park and Ride following this section. None can be considered a serious practical evaluation of consolidating car-borne trips onto bus services, including existing ones, for example local mobility hubs, more frequent bus corridors, delivery of specific bus priorities.

None of the discussion of alternatives to “predicting and providing” for unconstrained traffic growth is rooted in a deliverable evidence base, or proper evaluation of options and specific projects.

To take just one aspect of the few specifics that can be picked out, a workplace parking levy is hypothesised. This would apply only to “offices”, in Chichester city centre (para 6.2.3), without consideration given as to how this could be practically achieved or even that a meaningful amount of office based employment would qualify. Much less is any consideration given to how far focusing a strategy only on office-based workers would actually deliver a particularly significant effect, apart from to create a strong incentive to relocate offices out of the city centre to places out of reach by public transport.

Looking at the Chichester Transport Study 2023 and the draft plan together, there is insufficient evidence that the traffic capacity increase proposed in the 2023 Transport Study is any more affordable or technically deliverable, or likely to be sufficiently effective, than those in the past strategy. The evidence more strongly points to the fact that no highway improvements are identifiable or economically deliverable to meet even short term increases in demand for car-borne mobility on most of the network around Chichester.

There are no published strategies or schemes clearly supporting the contention that the objective of improving sustainable modes is technically achievable or deliverable either. The plan makes generalised assertions that such strategies will be devised and implemented only after serious problems emerge from a shortfall in the car-borne transport strategy.

The reference to “monitor and manage” is undefined and unsubstantiated. There are no outcomes stated, no mechanisms specified and no timescales for action.

Our experience today is that network conditions have reached unacceptable and prejudicial levels of severe unpredictable delay. The saturation of the network is already evident well outside the traditional peaks on key sections of highway and at key junctions. External shocks such as the effects of severe weather are becoming more common, leading to delays so extreme as to justify the description of “gridlock”. The plan does not identify a strategy to effectively address this, in particular by consolidating passenger car trips onto more efficient public transport vehicles. This is unacceptable to Stagecoach.

2.4. Local Plan Vision

Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the broad approach in Plan Vision and in particular that by 2039, the Plan will support and enable greater use of sustainable modes. However, there is no link made between reducing the use of private cars, and the need for a step change in the use of sustainable modes. Without a published transport evidence base it is impossible to establish a suitable sustainable transport strategy to support both carbon reduction and alleviation of the problems arising from acute congestion. Even on a very crude basis, to achieve a meaning mode shift on key approaches to the A27 Chichester Bypass will require more than 20% of existing peak car-borne journeys to transfer to other modes. A 10 percentage point transfer to bus (about half this shift) would imply more than doubling peak hour bus passenger boardings.

The Vision is nothing more than an aspiration, that needs to more definitively aim at key outcomes, for the plan to be effective. The Vision should thus be altered to read:

“Get about easily, safely and conveniently with less reliance on private cars –making the greatest possible use of the rail and enhanced bus network, and with more opportunities for active travel including walking and cycling; to materially reduce dependence on private car use.”

Underpinning the Plan’s spatial strategy, the Vision section goes into more specific detail about key localities in the Plan area.

Regarding Chichester, Paragraph 2.39 states: “The emphasis will be upon consolidating and enhancing the role of

Chichester city as the plan area's main centre, whilst also developing the role of key settlements to its east and west. The focus will be upon creating communities with good access to a range of employment opportunities and affordable housing for young people and families to balance the ageing population."

This is clearly the appropriate focus for meeting the District's development needs in a sustainable manner. The city and key settlements to the east and west, are those places already able to make use of relevant public transport services, both rail and bus. Especially within and near the City, walking and cycling can credibly present highly relevant choices. This emphasis clear can be expected to address the requirements of sustainable development set out in NPPF and their local application set out in the Plans Strategic Objectives.

However, this needs a robust transport strategy, to avoid a further concentration of development and its traffic impacts occurring on or near some of the most chronically congested parts of the highway network. To date, the absence of intervention has strangled the bus network through further marked deterioration in traffic conditions. This by consequence increases the risk of bus delay or cancellation, lengthens journey time and reduces customer confidence in bus as an attractive alternative mode of travel.

In April 2023, Stagecoach is making significant timetables changes to improve operational resilience in and around Chichester. The biggest such change is the severance of the Portsmouth to Littlehampton section of service 700, at Chichester, with buses operating independently to the east and to the west and ending cross-city links. This is planned to reduce the probability of delay but at the cost of additional vehicle resource (circa £200,000 per annum) which could be better spent providing new or enhanced services. We anticipate a small loss of custom as a direct consequence of the change, but have little choice other than to take negative action so as to fulfil our statutory punctuality obligations.

If the Strategic Objectives of the Plan and its Vision are to be achieved, in the way required by NPPF paragraphs 104-105, a properly-evidenced transport mitigation strategy needs to create the conditions where bus journeys are more reliable than car journeys and thus mobility demand switches as far as can be realistically achieved away from car use, to bus use and other more sustainable modes.

Beyond Chichester, the Plan Vision focuses on key localities beyond to the east and west.

To the west of Chichester a focus on growth at Southbourne is justified at paragraph 2.43: "...the aim is to take advantage of the village's good transport links and existing facilities to deliver significant new residential-led development within the broad location for development which will further enhance local facilities and offer opportunities to reinforce and supplement existing public transport, including bus routes."

We agree this is a very significant opportunity. However, if the requirements of NPPF paragraphs 104-105 are to be met, this demands that effective bus priority is delivered on the A259 corridor, especially eastbound at Fishbourne and westbound approaching Emsworth. Without such measures, the growth committed and planned will serve only to further undermine bus journey time and decrease punctuality on the existing 700 service, entirely contrary to the aims of the Vision.

The emphasis on the A259 corridor served by Stagecoach 700 west of Chichester is reinforced at paragraph 2.45 stating that "Between Chichester and Southbourne, the Plan provides for more moderate levels of growth within the parishes of Fishbourne, Bosham and Chidham & Hambrook, ... with opportunities to support and expand existing facilities and for increased use of public transport options". We strongly support the principle, but the Plan must follow through with specific public transport priority measures that facilitate rather than prejudice such an outcome.

East of Chichester the focus is at Tangmere, where the existing allocation for about 1000 dwellings is being uplifted by 300. Paragraph 2.44 justifies this among other things recognising the scope for "...improved and additional bus services and cycleways will provide better connections to Chichester city and east to Barnham and the 'Five Villages' area in Arun District." We unequivocally endorse this conclusion. Realising a "game-changing" level of bus service quality, reliability and frequency east of the city, also serving committed and planned development north and south of Oving Road at Shopwhyke, is equally essential, given that all SRN links and junctions are approaching equal saturation.

The National Bus Strategy has given new focus on partnership with West Sussex County Council to discuss and deliver a significant new bus service between Chichester, Shopwhyke, Tangmere, Eastergate and Barnham, supporting committed development and acting as an initial phase of what ought to be a more ambitious longer-term strategy to support growth beyond 2025 in both Chichester and Arun Districts. For these improved bus services to be both deliverable and effective, robust bus prioritisation is unavoidable. No such measures are proposed in the Plan or its evidence base and we therefore suggest inclusion of plans to facilitate safe and efficient bus operation between Tangmere and Nyton/Eastergate, ideally avoiding the need to join A27 through-traffic entirely.

We welcome the clear recognition that these localities identified for growth, benefit from existing relevant public transport services. The Vision also sets an expectation that bus services in particular should be "enhanced" and "reinforced".

We entirely agree that these opportunities exist, across the broad strategy and strategic allocation proposed by the draft Local Plan. Securing them will be crucial to achieving national and local policy objectives, including the Strategic Objectives. However, to our continuing very great dismay, the Plan goes no further to defining how this will be achieved.

As such the Vision is not demonstrable achievable or deliverable.

Accordingly the Plan cannot be considered effective, in the sense of NPPF.

Remedying this, demands specific measures to protect bus services from congestion in the following corridors:

- A259 East of Emsworth
- A259 Fishbourne
- A 259 Via Ravenna/Cathedral Way
- A286 Stockbridge Road north and south of A27
- B2145 Whyke Road/Hunston Road
- A259 Bognor Road, east and west of A27 and extending to the District Boundary
- B2144 Oving Road/Shopwhyke Road east and west of the A27
- A 285 Westhampnett Road/Portfield Way/Stane Street, potentially involving a mode filter at the west end of Stane Street

These must be defined to a sufficient level of detail to assess their effectiveness and deliverability, including costs.

This would then allow West Sussex County Council and Local Transport and Highways Authority, ourselves as the principal bus operator, and where appropriate other organisations that would be directly tasked with delivering the mitigation package, to agree service levels and standards necessary to deliver specified outcomes, including journey times, frequencies, capacity and hours of operation on the network, and also in respect of the strategic allocations and Strategic Locations for Growth.

The agreed mitigations strategy should be set out in an up-to-date Infrastructure Delivery Plan backed by clear funding commitments, including a funding strategy to justify necessary developer contributions.

Where necessary to support evidence of effectiveness and deliverability, clear statements of support, which might include Statements of Common Ground between the LPA, LTA, National Highways and Stagecoach, could be provided.

3. Spatial Strategy

Stagecoach Supports

Stagecoach well recognises the constraints outlined in the explanatory narrative at the start of Chapter 3.

In particular we strongly endorse that strategy in that it reflects that the best opportunities to meet housing and employment development requirements sustainably clearly exist in and close to Chichester and on the key east-west movement corridor where – subject to effective measures being delivered to make these modes more attractive, efficient and relevant – sustainable modes can credibly provide for a much higher proportion of movement demands, mitigating most effectively the potential traffic impacts of development.

We agree that the Manhood Peninsula suffers serious environmental constraints, but, added to these, public transport and other sustainable modes cannot provide such attractive alternatives, and significant further development risks merely reinforcing already high levels of car use, aggravated by the carbon impacts of the distances involved – something the plan does very little to evaluate, and makes no reference to.

We endorse the conclusion in paragraph 3.24 that significant development in the part of the District north of the National Park is inappropriate. The rationale is principally on landscape and visual character. This exposes a fundamentally biased approach to plan making that has consistently underplays transport accessibility and carbon issues. In fact, the lack of local services and the extended distances that need to be travelled to fully participate in society in this area, with no realistic prospect of public transport offering relevant choices, ought to rule such a strategy out of play on a far less aesthetic and interpretational basis.

3.1. Policy S1 Spatial Development Strategy

Stagecoach Supports

The Spatial Strategy flows clearly and logically from the Spatial Portrait, and the opportunities and constraints identifiable across the Plan area. It represents a logical and justified continuation of the existing Local Plan strategy. In particular the spatial strategy maximises the potential for sustainable modes to contribute to meeting a much higher proportion of all the District's mobility and accessibility needs.

3.2. Policy S2 Settlement Hierarchy

Stagecoach Supports

The settlement hierarchy clearly reflects the service endowment and potential self-containment of the settlements in the District. In particular, the second tier of settlement hubs includes secondary schools, which are major peak trip generating uses. Service villages, in the main, also benefit from bus services running at least hourly, which can be expected to provide for a degree of mobility for the higher number of trip purposes that cannot be satisfied by walking or cycling within the immediate locality. Thus, a level of development to meet local needs in this tier is relatively sustainable.

There is a quite broad range of settlements in this category. We have concerns that, north of the National Park, the

Service Villages have no realistic public transport choice. These include Plaistow/Ifold, Kirdford, Loxwood, and Wisborough Green. Such as exists is typically a 1/bus per day off-peak shoppers service offering up to 90 minutes in Horsham or Guildford and as such any development here even to meet local needs requires each adult to own a car. This contrasts strongly with Service Villages to the south of the National Park, which are greatly more sustainable.

4. Climate Change and the Natural Environment

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This section of the plan is extensive and wide ranging, as should be expected.

However, remarkably, there is no acknowledgement whatever of the role of transport in mitigating climate change or its effects, not of the importance of sustainable movement and access being facilitated across the plan area in addressing anthropogenic impacts on the natural world at a more local level.

This exposes very clearly a troubling level of indifference to transport matters in the production of the Plan, which, while nationally quite common, is neither appropriate nor acceptable. The mitigation of transport impacts is not merely a matter speaking to the social and economic aspects of sustainable development. It is crucial to address the causes and effects of climate change that arise from transport, and personal mobility.

This is now well understood and at the centre of national policy, including the National Decarbonisation Strategy for Transport (July 2021) which at Section 5 commits the government to aligning land use planning and transport strategy much more tightly and effectively to mitigate the carbon emissions associated with the current dependence on cars, and the mode mix; but also to reduce travel distances, both increasing the potential relevance and effectiveness of all sustainable modes, and reducing average journey lengths for residual motorised journeys of all kinds.

National statistics show that well over a third of all domestic carbon emissions arise from land-based transport and of these, the vast majority arise from trips of over 10km – outside the range of large scale use of cycling. In fact, the potential of the plan to materially support carbon emissions reduction from within the plan area lies more in the realm of transport than any other policy theme – including emissions mitigation from buildings, which is in any event an aspatial matter and covered by nationally-binding building regulations. By 2025 something like 40% of all the emissions within the plan-area will be transport related.

There is no evidence supplied to support the plan that addresses the transport carbon impacts of the spatial development strategy in a clear manner.

There is no evidence supplied that sets out the effects of potential worsening of congestion on air quality within the plan area, arising entirely from the excess of passenger car movement demands over available and credibly deliverable highway capacity. This is despite the evidence set out and acknowledged in the explanatory memorandum at paragraph 4.130:

“4.130. The council’s Air Quality Action Plan and the West Sussex Transport Plan 2022-2036 both refer to the air quality issues faced by Chichester. There is currently one Air Quality Management Area (AQMA) in the plan area, located at St Pancras, Chichester. AQMAs are designated where air quality exceeds, or is likely to exceed, national air quality standards and objectives. Development within or impacting these areas, or that likely to cause the declaration of any further AQMAs, will be subject to an air quality assessment by the applicant.”

This is a retroactive approach – it is not “planning”, based on evidence.

We are well aware that air quality issues in and of themselves can render allocated sites to be undeliverable: a good example is in the Vale of White Horse, Oxfordshire, where strategic allocations on the A338 and A420 corridors have been held up for years by air quality issues at Marcham and Frilford, in large measure because agreed transport interventions were considered inadequate or undeliverable a very short time after the Plan was examined and adopted.

There is no evidence that shows how the development strategy can effectively mitigate these impacts as well as the further potential impacts that arise from the development strategy. This is exasperating, as there is clear evidence that could be drawn upon to show that that very substantial opportunities exist to:

- Speed buses up and make them more reliable by the delivery of bus priority on most of the key main corridors. Most of these even today operate relatively frequently
- Improve service frequencies and extend hours of operation.
- Secure significant background mode shift to bus as a result, damping pressure on key links and junctions, by consolidating demands on direct more reliable and more frequent bus services.

The spatial development strategy as submitted is in fact, likely to well conform to such additional evidence.

The allocations require substantial additional transport related work and evidence to demonstrate that the opportunities for sustainable transport have been identified and taken up as required by NPPF paragraphs 104-105.

With regards to specific policy, Policy NE22 should be modified to read:

"Development proposals will be permitted where it can be demonstrated that all the following criteria have been addressed:

1. Development is located and designed to minimise traffic generation and congestion through access to by maximising the relevance and attractiveness of sustainable transport modes, including maximising provision of specific demonstrably effective measures to make pedestrian and cycle and public transport routes and networks more direct, more safe, faster and more reliable;..."

5. Housing

5.1. Policy H1 Meeting Housing Needs

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

The presumption of the planning system is that local planning authorities should seek to meet their objectively assessed development requirements in full. These needs are assessed by a defined Standard Methodology set out in Planning Practice Guidance and elsewhere, that has explicit regard to ensuring that the economic and social effects associated with housing are properly provided for, to avoid exacerbating serious problems that arise from inadequate housing supply.

As a significant local service provider and employer, Stagecoach is concerned that existing issues with housing availability and affordable housing supply are not exacerbated. This has a direct bearing on staff recruitment and retention. It also has an indirect bearing on our cost base.

The existing problems with housing affordability have developed over many decades of undersupply. It should be emphasised that the significant boost to the supply of housing that has been sought by governments over the last 15 years, has only begun to take effect relatively recently in this District. Tackling the problem will require years of consistent attention.

Stagecoach notes that the Council is no longer proposing to meet its identified housing needs in full. Rather than 638/annum the Council is allocating a total that implies an annual delivery rate of 535/annum.

While a number of matters evidently present challenges to the Council in identifying a sustainable development strategy. Paragraph 5.2 indicates that "constraints, particularly the capacity of the A27 has led to the council planning for a housing requirement below the need derived from the standard method..." The blame for being unable to meet housing requirements is thus laid squarely at the door of transport infrastructure and systems.

This conclusion in no way follows from the evidence in the Chichester Transport Study. This, rather, makes the statement that when a higher annualised quantum of 700 dwellings per annum was tested, in the majority of cases the traffic capacity improvement package would perform little differently. To quote the Study:

"5.6.3 The network performance outputs analysed comprising V/C%, Delays (seconds) and Queues (PCU's) suggest that generally the proposed SRN mitigation identified for the Core Scenario, can accommodate in the most part, additional increase in development to 700dpa."

Whether the rest of the local road network is similarly protects is moot.

Irrespective of these results, even if the contention made in the draft plan were true, unlike many other constraints, this is amenable to a suitable effective strategy to address the constraints identified being collaboratively conceived. This is what NPPF expects, as set out in paragraphs 104-106.

Where the A27 is concerned, as part of the SRN, National Highways is now working to a substantially revised approach than that in force at the time to current Local Plan was prepared, or LSS2, or reflected in the Chichester Transport Study. This is set out in DfT WMS 01/22. This document is the policy of the Secretary of State for Transport in relation to the SRN which should be read in conjunction with the National Planning Policy Framework (NPPF). It replaces the policies in the Department for Transport Circular 02/2013 of the same title.

It makes plain that to accommodate additional demands arising from development, National Highways (NHC) expects to meet the requirements of its statutory license in a substantially different manner. With respect to development NHC LTN 01/22 continues to address the tensions between national policy for the environment and carbon mitigation, the ongoing need to substantially boost the supply of housing as well as maintain national economic competitiveness and protect the safety of the public. However, in future, the approach will be to seek first to maximise the impact of demand management measures (reducing the need to travel), and then to accommodate residual additional demands first though maximising the use of sustainable modes, rather than accommodating assumptions about current levels of car dependency and use.

LTN 01/22 much more closely and explicitly aligns with the language of NPPF Chapter 9 paragraphs 104-106. Paragraph 12 states: "New development should be facilitating a reduction in the need to travel by private car and focused on locations that are or can be made sustainable.... Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas." (our emphasis).

It continues at paragraph 13: "where developments are located, how they are designed and how well delivery and public transport services are integrated has a huge impact on people's mode of travel for short journeys. The company will therefore expect strategic policy-making authorities and community groups responsible for preparing local and neighbourhood plans to only promote development at locations that are or can be made sustainable [footnote 8] and where opportunities to maximise walking, wheeling, cycling, public transport and shared travel have been identified." (again, our emphasis)

Stagecoach readily confirms that the draft Plan development strategy conforms well to the first limb of this expectation, in terms of the location of development.

Stagecoach considers that the plan and its evidence base conforms poorly to the second in that the specific opportunities to maximise walking, cycling wheeling and public transport are not clearly identified, and defined, and proven to be effective and deliverable.

The current mitigation strategy for the A27 Chichester area, supporting the adopted Local Plan and for which proportionate developer contributions have and continue to be sought, reflects now-superseded DfT Circular 02/2013. As a direct result, it failed completely to identify any significant effective bus priority measures, despite the fact that frequent services already exist on the key corridor concerned, and that one bus journey can remove, fully seated between 72 and 80 single occupancy car journeys from congested links and across key junctions on the A27. Rather, it sought to implement targeted measures to increase the throughflow of general traffic.

We recognise the realisation that this approach, which was already reliant on some tenuous logic, is simply not technically viable, especially where further development needs are anticipated.

National Highways will now pursue an approach with the planning system that "includes moving away from transport planning based on predicting future demand to provide capacity ('predict and provide') to planning that sets an outcome communities want to achieve and provides the transport solutions to deliver those outcomes (vision-led approaches including 'vision and validate,' 'decide and provide' or 'monitor and manage'). The company will support local authorities in achieving this aim through its engagement with their plan-making and decision-taking stages." (paragraph 15).

Paragraph 23 is at the fulcrum of assessing and defining transport mitigations to accommodate growth on and near the SRN "Capacity enhancements such as modifications to existing junctions or road widening to facilitate development should be determined on a case-by-case basis. The general principle should be accepted where proposals would include measures to improve community connectivity and public transport accessibility, and this will be weighed against any negative safety, traffic flow, environmental and deliverability considerations, impacts on the permeability and attractiveness of local walking, wheeling and cycling routes, and alternative options to manage down the traffic impact of planned development or improve the local road network as a first preference." (our emphasis).

However, no material work has been done that seeks to identify if a bold robustly conceived and suitable judiciously-prepared strategy that seeks to consolidate flows on already densely travelled corridor onto improved bus services, driving mode shift through insulating these services preferentially from already serious queuing. This would be likely to have very substantial impacts on all the key junctions on the A27, and potentially, on the A27 itself. The need for an integrated approach between Shoreham and Emsworth within West Sussex paying particular regard to development requirements in both Arun and Chichester Districts naturally lies at the heart of this, and we would expect to be picked up by the LSS3 Review among other things.

However, the locus of the problems and its causes and effects are obviously well enough known to start work on defining solutions within the plan area today. We would expect that this work will be essential if National Highways are to support the Plan, especially now given the terms of Circular 01/2022.

Such work could and should start from a "policy off" position: in other words that the Plan should fully accommodate its needs unless it can be proved that a mitigation strategy for the A27 that is compliant with DfT WMS 01/2022 cannot credibly accommodate resulting capacity demands without unacceptable impacts on the safety and efficient operation of the SRN.

This evidence does not exist. In fact the Chichester Transport Strategy 2023, on which the Council solely relies as its transport evidence base, indicates the opposite at para 5.6.3. This is the case before meaningful measures to secure damping of traffic demands through mode reassignment are even considered.

The exception to this is Portfield and Oving Road, which are among the most problematic areas after mitigation even at the Council's chosen 535 dwelling/annum scenario (para 5.6.4.-5). The costly capacity mitigation simply cannot deliver

enough benefit. It is admitted that WSCC has indicated that it would prefer a solution that places greater reliance on sustainable modes damping car-borne demand. This is entirely the strategy required by NHC to follow LTN 01/22, of course. Despite the fact that “predict and provide has “run out of road” no attempt has been made to examine what such a solution set credibly could look like. This is unsatisfactory and deeply troubling.

At paragraph 5.4 the draft plan points back again at the West Sussex and Greater Brighton Strategic Planning Board and the future work that has been commissioned, but has barely begun, to update the Local Strategic Statement. This work is to inform the preparation of plans that have horizons beyond the end date of the current LSS in 2030 and properly to meet the Duty to Cooperate. As we said in our response to section 1 of the Plan we fully endorse the conclusion that this is the right mechanism to look at these issues. However, the mechanism has not been effectively applied to the production of this plan. Therefore, the specific evidence that capacity on the A27 in and of itself supports accommodating a lower housing requirement does not exist.

The Plan thus does not conform to NPPF, is not adequately justified and is not effective.

The Plan does not properly meet the statutory Duty to Cooperate.

We will return to this matter in specific representations to Section 7 of the draft plan.

5.2. Policy H2 Strategic Locations/Allocations 2021-2039

Stagecoach Supports

Policy H1 makes plain that the plan, as far as it identifies locations for development has done so in locations that conform with its spatial strategy. All of the strategic allocations to a greater or lesser extent offer clear opportunities to make use of sustainable modes, by virtue of their location. That is not to say that the opportunities to take up these opportunities, and maximise the role of sustainable modes, has been identified, defined and translated properly into the rest of the plan policy suite or Infrastructure Delivery Plan.

As our remaining representations make clear, we support the locations thus far identified as being those that offer the best opportunities to reduce the need to travel, reduce travel distances, and create high quality attractive sustainable travel choices, for both existing residents as well as new ones.

However, the transport impacts of the allocation will individually and cumulatively likely to lead to increasingly severe impacts on the transport network, and on bus services.

Perversely, because these opportunities are not properly identified and secured through the plan and its supporting transport strategy, the opportunities presented by the allocations to secure a substantially more sustainable and lower carbon pattern of movement will not only risk being squandered but may aggravate the wider problems.

5.3. Policy H3 Non-strategic Parish Housing Requirements

Stagecoach Supports

The approach is consistent with the plan’s spatial strategy. It generally avoids a dispersal of development to locations likely to be highly car dependent. There is a clear focus on meeting housing needs in the far north-east of the District at the largest and most sustainable settlements, such as Loxwood, Kirdford and Wisborough Green. However, it must be pointed out that public transport availability in this area, provided by the County Council through services it procures, is minimal. These settlements in practice require each adult and child of secondary school age to have access to motorised transport to fully participate in society. This might justify significant measures to secure a boost in the frequency of bus services between Guildford and Billingshurst, passing through these settlements.

Otherwise, existing commitments in the plan area already make provision to meet for local needs. To the degree that there is an unmet local requirement for affordable housing of a small scale – for example to support the rural economy – this could be met through neighbourhood plans or through Rural Exception Sites.

6. Place-making, Health and Wellbeing

6.1. Policy P1 Design principles

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

NPPF requires that proposals should consider transport issues from the earliest possible stage. Designing to properly facilitate safe and efficient access, focusing first on sustainable modes, should be at the heart of development design. Too often it is still an afterthought, notwithstanding this.

Policy P1 must include an additional statement to be compliant and effective with NPPF paragraph 104-105 and 112 a): “Development will be designed to make access and movement using walking, cycling and public transport the natural first choice, and demonstrate through the Design and Access Statement how such modes are afforded the most direct, safe, reliable and efficient routes within to and from the proposals, especially when compared with car use.”

6.2. Policy P4 Layout and Access

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

A number of proposals in the plan involve large-scale development. It is essential that where appropriate buses can access and circulate efficiently through development at a suitably early stage. There is no acknowledgement of this anywhere in the policy, contrary to NPPF paragraph 112.

Large-scale development which buses cannot access in an efficient or timely manner, or at all, strongly contributes to high levels of car-dependency. Evidence for this is referred to among other places, in DfT Circular 01/2022. To be compliant with NPPF and properly pursue its strategic Objectives, Policy P4 needs to be modified to address this point: "1. Provide safe, direct and attractive conditions for inclusive access, egress and active travel between all locations and providing as good direct high quality links to integrated public transport, and where appropriate efficient access and circulation to bus services, unimpeded by excessive parking, at a suitably early point in the development phasing;

7. Transport and Accessibility

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

The issues related to transport are fundamental to the soundness of the Plan. In particular, the constraints presented by the capacity on the A27 around Chichester and its key junctions, are the paramount reasons why the Council does not consider it can meet its objectively-assessed development needs in full. Thus, the transport issues and potential solutions available and what these mean for the ability of development needs to be accommodated, are matters that go to the heart of the soundness of the Plan.

Paragraph 8.3 sets out the approach taken to date succinctly:

"Increasing the capacity of the road network is key to supporting growth in the Local Plan. However, there is also a need to reduce demand for road transport to achieve net zero in greenhouse gas emissions by 2050 as highlighted in the council's Climate Emergency Action Plan and Strategic Objective 1. In aiming to achieve the ambitions of the action plan, all development is expected to demonstrate how it will support four key objectives to create an integrated transport network which will alleviate pressure on the road network, improve highway safety, encourage sustainable travel behaviours and help reduce transport related impact on air quality, by:

1. Avoiding or reducing the need to travel by car;
2. Enabling access to sustainable means of travel, including public transport, walking and cycling;
3. Managing travel demand; and
4. Mitigating the impacts of travel by car."

However, this approach is unambitious and "lightweight" as it assumes, as does the existing Chichester Transport Strategy on which the current adopted plan relies, that the focus of investment should be, wholly, in highways capacity improvement.

Sustainable modes explicitly are expected to play a greater role to "alleviate pressure" on the local road network, as part of this strategy. To emphasise: to avoid exacerbating congestion, the strategy will have to both remove a significant proportion of existing demands from the network on multiple key approaches to Chichester; and then ensure that travel demands from committed and further new development allocated in the plan does not simply replace these journeys, or, worse, create even greater demands.

This will demand very significant behaviour change. Only by making sustainable modes substantially more attractive, both absolutely, and relative to the same journey made by car, can this be expected to occur. However, the explanatory memorandum as well as the wider policy suite and IDP, well expresses a fundamental unwillingness to taking specific, defined measures to achieve this reduction in car use and material promotion of sustainable modes. It makes plain that sustainable modes, including bus services, will offer a lesser role to which "access will be provided".

Such a vague and weakly defined mechanism will have no effect, at all, on current behaviour and car dependency if the relevance of those choices as a credible alternative to car use, is not substantially boosted. This includes a 5% reduction in trip demand assumed by the Traffic Model at the heart of the Chichester Transport Study 2023.

For this reason. the transport strategy behind the current adopted plan is demonstrably ineffective, as the updated model makes plain. It has not yet been delivered and is yet unclear when or (in the absence of committed funding) even if it can be. It is ineffective to "roll forward" this strategy to support a higher level of planned growth.

We note that a scheme for addressing congestion on the A27 at Chichester has been included in Roads Investment Period 3 (2025-2030) – well within the horizon of this Plan. However, recent history provides compelling evidence that off-line improvement to the north is not politically supported and arguably even technically or economically deliverable. It is not funded, nor at this stage can it be hypothesised if an economically deliverable scheme is achievable sufficient to warrant the necessary investment.

An on-line improvement of the A27, including junction improvements, is likely to favour longer distance east-west though movements, which are of greater significance to the national economy, at the expense of local movements crossing the SRN- a conundrum that largely sums up the dilemma that is faced by NHC and the County as Highways and Transport Authority. It is one that is played out in many places, but rarely is the tension so stark as at Chichester.

Every local route crossing the A27 at grade around Chichester accommodates a regular bus service - or shortly will do (Oving Road area is expected to follow in 2023, though bus services are likely to not use the modified crossroads but to use the left-in-left-out facilities provided as part of the Shopwhyke Lakes development). The impact of these issues on the entire bus operation are serious and increasingly severe.

By the same token, boosting the relevance and reliability of each of these services substantially consolidating as much demand as possible onto a much smaller number of vehicles, is clearly a strategy that ought to support the effective capacity of each of these junctions being greatly augmented, at the same time as reducing equally substantially, the energy- and carbon intensity of mobility in the plan area. Addressing the A27 should not be considered some kind of “zero-sum” game.

Furthermore, the approach of National Highways in its dealings with development and the planning system now reflect a substantial change in Government Policy set out in DfT Circular 01/2022, which we separately cover in these representations, that entirely aligns with an approach that seeks to appropriately invest in more active and rational management of scarce highways capacity, on both the SRN and local roads.

For environmental, economic and social reasons – including public health, the issues presented by the A27 and its interface with local roads around Chichester stands out, nationally, as an example of where the approach taken to accommodating and mitigating development impacts needs to make a clear break with previous “predict and provide” approaches to meet forecast unconstrained car use as LTN 02/2022 makes clear as a principle. Policy in the West Sussex LTP to 2036 itself makes plain that “shared mobility” – including bus services – must play a much greater role in this area.

The existing Chichester Area Transport Strategy is focused on justifying capital contributions from committed development to fund highways capacity improvement – with nothing included to make bus services more attractive, or importantly more reliable. Indeed this “cars first” approach is so costly, that there is already accepted by WSCC to be insufficient land value remaining to be captured to put into substantial improvements for public transport. That much is very evident, and transparent, from paragraph 8.12 and 8.14, where south of Chichester “This (one) package of works (of several improvements needed) would be between £57.23 and £82.79 million to deliver in full and would not be capable of being funded by development contributions alone.” This assumes the scheme is otherwise deliverable, which on the evidence in the public domain for some time, has been considered challengeable.

The draft Local Plan and a modestly updated infrastructure package that flows from the 2023 Chichester Transport Study, pursues exactly the same approach.

This strategy is also even more ineffective having regard to the roll forward of the Plan to 2039. It cannot deliver the key Strategic Objectives of the Plan; and in particular this is explicitly recognised by the Council in the failure of the draft Plan to accommodate the OAN in full.

It is also obsolete, as it does not align, from first principles, with national policy (including the National Decarbonisation Strategy for Transport) and DfT Circular 01/22; nor the Council’s own declared Climate Emergency.

As a result, draft Policies T1 and T2 are both unsound, as we will separately explain.

Owing to the lack of evidence about the implications of this for adjoining authorities – especially Adur District – in the absence of the review of the Local Strategic Statement – this has implications for fulfilling the Statutory Duty to Co-operate.

The absence of any meaningfully comprehensive refresh of the transport evidence base means that there are no meaningful schemes of any kind, defined in the plan or its IDP, to indicate either what level of growth can be accommodated, by delivering a change in travel behaviour. This would be aimed to secure a sufficient effective increase in junction throughput (measured in terms of person trips as opposed to passenger car unit movements (PCUs)). Such evidence would propose measure to achieve that outcome and assess the efficacy and costs of such improvements, across all modes.

Paragraphs 8.10-8.13 inclusive indicate that the Council “has moved away from ‘predict and provide’” and invites the reader to conclude this has translated into a programme of interventions that can be funded to deliver specific, credibly

predictable outcomes. Such a programme should be clear in paragraph 8.11. and the IDP. There is no such clarity and this conclusion would be false.

It would also be evident in the language of the Chichester Transport Study 2023 and its refreshed proposals. Only the most token of lip service is paid to the matter. It is a plainly car-focused, predict and provide methodology to support a "predict and provide" strategy. In fact, it is a brazenly car-focused approach, to the exclusion of all else.

The statements in the Plan regarding any other approach, read properly, offer nothing more than a vague commitment to look post-adoption, and implementation, at unspecified measures, based on problems that may arise in future that will be decided by a committee: the Traffic and Infrastructure Management Group (TIMG). This does not yet exist and is obviously an attempt to posit a mechanism that retroactively will cover for the lack of serious multi-party engagement to address the existing and future issues. Such a group should, in our view, also include the public transport operators, not least if the requirements of NPPF Para 106c) are to be satisfied, and the strategy and measures to be adopted are material to supporting the Local Plan, as of course the purpose of the TIMG has as its core *raison d'être*.

The approach proposed by the draft plan is plainly ineffective and unsound in justifying the draft Plan.

It is more widely unacceptable to Stagecoach. The issues are severe today and well-known, already serving to jeopardise the delivery of buses relied on by existing residents, much less attract new ones.

We also consider that HM Planning Inspectorate are likely to be quite resistant to accepting this aspect of the plan's transport strategy, nor will it be appropriate for the Council, West Sussex County Council, or National Highways, to define such measures after the submission of the Plan during the Examination process. The Examination in Public of a local plan has no purpose to improve plans, or remedy deficiencies clearly evident prior to submission.

The examination of the West of England Joint Strategic Plan in 2019, and the Uttlesford Local Plan in 2021, among several others, demonstrates especially clearly that the Planning System and the Examination process is not amenable to post-hoc retrofitting of transport evidence and strategies to support a development strategy.

7.1. Transport Evidence Base

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Most of Stagecoach's serious concerns about the soundness of the plan arise from the fact that it has been prepared in advance of any up-to-date transport evidence and suitably robust transport mitigation strategy being advanced to support it. In essence, the Council has rolled forward the existing plan by 9 years, adding some additional sources of housing supply, while still relying implicitly on a transport evidence base that was prepared 10 years ago.

This led to the formulation at that time of what can only be described as an attempt to develop an effective car-based mitigation strategy, creating capacity for general traffic added to accommodate unconstrained additional demands on an already over-taxed highways network – the Chichester Area Transport Strategy. Despite language in support of sustainable modes, no deliverable measures were identified to support either the extension of the bus network to serve allocated sites, and much less to create a vital improvement to the quality and reliability of public transport services. This approach reflected the approach set out in DfT Ministerial Circular 02/2013 "Development and the Strategic Highways Network", applicable since the A27, which is the focus of the most severe difficulties, forms part of the national Strategic Roads Network.

This approach has proven ineffective even before substantial elements of housing land supply in the current plan come forward – in particular West of Chichester and West of Tangmere.

In addition, Circular 02/2013 has now been replaced by a new Ministerial Statement of 23/12/2022, DfT Circular 01/2022.

On both counts the transport evidence base and strategy needs to be properly revisited and established to provide effective mitigation for the plan, including current commitments that are being rolled forward.

The language of the current Ministerial Circular 01/2022 offers a highly condensed synoptic view of the proper approach to addressing transport matters in the planning system notwithstanding that it is directly concerned with the Strategic Roads Network. *Videlicet*:

"31. The NPPF expects local plans and spatial development strategies to be underpinned by a clear and transparent evidence base which informs the authority's preferred approach to land use and strategic transport options, and the formulation of policies and allocations that will be subject to public consultation. The company will expect this process to explore all options to reduce a reliance on the SRN for local journeys including a reduction in the need to travel and integrating land use considerations with the need to maximise opportunities for walking, wheeling, cycling, public

transport and shared travel.

32. The Transport Decarbonisation Plan indicates that carbon emissions from car and van use is the largest component of the United Kingdom's total transport emissions. While action is being taken to decarbonise transport such that all new cars and vans will be fully zero emission at the tailpipe from 2035, the proposed location of growth in current plan periods and whether new developments would be genuinely sustainable remain important factors in demonstrating that a local authority area is on a pathway to net zero by 2050 and therefore compliant with the requirements of the Climate Change Act 2008.

33. Alongside this, the local authority should identify the key issues within their study area regarding transport provision and accessibility, setting out how the plan or strategy can address these key issues in consultation with (National Highways, and other transport stakeholders identified in NPPF paragraph 106b). It is the responsibility of the local authority undertaking its strategic policy-making function to present a robust transport evidence base in support of its plan or strategy. The company can review measures that would help to avoid or significantly reduce the need for additional infrastructure on the SRN where development can be delivered through identified improvements to the local transport network, to include infrastructure that promotes walking, wheeling, cycling, public transport and shared travel. A robust evidence base will be required, including demand forecasting models, which inform analysis of alternatives by accounting for the effects of possible mitigation scenarios that shift demand into less carbon-intensive forms of travel." (our emphasis)

Within the text quoted above, references to National Highways and "the Company" can quite legitimately be extended, given the statements in NPPF paragraph 16, 25, 26 and 106b, to include all the relevant transport infrastructure and service providers in the plan area. Circular 01/2022 also has the weight of secondary legislation as a Written Ministerial Statement and thus should be considered to be highly material.

To date there has been little attempt to explore, to the degree necessary, strategies that conform to Circular 01/2022. It is thus not possible to conclude, as the Council has done, that the issues on the A27 that present a constraint to development, are insuperable.

In line with comments made elsewhere in the response to this pre-submission draft, the Plan thus requires substantial further work to be undertaken with key stakeholders to establish a suitably effective and demonstrably deliverable transport mitigation strategy, to sustainably meet the District's identifiable development needs and where apparent and appropriate, also ensure that wider cross boundary strategic issues are appropriately addressed, in conformity inter alia, with the Duty to Cooperate, NPPF paragraph 16 and 104-111 inclusive, and DfT Circular 01/2022 and to ensure the Plan's own Strategic Objectives can be met.

7.2. Policy T1 Transport infrastructure

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

As described in comments elsewhere, Stagecoach does not see that a suitable proportionate and up-to-date basis exists to properly and appropriately address the transport issues in the plan area.

The 2023 Transport Study does not perform this role adequately but, contrary to the explanatory memorandum, is a scheme intended only to facilitate car-borne movements through some of the key junctions. There is no evidence that an holistic integrated and strategic approach to transport mitigations has been prepared. Certainly Stagecoach has not been involved in any of the discussion about appropriate transport measures in support of the plan, including the Transport Study 2023, contrary to the expectations set out in NPPF at paragraph 16 and 106.

Notwithstanding out fundamental concerns about the transport evidence case and mitigations strategy, Policy T1 reflects a weak and ineffective approach, that seeks to try and define a strategy post-adoption.

Contrary even to the explanatory memorandum for the policy, which seeks to maximise the contribution of sustainable modes, the policy is phased in such a way that it gives basis for previous "predict and provide" solutions to facilitate and support current levels of car dependency – already shown to be undeliverable and unaffordable – will nevertheless be the first rather than the last resort. There is no commitment to seek to maximise the contribution made by sustainable modes to meeting mobility needs. Nor is there any recognition that current chronic congestion and lack of network resilience jeopardises the ongoing attractiveness and long-term sustainability of the current public transport offer.

To be effective and create alignment with national policy, and also provide for an up-to-date transport evidence base and strategy to be adduced, Policy T1 should be modified to read:

"Integrated transport measures will be developed to mitigate the impact of planned development on the highways network, improve highway safety and air quality, promote more sustainable travel patterns and through providing in the first instance, new and improved infrastructure and services that will be credible effective in maximising the encourage increased use of sustainable modes of travel, such as public transport, cycling and walking.

To achieve this, the council will work with National Highways, West Sussex County Council, other transport and service providers (including through the Traffic and Infrastructure Management Group) and developers to provide a better integrated transport network and to improve accessibility to key services and facilities...

All parties, including applicants, are expected to support these objectives by:

1. Ensuring that new development is well located and designed to avoid or minimise the need for travel, encourages maximises the use of sustainable modes of travel as an a credible alternative to the private car and directly provides or contributes towards new or improved transport infrastructure;
2. Working with relevant transport infrastructure and service providers to improve accessibility to key services and facilities with primary emphasis on sustainable modes, and to ensure that new facilities are easily accessible by sustainable modes of travel;
3. Targeting investment to provide local travel options as an that represent a clearly credible alternative to the car use, focusing on the delivery of improved integrated bus and train services, and improved pedestrian and cycling networks, including the public rights of way network, based on the routes and projects identified in the Local Transport Plan, West Sussex Bus Service Improvement Plan, Local Cycling and Walking Infrastructure Plan (LCWIP) and the Infrastructure Delivery Plan;
4. Planning to achieve the timely delivery of transport infrastructure on and approaching the A27 and elsewhere on the network, needed to support new housing, employment and other development identified in this plan;
5. Phasing the delivery of new development to align with and where possible facilitate the provision of new and improved transport infrastructure and services and the outcomes of monitoring travel demand on the network, including that arising from areas immediately adjoining the plan area. It may also be Where necessary to achieve this alignment proactively phase development will be phased to take into account the monitoring and effectiveness of travel plans demands on the network and to ensure that measures are implemented to support the highest possible level of encourage sustainable travel behaviour.;
6. Using demand management measures, such as travel plans, to manage robust methodologies to assess travel demand and minimise the need for new or improved transport infrastructure as part of the monitor and manage process.
7. Delivering a coordinated package of infrastructure improvements at and approaching to junctions on the A27 Chichester Bypass along with other small-scale junction improvements interventions within the city and elsewhere, as identified through the monitor and manage process. These will increase road capacity, reduce traffic congestion, improve safety and air quality, and improve access to Chichester city from surrounding areas, first by maximising the contribution of sustainable modes to meeting mobility demands, then, and only as evidenced by robust modelling and option testing, providing increased highway capacity for general traffic.

..."

7.3. Policy T2 Transport and Development

Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Section 1 b) of T2 will be ineffective as, absent measures to ensure buses can run reliably and efficiently, improved bus services will not be possible, in support of the plan's own stated broad approach to transport mitigation, as well as wider local and national policy.

The draft policy does not require improvements to the quality of services such that sustainable choices will be materially more attractive than car use for many local journeys. Without this the Plan's Strategic Objectives cannot be fulfilled and the objectives of the Plan and this policy, read in its own terms, will not be realised, where reduction in private car use is concerned. It is thus ineffective.

Absent measures to make bus services more reliable and more efficient, by insulating them from chronic congestion as far as possible, still further operating resource and therefore costs, will be needed to just to reliably run existing service frequencies, and capacity, as vehicle productivity continues to be more and more adversely affected by chronic delay. This will be further aggravated by increasing incidence of severe unpredictable service breakdown arising from incidents of diverse kinds on the network, especially on or around the A27, including that arising from more regular severe weather events. Longer journey times can only be expected to lead to relative disadvantage of bus services compared to personal car use, entirely contrary to the objectives of national and local policy, including Policy T1. It can also expect to lead to a dampening effect not on car use, but on bus patronage, threatening the ongoing viability of bus services across the plan area.

Section 1 b) of T2 should be modified to read:

"b) Maximise opportunities for the use of sustainable travel modes through provision of direct and efficient access both to either the existing networks or and through providing such new infrastructure or public transport services, as can be credibly expected to reduce reliance on the private car and work towards achieving net zero in greenhouse gas emissions by 2050;"

Section 1 d) of T2 will be ineffective as the location of development is fixed by this plan. We commend the fact that all the strategic allocations are or will be served by regular bus services.

However, the use of public transport services, where available, depends on the relevance and reliability of these services. Furthermore, provision of services without them generating sufficient patronage to support their long-term operation also threatens the sustainability of the plan and its supporting transport strategy. This is especially true of new services such as those intended to serve West of Chichester and Tangmere and East of Chichester Strategic Allocations.

This can only be assured by the plan being supported by specific measures to ensure buses can operate efficiently and reliably on the existing and projected services intended to serve the developments concerned, and also at the same time secure behavioural change from existing development.

To be sound and effective, the policy T2 1 d.) should be changed to read:

"d) Ensure major development is located to proposals and the supporting mitigation measures enable the use delivery of high-quality, reliable and effective public transport to present the most relevant possible choice to access local services and facilities including employment, leisure and education facilities";

The Policy T2 makes no provision for buses, where necessary, to enter and make efficient and safe progress through major development sites. The plan is thus out of conformity with NPPF paragraphs 104-106. It makes no provision to ensure that penetration of bus services is achieved at a suitably early point in the development trajectory, undermining the achievement of the goals of the Plan and this specific policy. As a good example, West of Chichester Phase 1, currently under construction, cannot be served by buses as a strategy to effect interim bus penetration was never made.

Policy T2 1 f.) should therefore be amended to read:

f) Ensure that the layout and design of the site development proposals provides effective penetration of the site by sustainable modes, at all points in the development build-out, including public transport where appropriate; and sufficient space for all vehicles to manoeuvre without compromising the safety of pedestrians and cyclists, the efficiency of bus services, or the ability to provide an appropriate level of landscaping across the site"

Policy T2 3.) regarding Travel Planning depends entirely on its effectiveness on the quality and relative attractiveness of sustainable alternatives over car use. In the absence of efficient frequent, reliable and direct public transport services (or similarly, high quality facilities for active travel, Travel Plans will continue to be the entirely ineffective "tick box" exercises that they generally are today, evidenced by much lower levels of public transport use in most new developments than it seen in nearby established neighbourhoods, as demonstrated broadly by Census data in 2011, 2011 and 2021.

For this policy to be effective an up-to date transport evidence base and strategy, underpinning a series of specified interventions to promote the relevance and effectiveness of all sustainable does including public transport in particular, needs to be put in place.

8. Chapter 9 Infrastructure – Policy I1 Infrastructure provision

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Policy I1 could not expect to be effective without a clear understanding of the effectiveness and costs of a defined series of measures that are laid out in this Plan and its IDP, to mitigate the transport impacts of the development strategy.

Where the Chichester Transport Study is concerned the only meaningful work has focused on the definition and delivery of a range of highways capacity schemes mainly on the A27 around Chichester.

As we have discussed elsewhere the effectiveness of these schemes is insufficient as set out at Tables 8.1 and 8.2 of the Chichester Transport Study 2023. The plan itself admits that the deliverability of this package cannot be afforded by developer contributions alone.

The Chichester Transport Study 2023 does not attempt provide a realistic assessment of costs to deliver these schemes, despite the fact that they have been under evaluation for many years. Nor does it offer any assurance that the schemes are technically achievable. Rather, it states the opposite:

"9.2.3 No investigation has been carried out into specific land ownership details, or into the location details or cost of

moving statutory undertakers and utility apparatus within the areas of the scheme. No design assessments were carried out at this stage to ascertain the deliverability of the proposals except where any Health and Safety concerns were raised.”

Thus on the grounds of effectiveness, deliverability and affordability, the measures on which the Plan relies must at the very least be considered to involve an exceptionally high level of risk. Since Policy I1 is founded on these assumptions, it cannot be considered effective.

As we set out elsewhere, the Plan has been advanced on the basis that if any additional sustainable transport measures are required, these mitigations should be retroactively considered and defined after adoption of the Plan. In the light of the doubts that are apparent of both the deliverability, affordability and effectiveness of the Chichester Transport strategy this is especially unsatisfactory even if existing baseline conditions were reasonably acceptable.

However, the Chichester Transport Study 2023, as did its predecessors, makes plain that that existing problems are acute, and can rightly be considered “severe” in the sense of NPPF paragraph 111. Waiting to define deliverable affordable alternatives is an entirely inappropriate approach to the local plan transport mitigation strategy. Such an approach also makes it impossible to consider prior to adoption how far the transport impacts of the plan can be cost-effectively mitigated by alternative means, or whether they are deliverable having regard to technical achievability, land control, development viability, or any combination of the above. Thus, the plan cannot be considered justified, or effective.

Given the mutual dependence of development strategies in Chichester and Arun in particular on these measures this should be seen as crucial of the fulfilment of the Duty to Cooperate.

The remedy for this is ultimately to put in place a suitable transport mitigation strategy following a strategic appraisal of options through review of the LSS. This then must be supplemented by more detailed development specific and localised scheme definition, including, where necessary, bus priority and other measures to support the substantial promotion of the attractiveness of public transport in key bus corridors over private car use. This would then be reflected by costed proposals in the IDP.

Leaving these fundamental weaknesses to one side, even if such a strategy and mitigation package were defined, there is no mention of public transport in the policy even though it is clearly a key part of the policy environment and mitigation strategy for the plan as expressed in the explanatory memorandum for I1, but also at Policies T1 and T2. I1 thus does not effectively support the realisation of the intent of Policies T1 and T2.

Policy I1 iii) should therefore be modified to read:

“(iii) Safeguard the requirements of infrastructure providers, having regard to requirements within and where appropriate across the boundaries of the plan area, including but not limited to:

...
 • Highways including specific measures to accommodate improved active travel and public transport level of service and cycle lanes, and...”

At limb v) the Policy expects developers to meet the “in perpetuity costs of operating and maintaining infrastructure”. This shackles development management decisions to developers assuming what are infinite costs – given that “in perpetuity”, read properly, can only mean “without any limit in time”. This means that it is impossible to meet the statutory tests on developer obligations set out in the Community Infrastructure Levy Regulations 2010 (as amended) at Regulation 122, also repeated in NPPF. This policy cannot be lawfully implemented and it is thus ineffective.

In the absence of an up-to-date transport mitigation strategy that is fit for purpose, at the point the Plan is examined these costs of any additional infrastructure are not known in any case. The strategy and its costs, including its affordability and deliverability, are crucial to assessing if the Plan is sound.

Subject to an appropriate defined transport mitigation strategy being arrived at, to be sound, the Policy I1 v) should be modified as follows:

(v) To consider and meet as appropriate the in-perpetuity delivery costs of infrastructure and, where appropriate, improved services, to the point where its long-term operational sustainability is credibly assured from mainstream sources. Where adoption is not envisaged by local authorities, that must include arrangements for its future ongoing management and maintenance;

9. Strategic and Area Based Policies

9.1. Policy A1 City Centre Development Principles

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

- is unsound because it is not based on relevant proportionate and up to date evidence

Chichester City centre is rightly identified at 10.2 and 10.4 as the commercial and service hub of the District. It is also acknowledged to be the most accessible place in the District by sustainable modes, public transport in particular.

Boosting the vitality of the city centre is something that Stagecoach strongly supports. Irrespective, the enhancement of the commercial and cultural life of the District in the place where these opportunities can be accessed broadly by sustainable modes, is one that has long been at the heart of national planning policy for town centres, reflected in the “town centre first” approach to locating major trip generating uses.

Paragraph 10.5 exposes an unbalanced and unsound preoccupation with aesthetic matters in its approach to the town centre, and far too little to ensuring that the central place function is enhanced through protecting and enhancing the quality of public transport access.

The city is relatively small but at the heart of an extensive hinterland, and thus the role of bus in supporting sustainable access to and enhanced city centre venue is one that needs appropriate recognition and emphasis. It is important to note that a dominant number of key service and facilities such as the General Hospital are relatively close to the city centre. This directly contributes to driving travel demand into the city, causing congestion. Most importantly, it also makes the task of mitigation simpler, given the impact a suite of active and sustainable measures can have within the same close proximity.

Policy A1 does not provide this. As such, achieving the strategic objectives of the plan is seriously threatened, and the plan is thus not effective.

The Plan needs to ensure that the approach to city centre regeneration maintains and enhances public transport access, interchange and inter-modal connectivity. It also needs to ensure that bus service stopping and interchange facilities are able to address increases in future demand, anticipated by the clear intent expressed elsewhere in the Plan that public transport should be meeting a greater proportion of mobility needs, in a growing district. Achieving this demands an ambitious approach to the location, quality and capacity of bus stop and interchange.

We have been in discussions with the District Council about this, alongside West Sussex County Council, for a very considerable period. Stagecoach has always been keen to help facilitate the Council’s aspirations for the city centre, and we continue to hold this intention. However, this cannot be at the expense of a material diminishing of the convenience and fitness-for-purpose of bus stop infrastructure and interchange. Stagecoach has significant concerns that current proposals to remove the bus station and have all bus services operate from the street kerbside, on an inner distributor road with similar or reduced net stop capacity, fall short of promoting attractive, convenient bus access to the central area as a destination.

For the longer term and where the objectives of the draft plan are concerned looking ahead to 2039, they clearly fall short of enhancing the convenience and attractiveness of public transport use. Much less do they make sufficient provision for a material increase in bus frequency, connectivity, and interchange convenience, on which the draft plan explicitly relies. It is vital that the District Council is clear in policy about its objectives for public transport in the city centre. These objectives must also carry sufficient weight when held in tension with other aspirations for the centre and the constraints on achieving them.

For the Plan to be sound, properly effective and compliant with NPPF, the approach to the City centre cannot ignore its role in the provision of sustainable transport service and connectivity.

Policy A1 should therefore be modified to properly reflect this crucial function, on which the vitality of the city centre must increasingly depend if unacceptable impacts on congestion, air quality and amenity are not to arise. This is still more crucial if wider aspirations to secure a more sustainable society and mitigate carbon are to be achieved.

“...This will include provision for development and proposals that:

- Support and strengthen the vitality and viability of the city centre and its role as a shopping/visitor destination, employment centre, public transport hub and a place to live;
- Support and promote facilitate improved access to the city and with increased emphasis on sustainable modes of travel, with particular regard to enhancing the public transport interchange role of the city centre area, in accordance with the transport strategy for the city and...”

9.2. Policy A3 Southern Gateway Development principles Chichester Bus Station, Bus Depot and Basin Road Car Park Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

There has been aspiration to redevelop the bus station and nearby bus depot from many years. Stagecoach has been engaged with detailed discussion with the District Council on this matter over a very extended period. We confirm that these discussions have reached a relatively mature stage, however at the time of writing are not concluded.

Stagecoach recognises and supports in principle the Council's wider aspirations for the "Southern Gateway", and this has governed our approach to the Council to date. We continue to have no "in principle" objection to relocating our administrative, engineering, operational and customer service facilities.

Leaving our proprietary interests entirely to one side, it remains vital that in so doing, the effectiveness, attractiveness and convenience of these facilities is not compromised, as we have outlined in our representations to Policy A1, if wider national and local transport policy, and the local plan strategy itself, are to be effectively achieved.

The depot is crucial infrastructure to support the safe, reliable and legally-compliant operation of Stagecoach bus services over a very extensive area covering the entirety of the District and beyond. Without securing equivalent facilities, that are fit-for-purpose, many of our services would have to cease.

If buses are to provide a greater and more attractive level of service (still more so if they are to be electrified) larger, more capable depot facilities, and city centre bus interchange facilities will be necessary.

Notwithstanding that the bus station and depot sites are leased from the District Council, these leases terminate well beyond the end of the plan period.

Finding suitable sites for a replacement bus depot in Chichester, in common with all similar localities especially in southern England, is extremely challenging. As a sui generis use, bus depots do not automatically benefit from policy support on land allocated for employment uses. Most bus depots benefit from being legacy assets established under very different economic conditions. That is the case here. The value of a depot site for redevelopment net of demolition and remediation costs, rarely approximates to that able to sustain the acquisition of land in a tight wider employment land market, and the construction of suitable new facilities.

Furthermore, the costs of operating bus services are sensitive to the parasitic costs of vehicle and staff hours and mileage associated with "dead running" to a remote depot location from the operational network. Here, the existing depot site is ideal, and any replacement will unavoidable add ongoing operational costs to the operation that cannot be directly recovered.

We confirm that a replacement depot site has been identified and has in principle been agreed, subject to overcoming issues with the disposition of existing and future structures on the site. However, the site is recognised as not capable of accommodating meaningful operational expansion. This is just one of the most important foundational reasons why a positive transformation of bus productivity needs to be achieved, across the plan area and beyond, to support delivery of greater bus mileage and frequencies with the same level of operational resource. At the time of writing, we are not fully convinced that the proposals for the relocation will be sufficiently fit-for-purpose in the event the above is not achieved. Thus, we must raise a concern that the bus depot site might not be available during the plan period. While there is a strong probability it will be, the certainty surrounding the availability of the site, especially within the first 5 years of the plan, needs to be made transparent.

9.3. Policy A4 Southern Gateway - Chichester Bus Station, Bus Depot and Basin Road Car Park Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Regarding the removal of the bus station, without equivalent replacement, Stagecoach has significant concerns. Pressures and conflicts at the current bus station site have been gradually rising for several years, arising from increasing use and the need for additional scheduled vehicle layover periods to reduce the risks of accumulated late running from traffic congestion. Peak passenger volumes have recovered strongly on several routes, however passenger accumulations resulting from more frequent delays and disruption have added substantial further pressure on limited space.

Under current plans, buses and bus passengers will be displaced to bus stops at new locations outside the city centre, along Avenue de Chartres. This road was always intended to be a relatively high-speed traffic route, outside the historic core of the city. The city centre has evolved in the subsequent years to reinforce already strong natural severance, with the highway lying beyond the city walls and the green space along the Lavant. It is a traffic dominated, un surveilled and unattractive environment, reflecting the intended function of the road as an efficient movement corridor for high traffic volume, and nothing more. Avenue de Chartres is relatively close to the rail station and pedestrian connectivity can be provided at broadly equivalent distance to the current bus station, but again it is un surveilled and currently unpleasant, lacking natural legibility or any sense of prominence.

We understand kerbside capacity on Avenue de Chartres will be strained even to accommodate current levels of service, with no expansion possible. There is therefore a strong probability that to accommodate more frequencies and key new routes, such as West of Tangmere, East of Chichester and West of Chichester allocations, additional future bus stops must occupy a different location. This makes interchange between routes and rail services substantially challenging and less attractive.

The emerging arrangements risk marginalising public transport and public transport users substantially. This strongly undermines achievement of the wider plan objectives and delivery of a significantly greater role for public transport. If substantial public transport growth is to be accommodated in a growing city and hinterland, as the draft plan anticipates, then a more ambitious strategic approach must be taken. This should plan for additional and improved facilities to accommodate all services predicted to be required, whilst enhancing the passenger experience to ensure meaningful and attractive modal choice.

There is therefore a need for the plan to evidence how these issues will be appropriately resolved, having regard to a suitably ambitious approach that properly supports clear objectives to boost the relevance of public transport. The current policy is weak, unspecific and indifferent to achieving the strategic objectives of the plan, including a transport strategy in support of the plan, and as such it is ineffective.

Policy A3 should therefore be modified to read:

" ...

- Be designed to encourage and facilitate substantial increase in the use of active travel and public transport to, from and through the city centre.

" ...

In line with the commentary above Policy A4 should also be modified to read:

3. Enhance the public interchange function of the immediate area, the public realm, particularly connections to the railway station and the city centre via South Street, Southgate and Basin Road for pedestrians, cyclists and public transport users, and to National Cycle Route 2 and Route 88 which run close by. Suitable replacement bus stops and layover facilities should be provided to replace those at the bus station in line with reflecting the objectives of the West Sussex Bus Service Improvement Plan, and to facilitate growth to meet the requirements of the plan's development strategy. Routes and crossings should reflect pedestrian desire lines, and public art should be incorporated to create a sense of place;

4. Enhance the public realm, in support of this and wider objectives, incorporating public art and other measures to create a strong and attractive sense of place.

...(renumber remaining points)

9.4. Policy A6 Land West of Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

This is an existing Local Plan allocation. The public transport strategy for the site depends on the delivery of the second phase which Stagecoach notes is the subject of several applications now awaiting review and determination by the Council.

The site represents a compact form of development adjoining the city, as the most sustainable settlement, meeting housing needs close to where they arise, and affording very good opportunities for the use of sustainable modes, especially walking and cycling.

It is vital that a bus service is delivered to serve the site at the earliest potential. This was anticipated to be at the start of Phase 2 and will require the early delivery of the entire length of the spine road between the Old Broyle Road and Westgate and making it available for bus services.

It is not clear if the costs of pump-priming the service mentioned in the draft policy are anticipated to be met by the developer. Without such funding, the service will not be deliverable as years of losses will never credibly be covered from future profit. It is likely that the current wording will be interpreted by the developer as meaning that they have no such obligation binding upon them. Not does policy set out any specification for this service, thus its costs and the basis for securing developer contributions does not exist.

As such any wider transport strategy, that seeks to secure a greater role for the use of public transport, and the aspiration for this allocation cannot demonstrably be met. The policy is ineffective.

Policy A6 should be modified to read:

" ...

10. Make provision to accommodate and secure delivery of for regular bus services linking running through the site to Chichester city centre operating at least every 30 minutes Monday-Saturday, and new and improved cycle and pedestrian routes linking the site with the city,

" ...

9.5. Policy A7 Land at Shopwhyke Stagecoach Supports

This is an existing Local Plan allocation, largely built-out, that benefits from an existing set of permissions.

The public transport strategy for the site depends on the delivery of effective bus priority at Oving Crossroads. The current recently implemented scheme, undertaken by National Highways, makes no provision for effective bus priority and needs considerable re-evaluation.

The site represents a compact form of development adjoining the city, as the most sustainable settlement, meeting housing needs close to where they arise, and affording very good opportunities for the use of sustainable modes, especially walking and cycling. It lies on a new bus corridor that will shortly be put in place, running to Tangmere via Shopwhyke. The allocation is being significantly consolidated by further development in the immediate vicinity which strongly supports the potential for this new service.

As we explain in our representations for East of Chichester proposed allocation A8, and West of Tangmere Allocation A14, a clear corridor strategy to effect bus priority is needed, that should be delivered in support of that further growth, and that at Tangmere SDL. However this allocation is a near complete commitment and there is no scope through policy regarding this land to effect this outcome.

It is notable that Point 6) of policy A7 makes mention of a bus service. This language reflects the currently adopted Local Plan policy and has underpinned the existing permissions. The failure of any bus service to be delivered demonstrates from first principles that this Policy has been entirely ineffective. It is important that lessons are learned from this in the Local Plan Review.

9.6. Policy A8 Land East of Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This proposed allocation lies next to unallocated land that is already consented as a departure from the adopted development plan, with 143 units near completion south of Oving Road (20/02471/FUL). Additional land, also unallocated but similarly consented, has now commenced north of Oving Road (88 units under 21/02197/FUL). This and the allocation site consolidates earlier development at Shopwhyke brought forward under the current Local Plan, and allocated again as draft policy A7.

Development at Shopwhyke was brought forward on the basis of a premise that the developer would provide or somehow arrange a bus service, that was reflected in the policies of the current Local Plan. This was secured by an unenforceable condition. No bus service has been provided, as there was inadequate clarity regarding the basis on which the costs of establishing such a service would be met by the developer, and the expectations of policy on the developer. The site does however lie on a logical new bus corridor between Chichester and West of Tangmere along the Oving Road.

In addition, an expectation that modifications to the Oving Crossroads would effect bus advantage have proven false – the arrangements put buses into a similar or longer queue than if they use the route available to general traffic to and from the A27.

Stagecoach strongly supports the principle of bringing this land forward. However, the soundness of the site depends on deliverability of a regular, reliable and direct bus service along the Oving Road, taking advantage of effective bus priority.

Given the failure of existing policy in the adopted Local Plan covering the proposed A7 allocation to deliver a bus service, it is of great concern that there is no draft policy to adequately address the issue. The policy is out of conformity with NPPF paragraph 104-105 in that sustainable modes do not offer realistic choices, much less an attractive one, and as such also does not secure the objectives of national policy nor of the plan itself.

Currently the proposed allocation is not served at all by public transport. Policy needs to ensure there is a policy basis to secure contributions to deliver such a service, which may well take the form of a proportionate contribution to deliver a new service or enhance provision that is put in place between Chichester along the Shopwhyke Road to west of Tangmere.

To become sound Policy A8 must be modified to read:

"...
12. Provide for improved high quality connectivity by sustainable travel modes and focused in particular on a corridor between Chichester city centre and Tangmere along Shopwhyke Road, including new improved cycle and pedestrian routes, and a frequent bus service including linkages with Chichester taking advantage of effective bus priority measures on Oving Road at the A27;
..."

9.7. Policy A9 Land at Westhampnett/North East Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This land is already allocated and consented as part of the existing 2016 Local Plan. All reserved matters are determined.

The site lies on service 55 between Chichester, Westhampnett and Tangmere. This established service benefits from additional demand from the development at Phase 1. Phase 2 which is currently well underway, does not benefit directly from bus services. However it is a compact and logical form of development where walking and cycling to local facilities and employment is a credible option.

The existing allocation rolls forward policies in the 2015 Local Plan. In so doing it is possible to see which have been effective.

Point 9. regarding bus service and routing has not been effective. In particular the potential for a bus only link between the site and Graylingwell has not been established as policy anticipated. Given congestion around the Portfield area acutely affects public transport this, or alternative methods to secure bus priority over private car use, a clear and unequivocal policy steer is required.

The lack of an up-to-date transport evidence base is ultimately at the root of these issues. Arguably the policy and allocation can only be made sound once this refreshed evidence base in place.

However, it is possible that the allocation could be made sound by modification of Policy A9 as follows:

“ ...

9. Make provision for regular, direct and reliable bus services linking the site with Chichester city centre, and new and improved safe and convenient cycle and pedestrian routes linking the site with Chichester city, the South Downs National Park and other strategic developments to the east of Chichester city including Tangmere. These objectives could include exploring the potential for a bus only route require a deliverable scheme to afford bus priority through Portfield, and potentially linking the development with the Graylingwell area through use of a modal filter;

“ ...”

9.8. Policy A10 Land at Maudlin Farm

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing public transport route. It is relatively close to the city and very near substantial centres of employment and services that can be reached by active travel modes, helping damp the demand for car use. It is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services at Portfield and over a wider area. In fact, the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A10 should accordingly be modified to read:

“ ...

5. Provide safe and suitable access points for all users, including a main vehicle access from Old Arundel Road and, subject to further assessment, a secondary vehicle access from Dairy Lane. The development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis o maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes;

“ ...”

9.9. Policy A11 Bosham – Land at Highgrove Farm

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Bosham

Station. It is relatively close to the city and very near substantial centres of employment and services that can be reached by public transport and cycling, offering strong potential to materially damp the demand for car use.

There are serious risks that development in the A259 corridor west of Chichester could place further demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular to bus services.

Nevertheless, given the potential to effect bus priority on the approaches to Fishbourne Roundabout, it is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A11 should accordingly be modified to read:

"...

8. Provide safe and suitable access points for all users, including a main vehicle access from the A259. The development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys crossing the A27 at Fishbourne;

9.10. Policy A12 Chidham and Hambrook

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Nutbourne Station. Substantial centres of employment and services that can be reached by public transport and cycling, offering strong potential to materially damp the demand for car use.

There are serious risks that development in the A259 corridor west of Chichester could place further demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular to bus services.

Nevertheless, given the potential to effect bus priority on the approaches to Fishbourne Roundabout, it is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A12 should accordingly be modified to read:

"...

7. Development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys along the A259, crossing the A27 at Fishbourne and where necessary on the approaches to Emsworth;

8. Facilitate improved sustainable travel modes, and new improved cycle and pedestrian routes, including linkages with Chichester city and settlement along the East/West Corridor;

9.11. Policy A13 Southbourne Broad Location for Development

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach agrees unequivocally that Southbourne is a location that could accommodate growth on a strategic scale. It has a substantial range of service available within the settlement, including secondary education. It is well connected by bus and rail service to key destinations, including Chichester, lying to the east and west.

This is one of the few locations identified for growth that represents substantial additional development in a new location to the strategy in the existing Local Plan adopted in 2015. Thus, the transport impacts of development on the substantial scale envisaged at Southbourne are not covered or accommodated by the Chichester Area Transport Strategy that lies behind the existing plan. This demands, from first principles, that substantial further transport mitigation measures are required.

We recognise and endorse fully that the intent of the draft plan for Southbourne as a Broad Location for Development on a strategic scale, includes "Maximising the potential for sustainable travel links through improved public transport, including consideration of opportunities to reduce community severance caused by the railway line as well as the inclusion of cycling and pedestrian routes." (our emphasis).

The existing railway station at Southbourne is served regularly, however, it is not within the power of this plan to improve rail services. It is, however, well within the scope of action of the Local Planning and Highways Authority to work with bus operators to achieve a step change in the journey time, reliability, frequency and connectivity of bus services, and in particular the major corridor operated as service 700 by Stagecoach along the A259 between Havant and Chichester through Southbourne.

Notwithstanding the clear potential for sustainable connectivity in the western A259 corridor, there are very serious risks that development in the A259 corridor west of Chichester will place further significant car-borne demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular bus services, having the opposite effect to that intended: longer, less reliable and less frequent bus services, leading to a spiral of slowly declining use.

These risks, while very serious, look credibly likely to be entirely mitigated subject to carefully conceived and robust specified actions on the local highway network. It is perplexing to us that this potential still has not been identified, as part of a comprehensive "first principles" review of the transport evidence base. In particular given the former trunk status of the A259, there is evident potential to effect bus priority on the A259, including on the approaches to Fishbourne Roundabout.

With appropriate measures, including but not limited to this, to substantially boost the relevance and attractiveness of sustainable travel choices, strategic development at Southbourne could well be made highly sustainable.

In the absence of a refreshed transport strategy and transport evidence base, the draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact, the only reference that is made in Policy is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A12 should accordingly be modified to read:

"...Development should be comprehensively masterplanned to achieve a high-quality design and layout that integrates well with the surrounding built and natural environments to enable a high degree of connectivity with them, particularly for pedestrians and cyclists, and provides good the highest possible quality of access to facilities and sustainable forms of improved public transport services.

...

4. Provide a suitable means of access to the site(s), and securing secure necessary off-site transport infrastructure and service improvements (including highways in particular to the A259 corridor between Emsworth and Chichester) in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development) to promote sustainable transport options prioritising delivery of high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes;

..."

9.12. Policy A14 Land West of Tangmere

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach strongly supports the principle of intensifying the level of development at the Strategic Development Location already identified and allocated West of Tangmere in the existing Local Plan. This serves to consolidate development at a location where effective and attractive public transport choices could be provided. It also conforms closely with the principle expressed in NPPF that the best possible use should be made of land on sites that are judged to be sustainable, or potentially sustainable locations for development.

It must be stressed that the current policy suite for the SDL has to date not brought forward development in this location. We recognise that a Master Plan has been adopted by the Council, and that a planning application (20/02893/OUT) for the full larger quantum of 1300 dwellings proposed in the draft plan has received a resolution to grant by the Council.

However, we are not aware that a sustainable transport strategy has been finalised.

Land West of Tangmere is not served by any existing regular bus services. Rather, an entirely new bus service corridor is anticipated to operate in the near term from Chichester through Tangmere and beyond towards Barnham. This would serve proposed allocations A7, A8 and West of Tangmere (A14) included in the draft Plan.

This is reflected in the language of the explanatory memorandum to Policy A14 at paragraph 10.65:

“Opportunities, in partnership with relevant authorities, to provide improved sustainable public transport routes linking the village with Chichester city, to improve cycle routes to the city, and better transport links to Barnham rail station and the ‘Five Villages’ area in Arun District; and..”

Initiating this service will be costly and will in large measure be funded not by developer contributions, but by DfT monies awarded through the West Sussex Bus Service Improvement Plan. It is crucial this service is both sustainable in the longer term without revenue support, and that the success of the service can be built on by scalable frequency improvements as strategic development comes forward in both Chichester District, and proposed allocations A7 A8 and A14, and in Arun District, in particular at Barnham, Eastergate and Westergate (BEW).

This demands measures to effect safe, direct and swift operation of the service especially within the city centre, where it approaches and crosses the A27 at Oving crossroads and on the eastern fringes of the District east and west of Tangmere. Without these measures, bus journey time and reliability will be severely compromised and the impact of this service to damped car trip demands will be very substantially compromised. No such measures are proposed in the draft plan or its evidence base.

Changes to Oving Crossroads have recently taken place which, amongst other intentions, ostensibly provide bus advantage between Chichester and Shopwhyke. The junction in its current form does not offer material gain in bus journey time, as movements involve a less-direct route towards the city over an increased operating distance, much of which involves passage through heavily congested sections of the A27 and Westhampnett Road. A refreshed transport strategy supporting plan-led growth must revisit this area to secure an effective solution which offers bus customers the fastest and most reliable trip-time to and from the city.

In addition, the extension of public transport connectivity towards BEW and Barnham, including key links to secondary education and a logical railhead for journeys beyond towards Brighton and London as provided at Barnham Station, needs to facilitate bus priority between Tangmere and Nyton – whether using the A27, or preferably avoiding it altogether. There are significant safety concerns associated with the at-grade uncontrolled right-hand A27 exit onto the B2233 Nyton Road at Crockerhill Turn. This movement is also prone to extreme delay owing to the conflict with approaching westbound traffic on the A27, travelling at speed, which has priority. Our concerns with this junction in its current form can be expected to worsen with the increased traffic volumes predicted from new residential developments to the west of the city.

A solution providing a suitable short length of highway available only to sustainable modes, between Tangmere and Easthampnett, could provide a very effective solution to this. This would be deliverable within the scope of the separate proposed allocation at A19 Chichester Business Park, Tangmere. We comment on this separately.

Howsoever effected, a reliable direct and delay-free bus corridor between Barnham, BEW, Tangmere and Chichester could expect to secure very substantial elevation of the relative attractiveness of public transport over car use on the entire corridor and serve to effectively damp growth-related demands on this section of the A27. West of Tangmere, in the longer term, there is evident scope for the route corridor to operate as two branches – one via Shopwhyke and one via Westhampnett, effectively serving all the strategic developments proposed in the plan and transforming wider public transport connectivity to key employment destinations and services within and east of Chichester.

However, in common with all the other proposed allocations, the plan proposes no specific measures to provide, much less improve public transport or other sustainable modes to the site. This leaves the draft plan out of conformity with

NPPF, especially paragraphs 104-106. The plan is inadequately evidenced and to the degree that public transport measures are identified and emergent, their successful implementation in the near and longer term will be jeopardised without clear measures to provide a safe as well as efficient bus route towards BEW and the Five Village area within Arun. The Duty to Cooperate is not effectively met and effective cross boundary collaboration on these strategic issues through the review of LSS is not demonstrated, despite the current version which identifies the issues.

To be made sound the LSS Review and a subsequent urgent review of the transport evidence base and strategy needs to take place. The strategic issues are especially critical east of Chichester, in our view.

Notwithstanding this foundational deficiency, to be made sound, Policy A14 should be modified to read:

- “...
8. Subject to detailed transport assessment, provide primary road access to the site from the slip-road roundabout at the A27/A285 junction to the west of Tangmere providing a spine road link with secondary access from Tangmere Road. Development will be required to provide or fund mitigation for potential off-site traffic impacts through a package of measures in conformity with Policy T1 (Transport Infrastructure) and T2 (Transport and Development) and DfT Circular 01/2022 that maximise the relevance and use of sustainable travel modes, in particular bus services;
9. Make provision for improved sustainable travel modes between Tangmere and Chichester city, in partnership with relevant authorities, including improved direct, seamless safe and reliable and additional bus and cycle routes linking Tangmere with Chichester city, Shopwhyke and Westhampnett. In conjunction with measures in support of Allocation A19, Opportunities should also be explored contributions shall also be sought for providing improving high quality cycling and bus service transport links with the 'Five Villages' area and Barnham rail station in Arun District; and...”

10. Concluding comments

Stagecoach recognises its role as a key stakeholder in the plan, as well as a local employer and corporate citizen. We recognise the primacy of the plan-led system as the mechanism intended to resolve complex challenges, including the proper alignment of transport and spatial planning, which as the National Decarbonisation Strategy for Transport among other policies makes clear, has never been more vital.

In making our representations, we emphasise that we are entirely supportive of the Local Planning Authority and the relevant Highways and Transport Authorities, in their efforts to properly manage the amount and pattern of development to secure vital policy objectives. We recognise that balancing delivery of assessed development needs with a wide variety of other constraints is a very difficult task.

The transport issues faced by the plan are recognised in the draft plan as being serious and long-standing. We believe that there are ways to arrive at a suitable transport mitigation strategy that has regard to wider strategic issues and resolves existing problems in a much more effective way than those pursued to date.

We support the spatial strategy of the plan as it evidently provides the basis to secure the necessary step change in the quality and use of sustainable transport modes, as it explicitly seeks to do. However thus far, there has been insufficient work done to define the measures that will credibly secure these outcomes.

Stagecoach therefore urges the authorities to draw us into the necessary effective ongoing collaborations that is expected by NPPF paragraph 16 and 106; and DfT Circular 01/022, to do this work, prior to, rather than after the submission of the draft plan. We look forward to being approached to initiate this dialogue at the earliest opportunity.

Document Element: How the Plan has developed, 1.37**Respondent:** Kingsbridge Estates Limited & Landlink Estates Limited [8084]**Agent:** Savills (Mr William Price, Planner) [7783]**Summary:**

The Plan is not positively prepared. The proposed expansion of HDAs is welcome. However the council's current approach to restrictions on co-location of functionally linked businesses and activities within the food park/cluster is impacting on business competitiveness and efficiency.

Full text:

Object

It is welcomed that the Regulation 19 Local Plan has responded positively to the representations made previously by Kingsbridge Estates and Landlink Estates insofar as the Runcton HDA has now increased in terms of land allocation.

To realise the benefits of the HDAs in accordance with contemporary food production and distribution practices, the Council also needs to pursue a more positive and proactive wording of the HDA policy within this Regulation 19 consultation to allow for a greater breadth of associated uses within the Runcton HDA. The proposed wording of the policy does not provide sufficient certainty to investors and businesses (both established within Runcton HDA or looking to locate within it) that the Council will support the functionally associated uses that are necessary to foster and maintain the growth and competitiveness of a world-class food cluster.

The restrictive nature of the existing HDA policy is identified by stakeholders within the 2018 HEDNA (para 11.78) as having been a barrier to growth, whilst the importance of associated uses to the cluster is also acknowledged within the Council's evidence base and other key Government and Industry publications.

The Local Plan therefore conflicts with paragraph 81 of the NPPF in its entirety which states:

Planning policies and decisions should help create the conditions in which businesses can invest, expand and adapt. Significant weight should be placed on the need to support economic growth and productivity, taking into account both local business needs and wider opportunities for development. The approach taken should allow each area to build on its strengths, counter any weaknesses and address the challenges of the future. This is particularly important where Britain can be a global leader in driving innovation 42, and in areas with high levels of productivity, which should be able to capitalise on their performance and potential.

Change suggested by respondent:

Reference to 'ancillary' with regard to the HDAs in relevant policies and supporting text should be modified to 'functionally linked' and include explanatory text clarifying that 'functionally linked' uses can include a range of activities including: food-related distribution; food manufacturing linked to the HDAs food preparation; on-site renewable energy to serve on-site activities; and R&D.

I only spotted this when I went back to see what I had written to help someone else with another matter. Their reason being that they 'thought they were a duplication' of comments written in another section. This was not the case - related points were linked by reference to each other but each was individually written and included proposed modifications to the wording.

Change suggested by respondent:

The inspector should investigate how many people's comments were deleted. Given the amount of responses they actually acknowledge, the plan should have been re-consulted on before the S19 consultation.

Document Element: How the Plan has developed, 1.38

Respondent: Gleeson Strategic Land (Mr Peter Rawlinson, Strategic Planner) [855]

Summary:

The Chichester Transport Study has concluded the southern planning area can generally accommodate 700 dwellings per annum, with proposed mitigation. The SA conclusion that there is capacity for no more than 535dpa is therefore fundamentally flawed.

The SA must be revisited given that this factual flaw goes to the heart of the process of selecting and testing reasonable alternative options. Consequentially, the draft CLP decision-making making process will also need to be revisited, as this too has been infected by the factually incorrect SA.

Full text:

e) Sustainability Appraisal

2.43 By way of context to these representations, we note that the Chichester Transport Study, dated January 2023, concludes at paragraphs 5.6.5 and 11.2.3:

"5.6.5 It is concluded that in the main, the 700 dpa (southern plan area) demands can generally be accommodated by the mitigation proposed for the 535 dpa core test although at the Portfield roundabout and Oving junction, capacity issues get worse with the 700 dpa demands, with additional mitigation being required. As no schemes have been designed to date, it would be advisable to retain some costs against for future works against Portfield Roundabout as a minimum."

"11.2.3 A sensitivity test with 700 dpa has been undertaken. It is concluded that in the main, the 700 dpa demands can generally be accommodated by the mitigation proposed for the 535 dpa core test, although at the Portfield roundabout and Oving junction, capacity issues get worse with the 700 dpa demands and these junctions may need to consider further mitigation. As no schemes have been designed to date, it would be advisable to retain some cost against for future works against Portfield Roundabout as a minimum. It is unlikely there would be significant capacity in the network beyond 700 dpa, considering full mitigation package."

2.44 Although the Transport Study is dated January 2023, it is noted that the report's Document Control Sheet (page ii) confirms it was first issued back in April 2022, and has since been the subject of revisions prior to finalisation.

2.45 The Transport Study conclusion that 535 dwellings per annum (dpa) was not an absolute 'cap' to housing development within the southern planning area was therefore well known to the Council during the time that the SA was being prepared to inform draft CLP decision-making process.

2.46 In view of the above, we are fundamentally concerned that the basis of the reasonable alternatives tested have been infected by a fundamentally flawed starting point conclusion that there is capacity for no more than 535 dpa within the southern planning area:

"The southern plan area (i.e. the east west corridor and Manhood Peninsula) is highly constrained by capacity on the A27. Detailed discussions with National Highways and WSCC, over the course of 2019-2022, have led to a resolution that there is capacity for no more than 535 dpa in this area" (paragraph 5.2.11, first bullet).

2.47 The SA must be revisited given that this factual flaw goes to the heart of the process of selecting and testing reasonable alternative options. Consequentially, the draft CLP decision-making making process will also need to be revisited, as this too has been infected by the factually incorrect SA.

Change suggested by respondent:

Document Element: How the Plan has developed, 1.38**Respondent:** Kingsbridge Estates Limited & Landlink Estates Limited [8084]**Agent:** Savills (Mr William Price, Planner) [7783]**Summary:**

The Local Plan is not positively prepared. The proposed expansion of HDAs is welcome. However the council's current approach to restrictions on co-location of functionally linked businesses and activities within the food park/cluster is impacting on business competitiveness and efficiency. There is no mechanism in place for either the acknowledged or unacknowledged horticultural need to be met via the proposed allocation at Land South of Bognor Road.

Full text:

Object

Paragraph 8 of the NPPF recognises an economic objective as one of the three core tenets underpinning achieving sustainable development.

The failure to allow for functionally linked development within the Runcton HDA that could not reasonably be construed as ancillary development, would unduly constrain the economic potential of the horticultural industry within the Chichester District. The development and siting of associated and functionally linked businesses within the Runcton HDA would support the continued creation of local jobs and assist at providing employment opportunities that meet the needs of the residents of the dwellings planned to be delivered within the Local Plan period.

The correlation between the draft allocation 20 for business development to locate at Land South of Bognor Road and Runcton HDA offers no guarantee that land or premises within that allocation would be suitable for, or become available at the right time, to perform a complimentary function for the Runcton HDA.

Change suggested by respondent:

Reference to 'ancillary' with regard to the HDAs in relevant policies and supporting text should be modified to 'functionally linked' and include explanatory text clarifying that 'functionally linked' uses can include a range of activities including: food-related distribution; food manufacturing linked to the HDAs food preparation; on-site renewable energy to serve on-site activities; and R&D.

Change suggested by respondent:

"There are 33 parish councils located within the Local Plan area, including six parishes which are also partly located within the South Downs National Park, 7 parishes which are partly located within the Chichester Harbour Area of Outstanding Natural Beauty (AONB), and 1 parish located entirely within the AONB."

~ Every time the South Downs National Park is cited, you need to think, 'Should we also cite Chichester Harbour AONB, since they are both protected landscapes?' I understand parishes that cross the boundary in the Park will be subject to two Local Plans, but that is not the point. If the Plan is written such as way so as to not give equal status to the South Downs and Chichester Harbour, then the policies and their interpretation will be affected - Chichester Harbour will be seen as second class to the National Park.

Object

Document Element: Characteristics of the Plan Area – A Spatial Portrait, 2.1

Respondent: Plaistow and Ifold Parish Council (Mrs Catherine Nutting, Clerk & RFO) [7910]

Summary:

The Plan, as worded, risks confusion and unsoundness in its use of language for 'landscape' and how it applies 'landscape'. Landscape should adhere to the European Landscape Convention definition. Policy and supporting text switches between terms such as 'rural setting', 'countryside' and 'natural landscape'. Whilst countryside is defined in planning terms, the others are not, and their use within the Plan is inconsistent. Assumptions about landscape appear to be made in areas where there is no evidence.

Full text:

Plaistow and Ifold Parish Council seeks to act in the capacity of critical friend to ensure that the Local Plan is fit for purposes and expertly drafted to avoid confusion in its future application.

It is the Council's view that the following matter(s) should be addressed to ensure the Plan is sound i.e., justified, effective and consistent with national policy.

In general terms (strategic matters) the Plan, as worded, risks confusion and unsoundness in terms of its use of language for 'landscape' and how it applies 'landscape'.

- The Plan should adhere to the European Landscape Convention definition of Landscape. This is adhered to by Landscape professionals and Protected Landscapes, and is required in terms of plan-making (<https://www.gov.uk/government/publications/european-landscape-convention-guidelines-for-managing-landscapes>).
- This definition is even more important because policy and supporting text appears to switch between terms such as 'rural setting', 'countryside' and 'natural landscape'. Whilst countryside is defined in planning terms, the others are not, and their use within the Plan is inconsistent. The foundation of the Plan and its understanding of the different areas is 'landscape character' and so it is this which the policies are seeking to conserve and enhance. The landscape evidence upon which the Plan relies (the Capacity Study 2019) is all about landscape character, which is how landscape is understood in planning terms. Therefore, the Plan should refer to "conserving and enhancing landscape character", or "ensuring no adverse effects upon landscape character". This will ensure the Plan links directly back to its evidence base and avoids confusing terminology in the policies themselves.
- The relationship between landscape character and other areas of policymaking is not yet joined-up.
- The Plan's evidence for landscape uses the Landscape Character Assessment method. This is the accepted way to understand landscape for planning (Policy and DM). However, the Capacity Study (2019), does not cover the whole District. Yet assumptions about landscape appear to be made in areas where there is no evidence. For example, in the Sustainability Appraisal's (SA) assessment of the site at Crouchlands Farm, there is no landscape evidence to support the finding that the landscape would be benefitted by a development. Indeed, the opposite is considered to be the case. This calls into question other aspects of the SA, which might also be founded upon an incomplete landscape evidence-base.

Given the Plan's aspiration to maintain the landscape quality, particularly in the North of the Plan Area, this quality is found through landscape character assessment, which is the evidence-base. In order to meet the Plan's own ambition, the policies, and supporting text, must be consistent and refer to landscape character too, which, in the North of the Plan Area happens to be rural.

Change suggested by respondent:

To meet the Plan's ambition to maintain landscape quality, the policies and supporting text must be consistent and refer to landscape character.

Object

Document Element: Characteristics of the Plan Area – A Spatial Portrait, 2.1**Respondent:** Stagecoach South (Rob Vince) [8141]**Summary:**

Given the long period of time elapsed since the 2018 Reg 18 consultation and clear constraints on strategic infrastructure capacity, it is of great concern to Stagecoach that the LSS2 has not been updated to reflect emerging issues in the intervening period. A review and update of the LSS2 has only just commenced.

We have no confidence in the transport mitigations proposed in the existing Local Plan and LSS2 being sufficiently effective, even if deliverable at all.

LSS2 is currently inadequate to act as a part of an up-to-date, proportionate, and relevant evidence base for the Plan.

"Effective and ongoing collaboration" on transport matters has not led to solutions being agreed and published for public scrutiny as part of the plan evidence base. Whatever the approach to modelling and "highways improvements" that may be agreed or pending agreement with the County Highways Authority and National Highways, Stagecoach is neither participant or sighted. This is despite the clear requirements set out in NPPF Para 106 b.

We therefore consider that the Council has failed to comply with the requirements of NPPF paragraph 25 and 26 that "relevant bodies" are involved in plan-making, especially with regard to addressing the needs for infrastructure.

It should be stressed that the Regulation 18 "Preferred Approach" consultation took place in December 2018 – over 4 years ago and prior to COVID, based on LSS2. The inordinate length of time that has elapsed between the Regulation 18 and Regulation 19 stages greatly challenges the LSS2 and other parts of the evidence base, especially as the pause straddles the COVID epidemic. That would include the transport modelling baseline, and key assumptions in any traffic modelling that took place prior to mid-2022, which is a point at which a reasonable "new normal" post-COVID might be considered to have become established.

The established mechanism to fulfil the Duty to Co-operate has thus not operated effectively.

The Plan is not founded on a relevant, proportionate and up-to date evidence base and is thus inadequately justified.

Full text:

Chichester District Local Plan 2039 – Pre-Submission (Regulation 19) Consultation

1. Introductory Comments

Stagecoach South is the main commercial public transport operator across Chichester District. The Company has headquarters in the city, which is also the principal public transport hub for the District and it's rather wider travel-to-work area encompassing much of the Arun District. Our services extend throughout and beyond the District boundaries, as far as Littlehampton, Midhurst, Havant and Portsmouth. The vast majority of services operate on a commercial basis – that is to say, sustained by passenger use and fare revenue, including concessionary reimbursement.

While the role of the railway is significant in much of the District, especially the east-west Coastway line, yet bus services account for more boardings locally than the railway, with Chichester depot services carrying over 3.5m passengers each year.

Unlike bus services in other parts of the country, the local network has recovered strongly after the pandemic with fare-paying passenger numbers over 95% of 2019 levels, albeit with concession patronage somewhat lower. This has helped secure not only a stable but growing bus network even during this period of rapidly rising operational costs, avoiding the

need for the service contractions seen in other regions. Indeed, during the second quarter of 2023 Stagecoach will invest £5.5m in brand-new vehicles for high-profile coastal Service 700 – one of the largest vehicle investments for Stagecoach Group this year.

Our services are therefore critical to existing and future local connectivity. As the Plan acknowledges, mobility demands do not respect planning authority boundaries. The role of our services is especially high to settlements in the broad A27 corridor, within the District and beyond. This includes major settlements in Arun District such as Pagham and suburban Bognor Regis, where bus is the only mass public transport option. As the Council is well aware, there is an even higher level and rate of committed development envisaged in these locations in the Arun District Local Plan than in Chichester.

It is already evident to the planning authorities, West Sussex County Council and National Highways, as proprietor of the A27 Trunk Road, that accommodating growing mobility demands across Chichester District and especially around Chichester itself, is becoming increasingly challenging to the point of being seriously problematic.

Stagecoach has a particular interest in this Plan arising from:

- The already clear and highly deleterious impact of congestion affecting our operations and their reliability and attractiveness to the public. The effects of these on the approaches to Chichester, and around the A27 bypass are especially severe. If public transport is to retain its existing role – even before the needs of any meaningful growth both in Chichester and neighbouring authorities is considered, are considered – the Council and the Highways Authority need to arrive at clearly-defined measures to protect buses from chronic delay and the damaging impacts arising from the lack of bus network resilience and customer journey times.
- In connection with the above, the need to properly consider the predictable impacts of committed development in Arun District on the transport network and in particular the operation of bus services. The duty to cooperate on cross-border strategic matters is not limited merely to accommodating housing requirements.
- The fact that our entire business premises and operational base at Chichester is the subject of allocation for redevelopment within the Plan period. Specifically, this includes our Head Office, the Bus Station as the operational hub of the network and the key interchange for passenger journeys – including those that involve the railway – and the bus depot required to support the entire operation. Notwithstanding many years of discussions, there is as yet no agreed deliverable strategy to replace these facilities either in the Draft Plan or elsewhere.

Stagecoach broadly supports the vision and priorities of the draft plan. In most respects, Stagecoach supports strongly the spatial strategy and the identified site allocations that flow from it, and the evidence.

However, it has serious concerns about the soundness of the plan as proposed for submission, for important regards outlined in this response. These are made in the light of requirements set by the National Planning Policy Framework (NPPF), in particular at paragraphs 15 and 16; 35, 105-109 inclusive and having due regard to the need for allocations to satisfy 110-112 inclusive in due course as development permission is sought; and paragraph 174.

Paragraph 16c) of NPPF makes plain that strategic plans and policies should “be shaped by early, proportionate and effective engagement between plan-makers and communities, local organisations, businesses, infrastructure providers and operators and statutory consultees” (our emphasis). This makes plain that collaborative and ongoing involvement of public transport operators is both necessary, and separate and in addition to the engagement with statutory consultees. This has not taken place.

Para 1.25 of the draft plan states that “the council has engaged constructively, actively and on an ongoing basis with other local authorities and organisations to address key strategic matters.” Despite the requirements in NPPF and contrary to the statement made, Stagecoach has not been approached or involved in a meaningful, collaborative or ongoing way in the preparation of the Plan.

Our main concerns centre around the fact that the plan strategy is neither backed by sufficient transport evidence. Even more importantly, the plan relies on a wholly car-based transport mitigation strategy despite policy stating that this is not the case, and the track record of the existing Local Plan, based on a very similar strategy, that has failed to bring forward meaningful mitigations to date to prevent traffic conditions substantially worsening. There is no support in policy for the achievement of the Strategic Objectives in the Plan. Nor is there definition of any measures in the 2023 Transport Study to make provision for sustainable transport infrastructure or services – much less materially improve them.

Finally, to the extent that updated transport evidence has been provided in the form of the 2023 Chichester Transport Study, arising from updated traffic modelling, it does not support the contention that highways capacity constraints on and around the A27 justify not meeting the objectively-assessed development needs of the area, as the draft plan contends.

2. Vision and Strategic Objectives

2.1. Issues and Opportunities

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework

- is not effective
- is unsound because it is not based on relevant, proportionate and up to date evidence

Stagecoach recognises the important role of the West Sussex and Greater Brighton Strategic Planning Board which agreed a Local Strategic Statement (LSS2) in early 2016 to identify spatial planning issues across the wider area. This established strategic priorities and policies to guide longer term strategic growth in a coordinated and well considered matter. This institutional framework and the purpose of the LSS is a highly significant one and is at the heart of efforts to properly fulfil the statutory Duty to Co-operate, including with regard to strategic infrastructure issues, as NPPF requires.

Given the long period of time elapsed since the 2018 Reg 18 consultation and the already very clear constraints on strategic infrastructure capacity, it is of great concern to Stagecoach that the LSS2 has not been updated to reflect emerging issues in the intervening period. A review and update of the LSS2 has only just commenced. This includes a study of projected housing and employment needs, transport impact, infrastructure and spatial options to deliver the required development in the period after 2030. This Chichester District draft plan covers a period extending to 2039 – therefore well beyond 2030 and the nominal currency of LSS2.

However, infrastructure needs are pressing today. Stagecoach is presented with severe highway operational problems on a near-daily basis. During the winter of 2022-23 we have, for example, seen key road links impacted for many weeks by acute disruption arising from flood events. Unpredictable, but seemingly more-frequent, exogenous events expose a lack of resilience in the highway network around Chichester and its travel-to-work area. However, serious, chronic, unpredictable delay has been normalised over recent years, with peak-time congestion having quickly returned after the pandemic. The existing development strategy has failed to bring forward measures having any impact on this to date, and key commitments – notably at west of Chichester Phase 2 and at Tangmere – have yet to commence to further aggravate the issue.

We have no confidence in the transport mitigations proposed in the existing Local Plan and LSS2 being sufficiently effective, even if deliverable at all. Indeed, the existing adopted Local Plan does little more than make vague speculations about the sustainable transport measures that might be achievable. The draft local plan review is no different. It has no ambitions at all for sustainable modes and thus, makes no meaningful provision to meet them.

This is especially relevant in light of the fact that the approach to resolving issues on the A27 around Chichester that were anticipated in 2015-16 have fallen away. LSS2 is thus currently inadequate to act as a part of an up-to-date, proportionate, and relevant evidence base for the Plan.

An update of a traffic model lies at the heart of a 2023 Chichester Transport Study. This talks no account of the existing role of non-car modes, nor can it do so. It is unable to properly evaluate the nature of problems or solutions that involve public transport, or for that matter, other sustainable modes.

Therefore, we consider that the combination of committed and additional development needs that must be accommodated over the whole plan period between 2022 and 2039, in both the Chichester and Arun Districts, require a “first principles” review. This must be based on a refreshed transport evidence baseline of no earlier than 2022 – given that the effects of COVID distort 2020-22 – and the transport infrastructure and service requirements to sustainably support those needs.

Key issues – including substantial changes with regards to transport issues and challenges, as well as potential solutions – thus do not form part of the evidence base that steers this plan. Given long term changes in travel patterns, and mode share that took place during COVID, as well as a local and national policy context that seeks to radically reduce and then eliminate transport-related carbon emissions, this is especially problematic.

The specific problems of congestion and network resilience that are evident on the A27 and the approaches to Chichester remain a set of especially difficult problems that disproportionately affect the efficiency, reliability and attractiveness of the bus network, that evidently demand larger-scale strategic responses involving multiple stakeholders, including bus operators.

Where the effects of development on the national Strategic Roads Network (SRN) are concerned, the approach of National Highways to addressing and responding to the mobility needs of development has now substantially changed following the promulgation of the DfT Written Ministerial Statement LTN01/22. This makes it clear that adding highways capacity is no longer the first or only strategy that should be pursued, but one subordinate this to maximising the potential of non-car modes and sustainable travel.

“Effective and ongoing collaboration” on transport matters has not led to solutions being agreed and published for public scrutiny as part of the plan evidence base. Whatever the approach to modelling and “highways improvements” that may be agreed or pending agreement with the County Highways Authority and National Highways, Stagecoach is neither participant or sighted. This is despite the clear requirements set out in NPPF Para 106 b) that “Planning policies should ... be prepared with the active involvement of local highways authorities, other transport infrastructure providers and operators and neighbouring councils, so that strategies and investments for supporting sustainable transport and development patterns are aligned.” (our emphasis).

We therefore consider that the Council has failed to comply with the requirements of NPPF paragraph 25 and 26 that

“relevant bodies” are involved in plan-making, especially with regard to addressing the needs for infrastructure. Public transport services and the infrastructure that supports its operation and use clearly fall within matters relevant to plan-making. This is explicit in NPPF Chapter 9 and indeed within the plan itself – for example reference to public transport and sustainable modes in the Vision for the plan.

It should be stressed that the Regulation 18 “Preferred Approach” consultation took place in December 2018 – over 4 years ago and prior to COVID, based on LSS2. The inordinate length of time that has elapsed between the Regulation 18 and Regulation 19 stages greatly challenges the LSS2 and other parts of the evidence base, especially as the pause straddles the COVID epidemic. That would include the transport modelling baseline, and key assumptions in any traffic modelling that took place prior to mid-2022, which is a point at which a reasonable “new normal” post-COVID might be considered to have become established. In that period, Arun District has also adopted its own Local Plan development strategy that accommodates an unprecedented quantum of development immediately east and south-east of the District Boundary – creating additional substantial transport impacts directly affecting the A27 and multiple major approaches to Chichester crossing it.

The established mechanism to fulfil the Duty to Co-operate has thus not operated effectively.

The Plan is not founded on a relevant, proportionate and up-to date evidence base and is thus inadequately justified.

2.2. Spatial Portrait

The spatial portrait is generally succinct and accurate. However, it makes no mention of road-based public transport, the role of the City as a public transport hub, or the range of bus services that provide local connectivity (Section 2.4 and 2.5). The complete concentration of post-16 education in the City itself as just one example of the peculiarities of transport demands in the area, is not highlighted, though this has a profound influence on peak time travel demands affecting the most congested parts of the highway network. Among other things, the role of bus services in supporting the educational system of the plan area is very great indeed.

The potential role of bus in addressing the already-severe transport problems of the plan area and beyond seems entirely overlooked. The spatial portrait is thus clearly inadequate and incomplete.

2.3. Strategic Objectives

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Chapter 9 of NPPF and paragraphs 104 and 105 in particular require that plans should:

“Transport issues should be considered from the earliest stages of plan-making and development proposals, so that:

- a) the potential impacts of development on transport networks can be addressed;
 - b) opportunities from existing or proposed transport infrastructure, and changing transport technology and usage, are realised – for example in relation to the scale, location or density of development that can be accommodated;
 - c) opportunities to promote walking, cycling and public transport use are identified and pursued;
 - d) the environmental impacts of traffic and transport infrastructure can be identified, assessed and taken into account – including appropriate opportunities for avoiding and mitigating any adverse effects, and for net environmental gains;...
- ...The planning system should actively manage patterns of growth in support of these objectives. Significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. This can help to reduce congestion and emissions, and improve air quality and public health...”

The Strategic Objectives do not conform with NPPF in these foundational requirements adequately, to transparently steer the plan strategy. They should therefore be amended to read:

“Plan to provide local infrastructure to support new development and seek opportunities to address existing identifiable infrastructure problems deficits, such as in particular those relating to the A27 and its junctions and wastewater treatment.”

Paragraph 2.36 states, in the context of the Climate Emergency and the National Trajectory to “Net Zero” that “The council will enable the delivery of infrastructure, jobs, accessible local services and housing for future generations while protecting, conserving and enhancing the historic and natural environment.”

Naturally, we support this intent.

However, there is no acknowledgement of the role current patterns of transport use contribute to carbon emissions, nor that substantial mode shift is necessary to address sustainably an acute lack of capacity on the local network and the SRN, especially around Chichester. This is especially concerning as the basic conceptual link is not made between the fact that the greatest such problems lie on the A27 corridor and around Chichester, while these are also at the same time present many of the most sustainable locations for development, and where the opportunities to secure much greater use of sustainable modes also exists.

Strategic Objective 7 “Strategic Infrastructure” includes the following statement:

“To work with infrastructure providers to ensure the timely delivery of key infrastructure to support delivery of new development. New development will be supported by sufficient provision of infrastructure to enable the sustainable delivery of the development strategy for the plan area. Key infrastructure to support the Local Plan will include improvements to transport, ...

A sustainable and integrated transport system will be achieved through improvements to walking and cycling networks and links to accessible public transport. Highway improvements will be delivered to mitigate congestion, including measures to mitigate potential impacts on the A27 through a monitor and manage process.”

The latest transport evidence in the Chichester Transport Study makes no pretence to define much less to deliver a “sustainable or integrated” transport system. It is wholly devoted to sustaining current levels of car use across the District, to and through Chichester area.

It is no more than the lightest of touches to the approach taken to supporting the adopted Local Plan, an approach that is already almost 10 years beyond the date of its gestation but has yet to deliver any significant capacity improvement schemes, much less any measures that sustain even current levels of public transport journey times and reliability in the face of increasing congestion – much less any betterment.

Of the six key junctions on the A27 around Chichester, recognised to require significant mitigation given they are saturated for extended periods, five accommodate regular bus services - indeed frequent ones at least every 20 minutes in several cases. The sixth at Oving Road, relates directly to a key corridor where bus services are needed to support strategic growth currently being delivered at Shopwhyke, as well as substantial further growth West of Tangmere (proposed allocation A14) and “East of Chichester” (A8), south of Shopwhyke Road.

As stated at p12 of the Study Summary “The modelling shows that all the junctions on the A27 Chichester bypass are well over capacity, even before adding in the Local Plan development and with the exception of Portfield Roundabout are actually shown to be over capacity in the base model year (2014) in one or both peaks”. This much has indeed been evident for years from delay and periodic even more severe disruption arising to Stagecoach services from the lack of network resilience.

The reassignment of through and local traffic through Chichester to avoid the A27 bypass is an especially serious issue for bus services that penetrate the city. This is leading to consequential saturation of a range of junctions used by buses. Rising delay and unpredictable running times are at the root of our decision to sever the long-established Portsmouth to Littlehampton service in 2023, which will in future no longer run across Chichester, but terminate to provide additional dwell time to mitigate the impacts of congestion.

While this congestion affects all road users including businesses and freight traffic, the effect on scheduled bus services is greatly higher, as such services cannot reassign route to ‘beat the queue’. Traffic congestion often encourages greater car use for this reason, in tandem that people are happier to sit for extended periods in their own vehicle on a seamless door-to-door journey than wait at the roadside for a delayed bus making slower progress in lengthy queues.

As the Study admits at para. 1.3.2 “Although, there have been works at the Portfield Roundabout in this timeline, no other mitigation schemes have been completed along the A27 corridor, as such the mitigation schemes defined in this report will also be required to consider the development from this plan period.”

In other words, in the 8 years since the current Local Plan was adopted in 2015, there has been minimal progress is delivering the traffic mitigations. There is no clarity at all when any such mitigations will be brought forward. It is hardly surprising then, that traffic conditions have deteriorated. The “predict and provide” transport strategy supporting the current plan has failed.

Despite this, the Draft Local Plan Review proposed to “double down” on exactly this strategy. It represents, like the rest of the evidence base, a “rolling forward” of the current car-based strategy by 9 years, with the lightest of touches to attempt to accommodate car trip demands from a relatively modest additional development quantum.

Nevertheless, the Study requires a global 5% reduction in trip demands arising from unspecified “credible” (paragraph 4.1.2) sustainable transport and travel planning measures. It is unclear why use of non-car modes will see disproportionate growth when no measures are in place to make them more attractive. This 5% increase in use translates to a doubling in the modal share of bus services. There is no evidence nationally, anywhere, that simple ignorance of alternatives to the car is the main barrier to uptake.

The outputs of the 2023 Chichester Area Traffic (SATURN) model are set out at Table 5.1 (am peak) and 5.2 (pm peak) without mitigation. These betray just how seriously compromised the whole network around Chichester is, and will be in future, even with implementation of a mitigation partake to increase traffic capacity that is understood to cost between £92m and £164m – and which the Study and the draft plan acknowledge cannot be delivered through developer funding sources alone. Unspecified external funding presumably from HM Treasury through DfT is required.

Even if this provided and the schemes are delivered, Tables 8.1 and 8.2 indicate these will provide minimal relief. The final columns suggest key junctions, including Portfield, Fishbourne Road and Cathedral Way East will remain at well over 100% ratio of flow to capacity (90% is considered the point at which saturation is approached, with the onset of increasing delay above that figure). RFCs in tables 8.1 and 8.2 are some of the highest we have ever seen in a local transport evidence base for a post-mitigation scenario. While the serious potential risk of reassignment across Chichester City is greatly reduced, which is important and welcome given its impact on bus services, Tables 8.1 and 8.2 show the extent of post-mitigation saturation is also egregious, covering a very large number of key links and junctions.

On every measure and criterion, then, including cost deliverability and effectiveness, the revised Transport Strategy falls well short of evidence to suggest the transport impacts of the plan can be properly addressed by this means.

Despite the repeated statements about sustainable modes throughout the draft plan and Chichester Transport Study, only 2 paragraphs at Section 6.2 within the Study are devoted to public transport:

“6.2.7 The funds generated from the parking management schemes, local/nation funding schemes and developer contributions could also be utilised to fund potential public transport enhancements within the city centre including an expansion of the bus priority lane system within Chichester City Centre. This could reduce reliance on the car in the longer term towards sustainable public transport. A park and ride scheme could be incorporated within a bus priority lane network in the future depending on the uptake and successfulness of early bus priority trials.

6.2.8 Chichester City centre has a constrained existing public highway network. Therefore, any proposed dedicated public transport or light transit corridors that could be implemented would be at the expense of existing highway. This could be managed through a time-based system where certain routes are restricted to public transport only during specific times. E.g., peak hours.”

There is some very high-level consideration of Park and Ride following this section. None can be considered a serious practical evaluation of consolidating car-borne trips onto bus services, including existing ones, for example local mobility hubs, more frequent bus corridors, delivery of specific bus priorities.

None of the discussion of alternatives to “predicting and providing” for unconstrained traffic growth is rooted in a deliverable evidence base, or proper evaluation of options and specific projects.

To take just one aspect of the few specifics that can be picked out, a workplace parking levy is hypothesised. This would apply only to “offices”, in Chichester city centre (para 6.2.3), without consideration given as to how this could be practically achieved or even that a meaningful amount of office based employment would qualify. Much less is any consideration given to how far focusing a strategy only on office-based workers would actually deliver a particularly significant effect, apart from to create a strong incentive to relocate offices out of the city centre to places out of reach by public transport.

Looking at the Chichester Transport Study 2023 and the draft plan together, there is insufficient evidence that the traffic capacity increase proposed in the 2023 Transport Study is any more affordable or technically deliverable, or likely to be sufficiently effective, than those in the past strategy. The evidence more strongly points to the fact that no highway improvements are identifiable or economically deliverable to meet even short term increases in demand for car-borne mobility on most of the network around Chichester.

There are no published strategies or schemes clearly supporting the contention that the objective of improving sustainable modes is technically achievable or deliverable either. The plan makes generalised assertions that such strategies will be devised and implemented only after serious problems emerge from a shortfall in the car-borne transport strategy.

The reference to “monitor and manage” is undefined and unsubstantiated. There are no outcomes stated, no mechanisms specified and no timescales for action.

Our experience today is that network conditions have reached unacceptable and prejudicial levels of severe unpredictable delay. The saturation of the network is already evident well outside the traditional peaks on key sections of highway and at key junctions. External shocks such as the effects of severe weather are becoming more common, leading to delays so extreme as to justify the description of “gridlock”. The plan does not identify a strategy to effectively address this, in particular by consolidating passenger car trips onto more efficient public transport vehicles. This is unacceptable to Stagecoach.

2.4. Local Plan Vision

Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the broad approach in Plan Vision and in particular that by 2039, the Plan will support and enable greater use of sustainable modes. However, there is no link made between reducing the use of private cars, and the need for a step change in the use of sustainable modes. Without a published transport evidence base it is impossible to

establish a suitable sustainable transport strategy to support both carbon reduction and alleviation of the problems arising from acute congestion. Even on a very crude basis, to achieve a meaning mode shift on key approaches to the A27 Chichester Bypass will require more than 20% of existing peak car-borne journeys to transfer to other modes. A 10 percentage point transfer to bus (about half this shift) would imply more than doubling peak hour bus passenger boardings.

The Vision is nothing more than an aspiration, that needs to more definitively aim at key outcomes, for the plan to be effective. The Vision should thus be altered to read:

“Get about easily, safely and conveniently with less reliance on private cars –making the greatest possible use of the rail and enhanced bus network, and with more opportunities for active travel including walking and cycling; to materially reduce dependence on private car use.”

Underpinning the Plan’s spatial strategy, the Vision section goes into more specific detail about key localities in the Plan area.

Regarding Chichester, Paragraph 2.39 states: “The emphasis will be upon consolidating and enhancing the role of Chichester city as the plan area’s main centre, whilst also developing the role of key settlements to its east and west. The focus will be upon creating communities with good access to a range of employment opportunities and affordable housing for young people and families to balance the ageing population.”

This is clearly the appropriate focus for meeting the District’s development needs in a sustainable manner. The city and key settlements to the east and west, are those places already able to make use of relevant public transport services, both rail and bus. Especially within and near the City, walking and cycling can credibly present highly relevant choices. This emphasis clear can be expected to address the requirements of sustainable development set out in NPPF and their local application set out in the Plans Strategic Objectives.

However, this needs a robust transport strategy, to avoid a further concentration of development and its traffic impacts occurring on or near some of the most chronically congested parts of the highway network. To date, the absence of intervention has strangled the bus network through further marked deterioration in traffic conditions. This by consequence increases the risk of bus delay or cancellation, lengthens journey time and reduces customer confidence in bus as an attractive alternative mode of travel.

In April 2023, Stagecoach is making significant timetables changes to improve operational resilience in and around Chichester. The biggest such change is the severance of the Portsmouth to Littlehampton section of service 700, at Chichester, with buses operating independently to the east and to the west and ending cross-city links. This is planned to reduce the probability of delay but at the cost of additional vehicle resource (circa £200,000 per annum) which could be better spent providing new or enhanced services. We anticipate a small loss of custom as a direct consequence of the change, but have little choice other than to take negative action so as to fulfil our statutory punctuality obligations.

If the Strategic Objectives of the Plan and its Vision are to be achieved, in the way required by NPPF paragraphs 104-105, a properly-evidenced transport mitigation strategy needs to create the conditions where bus journeys are more reliable than car journeys and thus mobility demand switches as far as can be realistically achieved away from car use, to bus use and other more sustainable modes.

Beyond Chichester, the Plan Vision focuses on key localities beyond to the east and west.

To the west of Chichester a focus on growth at Southbourne is justified at paragraph 2.43: “...the aim is to take advantage of the village’s good transport links and existing facilities to deliver significant new residential-led development within the broad location for development which will further enhance local facilities and offer opportunities to reinforce and supplement existing public transport, including bus routes.”

We agree this is a very significant opportunity. However, if the requirements of NPPF paragraphs 104-105 are to be met, this demands that effective bus priority is delivered on the A259 corridor, especially eastbound at Fishbourne and westbound approaching Emsworth. Without such measures, the growth committed and planned will serve only to further undermine bus journey time and decrease punctuality on the existing 700 service, entirely contrary to the aims of the Vision.

The emphasis on the A259 corridor served by Stagecoach 700 west of Chichester is reinforced at paragraph 2.45 stating that “Between Chichester and Southbourne, the Plan provides for more moderate levels of growth within the parishes of Fishbourne, Bosham and Chidham & Hambrook, ... with opportunities to support and expand existing facilities and for increased use of public transport options”. We strongly support the principle, but the Plan must follow through with specific public transport priority measures that facilitate rather than prejudice such an outcome.

East of Chichester the focus is at Tangmere, where the existing allocation for about 1000 dwellings is being uplifted by 300. Paragraph 2.44 justifies this among other things recognising the scope for “...improved and additional bus services and cycleways will provide better connections to Chichester city and east to Barnham and the ‘Five Villages’ area in Arun District.” We unequivocally endorse this conclusion. Realising a “game-changing” level of bus service quality, reliability and frequency east of the city, also serving committed and planned development north and south of Oving Road at Shopwhyke, is equally essential, given that all SRN links and junctions are approaching equal saturation.

The National Bus Strategy has given new focus on partnership with West Sussex County Council to discuss and deliver a significant new bus service between Chichester, Shopwhyke, Tangmere, Eastergate and Barnham, supporting committed development and acting as an initial phase of what ought to be a more ambitious longer-term strategy to support growth beyond 2025 in both Chichester and Arun Districts. For these improved bus services to be both deliverable and effective, robust bus prioritisation is unavoidable. No such measures are proposed in the Plan or its evidence base and we therefore suggest inclusion of plans to facilitate safe and efficient bus operation between Tangmere and Nyton/Eastergate, ideally avoiding the need to join A27 through-traffic entirely.

We welcome the clear recognition that these localities identified for growth, benefit from existing relevant public transport services. The Vision also sets an expectation that bus services in particular should be “enhanced” and “reinforced”.

We entirely agree that these opportunities exist, across the broad strategy and strategic allocation proposed by the draft Local Plan. Securing them will be crucial to achieving national and local policy objectives, including the Strategic Objectives. However, to our continuing very great dismay, the Plan goes no further to defining how this will be achieved. As such the Vision is not demonstrable achievable or deliverable.

Accordingly the Plan cannot be considered effective, in the sense of NPPF.

Remedying this, demands specific measures to protect bus services from congestion in the following corridors:

- A259 East of Emsworth
- A259 Fishbourne
- A 259 Via Ravenna/Cathedral Way
- A286 Stockbridge Road north and south of A27
- B2145 Whyke Road/Hunston Road
- A259 Bognor Road, east and west of A27 and extending to the District Boundary
- B2144 Oving Road/Shopwhyke Road east and west of the A27
- A 285 Westhampnett Road/Portfield Way/Stane Street, potentially involving a mode filter at the west end of Stane Street

These must be defined to a sufficient level of detail to assess their effectiveness and deliverability, including costs.

This would then allow West Sussex County Council and Local Transport and Highways Authority, ourselves as the principal bus operator, and where appropriate other organisations that would be directly tasked with delivering the mitigation package, to agree service levels and standards necessary to deliver specified outcomes, including journey times, frequencies, capacity and hours of operation on the network, and also in respect of the strategic allocations and Strategic Locations for Growth.

The agreed mitigations strategy should be set out in an up-to-date Infrastructure Delivery Plan backed by clear funding commitments, including a funding strategy to justify necessary developer contributions.

Where necessary to support evidence of effectiveness and deliverability, clear statements of support, which might include Statements of Common Ground between the LPA, LTA, National Highways and Stagecoach, could be provided.

3. Spatial Strategy

Stagecoach Supports

Stagecoach well recognises the constraints outlined in the explanatory narrative at the start of Chapter 3.

In particular we strongly endorse that strategy in that it reflects that the best opportunities to meet housing and employment development requirements sustainably clearly exist in and close to Chichester and on the key east-west movement corridor where – subject to effective measures being delivered to make these modes more attractive, efficient and relevant – sustainable modes can credibly provide for a much higher proportion of movement demands, mitigating most effectively the potential traffic impacts of development.

We agree that the Manhood Peninsula suffers serious environmental constraints, but, added to these, public transport and other sustainable modes cannot provide such attractive alternatives, and significant further development risks merely reinforcing already high levels of car use, aggravated by the carbon impacts of the distances involved – something the plan does very little to evaluate, and makes no reference to.

We endorse the conclusion in paragraph 3.24 that significant development in the part of the District north of the National Park is inappropriate. The rationale is principally on landscape and visual character. This exposes a fundamentally biased approach to plan making that has consistently underplays transport accessibility and carbon issues. In fact, the lack of local services and the extended distances that need to be travelled to fully participate in society in this area, with no realistic prospect of public transport offering relevant choices, ought to rule such a strategy out of play on a far less aesthetic and interpretational basis.

3.1. Policy S1 Spatial Development Strategy

Stagecoach Supports

The Spatial Strategy flows clearly and logically from the Spatial Portrait, and the opportunities and constraints identifiable across the Plan area. It represents a logical and justified continuation of the existing Local Plan strategy. In particular the spatial strategy maximises the potential for sustainable modes to contribute to meeting a much higher proportion of all the District's mobility and accessibility needs.

3.2. Policy S2 Settlement Hierarchy

Stagecoach Supports

The settlement hierarchy clearly reflects the service endowment and potential self-containment of the settlements in the District. In particular, the second tier of settlement hubs includes secondary schools, which are major peak trip generating uses. Service villages, in the main, also benefit from bus services running at least hourly, which can be expected to provide for a degree of mobility for the higher number of trip purposes that cannot be satisfied by walking or cycling within the immediate locality. Thus, a level of development to meet local needs in this tier is relatively sustainable.

There is a quite broad range of settlements in this category. We have concerns that, north of the National Park, the Service Villages have no realistic public transport choice. These include Plaistow/Ifold, Kirdford, Loxwood, and Wisborough Green. Such as exists is typically a 1/bus per day off-peak shoppers service offering up to 90 minutes in Horsham or Guildford and as such any development here even to meet local needs requires each adult to own a car. This contrasts strongly with Service Villages to the south of the National Park, which are greatly more sustainable.

4. Climate Change and the Natural Environment

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This section of the plan is extensive and wide ranging, as should be expected.

However, remarkably, there is no acknowledgement whatever of the role of transport in mitigating climate change or its effects, not of the importance of sustainable movement and access being facilitated across the plan area in addressing anthropogenic impacts on the natural world at a more local level.

This exposes very clearly a troubling level of indifference to transport matters in the production of the Plan, which, while nationally quite common, is neither appropriate nor acceptable. The mitigation of transport impacts is not merely a matter speaking to the social and economic aspects of sustainable development. It is crucial to address the causes and effects of climate change that arise from transport, and personal mobility.

This is now well understood and at the centre of national policy, including the National Decarbonisation Strategy for Transport (July 2021) which at Section 5 commits the government to aligning land use planning and transport strategy much more tightly and effectively to mitigate the carbon emissions associated with the current dependence on cars, and the mode mix; but also to reduce travel distances, both increasing the potential relevance and effectiveness of all sustainable modes, and reducing average journey lengths for residual motorised journeys of all kinds.

National statistics show that well over a third of all domestic carbon emissions arise from land-based transport and of these, the vast majority arise from trips of over 10km – outside the range of large scale use of cycling. In fact, the potential of the plan to materially support carbon emissions reduction from within the plan area lies more in the realm of transport than any other policy theme – including emissions mitigation from buildings, which is in any event an aspatial matter and covered by nationally-binding building regulations. By 2025 something like 40% of all the emissions within the plan-area will be transport related.

There is no evidence supplied to support the plan that addresses the transport carbon impacts of the spatial development strategy in a clear manner.

There is no evidence supplied that sets out the effects of potential worsening of congestion on air quality within the plan area, arising entirely from the excess of passenger car movement demands over available and credibly deliverable highway capacity. This is despite the evidence set out and acknowledged in the explanatory memorandum at paragraph 4.130:

"4.130. The council's Air Quality Action Plan and the West Sussex Transport Plan 2022-2036 both refer to the air quality issues faced by Chichester. There is currently one Air Quality Management Area (AQMA) in the plan area, located at St Pancras, Chichester. AQMAs are designated where air quality exceeds, or is likely to exceed, national air quality standards and objectives. Development within or impacting these areas, or that likely to cause the declaration of any further AQMAs, will be subject to an air quality assessment by the applicant."

This is a retroactive approach – it is not "planning", based on evidence.

We are well aware that air quality issues in and of themselves can render allocated sites to be undeliverable: a good example is in the Vale of White Horse, Oxfordshire, where strategic allocations on the A338 and A420 corridors have been held up for years by air quality issues at Marcham and Frilford, in large measure because agreed transport

interventions were considered inadequate or undeliverable a very short time after the Plan was examined and adopted.

There is no evidence that shows how the development strategy can effectively mitigate these impacts as well as the further potential impacts that arise from the development strategy. This is exasperating, as there is clear evidence that could be drawn upon to show that that very substantial opportunities exist to:

- Speed buses up and make them more reliable by the delivery of bus priority on most of the key main corridors. Most of these even today operate relatively frequently
- Improve service frequencies and extend hours of operation.
- Secure significant background mode shift to bus as a result, damping pressure on key links and junctions, by consolidating demands on direct more reliable and more frequent bus services.

The spatial development strategy as submitted is in fact, likely to well conform to such additional evidence.

The allocations require substantial additional transport related work and evidence to demonstrate that the opportunities for sustainable transport have been identified and taken up as required by NPPF paragraphs 104-105.

With regards to specific policy, Policy NE22 should be modified to read:

“Development proposals will be permitted where it can be demonstrated that all the following criteria have been addressed:

1. Development is located and designed to minimise traffic generation and congestion through access to by maximising the relevance and attractiveness of sustainable transport modes, including maximising provision of specific demonstrably effective measures to make pedestrian and cycle and public transport routes and networks more direct, more safe, faster and more reliable;...”

5. Housing

5.1. Policy H1 Meeting Housing Needs

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

The presumption of the planning system is that local planning authorities should seek to meet their objectively assessed development requirements in full. These needs are assessed by a defined Standard Methodology set out in Planning Practice Guidance and elsewhere, that has explicit regard to ensuring that the economic and social effects associated with housing are properly provided for, to avoid exacerbating serious problems that arise from inadequate housing supply.

As a significant local service provider and employer, Stagecoach is concerned that existing issues with housing availability and affordable housing supply are not exacerbated. This has a direct bearing on staff recruitment and retention. It also has an indirect bearing on our cost base.

The existing problems with housing affordability have developed over many decades of undersupply. It should be emphasised that the significant boost to the supply of housing that has been sought by governments over the last 15 years, has only begun to take effect relatively recently in this District. Tackling the problem will require years of consistent attention.

Stagecoach notes that the Council is no longer proposing to meet its identified housing needs in full. Rather than 638/annum the Council is allocating a total that implies an annual delivery rate of 535/annum.

While a number of matters evidently present challenges to the Council in identifying a sustainable development strategy. Paragraph 5.2 indicates that “constraints, particularly the capacity of the A27 has led to the council planning for a housing requirement below the need derived from the standard method...” The blame for being unable to meet housing requirements is thus laid squarely at the door of transport infrastructure and systems.

This conclusion in no way follows from the evidence in the Chichester Transport Study. This, rather, makes the statement that when a higher annualised quantum of 700 dwellings per annum was tested, in the majority of cases the traffic capacity improvement package would perform little differently. To quote the Study:

“5.6.3 The network performance outputs analysed comprising V/C%, Delays (seconds) and Queues (PCU's) suggest that generally the proposed SRN mitigation identified for the Core Scenario, can accommodate in the most part, additional increase in development to 700dpa.”

Whether the rest of the local road network is similarly protects is moot.

Irrespective of these results, even if the contention made in the draft plan were true, unlike many other constraints, this is amenable to a suitable effective strategy to address the constraints identified being collaboratively conceived. This is what NPPF expects, as set out in paragraphs 104-106.

Where the A27 is concerned, as part of the SRN, National Highways is now working to a substantially revised approach than that in force at the time to current Local Plan was prepared, or LSS2, or reflected in the Chichester Transport Study. This is set out in DfT WMS 01/22. This document is the policy of the Secretary of State for Transport in relation to the SRN which should be read in conjunction with the National Planning Policy Framework (NPPF). It replaces the policies in the Department for Transport Circular 02/2013 of the same title.

It makes plain that to accommodate additional demands arising from development, National Highways (NHC) expects to meet the requirements of its statutory license in a substantially different manner. With respect to development NHC LTN 01/22 continues to address the tensions between national policy for the environment and carbon mitigation, the ongoing need to substantially boost the supply of housing as well as maintain national economic competitiveness and protect the safety of the public. However, in future, the approach will be to seek first to maximise the impact of demand management measures (reducing the need to travel), and then to accommodate residual additional demands first though maximising the use of sustainable modes, rather than accommodating assumptions about current levels of car dependency and use.

LTN 01/22 much more closely and explicitly aligns with the language of NPPF Chapter 9 paragraphs 104-106. Paragraph 12 states: "New development should be facilitating a reduction in the need to travel by private car and focused on locations that are or can be made sustainable.... Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas." (our emphasis).

It continues at paragraph 13: "where developments are located, how they are designed and how well delivery and public transport services are integrated has a huge impact on people's mode of travel for short journeys. The company will therefore expect strategic policy-making authorities and community groups responsible for preparing local and neighbourhood plans to only promote development at locations that are or can be made sustainable [footnote 8] and where opportunities to maximise walking, wheeling, cycling, public transport and shared travel have been identified." (again, our emphasis)

Stagecoach readily confirms that the draft Plan development strategy conforms well to the first limb of this expectation, in terms of the location of development.

Stagecoach considers that the plan and its evidence base conforms poorly to the second in that the specific opportunities to maximise walking, cycling wheeling and public transport are not clearly identified, and defined, and proven to be effective and deliverable.

The current mitigation strategy for the A27 Chichester area, supporting the adopted Local Plan and for which proportionate developer contributions have and continue to be sought, reflects now-superseded DfT Circular 02/2013. As a direct result, it failed completely to identify any significant effective bus priority measures, despite the fact that frequent services already exist on the key corridor concerned, and that one bus journey can remove, fully seated between 72 and 80 single occupancy car journeys from congested links and across key junctions on the A27. Rather, it sought to implement targeted measures to increase the throughflow of general traffic.

We recognise the realisation that this approach, which was already reliant on some tenuous logic, is simply not technically viable, especially where further development needs are anticipated.

National Highways will now pursue an approach with the planning system that "includes moving away from transport planning based on predicting future demand to provide capacity ('predict and provide') to planning that sets an outcome communities want to achieve and provides the transport solutions to deliver those outcomes (vision-led approaches including 'vision and validate,' 'decide and provide' or 'monitor and manage'). The company will support local authorities in achieving this aim through its engagement with their plan-making and decision-taking stages." (paragraph 15).

Paragraph 23 is at the fulcrum of assessing and defining transport mitigations to accommodate growth on and near the SRN "Capacity enhancements such as modifications to existing junctions or road widening to facilitate development should be determined on a case-by-case basis. The general principle should be accepted where proposals would include measures to improve community connectivity and public transport accessibility, and this will be weighed against any negative safety, traffic flow, environmental and deliverability considerations, impacts on the permeability and attractiveness of local walking, wheeling and cycling routes, and alternative options to manage down the traffic impact of planned development or improve the local road network as a first preference." (our emphasis).

However, no material work has been done that seeks to identify if a bold robustly conceived and suitable judiciously-prepared strategy that seeks to consolidate flows on already densely travelled corridor onto improved bus services, driving mode shift through insulating these services preferentially from already serious queuing. This would be likely to have very substantial impacts on all the key junctions on the A27, and potentially, on the A27 itself. The need for an integrated approach between Shoreham and Emsworth within West Sussex paying particular regard to development requirements in both Arun and Chichester Districts naturally lies at the heart of this, and we would expect to be picked up by the LSS3 Review among other things.

However, the locus of the problems and its causes and effects are obviously well enough known to start work on defining solutions within the plan area today. We would expect that this work will be essential if National Highways are to support the Plan, especially now given the terms of Circular 01/2022.

Such work could and should start from a “policy off” position: in other words that the Plan should fully accommodate its needs unless it can be proved that a mitigation strategy for the A27 that is compliant with DfT WMS 01/2022 cannot credibly accommodate resulting capacity demands without unacceptable impacts on the safety and efficient operation of the SRN.

This evidence does not exist. In fact the Chichester Transport Strategy 2023, on which the Council solely relies as its transport evidence base, indicates the opposite at para 5.6.3. This is the case before meaningful measures to secure damping of traffic demands through mode reassignment are even considered.

The exception to this is Portfield and Oving Road, which are among the most problematic areas after mitigation even at the Council’s chosen 535 dwelling/annum scenario (para 5.6.4.-5). The costly capacity mitigation simply cannot deliver enough benefit. It is admitted that WSCC has indicated that it would prefer a solution that places greater reliance on sustainable modes damping car-borne demand. This is entirely the strategy required by NHC to follow LTN 01/22, of course. Despite the fact that “predict and provide has “run out of road” no attempt has been made to examine what such a solution set credibly could look like. This is unsatisfactory and deeply troubling.

At paragraph 5.4 the draft plan points back again at the West Sussex and Greater Brighton Strategic Planning Board and the future work that has been commissioned, but has barely begun, to update the Local Strategic Statement. This work is to inform the preparation of plans that have horizons beyond the end date of the current LSS in 2030 and properly to meet the Duty to Cooperate. As we said in our response to section 1 of the Plan we fully endorse the conclusion that this is the right mechanism to look at these issues. However, the mechanism has not been effectively applied to the production of this plan. Therefore, the specific evidence that capacity on the A27 in and of itself supports accommodating a lower housing requirement does not exist.

The Plan thus does not conform to NPPF, is not adequately justified and is not effective.

The Plan does not properly meet the statutory Duty to Cooperate.

We will return to this matter in specific representations to Section 7 of the draft plan.

5.2. Policy H2 Strategic Locations/Allocations 2021-2039

Stagecoach Supports

Policy H1 makes plain that the plan, as far as it identifies locations for development has done so in locations that conform with its spatial strategy. All of the strategic allocations to a greater or lesser extent offer clear opportunities to make use of sustainable modes, by virtue of their location. That is not to say that the opportunities to take up these opportunities, and maximise the role of sustainable modes, has been identified, defined and translated properly into the rest of the plan policy suite or Infrastructure Delivery Plan.

As our remaining representations make clear, we support the locations thus far identified as being those that offer the best opportunities to reduce the need to travel, reduce travel distances, and create high quality attractive sustainable travel choices, for both existing residents as well as new ones.

However, the transport impacts of the allocation will individually and cumulatively likely to lead to increasingly severe impacts on the transport network, and on bus services.

Perversely, because these opportunities are not properly identified and secured through the plan and its supporting transport strategy, the opportunities presented by the allocations to secure a substantially more sustainable and lower carbon pattern of movement will not only risk being squandered but may aggravate the wider problems.

5.3. Policy H3 Non-strategic Parish Housing Requirements

Stagecoach Supports

The approach is consistent with the plan’s spatial strategy. It generally avoids a dispersal of development to locations likely to be highly car dependent. There is a clear focus on meeting housing needs in the far north-east of the District at the largest and most sustainable settlements, such as Loxwood, Kirdford and Wisborough Green. However, it must be pointed out that public transport availability in this area, provided by the County Council through services it procures, is minimal. These settlements in practice require each adult and child of secondary school age to have access to motorised transport to fully participate in society. This might justify significant measures to secure a boost in the frequency of bus services between Guildford and Billingshurst, passing through these settlements.

Otherwise, existing commitments in the plan area already make provision to meet for local needs. To the degree that there is an unmet local requirement for affordable housing of a small scale – for example to support the rural economy – this could be met through neighbourhood plans or through Rural Exception Sites.

6. Place-making, Health and Wellbeing

6.1. Policy P1 Design principles

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

NPPF requires that proposals should consider transport issues from the earliest possible stage. Designing to properly facilitate safe and efficient access, focusing first on sustainable modes, should be at the heart of development design. Too often it is still an afterthought, notwithstanding this.

Policy P1 must include an additional statement to be compliant and effective with NPPF paragraph 104-105 and 112 a): "Development will be designed to make access and movement using walking, cycling and public transport the natural first choice, and demonstrate through the Design and Access Statement how such modes are afforded the most direct, safe, reliable and efficient routes within to and from the proposals, especially when compared with car use."

6.2. Policy P4 Layout and Access

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

A number of proposals in the plan involve large-scale development. It is essential that where appropriate buses can access and circulate efficiently through development at a suitably early stage. There is no acknowledgement of this anywhere in the policy, contrary to NPPF paragraph 112.

Large-scale development which buses cannot access in an efficient or timely manner, or at all, strongly contributes to high levels of car-dependency. Evidence for this is referred to among other places, in DfT Circular 01/2022. To be compliant with NPPF and properly pursue its strategic Objectives, Policy P4 needs to be modified to address this point: "1. Provide safe, direct and attractive conditions for inclusive access, egress and active travel between all locations and providing as good direct high quality links to integrated public transport, and where appropriate efficient access and circulation to bus services, unimpeded by excessive parking, at a suitably early point in the development phasing;

7. Transport and Accessibility

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

The issues related to transport are fundamental to the soundness of the Plan. In particular, the constraints presented by the capacity on the A27 around Chichester and its key junctions, are the paramount reasons why the Council does not consider it can meet its objectively-assessed development needs in full. Thus, the transport issues and potential solutions available and what these mean for the ability of development needs to be accommodated, are matters that go to the heart of the soundness of the Plan.

Paragraph 8.3 sets out the approach taken to date succinctly:

"Increasing the capacity of the road network is key to supporting growth in the Local Plan. However, there is also a need to reduce demand for road transport to achieve net zero in greenhouse gas emissions by 2050 as highlighted in the council's Climate Emergency Action Plan and Strategic Objective 1. In aiming to achieve the ambitions of the action plan, all development is expected to demonstrate how it will support four key objectives to create an integrated transport network which will alleviate pressure on the road network, improve highway safety, encourage sustainable travel behaviours and help reduce transport related impact on air quality, by:

1. Avoiding or reducing the need to travel by car;
2. Enabling access to sustainable means of travel, including public transport, walking and cycling;
3. Managing travel demand; and
4. Mitigating the impacts of travel by car."

However, this approach is unambitious and "lightweight" as it assumes, as does the existing Chichester Transport Strategy on which the current adopted plan relies, that the focus of investment should be, wholly, in highways capacity improvement.

Sustainable modes explicitly are expected to play a greater role to "alleviate pressure" on the local road network, as part of this strategy. To emphasise: to avoid exacerbating congestion, the strategy will have to both remove a significant proportion of existing demands from the network on multiple key approaches to Chichester; and then ensure that travel demands from committed and further new development allocated in the plan does not simply replace these journeys, or,

worse, create even greater demands.

This will demand very significant behaviour change. Only by making sustainable modes substantially more attractive, both absolutely, and relative to the same journey made by car, can this be expected to occur. However, the explanatory memorandum as well as the wider policy suite and IDP, well expresses a fundamental unwillingness to taking specific, defined measures to achieve this reduction in car use and material promotion of sustainable modes. It makes plain that sustainable modes, including bus services, will offer a lesser role to which “access will be provided”.

Such a vague and weakly defined mechanism will have no effect, at all, on current behaviour and car dependency if the relevance of those choices as a credible alternative to car use, is not substantially boosted. This includes a 5% reduction in trip demand assumed by the Traffic Model at the heart of the Chichester Transport Study 2023.

For this reason. the transport strategy behind the current adopted plan is demonstrably ineffective, as the updated model makes plain. It has not yet been delivered and is yet unclear when or (in the absence of committed funding) even if it can be. It is ineffective to “roll forward” this strategy to support a higher level of planned growth.

We note that a scheme for addressing congestion on the A27 at Chichester has been included in Roads Investment Period 3 (2025-2030) – well within the horizon of this Plan. However, recent history provides compelling evidence that off-line improvement to the north is not politically supported and arguably even technically or economically deliverable. It is not funded, nor at this stage can it be hypothesised if an economically deliverable scheme is achievable sufficient to warrant the necessary investment.

An on-line improvement of the A27, including junction improvements, is likely to favour longer distance east-west though movements, which are of greater significance to the national economy, at the expense of local movements crossing the SRN- a conundrum that largely sums up the dilemma that is faced by NHC and the County as Highways and Transport Authority. It is one that is played out in many places, but rarely is the tension so stark as at Chichester.

Every local route crossing the A27 at grade around Chichester accommodates a regular bus service - or shortly will do (Oving Road area is expected to follow in 2023, though bus services are likely to not use the modified crossroads but to use the left-in-left-out facilities provided as part of the Shopwhyke Lakes development). The impact of these issues on the entire bus operation are serious and increasingly severe.

By the same token, boosting the relevance and reliability of each of these services substantially consolidating as much demand as possible onto a much smaller number of vehicles, is clearly a strategy that ought to support the effective capacity of each of these junctions being greatly augmented, at the same time as reducing equally substantially, the energy- and carbon intensity of mobility in the plan area. Addressing the A27 should not be considered some kind of “zero-sum” game.

Furthermore, the approach of National Highways in its dealings with development and the planning system now reflect a substantial change in Government Policy set out in DfT Circular 01/2022, which we separately cover in these representations, that entirely aligns with an approach that seeks to appropriately invest in more active and rational management of scarce highways capacity, on both the SRN and local roads.

For environmental, economic and social reasons – including public health, the issues presented by the A27 and its interface with local roads around Chichester stands out, nationally, as an example of where the approach taken to accommodating and mitigating development impacts needs to make a clear break with previous “predict and provide” approaches to meet forecast unconstrained car use as LTN 02/2022 makes clear as a principle. Policy in the West Sussex LTP to 2036 itself makes plain that “shared mobility” – including bus services – must play a much greater role in this area.

The existing Chichester Area Transport Strategy is focused on justifying capital contributions from committed development to fund highways capacity improvement – with nothing included to make bus services more attractive, or importantly more reliable. Indeed this “cars first” approach is so costly, that there is already accepted by WSCC to be insufficient land value remaining to be captured to put into substantial improvements for public transport. That much is very evident, and transparent, from paragraph 8.12 and 8.14, where south of Chichester “This (one) package of works (of several improvements needed) would be between £57.23 and £82.79 million to deliver in full and would not be capable of being funded by development contributions alone.” This assumes the scheme is otherwise deliverable, which on the evidence in the public domain for some time, has be considered challengeable.

The draft Local Plan and a modestly updated infrastructure package that flows from the 2023 Chichester Transport Study, pursues exactly the same approach.

This strategy is also even more ineffective having regard to the roll forward of the Plan to 2039. It cannot deliver the key Strategic Objectives of the Plan; and in particular this is explicitly recognised by the Council in the failure of the draft Plan to accommodate the OAN in full.

It is also obsolete, as it does not align, from first principles, with national policy (including the National Decarbonisation Strategy for Transport) and DfT Circular 01/22; nor the Council’s own declared Climate Emergency.

As a result, draft Policies T1 and T2 are both unsound, as we will separately explain.

Owing to the lack of evidence about the implications of this for adjoining authorities – especially Adur District – in the absence of the review of the Local Strategic Statement – this has implications for fulfilling the Statutory Duty to Co-operate.

The absence of any meaningfully comprehensive refresh of the transport evidence base means that there are no meaningful schemes of any kind, defined in the plan or its IDP, to indicate either what level of growth can be accommodated, by delivering a change in travel behaviour. This would be aimed to secure a sufficient effective increase in junction throughput (measured in terms of person trips as opposed to passenger car unit movements (PCUs)). Such evidence would propose measure to achieve that outcome and assess the efficacy and costs of such improvements, across all modes.

Paragraphs 8.10-8.13 inclusive indicate that the Council “has moved away from ‘predict and provide’” and invites the reader to conclude this has translated into a programme of interventions that can be funded to deliver specific, credibly predictable outcomes. Such a programme should be clear in paragraph 8.11. and the IDP. There is no such clarity and this conclusion would be false.

It would also be evident in the language of the Chichester Transport Study 2023 and its refreshed proposals. Only the most token of lip service is paid to the matter. It is a plainly car-focused, predict and provide methodology to support a “predict and provide” strategy. In fact, it is a brazenly car-focused approach, to the exclusion of all else.

The statements in the Plan regarding any other approach, read properly, offer nothing more than a vague commitment to look post-adoption, and implementation, at unspecified measures, based on problems that may arise in future that will be decided by a committee: the Traffic and Infrastructure Management Group (TIMG). This does not yet exist and is obviously an attempt to posit a mechanism that retroactively will cover for the lack of serious multi-party engagement to address the existing and future issues. Such a group should, in our view, also include the public transport operators, not least if the requirements of NPPF Para 106c) are to be satisfied, and the strategy and measures to be adopted are material to supporting the Local Plan, as of course the purpose of the TIMG has as its core *raison d'être*.

The approach proposed by the draft plan is plainly ineffective and unsound in justifying the draft Plan.

It is more widely unacceptable to Stagecoach. The issues are severe today and well-known, already serving to jeopardise the delivery of buses relied on by existing residents, much less attract new ones.

We also consider that HM Planning Inspectorate are likely to be quite resistant to accepting this aspect of the plan's transport strategy, nor will it be appropriate for the Council, West Sussex County Council, or National Highways, to define such measures after the submission of the Plan during the Examination process. The Examination in Public of a local plan has no purpose to improve plans, or remedy deficiencies clearly evident prior to submission.

The examination of the West of England Joint Strategic Plan in 2019, and the Uttlesford Local Plan in 2021, among several others, demonstrates especially clearly that the Planning System and the Examination process is not amenable to post-hoc retrofitting of transport evidence and strategies to support a development strategy.

7.1. Transport Evidence Base

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Most of Stagecoach's serious concerns about the soundness of the plan arise from the fact that it has been prepared in advance of any up-to-date transport evidence and suitably robust transport mitigation strategy being advanced to support it. In essence, the Council has rolled forward the existing plan by 9 years, adding some additional sources of housing supply, while still relying implicitly on a transport evidence base that was prepared 10 years ago.

This led to the formulation at that time of what can only be described as an attempt to develop an effective car-based mitigation strategy, creating capacity for general traffic added to accommodate unconstrained additional demands on an already over-taxed highways network – the Chichester Area Transport Strategy. Despite language in support of sustainable modes, no deliverable measures were identified to support either the extension of the bus network to serve allocated sites, and much less to create a vital improvement to the quality and reliability of public transport services. This approach reflected the approach set out in DfT Ministerial Circular 02/2013 “Development and the Strategic Highways Network”, applicable since the A27, which is the focus of the most severe difficulties, forms part of the national Strategic Roads Network.

This approach has proven ineffective even before substantial elements of housing land supply in the current plan come forward – in particular West of Chichester and West of Tangmere.

In addition, Circular 02/2013 has now been replaced by a new Ministerial Statement of 23/12/2022, DfT Circular 01/2022.

On both counts the transport evidence base and strategy needs to be properly revisited and established to provide effective mitigation for the plan, including current commitments that are being rolled forward.

The language of the current Ministerial Circular 01/2022 offers a highly condensed synoptic view of the proper approach to addressing transport matters in the planning system notwithstanding that it is directly concerned with the Strategic Roads Network. Videlicet:

"31. The NPPF expects local plans and spatial development strategies to be underpinned by a clear and transparent evidence base which informs the authority's preferred approach to land use and strategic transport options, and the formulation of policies and allocations that will be subject to public consultation. The company will expect this process to explore all options to reduce a reliance on the SRN for local journeys including a reduction in the need to travel and integrating land use considerations with the need to maximise opportunities for walking, wheeling, cycling, public transport and shared travel.

32. The Transport Decarbonisation Plan indicates that carbon emissions from car and van use is the largest component of the United Kingdom's total transport emissions. While action is being taken to decarbonise transport such that all new cars and vans will be fully zero emission at the tailpipe from 2035, the proposed location of growth in current plan periods and whether new developments would be genuinely sustainable remain important factors in demonstrating that a local authority area is on a pathway to net zero by 2050 and therefore compliant with the requirements of the Climate Change Act 2008.

33. Alongside this, the local authority should identify the key issues within their study area regarding transport provision and accessibility, setting out how the plan or strategy can address these key issues in consultation with (National Highways, and other transport stakeholders identified in NPPF paragraph 106b). It is the responsibility of the local authority undertaking its strategic policy-making function to present a robust transport evidence base in support of its plan or strategy. The company can review measures that would help to avoid or significantly reduce the need for additional infrastructure on the SRN where development can be delivered through identified improvements to the local transport network, to include infrastructure that promotes walking, wheeling, cycling, public transport and shared travel. A robust evidence base will be required, including demand forecasting models, which inform analysis of alternatives by accounting for the effects of possible mitigation scenarios that shift demand into less carbon-intensive forms of travel." (our emphasis)

Within the text quoted above, references to National Highways and "the Company" can quite legitimately be extended, given the statements in NPPF paragraph 16, 25, 26 and 106b, to include all the relevant transport infrastructure and service providers in the plan area. Circular 01/2022 also has the weight of secondary legislation as a Written Ministerial Statement and thus should be considered to be highly material.

To date there has been little attempt to explore, to the degree necessary, strategies that conform to Circular 01/2022. It is thus not possible to conclude, as the Council has done, that the issues on the A27 that present a constraint to development, are insuperable.

In line with comments made elsewhere in the response to this pre-submission draft, the Plan thus requires substantial further work to be undertaken with key stakeholders to establish a suitably effective and demonstrably deliverable transport mitigation strategy, to sustainably meet the District's identifiable development needs and where apparent and appropriate, also ensure that wider cross boundary strategic issues are appropriately addressed, in conformity inter alia, with the Duty to Cooperate, NPPF paragraph 16 and 104-111 inclusive, and DfT Circular 01/2022 and to ensure the Plan's own Strategic Objectives can be met.

7.2. Policy T1 Transport infrastructure

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

As described in comments elsewhere, Stagecoach does not see that a suitable proportionate and up-to-date basis exists to properly and appropriately address the transport issues in the plan area.

The 2023 Transport Study does not perform this role adequately but, contrary to the explanatory memorandum, is a scheme intended only to facilitate car-borne movements through some of the key junctions. There is no evidence that an holistic integrated and strategic approach to transport mitigations has been prepared. Certainly Stagecoach has not been involved in any of the discussion about appropriate transport measures in support of the plan, including the Transport Study 2023, contrary to the expectations set out in NPPF at paragraph 16 and 106.

Notwithstanding out fundamental concerns about the transport evidence case and mitigations strategy, Policy T1

reflects a weak and ineffective approach, that seeks to try and define a strategy post-adoption.

Contrary even to the explanatory memorandum for the policy, which seeks to maximise the contribution of sustainable modes, the policy is phased in such a way that it gives basis for previous “predict and provide” solutions to facilitate and support current levels of car dependency – already shown to be undeliverable and unaffordable – will nevertheless be the first rather than the last resort. There is no commitment to seek to maximise the contribution made by sustainable modes to meeting mobility needs. Nor is there any recognition that current chronic congestion and lack of network resilience jeopardises the ongoing attractiveness and long-term sustainability of the current public transport offer.

To be effective and create alignment with national policy, and also provide for an up-to-date transport evidence base and strategy to be adduced, Policy T1 should be modified to read:

“Integrated transport measures will be developed to mitigate the impact of planned development on the highways network, improve highway safety and air quality, promote more sustainable travel patterns and through providing in the first instance, new and improved infrastructure and services that will be credible effective in maximising the encourage increased use of sustainable modes of travel, such as public transport, cycling and walking.

To achieve this, the council will work with National Highways, West Sussex County Council, other transport and service providers (including through the Traffic and Infrastructure Management Group) and developers to provide a better integrated transport network and to improve accessibility to key services and facilities...

All parties, including applicants, are expected to support these objectives by:

1. Ensuring that new development is well located and designed to avoid or minimise the need for travel, encourages maximises the use of sustainable modes of travel as an a credible alternative to the private car and directly provides or contributes towards new or improved transport infrastructure;
2. Working with relevant transport infrastructure and service providers to improve accessibility to key services and facilities with primary emphasis on sustainable modes, and to ensure that new facilities are easily accessible by sustainable modes of travel;
3. Targeting investment to provide local travel options as an that represent a clearly credible alternative to the car use, focusing on the delivery of improved integrated bus and train services, and improved pedestrian and cycling networks, including the public rights of way network, based on the routes and projects identified in the Local Transport Plan, West Sussex Bus Service Improvement Plan, Local Cycling and Walking Infrastructure Plan (LCWIP) and the Infrastructure Delivery Plan;
4. Planning to achieve the timely delivery of transport infrastructure on and approaching the A27 and elsewhere on the network, needed to support new housing, employment and other development identified in this plan;
5. Phasing the delivery of new development to align with and where possible facilitate the provision of new and improved transport infrastructure and services and the outcomes of monitoring travel demand on the network, including that arising from areas immediately adjoining the plan area. It may also be Where necessary to achieve this alignment proactively phase development will be phased to take into account the monitoring and effectiveness of travel plans demands on the network and to ensure that measures are implemented to support the highest possible level of encourage sustainable travel behaviour.;
6. Using demand management measures, such as travel plans, to manage robust methodologies to assess travel demand and minimise the need for new or improved transport infrastructure as part of the monitor and manage process.
7. Delivering a coordinated package of infrastructure improvements at and approaching to junctions on the A27 Chichester Bypass along with other small-scale junction improvements interventions within the city and elsewhere, as identified through the monitor and manage process. These will increase road capacity, reduce traffic congestion, improve safety and air quality, and improve access to Chichester city from surrounding areas, first by maximising the contribution of sustainable modes to meeting mobility demands, then, and only as evidenced by robust modelling and option testing, providing increased highway capacity for general traffic.

...”

7.3. Policy T2 Transport and Development
Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Section 1 b) of T2 will be ineffective as, absent measures to ensure buses can run reliably and efficiently, improved bus services will not be possible, in support of the plan’s own stated broad approach to transport mitigation, as well as wider local and national policy.

The draft policy does not require improvements to the quality of services such that sustainable choices will be materially more attractive than car use for many local journeys. Without this the Plan's Strategic Objectives cannot be fulfilled and the objectives of the Plan and this policy, read in its own terms, will not be realised, where reduction in private car use is concerned. It is thus ineffective.

Absent measures to make bus services more reliable and more efficient, by insulating them from chronic congestion as far as possible, still further operating resource and therefore costs, will be needed to just to reliably run existing service frequencies, and capacity, as vehicle productivity continues to be more and more adversely affected by chronic delay. This will be further aggravated by increasing incidence of severe unpredictable service breakdown arising from incidents of diverse kinds on the network, especially on or around the A27, including that arising from more regular severe weather events. Longer journey times can only be expected to lead to relative disadvantage of bus services compared to personal car use, entirely contrary to the objectives of national and local policy, including Policy T1. It can also expect to lead to a dampening effect not on car use, but on bus patronage, threatening the ongoing viability of bus services across the plan area.

Section 1 b) of T2 should be modified to read:

"b) Maximise opportunities for the use of sustainable travel modes through provision of direct and efficient access both to either the existing networks or and through providing such new infrastructure or public transport services, as can be credibly expected to reduce reliance on the private car and work towards achieving net zero in greenhouse gas emissions by 2050;"

Section 1 d) of T2 will be ineffective as the location of development is fixed by this plan. We commend the fact that all the strategic allocations are or will be served by regular bus services.

However, the use of public transport services, where available, depends on the relevance and reliability of these services. Furthermore, provision of services without them generating sufficient patronage to support their long-term operation also threatens the sustainability of the plan and its supporting transport strategy. This is especially true of new services such as those intended to serve West of Chichester and Tangmere and East of Chichester Strategic Allocations.

This can only be assured by the plan being supported by specific measures to ensure buses can operate efficiently and reliably on the existing and projected services intended to serve the developments concerned, and also at the same time secure behavioural change from existing development.

To be sound and effective, the policy T2 1 d.) should be changed to read:

"d) Ensure major development is located to proposals and the supporting mitigation measures enable the use delivery of high-quality, reliable and effective public transport to present the most relevant possible choice to access local services and facilities including employment, leisure and education facilities";

The Policy T2 makes no provision for buses, where necessary, to enter and make efficient and safe progress through major development sites. The plan is thus out of conformity with NPPF paragraphs 104-106. It makes no provision to ensure that penetration of bus services is achieved at a suitably early point in the development trajectory, undermining the achievement of the goals of the Plan and this specific policy. As a good example, West of Chichester Phase 1, currently under construction, cannot be served by buses as a strategy to effect interim bus penetration was never made.

Policy T2 1 f.) should therefore be amended to read:

f) Ensure that the layout and design of the site development proposals provides effective penetration of the site by sustainable modes, at all points in the development build-out, including public transport where appropriate; and sufficient space for all vehicles to manoeuvre without compromising the safety of pedestrians and cyclists, the efficiency of bus services, or the ability to provide an appropriate level of landscaping across the site"

Policy T2 3.) regarding Travel Planning depends entirely on its effectiveness on the quality and relative attractiveness of sustainable alternatives over car use. In the absence of efficient frequent, reliable and direct public transport services (or similarly, high quality facilities for active travel, Travel Plans will continue to be the entirely ineffective "tick box" exercises that they generally are today, evidenced by much lower levels of public transport use in most new developments than it seen in nearby established neighbourhoods, as demonstrated broadly by Census data in 2011, 2011 and 2021.

For this policy to be effective an up-to date transport evidence base and strategy, underpinning a series of specified interventions to promote the relevance and effectiveness of all sustainable does including public transport in particular, needs to be put in place.

8. Chapter 9 Infrastructure – Policy I1 Infrastructure provision

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Policy I1 could not expect to be effective without a clear understanding of the effectiveness and costs of a defined series of measures that are laid out in this Plan and its IDP, to mitigate the transport impacts of the development strategy.

Where the Chichester Transport Study is concerned the only meaningful work has focused on the definition and delivery of a range of highways capacity schemes mainly on the A27 around Chichester.

As we have discussed elsewhere the effectiveness of these schemes is insufficient as set out at Tables 8.1 and 8.2 of the Chichester Transport Study 2023. The plan itself admits that the deliverability of this package cannot be afforded by developer contributions alone.

The Chichester Transport Study 2023 does not attempt provide a realistic assessment of costs to deliver these schemes, despite the fact that they have been under evaluation for many years. Nor does it offer any assurance that the schemes are technically achievable. Rather, it states the opposite:

“9.2.3 No investigation has been carried out into specific land ownership details, or into the location details or cost of moving statutory undertakers and utility apparatus within the areas of the scheme. No design assessments were carried out at this stage to ascertain the deliverability of the proposals except where any Health and Safety concerns were raised.”

Thus on the grounds of effectiveness, deliverability and affordability, the measures on which the Plan relies must at the very least be considered to involve an exceptionally high level of risk. Since Policy I1 is founded on these assumptions, it cannot be considered effective.

As we set out elsewhere, the Plan has been advanced on the basis that if any additional sustainable transport measures are required, these mitigations should be retroactively considered and defined after adoption of the Plan. In the light of the doubts that are apparent of both the deliverability, affordability and effectiveness of the Chichester Transport strategy this is especially unsatisfactory even if existing baseline conditions were reasonably acceptable.

However, the Chichester Transport Study 2023, as did its predecessors, makes plain that that existing problems are acute, and can rightly be considered “severe” in the sense of NPPF paragraph 111. Waiting to define deliverable affordable alternatives is an entirely inappropriate approach to the local plan transport mitigation strategy. Such an approach also makes it impossible to consider prior to adoption how far the transport impacts of the plan can be cost-effectively mitigated by alternative means, or whether they are deliverable having regard to technical achievability, land control, development viability, or any combination of the above. Thus, the plan cannot be considered justified, or effective.

Given the mutual dependence of development strategies in Chichester and Arun in particular on these measures this should be seen as crucial of the fulfilment of the Duty to Cooperate.

The remedy for this is ultimately to put in place a suitable transport mitigation strategy following a strategic appraisal of options through review of the LSS. This then must be supplemented by more detailed development specific and localised scheme definition, including, where necessary, bus priority and other measures to support the substantial promotion of the attractiveness of public transport in key bus corridors over private car use. This would then be reflected by costed proposals in the IDP.

Leaving these fundamental weaknesses to one side, even if such a strategy and mitigation package were defined, there is no mention of public transport in the policy even though it is clearly a key part of the policy environment and mitigation strategy for the plan as expressed in the explanatory memorandum for I1, but also at Policies T1 and T2. I1 thus does not effectively support the realisation of the intent of Policies T1 and T2.

Policy I1 iii) should therefore be modified to read:

“(iii) Safeguard the requirements of infrastructure providers, having regard to requirements within and where appropriate across the boundaries of the plan area, including but not limited to:

...

• Highways including specific measures to accommodate improved active travel and public transport level of service and cycle lanes, and...”

At limb v) the Policy expects developers to meet the “in perpetuity costs of operating and maintaining infrastructure”. This shackles development management decisions to developers assuming what are infinite costs – given that “in perpetuity”, read properly, can only mean “without any limit in time”. This means that it is impossible to meet the statutory tests on developer obligations set out in the Community Infrastructure Levy Regulations 2010 (as amended) at Regulation 122, also repeated in NPPF. This policy cannot be lawfully implemented and it is thus ineffective.

In the absence of an up-to-date transport mitigation strategy that is fit for purpose, at the point the Plan is examined these costs of any additional infrastructure are not known in any case. The strategy and its costs, including its affordability and deliverability, are crucial to assessing if the Plan is sound.

Subject to an appropriate defined transport mitigation strategy being arrived at, to be sound, the Policy I1 v) should be modified as follows:

(v) To consider and meet as appropriate the in-perpetuity delivery costs of infrastructure and, where appropriate, improved services, to the point where its long-term operational sustainability is credibly assured from mainstream sources. Where adoption is not envisaged by local authorities, that must include arrangements for its future ongoing management and maintenance;

9. Strategic and Area Based Policies

9.1. Policy A1 City Centre Development Principles

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Chichester City centre is rightly identified at 10.2 and 10.4 as the commercial and service hub of the District. It is also acknowledged to be the most accessible place in the District by sustainable modes, public transport in particular.

Boosting the vitality of the city centre is something that Stagecoach strongly supports. Irrespective, the enhancement of the commercial and cultural life of the District in the place where these opportunities can be accessed broadly by sustainable modes, is one that has long been at the heart of national planning policy for town centres, reflected in the “town centre first” approach to locating major trip generating uses.

Paragraph 10.5 exposes an unbalanced and unsound preoccupation with aesthetic matters in its approach to the town centre, and far too little to ensuring that the central place function is enhanced through protecting and enhancing the quality of public transport access.

The city is relatively small but at the heart of an extensive hinterland, and thus the role of bus in supporting sustainable access to and enhanced city centre venue is one that needs appropriate recognition and emphasis. It is important to note that a dominant number of key service and facilities such as the General Hospital are relatively close to the city centre. This directly contributes to driving travel demand into the city, causing congestion. Most importantly, it also makes the task of mitigation simpler, given the impact a suite of active and sustainable measures can have within the same close proximity.

Policy A1 does not provide this. As such, achieving the strategic objectives of the plan is seriously threatened, and the plan is thus not effective.

The Plan needs to ensure that the approach to city centre regeneration maintains and enhances public transport access, interchange and inter-modal connectivity. It also needs to ensure that bus service stopping and interchange facilities are able to address increases in future demand, anticipated by the clear intent expressed elsewhere in the Plan that public transport should be meeting a greater proportion of mobility needs, in a growing district. Achieving this demands an ambitious approach to the location, quality and capacity of bus stop and interchange.

We have been in discussions with the District Council about this, alongside West Sussex County Council, for a very considerable period. Stagecoach has always been keen to help facilitate the Council’s aspirations for the city centre, and we continue to hold this intention. However, this cannot be at the expense of a material diminishing of the convenience and fitness-for-purpose of bus stop infrastructure and interchange. Stagecoach has significant concerns that current proposals to remove the bus station and have all bus services operate from the street kerbside, on an inner distributor road with similar of reduced net stop capacity, fall short of promoting attractive, convenient bus access to the central area as a destination.

For the longer term and where the objectives of the draft plan are concerned looking ahead to 2039, they clearly fall short of enhancing the convenience and attractiveness of public transport use. Much less do they make sufficient provision for a material increase in bus frequency, connectivity, and interchange convenience, on which the draft plan explicitly relies. It is vital that the District Council is clear in policy about its objectives for public transport in the city centre. These objectives must also carry sufficient weight when held in tension with other aspirations for the centre and the constraints on achieving them.

For the Plan to be sound, properly effective and compliant with NPPF, the approach to the City centre cannot ignore its role in the provision of sustainable transport service and connectivity.

Policy A1 should therefore be modified to properly reflect this crucial function, on which the vitality of the city centre must increasingly depend if unacceptable impacts on congestion, air quality and amenity are not to arise. This is still more crucial if wider aspirations to secure a more sustainable society and mitigate carbon are to be achieved.

“...This will include provision for development and proposals that:

- Support and strengthen the vitality and viability of the city centre and its role as a shopping/visitor destination, employment centre, public transport hub and a place to live;
- Support and promote facilitate improved access to the city and with increased emphasis on sustainable modes of travel, with particular regard to enhancing the public transport interchange role of the city centre area, in accordance with the transport strategy for the city and...”

9.2. Policy A3 Southern Gateway Development principles Chichester Bus Station, Bus Depot and Basin Road Car Park Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

There has been aspiration to redevelop the bus station and nearby bus depot from many years. Stagecoach has been engaged with detailed discussion with the District Council on this matter over a very extended period. We confirm that these discussions have reached a relatively mature stage, however at the time of writing are not concluded.

Stagecoach recognises and supports in principle the Council’s wider aspirations for the “Southern Gateway”, and this has governed our approach to the Council to date. We continue to have no “in principle” objection to relocating our administrative, engineering, operational and customer service facilities.

Leaving our proprietary interests entirely to one side, it remains vital that in so doing, the effectiveness, attractiveness and convenience of these facilities is not compromised, as we have outlined in our representations to Policy A1, if wider national and local transport policy, and the local plan strategy itself, are to be effectively achieved.

The depot is crucial infrastructure to support the safe, reliable and legally-compliant operation of Stagecoach bus services over a very extensive area covering the entirety of the District and beyond. Without securing equivalent facilities, that are fit-for-purpose, many of our services would have to cease.

If buses are to provide a greater and more attractive level of service (still more so if they are to be electrified) larger, more capable depot facilities, and city centre bus interchange facilities will be necessary.

Notwithstanding that the bus station and depot sites are leased from the District Council, these leases terminate well beyond the end of the plan period.

Finding suitable sites for a replacement bus depot in Chichester, in common with all similar localities especially in southern England, is extremely challenging. As a sui generis use, bus depots do not automatically benefit from policy support on land allocated for employment uses. Most bus depots benefit from being legacy assets established under very different economic conditions. That is the case here. The value of a depot site for redevelopment net of demolition and remediation costs, rarely approximates to that able to sustain the acquisition of land in a tight wider employment land market, and the construction of suitable new facilities.

Furthermore, the costs of operating bus services are sensitive to the parasitic costs of vehicle and staff hours and mileage associated with “dead running” to a remote depot location from the operational network. Here, the existing depot site is ideal, and any replacement will unavoidable add ongoing operational costs to the operation that cannot be directly recovered.

We confirm that a replacement depot site has been identified and has in principle been agreed, subject to overcoming issues with the disposition of existing and future structures on the site. However, the site is recognised as not capable of accommodating meaningful operational expansion. This is just one of the most important foundational reasons why a positive transformation of bus productivity needs to be achieved, across the plan area and beyond, to support delivery of greater bus mileage and frequencies with the same level of operational resource. At the time of writing, we are not fully convinced that the proposals for the relocation will be sufficiently fit-for-purpose in the event the above is not achieved. Thus, we must raise a concern that the bus depot site might not be available during the plan period. While there is a strong probability it will be, the certainty surrounding the availability of the site, especially within the first 5 years of the plan, needs to be made transparent.

9.3. Policy A4 Southern Gateway - Chichester Bus Station, Bus Depot and Basin Road Car Park Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Regarding the removal of the bus station, without equivalent replacement, Stagecoach has significant concerns. Pressures and conflicts at the current bus station site have been gradually rising for several years, arising from increasing use and the need for additional scheduled vehicle layover periods to reduce the risks of accumulated late running from traffic congestion. Peak passenger volumes have recovered strongly on several routes, however passenger accumulations resulting from more frequent delays and disruption have added substantial further pressure on limited space.

Under current plans, buses and bus passengers will be displaced to bus stops at new locations outside the city centre, along Avenue de Chartres. This road was always intended to be a relatively high-speed traffic route, outside the historic core of the city. The city centre has evolved in the subsequent years to reinforce already strong natural severance, with the highway lying beyond the city walls and the green space along the Lavant. It is a traffic dominated, unsurveyed and unattractive environment, reflecting the intended function of the road as an efficient movement corridor for high traffic volume, and nothing more. Avenue de Chartres is relatively close to the rail station and pedestrian connectivity can be provided at broadly equivalent distance to the current bus station, but again it is unsurveyed and currently unpleasant, lacking natural legibility or any sense of prominence.

We understand kerbside capacity on Avenue de Chartres will be strained even to accommodate current levels of service, with no expansion possible. There is therefore a strong probability that to accommodate more frequencies and key new routes, such as West of Tangmere, East of Chichester and West of Chichester allocations, additional future bus stops must occupy a different location. This makes interchange between routes and rail services substantially challenging and less attractive.

The emerging arrangements risk marginalising public transport and public transport users substantially. This strongly undermines achievement of the wider plan objectives and delivery of a significantly greater role for public transport. If substantial public transport growth is to be accommodated in a growing city and hinterland, as the draft plan anticipates, then a more ambitious strategic approach must be taken. This should plan for additional and improved facilities to accommodate all services predicted to be required, whilst enhancing the passenger experience to ensure meaningful and attractive modal choice.

There is therefore a need for the plan to evidence how these issues will be appropriately resolved, having regard to a suitably ambitious approach that properly supports clear objectives to boost the relevance of public transport. The current policy is weak, unspecific and indifferent to achieving the strategic objectives of the plan, including a transport strategy in support of the plan, and as such it is ineffective.

Policy A3 should therefore be modified to read:

“...
 • Be designed to encourage and facilitate substantial increase in the use of active travel and public transport to, from and through the city centre.
 ...”

In line with the commentary above Policy A4 should also be modified to read:

3. Enhance the public interchange function of the immediate area, the public realm, particularly connections to the railway station and the city centre via South Street, Southgate and Basin Road for pedestrians, cyclists and public transport users, and to National Cycle Route 2 and Route 88 which run close by. Suitable replacement bus stops and layover facilities should be provided to replace those at the bus station in line with reflecting the objectives of the West Sussex Bus Service Improvement Plan, and to facilitate growth to meet the requirements of the plan's development strategy. Routes and crossings should reflect pedestrian desire lines, and public art should be incorporated to create a sense of place;

4. Enhance the public realm, in support of this and wider objectives, incorporating public art and other measures to create a strong and attractive sense of place.

...(renumber remaining points)

9.4. Policy A6 Land West of Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

This is an existing Local Plan allocation. The public transport strategy for the site depends on the delivery of the second phase which Stagecoach notes is the subject of several applications now awaiting review and determination by the Council.

The site represents a compact form of development adjoining the city, as the most sustainable settlement, meeting housing needs close to where they arise, and affording very good opportunities for the use of sustainable modes, especially walking and cycling.

It is vital that a bus service is delivered to serve the site at the earliest potential. This was anticipated to be at the start of Phase 2 and will require the early delivery of the entire length of the spine road between the Old Broyle Road and Westgate and making it available for bus services.

It is not clear if the costs of pump-priming the service mentioned in the draft policy are anticipated to be met by the developer. Without such funding, the service will not be deliverable as years of losses will never credibly be covered from

future profit. It is likely that the current wording will be interpreted by the developer as meaning that they have no such obligation binding upon them. Not does policy set out any specification for this service, thus its costs and the basis for securing developer contributions does not exist.

As such any wider transport strategy, that seeks to secure a greater role for the use of public transport, and the aspiration for this allocation cannot demonstrably be met. The policy is ineffective.

Policy A6 should be modified to read:

"...

10. Make provision to accommodate and secure delivery of for regular bus services linking running through the site to Chichester city centre operating at least every 30 minutes Monday-Saturday, and new and improved cycle and pedestrian routes linking the site with the city,

"..."

9.5. Policy A7 Land at Shopwhyke

Stagecoach Supports

This is an existing Local Plan allocation, largely built-out, that benefits from an existing set of permissions.

The public transport strategy for the site depends on the delivery of effective bus priority at Oving Crossroads. The current recently implemented scheme, undertaken by National Highways, makes no provision for effective bus priority and needs considerable re-evaluation.

The site represents a compact form of development adjoining the city, as the most sustainable settlement, meeting housing needs close to where they arise, and affording very good opportunities for the use of sustainable modes, especially walking and cycling. It lies on a new bus corridor that will shortly be put in place, running to Tangmere via Shopwhyke. The allocation is being significantly consolidated by further development in the immediate vicinity which strongly supports the potential for this new service.

As we explain in our representations for East of Chichester proposed allocation A8, and West of Tangmere Allocation A14, a clear corridor strategy to effect bus priority is needed, that should be delivered in support of that further growth, and that at Tangmere SDL. However this allocation is a near complete commitment and there is no scope through policy regarding this land to effect this outcome.

It is notable that Point 6) of policy A7 makes mention of a bus service. This language reflects the currently adopted Local Plan policy and has underpinned the existing permissions. The failure of any bus service to be delivered demonstrates from first principles that this Policy has been entirely ineffective. It is important that lessons are learned from this in the Local Plan Review.

9.6. Policy A8 Land East of Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This proposed allocation lies next to unallocated land that is already consented as a departure from the adopted development plan, with 143 units near completion south of Oving Road (20/02471/FUL). Additional land, also unallocated but similarly consented, has now commenced north of Oving Road (88 units under 21/02197/FUL). This and the allocation site consolidates earlier development at Shopwhyke brought forward under the current Local Plan, and allocated again as draft policy A7.

Development at Shopwhyke was brought forward on the basis of a premise that the developer would provide or somehow arrange a bus service, that was reflected in the policies of the current Local Plan. This was secured by an unenforceable condition. No bus service has been provided, as there was inadequate clarity regarding the basis on which the costs of establishing such a service would be met by the developer, and the expectations of policy on the developer. The site does however lies on a logical new bus corridor between Chichester and West of Tangmere along the Oving Road.

In addition, an expectation that modifications to the Oving Crossroads would effect bus advantage have proven false – the arrangements put buses into a similar or longer queue than if they use the route available to general traffic to and from the A27.

Stagecoach strongly supports the principle of bringing this land forward. However, the soundness of the site depends on deliverability of a regular, reliable and direct bus service along the Oving Road, taking advantage of effective bus priority.

Given the failure of existing policy in the adopted Local Plan covering the proposed A7 allocation to deliver a bus service, it is of great concern that there is no draft policy to adequately address the issue. The policy is out of conformity with NPPF paragraph 104-105 in that sustainable modes do not offer realistic choices, much less an attractive one, and as such also does not secure the objectives of national policy nor of the plan itself.

Currently the proposed allocation is not served at all by public transport. Policy needs to ensure there is a policy basis to secure contributions to deliver such a service, which may well take the form of a proportionate contribution to deliver a new service or enhance provision that is put in place between Chichester along the Shopwhyke Road to west of Tangmere.

To become sound Policy A8 must be modified to read:

"...

12. Provide for improved high quality connectivity by sustainable travel modes and focused in particular on a corridor between Chichester city centre and Tangmere along Shopwhyke Road, including new improved cycle and pedestrian routes, and a frequent bus service including linkages with Chichester taking advantage of effective bus priority measures on Oving Road at the A27;

..."

9.7. Policy A9 Land at Westhampnett/North East Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This land is already allocated and consented as part of the existing 2016 Local Plan. All reserved matters are determined.

The site lies on service 55 between Chichester, Westhampnett and Tangmere. This established service benefits from additional demand from the development at Phase 1. Phase 2 which is currently well underway, does not benefit directly from bus services. However it is a compact and logical form of development where walking and cycling to local facilities and employment is a credible option.

The existing allocation rolls forward policies in the 2015 Local Plan. In so doing it is possible to see which have been effective.

Point 9. regarding bus service and routing has not been effective. In particular the potential for a bus only link between the site and Graylingwell has not been established as policy anticipated. Given congestion around the Portfield area acutely affects public transport this, or alternative methods to secure bus priority over private car use, a clear and unequivocal policy steer is required.

The lack of an up-to-date transport evidence base is ultimately at the root of these issues. Arguably the policy and allocation can only be made sound once this refreshed evidence base in place.

However, it is possible that the allocation could be made sound by modification of Policy A9 as follows:

"...

9. Make provision for regular, direct and reliable bus services linking the site with Chichester city centre, and new and improved safe and convenient cycle and pedestrian routes linking the site with Chichester city, the South Downs National Park and other strategic developments to the east of Chichester city including Tangmere. These objectives could include exploring the potential for a bus only route require a deliverable scheme to afford bus priority through Portfield, and potentially linking the development with the Graylingwell area through use of a modal filter;

..."

9.8. Policy A10 Land at Maudlin Farm

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing public transport route. It is relatively close to the city and very near substantial centres of employment and services that can be reached by active travel modes, helping damp the demand for car use. It is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services at Portfield and over a wider area. In fact, the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A10 should accordingly be modified to read:

"...

5. Provide safe and suitable access points for all users, including a main vehicle access from Old Arundel Road and, subject to further assessment, a secondary vehicle access from Dairy Lane. The development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes;

..."

9.9. Policy A11 Bosham – Land at Highgrove Farm

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Bosham Station. It is relatively close to the city and very near substantial centres of employment and services that can be reached by public transport and cycling, offering strong potential to materially damp the demand for car use.

There are serious risks that development in the A259 corridor west of Chichester could place further demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular to bus services.

Nevertheless, given the potential to effect bus priority on the approaches to Fishbourne Roundabout, it is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A11 should accordingly be modified to read:

“...

8. Provide safe and suitable access points for all users, including a main vehicle access from the A259. The development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys crossing the A27 at Fishbourne;

9.10. Policy A12 Chidham and Hambrook

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Nutbourne Station. Substantial centres of employment and services that can be reached by public transport and cycling, offering strong potential to materially damp the demand for car use.

There are serious risks that development in the A259 corridor west of Chichester could place further demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular to bus services.

Nevertheless, given the potential to effect bus priority on the approaches to Fishbourne Roundabout, it is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as

set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A12 should accordingly be modified to read:

"...

7. Development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys along the A259, crossing the A27 at Fishbourne and where necessary on the approaches to Emsworth;

8. Facilitate improved sustainable travel modes, and new improved cycle and pedestrian routes, including linkages with Chichester city and settlement along the East/West Corridor;

9.11. Policy A13 Southbourne Broad Location for Development

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach agrees unequivocally that Southbourne is a location that could accommodate growth on a strategic scale. It has a substantial range of service available within the settlement, including secondary education. It is well connected by bus and rail service to key destinations, including Chichester, lying to the east and west.

This is one of the few locations identified for growth that represents substantial additional development in a new location to the strategy in the existing Local Plan adopted in 2015. Thus, the transport impacts of development on the substantial scale envisaged at Southbourne are not covered or accommodated by the Chichester Area Transport Strategy that lies behind the existing plan. This demands, from first principles, that substantial further transport mitigation measures are required.

We recognise and endorse fully that the intent of the draft plan for Southbourne as a Broad Location for Development on a strategic scale, includes "Maximising the potential for sustainable travel links through improved public transport, including consideration of opportunities to reduce community severance caused by the railway line as well as the inclusion of cycling and pedestrian routes." (our emphasis).

The existing railway station at Southbourne is served regularly, however, it is not within the power of this plan to improve rail services. It is, however, well within the scope of action of the Local Planning and Highways Authority to work with bus operators to achieve a step change in the journey time, reliability, frequency and connectivity of bus services, and in particular the major corridor operated as service 700 by Stagecoach along the A259 between Havant and Chichester through Southbourne.

Notwithstanding the clear potential for sustainable connectivity in the western A259 corridor, there are very serious risks that development in the A259 corridor west of Chichester will place further significant car-borne demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular bus services, having the opposite effect to that intended: longer, less reliable and less frequent bus services, leading to a spiral of slowly declining use.

These risks, while very serious, look credibly likely to be entirely mitigated subject to carefully conceived and robust specified actions on the local highway network. It is perplexing to us that this potential still has not been identified, as part of a comprehensive "first principles" review of the transport evidence base. In particular given the former trunk status of the A259, there is evident potential to effect bus priority on the A259, including on the approaches to Fishbourne Roundabout.

With appropriate measures, including but not limited to this, to substantially boost the relevance and attractiveness of sustainable travel choices, strategic development at Southbourne could well be made highly sustainable.

In the absence of a refreshed transport strategy and transport evidence base, the draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact, the only reference that is made in Policy is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A12 should accordingly be modified to read:

"...Development should be comprehensively masterplanned to achieve a high-quality design and layout that integrates well with the surrounding built and natural environments to enable a high degree of connectivity with them, particularly for pedestrians and cyclists, and provides good the highest possible quality of access to facilities and sustainable forms of improved public transport services.

...

4. Provide a suitable means of access to the site(s), and securing secure necessary off-site transport infrastructure and service improvements (including highways in particular to the A259 corridor between Emsworth and Chichester) in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development) to promote sustainable transport options prioritising delivery of high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes;

..."

9.12. Policy A14 Land West of Tangmere

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach strongly supports the principle of intensifying the level of development at the Strategic Development Location already identified and allocated West of Tangmere in the existing Local Plan. This serves to consolidate development at a location where effective and attractive public transport choices could be provided. It also conforms closely with the principle expressed in NPPF that the best possible use should be made of land on sites that are judged to be sustainable, or potentially sustainable locations for development.

It must be stressed that the current policy suite for the SDL has to date not brought forward development in this location. We recognise that a Master Plan has been adopted by the Council, and that a planning application (20/02893/OUT) for the full larger quantum of 1300 dwellings proposed in the draft plan has received a resolution to grant by the Council.

However, we are not aware that a sustainable transport strategy has been finalised.

Land West of Tangmere is not served by any existing regular bus services. Rather, an entirely new bus service corridor is anticipated to operate in the near term from Chichester through Tangmere and beyond towards Barnham. This would serve proposed allocations A7, A8 and West of Tangmere (A14) included in the draft Plan.

This is reflected in the language of the explanatory memorandum to Policy A14 at paragraph 10.65:

"Opportunities, in partnership with relevant authorities, to provide improved sustainable public transport routes linking the village with Chichester city, to improve cycle routes to the city, and better transport links to Barnham rail station and the 'Five Villages' area in Arun District; and.."

Initiating this service will be costly and will in large measure be funded not by developer contributions, but by DfT monies awarded through the West Sussex Bus Service Improvement Plan. It is crucial this service is both sustainable in the longer term without revenue support, and that the success of the service can be built on by scalable frequency improvements as strategic development comes forward in both Chichester District, and proposed allocations A7 A8 and A14, and in Arun District, in particular at Barnham, Eastergate and Westergate (BEW).

This demands measures to effect safe, direct and swift operation of the service especially within the city centre, where it approaches and crosses the A27 at Oving crossroads and on the eastern fringes of the District east and west of Tangmere. Without these measures, bus journey time and reliability will be severely compromised and the and impact of this service to damped car trip demands will be very substantially compromised. No such measures are proposed in the draft plan or its evidence base.

Changes to Oving Crossroads have recently taken place which, amongst other intentions, ostensibly provide bus advantage between Chichester and Shopwhyke. The junction in its current form does not offer material gain in bus journey time, as movements involve a less-direct route towards the city over an increased operating distance, much of which involves passage through heavily congested sections of the A27 and Westhampnett Road. A refreshed transport strategy supporting plan-led growth must revisit this area to secure an effective solution which offers bus customers the fastest and most reliable trip-time to and from the city.

In addition, the extension of public transport connectivity towards BEW and Barnham, including key links to secondary education and a logical railhead for journeys beyond towards Brighton and London as provided at Barnham Station, needs to facilitate bus priority between Tangmere and Nyton – whether using the A27, or preferably avoiding it altogether. There are significant safety concerns associated with the at-grade uncontrolled right-hand A27 exit onto the B2233 Nyton Road at Crockerhill Turn. This movement is also prone to extreme delay owing to the conflict with approaching westbound traffic on the A27, travelling at speed, which has priority. Our concerns with this junction in its current form

can be expected to worsen with the increased traffic volumes predicted from new residential developments to the west of the city.

A solution providing a suitable short length of highway available only to sustainable modes, between Tangmere and Easthampnett, could provide a very effective solution to this. This would be deliverable within the scope of the separate proposed allocation at A19 Chichester Business Park, Tangmere. We comment on this separately.

Howsoever effected, a reliable direct and delay-free bus corridor between Barnham, BEW, Tangmere and Chichester could expect to secure very substantial elevation of the relative attractiveness of public transport over car use on the entire corridor and serve to effectively damp growth-related demands on this section of the A27. West of Tangmere, in the longer term, there is evident scope for the route corridor to operate as two branches – one via Shopwhyke and one via Westhampnett, effectively serving all the strategic developments proposed in the plan and transforming wider public transport connectivity to key employment destinations and services within and east of Chichester.

However, in common with all the other proposed allocations, the plan proposes no specific measures to provide, much less improve public transport or other sustainable modes to the site. This leaves the draft plan out of conformity with NPPF, especially paragraphs 104-106. The plan is inadequately evidenced and to the degree that public transport measures are identified and emergent, their successful implementation in the near and longer term will be jeopardised without clear measures to provide a safe as well as efficient bus route towards BEW and the Five Village area within Arun. The Duty to Cooperate is not effectively met and effective cross boundary collaboration on these strategic issues through the review of LSS is not demonstrated, despite the current version which identifies the issues.

To be made sound the LSS Review and a subsequent urgent review of the transport evidence base and strategy needs to take place. The strategic issues are especially critical east of Chichester, in our view.

Notwithstanding this foundational deficiency, to be made sound, Policy A14 should be modified to read:

“ ...

8. Subject to detailed transport assessment, provide primary road access to the site from the slip-road roundabout at the A27/A285 junction to the west of Tangmere providing a spine road link with secondary access from Tangmere Road. Development will be required to provide or fund mitigation for potential off-site traffic impacts through a package of measures in conformity with Policy T1 (Transport Infrastructure) and T2 (Transport and Development) and DfT Circular 01/2022 that maximise the relevance and use of sustainable travel modes, in particular bus services;

9. Make provision for improved sustainable travel modes between Tangmere and Chichester city, in partnership with relevant authorities, including improved direct, seamless safe and reliable and additional bus and cycle routes linking Tangmere with Chichester city, Shopwhyke and Westhampnett. In conjunction with measures in support of Allocation A19, Opportunities should also be explored contributions shall also be sought for providing improving high quality cycling and bus service transport links with the 'Five Villages' area and Barnham rail station in Arun District; and...”

10. Concluding comments

Stagecoach recognises its role as a key stakeholder in the plan, as well as a local employer and corporate citizen. We recognise the primacy of the plan-led system as the mechanism intended to resolve complex challenges, including the proper alignment of transport and spatial planning, which as the National Decarbonisation Strategy for Transport among other policies makes clear, has never been more vital.

In making our representations, we emphasise that we are entirely supportive of the Local Planning Authority and the relevant Highways and Transport Authorities, in their efforts to properly manage the amount and pattern of development to secure vital policy objectives. We recognise that balancing delivery of assessed development needs with a wide variety of other constraints is a very difficult task.

The transport issues faced by the plan are recognised in the draft plan as being serious and long-standing. We believe that there are ways to arrive at a suitable transport mitigation strategy that has regard to wider strategic issues and resolves existing problems in a much more effective way than those pursued to date.

We support the spatial strategy of the plan as it evidently provides the basis to secure the necessary step change in the quality and use of sustainable transport modes, as it explicitly seeks to do. However thus far, there has been insufficient work done to define the measures that will credibly secure these outcomes.

Stagecoach therefore urges the authorities to draw us into the necessary effective ongoing collaborations that is expected by NPPF paragraph 16 and 106; and DfT Circular 01/022, to do this work, prior to, rather than after the submission of the draft plan. We look forward to being approached to initiate this dialogue at the earliest opportunity.

Please see above. Your own description details the isolated nature of the communities here in the North and of the limited public transport and narrow lanes. How on earth could you consider planning new developments of houses when the local infrastructure in place at the moment is not sufficient to sustain them ??

Change suggested by respondent:

If further development is planned then the infrastructure needs to be improved first surely. The roads, water neutrality, schooling, public transport and doctors surgeries are all strained in this area at present. Further development will only exasperate this.

Document Element: Characteristics of the Plan Area – A Spatial Portrait, 2.2**Respondent:** Plaistow and Ifold Parish Council (Mrs Catherine Nutting, Clerk & RFO) [7910]**Summary:**

The Plan does not currently recognise that the scale of settlements in the North of the Plan Area is materially different from the rest of the District.

Settlements are 'small and dispersed'. It is the small scale and dispersed pattern of the settlements within the North of the Plan Area that give this part of the District its landscape character.

The nuance of this point should not be underestimated, and the drafting should be tighter to ensure sensitive, landscape led planning decisions within the North of the Plan Area.

Document Element: Characteristics of the Plan Area – A Spatial Portrait, 2.2**Respondent:** Stagecoach South (Rob Vince) [8141]**Summary:**

The spatial portrait is generally succinct and accurate. However, it makes no mention of road-based public transport, the role of the City as a public transport hub, or the range of bus services that provide local connectivity (Section 2.4 and 2.5). The complete concentration of post-16 education in the City itself as just one example of the peculiarities of transport demands in the area, is not highlighted, though this has a profound influence on peak time travel demands affecting the most congested parts of the highway network. Among other things, the role of bus services in supporting the educational system of the plan area is very great indeed.

The potential role of bus in addressing the already-severe transport problems of the plan area and beyond seems entirely overlooked. The spatial portrait is thus clearly inadequate and incomplete.

Full text:

Chichester District Local Plan 2039 – Pre-Submission (Regulation 19) Consultation

1. Introductory Comments

Stagecoach South is the main commercial public transport operator across Chichester District. The Company has headquarters in the city, which is also the principal public transport hub for the District and it's rather wider travel-to-work area encompassing much of the Arun District. Our services extend throughout and beyond the District boundaries, as far as Littlehampton, Midhurst, Havant and Portsmouth. The vast majority of services operate on a commercial basis – that is to say, sustained by passenger use and fare revenue, including concessionary reimbursement.

While the role of the railway is significant in much of the District, especially the east-west Coastway line, yet bus services account for more boardings locally than the railway, with Chichester depot services carrying over 3.5m passengers each year.

Unlike bus services in other parts of the country, the local network has recovered strongly after the pandemic with fare-paying passenger numbers over 95% of 2019 levels, albeit with concession patronage somewhat lower. This has helped secure not only a stable but growing bus network even during this period of rapidly rising operational costs, avoiding the need for the service contractions seen in other regions. Indeed, during the second quarter of 2023 Stagecoach will invest £5.5m in brand-new vehicles for high-profile coastal Service 700 – one of the largest vehicle investments for Stagecoach Group this year.

Our services are therefore critical to existing and future local connectivity. As the Plan acknowledges, mobility demands do not respect planning authority boundaries. The role of our services is especially high to settlements in the broad A27 corridor, within the District and beyond. This includes major settlements in Arun District such as Pagham and suburban Bognor Regis, where bus is the only mass public transport option. As the Council is well aware, there is an even higher level and rate of committed development envisaged in these locations in the Arun District Local Plan than in Chichester.

It is already evident to the planning authorities, West Sussex County Council and National Highways, as proprietor of the A27 Trunk Road, that accommodating growing mobility demands across Chichester District and especially around Chichester itself, is becoming increasingly challenging to the point of being seriously problematic.

Stagecoach has a particular interest in this Plan arising from:

- The already clear and highly deleterious impact of congestion affecting our operations and their reliability and attractiveness to the public. The effects of these on the approaches to Chichester, and around the A27 bypass are especially severe. If public transport is to retain its existing role – even before the needs of any meaningful growth both in Chichester and neighbouring authorities is considered, are considered – the Council and the Highways Authority need to arrive at clearly-defined measures to protect buses from chronic delay and the damaging impacts arising from the lack of bus network resilience and customer journey times.
- In connection with the above, the need to properly consider the predictable impacts of committed development in Arun District on the transport network and in particular the operation of bus services. The duty to cooperate on cross-border strategic matters is not limited merely to accommodating housing requirements.
- The fact that our entire business premises and operational base at Chichester is the subject of allocation for redevelopment within the Plan period. Specifically, this includes our Head Office, the Bus Station as the operational hub of the network and the key interchange for passenger journeys – including those that involve the railway – and the bus depot required to support the entire operation. Notwithstanding many years of discussions, there is as yet no agreed deliverable strategy to replace these facilities either in the Draft Plan or elsewhere.

Stagecoach broadly supports the vision and priorities of the draft plan. In most respects, Stagecoach supports strongly the spatial strategy and the identified site allocations that flow from it, and the evidence.

However, it has serious concerns about the soundness of the plan as proposed for submission, for important regards outlined in this response. These are made in the light of requirements set by the National Planning Policy Framework (NPPF), in particular at paragraphs 15 and 16; 35, 105-109 inclusive and having due regard to the need for allocations to satisfy 110-112 inclusive in due course as development permission is sought; and paragraph 174.

Paragraph 16c) of NPPF makes plain that strategic plans and policies should “be shaped by early, proportionate and effective engagement between plan-makers and communities, local organisations, businesses, infrastructure providers and operators and statutory consultees” (our emphasis). This makes plain that collaborative and ongoing involvement of public transport operators is both necessary, and separate and in addition to the engagement with statutory consultees. This has not taken place.

Para 1.25 of the draft plan states that “the council has engaged constructively, actively and on an ongoing basis with other local authorities and organisations to address key strategic matters.” Despite the requirements in NPPF and contrary to the statement made, Stagecoach has not been approached or involved in a meaningful, collaborative or ongoing way in the preparation of the Plan.

Our main concerns centre around the fact that the plan strategy is neither backed by sufficient transport evidence. Even more importantly, the plan relies on a wholly car-based transport mitigation strategy despite policy stating that this is not the case, and the track record of the existing Local Plan, based on a very similar strategy, that has failed to bring forward meaningful mitigations to date to prevent traffic conditions substantially worsening. There is no support in policy for the achievement of the Strategic Objectives in the Plan. Nor is there definition of any measures in the 2023 Transport Study to make provision for sustainable transport infrastructure or services – much less materially improve them.

Finally, to the extent that updated transport evidence has been provided in the form of the 2023 Chichester Transport Study, arising from updated traffic modelling, it does not support the contention that highways capacity constraints on and around the A27 justify not meeting the objectively-assessed development needs of the area, as the draft plan contends.

2. Vision and Strategic Objectives

2.1. Issues and Opportunities

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant, proportionate and up to date evidence

Stagecoach recognises the important role of the West Sussex and Greater Brighton Strategic Planning Board which agreed a Local Strategic Statement (LSS2) in early 2016 to identify spatial planning issues across the wider area. This established strategic priorities and policies to guide longer term strategic growth in a coordinated and well considered matter. This institutional framework and the purpose of the LSS is a highly significant one and is at the heart of efforts to properly fulfil the statutory Duty to Co-operate, including with regard to strategic infrastructure issues, as NPPF requires.

Given the long period of time elapsed since the 2018 Reg 18 consultation and the already very clear constraints on strategic infrastructure capacity, it is of great concern to Stagecoach that the LSS2 has not been updated to reflect emerging issues in the intervening period. A review and update of the LSS2 has only just commenced. This includes a study of projected housing and employment needs, transport impact, infrastructure and spatial options to deliver the required development in the period after 2030. This Chichester District draft plan covers a period extending to 2039 – therefore well beyond 2030 and the nominal currency of LSS2.

However, infrastructure needs are pressing today. Stagecoach is presented with severe highway operational problems on a near-daily basis. During the winter of 2022-23 we have, for example, seen key road links impacted for many weeks by acute disruption arising from flood events. Unpredictable, but seemingly more-frequent, exogenous events expose a lack of resilience in the highway network around Chichester and its travel-to-work area. However, serious, chronic, unpredictable delay has been normalised over recent years, with peak-time congestion having quickly returned after the pandemic. The existing development strategy has failed to bring forward measures having any impact on this to date, and key commitments – notably at west of Chichester Phase 2 and at Tangmere – have yet to commence to further aggravate the issue.

We have no confidence in the transport mitigations proposed in the existing Local Plan and LSS2 being sufficiently effective, even if deliverable at all. Indeed, the existing adopted Local Plan does little more than make vague speculations about the sustainable transport measures that might be achievable. The draft local plan review is no different. It has no ambitions at all for sustainable modes and thus, makes no meaningful provision to meet them.

This is especially relevant in light of the fact that the approach to resolving issues on the A27 around Chichester that were anticipated in 2015-16 have fallen away. LSS2 is thus currently inadequate to act as a part of an up-to-date, proportionate, and relevant evidence base for the Plan.

An update of a traffic model lies at the heart of a 2023 Chichester Transport Study. This talks no account of the existing role of non-car modes, nor can it do so. It is unable to properly evaluate the nature of problems or solutions that involve public transport, or for that matter, other sustainable modes.

Therefore, we consider that the combination of committed and additional development needs that must be accommodated over the whole plan period between 2022 and 2039, in both the Chichester and Arun Districts, require a “first principles” review. This must be based on a refreshed transport evidence baseline of no earlier than 2022 – given that the effects of COVID distort 2020-22 – and the transport infrastructure and service requirements to sustainably support those needs.

Key issues – including substantial changes with regards to transport issues and challenges, as well as potential solutions – thus do not form part of the evidence base that steers this plan. Given long term changes in travel patterns, and mode share that took place during COVID, as well as a local and national policy context that seeks to radically reduce and then eliminate transport-related carbon emissions, this is especially problematic.

The specific problems of congestion and network resilience that are evident on the A27 and the approaches to Chichester remain a set of especially difficult problems that disproportionately affect the efficiency, reliability and attractiveness of the bus network, that evidently demand larger-scale strategic responses involving multiple stakeholders, including bus operators.

Where the effects of development on the national Strategic Roads Network (SRN) are concerned, the approach of National Highways to addressing and responding to the mobility needs of development has now substantially changed following the promulgation of the DfT Written Ministerial Statement LTN01/22. This makes it clear that adding highways capacity is no longer the first or only strategy that should be pursued, but one subordinate this to maximising the potential of non-car modes and sustainable travel.

“Effective and ongoing collaboration” on transport matters has not led to solutions being agreed and published for public scrutiny as part of the plan evidence base. Whatever the approach to modelling and “highways improvements” that may be agreed or pending agreement with the County Highways Authority and National Highways, Stagecoach is neither participant or sighted. This is despite the clear requirements set out in NPPF Para 106 b) that “Planning policies should ... be prepared with the active involvement of local highways authorities, other transport infrastructure providers and

operators and neighbouring councils, so that strategies and investments for supporting sustainable transport and development patterns are aligned.” (our emphasis).

We therefore consider that the Council has failed to comply with the requirements of NPPF paragraph 25 and 26 that “relevant bodies” are involved in plan-making, especially with regard to addressing the needs for infrastructure. Public transport services and the infrastructure that supports its operation and use clearly fall within matters relevant to plan-making. This is explicit in NPPF Chapter 9 and indeed within the plan itself – for example reference to public transport and sustainable modes in the Vision for the plan.

It should be stressed that the Regulation 18 “Preferred Approach” consultation took place in December 2018 – over 4 years ago and prior to COVID, based on LSS2. The inordinate length of time that has elapsed between the Regulation 18 and Regulation 19 stages greatly challenges the LSS2 and other parts of the evidence base, especially as the pause straddles the COVID epidemic. That would include the transport modelling baseline, and key assumptions in any traffic modelling that took place prior to mid-2022, which is a point at which a reasonable “new normal” post-COVID might be considered to have become established. In that period, Arun District has also adopted its own Local Plan development strategy that accommodates an unprecedented quantum of development immediately east and south-east of the District Boundary – creating additional substantial transport impacts directly affecting the A27 and multiple major approaches to Chichester crossing it.

The established mechanism to fulfil the Duty to Co-operate has thus not operated effectively.

The Plan is not founded on a relevant, proportionate and up-to date evidence base and is thus inadequately justified.

2.2. Spatial Portrait

The spatial portrait is generally succinct and accurate. However, it makes no mention of road-based public transport, the role of the City as a public transport hub, or the range of bus services that provide local connectivity (Section 2.4 and 2.5). The complete concentration of post-16 education in the City itself as just one example of the peculiarities of transport demands in the area, is not highlighted, though this has a profound influence on peak time travel demands affecting the most congested parts of the highway network. Among other things, the role of bus services in supporting the educational system of the plan area is very great indeed.

The potential role of bus in addressing the already-severe transport problems of the plan area and beyond seems entirely overlooked. The spatial portrait is thus clearly inadequate and incomplete.

2.3. Strategic Objectives

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Chapter 9 of NPPF and paragraphs 104 and 105 in particular require that plans should:

“Transport issues should be considered from the earliest stages of plan-making and development proposals, so that:

- a) the potential impacts of development on transport networks can be addressed;
 - b) opportunities from existing or proposed transport infrastructure, and changing transport technology and usage, are realised – for example in relation to the scale, location or density of development that can be accommodated;
 - c) opportunities to promote walking, cycling and public transport use are identified and pursued;
 - d) the environmental impacts of traffic and transport infrastructure can be identified, assessed and taken into account – including appropriate opportunities for avoiding and mitigating any adverse effects, and for net environmental gains;...
- ...The planning system should actively manage patterns of growth in support of these objectives. Significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. This can help to reduce congestion and emissions, and improve air quality and public health...”

The Strategic Objectives do not conform with NPPF in these foundational requirements adequately, to transparently steer the plan strategy. They should therefore be amended to read:

“Plan to provide local infrastructure to support new development and seek opportunities to address existing identifiable infrastructure problems deficits, such as in particular those relating to the A27 and its junctions and wastewater treatment.”

Paragraph 2.36 states, in the context of the Climate Emergency and the National Trajectory to “Net Zero” that “The council will enable the delivery of infrastructure, jobs, accessible local services and housing for future generations while protecting, conserving and enhancing the historic and natural environment.”
Naturally, we support this intent.

However, there is no acknowledgement of the role current patterns of transport use contribute to carbon emissions, nor that substantial mode shift is necessary to address sustainably an acute lack of capacity on the local network and the

SRN, especially around Chichester. This is especially concerning as the basic conceptual link is not made between the fact that the greatest such problems lie on the A27 corridor and around Chichester, while these are also at the same time present many of the most sustainable locations for development, and where the opportunities to secure much greater use of sustainable modes also exists.

Strategic Objective 7 “Strategic Infrastructure” includes the following statement:

“To work with infrastructure providers to ensure the timely delivery of key infrastructure to support delivery of new development. New development will be supported by sufficient provision of infrastructure to enable the sustainable delivery of the development strategy for the plan area. Key infrastructure to support the Local Plan will include improvements to transport, ...

A sustainable and integrated transport system will be achieved through improvements to walking and cycling networks and links to accessible public transport. Highway improvements will be delivered to mitigate congestion, including measures to mitigate potential impacts on the A27 through a monitor and manage process.”

The latest transport evidence in the Chichester Transport Study makes no pretence to define much less to deliver a “sustainable or integrated” transport system. It is wholly devoted to sustaining current levels of car use across the District, to and through Chichester area.

It is no more than the lightest of touches to the approach taken to supporting the adopted Local Plan, an approach that is already almost 10 years beyond the date of its gestation but has yet to deliver any significant capacity improvement schemes, much less any measures that sustain even current levels of public transport journey times and reliability in the face of increasing congestion – much less any betterment.

Of the six key junctions on the A27 around Chichester, recognised to require significant mitigation given they are saturated for extended periods, five accommodate regular bus services - indeed frequent ones at least every 20 minutes in several cases. The sixth at Oving Road, relates directly to a key corridor where bus services are needed to support strategic growth currently being delivered at Shopwhyke, as well as substantial further growth West of Tangmere (proposed allocation A14) and “East of Chichester” (A8), south of Shopwhyke Road.

As stated at p12 of the Study Summary “The modelling shows that all the junctions on the A27 Chichester bypass are well over capacity, even before adding in the Local Plan development and with the exception of Portfield Roundabout are actually shown to be over capacity in the base model year (2014) in one or both peaks”. This much has indeed been evident for years from delay and periodic even more severe disruption arising to Stagecoach services from the lack of network resilience.

The reassignment of through and local traffic through Chichester to avoid the A27 bypass is an especially serious issue for bus services that penetrate the city. This is leading to consequential saturation of a range of junctions used by buses. Rising delay and unpredictable running times are at the root of our decision to sever the long-established Portsmouth to Littlehampton service in 2023, which will in future no longer run across Chichester, but terminate to provide additional dwell time to mitigate the impacts of congestion.

While this congestion affects all road users including businesses and freight traffic, the effect on scheduled bus services is greatly higher, as such services cannot reassign route to ‘beat the queue’. Traffic congestion often encourages greater car use for this reason, in tandem that people are happier to sit for extended periods in their own vehicle on a seamless door-to-door journey than wait at the roadside for a delayed bus making slower progress in lengthy queues.

As the Study admits at para. 1.3.2 “Although, there have been works at the Portfield Roundabout in this timeline, no other mitigation schemes have been completed along the A27 corridor, as such the mitigation schemes defined in this report will also be required to consider the development from this plan period.”

In other words, in the 8 years since the current Local Plan was adopted in 2015, there has been minimal progress is delivering the traffic mitigations. There is no clarity at all when any such mitigations will be brought forward. It is hardly surprising then, that traffic conditions have deteriorated. The “predict and provide” transport strategy supporting the current plan has failed.

Despite this, the Draft Local Plan Review proposed to “double down” on exactly this strategy. It represents, like the rest of the evidence base, a “rolling forward” of the current car-based strategy by 9 years, with the lightest of touches to attempt to accommodate car trip demands from a relatively modest additional development quantum.

Nevertheless, the Study requires a global 5% reduction in trip demands arising from unspecified “credible” (paragraph 4.1.2) sustainable transport and travel planning measures. It is unclear why use of non-car modes will see disproportionate growth when no measures are in place to make them more attractive. This 5% increase in use translates to a doubling in the modal share of bus services. There is no evidence nationally, anywhere, that simple ignorance of alternatives to the car is the main barrier to uptake.

The outputs of the 2023 Chichester Area Traffic (SATURN) model are set out at Table 5.1 (am peak) and 5.2 (pm peak) without mitigation. These betray just how seriously compromised the whole network around Chichester is, and will be in

future, even with implementation of a mitigation partake to increase traffic capacity that is understood to cost between £92m and £164m – and which the Study and the draft plan acknowledge cannot be delivered through developer funding sources alone. Unspecified external funding presumably from HM Treasury through DfT is required.

Even if this provided and the schemes are delivered, Tables 8.1 and 8.2 indicate these will provide minimal relief. The final columns suggest key junctions, including Portfield, Fishbourne Road and Cathedral Way East will remain at well over 100% ratio of flow to capacity (90% is considered the point at which saturation is approached, with the onset of increasing delay above that figure). RFCs in tables 8.1 and 8.2 are some of the highest we have ever seen in a local transport evidence base for a post-mitigation scenario. While the serious potential risk of reassignment across Chichester City is greatly reduced, which is important and welcome given its impact on bus services, Tables 8.1 and 8.2 show the extent of post-mitigation saturation is also egregious, covering a very large number of key links and junctions.

On every measure and criterion, then, including cost deliverability and effectiveness, the revised Transport Strategy falls well short of evidence to suggest the transport impacts of the plan can be properly addressed by this means.

Despite the repeated statements about sustainable modes throughout the draft plan and Chichester Transport Study, only 2 paragraphs at Section 6.2 within the Study are devoted to public transport:

“6.2.7 The funds generated from the parking management schemes, local/nation funding schemes and developer contributions could also be utilised to fund potential public transport enhancements within the city centre including an expansion of the bus priority lane system within Chichester City Centre. This could reduce reliance on the car in the longer term towards sustainable public transport. A park and ride scheme could be incorporated within a bus priority lane network in the future depending on the uptake and successfulness of early bus priority trials.

6.2.8 Chichester City centre has a constrained existing public highway network. Therefore, any proposed dedicated public transport or light transit corridors that could be implemented would be at the expense of existing highway. This could be managed through a time-based system where certain routes are restricted to public transport only during specific times. E.g., peak hours.”

There is some very high-level consideration of Park and Ride following this section. None can be considered a serious practical evaluation of consolidating car-borne trips onto bus services, including existing ones, for example local mobility hubs, more frequent bus corridors, delivery of specific bus priorities.

None of the discussion of alternatives to “predicting and providing” for unconstrained traffic growth is rooted in a deliverable evidence base, or proper evaluation of options and specific projects.

To take just one aspect of the few specifics that can be picked out, a workplace parking levy is hypothesised. This would apply only to “offices”, in Chichester city centre (para 6.2.3), without consideration given as to how this could be practically achieved or even that a meaningful amount of office based employment would qualify. Much less is any consideration given to how far focusing a strategy only on office-based workers would actually deliver a particularly significant effect, apart from to create a strong incentive to relocate offices out of the city centre to places out of reach by public transport.

Looking at the Chichester Transport Study 2023 and the draft plan together, there is insufficient evidence that the traffic capacity increase proposed in the 2023 Transport Study is any more affordable or technically deliverable, or likely to be sufficiently effective, than those in the past strategy. The evidence more strongly points to the fact that no highway improvements are identifiable or economically deliverable to meet even short term increases in demand for car-borne mobility on most of the network around Chichester.

There are no published strategies or schemes clearly supporting the contention that the objective of improving sustainable modes is technically achievable or deliverable either. The plan makes generalised assertions that such strategies will be devised and implemented only after serious problems emerge from a shortfall in the car-borne transport strategy.

The reference to “monitor and manage” is undefined and unsubstantiated. There are no outcomes stated, no mechanisms specified and no timescales for action.

Our experience today is that network conditions have reached unacceptable and prejudicial levels of severe unpredictable delay. The saturation of the network is already evident well outside the traditional peaks on key sections of highway and at key junctions. External shocks such as the effects of severe weather are becoming more common, leading to delays so extreme as to justify the description of “gridlock”. The plan does not identify a strategy to effectively address this, in particular by consolidating passenger car trips onto more efficient public transport vehicles. This is unacceptable to Stagecoach.

2.4. Local Plan Vision

Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the broad approach in Plan Vision and in particular that by 2039, the Plan will support and enable greater use of sustainable modes. However, there is no link made between reducing the use of private cars, and the need for a step change in the use of sustainable modes. Without a published transport evidence base it is impossible to establish a suitable sustainable transport strategy to support both carbon reduction and alleviation of the problems arising from acute congestion. Even on a very crude basis, to achieve a meaning mode shift on key approaches to the A27 Chichester Bypass will require more than 20% of existing peak car-borne journeys to transfer to other modes. A 10 percentage point transfer to bus (about half this shift) would imply more than doubling peak hour bus passenger boardings.

The Vision is nothing more than an aspiration, that needs to more definitively aim at key outcomes, for the plan to be effective. The Vision should thus be altered to read:

“Get about easily, safely and conveniently with less reliance on private cars –making the greatest possible use of the rail and enhanced bus network, and with more opportunities for active travel including walking and cycling; to materially reduce dependence on private car use.”

Underpinning the Plan’s spatial strategy, the Vision section goes into more specific detail about key localities in the Plan area.

Regarding Chichester, Paragraph 2.39 states: “The emphasis will be upon consolidating and enhancing the role of Chichester city as the plan area’s main centre, whilst also developing the role of key settlements to its east and west. The focus will be upon creating communities with good access to a range of employment opportunities and affordable housing for young people and families to balance the ageing population.”

This is clearly the appropriate focus for meeting the District’s development needs in a sustainable manner. The city and key settlements to the east and west, are those places already able to make use of relevant public transport services, both rail and bus. Especially within and near the City, walking and cycling can credibly present highly relevant choices. This emphasis clear can be expected to address the requirements of sustainable development set out in NPPF and their local application set out in the Plans Strategic Objectives.

However, this needs a robust transport strategy, to avoid a further concentration of development and its traffic impacts occurring on or near some of the most chronically congested parts of the highway network. To date, the absence of intervention has strangled the bus network through further marked deterioration in traffic conditions. This by consequence increases the risk of bus delay or cancellation, lengthens journey time and reduces customer confidence in bus as an attractive alternative mode of travel.

In April 2023, Stagecoach is making significant timetables changes to improve operational resilience in and around Chichester. The biggest such change is the severance of the Portsmouth to Littlehampton section of service 700, at Chichester, with buses operating independently to the east and to the west and ending cross-city links. This is planned to reduce the probability of delay but at the cost of additional vehicle resource (circa £200,000 per annum) which could be better spent providing new or enhanced services. We anticipate a small loss of custom as a direct consequence of the change, but have little choice other than to take negative action so as to fulfil our statutory punctuality obligations.

If the Strategic Objectives of the Plan and its Vision are to be achieved, in the way required by NPPF paragraphs 104-105, a properly-evidenced transport mitigation strategy needs to create the conditions where bus journeys are more reliable than car journeys and thus mobility demand switches as far as can be realistically achieved away from car use, to bus use and other more sustainable modes.

Beyond Chichester, the Plan Vision focuses on key localities beyond to the east and west.

To the west of Chichester a focus on growth at Southbourne is justified at paragraph 2.43: “...the aim is to take advantage of the village’s good transport links and existing facilities to deliver significant new residential-led development within the broad location for development which will further enhance local facilities and offer opportunities to reinforce and supplement existing public transport, including bus routes.”

We agree this is a very significant opportunity. However, if the requirements of NPPF paragraphs 104-105 are to be met, this demands that effective bus priority is delivered on the A259 corridor, especially eastbound at Fishbourne and westbound approaching Emsworth. Without such measures, the growth committed and planned will serve only to further undermine bus journey time and decrease punctuality on the existing 700 service, entirely contrary to the aims of the Vision.

The emphasis on the A259 corridor served by Stagecoach 700 west of Chichester is reinforced at paragraph 2.45 stating that “Between Chichester and Southbourne, the Plan provides for more moderate levels of growth within the parishes of Fishbourne, Bosham and Chidham & Hambrook, ... with opportunities to support and expand existing facilities and for increased use of public transport options”. We strongly support the principle, but the Plan must follow through with specific public transport priority measures that facilitate rather than prejudice such an outcome.

East of Chichester the focus is at Tangmere, where the existing allocation for about 1000 dwellings is being uplifted by 300. Paragraph 2.44 justifies this among other things recognising the scope for “...improved and additional bus services

and cycleways will provide better connections to Chichester city and east to Barnham and the 'Five Villages' area in Arun District." We unequivocally endorse this conclusion. Realising a "game-changing" level of bus service quality, reliability and frequency east of the city, also serving committed and planned development north and south of Oving Road at Shopwhyke, is equally essential, given that all SRN links and junctions are approaching equal saturation.

The National Bus Strategy has given new focus on partnership with West Sussex County Council to discuss and deliver a significant new bus service between Chichester, Shopwhyke, Tangmere, Eastergate and Barnham, supporting committed development and acting as an initial phase of what ought to be a more ambitious longer-term strategy to support growth beyond 2025 in both Chichester and Arun Districts. For these improved bus services to be both deliverable and effective, robust bus prioritisation is unavoidable. No such measures are proposed in the Plan or its evidence base and we therefore suggest inclusion of plans to facilitate safe and efficient bus operation between Tangmere and Nyton/Eastergate, ideally avoiding the need to join A27 through-traffic entirely.

We welcome the clear recognition that these localities identified for growth, benefit from existing relevant public transport services. The Vision also sets an expectation that bus services in particular should be "enhanced" and "reinforced".

We entirely agree that these opportunities exist, across the broad strategy and strategic allocation proposed by the draft Local Plan. Securing them will be crucial to achieving national and local policy objectives, including the Strategic Objectives. However, to our continuing very great dismay, the Plan goes no further to defining how this will be achieved. As such the Vision is not demonstrable achievable or deliverable.

Accordingly the Plan cannot be considered effective, in the sense of NPPF.

Remedying this, demands specific measures to protect bus services from congestion in the following corridors:

- A259 East of Emsworth
- A259 Fishbourne
- A 259 Via Ravenna/Cathedral Way
- A286 Stockbridge Road north and south of A27
- B2145 Whyke Road/Hunston Road
- A259 Bognor Road, east and west of A27 and extending to the District Boundary
- B2144 Oving Road/Shopwhyke Road east and west of the A27
- A 285 Westhampnett Road/Portfield Way/Stane Street, potentially involving a mode filter at the west end of Stane Street

These must be defined to a sufficient level of detail to assess their effectiveness and deliverability, including costs.

This would then allow West Sussex County Council and Local Transport and Highways Authority, ourselves as the principal bus operator, and where appropriate other organisations that would be directly tasked with delivering the mitigation package, to agree service levels and standards necessary to deliver specified outcomes, including journey times, frequencies, capacity and hours of operation on the network, and also in respect of the strategic allocations and Strategic Locations for Growth.

The agreed mitigations strategy should be set out in an up-to-date Infrastructure Delivery Plan backed by clear funding commitments, including a funding strategy to justify necessary developer contributions.

Where necessary to support evidence of effectiveness and deliverability, clear statements of support, which might include Statements of Common Ground between the LPA, LTA, National Highways and Stagecoach, could be provided.

3. Spatial Strategy

Stagecoach Supports

Stagecoach well recognises the constraints outlined in the explanatory narrative at the start of Chapter 3.

In particular we strongly endorse that strategy in that it reflects that the best opportunities to meet housing and employment development requirements sustainably clearly exist in and close to Chichester and on the key east-west movement corridor where – subject to effective measures being delivered to make these modes more attractive, efficient and relevant – sustainable modes can credibly provide for a much higher proportion of movement demands, mitigating most effectively the potential traffic impacts of development.

We agree that the Manhood Peninsula suffers serious environmental constraints, but, added to these, public transport and other sustainable modes cannot provide such attractive alternatives, and significant further development risks merely reinforcing already high levels of car use, aggravated by the carbon impacts of the distances involved – something the plan does very little to evaluate, and makes no reference to.

We endorse the conclusion in paragraph 3.24 that significant development in the part of the District north of the National Park is inappropriate. The rationale is principally on landscape and visual character. This exposes a fundamentally biased approach to plan making that has consistently underplays transport accessibility and carbon issues. In fact, the lack of local services and the extended distances that need to be travelled to fully participate in society in this area, with no

realistic prospect of public transport offering relevant choices, ought to rule such a strategy out of play on a far less aesthetic and interpretational basis.

3.1. Policy S1 Spatial Development Strategy

Stagecoach Supports

The Spatial Strategy flows clearly and logically from the Spatial Portrait, and the opportunities and constraints identifiable across the Plan area. It represents a logical and justified continuation of the existing Local Plan strategy. In particular the spatial strategy maximises the potential for sustainable modes to contribute to meeting a much higher proportion of all the District's mobility and accessibility needs.

3.2. Policy S2 Settlement Hierarchy

Stagecoach Supports

The settlement hierarchy clearly reflects the service endowment and potential self-containment of the settlements in the District. In particular, the second tier of settlement hubs includes secondary schools, which are major peak trip generating uses. Service villages, in the main, also benefit from bus services running at least hourly, which can be expected to provide for a degree of mobility for the higher number of trip purposes that cannot be satisfied by walking or cycling within the immediate locality. Thus, a level of development to meet local needs in this tier is relatively sustainable.

There is a quite broad range of settlements in this category. We have concerns that, north of the National Park, the Service Villages have no realistic public transport choice. These include Plaistow/Ifold, Kirdford, Loxwood, and Wisborough Green. Such as exists is typically a 1/bus per day off-peak shoppers service offering up to 90 minutes in Horsham or Guildford and as such any development here even to meet local needs requires each adult to own a car. This contrasts strongly with Service Villages to the south of the National Park, which are greatly more sustainable.

4. Climate Change and the Natural Environment

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This section of the plan is extensive and wide ranging, as should be expected.

However, remarkably, there is no acknowledgement whatever of the role of transport in mitigating climate change or its effects, not of the importance of sustainable movement and access being facilitated across the plan area in addressing anthropogenic impacts on the natural world at a more local level.

This exposes very clearly a troubling level of indifference to transport matters in the production of the Plan, which, while nationally quite common, is neither appropriate nor acceptable. The mitigation of transport impacts is not merely a matter speaking to the social and economic aspects of sustainable development. It is crucial to address the causes and effects of climate change that arise from transport, and personal mobility.

This is now well understood and at the centre of national policy, including the National Decarbonisation Strategy for Transport (July 2021) which at Section 5 commits the government to aligning land use planning and transport strategy much more tightly and effectively to mitigate the carbon emissions associated with the current dependence on cars, and the mode mix; but also to reduce travel distances, both increasing the potential relevance and effectiveness of all sustainable modes, and reducing average journey lengths for residual motorised journeys of all kinds.

National statistics show that well over a third of all domestic carbon emissions arise from land-based transport and of these, the vast majority arise from trips of over 10km – outside the range of large scale use of cycling. In fact, the potential of the plan to materially support carbon emissions reduction from within the plan area lies more in the realm of transport than any other policy theme – including emissions mitigation from buildings, which is in any event an aspatial matter and covered by nationally-binding building regulations. By 2025 something like 40% of all the emissions within the plan-area will be transport related.

There is no evidence supplied to support the plan that addresses the transport carbon impacts of the spatial development strategy in a clear manner.

There is no evidence supplied that sets out the effects of potential worsening of congestion on air quality within the plan area, arising entirely from the excess of passenger car movement demands over available and credibly deliverable highway capacity. This is despite the evidence set out and acknowledged in the explanatory memorandum at paragraph 4.130:

“4.130. The council's Air Quality Action Plan and the West Sussex Transport Plan 2022-2036 both refer to the air quality issues faced by Chichester. There is currently one Air Quality Management Area (AQMA) in the plan area, located at St Pancras, Chichester. AQMAs are designated where air quality exceeds, or is likely to exceed, national air quality standards and objectives. Development within or impacting these areas, or that likely to cause the declaration of any further AQMAs, will be subject to an air quality assessment by the applicant.”

This is a retroactive approach – it is not “planning”, based on evidence.

We are well aware that air quality issues in and of themselves can render allocated sites to be undeliverable: a good example is in the Vale of White Horse, Oxfordshire, where strategic allocations on the A338 and A420 corridors have been held up for years by air quality issues at Marcham and Frilford, in large measure because agreed transport interventions were considered inadequate or undeliverable a very short time after the Plan was examined and adopted.

There is no evidence that shows how the development strategy can effectively mitigate these impacts as well as the further potential impacts that arise from the development strategy. This is exasperating, as there is clear evidence that could be drawn upon to show that that very substantial opportunities exist to:

- Speed buses up and make them more reliable by the delivery of bus priority on most of the key main corridors. Most of these even today operate relatively frequently
- Improve service frequencies and extend hours of operation.
- Secure significant background mode shift to bus as a result, damping pressure on key links and junctions, by consolidating demands on direct more reliable and more frequent bus services.

The spatial development strategy as submitted is in fact, likely to well conform to such additional evidence.

The allocations require substantial additional transport related work and evidence to demonstrate that the opportunities for sustainable transport have been identified and taken up as required by NPPF paragraphs 104-105.

With regards to specific policy, Policy NE22 should be modified to read:

“Development proposals will be permitted where it can be demonstrated that all the following criteria have been addressed:

1. Development is located and designed to minimise traffic generation and congestion through access to by maximising the relevance and attractiveness of sustainable transport modes, including maximising provision of specific demonstrably effective measures to make pedestrian and cycle and public transport routes and networks more direct, more safe, faster and more reliable;...”

5. Housing

5.1. Policy H1 Meeting Housing Needs

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

The presumption of the planning system is that local planning authorities should seek to meet their objectively assessed development requirements in full. These needs are assessed by a defined Standard Methodology set out in Planning Practice Guidance and elsewhere, that has explicit regard to ensuring that the economic and social effects associated with housing are properly provided for, to avoid exacerbating serious problems that arise from inadequate housing supply.

As a significant local service provider and employer, Stagecoach is concerned that existing issues with housing availability and affordable housing supply are not exacerbated. This has a direct bearing on staff recruitment and retention. It also has an indirect bearing on our cost base.

The existing problems with housing affordability have developed over many decades of undersupply. It should be emphasised that the significant boost to the supply of housing that has been sought by governments over the last 15 years, has only begun to take effect relatively recently in this District. Tackling the problem will require years of consistent attention.

Stagecoach notes that the Council is no longer proposing to meet its identified housing needs in full. Rather than 638/annum the Council is allocating a total that implies an annual delivery rate of 535/annum.

While a number of matters evidently present challenges to the Council in identifying a sustainable development strategy. Paragraph 5.2 indicates that “constraints, particularly the capacity of the A27 has led to the council planning for a housing requirement below the need derived from the standard method...” The blame for being unable to meet housing requirements is thus laid squarely at the door of transport infrastructure and systems.

This conclusion in no way follows from the evidence in the Chichester Transport Study. This, rather, makes the statement that when a higher annualised quantum of 700 dwellings per annum was tested, in the majority of cases the traffic capacity improvement package would perform little differently. To quote the Study:

“5.6.3 The network performance outputs analysed comprising V/C%, Delays (seconds) and Queues (PCU's) suggest that generally the proposed SRN mitigation identified for the Core Scenario, can accommodate in the most part, additional increase in development to 700dpa.”

Whether the rest of the local road network is similarly protects is moot.

Irrespective of these results, even if the contention made in the draft plan were true, unlike many other constraints, this is amenable to a suitable effective strategy to address the constraints identified being collaboratively conceived. This is what NPPF expects, as set out in paragraphs 104-106.

Where the A27 is concerned, as part of the SRN, National Highways is now working to a substantially revised approach than that in force at the time to current Local Plan was prepared, or LSS2, or reflected in the Chichester Transport Study. This is set out in DfT WMS 01/22. This document is the policy of the Secretary of State for Transport in relation to the SRN which should be read in conjunction with the National Planning Policy Framework (NPPF). It replaces the policies in the Department for Transport Circular 02/2013 of the same title.

It makes plain that to accommodate additional demands arising from development, National Highways (NHC) expects to meet the requirements of its statutory license in a substantially different manner. With respect to development NHC LTN 01/22 continues to address the tensions between national policy for the environment and carbon mitigation, the ongoing need to substantially boost the supply of housing as well as maintain national economic competitiveness and protect the safety of the public. However, in future, the approach will be to seek first to maximise the impact of demand management measures (reducing the need to travel), and then to accommodate residual additional demands first though maximising the use of sustainable modes, rather than accommodating assumptions about current levels of car dependency and use.

LTN 01/22 much more closely and explicitly aligns with the language of NPPF Chapter 9 paragraphs 104-106. Paragraph 12 states: "New development should be facilitating a reduction in the need to travel by private car and focused on locations that are or can be made sustainable.... Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas." (our emphasis).

It continues at paragraph 13: "where developments are located, how they are designed and how well delivery and public transport services are integrated has a huge impact on people's mode of travel for short journeys. The company will therefore expect strategic policy-making authorities and community groups responsible for preparing local and neighbourhood plans to only promote development at locations that are or can be made sustainable [footnote 8] and where opportunities to maximise walking, wheeling, cycling, public transport and shared travel have been identified." (again, our emphasis)

Stagecoach readily confirms that the draft Plan development strategy conforms well to the first limb of this expectation, in terms of the location of development.

Stagecoach considers that the plan and its evidence base conforms poorly to the second in that the specific opportunities to maximise walking, cycling wheeling and public transport are not clearly identified, and defined, and proven to be effective and deliverable.

The current mitigation strategy for the A27 Chichester area, supporting the adopted Local Plan and for which proportionate developer contributions have and continue to be sought, reflects now-superseded DfT Circular 02/2013. As a direct result, it failed completely to identify any significant effective bus priority measures, despite the fact that frequent services already exist on the key corridor concerned, and that one bus journey can remove, fully seated between 72 and 80 single occupancy car journeys from congested links and across key junctions on the A27. Rather, it sought to implement targeted measures to increase the throughflow of general traffic.

We recognise the realisation that this approach, which was already reliant on some tenuous logic, is simply not technically viable, especially where further development needs are anticipated.

National Highways will now pursue an approach with the planning system that "includes moving away from transport planning based on predicting future demand to provide capacity ('predict and provide') to planning that sets an outcome communities want to achieve and provides the transport solutions to deliver those outcomes (vision-led approaches including 'vision and validate,' 'decide and provide' or 'monitor and manage'). The company will support local authorities in achieving this aim through its engagement with their plan-making and decision-taking stages." (paragraph 15).

Paragraph 23 is at the fulcrum of assessing and defining transport mitigations to accommodate growth on and near the SRN "Capacity enhancements such as modifications to existing junctions or road widening to facilitate development should be determined on a case-by-case basis. The general principle should be accepted where proposals would include measures to improve community connectivity and public transport accessibility, and this will be weighed against any negative safety, traffic flow, environmental and deliverability considerations, impacts on the permeability and attractiveness of local walking, wheeling and cycling routes, and alternative options to manage down the traffic impact of planned development or improve the local road network as a first preference." (our emphasis).

However, no material work has been done that seeks to identify if a bold robustly conceived and suitable judiciously-prepared strategy that seeks to consolidate flows on already densely travelled corridor onto improved bus services, driving mode shift through insulating these services preferentially from already serious queuing. This would be likely to

have very substantial impacts on all the key junctions on the A27, and potentially, on the A27 itself. The need for an integrated approach between Shoreham and Emsworth within West Sussex paying particular regard to development requirements in both Arun and Chichester Districts naturally lies at the heart of this, and we would expect to be picked up by the LSS3 Review among other things.

However, the locus of the problems and its causes and effects are obviously well enough known to start work on defining solutions within the plan area today. We would expect that this work will be essential if National Highways are to support the Plan, especially now given the terms of Circular 01/2022.

Such work could and should start from a "policy off" position: in other words that the Plan should fully accommodate its needs unless it can be proved that a mitigation strategy for the A27 that is compliant with DfT WMS 01/2022 cannot credibly accommodate resulting capacity demands without unacceptable impacts on the safety and efficient operation of the SRN.

This evidence does not exist. In fact the Chichester Transport Strategy 2023, on which the Council solely relies as its transport evidence base, indicates the opposite at para 5.6.3. This is the case before meaningful measures to secure damping of traffic demands through mode reassignment are even considered.

The exception to this is Portfield and Oving Road, which are among the most problematic areas after mitigation even at the Council's chosen 535 dwelling/annum scenario (para 5.6.4.-5). The costly capacity mitigation simply cannot deliver enough benefit. It is admitted that WSCC has indicated that it would prefer a solution that places greater reliance on sustainable modes damping car-borne demand. This is entirely the strategy required by NHC to follow LTN 01/22, of course. Despite the fact that "predict and provide has "run out of road" no attempt has been made to examine what such a solution set credibly could look like. This is unsatisfactory and deeply troubling.

At paragraph 5.4 the draft plan points back again at the West Sussex and Greater Brighton Strategic Planning Board and the future work that has been commissioned, but has barely begun, to update the Local Strategic Statement. This work is to inform the preparation of plans that have horizons beyond the end date of the current LSS in 2030 and properly to meet the Duty to Cooperate. As we said in our response to section 1 of the Plan we fully endorse the conclusion that this is the right mechanism to look at these issues. However, the mechanism has not been effectively applied to the production of this plan. Therefore, the specific evidence that capacity on the A27 in and of itself supports accommodating a lower housing requirement does not exist.

The Plan thus does not conform to NPPF, is not adequately justified and is not effective.

The Plan does not properly meet the statutory Duty to Cooperate.

We will return to this matter in specific representations to Section 7 of the draft plan.

5.2. Policy H2 Strategic Locations/Allocations 2021-2039

Stagecoach Supports

Policy H1 makes plain that the plan, as far as it identifies locations for development has done so in locations that conform with its spatial strategy. All of the strategic allocations to a greater or lesser extent offer clear opportunities to make use of sustainable modes, by virtue of their location. That is not to say that the opportunities to take up these opportunities, and maximise the role of sustainable modes, has been identified, defined and translated properly into the rest of the plan policy suite or Infrastructure Delivery Plan.

As our remaining representations make clear, we support the locations thus far identified as being those that offer the best opportunities to reduce the need to travel, reduce travel distances, and create high quality attractive sustainable travel choices, for both existing residents as well as new ones.

However, the transport impacts of the allocation will individually and cumulatively likely to lead to increasingly severe impacts on the transport network, and on bus services.

Perversely, because these opportunities are not properly identified and secured through the plan and its supporting transport strategy, the opportunities presented by the allocations to secure a substantially more sustainable and lower carbon pattern of movement will not only risk being squandered but may aggravate the wider problems.

5.3. Policy H3 Non-strategic Parish Housing Requirements

Stagecoach Supports

The approach is consistent with the plan's spatial strategy. It generally avoids a dispersal of development to locations likely to be highly car dependent. There is a clear focus on meeting housing needs in the far north-east of the District at the largest and most sustainable settlements, such as Loxwood, Kirdford and Wisborough Green. However, it must be pointed out that public transport availability in this area, provided by the County Council through services it procures, is minimal. These settlements in practice require each adult and child of secondary school age to have access to motorised transport to fully participate in society. This might justify significant measures to secure a boost in the frequency of bus services between Guildford and Billingshurst, passing through these settlements.

Otherwise, existing commitments in the plan area already make provision to meet for local needs. To the degree that there is an unmet local requirement for affordable housing of a small scale – for example to support the rural economy – this could be met through neighbourhood plans or through Rural Exception Sites.

6. Place-making, Health and Wellbeing

6.1. Policy P1 Design principles

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

NPPF requires that proposals should consider transport issues from the earliest possible stage. Designing to properly facilitate safe and efficient access, focusing first on sustainable modes, should be at the heart of development design. Too often it is still an afterthought, notwithstanding this.

Policy P1 must include an additional statement to be compliant and effective with NPPF paragraph 104-105 and 112 a): “Development will be designed to make access and movement using walking, cycling and public transport the natural first choice, and demonstrate through the Design and Access Statement how such modes are afforded the most direct, safe, reliable and efficient routes within to and from the proposals, especially when compared with car use.”

6.2. Policy P4 Layout and Access

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

A number of proposals in the plan involve large-scale development. It is essential that where appropriate buses can access and circulate efficiently through development at a suitably early stage. There is no acknowledgement of this anywhere in the policy, contrary to NPPF paragraph 112.

Large-scale development which buses cannot access in an efficient or timely manner, or at all, strongly contributes to high levels of car-dependency. Evidence for this is referred to among other places, in DfT Circular 01/2022. To be compliant with NPPF and properly pursue its strategic Objectives, Policy P4 needs to be modified to address this point: “1. Provide safe, direct and attractive conditions for inclusive access, egress and active travel between all locations and providing as good direct high quality links to integrated public transport, and where appropriate efficient access and circulation to bus services, unimpeded by excessive parking, at a suitably early point in the development phasing;

7. Transport and Accessibility

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

The issues related to transport are fundamental to the soundness of the Plan. In particular, the constraints presented by the capacity on the A27 around Chichester and its key junctions, are the paramount reasons why the Council does not consider it can meet its objectively-assessed development needs in full. Thus, the transport issues and potential solutions available and what these mean for the ability of development needs to be accommodated, are matters that go to the heart of the soundness of the Plan.

Paragraph 8.3 sets out the approach taken to date succinctly:

“Increasing the capacity of the road network is key to supporting growth in the Local Plan. However, there is also a need to reduce demand for road transport to achieve net zero in greenhouse gas emissions by 2050 as highlighted in the council’s Climate Emergency Action Plan and Strategic Objective 1. In aiming to achieve the ambitions of the action plan, all development is expected to demonstrate how it will support four key objectives to create an integrated transport network which will alleviate pressure on the road network, improve highway safety, encourage sustainable travel behaviours and help reduce transport related impact on air quality, by:

1. Avoiding or reducing the need to travel by car;
2. Enabling access to sustainable means of travel, including public transport, walking and cycling;
3. Managing travel demand; and
4. Mitigating the impacts of travel by car.”

However, this approach is unambitious and “lightweight” as it assumes, as does the existing Chichester Transport Strategy on which the current adopted plan relies, that the focus of investment should be, wholly, in highways capacity improvement.

Sustainable modes explicitly are expected to play a greater role to “alleviate pressure” on the local road network, as part of this strategy. To emphasise: to avoid exacerbating congestion, the strategy will have to both remove a significant proportion of existing demands from the network on multiple key approaches to Chichester; and then ensure that travel demands from committed and further new development allocated in the plan does not simply replace these journeys, or, worse, create even greater demands.

This will demand very significant behaviour change. Only by making sustainable modes substantially more attractive, both absolutely, and relative to the same journey made by car, can this be expected to occur. However, the explanatory memorandum as well as the wider policy suite and IDP, well expresses a fundamental unwillingness to taking specific, defined measures to achieve this reduction in car use and material promotion of sustainable modes. It makes plain that sustainable modes, including bus services, will offer a lesser role to which “access will be provided”.

Such a vague and weakly defined mechanism will have no effect, at all, on current behaviour and car dependency if the relevance of those choices as a credible alternative to car use, is not substantially boosted. This includes a 5% reduction in trip demand assumed by the Traffic Model at the heart of the Chichester Transport Study 2023.

For this reason, the transport strategy behind the current adopted plan is demonstrably ineffective, as the updated model makes plain. It has not yet been delivered and is yet unclear when or (in the absence of committed funding) even if it can be. It is ineffective to “roll forward” this strategy to support a higher level of planned growth.

We note that a scheme for addressing congestion on the A27 at Chichester has been included in Roads Investment Period 3 (2025-2030) – well within the horizon of this Plan. However, recent history provides compelling evidence that off-line improvement to the north is not politically supported and arguably even technically or economically deliverable. It is not funded, nor at this stage can it be hypothesised if an economically deliverable scheme is achievable sufficient to warrant the necessary investment.

An on-line improvement of the A27, including junction improvements, is likely to favour longer distance east-west though movements, which are of greater significance to the national economy, at the expense of local movements crossing the SRN- a conundrum that largely sums up the dilemma that is faced by NHC and the County as Highways and Transport Authority. It is one that is played out in many places, but rarely is the tension so stark as at Chichester.

Every local route crossing the A27 at grade around Chichester accommodates a regular bus service - or shortly will do (Oving Road area is expected to follow in 2023, though bus services are likely to not use the modified crossroads but to use the left-in-left-out facilities provided as part of the Shopwhyke Lakes development). The impact of these issues on the entire bus operation are serious and increasingly severe.

By the same token, boosting the relevance and reliability of each of these services substantially consolidating as much demand as possible onto a much smaller number of vehicles, is clearly a strategy that ought to support the effective capacity of each of these junctions being greatly augmented, at the same time as reducing equally substantially, the energy- and carbon intensity of mobility in the plan area. Addressing the A27 should not be considered some kind of “zero-sum” game.

Furthermore, the approach of National Highways in its dealings with development and the planning system now reflect a substantial change in Government Policy set out in DfT Circular 01/2022, which we separately cover in these representations, that entirely aligns with an approach that seeks to appropriately invest in more active and rational management of scarce highways capacity, on both the SRN and local roads.

For environmental, economic and social reasons – including public health, the issues presented by the A27 and its interface with local roads around Chichester stands out, nationally, as an example of where the approach taken to accommodating and mitigating development impacts needs to make a clear break with previous “predict and provide” approaches to meet forecast unconstrained car use as LTN 02/2022 makes clear as a principle. Policy in the West Sussex LTP to 2036 itself makes plain that “shared mobility” – including bus services – must play a much greater role in this area.

The existing Chichester Area Transport Strategy is focused on justifying capital contributions from committed development to fund highways capacity improvement – with nothing included to make bus services more attractive, or importantly more reliable. Indeed this “cars first” approach is so costly, that there is already accepted by WSCC to be insufficient land value remaining to be captured to put into substantial improvements for public transport. That much is very evident, and transparent, from paragraph 8.12 and 8.14, where south of Chichester “This (one) package of works (of several improvements needed) would be between £57.23 and £82.79 million to deliver in full and would not be capable of being funded by development contributions alone.” This assumes the scheme is otherwise deliverable, which on the evidence in the public domain for some time, has been considered challengeable.

The draft Local Plan and a modestly updated infrastructure package that flows from the 2023 Chichester Transport Study, pursues exactly the same approach.

This strategy is also even more ineffective having regard to the roll forward of the Plan to 2039. It cannot deliver the key Strategic Objectives of the Plan; and in particular this is explicitly recognised by the Council in the failure of the draft Plan

to accommodate the OAN in full.

It is also obsolete, as it does not align, from first principles, with national policy (including the National Decarbonisation Strategy for Transport) and DfT Circular 01/22; nor the Council's own declared Climate Emergency.

As a result, draft Policies T1 and T2 are both unsound, as we will separately explain.

Owing to the lack of evidence about the implications of this for adjoining authorities – especially Adur District – in the absence of the review of the Local Strategic Statement – this has implications for fulfilling the Statutory Duty to Co-operate.

The absence of any meaningfully comprehensive refresh of the transport evidence base means that there are no meaningful schemes of any kind, defined in the plan or its IDP, to indicate either what level of growth can be accommodated, by delivering a change in travel behaviour. This would be aimed to secure a sufficient effective increase in junction throughput (measured in terms of person trips as opposed to passenger car unit movements (PCUs)). Such evidence would propose measure to achieve that outcome and assess the efficacy and costs of such improvements, across all modes.

Paragraphs 8.10-8.13 inclusive indicate that the Council “has moved away from ‘predict and provide’” and invites the reader to conclude this has translated into a programme of interventions that can be funded to deliver specific, credibly predictable outcomes. Such a programme should be clear in paragraph 8.11. and the IDP. There is no such clarity and this conclusion would be false.

It would also be evident in the language of the Chichester Transport Study 2023 and its refreshed proposals. Only the most token of lip service is paid to the matter. It is a plainly car-focused, predict and provide methodology to support a “predict and provide” strategy. In fact, it is a brazenly car-focused approach, to the exclusion of all else.

The statements in the Plan regarding any other approach, read properly, offer nothing more than a vague commitment to look post-adoption, and implementation, at unspecified measures, based on problems that may arise in future that will be decided by a committee: the Traffic and Infrastructure Management Group (TIMG). This does not yet exist and is obviously an attempt to posit a mechanism that retroactively will cover for the lack of serious multi-party engagement to address the existing and future issues. Such a group should, in our view, also include the public transport operators, not least if the requirements of NPPF Para 106c) are to be satisfied, and the strategy and measures to be adopted are material to supporting the Local Plan, as of course the purpose of the TIMG has as its core *raison d'être*.

The approach proposed by the draft plan is plainly ineffective and unsound in justifying the draft Plan.

It is more widely unacceptable to Stagecoach. The issues are severe today and well-known, already serving to jeopardise the delivery of buses relied on by existing residents, much less attract new ones.

We also consider that HM Planning Inspectorate are likely to be quite resistant to accepting this aspect of the plan's transport strategy, nor will it be appropriate for the Council, West Sussex County Council, or National Highways, to define such measures after the submission of the Plan during the Examination process. The Examination in Public of a local plan has no purpose to improve plans, or remedy deficiencies clearly evident prior to submission.

The examination of the West of England Joint Strategic Plan in 2019, and the Uttlesford Local Plan in 2021, among several others, demonstrates especially clearly that the Planning System and the Examination process is not amenable to post-hoc retrofitting of transport evidence and strategies to support a development strategy.

7.1. Transport Evidence Base

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Most of Stagecoach's serious concerns about the soundness of the plan arise from the fact that it has been prepared in advance of any up-to-date transport evidence and suitably robust transport mitigation strategy being advanced to support it. In essence, the Council has rolled forward the existing plan by 9 years, adding some additional sources of housing supply, while still relying implicitly on a transport evidence base that was prepared 10 years ago.

This led to the formulation at that time of what can only be described as an attempt to develop an effective car-based mitigation strategy, creating capacity for general traffic added to accommodate unconstrained additional demands on an already over-taxed highways network – the Chichester Area Transport Strategy. Despite language in support of sustainable modes, no deliverable measures were identified to support either the extension of the bus network to serve allocated sites, and much less to create a vital improvement to the quality and reliability of public transport services. This approach reflected the approach set out in DfT Ministerial Circular 02/2013 “Development and the Strategic Highways Network”, applicable since the A27, which is the focus of the most severe difficulties, forms part of the national Strategic

Roads Network.

This approach has proven ineffective even before substantial elements of housing land supply in the current plan come forward – in particular West of Chichester and West of Tangmere.

In addition, Circular 02/2013 has now been replaced by a new Ministerial Statement of 23/12/2022, DfT Circular 01/2022.

On both counts the transport evidence base and strategy needs to be properly revisited and established to provide effective mitigation for the plan, including current commitments that are being rolled forward.

The language of the current Ministerial Circular 01/2022 offers a highly condensed synoptic view of the proper approach to addressing transport matters in the planning system notwithstanding that it is directly concerned with the Strategic Roads Network. Videlicet:

“31. The NPPF expects local plans and spatial development strategies to be underpinned by a clear and transparent evidence base which informs the authority’s preferred approach to land use and strategic transport options, and the formulation of policies and allocations that will be subject to public consultation. The company will expect this process to explore all options to reduce a reliance on the SRN for local journeys including a reduction in the need to travel and integrating land use considerations with the need to maximise opportunities for walking, wheeling, cycling, public transport and shared travel.

32. The Transport Decarbonisation Plan indicates that carbon emissions from car and van use is the largest component of the United Kingdom’s total transport emissions. While action is being taken to decarbonise transport such that all new cars and vans will be fully zero emission at the tailpipe from 2035, the proposed location of growth in current plan periods and whether new developments would be genuinely sustainable remain important factors in demonstrating that a local authority area is on a pathway to net zero by 2050 and therefore compliant with the requirements of the Climate Change Act 2008.

33. Alongside this, the local authority should identify the key issues within their study area regarding transport provision and accessibility, setting out how the plan or strategy can address these key issues in consultation with (National Highways, and other transport stakeholders identified in NPPF paragraph 106b). It is the responsibility of the local authority undertaking its strategic policy-making function to present a robust transport evidence base in support of its plan or strategy. The company can review measures that would help to avoid or significantly reduce the need for additional infrastructure on the SRN where development can be delivered through identified improvements to the local transport network, to include infrastructure that promotes walking, wheeling, cycling, public transport and shared travel. A robust evidence base will be required, including demand forecasting models, which inform analysis of alternatives by accounting for the effects of possible mitigation scenarios that shift demand into less carbon-intensive forms of travel.” (our emphasis)

Within the text quoted above, references to National Highways and “the Company” can quite legitimately be extended, given the statements in NPPF paragraph 16, 25, 26 and 106b, to include all the relevant transport infrastructure and service providers in the plan area. Circular 01/2022 also has the weight of secondary legislation as a Written Ministerial Statement and thus should be considered to be highly material.

To date there has been little attempt to explore, to the degree necessary, strategies that conform to Circular 01/2022. It is thus not possible to conclude, as the Council has done, that the issues on the A27 that present a constraint to development, are insuperable.

In line with comments made elsewhere in the response to this pre-submission draft, the Plan thus requires substantial further work to be undertaken with key stakeholders to establish a suitably effective and demonstrably deliverable transport mitigation strategy, to sustainably meet the District’s identifiable development needs and where apparent and appropriate, also ensure that wider cross boundary strategic issues are appropriately addressed, in conformity inter alia, with the Duty to Cooperate, NPPF paragraph 16 and 104-111 inclusive, and DfT Circular 01/2022 and to ensure the Plan’s own Strategic Objectives can be met.

7.2. Policy T1 Transport infrastructure

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

As described in comments elsewhere, Stagecoach does not see that a suitable proportionate and up-to-date basis exists to properly and appropriately address the transport issues in the plan area.

The 2023 Transport Study does not perform this role adequately but, contrary to the explanatory memorandum, is a scheme intended only to facilitate car-borne movements through some of the key junctions. There is no evidence that an holistic integrated and strategic approach to transport mitigations has been prepared. Certainly Stagecoach has not been

involved in any of the discussion about appropriate transport measures in support of the plan, including the Transport Study 2023, contrary to the expectations set out in NPPF at paragraph 16 and 106.

Notwithstanding out fundamental concerns about the transport evidence case and mitigations strategy, Policy T1 reflects a weak and ineffective approach, that seeks to try and define a strategy post-adoption.

Contrary even to the explanatory memorandum for the policy, which seeks to maximise the contribution of sustainable modes, the policy is phased in such a way that it gives basis for previous “predict and provide” solutions to facilitate and support current levels of car dependency – already shown to be undeliverable and unaffordable – will nevertheless be the first rather than the last resort. There is no commitment to seek to maximise the contribution made by sustainable modes to meeting mobility needs. Nor is there any recognition that current chronic congestion and lack of network resilience jeopardises the ongoing attractiveness and long- term sustainability of the current public transport offer.

To be effective and create alignment with national policy, and also provide for an up-to-date transport evidence base and strategy to be adduced, Policy T1 should be modified to read:

“Integrated transport measures will be developed to mitigate the impact of planned development on the highways network, improve highway safety and air quality, promote more sustainable travel patterns and through providing in the first instance, new and improved infrastructure and services that will be credible effective in maximising the encourage increased use of sustainable modes of travel, such as public transport, cycling and walking.

To achieve this, the council will work with National Highways, West Sussex County Council, other transport and service providers (including through the Traffic and Infrastructure Management Group) and developers to provide a better integrated transport network and to improve accessibility to key services and facilities...

All parties, including applicants, are expected to support these objectives by:

1. Ensuring that new development is well located and designed to avoid or minimise the need for travel, encourages maximises the use of sustainable modes of travel as an a credible alternative to the private car and directly provides or contributes towards new or improved transport infrastructure;
2. Working with relevant transport infrastructure and service providers to improve accessibility to key services and facilities with primary emphasis on sustainable modes, and to ensure that new facilities are easily accessible by sustainable modes of travel;
3. Targeting investment to provide local travel options as an that represent a clearly credible alternative to the car use, focusing on the delivery of improved integrated bus and train services, and improved pedestrian and cycling networks, including the public rights of way network, based on the routes and projects identified in the Local Transport Plan, West Sussex Bus Service Improvement Plan, Local Cycling and Walking Infrastructure Plan (LCWIP) and the Infrastructure Delivery Plan;
4. Planning to achieve the timely delivery of transport infrastructure on and approaching the A27 and elsewhere on the network, needed to support new housing, employment and other development identified in this plan;
5. Phasing the delivery of new development to align with and where possible facilitate the provision of new and improved transport infrastructure and services and the outcomes of monitoring travel demand on the network, including that arising from areas immediately adjoining the plan area. It may also be Where necessary to achieve this alignment proactively phase development will be phased to take into account the monitoring and effectiveness of travel plans demands on the network and to ensure that measures are implemented to support the highest possible level of encourage sustainable travel behaviour.;
6. Using demand management measures, such as travel plans, to manage robust methodologies to assess travel demand and minimise the need for new or improved transport infrastructure as part of the monitor and manage process.
7. Delivering a coordinated package of infrastructure improvements at and approaching to junctions on the A27 Chichester Bypass along with other small-scale junction improvements interventions within the city and elsewhere, as identified through the monitor and manage process. These will increase road capacity, reduce traffic congestion, improve safety and air quality, and improve access to Chichester city from surrounding areas, first by maximising the contribution of sustainable modes to meeting mobility demands, then, and only as evidenced by robust modelling and option testing, providing increased highway capacity for general traffic.

...”

7.3. Policy T2 Transport and Development
Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Section 1 b) of T2 will be ineffective as, absent measures to ensure buses can run reliably and efficiently, improved bus services will not be possible, in support of the plan's own stated broad approach to transport mitigation, as well as wider local and national policy.

The draft policy does not require improvements to the quality of services such that sustainable choices will be materially more attractive than car use for many local journeys. Without this the Plan's Strategic Objectives cannot be fulfilled and the objectives of the Plan and this policy, read in its own terms, will not be realised, where reduction in private car use is concerned. It is thus ineffective.

Absent measures to make bus services more reliable and more efficient, by insulating them from chronic congestion as far as possible, still further operating resource and therefore costs, will be needed to just to reliably run existing service frequencies, and capacity, as vehicle productivity continues to be more and more adversely affected by chronic delay. This will be further aggravated by increasing incidence of severe unpredictable service breakdown arising from incidents of diverse kinds on the network, especially on or around the A27, including that arising from more regular severe weather events. Longer journey times can only be expected to lead to relative disadvantage of bus services compared to personal car use, entirely contrary to the objectives of national and local policy, including Policy T1. It can also expect to lead to a dampening effect not on car use, but on bus patronage, threatening the ongoing viability of bus services across the plan area.

Section 1 b) of T2 should be modified to read:

"b) Maximise opportunities for the use of sustainable travel modes through provision of direct and efficient access both to either the existing networks or and through providing such new infrastructure or public transport services, as can be credibly expected to reduce reliance on the private car and work towards achieving net zero in greenhouse gas emissions by 2050;"

Section 1 d) of T2 will be ineffective as the location of development is fixed by this plan. We commend the fact that all the strategic allocations are or will be served by regular bus services.

However, the use of public transport services, where available, depends on the relevance and reliability of these services. Furthermore, provision of services without them generating sufficient patronage to support their long-term operation also threatens the sustainability of the plan and its supporting transport strategy. This is especially true of new services such as those intended to serve West of Chichester and Tangmere and East of Chichester Strategic Allocations.

This can only be assured by the plan being supported by specific measures to ensure buses can operate efficiently and reliably on the existing and projected services intended to serve the developments concerned, and also at the same time secure behavioural change from existing development.

To be sound and effective, the policy T2 1 d.) should be changed to read:

"d) Ensure major development is located to proposals and the supporting mitigation measures enable the use delivery of high-quality, reliable and effective public transport to present the most relevant possible choice to access local services and facilities including employment, leisure and education facilities";

The Policy T2 makes no provision for buses, where necessary, to enter and make efficient and safe progress through major development sites. The plan is thus out of conformity with NPPF paragraphs 104-106. It makes no provision to ensure that penetration of bus services is achieved at a suitably early point in the development trajectory, undermining the achievement of the goals of the Plan and this specific policy. As a good example, West of Chichester Phase 1, currently under construction, cannot be served by buses as a strategy to effect interim bus penetration was never made.

Policy T2 1 f.) should therefore be amended to read:

f) Ensure that the layout and design of the site development proposals provides effective penetration of the site by sustainable modes, at all points in the development build-out, including public transport where appropriate; and sufficient space for all vehicles to manoeuvre without compromising the safety of pedestrians and cyclists, the efficiency of bus services, or the ability to provide an appropriate level of landscaping across the site"

Policy T2 3.) regarding Travel Planning depends entirely on its effectiveness on the quality and relative attractiveness of sustainable alternatives over car use. In the absence of efficient frequent, reliable and direct public transport services (or similarly, high quality facilities for active travel, Travel Plans will continue to be the entirely ineffective "tick box" exercises that they generally are today, evidenced by much lower levels of public transport use in most new developments than it seen in nearby established neighbourhoods, as demonstrated broadly by Census data in 2011, 2011 and 2021.

For this policy to be effective an up-to date transport evidence base and strategy, underpinning a series of specified interventions to promote the relevance and effectiveness of all sustainable does including public transport in particular, needs to be put in place.

8. Chapter 9 Infrastructure – Policy I1 Infrastructure provision
Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Policy I1 could not expect to be effective without a clear understanding of the effectiveness and costs of a defined series of measures that are laid out in this Plan and its IDP, to mitigate the transport impacts of the development strategy.

Where the Chichester Transport Study is concerned the only meaningful work has focused on the definition and delivery of a range of highways capacity schemes mainly on the A27 around Chichester.

As we have discussed elsewhere the effectiveness of these schemes is insufficient as set out at Tables 8.1 and 8.2 of the Chichester Transport Study 2023. The plan itself admits that the deliverability of this package cannot be afforded by developer contributions alone.

The Chichester Transport Study 2023 does not attempt provide a realistic assessment of costs to deliver these schemes, despite the fact that they have been under evaluation for many years. Nor does it offer any assurance that the schemes are technically achievable. Rather, it states the opposite:

"9.2.3 No investigation has been carried out into specific land ownership details, or into the location details or cost of moving statutory undertakers and utility apparatus within the areas of the scheme. No design assessments were carried out at this stage to ascertain the deliverability of the proposals except where any Health and Safety concerns were raised."

Thus on the grounds of effectiveness, deliverability and affordability, the measures on which the Plan relies must at the very least be considered to involve an exceptionally high level of risk. Since Policy I1 is founded on these assumptions, it cannot be considered effective.

As we set out elsewhere, the Plan has been advanced on the basis that if any additional sustainable transport measures are required, these mitigations should be retroactively considered and defined after adoption of the Plan. In the light of the doubts that are apparent of both the deliverability, affordability and effectiveness of the Chichester Transport strategy this is especially unsatisfactory even if existing baseline conditions were reasonably acceptable.

However, the Chichester Transport Study 2023, as did its predecessors, makes plain that that existing problems are acute, and can rightly be considered "severe" in the sense of NPPF paragraph 111. Waiting to define deliverable affordable alternatives is an entirely inappropriate approach to the local plan transport mitigation strategy. Such an approach also makes it impossible to consider prior to adoption how far the transport impacts of the plan can be cost-effectively mitigated by alternative means, or whether they are deliverable having regard to technical achievability, land control, development viability, or any combination of the above. Thus, the plan cannot be considered justified, or effective.

Given the mutual dependence of development strategies in Chichester and Arun in particular on these measures this should be seen as crucial of the fulfilment of the Duty to Cooperate.

The remedy for this is ultimately to put in place a suitable transport mitigation strategy following a strategic appraisal of options through review of the LSS. This then must be supplemented by more detailed development specific and localised scheme definition, including, where necessary, bus priority and other measures to support the substantial promotion of the attractiveness of public transport in key bus corridors over private car use. This would then be reflected by costed proposals in the IDP.

Leaving these fundamental weaknesses to one side, even if such a strategy and mitigation package were defined, there is no mention of public transport in the policy even though it is clearly a key part of the policy environment and mitigation strategy for the plan as expressed in the explanatory memorandum for I1, but also at Policies T1 and T2. I1 thus does not effectively support the realisation of the intent of Policies T1 and T2.

Policy I1 iii) should therefore be modified to read:

"(iii) Safeguard the requirements of infrastructure providers, having regard to requirements within and where appropriate across the boundaries of the plan area, including but not limited to:

...

- Highways including specific measures to accommodate improved active travel and public transport level of service and cycle lanes, and..."

At limb v) the Policy expects developers to meet the "in perpetuity costs of operating and maintaining infrastructure". This shackles development management decisions to developers assuming what are infinite costs – given that "in perpetuity", read properly, can only mean "without any limit in time". This means that it is impossible to meet the statutory tests on developer obligations set out in the Community Infrastructure Levy Regulations 2010 (as amended) at Regulation 122, also repeated in NPPF. This policy cannot be lawfully implemented and it is thus ineffective.

In the absence of an up-to-date transport mitigation strategy that is fit for purpose, at the point the Plan is examined these costs of any additional infrastructure are not known in any case. The strategy and its costs, including its affordability and deliverability, are crucial to assessing if the Plan is sound.

Subject to an appropriate defined transport mitigation strategy being arrived at, to be sound, the Policy I1 v) should be modified as follows:

(v) To consider and meet as appropriate the in-perpetuity delivery costs of infrastructure and, where appropriate, improved services, to the point where its long-term operational sustainability is credibly assured from mainstream sources. Where adoption is not envisaged by local authorities, that must include arrangements for its future ongoing management and maintenance;

9. Strategic and Area Based Policies

9.1. Policy A1 City Centre Development Principles

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Chichester City centre is rightly identified at 10.2 and 10.4 as the commercial and service hub of the District. It is also acknowledged to be the most accessible place in the District by sustainable modes, public transport in particular.

Boosting the vitality of the city centre is something that Stagecoach strongly supports. Irrespective, the enhancement of the commercial and cultural life of the District in the place where these opportunities can be accessed broadly by sustainable modes, is one that has long been at the heart of national planning policy for town centres, reflected in the "town centre first" approach to locating major trip generating uses.

Paragraph 10.5 exposes an unbalanced and unsound preoccupation with aesthetic matters in its approach to the town centre, and far too little to ensuring that the central place function is enhanced through protecting and enhancing the quality of public transport access.

The city is relatively small but at the heart of an extensive hinterland, and thus the role of bus in supporting sustainable access to and enhanced city centre venue is one that needs appropriate recognition and emphasis. It is important to note that a dominant number of key service and facilities such as the General Hospital are relatively close to the city centre. This directly contributes to driving travel demand into the city, causing congestion. Most importantly, it also makes the task of mitigation simpler, given the impact a suite of active and sustainable measures can have within the same close proximity.

Policy A1 does not provide this. As such, achieving the strategic objectives of the plan is seriously threatened, and the plan is thus not effective.

The Plan needs to ensure that the approach to city centre regeneration maintains and enhances public transport access, interchange and inter-modal connectivity. It also needs to ensure that bus service stopping and interchange facilities are able to address increases in future demand, anticipated by the clear intent expressed elsewhere in the Plan that public transport should be meeting a greater proportion of mobility needs, in a growing district. Achieving this demands an ambitious approach to the location, quality and capacity of bus stop and interchange.

We have been in discussions with the District Council about this, alongside West Sussex County Council, for a very considerable period. Stagecoach has always been keen to help facilitate the Council's aspirations for the city centre, and we continue to hold this intention. However, this cannot be at the expense of a material diminishing of the convenience and fitness-for-purpose of bus stop infrastructure and interchange. Stagecoach has significant concerns that current proposals to remove the bus station and have all bus services operate from the street kerbside, on an inner distributor road with similar or reduced net stop capacity, fall short of promoting attractive, convenient bus access to the central area as a destination.

For the longer term and where the objectives of the draft plan are concerned looking ahead to 2039, they clearly fall short of enhancing the convenience and attractiveness of public transport use. Much less do they make sufficient provision for a material increase in bus frequency, connectivity, and interchange convenience, on which the draft plan explicitly relies. It is vital that the District Council is clear in policy about its objectives for public transport in the city centre. These objectives must also carry sufficient weight when held in tension with other aspirations for the centre and the constraints on achieving them.

For the Plan to be sound, properly effective and compliant with NPPF, the approach to the City centre cannot ignore its role in the provision of sustainable transport service and connectivity.

Policy A1 should therefore be modified to properly reflect this crucial function, on which the vitality of the city centre must increasingly depend if unacceptable impacts on congestion, air quality and amenity are not to arise. This is still more crucial if wider aspirations to secure a more sustainable society and mitigate carbon are to be achieved.

“...This will include provision for development and proposals that:

- Support and strengthen the vitality and viability of the city centre and its role as a shopping/visitor destination, employment centre, public transport hub and a place to live;
- Support and promote facilitate improved access to the city and with increased emphasis on sustainable modes of travel, with particular regard to enhancing the public transport interchange role of the city centre area, in accordance with the transport strategy for the city and...”

9.2. Policy A3 Southern Gateway Development principles Chichester Bus Station, Bus Depot and Basin Road Car Park Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

There has been aspiration to redevelop the bus station and nearby bus depot from many years. Stagecoach has been engaged with detailed discussion with the District Council on this matter over a very extended period. We confirm that these discussions have reached a relatively mature stage, however at the time of writing are not concluded.

Stagecoach recognises and supports in principle the Council’s wider aspirations for the “Southern Gateway”, and this has governed our approach to the Council to date. We continue to have no “in principle” objection to relocating our administrative, engineering, operational and customer service facilities.

Leaving our proprietary interests entirely to one side, it remains vital that in so doing, the effectiveness, attractiveness and convenience of these facilities is not compromised, as we have outlined in our representations to Policy A1, if wider national and local transport policy, and the local plan strategy itself, are to be effectively achieved.

The depot is crucial infrastructure to support the safe, reliable and legally-compliant operation of Stagecoach bus services over a very extensive area covering the entirety of the District and beyond. Without securing equivalent facilities, that are fit-for-purpose, many of our services would have to cease.

If buses are to provide a greater and more attractive level of service (still more so if they are to be electrified) larger, more capable depot facilities, and city centre bus interchange facilities will be necessary.

Notwithstanding that the bus station and depot sites are leased from the District Council, these leases terminate well beyond the end of the plan period.

Finding suitable sites for a replacement bus depot in Chichester, in common with all similar localities especially in southern England, is extremely challenging. As a sui generis use, bus depots do not automatically benefit from policy support on land allocated for employment uses. Most bus depots benefit from being legacy assets established under very different economic conditions. That is the case here. The value of a depot site for redevelopment net of demolition and remediation costs, rarely approximates to that able to sustain the acquisition of land in a tight wider employment land market, and the construction of suitable new facilities.

Furthermore, the costs of operating bus services are sensitive to the parasitic costs of vehicle and staff hours and mileage associated with “dead running” to a remote depot location from the operational network. Here, the existing depot site is ideal, and any replacement will unavoidable add ongoing operational costs to the operation that cannot be directly recovered.

We confirm that a replacement depot site has been identified and has in principle been agreed, subject to overcoming issues with the disposition of existing and future structures on the site. However, the site is recognised as not capable of accommodating meaningful operational expansion. This is just one of the most important foundational reasons why a positive transformation of bus productivity needs to be achieved, across the plan area and beyond, to support delivery of greater bus mileage and frequencies with the same level of operational resource. At the time of writing, we are not fully convinced that the proposals for the relocation will be sufficiently fit-for-purpose in the event the above is not achieved. Thus, we must raise a concern that the bus depot site might not be available during the plan period. While there is a strong probability it will be, the certainty surrounding the availability of the site, especially within the first 5 years of the plan, needs to be made transparent.

9.3. Policy A4 Southern Gateway - Chichester Bus Station, Bus Depot and Basin Road Car Park Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Regarding the removal of the bus station, without equivalent replacement, Stagecoach has significant concerns. Pressures and conflicts at the current bus station site have been gradually rising for several years, arising from

increasing use and the need for additional scheduled vehicle layover periods to reduce the risks of accumulated late running from traffic congestion. Peak passenger volumes have recovered strongly on several routes, however passenger accumulations resulting from more frequent delays and disruption have added substantial further pressure on limited space.

Under current plans, buses and bus passengers will be displaced to bus stops at new locations outside the city centre, along Avenue de Chartres. This road was always intended to be a relatively high-speed traffic route, outside the historic core of the city. The city centre has evolved in the subsequent years to reinforce already strong natural severance, with the highway lying beyond the city walls and the green space along the Lavant. It is a traffic dominated, unsurveyed and unattractive environment, reflecting the intended function of the road as an efficient movement corridor for high traffic volume, and nothing more. Avenue de Chartres is relatively close to the rail station and pedestrian connectivity can be provided at broadly equivalent distance to the current bus station, but again it is unsurveyed and currently unpleasant, lacking natural legibility or any sense of prominence.

We understand kerbside capacity on Avenue de Chartres will be strained even to accommodate current levels of service, with no expansion possible. There is therefore a strong probability that to accommodate more frequencies and key new routes, such as West of Tangmere, East of Chichester and West of Chichester allocations, additional future bus stops must occupy a different location. This makes interchange between routes and rail services substantially challenging and less attractive.

The emerging arrangements risk marginalising public transport and public transport users substantially. This strongly undermines achievement of the wider plan objectives and delivery of a significantly greater role for public transport. If substantial public transport growth is to be accommodated in a growing city and hinterland, as the draft plan anticipates, then a more ambitious strategic approach must be taken. This should plan for additional and improved facilities to accommodate all services predicted to be required, whilst enhancing the passenger experience to ensure meaningful and attractive modal choice.

There is therefore a need for the plan to evidence how these issues will be appropriately resolved, having regard to a suitably ambitious approach that properly supports clear objectives to boost the relevance of public transport. The current policy is weak, unspecific and indifferent to achieving the strategic objectives of the plan, including a transport strategy in support of the plan, and as such it is ineffective.

Policy A3 should therefore be modified to read:

“ ...

- Be designed to encourage and facilitate substantial increase in the use of active travel and public transport to, from and through the city centre.

...”

In line with the commentary above Policy A4 should also be modified to read:

3. Enhance the public interchange function of the immediate area, the public realm, particularly connections to the railway station and the city centre via South Street, Southgate and Basin Road for pedestrians, cyclists and public transport users, and to National Cycle Route 2 and Route 88 which run close by. Suitable replacement bus stops and layover facilities should be provided to replace those at the bus station in line with reflecting the objectives of the West Sussex Bus Service Improvement Plan, and to facilitate growth to meet the requirements of the plan's development strategy. Routes and crossings should reflect pedestrian desire lines, and public art should be incorporated to create a sense of place;

4. Enhance the public realm, in support of this and wider objectives, incorporating public art and other measures to create a strong and attractive sense of place.

...(renumber remaining points)

9.4. Policy A6 Land West of Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

This is an existing Local Plan allocation. The public transport strategy for the site depends on the delivery of the second phase which Stagecoach notes is the subject of several applications now awaiting review and determination by the Council.

The site represents a compact form of development adjoining the city, as the most sustainable settlement, meeting housing needs close to where they arise, and affording very good opportunities for the use of sustainable modes, especially walking and cycling.

It is vital that a bus service is delivered to serve the site at the earliest potential. This was anticipated to be at the start of Phase 2 and will require the early delivery of the entire length of the spine road between the Old Broyle Road and

Westgate and making it available for bus services.

It is not clear if the costs of pump-priming the service mentioned in the draft policy are anticipated to be met by the developer. Without such funding, the service will not be deliverable as years of losses will never credibly be covered from future profit. It is likely that the current wording will be interpreted by the developer as meaning that they have no such obligation binding upon them. Not does policy set out any specification for this service, thus its costs and the basis for securing developer contributions does not exist.

As such any wider transport strategy, that seeks to secure a greater role for the use of public transport, and the aspiration for this allocation cannot demonstrably be met. The policy is ineffective.

Policy A6 should be modified to read:

"...

10. Make provision to accommodate and secure delivery of for regular bus services linking running through the site to Chichester city centre operating at least every 30 minutes Monday-Saturday, and new and improved cycle and pedestrian routes linking the site with the city,

..."

9.5. Policy A7 Land at Shopwhyke

Stagecoach Supports

This is an existing Local Plan allocation, largely built-out, that benefits from an existing set of permissions.

The public transport strategy for the site depends on the delivery of effective bus priority at Oving Crossroads. The current recently implemented scheme, undertaken by National Highways, makes no provision for effective bus priority and needs considerable re-evaluation.

The site represents a compact form of development adjoining the city, as the most sustainable settlement, meeting housing needs close to where they arise, and affording very good opportunities for the use of sustainable modes, especially walking and cycling. It lies on a new bus corridor that will shortly be put in place, running to Tangmere via Shopwhyke. The allocation is being significantly consolidated by further development in the immediate vicinity which strongly supports the potential for this new service.

As we explain in our representations for East of Chichester proposed allocation A8, and West of Tangmere Allocation A14, a clear corridor strategy to effect bus priority is needed, that should be delivered in support of that further growth, and that at Tangmere SDL. However this allocation is a near complete commitment and there is no scope through policy regarding this land to effect this outcome.

It is notable that Point 6) of policy A7 makes mention of a bus service. This language reflects the currently adopted Local Plan policy and has underpinned the existing permissions. The failure of any bus service to be delivered demonstrates from first principles that this Policy has been entirely ineffective. It is important that lessons are learned from this in the Local Plan Review.

9.6. Policy A8 Land East of Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This proposed allocation lies next to unallocated land that is already consented as a departure from the adopted development plan, with 143 units near completion south of Oving Road (20/02471/FUL). Additional land, also unallocated but similarly consented, has now commenced north of Oving Road (88 units under 21/02197/FUL). This and the allocation site consolidates earlier development at Shopwhyke brought forward under the current Local Plan, and allocated again as draft policy A7.

Development at Shopwhyke was brought forward on the basis of a premise that the developer would provide or somehow arrange a bus service, that was reflected in the policies of the current Local Plan. This was secured by an unenforceable condition. No bus service has been provided, as there was inadequate clarity regarding the basis on which the costs of establishing such a service would be met by the developer, and the expectations of policy on the developer. The site does however lie on a logical new bus corridor between Chichester and West of Tangmere along the Oving Road.

In addition, an expectation that modifications to the Oving Crossroads would effect bus advantage have proven false – the arrangements put buses into a similar or longer queue than if they use the route available to general traffic to and from the A27.

Stagecoach strongly supports the principle of bringing this land forward. However, the soundness of the site depends on deliverability of a regular, reliable and direct bus service along the Oving Road, taking advantage of effective bus priority.

Given the failure of existing policy in the adopted Local Plan covering the proposed A7 allocation to deliver a bus service, it is of great concern that there is no draft policy to adequately address the issue. The policy is out of conformity with NPPF paragraph 104-105 in that sustainable modes do not offer realistic choices, much less an attractive one, and as such also does not secure the objectives of national policy nor of the plan itself.

Currently the proposed allocation is not served at all by public transport. Policy needs to ensure there is a policy basis to secure contributions to deliver such a service, which may well take the form of a proportionate contribution to deliver a new service or enhance provision that is put in place between Chichester along the Shopwhyke Road to west of Tangmere.

To become sound Policy A8 must be modified to read:

"...

12. Provide for improved high quality connectivity by sustainable travel modes and focused in particular on a corridor between Chichester city centre and Tangmere along Shopwhyke Road, including new improved cycle and pedestrian routes, and a frequent bus service including linkages with Chichester taking advantage of effective bus priority measures on Oving Road at the A27;

"...

9.7. Policy A9 Land at Westhampnett/North East Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This land is already allocated and consented as part of the existing 2016 Local Plan. All reserved matters are determined.

The site lies on service 55 between Chichester, Westhampnett and Tangmere. This established service benefits from additional demand from the development at Phase 1. Phase 2 which is currently well underway, does not benefit directly from bus services. However it is a compact and logical form of development where walking and cycling to local facilities and employment is a credible option.

The existing allocation rolls forward policies in the 2015 Local Plan. In so doing it is possible to see which have been effective.

Point 9. regarding bus service and routing has not been effective. In particular the potential for a bus only link between the site and Graylingwell has not been established as policy anticipated. Given congestion around the Portfield area acutely affects public transport this, or alternative methods to secure bus priority over private car use, a clear and unequivocal policy steer is required.

The lack of an up-to-date transport evidence base is ultimately at the root of these issues. Arguably the policy and allocation can only be made sound once this refreshed evidence base in place.

However, it is possible that the allocation could be made sound by modification of Policy A9 as follows:

"...

9. Make provision for regular, direct and reliable bus services linking the site with Chichester city centre, and new and improved safe and convenient cycle and pedestrian routes linking the site with Chichester city, the South Downs National Park and other strategic developments to the east of Chichester city including Tangmere. These objectives could include exploring the potential for a bus only route require a deliverable scheme to afford bus priority through Portfield, and potentially linking the development with the Graylingwell area through use of a modal filter;

"...

9.8. Policy A10 Land at Maudlin Farm

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing public transport route. It is relatively close to the city and very near substantial centres of employment and services that can be reached by active travel modes, helping damp the demand for car use. It is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services at Portfield and over a wider area. In fact, the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an

unsound, inadequately evidenced approach, that will be ineffective.

Policy A10 should accordingly be modified to read:

"...

5. Provide safe and suitable access points for all users, including a main vehicle access from Old Arundel Road and, subject to further assessment, a secondary vehicle access from Dairy Lane. The development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes;

"..."

9.9. Policy A11 Bosham – Land at Highgrove Farm

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Bosham Station. It is relatively close to the city and very near substantial centres of employment and services that can be reached by public transport and cycling, offering strong potential to materially damp the demand for car use.

There are serious risks that development in the A259 corridor west of Chichester could place further demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular to bus services.

Nevertheless, given the potential to effect bus priority on the approaches to Fishbourne Roundabout, it is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A11 should accordingly be modified to read:

"...

8. Provide safe and suitable access points for all users, including a main vehicle access from the A259. The development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys crossing the A27 at Fishbourne;

9.10. Policy A12 Chidham and Hambrook

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Nutbourne Station. Substantial centres of employment and services that can be reached by public transport and cycling, offering strong potential to materially damp the demand for car use.

There are serious risks that development in the A259 corridor west of Chichester could place further demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular to bus services.

Nevertheless, given the potential to effect bus priority on the approaches to Fishbourne Roundabout, it is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A12 should accordingly be modified to read:

"...

7. Development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys along the A259, crossing the A27 at Fishbourne and where necessary on the approaches to Emsworth;

8. Facilitate improved sustainable travel modes, and new improved cycle and pedestrian routes, including linkages with Chichester city and settlement along the East/West Corridor;

9.11. Policy A13 Southbourne Broad Location for Development

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach agrees unequivocally that Southbourne is a location that could accommodate growth on a strategic scale. It has a substantial range of service available within the settlement, including secondary education. It is well connected by bus and rail service to key destinations, including Chichester, lying to the east and west.

This is one of the few locations identified for growth that represents substantial additional development in a new location to the strategy in the existing Local Plan adopted in 2015. Thus, the transport impacts of development on the substantial scale envisaged at Southbourne are not covered or accommodated by the Chichester Area Transport Strategy that lies behind the existing plan. This demands, from first principles, that substantial further transport mitigation measures are required.

We recognise and endorse fully that the intent of the draft plan for Southbourne as a Broad Location for Development on a strategic scale, includes "Maximising the potential for sustainable travel links through improved public transport, including consideration of opportunities to reduce community severance caused by the railway line as well as the inclusion of cycling and pedestrian routes." (our emphasis).

The existing railway station at Southbourne is served regularly, however, it is not within the power of this plan to improve rail services. It is, however, well within the scope of action of the Local Planning and Highways Authority to work with bus operators to achieve a step change in the journey time, reliability, frequency and connectivity of bus services, and in particular the major corridor operated as service 700 by Stagecoach along the A259 between Havant and Chichester through Southbourne.

Notwithstanding the clear potential for sustainable connectivity in the western A259 corridor, there are very serious risks that development in the A259 corridor west of Chichester will place further significant car-borne demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular bus services, having the opposite effect to that intended: longer, less reliable and less frequent bus services, leading to a spiral of slowly declining use.

These risks, while very serious, look credibly likely to be entirely mitigated subject to carefully conceived and robust specified actions on the local highway network. It is perplexing to us that this potential still has not been identified, as part of a comprehensive "first principles" review of the transport evidence base. In particular given the former trunk status of the A259, there is evident potential to effect bus priority on the A259, including on the approaches to Fishbourne Roundabout.

With appropriate measures, including but not limited to this, to substantially boost the relevance and attractiveness of sustainable travel choices, strategic development at Southbourne could well be made highly sustainable.

In the absence of a refreshed transport strategy and transport evidence base, the draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact, the only reference that is made in Policy is that

the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan . They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A12 should accordingly be modified to read:

"...Development should be comprehensively masterplanned to achieve a high-quality design and layout that integrates well with the surrounding built and natural environments to enable a high degree of connectivity with them, particularly for pedestrians and cyclists, and provides good the highest possible quality of access to facilities and sustainable forms of improved public transport services.

...

4. Provide a suitable means of access to the site(s), and securing secure necessary off-site transport infrastructure and service improvements (including highways in particular to the A259 corridor between Emsworth and Chichester) in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development) to promote sustainable transport options prioritising delivery of high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes;

..."

9.12. Policy A14 Land West of Tangmere

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach strongly supports the principle of intensifying the level of development at the Strategic Development Location already identified and allocated West of Tangmere in the existing Local Plan. This serves to consolidate development at a location where effective and attractive public transport choices could be provided. It also conforms closely with the principle expressed in NPPF that the best possible use should be made of land on sites that are judged to be sustainable, or potentially sustainable locations for development.

It must be stressed that the current policy suite for the SDL has to date not brought forward development in this location. We recognise that a Master Plan has been adopted by the Council, and that a planning application (20/02893/OUT) for the full larger quantum of 1300 dwellings proposed in the draft plan has received a resolution to grant by the Council.

However, we are not aware that a sustainable transport strategy has been finalised.

Land West of Tangmere is not served by any existing regular bus services. Rather, an entirely new bus service corridor is anticipated to operate in the near term from Chichester through Tangmere and beyond towards Barnham. This would serve proposed allocations A7, A8 and West of Tangmere (A14) included in the draft Plan.

This is reflected in the language of the explanatory memorandum to Policy A14 at paragraph 10.65:

"Opportunities, in partnership with relevant authorities, to provide improved sustainable public transport routes linking the village with Chichester city, to improve cycle routes to the city, and better transport links to Barnham rail station and the 'Five Villages' area in Arun District; and.."

Initiating this service will be costly and will in large measure be funded not by developer contributions, but by DfT monies awarded through the West Sussex Bus Service Improvement Plan. It is crucial this service is both sustainable in the longer term without revenue support, and that the success of the service can be built on by scalable frequency improvements as strategic development comes forward in both Chichester District, and proposed allocations A7 A8 and A14, and in Arun District, in particular at Barnham, Eastergate and Westergate (BEW).

This demands measures to effect safe, direct and swift operation of the service especially within the city centre, where it approaches and crosses the A27 at Oving crossroads and on the eastern fringes of the District east and west of Tangmere. Without these measures, bus journey time and reliability will be severely compromised and the and impact of this service to damped car trip demands will be very substantially compromised. No such measures are proposed in the draft plan or its evidence base.

Changes to Oving Crossroads have recently taken place which, amongst other intentions, ostensibly provide bus advantage between Chichester and Shopwhyke. The junction in its current form does not offer material gain in bus journey time, as movements involve a less-direct route towards the city over an increased operating distance, much of which involves passage through heavily congested sections of the A27 and Westhampnett Road. A refreshed transport strategy supporting plan-led growth must revisit this area to secure an effective solution which offers bus customers the fastest and most reliable trip-time to and from the city.

In addition, the extension of public transport connectivity towards BEW and Barnham, including key links to secondary education and a logical railhead for journeys beyond towards Brighton and London as provided at Barnham Station,

needs to facilitate bus priority between Tangmere and Nyton – whether using the A27, or preferably avoiding it altogether. There are significant safety concerns associated with the at-grade uncontrolled right-hand A27 exit onto the B2233 Nyton Road at Crockerhill Turn. This movement is also prone to extreme delay owing to the conflict with approaching westbound traffic on the A27, travelling at speed, which has priority. Our concerns with this junction in its current form can be expected to worsen with the increased traffic volumes predicted from new residential developments to the west of the city.

A solution providing a suitable short length of highway available only to sustainable modes, between Tangmere and Easthampnett, could provide a very effective solution to this. This would be deliverable within the scope of the separate proposed allocation at A19 Chichester Business Park, Tangmere. We comment on this separately.

Howsoever effected, a reliable direct and delay-free bus corridor between Barnham, BEW, Tangmere and Chichester could expect to secure very substantial elevation of the relative attractiveness of public transport over car use on the entire corridor and serve to effectively damp growth-related demands on this section of the A27. West of Tangmere, in the longer term, there is evident scope for the route corridor to operate as two branches – one via Shopwhyke and one via Westhampnett, effectively serving all the strategic developments proposed in the plan and transforming wider public transport connectivity to key employment destinations and services within and east of Chichester.

However, in common with all the other proposed allocations, the plan proposes no specific measures to provide, much less improve public transport or other sustainable modes to the site. This leaves the draft plan out of conformity with NPPF, especially paragraphs 104-106. The plan is inadequately evidenced and to the degree that public transport measures are identified and emergent, their successful implementation in the near and longer term will be jeopardised without clear measures to provide a safe as well as efficient bus route towards BEW and the Five Village area within Arun. The Duty to Cooperate is not effectively met and effective cross boundary collaboration on these strategic issues through the review of LSS is not demonstrated, despite the current version which identifies the issues.

To be made sound the LSS Review and a subsequent urgent review of the transport evidence base and strategy needs to take place. The strategic issues are especially critical east of Chichester, in our view.

Notwithstanding this foundational deficiency, to be made sound, Policy A14 should be modified to read:

“... ”

8. Subject to detailed transport assessment, provide primary road access to the site from the slip-road roundabout at the A27/A285 junction to the west of Tangmere providing a spine road link with secondary access from Tangmere Road. Development will be required to provide or fund mitigation for potential off-site traffic impacts through a package of measures in conformity with Policy T1 (Transport Infrastructure) and T2 (Transport and Development) and DfT Circular 01/2022 that maximise the relevance and use of sustainable travel modes, in particular bus services;

9. Make provision for improved sustainable travel modes between Tangmere and Chichester city, in partnership with relevant authorities, including improved direct, seamless safe and reliable and additional bus and cycle routes linking Tangmere with Chichester city, Shopwhyke and Westhampnett. In conjunction with measures in support of Allocation A19, Opportunities should also be explored contributions shall also be sought for providing improving high quality cycling and bus service transport links with the 'Five Villages' area and Barnham rail station in Arun District; and...”

10. Concluding comments

Stagecoach recognises its role as a key stakeholder in the plan, as well as a local employer and corporate citizen. We recognise the primacy of the plan-led system as the mechanism intended to resolve complex challenges, including the proper alignment of transport and spatial planning, which as the National Decarbonisation Strategy for Transport among other policies makes clear, has never been more vital.

In making our representations, we emphasise that we are entirely supportive of the Local Planning Authority and the relevant Highways and Transport Authorities, in their efforts to properly manage the amount and pattern of development to secure vital policy objectives. We recognise that balancing delivery of assessed development needs with a wide variety of other constraints is a very difficult task.

The transport issues faced by the plan are recognised in the draft plan as being serious and long-standing. We believe that there are ways to arrive at a suitable transport mitigation strategy that has regard to wider strategic issues and resolves existing problems in a much more effective way than those pursued to date.

We support the spatial strategy of the plan as it evidently provides the basis to secure the necessary step change in the quality and use of sustainable transport modes, as it explicitly seeks to do. However thus far, there has been insufficient work done to define the measures that will credibly secure these outcomes.

Stagecoach therefore urges the authorities to draw us into the necessary effective ongoing collaborations that is expected by NPPF paragraph 16 and 106; and DfT Circular 01/022, to do this work, prior to, rather than after the submission of the draft plan. We look forward to being approached to initiate this dialogue at the earliest opportunity.

Change suggested by respondent:

The potential role of bus in addressing the already-severe transport problems of the plan area and beyond seems entirely overlooked.

Respondent: Mr John Wolfenden [7853]

Summary:

The representation that the East West Corridor has the 'best transport connections ... with the A27 and railway running throughout.'

This is a gross generalisation. When you take the newly proposed Settlement Hub of Tangmere the nearest access to rail is 10 kilometres, to Chichester station to the west and Barnham Station to the East.

A non-existent option for anything other than connecting by a bus, car or taxi or non-existent safe cycle route.

There is a lack of rail infrastructure for the majority of development in this Corridor.

Document Element: Characteristics of the Plan Area – A Spatial Portrait, 2.3**Respondent:** Stagecoach South (Rob Vince) [8141]**Summary:**

The Strategic Objectives do not conform with Chapter 9 paras 104 and 105 NPPF in these foundational requirements adequately, to transparently steer the plan strategy. Wording should be amended.

Paragraph 2.36 - There is no acknowledgement of the role current patterns of transport use contribute to carbon emissions, nor that substantial mode shift is necessary to address sustainably an acute lack of capacity on the local network and the SRN, especially around Chichester. This is especially concerning as the basic conceptual link is not made between the fact that the greatest such problems lie on the A27 corridor and around Chichester, while these are also at the same time present many of the most sustainable locations for development, and where the opportunities to secure much greater use of sustainable modes also exists.

Strategic Objective 7 - The latest transport evidence in the Chichester Transport Study makes no pretence to define much less to deliver a "sustainable or integrated" transport system. It is wholly devoted to sustaining current levels of car use across the District, to and through Chichester area.

It is no more than the lightest of touches to the approach taken to supporting the adopted Local Plan, an approach that is already almost 10 years beyond the date of its gestation but has yet to deliver any significant capacity improvement schemes, much less any measures that sustain even current levels of public transport journey times and reliability in the face of increasing congestion – much less any betterment.

Chichester District Local Plan 2039 – Pre-Submission (Regulation 19) Consultation

1. Introductory Comments

Stagecoach South is the main commercial public transport operator across Chichester District. The Company has headquarters in the city, which is also the principal public transport hub for the District and it's rather wider travel-to-work area encompassing much of the Arun District. Our services extend throughout and beyond the District boundaries, as far as Littlehampton, Midhurst, Havant and Portsmouth. The vast majority of services operate on a commercial basis – that is to say, sustained by passenger use and fare revenue, including concessionary reimbursement.

While the role of the railway is significant in much of the District, especially the east-west Coastway line, yet bus services account for more boardings locally than the railway, with Chichester depot services carrying over 3.5m passengers each year.

Unlike bus services in other parts of the country, the local network has recovered strongly after the pandemic with fare-paying passenger numbers over 95% of 2019 levels, albeit with concession patronage somewhat lower. This has helped secure not only a stable but growing bus network even during this period of rapidly rising operational costs, avoiding the need for the service contractions seen in other regions. Indeed, during the second quarter of 2023 Stagecoach will invest £5.5m in brand-new vehicles for high-profile coastal Service 700 – one of the largest vehicle investments for Stagecoach Group this year.

Our services are therefore critical to existing and future local connectivity. As the Plan acknowledges, mobility demands do not respect planning authority boundaries. The role of our services is especially high to settlements in the broad A27 corridor, within the District and beyond. This includes major settlements in Arun District such as Pagham and suburban Bognor Regis, where bus is the only mass public transport option. As the Council is well aware, there is an even higher level and rate of committed development envisaged in these locations in the Arun District Local Plan than in Chichester.

It is already evident to the planning authorities, West Sussex County Council and National Highways, as proprietor of the A27 Trunk Road, that accommodating growing mobility demands across Chichester District and especially around Chichester itself, is becoming increasingly challenging to the point of being seriously problematic.

Stagecoach has a particular interest in this Plan arising from:

- The already clear and highly deleterious impact of congestion affecting our operations and their reliability and attractiveness to the public. The effects of these on the approaches to Chichester, and around the A27 bypass are especially severe. If public transport is to retain its existing role – even before the needs of any meaningful growth both in Chichester and neighbouring authorities is considered, are considered – the Council and the Highways Authority need to arrive at clearly-defined measures to protect buses from chronic delay and the damaging impacts arising from the lack of bus network resilience and customer journey times.
- In connection with the above, the need to properly consider the predictable impacts of committed development in Arun District on the transport network and in particular the operation of bus services. The duty to cooperate on cross-border strategic matters is not limited merely to accommodating housing requirements.
- The fact that our entire business premises and operational base at Chichester is the subject of allocation for redevelopment within the Plan period. Specifically, this includes our Head Office, the Bus Station as the operational hub of the network and the key interchange for passenger journeys – including those that involve the railway – and the bus depot required to support the entire operation. Notwithstanding many years of discussions, there is as yet no agreed deliverable strategy to replace these facilities either in the Draft Plan or elsewhere.

Stagecoach broadly supports the vision and priorities of the draft plan. In most respects, Stagecoach supports strongly the spatial strategy and the identified site allocations that flow from it, and the evidence.

However, it has serious concerns about the soundness of the plan as proposed for submission, for important regards outlined in this response. These are made in the light of requirements set by the National Planning Policy Framework (NPPF), in particular at paragraphs 15 and 16; 35, 105-109 inclusive and having due regard to the need for allocations to satisfy 110-112 inclusive in due course as development permission is sought; and paragraph 174.

Paragraph 16c) of NPPF makes plain that strategic plans and policies should “be shaped by early, proportionate and effective engagement between plan-makers and communities, local organisations, businesses, infrastructure providers and operators and statutory consultees” (our emphasis). This makes plain that collaborative and ongoing involvement of public transport operators is both necessary, and separate and in addition to the engagement with statutory consultees. This has not taken place.

Para 1.25 of the draft plan states that “the council has engaged constructively, actively and on an ongoing basis with other local authorities and organisations to address key strategic matters.” Despite the requirements in NPPF and contrary to the statement made, Stagecoach has not been approached or involved in a meaningful, collaborative or ongoing way in the preparation of the Plan.

Our main concerns centre around the fact that the plan strategy is neither backed by sufficient transport evidence. Even more importantly, the plan relies on a wholly car-based transport mitigation strategy despite policy stating that this is not the case, and the track record of the existing Local Plan, based on a very similar strategy, that has failed to bring forward meaningful mitigations to date to prevent traffic conditions substantially worsening. There is no support in policy for the achievement of the Strategic Objectives in the Plan. Nor is there definition of any measures in the 2023 Transport Study to make provision for sustainable transport infrastructure or services – much less materially improve them.

Finally, to the extent that updated transport evidence has been provided in the form of the 2023 Chichester Transport Study, arising from updated traffic modelling, it does not support the contention that highways capacity constraints on and around the A27 justify not meeting the objectively-assessed development needs of the area, as the draft plan contends.

2. Vision and Strategic Objectives

2.1. Issues and Opportunities

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant, proportionate and up to date evidence

Stagecoach recognises the important role of the West Sussex and Greater Brighton Strategic Planning Board which agreed a Local Strategic Statement (LSS2) in early 2016 to identify spatial planning issues across the wider area. This

established strategic priorities and policies to guide longer term strategic growth in a coordinated and well considered matter. This institutional framework and the purpose of the LSS is a highly significant one and is at the heart of efforts to properly fulfil the statutory Duty to Co-operate, including with regard to strategic infrastructure issues, as NPPF requires.

Given the long period of time elapsed since the 2018 Reg 18 consultation and the already very clear constraints on strategic infrastructure capacity, it is of great concern to Stagecoach that the LSS2 has not been updated to reflect emerging issues in the intervening period. A review and update of the LSS2 has only just commenced. This includes a study of projected housing and employment needs, transport impact, infrastructure and spatial options to deliver the required development in the period after 2030. This Chichester District draft plan covers a period extending to 2039 – therefore well beyond 2030 and the nominal currency of LSS2.

However, infrastructure needs are pressing today. Stagecoach is presented with severe highway operational problems on a near-daily basis. During the winter of 2022-23 we have, for example, seen key road links impacted for many weeks by acute disruption arising from flood events. Unpredictable, but seemingly more-frequent, exogenous events expose a lack of resilience in the highway network around Chichester and its travel-to-work area. However, serious, chronic, unpredictable delay has been normalised over recent years, with peak-time congestion having quickly returned after the pandemic. The existing development strategy has failed to bring forward measures having any impact on this to date, and key commitments – notably at west of Chichester Phase 2 and at Tangmere – have yet to commence to further aggravate the issue.

We have no confidence in the transport mitigations proposed in the existing Local Plan and LSS2 being sufficiently effective, even if deliverable at all. Indeed, the existing adopted Local Plan does little more than make vague speculations about the sustainable transport measures that might be achievable. The draft local plan review is no different. It has no ambitions at all for sustainable modes and thus, makes no meaningful provision to meet them.

This is especially relevant in light of the fact that the approach to resolving issues on the A27 around Chichester that were anticipated in 2015-16 have fallen away. LSS2 is thus currently inadequate to act as a part of an up-to-date, proportionate, and relevant evidence base for the Plan.

An update of a traffic model lies at the heart of a 2023 Chichester Transport Study. This talks no account of the existing role of non-car modes, nor can it do so. It is unable to properly evaluate the nature of problems or solutions that involve public transport, or for that matter, other sustainable modes.

Therefore, we consider that the combination of committed and additional development needs that must be accommodated over the whole plan period between 2022 and 2039, in both the Chichester and Arun Districts, require a “first principles” review. This must be based on a refreshed transport evidence baseline of no earlier than 2022 – given that the effects of COVID distort 2020-22 – and the transport infrastructure and service requirements to sustainably support those needs.

Key issues – including substantial changes with regards to transport issues and challenges, as well as potential solutions – thus do not form part of the evidence base that steers this plan. Given long term changes in travel patterns, and mode share that took place during COVID, as well as a local and national policy context that seeks to radically reduce and then eliminate transport-related carbon emissions, this is especially problematic.

The specific problems of congestion and network resilience that are evident on the A27 and the approaches to Chichester remain a set of especially difficult problems that disproportionately affect the efficiency, reliability and attractiveness of the bus network, that evidently demand larger-scale strategic responses involving multiple stakeholders, including bus operators.

Where the effects of development on the national Strategic Roads Network (SRN) are concerned, the approach of National Highways to addressing and responding to the mobility needs of development has now substantially changed following the promulgation of the DfT Written Ministerial Statement LTN01/22. This makes it clear that adding highways capacity is no longer the first or only strategy that should be pursued, but one subordinate this to maximising the potential of non-car modes and sustainable travel.

“Effective and ongoing collaboration” on transport matters has not led to solutions being agreed and published for public scrutiny as part of the plan evidence base. Whatever the approach to modelling and “highways improvements” that may be agreed or pending agreement with the County Highways Authority and National Highways, Stagecoach is neither participant or sighted. This is despite the clear requirements set out in NPPF Para 106 b) that “Planning policies should ... be prepared with the active involvement of local highways authorities, other transport infrastructure providers and operators and neighbouring councils, so that strategies and investments for supporting sustainable transport and development patterns are aligned.” (our emphasis).

We therefore consider that the Council has failed to comply with the requirements of NPPF paragraph 25 and 26 that “relevant bodies” are involved in plan-making, especially with regard to addressing the needs for infrastructure. Public transport services and the infrastructure that supports its operation and use clearly fall within matters relevant to plan-making. This is explicit in NPPF Chapter 9 and indeed within the plan itself – for example reference to public transport and sustainable modes in the Vision for the plan.

It should be stressed that the Regulation 18 “Preferred Approach” consultation took place in December 2018 – over 4 years ago and prior to COVID, based on LSS2. The inordinate length of time that has elapsed between the Regulation 18 and Regulation 19 stages greatly challenges the LSS2 and other parts of the evidence base, especially as the pause straddles the COVID epidemic. That would include the transport modelling baseline, and key assumptions in any traffic modelling that took place prior to mid-2022, which is a point at which a reasonable “new normal” post-COVID might be considered to have become established. In that period, Arun District has also adopted its own Local Plan development strategy that accommodates an unprecedented quantum of development immediately east and south-east of the District Boundary – creating additional substantial transport impacts directly affecting the A27 and multiple major approaches to Chichester crossing it.

The established mechanism to fulfil the Duty to Co-operate has thus not operated effectively.

The Plan is not founded on a relevant, proportionate and up-to date evidence base and is thus inadequately justified.

2.2. Spatial Portrait

The spatial portrait is generally succinct and accurate. However, it makes no mention of road-based public transport, the role of the City as a public transport hub, or the range of bus services that provide local connectivity (Section 2.4 and 2.5). The complete concentration of post-16 education in the City itself as just one example of the peculiarities of transport demands in the area, is not highlighted, though this has a profound influence on peak time travel demands affecting the most congested parts of the highway network. Among other things, the role of bus services in supporting the educational system of the plan area is very great indeed.

The potential role of bus in addressing the already-severe transport problems of the plan area and beyond seems entirely overlooked. The spatial portrait is thus clearly inadequate and incomplete.

2.3. Strategic Objectives

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Chapter 9 of NPPF and paragraphs 104 and 105 in particular require that plans should:

“Transport issues should be considered from the earliest stages of plan-making and development proposals, so that:

- a) the potential impacts of development on transport networks can be addressed;
 - b) opportunities from existing or proposed transport infrastructure, and changing transport technology and usage, are realised – for example in relation to the scale, location or density of development that can be accommodated;
 - c) opportunities to promote walking, cycling and public transport use are identified and pursued;
 - d) the environmental impacts of traffic and transport infrastructure can be identified, assessed and taken into account – including appropriate opportunities for avoiding and mitigating any adverse effects, and for net environmental gains;...
- ...The planning system should actively manage patterns of growth in support of these objectives. Significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. This can help to reduce congestion and emissions, and improve air quality and public health...”

The Strategic Objectives do not conform with NPPF in these foundational requirements adequately, to transparently steer the plan strategy. They should therefore be amended to read:

“Plan to provide local infrastructure to support new development and seek opportunities to address existing identifiable infrastructure problems deficits, such as in particular those relating to the A27 and its junctions and wastewater treatment.”

Paragraph 2.36 states, in the context of the Climate Emergency and the National Trajectory to “Net Zero” that “The council will enable the delivery of infrastructure, jobs, accessible local services and housing for future generations while protecting, conserving and enhancing the historic and natural environment.”
Naturally, we support this intent.

However, there is no acknowledgement of the role current patterns of transport use contribute to carbon emissions, nor that substantial mode shift is necessary to address sustainably an acute lack of capacity on the local network and the SRN, especially around Chichester. This is especially concerning as the basic conceptual link is not made between the fact that the greatest such problems lie on the A27 corridor and around Chichester, while these are also at the same time present many of the most sustainable locations for development, and where the opportunities to secure much greater use of sustainable modes also exists.

Strategic Objective 7 “Strategic Infrastructure” includes the following statement:

“To work with infrastructure providers to ensure the timely delivery of key infrastructure to support delivery of new

development. New development will be supported by sufficient provision of infrastructure to enable the sustainable delivery of the development strategy for the plan area. Key infrastructure to support the Local Plan will include improvements to transport, ...

A sustainable and integrated transport system will be achieved through improvements to walking and cycling networks and links to accessible public transport. Highway improvements will be delivered to mitigate congestion, including measures to mitigate potential impacts on the A27 through a monitor and manage process.”

The latest transport evidence in the Chichester Transport Study makes no pretence to define much less to deliver a “sustainable or integrated” transport system. It is wholly devoted to sustaining current levels of car use across the District, to and through Chichester area.

It is no more than the lightest of touches to the approach taken to supporting the adopted Local Plan, an approach that is already almost 10 years beyond the date of its gestation but has yet to deliver any significant capacity improvement schemes, much less any measures that sustain even current levels of public transport journey times and reliability in the face of increasing congestion – much less any betterment.

Of the six key junctions on the A27 around Chichester, recognised to require significant mitigation given they are saturated for extended periods, five accommodate regular bus services - indeed frequent ones at least every 20 minutes in several cases. The sixth at Oving Road, relates directly to a key corridor where bus services are needed to support strategic growth currently being delivered at Shopwhyke, as well as substantial further growth West of Tangmere (proposed allocation A14) and “East of Chichester” (A8), south of Shopwhyke Road.

As stated at p12 of the Study Summary “The modelling shows that all the junctions on the A27 Chichester bypass are well over capacity, even before adding in the Local Plan development and with the exception of Portfield Roundabout are actually shown to be over capacity in the base model year (2014) in one or both peaks”. This much has indeed been evident for years from delay and periodic even more severe disruption arising to Stagecoach services from the lack of network resilience.

The reassignment of through and local traffic through Chichester to avoid the A27 bypass is an especially serious issue for bus services that penetrate the city. This is leading to consequential saturation of a range of junctions used by buses. Rising delay and unpredictable running times are at the root of our decision to sever the long-established Portsmouth to Littlehampton service in 2023, which will in future no longer run across Chichester, but terminate to provide additional dwell time to mitigate the impacts of congestion.

While this congestion affects all road users including businesses and freight traffic, the effect on scheduled bus services is greatly higher, as such services cannot reassign route to ‘beat the queue’. Traffic congestion often encourages greater car use for this reason, in tandem that people are happier to sit for extended periods in their own vehicle on a seamless door-to-door journey than wait at the roadside for a delayed bus making slower progress in lengthy queues.

As the Study admits at para. 1.3.2 “Although, there have been works at the Portfield Roundabout in this timeline, no other mitigation schemes have been completed along the A27 corridor, as such the mitigation schemes defined in this report will also be required to consider the development from this plan period.”

In other words, in the 8 years since the current Local Plan was adopted in 2015, there has been minimal progress in delivering the traffic mitigations. There is no clarity at all when any such mitigations will be brought forward. It is hardly surprising then, that traffic conditions have deteriorated. The “predict and provide” transport strategy supporting the current plan has failed.

Despite this, the Draft Local Plan Review proposed to “double down” on exactly this strategy. It represents, like the rest of the evidence base, a “rolling forward” of the current car-based strategy by 9 years, with the lightest of touches to attempt to accommodate car trip demands from a relatively modest additional development quantum.

Nevertheless, the Study requires a global 5% reduction in trip demands arising from unspecified “credible” (paragraph 4.1.2) sustainable transport and travel planning measures. It is unclear why use of non-car modes will see disproportionate growth when no measures are in place to make them more attractive. This 5% increase in use translates to a doubling in the modal share of bus services. There is no evidence nationally, anywhere, that simple ignorance of alternatives to the car is the main barrier to uptake.

The outputs of the 2023 Chichester Area Traffic (SATURN) model are set out at Table 5.1 (am peak) and 5.2 (pm peak) without mitigation. These betray just how seriously compromised the whole network around Chichester is, and will be in future, even with implementation of a mitigation package to increase traffic capacity that is understood to cost between £92m and £164m – and which the Study and the draft plan acknowledge cannot be delivered through developer funding sources alone. Unspecified external funding presumably from HM Treasury through DfT is required.

Even if this provided and the schemes are delivered, Tables 8.1 and 8.2 indicate these will provide minimal relief. The final columns suggest key junctions, including Portfield, Fishbourne Road and Cathedral Way East will remain at well over 100% ratio of flow to capacity (90% is considered the point at which saturation is approached, with the onset of increasing delay above that figure). RFCs in tables 8.1 and 8.2 are some of the highest we have ever seen in a local

transport evidence base for a post-mitigation scenario. While the serious potential risk of reassignment across Chichester City is greatly reduced, which is important and welcome given its impact on bus services, Tables 8.1 and 8.2 show the extent of post-mitigation saturation is also egregious, covering a very large number of key links and junctions.

On every measure and criterion, then, including cost deliverability and effectiveness, the revised Transport Strategy falls well short of evidence to suggest the transport impacts of the plan can be properly addressed by this means.

Despite the repeated statements about sustainable modes throughout the draft plan and Chichester Transport Study, only 2 paragraphs at Section 6.2 within the Study are devoted to public transport:

“6.2.7 The funds generated from the parking management schemes, local/nation funding schemes and developer contributions could also be utilised to fund potential public transport enhancements within the city centre including an expansion of the bus priority lane system within Chichester City Centre. This could reduce reliance on the car in the longer term towards sustainable public transport. A park and ride scheme could be incorporated within a bus priority lane network in the future depending on the uptake and successfulness of early bus priority trials.

6.2.8 Chichester City centre has a constrained existing public highway network. Therefore, any proposed dedicated public transport or light transit corridors that could be implemented would be at the expense of existing highway. This could be managed through a time-based system where certain routes are restricted to public transport only during specific times. E.g., peak hours.”

There is some very high-level consideration of Park and Ride following this section. None can be considered a serious practical evaluation of consolidating car-borne trips onto bus services, including existing ones, for example local mobility hubs, more frequent bus corridors, delivery of specific bus priorities.

None of the discussion of alternatives to “predicting and providing” for unconstrained traffic growth is rooted in a deliverable evidence base, or proper evaluation of options and specific projects.

To take just one aspect of the few specifics that can be picked out, a workplace parking levy is hypothesised. This would apply only to “offices”, in Chichester city centre (para 6.2.3), without consideration given as to how this could be practically achieved or even that a meaningful amount of office based employment would qualify. Much less is any consideration given to how far focusing a strategy only on office-based workers would actually deliver a particularly significant effect, apart from to create a strong incentive to relocate offices out of the city centre to places out of reach by public transport.

Looking at the Chichester Transport Study 2023 and the draft plan together, there is insufficient evidence that the traffic capacity increase proposed in the 2023 Transport Study is any more affordable or technically deliverable, or likely to be sufficiently effective, than those in the past strategy. The evidence more strongly points to the fact that no highway improvements are identifiable or economically deliverable to meet even short term increases in demand for car-borne mobility on most of the network around Chichester.

There are no published strategies or schemes clearly supporting the contention that the objective of improving sustainable modes is technically achievable or deliverable either. The plan makes generalised assertions that such strategies will be devised and implemented only after serious problems emerge from a shortfall in the car-borne transport strategy.

The reference to “monitor and manage” is undefined and unsubstantiated. There are no outcomes stated, no mechanisms specified and no timescales for action.

Our experience today is that network conditions have reached unacceptable and prejudicial levels of severe unpredictable delay. The saturation of the network is already evident well outside the traditional peaks on key sections of highway and at key junctions. External shocks such as the effects of severe weather are becoming more common, leading to delays so extreme as to justify the description of “gridlock”. The plan does not identify a strategy to effectively address this, in particular by consolidating passenger car trips onto more efficient public transport vehicles. This is unacceptable to Stagecoach.

2.4. Local Plan Vision

Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the broad approach in Plan Vision and in particular that by 2039, the Plan will support and enable greater use of sustainable modes. However, there is no link made between reducing the use of private cars, and the need for a step change in the use of sustainable modes. Without a published transport evidence base it is impossible to establish a suitable sustainable transport strategy to support both carbon reduction and alleviation of the problems arising from acute congestion. Even on a very crude basis, to achieve a meaning mode shift on key approaches to the A27 Chichester Bypass will require more than 20% of existing peak car-borne journeys to transfer to other modes. A 10 percentage point transfer to bus (about half this shift) would imply more than doubling peak hour bus passenger

boardings.

The Vision is nothing more than an aspiration, that needs to more definitively aim at key outcomes, for the plan to be effective. The Vision should thus be altered to read:

“Get about easily, safely and conveniently with less reliance on private cars –making the greatest possible use of the rail and enhanced bus network, and with more opportunities for active travel including walking and cycling; to materially reduce dependence on private car use.”

Underpinning the Plan’s spatial strategy, the Vision section goes into more specific detail about key localities in the Plan area.

Regarding Chichester, Paragraph 2.39 states: “The emphasis will be upon consolidating and enhancing the role of Chichester city as the plan area’s main centre, whilst also developing the role of key settlements to its east and west. The focus will be upon creating communities with good access to a range of employment opportunities and affordable housing for young people and families to balance the ageing population.”

This is clearly the appropriate focus for meeting the District’s development needs in a sustainable manner. The city and key settlements to the east and west, are those places already able to make use of relevant public transport services, both rail and bus. Especially within and near the City, walking and cycling can credibly present highly relevant choices. This emphasis clear can be expected to address the requirements of sustainable development set out in NPPF and their local application set out in the Plans Strategic Objectives.

However, this needs a robust transport strategy, to avoid a further concentration of development and its traffic impacts occurring on or near some of the most chronically congested parts of the highway network. To date, the absence of intervention has strangled the bus network through further marked deterioration in traffic conditions. This by consequence increases the risk of bus delay or cancellation, lengthens journey time and reduces customer confidence in bus as an attractive alternative mode of travel.

In April 2023, Stagecoach is making significant timetables changes to improve operational resilience in and around Chichester. The biggest such change is the severance of the Portsmouth to Littlehampton section of service 700, at Chichester, with buses operating independently to the east and to the west and ending cross-city links. This is planned to reduce the probability of delay but at the cost of additional vehicle resource (circa £200,000 per annum) which could be better spent providing new or enhanced services. We anticipate a small loss of custom as a direct consequence of the change, but have little choice other than to take negative action so as to fulfil our statutory punctuality obligations.

If the Strategic Objectives of the Plan and its Vision are to be achieved, in the way required by NPPF paragraphs 104-105, a properly-evidenced transport mitigation strategy needs to create the conditions where bus journeys are more reliable than car journeys and thus mobility demand switches as far as can be realistically achieved away from car use, to bus use and other more sustainable modes.

Beyond Chichester, the Plan Vision focuses on key localities beyond to the east and west.

To the west of Chichester a focus on growth at Southbourne is justified at paragraph 2.43: “...the aim is to take advantage of the village’s good transport links and existing facilities to deliver significant new residential-led development within the broad location for development which will further enhance local facilities and offer opportunities to reinforce and supplement existing public transport, including bus routes.”

We agree this is a very significant opportunity. However, if the requirements of NPPF paragraphs 104-105 are to be met, this demands that effective bus priority is delivered on the A259 corridor, especially eastbound at Fishbourne and westbound approaching Emsworth. Without such measures, the growth committed and planned will serve only to further undermine bus journey time and decrease punctuality on the existing 700 service, entirely contrary to the aims of the Vision.

The emphasis on the A259 corridor served by Stagecoach 700 west of Chichester is reinforced at paragraph 2.45 stating that “Between Chichester and Southbourne, the Plan provides for more moderate levels of growth within the parishes of Fishbourne, Bosham and Chidham & Hambrook, ... with opportunities to support and expand existing facilities and for increased use of public transport options”. We strongly support the principle, but the Plan must follow through with specific public transport priority measures that facilitate rather than prejudice such an outcome.

East of Chichester the focus is at Tangmere, where the existing allocation for about 1000 dwellings is being uplifted by 300. Paragraph 2.44 justifies this among other things recognising the scope for “...improved and additional bus services and cycleways will provide better connections to Chichester city and east to Barnham and the ‘Five Villages’ area in Arun District.” We unequivocally endorse this conclusion. Realising a “game-changing” level of bus service quality, reliability and frequency east of the city, also serving committed and planned development north and south of Oving Road at Shopwhyke, is equally essential, given that all SRN links and junctions are approaching equal saturation.

The National Bus Strategy has given new focus on partnership with West Sussex County Council to discuss and deliver a significant new bus service between Chichester, Shopwhyke, Tangmere, Eastergate and Barnham, supporting committed development and acting as an initial phase of what ought to be a more ambitious longer-term strategy to support growth

beyond 2025 in both Chichester and Arun Districts. For these improved bus services to be both deliverable and effective, robust bus prioritisation is unavoidable. No such measures are proposed in the Plan or its evidence base and we therefore suggest inclusion of plans to facilitate safe and efficient bus operation between Tangmere and Nyton/Eastergate, ideally avoiding the need to join A27 through-traffic entirely.

We welcome the clear recognition that these localities identified for growth, benefit from existing relevant public transport services. The Vision also sets an expectation that bus services in particular should be “enhanced” and “reinforced”.

We entirely agree that these opportunities exist, across the broad strategy and strategic allocation proposed by the draft Local Plan. Securing them will be crucial to achieving national and local policy objectives, including the Strategic Objectives. However, to our continuing very great dismay, the Plan goes no further to defining how this will be achieved. As such the Vision is not demonstrable achievable or deliverable.

Accordingly the Plan cannot be considered effective, in the sense of NPPF.

Remedying this, demands specific measures to protect bus services from congestion in the following corridors:

- A259 East of Emsworth
- A259 Fishbourne
- A 259 Via Ravenna/Cathedral Way
- A286 Stockbridge Road north and south of A27
- B2145 Whyke Road/Hunston Road
- A259 Bognor Road, east and west of A27 and extending to the District Boundary
- B2144 Oving Road/Shopwhyke Road east and west of the A27
- A 285 Westhampnett Road/Portfield Way/Stane Street, potentially involving a mode filter at the west end of Stane Street

These must be defined to a sufficient level of detail to assess their effectiveness and deliverability, including costs.

This would then allow West Sussex County Council and Local Transport and Highways Authority, ourselves as the principal bus operator, and where appropriate other organisations that would be directly tasked with delivering the mitigation package, to agree service levels and standards necessary to deliver specified outcomes, including journey times, frequencies, capacity and hours of operation on the network, and also in respect of the strategic allocations and Strategic Locations for Growth.

The agreed mitigations strategy should be set out in an up-to-date Infrastructure Delivery Plan backed by clear funding commitments, including a funding strategy to justify necessary developer contributions.

Where necessary to support evidence of effectiveness and deliverability, clear statements of support, which might include Statements of Common Ground between the LPA, LTA, National Highways and Stagecoach, could be provided.

3. Spatial Strategy

Stagecoach Supports

Stagecoach well recognises the constraints outlined in the explanatory narrative at the start of Chapter 3.

In particular we strongly endorse that strategy in that it reflects that the best opportunities to meet housing and employment development requirements sustainably clearly exist in and close to Chichester and on the key east-west movement corridor where – subject to effective measures being delivered to make these modes more attractive, efficient and relevant – sustainable modes can credibly provide for a much higher proportion of movement demands, mitigating most effectively the potential traffic impacts of development.

We agree that the Manhood Peninsula suffers serious environmental constraints, but, added to these, public transport and other sustainable modes cannot provide such attractive alternatives, and significant further development risks merely reinforcing already high levels of car use, aggravated by the carbon impacts of the distances involved – something the plan does very little to evaluate, and makes no reference to.

We endorse the conclusion in paragraph 3.24 that significant development in the part of the District north of the National Park is inappropriate. The rationale is principally on landscape and visual character. This exposes a fundamentally biased approach to plan making that has consistently underplays transport accessibility and carbon issues. In fact, the lack of local services and the extended distances that need to be travelled to fully participate in society in this area, with no realistic prospect of public transport offering relevant choices, ought to rule such a strategy out of play on a far less aesthetic and interpretational basis.

3.1. Policy S1 Spatial Development Strategy

Stagecoach Supports

The Spatial Strategy flows clearly and logically from the Spatial Portrait, and the opportunities and constraints identifiable across the Plan area. It represents a logical and justified continuation of the existing Local Plan strategy. In particular the spatial strategy maximises the potential for sustainable modes to contribute to meeting a much higher

proportion of all the District's mobility and accessibility needs.

3.2. Policy S2 Settlement Hierarchy

Stagecoach Supports

The settlement hierarchy clearly reflects the service endowment and potential self-containment of the settlements in the District. In particular, the second tier of settlement hubs includes secondary schools, which are major peak trip generating uses. Service villages, in the main, also benefit from bus services running at least hourly, which can be expected to provide for a degree of mobility for the higher number of trip purposes that cannot be satisfied by walking or cycling within the immediate locality. Thus, a level of development to meet local needs in this tier is relatively sustainable.

There is a quite broad range of settlements in this category. We have concerns that, north of the National Park, the Service Villages have no realistic public transport choice. These include Plaistow/Ifold, Kirdford, Loxwood, and Wisborough Green. Such as exists is typically a 1/bus per day off-peak shoppers service offering up to 90 minutes in Horsham or Guildford and as such any development here even to meet local needs requires each adult to own a car. This contrasts strongly with Service Villages to the south of the National Park, which are greatly more sustainable.

4. Climate Change and the Natural Environment

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This section of the plan is extensive and wide ranging, as should be expected.

However, remarkably, there is no acknowledgement whatever of the role of transport in mitigating climate change or its effects, not of the importance of sustainable movement and access being facilitated across the plan area in addressing anthropogenic impacts on the natural world at a more local level.

This exposes very clearly a troubling level of indifference to transport matters in the production of the Plan, which, while nationally quite common, is neither appropriate nor acceptable. The mitigation of transport impacts is not merely a matter speaking to the social and economic aspects of sustainable development. It is crucial to address the causes and effects of climate change that arise from transport, and personal mobility.

This is now well understood and at the centre of national policy, including the National Decarbonisation Strategy for Transport (July 2021) which at Section 5 commits the government to aligning land use planning and transport strategy much more tightly and effectively to mitigate the carbon emissions associated with the current dependence on cars, and the mode mix; but also to reduce travel distances, both increasing the potential relevance and effectiveness of all sustainable modes, and reducing average journey lengths for residual motorised journeys of all kinds.

National statistics show that well over a third of all domestic carbon emissions arise from land-based transport and of these, the vast majority arise from trips of over 10km – outside the range of large scale use of cycling. In fact, the potential of the plan to materially support carbon emissions reduction from within the plan area lies more in the realm of transport than any other policy theme – including emissions mitigation from buildings, which is in any event an aspatial matter and covered by nationally-binding building regulations. By 2025 something like 40% of all the emissions within the plan-area will be transport related.

There is no evidence supplied to support the plan that addresses the transport carbon impacts of the spatial development strategy in a clear manner.

There is no evidence supplied that sets out the effects of potential worsening of congestion on air quality within the plan area, arising entirely from the excess of passenger car movement demands over available and credibly deliverable highway capacity. This is despite the evidence set out and acknowledged in the explanatory memorandum at paragraph 4.130:

"4.130. The council's Air Quality Action Plan and the West Sussex Transport Plan 2022-2036 both refer to the air quality issues faced by Chichester. There is currently one Air Quality Management Area (AQMA) in the plan area, located at St Pancras, Chichester. AQMAs are designated where air quality exceeds, or is likely to exceed, national air quality standards and objectives. Development within or impacting these areas, or that likely to cause the declaration of any further AQMAs, will be subject to an air quality assessment by the applicant."

This is a retroactive approach – it is not "planning", based on evidence.

We are well aware that air quality issues in and of themselves can render allocated sites to be undeliverable: a good example is in the Vale of White Horse, Oxfordshire, where strategic allocations on the A338 and A420 corridors have been held up for years by air quality issues at Marcham and Frilford, in large measure because agreed transport interventions were considered inadequate or undeliverable a very short time after the Plan was examined and adopted.

There is no evidence that shows how the development strategy can effectively mitigate these impacts as well as the further potential impacts that arise from the development strategy. This is exasperating, as there is clear evidence that

could be drawn upon to show that that very substantial opportunities exist to:

- Speed buses up and make them more reliable by the delivery of bus priority on most of the key main corridors. Most of these even today operate relatively frequently
- Improve service frequencies and extend hours of operation.
- Secure significant background mode shift to bus as a result, damping pressure on key links and junctions, by consolidating demands on direct more reliable and more frequent bus services.

The spatial development strategy as submitted is in fact, likely to well conform to such additional evidence.

The allocations require substantial additional transport related work and evidence to demonstrate that the opportunities for sustainable transport have been identified and taken up as required by NPPF paragraphs 104-105.

With regards to specific policy, Policy NE22 should be modified to read:

"Development proposals will be permitted where it can be demonstrated that all the following criteria have been addressed:

1. Development is located and designed to minimise traffic generation and congestion through access to by maximising the relevance and attractiveness of sustainable transport modes, including maximising provision of specific demonstrably effective measures to make pedestrian and cycle and public transport routes and networks more direct, more safe, faster and more reliable;..."

5. Housing

5.1. Policy H1 Meeting Housing Needs

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

The presumption of the planning system is that local planning authorities should seek to meet their objectively assessed development requirements in full. These needs are assessed by a defined Standard Methodology set out in Planning Practice Guidance and elsewhere, that has explicit regard to ensuring that the economic and social effects associated with housing are properly provided for, to avoid exacerbating serious problems that arise from inadequate housing supply.

As a significant local service provider and employer, Stagecoach is concerned that existing issues with housing availability and affordable housing supply are not exacerbated. This has a direct bearing on staff recruitment and retention. It also has an indirect bearing on our cost base.

The existing problems with housing affordability have developed over many decades of undersupply. It should be emphasised that the significant boost to the supply of housing that has been sought by governments over the last 15 years, has only begun to take effect relatively recently in this District. Tackling the problem will require years of consistent attention.

Stagecoach notes that the Council is no longer proposing to meet its identified housing needs in full. Rather than 638/annum the Council is allocating a total that implies an annual delivery rate of 535/annum.

While a number of matters evidently present challenges to the Council in identifying a sustainable development strategy. Paragraph 5.2 indicates that "constraints, particularly the capacity of the A27 has led to the council planning for a housing requirement below the need derived from the standard method..." The blame for being unable to meet housing requirements is thus laid squarely at the door of transport infrastructure and systems.

This conclusion in no way follows from the evidence in the Chichester Transport Study. This, rather, makes the statement that when a higher annualised quantum of 700 dwellings per annum was tested, in the majority of cases the traffic capacity improvement package would perform little differently. To quote the Study:

"5.6.3 The network performance outputs analysed comprising V/C%, Delays (seconds) and Queues (PCU's) suggest that generally the proposed SRN mitigation identified for the Core Scenario, can accommodate in the most part, additional increase in development to 700dpa."

Whether the rest of the local road network is similarly protects is moot.

Irrespective of these results, even if the contention made in the draft plan were true, unlike many other constraints, this is amenable to a suitable effective strategy to address the constraints identified being collaboratively conceived. This is what NPPF expects, as set out in paragraphs 104-106.

Where the A27 is concerned, as part of the SRN, National Highways is now working to a substantially revised approach than that in force at the time to current Local Plan was prepared, or LSS2, or reflected in the Chichester Transport Study. This is set out in DfT WMS 01/22. This document is the policy of the Secretary of State for Transport in relation to the

SRN which should be read in conjunction with the National Planning Policy Framework (NPPF). It replaces the policies in the Department for Transport Circular 02/2013 of the same title.

It makes plain that to accommodate additional demands arising from development, National Highways (NHC) expects to meet the requirements of its statutory license in a substantially different manner. With respect to development NHC LTN 01/22 continues to address the tensions between national policy for the environment and carbon mitigation, the ongoing need to substantially boost the supply of housing as well as maintain national economic competitiveness and protect the safety of the public. However, in future, the approach will be to seek first to maximise the impact of demand management measures (reducing the need to travel), and then to accommodate residual additional demands first though maximising the use of sustainable modes, rather than accommodating assumptions about current levels of car dependency and use.

LTN 01/22 much more closely and explicitly aligns with the language of NPPF Chapter 9 paragraphs 104-106. Paragraph 12 states: "New development should be facilitating a reduction in the need to travel by private car and focused on locations that are or can be made sustainable.... Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas." (our emphasis).

It continues at paragraph 13: "where developments are located, how they are designed and how well delivery and public transport services are integrated has a huge impact on people's mode of travel for short journeys. The company will therefore expect strategic policy-making authorities and community groups responsible for preparing local and neighbourhood plans to only promote development at locations that are or can be made sustainable [footnote 8] and where opportunities to maximise walking, wheeling, cycling, public transport and shared travel have been identified." (again, our emphasis)

Stagecoach readily confirms that the draft Plan development strategy conforms well to the first limb of this expectation, in terms of the location of development.

Stagecoach considers that the plan and its evidence base conforms poorly to the second in that the specific opportunities to maximise walking, cycling wheeling and public transport are not clearly identified, and defined, and proven to be effective and deliverable.

The current mitigation strategy for the A27 Chichester area, supporting the adopted Local Plan and for which proportionate developer contributions have and continue to be sought, reflects now-superseded DfT Circular 02/2013. As a direct result, it failed completely to identify any significant effective bus priority measures, despite the fact that frequent services already exist on the key corridor concerned, and that one bus journey can remove, fully seated between 72 and 80 single occupancy car journeys from congested links and across key junctions on the A27. Rather, it sought to implement targeted measures to increase the throughflow of general traffic.

We recognise the realisation that this approach, which was already reliant on some tenuous logic, is simply not technically viable, especially where further development needs are anticipated.

National Highways will now pursue an approach with the planning system that "includes moving away from transport planning based on predicting future demand to provide capacity ('predict and provide') to planning that sets an outcome communities want to achieve and provides the transport solutions to deliver those outcomes (vision-led approaches including 'vision and validate,' 'decide and provide' or 'monitor and manage'). The company will support local authorities in achieving this aim through its engagement with their plan-making and decision-taking stages." (paragraph 15).

Paragraph 23 is at the fulcrum of assessing and defining transport mitigations to accommodate growth on and near the SRN "Capacity enhancements such as modifications to existing junctions or road widening to facilitate development should be determined on a case-by-case basis. The general principle should be accepted where proposals would include measures to improve community connectivity and public transport accessibility, and this will be weighed against any negative safety, traffic flow, environmental and deliverability considerations, impacts on the permeability and attractiveness of local walking, wheeling and cycling routes, and alternative options to manage down the traffic impact of planned development or improve the local road network as a first preference." (our emphasis).

However, no material work has been done that seeks to identify if a bold robustly conceived and suitable judiciously-prepared strategy that seeks to consolidate flows on already densely travelled corridor onto improved bus services, driving mode shift through insulating these services preferentially from already serious queuing. This would be likely to have very substantial impacts on all the key junctions on the A27, and potentially, on the A27 itself. The need for an integrated approach between Shoreham and Emsworth within West Sussex paying particular regard to development requirements in both Arun and Chichester Districts naturally lies at the heart of this, and we would expect to be picked up by the LSS3 Review among other things.

However, the locus of the problems and its causes and effects are obviously well enough known to start work on defining solutions within the plan area today. We would expect that this work will be essential if National Highways are to support the Plan, especially now given the terms of Circular 01/2022.

Such work could and should start from a “policy off” position: in other words that the Plan should fully accommodate its needs unless it can be proved that a mitigation strategy for the A27 that is compliant with DfT WMS 01/2022 cannot credibly accommodate resulting capacity demands without unacceptable impacts on the safety and efficient operation of the SRN.

This evidence does not exist. In fact the Chichester Transport Strategy 2023, on which the Council solely relies as its transport evidence base, indicates the opposite at para 5.6.3. This is the case before meaningful measures to secure damping of traffic demands through mode reassignment are even considered.

The exception to this is Portfield and Oving Road, which are among the most problematic areas after mitigation even at the Council’s chosen 535 dwelling/annum scenario (para 5.6.4.-5). The costly capacity mitigation simply cannot deliver enough benefit. It is admitted that WSCC has indicated that it would prefer a solution that places greater reliance on sustainable modes damping car-borne demand. This is entirely the strategy required by NHC to follow LTN 01/22, of course. Despite the fact that “predict and provide has “run out of road” no attempt has been made to examine what such a solution set credibly could look like. This is unsatisfactory and deeply troubling.

At paragraph 5.4 the draft plan points back again at the West Sussex and Greater Brighton Strategic Planning Board and the future work that has been commissioned, but has barely begun, to update the Local Strategic Statement. This work is to inform the preparation of plans that have horizons beyond the end date of the current LSS in 2030 and properly to meet the Duty to Cooperate. As we said in our response to section 1 of the Plan we fully endorse the conclusion that this is the right mechanism to look at these issues. However, the mechanism has not been effectively applied to the production of this plan. Therefore, the specific evidence that capacity on the A27 in and of itself supports accommodating a lower housing requirement does not exist.

The Plan thus does not conform to NPPF, is not adequately justified and is not effective.

The Plan does not properly meet the statutory Duty to Cooperate.

We will return to this matter in specific representations to Section 7 of the draft plan.

5.2. Policy H2 Strategic Locations/Allocations 2021-2039

Stagecoach Supports

Policy H1 makes plain that the plan, as far as it identifies locations for development has done so in locations that conform with its spatial strategy. All of the strategic allocations to a greater or lesser extent offer clear opportunities to make use of sustainable modes, by virtue of their location. That is not to say that the opportunities to take up these opportunities, and maximise the role of sustainable modes, has been identified, defined and translated properly into the rest of the plan policy suite or Infrastructure Delivery Plan.

As our remaining representations make clear, we support the locations thus far identified as being those that offer the best opportunities to reduce the need to travel, reduce travel distances, and create high quality attractive sustainable travel choices, for both existing residents as well as new ones.

However, the transport impacts of the allocation will individually and cumulatively likely to lead to increasingly severe impacts on the transport network, and on bus services.

Perversely, because these opportunities are not properly identified and secured through the plan and its supporting transport strategy, the opportunities presented by the allocations to secure a substantially more sustainable and lower carbon pattern of movement will not only risk being squandered but may aggravate the wider problems.

5.3. Policy H3 Non-strategic Parish Housing Requirements

Stagecoach Supports

The approach is consistent with the plan’s spatial strategy. It generally avoids a dispersal of development to locations likely to be highly car dependent. There is a clear focus on meeting housing needs in the far north-east of the District at the largest and most sustainable settlements, such as Loxwood, Kirdford and Wisborough Green. However, it must be pointed out that public transport availability in this area, provided by the County Council through services it procures, is minimal. These settlements in practice require each adult and child of secondary school age to have access to motorised transport to fully participate in society. This might justify significant measures to secure a boost in the frequency of bus services between Guildford and Billingshurst, passing through these settlements.

Otherwise, existing commitments in the plan area already make provision to meet for local needs. To the degree that there is an unmet local requirement for affordable housing of a small scale – for example to support the rural economy – this could be met through neighbourhood plans or through Rural Exception Sites.

6. Place-making, Health and Wellbeing

6.1. Policy P1 Design principles

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

NPPF requires that proposals should consider transport issues from the earliest possible stage. Designing to properly facilitate safe and efficient access, focusing first on sustainable modes, should be at the heart of development design. Too often it is still an afterthought, notwithstanding this.

Policy P1 must include an additional statement to be compliant and effective with NPPF paragraph 104-105 and 112 a): "Development will be designed to make access and movement using walking, cycling and public transport the natural first choice, and demonstrate through the Design and Access Statement how such modes are afforded the most direct, safe, reliable and efficient routes within to and from the proposals, especially when compared with car use."

6.2. Policy P4 Layout and Access

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

A number of proposals in the plan involve large-scale development. It is essential that where appropriate buses can access and circulate efficiently through development at a suitably early stage. There is no acknowledgement of this anywhere in the policy, contrary to NPPF paragraph 112.

Large-scale development which buses cannot access in an efficient or timely manner, or at all, strongly contributes to high levels of car-dependency. Evidence for this is referred to among other places, in DfT Circular 01/2022. To be compliant with NPPF and properly pursue its strategic Objectives, Policy P4 needs to be modified to address this point: "1. Provide safe, direct and attractive conditions for inclusive access, egress and active travel between all locations and providing as good direct high quality links to integrated public transport, and where appropriate efficient access and circulation to bus services, unimpeded by excessive parking, at a suitably early point in the development phasing;

7. Transport and Accessibility

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

The issues related to transport are fundamental to the soundness of the Plan. In particular, the constraints presented by the capacity on the A27 around Chichester and its key junctions, are the paramount reasons why the Council does not consider it can meet its objectively-assessed development needs in full. Thus, the transport issues and potential solutions available and what these mean for the ability of development needs to be accommodated, are matters that go to the heart of the soundness of the Plan.

Paragraph 8.3 sets out the approach taken to date succinctly:

"Increasing the capacity of the road network is key to supporting growth in the Local Plan. However, there is also a need to reduce demand for road transport to achieve net zero in greenhouse gas emissions by 2050 as highlighted in the council's Climate Emergency Action Plan and Strategic Objective 1. In aiming to achieve the ambitions of the action plan, all development is expected to demonstrate how it will support four key objectives to create an integrated transport network which will alleviate pressure on the road network, improve highway safety, encourage sustainable travel behaviours and help reduce transport related impact on air quality, by:

1. Avoiding or reducing the need to travel by car;
2. Enabling access to sustainable means of travel, including public transport, walking and cycling;
3. Managing travel demand; and
4. Mitigating the impacts of travel by car."

However, this approach is unambitious and "lightweight" as it assumes, as does the existing Chichester Transport Strategy on which the current adopted plan relies, that the focus of investment should be, wholly, in highways capacity improvement.

Sustainable modes explicitly are expected to play a greater role to "alleviate pressure" on the local road network, as part of this strategy. To emphasise: to avoid exacerbating congestion, the strategy will have to both remove a significant proportion of existing demands from the network on multiple key approaches to Chichester; and then ensure that travel demands from committed and further new development allocated in the plan does not simply replace these journeys, or, worse, create even greater demands.

This will demand very significant behaviour change. Only by making sustainable modes substantially more attractive, both absolutely, and relative to the same journey made by car, can this be expected to occur. However, the explanatory

memorandum as well as the wider policy suite and IDP, well expresses a fundamental unwillingness to taking specific, defined measures to achieve this reduction in car use and material promotion of sustainable modes. It makes plain that sustainable modes, including bus services, will offer a lesser role to which "access will be provided".

Such a vague and weakly defined mechanism will have no effect, at all, on current behaviour and car dependency if the relevance of those choices as a credible alternative to car use, is not substantially boosted. This includes a 5% reduction in trip demand assumed by the Traffic Model at the heart of the Chichester Transport Study 2023.

For this reason, the transport strategy behind the current adopted plan is demonstrably ineffective, as the updated model makes plain. It has not yet been delivered and is yet unclear when or (in the absence of committed funding) even if it can be. It is ineffective to "roll forward" this strategy to support a higher level of planned growth.

We note that a scheme for addressing congestion on the A27 at Chichester has been included in Roads Investment Period 3 (2025-2030) – well within the horizon of this Plan. However, recent history provides compelling evidence that off-line improvement to the north is not politically supported and arguably even technically or economically deliverable. It is not funded, nor at this stage can it be hypothesised if an economically deliverable scheme is achievable sufficient to warrant the necessary investment.

An on-line improvement of the A27, including junction improvements, is likely to favour longer distance east-west though movements, which are of greater significance to the national economy, at the expense of local movements crossing the SRN- a conundrum that largely sums up the dilemma that is faced by NHC and the County as Highways and Transport Authority. It is one that is played out in many places, but rarely is the tension so stark as at Chichester.

Every local route crossing the A27 at grade around Chichester accommodates a regular bus service - or shortly will do (Oving Road area is expected to follow in 2023, though bus services are likely to not use the modified crossroads but to use the left-in-left-out facilities provided as part of the Shopwhyke Lakes development). The impact of these issues on the entire bus operation are serious and increasingly severe.

By the same token, boosting the relevance and reliability of each of these services substantially consolidating as much demand as possible onto a much smaller number of vehicles, is clearly a strategy that ought to support the effective capacity of each of these junctions being greatly augmented, at the same time as reducing equally substantially, the energy- and carbon intensity of mobility in the plan area. Addressing the A27 should not be considered some kind of "zero-sum" game.

Furthermore, the approach of National Highways in its dealings with development and the planning system now reflect a substantial change in Government Policy set out in DfT Circular 01/2022, which we separately cover in these representations, that entirely aligns with an approach that seeks to appropriately invest in more active and rational management of scarce highways capacity, on both the SRN and local roads.

For environmental, economic and social reasons – including public health, the issues presented by the A27 and its interface with local roads around Chichester stands out, nationally, as an example of where the approach taken to accommodating and mitigating development impacts needs to make a clear break with previous "predict and provide" approaches to meet forecast unconstrained car use as LTN 02/2022 makes clear as a principle. Policy in the West Sussex LTP to 2036 itself makes plain that "shared mobility" – including bus services – must play a much greater role in this area.

The existing Chichester Area Transport Strategy is focused on justifying capital contributions from committed development to fund highways capacity improvement – with nothing included to make bus services more attractive, or importantly more reliable. Indeed this "cars first" approach is so costly, that there is already accepted by WSCC to be insufficient land value remaining to be captured to put into substantial improvements for public transport. That much is very evident, and transparent, from paragraph 8.12 and 8.14, where south of Chichester "This (one) package of works (of several improvements needed) would be between £57.23 and £82.79 million to deliver in full and would not be capable of being funded by development contributions alone." This assumes the scheme is otherwise deliverable, which on the evidence in the public domain for some time, has been considered challengeable.

The draft Local Plan and a modestly updated infrastructure package that flows from the 2023 Chichester Transport Study, pursues exactly the same approach.

This strategy is also even more ineffective having regard to the roll forward of the Plan to 2039. It cannot deliver the key Strategic Objectives of the Plan; and in particular this is explicitly recognised by the Council in the failure of the draft Plan to accommodate the OAN in full.

It is also obsolete, as it does not align, from first principles, with national policy (including the National Decarbonisation Strategy for Transport) and DfT Circular 01/22; nor the Council's own declared Climate Emergency.

As a result, draft Policies T1 and T2 are both unsound, as we will separately explain.

Owing to the lack of evidence about the implications of this for adjoining authorities – especially Adur District – in the

absence of the review of the Local Strategic Statement – this has implications for fulfilling the Statutory Duty to Co-operate.

The absence of any meaningfully comprehensive refresh of the transport evidence base means that there are no meaningful schemes of any kind, defined in the plan or its IDP, to indicate either what level of growth can be accommodated, by delivering a change in travel behaviour. This would be aimed to secure a sufficient effective increase in junction throughput (measured in terms of person trips as opposed to passenger car unit movements (PCUs)). Such evidence would propose measure to achieve that outcome and assess the efficacy and costs of such improvements, across all modes.

Paragraphs 8.10-8.13 inclusive indicate that the Council “has moved away from ‘predict and provide’” and invites the reader to conclude this has translated into a programme of interventions that can be funded to deliver specific, credibly predictable outcomes. Such a programme should be clear in paragraph 8.11. and the IDP. There is no such clarity and this conclusion would be false.

It would also be evident in the language of the Chichester Transport Study 2023 and its refreshed proposals. Only the most token of lip service is paid to the matter. It is a plainly car-focused, predict and provide methodology to support a “predict and provide” strategy. In fact, it is a brazenly car-focused approach, to the exclusion of all else.

The statements in the Plan regarding any other approach, read properly, offer nothing more than a vague commitment to look post-adoption, and implementation, at unspecified measures, based on problems that may arise in future that will be decided by a committee: the Traffic and Infrastructure Management Group (TIMG). This does not yet exist and is obviously an attempt to posit a mechanism that retroactively will cover for the lack of serious multi-party engagement to address the existing and future issues. Such a group should, in our view, also include the public transport operators, not least if the requirements of NPPF Para 106c) are to be satisfied, and the strategy and measures to be adopted are material to supporting the Local Plan, as of course the purpose of the TIMG has as its core raison d’être.

The approach proposed by the draft plan is plainly ineffective and unsound in justifying the draft Plan.

It is more widely unacceptable to Stagecoach. The issues are severe today and well-known, already serving to jeopardise the delivery of buses relied on by existing residents, much less attract new ones.

We also consider that HM Planning Inspectorate are likely to be quite resistant to accepting this aspect of the plan’s transport strategy, nor will it be appropriate for the Council, West Sussex County Council, or National Highways, to define such measures after the submission of the Plan during the Examination process. The Examination in Public of a local plan has no purpose to improve plans, or remedy deficiencies clearly evident prior to submission.

The examination of the West of England Joint Strategic Plan in 2019, and the Uttlesford Local Plan in 2021, among several others, demonstrates especially clearly that the Planning System and the Examination process is not amenable to post-hoc retrofitting of transport evidence and strategies to support a development strategy.

7.1. Transport Evidence Base

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Most of Stagecoach’s serious concerns about the soundness of the plan arise from the fact that it has been prepared in advance of any up-to-date transport evidence and suitably robust transport mitigation strategy being advanced to support it. In essence, the Council has rolled forward the existing plan by 9 years, adding some additional sources of housing supply, while still relying implicitly on a transport evidence base that was prepared 10 years ago.

This led to the formulation at that time of what can only be described as an attempt to develop an effective car-based mitigation strategy, creating capacity for general traffic added to accommodate unconstrained additional demands on an already over-taxed highways network – the Chichester Area Transport Strategy. Despite language in support of sustainable modes, no deliverable measures were identified to support either the extension of the bus network to serve allocated sites, and much less to create a vital improvement to the quality and reliability of public transport services. This approach reflected the approach set out in DfT Ministerial Circular 02/2013 “Development and the Strategic Highways Network”, applicable since the A27, which is the focus of the most severe difficulties, forms part of the national Strategic Roads Network.

This approach has proven ineffective even before substantial elements of housing land supply in the current plan come forward – in particular West of Chichester and West of Tangmere.

In addition, Circular 02/2013 has now been replaced by a new Ministerial Statement of 23/12/2022, DfT Circular 01/2022.

On both counts the transport evidence base and strategy needs to be properly revisited and established to provide effective mitigation for the plan, including current commitments that are being rolled forward.

The language of the current Ministerial Circular 01/2022 offers a highly condensed synoptic view of the proper approach to addressing transport matters in the planning system notwithstanding that it is directly concerned with the Strategic Roads Network. Videlicet:

“31. The NPPF expects local plans and spatial development strategies to be underpinned by a clear and transparent evidence base which informs the authority’s preferred approach to land use and strategic transport options, and the formulation of policies and allocations that will be subject to public consultation. The company will expect this process to explore all options to reduce a reliance on the SRN for local journeys including a reduction in the need to travel and integrating land use considerations with the need to maximise opportunities for walking, wheeling, cycling, public transport and shared travel.

32. The Transport Decarbonisation Plan indicates that carbon emissions from car and van use is the largest component of the United Kingdom’s total transport emissions. While action is being taken to decarbonise transport such that all new cars and vans will be fully zero emission at the tailpipe from 2035, the proposed location of growth in current plan periods and whether new developments would be genuinely sustainable remain important factors in demonstrating that a local authority area is on a pathway to net zero by 2050 and therefore compliant with the requirements of the Climate Change Act 2008.

33. Alongside this, the local authority should identify the key issues within their study area regarding transport provision and accessibility, setting out how the plan or strategy can address these key issues in consultation with (National Highways, and other transport stakeholders identified in NPPF paragraph 106b). It is the responsibility of the local authority undertaking its strategic policy-making function to present a robust transport evidence base in support of its plan or strategy. The company can review measures that would help to avoid or significantly reduce the need for additional infrastructure on the SRN where development can be delivered through identified improvements to the local transport network, to include infrastructure that promotes walking, wheeling, cycling, public transport and shared travel. A robust evidence base will be required, including demand forecasting models, which inform analysis of alternatives by accounting for the effects of possible mitigation scenarios that shift demand into less carbon-intensive forms of travel.” (our emphasis)

Within the text quoted above, references to National Highways and “the Company” can quite legitimately be extended, given the statements in NPPF paragraph 16, 25, 26 and 106b, to include all the relevant transport infrastructure and service providers in the plan area. Circular 01/2022 also has the weight of secondary legislation as a Written Ministerial Statement and thus should be considered to be highly material.

To date there has been little attempt to explore, to the degree necessary, strategies that conform to Circular 01/2022. It is thus not possible to conclude, as the Council has done, that the issues on the A27 that present a constraint to development, are insuperable.

In line with comments made elsewhere in the response to this pre-submission draft, the Plan thus requires substantial further work to be undertaken with key stakeholders to establish a suitably effective and demonstrably deliverable transport mitigation strategy, to sustainably meet the District’s identifiable development needs and where apparent and appropriate, also ensure that wider cross boundary strategic issues are appropriately addressed, in conformity inter alia, with the Duty to Cooperate, NPPF paragraph 16 and 104-111 inclusive, and DfT Circular 01/2022 and to ensure the Plan’s own Strategic Objectives can be met.

7.2. Policy T1 Transport infrastructure

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

As described in comments elsewhere, Stagecoach does not see that a suitable proportionate and up-to-date basis exists to properly and appropriately address the transport issues in the plan area.

The 2023 Transport Study does not perform this role adequately but, contrary to the explanatory memorandum, is a scheme intended only to facilitate car-borne movements through some of the key junctions. There is no evidence that an holistic integrated and strategic approach to transport mitigations has been prepared. Certainly Stagecoach has not been involved in any of the discussion about appropriate transport measures in support of the plan, including the Transport Study 2023, contrary to the expectations set out in NPPF at paragraph 16 and 106.

Notwithstanding out fundamental concerns about the transport evidence case and mitigations strategy, Policy T1 reflects a weak and ineffective approach, that seeks to try and define a strategy post-adoption.

Contrary even to the explanatory memorandum for the policy, which seeks to maximise the contribution of sustainable modes, the policy is phased in such a way that it gives basis for previous “predict and provide” solutions to facilitate and

support current levels of car dependency – already shown to be undeliverable and unaffordable – will nevertheless be the first rather than the last resort. There is no commitment to seek to maximise the contribution made by sustainable modes to meeting mobility needs. Nor is there any recognition that current chronic congestion and lack of network resilience jeopardises the ongoing attractiveness and long-term sustainability of the current public transport offer.

To be effective and create alignment with national policy, and also provide for an up-to-date transport evidence base and strategy to be adduced, Policy T1 should be modified to read:

“Integrated transport measures will be developed to mitigate the impact of planned development on the highways network, improve highway safety and air quality, promote more sustainable travel patterns and through providing in the first instance, new and improved infrastructure and services that will be credible effective in maximising the encourage increased use of sustainable modes of travel, such as public transport, cycling and walking.

To achieve this, the council will work with National Highways, West Sussex County Council, other transport and service providers (including through the Traffic and Infrastructure Management Group) and developers to provide a better integrated transport network and to improve accessibility to key services and facilities...

All parties, including applicants, are expected to support these objectives by:

1. Ensuring that new development is well located and designed to avoid or minimise the need for travel, encourages maximises the use of sustainable modes of travel as an a credible alternative to the private car and directly provides or contributes towards new or improved transport infrastructure;
2. Working with relevant transport infrastructure and service providers to improve accessibility to key services and facilities with primary emphasis on sustainable modes, and to ensure that new facilities are easily accessible by sustainable modes of travel;
3. Targeting investment to provide local travel options as an that represent a clearly credible alternative to the car use, focusing on the delivery of improved integrated bus and train services, and improved pedestrian and cycling networks, including the public rights of way network, based on the routes and projects identified in the Local Transport Plan, West Sussex Bus Service Improvement Plan, Local Cycling and Walking Infrastructure Plan (LCWIP) and the Infrastructure Delivery Plan;
4. Planning to achieve the timely delivery of transport infrastructure on and approaching the A27 and elsewhere on the network, needed to support new housing, employment and other development identified in this plan;
5. Phasing the delivery of new development to align with and where possible facilitate the provision of new and improved transport infrastructure and services and the outcomes of monitoring travel demand on the network, including that arising from areas immediately adjoining the plan area. It may also be Where necessary to achieve this alignment proactively phase development will be phased to take into account the monitoring and effectiveness of travel plans demands on the network and to ensure that measures are implemented to support the highest possible level of encourage sustainable travel behaviour.;
6. Using demand management measures, such as travel plans, to manage robust methodologies to assess travel demand and minimise the need for new or improved transport infrastructure as part of the monitor and manage process.
7. Delivering a coordinated package of infrastructure improvements at and approaching to junctions on the A27 Chichester Bypass along with other small-scale junction improvements interventions within the city and elsewhere, as identified through the monitor and manage process. These will increase road capacity, reduce traffic congestion, improve safety and air quality, and improve access to Chichester city from surrounding areas, first by maximising the contribution of sustainable modes to meeting mobility demands, then, and only as evidenced by robust modelling and option testing, providing increased highway capacity for general traffic.

...”

7.3. Policy T2 Transport and Development

Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Section 1 b) of T2 will be ineffective as, absent measures to ensure buses can run reliably and efficiently, improved bus services will not be possible, in support of the plan’s own stated broad approach to transport mitigation, as well as wider local and national policy.

The draft policy does not require improvements to the quality of services such that sustainable choices will be materially more attractive than car use for many local journeys. Without this the Plan’s Strategic Objectives cannot be fulfilled and the objectives of the Plan and this policy, read in its own terms, will not be realised, where reduction in private car use is

concerned. It is thus ineffective.

Absent measures to make bus services more reliable and more efficient, by insulating them from chronic congestion as far as possible, still further operating resource and therefore costs, will be needed to just to reliably run existing service frequencies, and capacity, as vehicle productivity continues to be more and more adversely affected by chronic delay. This will be further aggravated by increasing incidence of severe unpredictable service breakdown arising from incidents of diverse kinds on the network, especially on or around the A27, including that arising from more regular severe weather events. Longer journey times can only be expected to lead to relative disadvantage of bus services compared to personal car use, entirely contrary to the objectives of national and local policy, including Policy T1. It can also expect to lead to a dampening effect not on car use, but on bus patronage, threatening the ongoing viability of bus services across the plan area.

Section 1 b) of T2 should be modified to read:

“b) Maximise opportunities for the use of sustainable travel modes through provision of direct and efficient access both to either the existing networks or and through providing such new infrastructure or public transport services, as can be credibly expected to reduce reliance on the private car and work towards achieving net zero in greenhouse gas emissions by 2050;”

Section 1 d) of T2 will be ineffective as the location of development is fixed by this plan. We commend the fact that all the strategic allocations are or will be served by regular bus services.

However, the use of public transport services, where available, depends on the relevance and reliability of these services. Furthermore, provision of services without them generating sufficient patronage to support their long-term operation also threatens the sustainability of the plan and its supporting transport strategy. This is especially true of new services such as those intended to serve West of Chichester and Tangmere and East of Chichester Strategic Allocations.

This can only be assured by the plan being supported by specific measures to ensure buses can operate efficiently and reliably on the existing and projected services intended to serve the developments concerned, and also at the same time secure behavioural change from existing development.

To be sound and effective, the policy T2 1 d.) should be changed to read:

“d) Ensure major development is located to proposals and the supporting mitigation measures enable the use delivery of high-quality, reliable and effective public transport to present the most relevant possible choice to access local services and facilities including employment, leisure and education facilities”;

The Policy T2 makes no provision for buses, where necessary, to enter and make efficient and safe progress through major development sites. The plan is thus out of conformity with NPPF paragraphs 104-106. It makes no provision to ensure that penetration of bus services is achieved at a suitably early point in the development trajectory, undermining the achievement of the goals of the Plan and this specific policy. As a good example, West of Chichester Phase 1, currently under construction, cannot be served by buses as a strategy to effect interim bus penetration was never made.

Policy T2 1 f.) should therefore be amended to read:

f) Ensure that the layout and design of the site development proposals provides effective penetration of the site by sustainable modes, at all points in the development build-out, including public transport where appropriate; and sufficient space for all vehicles to manoeuvre without compromising the safety of pedestrians and cyclists, the efficiency of bus services, or the ability to provide an appropriate level of landscaping across the site”

Policy T2 3.) regarding Travel Planning depends entirely on its effectiveness on the quality and relative attractiveness of sustainable alternatives over car use. In the absence of efficient frequent, reliable and direct public transport services (or similarly, high quality facilities for active travel, Travel Plans will continue to be the entirely ineffective “tick box” exercises that they generally are today, evidenced by much lower levels of public transport use in most new developments than it seen in nearby established neighbourhoods, as demonstrated broadly by Census data in 2011, 2011 and 2021.

For this policy to be effective an up-to date transport evidence base and strategy, underpinning a series of specified interventions to promote the relevance and effectiveness of all sustainable does including public transport in particular, needs to be put in place.

8. Chapter 9 Infrastructure – Policy I1 Infrastructure provision

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Policy I1 could not expect to be effective without a clear understanding of the effectiveness and costs of a defined series of measures that are laid out in this Plan and its IDP, to mitigate the transport impacts of the development strategy.

Where the Chichester Transport Study is concerned the only meaningful work has focused on the definition and delivery of a range of highways capacity schemes mainly on the A27 around Chichester.

As we have discussed elsewhere the effectiveness of these schemes is insufficient as set out at Tables 8.1 and 8.2 of the Chichester Transport Study 2023. The plan itself admits that the deliverability of this package cannot be afforded by developer contributions alone.

The Chichester Transport Study 2023 does not attempt provide a realistic assessment of costs to deliver these schemes, despite the fact that they have been under evaluation for many years. Nor does it offer any assurance that the schemes are technically achievable. Rather, it states the opposite:

"9.2.3 No investigation has been carried out into specific land ownership details, or into the location details or cost of moving statutory undertakers and utility apparatus within the areas of the scheme. No design assessments were carried out at this stage to ascertain the deliverability of the proposals except where any Health and Safety concerns were raised."

Thus on the grounds of effectiveness, deliverability and affordability, the measures on which the Plan relies must at the very least be considered to involve an exceptionally high level of risk. Since Policy I1 is founded on these assumptions, it cannot be considered effective.

As we set out elsewhere, the Plan has been advanced on the basis that if any additional sustainable transport measures are required, these mitigations should be retroactively considered and defined after adoption of the Plan. In the light of the doubts that are apparent of both the deliverability, affordability and effectiveness of the Chichester Transport strategy this is especially unsatisfactory even if existing baseline conditions were reasonably acceptable.

However, the Chichester Transport Study 2023, as did its predecessors, makes plain that that existing problems are acute, and can rightly be considered "severe" in the sense of NPPF paragraph 111. Waiting to define deliverable affordable alternatives is an entirely inappropriate approach to the local plan transport mitigation strategy. Such an approach also makes it impossible to consider prior to adoption how far the transport impacts of the plan can be cost-effectively mitigated by alternative means, or whether they are deliverable having regard to technical achievability, land control, development viability, or any combination of the above. Thus, the plan cannot be considered justified, or effective.

Given the mutual dependence of development strategies in Chichester and Arun in particular on these measures this should be seen as crucial of the fulfilment of the Duty to Cooperate.

The remedy for this is ultimately to put in place a suitable transport mitigation strategy following a strategic appraisal of options through review of the LSS. This then must be supplemented by more detailed development specific and localised scheme definition, including, where necessary, bus priority and other measures to support the substantial promotion of the attractiveness of public transport in key bus corridors over private car use. This would then be reflected by costed proposals in the IDP.

Leaving these fundamental weaknesses to one side, even if such a strategy and mitigation package were defined, there is no mention of public transport in the policy even though it is clearly a key part of the policy environment and mitigation strategy for the plan as expressed in the explanatory memorandum for I1, but also at Policies T1 and T2. I1 thus does not effectively support the realisation of the intent of Policies T1 and T2.

Policy I1 iii) should therefore be modified to read:

"(iii) Safeguard the requirements of infrastructure providers, having regard to requirements within and where appropriate across the boundaries of the plan area, including but not limited to:

...

- Highways including specific measures to accommodate improved active travel and public transport level of service and cycle lanes, and..."

At limb v) the Policy expects developers to meet the "in perpetuity costs of operating and maintaining infrastructure". This shackles development management decisions to developers assuming what are infinite costs – given that "in perpetuity", read properly, can only mean "without any limit in time". This means that it is impossible to meet the statutory tests on developer obligations set out in the Community Infrastructure Levy Regulations 2010 (as amended) at Regulation 122, also repeated in NPPF. This policy cannot be lawfully implemented and it is thus ineffective.

In the absence of an up-to-date transport mitigation strategy that is fit for purpose, at the point the Plan is examined these costs of any additional infrastructure are not known in any case. The strategy and its costs, including its affordability and deliverability, are crucial to assessing if the Plan is sound.

Subject to an appropriate defined transport mitigation strategy being arrived at, to be sound, the Policy I1 v) should be modified as follows:

(v) To consider and meet as appropriate the in-perpetuity delivery costs of infrastructure and, where appropriate, improved services, to the point where its long-term operational sustainability is credibly assured from mainstream sources. Where adoption is not envisaged by local authorities, that must include arrangements for its future ongoing management and maintenance;

9. Strategic and Area Based Policies

9.1. Policy A1 City Centre Development Principles

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Chichester City centre is rightly identified at 10.2 and 10.4 as the commercial and service hub of the District. It is also acknowledged to be the most accessible place in the District by sustainable modes, public transport in particular.

Boosting the vitality of the city centre is something that Stagecoach strongly supports. Irrespective, the enhancement of the commercial and cultural life of the District in the place where these opportunities can be accessed broadly by sustainable modes, is one that has long been at the heart of national planning policy for town centres, reflected in the "town centre first" approach to locating major trip generating uses.

Paragraph 10.5 exposes an unbalanced and unsound preoccupation with aesthetic matters in its approach to the town centre, and far too little to ensuring that the central place function is enhanced through protecting and enhancing the quality of public transport access.

The city is relatively small but at the heart of an extensive hinterland, and thus the role of bus in supporting sustainable access to and enhanced city centre venue is one that needs appropriate recognition and emphasis. It is important to note that a dominant number of key service and facilities such as the General Hospital are relatively close to the city centre. This directly contributes to driving travel demand into the city, causing congestion. Most importantly, it also makes the task of mitigation simpler, given the impact a suite of active and sustainable measures can have within the same close proximity.

Policy A1 does not provide this. As such, achieving the strategic objectives of the plan is seriously threatened, and the plan is thus not effective.

The Plan needs to ensure that the approach to city centre regeneration maintains and enhances public transport access, interchange and inter-modal connectivity. It also needs to ensure that bus service stopping and interchange facilities are able to address increases in future demand, anticipated by the clear intent expressed elsewhere in the Plan that public transport should be meeting a greater proportion of mobility needs, in a growing district. Achieving this demands an ambitious approach to the location, quality and capacity of bus stop and interchange.

We have been in discussions with the District Council about this, alongside West Sussex County Council, for a very considerable period. Stagecoach has always been keen to help facilitate the Council's aspirations for the city centre, and we continue to hold this intention. However, this cannot be at the expense of a material diminishing of the convenience and fitness-for-purpose of bus stop infrastructure and interchange. Stagecoach has significant concerns that current proposals to remove the bus station and have all bus services operate from the street kerbside, on an inner distributor road with similar or reduced net stop capacity, fall short of promoting attractive, convenient bus access to the central area as a destination.

For the longer term and where the objectives of the draft plan are concerned looking ahead to 2039, they clearly fall short of enhancing the convenience and attractiveness of public transport use. Much less do they make sufficient provision for a material increase in bus frequency, connectivity, and interchange convenience, on which the draft plan explicitly relies. It is vital that the District Council is clear in policy about its objectives for public transport in the city centre. These objectives must also carry sufficient weight when held in tension with other aspirations for the centre and the constraints on achieving them.

For the Plan to be sound, properly effective and compliant with NPPF, the approach to the City centre cannot ignore its role in the provision of sustainable transport service and connectivity.

Policy A1 should therefore be modified to properly reflect this crucial function, on which the vitality of the city centre must increasingly depend if unacceptable impacts on congestion, air quality and amenity are not to arise. This is still more crucial if wider aspirations to secure a more sustainable society and mitigate carbon are to be achieved.

"...This will include provision for development and proposals that:

- Support and strengthen the vitality and viability of the city centre and its role as a shopping/visitor destination, employment centre, public transport hub and a place to live;

- Support and promote facilitate improved access to the city and with increased emphasis on sustainable modes of travel, with particular regard to enhancing the public transport interchange role of the city centre area, in accordance with the transport strategy for the city and...”

9.2. Policy A3 Southern Gateway Development principles Chichester Bus Station, Bus Depot and Basin Road Car Park Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

There has been aspiration to redevelop the bus station and nearby bus depot from many years. Stagecoach has been engaged with detailed discussion with the District Council on this matter over a very extended period. We confirm that these discussions have reached a relatively mature stage, however at the time of writing are not concluded.

Stagecoach recognises and supports in principle the Council’s wider aspirations for the “Southern Gateway”, and this has governed our approach to the Council to date. We continue to have no “in principle” objection to relocating our administrative, engineering, operational and customer service facilities.

Leaving our proprietary interests entirely to one side, it remains vital that in so doing, the effectiveness, attractiveness and convenience of these facilities is not compromised, as we have outlined in our representations to Policy A1, if wider national and local transport policy, and the local plan strategy itself, are to be effectively achieved.

The depot is crucial infrastructure to support the safe, reliable and legally-compliant operation of Stagecoach bus services over a very extensive area covering the entirety of the District and beyond. Without securing equivalent facilities, that are fit-for-purpose, many of our services would have to cease.

If buses are to provide a greater and more attractive level of service (still more so if they are to be electrified) larger, more capable depot facilities, and city centre bus interchange facilities will be necessary.

Notwithstanding that the bus station and depot sites are leased from the District Council, these leases terminate well beyond the end of the plan period.

Finding suitable sites for a replacement bus depot in Chichester, in common with all similar localities especially in southern England, is extremely challenging. As a sui generis use, bus depots do not automatically benefit from policy support on land allocated for employment uses. Most bus depots benefit from being legacy assets established under very different economic conditions. That is the case here. The value of a depot site for redevelopment net of demolition and remediation costs, rarely approximates to that able to sustain the acquisition of land in a tight wider employment land market, and the construction of suitable new facilities.

Furthermore, the costs of operating bus services are sensitive to the parasitic costs of vehicle and staff hours and mileage associated with “dead running” to a remote depot location from the operational network. Here, the existing depot site is ideal, and any replacement will unavoidable add ongoing operational costs to the operation that cannot be directly recovered.

We confirm that a replacement depot site has been identified and has in principle been agreed, subject to overcoming issues with the disposition of existing and future structures on the site. However, the site is recognised as not capable of accommodating meaningful operational expansion. This is just one of the most important foundational reasons why a positive transformation of bus productivity needs to be achieved, across the plan area and beyond, to support delivery of greater bus mileage and frequencies with the same level of operational resource. At the time of writing, we are not fully convinced that the proposals for the relocation will be sufficiently fit-for-purpose in the event the above is not achieved. Thus, we must raise a concern that the bus depot site might not be available during the plan period. While there is a strong probability it will be, the certainty surrounding the availability of the site, especially within the first 5 years of the plan, needs to be made transparent.

9.3. Policy A4 Southern Gateway - Chichester Bus Station, Bus Depot and Basin Road Car Park Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Regarding the removal of the bus station, without equivalent replacement, Stagecoach has significant concerns. Pressures and conflicts at the current bus station site have been gradually rising for several years, arising from increasing use and the need for additional scheduled vehicle layover periods to reduce the risks of accumulated late running from traffic congestion. Peak passenger volumes have recovered strongly on several routes, however passenger accumulations resulting from more frequent delays and disruption have added substantial further pressure on limited space.

Under current plans, buses and bus passengers will be displaced to bus stops at new locations outside the city centre, along Avenue de Chartres. This road was always intended to be a relatively high-speed traffic route, outside the historic core of the city. The city centre has evolved in the subsequent years to reinforce already strong natural severance, with

the highway lying beyond the city walls and the green space along the Lavant. It is a traffic dominated, unsurveyed and unattractive environment, reflecting the intended function of the road as an efficient movement corridor for high traffic volume, and nothing more. Avenue de Chartres is relatively close to the rail station and pedestrian connectivity can be provided at broadly equivalent distance to the current bus station, but again it is unsurveyed and currently unpleasant, lacking natural legibility or any sense of prominence.

We understand kerbside capacity on Avenue de Chartres will be strained even to accommodate current levels of service, with no expansion possible. There is therefore a strong probability that to accommodate more frequencies and key new routes, such as West of Tangmere, East of Chichester and West of Chichester allocations, additional future bus stops must occupy a different location. This makes interchange between routes and rail services substantially challenging and less attractive.

The emerging arrangements risk marginalising public transport and public transport users substantially. This strongly undermines achievement of the wider plan objectives and delivery of a significantly greater role for public transport. If substantial public transport growth is to be accommodated in a growing city and hinterland, as the draft plan anticipates, then a more ambitious strategic approach must be taken. This should plan for additional and improved facilities to accommodate all services predicted to be required, whilst enhancing the passenger experience to ensure meaningful and attractive modal choice.

There is therefore a need for the plan to evidence how these issues will be appropriately resolved, having regard to a suitably ambitious approach that properly supports clear objectives to boost the relevance of public transport. The current policy is weak, unspecific and indifferent to achieving the strategic objectives of the plan, including a transport strategy in support of the plan, and as such it is ineffective.

Policy A3 should therefore be modified to read:

" ...

- Be designed to encourage and facilitate substantial increase in the use of active travel and public transport to, from and through the city centre.

" ...

In line with the commentary above Policy A4 should also be modified to read:

3. Enhance the public interchange function of the immediate area, the public realm, particularly connections to the railway station and the city centre via South Street, Southgate and Basin Road for pedestrians, cyclists and public transport users, and to National Cycle Route 2 and Route 88 which run close by. Suitable replacement bus stops and layover facilities should be provided to replace those at the bus station in line with reflecting the objectives of the West Sussex Bus Service Improvement Plan, and to facilitate growth to meet the requirements of the plan's development strategy. Routes and crossings should reflect pedestrian desire lines, and public art should be incorporated to create a sense of place;

4. Enhance the public realm, in support of this and wider objectives, incorporating public art and other measures to create a strong and attractive sense of place.

...(renumber remaining points)

9.4. Policy A6 Land West of Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

This is an existing Local Plan allocation. The public transport strategy for the site depends on the delivery of the second phase which Stagecoach notes is the subject of several applications now awaiting review and determination by the Council.

The site represents a compact form of development adjoining the city, as the most sustainable settlement, meeting housing needs close to where they arise, and affording very good opportunities for the use of sustainable modes, especially walking and cycling.

It is vital that a bus service is delivered to serve the site at the earliest potential. This was anticipated to be at the start of Phase 2 and will require the early delivery of the entire length of the spine road between the Old Broyle Road and Westgate and making it available for bus services.

It is not clear if the costs of pump-priming the service mentioned in the draft policy are anticipated to be met by the developer. Without such funding, the service will not be deliverable as years of losses will never credibly be covered from future profit. It is likely that the current wording will be interpreted by the developer as meaning that they have no such obligation binding upon them. Not does policy set out any specification for this service, thus its costs and the basis for securing developer contributions does not exist.

As such any wider transport strategy, that seeks to secure a greater role for the use of public transport, and the aspiration for this allocation cannot demonstrably be met. The policy is ineffective.

Policy A6 should be modified to read:

“ ...
10. Make provision to accommodate and secure delivery of for regular bus services linking running through the site to Chichester city centre operating at least every 30 minutes Monday-Saturday, and new and improved cycle and pedestrian routes linking the site with the city,
...”

9.5. Policy A7 Land at Shopwhyke

Stagecoach Supports

This is an existing Local Plan allocation, largely built-out, that benefits from an existing set of permissions.

The public transport strategy for the site depends on the delivery of effective bus priority at Oving Crossroads. The current recently implemented scheme, undertaken by National Highways, makes no provision for effective bus priority and needs considerable re-evaluation.

The site represents a compact form of development adjoining the city, as the most sustainable settlement, meeting housing needs close to where they arise, and affording very good opportunities for the use of sustainable modes, especially walking and cycling. It lies on a new bus corridor that will shortly be put in place, running to Tangmere via Shopwhyke. The allocation is being significantly consolidated by further development in the immediate vicinity which strongly supports the potential for this new service.

As we explain in our representations for East of Chichester proposed allocation A8, and West of Tangmere Allocation A14, a clear corridor strategy to effect bus priority is needed, that should be delivered in support of that further growth, and that at Tangmere SDL. However this allocation is a near complete commitment and there is no scope through policy regarding this land to effect this outcome.

It is notable that Point 6) of policy A7 makes mention of a bus service. This language reflects the currently adopted Local Plan policy and has underpinned the existing permissions. The failure of any bus service to be delivered demonstrates from first principles that this Policy has been entirely ineffective. It is important that lessons are learned from this in the Local Plan Review.

9.6. Policy A8 Land East of Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This proposed allocation lies next to unallocated land that is already consented as a departure from the adopted development plan, with 143 units near completion south of Oving Road (20/02471/FUL). Additional land, also unallocated but similarly consented, has now commenced north of Oving Road (88 units under 21/02197/FUL). This and the allocation site consolidates earlier development at Shopwhyke brought forward under the current Local Plan, and allocated again as draft policy A7.

Development at Shopwhyke was brought forward on the basis of a premise that the developer would provide or somehow arrange a bus service, that was reflected in the policies of the current Local Plan. This was secured by an unenforceable condition. No bus service has been provided, as there was inadequate clarity regarding the basis on which the costs of establishing such a service would be met by the developer, and the expectations of policy on the developer. The site does however lie on a logical new bus corridor between Chichester and West of Tangmere along the Oving Road.

In addition, an expectation that modifications to the Oving Crossroads would effect bus advantage have proven false – the arrangements put buses into a similar or longer queue than if they use the route available to general traffic to and from the A27.

Stagecoach strongly supports the principle of bringing this land forward. However, the soundness of the site depends on deliverability of a regular, reliable and direct bus service along the Oving Road, taking advantage of effective bus priority.

Given the failure of existing policy in the adopted Local Plan covering the proposed A7 allocation to deliver a bus service, it is of great concern that there is no draft policy to adequately address the issue. The policy is out of conformity with NPPF paragraph 104-105 in that sustainable modes do not offer realistic choices, much less an attractive one, and as such also does not secure the objectives of national policy nor of the plan itself.

Currently the proposed allocation is not served at all by public transport. Policy needs to ensure there is a policy basis to secure contributions to deliver such a service, which may well take the form of a proportionate contribution to deliver a new service or enhance provision that is put in place between Chichester along the Shopwhyke Road to west of

Tangmere.

To become sound Policy A8 must be modified to read:

" ...

12. Provide for improved high quality connectivity by sustainable travel modes and focused in particular on a corridor between Chichester city centre and Tangmere along Shopwhyke Road, including new improved cycle and pedestrian routes, and a frequent bus service including linkages with Chichester taking advantage of effective bus priority measures on Oving Road at the A27;

" ...

9.7. Policy A9 Land at Westhampnett/North East Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This land is already allocated and consented as part of the existing 2016 Local Plan. All reserved matters are determined.

The site lies on service 55 between Chichester, Westhampnett and Tangmere. This established service benefits from additional demand from the development at Phase 1. Phase 2 which is currently well underway, does not benefit directly from bus services. However it is a compact and logical form of development where walking and cycling to local facilities and employment is a credible option.

The existing allocation rolls forward policies in the 2015 Local Plan. In so doing it is possible to see which have been effective.

Point 9. regarding bus service and routing has not been effective. In particular the potential for a bus only link between the site and Graylingwell has not been established as policy anticipated. Given congestion around the Portfield area acutely affects public transport this, or alternative methods to secure bus priority over private car use, a clear and unequivocal policy steer is required.

The lack of an up-to-date transport evidence base is ultimately at the root of these issues. Arguably the policy and allocation can only be made sound once this refreshed evidence base in place.

However, it is possible that the allocation could be made sound by modification of Policy A9 as follows:

" ...

9. Make provision for regular, direct and reliable bus services linking the site with Chichester city centre, and new and improved safe and convenient cycle and pedestrian routes linking the site with Chichester city, the South Downs National Park and other strategic developments to the east of Chichester city including Tangmere. These objectives could include exploring the potential for a bus only route require a deliverable scheme to afford bus priority through Portfield, and potentially linking the development with the Graylingwell area through use of a modal filter;

" ...

9.8. Policy A10 Land at Maudlin Farm

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing public transport route. It is relatively close to the city and very near substantial centres of employment and services that can be reached by active travel modes, helping damp the demand for car use. It is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services at Portfield and over a wider area. In fact, the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A10 should accordingly be modified to read:

" ...

5. Provide safe and suitable access points for all users, including a main vehicle access from Old Arundel Road and, subject to further assessment, a secondary vehicle access from Dairy Lane. The development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport

and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes;

..."

9.9. Policy A11 Bosham – Land at Highgrove Farm

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Bosham Station. It is relatively close to the city and very near substantial centres of employment and services that can be reached by public transport and cycling, offering strong potential to materially damp the demand for car use.

There are serious risks that development in the A259 corridor west of Chichester could place further demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular to bus services.

Nevertheless, given the potential to effect bus priority on the approaches to Fishbourne Roundabout, it is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A11 should accordingly be modified to read:

“...

8. Provide safe and suitable access points for all users, including a main vehicle access from the A259. The development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys crossing the A27 at Fishbourne;

9.10. Policy A12 Chidham and Hambrook

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Nutbourne Station. Substantial centres of employment and services that can be reached by public transport and cycling, offering strong potential to materially damp the demand for car use.

There are serious risks that development in the A259 corridor west of Chichester could place further demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular to bus services.

Nevertheless, given the potential to effect bus priority on the approaches to Fishbourne Roundabout, it is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A12 should accordingly be modified to read:

"...

7. Development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys along the A259, crossing the A27 at Fishbourne and where necessary on the approaches to Emsworth;

8. Facilitate improved sustainable travel modes, and new improved cycle and pedestrian routes, including linkages with Chichester city and settlement along the East/West Corridor;

9.11. Policy A13 Southbourne Broad Location for Development

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach agrees unequivocally that Southbourne is a location that could accommodate growth on a strategic scale. It has a substantial range of service available within the settlement, including secondary education. It is well connected by bus and rail service to key destinations, including Chichester, lying to the east and west.

This is one of the few locations identified for growth that represents substantial additional development in a new location to the strategy in the existing Local Plan adopted in 2015. Thus, the transport impacts of development on the substantial scale envisaged at Southbourne are not covered or accommodated by the Chichester Area Transport Strategy that lies behind the existing plan. This demands, from first principles, that substantial further transport mitigation measures are required.

We recognise and endorse fully that the intent of the draft plan for Southbourne as a Broad Location for Development on a strategic scale, includes "Maximising the potential for sustainable travel links through improved public transport, including consideration of opportunities to reduce community severance caused by the railway line as well as the inclusion of cycling and pedestrian routes." (our emphasis).

The existing railway station at Southbourne is served regularly, however, it is not within the power of this plan to improve rail services. It is, however, well within the scope of action of the Local Planning and Highways Authority to work with bus operators to achieve a step change in the journey time, reliability, frequency and connectivity of bus services, and in particular the major corridor operated as service 700 by Stagecoach along the A259 between Havant and Chichester through Southbourne.

Notwithstanding the clear potential for sustainable connectivity in the western A259 corridor, there are very serious risks that development in the A259 corridor west of Chichester will place further significant car-borne demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular bus services, having the opposite effect to that intended: longer, less reliable and less frequent bus services, leading to a spiral of slowly declining use.

These risks, while very serious, look credibly likely to be entirely mitigated subject to carefully conceived and robust specified actions on the local highway network. It is perplexing to us that this potential still has not been identified, as part of a comprehensive "first principles" review of the transport evidence base. In particular given the former trunk status of the A259, there is evident potential to effect bus priority on the A259, including on the approaches to Fishbourne Roundabout.

With appropriate measures, including but not limited to this, to substantially boost the relevance and attractiveness of sustainable travel choices, strategic development at Southbourne could well be made highly sustainable.

In the absence of a refreshed transport strategy and transport evidence base, the draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact, the only reference that is made in Policy is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A12 should accordingly be modified to read:

"...Development should be comprehensively masterplanned to achieve a high-quality design and layout that integrates

well with the surrounding built and natural environments to enable a high degree of connectivity with them, particularly for pedestrians and cyclists, and provides good the highest possible quality of access to facilities and sustainable forms of improved public transport services.

...

4. Provide a suitable means of access to the site(s), and securing secure necessary off-site transport infrastructure and service improvements (including highways in particular to the A259 corridor between Emsworth and Chichester) in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development) to promote sustainable transport options prioritising delivery of high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes;

..."

9.12. Policy A14 Land West of Tangmere

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach strongly supports the principle of intensifying the level of development at the Strategic Development Location already identified and allocated West of Tangmere in the existing Local Plan. This serves to consolidate development at a location where effective and attractive public transport choices could be provided. It also conforms closely with the principle expressed in NPPF that the best possible use should be made of land on sites that are judged to be sustainable, or potentially sustainable locations for development.

It must be stressed that the current policy suite for the SDL has to date not brought forward development in this location. We recognise that a Master Plan has been adopted by the Council, and that a planning application (20/02893/OUT) for the full larger quantum of 1300 dwellings proposed in the draft plan has received a resolution to grant by the Council.

However, we are not aware that a sustainable transport strategy has been finalised.

Land West of Tangmere is not served by any existing regular bus services. Rather, an entirely new bus service corridor is anticipated to operate in the near term from Chichester through Tangmere and beyond towards Barnham. This would serve proposed allocations A7, A8 and West of Tangmere (A14) included in the draft Plan.

This is reflected in the language of the explanatory memorandum to Policy A14 at paragraph 10.65:

"Opportunities, in partnership with relevant authorities, to provide improved sustainable public transport routes linking the village with Chichester city, to improve cycle routes to the city, and better transport links to Barnham rail station and the 'Five Villages' area in Arun District; and.."

Initiating this service will be costly and will in large measure be funded not by developer contributions, but by DfT monies awarded through the West Sussex Bus Service Improvement Plan. It is crucial this service is both sustainable in the longer term without revenue support, and that the success of the service can be built on by scalable frequency improvements as strategic development comes forward in both Chichester District, and proposed allocations A7 A8 and A14, and in Arun District, in particular at Barnham, Eastergate and Westergate (BEW).

This demands measures to effect safe, direct and swift operation of the service especially within the city centre, where it approaches and crosses the A27 at Oving crossroads and on the eastern fringes of the District east and west of Tangmere. Without these measures, bus journey time and reliability will be severely compromised and the and impact of this service to damped car trip demands will be very substantially compromised. No such measures are proposed in the draft plan or its evidence base.

Changes to Oving Crossroads have recently taken place which, amongst other intentions, ostensibly provide bus advantage between Chichester and Shopwhyke. The junction in its current form does not offer material gain in bus journey time, as movements involve a less-direct route towards the city over an increased operating distance, much of which involves passage through heavily congested sections of the A27 and Westhampnett Road. A refreshed transport strategy supporting plan-led growth must revisit this area to secure an effective solution which offers bus customers the fastest and most reliable trip-time to and from the city.

In addition, the extension of public transport connectivity towards BEW and Barnham, including key links to secondary education and a logical railhead for journeys beyond towards Brighton and London as provided at Barnham Station, needs to facilitate bus priority between Tangmere and Nyton – whether using the A27, or preferably avoiding it altogether. There are significant safety concerns associated with the at-grade uncontrolled right-hand A27 exit onto the B2233 Nyton Road at Crockerhill Turn. This movement is also prone to extreme delay owing to the conflict with approaching westbound traffic on the A27, travelling at speed, which has priority. Our concerns with this junction in its current form can be expected to worsen with the increased traffic volumes predicted from new residential developments to the west of the city.

A solution providing a suitable short length of highway available only to sustainable modes, between Tangmere and

Easthampnett, could provide a very effective solution to this. This would be deliverable within the scope of the separate proposed allocation at A19 Chichester Business Park, Tangmere. We comment on this separately.

Howsoever effected, a reliable direct and delay-free bus corridor between Barnham, BEW, Tangmere and Chichester could expect to secure very substantial elevation of the relative attractiveness of public transport over car use on the entire corridor and serve to effectively damp growth-related demands on this section of the A27. West of Tangmere, in the longer term, there is evident scope for the route corridor to operate as two branches – one via Shopwhyke and one via Westhampnett, effectively serving all the strategic developments proposed in the plan and transforming wider public transport connectivity to key employment destinations and services within and east of Chichester.

However, in common with all the other proposed allocations, the plan proposes no specific measures to provide, much less improve public transport or other sustainable modes to the site. This leaves the draft plan out of conformity with NPPF, especially paragraphs 104-106. The plan is inadequately evidenced and to the degree that public transport measures are identified and emergent, their successful implementation in the near and longer term will be jeopardised without clear measures to provide a safe as well as efficient bus route towards BEW and the Five Village area within Arun. The Duty to Cooperate is not effectively met and effective cross boundary collaboration on these strategic issues through the review of LSS is not demonstrated, despite the current version which identifies the issues.

To be made sound the LSS Review and a subsequent urgent review of the transport evidence base and strategy needs to take place. The strategic issues are especially critical east of Chichester, in our view.

Notwithstanding this foundational deficiency, to be made sound, Policy A14 should be modified to read:

“...
8. Subject to detailed transport assessment, provide primary road access to the site from the slip-road roundabout at the A27/A285 junction to the west of Tangmere providing a spine road link with secondary access from Tangmere Road. Development will be required to provide or fund mitigation for potential off-site traffic impacts through a package of measures in conformity with Policy T1 (Transport Infrastructure) and T2 (Transport and Development) and DfT Circular 01/2022 that maximise the relevance and use of sustainable travel modes, in particular bus services;

9. Make provision for improved sustainable travel modes between Tangmere and Chichester city, in partnership with relevant authorities, including improved direct, seamless safe and reliable and additional bus and cycle routes linking Tangmere with Chichester city, Shopwhyke and Westhampnett. In conjunction with measures in support of Allocation A19, Opportunities should also be explored contributions shall also be sought for providing improving high quality cycling and bus service transport links with the 'Five Villages' area and Barnham rail station in Arun District; and...”

10. Concluding comments

Stagecoach recognises its role as a key stakeholder in the plan, as well as a local employer and corporate citizen. We recognise the primacy of the plan-led system as the mechanism intended to resolve complex challenges, including the proper alignment of transport and spatial planning, which as the National Decarbonisation Strategy for Transport among other policies makes clear, has never been more vital.

In making our representations, we emphasise that we are entirely supportive of the Local Planning Authority and the relevant Highways and Transport Authorities, in their efforts to properly manage the amount and pattern of development to secure vital policy objectives. We recognise that balancing delivery of assessed development needs with a wide variety of other constraints is a very difficult task.

The transport issues faced by the plan are recognised in the draft plan as being serious and long-standing. We believe that there are ways to arrive at a suitable transport mitigation strategy that has regard to wider strategic issues and resolves existing problems in a much more effective way than those pursued to date.

We support the spatial strategy of the plan as it evidently provides the basis to secure the necessary step change in the quality and use of sustainable transport modes, as it explicitly seeks to do. However thus far, there has been insufficient work done to define the measures that will credibly secure these outcomes.

Stagecoach therefore urges the authorities to draw us into the necessary effective ongoing collaborations that is expected by NPPF paragraph 16 and 106; and DfT Circular 01/022, to do this work, prior to, rather than after the submission of the draft plan. We look forward to being approached to initiate this dialogue at the earliest opportunity.

Change suggested by respondent:

Should be amended to read:

“Plan to provide local infrastructure to support new development and seek opportunities to address existing identifiable infrastructure problems deficits, such as in particular those relating to the A27 and its junctions and wastewater treatment.”

Respondent: Stagecoach South (Rob Vince) [8141]

Summary:

The Vision is nothing more than an aspiration, that needs to more definitively aim at key outcomes, for the plan to be effective. The Vision should thus be altered to read:

“Get about easily, safely and conveniently with less reliance on private cars –making the greatest possible use of the rail and enhanced bus network, and with more opportunities for active travel including walking and cycling; to materially reduce dependence on private car use.”

If the Strategic Objectives of the Plan and its Vision are to be achieved, in the way required by NPPF paragraphs 104-105, a properly-evidenced transport mitigation strategy needs to create the conditions where bus journeys are more reliable than car journeys and thus mobility demand switches as far as can be realistically achieved away from car use, to bus use and other more sustainable modes.

We welcome the clear recognition that localities identified for growth, benefit from existing relevant public transport services. The Vision also sets an expectation that bus services in particular should be “enhanced” and “reinforced”. We entirely agree that these opportunities exist, across the broad strategy and strategic allocation proposed by the draft Local Plan. Securing them will be crucial to achieving national and local policy objectives, including the Strategic Objectives. However, to our continuing very great dismay, the Plan goes no further to defining how this will be achieved. As such the Vision is not demonstrable achievable or deliverable.

Full text:

Chichester District Local Plan 2039 – Pre-Submission (Regulation 19) Consultation

1. Introductory Comments

Stagecoach South is the main commercial public transport operator across Chichester District. The Company has headquarters in the city, which is also the principal public transport hub for the District and it’s rather wider travel-to-work area encompassing much of the Arun District. Our services extend throughout and beyond the District boundaries, as far as Littlehampton, Midhurst, Havant and Portsmouth. The vast majority of services operate on a commercial basis – that is to say, sustained by passenger use and fare revenue, including concessionary reimbursement.

While the role of the railway is significant in much of the District, especially the east-west Coastway line, yet bus services account for more boardings locally than the railway, with Chichester depot services carrying over 3.5m passengers each year.

Unlike bus services in other parts of the country, the local network has recovered strongly after the pandemic with fare-paying passenger numbers over 95% of 2019 levels, albeit with concession patronage somewhat lower. This has helped secure not only a stable but growing bus network even during this period of rapidly rising operational costs, avoiding the need for the service contractions seen in other regions. Indeed, during the second quarter of 2023 Stagecoach will invest £5.5m in brand-new vehicles for high-profile coastal Service 700 – one of the largest vehicle investments for Stagecoach Group this year.

Our services are therefore critical to existing and future local connectivity. As the Plan acknowledges, mobility demands do not respect planning authority boundaries. The role of our services is especially high to settlements in the broad A27 corridor, within the District and beyond. This includes major settlements in Arun District such as Pagham and suburban Bognor Regis, where bus is the only mass public transport option. As the Council is well aware, there is an even higher level and rate of committed development envisaged in these locations in the Arun District Local Plan than in Chichester.

It is already evident to the planning authorities, West Sussex County Council and National Highways, as proprietor of the A27 Trunk Road, that accommodating growing mobility demands across Chichester District and especially around Chichester itself, is becoming increasingly challenging to the point of being seriously problematic.

Stagecoach has a particular interest in this Plan arising from:

- The already clear and highly deleterious impact of congestion affecting our operations and their reliability and attractiveness to the public. The effects of these on the approaches to Chichester, and around the A27 bypass are especially severe. If public transport is to retain its existing role – even before the needs of any meaningful growth both in Chichester and neighbouring authorities is considered, are considered – the Council and the Highways Authority need to arrive at clearly-defined measures to protect buses from chronic delay and the damaging impacts arising from the lack of bus network resilience and customer journey times.
- In connection with the above, the need to properly consider the predictable impacts of committed development in Arun District on the transport network and in particular the operation of bus services. The duty to cooperate on cross-border strategic matters is not limited merely to accommodating housing requirements.
- The fact that our entire business premises and operational base at Chichester is the subject of allocation for redevelopment within the Plan period. Specifically, this includes our Head Office, the Bus Station as the operational hub of the network and the key interchange for passenger journeys – including those that involve the railway – and the bus depot required to support the entire operation. Notwithstanding many years of discussions, there is as yet no agreed deliverable strategy to replace these facilities either in the Draft Plan or elsewhere.

Stagecoach broadly supports the vision and priorities of the draft plan. In most respects, Stagecoach supports strongly the spatial strategy and the identified site allocations that flow from it, and the evidence.

However, it has serious concerns about the soundness of the plan as proposed for submission, for important regards outlined in this response. These are made in the light of requirements set by the National Planning Policy Framework (NPPF), in particular at paragraphs 15 and 16; 35, 105-109 inclusive and having due regard to the need for allocations to satisfy 110-112 inclusive in due course as development permission is sought; and paragraph 174.

Paragraph 16c) of NPPF makes plain that strategic plans and policies should “be shaped by early, proportionate and effective engagement between plan-makers and communities, local organisations, businesses, infrastructure providers and operators and statutory consultees” (our emphasis). This makes plain that collaborative and ongoing involvement of public transport operators is both necessary, and separate and in addition to the engagement with statutory consultees. This has not taken place.

Para 1.25 of the draft plan states that “the council has engaged constructively, actively and on an ongoing basis with other local authorities and organisations to address key strategic matters.” Despite the requirements in NPPF and contrary to the statement made, Stagecoach has not been approached or involved in a meaningful, collaborative or ongoing way in the preparation of the Plan.

Our main concerns centre around the fact that the plan strategy is neither backed by sufficient transport evidence. Even more importantly, the plan relies on a wholly car-based transport mitigation strategy despite policy stating that this is not the case, and the track record of the existing Local Plan, based on a very similar strategy, that has failed to bring forward meaningful mitigations to date to prevent traffic conditions substantially worsening. There is no support in policy for the achievement of the Strategic Objectives in the Plan. Nor is there definition of any measures in the 2023 Transport Study to make provision for sustainable transport infrastructure or services – much less materially improve them.

Finally, to the extent that updated transport evidence has been provided in the form of the 2023 Chichester Transport Study, arising from updated traffic modelling, it does not support the contention that highways capacity constraints on and around the A27 justify not meeting the objectively-assessed development needs of the area, as the draft plan contends.

2. Vision and Strategic Objectives

2.1. Issues and Opportunities

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant, proportionate and up to date evidence

Stagecoach recognises the important role of the West Sussex and Greater Brighton Strategic Planning Board which agreed a Local Strategic Statement (LSS2) in early 2016 to identify spatial planning issues across the wider area. This established strategic priorities and policies to guide longer term strategic growth in a coordinated and well considered matter. This institutional framework and the purpose of the LSS is a highly significant one and is at the heart of efforts to properly fulfil the statutory Duty to Co-operate, including with regard to strategic infrastructure issues, as NPPF requires.

Given the long period of time elapsed since the 2018 Reg 18 consultation and the already very clear constraints on strategic infrastructure capacity, it is of great concern to Stagecoach that the LSS2 has not been updated to reflect emerging issues in the intervening period. A review and update of the LSS2 has only just commenced. This includes a study of projected housing and employment needs, transport impact, infrastructure and spatial options to deliver the required development in the period after 2030. This Chichester District draft plan covers a period extending to 2039 – therefore well beyond 2030 and the nominal currency of LSS2.

However, infrastructure needs are pressing today. Stagecoach is presented with severe highway operational problems on a near-daily basis. During the winter of 2022-23 we have, for example, seen key road links impacted for many weeks by acute disruption arising from flood events. Unpredictable, but seemingly more-frequent, exogenous events expose a lack of resilience in the highway network around Chichester and its travel-to-work area. However, serious, chronic, unpredictable delay has been normalised over recent years, with peak-time congestion having quickly returned after the pandemic. The existing development strategy has failed to bring forward measures having any impact on this to date, and key commitments – notably at west of Chichester Phase 2 and at Tangmere – have yet to commence to further aggravate the issue.

We have no confidence in the transport mitigations proposed in the existing Local Plan and LSS2 being sufficiently effective, even if deliverable at all. Indeed, the existing adopted Local Plan does little more than make vague speculations about the sustainable transport measures that might be achievable. The draft local plan review is no different. It has no ambitions at all for sustainable modes and thus, makes no meaningful provision to meet them.

This is especially relevant in light of the fact that the approach to resolving issues on the A27 around Chichester that were anticipated in 2015-16 have fallen away. LSS2 is thus currently inadequate to act as a part of an up-to-date, proportionate, and relevant evidence base for the Plan.

An update of a traffic model lies at the heart of a 2023 Chichester Transport Study. This talks no account of the existing role of non-car modes, nor can it do so. It is unable to properly evaluate the nature of problems or solutions that involve public transport, or for that matter, other sustainable modes.

Therefore, we consider that the combination of committed and additional development needs that must be accommodated over the whole plan period between 2022 and 2039, in both the Chichester and Arun Districts, require a “first principles” review. This must be based on a refreshed transport evidence baseline of no earlier than 2022 – given that the effects of COVID distort 2020-22 – and the transport infrastructure and service requirements to sustainably support those needs.

Key issues – including substantial changes with regards to transport issues and challenges, as well as potential solutions – thus do not form part of the evidence base that steers this plan. Given long term changes in travel patterns, and mode share that took place during COVID, as well as a local and national policy context that seeks to radically reduce and then eliminate transport-related carbon emissions, this is especially problematic.

The specific problems of congestion and network resilience that are evident on the A27 and the approaches to Chichester remain a set of especially difficult problems that disproportionately affect the efficiency, reliability and attractiveness of the bus network, that evidently demand larger-scale strategic responses involving multiple stakeholders, including bus operators.

Where the effects of development on the national Strategic Roads Network (SRN) are concerned, the approach of National Highways to addressing and responding to the mobility needs of development has now substantially changed following the promulgation of the DfT Written Ministerial Statement LTN01/22. This makes it clear that adding highways capacity is no longer the first or only strategy that should be pursued, but one subordinate this to maximising the potential of non-car modes and sustainable travel.

“Effective and ongoing collaboration” on transport matters has not led to solutions being agreed and published for public scrutiny as part of the plan evidence base. Whatever the approach to modelling and “highways improvements” that may be agreed or pending agreement with the County Highways Authority and National Highways, Stagecoach is neither participant or sighted. This is despite the clear requirements set out in NPPF Para 106 b) that “Planning policies should ... be prepared with the active involvement of local highways authorities, other transport infrastructure providers and operators and neighbouring councils, so that strategies and investments for supporting sustainable transport and development patterns are aligned.” (our emphasis).

We therefore consider that the Council has failed to comply with the requirements of NPPF paragraph 25 and 26 that “relevant bodies” are involved in plan-making, especially with regard to addressing the needs for infrastructure. Public transport services and the infrastructure that supports its operation and use clearly fall within matters relevant to plan-making. This is explicit in NPPF Chapter 9 and indeed within the plan itself – for example reference to public transport and sustainable modes in the Vision for the plan.

It should be stressed that the Regulation 18 “Preferred Approach” consultation took place in December 2018 – over 4 years ago and prior to COVID, based on LSS2. The inordinate length of time that has elapsed between the Regulation 18 and Regulation 19 stages greatly challenges the LSS2 and other parts of the evidence base, especially as the pause straddles the COVID epidemic. That would include the transport modelling baseline, and key assumptions in any traffic modelling that took place prior to mid-2022, which is a point at which a reasonable “new normal” post-COVID might be considered to have become established. In that period, Arun District has also adopted its own Local Plan development strategy that accommodates an unprecedented quantum of development immediately east and south-east of the District Boundary – creating additional substantial transport impacts directly affecting the A27 and multiple major approaches to Chichester crossing it.

The established mechanism to fulfil the Duty to Co-operate has thus not operated effectively. The Plan is not founded on a relevant, proportionate and up-to date evidence base and is thus inadequately justified.

2.2. Spatial Portrait

The spatial portrait is generally succinct and accurate. However, it makes no mention of road-based public transport, the role of the City as a public transport hub, or the range of bus services that provide local connectivity (Section 2.4 and 2.5). The complete concentration of post-16 education in the City itself as just one example of the peculiarities of transport demands in the area, is not highlighted, though this has a profound influence on peak time travel demands affecting the most congested parts of the highway network. Among other things, the role of bus services in supporting the educational system of the plan area is very great indeed.

The potential role of bus in addressing the already-severe transport problems of the plan area and beyond seems entirely overlooked. The spatial portrait is thus clearly inadequate and incomplete.

2.3. Strategic Objectives

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Chapter 9 of NPPF and paragraphs 104 and 105 in particular require that plans should:

“Transport issues should be considered from the earliest stages of plan-making and development proposals, so that:

- a) the potential impacts of development on transport networks can be addressed;
 - b) opportunities from existing or proposed transport infrastructure, and changing transport technology and usage, are realised – for example in relation to the scale, location or density of development that can be accommodated;
 - c) opportunities to promote walking, cycling and public transport use are identified and pursued;
 - d) the environmental impacts of traffic and transport infrastructure can be identified, assessed and taken into account – including appropriate opportunities for avoiding and mitigating any adverse effects, and for net environmental gains;...
- ...The planning system should actively manage patterns of growth in support of these objectives. Significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. This can help to reduce congestion and emissions, and improve air quality and public health...”

The Strategic Objectives do not conform with NPPF in these foundational requirements adequately, to transparently steer the plan strategy. They should therefore be amended to read:

“Plan to provide local infrastructure to support new development and seek opportunities to address existing identifiable infrastructure problems deficits, such as in particular those relating to the A27 and its junctions and wastewater treatment.”

Paragraph 2.36 states, in the context of the Climate Emergency and the National Trajectory to “Net Zero” that “The council will enable the delivery of infrastructure, jobs, accessible local services and housing for future generations while protecting, conserving and enhancing the historic and natural environment.”
Naturally, we support this intent.

However, there is no acknowledgement of the role current patterns of transport use contribute to carbon emissions, nor that substantial mode shift is necessary to address sustainably an acute lack of capacity on the local network and the SRN, especially around Chichester. This is especially concerning as the basic conceptual link is not made between the fact that the greatest such problems lie on the A27 corridor and around Chichester, while these are also at the same time present many of the most sustainable locations for development, and where the opportunities to secure much greater use of sustainable modes also exists.

Strategic Objective 7 “Strategic Infrastructure” includes the following statement:

“To work with infrastructure providers to ensure the timely delivery of key infrastructure to support delivery of new development. New development will be supported by sufficient provision of infrastructure to enable the sustainable delivery of the development strategy for the plan area. Key infrastructure to support the Local Plan will include improvements to transport, ...

A sustainable and integrated transport system will be achieved through improvements to walking and cycling networks and links to accessible public transport. Highway improvements will be delivered to mitigate congestion, including measures to mitigate potential impacts on the A27 through a monitor and manage process.”

The latest transport evidence in the Chichester Transport Study makes no pretence to define much less to deliver a “sustainable or integrated” transport system. It is wholly devoted to sustaining current levels of car use across the District, to and through Chichester area.

It is no more than the lightest of touches to the approach taken to supporting the adopted Local Plan, an approach that is already almost 10 years beyond the date of its gestation but has yet to deliver any significant capacity improvement schemes, much less any measures that sustain even current levels of public transport journey times and reliability in the face of increasing congestion – much less any betterment.

Of the six key junctions on the A27 around Chichester, recognised to require significant mitigation given they are saturated for extended periods, five accommodate regular bus services - indeed frequent ones at least every 20 minutes in several cases. The sixth at Oving Road, relates directly to a key corridor where bus services are needed to support strategic growth currently being delivered at Shopwhyke, as well as substantial further growth West of Tangmere (proposed allocation A14) and “East of Chichester” (A8), south of Shopwhyke Road.

As stated at p12 of the Study Summary “The modelling shows that all the junctions on the A27 Chichester bypass are well over capacity, even before adding in the Local Plan development and with the exception of Portfield Roundabout are actually shown to be over capacity in the base model year (2014) in one or both peaks”. This much has indeed been evident for years from delay and periodic even more severe disruption arising to Stagecoach services from the lack of network resilience.

The reassignment of through and local traffic through Chichester to avoid the A27 bypass is an especially serious issue

for bus services that penetrate the city. This is leading to consequential saturation of a range of junctions used by buses. Rising delay and unpredictable running times are at the root of our decision to sever the long-established Portsmouth to Littlehampton service in 2023, which will in future no longer run across Chichester, but terminate to provide additional dwell time to mitigate the impacts of congestion.

While this congestion affects all road users including businesses and freight traffic, the effect on scheduled bus services is greatly higher, as such services cannot reassign route to 'beat the queue'. Traffic congestion often encourages greater car use for this reason, in tandem that people are happier to sit for extended periods in their own vehicle on a seamless door-to-door journey than wait at the roadside for a delayed bus making slower progress in lengthy queues.

As the Study admits at para. 1.3.2 "Although, there have been works at the Portfield Roundabout in this timeline, no other mitigation schemes have been completed along the A27 corridor, as such the mitigation schemes defined in this report will also be required to consider the development from this plan period."

In other words, in the 8 years since the current Local Plan was adopted in 2015, there has been minimal progress in delivering the traffic mitigations. There is no clarity at all when any such mitigations will be brought forward. It is hardly surprising then, that traffic conditions have deteriorated. The "predict and provide" transport strategy supporting the current plan has failed.

Despite this, the Draft Local Plan Review proposed to "double down" on exactly this strategy. It represents, like the rest of the evidence base, a "rolling forward" of the current car-based strategy by 9 years, with the lightest of touches to attempt to accommodate car trip demands from a relatively modest additional development quantum.

Nevertheless, the Study requires a global 5% reduction in trip demands arising from unspecified "credible" (paragraph 4.1.2) sustainable transport and travel planning measures. It is unclear why use of non-car modes will see disproportionate growth when no measures are in place to make them more attractive. This 5% increase in use translates to a doubling in the modal share of bus services. There is no evidence nationally, anywhere, that simple ignorance of alternatives to the car is the main barrier to uptake.

The outputs of the 2023 Chichester Area Traffic (SATURN) model are set out at Table 5.1 (am peak) and 5.2 (pm peak) without mitigation. These betray just how seriously compromised the whole network around Chichester is, and will be in future, even with implementation of a mitigation package to increase traffic capacity that is understood to cost between £92m and £164m – and which the Study and the draft plan acknowledge cannot be delivered through developer funding sources alone. Unspecified external funding presumably from HM Treasury through DfT is required.

Even if this provided and the schemes are delivered, Tables 8.1 and 8.2 indicate these will provide minimal relief. The final columns suggest key junctions, including Portfield, Fishbourne Road and Cathedral Way East will remain at well over 100% ratio of flow to capacity (90% is considered the point at which saturation is approached, with the onset of increasing delay above that figure). RFCs in tables 8.1 and 8.2 are some of the highest we have ever seen in a local transport evidence base for a post-mitigation scenario. While the serious potential risk of reassignment across Chichester City is greatly reduced, which is important and welcome given its impact on bus services, Tables 8.1 and 8.2 show the extent of post-mitigation saturation is also egregious, covering a very large number of key links and junctions.

On every measure and criterion, then, including cost deliverability and effectiveness, the revised Transport Strategy falls well short of evidence to suggest the transport impacts of the plan can be properly addressed by this means.

Despite the repeated statements about sustainable modes throughout the draft plan and Chichester Transport Study, only 2 paragraphs at Section 6.2 within the Study are devoted to public transport:

"6.2.7 The funds generated from the parking management schemes, local/nation funding schemes and developer contributions could also be utilised to fund potential public transport enhancements within the city centre including an expansion of the bus priority lane system within Chichester City Centre. This could reduce reliance on the car in the longer term towards sustainable public transport. A park and ride scheme could be incorporated within a bus priority lane network in the future depending on the uptake and successfulness of early bus priority trials.

6.2.8 Chichester City centre has a constrained existing public highway network. Therefore, any proposed dedicated public transport or light transit corridors that could be implemented would be at the expense of existing highway. This could be managed through a time-based system where certain routes are restricted to public transport only during specific times. E.g., peak hours."

There is some very high-level consideration of Park and Ride following this section. None can be considered a serious practical evaluation of consolidating car-borne trips onto bus services, including existing ones, for example local mobility hubs, more frequent bus corridors, delivery of specific bus priorities.

None of the discussion of alternatives to "predicting and providing" for unconstrained traffic growth is rooted in a deliverable evidence base, or proper evaluation of options and specific projects.

To take just one aspect of the few specifics that can be picked out, a workplace parking levy is hypothesised. This would

apply only to “offices”, in Chichester city centre (para 6.2.3), without consideration given as to how this could be practically achieved or even that a meaningful amount of office based employment would qualify. Much less is any consideration given to how far focusing a strategy only on office-based workers would actually deliver a particularly significant effect, apart from to create a strong incentive to relocate offices out of the city centre to places out of reach by public transport.

Looking at the Chichester Transport Study 2023 and the draft plan together, there is insufficient evidence that the traffic capacity increase proposed in the 2023 Transport Study is any more affordable or technically deliverable, or likely to be sufficiently effective, than those in the past strategy. The evidence more strongly points to the fact that no highway improvements are identifiable or economically deliverable to meet even short term increases in demand for car-borne mobility on most of the network around Chichester.

There are no published strategies or schemes clearly supporting the contention that the objective of improving sustainable modes is technically achievable or deliverable either. The plan makes generalised assertions that such strategies will be devised and implemented only after serious problems emerge from a shortfall in the car-borne transport strategy.

The reference to “monitor and manage” is undefined and unsubstantiated. There are no outcomes stated, no mechanisms specified and no timescales for action.

Our experience today is that network conditions have reached unacceptable and prejudicial levels of severe unpredictable delay. The saturation of the network is already evident well outside the traditional peaks on key sections of highway and at key junctions. External shocks such as the effects of severe weather are becoming more common, leading to delays so extreme as to justify the description of “gridlock”. The plan does not identify a strategy to effectively address this, in particular by consolidating passenger car trips onto more efficient public transport vehicles. This is unacceptable to Stagecoach.

2.4. Local Plan Vision

Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the broad approach in Plan Vision and in particular that by 2039, the Plan will support and enable greater use of sustainable modes. However, there is no link made between reducing the use of private cars, and the need for a step change in the use of sustainable modes. Without a published transport evidence base it is impossible to establish a suitable sustainable transport strategy to support both carbon reduction and alleviation of the problems arising from acute congestion. Even on a very crude basis, to achieve a meaning mode shift on key approaches to the A27 Chichester Bypass will require more than 20% of existing peak car-borne journeys to transfer to other modes. A 10 percentage point transfer to bus (about half this shift) would imply more than doubling peak hour bus passenger boardings.

The Vision is nothing more than an aspiration, that needs to more definitively aim at key outcomes, for the plan to be effective. The Vision should thus be altered to read:

“Get about easily, safely and conveniently with less reliance on private cars –making the greatest possible use of the rail and enhanced bus network, and with more opportunities for active travel including walking and cycling; to materially reduce dependence on private car use.”

Underpinning the Plan’s spatial strategy, the Vision section goes into more specific detail about key localities in the Plan area.

Regarding Chichester, Paragraph 2.39 states: “The emphasis will be upon consolidating and enhancing the role of Chichester city as the plan area’s main centre, whilst also developing the role of key settlements to its east and west. The focus will be upon creating communities with good access to a range of employment opportunities and affordable housing for young people and families to balance the ageing population.”

This is clearly the appropriate focus for meeting the District’s development needs in a sustainable manner. The city and key settlements to the east and west, are those places already able to make use of relevant public transport services, both rail and bus. Especially within and near the City, walking and cycling can credibly present highly relevant choices. This emphasis clear can be expected to address the requirements of sustainable development set out in NPPF and their local application set out in the Plans Strategic Objectives.

However, this needs a robust transport strategy, to avoid a further concentration of development and its traffic impacts occurring on or near some of the most chronically congested parts of the highway network. To date, the absence of intervention has strangled the bus network through further marked deterioration in traffic conditions. This by consequence increases the risk of bus delay or cancellation, lengthens journey time and reduces customer confidence in bus as an attractive alternative mode of travel.

In April 2023, Stagecoach is making significant timetables changes to improve operational resilience in and around

Chichester. The biggest such change is the severance of the Portsmouth to Littlehampton section of service 700, at Chichester, with buses operating independently to the east and to the west and ending cross-city links. This is planned to reduce the probability of delay but at the cost of additional vehicle resource (circa £200,000 per annum) which could be better spent providing new or enhanced services. We anticipate a small loss of custom as a direct consequence of the change, but have little choice other than to take negative action so as to fulfil our statutory punctuality obligations.

If the Strategic Objectives of the Plan and its Vision are to be achieved, in the way required by NPPF paragraphs 104-105, a properly-evidenced transport mitigation strategy needs to create the conditions where bus journeys are more reliable than car journeys and thus mobility demand switches as far as can be realistically achieved away from car use, to bus use and other more sustainable modes.

Beyond Chichester, the Plan Vision focuses on key localities beyond to the east and west.

To the west of Chichester a focus on growth at Southbourne is justified at paragraph 2.43: "...the aim is to take advantage of the village's good transport links and existing facilities to deliver significant new residential-led development within the broad location for development which will further enhance local facilities and offer opportunities to reinforce and supplement existing public transport, including bus routes."

We agree this is a very significant opportunity. However, if the requirements of NPPF paragraphs 104-105 are to be met, this demands that effective bus priority is delivered on the A259 corridor, especially eastbound at Fishbourne and westbound approaching Emsworth. Without such measures, the growth committed and planned will serve only to further undermine bus journey time and decrease punctuality on the existing 700 service, entirely contrary to the aims of the Vision.

The emphasis on the A259 corridor served by Stagecoach 700 west of Chichester is reinforced at paragraph 2.45 stating that "Between Chichester and Southbourne, the Plan provides for more moderate levels of growth within the parishes of Fishbourne, Bosham and Chidham & Hambrook, ... with opportunities to support and expand existing facilities and for increased use of public transport options". We strongly support the principle, but the Plan must follow through with specific public transport priority measures that facilitate rather than prejudice such an outcome.

East of Chichester the focus is at Tangmere, where the existing allocation for about 1000 dwellings is being uplifted by 300. Paragraph 2.44 justifies this among other things recognising the scope for "...improved and additional bus services and cycleways will provide better connections to Chichester city and east to Barnham and the 'Five Villages' area in Arun District." We unequivocally endorse this conclusion. Realising a "game-changing" level of bus service quality, reliability and frequency east of the city, also serving committed and planned development north and south of Oving Road at Shopwhyke, is equally essential, given that all SRN links and junctions are approaching equal saturation.

The National Bus Strategy has given new focus on partnership with West Sussex County Council to discuss and deliver a significant new bus service between Chichester, Shopwhyke, Tangmere, Eastergate and Barnham, supporting committed development and acting as an initial phase of what ought to be a more ambitious longer-term strategy to support growth beyond 2025 in both Chichester and Arun Districts. For these improved bus services to be both deliverable and effective, robust bus prioritisation is unavoidable. No such measures are proposed in the Plan or its evidence base and we therefore suggest inclusion of plans to facilitate safe and efficient bus operation between Tangmere and Nyton/Eastergate, ideally avoiding the need to join A27 through-traffic entirely.

We welcome the clear recognition that these localities identified for growth, benefit from existing relevant public transport services. The Vision also sets an expectation that bus services in particular should be "enhanced" and "reinforced".

We entirely agree that these opportunities exist, across the broad strategy and strategic allocation proposed by the draft Local Plan. Securing them will be crucial to achieving national and local policy objectives, including the Strategic Objectives. However, to our continuing very great dismay, the Plan goes no further to defining how this will be achieved. As such the Vision is not demonstrable achievable or deliverable.

Accordingly the Plan cannot be considered effective, in the sense of NPPF.

Remedying this, demands specific measures to protect bus services from congestion in the following corridors:

- A259 East of Emsworth
- A259 Fishbourne
- A 259 Via Ravenna/Cathedral Way
- A286 Stockbridge Road north and south of A27
- B2145 Whyke Road/Hunston Road
- A259 Bognor Road, east and west of A27 and extending to the District Boundary
- B2144 Oving Road/Shopwhyke Road east and west of the A27
- A 285 Westhampnett Road/Portfield Way/Stane Street, potentially involving a mode filter at the west end of Stane Street

These must be defined to a sufficient level of detail to assess their effectiveness and deliverability, including costs.

This would then allow West Sussex County Council and Local Transport and Highways Authority, ourselves as the principal bus operator, and where appropriate other organisations that would be directly tasked with delivering the mitigation package, to agree service levels and standards necessary to deliver specified outcomes, including journey times, frequencies, capacity and hours of operation on the network, and also in respect of the strategic allocations and Strategic Locations for Growth.

The agreed mitigations strategy should be set out in an up-to-date Infrastructure Delivery Plan backed by clear funding commitments, including a funding strategy to justify necessary developer contributions.

Where necessary to support evidence of effectiveness and deliverability, clear statements of support, which might include Statements of Common Ground between the LPA, LTA, National Highways and Stagecoach, could be provided.

3. Spatial Strategy

Stagecoach Supports

Stagecoach well recognises the constraints outlined in the explanatory narrative at the start of Chapter 3.

In particular we strongly endorse that strategy in that it reflects that the best opportunities to meet housing and employment development requirements sustainably clearly exist in and close to Chichester and on the key east-west movement corridor where – subject to effective measures being delivered to make these modes more attractive, efficient and relevant – sustainable modes can credibly provide for a much higher proportion of movement demands, mitigating most effectively the potential traffic impacts of development.

We agree that the Manhood Peninsula suffers serious environmental constraints, but, added to these, public transport and other sustainable modes cannot provide such attractive alternatives, and significant further development risks merely reinforcing already high levels of car use, aggravated by the carbon impacts of the distances involved – something the plan does very little to evaluate, and makes no reference to.

We endorse the conclusion in paragraph 3.24 that significant development in the part of the District north of the National Park is inappropriate. The rationale is principally on landscape and visual character. This exposes a fundamentally biased approach to plan making that has consistently underplays transport accessibility and carbon issues. In fact, the lack of local services and the extended distances that need to be travelled to fully participate in society in this area, with no realistic prospect of public transport offering relevant choices, ought to rule such a strategy out of play on a far less aesthetic and interpretational basis.

3.1. Policy S1 Spatial Development Strategy

Stagecoach Supports

The Spatial Strategy flows clearly and logically from the Spatial Portrait, and the opportunities and constraints identifiable across the Plan area. It represents a logical and justified continuation of the existing Local Plan strategy. In particular the spatial strategy maximises the potential for sustainable modes to contribute to meeting a much higher proportion of all the District's mobility and accessibility needs.

3.2. Policy S2 Settlement Hierarchy

Stagecoach Supports

The settlement hierarchy clearly reflects the service endowment and potential self-containment of the settlements in the District. In particular, the second tier of settlement hubs includes secondary schools, which are major peak trip generating uses. Service villages, in the main, also benefit from bus services running at least hourly, which can be expected to provide for a degree of mobility for the higher number of trip purposes that cannot be satisfied by walking or cycling within the immediate locality. Thus, a level of development to meet local needs in this tier is relatively sustainable.

There is a quite broad range of settlements in this category. We have concerns that, north of the National Park, the Service Villages have no realistic public transport choice. These include Plaistow/Ifold, Kirdford, Loxwood, and Wisborough Green. Such as exists is typically a 1/bus per day off-peak shoppers service offering up to 90 minutes in Horsham or Guildford and as such any development here even to meet local needs requires each adult to own a car. This contrasts strongly with Service Villages to the south of the National Park, which are greatly more sustainable.

4. Climate Change and the Natural Environment

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This section of the plan is extensive and wide ranging, as should be expected.

However, remarkably, there is no acknowledgement whatever of the role of transport in mitigating climate change or its effects, not of the importance of sustainable movement and access being facilitated across the plan area in addressing anthropogenic impacts on the natural world at a more local level.

This exposes very clearly a troubling level of indifference to transport matters in the production of the Plan, which, while nationally quite common, is neither appropriate nor acceptable. The mitigation of transport impacts is not merely a matter speaking to the social and economic aspects of sustainable development. It is crucial to address the causes and effects of climate change that arise from transport, and personal mobility.

This is now well understood and at the centre of national policy, including the National Decarbonisation Strategy for Transport (July 2021) which at Section 5 commits the government to aligning land use planning and transport strategy much more tightly and effectively to mitigate the carbon emissions associated with the current dependence on cars, and the mode mix; but also to reduce travel distances, both increasing the potential relevance and effectiveness of all sustainable modes, and reducing average journey lengths for residual motorised journeys of all kinds.

National statistics show that well over a third of all domestic carbon emissions arise from land-based transport and of these, the vast majority arise from trips of over 10km – outside the range of large scale use of cycling. In fact, the potential of the plan to materially support carbon emissions reduction from within the plan area lies more in the realm of transport than any other policy theme – including emissions mitigation from buildings, which is in any event an aspatial matter and covered by nationally-binding building regulations. By 2025 something like 40% of all the emissions within the plan-area will be transport related.

There is no evidence supplied to support the plan that addresses the transport carbon impacts of the spatial development strategy in a clear manner.

There is no evidence supplied that sets out the effects of potential worsening of congestion on air quality within the plan area, arising entirely from the excess of passenger car movement demands over available and credibly deliverable highway capacity. This is despite the evidence set out and acknowledged in the explanatory memorandum at paragraph 4.130:

“4.130. The council’s Air Quality Action Plan and the West Sussex Transport Plan 2022-2036 both refer to the air quality issues faced by Chichester. There is currently one Air Quality Management Area (AQMA) in the plan area, located at St Pancras, Chichester. AQMAs are designated where air quality exceeds, or is likely to exceed, national air quality standards and objectives. Development within or impacting these areas, or that likely to cause the declaration of any further AQMAs, will be subject to an air quality assessment by the applicant.”

This is a retroactive approach – it is not “planning”, based on evidence.

We are well aware that air quality issues in and of themselves can render allocated sites to be undeliverable: a good example is in the Vale of White Horse, Oxfordshire, where strategic allocations on the A338 and A420 corridors have been held up for years by air quality issues at Marcham and Frilford, in large measure because agreed transport interventions were considered inadequate or undeliverable a very short time after the Plan was examined and adopted.

There is no evidence that shows how the development strategy can effectively mitigate these impacts as well as the further potential impacts that arise from the development strategy. This is exasperating, as there is clear evidence that could be drawn upon to show that that very substantial opportunities exist to:

- Speed buses up and make them more reliable by the delivery of bus priority on most of the key main corridors. Most of these even today operate relatively frequently
- Improve service frequencies and extend hours of operation.
- Secure significant background mode shift to bus as a result, damping pressure on key links and junctions, by consolidating demands on direct more reliable and more frequent bus services.

The spatial development strategy as submitted is in fact, likely to well conform to such additional evidence.

The allocations require substantial additional transport related work and evidence to demonstrate that the opportunities for sustainable transport have been identified and taken up as required by NPPF paragraphs 104-105.

With regards to specific policy, Policy NE22 should be modified to read:

“Development proposals will be permitted where it can be demonstrated that all the following criteria have been addressed:

1. Development is located and designed to minimise traffic generation and congestion through access to by maximising the relevance and attractiveness of sustainable transport modes, including maximising provision of specific demonstrably effective measures to make pedestrian and cycle and public transport routes and networks more direct, more safe, faster and more reliable;...”

5. Housing

5.1. Policy H1 Meeting Housing Needs

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

The presumption of the planning system is that local planning authorities should seek to meet their objectively assessed

development requirements in full. These needs are assessed by a defined Standard Methodology set out in Planning Practice Guidance and elsewhere, that has explicit regard to ensuring that the economic and social effects associated with housing are properly provided for, to avoid exacerbating serious problems that arise from inadequate housing supply.

As a significant local service provider and employer, Stagecoach is concerned that existing issues with housing availability and affordable housing supply are not exacerbated. This has a direct bearing on staff recruitment and retention. It also has an indirect bearing on our cost base.

The existing problems with housing affordability have developed over many decades of undersupply. It should be emphasised that the significant boost to the supply of housing that has been sought by governments over the last 15 years, has only begun to take effect relatively recently in this District. Tackling the problem will require years of consistent attention.

Stagecoach notes that the Council is no longer proposing to meet its identified housing needs in full. Rather than 638/annum the Council is allocating a total that implies an annual delivery rate of 535/annum.

While a number of matters evidently present challenges to the Council in identifying a sustainable development strategy. Paragraph 5.2 indicates that "constraints, particularly the capacity of the A27 has led to the council planning for a housing requirement below the need derived from the standard method..." The blame for being unable to meet housing requirements is thus laid squarely at the door of transport infrastructure and systems.

This conclusion in no way follows from the evidence in the Chichester Transport Study. This, rather, makes the statement that when a higher annualised quantum of 700 dwellings per annum was tested, in the majority of cases the traffic capacity improvement package would perform little differently. To quote the Study:

"5.6.3 The network performance outputs analysed comprising V/C%, Delays (seconds) and Queues (PCU's) suggest that generally the proposed SRN mitigation identified for the Core Scenario, can accommodate in the most part, additional increase in development to 700dpa."

Whether the rest of the local road network is similarly protects is moot.

Irrespective of these results, even if the contention made in the draft plan were true, unlike many other constraints, this is amenable to a suitable effective strategy to address the constraints identified being collaboratively conceived. This is what NPPF expects, as set out in paragraphs 104-106.

Where the A27 is concerned, as part of the SRN, National Highways is now working to a substantially revised approach than that in force at the time to current Local Plan was prepared, or LSS2, or reflected in the Chichester Transport Study. This is set out in DfT WMS 01/22. This document is the policy of the Secretary of State for Transport in relation to the SRN which should be read in conjunction with the National Planning Policy Framework (NPPF). It replaces the policies in the Department for Transport Circular 02/2013 of the same title.

It makes plain that to accommodate additional demands arising from development, National Highways (NHC) expects to meet the requirements of its statutory license in a substantially different manner. With respect to development NHC LTN 01/22 continues to address the tensions between national policy for the environment and carbon mitigation, the ongoing need to substantially boost the supply of housing as well as maintain national economic competitiveness and protect the safety of the public. However, in future, the approach will be to seek first to maximise the impact of demand management measures (reducing the need to travel), and then to accommodate residual additional demands first though maximising the use of sustainable modes, rather than accommodating assumptions about current levels of car dependency and use.

LTN 01/22 much more closely and explicitly aligns with the language of NPPF Chapter 9 paragraphs 104-106. Paragraph 12 states: "New development should be facilitating a reduction in the need to travel by private car and focused on locations that are or can be made sustainable.... Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas." (our emphasis).

It continues at paragraph 13: "where developments are located, how they are designed and how well delivery and public transport services are integrated has a huge impact on people's mode of travel for short journeys. The company will therefore expect strategic policy-making authorities and community groups responsible for preparing local and neighbourhood plans to only promote development at locations that are or can be made sustainable [footnote 8] and where opportunities to maximise walking, wheeling, cycling, public transport and shared travel have been identified." (again, our emphasis)

Stagecoach readily confirms that the draft Plan development strategy conforms well to the first limb of this expectation, in terms of the location of development.

Stagecoach considers that the plan and its evidence base conforms poorly to the second in that the specific

opportunities to maximise walking, cycling wheeling and public transport are not clearly identified, and defined, and proven to be effective and deliverable.

The current mitigation strategy for the A27 Chichester area, supporting the adopted Local Plan and for which proportionate developer contributions have and continue to be sought, reflects now-superseded DfT Circular 02/2013. As a direct result, it failed completely to identify any significant effective bus priority measures, despite the fact that frequent services already exist on the key corridor concerned, and that one bus journey can remove, fully seated between 72 and 80 single occupancy car journeys from congested links and across key junctions on the A27. Rather, it sought to implement targeted measures to increase the throughflow of general traffic.

We recognise the realisation that this approach, which was already reliant on some tenuous logic, is simply not technically viable, especially where further development needs are anticipated.

National Highways will now pursue an approach with the planning system that “includes moving away from transport planning based on predicting future demand to provide capacity (‘predict and provide’) to planning that sets an outcome communities want to achieve and provides the transport solutions to deliver those outcomes (vision-led approaches including ‘vision and validate,’ ‘decide and provide’ or ‘monitor and manage’). The company will support local authorities in achieving this aim through its engagement with their plan-making and decision-taking stages.” (paragraph 15).

Paragraph 23 is at the fulcrum of assessing and defining transport mitigations to accommodate growth on and near the SRN “Capacity enhancements such as modifications to existing junctions or road widening to facilitate development should be determined on a case-by-case basis. The general principle should be accepted where proposals would include measures to improve community connectivity and public transport accessibility, and this will be weighed against any negative safety, traffic flow, environmental and deliverability considerations, impacts on the permeability and attractiveness of local walking, wheeling and cycling routes, and alternative options to manage down the traffic impact of planned development or improve the local road network as a first preference.” (our emphasis).

However, no material work has been done that seeks to identify if a bold robustly conceived and suitable judiciously-prepared strategy that seeks to consolidate flows on already densely travelled corridor onto improved bus services, driving mode shift through insulating these services preferentially from already serious queuing. This would be likely to have very substantial impacts on all the key junctions on the A27, and potentially, on the A27 itself. The need for an integrated approach between Shoreham and Emsworth within West Sussex paying particular regard to development requirements in both Arun and Chichester Districts naturally lies at the heart of this, and we would expect to be picked up by the LSS3 Review among other things.

However, the locus of the problems and its causes and effects are obviously well enough known to start work on defining solutions within the plan area today. We would expect that this work will be essential if National Highways are to support the Plan, especially now given the terms of Circular 01/2022.

Such work could and should start from a “policy off” position: in other words that the Plan should fully accommodate its needs unless it can be proved that a mitigation strategy for the A27 that is compliant with DfT WMS 01/2022 cannot credibly accommodate resulting capacity demands without unacceptable impacts on the safety and efficient operation of the SRN.

This evidence does not exist. In fact the Chichester Transport Strategy 2023, on which the Council solely relies as its transport evidence base, indicates the opposite at para 5.6.3. This is the case before meaningful measures to secure damping of traffic demands through mode reassignment are even considered.

The exception to this is Portfield and Oving Road, which are among the most problematic areas after mitigation even at the Council’s chosen 535 dwelling/annum scenario (para 5.6.4.-5). The costly capacity mitigation simply cannot deliver enough benefit. It is admitted that WSCC has indicated that it would prefer a solution that places greater reliance on sustainable modes damping car-borne demand. This is entirely the strategy required by NHC to follow LTN 01/22, of course. Despite the fact that “predict and provide has “run out of road” no attempt has been made to examine what such a solution set credibly could look like. This is unsatisfactory and deeply troubling.

At paragraph 5.4 the draft plan points back again at the West Sussex and Greater Brighton Strategic Planning Board and the future work that has been commissioned, but has barely begun, to update the Local Strategic Statement. This work is to inform the preparation of plans that have horizons beyond the end date of the current LSS in 2030 and properly to meet the Duty to Cooperate. As we said in our response to section 1 of the Plan we fully endorse the conclusion that this is the right mechanism to look at these issues. However, the mechanism has not been effectively applied to the production of this plan. Therefore, the specific evidence that capacity on the A27 in and of itself supports accommodating a lower housing requirement does not exist.

The Plan thus does not conform to NPPF, is not adequately justified and is not effective.

The Plan does not properly meet the statutory Duty to Cooperate.

We will return to this matter in specific representations to Section 7 of the draft plan.

5.2. Policy H2 Strategic Locations/Allocations 2021-2039

Stagecoach Supports

Policy H1 makes plain that the plan, as far as it identifies locations for development has done so in locations that conform with its spatial strategy. All of the strategic allocations to a greater or lesser extent offer clear opportunities to make use of sustainable modes, by virtue of their location. That is not to say that the opportunities to take up these opportunities, and maximise the role of sustainable modes, has been identified, defined and translated properly into the rest of the plan policy suite or Infrastructure Delivery Plan.

As our remaining representations make clear, we support the locations thus far identified as being those that offer the best opportunities to reduce the need to travel, reduce travel distances, and create high quality attractive sustainable travel choices, for both existing residents as well as new ones.

However, the transport impacts of the allocation will individually and cumulatively likely to lead to increasingly severe impacts on the transport network, and on bus services.

Perversely, because these opportunities are not properly identified and secured through the plan and its supporting transport strategy, the opportunities presented by the allocations to secure a substantially more sustainable and lower carbon pattern of movement will not only risk being squandered but may aggravate the wider problems.

5.3. Policy H3 Non-strategic Parish Housing Requirements

Stagecoach Supports

The approach is consistent with the plan's spatial strategy. It generally avoids a dispersal of development to locations likely to be highly car dependent. There is a clear focus on meeting housing needs in the far north-east of the District at the largest and most sustainable settlements, such as Loxwood, Kirdford and Wisborough Green. However, it must be pointed out that public transport availability in this area, provided by the County Council through services it procures, is minimal. These settlements in practice require each adult and child of secondary school age to have access to motorised transport to fully participate in society. This might justify significant measures to secure a boost in the frequency of bus services between Guildford and Billingshurst, passing through these settlements.

Otherwise, existing commitments in the plan area already make provision to meet for local needs. To the degree that there is an unmet local requirement for affordable housing of a small scale – for example to support the rural economy – this could be met through neighbourhood plans or through Rural Exception Sites.

6. Place-making, Health and Wellbeing

6.1. Policy P1 Design principles

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

NPPF requires that proposals should consider transport issues from the earliest possible stage. Designing to properly facilitate safe and efficient access, focusing first on sustainable modes, should be at the heart of development design. Too often it is still an afterthought, notwithstanding this.

Policy P1 must include an additional statement to be compliant and effective with NPPF paragraph 104-105 and 112 a): "Development will be designed to make access and movement using walking, cycling and public transport the natural first choice, and demonstrate through the Design and Access Statement how such modes are afforded the most direct, safe, reliable and efficient routes within to and from the proposals, especially when compared with car use."

6.2. Policy P4 Layout and Access

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

A number of proposals in the plan involve large-scale development. It is essential that where appropriate buses can access and circulate efficiently through development at a suitably early stage. There is no acknowledgement of this anywhere in the policy, contrary to NPPF paragraph 112.

Large-scale development which buses cannot access in an efficient or timely manner, or at all, strongly contributes to high levels of car-dependency. Evidence for this is referred to among other places, in DfT Circular 01/2022. To be compliant with NPPF and properly pursue its strategic Objectives, Policy P4 needs to be modified to address this point: "1. Provide safe, direct and attractive conditions for inclusive access, egress and active travel between all locations and providing as good direct high quality links to integrated public transport, and where appropriate efficient access and circulation to bus services, unimpeded by excessive parking, at a suitably early point in the development phasing;

7. Transport and Accessibility

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

The issues related to transport are fundamental to the soundness of the Plan. In particular, the constraints presented by the capacity on the A27 around Chichester and its key junctions, are the paramount reasons why the Council does not consider it can meet its objectively-assessed development needs in full. Thus, the transport issues and potential solutions available and what these mean for the ability of development needs to be accommodated, are matters that go to the heart of the soundness of the Plan.

Paragraph 8.3 sets out the approach taken to date succinctly:

“Increasing the capacity of the road network is key to supporting growth in the Local Plan. However, there is also a need to reduce demand for road transport to achieve net zero in greenhouse gas emissions by 2050 as highlighted in the council’s Climate Emergency Action Plan and Strategic Objective 1. In aiming to achieve the ambitions of the action plan, all development is expected to demonstrate how it will support four key objectives to create an integrated transport network which will alleviate pressure on the road network, improve highway safety, encourage sustainable travel behaviours and help reduce transport related impact on air quality, by:

1. Avoiding or reducing the need to travel by car;
2. Enabling access to sustainable means of travel, including public transport, walking and cycling;
3. Managing travel demand; and
4. Mitigating the impacts of travel by car.”

However, this approach is unambitious and “lightweight” as it assumes, as does the existing Chichester Transport Strategy on which the current adopted plan relies, that the focus of investment should be, wholly, in highways capacity improvement.

Sustainable modes explicitly are expected to play a greater role to “alleviate pressure” on the local road network, as part of this strategy. To emphasise: to avoid exacerbating congestion, the strategy will have to both remove a significant proportion of existing demands from the network on multiple key approaches to Chichester; and then ensure that travel demands from committed and further new development allocated in the plan does not simply replace these journeys, or, worse, create even greater demands.

This will demand very significant behaviour change. Only by making sustainable modes substantially more attractive, both absolutely, and relative to the same journey made by car, can this be expected to occur. However, the explanatory memorandum as well as the wider policy suite and IDP, well expresses a fundamental unwillingness to taking specific, defined measures to achieve this reduction in car use and material promotion of sustainable modes. It makes plain that sustainable modes, including bus services, will offer a lesser role to which “access will be provided”.

Such a vague and weakly defined mechanism will have no effect, at all, on current behaviour and car dependency if the relevance of those choices as a credible alternative to car use, is not substantially boosted. This includes a 5% reduction in trip demand assumed by the Traffic Model at the heart of the Chichester Transport Study 2023.

For this reason. the transport strategy behind the current adopted plan is demonstrably ineffective, as the updated model makes plain. It has not yet been delivered and is yet unclear when or (in the absence of committed funding) even if it can be. It is ineffective to “roll forward” this strategy to support a higher level of planned growth.

We note that a scheme for addressing congestion on the A27 at Chichester has been included in Roads Investment Period 3 (2025-2030) – well within the horizon of this Plan. However, recent history provides compelling evidence that off-line improvement to the north is not politically supported and arguably even technically or economically deliverable. It is not funded, nor at this stage can it be hypothesised if an economically deliverable scheme is achievable sufficient to warrant the necessary investment.

An on-line improvement of the A27, including junction improvements, is likely to favour longer distance east-west though movements, which are of greater significance to the national economy, at the expense of local movements crossing the SRN- a conundrum that largely sums up the dilemma that is faced by NHC and the County as Highways and Transport Authority. It is one that is played out in many places, but rarely is the tension so stark as at Chichester.

Every local route crossing the A27 at grade around Chichester accommodates a regular bus service - or shortly will do (Oving Road area is expected to follow in 2023, though bus services are likely to not use the modified crossroads but to use the left-in-left-out facilities provided as part of the Shopwhyke Lakes development). The impact of these issues on the entire bus operation are serious and increasingly severe.

By the same token, boosting the relevance and reliability of each of these services substantially consolidating as much

demand as possible onto a much smaller number of vehicles, is clearly a strategy that ought to support the effective capacity of each of these junctions being greatly augmented, at the same time as reducing equally substantially, the energy- and carbon intensity of mobility in the plan area. Addressing the A27 should not be considered some kind of “zero-sum” game.

Furthermore, the approach of National Highways in its dealings with development and the planning system now reflect a substantial change in Government Policy set out in DfT Circular 01/2022, which we separately cover in these representations, that entirely aligns with an approach that seeks to appropriately invest in more active and rational management of scarce highways capacity, on both the SRN and local roads.

For environmental, economic and social reasons – including public health, the issues presented by the A27 and its interface with local roads around Chichester stands out, nationally, as an example of where the approach taken to accommodating and mitigating development impacts needs to make a clear break with previous “predict and provide” approaches to meet forecast unconstrained car use as LTN 02/2022 makes clear as a principle. Policy in the West Sussex LTP to 2036 itself makes plain that “shared mobility” – including bus services – must play a much greater role in this area.

The existing Chichester Area Transport Strategy is focused on justifying capital contributions from committed development to fund highways capacity improvement – with nothing included to make bus services more attractive, or importantly more reliable. Indeed this “cars first” approach is so costly, that there is already accepted by WSCC to be insufficient land value remaining to be captured to put into substantial improvements for public transport. That much is very evident, and transparent, from paragraph 8.12 and 8.14, where south of Chichester “This (one) package of works (of several improvements needed) would be between £57.23 and £82.79 million to deliver in full and would not be capable of being funded by development contributions alone.” This assumes the scheme is otherwise deliverable, which on the evidence in the public domain for some time, has been considered challengeable.

The draft Local Plan and a modestly updated infrastructure package that flows from the 2023 Chichester Transport Study, pursues exactly the same approach.

This strategy is also even more ineffective having regard to the roll forward of the Plan to 2039. It cannot deliver the key Strategic Objectives of the Plan; and in particular this is explicitly recognised by the Council in the failure of the draft Plan to accommodate the OAN in full.

It is also obsolete, as it does not align, from first principles, with national policy (including the National Decarbonisation Strategy for Transport) and DfT Circular 01/22; nor the Council’s own declared Climate Emergency.

As a result, draft Policies T1 and T2 are both unsound, as we will separately explain.

Owing to the lack of evidence about the implications of this for adjoining authorities – especially Adur District – in the absence of the review of the Local Strategic Statement – this has implications for fulfilling the Statutory Duty to Co-operate.

The absence of any meaningfully comprehensive refresh of the transport evidence base means that there are no meaningful schemes of any kind, defined in the plan or its IDP, to indicate either what level of growth can be accommodated, by delivering a change in travel behaviour. This would be aimed to secure a sufficient effective increase in junction throughput (measured in terms of person trips as opposed to passenger car unit movements (PCUs)). Such evidence would propose measure to achieve that outcome and assess the efficacy and costs of such improvements, across all modes.

Paragraphs 8.10-8.13 inclusive indicate that the Council “has moved away from ‘predict and provide’” and invites the reader to conclude this has translated into a programme of interventions that can be funded to deliver specific, credibly predictable outcomes. Such a programme should be clear in paragraph 8.11. and the IDP. There is no such clarity and this conclusion would be false.

It would also be evident in the language of the Chichester Transport Study 2023 and its refreshed proposals. Only the most token of lip service is paid to the matter. It is a plainly car-focused, predict and provide methodology to support a “predict and provide” strategy. In fact, it is a brazenly car-focused approach, to the exclusion of all else.

The statements in the Plan regarding any other approach, read properly, offer nothing more than a vague commitment to look post-adoption, and implementation, at unspecified measures, based on problems that may arise in future that will be decided by a committee: the Traffic and Infrastructure Management Group (TIMG). This does not yet exist and is obviously an attempt to posit a mechanism that retroactively will cover for the lack of serious multi-party engagement to address the existing and future issues. Such a group should, in our view, also include the public transport operators, not least if the requirements of NPPF Para 106c) are to be satisfied, and the strategy and measures to be adopted are material to supporting the Local Plan, as of course the purpose of the TIMG has as its core *raison d’être*.

The approach proposed by the draft plan is plainly ineffective and unsound in justifying the draft Plan.

It is more widely unacceptable to Stagecoach. The issues are severe today and well-known, already serving to jeopardise the delivery of buses relied on by existing residents, much less attract new ones.

We also consider that HM Planning Inspectorate are likely to be quite resistant to accepting this aspect of the plan's transport strategy, nor will it be appropriate for the Council, West Sussex County Council, or National Highways, to define such measures after the submission of the Plan during the Examination process. The Examination in Public of a local plan has no purpose to improve plans, or remedy deficiencies clearly evident prior to submission.

The examination of the West of England Joint Strategic Plan in 2019, and the Uttlesford Local Plan in 2021, among several others, demonstrates especially clearly that the Planning System and the Examination process is not amenable to post-hoc retrofitting of transport evidence and strategies to support a development strategy.

7.1. Transport Evidence Base

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Most of Stagecoach's serious concerns about the soundness of the plan arise from the fact that it has been prepared in advance of any up-to-date transport evidence and suitably robust transport mitigation strategy being advanced to support it. In essence, the Council has rolled forward the existing plan by 9 years, adding some additional sources of housing supply, while still relying implicitly on a transport evidence base that was prepared 10 years ago.

This led to the formulation at that time of what can only be described as an attempt to develop an effective car-based mitigation strategy, creating capacity for general traffic added to accommodate unconstrained additional demands on an already over-taxed highways network – the Chichester Area Transport Strategy. Despite language in support of sustainable modes, no deliverable measures were identified to support either the extension of the bus network to serve allocated sites, and much less to create a vital improvement to the quality and reliability of public transport services. This approach reflected the approach set out in DfT Ministerial Circular 02/2013 "Development and the Strategic Highways Network", applicable since the A27, which is the focus of the most severe difficulties, forms part of the national Strategic Roads Network.

This approach has proven ineffective even before substantial elements of housing land supply in the current plan come forward – in particular West of Chichester and West of Tangmere.

In addition, Circular 02/2013 has now been replaced by a new Ministerial Statement of 23/12/2022, DfT Circular 01/2022.

On both counts the transport evidence base and strategy needs to be properly revisited and established to provide effective mitigation for the plan, including current commitments that are being rolled forward.

The language of the current Ministerial Circular 01/2022 offers a highly condensed synoptic view of the proper approach to addressing transport matters in the planning system notwithstanding that it is directly concerned with the Strategic Roads Network. Videlicet:

"31. The NPPF expects local plans and spatial development strategies to be underpinned by a clear and transparent evidence base which informs the authority's preferred approach to land use and strategic transport options, and the formulation of policies and allocations that will be subject to public consultation. The company will expect this process to explore all options to reduce a reliance on the SRN for local journeys including a reduction in the need to travel and integrating land use considerations with the need to maximise opportunities for walking, wheeling, cycling, public transport and shared travel.

32. The Transport Decarbonisation Plan indicates that carbon emissions from car and van use is the largest component of the United Kingdom's total transport emissions. While action is being taken to decarbonise transport such that all new cars and vans will be fully zero emission at the tailpipe from 2035, the proposed location of growth in current plan periods and whether new developments would be genuinely sustainable remain important factors in demonstrating that a local authority area is on a pathway to net zero by 2050 and therefore compliant with the requirements of the Climate Change Act 2008.

33. Alongside this, the local authority should identify the key issues within their study area regarding transport provision and accessibility, setting out how the plan or strategy can address these key issues in consultation with (National Highways, and other transport stakeholders identified in NPPF paragraph 106b). It is the responsibility of the local authority undertaking its strategic policy-making function to present a robust transport evidence base in support of its plan or strategy. The company can review measures that would help to avoid or significantly reduce the need for additional infrastructure on the SRN where development can be delivered through identified improvements to the local transport network, to include infrastructure that promotes walking, wheeling, cycling, public transport and shared travel. A robust evidence base will be required, including demand forecasting models, which inform analysis of alternatives by

accounting for the effects of possible mitigation scenarios that shift demand into less carbon-intensive forms of travel.” (our emphasis)

Within the text quoted above, references to National Highways and “the Company” can quite legitimately be extended, given the statements in NPPF paragraph 16, 25, 26 and 106b, to include all the relevant transport infrastructure and service providers in the plan area. Circular 01/2022 also has the weight of secondary legislation as a Written Ministerial Statement and thus should be considered to be highly material.

To date there has been little attempt to explore, to the degree necessary, strategies that conform to Circular 01/2022. It is thus not possible to conclude, as the Council has done, that the issues on the A27 that present a constraint to development, are insuperable.

In line with comments made elsewhere in the response to this pre-submission draft, the Plan thus requires substantial further work to be undertaken with key stakeholders to establish a suitably effective and demonstrably deliverable transport mitigation strategy, to sustainably meet the District’s identifiable development needs and where apparent and appropriate, also ensure that wider cross boundary strategic issues are appropriately addressed, in conformity inter alia, with the Duty to Cooperate, NPPF paragraph 16 and 104-111 inclusive, and DfT Circular 01/2022 and to ensure the Plan’s own Strategic Objectives can be met.

7.2. Policy T1 Transport infrastructure

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

As described in comments elsewhere, Stagecoach does not see that a suitable proportionate and up-to-date basis exists to properly and appropriately address the transport issues in the plan area.

The 2023 Transport Study does not perform this role adequately but, contrary to the explanatory memorandum, is a scheme intended only to facilitate car-borne movements through some of the key junctions. There is no evidence that an holistic integrated and strategic approach to transport mitigations has been prepared. Certainly Stagecoach has not been involved in any of the discussion about appropriate transport measures in support of the plan, including the Transport Study 2023, contrary to the expectations set out in NPPF at paragraph 16 and 106.

Notwithstanding out fundamental concerns about the transport evidence case and mitigations strategy, Policy T1 reflects a weak and ineffective approach, that seeks to try and define a strategy post-adoption.

Contrary even to the explanatory memorandum for the policy, which seeks to maximise the contribution of sustainable modes, the policy is phased in such a way that it gives basis for previous “predict and provide” solutions to facilitate and support current levels of car dependency – already shown to be undeliverable and unaffordable – will nevertheless be the first rather than the last resort. There is no commitment to seek to maximise the contribution made by sustainable modes to meeting mobility needs. Nor is there any recognition that current chronic congestion and lack of network resilience jeopardises the ongoing attractiveness and long- term sustainability of the current public transport offer.

To be effective and create alignment with national policy, and also provide for an up-to-date transport evidence base and strategy to be adduced, Policy T1 should be modified to read:

“Integrated transport measures will be developed to mitigate the impact of planned development on the highways network, improve highway safety and air quality, promote more sustainable travel patterns and through providing in the first instance, new and improved infrastructure and services that will be credible effective in maximising the encourage increased use of sustainable modes of travel, such as public transport, cycling and walking.

To achieve this, the council will work with National Highways, West Sussex County Council, other transport and service providers (including through the Traffic and Infrastructure Management Group) and developers to provide a better integrated transport network and to improve accessibility to key services and facilities...

All parties, including applicants, are expected to support these objectives by:

1. Ensuring that new development is well located and designed to avoid or minimise the need for travel, encourages maximises the use of sustainable modes of travel as an a credible alternative to the private car and directly provides or contributes towards new or improved transport infrastructure;
2. Working with relevant transport infrastructure and service providers to improve accessibility to key services and facilities with primary emphasis on sustainable modes, and to ensure that new facilities are easily accessible by sustainable modes of travel;
3. Targeting investment to provide local travel options as an that represent a clearly credible alternative to the car use,

focusing on the delivery of improved integrated bus and train services, and improved pedestrian and cycling networks, including the public rights of way network, based on the routes and projects identified in the Local Transport Plan, West Sussex Bus Service Improvement Plan, Local Cycling and Walking Infrastructure Plan (LCWIP) and the Infrastructure Delivery Plan;

4. Planning to achieve the timely delivery of transport infrastructure on and approaching the A27 and elsewhere on the network, needed to support new housing, employment and other development identified in this plan;
5. Phasing the delivery of new development to align with and where possible facilitate the provision of new and improved transport infrastructure and services and the outcomes of monitoring travel demand on the network, including that arising from areas immediately adjoining the plan area. It may also be Where necessary to achieve this alignment proactively phase development will be phased to take into account the monitoring and effectiveness of travel plans demands on the network and to ensure that measures are implemented to support the highest possible level of encourage sustainable travel behaviour.;
6. Using demand management measures, such as travel plans, to manage robust methodologies to assess travel demand and minimise the need for new or improved transport infrastructure as part of the monitor and manage process.
7. Delivering a coordinated package of infrastructure improvements at and approaching to junctions on the A27 Chichester Bypass along with other small-scale junction improvements interventions within the city and elsewhere, as identified through the monitor and manage process. These will increase road capacity, reduce traffic congestion, improve safety and air quality, and improve access to Chichester city from surrounding areas, first by maximising the contribution of sustainable modes to meeting mobility demands, then, and only as evidenced by robust modelling and option testing, providing increased highway capacity for general traffic.

..."

7.3. Policy T2 Transport and Development

Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Section 1 b) of T2 will be ineffective as, absent measures to ensure buses can run reliably and efficiently, improved bus services will not be possible, in support of the plan's own stated broad approach to transport mitigation, as well as wider local and national policy.

The draft policy does not require improvements to the quality of services such that sustainable choices will be materially more attractive than car use for many local journeys. Without this the Plan's Strategic Objectives cannot be fulfilled and the objectives of the Plan and this policy, read in its own terms, will not be realised, where reduction in private car use is concerned. It is thus ineffective.

Absent measures to make bus services more reliable and more efficient, by insulating them from chronic congestion as far as possible, still further operating resource and therefore costs, will be needed to just to reliably run existing service frequencies, and capacity, as vehicle productivity continues to be more and more adversely affected by chronic delay. This will be further aggravated by increasing incidence of severe unpredictable service breakdown arising from incidents of diverse kinds on the network, especially on or around the A27, including that arising from more regular severe weather events. Longer journey times can only be expected to lead to relative disadvantage of bus services compared to personal car use, entirely contrary to the objectives of national and local policy, including Policy T1. It can also expect to lead to a dampening effect not on car use, but on bus patronage, threatening the ongoing viability of bus services across the plan area.

Section 1 b) of T2 should be modified to read:

"b) Maximise opportunities for the use of sustainable travel modes through provision of direct and efficient access both to either the existing networks or and through providing such new infrastructure or public transport services, as can be credibly expected to reduce reliance on the private car and work towards achieving net zero in greenhouse gas emissions by 2050;"

Section 1 d) of T2 will be ineffective as the location of development is fixed by this plan. We commend the fact that all the strategic allocations are or will be served by regular bus services.

However, the use of public transport services, where available, depends on the relevance and reliability of these services. Furthermore, provision of services without them generating sufficient patronage to support their long-term operation also threatens the sustainability of the plan and its supporting transport strategy. This is especially true of new services such as those intended to serve West of Chichester and Tangmere and East of Chichester Strategic Allocations.

This can only be assured by the plan being supported by specific measures to ensure buses can operate efficiently and reliably on the existing and projected services intended to serve the developments concerned, and also at the same time secure behavioural change from existing development.

To be sound and effective, the policy T2 1 d.) should be changed to read:

"d) Ensure major development is located to proposals and the supporting mitigation measures enable the use delivery of high-quality, reliable and effective public transport to present the most relevant possible choice to access local services and facilities including employment, leisure and education facilities";

The Policy T2 makes no provision for buses, where necessary, to enter and make efficient and safe progress through major development sites. The plan is thus out of conformity with NPPF paragraphs 104-106. It makes no provision to ensure that penetration of bus services is achieved at a suitably early point in the development trajectory, undermining the achievement of the goals of the Plan and this specific policy. As a good example, West of Chichester Phase 1, currently under construction, cannot be served by buses as a strategy to effect interim bus penetration was never made.

Policy T2 1 f.) should therefore be amended to read:

f) Ensure that the layout and design of the site development proposals provides effective penetration of the site by sustainable modes, at all points in the development build-out, including public transport where appropriate; and sufficient space for all vehicles to manoeuvre without compromising the safety of pedestrians and cyclists, the efficiency of bus services, or the ability to provide an appropriate level of landscaping across the site"

Policy T2 3.) regarding Travel Planning depends entirely on its effectiveness on the quality and relative attractiveness of sustainable alternatives over car use. In the absence of efficient frequent, reliable and direct public transport services (or similarly, high quality facilities for active travel, Travel Plans will continue to be the entirely ineffective "tick box" exercises that they generally are today, evidenced by much lower levels of public transport use in most new developments than it seen in nearby established neighbourhoods, as demonstrated broadly by Census data in 2011, 2011 and 2021.

For this policy to be effective an up-to date transport evidence base and strategy, underpinning a series of specified interventions to promote the relevance and effectiveness of all sustainable does including public transport in particular, needs to be put in place.

8. Chapter 9 Infrastructure – Policy I1 Infrastructure provision

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Policy I1 could not expect to be effective without a clear understanding of the effectiveness and costs of a defined series of measures that are laid out in this Plan and its IDP, to mitigate the transport impacts of the development strategy.

Where the Chichester Transport Study is concerned the only meaningful work has focused on the definition and delivery of a range of highways capacity schemes mainly on the A27 around Chichester.

As we have discussed elsewhere the effectiveness of these schemes is insufficient as set out at Tables 8.1 and 8.2 of the Chichester Transport Study 2023. The plan itself admits that the deliverability of this package cannot be afforded by developer contributions alone.

The Chichester Transport Study 2023 does not attempt provide a realistic assessment of costs to deliver these schemes, despite the fact that they have been under evaluation for many years. Nor does it offer any assurance that the schemes are technically achievable. Rather, it states the opposite:

"9.2.3 No investigation has been carried out into specific land ownership details, or into the location details or cost of moving statutory undertakers and utility apparatus within the areas of the scheme. No design assessments were carried out at this stage to ascertain the deliverability of the proposals except where any Health and Safety concerns were raised."

Thus on the grounds of effectiveness, deliverability and affordability, the measures on which the Plan relies must at the very least be considered to involve an exceptionally high level of risk. Since Policy I1 is founded on these assumptions, it cannot be considered effective.

As we set out elsewhere, the Plan has been advanced on the basis that if any additional sustainable transport measures are required, these mitigations should be retroactively considered and defined after adoption of the Plan. In the light of the doubts that are apparent of both the deliverability, affordability and effectiveness of the Chichester Transport strategy this is especially unsatisfactory even if existing baseline conditions were reasonably acceptable.

However, the Chichester Transport Study 2023, as did its predecessors, makes plain that that existing problems are acute, and can rightly be considered "severe" in the sense of NPPF paragraph 111. Waiting to define deliverable affordable alternatives is an entirely inappropriate approach to the local plan transport mitigation strategy. Such an approach also makes it impossible to consider prior to adoption how far the transport impacts of the plan can be cost-

effectively mitigated by alternative means, or whether they are deliverable having regard to technical achievability, land control, development viability, or any combination of the above. Thus, the plan cannot be considered justified, or effective.

Given the mutual dependence of development strategies in Chichester and Arun in particular on these measures this should be seen as crucial of the fulfilment of the Duty to Cooperate.

The remedy for this is ultimately to put in place a suitable transport mitigation strategy following a strategic appraisal of options through review of the LSS. This then must be supplemented by more detailed development specific and localised scheme definition, including, where necessary, bus priority and other measures to support the substantial promotion of the attractiveness of public transport in key bus corridors over private car use. This would then be reflected by costed proposals in the IDP.

Leaving these fundamental weaknesses to one side, even if such a strategy and mitigation package were defined, there is no mention of public transport in the policy even though it is clearly a key part of the policy environment and mitigation strategy for the plan as expressed in the explanatory memorandum for I1, but also at Policies T1 and T2. I1 thus does not effectively support the realisation of the intent of Policies T1 and T2.

Policy I1 iii) should therefore be modified to read:

“(iii) Safeguard the requirements of infrastructure providers, having regard to requirements within and where appropriate across the boundaries of the plan area, including but not limited to:

...

- Highways including specific measures to accommodate improved active travel and public transport level of service and cycle lanes, and...”

At limb v) the Policy expects developers to meet the “in perpetuity costs of operating and maintaining infrastructure”. This shackles development management decisions to developers assuming what are infinite costs – given that “in perpetuity”, read properly, can only mean “without any limit in time”. This means that it is impossible to meet the statutory tests on developer obligations set out in the Community Infrastructure Levy Regulations 2010 (as amended) at Regulation 122, also repeated in NPPF. This policy cannot be lawfully implemented and it is thus ineffective.

In the absence of an up-to-date transport mitigation strategy that is fit for purpose, at the point the Plan is examined these costs of any additional infrastructure are not known in any case. The strategy and its costs, including its affordability and deliverability, are crucial to assessing if the Plan is sound.

Subject to an appropriate defined transport mitigation strategy being arrived at, to be sound, the Policy I1 v) should be modified as follows:

(v) To consider and meet as appropriate the in-perpetuity delivery costs of infrastructure and, where appropriate, improved services, to the point where its long-term operational sustainability is credibly assured from mainstream sources. Where adoption is not envisaged by local authorities, that must include arrangements for its future ongoing management and maintenance;

9. Strategic and Area Based Policies

9.1. Policy A1 City Centre Development Principles

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Chichester City centre is rightly identified at 10.2 and 10.4 as the commercial and service hub of the District. It is also acknowledged to be the most accessible place in the District by sustainable modes, public transport in particular.

Boosting the vitality of the city centre is something that Stagecoach strongly supports. Irrespective, the enhancement of the commercial and cultural life of the District in the place where these opportunities can be accessed broadly by sustainable modes, is one that has long been at the heart of national planning policy for town centres, reflected in the “town centre first” approach to locating major trip generating uses.

Paragraph 10.5 exposes an unbalanced and unsound preoccupation with aesthetic matters in its approach to the town centre, and far too little to ensuring that the central place function is enhanced through protecting and enhancing the quality of public transport access.

The city is relatively small but at the heart of an extensive hinterland, and thus the role of bus in supporting sustainable access to and enhanced city centre venue is one that needs appropriate recognition and emphasis. It is important to note that a dominant number of key service and facilities such as the General Hospital are relatively close to the city centre.

This directly contributes to driving travel demand into the city, causing congestion. Most importantly, it also makes the task of mitigation simpler, given the impact a suite of active and sustainable measures can have within the same close proximity.

Policy A1 does not provide this. As such, achieving the strategic objectives of the plan is seriously threatened, and the plan is thus not effective.

The Plan needs to ensure that the approach to city centre regeneration maintains and enhances public transport access, interchange and inter-modal connectivity. It also needs to ensure that bus service stopping and interchange facilities are able to address increases in future demand, anticipated by the clear intent expressed elsewhere in the Plan that public transport should be meeting a greater proportion of mobility needs, in a growing district. Achieving this demands an ambitious approach to the location, quality and capacity of bus stop and interchange.

We have been in discussions with the District Council about this, alongside West Sussex County Council, for a very considerable period. Stagecoach has always been keen to help facilitate the Council's aspirations for the city centre, and we continue to hold this intention. However, this cannot be at the expense of a material diminishing of the convenience and fitness-for-purpose of bus stop infrastructure and interchange. Stagecoach has significant concerns that current proposals to remove the bus station and have all bus services operate from the street kerbside, on an inner distributor road with similar of reduced net stop capacity, fall short of promoting attractive, convenient bus access to the central area as a destination.

For the longer term and where the objectives of the draft plan are concerned looking ahead to 2039, they clearly fall short of enhancing the convenience and attractiveness of public transport use. Much less do they make sufficient provision for a material increase in bus frequency, connectivity, and interchange convenience, on which the draft plan explicitly relies. It is vital that the District Council is clear in policy about its objectives for public transport in the city centre. These objectives must also carry sufficient weight when held in tension with other aspirations for the centre and the constraints on achieving them.

For the Plan to be sound, properly effective and compliant with NPPF, the approach to the City centre cannot ignore its role in the provision of sustainable transport service and connectivity.

Policy A1 should therefore be modified to properly reflect this crucial function, on which the vitality of the city centre must increasingly depend if unacceptable impacts on congestion, air quality and amenity are not to arise. This is still more crucial if wider aspirations to secure a more sustainable society and mitigate carbon are to be achieved.

"...This will include provision for development and proposals that:

- Support and strengthen the vitality and viability of the city centre and its role as a shopping/visitor destination, employment centre, public transport hub and a place to live;
- Support and promote facilitate improved access to the city and with increased emphasis on sustainable modes of travel, with particular regard to enhancing the public transport interchange role of the city centre area, in accordance with the transport strategy for the city and..."

9.2. Policy A3 Southern Gateway Development principles Chichester Bus Station, Bus Depot and Basin Road Car Park Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

There has been aspiration to redevelop the bus station and nearby bus depot from many years. Stagecoach has been engaged with detailed discussion with the District Council on this matter over a very extended period. We confirm that these discussions have reached a relatively mature stage, however at the time of writing are not concluded.

Stagecoach recognises and supports in principle the Council's wider aspirations for the "Southern Gateway", and this has governed our approach to the Council to date. We continue to have no "in principle" objection to relocating our administrative, engineering, operational and customer service facilities.

Leaving our proprietary interests entirely to one side, it remains vital that in so doing, the effectiveness, attractiveness and convenience of these facilities is not compromised, as we have outlined in our representations to Policy A1, if wider national and local transport policy, and the local plan strategy itself, are to be effectively achieved.

The depot is crucial infrastructure to support the safe, reliable and legally-compliant operation of Stagecoach bus services over a very extensive area covering the entirety of the District and beyond. Without securing equivalent facilities, that are fit-for-purpose, many of our services would have to cease.

If buses are to provide a greater and more attractive level of service (still more so if they are to be electrified) larger, more capable depot facilities, and city centre bus interchange facilities will be necessary.

Notwithstanding that the bus station and depot sites are leased from the District Council, these leases terminate well

beyond the end of the plan period.

Finding suitable sites for a replacement bus depot in Chichester, in common with all similar localities especially in southern England, is extremely challenging. As a sui generis use, bus depots do not automatically benefit from policy support on land allocated for employment uses. Most bus depots benefit from being legacy assets established under very different economic conditions. That is the case here. The value of a depot site for redevelopment net of demolition and remediation costs, rarely approximates to that able to sustain the acquisition of land in a tight wider employment land market, and the construction of suitable new facilities.

Furthermore, the costs of operating bus services are sensitive to the parasitic costs of vehicle and staff hours and mileage associated with "dead running" to a remote depot location from the operational network. Here, the existing depot site is ideal, and any replacement will unavoidable add ongoing operational costs to the operation that cannot be directly recovered.

We confirm that a replacement depot site has been identified and has in principle been agreed, subject to overcoming issues with the disposition of existing and future structures on the site. However, the site is recognised as not capable of accommodating meaningful operational expansion. This is just one of the most important foundational reasons why a positive transformation of bus productivity needs to be achieved, across the plan area and beyond, to support delivery of greater bus mileage and frequencies with the same level of operational resource. At the time of writing, we are not fully convinced that the proposals for the relocation will be sufficiently fit-for-purpose in the event the above is not achieved. Thus, we must raise a concern that the bus depot site might not be available during the plan period. While there is a strong probability it will be, the certainty surrounding the availability of the site, especially within the first 5 years of the plan, needs to be made transparent.

9.3. Policy A4 Southern Gateway - Chichester Bus Station, Bus Depot and Basin Road Car Park Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Regarding the removal of the bus station, without equivalent replacement, Stagecoach has significant concerns. Pressures and conflicts at the current bus station site have been gradually rising for several years, arising from increasing use and the need for additional scheduled vehicle layover periods to reduce the risks of accumulated late running from traffic congestion. Peak passenger volumes have recovered strongly on several routes, however passenger accumulations resulting from more frequent delays and disruption have added substantial further pressure on limited space.

Under current plans, buses and bus passengers will be displaced to bus stops at new locations outside the city centre, along Avenue de Chartres. This road was always intended to be a relatively high-speed traffic route, outside the historic core of the city. The city centre has evolved in the subsequent years to reinforce already strong natural severance, with the highway lying beyond the city walls and the green space along the Lavant. It is a traffic dominated, unsurveyed and unattractive environment, reflecting the intended function of the road as an efficient movement corridor for high traffic volume, and nothing more. Avenue de Chartres is relatively close to the rail station and pedestrian connectivity can be provided at broadly equivalent distance to the current bus station, but again it is unsurveyed and currently unpleasant, lacking natural legibility or any sense of prominence.

We understand kerbside capacity on Avenue de Chartres will be strained even to accommodate current levels of service, with no expansion possible. There is therefore a strong probability that to accommodate more frequencies and key new routes, such as West of Tangmere, East of Chichester and West of Chichester allocations, additional future bus stops must occupy a different location. This makes interchange between routes and rail services substantially challenging and less attractive.

The emerging arrangements risk marginalising public transport and public transport users substantially. This strongly undermines achievement of the wider plan objectives and delivery of a significantly greater role for public transport. If substantial public transport growth is to be accommodated in a growing city and hinterland, as the draft plan anticipates, then a more ambitious strategic approach must be taken. This should plan for additional and improved facilities to accommodate all services predicted to be required, whilst enhancing the passenger experience to ensure meaningful and attractive modal choice.

There is therefore a need for the plan to evidence how these issues will be appropriately resolved, having regard to a suitably ambitious approach that properly supports clear objectives to boost the relevance of public transport. The current policy is weak, unspecific and indifferent to achieving the strategic objectives of the plan, including a transport strategy in support of the plan, and as such it is ineffective.

Policy A3 should therefore be modified to read:

" ...

- Be designed to encourage and facilitate substantial increase in the use of active travel and public transport to, from and through the city centre.

" ..."

In line with the commentary above Policy A4 should also be modified to read:

3. Enhance the public interchange function of the immediate area, the public realm, particularly connections to the railway station and the city centre via South Street, Southgate and Basin Road for pedestrians, cyclists and public transport users, and to National Cycle Route 2 and Route 88 which run close by. Suitable replacement bus stops and layover facilities should be provided to replace those at the bus station in line with reflecting the objectives of the West Sussex Bus Service Improvement Plan, and to facilitate growth to meet the requirements of the plan's development strategy. Routes and crossings should reflect pedestrian desire lines, and public art should be incorporated to create a sense of place;

4. Enhance the public realm, in support of this and wider objectives, incorporating public art and other measures to create a strong and attractive sense of place.

...(renumber remaining points)

9.4. Policy A6 Land West of Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

This is an existing Local Plan allocation. The public transport strategy for the site depends on the delivery of the second phase which Stagecoach notes is the subject of several applications now awaiting review and determination by the Council.

The site represents a compact form of development adjoining the city, as the most sustainable settlement, meeting housing needs close to where they arise, and affording very good opportunities for the use of sustainable modes, especially walking and cycling.

It is vital that a bus service is delivered to serve the site at the earliest potential. This was anticipated to be at the start of Phase 2 and will require the early delivery of the entire length of the spine road between the Old Broyle Road and Westgate and making it available for bus services.

It is not clear if the costs of pump-priming the service mentioned in the draft policy are anticipated to be met by the developer. Without such funding, the service will not be deliverable as years of losses will never credibly be covered from future profit. It is likely that the current wording will be interpreted by the developer as meaning that they have no such obligation binding upon them. Not does policy set out any specification for this service, thus its costs and the basis for securing developer contributions does not exist.

As such any wider transport strategy, that seeks to secure a greater role for the use of public transport, and the aspiration for this allocation cannot demonstrably be met. The policy is ineffective.

Policy A6 should be modified to read:

" ...

10. Make provision to accommodate and secure delivery of for regular bus services linking running through the site to Chichester city centre operating at least every 30 minutes Monday-Saturday, and new and improved cycle and pedestrian routes linking the site with the city,

" ..."

9.5. Policy A7 Land at Shopwhyke

Stagecoach Supports

This is an existing Local Plan allocation, largely built-out, that benefits from an existing set of permissions.

The public transport strategy for the site depends on the delivery of effective bus priority at Oving Crossroads. The current recently implemented scheme, undertaken by National Highways, makes no provision for effective bus priority and needs considerable re-evaluation.

The site represents a compact form of development adjoining the city, as the most sustainable settlement, meeting housing needs close to where they arise, and affording very good opportunities for the use of sustainable modes, especially walking and cycling. It lies on a new bus corridor that will shortly be put in place, running to Tangmere via Shopwhyke. The allocation is being significantly consolidated by further development in the immediate vicinity which strongly supports the potential for this new service.

As we explain in our representations for East of Chichester proposed allocation A8, and West of Tangmere Allocation A14, a clear corridor strategy to effect bus priority is needed, that should be delivered in support of that further growth, and that at Tangmere SDL. However this allocation is a near complete commitment and there is no scope through policy regarding this land to effect this outcome.

It is notable that Point 6) of policy A7 makes mention of a bus service. This language reflects the currently adopted Local Plan policy and has underpinned the existing permissions. The failure of any bus service to be delivered demonstrates from first principles that this Policy has been entirely ineffective. It is important that lessons are learned from this in the Local Plan Review.

9.6. Policy A8 Land East of Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This proposed allocation lies next to unallocated land that is already consented as a departure from the adopted development plan, with 143 units near completion south of Oving Road (20/02471/FUL). Additional land, also unallocated but similarly consented, has now commenced north of Oving Road (88 units under 21/02197/FUL). This and the allocation site consolidates earlier development at Shopwhyke brought forward under the current Local Plan, and allocated again as draft policy A7.

Development at Shopwhyke was brought forward on the basis of a premise that the developer would provide or somehow arrange a bus service, that was reflected in the policies of the current Local Plan. This was secured by an unenforceable condition. No bus service has been provided, as there was inadequate clarity regarding the basis on which the costs of establishing such a service would be met by the developer, and the expectations of policy on the developer. The site does however lie on a logical new bus corridor between Chichester and West of Tangmere along the Oving Road.

In addition, an expectation that modifications to the Oving Crossroads would effect bus advantage have proven false – the arrangements put buses into a similar or longer queue than if they use the route available to general traffic to and from the A27.

Stagecoach strongly supports the principle of bringing this land forward. However, the soundness of the site depends on deliverability of a regular, reliable and direct bus service along the Oving Road, taking advantage of effective bus priority.

Given the failure of existing policy in the adopted Local Plan covering the proposed A7 allocation to deliver a bus service, it is of great concern that there is no draft policy to adequately address the issue. The policy is out of conformity with NPPF paragraph 104-105 in that sustainable modes do not offer realistic choices, much less an attractive one, and as such also does not secure the objectives of national policy nor of the plan itself.

Currently the proposed allocation is not served at all by public transport. Policy needs to ensure there is a policy basis to secure contributions to deliver such a service, which may well take the form of a proportionate contribution to deliver a new service or enhance provision that is put in place between Chichester along the Shopwhyke Road to west of Tangmere.

To become sound Policy A8 must be modified to read:

“ ...

12. Provide for improved high quality connectivity by sustainable travel modes and focused in particular on a corridor between Chichester city centre and Tangmere along Shopwhyke Road, including new improved cycle and pedestrian routes, and a frequent bus service including linkages with Chichester taking advantage of effective bus priority measures on Oving Road at the A27;

...”

9.7. Policy A9 Land at Westhampnett/North East Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This land is already allocated and consented as part of the existing 2016 Local Plan. All reserved matters are determined.

The site lies on service 55 between Chichester, Westhampnett and Tangmere. This established service benefits from additional demand from the development at Phase 1. Phase 2 which is currently well underway, does not benefit directly from bus services. However it is a compact and logical form of development where walking and cycling to local facilities and employment is a credible option.

The existing allocation rolls forward policies in the 2015 Local Plan. In so doing it is possible to see which have been effective.

Point 9. regarding bus service and routing has not been effective. In particular the potential for a bus only link between the site and Graylingwell has not been established as policy anticipated. Given congestion around the Portfield area acutely affects public transport this, or alternative methods to secure bus priority over private car use, a clear and

unequivocal policy steer is required.

The lack of an up-to-date transport evidence base is ultimately at the root of these issues. Arguably the policy and allocation can only be made sound once this refreshed evidence base is in place.

However, it is possible that the allocation could be made sound by modification of Policy A9 as follows:

“ ...

9. Make provision for regular, direct and reliable bus services linking the site with Chichester city centre, and new and improved safe and convenient cycle and pedestrian routes linking the site with Chichester city, the South Downs National Park and other strategic developments to the east of Chichester city including Tangmere. These objectives could include exploring the potential for a bus only route require a deliverable scheme to afford bus priority through Portfield, and potentially linking the development with the Graylingwell area through use of a modal filter;

...”

9.8. Policy A10 Land at Maudlin Farm

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing public transport route. It is relatively close to the city and very near substantial centres of employment and services that can be reached by active travel modes, helping damp the demand for car use. It is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services at Portfield and over a wider area. In fact, the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A10 should accordingly be modified to read:

“ ...

5. Provide safe and suitable access points for all users, including a main vehicle access from Old Arundel Road and, subject to further assessment, a secondary vehicle access from Dairy Lane. The development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes;

...”

9.9. Policy A11 Bosham – Land at Highgrove Farm

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Bosham Station. It is relatively close to the city and very near substantial centres of employment and services that can be reached by public transport and cycling, offering strong potential to materially damp the demand for car use.

There are serious risks that development in the A259 corridor west of Chichester could place further demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular to bus services.

Nevertheless, given the potential to effect bus priority on the approaches to Fishbourne Roundabout, it is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this

strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A11 should accordingly be modified to read:

"...

8. Provide safe and suitable access points for all users, including a main vehicle access from the A259. The development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys crossing the A27 at Fishbourne;

9.10. Policy A12 Chidham and Hambrook

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Nutbourne Station. Substantial centres of employment and services that can be reached by public transport and cycling, offering strong potential to materially damp the demand for car use.

There are serious risks that development in the A259 corridor west of Chichester could place further demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular to bus services.

Nevertheless, given the potential to effect bus priority on the approaches to Fishbourne Roundabout, it is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A12 should accordingly be modified to read:

"...

7. Development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys along the A259, crossing the A27 at Fishbourne and where necessary on the approaches to Emsworth;

8. Facilitate improved sustainable travel modes, and new improved cycle and pedestrian routes, including linkages with Chichester city and settlement along the East/West Corridor;

9.11. Policy A13 Southbourne Broad Location for Development

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach agrees unequivocally that Southbourne is a location that could accommodate growth on a strategic scale. It has a substantial range of service available within the settlement, including secondary education. It is well connected by bus and rail service to key destinations, including Chichester, lying to the east and west.

This is one of the few locations identified for growth that represents substantial additional development in a new location to the strategy in the existing Local Plan adopted in 2015. Thus, the transport impacts of development on the substantial scale envisaged at Southbourne are not covered or accommodated by the Chichester Area Transport Strategy that lies behind the existing plan. This demands, from first principles, that substantial further transport mitigation measures are required.

We recognise and endorse fully that the intent of the draft plan for Southbourne as a Broad Location for Development on a strategic scale, includes “Maximising the potential for sustainable travel links through improved public transport, including consideration of opportunities to reduce community severance caused by the railway line as well as the inclusion of cycling and pedestrian routes.” (our emphasis).

The existing railway station at Southbourne is served regularly, however, it is not within the power of this plan to improve rail services. It is, however, well within the scope of action of the Local Planning and Highways Authority to work with bus operators to achieve a step change in the journey time, reliability, frequency and connectivity of bus services, and in particular the major corridor operated as service 700 by Stagecoach along the A259 between Havant and Chichester through Southbourne.

Notwithstanding the clear potential for sustainable connectivity in the western A259 corridor, there are very serious risks that development in the A259 corridor west of Chichester will place further significant car-borne demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular bus services, having the opposite effect to that intended: longer, less reliable and less frequent bus services, leading to a spiral of slowly declining use.

These risks, while very serious, look credibly likely to be entirely mitigated subject to carefully conceived and robust specified actions on the local highway network. It is perplexing to us that this potential still has not been identified, as part of a comprehensive “first principles” review of the transport evidence base. In particular given the former trunk status of the A259, there is evident potential to effect bus priority on the A259, including on the approaches to Fishbourne Roundabout.

With appropriate measures, including but not limited to this, to substantially boost the relevance and attractiveness of sustainable travel choices, strategic development at Southbourne could well be made highly sustainable.

In the absence of a refreshed transport strategy and transport evidence base, the draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact, the only reference that is made in Policy is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A12 should accordingly be modified to read:

“...Development should be comprehensively masterplanned to achieve a high-quality design and layout that integrates well with the surrounding built and natural environments to enable a high degree of connectivity with them, particularly for pedestrians and cyclists, and provides good the highest possible quality of access to facilities and sustainable forms of improved public transport services.

...

4. Provide a suitable means of access to the site(s), and securing secure necessary off-site transport infrastructure and service improvements (including highways in particular to the A259 corridor between Emsworth and Chichester) in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development) to promote sustainable transport options prioritising delivery of high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes;

...”

9.12. Policy A14 Land West of Tangmere

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach strongly supports the principle of intensifying the level of development at the Strategic Development Location already identified and allocated West of Tangmere in the existing Local Plan. This serves to consolidate development at a location where effective and attractive public transport choices could be provided. It also conforms closely with the principle expressed in NPPF that the best possible use should be made of land on sites that are judged to be sustainable, or potentially sustainable locations for development.

It must be stressed that the current policy suite for the SDL has to date not brought forward development in this location. We recognise that a Master Plan has been adopted by the Council, and that a planning application (20/02893/OUT) for the full larger quantum of 1300 dwellings proposed in the draft plan has received a resolution to grant by the Council.

However, we are not aware that a sustainable transport strategy has been finalised.

Land West of Tangmere is not served by any existing regular bus services. Rather, an entirely new bus service corridor is anticipated to operate in the near term from Chichester through Tangmere and beyond towards Barnham. This would serve proposed allocations A7, A8 and West of Tangmere (A14) included in the draft Plan.

This is reflected in the language of the explanatory memorandum to Policy A14 at paragraph 10.65:

“Opportunities, in partnership with relevant authorities, to provide improved sustainable public transport routes linking the village with Chichester city, to improve cycle routes to the city, and better transport links to Barnham rail station and the ‘Five Villages’ area in Arun District; and..”

Initiating this service will be costly and will in large measure be funded not by developer contributions, but by DfT monies awarded through the West Sussex Bus Service Improvement Plan. It is crucial this service is both sustainable in the longer term without revenue support, and that the success of the service can be built on by scalable frequency improvements as strategic development comes forward in both Chichester District, and proposed allocations A7 A8 and A14, and in Arun District, in particular at Barnham, Eastergate and Westergate (BEW).

This demands measures to effect safe, direct and swift operation of the service especially within the city centre, where it approaches and crosses the A27 at Oving crossroads and on the eastern fringes of the District east and west of Tangmere. Without these measures, bus journey time and reliability will be severely compromised and the impact of this service to damped car trip demands will be very substantially compromised. No such measures are proposed in the draft plan or its evidence base.

Changes to Oving Crossroads have recently taken place which, amongst other intentions, ostensibly provide bus advantage between Chichester and Shopwhyke. The junction in its current form does not offer material gain in bus journey time, as movements involve a less-direct route towards the city over an increased operating distance, much of which involves passage through heavily congested sections of the A27 and Westhampnett Road. A refreshed transport strategy supporting plan-led growth must revisit this area to secure an effective solution which offers bus customers the fastest and most reliable trip-time to and from the city.

In addition, the extension of public transport connectivity towards BEW and Barnham, including key links to secondary education and a logical railhead for journeys beyond towards Brighton and London as provided at Barnham Station, needs to facilitate bus priority between Tangmere and Nyton – whether using the A27, or preferably avoiding it altogether. There are significant safety concerns associated with the at-grade uncontrolled right-hand A27 exit onto the B2233 Nyton Road at Crockerhill Turn. This movement is also prone to extreme delay owing to the conflict with approaching westbound traffic on the A27, travelling at speed, which has priority. Our concerns with this junction in its current form can be expected to worsen with the increased traffic volumes predicted from new residential developments to the west of the city.

A solution providing a suitable short length of highway available only to sustainable modes, between Tangmere and Easthampnett, could provide a very effective solution to this. This would be deliverable within the scope of the separate proposed allocation at A19 Chichester Business Park, Tangmere. We comment on this separately.

Howsoever effected, a reliable direct and delay-free bus corridor between Barnham, BEW, Tangmere and Chichester could expect to secure very substantial elevation of the relative attractiveness of public transport over car use on the entire corridor and serve to effectively damp growth-related demands on this section of the A27. West of Tangmere, in the longer term, there is evident scope for the route corridor to operate as two branches – one via Shopwhyke and one via Westhampnett, effectively serving all the strategic developments proposed in the plan and transforming wider public transport connectivity to key employment destinations and services within and east of Chichester.

However, in common with all the other proposed allocations, the plan proposes no specific measures to provide, much less improve public transport or other sustainable modes to the site. This leaves the draft plan out of conformity with NPPF, especially paragraphs 104-106. The plan is inadequately evidenced and to the degree that public transport measures are identified and emergent, their successful implementation in the near and longer term will be jeopardised without clear measures to provide a safe as well as efficient bus route towards BEW and the Five Village area within Arun. The Duty to Cooperate is not effectively met and effective cross boundary collaboration on these strategic issues through the review of LSS is not demonstrated, despite the current version which identifies the issues.

To be made sound the LSS Review and a subsequent urgent review of the transport evidence base and strategy needs to take place. The strategic issues are especially critical east of Chichester, in our view.

Notwithstanding this foundational deficiency, to be made sound, Policy A14 should be modified to read:

“... ”

8. Subject to detailed transport assessment, provide primary road access to the site from the slip-road roundabout at the A27/A285 junction to the west of Tangmere providing a spine road link with secondary access from Tangmere Road. Development will be required to provide or fund mitigation for potential off-site traffic impacts through a package of measures in conformity with Policy T1 (Transport Infrastructure) and T2 (Transport and Development) and DfT Circular 01/2022 that maximise the relevance and use of sustainable travel modes, in particular bus services;

9. Make provision for improved sustainable travel modes between Tangmere and Chichester city, in partnership with relevant authorities, including improved direct, seamless safe and reliable and additional bus and cycle routes linking Tangmere with Chichester city, Shopwhyke and Westhampnett. In conjunction with measures in support of Allocation A19, Opportunities should also be explored contributions shall also be sought for providing improving high quality cycling and bus service transport links with the 'Five Villages' area and Barnham rail station in Arun District; and..."

10. Concluding comments

Stagecoach recognises its role as a key stakeholder in the plan, as well as a local employer and corporate citizen. We recognise the primacy of the plan-led system as the mechanism intended to resolve complex challenges, including the proper alignment of transport and spatial planning, which as the National Decarbonisation Strategy for Transport among other policies makes clear, has never been more vital.

In making our representations, we emphasise that we are entirely supportive of the Local Planning Authority and the relevant Highways and Transport Authorities, in their efforts to properly manage the amount and pattern of development to secure vital policy objectives. We recognise that balancing delivery of assessed development needs with a wide variety of other constraints is a very difficult task.

The transport issues faced by the plan are recognised in the draft plan as being serious and long-standing. We believe that there are ways to arrive at a suitable transport mitigation strategy that has regard to wider strategic issues and resolves existing problems in a much more effective way than those pursued to date.

We support the spatial strategy of the plan as it evidently provides the basis to secure the necessary step change in the quality and use of sustainable transport modes, as it explicitly seeks to do. However thus far, there has been insufficient work done to define the measures that will credibly secure these outcomes.

Stagecoach therefore urges the authorities to draw us into the necessary effective ongoing collaborations that is expected by NPPF paragraph 16 and 106; and DfT Circular 01/022, to do this work, prior to, rather than after the submission of the draft plan. We look forward to being approached to initiate this dialogue at the earliest opportunity.

Change suggested by respondent:

Vision wording amended to - "Get about easily, safely and conveniently with less reliance on private cars –making the greatest possible use of the rail and enhanced bus network, and with more opportunities for active travel including walking and cycling; to materially reduce dependence on private car use."

Specific measures to protect bus services from congestion in the following corridors:

- A259 East of Emsworth
- A259 Fishbourne
- A 259 Via Ravenna/Cathedral Way
- A286 Stockbridge Road north and south of A27
- B2145 Whyke Road/Hunston Road
- A259 Bognor Road, east and west of A27 and extending to the District Boundary
- B2144 Oving Road/Shopwhyke Road east and west of the A27
- A 285 Westhampnett Road/Portfield Way/Stane Street, potentially involving a mode filter at the west end of Stane Street

The Plan states 'Tangmere, to the east of Chichester city, is a settlement of some 3,158 people. It hosts a number of local businesses and has some dispersed community facilities including shops and a medical centre. However, it currently lacks many of the amenities and services normally associated with a settlement of its size.' The plan does not address these issues and proposes to double the size of the community without an appropriate infrastructure.

Change suggested by respondent:

There needs to be a recognition that in doubling the size of a community there needs to be a funded scheme to double the infrastructure in terms of providing locational provision for community shops, an additional medical centre, for GP and Dentists, local community policing hub, multi faith places of worship, parking areas for community shops, coffee shops, laundromat for social housing, fast food dining. Traffic management plan which should include traffic lights, pedestrian crossings, provision of continuous pathways, restricted speed of traffic through the narrow Tangmere Road. This road is part of the existing Special Conservation Area and needs to be taken into account and the area protected. The county council is the beneficiary of the CPO and needs to set these costs aside and recognise this need in the plan.

Object

Document Element: Social Characteristics, 2.9**Respondent:** Save our South Coast Alliance (Libby Alexander) [7648]**Summary:**

The 'good quality of life' is being consistently undermined by centrally imposed housing numbers from government that are unsustainable.

Developments are creating flooding that imposes restrictions on insurance and mortgage valuations. They are creating upsurges of sewage in new built homes as Southern Water is unable to cope.

There is a wide spread horror at the amount of poisoning going on in our seas which deters swimmers, kayakers, and sailors.

There is a constant fear that access to doctors will be delayed due to oversubscribed surgeries.

Likewise access to schools as they too are oversubscribed. This has led to a rise in the instances of home schooling.

And frustration with public transport and the irregularity of the rail service.

■ [National Highways letter dated 24/07/23 confirmed representation should be categorised as Comment.] We note that households who did not have access to a car or van; are lower than county, regional and national averages (para 2.12)

Full text:

■ We have reviewed the publicly available Local Plan documents and provided comments in the attached letter, in relation to the transport implications of the plan for the safety and operation of the SRN.

Our comments include issues to resolve, comments, requests for further information and recommendations. A brief summary of our main comments are:

- the reliance on the delivery of the A27 Chichester bypass improvements project.
- the requirements for new, additional, and adapted processes and assessments, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments.
- collaborative working between agencies in combination with a robust monitor and manage policy.

We hope our comments assist.

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders. We look forward to continuing to participate in future consultations and discussions.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Background

National Highways has been appointed by the Secretary of State for Transport as strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the strategic road network (SRN).

National Highways is responsible for operating, maintaining, and improving the Strategic Road Network (SRN) i.e., the Trunk Road and Motorway Network in England, as laid down in Department for Transport (DfT) Circular 01/2022 (Strategic Road Network and the delivery of sustainable development).

The SRN is a critical national asset and as such we work to ensure that it operates and is managed in the public interest, both in respect of current activities and needs as well as in providing effective stewardship of its long-term operation and integrity.

Our responses to Local Plan consultations are guided by relevant policy and guidance including the National Planning Policy Framework (2021) (NPPF):

- Transport issues should be considered from the earliest stages of plan-making and development proposals so that the potential impact of development on transport networks can be addressed (para 104).
- The planning system should actively manage patterns of growth such that significant development is focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. (para 105).

- Planning policies should be prepared with the active involvement of highways authorities and other transport infrastructure providers so that strategies and investments for supporting sustainable transport and development patterns are aligned. (para 106).
- In terms of identifying the necessity of transport infrastructure, NPPF confirms that development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe. (para 111).
- Planning policies and decisions should support development that makes efficient use of land, taking into account the availability and capacity of infrastructure and services – both existing and proposed – as well as their potential for further improvement and the scope to promote sustainable travel modes that limit future car use. (para 124).

In relation to the tests of soundness set out at paragraph 35 of the NPPF, in the context of transport, these are interpreted as meaning:

- a) Positively prepared - has the transport strategy been prepared with the active involvement of the highway authorities, other transport infrastructure providers and operators and neighbouring councils?
- b) Justified – Is the transport strategy based on a robust evidence base prepared with the agreement in partnership, or with the support of the highway authorities?
- c) Effective – Does the transport strategy and policy satisfy the transport needs of the plan and is it deliverable at a pace which provides for and accommodates the proposed progress and implementation of the plan?
- d) Consistent with national policy – Does the transport strategy support the economic, social, and environmental objectives of the Plan and the NPPF/NPPG?

We will be concerned with proposals that have the potential to impact on the safe and efficient operation of the SRN; in this case, the A27 trunk road (Chichester Bypass and its junctions) which is the main access route in the Chichester area. We have particular interest in any allocation, policy or proposals which could have implications for the A27 and the wider SRN network. We are interested as to whether there would be any adverse road safety or operational implications for the SRN. The latter would include a material increase in queueing or delay or reduction in journey time reliability during the construction or operation of the development set out in the plan.

National Highways is a key delivery partner for sustainable development promoted through the plan-led system, and as a statutory consultee we have a duty to cooperate with local authorities to support the preparation and implementation of development plan documents.

In accordance with national planning and transport policy and our operating licence, we are entirely neutral on the principle of development as it is for the local planning authority to determine whether development should be allocated or permitted; albeit it must comply with national policy on locating development in locations that are or can be made sustainable. Therefore, while always seeking early and fulsome engagement with local plans and/or developers, we will simply be assessing the transport and related implications of plans or proposals and agreeing any necessary transport improvements and relevant development management policy.

In progressing Local Plans, we will seek to agree the following:

- Assessment tools and methodology
- Baseline Assessment i.e., to demonstrate that the assessment tool accurately reflects current transport conditions
- Comparator case assessment i.e., to forecast the transport conditions that would occur in the absence of the plan
- Forecast modelling i.e., to forecast the transport conditions that would arise with the plan in place, this will include an assessment at the end of the Plan period; and, if required, at full build out if that occurs after the end of the Plan period
- Outputs and outcomes of modelling, demonstrating, as appropriate, what transport infrastructure is necessary to support the plan o It should be noted that a suite of transport modelling tools may be required. This includes strategic modelling covering an area at least one major junction beyond the district boundary, localised network modelling where several links/junctions are close together and/or individual junction modelling
- o A DMRB (Design Manual for Roads and Bridges) compliancy assessment may also be required for certain highway features, such as
 - Merge/Diverge assessment at Grade separated junctions, link capacity assessments, and others.
- The design of any necessary transport infrastructure, to an extent suitable for establishing deliverability during the plan period at the time that it becomes necessary for the purpose of ensuring that unacceptable road safety impacts or severe operational impacts do not arise as a result of development. This may be to at least General Arrangement design stage or preliminary design stage. Whichever degree of detail is agreed, the products must be in full compliance with the DMRB.
- Industry standard transport intervention costings.
- The delivery/funding mechanisms for necessary transport interventions. It should not be assumed that National Highways will have any responsibility to identify or deliver necessary transport interventions.
- If considered appropriate, a “Monitor & Manage” (M&M) framework, aimed at managing the pace of development in line with the pace of funding and delivery of necessary highway interventions in a manner which responds to the realworld impacts of development may be agreed for inclusion in the plan subject to the adequacy of risk control measures included therein. This can include the move from a ‘predict & provide’ style of delivery to ‘a vision & validate’ style. o Any

M&M framework must be based on a “worst case scenario” whereby necessary mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. It must be translated into development management plan policy and policy relating to development allocations.

Further detail on the above can be provided by National Highways.

While ideally all the above should be agreed prior to the Submission of the Local Plan for examination, we recognise that this is not always possible. However, all parties should work towards all matters being agreed and reflected in a Statement of Common Ground (SoCG) by the start of the Local Plan Examination at the latest. Ideally the SoCG between the Council and National Highways would be prepared well in advance of plan submission in order to guide resource input and to track progress towards final agreement on all relevant matters starting from the earliest plan iterations until the final version is agreed.

It is acknowledged that Government policy places much emphasis on housing delivery as a means for ensuring economic growth and addressing the current national shortage of housing. The NPPF is very clear that: “Strategic policy-making authorities should establish a housing requirement figure for their whole area, which shows the extent to which their identified housing need (and any needs that cannot be met within neighbouring areas) can be met over the plan period.”

However, new DfT C1/22 and the NPPF are equally clear that any development, including housing delivery, must be tempered by the requirement to ensure that the associated transport demand can be accommodated without unacceptable impacts on the safety of the SRN or severe impacts on the operation of the SRN including reliability and congestion. Therefore, as necessary and appropriate, any plan and/or development must be accompanied by suitable mitigation in the right places at the right time, that is to the required design standards and is deliverable in terms of land availability, constructability and funding.

We would also draw your attention to the then Highways England document ‘The Strategic Road Network, Planning for the Future: A guide to working with National Highways on planning matters’ (September 2015). This document sets out how National Highways intends to work with local planning authorities and developers to support the preparation of sound documents which enable the delivery of sustainable development. https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_t_data/file/461023/N150227_-_Highways_England_Planning_Document_FINAL-lo.pdf

Responses to Local Plan consultations are also guided by National Planning Policy Framework (NPPF) revised on 20 July 2021 which sets out the government’s planning policies for England and how these are expected to be applied.

Updated Circular (01/2022)

It should be noted that since the start of the Local Plan consultation process, on the 23 December 2022, the Department for Transport released a new circular on the ‘Strategic road network and the delivery of sustainable development’ (Circular 01/2022), which replaces all of the policies in Circular 02/2013 of the same name. These representations take account of the new circular and the requirements in terms of the Local Plan evidence base and process.

We request that the Local Plan is prepared in line with all aspects of the new circular. Particularly, the principles of sustainable development (paragraphs 11 to 17), new connections and capacity enhancements (paragraphs 18 to 25), and engagement with plan-making (paragraphs 26 to 38).

Regulation 18 submission

In our Regulation 18 submission we noted several matters including:

- The need to mitigate the adverse impacts of strategic development traffic to the A27 Chichester Bypass and its junctions at Portfield Roundabout, Bognor Road Roundabout, Whyke Roundabout, Stockbridge Roundabout and Fishbourne Roundabout and Oving junction.
- The need to identify a mechanism to calculate contributions towards the delivery of the previously agreed Local Plan A27 improvements
- The need to confirm the number of dwellings needed within the plan period
- The need to establish National Highways acceptance of the traffic model reference and future case scenarios
- The need to confirm costs, viability, and funding associated with mitigating the safety and congestion impacts of the development included within the plan.

Local Plan context

This Local Plan (Chichester Local Plan 2021 – 2039), prepared by the Local Planning Authority (LPA) Chichester District Council, sets out the vision for future development in the district and will be used to help decide on planning applications and other planning related decisions including shaping infrastructure investments.

The draft sets out how the district should be developed over the next 18-years to 2039 including for the full Plan period (1 April 2021 to 31 March 2039) the total supply of
- 10,359 dwellings

- 114,652 net additional sqm new floorspace

Minus the completions this is equivalent to around 530 dwellings and 6,150 sqm of floorspace a year.

National Highways Representations

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders.

We have undertaken a review of the Chichester Local Plan 2021-2039 proposed submission version and accompanying evidence documents, our comments are set out in the tables below (following pages). [see table within attachment]

Summary

We have reviewed the publicly available Local Plan documents and provided comments above in relation to the transport implications of the plan for the safety and operation of the SRN. We understand that other technical information is available, but this was not presented as part of this consultation.

Chichester, and the A27, are already heavily congested, infrastructure in the existing Local Plan remains undelivered and the growth set out in the new Plan will further increase travel demand.

As presented, satisfying the transport needs of the plan is clearly reliant on the delivery of the A27 Chichester bypass improvements project. The A27 Chichester bypass improvements project is one of 32 pipeline schemes being considered for possible inclusion in National Highways third Road Investment Strategy (RIS3) covering 1 April 2025 to 31 March 2030.

On 9 March 2023 the UK Transport Secretary ensured record funding would be invested in the country's transport network, sustainably driving growth across the country while managing the pressures of inflation. The announcement cited the A27 Arundel Bypass as being deferred from RIS2 to RIS 3 (covering 2025-2030). The transport secretary also identified a number of challenges to the delivery of the road investment strategy and cited the benefit of allowing extra time to ensure schemes are better planned and efficient schemes can be deployed more effectively.

At present, there is no commitment by DfT to carry out the A27 Chichester bypass improvements project. Until the A27 Chichester bypass improvements project is published in the RIS3, consented and a decision to invest is made it cannot be assumed to be a committed project.

We note that the Plan does not address any uncertainty of delivery of the A27 Chichester bypass improvements project and we strongly recommend that there is either no reliance placed on RIS3 to realise capacity for growth in the Plan or that contingency measures are included to cover the eventuality that RIS3 funding is not forthcoming within the plan period. It is not clear that the potential impact of development on transport networks can be addressed in the absence of the A27 Chichester bypass improvements project.

Achieving net zero, reducing emissions reduction, acting on climate, and supporting thousands of new homes and new employment developments will be problematic with existing processes. New, additional, and adapted processes and assessments will likely be required, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments. We acknowledge that change is complex, expensive, and time-consuming, especially for smaller district level Councils. But the hard work will deliver benefits for the Council and residents in the longer-term.

National Highways seeks to continue working with the Council and WSCC to progress coordinated and deliverable packages of interim mitigation measures and alternative transport solutions while a long-term strategic solution is considered by government. This must however be in combination with a robust monitor and manage policy that appropriately manages the risk of unacceptable road impacts resulting from new housing and other development over the Plan period.

We have been in discussion with Chichester District Council regarding their proposed Monitor and Manage Strategy. At present, we do not consider the current strategy to be robust and we seek further information and detail especially on who, when and when monitoring and management will be undertaken. Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas. Any M&M framework must be based on a "worst case scenario" whereby necessary transport mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. The M&M framework must set out that the alternative to mitigation not being delivered is that development does not proceed where that development would give rise to unacceptable road safety risk or severe cumulative impacts on the road network in the absence of that mitigation. The M&M framework must be translated into development management plan policy and policy relating to development allocations.

As we have reiterated throughout our comments, we welcome the opportunity to work with you to address these outstanding matters and we will continue to liaise over submitted Transport Assessment, Travel Plan policy and Monitor and Manage Policy to help to work towards a viable plan.

We hope our comments assist.

We look forward to continuing to participate in future consultations and discussions. Please do continue to consult us as the Plan progresses so that we can remain aware of, and comment as required on, its contents.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

[National Highways letter dated 24/07/23 confirmed representation should be categorised as Comment.] We note that the majority of existing employment and business space are focused around Chichester city and the A27 corridor (para 2.18).

Full text:

We have reviewed the publicly available Local Plan documents and provided comments in the attached letter, in relation to the transport implications of the plan for the safety and operation of the SRN.

Our comments include issues to resolve, comments, requests for further information and recommendations. A brief summary of our main comments are:

- the reliance on the delivery of the A27 Chichester bypass improvements project.
- the requirements for new, additional, and adapted processes and assessments, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments.
- collaborative working between agencies in combination with a robust monitor and manage policy.

We hope our comments assist.

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders. We look forward to continuing to participate in future consultations and discussions.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Background

National Highways has been appointed by the Secretary of State for Transport as strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the strategic road network (SRN).

National Highways is responsible for operating, maintaining, and improving the Strategic Road Network (SRN) i.e., the Trunk Road and Motorway Network in England, as laid down in Department for Transport (DfT) Circular 01/2022 (Strategic Road Network and the delivery of sustainable development).

The SRN is a critical national asset and as such we work to ensure that it operates and is managed in the public interest, both in respect of current activities and needs as well as in providing effective stewardship of its long-term operation and integrity.

Our responses to Local Plan consultations are guided by relevant policy and guidance including the National Planning Policy Framework (2021) (NPPF):

- Transport issues should be considered from the earliest stages of plan-making and development proposals so that the potential impact of development on transport networks can be addressed (para 104).
- The planning system should actively manage patterns of growth such that significant development is focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. (para 105).
- Planning policies should be prepared with the active involvement of highways authorities and other transport infrastructure providers so that strategies and investments for supporting sustainable transport and development patterns are aligned. (para 106).
- In terms of identifying the necessity of transport infrastructure, NPPF confirms that development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe. (para 111).
- Planning policies and decisions should support development that makes efficient use of land, taking into account the availability and capacity of infrastructure and services – both existing and proposed – as well as their potential for further improvement and the scope to promote sustainable travel modes that limit future car use. (para 124).

In relation to the tests of soundness set out at paragraph 35 of the NPPF, in the context of transport, these are interpreted as meaning:

- a) Positively prepared - has the transport strategy been prepared with the active involvement of the highway authorities, other transport infrastructure providers and operators and neighbouring councils?
- b) Justified – Is the transport strategy based on a robust evidence base prepared with the agreement in partnership, or with the support of the highway authorities?
- c) Effective – Does the transport strategy and policy satisfy the transport needs of the plan and is it deliverable at a pace which provides for and accommodates the proposed progress and implementation of the plan?
- d) Consistent with national policy – Does the transport strategy support the economic, social, and environmental objectives of the Plan and the NPPF/NPPG?

We will be concerned with proposals that have the potential to impact on the safe and efficient operation of the SRN; in this case, the A27 trunk road (Chichester Bypass and its junctions) which is the main access route in the Chichester area. We have particular interest in any allocation, policy or proposals which could have implications for the A27 and the wider SRN network. We are interested as to whether there would be any adverse road safety or operational implications for the SRN. The latter would include a material increase in queueing or delay or reduction in journey time reliability during the

construction or operation of the development set out in the plan.

National Highways is a key delivery partner for sustainable development promoted through the plan-led system, and as a statutory consultee we have a duty to cooperate with local authorities to support the preparation and implementation of development plan documents.

In accordance with national planning and transport policy and our operating licence, we are entirely neutral on the principle of development as it is for the local planning authority to determine whether development should be allocated or permitted; albeit it must comply with national policy on locating development in locations that are or can be made sustainable. Therefore, while always seeking early and fulsome engagement with local plans and/or developers, we will simply be assessing the transport and related implications of plans or proposals and agreeing any necessary transport improvements and relevant development management policy.

In progressing Local Plans, we will seek to agree the following:

- Assessment tools and methodology
- Baseline Assessment i.e., to demonstrate that the assessment tool accurately reflects current transport conditions
- Comparator case assessment i.e., to forecast the transport conditions that would occur in the absence of the plan
- Forecast modelling i.e., to forecast the transport conditions that would arise with the plan in place, this will include an assessment at the end of the Plan period; and, if required, at full build out if that occurs after the end of the Plan period
- Outputs and outcomes of modelling, demonstrating, as appropriate, what transport infrastructure is necessary to support the plan o It should be noted that a suite of transport modelling tools may be required. This includes strategic modelling covering an area at least one major junction beyond the district boundary, localised network modelling where several links/junctions are close together and/or individual junction modelling
 - o A DMRB (Design Manual for Roads and Bridges) compliancy assessment may also be required for certain highway features, such as
 - o Merge/Diverge assessment at Grade separated junctions, link capacity assessments, and others.
- The design of any necessary transport infrastructure, to an extent suitable for establishing deliverability during the plan period at the time that it becomes necessary for the purpose of ensuring that unacceptable road safety impacts or severe operational impacts do not arise as a result of development. This may be to at least General Arrangement design stage or preliminary design stage. Whichever degree of detail is agreed, the products must be in full compliance with the DMRB.
- Industry standard transport intervention costings.
- The delivery/funding mechanisms for necessary transport interventions. It should not be assumed that National Highways will have any responsibility to identify or deliver necessary transport interventions.
- If considered appropriate, a "Monitor & Manage" (M&M) framework, aimed at managing the pace of development in line with the pace of funding and delivery of necessary highway interventions in a manner which responds to the realworld impacts of development may be agreed for inclusion in the plan subject to the adequacy of risk control measures included therein. This can include the move from a 'predict & provide' style of delivery to 'a vision & validate' style. o Any M&M framework must be based on a "worst case scenario" whereby necessary mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. It must be translated into development management plan policy and policy relating to development allocations.

Further detail on the above can be provided by National Highways.

While ideally all the above should be agreed prior to the Submission of the Local Plan for examination, we recognise that this is not always possible. However, all parties should work towards all matters being agreed and reflected in a Statement of Common Ground (SoCG) by the start of the Local Plan Examination at the latest. Ideally the SoCG between the Council and National Highways would be prepared well in advance of plan submission in order to guide resource input and to track progress towards final agreement on all relevant matters starting from the earliest plan iterations until the final version is agreed.

It is acknowledged that Government policy places much emphasis on housing delivery as a means for ensuring economic growth and addressing the current national shortage of housing. The NPPF is very clear that: "Strategic policy-making authorities should establish a housing requirement figure for their whole area, which shows the extent to which their identified housing need (and any needs that cannot be met within neighbouring areas) can be met over the plan period."

However, new DfT C1/22 and the NPPF are equally clear that any development, including housing delivery, must be tempered by the requirement to ensure that the associated transport demand can be accommodated without unacceptable impacts on the safety of the SRN or severe impacts on the operation of the SRN including reliability and congestion. Therefore, as necessary and appropriate, any plan and/or development must be accompanied by suitable mitigation in the right places at the right time, that is to the required design standards and is deliverable in terms of land availability, constructability and funding.

We would also draw your attention to the then Highways England document 'The Strategic Road Network, Planning for the Future: A guide to working with National

Highways on planning matters' (September 2015). This document sets out how National Highways intends to work with local planning authorities and developers to support the preparation of sound documents which enable the delivery of sustainable development. https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/461023/N150227_-_Highways_England_Planning_Document_FINAL-lo.pdf

Responses to Local Plan consultations are also guided by National Planning Policy Framework (NPPF) revised on 20 July 2021 which sets out the government's planning policies for England and how these are expected to be applied.

Updated Circular (01/2022)

It should be noted that since the start of the Local Plan consultation process, on the 23 December 2022, the Department for Transport released a new circular on the 'Strategic road network and the delivery of sustainable development' (Circular 01/2022), which replaces all of the policies in Circular 02/2013 of the same name. These representations take account of the new circular and the requirements in terms of the Local Plan evidence base and process.

We request that the Local Plan is prepared in line with all aspects of the new circular. Particularly, the principles of sustainable development (paragraphs 11 to 17), new connections and capacity enhancements (paragraphs 18 to 25), and engagement with plan-making (paragraphs 26 to 38).

Regulation 18 submission

In our Regulation 18 submission we noted several matters including:

- The need to mitigate the adverse impacts of strategic development traffic to the A27 Chichester Bypass and its junctions at Portfield Roundabout, Bognor Road Roundabout, Whyke Roundabout, Stockbridge Roundabout and Fishbourne Roundabout and Oving junction.
- The need to identify a mechanism to calculate contributions towards the delivery of the previously agreed Local Plan A27 improvements
- The need to confirm the number of dwellings needed within the plan period
- The need to establish National Highways acceptance of the traffic model reference and future case scenarios
- The need to confirm costs, viability, and funding associated with mitigating the safety and congestion impacts of the development included within the plan.

Local Plan context

This Local Plan (Chichester Local Plan 2021 – 2039), prepared by the Local Planning Authority (LPA) Chichester District Council, sets out the vision for future development in the district and will be used to help decide on planning applications and other planning related decisions including shaping infrastructure investments.

The draft sets out how the district should be developed over the next 18-years to 2039 including for the full Plan period (1 April 2021 to 31 March 2039) the total supply of

- 10,359 dwellings

- 114,652 net additional sqm new floorspace

Minus the completions this is equivalent to around 530 dwellings and 6,150 sqm of floorspace a year.

National Highways Representations

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders.

We have undertaken a review of the Chichester Local Plan 2021-2039 proposed submission version and accompanying evidence documents, our comments are set out in the tables below (following pages). [see table within attachment]

Summary

We have reviewed the publicly available Local Plan documents and provided comments above in relation to the transport implications of the plan for the safety and operation of the SRN. We understand that other technical information is available, but this was not presented as part of this consultation.

Chichester, and the A27, are already heavily congested, infrastructure in the existing Local Plan remains undelivered and the growth set out in the new Plan will further increase travel demand.

As presented, satisfying the transport needs of the plan is clearly reliant on the delivery of the A27 Chichester bypass improvements project. The A27 Chichester bypass improvements project is one of 32 pipeline schemes being considered for possible inclusion in National Highways third Road Investment Strategy (RIS3) covering 1 April 2025 to 31 March 2030.

On 9 March 2023 the UK Transport Secretary ensured record funding would be invested in the country's transport network, sustainably driving growth across the country while managing the pressures of inflation. The announcement cited the A27 Arundel Bypass as being deferred from RIS2 to RIS 3 (covering 2025-2030). The transport secretary also identified a number of challenges to the delivery of the road investment strategy and cited the benefit of allowing extra time to ensure schemes are better planned and efficient schemes can be deployed more effectively.

At present, there is no commitment by DfT to carry out the A27 Chichester bypass improvements project. Until the A27 Chichester bypass improvements project is published in the RIS3, consented and a decision to invest is made it cannot be assumed to be a committed project.

We note that the Plan does not address any uncertainty of delivery of the A27 Chichester bypass improvements project

and we strongly recommend that there is either no reliance placed on RIS3 to realise capacity for growth in the Plan or that contingency measures are included to cover the eventuality that RIS3 funding is not forthcoming within the plan period. It is not clear that the potential impact of development on transport networks can be addressed in the absence of the A27 Chichester bypass improvements project.

Achieving net zero, reducing emissions reduction, acting on climate, and supporting thousands of new homes and new employment developments will be problematic with existing processes. New, additional, and adapted processes and assessments will likely be required, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments. We acknowledge that change is complex, expensive, and time-consuming, especially for smaller district level Councils. But the hard work will deliver benefits for the Council and residents in the longer-term.

National Highways seeks to continue working with the Council and WSCC to progress coordinated and deliverable packages of interim mitigation measures and alternative transport solutions while a long-term strategic solution is considered by government. This must however be in combination with a robust monitor and manage policy that appropriately manages the risk of unacceptable road impacts resulting from new housing and other development over the Plan period.

We have been in discussion with Chichester District Council regarding their proposed Monitor and Manage Strategy. At present, we do not consider the current strategy to be robust and we seek further information and detail especially on who, when and when monitoring and management will be undertaken. Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas. Any M&M framework must be based on a "worst case scenario" whereby necessary transport mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. The M&M framework must set out that the alternative to mitigation not being delivered is that development does not proceed where that development would give rise to unacceptable road safety risk or severe cumulative impacts on the road network in the absence of that mitigation. The M&M framework must be translated into development management plan policy and policy relating to development allocations.

As we have reiterated throughout our comments, we welcome the opportunity to work with you to address these outstanding matters and we will continue to liaise over submitted Transport Assessment, Travel Plan policy and Monitor and Manage Policy to help to work towards a viable plan.

We hope our comments assist.

We look forward to continuing to participate in future consultations and discussions. Please do continue to consult us as the Plan progresses so that we can remain aware of, and comment as required on, its contents.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Full text:

Thank you for the opportunity to comment on the Draft Chichester District Local Plan 2021-39. We would suggest that there has been insufficient public consultation to date. We commented on the draft Local Plan for 2015, on the Preferred Options in 2019 and there have been many changes in Government policy and commitments since then to include

Climate Change, Net Zero and commitments made at COP 26 and 27 to include reducing methane emissions etc. With regards to this consultation we recognise the importance of a plan-led system and support Chichester District Council's (CDC) desire to produce a comprehensive Local Plan. CPRE Sussex wishes to contribute to policies concerning landscape, rural areas, communities, environment and wildlife drawing on evidence and local knowledge.

CONTEXT

1. Examining the previous government consultation which closed on March 2nd, ie the Levelling-up and Regeneration Bill including some aspects of the National Planning Policy Framework, NPPF, there are some issues which would impact on this Local Plan and need consideration.

1.1 That consultation included important changes to the way in which the 5 year housing land supply is calculated, and the timetable for making Local Plans. They are of significance to local councils, especially those with Neighbourhood Plans. Some measures will take effect almost immediately through an update to the existing NPPF in Spring 2023. Others will follow later in the year or in 2024. Surely such consultations should be better phased to make plan development more logical and access to consultations easier?

2. Communities: Our group welcomed the overall shift in emphasis towards communities. Mind you, while the word is used 121 times in the Prospectus it does not appear in the draft NPPF! We would expect much more emphasis on the importance of communities in any forthcoming consultations. Earlier and more effective engagement with communities could help to lead to a less confrontational planning system with an emphasis on active participation.

3 Time required – a lot of time is needed to understand and implement such policies and a searchable on-line version would be very helpful; and, consideration also needs to be extended to those people in the community who are not computerised.

4 We take the word "sufficient" with regard to housing numbers to be equivalent to that which is "needed" and the current Standard Method does not establish that figure. Our MP, the Rt Hon Andrew Griffith, Arundel and South Downs, referred to the approach to developing housing numbers as a mutant algorithm.

4.1 Specifically, the changes to housing targets, to make them 'advisory', are welcome. However, we should remind you that the Government continues to insist on using out-of-date projections (2014). The current ONS population estimates are 1 million less people in the population than allowed for in the figures used to so that the reliance on the 2014 figures is completely out of date. The emphasis should always be on using current up to date evidenceand to use those out-of-date figures produces the wrong results and does not conform with the need to use up to date information. In addition, this would require an immediate change to the guidance to insist (as previously) on the most up-to-date projections.

4.2 We also recommended a review of the Standard Method, which does not make housing affordable and simply supports developers to build market homes where they want to. The graph above illustrates the gap between projection and current population figure provided by the Community Planning Association.

4.3 Local Planning Authorities, LPAs, were also given an opportunity to put forward alternatives to the Standard Method and to name the specific constraints faced. Our contribution to that consultation referred to the:

- Reduction of land available to the CDC given the creation of the South Downs National Park, SDNP
- English Channel
- SDNP itself
- Range of internationally important designated sites
- Rare species and habitats
- River flood plains
- Water neutrality in part of the District
- Nutrient neutrality in the Solent
- Sea Level Rise
- Inadequate infrastructure – roads/lanes and local transport; sewage treatment; community facilities such as medical centres, shops; and

4.4 There have already been large housing commitments, loosely put on "flat green land" around Chichester and now CDC is eyeing the "empty" north of the District with allocations being made for Loxwood and an increase in the number of houses being sought in Wisborough Green. Such land supports wildlife which often may not be under recorded as it is private land. Areas in both of those Parishes has been "cleared" of biological interest but the BNG established a baseline of 2020 and google maps can show the state of the environment at that date. The commitment to safeguarding biodiversity needs to be pursued carefully and consistently.

COMMENTS ON THE CDC LOCAL PLAN 2021-2039 REG19 proposed submission comments: the comments cite the para and/or Chapter number

5. At this phase in the local plan process the scope of the invited representations is limited to whether the Plan that has been produced is:

- a) legally compliant (i.e., whether it meets the legal requirements); and
- b) sound (i.e., whether it has been positively prepared, is justified, is effective and is consistent with national policy) and I would ADD whether it is forward thinking enough as it is planned to last until 2039.

5.1 The plan area is split in to three areas, each with different characteristics, landscapes and access to services:

- a) • The East-West Corridor, running across the width of the plan area, is varied in landscape with the inclusion of both larger settlements (including the city) and rural villages. It has the best transport connections and access to facilities in the plan area with the A27 and railway running through-out.
- b) The Manhood Peninsula* MP, located in the south of the plan area, jutting out into the English Channel, is rich in coastal landscapes with the majority of the area covered by environmental designations. It also includes some of the plan area's larger settlements which rely heavily on limited road accessibility to the north towards Chichester city.
- c) The North of the Plan Area is primarily rural in character with diverse landscapes, rich cultural and heritage assets and a number of dispersed settlements, some of which are relatively isolated and served by narrow lanes with limited public transport

*NB The population on the MP is dispersed in a rural landscape and equals that of Chichester. The description for the North section could just as easily have been used for the MP.

Chapter 2 and Local Plan Vision

These Objectives will need to underlie every aspect of the document.

5.2 P 23: Para 2.25 Replace the word "site" by "area" and insert forming part of a diverse set of wetlands (Ditches, Rifes, Ponds, Saline lagoons and a small section of Canal). Info: The Medmerry site is no longer the largest eg having been overtaken in area by the Steart Marshes, Somerset.

5.3 Include mention of rare habitats and species and the role of Selsey Bill in facilitating arrivals and departures of bats, butterflies and birds. That's its USP,

6.1 P 25 Local Plan Vision and Strategic Objectives p 30 Objective 1: CLIMATE CHANGE

This section does not reflect the urgency of the issue nor the vulnerability of parts of Sussex. Many scientists are pointing to Sea Level Rise, SLR, speeding up and some of them cite a 10 year window in which to act ie so that before this Local Plan has run its course, areas on the coast including the coastal plain and the Manhood Peninsula could well be adversely affected. This would have an immediate impact on housing, facilities and transport links and could lead to the local population having to move.

6.2 Actions related to this particular objective need to be included in all the following objectives. The south of the District is very vulnerable and the rest of the District will experience very intensive rainfall, water shortages (NE/EA 2013 report) and hot summers.

6.2 Policies need to include not building on areas below 5m high Water Level. The CDC Climate Change officer should host meetings to consider potential plans for putting houses on stilts, moving people to land safe from flooding and re-directing roads, cycle ways and footpaths to facilitate future access.

6.3 Evidence: See the Surging Seas and NASA websites for prediction of Sea Level Rise. Need to include reference to the UK Climate Resilience Programme jointly led by UK Research and Innovation, UKRI, and the Met Office which was set up to fund research "to help understand how to quantify the risks from climate change and build climate resilience for the UK, This research should produce "usable outputs" to "directly support decision-making" by government, local authorities, communities and other stakeholders

6.3.1 Every area of UK society will feel the effects of climate change and, as global emissions continue to rise, pre-paring for life in a warmer world is crucial. Findings were discussed last week by the UK ranging from assessments of elderly people overheating in care homes through to building community-run water storage.

6.3.2 Every area of UK society will feel the effects of climate change and, as global emissions continue to rise, preparing for life in a warmer world is crucial.

6.2.2.i In early March, UKTI and Met office researchers involved with the programme gathered to present and discuss their findings. They ranged from assessments of elderly people overheating in care homes through to building community-run water storage. These items and website need to be referenced in the evidence section.

6.3.3 The key points are intended to help businesses and policymakers adapt to climate change.

6.3.4 Many focused on "climate services" defined as involving the "production, translation, transfer and use of climate knowledge and information in climate-informed decision making".

6.3.5 Climate services could be an important tool for adaptation because they can provide people with the relevant information to prepare for climate change.

6.3.6 Representatives from the Met Office laid out their recommendations for a UK National Framework for Climate Services. And said they wanted to provide a "driving force" for the nation's climate services community and help ensure that "adaptation action actually does get done".

6.4.7 UK 'SSPs'

"Shared socioeconomic pathways" (SSPs) are tools used by researchers to explore how society will change in the future. This can help them to answer important questions about climate change. As there were no UK-specific versions of SSPs available to complement the UKCP18 climate projections

Ref: The importance of Adaptive Resilience Solutions in the Face of Climate Threats.

Recommendation: This report needs to be drawn on and form part of the evidence base.

7.1 Objective 2: NATURAL ENVIRONMENT Work with site managers of the Designated Sites and NGOs in the wider environment. This objective is vitally important and welcome and its importance needs to be reflected in all parts of the plan to include Wildlife Corridors, Biodiversity Net Gain and the Nature Recovery Network.

Sir David Attenborough

"It may sound frightening, but the scientific evidence is that if we have not taken dramatic action within the next decade, we could face irreversible damage to the natural world and the collapse of our societies."

7.1.1 The emergency concerning Biodiversity also needs to be communicated.

Para 2.32: Agree – this (climate emergency) is the most urgent issue facing us all together with the Biodiversity Emergency (declared by IPBWS, 2019).

7.1.2 Info: The ESPACE project European Spatial Planning: Adapting to Climate Events (ESPACE) was a four-year project funded by the European Commission's north-west Europe INTERREG IIIB programme and the ODPM. It produced a Climate Action Plan for the Manhood Peninsula in 2008 and not much action has followed to implement this. Perhaps it needs dusting off and re-visiting and including within the Local Plan?

7.2 Add policy:

PROPOSED Ecosystem Services Policy

7.2.1 CPRE Sussex considers that the Chichester Local Plan 2021 - 2039 should include a policy specifically for Ecosystem Services for the following reasons:

1. NPPF para 174. Planning policies and decisions should contribute to and enhance the natural and local environment by:

a) protecting and enhancing valued landscapes, sites of biodiversity or geological value and soils (in a manner

commensurate with their statutory status or identified quality in the development plan);

b) recognising the intrinsic character and beauty of the countryside, and the wider benefits from natural capital and ecosystem services – including the economic and other benefits of the best and most versatile agricultural land, and of trees and woodland

7.2.2 'Natural capital refers to the elements of nature that produce value to people –whether directly or indirectly. Our natural capital 'assets' are the stocks of renewable and non-renewable natural capital such as our soils, freshwater, farmland, forests, atmosphere, oceans, ecological processes and the natural processes that underpin them. The flows of ecosystem services and benefits that our natural capital provides can be very obvious such as food, fuel, clean air, clean water, and opportunities for recreation. Others are much less visible, such as climate regulation, flood defences provided by natural vegetation, the billions of tonnes of carbon stored by peatlands and other habitats and the pollination of crops by insects'. (Sussex Local Nature Partnership <http://sussexlnp.org.uk/natural-capital/>)

7.3 Accordingly, we propose an Ecosystem Services policy (an adaptation of South Downs Park Authority's Core Policy SD2: Ecosystem Services'), be added as follows:

1. Development proposals will be permitted where they have an overall positive impact on the ability of the natural environment to contribute goods and services. This will be achieved by means of high-quality design, and by delivering all opportunities to:

- a) Sustainably manage land and water environments;
- b) Protect and provide more, better and joined up natural habitats;
- c) Conserve water resources and improve water quality;
- d) Manage and mitigate the risk of flooding;
- e) Improve the District's resilience to, and mitigation of, climate change;
- f) Increase the ability to store carbon through the retention of existing woodland, new planting or other means;
- g) Conserve and enhance soils, use soils sustainably and protect the best and most versatile agricultural land;
- h) Support the sustainable production and use of food, forestry and raw materials;
- i) Reduce levels of pollution;
- j) Improve opportunities for peoples' health and wellbeing; and
- k) Provide opportunities for access to the natural and cultural resources which contribute to the District's special qualities.

2. The Environment Act 2021 will require the production of a Nature Recovery Network and more locally a Local Nature Recovery Strategy. The Strategic Wildlife Corridors in Chichester District will be integral components of that local network. The importance of local networks in Nature Recovery Networks is highlighted in NPPG

7.3.4 Policy NE 4 Strategic Wildlife Corridors

CPRE Sussex supports this policy, Strategic Wildlife Corridors as part of the Local Plan process, conform with section 179 of the NPPF 2021 which is well-evidenced. However, CPRE Sussex wishes to question the size of the corridors ie the width/

Information provided in the 2021 consultation appears to demonstrate that these areas have been downsized such as those put alongside the East of the City Corridor, it appears that there has been a narrowing of the Strategic Wildlife Corridor around the location of the proposed allocations of A8, Chapter 10: Strategic and Area Based Allocations Land East of Chichester and potential A7, Land at Shopwyke. The Corridor to the East of Chichester was proposed for connectivity and functional links to the area for the rare and European Protected Species of Barbastelle Bats. It is shown on CDC technical consultation documents as a bat network

This does not conform with the Natural Environment & Rural Communities Act, NERC, 2006 and Section 40 subsection 3a as it would destroy a habitat over which the Barbastelle Bat has been recorded, a Section 41 species. And it is the DUTY of the Local Authority to safeguard these species. There should be NO recreational use in the buffer zones.

8. Green Infrastructure: p 160 and Policy P 14 d Submission (Regulation 19)

8.1 Local Green Space

6.82. The NPPF includes the concept of Local Green Space designation. This is a discretionary designation and sites may be identified and included in either local or neighbourhood plans. The designation should only be used as defined by the criteria in the NPPF where the land is not extensive, is local in character and reasonably close to the community; and, where it is demonstrably special, for example because of its beauty, historic significance, recreational value (including as a playing field), tranquillity or richness of its wildlife. Any areas which fall outside a neighbourhood plan area and where such designation is sought, will be considered by the subsequent Site Allocations DPD that will cover the remainder of the plan area. Policies for managing development within a Local Green Space should be consistent with those for Green Belts.

8.2 Parishes should be encouraged to look into such areas to be included in Neighbourhood Plans.

9. Renewable Energy: General policy

9.1 Housing p 103:

CPRE Sussex considers that the Chichester Local Plan should include a policy requiring all new-build homes to be equipped and sold with solar PV panels, roof or wall mounted.

9.2 Although the Chichester District Local Plan, at Para 6.15, states that 'Design proposals should respond to the opportunities a site presents to make best use of solar gain where this can be achieved without compromising good urban design or creating issues of overheating', there is no requirement in any of the plan's policies for new-build homes to be equipped and sold with roof or wall mounted solar PV.

9.3 Note that West Sussex County Council has advised in their Solar Together initiative that "By generating electricity from the sun, you could reduce your annual carbon emissions by approximately one tonne each year and help West Sussex to become carbon neutral".

Note, too: <https://solartogether.co.uk/westsussex/blog/best-ways-to-increase-solar-self-consumption>

9.4 "According to the University of Oxford findings, UK households with solar PV self-consume 45% of their own solar

generation on average and reduce annual electricity demand from the grid by 24%. With additional adjustments, this reduction of 24% can be increased to over 35%”.

9.5 New-build homes in Chichester District should therefore be equipped with solar P V panels. We question the statement in Para 6.15 that ‘solar gain’ could create ‘issues of overheating’. Surely this can be prevented by good design?

9.6 There are additional opportunities for solar installations on school rooves (Brighton Sustainable Energy Co-op has many examples), car parks, industrial buildings et al.

10.0 Renewable Energy: Specific location Wisborough Green 75 additional houses. Unacceptable – see CDC Capacity Study sub sections 166+167. Limitations – Ancient woodland; wildlife – rare habitats and species, river floodplain; Water neutrality; HRA with reference to the Mens Ancient Woodland and presence of European Protected Species, Barbastelle Bats flight paths and foraging across the parish. See Natural England report Site Improvement Report and reports by Frank Greenway, 2008 et al.

10.1 See Page 84: In the north of the plan area, properties within Southern Water’s Sussex North Water Resource Zone are supplied with water from a groundwater abstraction at Pulborough which is currently subject to environmental investigations to ensure there is no adverse impact on environmentally designated sites in the Arun Valley. This may impact on the available supply and alternative sources may need to be considered by Southern Water. Natural England published a position statement in September 2021 requiring developments within the Sussex North Supply Zone to be water neutral – this means that the use of water in the supply area after the development is the same or lower than before. A Water Neutrality Strategy had been prepared jointly with other affected authorities. Natural England’s Position Statement sets out an interim approach based on minimising water use in new builds and offsetting the water that is used

10.2 Water consumption target. It is noted that both Ports-mouth Water and Southern Water have targets to reduce water consumption to 100 litres per person per day (lppd) by 2040, a lower figure than the current most stringent Building Regulation target of 110 lppd and not that level which could be required for water neutrality.

10.3 The Local Plan is weak on impacts especially from the largest concentration of caravans at Selsey on Medmerry.

10.4 There is no wildlife corridor running east to west along the Manhood Peninsula ie Pagham to East Head and this undermines the importance of a positive barrier zone to protect the habitat. CDC have used the corridors for this barrier purpose possibly more than as a pathway throughout other parts of the plan.

10.5 Nutrient neutrality exclusion of a large area of the Peninsula from the protection zone is illogical as the same conditions exhibited in Chichester harbour (in the zone) exist at Pagham.

10.6 There is a ‘tool’ - “nutrient budget calculator March, 2022 version” – which gives an “n” factor for instance to discharges from WWTW. There is no direct mention of its use at Chichester harbour and as the data on Pagham Harbour has yet to be made public, the role of Sidlesham WWTW has not been referred to. The “N” factor would probably be more restrictive on outflows from WWTW than the total discharge permits – and shows a lack of coordinated approach between the Environment Agency and Natural England.

10.7 There are two reports due to be published this month - the West Sussex Coast and Gt Brighton Board and Southern Water overall plan for drainage and waste water-the timing of the LP – is thus unable to take these two influential inputs into account and may have implications for the ‘Soundness’ of the plan as it moves forward.

10.8 No mention is included of Sidlesham WSTW which is operating at and beyond capacity resulting in new housing on the Manhood Peninsula dealing with waste water in gardens, in houses etc.

Pages 87 and 88: Paras 4.112 and 4.113 are contradictory.

Appendix F Monitoring Framework

Early in 2020 attended a Public Inquiry representing the Manhood Wildlife and Heritage Group and presented evidence about an application at Easton Farm where the implementation of an application had not been followed up, which had expanded like Topsy and which potentially could damage the Medmerry coastal realignment site with its runoff. CDC had not been on watch possibly through lack of staff and/or a lack of enforcement staff. The site had grown without permission. This section requires a firm commitment to monitoring and reporting back, not just a paper one.

Thank you for your attention.

Change suggested by respondent:

Replace word “site” with “area” and insert reference to forming part of diverse set of wetlands (Ditches, Rifes, Ponds, Saline lagoons and a small section of Canal).

Include mention of rare habitats and species and the role of Selsey Bill in facilitating arrivals and departures of bats, butterflies and birds.

Document Element: Environmental Characteristics, 2.27**Respondent:** Save our South Coast Alliance (Libby Alexander) [7648]**Summary:**

The roads into the city of Chichester are narrow and reflect the historical build of its centre. These are under huge stress from the outlying developments most especially from the large Whitehouse Farm development along the A2178. And for all the communities trying to cross the A27 from the south.

Our rich heritage is being constantly undermined by empty shops, lack of trees, broken paving, and little night life across its centre.

The city centre should be brought to life with a greater encouragement of housing above shops and within large buildings that could be converted into dwellings.

There should be a greater push to encourage the young to live in the city by providing space for business hubs and nursery/childcare facilities, and entertainment.

Document Element: Issues and Opportunities facing the Plan Area, 2.29**Respondent:** Kingsbridge Estates Limited & Landlink Estates Limited [8084]**Agent:** Savills (Mr William Price, Planner) [7783]**Summary:**

The Local Plan is not positively prepared. The proposed expansion of HDAs is welcome. However the council's current approach to restrictions on co-location of functionally linked businesses and activities within the food park/cluster is impacting on business competitiveness and efficiency.

Full text:

The attached Savills SREBR Report and the HEDNA 2018 both flag that the existing and proposed draft policy E4 do, and will continue to, constrain the future capability of the horticulture industry to grow and contribute to the local and UK economy, food resilience and carbon reduction ambitions

The importance of associated uses to the cluster is also acknowledged within The Council's evidence base and other key Government and Industry publications.

Consolidation of horticultural and functionally linked development within the HDAs will facilitate growth and competitiveness, and reduce food miles.

Accordingly, it is suggested that the Council should pursue a more positive and proactive wording of the HDA policy in order to allow for a greater breadth of associated uses within the Runcton HDA. The proposed wording of the policy does not provide sufficient certainty to investors and businesses (both established within Runcton HDA or looking to locate within it) that The Council will support the functionally associated uses that are necessary to foster and maintain the growth and competitiveness of a world-class food cluster.

The Local Plan therefore conflicts with paragraph 81 of the NPPF in its entirety which states:

Planning policies and decisions should help create the conditions in which businesses can invest, expand and adapt. Significant weight should be placed on the need to support economic growth and productivity, taking into account both local business needs and wider opportunities for development. The approach taken should allow each area to build on its strengths, counter any weaknesses and address the challenges of the future. This is particularly important where Britain can be a global leader in driving innovation 42, and in areas with high levels of productivity, which should be able to capitalise on their performance and potential.

Change suggested by respondent:

Reference to 'ancillary' with regard to the HDAs in relevant policies and supporting text should be modified to 'functionally linked' and include explanatory text clarifying that 'functionally linked' uses can include a range of activities including: food-related distribution; food manufacturing linked to the HDAs food preparation; on-site renewable energy to serve on-site activities; and R&D.

Support

Document Element: Issues and Opportunities facing the Plan Area, 2.29**Respondent:** National Highways (Mr Marius Pieters, Spatial Planning Manager) [8127]**Summary:**

[National Highways letter dated 24/07/23 confirmed representation should be categorised as Comment - Support.] The A27 is a key corridor although the area is severely congested. The bypass continues to suffer from high accident rates, daily congestion, and extensive queuing at most of the junctions along this 5km stretch of road. With traffic due to increase by 24% by 2035 this situation will consistently worsen if there is no intervention.

We therefore support (para 2.29) the need:

- to reduce the need to travel, particularly by private car, supported by direct walking and cycling routes - for the Local Plan to provide local infrastructure to support new development and seek opportunities to address existing infrastructure problems, such as those relating to the A27

Full text:

We have reviewed the publicly available Local Plan documents and provided comments in the attached letter, in relation to the transport implications of the plan for the safety and operation of the SRN.

Our comments include issues to resolve, comments, requests for further information and recommendations. A brief summary of our main comments are:

- the reliance on the delivery of the A27 Chichester bypass improvements project.
- the requirements for new, additional, and adapted processes and assessments, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments.
- collaborative working between agencies in combination with a robust monitor and manage policy.

We hope our comments assist.

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders. We look forward to continuing to participate in future consultations and discussions.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Background

National Highways has been appointed by the Secretary of State for Transport as strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the strategic road network (SRN).

National Highways is responsible for operating, maintaining, and improving the Strategic Road Network (SRN) i.e., the Trunk Road and Motorway Network in England, as laid down in Department for Transport (DfT) Circular 01/2022 (Strategic Road Network and the delivery of sustainable development).

The SRN is a critical national asset and as such we work to ensure that it operates and is managed in the public interest, both in respect of current activities and needs as well as in providing effective stewardship of its long-term operation and integrity.

Our responses to Local Plan consultations are guided by relevant policy and guidance including the National Planning Policy Framework (2021) (NPPF):

- Transport issues should be considered from the earliest stages of plan-making and development proposals so that the potential impact of development on transport networks can be addressed (para 104).
- The planning system should actively manage patterns of growth such that significant development is focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. (para 105).
- Planning policies should be prepared with the active involvement of highways authorities and other transport infrastructure providers so that strategies and investments for supporting sustainable transport and development patterns are aligned. (para 106).
- In terms of identifying the necessity of transport infrastructure, NPPF confirms that development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe. (para 111).
- Planning policies and decisions should support development that makes efficient use of land, taking into account the availability and capacity of infrastructure and services – both existing and proposed – as well as their potential for further improvement and the scope to promote sustainable travel modes that limit future car use. (para 124).

In relation to the tests of soundness set out at paragraph 35 of the NPPF, in the context of transport, these are interpreted as meaning:

- a) Positively prepared - has the transport strategy been prepared with the active involvement of the highway authorities, other transport infrastructure providers and operators and neighbouring councils?
- b) Justified – Is the transport strategy based on a robust evidence base prepared with the agreement in partnership, or with the support of the highway authorities?
- c) Effective – Does the transport strategy and policy satisfy the transport needs of the plan and is it deliverable at a pace which provides for and accommodates the proposed progress and implementation of the plan?
- d) Consistent with national policy – Does the transport strategy support the economic, social, and environmental objectives of the Plan and the NPPF/NPPG?

We will be concerned with proposals that have the potential to impact on the safe and efficient operation of the SRN; in this case, the A27 trunk road (Chichester Bypass and its junctions) which is the main access route in the Chichester area. We have particular interest in any allocation, policy or proposals which could have implications for the A27 and the wider SRN network. We are interested as to whether there would be any adverse road safety or operational implications for the SRN. The latter would include a material increase in queueing or delay or reduction in journey time reliability during the construction or operation of the development set out in the plan.

National Highways is a key delivery partner for sustainable development promoted through the plan-led system, and as a statutory consultee we have a duty to cooperate with local authorities to support the preparation and implementation of development plan documents.

In accordance with national planning and transport policy and our operating licence, we are entirely neutral on the principle of development as it is for the local planning authority to determine whether development should be allocated or permitted; albeit it must comply with national policy on locating development in locations that are or can be made sustainable. Therefore, while always seeking early and fulsome engagement with local plans and/or developers, we will simply be assessing the transport and related implications of plans or proposals and agreeing any necessary transport improvements and relevant development management policy.

In progressing Local Plans, we will seek to agree the following:

- Assessment tools and methodology
- Baseline Assessment i.e., to demonstrate that the assessment tool accurately reflects current transport conditions
- Comparator case assessment i.e., to forecast the transport conditions that would occur in the absence of the plan
- Forecast modelling i.e., to forecast the transport conditions that would arise with the plan in place, this will include an assessment at the end of the Plan period; and, if required, at full build out if that occurs after the end of the Plan period
- Outputs and outcomes of modelling, demonstrating, as appropriate, what transport infrastructure is necessary to support the plan o It should be noted that a suite of transport modelling tools may be required. This includes strategic modelling covering an area at least one major junction beyond the district boundary, localised network modelling where several links/junctions are close together and/or individual junction modelling
 - o A DMRB (Design Manual for Roads and Bridges) compliancy assessment may also be required for certain highway features, such as
 - o Merge/Diverge assessment at Grade separated junctions, link capacity assessments, and others.
- The design of any necessary transport infrastructure, to an extent suitable for establishing deliverability during the plan period at the time that it becomes necessary for the purpose of ensuring that unacceptable road safety impacts or severe operational impacts do not arise as a result of development. This may be to at least General Arrangement design stage or preliminary design stage. Whichever degree of detail is agreed, the products must be in full compliance with the DMRB.
- Industry standard transport intervention costings.
- The delivery/funding mechanisms for necessary transport interventions. It should not be assumed that National Highways will have any responsibility to identify or deliver necessary transport interventions.
- If considered appropriate, a "Monitor & Manage" (M&M) framework, aimed at managing the pace of development in line with the pace of funding and delivery of necessary highway interventions in a manner which responds to the realworld impacts of development may be agreed for inclusion in the plan subject to the adequacy of risk control measures included therein. This can include the move from a 'predict & provide' style of delivery to 'a vision & validate' style. o Any M&M framework must be based on a "worst case scenario" whereby necessary mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. It must be translated into development management plan policy and policy relating to development allocations.

Further detail on the above can be provided by National Highways.

While ideally all the above should be agreed prior to the Submission of the Local Plan for examination, we recognise that this is not always possible. However, all parties should work towards all matters being agreed and reflected in a Statement of Common Ground (SoCG) by the start of the Local Plan Examination at the latest. Ideally the SoCG between the Council and National Highways would be prepared well in advance of plan submission in order to guide resource input and to track progress towards final agreement on all relevant matters starting from the earliest plan iterations until the final version is agreed.

It is acknowledged that Government policy places much emphasis on housing delivery as a means for ensuring economic growth and addressing the current national shortage of housing. The NPPF is very clear that: "Strategic policy-making authorities should establish a housing requirement figure for their whole area, which shows the extent to which their identified housing need (and any needs that cannot be met within neighbouring areas) can be met over the plan period."

However, new DfT C1/22 and the NPPF are equally clear that any development, including housing delivery, must be tempered by the requirement to ensure that the associated transport demand can be accommodated without unacceptable impacts on the safety of the SRN or severe impacts on the operation of the SRN including reliability and congestion. Therefore, as necessary and appropriate, any plan and/or development must be accompanied by suitable mitigation in the right places at the right time, that is to the required design standards and is deliverable in terms of land availability, constructability and funding.

We would also draw your attention to the then Highways England document 'The Strategic Road Network, Planning for the Future: A guide to working with National Highways on planning matters' (September 2015). This document sets out how National Highways intends to work with local planning authorities and developers to support the preparation of sound documents which enable the delivery of

sustainable development. https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/461023/N150227_-_Highways_England_Planning_Document_FINAL-lo.pdf

Responses to Local Plan consultations are also guided by National Planning Policy Framework (NPPF) revised on 20 July 2021 which sets out the government's planning policies for England and how these are expected to be applied.

Updated Circular (01/2022)

It should be noted that since the start of the Local Plan consultation process, on the 23 December 2022, the Department for Transport released a new circular on the 'Strategic road network and the delivery of sustainable development' (Circular 01/2022), which replaces all of the policies in Circular 02/2013 of the same name. These representations take account of the new circular and the requirements in terms of the Local Plan evidence base and process.

We request that the Local Plan is prepared in line with all aspects of the new circular. Particularly, the principles of sustainable development (paragraphs 11 to 17), new connections and capacity enhancements (paragraphs 18 to 25), and engagement with plan-making (paragraphs 26 to 38).

Regulation 18 submission

In our Regulation 18 submission we noted several matters including:

- The need to mitigate the adverse impacts of strategic development traffic to the A27 Chichester Bypass and its junctions at Portfield Roundabout, Bognor Road Roundabout, Whyke Roundabout, Stockbridge Roundabout and Fishbourne Roundabout and Oving junction.
- The need to identify a mechanism to calculate contributions towards the delivery of the previously agreed Local Plan A27 improvements
- The need to confirm the number of dwellings needed within the plan period
- The need to establish National Highways acceptance of the traffic model reference and future case scenarios
- The need to confirm costs, viability, and funding associated with mitigating the safety and congestion impacts of the development included within the plan.

Local Plan context

This Local Plan (Chichester Local Plan 2021 – 2039), prepared by the Local Planning Authority (LPA) Chichester District Council, sets out the vision for future development in the district and will be used to help decide on planning applications and other planning related decisions including shaping infrastructure investments.

The draft sets out how the district should be developed over the next 18-years to 2039 including for the full Plan period (1 April 2021 to 31 March 2039) the total supply of

- 10,359 dwellings

- 114,652 net additional sqm new floorspace

Minus the completions this is equivalent to around 530 dwellings and 6,150 sqm of floorspace a year.

National Highways Representations

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders.

We have undertaken a review of the Chichester Local Plan 2021-2039 proposed submission version and accompanying evidence documents, our comments are set out in the tables below (following pages). [see table within attachment]

Summary

We have reviewed the publicly available Local Plan documents and provided comments above in relation to the transport implications of the plan for the safety and operation of the SRN. We understand that other technical information is available, but this was not presented as part of this consultation.

Chichester, and the A27, are already heavily congested, infrastructure in the existing Local Plan remains undelivered and the growth set out in the new Plan will further increase travel demand.

As presented, satisfying the transport needs of the plan is clearly reliant on the delivery of the A27 Chichester bypass improvements project. The A27 Chichester bypass improvements project is one of 32 pipeline schemes being considered for possible inclusion in National Highways third Road Investment Strategy (RIS3) covering 1 April 2025 to 31 March 2030.

On 9 March 2023 the UK Transport Secretary ensured record funding would be invested in the country's transport network, sustainably driving growth across the country while managing the pressures of inflation. The announcement cited the A27 Arundel Bypass as being deferred from RIS2 to RIS 3 (covering 2025-2030). The transport secretary also identified a number of challenges to the delivery of the road investment strategy and cited the benefit of allowing extra time to ensure schemes are better planned and efficient schemes can be deployed more effectively.

At present, there is no commitment by DfT to carry out the A27 Chichester bypass improvements project. Until the A27 Chichester bypass improvements project is published in the RIS3, consented and a decision to invest is made it cannot be assumed to be a committed project.

We note that the Plan does not address any uncertainty of delivery of the A27 Chichester bypass improvements project and we strongly recommend that there is either no reliance placed on RIS3 to realise capacity for growth in the Plan or that contingency measures are included to cover the eventuality that RIS3 funding is not forthcoming within the plan

period. It is not clear that the potential impact of development on transport networks can be addressed in the absence of the A27 Chichester bypass improvements project.

Achieving net zero, reducing emissions reduction, acting on climate, and supporting thousands of new homes and new employment developments will be problematic with existing processes. New, additional, and adapted processes and assessments will likely be required, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments. We acknowledge that change is complex, expensive, and time-consuming, especially for smaller district level Councils. But the hard work will deliver benefits for the Council and residents in the longer-term.

National Highways seeks to continue working with the Council and WSCC to progress coordinated and deliverable packages of interim mitigation measures and alternative transport solutions while a long-term strategic solution is considered by government. This must however be in combination with a robust monitor and manage policy that appropriately manages the risk of unacceptable road impacts resulting from new housing and other development over the Plan period.

We have been in discussion with Chichester District Council regarding their proposed Monitor and Manage Strategy. At present, we do not consider the current strategy to be robust and we seek further information and detail especially on who, when and when monitoring and management will be undertaken. Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas. Any M&M framework must be based on a "worst case scenario" whereby necessary transport mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. The M&M framework must set out that the alternative to mitigation not being delivered is that development does not proceed where that development would give rise to unacceptable road safety risk or severe cumulative impacts on the road network in the absence of that mitigation. The M&M framework must be translated into development management plan policy and policy relating to development allocations.

As we have reiterated throughout our comments, we welcome the opportunity to work with you to address these outstanding matters and we will continue to liaise over submitted Transport Assessment, Travel Plan policy and Monitor and Manage Policy to help to work towards a viable plan.

We hope our comments assist.

We look forward to continuing to participate in future consultations and discussions. Please do continue to consult us as the Plan progresses so that we can remain aware of, and comment as required on, its contents.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Document Element: Responding to the Climate Emergency, 2.30**Respondent:** Kingsbridge Estates Limited & Landlink Estates Limited [8084]**Agent:** Savills (Mr William Price, Planner) [7783]**Summary:**

The Local Plan does not fully take opportunities to align with the government's net zero commitments, as it fails to take opportunities to reduce greenhouse gas emissions through a positive approach to locating functional development within HDAs

Full text:

The Council's declaration of a climate emergency is welcomed, however there is an opportunity to better align this the Council's economic strategy within the Local Plan.

Supporting the growth of the horticultural industry to include functionally linked uses, such as food processing/production and consolidated storage and distribution capabilities within the HDA, would allow for greater food production on site. This in turn would allow for greater home grown food production and export to the rest of the UK. Accordingly, there would be a reduction in food miles as home-grown food consumption would increase. This would lead to a reduction in greenhouse gas emissions.

Refer to Savills SREBR para 4.4.2 – effective storage and distribution hub at Runcton HDA would achieve reduction in food miles by 84000 per annum

Change suggested by respondent:

Reference to 'ancillary' with regard to the HDAs in relevant policies and supporting text should be modified to 'functionally linked' and include explanatory text clarifying that 'functionally linked' uses can include a range of activities including: food-related distribution; food manufacturing linked to the HDAs food preparation; on-site renewable energy to serve on-site activities; and R&D.

5352

Object

Document Element: Responding to the Climate Emergency, 2.30**Respondent:** Landlink Estates Ltd [1764]**Agent:** Jackson Planning Ltd (Mrs Lisa Jackson, Managing Director) [8130]

Summary:

The Council position does not comply with Section 19(1A) of the PCPA 2004, which requires Local Plan policies to be designed to secure that the development and use of land in the LPA's area contribute to the mitigation of, and adaptation to, climate change.

The plan has failed to demonstrate a vision of how to achieve net zero by 2050, or decarbonise power systems by 2035 in line with the Climate Change Act 2008 and ongoing ambitions towards Net Zero.

The 2008 Climate Change Act sets a legally binding target to reduce net greenhouse gas emissions from their 1990 level by 100% by 2050. The plan does not demonstrate how this is achieved and is not legally compliant.

Full text:

See attachments.

Change suggested by respondent:

Withdraw plan and rework to ensure priority given to climate change, especially in relation to land use implications and climate mitigations. Propose an additional strategic overarching policy to deliver Net Zero and secure sustainable development to make the Plan sound. Suggested wording as follows:

Additional Strategic Policy 01 - Delivering Net Zero.

The Council will support growth and change that delivers a more sustainable, low carbon future for Chichester District, reflecting the Government's legal Net Zero targets and the Council's declared climate emergency (July 2019). The ambition is to reduce levels of carbon emissions by X%* at the end of the plan period.

Climate change mitigation is required in all relevant policy areas, including sustainable travel, net zero buildings, energy and water efficiency, renewable energy production and energy storage, and also supporting the circular economy and green infrastructure through the protection of carbon sinks and opportunities for carbon sequestration.

Development and change will be planned for and managed in accordance with the following principles of sustainable development:

1. All development will contribute to achieving net zero by 2050 as follows (demonstrated through an energy calculation):

- No on-site fossil fuel combustion;
- Energy use is minimised, demonstrated through space heating demand of less than 15kWh/m² /year and operational energy use of less than 35kWh/m² /year for dwellings; or demonstrated by using BREEAM Excellent level accreditation, with outstanding level for energy use (Credit Ene01) or equivalent for non-residential development;
- On-site renewable generation is maximised, equivalent to at least the on-site energy demand.
- Where the above criteria cannot be met, due to exceptional circumstances set out in support of the development, the proposal must deliver equivalent carbon reductions through off-site measures;

2. The effective use of land is made for development through optimising reuse of previously developed sites and buildings, therefore reducing the need for greenfield development and retaining embedded carbon where viable;

3. Supporting embedded and free-standing renewable energy development and de-carbonisation of the District as set out in policy NE1 and as defined in the site allocations DPD which will identify the necessary range of suitable sites for renewable energy to meet the legal climate obligations.

*The percentage reduction in carbon emissions to 2039 (end of the plan period) needs to be calculated by CDC from the 1990 baseline. CDC's current Climate Change Action Plan targets stop at 2025.

Document Element: Responding to the Climate Emergency, 2.31

Respondent: Mayday! Action Group (John Garrett) [7163]

Summary:

The Local Plan is inadequate for the needs of the people in the district both at present and in the future because it has been written in advance of the District having a properly formed and agreed Climate Emergency Action Plan. It is inconceivable that such a key document will not shape our Local Plan. It is this Action Plan that is needed first in order to provide the long-term strategic view as to how and what the District will look like in the future; this, in turn, will help form and shape the policies outlined in any prospective, Local Plan. The Plan as proposed is moribund, as a result of "cart before the horse" thinking.

Full text:

Executive Summary

The Local Plan as written lacks ambition and vision, and will be detrimental to the landscape within which the district lies. It is a plan borne out of a need to produce a legal document which will satisfy the regulatory authorities. In terms of Urban Planning it fails "To meet the needs of the present without compromising the ability of future generations to meet their own needs" (NPPF).

The development that will consequentially arise from the deployment of such a made Local Plan is not sustainable. It will adversely affect the Character, Amenity and Safety of the built environment, throughout our district.

In particular, the Local Plan is inadequate for the needs of the people in the district both at present and in the future because –

1. It has been written in advance of the District having a properly formed and agreed Climate Emergency Action Plan. It is inconceivable that such a key document will not shape our Local Plan. It is this Action Plan that is needed first in order to provide the long-term strategic view as to how and what the District will look like in the future; this, in turn, will help form and shape the policies outlined in any prospective, Local Plan. The Plan as proposed is moribund, as a result of “cart before the horse” thinking.
2. The Local Plan as written does not adequately address how infrastructure, transport and services are going to be materially and strategically improved to meet the predicted growth and shift to a significantly ageing population. There is presently insufficient capacity to supply services and to have adequate people and environmentally friendly connectivity, as a direct result of decades of neglect towards investing in infrastructure and services to meet the needs of the District’s population. We are led to believe that developers through increased levies in order to gain permission to build will fulfil this need, but all that this will result in is an uncoordinated, dysfunctional mess completely lacking in any future-proof master planning approach. We contend that this will do nothing for the quality of life of Chichester District residents and it will create a vacuum whereby few if indeed any can be held accountable or indeed found liable for shortcomings in the future.
3. The Local Plan as written does not state how it will go about addressing the need to create affordable homes. The District Council’s record on this matter since the last made plan has been inadequate and now the creation of affordable homes has become urgent as political/economic/social factors drive an ever increasing rate of change within the District.
4. Flood risks assessments used in forming the Plan are out of date (last completed in 2018) and any decision to allocate sites is contrary to Environment Agency policy. Additionally, since March 2021 Natural England established a position in relationship to ‘Hold the Line’ vs. ‘Managed Retreat’ in environmentally sensitive areas, of which the Chichester Harbour AONB is a significant example. CDC have failed to set out an appropriate policy within the proposed Local Plan that addresses this requirement.
5. The A27 needs significant investment in order to yield significant benefits for those travelling through the East-West corridor; this is unfunded. Essential improvements to the A27 are key to the success of any Local Plan particularly as the city’s ambitions are to expand significantly in the next two decades. But any ambitions will fall flat if the A27 is not improved before such plans are implemented.. The A259 is an increasingly dangerous so-called ‘resilient road’ with a significant increase in accidents and fatalities in recent years. In 2011, the BBC named the road as the “most crash prone A road” in the UK. There is nothing in the Local Plan that addresses this issue. There is no capacity within the strategic road network serving our district to accommodate the increase in housing planned, and the Local Plan does not guarantee it.
6. There is insufficient wastewater treatment capacity in the District to support the current houses let alone more. The tankering of wastewater from recent developments that Southern Water has not been able to connect to their network and in recent months the required emergency use of tankers to pump out overflowing sewers within our City/District reflects the gross weakness of short-termism dominated thinking at its worst and is an indictment of how broken our water system is. The provision of wastewater treatment is absolutely critical and essential to the well-being of all our residents and the long-term safety of our built environment. The abdication by those in authority, whether that be nationally, regionally or locally, is causing serious harm to the people to whom those in power owe a duty of care and their lack of urgency in dealing properly with this issue is seriously jeopardizing the environment in which we and all wildlife co-exist.
7. Settlement Boundaries should be left to the determination of Parish Councils to make and nobody else. The proposed policy outlined in the Local Plan to allow development on plots of land adjacent to existing settlement boundaries is ill-conceived and will lead to coalescence which is in contradiction of Policy NE3.
8. All the sites allocated in the Strategic Area Based Policies appear to be in the majority of cases Greenfield Sites. The plan makes little, if any reference to the development of Brownfield sites. In fact, there is not a Policy that relates to this source of land within the Local Plan as proposed. Whilst in the 2021 HELAA Report sites identified as being suitable for development in the District as being Brownfield sites were predicted to yield over 4000 new dwellings. Why would our Local Plan not seek to develop these sites ahead of Greenfield sites?
9. The Local Plan does not define the minimum size that a wildlife corridor should be in width. What does close proximity to a wildlife corridor mean? How can you have a policy (NE 4) that suggests you can have development within a wildlife corridor? These exceptions need to have clear measures and accountability for providing evidence of no adverse impact on the wildlife corridor where a development is proposed. Our view is quite clear. Wildlife and indeed nature in the UK is under serious and in the case of far too many species, potentially terminal threat. Natural England has suggested that a

Wildlife Corridor should not be less than 100metres wide. The proposed Wildlife Corridors agreed to by CDC must be enlarged and fully protected from any development. This is essential and urgent for those Wildlife Corridors which allow wildlife to achieve essential connectivity between the Chichester Harbour AONB and the South Downs National Park.

10. Biodiversity Policy NE5 - This is an absolute nonsense. If biodiversity is going to be harmed there should be no ability to mitigate or for developers to be able to buy their way out of this situation. This mindset is exactly why we are seeing a significant decline in biodiversity in the District which should be a rich in biodiversity area and why the World Economic Forum Report (2023) cites the UK as one of the worst countries in the world for destroying its biodiversity.

11. In many cases as set out in the Policies the strategic requirements lack being SMART in nature – particularly the M Measurable. These need to be explicit and clear: "you get what you measure".

12. 65% of the perimeter of the District of Chichester south of the SDNP is coastal in nature. The remainder being land-facing. Policy NE11 does not sufficiently address the impact of building property in close proximity to the area surrounding the harbour, something acknowledged by the Harbour Conservancy in a published report in 2018 reflecting upon how surrounding the harbour with housing was detrimental to its long-term health. And here we are 5 years on and all of the organizations that CDC are saying that they are working in collaboration with, to remedy the decline in the harbour's condition, are failing to implement the actions necessary in a reasonable timescale. CDC are following when they should be actually taking the lead on the issue. Being followers rather than leaders makes it easy to abdicate responsibility. There must be full and transparent accountability.

13. The very significant space constraints for the plan area must be taken into account. The standard methodology need no longer apply where there are exceptional circumstances and we are certain that our District should be treated as a special case because of the developable land area is severely reduced by the South Downs National Park (SDNP) to the north and the unique marine AONB of Chichester Harbour to the south. A target of 535dpa is way too high. This number should be reduced to reflect the fact that only 30% of the area can be developed and much of that is rural/semi-rural land which provides essential connectivity for wildlife via a number of wildlife corridors running between the SDNP and the AONB. Excessive housebuilding will do irretrievable damage to the environment and lead to a significant deterioration in quality of life for all who reside within the East / West corridor.

14. Many of the sites identified in the Strategic & Area Based Policies could result in Grade 1 ^ 2 farmland being built upon. The UK is not self-sufficient in our food security. It is short-sighted to expect the world to return to what we have come to expect. Our good quality agricultural land should not all be covered with non-environmentally friendly designed homes.

Document Element: Responding to the Climate Emergency, 2.32**Respondent:** CPRE Sussex [6955]**Agent:** CPRE Sussex (Dr Jill Sutcliffe) [6956]**Summary:**

RECEIVED LATE: Agree – this (climate emergency) is the most urgent issue facing us all together with the Biodiversity Emergency (declared by IPBWS, 2019). The ESPACE project European Spatial Planning: Adapting to Climate Events (ESPACE) was a four-year project funded by the European Commission's north-west Europe INTERREG IIIB programme and the ODPM. It produced a Climate Action Plan for the Manhood Peninsula in 2008 and not much action has followed to implement this. Perhaps it needs dusting off and re-visiting and including within the Local Plan?

Full text:

Thank you for the opportunity to comment on the Draft Chichester District Local Plan 2021-39. We would suggest that there has been insufficient public consultation to date. We commented on the draft Local Plan for 2015, on the Preferred Options in 2019 and there have been many changes in Government policy and commitments since then to include Climate Change, Net Zero and commitments made at COP 26 and 27 to include reducing methane emissions etc. With regards to this consultation we recognise the importance of a plan-led system and support Chichester District Council's (CDC) desire to produce a comprehensive Local Plan. CPRE Sussex wishes to contribute to policies concerning landscape, rural areas, communities, environment and wildlife drawing on evidence and local knowledge.

CONTEXT

1. Examining the previous government consultation which closed on March 2nd, ie the Levelling-up and Regeneration Bill including some aspects of the National Planning Policy Framework, NPPF, there are some issues which would impact on this Local Plan and need consideration.

1.1 That consultation included important changes to the way in which the 5 year housing land supply is calculated, and the timetable for making Local Plans. They are of significance to local councils, especially those with Neighbourhood Plans. Some measures will take effect almost immediately through an update to the existing NPPF in Spring 2023. Others will follow later in the year or in 2024. Surely such consultations should be better phased to make plan development more logical and access to consultations easier?

2. Communities: Our group welcomed the overall shift in emphasis towards communities. Mind you, while the word is used 121 times in the Prospectus it does not appear in the draft NPPF! We would expect much more emphasis on the importance of communities in any forthcoming consultations. Earlier and more effective engagement with communities could help to lead to a less confrontational planning system with an emphasis on active participation.

3 Time required – a lot of time is needed to understand and implement such policies and a searchable on-line version would be very helpful; and, consideration also needs to be extended to those people in the community who are not computerised.

4 We take the word "sufficient" with regard to housing numbers to be equivalent to that which is "needed" and the current Standard Method does not establish that figure. Our MP, the Rt Hon Andrew Griffith, Arundel and South Downs, referred to the approach to developing housing numbers as a mutant algorithm.

4.1 Specifically, the changes to housing targets, to make them 'advisory', are welcome. However, we should remind you that the Government continues to insist on using out-of-date projections (2014). The current ONS population estimates are 1 million less people in the population than allowed for in the figures used to so that the reliance on the 2014 figures is completely out of date. The emphasis should always be on using current up to date evidenceand to use those out-of-date figures produces the wrong results and does not conform with the need to use up to date information. In addition, this would require an immediate change to the guidance to insist (as previously) on the most up-to-date projections.

4.2 We also recommended a review of the Standard Method, which does not make housing affordable and simply supports developers to build market homes where they want to. The graph above illustrates the gap between projection

and current population figure provided by the Community Planning Association.

4.3 Local Planning Authorities, LPAs, were also given an opportunity to put forward alternatives to the Standard Method and to name the specific constraints faced. Our contribution to that consultation referred to the:

- Reduction of land available to the CDC given the creation of the South Downs National Park, SDNP
- English Channel
- SDNP itself
- Range of internationally important designated sites
- Rare species and habitats
- River flood plains
- Water neutrality in part of the District
- Nutrient neutrality in the Solent
- Sea Level Rise
- Inadequate infrastructure – roads/lanes and local transport; sewage treatment; community facilities such as medical centres, shops; and

4.4 There have already been large housing commitments, loosely put on “flat green land” around Chichester and now CDC is eyeing the “empty” north of the District with allocations being made for Loxwood and an increase in the number of houses being sought in Wisborough Green. Such land supports wildlife which often may not be under recorded as it is private land. Areas in both of those Parishes has been “cleared” of biological interest but the BNG established a baseline of 2020 and google maps can show the state of the environment at that date. The commitment to safeguarding biodiversity needs to be pursued carefully and consistently.

COMMENTS ON THE CDC LOCAL PLAN 2021-2039 REG19 proposed submission comments: the comments cite the para and/or Chapter number

5. At this phase in the local plan process the scope of the invited representations is limited to whether the Plan that has been produced is:

- a) legally compliant (i.e., whether it meets the legal requirements); and
- b) sound (i.e., whether it has been positively prepared, is justified, is effective and is consistent with national policy) and I would ADD whether it is forward thinking enough as it is planned to last until 2039.

5.1 The plan area is split in to three areas, each with different characteristics, landscapes and access to services:

- a) • The East-West Corridor, running across the width of the plan area, is varied in landscape with the inclusion of both larger settlements (including the city) and rural villages. It has the best transport connections and access to facilities in the plan area with the A27 and railway running through-out.
- b) The Manhood Peninsula* MP, located in the south of the plan area, jutting out into the English Channel, is rich in coastal landscapes with the majority of the area covered by environmental designations. It also includes some of the plan area’s larger settlements which rely heavily on limited road accessibility to the north towards Chichester city.
- c) The North of the Plan Area is primarily rural in character with diverse landscapes, rich cultural and heritage assets and a number of dispersed settlements, some of which are relatively isolated and served by narrow lanes with limited public transport

*NB The population on the MP is dispersed in a rural landscape and equals that of Chichester. The description for the North section could just as easily have been used for the MP.

Chapter 2 and Local Plan Vision

These Objectives will need to underlie every aspect of the document.

5.2 P 23: Para 2.25 Replace the word “site” by “area” and insert forming part of a diverse set of wetlands (Ditches, Rifes, Ponds, Saline lagoons and a small section of Canal). Info: The Medmerry site is no longer the largest eg having been overtaken in area by the Steart Marshes, Somerset.

5.3 Include mention of rare habitats and species and the role of Selsey Bill in facilitating arrivals and departures of bats, butterflies and birds. That’s its USP,

6.1 P 25 Local Plan Vision and Strategic Objectives p 30 Objective 1: CLIMATE CHANGE

This section does not reflect the urgency of the issue nor the vulnerability of parts of Sussex. Many scientists are pointing to Sea Level Rise, SLR, speeding up and some of them cite a 10 year window in which to act ie so that before this Local Plan has run its course, areas on the coast including the coastal plain and the Manhood Peninsula could well be adversely affected. This would have an immediate impact on housing, facilities and transport links and could lead to the local population having to move.

6.2 Actions related to this particular objective need to be included in all the following objectives. The south of the District is very vulnerable and the rest of the District will experience very intensive rainfall, water shortages (NE/EA 2013 report) and hot summers.

6.2 Policies need to include not building on areas below 5m high Water Level. The CDC Climate Change officer should host meetings to consider potential plans for putting houses on stilts, moving people to land safe from flooding and re-directing roads, cycle ways and footpaths to facilitate future access.

6.3 Evidence: See the Surging Seas and NASA websites for prediction of Sea Level Rise. Need to include reference to the UK Climate Resilience Programme jointly led by UK Research and Innovation, UKRI, and the Met Office which was set up to fund research “to help understand how to quantify the risks from climate change and build climate resilience for the UK, This research should produce “usable outputs” to “directly support decision-making” by government, local authorities, communities and other stakeholders

6.3.1 Every area of UK society will feel the effects of climate change and, as global emissions continue to rise, pre-paring for life in a warmer world is crucial. Findings were discussed last week by the UK ranging from assessments of elderly people overheating in care homes through to building community-run water storage.

6.3.2 Every area of UK society will feel the effects of climate change and, as global emissions continue to rise, preparing for life in a warmer world is crucial.

6.2.2.i In early March, UKTI and Met office researchers involved with the programme gathered to present and discuss their findings. They ranged from assessments of elderly people overheating in care homes through to building community-run water storage. These items and website need to be referenced in the evidence section.

6.3.3 The key points are intended to help businesses and policymakers adapt to climate change.

6.3.4 Many focused on "climate services" defined as involving the "production, translation, transfer and use of climate knowledge and information in climate-informed decision making".

6.3.5 Climate services could be an important tool for adaptation because they can provide people with the relevant information to prepare for climate change.

6.3.6 Representatives from the Met Office laid out their recommendations for a UK National Framework for Climate Services. And said they wanted to provide a "driving force" for the nation's climate services community and help ensure that "adaptation action actually does get done".

6.4.7 UK 'SSPs'

"Shared socioeconomic pathways" (SSPs) are tools used by researchers to explore how society will change in the future. This can help them to answer important questions about climate change. As there were no UK-specific versions of SSPs available to complement the UKCP18 climate projections

Ref: The importance of Adaptive Resilience Solutions in the Face of Climate Threats.

Recommendation: This report needs to be drawn on and form part of the evidence base.

7.1 Objective 2: NATURAL ENVIRONMENT Work with site managers of the Designated Sites and NGOs in the wider environment. This objective is vitally important and welcome and its importance needs to be reflected in all parts of the plan to include Wildlife Corridors, Biodiversity Net Gain and the Nature Recovery Network.

Sir David Attenborough

"It may sound frightening, but the scientific evidence is that if we have not taken dramatic action within the next decade, we could face irreversible damage to the natural world and the collapse of our societies."

7.1.1 The emergency concerning Biodiversity also needs to be communicated.

Para 2.32: Agree – this (climate emergency) is the most urgent issue facing us all together with the Biodiversity Emergency (declared by IPBWS, 2019).

7.1.2 Info: The ESPACE project European Spatial Planning: Adapting to Climate Events (ESPACE) was a four-year project funded by the European Commission's north-west Europe INTERREG IIIB programme and the ODPM. It produced a Climate Action Plan for the Manhood Peninsula in 2008 and not much action has followed to implement this. Perhaps it needs dusting off and re-visiting and including within the Local Plan?

7.2 Add policy:

PROPOSED Ecosystem Services Policy

7.2.1 CPRE Sussex considers that the Chichester Local Plan 2021 - 2039 should include a policy specifically for Ecosystem Services for the following reasons:

1. NPPF para 174. Planning policies and decisions should contribute to and enhance the natural and local environment by:

- a) protecting and enhancing valued landscapes, sites of biodiversity or geological value and soils (in a manner commensurate with their statutory status or identified quality in the development plan);
- b) recognising the intrinsic character and beauty of the countryside, and the wider benefits from natural capital and ecosystem services – including the economic and other benefits of the best and most versatile agricultural land, and of trees and woodland

7.2.2 'Natural capital refers to the elements of nature that produce value to people –whether directly or indirectly. Our natural capital 'assets' are the stocks of renewable and non-renewable natural capital such as our soils, freshwater, farmland, forests, atmosphere, oceans, ecological processes and the natural processes that underpin them. The flows of ecosystem services and benefits that our natural capital provides can be very obvious such as food, fuel, clean air, clean water, and opportunities for recreation. Others are much less visible, such as climate regulation, flood defences provided by natural vegetation, the billions of tonnes of carbon stored by peatlands and other habitats and the pollination of crops by insects'. (Sussex Local Nature Partnership <http://sussexlnp.org.uk/natural-capital/>)

7.3 Accordingly, we propose an Ecosystem Services policy (an adaptation of South Downs Park Authority's Core Policy SD2: Ecosystem Services'), be added as follows:

1. Development proposals will be permitted where they have an overall positive impact on the ability of the natural environment to contribute goods and services. This will be achieved by means of high-quality design, and by delivering all opportunities to:

- a) Sustainably manage land and water environments;
- b) Protect and provide more, better and joined up natural habitats;
- c) Conserve water resources and improve water quality;
- d) Manage and mitigate the risk of flooding;
- e) Improve the District's resilience to, and mitigation of, climate change;
- f) Increase the ability to store carbon through the retention of existing woodland, new planting or other means;
- g) Conserve and enhance soils, use soils sustainably and protect the best and most versatile agricultural land;
- h) Support the sustainable production and use of food, forestry and raw materials;
- i) Reduce levels of pollution;
- j) Improve opportunities for peoples' health and wellbeing; and
- k) Provide opportunities for access to the natural and cultural resources which contribute to the District's special qualities.

2. The Environment Act 2021 will require the production of a Nature Recovery Network and more locally a Local Nature Recovery Strategy. The Strategic Wildlife Corridors in Chichester District will be integral components of that local network. The importance of local networks in Nature Recovery Networks is highlighted in NPPG

7.3.4 Policy NE 4 Strategic Wildlife Corridors

CPRE Sussex supports this policy, Strategic Wildlife Corridors as part of the Local Plan process, conform with section 179 of the NPPF 2021 which is well-evidenced. However, CPRE Sussex wishes to question the size of the corridors ie the width/

Information provided in the 2021 consultation appears to demonstrate that these areas have been downsized such as those put alongside the East of the City Corridor, it appears that there has been a narrowing of the Strategic Wildlife Corridor around the location of the proposed allocations of A8, Chapter 10: Strategic and Area Based Allocations Land East of Chichester and potential A7, Land at Shopwyke. The Corridor to the East of Chichester was proposed for connectivity and functional links to the area for the rare and European Protected Species of Barbastelle Bats. It is shown on CDC technical consultation documents as a bat network

This does not conform with the Natural Environment & Rural Communities Act, NERC, 2006 and Section 40 subsection 3a as it would destroy a habitat over which the Barbastelle Bat has been recorded, a Section 41 species. And it is the DUTY of the Local Authority to safeguard these species. There should be NO recreational use in the buffer zones.

8. Green Infrastructure: p 160 and Policy P 14 d Submission (Regulation 19)

8.1 Local Green Space

6.82. The NPPF includes the concept of Local Green Space designation. This is a discretionary designation and sites may be identified and included in either local or neighbourhood plans. The designation should only be used as defined by the criteria in the NPPF where the land is not extensive, is local in character and reasonably close to the community; and, where it is demonstrably special, for example because of its beauty, historic significance, recreational value (including as a playing field), tranquillity or richness of its wildlife. Any areas which fall outside a neighbourhood plan area and where such designation is sought, will be considered by the subsequent Site Allocations DPD that will cover the remainder of the plan area. Policies for managing development within a Local Green Space should be consistent with those for Green Belts.

8.2 Parishes should be encouraged to look into such areas to be included in Neighbourhood Plans.

9. Renewable Energy: General policy

9.1 Housing p 103:

CPRE Sussex considers that the Chichester Local Plan should include a policy requiring all new-build homes to be equipped and sold with solar PV panels, roof or wall mounted.

9.2 Although the Chichester District Local Plan, at Para 6.15, states that 'Design proposals should respond to the opportunities a site presents to make best use of solar gain where this can be achieved without compromising good urban design or creating issues of overheating', there is no requirement in the any of the plan's policies for new-build homes to be equipped and sold with roof or wall mounted solar PV.

9.3 Note that West Sussex County Council has advised in their Solar Together initiative that "By generating electricity from the sun, you could reduce your annual carbon emissions by approximately one tonne each year and help West Sussex to become carbon neutral".

Note, too: <https://solartogether.co.uk/westsussex/blog/best-ways-to-increase-solar-self-consumption>

9.4 "According to the University of Oxford findings, UK households with solar PV self-consume 45% of their own solar generation on average and reduce annual electricity demand from the grid by 24%. With additional adjustments, this reduction of 24% can be increased to over 35%".

9.5 New-build homes in Chichester District should therefore be equipped with solar P V panels. We question the statement in Para 6.15 that 'solar gain' could create 'issues of overheating'. Surely this can be prevented by good design?

9.6 There are additional opportunities for solar installations on school rooves (Brighton Sustainable Energy Co-op has many examples), car parks, industrial buildings et al.

10.0 Renewable Energy: Specific location Wisborough Green 75 additional houses. Unacceptable – see CDC Capacity Study sub sections 166+167. Limitations – Ancient woodland; wildlife – rare habitats and species, river floodplain; Water neutrality; HRA with reference to the Mens Ancient Woodland and presence of European Protected Species, Barbastelle Bats flight paths and foraging across the parish. See Natural England report Site Improvement Report and reports by Frank Greenway, 2008 et al.

10.1 See Page 84: In the north of the plan area, properties within Southern Water's Sussex North Water Resource Zone are supplied with water from a groundwater abstraction at Pulborough which is currently subject to environmental investigations to ensure there is no adverse impact on environmentally designated sites in the Arun Valley. This may impact on the available supply and alternative sources may need to be considered by Southern Water. Natural England published a position statement in September 2021 requiring developments within the Sussex North Supply Zone to be water neutral – this means that the use of water in the supply area after the development is the same or lower than before. A Water Neutrality Strategy had been prepared jointly with other affected authorities. Natural England's Position Statement sets out an interim approach based on minimising water use in new builds and offsetting the water that is used

10.2 Water consumption target. It is noted that both Ports-mouth Water and Southern Water have targets to reduce water consumption to 100 litres per person per day (lppd) by 2040, a lower figure than the current most stringent Building Regulation target of 110 lppd and not that level which could be required for water neutrality.

10.3 The Local Plan is weak on impacts especially from the largest concentration of caravans at Selsey on Medmerry.

10.4 There is no wildlife corridor running east to west along the Manhood Peninsula ie Pagham to East Head and this undermines the importance of a positive barrier zone to protect the habitat. CDC have used the corridors for this barrier purpose possibly more than as a pathway throughout other parts of the plan.

10.5 Nutrient neutrality exclusion of a large area of the Peninsula from the protection zone is illogical as the same conditions exhibited in Chichester harbour (in the zone) exist at Pagham.

10.6 There is a 'tool' - "nutrient budget calculator March, 2022 version" – which gives an "n" factor for instance to discharges from WWTW. There is no direct mention of its use at Chichester harbour and as the data on Pagham Harbour

has yet to be made public, the role of Sidlesham WWTW has not been referred to. The “N” factor would probably be more restrictive on outflows from WWTW than the total discharge permits – and shows a lack of coordinated approach between the Environment Agency and Natural England.

10.7 There are two reports due to be published this month - the West Sussex Coast and Gt Brighton Board and Southern Water overall plan for drainage and waste water-the timing of the LP – is thus unable to take these two influential inputs into account and may have implications for the ‘Soundness’ of the plan as it moves forward.

10.8 No mention is included of Sidlesham WSTW which is operating at and beyond capacity resulting in new housing on the Manhood Peninsula dealing with waste water in gardens, in houses etc.

Pages 87 and 88: Paras 4.112 and 4.113 are contradictory.

Appendix F Monitoring Framework

Early in 2020 attended a Public Inquiry representing the Manhood Wildlife and Heritage Group and presented evidence about an application at Easton Farm where the implementation of an application had not been followed up, which had expanded like Topsy and which potentially could damage the Medmerry coastal realignment site with its runoff. CDC had not been on watch possibly through lack of staff and/or a lack of enforcement staff. The site had grown without permission. This section requires a firm commitment to monitoring and reporting back, not just a paper one.

Thank you for your attention.

Document Element: Responding to the Climate Emergency, 2.35**Respondent:** Mr Allen McDonald [7965]**Summary:**

Chichester DC has declared a climate emergency. However, the Sustainability Assessment (clause 9.6.8) states '...This largely reflects the [CDC] decision not to set requirements on new development, in respect of built environment decarbonisation, that go beyond the requirement of Building Regulations (albeit it is recognised that there are quite clear arguments in support of this approach, particularly in the Chichester context, given competing funding priorities).' The CDC approach that relies solely on proposed revisions to the Building Regulations does not support the intent of the Climate Emergency declaration, and the leadership role from CDC that this declaration requires.

Full text:

Chichester DC has declared a climate emergency. However, the Sustainability Assessment (clause 9.6.8) states '...This largely reflects the [CDC] decision not to set requirements on new development, in respect of built environment decarbonisation, that go beyond the requirement of Building Regulations (albeit it is recognised that there are quite clear arguments in support of this approach, particularly in the Chichester context, given competing funding priorities).' The CDC approach that relies solely on proposed revisions to the Building Regulations does not support the intent of the Climate Emergency declaration, and the leadership role from CDC that this declaration requires.

Change suggested by respondent:

CDC should impose sustainability requirements that are over and above those in the Building Requirements in the design and construction of new buildings. This includes enhanced insulation, water saving measures and the use of solar panels on all buildings. The latter would take advantage of CDC is in an area with some of the highest hours of sunshine in England.

Document Element: Local Plan Vision, 2.37**Respondent:** National Highways (Mr Marius Pieters, Spatial Planning Manager) [8127]**Summary:**

■ [National Highways letter dated 24/07/23 confirmed representation should be categorised as Comment - Support.] We support the vision (para 2.37) that by 2039, the Chichester plan area will be a place where people can: - get about easily, safely, and conveniently with less reliance on private cars –making use of the rail and bus network, and with more opportunities for active travel including walking and cycling.

Full text:

■ We have reviewed the publicly available Local Plan documents and provided comments in the attached letter, in relation to the transport implications of the plan for the safety and operation of the SRN.

Our comments include issues to resolve, comments, requests for further information and recommendations. A brief summary of our main comments are:

- the reliance on the delivery of the A27 Chichester bypass improvements project.
- the requirements for new, additional, and adapted processes and assessments, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments.
- collaborative working between agencies in combination with a robust monitor and manage policy.

We hope our comments assist.

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders. We look forward to continuing to participate in future consultations and discussions.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Background

National Highways has been appointed by the Secretary of State for Transport as strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the strategic road network (SRN).

National Highways is responsible for operating, maintaining, and improving the Strategic Road Network (SRN) i.e., the Trunk Road and Motorway Network in England, as laid down in Department for Transport (DfT) Circular 01/2022 (Strategic Road Network and the delivery of sustainable development).

The SRN is a critical national asset and as such we work to ensure that it operates and is managed in the public interest, both in respect of current activities and needs as well as in providing effective stewardship of its long-term operation and integrity.

Our responses to Local Plan consultations are guided by relevant policy and guidance including the National Planning Policy Framework (2021) (NPPF):

- Transport issues should be considered from the earliest stages of plan-making and development proposals so that the potential impact of development on transport networks can be addressed (para 104).

- The planning system should actively manage patterns of growth such that significant development is focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. (para 105).
- Planning policies should be prepared with the active involvement of highways authorities and other transport infrastructure providers so that strategies and investments for supporting sustainable transport and development patterns are aligned. (para 106).
- In terms of identifying the necessity of transport infrastructure, NPPF confirms that development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe. (para 111).
- Planning policies and decisions should support development that makes efficient use of land, taking into account the availability and capacity of infrastructure and services – both existing and proposed – as well as their potential for further improvement and the scope to promote sustainable travel modes that limit future car use. (para 124).

In relation to the tests of soundness set out at paragraph 35 of the NPPF, in the context of transport, these are interpreted as meaning:

- a) Positively prepared - has the transport strategy been prepared with the active involvement of the highway authorities, other transport infrastructure providers and operators and neighbouring councils?
- b) Justified – Is the transport strategy based on a robust evidence base prepared with the agreement in partnership, or with the support of the highway authorities?
- c) Effective – Does the transport strategy and policy satisfy the transport needs of the plan and is it deliverable at a pace which provides for and accommodates the proposed progress and implementation of the plan?
- d) Consistent with national policy – Does the transport strategy support the economic, social, and environmental objectives of the Plan and the NPPF/NPPG?

We will be concerned with proposals that have the potential to impact on the safe and efficient operation of the SRN; in this case, the A27 trunk road (Chichester Bypass and its junctions) which is the main access route in the Chichester area. We have particular interest in any allocation, policy or proposals which could have implications for the A27 and the wider SRN network. We are interested as to whether there would be any adverse road safety or operational implications for the SRN. The latter would include a material increase in queueing or delay or reduction in journey time reliability during the construction or operation of the development set out in the plan.

National Highways is a key delivery partner for sustainable development promoted through the plan-led system, and as a statutory consultee we have a duty to cooperate with local authorities to support the preparation and implementation of development plan documents.

In accordance with national planning and transport policy and our operating licence, we are entirely neutral on the principle of development as it is for the local planning authority to determine whether development should be allocated or permitted; albeit it must comply with national policy on locating development in locations that are or can be made sustainable. Therefore, while always seeking early and fulsome engagement with local plans and/or developers, we will simply be assessing the transport and related implications of plans or proposals and agreeing any necessary transport improvements and relevant development management policy.

In progressing Local Plans, we will seek to agree the following:

- Assessment tools and methodology
- Baseline Assessment i.e., to demonstrate that the assessment tool accurately reflects current transport conditions
- Comparator case assessment i.e., to forecast the transport conditions that would occur in the absence of the plan
- Forecast modelling i.e., to forecast the transport conditions that would arise with the plan in place, this will include an assessment at the end of the Plan period; and, if required, at full build out if that occurs after the end of the Plan period
- Outputs and outcomes of modelling, demonstrating, as appropriate, what transport infrastructure is necessary to support the plan o It should be noted that a suite of transport modelling tools may be required. This includes strategic modelling covering an area at least one major junction beyond the district boundary, localised network modelling where several links/junctions are close together and/or individual junction modelling
 - o A DMRB (Design Manual for Roads and Bridges) compliancy assessment may also be required for certain highway features, such as Merge/Diverge assessment at Grade separated junctions, link capacity assessments, and others.
- The design of any necessary transport infrastructure, to an extent suitable for establishing deliverability during the plan period at the time that it becomes necessary for the purpose of ensuring that unacceptable road safety impacts or severe operational impacts do not arise as a result of development. This may be to at least General Arrangement design stage or preliminary design stage. Whichever degree of detail is agreed, the products must be in full compliance with the DMRB.
- Industry standard transport intervention costings.
- The delivery/funding mechanisms for necessary transport interventions. It should not be assumed that National Highways will have any responsibility to identify or deliver necessary transport interventions.

• If considered appropriate, a “Monitor & Manage” (M&M) framework, aimed at managing the pace of development in line with the pace of funding and delivery of necessary highway interventions in a manner which responds to the realworld impacts of development may be agreed for inclusion in the plan subject to the adequacy of risk control measures included therein. This can include the move from a ‘predict & provide’ style of delivery to ‘a vision & validate’ style. o Any M&M framework must be based on a “worst case scenario” whereby necessary mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. It must be translated into development management plan policy and policy relating to development allocations.

Further detail on the above can be provided by National Highways.

While ideally all the above should be agreed prior to the Submission of the Local Plan for examination, we recognise that this is not always possible. However, all parties should work towards all matters being agreed and reflected in a Statement of Common Ground (SoCG) by the start of the Local Plan Examination at the latest. Ideally the SoCG between the Council and National Highways would be prepared well in advance of plan submission in order to guide resource input and to track progress towards final agreement on all relevant matters starting from the earliest plan iterations until the final version is agreed.

It is acknowledged that Government policy places much emphasis on housing delivery as a means for ensuring economic growth and addressing the current national shortage of housing. The NPPF is very clear that: “Strategic policy-making authorities should establish a housing requirement figure for their whole area, which shows the extent to which their identified housing need (and any needs that cannot be met within neighbouring areas) can be met over the plan period.”

However, new DfT C1/22 and the NPPF are equally clear that any development, including housing delivery, must be tempered by the requirement to ensure that the associated transport demand can be accommodated without unacceptable impacts on the safety of the SRN or severe impacts on the operation of the SRN including reliability and congestion. Therefore, as necessary and appropriate, any plan and/or development must be accompanied by suitable mitigation in the right places at the right time, that is to the required design standards and is deliverable in terms of land availability, constructability and funding.

We would also draw your attention to the then Highways England document ‘The Strategic Road Network, Planning for the Future: A guide to working with National Highways on planning matters’ (September 2015). This document sets out how National Highways intends to work with local planning authorities and developers to support the preparation of sound documents which enable the delivery of sustainable development. https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_t_data/file/461023/N150227_-_Highways_England_Planning_Document_FINAL-lo.pdf

Responses to Local Plan consultations are also guided by National Planning Policy Framework (NPPF) revised on 20 July 2021 which sets out the government’s planning policies for England and how these are expected to be applied.

Updated Circular (01/2022)

It should be noted that since the start of the Local Plan consultation process, on the 23 December 2022, the Department for Transport released a new circular on the ‘Strategic road network and the delivery of sustainable development’ (Circular 01/2022), which replaces all of the policies in Circular 02/2013 of the same name. These representations take account of the new circular and the requirements in terms of the Local Plan evidence base and process.

We request that the Local Plan is prepared in line with all aspects of the new circular. Particularly, the principles of sustainable development (paragraphs 11 to 17), new connections and capacity enhancements (paragraphs 18 to 25), and engagement with plan-making (paragraphs 26 to 38).

Regulation 18 submission

In our Regulation 18 submission we noted several matters including:

- The need to mitigate the adverse impacts of strategic development traffic to the A27 Chichester Bypass and its junctions at Portfield Roundabout, Bognor Road Roundabout, Whyke Roundabout, Stockbridge Roundabout and Fishbourne Roundabout and Oving junction.
- The need to identify a mechanism to calculate contributions towards the delivery of the previously agreed Local Plan A27 improvements
- The need to confirm the number of dwellings needed within the plan period
- The need to establish National Highways acceptance of the traffic model reference and future case scenarios
- The need to confirm costs, viability, and funding associated with mitigating the safety and congestion impacts of the development included within the plan.

Local Plan context

This Local Plan (Chichester Local Plan 2021 – 2039), prepared by the Local Planning Authority (LPA) Chichester District Council, sets out the vision for future development in the district and will be used to help decide on planning applications and other planning related decisions including shaping infrastructure investments.

The draft sets out how the district should be developed over the next 18-years to 2039 including for the full Plan period (1 April 2021 to 31 March 2039) the total supply of

- 10,359 dwellings
- 114,652 net additional sqm new floorspace

Minus the completions this is equivalent to around 530 dwellings and 6,150 sqm of floorspace a year.

National Highways Representations

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders.

We have undertaken a review of the Chichester Local Plan 2021-2039 proposed submission version and accompanying evidence documents, our comments are set out in the tables below (following pages). [see table within attachment]

Summary

We have reviewed the publicly available Local Plan documents and provided comments above in relation to the transport implications of the plan for the safety and operation of the SRN. We understand that other technical information is available, but this was not presented as part of this consultation.

Chichester, and the A27, are already heavily congested, infrastructure in the existing Local Plan remains undelivered and the growth set out in the new Plan will further increase travel demand.

As presented, satisfying the transport needs of the plan is clearly reliant on the delivery of the A27 Chichester bypass improvements project. The A27 Chichester bypass improvements project is one of 32 pipeline schemes being considered for possible inclusion in National Highways third Road Investment Strategy (RIS3) covering 1 April 2025 to 31 March 2030.

On 9 March 2023 the UK Transport Secretary ensured record funding would be invested in the country's transport network, sustainably driving growth across the country while managing the pressures of inflation. The announcement cited the A27 Arundel Bypass as being deferred from RIS2 to RIS 3 (covering 2025-2030). The transport secretary also identified a number of challenges to the delivery of the road investment strategy and cited the benefit of allowing extra time to ensure schemes are better planned and efficient schemes can be deployed more effectively.

At present, there is no commitment by DfT to carry out the A27 Chichester bypass improvements project. Until the A27 Chichester bypass improvements project is published in the RIS3, consented and a decision to invest is made it cannot be assumed to be a committed project.

We note that the Plan does not address any uncertainty of delivery of the A27 Chichester bypass improvements project and we strongly recommend that there is either no reliance placed on RIS3 to realise capacity for growth in the Plan or that contingency measures are included to cover the eventuality that RIS3 funding is not forthcoming within the plan period. It is not clear that the potential impact of development on transport networks can be addressed in the absence of the A27 Chichester bypass improvements project.

Achieving net zero, reducing emissions reduction, acting on climate, and supporting thousands of new homes and new employment developments will be problematic with existing processes. New, additional, and adapted processes and assessments will likely be required, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments. We acknowledge that change is complex, expensive, and time-consuming, especially for smaller district level Councils. But the hard work will deliver benefits for the Council and residents in the longer-term.

National Highways seeks to continue working with the Council and WSCC to progress coordinated and deliverable packages of interim mitigation measures and alternative transport solutions while a long-term strategic solution is considered by government. This must however be in combination with a robust monitor and manage policy that appropriately manages the risk of unacceptable road impacts resulting from new housing and other development over the Plan period.

We have been in discussion with Chichester District Council regarding their proposed Monitor and Manage Strategy. At present, we do not consider the current strategy to be robust and we seek further information and detail especially on who, when and when monitoring and management will be undertaken. Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas. Any M&M framework must be based on a "worst case scenario" whereby necessary transport mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. The M&M framework must set out that the alternative to mitigation not being delivered is that development does not proceed where that development would give rise to unacceptable road safety risk or severe cumulative impacts on the road network in the absence of that mitigation. The M&M framework must be translated into development management plan policy and policy relating to development allocations.

As we have reiterated throughout our comments, we welcome the opportunity to work with you to address these outstanding matters and we will continue to liaise over submitted Transport Assessment, Travel Plan policy and Monitor and Manage Policy to help to work towards a viable plan.

We hope our comments assist.

We look forward to continuing to participate in future consultations and discussions. Please do continue to consult us as the Plan progresses so that we can remain aware of, and comment as required on, its contents.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Support

Document Element: The Vision is that by 2039,**Respondent:** Church Commissioners for England [1858]**Agent:** Lichfields (Tara Johnston, Planner) [7506]**Summary:**

The Local Plan Vision details a positive approach to supporting sustainable development in the context of the climate emergency. CCE welcomes the Vision for Chichester, particularly the importance placed on the delivery of new homes in 'Objective 3' and the delivery of new infrastructure to support the new development in 'Objective 7'.

Full text:

We write in response to the above consultation on behalf of our client, the Church Commissioners for England (CCE).

CCE owns a large amount of land in the area largely to the south, west and east of Chichester.

We welcome the opportunity to further engage with the Local Plan process. Whilst we support some aspects of the Local Plan, we consider that some changes are likely to be necessary to ensure that the Plan can be found sound.

By way of background, CCE submitted several sites for consideration as part of the Housing Economic Land Availability Assessment (HELAA) in 2021. These sites were previously promoted as part of the Preferred Approach Local Plan Regulation 18 Consultation in 2019.

As part of these representations, we take the opportunity to re-promote a number of CCE's sites, which could assist the Council in delivering much needed housing for the district. CCE has updated its technical work and provide Vision Documents in relation to its landholdings in Southbourne, Oving, and Hunston Parishes to demonstrate how additional housing can be delivered. These Vision Documents are enclosed.

We consider this and other aspects of the emerging Local Plan below.

Chapter 2: Vision & Strategic Objectives

The Local Plan Vision details a positive approach to supporting sustainable development in the context of the climate emergency. CCE welcomes the Vision for Chichester, particularly the importance placed on the delivery of new homes in 'Objective 3' and the delivery of new infrastructure to support the new development in 'Objective 7'.

Chapter 3: Spatial Strategy and Settlement Hierarchy

The Spatial Strategy builds on the previous Local Plan by focussing growth on Chichester city as the main sub-regional centre. Outside Chichester city and its closest settlements, development will focus on the two settlement hubs within the east-west corridor at Tangmere and Southbourne. This approach is supported by CCE.

Policy S1 Spatial Development Strategy

Draft Policy S1 (Spatial Development Strategy) identifies the broad approach to providing sustainable development in the plan area, which includes ensuring that new residential development is distributed in line with the settlement hierarchy, with a greater proportion of development in the larger and more sustainable settlements. We support this strategy, with particular support for development at the settlement hubs of Southbourne (Policy A13) and Tangmere (Policy A14). We also support that provision is made for extant Site Allocations and the Tangmere strategic site remains allocated under draft Policy A14.

Policy A14 continues to allocate Land West of Tangmere for 1,300 dwellings. CCE questions the Council's decision to not amend the existing settlement boundary of Tangmere to include the land subject to the allocation. Without amending the settlement boundary, the future growth of Tangmere may be hindered. As such, the settlement boundary of Tangmere should be amended to include the allocated site to ensure that the plan is justified.

Draft Policy S1 also refers to development in service villages such as Bosham, Hambrook and Loxwood. Hunston is excluded from the Spatial Strategy but is identified as a Service Village within the Settlement Hierarchy in draft Policy SP2 (Settlement Hierarchy). The draft Local Plan suggests that the allocation of homes in Hunston has been removed as a result of growth in the Manhood Peninsula. CCE acknowledges that the overall housing numbers across the district have been reduced as a result of local constraints but reiterate that their landholding in Hunston remains a suitable site for housing should the Council need to identify more land for housing. This is discussed further below.

Policy S2 Settlement Hierarchy

As stated in paragraph 3.31 of the draft local plan, 'The NPPF encourages housing delivery where it will enhance or maintain the vitality of rural communities'. Paragraph 79 of the NPPF (2021) states that 'To promote sustainable development in rural areas, housing should be located where it will enhance or maintain the vitality of rural communities. Planning policies should identify opportunities for villages to grow and thrive, especially where this will support local services. Where there are groups of smaller settlements, development in one village may support services in a village nearby'.

CCE owns substantial land holdings in South Mundham, which is in close proximity to North Mundham/Runcton which is defined as a Service Village. As such, whilst South Mundham does not contain any services, development in the hamlet would enable sustainable growth to support facilities in North Mundham and Runcton. To ensure that the draft plan is consistent with national policy, South Mundham should be considered as part of North Mundham as a Service Village when considering the future pairing/grouping of some settlements where the facilities and services could be shared to capitalise on the close connections some settlements have.

Development outside the settlements listed in the hierarchy in SP2 is restricted to proposals which require a countryside location or meet an essential local rural local need or supports rural diversification in accordance with Policy NE10. To this end, CCE has smaller land holdings in Tangmere, Oving, South Mundham, Birdham, Chidham and Sidlesham, which may be suitable for conversion for residential use or via windfall housing. Location plans for each of the sites can be found in Appendices 1-8.

Chapter 4: Climate Change and the Natural Environment

Policy NE4 Strategic Wildlife Corridors

The East of City strategic wildlife corridor has been relocated to the eastern side of proposed Site Allocation A8 (Land to the East of Chichester). The relocation of this wildlife corridor follows additional evidence that shows that the commuting route for Barbastelle Bats is along Drayton Lane.

CCE owns land to the east of Drayton Lane (immediately adjacent to the wildlife corridor and to the east of draft allocation A8) and surrounding the village of Oving. Its land has been identified in the HELAA (2021) as being developable, including site HOV0017 (Drayton Lane). The land east of Drayton Lane is sustainably located being close to Chichester and its amenities. The site provides an opportunity to sensitively and sustainably provide additional homes for the District. In accordance with Draft Policy NE4, the proposals for the Land East of Drayton Lane will not have an adverse impact on the integrity and function of the wildlife corridor and will not undermine the connectivity and ecological value of the corridor. This Vision Document will be shared under separate cover.

The eastern edge of the relocated wildlife corridor encroaches into CCE land. Any proposal on this land would be required to take the statutory protection for bats and other protected species into consideration and managed as part of a sensitive masterplan for development and on this basis, it is considered unnecessary to extend the wildlife corridor to encroach into the CCE site.

It is also considered that the detail of policy NE4 goes beyond the purpose of the policy, which should be to safeguard wildlife rich habitats and wider ecological networks. The policy is clear that development should only be permitted where it would not create an adverse effect upon the ecological value, function, integrity and connectivity of the corridors. It does not resist development in principle. This therefore makes redundant policy text 1, which seeks to introduce a sequential test for preferable sites outside of a wildlife corridor. It is considered that this test conflicts with the underlying purpose of the policy, which is to safeguard wildlife corridors from harmful impacts that cannot be mitigated, and should therefore be deleted.

Policy NE7 Development and Disturbance of Birds

CCE is broadly supportive of Policy NE7. However, they would like to note that the situation regarding the national guidance on nutrient neutrality is still evolving and therefore, this policy is only relevant to current legislation. Policy NE7 may therefore not be relevant throughout the entirety of the plan period. As such, CCE considers that it is necessary in this instance to ensure that an appropriate reference to changing legislation is included within the policy to prevent it from becoming out of date and would also ensure that the policy remains effective once adopted.

Policy NE10 The Countryside

CCE is supportive of the inclusion of a policy referencing the conversion of existing buildings in the countryside, however, we believe that Policy NE10 is not consistent with national policy. Policy NE10 criteria B states that proposals for the conversion of buildings in the countryside will be permitted where 'it has been demonstrated that economic and community uses have been considered before residential, with residential uses only permitted if economic and community uses are shown to be inappropriate and unviable'. This policy is not in accordance with Paragraph 152 of the NPPF (2021) which states that the reuse of existing resources should be encouraged, including 'the conversion of existing buildings'. Under paragraph 152, there is no prerequisite to adopt a sequential approach, or to give preference to other uses. As such, criteria B should be omitted from Policy NE10. Reference to criteria B should also be removed from criteria C.

Chapter 5: Housing

Policy H1 Meeting Housing Needs

The Preferred Approach Local Plan was based on meeting the identified objectively assessed housing needs of the plan area of 638 dwellings per annum. However, due to constraints, particularly the capacity of the A27, the Submission Version of the Local Plan has planned for a housing requirement below the need derived from the standard method. The Plan proposes to deliver 535 dpa in the southern plan area and a further 40 dpa in the northern plan area, a total supply of 10,350 dwellings over the plan period from 2021 – 2039 (575 dpa).

The Planning Inspectorate has previously asked the Council to determine what level of housing could be achieved based on deliverable improvements to the A27 and to consider whether the full housing needs could be met another way. It is acknowledged that the Council has carried out the additional work required and the local constraints have resulted in a proposed lower housing requirement.

The NPPF (2021) confirms that to determine the minimum number of homes needed, strategic policies should be informed by a local housing need assessment, conducted using the standard method in national planning guidance – unless exceptional circumstances justify an alternative approach (para. 61). CCE acknowledges that that housing numbers have been reduced as a result of local constraints and it will be down to the Inspector to determine whether the Council's exceptional circumstances justify this. Should the Planning Inspector find that the Council requires additional land to meet the housing need using the standard method, CCE's land at Southbourne, Oving, Drayton Land and Hunston are suitable, available and developable for housing. In addition, CCE's rural development sites could also contribute to meeting the housing need.

Policy H2 Strategic Allocations

Draft Policy H2 confirms that the Tangmere Strategic Development Location is carried forward from the 2015 Local Plan

and this is supported by CCE. Strong support is also given for the Broad Location of Development in Southbourne (Policy A13) for up to 1,050 dwellings.

Policy H5 Housing Mix

Draft Policy H5 confirms that the housing mix for a development will be based on the most up to date HEDNA to address identified local needs and market demands. We suggest that the Council considers a range of criteria, including site characteristics, when determining the housing mix for individual sites and this should be reflected in wording of Policy H5.

Policy H7 Rural and First Homes Exception Sites

Draft Policy H7 relates to rural and first homes exception sites. CCE is supportive of the principle of the inclusion of a rural exceptions policy. However, we have concerns over criteria contained within the policy which limits the amount of development that can be delivered under it.

The NPPF (2021) at paragraph 78 states that planning policies and decisions should be responsive to local circumstances and support housing development that reflect local needs. Furthermore it also states that 'local planning authorities should support opportunities to bring forward rural exception sites that will provide affordable housing to meet identified local needs'.

The key aspect of the policy is to enable the delivery of rural exception sites which would address an identified local need. Within the policy, there is no limit on the amount of development that can be delivered and therefore, it is considered that if Policy H7 is limited to a maximum of 30 dwellings it could serve to hinder development (especially on slightly larger sites), which would otherwise be sustainable. As such, we consider that the amount of development should not be limited and rather should be dictated on a site and need specific basis. CCE considers that for Policy H7 to be positively prepared and in accordance with National Policy, criteria 2 should be removed.

In addition, criteria 6 states that proposals for affordable housing on rural exception sites will only be supported where 'the site is located adjacent or as close as possible to the existing settlement boundary and does not result in scattered or isolated development in rural areas'. The NPPF (2021) does not specify the location of rural exception sites. As such, to be consistent with national policy, criteria 6 should also be omitted.

Furthermore, Policy H7 states that 'applications for first homes exception sites that propose the inclusion of a small proportion of market housing will be expected to provide robust evidence...'. However, in the policy there is no allowance for the provision of market housing on rural exception sites in addition to first homes exception sites. As a result of this, the requirements of the policy are again not consistent with national policy. Paragraph 78 of the NPPF (2021) is supportive of 'some market housing' where it would facilitate the delivery of rural exception sites. As such, CCE considers that Policy H7 should be amended as follows:

'Applications for rural and first homes exceptions sites that propose the inclusion of a small proportion of market housing will be expected to provide robust evidence that the site would be unviable without such housing being included'.

Policy H8 Specialist Accommodation

Draft Policy H8 confirms that all housing sites over 200 units, including those allocated in this plan, will be required to provide specialist accommodation for older people with a support or care component. We request that this policy is amended to add 'where appropriate and viable', acknowledging that viability and site-specific factors need to be taken into consideration.

Chapter 6: Place-making

Policy P3 Density

We support the objective of Draft Policy P3 (Density) to make the most efficient use of land and follow a design led approach to achieve the optimum density for a site. The Policy does not prescribe an appropriate density for the District and this is supported. However, we consider that reference should be made to the fact that density may vary depending upon site specific circumstances and could be higher where transport links and access to services is good.

Chapter 7: Employment and Economy

Policy E3 and E4 Horticultural Development

Chapter 7 of the draft Local Plan confirms that 67 hectares of land is identified to meet the future horticultural land need within four Horticultural Development Areas (HDAs) over the plan period. It is confirmed that an additional 137 hectares of horticultural land is also forecast to be required outside of HDAs to meet future need.

CCE has significant landholdings which could assist the Council in addressing the insufficient availability within the

current HDAs. The CCE sites which are considered suitable for horticulture development are listed below and location plans for each of the sites can be found in Appendices 9-13.

- Somerley Farm, NE East Wittering, PO20 7JB
- Fisher Farm, South Mundham, PO20 1ND
- Church & Haise Farm, Sidlesham
- Cowdry Farm, Birdham
- Groves Farm, nr Merston, PO20 2DX / Colworth Manor Farm PO20 2DU.

CCE supports draft Policy E3 which confirms that “approximately 137 hectares of land is also needed outside of HDAs to meet anticipated horticultural and ancillary development land need for the plan period.” Support is also given for draft Policy E4 in relation to land outside HDAs. This Policy confirms that proposals for horticultural development can come forward outside the HDAs, subject to a set of criteria. We would welcome continued discussion with the Council on how these sites could help meet the districts horticultural needs in the future.

Chapter 10: Strategic and Area Based Policies

CCE supports Chichester District Council’s proposal to allocate additional land for housing at Southbourne and to maintain the existing allocation at Tangmere. We also consider that CCE’s land at Hunston and Oving could assist the Council in meeting its housing needs, should additional housing be required. We consider these opportunities in turn below.

Policy A13 Southbourne Broad Location for Development

CCE supports draft Policy A13 and the allocation of a Broad Location for Development in Southbourne for a mixed-use form of development including 1,050 dwellings.

CCE has significant landholdings around Southbourne which is suitable, available and developable. The land to the north and west of Southbourne measures 70ha and is wholly within CCE’s control. The land adjoins the existing settlement and provides an opportunity for a sustainable extension to Southbourne with the potential to deliver c. 1,200 homes for the village, as well as employment, community uses and a significant amount of new public space and green open space. A new Vision Document is enclosed which explains one way in which this opportunity could be realised. Importantly, it is considered that there are no technical impediments that would prevent development from coming forward on this site.

This site has been promoted throughout the Southbourne Neighbourhood Plan process, most recently in the December 2022 consultation. The new Vision Document demonstrates that the CCE site presents the opportunity to provide a comprehensive development that would contain strategic housing growth, significant areas of green infrastructure and open space in a sustainable location. The key access strategy for the site is to provide two new access points from the south A259 Main Road and the east Stein Road. These access points would connect to a spine road which would form a continuous vehicle route around the north-western edge of Southbourne.

The site almost entirely comprises a Secondary Support Area under the Solent Waders and Brent Goose Strategy (SWBGS), which aims to protect the network of non-designated terrestrial wader and brent goose sites that support the Solent Special Protection Areas (SPA) from land take and recreational pressure associated with new development. Due to the designation of the site, discussion was undertaken with the Hampshire and Isle of Wight Wildlife Trust with a view to determine a suitable approach for the scheme and an appropriate survey effort to establish the use of the site by designated birds. As a result of these discussions, wintering bird surveys are taking place. The aim of these surveys is to explore opportunities for mitigation for this SWBGS support area such that development within the red line can proceed without adverse impacts to the bird populations noted within this strategy. Following the survey, the results and approach will be presented to Natural England for further discussion.

In relation to viability, we note that Policy A13 sets several policy objectives for development at Southbourne. The NPPF (2021) notes that where there are up-to-date policies which have set out the contributions expected from development, planning applications that comply with them should be assumed to be viable (para. 58). With this in mind the policy objectives outlined within Policy A13 will require viability testing to be undertaken to ensure a policy compliant scheme is both viable and deliverable. This is necessary to ensure that the policy is sound.

The Policy suggests that employment opportunities are required to be delivered as part of the allocation but there is no specific reference to the amount of use required. CCE supports this proposed approach as it is sufficiently flexible to enable an amount of employment land to be proposed in response to market conditions at the appropriate time and this will help to support delivery of the allocation.

The scale of development proposed has been reduced from 1,250 to 1,050 dwellings to reflect the proportionate reduction in housing numbers across the parishes in the east west corridor as a consequence of the limit on numbers in the southern plan area. If the Inspector finds that additional housing is required, the Vision Document submitted demonstrates that the CCE site in Southbourne could deliver c. 1,200 homes and so could increase housing without needing to identify additional land for development elsewhere.

To summarise, the site could accommodate approximately 1,200 homes which could be delivered on a phased basis

early in the plan period. There are no overriding physical or technical constraints that would act as an impediment to development. There is also a clear access arrangement proposed.

Policy A14 Land West of Tangmere

CCE supports that Policy A14 is carried forward into this Local Plan to facilitate the delivery of a residential-led development of at least 1,300 dwellings.

Additional sites

Hunston

CCE further promotes land (15.31ha) located east of the B2145 Selsey Road in Hunston for 240 new homes. The land is deliverable and is fully within CCE's control. The site is highly accessible, located within a maximum of 5-6 minutes walking distance to Selsey Road, where several bus routes connect the village to Chichester.

CCE notes that the Council assessed the HELAA site (ref. HHN0016) as 'developable'. A Vision Document has previously been prepared and submitted to demonstrate the commitment to it being brought forward for residential development within the plan period. This document is enclosed.

To address the Council's concerns in relation to flooding, following publication of the Chichester Strategic Flood Risk Assessment (SFRA), we have prepared an updated Flood Risk Scoping Study which provides an overview of flood risk constraints across the site from a range of sources. Various mitigation measures are recommended in line with recommendations of the Chichester SFRA and prevailing local and national guidance and best practice. With these measures in place, it is likely that the flood risk could be managed effectively in accordance with the requirements of the NPPF. Detailed data has also been requested from the Environment Agency, which will feed into further technical work that is being carried out.

Should the Inspector conclude that additional housing is required, CCE considers that their site is the most appropriate and sustainable location for development in Hunston. The site provides an opportunity to sensitively and sustainably extend the existing village boundary to provide additional homes to meet an identified housing need.

Land East of Drayton Lane

CCE owns land to the east of Drayton Lane which is bound by Tangmere Road to the north and crosses Oving Road and the railway line to the south. The site is c.1km from the centre of Chichester and comprises 49ha. The site was assessed in the HELAA 2021 as developable 'HOV0017'. A Vision Document has been prepared and was presented to the Council in 2022. This includes a detailed analysis of the site and its surroundings and provided justification as to why the site is suitable for development. This technical review of the site concludes there are no technical impediments to development.

The Vision Document demonstrates how the proposals for the land east of Drayton Lane could be developed as an extension to the draft allocation A8 (Land to the east of Chichester) for up to 700 new homes. The land east of Drayton Lane is fully within the CCE's control, is available for development now and is deliverable with some development achievable within the first five years of the plan period. It represents an opportunity to provide new homes, facilities and significant community benefits, through a sensitively designed development that integrates into the surrounding landscape.

The Vision for this site is a landscape and ecology led masterplan which would celebrate the rich wildlife characters of the different surrounding landscapes and uses the connection between countryside and community to generate its character and identity. The Vision Document demonstrates that this is a suitable location for development.

Should the Inspector conclude that additional housing is required, CCE considers that the land east of Drayton Lane would form a natural extension to allocation A8 and is an appropriate and sustainable location for new development.

Appendix C Additional Guidance

Appendix C provides additional guidance on evidence which needs to be submitted in support of certain planning applications related mainly to development in the countryside. As mentioned in the comments above provided in response to Policy NE10, there is no prerequisite contained within the NPPF (2021) that requires an applicant to demonstrate that previous uses were proven unviable prior to the conversion of a building in the countryside to residential use. As such, to be in accordance with national policy, reference to Policy NE10 should be omitted from Appendix C.

Conclusion

CCE welcomes the opportunity to comment on the Local Plan and is keen to continue to engage with the Council, especially in relation to the Broad Location for Development in Southbourne. CCE is supportive of the Council's aspirations in the Local Plan. However, the changes set out above are considered likely to be necessary to ensure the plan is sound.

CCE is a considerable landowner in Chichester with land largely to the south, west and east of Chichester which could assist the Council in meeting their housing and development needs throughout the plan period.

Object

Document Element: The Vision is that by 2039,

Respondent: Natural England (Luke Hasler, Senior Advisor) [8189]

Summary:

Natural England maintains its advice, provided both as part of the Regulation 18 statutory consultation in 2019 and through subsequent, non-statutory consultations during 2021 and 2022. This has still not been addressed in the following areas [changes to plan refer]

Full text:**Summary of advice**

While we have raised some queries and recommended some further modifications to certain policies we do not find the Plan unsound on any grounds relating to our remit.

Natural England has reviewed the Proposed Submission Local Plan and accompanying appendices together with the Habitats Regulations Assessment (HRA) and Sustainability Appraisal (SA). Our detailed comments on the policies and site allocations are provided as follows:

- Annex 1 - Chapter 2 – Vision and Strategic Objectives
- Annex 2 - Chapter 4 – Climate Change and the Natural Environment
- Annex 3 - Chapter 5 (Housing) and Chapter 6 – (Place-making, Health and Well-being)
- Annex 4 - Chapter 7 (Employment and Economy) and Chapter 8 (Transport and

Accessibility)

- Annex 5 - Chapter 10 – Strategic and Area Based Policies

Please note that we have not provided comments on all policies but those which have most influence on environmental issues. Natural England has no comment to make on the policies not covered in this response. Other than confirming that we have referred to it when considering our advice on specific policies and site allocations Natural England has no general comments to make on the SA.

Unfortunately due to unforeseen resourcing issues while we have reviewed the associated HRA we are not in a position to provide detailed comment on it as part of this response. We will rectify this as soon as possible and can confirm that we have seen nothing in it that raises any major concerns.

The Plan has many positive aspects including standalone policies on Green Infrastructure (GI) and wildlife corridors and an incredibly extensive suite of natural environment policies more generally.

We are hugely appreciative of the opportunity that we were given to work with you on shaping key policies post-Regulation 18. However, we believe that the plan needs to go further in its recognition of coastal squeeze as a key issue for the district, should include policy hooks for the forthcoming Local Nature Recovery Strategy (LNRS) and make up to date references to both the Environment Act (2021) and the Environmental Improvement Plan (EIP, 2023). Given how recent the publication of the EIP is we would be happy to discuss with your authority how this could best be achieved but we believe given the wealth of natural capital within Chichester District it is vitally important that this latest iteration of the Local Plan is set in its full policy and legislative context.

We have suggested a significant number of amendments and additions to both policies and supporting text throughout the Plan. In our view these could all be taken forward as minor modifications but if they were all acted upon they would leave the Plan much stronger and more coherent in delivering for the natural environment, one of the three central tenets of genuinely sustainable development as set out in the National Planning Policy Framework (NPPF 2021, paragraph 8c).

See attachment for representations on paragraphs/policies.

Change suggested by respondent:

- Bullet point 1 – Natural England advise that “water scarcity” be mentioned under this, as it is recognised as an issue (under Issues and Options 2.29, p23)
- Bullet point 6 – Natural England advise the mention of “(including water supply)” after “natural” in this bullet, in order to provide context for its inclusion in Objective 7 Strategic Infrastructure on p32

Agent: Barton Willmore now Stantec (Mr Oli Haydon) [8051]

Summary:

We consider there is an opportunity for the strategic allocations across the District to plan for working aged people to be a major constituent part of the communities created, whilst also planning for a mixed uses and meaningful alternatives to the private car so as to reduce reliance on the private car and create sustainable communities.

Full text:

INTRODUCTION

These representations have been prepared by Barton Willmore on behalf of Wates Developments Ltd and Seaward Properties (hereby referred to as 'the Consortium'), who are jointly promoting Land East of Southbourne, the settlement being proposed for a mixed-use allocation under draft policies H2 and A13. It is submitted to the Chichester Local Plan Regulation 19 consultation.

The Consortium agrees with the broad direction of the draft plan in allocating housing in Southbourne and present the land east of Southbourne as a sustainable, deliverable and appropriate mechanism to deliver a development that meets the aspirations of the community.

The Consortium has been working together to promote the land east of Southbourne and have previously committed to working with the Neighbourhood Plan Group and wider community to develop an agreed masterplan and phasing approach to comprehensively deliver housing, community facilities, employment and green infrastructure as guided by the emerging local plan.

The following sections of the report provide comment to support the proposed allocation and its effective delivery in the future. Alongside these representations, the submission also includes the following:

Highways Technical Note prepared by i-Transport.
Latest Masterplan

The Consortium is in agreement with the overarching principles of the emerging Local Plan, including the drive for a sustainable development that is environmentally responsible, meeting biodiversity net gain and nitrate neutrality, as well as sensitively masterplanned to develop the community as a whole and integrate the facilities such that they are accessible to the existing residents, as well as the new.

A robust and extensive evidence base has been prepared to inform the illustrative masterplan and prior submissions to the Southbourne Neighbourhood Plan preparation. This evidence base continues to evolve and be updated, and we feel this information will be invaluable in forming the final agreed masterplan in terms of its deliverability and comprehensiveness.

Existing policy position

The Chichester Local Plan was adopted in 2014, and the Inspector was clear that it would require a review within 5 years to ensure that the housing needs of the district would be met in the long term. As required, Chichester District commenced a Plan Review. These representations support the broad direction of the plan and offer comments to the "Proposed Submission" (Regulation 19) stage of the preparation process.

By way of background, Policy 2 of the adopted Local Plan identified Southbourne as a settlement capable of strategic allocation and housing delivery, acting as a Settlement Hub that provides services for the surrounding communities. It is therefore identified as a location and focus for growth. This approach is carried forward in draft Policy S1, S2 and H2 of the emerging Local Plan.

As noted above, the overarching principles of spatial strategy and settlement hierarchy are consistent between the adopted Plan and emerging document. Therefore, the principle of a strategic extension to Southbourne is consistent with the strategic policies of the adopted Local Plan.

2.0 REPRESENTATIONS TO THE REGULATION 19 CONSULTATION

The Local Plan Vision

Whilst we support the broad direction of the vision within the draft Local Plan for sustainable development, improved accessibility and climate change mitigation, we question whether the identified issues within the Chichester Plan Area are addressed by the vision. There would appear to be a lack of aspiration as to what the Council want Chichester District to become over the course of the plan period and beyond. Issues are identified, namely those of out-commuting and an ageing population, with no tangible solutions identified at the overarching direction stage. This results in the vision portraying a bland image and lack of overall ambition.

The Vision acknowledges that, by the end of the plan period (2039), only half of the District's population will be working age, a fall from 55.8% and well below the national average of 62.3%. Despite the Plan's recognition of this the vision fails to identify how the District plans to attract those of a working age at this stage, which will only exacerbate the HEDNA's forecast of a further fall away from the national average in terms of active workforce. We would suggest that the most appropriate solution to champion at the vision stage is to utilise housing and the spatial strategy as a means to not only address the decreasing active workforce but also to confront other issues such as outcommuting and increased reliance on private motor vehicles.

In this regard, we consider there is an opportunity for the strategic allocations across the District to plan for working aged people to be a major constituent part of the communities created, whilst also planning for a mixed uses and meaningful alternatives to the private car so as to reduce reliance on the private car and create sustainable communities.

Change suggested by respondent:

Object

Document Element: Chichester City and the East West Corridor, 2.38**Respondent:** Chichester City Council Neighbourhood Plan Steering Group (Councillor Sarah Quail) [8184]**Summary:**

Paragraph 2.3. states that the cathedral city of Chichester is the main settlement while paragraph 2.38. says that the emphasis will be upon consolidating and enhancing the role of Chichester city as the plan area's main centre. The role of the Chichester Neighbourhood Plan in consolidating and enhancing Chichester as the main centre should be referenced here and throughout this chapter.

Support – with qualification

Notwithstanding this aim, the NE Parishes have housing allocated not because of identified need but, apparently, to 'make up the numbers'.

Further, it is evident from details in the Infrastructure Development Plan that infrastructure improvements are focused around Chichester. Apart from St Richards Hospital in Chichester, the majority of WG residents do not look to the Chichester for services. Primarily as a result of the SDNP splitting Chichester District, the northern parishes are remote from Chichester.

The over-reliance of development in the east-west corridor risks delivering unsustainable levels of housing on unwilling communities - particularly between Chichester and Emsworth to the west of the city.

Full text:

The over-reliance of development in the east-west corridor risks delivering unsustainable levels of housing on unwilling communities - particularly between Chichester and Emsworth to the west of the city. The proposed delivery of 3,225 houses in this area (1,600 west of Chichester, 1,050 Southbourne, 245 Bosham, 300 Chidham & Hambrook, 30 Fishbourne) cannot be reconciled with the objectives of conserving local distinctiveness, character and cohesion of settlements. The infrastructure to support this level of development is simply not in place, and is unlikely to be through the Plan duration (particularly waste water treatment, roads, doctors, schools). The proposed levels of development are disproportionate to the size of the existing settlements, and therefore will by default alter their character immeasurably.

Change suggested by respondent:

Reduction in the housing allocation, particularly the distribution along the boundary of the Chichester Harbour AONB.

The A27 is nothing but a huge barrier preventing the communities from accessing their city and its amenities and creating gridlock at the roundabouts.

The A259 is under growing stress from the rise in households along its length making accessing the A27 at Fishbourne roundabout a daily hazard.

The air pollution levels rise, the buildings suffer from heavy vehicles, and the designated national path of Emperor's Way taking walkers to and from the Marshes to the village is a daily stressful safety hazard. The 30mph is regularly ignored and because the village is approached through a bend the pedestrians are out of sight until too late. .

The A259 is also the relief road for when the major strategic road A27 is blocked.

Document Element: Manhood Peninsula, 2.46**Respondent:** Barratt David Wilson Homes [7523]**Agent:** Henry Adams LLP (Peter Cleveland, Head of Planning) [6827]**Summary:**

Paragraphs 2.43 – 2.45 of the draft Plan set out the reasoning, which relates to the need to protect the semi-rural nature of 'some' settlements and in recognition of the important wildlife habitats such as Pagham Harbour and Medmerry. These highlighted areas are subject to international wildlife designations and are very different to say our clients land at Stubcroft Farm, which has no heightened landscape or wildlife designations. On the contrary, land at Stubcroft Farm comprises relatively ordinary open arable land, which is intensively farmed. It is not extraordinary in any form and a blanket approach suggested by the Council, highlighting landscapes or habitats of national or international importance is not reflective of the entirety of the Manhood Peninsula. This should not be taken as a reason for not allowing further development, which is suitably located, on the Manhood Peninsula.

Document Element: North of the Plan Area, 2.49**Respondent:** Plaistow and Ifold Parish Council (Mrs Catherine Nutting, Clerk & RFO) [7910]**Summary:**

Plaistow and Ifold Parish Council would have liked to see a like-for-like replacement of Chichester's current Local Plan 2014 – 2029 Policy 25, 'Development in the North of the Plan' in the emerging plan.

Full text:

Plaistow and Ifold Parish Council notes that there is no like-for-like replacement of Chichester's current Local Plan 2014 – 2029 Policy 25, 'Development in the North of the Plan' in the emerging plan; but there is a substantial amount of explanation about the area strategy in the supporting text for Chapter 2 and in the supporting text for Policy S1, which is the spatial development strategy.

The Council would have liked to see a policy more explicitly linking the nature and capacity of the spatial areas with the proposed housing allocations. This was achieved in Policy 25 of the current adopted Local Plan.

The Spatial Strategy and recognition of different landscapes is supported by Plaistow and Ifold Parish Council; however, the distinctive differences of the landscapes within the District are not adequately followed through and protected within policy. As drafted, NE10 does not help to conserve the distinctive qualities of the landscapes as it is not specific. The separate/distinctive Policy 25, 'Development in the North of the Plan' within Chichester's current Local Plan 2014 – 2029 helps to underline and support Chichester's aspiration to conserve and enhance the distinctive landscape in the North of the Plan Area, which is currently significantly weakened by the omission of a distinctive policy in the current draft version of the Plan.

Change suggested by respondent:

Propose a distinctive policy for development in the North of the Plan, which would more explicitly link the nature and capacity of the spatial areas with the proposed housing allocations. This was achieved in Policy 25 of the current adopted Local Plan.

Document Element: Cross Boundary Strategic Objectives, 2.52**Respondent:** Beechcroft Developments Limited [8188]**Agent:** Genesis Town Planning Ltd (Mr Jeremy Farrelly, Director of Planning) [7504]**Summary:**

Paragraph 2.52 suggests that strategic objectives align with the objectives of LSS2, one of which is meeting strategic housing needs. However, paragraph 5.2 of the proposed submission draft explicitly identifies that not only will the housing needs of the plan-area not be met, but also that no contribution will be made to the unmet needs of the South Downs or the sub-area more widely.

Full text:

See attachments.

Change suggested by respondent:

Proposed policies directly undermine objectives of LSS2 - either paragraph 2.52 will need to be amended to recognise that there is some conflict between policies of Plan and objectives of LSS2, or policies will need to be amended to provide for strategic housing needs.

Document Element: Cross Boundary Strategic Objectives, 2.53**Respondent:** Bellway Homes (Wessex) Ltd [1573]**Agent:** Chapman Lily Planning (Mr Brett Spiller, Planning Consultancy Director) [8132]**Summary:**

Bellway supports spatial priority 2 setting out that Chichester City / Tangmere / Bognor Regis gives priority to the infrastructure improvements needed to support delivery of strategic employment and housing sites identified in Chichester and Arun Local Plans. There is a need for significant investment in Chichester's infrastructure to enable housing targets to be met. Bellway therefore consider it vital that strategic infrastructure improvements are delivered. New development offers the best means of securing investment in the area including through contributions towards such improvements albeit there is a fine balance to achieve in ensuring development is viable, particularly in regeneration areas such as Southern Gateway.

Document Element: Cross Boundary Strategic Objectives, 2.53**Respondent:** Kingsbridge Estates Limited & Landlink Estates Limited [8084]**Agent:** Savills (Mr William Price, Planner) [7783]**Summary:**

The Local Plan is not positively prepared. The proposed expansion of HDAs is welcome. However the council's current approach to restrictions on co-location of functionally linked businesses and activities within the food park/cluster is impacting on business competitiveness and efficiency.

Full text:

The Runcton HDA is home to a number of the most high performing horticultural operations in the south of England. These businesses are well-established and are capable of supporting sustainable and continued economic growth. This in turn will benefit the wider horticultural sector in the South. The current and proposed HDA policies do however act as a barrier to economic growth.

The current HDA policy is acknowledged within the 2018 HEDNA as a barrier to growth due to the failure to support functionally associated uses. The importance of associated uses to the cluster is also acknowledged within The Council's evidence base and other key Government and Industry publications.

Change suggested by respondent:

Reference to 'ancillary' with regard to the HDAs in relevant policies and supporting text should be modified to 'functionally linked' and include explanatory text clarifying that 'functionally linked' uses can include a range of activities including: food-related distribution; food manufacturing linked to the HDAs food preparation; on-site renewable energy to serve on-site activities; and R&D.

Summary:

Submission Plan has identified key challenges and opportunities that influence future planning, across the District and how it aims to address these through planning policies and proposals. The strategic objectives are structured into specific categories, ensuring housing and neighbourhood objectives are clearly set out for the plan period. Amongst these is the objective to increase housing supply; increase provision of affordable housing; and promote the development of mixed, balanced and well-integrated communities. These are consistent with the NPPF's policy objective to significantly boost the supply of housing in paragraph 60. In this context, it is right that the Local Plan's development strategy is founded on this objective, ensuring sustainable development which responds to social, economic and environmental considerations that meets the needs of the plan area. These objectives frame the policies and proposals for future development across the plan area to create sustainable neighbourhoods; this demonstrates, as a matter of principle, that the Local Plan intends to be positively prepared and justified, albeit there are limitations on how this is achieved in practice when the policies and proposals are considered.

Full text:**1 Introduction**

1.1 These Representations have been prepared on behalf of Hallam Land Management Limited (hereafter 'Hallam'), in response to the Chichester Local Plan Review Proposed Submission Plan consultation.

1.2 Hallam is a strategic land promotion company operating throughout England, Wales and Scotland delivering land for new employment and commercial premises, housing, including specialist elderly housing, and mixed-use developments. Hallam has been acquiring, promoting, developing and trading in land since 1990. During that time, the company has established an outstanding record in resolving complex planning and associated technical problems in order to secure planning permissions for a whole range of different land uses to facilitate the delivery of new development.

1.3 Hallam control land to the west of Southbourne, to the north of the A259 and south of the railway line. Development of this land for new housing including specialist elderly accommodation, as shown in the accompanying Vision Document, would be consistent with the established Spatial Strategy; which is rightly retained in the consultation document. Similarly, development would contribute towards meeting the future housing needs of the District within the proposed Broad Location for Development (BLD) at Southbourne.

1.4 These Representations set out our support for the BLD drawn on the key diagram to the west and east of Southbourne. However, Hallam are seeking amendments to Policies S1, H1, H2, H8 and A13 to ensure that: the overall housing needs are met across the District, including early delivery and specialist accommodation; the flexibility sought early in the Submission Plan, at Policy S2 and H1, is carried through to the strategic allocations and locations; and, the BLD is distributed to the west and east of Southbourne.

1.5 Moreover, Hallam are proposing the allocation of small and medium scale sites at Southbourne within the Local Plan, to enable early delivery of housing and infrastructure, with the land under their control a suitable site for this allocation. Should the Council not allocate these sites, then the strategic allocations/locations policies need to be updated to reflect the requirement for the delivery of small and medium scale parcels which could form part of the larger sites.

1.6 In the context of the above, it is instructive to note that Chichester District has an older population than national average, which has been predicted to increase by 42% between 2021- 2039. The increasing need for specialist accommodation should be addressed through specific allocations within the Local Plan, rather than the proposed approach of Policy H8.

1.7 Our response is focused on the following matters:

- The Spatial Strategy, settlement hierarchy and the distribution of development across the District;
- The overall amount of new housing required within the new plan period;
- The need for specialist accommodation;
- The status of Southbourne and the role and function it plays; and
- The strategic allocation proposed at Southbourne in Policy AL13.

1.8 In preparing the Local Plan Review, the Council will need to ensure that it complies with paragraph 35 of the National Planning Policy Framework (NPPF) (2021) which sets out four tests to ensure the plan is 'sound'. These are as follows:

- Positively prepared – providing a strategy which, as a minimum, seeks to meet the area's objectively assessed needs, and is informed by agreements with other authorities, so that unmet needs from neighbouring areas are accommodated where it is practical to do so and is consistent with achieving sustainable development;
- Justified – an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence;
- Effective – deliverable over the plan period, and based on effective joint working on cross- boundary strategic matters that have been dealt with rather than deferred, as evidenced by statements of common ground; and
- Consistent with national policy – enabling the delivery of sustainable development in accordance with the policies in this Framework.

1.9 We are mindful that the Government has recently published a consultation concerning potential amendments to the NPPF. Paragraph 1 of that consultation document indicates that the government is committed to "building more homes"

whilst Paragraph 6 explains that the government “remains committed to delivering 300,000 homes a year by the mid-2020s”.

1.10 In the proposed revisions, paragraph 1 makes clear that the NPPF provides “a framework within which locally-prepared plans can provide for sufficient housing and other development in a sustainable manner.” At paragraph 60 the overall aim of a Local Plan is identified as meet[ing] as much housing need as possible with an appropriate mix of housing types to meet the needs of communities.

1.11 It is clear therefore that the potential amendments to the NPPF firmly intend that Local Plans, including this one, continue to provide a sufficient supply of housing land to meet identified needs.

2 Objectives and Spatial Strategy

Objectives of the Local Plan

2.1 The Submission Plan has identified key challenges and opportunities that influence future planning, across the three areas of the District, and how it aims to address these through planning policies and proposals.

2.2 Within the consultation document, the strategic objectives presented by the Council are structured into specific categories, ensuring housing and neighbourhood objectives are clearly set out for the plan period.

2.3 Amongst these is the objective to increase housing supply; increase provision of affordable housing; and promote the development of mixed, balanced and well-integrated communities. These are consistent with the NPPF’s policy objective to significantly boost the supply of housing in paragraph 60. In this context, it is right that the Local Plan’s development strategy is founded on this objective, ensuring sustainable development which responds to social, economic and environmental considerations that meets the needs of the plan area.

2.4 These objectives frame the policies and proposals for future development across the plan area to create sustainable neighbourhoods; this demonstrates, as a matter of principle, that the Local Plan intends to be positively prepared and justified, albeit there are limitations on how this is achieved in practice when the policies and proposals are considered.

2.5 The NPPF states at paragraph 22 that strategic policies should look ahead over a minimum 15 year period from the date of the Plan’s adoption. The Local Plan aims to cover the period of 2021- 2039, which is 18 years. However, this plan has not been adopted yet and it is considered unlikely that this Local Plan will be adopted before 2024-25. Therefore, the Plan may not cover the required plan period of 15 years and the Council should extend the plan period to at least 2040 to ensure this requirement is met.

Policy S1: Spatial Strategy

2.6 The Spatial Strategy is accompanied by the Key Diagram (Map 3.1), identifying the distribution of development and infrastructure provision across the plan area.

2.7 The strategy aims to build on the existing Local Plan, focusing growth at Chichester city, as the main sub-regional centre, and at two settlement hubs along the east-west corridor at Tangmere and Southbourne.

2.8 Policy S1 specifically identifies the broad approach to providing sustainable development, in accordance with the Local Plan Objectives, ensuring development is focused principally along the east-west corridor. It aims to distribute development in line with the settlement hierarchy, ensuring development is located in the larger and more sustainable settlements.

2.9 This accords with paragraph 20 of the NPPF which requires strategic policies to set out an overall strategy for the pattern, scale and quality of development, and make sufficient provision for housing, infrastructure, community facilities along with policies that seek to conserve and enhance the environment.

2.10 Paragraph 105 of the NPPF states that the planning system should actively manage patterns of growth in support of these objectives. With significant development being focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes.

2.11 Paragraph 69 of the NPPF sets out how small and medium scale sites can make an important contribution to meeting the housing requirement. Part d) identifies how working with developers to encourage the sub division of large sites could help to speed up the delivery of homes.

2.12 In this context, Policy S1 (6) outlines how non-strategic provision is made for small scale housing developments consistent with the indicative housing numbers set out in Policy H3, however this does not identify an approach to medium scale sites. Consequently, the Local Plan should allocate small and medium scale sites for residential development.

2.13 Should the Local Plan not allocate these scale sites, then there should be parcels within the BLDs identified as medium scale sites for early delivery in the plan period without prejudicing the BLDs. Policy S1 should be amended to include medium scale sites and to require flexibility to the housing target. This is discussed further in respect of Policy A13.

2.14 Policy S1 (7) states that strategic allocations and locations will be made through either this emerging Local Plan, the extant Site Allocation Development Plan 2014-2019 (or subsequent Site Allocation Development Plan Document (DPD)) and through Neighbourhood Plans. Notwithstanding the allocations in the emerging Local Plan, the most appropriate future mechanism is the Site Allocations DPD, which has to meet the 'tests of soundness' rather than 'basic conditions'. This more rigorous approach to plan making is better able to address the site selection process and assessment of delivery requirements that a strategic allocation will need to demonstrate, particularly when taking account of the scale of growth proposed at Southbourne.

2.15 Lastly, the final paragraph of Policy S1 states that to ensure that the Plan's housing requirement is delivered, "the distribution of development may need to be flexibly applied, within the overall context of seeking to ensure that the majority of new housing is developed in accordance with this Strategy". The wording of this should be amended to state flexibility will be needed rather than may be needed, to ensure there is the ability to mitigate delays on allocations being brought forward by alternative proposals in order to meet the housing requirement over the plan period.

2.16 The use of the Authority Monitoring Report to control this is considered an acceptable approach, and policies A6 to A15 should reflect this requirement for flexibility. In practical terms, the LPA will need to consider performance in bringing forward and delivering large-scale development and enable alternative solutions where the required outcomes are not being achieved. This is discussed later in relation to Policy A13 specifically.

Policy S2: Settlement Hierarchy

2.17 The consultation document sets out a Settlement Hierarchy which is to serve as the framework for the Council to achieve its vision for the plan area, meet the scale of development required and enhance the quality of the built natural, historic, social and cultural environments, whilst sustaining the vitality of communities. This hierarchy seeks to deliver sustainable development that will support the role and function of different places within the plan area.

2.18 In this regard, Policy S2 is consistent with the NPPF acknowledging how "significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. This can help to reduce congestion and emissions, improve air quality and public health." (paragraph 105 refers). The Settlement Hierarchy ensures that new development is located in areas where residents have access to facilities and services and a range of public transport networks.

2.19 Chichester city is identified as the Sub-Regional Centre, with four Settlement Hubs being identified at East Wittering/Bracklesham; Selsey; Southbourne and Tangmere. This is a continuation of the existing spatial strategy in the Adopted Local Plan and consistent with the principle of locating new development at the most sustainable locations.

2.20 Southbourne is rightly identified as a Settlement Hub due to its range of local services and facilities, key public transport connections and employment/educational opportunities accessible via non vehicular methods of travel. The approach to Southbourne is discussed later at Section 4 and at Policy A13.

2.21 Accordingly, this strategic policy is positively prepared and justified, and is consistent with national policy promoting sustainable patterns of development.

3 Overall amount of Housing

Policy H1 Meeting Housing Needs Housing Need

3.1 Paragraphs 60 and 61 of the NPPF state that to determine the minimum number of homes needed, strategic policies should be informed by a local housing need assessment, conducted using the standard method in national planning guidance.

3.2 Only in exceptional circumstances could an alternative approach be justified. But even then, that alternative approach will also need to reflect current and future demographic trends and market signals.

3.3 Policy H1 identifies the need for the Plan to make provision for at least 10,350 dwellings within the plan period, amounting to 575dpa.

3.4 This is lower than both a. the standard method figure of 638 dpa; and, b. the Preferred Approach figure in the previous consultation, of 650 dpa which included accommodating some unmet need arising from the South Downs National Park (SDNP) area. This shortfall will amount to over 1,100 dwellings across the plan period. Without any Statements of Common Ground being published by the Council or evidence of the shortfall being accommodated elsewhere, this remains unaddressed.

3.5 It is highly germane that the current Local Plan adopted a lower housing figure than the identified need of 505dpa, proposing instead to deliver 435dpa.

Affordability in Chichester

3.6 The affordability ratios have risen from 12.38 in 2015, when the current Local Plan was adopted, to 14.61 in 2021 for Chichester, which is significantly higher than the current 9.1 national average, increasing the need for affordable housing within Chichester.

3.7 Between the 2011 and 2021 census, the number of people ages 50 to 64 years rose by over 3,100 (an increase of 13.4%), while the number of residents between 35 and 49 years fell by approximately 1,900 (8.5% decrease).

3.8 Chichester's worsening affordability ratios and aging population, which typically occurs in line with house price increases, demonstrate the clear need to increase the housing delivery to meet current and future needs (in line with the NPPF), and maximise the potential for housing in this District. The current strategy to suppress housing provision will only exacerbate these problems.

3.9 With the Submission Plan proposing to not meet the identified need, this once again will be an issue which moves onto the next Local Plan, failing to tackle key issues across the District such as affordability and lack of housing land supply. These issues cannot simply be moved onto the next Local Plan, they should be addressed now.

Constraints for development

3.10 The lower figure of 575dpa reflects both the infrastructure constraints along the A27 and at the

Waste Water Treatment Works, but also no longer accommodating unmet need from SDNP.

3.11 The Transport Study (January 2023) assesses the capacity levels, with particular focus on the A27. Although the Council state that 535dpa is the highest level of development per year achievable, the conclusions of this latest Study state, at paragraphs 5.6.5 and 11.2.3, that development of 700 dpa could be accommodated (in the southern plan area) through the mitigation proposed in the previous scenario of 535dpa with some additional mitigation at the Portfield and Oving roundabout.

3.12 This Transport Study (2023) was published following the preparation of the Sustainability Appraisal which refers to the 2018 study, therefore the latest evidence on highways matters has not be considered within the preparation of this Local Plan.

3.13 This is fundamental to the Plan's approach – increasing the housing requirement could assist with funding those additional highway improvements, in line with the recommendations of the Transport Study at Section 9.3 to prioritise junctions to avoid delays to housing delivery. This should be further reviewed by the Council to ensure the District's need is not being understated. It is recommended the housing need figure is reviewed in line with this evidence and the need to meet the minimum of the standard method figure of 638dpa, and aim to return to the 650dpa previously proposed.

Duty to Co-Operate

3.14 Paragraph 24 of the NPPF outlines the need for co-operation between local planning authorities on strategic matters that cross administrative boundaries.

3.15 The East Hampshire Local Plan Review has identified 100dpa for the SDNP area of the District, below the identified need of 112dpa for the District's area and the overall requirement of 447dpa for the SDNP (Housing and Economic Development Needs Assessment 2017). In effect, in combination with Chichester, the National Park is needing to accommodate some 30 more dwellings per annum without any assessment as yet as to whether this can be achieved given the statutory protection that is afforded to it.

3.16 Whilst a Statement of Common Ground is referred to, it has not been published and therefore it is not possible to determine whether the decision not to make a provision for the National Park area is soundly based.

3.17 Previous evidence for the Preferred Approach demonstrated how the figure of 650dpa was achievable and necessary to help with the worsening affordability ratios across Chichester and the neighbouring authorities. Having removed provision for unmet need it is considered this plan has not been positively prepared.

Summary

3.18 Policy H1 clearly sets out how the majority of housing is to be delivered along the east-west corridor, with 535dpa in the southern plan area and 40dpa in the northern plan area. This is consistent with the Spatial Strategy and the Settlement Hierarchy, Policies S1 and S2, and the overarching objective of locating new housing at the most sustainable locations in the plan area.

3.19 By limiting the amount of housing there will be fewer schemes contributing to the required infrastructure improvements. Without developer contributions to fund wholesale upgrades to this infrastructure there is a risk of pushing the problem down the line for the next Local Plan to address, whilst problems with affordability and an aging population are further exacerbated.

3.20 All future schemes will be required to mitigate their impact on infrastructure including highways and utilities, and there is an opportunity for small to medium scale sites to be delivered in the short term whilst the larger allocations and/or the majority of the larger allocations await the upgrading of these works.

3.21 Currently, the proposal to reduce the overall housing supply for the new plan period is not supported, and the Council should review the Transport Study with the intention of meeting the assessed level of local housing need in full. Without the identified housing requirement being met in full the problem of the younger population being unable to afford to remain in Chichester will continue, further growing the gap in workforce and an increasingly aging population.

3.22 Therefore, this policy is not positively prepared, justified or consistent with the NPPF.

Policy H2 Strategic Locations/Allocations 2021-2039

3.23 The wording of 'at least' within Policy H1 provides flexibility on the ability to achieve the minimum amount of housing considered necessary by the Council, in line with Policy S2. Although this quantum is not agreed, the approach using 'at least' is considered a sensible approach to allow the achievement rather than under delivery of much needed open and market housing.

3.24 The strategic locations/allocations set out in Policy H2 do not reflect this flexible approach. Instead, the sites are fixed as exact number of dwellings for those locations.

3.25 Paragraph 119 of the NPPF requires planning policies to promote an effective use of land in meeting the need for homes, while safeguarding and improving the environment and ensuring safe and healthy living conditions.

3.26 Policy A13 is a BLD and is fixed at 1,050 dwellings within Policy H2, this does not allow for the masterplanning approach to further assess the actual capacity and the best use of this land.

3.27 As such flexibility should be embedded into the wording of Policy H2 to ensure that the intention of Policy S2 is achieved; the housing target of at least 10,350 dwellings across the plan period (Policy H1) is met; and the land identified for development is most effectively used.

3.28 Therefore, it is suggested that Policy H2 includes the wording "at least" before the quantum of development for any strategic location or allocation. For example, Policy A13 would instead state "at least".

Policy H8 Specialist accommodation for older people and those with specialised needs

3.29 National Planning Practice Guidance for Housing for Older and Disabled People states how plan-making authorities should set clear policies to address the housing needs for groups with particular needs such as older and disabled people.

3.30 The Housing and Economic Development Needs Assessment (HEDNA) (April 2022) assesses the period between 2021-2039 for older people and those with a disability.

3.31 This concludes that there will be a 42% increase in the population above 65 years old, amounting to 67% of the total population growth.

3.32 The HEDNA sets out how the East-West Corridor has a higher percentage of over 65 year olds (24.7%) compared to both Chichester City (24.2%) and the Plan Area North area (23.4%).

3.33 The needs arising from this, amounts to between 2,131 and 2,872 additional dwellings with support or care, and a need for 429-800 additional nursing and residential care bedspaces. This equates to approximately 17-24% of all homes needing to be some form of specialist accommodation for older people.

3.34 In this context, the HEDNA makes an important recommendation that the Council allocate specific sites for housing with care to ensure the identified needs are met. In contrast Policy H8 is a criteria based policy that seeks specialist accommodation for older people on housing sites over 200 units based on evidence of local need.

3.35 As written, there is no confirmation on the quantum of specialist accommodation that this policy or other site allocations will secure and how the specific need for each application is calculated. Policy H8 fails to address the identified overall need clearly, as required by National guidance. Therefore, it is recommended the Local Plan allocates sites to deliver this type of accommodation as intended by the HEDNA.

3.36 This approach risks the land on these sites being unable to deliver both the expected market/affordable housing and the specialist accommodation on site.

3.37 The land under Hallam's control would be a suitable site for this type of accommodation, which is situated along the east-west corridor in a sustainable location on the edge of Southbourne.

4 Southbourne

4.1 Southbourne is a key area in the District, in terms of existing development, its status as a Settlement Hub and its potential to accommodate future development.

Role of Southbourne

4.2 Southbourne is identified as a Settlement Hub within Policy S2.

4.3 Southbourne is located within the east-west corridor with a range of existing facilities, good transport links, and employment opportunities both to the east and the west.

4.4 As set out in the Submission Plan, Southbourne has good access to educational facilities serving the residents, including primary schools, junior schools and secondary schools. There are a number of convenience stores and other community services and facilities such as a GP practice, pharmacy and places of worship.

4.5 The Bourne Community Leisure Centre provides local residents with access to community sports facilities. Access to public open space is also good through connections to Southbourne Recreation Ground. There is potential for more open space to be provided for local residents within the Local Plan Review and the strategic allocation proposed and this approach is embedded within our own Vision Document.

4.6 A key focus of the Sustainability Appraisal and the Submission Plan is for schemes to promote a modal shift in transportation. The strong public transport links within Southbourne to the wider surrounding area allows access to employment opportunities within the east-west corridor. Southbourne has strong public transport connections to the local and wider area, through bus and train services, to areas including: Chichester, Portsmouth, Havant, Littlehampton, Brighton, Southampton and London.

4.7 For these reasons, Southbourne is rightly designated as a Settlement Hub and is eminently suitable to serve as a BLD.

4.8 The Southbourne Level Crossing Report May 2021 analyses the options for delivering the railway crossing at Southbourne. It concludes that circa 750 dwellings can be delivered north of the railway line before triggering the requirement for a new crossing. The report highlights how sites south of the rail line are not likely to impact on the level crossing and can therefore be delivered earlier than await the railway line improvements.

4.9 Therefore, in this context it would be appropriate to allocate small and medium scale sites to the south of the railway, which is less constrained by the capacity restriction on the railway crossing.

4.10 The land under Hallam's control is to the south of the railway line, would help facilitate a future new railway crossing to the north of the site, and would be of a medium scale to deliver housing early in the period plan.

Strategic Allocation A13

4.11 The Key Diagram appears to suggest that new development is to be located to the west and east of Southbourne, remedying the previously unsuccessful approach of focusing development only to the east. Similarly, the Key Diagram acknowledges the need for development to the south of the railway line, facilitating development north of the railway line. It is recommended the wording of the policy should be updated to reflect this diagram, as suggested below:

Provision will be made for a mixed use development within the broad location for development to the west and east of Southbourne, as shown on the Key Diagram.

4.12 Previously, the Preferred Approach consultation document set out at Policy AL13 a minimum of 1,250 dwellings at Southbourne and to be identified in the revised Southbourne Neighbourhood Plan. (emphasis added)

4.13 The Submission Plan now allocates Policy A13 for 1,050 dwellings and will be established through the making of allocation(s) in the future Site Allocation DPD or the revised Southbourne NP. This strategic allocation is to act as a mixed use extension to the existing settlement.

4.14 It is acknowledged that the land north of Cooks Lane (Application number: 22/00157/REM) received Reserved Matters approval in August 2022 for 199 dwellings, with the reduction in quantum of development for the BLD reflecting this committed development. A practical effect of this is that this consent will not contribute to the wider infrastructure requirements associated with a larger scale of development.

4.15 It is disappointing to see the phrase "a minimum of" has been removed. This conflicts with the flexibility set out earlier in the consultation document, and also reduces the potential of making effective use of the land for housing that will assist in meeting the overall need of the District.

4.16 Policy A13 prescribes a number of requirements that must be met (criterion 1 – 16). These are considerations that reflect principles of place making and sustainable development and provide a sound framework for the preparation of the allocation through either mechanism.

4.17 One of these requirements states that future development "Provide[s] any required mitigation to ensure there is no adverse impact on the safety of existing or planned railway crossings." The existing Southbourne Neighbourhood Plan, at Objective 9, outlines the issues relating to the railway crossing and the plans for addressing this challenge in the future.

4.18 Related to this is the need for the provision of "suitable means of access to the site(s), securing necessary off-site

improvements (including highways) ... to promote sustainable transport options.”

4.19 The combination of the requirements relating to the railway crossing and the provision of a suitable means of access show the importance of accessibility to the A27, A259 and the east-west railway line, which are the principal public transport corridors for Southbourne.

4.20 Development will be well connected to Southbourne via footway and cycle connections to the east and offers the opportunity to help realise the construction of a new strategic road and bridge link over the West Coastway Rail Line through provision of land and proportionate contributions to this scheme.

4.21 Criteria 13 ensures there will be sufficient capacity within the relevant wastewater infrastructure before the delivery of development, which addresses (for Southbourne) the identified constraints for the District in relation to housing delivery.

4.22 The remaining requirements of Policy A13 cover the quality and range of development, the provision of education, community and transport facilities, provision of public open space and green infrastructure, and the impact of development on the landscape. These are each appropriate considerations for the Site Allocations DPD.

4.23 Having regard to the above, the allocation of 1,050 dwellings for Southbourne is, in part, appropriate.

4.24 However, this policy should allow for the delivery of small or medium scale parcels of land, in accordance with the NPPF at an early stage of delivery of the wider allocation to enable prompt and timely housing at Southbourne whilst infrastructure upgrades are commenced. The Local Plan should identify and allocate these smaller scale sites to ensure these can come forward early in the plan period.

4.25 A new criteria is proposed to be included in the wording of Policy A13, stating:

(17) To identify land for early delivery on small to medium scale sites which are not constrained by the need for a new railway crossing.

4.26 Therefore, the principle of a strategic allocation for mixed use housing is considered appropriate but amendments should be made to the wording of the policy to reflect the approach to flexibility, the inclusion of small and medium scale sites, and the dispersion of development to both the west and east of Southbourne.

Southbourne Neighbourhood Plan

4.27 As set out in the paragraph 10.56 of the Submission Plan, development phasing is a key issue to address through the allocation of development sites for this BLD.

4.28 Paragraph 70 of the NPPF states that “Neighbourhood planning groups should also consider the opportunities for allocating small and medium-sized sites suitable for housing in their area.” Southbourne Parish Council should be aware of this when allocating the strategic sites, to ensure that there are a mix of housing sites, that could come forward sooner than the principal element of the larger strategic site.

4.29 Through the preparation of the Neighbourhood Plan, the Parish Council should take into account the allocation of smaller sites, which could come forward as part of and alongside the larger strategic site. This will ensure that there is not a delay in the provision of housing within Southbourne and the plan area.

4.30 As set out previously, the most suitable mechanism for progressing the Southbourne BLD would be the Site Allocation DPD. Whether the sites are allocated through the Site Allocations DPD or the NP, there is a requirement to identify small and medium scale site.

Land to the north of Gosden Green

4.31 The land under Hallam’s control to the north of Gosden Green, should either be allocated in the Local Plan as a medium scale site or should be a key component of the BLD. The site can deliver both market/affordable residential units and specialist elderly accommodation. The site will create flexibility in achieving the housing requirement of the plan area early on in the plan period.

4.32 The accompanying Vision Document demonstrates how as an early development parcel for the wider BLD, a series of key benefits in accordance with the 13 criteria of Policy A13 will be achieved.

4.33 The Proposed Submission Plan at Policy H8 identifies the need for specialist accommodation for older people and those with specialist needs. Although not set out in the Vision Document, this site can deliver, early in the plan period, much needed specialist elderly accommodation.

4.34 Figure 3 of the Vision Document presents the scheme’s ability to connect into a wider masterplan for the strategic development, as it comes forward in the future. However, at the same time has the ability to come forward at an earlier rate being physically unconstrained and a well contained parcel of land.

4.35 Figure 9 provides context on connectivity, and the modal shift this scheme aims to achieve. The ability to walk to a range of services and facilities, including the train station further demonstrates the ability for the early delivery of this parcel of the BLD.

4.36 The impact of the highways network has been assessed for both a full residential scheme and specialist elderly housing, highlighting how the residential scheme will introduce approximately 55 new vehicles to the network at peak times, resulting in less than 1 car per minute in the peak hour. Either scheme will have a negligible impact on the highway network and would have a negligible impact on A27.

4.37 The site is to the south of the railway line, as previously mentioned, and would be unconstrained by the capacity constraint of the existing railway crossing.

4.38 For these reasons, the land under Hallam's control should be allocated within the Local Plan.

5 Conclusion

5.1 These representations are submitted on behalf of Hallam Land Management Limited.

5.2 In the context of national, local and neighbourhood planning policies, the Local Plan has an important role in providing policies and proposals for residential development to meet future needs.

5.3 The proposed objectively assessed need for housing across the plan area is not agreed, and the Council should review the latest transport evidence which currently do not demonstrate how there are exception circumstances, in accordance with paragraph 62 of the NPPF. The Council should also extend the plan period to ensure it meets the requirements of a minimum of 15 years in the NPPF.

5.4 Consistent with the established strategy to focus development in the District's east-west corridor, the Broad Location for Development to Southbourne as a Settlement Hub is, as a matter of principle, a sound proposition. Importantly the Key Diagram identifies the broad location for this development to the west and east of the settlement.

5.5 As discussed, there should be flexibility embedded into all strategic allocations, in particular those which are Broad Locations for Development through the use of the wording "at least". This will ensure that the "at least" quantum of housing delivery is met and affords flexibility to all housing sites coming forward.

5.6 The responsibility for allocating additional development land to meet this requirement has been given to either the Parish Council through the preparation of a new Neighbourhood Plan or through the Council reviewing the Site Allocations DPD. It is recommended that for the larger strategic allocations and locations the Site Allocations DPD is the more suitable mechanism for identifying land given the need to ensure that proposals are sound.

5.7 Whilst the scale of development proposed is strategic in nature, it is entirely appropriate to consider how different development parcels might contribute towards that and in particular early opportunities that facilitate larger scale development later in the plan period.

5.8 To this end, land to the west of Southbourne and south of the railway line could be allocated as the first phase of the strategic site allocation, as a medium size site, so that this southern section of the new link road is built to enable access to land to the north. This will reduce the pressure placed on the centre of Southbourne, the highway capacity on the A27, and the existing railway crossing.

5.9 By allocating small to medium scale sites in the Local Plan, this will bring forward development at a quicker pace and ensure that the objectively assessed needs for housing across the plan area are met each year. These can be delivered without prejudice to the larger strategic allocations and locations.

5.10 Currently, the Submission Plan fails to address the increasing need for specialist accommodation, with Policy H8 failing to secure specific delivery of such housing, instead moving this matter into major development schemes with no mechanism for assessing need at that stage. It is recommended that the Local Plan allocates sites for specialist accommodation.

5.11 Hallam control land to the west of Southbourne, which adjoins the land at Gosden Green which has already been built. The land controlled by Hallam could be: allocated as a medium scale site within the Local Plan; included as part of the western strategic allocation of Broad Location for Development at Southbourne; or could be allocated for specialist elderly accommodation, ensuring land is readily available for development early in the plan period to address identified needs.

5.12 This would be consistent with the development strategy for the Plan and positively contribute towards meeting future development needs of the plan area.

5.13 These representations have demonstrated that in part the Submission Plan has been positively prepared and justified, however the key recommendations in these Representations should be followed to ensure the plan preparation accords with Paragraph 35 of the NPPF.

Support

Document Element: Strategic Objectives, 2.54

Respondent: National Highways (Mr Marius Pieters, Spatial Planning Manager) [8127]

Summary:

[National Highways letter dated 24/07/23 confirmed representation should be categorised as Comment - Support.] We support:

- Objective 1 (Climate change) (para 2.54). This objective helps to support National Highways Net Zero objectives.
- Objective 4: (Employment and economy). This objective may help to reduce the need to travel long distances, increase community self-containment and support short walking and cycling trips
- Objective 7: (Strategic Infrastructure). This objective will help to reduce demand and reliance on the A27 especially in peak periods.

Full text:

We have reviewed the publicly available Local Plan documents and provided comments in the attached letter, in relation to the transport implications of the plan for the safety and operation of the SRN.

Our comments include issues to resolve, comments, requests for further information and recommendations. A brief summary of our main comments are:

- the reliance on the delivery of the A27 Chichester bypass improvements project.
- the requirements for new, additional, and adapted processes and assessments, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments.
- collaborative working between agencies in combination with a robust monitor and manage policy.

We hope our comments assist.

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSSCC) and we will continue to work with the Council and other key stakeholders. We look forward to continuing to participate in future consultations and discussions.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Background

National Highways has been appointed by the Secretary of State for Transport as strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the strategic road network (SRN).

National Highways is responsible for operating, maintaining, and improving the Strategic Road Network (SRN) i.e., the Trunk Road and Motorway Network in England, as laid down in Department for Transport (DfT) Circular 01/2022 (Strategic Road Network and the delivery of sustainable development).

The SRN is a critical national asset and as such we work to ensure that it operates and is managed in the public interest, both in respect of current activities and needs as well as in providing effective stewardship of its long-term operation and integrity.

Our responses to Local Plan consultations are guided by relevant policy and guidance including the National Planning Policy Framework (2021) (NPPF):

- Transport issues should be considered from the earliest stages of plan-making and development proposals so that the potential impact of development on transport networks can be addressed (para 104).
- The planning system should actively manage patterns of growth such that significant development is focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. (para 105).
- Planning policies should be prepared with the active involvement of highways authorities and other transport infrastructure providers so that strategies and investments for supporting sustainable transport and development patterns are aligned. (para 106).
- In terms of identifying the necessity of transport infrastructure, NPPF confirms that development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe. (para 111).
- Planning policies and decisions should support development that makes efficient use of land, taking into account the availability and capacity of infrastructure and services – both existing and proposed – as well as their potential for further improvement and the scope to promote sustainable travel modes that limit future car use. (para 124).

In relation to the tests of soundness set out at paragraph 35 of the NPPF, in the context of transport, these are interpreted as meaning:

- a) Positively prepared - has the transport strategy been prepared with the active involvement of the highway authorities, other transport infrastructure providers and operators and neighbouring councils?
- b) Justified – Is the transport strategy based on a robust evidence base prepared with the agreement in partnership, or with the support of the highway authorities?
- c) Effective – Does the transport strategy and policy satisfy the transport needs of the plan and is it deliverable at a pace which provides for and accommodates the proposed progress and implementation of the plan?
- d) Consistent with national policy – Does the transport strategy support the economic, social, and environmental objectives of the Plan and the NPPF/NPPG?

We will be concerned with proposals that have the potential to impact on the safe and efficient operation of the SRN; in this case, the A27 trunk road (Chichester Bypass and its junctions) which is the main access route in the Chichester area. We have particular interest in any allocation, policy or proposals which could have implications for the A27 and the wider SRN network. We are interested as to whether there would be any adverse road safety or operational implications for the SRN. The latter would include a material increase in queueing or delay or reduction in journey time reliability during the construction or operation of the development set out in the plan.

National Highways is a key delivery partner for sustainable development promoted through the plan-led system, and as a statutory consultee we have a duty to cooperate with local authorities to support the preparation and implementation of development plan documents.

In accordance with national planning and transport policy and our operating licence, we are entirely neutral on the principle of development as it is for the local planning authority to determine whether development should be allocated or permitted; albeit it must comply with national policy on locating development in locations that are or can be made sustainable. Therefore, while always seeking early and fulsome engagement with local plans and/or developers, we will simply be assessing the transport and related implications of plans or proposals and agreeing any necessary transport improvements and relevant development management policy.

In progressing Local Plans, we will seek to agree the following:

- Assessment tools and methodology
- Baseline Assessment i.e., to demonstrate that the assessment tool accurately reflects current transport conditions
- Comparator case assessment i.e., to forecast the transport conditions that would occur in the absence of the plan
- Forecast modelling i.e., to forecast the transport conditions that would arise with the plan in place, this will include an assessment at the end of the Plan period; and, if required, at full build out if that occurs after the end of the Plan period
- Outputs and outcomes of modelling, demonstrating, as appropriate, what transport infrastructure is necessary to

support the plan o It should be noted that a suite of transport modelling tools may be required. This includes strategic modelling covering an area at least one major junction beyond the district boundary, localised network modelling where several links/junctions are close together and/or individual junction modelling

o A DMRB (Design Manual for Roads and Bridges) compliancy assessment may also be required for certain highway features, such as

Merge/Diverge assessment at Grade separated junctions, link capacity assessments, and others.

- The design of any necessary transport infrastructure, to an extent suitable for establishing deliverability during the plan period at the time that it becomes necessary for the purpose of ensuring that unacceptable road safety impacts or severe operational impacts do not arise as a result of development. This may be to at least General Arrangement design stage or preliminary design stage. Whichever degree of detail is agreed, the products must be in full compliance with the DMRB.

- Industry standard transport intervention costings.

- The delivery/funding mechanisms for necessary transport interventions. It should not be assumed that National Highways will have any responsibility to identify or deliver necessary transport interventions.

- If considered appropriate, a "Monitor & Manage" (M&M) framework, aimed at managing the pace of development in line with the pace of funding and delivery of necessary highway interventions in a manner which responds to the realworld impacts of development may be agreed for inclusion in the plan subject to the adequacy of risk control measures included therein. This can include the move from a 'predict & provide' style of delivery to 'a vision & validate' style. o Any M&M framework must be based on a "worst case scenario" whereby necessary mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. It must be translated into development management plan policy and policy relating to development allocations.

Further detail on the above can be provided by National Highways.

While ideally all the above should be agreed prior to the Submission of the Local Plan for examination, we recognise that this is not always possible. However, all parties should work towards all matters being agreed and reflected in a Statement of Common Ground (SoCG) by the start of the Local Plan Examination at the latest. Ideally the SoCG between the Council and National Highways would be prepared well in advance of plan submission in order to guide resource input and to track progress towards final agreement on all relevant matters starting from the earliest plan iterations until the final version is agreed.

It is acknowledged that Government policy places much emphasis on housing delivery as a means for ensuring economic growth and addressing the current national shortage of housing. The NPPF is very clear that:

"Strategic policy-making authorities should establish a housing requirement figure for their whole area, which shows the extent to which their identified housing need (and any needs that cannot be met within neighbouring areas) can be met over the plan period."

However, new DfT C1/22 and the NPPF are equally clear that any development, including housing delivery, must be tempered by the requirement to ensure that the associated transport demand can be accommodated without unacceptable impacts on the safety of the SRN or severe impacts on the operation of the SRN including reliability and congestion. Therefore, as necessary and appropriate, any plan and/or development must be accompanied by suitable mitigation in the right places at the right time, that is to the required design standards and is deliverable in terms of land availability, constructability and funding.

We would also draw your attention to the then Highways England document 'The Strategic Road Network, Planning for the Future: A guide to working with National Highways on planning matters' (September 2015). This document sets out how National Highways intends to work with local planning authorities and developers to support the preparation of sound documents which enable the delivery of sustainable development. https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_t_data/file/461023/N150227_-_Highways_England_Planning_Document_FINAL-lo.pdf

Responses to Local Plan consultations are also guided by National Planning Policy Framework (NPPF) revised on 20 July 2021 which sets out the government's planning policies for England and how these are expected to be applied.

Updated Circular (01/2022)

It should be noted that since the start of the Local Plan consultation process, on the 23 December 2022, the Department for Transport released a new circular on the 'Strategic road network and the delivery of sustainable development' (Circular 01/2022), which replaces all of the policies in Circular 02/2013 of the same name. These representations take account of the new circular and the requirements in terms of the Local Plan evidence base and process.

We request that the Local Plan is prepared in line with all aspects of the new circular. Particularly, the principles of sustainable development (paragraphs 11 to 17), new connections and capacity enhancements (paragraphs 18 to 25), and engagement with plan-making (paragraphs 26 to 38).

Regulation 18 submission

In our Regulation 18 submission we noted several matters including:

- The need to mitigate the adverse impacts of strategic development traffic to the A27 Chichester Bypass and its junctions at Portfield Roundabout, Bognor Road Roundabout, Whyke Roundabout, Stockbridge Roundabout and Fishbourne Roundabout and Oving junction.
- The need to identify a mechanism to calculate contributions towards the delivery of the previously agreed Local Plan A27 improvements
- The need to confirm the number of dwellings needed within the plan period
- The need to establish National Highways acceptance of the traffic model reference and future case scenarios
- The need to confirm costs, viability, and funding associated with mitigating the safety and congestion impacts of the development included within the plan.

Local Plan context

This Local Plan (Chichester Local Plan 2021 – 2039), prepared by the Local Planning Authority (LPA) Chichester District Council, sets out the vision for future development in the district and will be used to help decide on planning applications and other planning related decisions including shaping infrastructure investments.

The draft sets out how the district should be developed over the next 18-years to 2039 including for the full Plan period (1 April 2021 to 31 March 2039) the total supply of

- 10,359 dwellings

- 114,652 net additional sqm new floorspace

Minus the completions this is equivalent to around 530 dwellings and 6,150 sqm of floorspace a year.

National Highways Representations

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders.

We have undertaken a review of the Chichester Local Plan 2021-2039 proposed submission version and accompanying evidence documents, our comments are set out in the tables below (following pages). [see table within attachment]

Summary

We have reviewed the publicly available Local Plan documents and provided comments above in relation to the transport implications of the plan for the safety and operation of the SRN. We understand that other technical information is available, but this was not presented as part of this consultation.

Chichester, and the A27, are already heavily congested, infrastructure in the existing Local Plan remains undelivered and the growth set out in the new Plan will further increase travel demand.

As presented, satisfying the transport needs of the plan is clearly reliant on the delivery of the A27 Chichester bypass improvements project. The A27 Chichester bypass improvements project is one of 32 pipeline schemes being considered for possible inclusion in National Highways third Road Investment Strategy (RIS3) covering 1 April 2025 to 31 March 2030.

On 9 March 2023 the UK Transport Secretary ensured record funding would be invested in the country's transport network, sustainably driving growth across the country while managing the pressures of inflation. The announcement cited the A27 Arundel Bypass as being deferred from RIS2 to RIS 3 (covering 2025-2030). The transport secretary also identified a number of challenges to the delivery of the road investment strategy and cited the benefit of allowing extra time to ensure schemes are better planned and efficient schemes can be deployed more effectively.

At present, there is no commitment by DfT to carry out the A27 Chichester bypass improvements project. Until the A27 Chichester bypass improvements project is published in the RIS3, consented and a decision to invest is made it cannot be assumed to be a committed project.

We note that the Plan does not address any uncertainty of delivery of the A27 Chichester bypass improvements project and we strongly recommend that there is either no reliance placed on RIS3 to realise capacity for growth in the Plan or that contingency measures are included to cover the eventuality that RIS3 funding is not forthcoming within the plan period. It is not clear that the potential impact of development on transport networks can be addressed in the absence of the A27 Chichester bypass improvements project.

Achieving net zero, reducing emissions reduction, acting on climate, and supporting thousands of new homes and new employment developments will be problematic with existing processes. New, additional, and adapted processes and assessments will likely be required, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments. We acknowledge that change is complex, expensive, and time-consuming, especially for smaller district level Councils. But the hard work will deliver benefits for the Council and residents in the longer-term.

National Highways seeks to continue working with the Council and WSCC to progress coordinated and deliverable packages of interim mitigation measures and alternative transport solutions while a long-term strategic solution is considered by government. This must however be in combination with a robust monitor and manage policy that appropriately manages the risk of unacceptable road impacts resulting from new housing and other development over the Plan period.

We have been in discussion with Chichester District Council regarding their proposed Monitor and Manage Strategy. At present, we do not consider the current strategy to be robust and we seek further information and detail especially on who, when and when monitoring and management will be undertaken. Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when

planning for growth in all local authority areas. Any M&M framework must be based on a “worst case scenario” whereby necessary transport mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. The M&M framework must set out that the alternative to mitigation not being delivered is that development does not proceed where that development would give rise to unacceptable road safety risk or severe cumulative impacts on the road network in the absence of that mitigation. The M&M framework must be translated into development management plan policy and policy relating to development allocations.

As we have reiterated throughout our comments, we welcome the opportunity to work with you to address these outstanding matters and we will continue to liaise over submitted Transport Assessment, Travel Plan policy and Monitor and Manage Policy to help to work towards a viable plan.

We hope our comments assist.

We look forward to continuing to participate in future consultations and discussions. Please do continue to consult us as the Plan progresses so that we can remain aware of, and comment as required on, its contents.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Full text:

We absolutely support this aspiration; however by default the Plan fails to deliver this in any meaningful way. The levels of housing development proposed are incompatible with the aspirations outlined. The south of the district occupies low-lying coastal plain, which is highly vulnerable to coastal change and sea level rise. Ground water levels are high, leading to frequent flooding. Conversely, the region also suffers from water scarcity issues due to climate change. As a matter of course, most new developments in the area are highly car-reliant, as the public transport and cycling infrastructure is not able to provide a viable alternative.

Full text:

Thank you for the opportunity to comment on the Draft Chichester District Local Plan 2021-39. We would suggest that there has been insufficient public consultation to date. We commented on the draft Local Plan for 2015, on the Preferred Options in 2019 and there have been many changes in Government policy and commitments since then to include Climate Change, Net Zero and commitments made at COP 26 and 27 to include reducing methane emissions etc. With regards to this consultation we recognise the importance of a plan-led system and support Chichester District Council's (CDC) desire to produce a comprehensive Local Plan. CPRE Sussex wishes to contribute to policies concerning landscape, rural areas, communities, environment and wildlife drawing on evidence and local knowledge.

CONTEXT

1. Examining the previous government consultation which closed on March 2nd, ie the Levelling-up and Regeneration Bill including some aspects of the National Planning Policy Framework, NPPF, there are some issues which would impact on this Local Plan and need consideration.

1.1 That consultation included important changes to the way in which the 5 year housing land supply is calculated, and the timetable for making Local Plans. They are of significance to local councils, especially those with Neighbourhood Plans. Some measures will take effect almost immediately through an update to the existing NPPF in Spring 2023. Others will follow later in the year or in 2024. Surely such consultations should be better phased to make plan development more logical and access to consultations easier?

2. Communities: Our group welcomed the overall shift in emphasis towards communities. Mind you, while the word is used 121 times in the Prospectus it does not appear in the draft NPPF! We would expect much more emphasis on the importance of communities in any forthcoming consultations. Earlier and more effective engagement with communities could help to lead to a less confrontational planning system with an emphasis on active participation.

3 Time required – a lot of time is needed to understand and implement such policies and a searchable on-line version would be very helpful; and, consideration also needs to be extended to those people in the community who are not computerised.

4 We take the word "sufficient" with regard to housing numbers to be equivalent to that which is "needed" and the current Standard Method does not establish that figure. Our MP, the Rt Hon Andrew Griffith, Arundel and South Downs, referred to the approach to developing housing numbers as a mutant algorithm.

4.1 Specifically, the changes to housing targets, to make them 'advisory', are welcome. However, we should remind you that the Government continues to insist on using out-of-date projections (2014). The current ONS population estimates are 1 million less people in the population than allowed for in the figures used to so that the reliance on the 2014 figures is completely out of date. The emphasis should always be on using current up to date evidenceand to use those out-of-date figures produces the wrong results and does not conform with the need to use up to date information. In addition, this would require an immediate change to the guidance to insist (as previously) on the most up-to-date projections.

4.2 We also recommended a review of the Standard Method, which does not make housing affordable and simply

supports developers to build market homes where they want to. The graph above illustrates the gap between projection and current population figure provided by the Community Planning Association.

4.3 Local Planning Authorities, LPAs, were also given an opportunity to put forward alternatives to the Standard Method and to name the specific constraints faced. Our contribution to that consultation referred to the:

- Reduction of land available to the CDC given the creation of the South Downs National Park, SDNP
- English Channel
- SDNP itself
- Range of internationally important designated sites
- Rare species and habitats
- River flood plains
- Water neutrality in part of the District
- Nutrient neutrality in the Solent
- Sea Level Rise
- Inadequate infrastructure – roads/lanes and local transport; sewage treatment; community facilities such as medical centres, shops; and

4.4 There have already been large housing commitments, loosely put on “flat green land” around Chichester and now CDC is eyeing the “empty” north of the District with allocations being made for Loxwood and an increase in the number of houses being sought in Wisborough Green. Such land supports wildlife which often may not be under recorded as it is private land. Areas in both of those Parishes has been “cleared” of biological interest but the BNG established a baseline of 2020 and google maps can show the state of the environment at that date. The commitment to safeguarding biodiversity needs to be pursued carefully and consistently.

COMMENTS ON THE CDC LOCAL PLAN 2021-2039 REG19 proposed submission comments: the comments cite the para and/or Chapter number

5. At this phase in the local plan process the scope of the invited representations is limited to whether the Plan that has been produced is:

- a) legally compliant (i.e., whether it meets the legal requirements); and
- b) sound (i.e., whether it has been positively prepared, is justified, is effective and is consistent with national policy) and I would ADD whether it is forward thinking enough as it is planned to last until 2039.

5.1 The plan area is split in to three areas, each with different characteristics, landscapes and access to services:

- a) • The East-West Corridor, running across the width of the plan area, is varied in landscape with the inclusion of both larger settlements (including the city) and rural villages. It has the best transport connections and access to facilities in the plan area with the A27 and railway running through-out.
- b) The Manhood Peninsula* MP, located in the south of the plan area, jutting out into the English Channel, is rich in coastal landscapes with the majority of the area covered by environmental designations. It also includes some of the plan area’s larger settlements which rely heavily on limited road accessibility to the north towards Chichester city.
- c) The North of the Plan Area is primarily rural in character with diverse landscapes, rich cultural and heritage assets and a number of dispersed settlements, some of which are relatively isolated and served by narrow lanes with limited public transport

*NB The population on the MP is dispersed in a rural landscape and equals that of Chichester. The description for the North section could just as easily have been used for the MP.

Chapter 2 and Local Plan Vision

These Objectives will need to underlie every aspect of the document.

5.2 P 23: Para 2.25 Replace the word “site” by “area” and insert forming part of a diverse set of wetlands (Ditches, Rifes, Ponds, Saline lagoons and a small section of Canal). Info: The Medmerry site is no longer the largest eg having been overtaken in area by the Steart Marshes, Somerset.

5.3 Include mention of rare habitats and species and the role of Selsey Bill in facilitating arrivals and departures of bats, butterflies and birds. That’s its USP,

6.1 P 25 Local Plan Vision and Strategic Objectives p 30 Objective 1: CLIMATE CHANGE

This section does not reflect the urgency of the issue nor the vulnerability of parts of Sussex. Many scientists are pointing to Sea Level Rise, SLR, speeding up and some of them cite a 10 year window in which to act ie so that before this Local Plan has run its course, areas on the coast including the coastal plain and the Manhood Peninsula could well be adversely affected. This would have an immediate impact on housing, facilities and transport links and could lead to the local population having to move.

6.2 Actions related to this particular objective need to be included in all the following objectives. The south of the District is very vulnerable and the rest of the District will experience very intensive rainfall, water shortages (NE/EA 2013 report) and hot summers.

6.2 Policies need to include not building on areas below 5m high Water Level. The CDC Climate Change officer should host meetings to consider potential plans for putting houses on stilts, moving people to land safe from flooding and re-directing roads, cycle ways and footpaths to facilitate future access.

6.3 Evidence: See the Surging Seas and NASA websites for prediction of Sea Level Rise. Need to include reference to the UK Climate Resilience Programme jointly led by UK Research and Innovation, UKRI, and the Met Office which was set up to fund research “to help understand how to quantify the risks from climate change and build climate resilience for the UK, This research should produce “usable outputs” to “directly support decision-making” by government, local authorities, communities and other stakeholders

6.3.1 Every area of UK society will feel the effects of climate change and, as global emissions continue to rise, pre-paring for life in a warmer world is crucial. Findings were discussed last week by the UK ranging from assessments of elderly people overheating in care homes through to building community-run water storage.

6.3.2 Every area of UK society will feel the effects of climate change and, as global emissions continue to rise, preparing

for life in a warmer world is crucial.

6.2.2.i In early March, UKTI and Met office researchers involved with the programme gathered to present and discuss their findings. They ranged from assessments of elderly people overheating in care homes through to building community-run water storage. These items and website need to be referenced in the evidence section.

6.3.3 The key points are intended to help businesses and policymakers adapt to climate change.

6.3.4 Many focused on “climate services” defined as involving the “production, translation, transfer and use of climate knowledge and information in climate-informed decision making”.

6.3.5 Climate services could be an important tool for adaptation because they can provide people with the relevant information to prepare for climate change.

6.3.6 Representatives from the Met Office laid out their recommendations for a UK National Framework for Climate Services. And said they wanted to provide a “driving force” for the nation’s climate services community and help ensure that “adaptation action actually does get done”.

6.4.7 UK ‘SSPs’

“Shared socioeconomic pathways” (SSPs) are tools used by researchers to explore how society will change in the future. This can help them to answer important questions about climate change. As there were no UK-specific versions of SSPs available to complement the UKCP18 climate projections

Ref: The importance of Adaptive Resilience Solutions in the Face of Climate Threats.

Recommendation: This report needs to be drawn on and form part of the evidence base.

7.1 Objective 2: NATURAL ENVIRONMENT Work with site managers of the Designated Sites and NGOs in the wider environment. This objective is vitally important and welcome and its importance needs to be reflected in all parts of the plan to include Wildlife Corridors, Biodiversity Net Gain and the Nature Recovery Network.

Sir David Attenborough

“It may sound frightening, but the scientific evidence is that if we have not taken dramatic action within the next decade, we could face irreversible damage to the natural world and the collapse of our societies.”

7.1.1 The emergency concerning Biodiversity also needs to be communicated.

Para 2.32: Agree – this (climate emergency) is the most urgent issue facing us all together with the Biodiversity Emergency (declared by IPBWS, 2019).

7.1.2 Info: The ESPACE project European Spatial Planning: Adapting to Climate Events (ESPACE) was a four-year project funded by the European Commission’s north-west Europe INTERREG IIIB programme and the ODPM. It produced a Climate Action Plan for the Manhood Peninsula in 2008 and not much action has followed to implement this. Perhaps it needs dusting off and re-visiting and including within the Local Plan?

7.2 Add policy:

PROPOSED Ecosystem Services Policy

7.2.1 CPRE Sussex considers that the Chichester Local Plan 2021 - 2039 should include a policy specifically for Ecosystem Services for the following reasons:

1. NPPF para 174. Planning policies and decisions should contribute to and enhance the natural and local environment by:

- a) protecting and enhancing valued landscapes, sites of biodiversity or geological value and soils (in a manner commensurate with their statutory status or identified quality in the development plan);
- b) recognising the intrinsic character and beauty of the countryside, and the wider benefits from natural capital and ecosystem services – including the economic and other benefits of the best and most versatile agricultural land, and of trees and woodland

7.2.2 ‘Natural capital refers to the elements of nature that produce value to people –whether directly or indirectly. Our natural capital ‘assets’ are the stocks of renewable and non-renewable natural capital such as our soils, freshwater, farmland, forests, atmosphere, oceans, ecological processes and the natural processes that underpin them. The flows of ecosystem services and benefits that our natural capital provides can be very obvious such as food, fuel, clean air, clean water, and opportunities for recreation. Others are much less visible, such as climate regulation, flood defences provided by natural vegetation, the billions of tonnes of carbon stored by peatlands and other habitats and the pollination of crops by insects’. (Sussex Local Nature Partnership <http://sussexlnp.org.uk/natural-capital/>)

7.3 Accordingly, we propose an Ecosystem Services policy (an adaptation of South Downs Park Authority’s Core Policy SD2: Ecosystem Services’), be added as follows:

1. Development proposals will be permitted where they have an overall positive impact on the ability of the natural environment to contribute goods and services. This will be achieved by means of high-quality design, and by delivering all opportunities to:

- a) Sustainably manage land and water environments;
- b) Protect and provide more, better and joined up natural habitats;
- c) Conserve water resources and improve water quality;
- d) Manage and mitigate the risk of flooding;
- e) Improve the District’s resilience to, and mitigation of, climate change;
- f) Increase the ability to store carbon through the retention of existing woodland, new planting or other means;
- g) Conserve and enhance soils, use soils sustainably and protect the best and most versatile agricultural land;
- h) Support the sustainable production and use of food, forestry and raw materials;
- i) Reduce levels of pollution;
- j) Improve opportunities for peoples’ health and wellbeing; and
- k) Provide opportunities for access to the natural and cultural resources which contribute to the District’s special qualities.

2. The Environment Act 2021 will require the production of a Nature Recovery Network and more locally a Local Nature Recovery Strategy. The Strategic Wildlife Corridors in Chichester District will be integral components of that local

network. The importance of local networks in Nature Recovery Networks is highlighted in NPPG

7.3.4 Policy NE 4 Strategic Wildlife Corridors

CPRE Sussex supports this policy, Strategic Wildlife Corridors as part of the Local Plan process, conform with section 179 of the NPPF 2021 which is well-evidenced. However, CPRE Sussex wishes to question the size of the corridors ie the width/

Information provided in the 2021 consultation appears to demonstrate that these areas have been downsized such as those put alongside the East of the City Corridor, it appears that there has been a narrowing of the Strategic Wildlife Corridor around the location of the proposed allocations of A8, Chapter 10: Strategic and Area Based Allocations Land East of Chichester and potential A7, Land at Shopwyke. The Corridor to the East of Chichester was proposed for connectivity and functional links to the area for the rare and European Protected Species of Barbastelle Bats. It is shown on CDC technical consultation documents as a bat network

This does not conform with the Natural Environment & Rural Communities Act, NERC, 2006 and Section 40 subsection 3a as it would destroy a habitat over which the Barbastelle Bat has been recorded, a Section 41 species. And it is the DUTY of the Local Authority to safeguard these species. There should be NO recreational use in the buffer zones.

8. Green Infrastructure: p 160 and Policy P 14 d Submission (Regulation 19)

8.1 Local Green Space

6.82. The NPPF includes the concept of Local Green Space designation. This is a discretionary designation and sites may be identified and included in either local or neighbourhood plans. The designation should only be used as defined by the criteria in the NPPF where the land is not extensive, is local in character and reasonably close to the community; and, where it is demonstrably special, for example because of its beauty, historic significance, recreational value (including as a playing field), tranquillity or richness of its wildlife. Any areas which fall outside a neighbourhood plan area and where such designation is sought, will be considered by the subsequent Site Allocations DPD that will cover the remainder of the plan area. Policies for managing development within a Local Green Space should be consistent with those for Green Belts.

8.2 Parishes should be encouraged to look into such areas to be included in Neighbourhood Plans.

9. Renewable Energy: General policy

9.1 Housing p 103:

CPRE Sussex considers that the Chichester Local Plan should include a policy requiring all new-build homes to be equipped and sold with solar PV panels, roof or wall mounted.

9.2 Although the Chichester District Local Plan, at Para 6.15, states that 'Design proposals should respond to the opportunities a site presents to make best use of solar gain where this can be achieved without compromising good urban design or creating issues of overheating', there is no requirement in any of the plan's policies for new-build homes to be equipped and sold with roof or wall mounted solar PV.

9.3 Note that West Sussex County Council has advised in their Solar Together initiative that "By generating electricity from the sun, you could reduce your annual carbon emissions by approximately one tonne each year and help West Sussex to become carbon neutral".

Note, too: <https://solartogether.co.uk/westsussex/blog/best-ways-to-increase-solar-self-consumption>

9.4 "According to the University of Oxford findings, UK households with solar PV self-consume 45% of their own solar generation on average and reduce annual electricity demand from the grid by 24%. With additional adjustments, this reduction of 24% can be increased to over 35%".

9.5 New-build homes in Chichester District should therefore be equipped with solar P V panels. We question the statement in Para 6.15 that 'solar gain' could create 'issues of overheating'. Surely this can be prevented by good design?

9.6 There are additional opportunities for solar installations on school rooves (Brighton Sustainable Energy Co-op has many examples), car parks, industrial buildings et al.

10.0 Renewable Energy: Specific location Wisborough Green 75 additional houses. Unacceptable – see CDC Capacity Study sub sections 166+167. Limitations – Ancient woodland; wildlife – rare habitats and species, river floodplain; Water neutrality; HRA with reference to the Mens Ancient Woodland and presence of European Protected Species, Barbastelle Bats flight paths and foraging across the parish. See Natural England report Site Improvement Report and reports by Frank Greenway, 2008 et al.

10.1 See Page 84: In the north of the plan area, properties within Southern Water's Sussex North Water Resource Zone are supplied with water from a groundwater abstraction at Pulborough which is currently subject to environmental investigations to ensure there is no adverse impact on environmentally designated sites in the Arun Valley. This may impact on the available supply and alternative sources may need to be considered by Southern Water. Natural England published a position statement in September 2021 requiring developments within the Sussex North Supply Zone to be water neutral – this means that the use of water in the supply area after the development is the same or lower than before. A Water Neutrality Strategy had been prepared jointly with other affected authorities. Natural England's Position Statement sets out an interim approach based on minimising water use in new builds and offsetting the water that is used

10.2 Water consumption target. It is noted that both Ports-mouth Water and Southern Water have targets to reduce water consumption to 100 litres per person per day (lppd) by 2040, a lower figure than the current most stringent Building Regulation target of 110 lppd and not that level which could be required for water neutrality.

10.3 The Local Plan is weak on impacts especially from the largest concentration of caravans at Selsey on Medmerry.

10.4 There is no wildlife corridor running east to west along the Manhood Peninsula ie Pagham to East Head and this undermines the importance of a positive barrier zone to protect the habitat. CDC have used the corridors for this barrier purpose possibly more than as a pathway throughout other parts of the plan.

10.5 Nutrient neutrality exclusion of a large area of the Peninsula from the protection zone is illogical as the same conditions exhibited in Chichester harbour (in the zone) exist at Pagham.

10.6 There is a 'tool' - "nutrient budget calculator March, 2022 version" – which gives an "n" factor for instance to

discharges from WWTW. There is no direct mention of its use at Chichester harbour and as the data on Pagham Harbour has yet to be made public, the role of Sidlesham WWTW has not been referred to. The "N" factor would probably be more restrictive on outflows from WWTW than the total discharge permits – and shows a lack of coordinated approach between the Environment Agency and Natural England.

10.7 There are two reports due to be published this month - the West Sussex Coast and Gt Brighton Board and Southern Water overall plan for drainage and waste water-the timing of the LP – is thus unable to take these two influential inputs into account and may have implications for the 'Soundness' of the plan as it moves forward.

10.8 No mention is included of Sidlesham WSTW which is operating at and beyond capacity resulting in new housing on the Manhood Peninsula dealing with waste water in gardens, in houses etc.

Pages 87 and 88: Paras 4.112 and 4.113 are contradictory.

Appendix F Monitoring Framework

Early in 2020 attended a Public Inquiry representing the Manhood Wildlife and Heritage Group and presented evidence about an application at Easton Farm where the implementation of an application had not been followed up, which had expanded like Topsy and which potentially could damage the Medmerry coastal realignment site with its runoff. CDC had not been on watch possibly through lack of staff and/or a lack of enforcement staff. The site had grown without permission. This section requires a firm commitment to monitoring and reporting back, not just a paper one.

Thank you for your attention.

Object

Document Element: Objective 1: Climate Change**Respondent:** Kingsbridge Estates Limited & Landlink Estates Limited [8084]**Agent:** Savills (Mr William Price, Planner) [7783]**Summary:**

The Local Plan is not positively prepared as it does not take the opportunities to fully align economic policy with environmental policy. This could be achieved by facilitating functional development within HDAs.

Full text:

The Council's declaration of a climate emergency is welcomed, however there is an opportunity to better align this the Council's economic strategy within the Local Plan.

Supporting the growth of the horticultural industry to include functionally associated uses, such as food processing/production and increased storage and distribution capabilities, would allow for greater food production on site. This in turn would allow for greater home grown food production and export to the rest of the UK. Accordingly, there would be a reduction in food miles as home-grown food consumption would increase. This would lead to a reduction in greenhouse gas emissions.

A wording of the HDA policy that facilitated the colocation of functionally linked elements of the food cluster would reduce the greenhouse gas emissions associated with the industry through reduce vehicular trip generation – Refer to Savills SREBR para 4.4.2 – effective storage and distribution hub at Runcton HDA would achieve reduction in food miles by 84000 per annum

Change suggested by respondent:

Reference to 'ancillary' with regard to the HDAs in relevant policies and supporting text should be modified to 'functionally linked' and include explanatory text clarifying that 'functionally linked' uses can include a range of activities including: food-related distribution; food manufacturing linked to the HDAs food preparation; on-site renewable energy to serve on-site activities; and R&D.

Full text:

While the Plan recognises climate change there is no forecast scenario of what climate the Plan is designed to cater for either in 2039 or any intervening years.

Change suggested by respondent:

The Plan should be revised to forecast how climate change may alter land use planning requirements over the period of the plan and demonstrate how the Plan is sufficiently flexible to the changes which will occur albeit the timing of these changes are uncertain. As an example it is clear that some existing areas of housing in the Manhood Peninsular are very vulnerable to flooding due to storm surges. Climate change will bring an increasing risk of such events and some housing areas should be identified in the Plan for such displacement to take place

Support

Document Element: Objective 1: Climate Change**Respondent:** National Highways (Mr Marius Pieters, Spatial Planning Manager) [8127]**Summary:**

[National Highways letter dated 24/07/23 confirmed representation should be categorised as Comment - Support.] - Objective 1 (Climate change) (para 2.54) "new development will be in accessible locations, designed to reduce reliance on the private car with convenient walking and cycling routes and public transport to access local facilities and open spaces".

This objective helps to supports National Highways Net Zero objectives

Full text:

We have reviewed the publicly available Local Plan documents and provided comments in the attached letter, in relation to the transport implications of the plan for the safety and operation of the SRN.

Our comments include issues to resolve, comments, requests for further information and recommendations. A brief summary of our main comments are:

- the reliance on the delivery of the A27 Chichester bypass improvements project.

- the requirements for new, additional, and adapted processes and assessments, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments.

- collaborative working between agencies in combination with a robust monitor and manage policy.
We hope our comments assist.

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders. We look forward to continuing to participate in future consultations and discussions.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Background

National Highways has been appointed by the Secretary of State for Transport as strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the strategic road network (SRN).

National Highways is responsible for operating, maintaining, and improving the Strategic Road Network (SRN) i.e., the Trunk Road and Motorway Network in England, as laid down in Department for Transport (DfT) Circular 01/2022 (Strategic Road Network and the delivery of sustainable development).

The SRN is a critical national asset and as such we work to ensure that it operates and is managed in the public interest, both in respect of current activities and needs as well as in providing effective stewardship of its long-term operation and integrity.

Our responses to Local Plan consultations are guided by relevant policy and guidance including the National Planning Policy Framework (2021) (NPPF):

- Transport issues should be considered from the earliest stages of plan-making and development proposals so that the potential impact of development on transport networks can be addressed (para 104).
- The planning system should actively manage patterns of growth such that significant development is focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. (para 105).
- Planning policies should be prepared with the active involvement of highways authorities and other transport infrastructure providers so that strategies and investments for supporting sustainable transport and development patterns are aligned. (para 106).
- In terms of identifying the necessity of transport infrastructure, NPPF confirms that development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe. (para 111).
- Planning policies and decisions should support development that makes efficient use of land, taking into account the availability and capacity of infrastructure and services – both existing and proposed – as well as their potential for further improvement and the scope to promote sustainable travel modes that limit future car use. (para 124).

In relation to the tests of soundness set out at paragraph 35 of the NPPF, in the context of transport, these are interpreted as meaning:

- a) Positively prepared - has the transport strategy been prepared with the active involvement of the highway authorities, other transport infrastructure providers and operators and neighbouring councils?
- b) Justified – Is the transport strategy based on a robust evidence base prepared with the agreement in partnership, or with the support of the highway authorities?
- c) Effective – Does the transport strategy and policy satisfy the transport needs of the plan and is it deliverable at a pace which provides for and accommodates the proposed progress and implementation of the plan?
- d) Consistent with national policy – Does the transport strategy support the economic, social, and environmental objectives of the Plan and the NPPF/NPPG?

We will be concerned with proposals that have the potential to impact on the safe and efficient operation of the SRN; in this case, the A27 trunk road (Chichester Bypass and its junctions) which is the main access route in the Chichester area. We have particular interest in any allocation, policy or proposals which could have implications for the A27 and the wider SRN network. We are interested as to whether there would be any adverse road safety or operational implications for the SRN. The latter would include a material increase in queueing or delay or reduction in journey time reliability during the construction or operation of the development set out in the plan.

National Highways is a key delivery partner for sustainable development promoted through the plan-led system, and as a statutory consultee we have a duty to cooperate with local authorities to support the preparation and implementation of development plan documents.

In accordance with national planning and transport policy and our operating licence, we are entirely neutral on the

principle of development as it is for the local planning authority to determine whether development should be allocated or permitted; albeit it must comply with national policy on locating development in locations that are or can be made sustainable. Therefore, while always seeking early and fulsome engagement with local plans and/or developers, we will simply be assessing the transport and related implications of plans or proposals and agreeing any necessary transport improvements and relevant development management policy.

In progressing Local Plans, we will seek to agree the following:

- Assessment tools and methodology
- Baseline Assessment i.e., to demonstrate that the assessment tool accurately reflects current transport conditions
- Comparator case assessment i.e., to forecast the transport conditions that would occur in the absence of the plan
- Forecast modelling i.e., to forecast the transport conditions that would arise with the plan in place, this will include an assessment at the end of the Plan period; and, if required, at full build out if that occurs after the end of the Plan period
- Outputs and outcomes of modelling, demonstrating, as appropriate, what transport infrastructure is necessary to support the plan o It should be noted that a suite of transport modelling tools may be required. This includes strategic modelling covering an area at least one major junction beyond the district boundary, localised network modelling where several links/junctions are close together and/or individual junction modelling
 - o A DMRB (Design Manual for Roads and Bridges) compliancy assessment may also be required for certain highway features, such as
 - o Merge/Diverge assessment at Grade separated junctions, link capacity assessments, and others.
- The design of any necessary transport infrastructure, to an extent suitable for establishing deliverability during the plan period at the time that it becomes necessary for the purpose of ensuring that unacceptable road safety impacts or severe operational impacts do not arise as a result of development. This may be to at least General Arrangement design stage or preliminary design stage. Whichever degree of detail is agreed, the products must be in full compliance with the DMRB.
- Industry standard transport intervention costings.
- The delivery/funding mechanisms for necessary transport interventions. It should not be assumed that National Highways will have any responsibility to identify or deliver necessary transport interventions.
- If considered appropriate, a "Monitor & Manage" (M&M) framework, aimed at managing the pace of development in line with the pace of funding and delivery of necessary highway interventions in a manner which responds to the realworld impacts of development may be agreed for inclusion in the plan subject to the adequacy of risk control measures included therein. This can include the move from a 'predict & provide' style of delivery to 'a vision & validate' style. o Any M&M framework must be based on a "worst case scenario" whereby necessary mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. It must be translated into development management plan policy and policy relating to development allocations.

Further detail on the above can be provided by National Highways.

While ideally all the above should be agreed prior to the Submission of the Local Plan for examination, we recognise that this is not always possible. However, all parties should work towards all matters being agreed and reflected in a Statement of Common Ground (SoCG) by the start of the Local Plan Examination at the latest. Ideally the SoCG between the Council and National Highways would be prepared well in advance of plan submission in order to guide resource input and to track progress towards final agreement on all relevant matters starting from the earliest plan iterations until the final version is agreed.

It is acknowledged that Government policy places much emphasis on housing delivery as a means for ensuring economic growth and addressing the current national shortage of housing. The NPPF is very clear that: "Strategic policy-making authorities should establish a housing requirement figure for their whole area, which shows the extent to which their identified housing need (and any needs that cannot be met within neighbouring areas) can be met over the plan period."

However, new DfT C1/22 and the NPPF are equally clear that any development, including housing delivery, must be tempered by the requirement to ensure that the associated transport demand can be accommodated without unacceptable impacts on the safety of the SRN or severe impacts on the operation of the SRN including reliability and congestion. Therefore, as necessary and appropriate, any plan and/or development must be accompanied by suitable mitigation in the right places at the right time, that is to the required design standards and is deliverable in terms of land availability, constructability and funding.

We would also draw your attention to the then Highways England document 'The Strategic Road Network, Planning for the Future: A guide to working with National Highways on planning matters' (September 2015). This document sets out how National Highways intends to work with local planning authorities and developers to support the preparation of sound documents which enable the delivery of sustainable development. https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_t_data/file/461023/N150227_-_Highways_England_Planning_Document_FINAL-lo.pdf

Responses to Local Plan consultations are also guided by National Planning Policy Framework (NPPF) revised on 20 July 2021 which sets out the government's planning policies for England and how these are expected to be applied.

Updated Circular (01/2022)

It should be noted that since the start of the Local Plan consultation process, on the 23 December 2022, the Department for Transport released a new circular on the 'Strategic road network and the delivery of sustainable development' (Circular 01/2022), which replaces all of the policies in Circular 02/2013 of the same name. These representations take account of the new circular and the requirements in terms of the Local Plan evidence base and process.

We request that the Local Plan is prepared in line with all aspects of the new circular. Particularly, the principles of sustainable development (paragraphs 11 to 17), new connections and capacity enhancements (paragraphs 18 to 25), and engagement with plan-making (paragraphs 26 to 38).

Regulation 18 submission

In our Regulation 18 submission we noted several matters including:

- The need to mitigate the adverse impacts of strategic development traffic to the A27 Chichester Bypass and its junctions at Portfield Roundabout, Bognor Road Roundabout, Whyke Roundabout, Stockbridge Roundabout and Fishbourne Roundabout and Oving junction.
- The need to identify a mechanism to calculate contributions towards the delivery of the previously agreed Local Plan A27 improvements
- The need to confirm the number of dwellings needed within the plan period
- The need to establish National Highways acceptance of the traffic model reference and future case scenarios
- The need to confirm costs, viability, and funding associated with mitigating the safety and congestion impacts of the development included within the plan.

Local Plan context

This Local Plan (Chichester Local Plan 2021 – 2039), prepared by the Local Planning Authority (LPA) Chichester District Council, sets out the vision for future development in the district and will be used to help decide on planning applications and other planning related decisions including shaping infrastructure investments.

The draft sets out how the district should be developed over the next 18-years to 2039 including for the full Plan period (1 April 2021 to 31 March 2039) the total supply of

- 10,359 dwellings
- 114,652 net additional sqm new floorspace

Minus the completions this is equivalent to around 530 dwellings and 6,150 sqm of floorspace a year.

National Highways Representations

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders.

We have undertaken a review of the Chichester Local Plan 2021-2039 proposed submission version and accompanying evidence documents, our comments are set out in the tables below (following pages). [see table within attachment]

Summary

We have reviewed the publicly available Local Plan documents and provided comments above in relation to the transport implications of the plan for the safety and operation of the SRN. We understand that other technical information is available, but this was not presented as part of this consultation.

Chichester, and the A27, are already heavily congested, infrastructure in the existing Local Plan remains undelivered and the growth set out in the new Plan will further increase travel demand.

As presented, satisfying the transport needs of the plan is clearly reliant on the delivery of the A27 Chichester bypass improvements project. The A27 Chichester bypass improvements project is one of 32 pipeline schemes being considered for possible inclusion in National Highways third Road Investment Strategy (RIS3) covering 1 April 2025 to 31 March 2030.

On 9 March 2023 the UK Transport Secretary ensured record funding would be invested in the country's transport network, sustainably driving growth across the country while managing the pressures of inflation. The announcement cited the A27 Arundel Bypass as being deferred from RIS2 to RIS 3 (covering 2025-2030). The transport secretary also identified a number of challenges to the delivery of the road investment strategy and cited the benefit of allowing extra time to ensure schemes are better planned and efficient schemes can be deployed more effectively.

At present, there is no commitment by DfT to carry out the A27 Chichester bypass improvements project. Until the A27 Chichester bypass improvements project is published in the RIS3, consented and a decision to invest is made it cannot be assumed to be a committed project.

We note that the Plan does not address any uncertainty of delivery of the A27 Chichester bypass improvements project and we strongly recommend that there is either no reliance placed on RIS3 to realise capacity for growth in the Plan or that contingency measures are included to cover the eventuality that RIS3 funding is not forthcoming within the plan period. It is not clear that the potential impact of development on transport networks can be addressed in the absence of the A27 Chichester bypass improvements project.

Achieving net zero, reducing emissions reduction, acting on climate, and supporting thousands of new homes and new employment developments will be problematic with existing processes. New, additional, and adapted processes and assessments will likely be required, especially in assessing Transport Assessments, mandating Travel Plans and

monitoring traffic associated with new developments. We acknowledge that change is complex, expensive, and time-consuming, especially for smaller district level Councils. But the hard work will deliver benefits for the Council and residents in the longer-term.

National Highways seeks to continue working with the Council and WSCC to progress coordinated and deliverable packages of interim mitigation measures and alternative transport solutions while a long-term strategic solution is considered by government. This must however be in combination with a robust monitor and manage policy that appropriately manages the risk of unacceptable road impacts resulting from new housing and other development over the Plan period.

We have been in discussion with Chichester District Council regarding their proposed Monitor and Manage Strategy. At present, we do not consider the current strategy to be robust and we seek further information and detail especially on who, when and when monitoring and management will be undertaken. Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas. Any M&M framework must be based on a "worst case scenario" whereby necessary transport mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. The M&M framework must set out that the alternative to mitigation not being delivered is that development does not proceed where that development would give rise to unacceptable road safety risk or severe cumulative impacts on the road network in the absence of that mitigation. The M&M framework must be translated into development management plan policy and policy relating to development allocations.

As we have reiterated throughout our comments, we welcome the opportunity to work with you to address these outstanding matters and we will continue to liaise over submitted Transport Assessment, Travel Plan policy and Monitor and Manage Policy to help to work towards a viable plan.

We hope our comments assist.

We look forward to continuing to participate in future consultations and discussions. Please do continue to consult us as the Plan progresses so that we can remain aware of, and comment as required on, its contents.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

We support these ambitions. However in reality it is unlikely that the proposed plan will be able to deliver these aspirations.

Full text:

We support these ambitions. However in reality it is unlikely that the proposed plan will be able to deliver these aspirations. The volume of housing proposed between Chichester and Emsworth (3,225), especially when combined with Havant Borough Council's strategic site at Southleigh (2,100 homes) will lead to an unprecedented level of development pressure on the AONB, SSSI/SPA designated site at Chichester Harbour. Inevitably the repercussions for waste water treatment (already at full capacity and storm discharging regularly) and additional recreational disturbance will further compound the challenges affecting the protected site, meaning that it is unable to recover from the current "Unfavourable Declining" condition assessment.

Full text:

Thank you for the opportunity to comment on the Draft Chichester District Local Plan 2021-39. We would suggest that there has been insufficient public consultation to date. We commented on the draft Local Plan for 2015, on the Preferred Options in 2019 and there have been many changes in Government policy and commitments since then to include Climate Change, Net Zero and commitments made at COP 26 and 27 to include reducing methane emissions etc. With regards to this consultation we recognise the importance of a plan-led system and support Chichester District Council's (CDC) desire to produce a comprehensive Local Plan. CPRE Sussex wishes to contribute to policies concerning landscape, rural areas, communities, environment and wildlife drawing on evidence and local knowledge.

CONTEXT

1. Examining the previous government consultation which closed on March 2nd, ie the Levelling-up and Regeneration Bill including some aspects of the National Planning Policy Framework, NPPF, there are some issues which would impact on this Local Plan and need consideration.

1.1 That consultation included important changes to the way in which the 5 year housing land supply is calculated, and the timetable for making Local Plans. They are of significance to local councils, especially those with Neighbourhood Plans. Some measures will take effect almost immediately through an update to the existing NPPF in Spring 2023. Others will follow later in the year or in 2024. Surely such consultations should be better phased to make plan development more logical and access to consultations easier?

2. Communities: Our group welcomed the overall shift in emphasis towards communities. Mind you, while the word is used 121 times in the Prospectus it does not appear in the draft NPPF! We would expect much more emphasis on the importance of communities in any forthcoming consult-ations. Earlier and more effective engagement with communities could help to lead to a less confrontational planning system with an emphasis on active participation.

3 Time required – a lot of time is needed to understand and implement such policies and a searchable on-line version would be very helpful; and, consideration also needs to be extended to those people in the community who are not computerised.

4 We take the word "sufficient" with regard to housing numbers to be equivalent to that which is "needed" and the current Standard Method does not establish that figure. Our MP, the Rt Hon Andrew Griffith, Arundel and South Downs, referred to the approach to developing housing numbers as a mutant algorithm.

4.1 Specifically, the changes to housing targets, to make them 'advisory', are welcome. However, we should remind you that the Government continues to insist on using out-of-date projections (2014). The current ONS population estimates are 1 million less people in the population than allowed for in the figures used to so that the reliance on the 2014 figures is completely out of date. The emphasis should always be on using current up to date evidenceand to use those out-of-date figures produces the wrong results and does not conform with the need to use up to date information. In addition, this would require an immediate change to the guidance to insist (as previously) on the most up-to-date projections.

4.2 We also recommended a review of the Standard Method, which does not make housing affordable and simply supports developers to build market homes where they want to. The graph above illustrates the gap between projection and current population figure provided by the Community Planning Association.

4.3 Local Planning Authorities, LPAs, were also given an opportunity to put forward alternatives to the Standard Method and to name the specific constraints faced. Our contribution to that consultation referred to the:

- Reduction of land available to the CDC given the creation of the South Downs National Park, SDNP
- English Channel
- SDNP itself
- Range of internationally important designated sites
- Rare species and habitats
- River flood plains
- Water neutrality in part of the District
- Nutrient neutrality in the Solent
- Sea Level Rise

- Inadequate infrastructure – roads/lanes and local transport; sewage treatment; community facilities such as medical centres, shops; and

4.4 There have already been large housing commitments, loosely put on "flat green land" around Chichester and now CDC is eyeing the "empty" north of the District with allocations being made for Loxwood and an increase in the number of houses being sought in Wisborough Green. Such land supports wildlife which often may not be under recorded as it is private land. Areas in both of those Parishes has been "cleared" of biological interest but the BNG established a baseline of 2020 and google maps can show the state of the environment at that date. The commitment to safeguarding biodiversity needs to be pursued carefully and consistently.

COMMENTS ON THE CDC LOCAL PLAN 2021-2039 REG19 proposed submission comments: the comments cite the para and/or Chapter number

5. At this phase in the local plan process the scope of the invited representations is limited to whether the Plan that has been produced is:

- a) legally compliant (i.e., whether it meets the legal requirements); and
 b) sound (i.e., whether it has been positively prepared, is justified, is effective and is consistent with national policy) and I would ADD whether it is forward thinking enough as it is planned to last until 2039.

5.1 The plan area is split in to three areas, each with different characteristics, landscapes and access to services:

- a) • The East-West Corridor, running across the width of the plan area, is varied in landscape with the inclusion of both larger settlements (including the city) and rural villages. It has the best transport connections and access to facilities in the plan area with the A27 and railway running through-out.
 •b) The Manhood Peninsula* MP, located in the south of the plan area, jutting out into the English Channel, is rich in coastal landscapes with the majority of the area covered by environmental designations. It also includes some of the plan area's larger settlements which rely heavily on limited road accessibility to the north towards Chichester city.
 •c) The North of the Plan Area is primarily rural in character with diverse landscapes, rich cultural and heritage assets and a number of dispersed settlements, some of which are relatively isolated and served by narrow lanes with limited public transport

*NB The population on the MP is dispersed in a rural landscape and equals that of Chichester. The description for the North section could just as easily have been used for the MP.

Chapter 2 and Local Plan Vision

These Objectives will need to underlie every aspect of the document.

5.2 P 23: Para 2.25 Replace the word "site" by "area" and insert forming part of a diverse set of wetlands (Ditches, Rifes, Ponds, Saline lagoons and a small section of Canal). Info: The Medmerry site is no longer the largest eg having been overtaken in area by the Steart Marshes, Somerset.

5.3 Include mention of rare habitats and species and the role of Selsey Bill in facilitating arrivals and departures of bats, butterflies and birds. That's its USP,

6.1 P 25 Local Plan Vision and Strategic Objectives p 30 Objective 1: CLIMATE CHANGE

This section does not reflect the urgency of the issue nor the vulnerability of parts of Sussex. Many scientists are pointing to Sea Level Rise, SLR, speeding up and some of them cite a 10 year window in which to act ie so that before this Local Plan has run its course, areas on the coast including the coastal plain and the Manhood Peninsula could well be adversely affected. This would have an immediate impact on housing, facilities and transport links and could lead to the local population having to move.

6.2 Actions related to this particular objective need to be included in all the following objectives. The south of the District is very vulnerable and the rest of the District will experience very intensive rainfall, water shortages (NE/EA 2013 report) and hot summers.

6.2 Policies need to include not building on areas below 5m high Water Level. The CDC Climate Change officer should host meetings to consider potential plans for putting houses on stilts, moving people to land safe from flooding and re-directing roads, cycle ways and footpaths to facilitate future access.

6.3 Evidence: See the Surging Seas and NASA websites for prediction of Sea Level Rise. Need to include reference to the UK Climate Resilience Programme jointly led by UK Research and Innovation, UKRI, and the Met Office which was set up to fund research "to help understand how to quantify the risks from climate change and build climate resilience for the UK, This research should produce "usable outputs" to "directly support decision-making" by government, local authorities, communities and other stakeholders

6.3.1 Every area of UK society will feel the effects of climate change and, as global emissions continue to rise, pre-paring for life in a warmer world is crucial. Findings were discussed last week by the UK ranging from assessments of elderly people overheating in care homes through to building community-run water storage.

6.3.2 Every area of UK society will feel the effects of climate change and, as global emissions continue to rise, preparing for life in a warmer world is crucial.

6.2.2.i In early March, UKTI and Met office researchers involved with the programme gathered to present and discuss their findings. They ranged from assessments of elderly people overheating in care homes through to building community-run water storage. These items and website need to be referenced in the evidence section.

6.3.3 The key points are intended to help businesses and policymakers adapt to climate change.

6.3.4 Many focused on "climate services" defined as involving the "production, translation, transfer and use of climate knowledge and information in climate-informed decision making".

6.3.5 Climate services could be an important tool for adaptation because they can provide people with the relevant information to prepare for climate change.

6.3.6 Representatives from the Met Office laid out their recommendations for a UK National Framework for Climate Services. And said they wanted to provide a "driving force" for the nation's climate services community and help ensure that "adaptation action actually does get done".

6.4.7 UK 'SSPs'

"Shared socioeconomic pathways" (SSPs) are tools used by researchers to explore how society will change in the future. This can help them to answer important questions about climate change. As there were no UK-specific versions of SSPs available to complement the UKCP18 climate projections

Ref: The importance of Adaptive Resilience Solutions in the Face of Climate Threats.

Recommendation: This report needs to be drawn on and form part of the evidence base.

7.1 Objective 2: NATURAL ENVIRONMENT Work with site managers of the Designated Sites and NGOs in the wider environment. This objective is vitally important and welcome and its importance needs to be reflected in all parts of the plan to include Wildlife Corridors, Biodiversity Net Gain and the Nature Recovery Network.

Sir David Attenborough

"It may sound frightening, but the scientific evidence is that if we have not taken dramatic action within the next decade, we could face irreversible damage to the natural world and the collapse of our societies."

7.1.1 The emergency concerning Biodiversity also needs to be communicated.

Para 2.32: Agree – this (climate emergency) is the most urgent issue facing us all together with the Biodiversity Emergency (declared by IPBWS, 2019).

7.1.2 Info: The ESPACE project European Spatial Planning: Adapting to Climate Events (ESPACE) was a four-year project funded by the European Commission's north-west Europe INTERREG IIIB programme and the ODPM. It produced a Climate Action Plan for the Manhood Peninsula in 2008 and not much action has followed to implement this. Perhaps it needs dusting off and re-visiting and including within the Local Plan?

7.2 Add policy:

PROPOSED Ecosystem Services Policy

7.2.1 CPRE Sussex considers that the Chichester Local Plan 2021 - 2039 should include a policy specifically for Ecosystem Services for the following reasons:

1. NPPF para 174. Planning policies and decisions should contribute to and enhance the natural and local environment by:

- a) protecting and enhancing valued landscapes, sites of biodiversity or geological value and soils (in a manner commensurate with their statutory status or identified quality in the development plan);
- b) recognising the intrinsic character and beauty of the countryside, and the wider benefits from natural capital and ecosystem services – including the economic and other benefits of the best and most versatile agricultural land, and of trees and woodland

7.2.2 'Natural capital refers to the elements of nature that produce value to people –whether directly or indirectly. Our natural capital 'assets' are the stocks of renewable and non-renewable natural capital such as our soils, freshwater, farmland, forests, atmosphere, oceans, ecological processes and the natural processes that underpin them. The flows of ecosystem services and benefits that our natural capital provides can be very obvious such as food, fuel, clean air, clean water, and opportunities for recreation. Others are much less visible, such as climate regulation, flood defences provided by natural vegetation, the billions of tonnes of carbon stored by peatlands and other habitats and the pollination of crops by insects'. (Sussex Local Nature Partnership <http://sussexlnp.org.uk/natural-capital/>)

7.3 Accordingly, we propose an Ecosystem Services policy (an adaptation of South Downs Park Authority's Core Policy SD2: Ecosystem Services'), be added as follows:

1. Development proposals will be permitted where they have an overall positive impact on the ability of the natural environment to contribute goods and services. This will be achieved by means of high-quality design, and by delivering all opportunities to:

- a) Sustainably manage land and water environments;
- b) Protect and provide more, better and joined up natural habitats;
- c) Conserve water resources and improve water quality;
- d) Manage and mitigate the risk of flooding;
- e) Improve the District's resilience to, and mitigation of, climate change;
- f) Increase the ability to store carbon through the retention of existing woodland, new planting or other means;
- g) Conserve and enhance soils, use soils sustainably and protect the best and most versatile agricultural land;
- h) Support the sustainable production and use of food, forestry and raw materials;
- i) Reduce levels of pollution;
- j) Improve opportunities for peoples' health and wellbeing; and
- k) Provide opportunities for access to the natural and cultural resources which contribute to the District's special qualities.

2. The Environment Act 2021 will require the production of a Nature Recovery Network and more locally a Local Nature Recovery Strategy. The Strategic Wildlife Corridors in Chichester District will be integral components of that local network. The importance of local networks in Nature Recovery Networks is highlighted in NPPG

7.3.4 Policy NE 4 Strategic Wildlife Corridors

CPRE Sussex supports this policy, Strategic Wildlife Corridors as part of the Local Plan process, conform with section 179 of the NPPF 2021 which is well-evidenced. However, CPRE Sussex wishes to question the size of the corridors ie the width/

Information provided in the 2021 consultation appears to demonstrate that these areas have been downsized such as those put alongside the East of the City Corridor, it appears that there has been a narrowing of the Strategic Wildlife Corridor around the location of the proposed allocations of A8, Chapter 10: Strategic and Area Based Allocations Land East of Chichester and potential A7, Land at Shopwyke. The Corridor to the East of Chichester was proposed for connectivity and functional links to the area for the rare and European Protected Species of Barbastelle Bats. It is shown on CDC technical consultation documents as a bat network

This does not conform with the Natural Environment & Rural Communities Act, NERC, 2006 and Section 40 subsection 3a as it would destroy a habitat over which the Barbastelle Bat has been recorded, a Section 41 species. And it is the DUTY of the Local Authority to safeguard these species. There should be NO recreational use in the buffer zones.

8. Green Infrastructure: p 160 and Policy P 14 d Submission (Regulation 19)

8.1 Local Green Space

6.82. The NPPF includes the concept of Local Green Space designation. This is a discretionary designation and sites may be identified and included in either local or neighbourhood plans. The designation should only be used as defined by the criteria in the NPPF where the land is not extensive, is local in character and reasonably close to the community; and, where it is demonstrably special, for example because of its beauty, historic significance, recreational value (including as a playing field), tranquillity or richness of its wildlife. Any areas which fall outside a neighbourhood plan area and where such designation is sought, will be considered by the subsequent Site Allocations DPD that will cover the remainder of the plan area. Policies for managing development within a Local Green Space should be consistent with those for Green Belts.

8.2 Parishes should be encouraged to look into such areas to be included in Neighbourhood Plans.

9. Renewable Energy: General policy

9.1 Housing p 103:

CPRE Sussex considers that the Chichester Local Plan should include a policy requiring all new-build homes to be equipped and sold with solar PV panels, roof or wall mounted.

9.2 Although the Chichester District Local Plan, at Para 6.15, states that 'Design proposals should respond to the opportunities a site presents to make best use of solar gain where this can be achieved without compromising good urban design or creating issues of overheating', there is no requirement in any of the plan's policies for new-build homes to be equipped and sold with roof or wall mounted solar PV.

9.3 Note that West Sussex County Council has advised in their Solar Together initiative that "By generating electricity from the sun, you could reduce your annual carbon emissions by approximately one tonne each year and help West Sussex to become carbon neutral".

Note, too: <https://solartogether.co.uk/westsussex/blog/best-ways-to-increase-solar-self-consumption>

9.4 "According to the University of Oxford findings, UK households with solar PV self-consume 45% of their own solar generation on average and reduce annual electricity demand from the grid by 24%. With additional adjustments, this reduction of 24% can be increased to over 35%".

9.5 New-build homes in Chichester District should therefore be equipped with solar PV panels. We question the statement in Para 6.15 that 'solar gain' could create 'issues of overheating'. Surely this can be prevented by good design?

9.6 There are additional opportunities for solar installations on school roofs (Brighton Sustainable Energy Co-op has many examples), car parks, industrial buildings et al.

10.0 Renewable Energy: Specific location Wisborough Green 75 additional houses. Unacceptable – see CDC Capacity Study sub sections 166+167. Limitations – Ancient woodland; wildlife – rare habitats and species, river floodplain; Water neutrality; HRA with reference to the Mens Ancient Woodland and presence of European Protected Species, Barbastelle Bats flight paths and foraging across the parish. See Natural England report Site Improvement Report and reports by Frank Greenway, 2008 et al.

10.1 See Page 84: In the north of the plan area, properties within Southern Water's Sussex North Water Resource Zone are supplied with water from a groundwater abstraction at Pulborough which is currently subject to environmental investigations to ensure there is no adverse impact on environmentally designated sites in the Arun Valley. This may impact on the available supply and alternative sources may need to be considered by Southern Water. Natural England published a position statement in September 2021 requiring developments within the Sussex North Supply Zone to be water neutral – this means that the use of water in the supply area after the development is the same or lower than before. A Water Neutrality Strategy had been prepared jointly with other affected authorities. Natural England's Position Statement sets out an interim approach based on minimising water use in new builds and offsetting the water that is used

10.2 Water consumption target. It is noted that both Portsmouth Water and Southern Water have targets to reduce water consumption to 100 litres per person per day (lppd) by 2040, a lower figure than the current most stringent Building Regulation target of 110 lppd and not that level which could be required for water neutrality.

10.3 The Local Plan is weak on impacts especially from the largest concentration of caravans at Selsey on Medmerry.

10.4 There is no wildlife corridor running east to west along the Manhood Peninsula ie Pagham to East Head and this undermines the importance of a positive barrier zone to protect the habitat. CDC have used the corridors for this barrier purpose possibly more than as a pathway throughout other parts of the plan.

10.5 Nutrient neutrality exclusion of a large area of the Peninsula from the protection zone is illogical as the same conditions exhibited in Chichester harbour (in the zone) exist at Pagham.

10.6 There is a 'tool' - "nutrient budget calculator March, 2022 version" – which gives an "n" factor for instance to discharges from WWTW. There is no direct mention of its use at Chichester harbour and as the data on Pagham Harbour has yet to be made public, the role of Sidlesham WWTW has not been referred to. The "N" factor would probably be more restrictive on outflows from WWTW than the total discharge permits – and shows a lack of coordinated approach between the Environment Agency and Natural England.

10.7 There are two reports due to be published this month - the West Sussex Coast and Gt Brighton Board and Southern Water overall plan for drainage and waste water-the timing of the LP – is thus unable to take these two influential inputs into account and may have implications for the 'Soundness' of the plan as it moves forward.

10.8 No mention is included of Sidlesham WSTW which is operating at and beyond capacity resulting in new housing on the Manhood Peninsula dealing with waste water in gardens, in houses etc.

Pages 87 and 88: Paras 4.112 and 4.113 are contradictory.

Appendix F Monitoring Framework

Early in 2020 attended a Public Inquiry representing the Manhood Wildlife and Heritage Group and presented evidence about an application at Easton Farm where the implementation of an application had not been followed up, which had expanded like Topsy and which potentially could damage the Medmerry coastal realignment site with its runoff. CDC had not been on watch possibly through lack of staff and/or a lack of enforcement staff. The site had grown without permission. This section requires a firm commitment to monitoring and reporting back, not just a paper one.

Thank you for your attention.

Object

Document Element: Objective 2: Natural Environment

Respondent: Natural England (Luke Hasler, Senior Advisor) [8189]

Summary:

Natural England maintains its advice, provided both as part of the Regulation 18 statutory consultation in 2019 and through subsequent, non-statutory consultations during 2021 and 2022. This has still not been addressed in the following areas [changes to plan refer]

Full text:**Summary of advice**

While we have raised some queries and recommended some further modifications to certain policies we do not find the Plan unsound on any grounds relating to our remit.

Natural England has reviewed the Proposed Submission Local Plan and accompanying appendices together with the Habitats Regulations Assessment (HRA) and Sustainability Appraisal (SA). Our detailed comments on the policies and site allocations are provided as follows:

- Annex 1 - Chapter 2 – Vision and Strategic Objectives
- Annex 2 - Chapter 4 – Climate Change and the Natural Environment
- Annex 3 - Chapter 5 (Housing) and Chapter 6 – (Place-making, Health and Well-being)
- Annex 4 - Chapter 7 (Employment and Economy) and Chapter 8 (Transport and Accessibility)

- Annex 5 - Chapter 10 – Strategic and Area Based Policies

Please note that we have not provided comments on all policies but those which have most influence on environmental issues. Natural England has no comment to make on the policies not covered in this response. Other than confirming that we have referred to it when considering our advice on specific policies and site allocations Natural England has no general comments to make on the SA.

Unfortunately due to unforeseen resourcing issues while we have reviewed the associated HRA we are not in a position to provide detailed comment on it as part of this response. We will rectify this as soon as possible and can confirm that we have seen nothing in it that raises any major concerns.

The Plan has many positive aspects including standalone policies on Green Infrastructure (GI) and wildlife corridors and an incredibly extensive suite of natural environment policies more generally.

We are hugely appreciative of the opportunity that we were given to work with you on shaping key policies post-Regulation 18. However, we believe that the plan needs to go further in its recognition of coastal squeeze as a key issue for the district, should include policy hooks for the forthcoming Local Nature Recovery Strategy (LNRS) and make up to date references to both the Environment Act (2021) and the Environmental Improvement Plan (EIP, 2023). Given how recent the publication of the EIP is we would be happy to discuss with your authority how this could best be achieved but we believe given the wealth of natural capital within Chichester District it is vitally important that this latest iteration of the Local Plan is set in its full policy and legislative context.

We have suggested a significant number of amendments and additions to both policies and supporting text throughout the Plan. In our view these could all be taken forward as minor modifications but if they were all acted upon they would leave the Plan much stronger and more coherent in delivering for the natural environment, one of the three central tenets of genuinely sustainable development as set out in the National Planning Policy Framework (NPPF 2021, paragraph 8c).

See attachment for representations on paragraphs/policies.

Change suggested by respondent:

Natural England advise the addition of "and where relevant will be water neutral" to the final sentence in this objective in order to provide context for the inclusion of Policies NE16 and NE17.

Natural England advise the inclusion of the phrase "SuDS will be incorporated to manage run-off" at the end of this objective although we acknowledge and support its inclusion in Chapter 4 Policy NE15.

Document Element: Objective 3: Housing**Respondent:** Merrow Wood [8213]**Agent:** Intelligent Land (Mr Simon Trueick) [8009]**Summary:**

This objective is supported. Merrow Wood consider that it is essential that new housing growth is focussed on sustainable locations which reduce the need to travel and/or offer opportunity to make sustainable travel choices.

Full text:

Intelligent Land is instructed by Merrow Wood, who have been selected by the landowner to help promote the site for development, to submit representations on the Chichester Local Plan Review, Submission consultation, relating to land at Prospect Farm, Cutmill View near Bosham.

Merrow Wood very much welcomes the renewed progress toward adoption of the Chichester Local Plan Review. The long delay to the plan preparation for the last 3 years has created uncertainty in the District and has, inevitably, lead to "planning by appeal" with development coming forward not in accordance with the existing local plan development strategy.

This objective is supported. Merrow Wood consider that it is essential that new housing growth is focussed on sustainable locations which reduce the need to travel and/or offer opportunity to make sustainable travel choices.

Support

Document Element: Objective 3: Housing**Respondent:** Miller Homes and Vistry Group [8065]**Agent:** Tetra Tech (Natalie Wilson) [8256]**Summary:**

Support in principle.

Full text:

In light of the housing crisis and the continued decreasing affordability of housing in the country as a whole and particularly within Chichester District, it is important that housing continues to be delivered in sustainable locations. The latest data release from 2021 on housing affordability shows that on average within Chichester District house prices are 14.61 times median earnings. This compares unfavorably with the West Sussex County average of 12.07 and the national average of 9.1. Chichester District remains one of the least affordable places to buy a home in the country. Furthermore, the Plan does not intend to meet the Objectively Assessed Need for housing in the district.

Whilst recognizing that the Local Plan Objectives and Vision do reference Housing, it is considered that the importance of housing delivery, and its relationship to affordability, should be made more explicit with reference to the housing crisis and the acute affordability issues in the district. The vision and objectives should also explicitly recognize the important part housing delivery plays in meeting the economic, social and environmental objectives of the NPPF.

Furthermore, it is all the more important that policies enable, rather than potentially hinder, continued delivery of new homes as far as possible, particularly on sustainable allocated sites, such as the West of Chichester. Vistry and Miller are already delivering housing on site contributing to Chichester's housing needs.

Object

Document Element: Objective 3: Housing**Respondent:** Save our South Coast Alliance (Libby Alexander) [7648]**Summary:**

The average price of a home in Chichester according to Rightmove is £437,828. This is unachievable for the young who having been brought up in the area and wish to earn and remain. It will result in an exodus of young aspiring professionals.

There is no indication that any of these houses being built have efficient energy systems incorporated such as solar panels or charging points for electric cars.

According to Local Government Inform there are approximately 2,405 people on the waiting list for affordable homes in the Chichester area. It is therefore possible to conjecture that the developments awarded planning permission are not fulfilling their 'affordability' quota. (Only sites of 10 homes or fewer are exempt from providing affordable homes.)

Full text:

4983

Object

Document Element: Objective 4: Employment and Economy**Respondent:** Kingsbridge Estates Limited & Landlink Estates Limited [8084]**Agent:** Savills (Mr William Price, Planner) [7783]**Summary:**

The draft plan does not adequately allow for suppressed demand. Consequently the option for HDA associated uses to locate on industrial land is restricted. (Though our analysis concludes that most such uses are best located on the HDAs. Which requires a more flexible approach to functionally linked uses on the HDAs).

Full text:

The Council's desire to support the horticultural industry is welcomed, however the mechanism for delivering this growth is fundamentally flawed and bakes in unwarranted constraints to realising the growth and competitiveness of the food production industry. Please refer to attached Savills SREBR.

The current HDA policy is noted by stakeholders within the 2018 HEDNA as a barrier to growth due to the failure to support functionally associated uses. The importance of functionally-associated uses to the cluster is also acknowledged within The Council's evidence base and other key Government and Industry publications.

Accordingly, it is suggested that the Council should pursue a more positive and proactive wording of the HDA policy in order to allow for a greater breadth of functionally linked uses within the Runcton HDA. The proposed wording of the policy does not provide sufficient certainty to investors and businesses (both established within Runcton HDA or looking to locate within it) that The Council will support the functionally associated uses that are necessary to foster and maintain the growth and competitiveness of a world-class food cluster.

The Local Plan therefore conflicts with paragraph 81 of the NPPF in its entirety which states:

Planning policies and decisions should help create the conditions in which businesses can invest, expand and adapt. Significant weight should be placed on the need to support economic growth and productivity, taking into account both local business needs and wider opportunities for development. The approach taken should allow each area to build on its strengths, counter any weaknesses and address the challenges of the future. This is particularly important where Britain can be a global leader in driving innovation 42, and in areas with high levels of productivity, which should be able to capitalise on their performance and potential.

Change suggested by respondent:

Reference to 'ancillary' with regard to the HDAs in relevant policies and supporting text should be modified to 'functionally linked' and include explanatory text clarifying that 'functionally linked' uses can include a range of activities including: food-related distribution; food manufacturing linked to the HDAs food preparation; on-site renewable energy to serve on-site activities; and R&D.

We have reviewed the publicly available Local Plan documents and provided comments in the attached letter, in relation to the transport implications of the plan for the safety and operation of the SRN.

Our comments include issues to resolve, comments, requests for further information and recommendations. A brief summary of our main comments are:

- the reliance on the delivery of the A27 Chichester bypass improvements project.
- the requirements for new, additional, and adapted processes and assessments, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments.
- collaborative working between agencies in combination with a robust monitor and manage policy.

We hope our comments assist.

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSSCC) and we will continue to work with the Council and other key stakeholders. We look forward to continuing to participate in future consultations and discussions.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Background

National Highways has been appointed by the Secretary of State for Transport as strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the strategic road network (SRN).

National Highways is responsible for operating, maintaining, and improving the Strategic Road Network (SRN) i.e., the Trunk Road and Motorway Network in England, as laid down in Department for Transport (DfT) Circular 01/2022 (Strategic Road Network and the delivery of sustainable development).

The SRN is a critical national asset and as such we work to ensure that it operates and is managed in the public interest, both in respect of current activities and needs as well as in providing effective stewardship of its long-term operation and integrity.

Our responses to Local Plan consultations are guided by relevant policy and guidance including the National Planning Policy Framework (2021) (NPPF):

- Transport issues should be considered from the earliest stages of plan-making and development proposals so that the potential impact of development on transport networks can be addressed (para 104).

- The planning system should actively manage patterns of growth such that significant development is focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. (para 105).
- Planning policies should be prepared with the active involvement of highways authorities and other transport infrastructure providers so that strategies and investments for supporting sustainable transport and development patterns are aligned. (para 106).
- In terms of identifying the necessity of transport infrastructure, NPPF confirms that development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe. (para 111).
- Planning policies and decisions should support development that makes efficient use of land, taking into account the availability and capacity of infrastructure and services – both existing and proposed – as well as their potential for further improvement and the scope to promote sustainable travel modes that limit future car use. (para 124).

In relation to the tests of soundness set out at paragraph 35 of the NPPF, in the context of transport, these are interpreted as meaning:

- a) Positively prepared - has the transport strategy been prepared with the active involvement of the highway authorities, other transport infrastructure providers and operators and neighbouring councils?
- b) Justified – Is the transport strategy based on a robust evidence base prepared with the agreement in partnership, or with the support of the highway authorities?
- c) Effective – Does the transport strategy and policy satisfy the transport needs of the plan and is it deliverable at a pace which provides for and accommodates the proposed progress and implementation of the plan?
- d) Consistent with national policy – Does the transport strategy support the economic, social, and environmental objectives of the Plan and the NPPF/NPPG?

We will be concerned with proposals that have the potential to impact on the safe and efficient operation of the SRN; in this case, the A27 trunk road (Chichester Bypass and its junctions) which is the main access route in the Chichester area. We have particular interest in any allocation, policy or proposals which could have implications for the A27 and the wider SRN network. We are interested as to whether there would be any adverse road safety or operational implications for the SRN. The latter would include a material increase in queueing or delay or reduction in journey time reliability during the construction or operation of the development set out in the plan.

National Highways is a key delivery partner for sustainable development promoted through the plan-led system, and as a statutory consultee we have a duty to cooperate with local authorities to support the preparation and implementation of development plan documents.

In accordance with national planning and transport policy and our operating licence, we are entirely neutral on the principle of development as it is for the local planning authority to determine whether development should be allocated or permitted; albeit it must comply with national policy on locating development in locations that are or can be made sustainable. Therefore, while always seeking early and fulsome engagement with local plans and/or developers, we will simply be assessing the transport and related implications of plans or proposals and agreeing any necessary transport improvements and relevant development management policy.

In progressing Local Plans, we will seek to agree the following:

- Assessment tools and methodology
- Baseline Assessment i.e., to demonstrate that the assessment tool accurately reflects current transport conditions
- Comparator case assessment i.e., to forecast the transport conditions that would occur in the absence of the plan
- Forecast modelling i.e., to forecast the transport conditions that would arise with the plan in place, this will include an assessment at the end of the Plan period; and, if required, at full build out if that occurs after the end of the Plan period
- Outputs and outcomes of modelling, demonstrating, as appropriate, what transport infrastructure is necessary to support the plan o It should be noted that a suite of transport modelling tools may be required. This includes strategic modelling covering an area at least one major junction beyond the district boundary, localised network modelling where several links/junctions are close together and/or individual junction modelling
- o A DMRB (Design Manual for Roads and Bridges) compliancy assessment may also be required for certain highway features, such as

Merge/Diverge assessment at Grade separated junctions, link capacity assessments, and others.

- The design of any necessary transport infrastructure, to an extent suitable for establishing deliverability during the plan period at the time that it becomes necessary for the purpose of ensuring that unacceptable road safety impacts or severe operational impacts do not arise as a result of development. This may be to at least General Arrangement design stage or preliminary design stage. Whichever degree of detail is agreed, the products must be in full compliance with the DMRB.
- Industry standard transport intervention costings.
- The delivery/funding mechanisms for necessary transport interventions. It should not be assumed that National Highways will have any responsibility to identify or deliver necessary transport interventions.

• If considered appropriate, a “Monitor & Manage” (M&M) framework, aimed at managing the pace of development in line with the pace of funding and delivery of necessary highway interventions in a manner which responds to the realworld impacts of development may be agreed for inclusion in the plan subject to the adequacy of risk control measures included therein. This can include the move from a ‘predict & provide’ style of delivery to ‘a vision & validate’ style. o Any M&M framework must be based on a “worst case scenario” whereby necessary mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. It must be translated into development management plan policy and policy relating to development allocations.

Further detail on the above can be provided by National Highways.

While ideally all the above should be agreed prior to the Submission of the Local Plan for examination, we recognise that this is not always possible. However, all parties should work towards all matters being agreed and reflected in a Statement of Common Ground (SoCG) by the start of the Local Plan Examination at the latest. Ideally the SoCG between the Council and National Highways would be prepared well in advance of plan submission in order to guide resource input and to track progress towards final agreement on all relevant matters starting from the earliest plan iterations until the final version is agreed.

It is acknowledged that Government policy places much emphasis on housing delivery as a means for ensuring economic growth and addressing the current national shortage of housing. The NPPF is very clear that: “Strategic policy-making authorities should establish a housing requirement figure for their whole area, which shows the extent to which their identified housing need (and any needs that cannot be met within neighbouring areas) can be met over the plan period.”

However, new DfT C1/22 and the NPPF are equally clear that any development, including housing delivery, must be tempered by the requirement to ensure that the associated transport demand can be accommodated without unacceptable impacts on the safety of the SRN or severe impacts on the operation of the SRN including reliability and congestion. Therefore, as necessary and appropriate, any plan and/or development must be accompanied by suitable mitigation in the right places at the right time, that is to the required design standards and is deliverable in terms of land availability, constructability and funding.

We would also draw your attention to the then Highways England document ‘The Strategic Road Network, Planning for the Future: A guide to working with National Highways on planning matters’ (September 2015). This document sets out how National Highways intends to work with local planning authorities and developers to support the preparation of sound documents which enable the delivery of sustainable development. https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_t_data/file/461023/N150227_-_Highways_England_Planning_Document_FINAL-lo.pdf

Responses to Local Plan consultations are also guided by National Planning Policy Framework (NPPF) revised on 20 July 2021 which sets out the government’s planning policies for England and how these are expected to be applied.

Updated Circular (01/2022)

It should be noted that since the start of the Local Plan consultation process, on the 23 December 2022, the Department for Transport released a new circular on the ‘Strategic road network and the delivery of sustainable development’ (Circular 01/2022), which replaces all of the policies in Circular 02/2013 of the same name. These representations take account of the new circular and the requirements in terms of the Local Plan evidence base and process.

We request that the Local Plan is prepared in line with all aspects of the new circular. Particularly, the principles of sustainable development (paragraphs 11 to 17), new connections and capacity enhancements (paragraphs 18 to 25), and engagement with plan-making (paragraphs 26 to 38).

Regulation 18 submission

In our Regulation 18 submission we noted several matters including:

- The need to mitigate the adverse impacts of strategic development traffic to the A27 Chichester Bypass and its junctions at Portfield Roundabout, Bognor Road Roundabout, Whyke Roundabout, Stockbridge Roundabout and Fishbourne Roundabout and Oving junction.
- The need to identify a mechanism to calculate contributions towards the delivery of the previously agreed Local Plan A27 improvements
- The need to confirm the number of dwellings needed within the plan period
- The need to establish National Highways acceptance of the traffic model reference and future case scenarios
- The need to confirm costs, viability, and funding associated with mitigating the safety and congestion impacts of the development included within the plan.

Local Plan context

This Local Plan (Chichester Local Plan 2021 – 2039), prepared by the Local Planning Authority (LPA) Chichester District Council, sets out the vision for future development in the district and will be used to help decide on planning applications and other planning related decisions including shaping infrastructure investments.

The draft sets out how the district should be developed over the next 18-years to 2039 including for the full Plan period (1 April 2021 to 31 March 2039) the total supply of

- 10,359 dwellings
- 114,652 net additional sqm new floorspace

Minus the completions this is equivalent to around 530 dwellings and 6,150 sqm of floorspace a year.

National Highways Representations

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders.

We have undertaken a review of the Chichester Local Plan 2021-2039 proposed submission version and accompanying evidence documents, our comments are set out in the tables below (following pages). [see table within attachment]

Summary

We have reviewed the publicly available Local Plan documents and provided comments above in relation to the transport implications of the plan for the safety and operation of the SRN. We understand that other technical information is available, but this was not presented as part of this consultation.

Chichester, and the A27, are already heavily congested, infrastructure in the existing Local Plan remains undelivered and the growth set out in the new Plan will further increase travel demand.

As presented, satisfying the transport needs of the plan is clearly reliant on the delivery of the A27 Chichester bypass improvements project. The A27 Chichester bypass improvements project is one of 32 pipeline schemes being considered for possible inclusion in National Highways third Road Investment Strategy (RIS3) covering 1 April 2025 to 31 March 2030.

On 9 March 2023 the UK Transport Secretary ensured record funding would be invested in the country's transport network, sustainably driving growth across the country while managing the pressures of inflation. The announcement cited the A27 Arundel Bypass as being deferred from RIS2 to RIS 3 (covering 2025-2030). The transport secretary also identified a number of challenges to the delivery of the road investment strategy and cited the benefit of allowing extra time to ensure schemes are better planned and efficient schemes can be deployed more effectively.

At present, there is no commitment by DfT to carry out the A27 Chichester bypass improvements project. Until the A27 Chichester bypass improvements project is published in the RIS3, consented and a decision to invest is made it cannot be assumed to be a committed project.

We note that the Plan does not address any uncertainty of delivery of the A27 Chichester bypass improvements project and we strongly recommend that there is either no reliance placed on RIS3 to realise capacity for growth in the Plan or that contingency measures are included to cover the eventuality that RIS3 funding is not forthcoming within the plan period. It is not clear that the potential impact of development on transport networks can be addressed in the absence of the A27 Chichester bypass improvements project.

Achieving net zero, reducing emissions reduction, acting on climate, and supporting thousands of new homes and new employment developments will be problematic with existing processes. New, additional, and adapted processes and assessments will likely be required, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments. We acknowledge that change is complex, expensive, and time-consuming, especially for smaller district level Councils. But the hard work will deliver benefits for the Council and residents in the longer-term.

National Highways seeks to continue working with the Council and WSCC to progress coordinated and deliverable packages of interim mitigation measures and alternative transport solutions while a long-term strategic solution is considered by government. This must however be in combination with a robust monitor and manage policy that appropriately manages the risk of unacceptable road impacts resulting from new housing and other development over the Plan period.

We have been in discussion with Chichester District Council regarding their proposed Monitor and Manage Strategy. At present, we do not consider the current strategy to be robust and we seek further information and detail especially on who, when and when monitoring and management will be undertaken. Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas. Any M&M framework must be based on a "worst case scenario" whereby necessary transport mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. The M&M framework must set out that the alternative to mitigation not being delivered is that development does not proceed where that development would give rise to unacceptable road safety risk or severe cumulative impacts on the road network in the absence of that mitigation. The M&M framework must be translated into development management plan policy and policy relating to development allocations.

As we have reiterated throughout our comments, we welcome the opportunity to work with you to address these outstanding matters and we will continue to liaise over submitted Transport Assessment, Travel Plan policy and Monitor and Manage Policy to help to work towards a viable plan.

We hope our comments assist.

We look forward to continuing to participate in future consultations and discussions. Please do continue to consult us as the Plan progresses so that we can remain aware of, and comment as required on, its contents.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Object

Document Element: Objective 4: Employment and Economy**Respondent:** The Goodwood Estates Company Limited [7922]**Agent:** HMPC Ltd (Mr Haydn Morris) [112]**Summary:**

Within the plan are policies or supporting information deficient on key matters affecting the economic sustainability of the district. The plan fails to recognise the full extent of the important roles of Goodwood Estate and Rolls-Royce to the District economic vitality.

The plan seeks to accommodate Goodwood needs through its policies but continues to present major challenges threatening Estate sustainability.

The plan should identify and protect economic assets robustly, appropriate provision made or their sustainability and enhancement and clarity that interests will not be impacted adversely by developments on adjoining land, or which adversely affect infrastructure essential to its well-being.

The plan seeks to accommodate Goodwood needs through its policies but continues to present major challenges threatening Estate sustainability.

The plan should identify and protect economic assets robustly, appropriate provision made or their sustainability and enhancement and clarity that interests will not be impacted adversely by developments on adjoining land, or which adversely affect infrastructure essential to its well-being.

Change suggested by respondent:

The Estate has shared with the planning authority an independent report prepared by LSE as to the very significant contribution made by Goodwood and Rolls-Royce locally (this report is in the process of being updated and it is understood Rolls-Royce has commissioned a similar study – it is intended such evidence will be available for the local plan examination). The REport and its findings should be reflected in the Plan.

The local plan is a major step forward in terms of protecting the Estate's interests and allowing it to evolve and continue to contribute significantly to the local and regional economy. However, for the plan to be truly sound and provide a true basis for forward investment, we ask that changes are made to the plan as we identify through our representations.

Further detailed policy support is required to deliver sustainable growth in sectors such as the hospitality and visitor economy. The plan does not provide an appropriate framework to support the on-going needs and evolution of businesses within that sector, such as The Goodwood Estate, where there is often conflict between policy objectives, e.g. new development and environmental protection, or a failure to recognise the environmental benefits arising from the historic and future activities of the Estate.

In advance of the Plan's publication the Estate wrote to the LPA setting out how it believed the Plan should respond to its specific needs, while protecting the plan's aims and objectives. This letter, dated 10th January 2023 and copy appended, should be read alongside comments made through this consultation response.

Object

Document Element: Objective 4: Employment and Economy**Respondent:** Mr Keith Tunstall [7711]**Summary:**

Plan unrealistic with regards to the economy and ignores the national context.

Full text:

My thoughts on the Plan are general and difficult to fit into boxes. So, if I may, I send them as a whole.....

I'm particularly interested in Objective 4. Employment and Economy. Though the Plan talks about "a strong, thriving and diverse economy" and "job opportunities for all skill levels" there is no detail on how we get there, so an air of complacency is engendered as everyone knows these things don't just happen. The Plan says there will be support by allocating "employment sites", but that is all. Suitable sites are only one ingredient for a thriving economy.

Again, asserting that "Chichester city will have a key role as a vibrant sustainable city with a good range of business, leisure and retail uses based on the aims of the Chichester Vision". A Vision is fine, but it needs a detailed Plan of where the money is coming from and who is going to be responsible for delivery, otherwise it sounds like wishful thinking.

Asserting that "Local industries such as horticulture, agriculture, fishing and tourism will flourish" and proclaiming also that "The dynamic local knowledge-based economy will excel in innovation and continue to diversify" sounds overly optimistic when we know there are real challenges ahead. Reference needs to be made to credible plans for future investment and initiative in these areas. As for diversity of jobs, we have some way to go as we are oriented very much towards the public sector. How exactly are we going to boost the private sector? Who is going to be responsible?

For new growth initiatives the Plan is decidedly down-beat with an emphasis on the hurdles to be negotiated before any planning permission is given - ten of them for horticulture for example. We need to give a genuine welcome if we are to succeed in attracting investment.

I could not find any financial data in the Plan and, if there is none, that would make it a most unusual Plan. Talk about the Southern Gateway yet again, for example, must surely be tempered by acknowledgement that there is no money, so it won't happen in the foreseeable future. And, incidentally, bus stops along Avenue de Chartres do not help constitute a sensible public transport hub.

The Local Plan should surely not ignore the national context. The economy as a whole is sluggish so it needs extra effort if Chichester is to buck the trend. High interest rates currently will mean businesses put investment on hold. The recent government announcement that there are going to be special incentives for business in 12 new enterprise zones, makes attracting investment more difficult for those parts of the country, like Chichester, which are outside.

With little money available for new initiatives, more use must be made of volunteers and more emphasis will be needed to nurture businesses which are already in the area. A positive attitude towards business should be proclaimed while obviously preserving the ambience of an attractive city.

Altogether the Plan has an air of unreality about it. It strikes an optimistic note on the economy when it is obvious that the outlook for the foreseeable future is not rosy. That is fine and we must aim to buck the trend, but the Plan needs to recognise that there are a whole host of requirements needed to get a strong diverse economy and provision must be made to put them in place. Simply leaving things to "market forces" does not achieve an optimum result. Chichester is in a competitive environment to attract inward investment and well-paid jobs. We are in a competitive environment to attract visitors and tourists. The Plan should be more specific in itemising the ways we are reacting to the challenges we face.

Change suggested by respondent:

The plan should be more specific in itemising the ways in which we are reacting to economic challenges, beyond leaving things to market forces. Reference needs to be made to credible plans for future investment and initiatives beyond allocation of suitable sites. More use must be made of volunteers and more emphasis needed to nurture businesses which are already in the area.

These aims can be achieved; however, the Horticultural and Food Industries need Local Planning Policies to be in place that enables sustainable development. To this end, more flexibility is needed in the current CDC Local Plan - Horticultural Policy to meet the needs of the Horticultural sector.

Change suggested by respondent:

Over the coming years, more provision of space for nurseries, high-tech glasshouses, packhouses and reservoirs will be required; however, there will also be an increased need for ancillary development, such as: Vertical Farming Projects, Research & Development Facilities, Alternative Energy Centres, Logistics and Distribution Centres, Engineering and Technical Support Facilities.

The West Sussex Coastal Plain, with its exceptionally high winter light levels and all year round beneficial climate, is the preferred location for horticultural production in the UK.

The Horticultural Industry, concentrated around Chichester and Bognor Regis, generates annual turnover that exceeds £1billion pounds and employs more than 10,000 full time equivalent staff.

Chichester District Council local plan.docx - <https://chichester.oc2.uk/a/spx>

4245

Object

Document Element: Objective 5: Health and Well-being

Respondent: The Goodwood Estates Company Limited [7922]

Agent: HMPC Ltd (Mr Haydn Morris) [112]

Summary:

The importance of access to open, linked green and blue spaces cannot be underestimated.

The definition of land as Countryside or land located beyond the settlement edge, while offering a level of protection, is an insufficient policy constraint to speculative housing driven justified by local housing demand.

The plan must make appropriate and robust provision for housing need within the material constraints imposed on the District, with those constraints being supported by clear policy.

Full text:

The definition of land as Countryside or land located beyond the settlement edge, while offering a level of protection, is an insufficient policy constraint to speculative housing driven justified by local housing demand.

The plan must make appropriate and robust provision for housing need within the material constraints imposed on the District, with those constraints being supported by clear policy.

Change suggested by respondent:

The plan should ensure that linked spaces are maintained between allocated sites and or proposed development and existing development. Land which plays an important role in the setting of Chichester, surrounding villages, the National Park and AONB should be so identified in the local plan and policies allocated to ensure their protection and enhancement; similarly important spaces vulnerable to coalescence through development.

The plan must include policies that add an additional layer of protection to important areas, confirming that open countryside and land outside settlement boundaries (particularly that identified as having an additional important function) does not carry with it a presumption in favour of any development; the new local plan being applied as a whole. Suitable land for additional policy protection must be identified by the role it plays to the benefit of the plan as a whole and subjected to a suitable, site specific policy – such as important landscape, landscape gap etc. Any development proposed in such a location would be policy compliant only if it was proven not to remove or prejudice the justification for the land's designation.

The Plan should include a need to protect areas of important countryside, where there is a risk of coalescence or gradual coalescence over time, or where development would erode the provision of open green or blue space to the detriment of the community.

5788**Object****Document Element:** Objective 6: Design and Heritage**Respondent:** Natural England (Luke Hasler, Senior Advisor) [8189]**Summary:**

Natural England maintains its advice, provided both as part of the Regulation 18 statutory consultation in 2019 and through subsequent, non-statutory consultations during 2021 and 2022. This has still not been addressed in the following areas [changes to plan refer]

Full text:**Summary of advice**

While we have raised some queries and recommended some further modifications to certain policies we do not find the Plan unsound on any grounds relating to our remit.

Natural England has reviewed the Proposed Submission Local Plan and accompanying appendices together with the Habitats Regulations Assessment (HRA) and Sustainability Appraisal (SA). Our detailed comments on the policies and site allocations are provided as follows:

- Annex 1 - Chapter 2 – Vision and Strategic Objectives
- Annex 2 - Chapter 4 – Climate Change and the Natural Environment
- Annex 3 - Chapter 5 (Housing) and Chapter 6 – (Place-making, Health and Well-being)
- Annex 4 - Chapter 7 (Employment and Economy) and Chapter 8 (Transport and Accessibility)

- Annex 5 - Chapter 10 – Strategic and Area Based Policies

Please note that we have not provided comments on all policies but those which have most influence on environmental issues. Natural England has no comment to make on the policies not covered in this response. Other than confirming that we have referred to it when considering our advice on specific policies and site allocations Natural England has no general comments to make on the SA.

Unfortunately due to unforeseen resourcing issues while we have reviewed the associated HRA we are not in a position to provide detailed comment on it as part of this response. We will rectify this as soon as possible and can confirm that we have seen nothing in it that raises any major concerns.

The Plan has many positive aspects including standalone policies on Green Infrastructure (GI) and wildlife corridors and an incredibly extensive suite of natural environment policies more generally.

We are hugely appreciative of the opportunity that we were given to work with you on shaping key policies post-Regulation 18. However, we believe that the plan needs to go further in its recognition of coastal squeeze as a key issue for the district, should include policy hooks for the forthcoming Local Nature Recovery Strategy (LNRS) and make up to date references to both the Environment Act (2021) and the Environmental Improvement Plan (EIP, 2023). Given how recent the publication of the EIP is we would be happy to discuss with your authority how this could best be achieved but we believe given the wealth of natural capital within Chichester District it is vitally important that this latest iteration of the Local Plan is set in its full policy and legislative context.

We have suggested a significant number of amendments and additions to both policies and supporting text throughout the Plan. In our view these could all be taken forward as minor modifications but if they were all acted upon they would leave the Plan much stronger and more coherent in delivering for the natural environment, one of the three central tenets of genuinely sustainable development as set out in the National Planning Policy Framework (NPPF 2021, paragraph 8c).

See attachment for representations on paragraphs/policies.

Change suggested by respondent:

Natural England advise the inclusion of the phrase “development to be sensitively designed, incorporating the special qualities of designated landscapes where required” to recognise the importance of the district’s protected landscapes.

There needs to be clear agreement with the relevant statutory undertakers as to when the deficiencies in infrastructure will be rectified, so that housing land release is phased in line with such provision. This should be set out in an agreed Statement of Common Ground.

In relation to traffic mitigation to relieve congestion and to shift travel to sustainable and active travel modes the draft polices lack teeth to achieve these aims. Again land release for development should follow from such transport investment, not proceed it.

Document Element: Objective 7: Strategic Infrastructure**Respondent:** Ms Anna Glanville-Hearson [7957]**Summary:**

Local Plan, Chapter 8 (Transport and Accessibility), Section 8.8, and Policy T1. I contend that in the light of current public transport performance, the plan is ineffective and unsound.

There are three groups of residents who are not receiving an adequate bus service - these groups cover almost all residents of Chichester and its outlying areas.

Evidence from existing performance is that our public transport providers, Stagecoach and Compass, are providing an inadequate service. If public transport systems are not improved significantly they will not be able to satisfy the needs of residents and the vision of the Local Plan.

Full text:

I refer to Chapter 8 (Transport & Accessibility), Section 8.8 and Policy T1, items 1-4.

Bus services in Chichester are sparse, infrequent and expensive eg no 47 every 2 hours, no 56 every 1.5 hours. So local residents - many of advancing age - are forced to use cars to access town-centre shops and retail parks leading to frequent gridlock. There are also no services to the many new outlying developments - some families on Shopwhyke Lakes have waited four years for a bus service. They are also forced to use cars. Finally many people moved here from larger cities after the pandemic; our public transport providers do not offer any hardcopy timetables or maps (only online); this disempowers residents and leads to widespread confusion - yet another cause of additional car traffic which blights the city and environs.

Evidence from existing public transport performance is that our public transport providers, Stagecoach and Compass, are currently providing an ineffective and inadequate service. If public transport systems are not improved significantly they will not be able to satisfy the needs of residents and the vision of the Local Plan.

Object

Document Element: Objective 7: Strategic Infrastructure**Respondent:** Mayday! Action Group (John Garrett) [7163]**Summary:**

The Local Plan as written does not adequately address how infrastructure, transport and services are going to be materially and strategically improved to meet the predicted growth and shift to a significantly ageing population. There is presently insufficient capacity to supply services and to have adequate people and environmentally friendly connectivity, as a direct result of decades of neglect towards investing in infrastructure and services to meet the needs of the District's population. We are led to believe that developers through increased levies in order to gain permission to build will fulfil this need, but all that this will result in is an uncoordinated, dysfunctional mess completely lacking in any future-proof master planning approach. We contend that this will do nothing for the quality of life of Chichester District residents and it will create a vacuum whereby few if indeed any can be held accountable or indeed found liable for shortcomings in the future.

Full text:

Executive Summary

The Local Plan as written lacks ambition and vision, and will be detrimental to the landscape within which the district lies. It is a plan borne out of a need to produce a legal document which will satisfy the regulatory authorities. In terms of Urban Planning it fails "To meet the needs of the present without compromising the ability of future generations to meet their own needs" (NPPF).

The development that will consequentially arise from the deployment of such a made Local Plan is not sustainable. It will adversely affect the Character, Amenity and Safety of the built environment, throughout our district.

In particular, the Local Plan is inadequate for the needs of the people in the district both at present and in the future because –

1. It has been written in advance of the District having a properly formed and agreed Climate Emergency Action Plan. It is inconceivable that such a key document will not shape our Local Plan. It is this Action Plan that is needed first in order to provide the long-term strategic view as to how and what the District will look like in the future; this, in turn, will help form and shape the policies outlined in any prospective, Local Plan. The Plan as proposed is moribund, as a result of “cart before the horse” thinking.
2. The Local Plan as written does not adequately address how infrastructure, transport and services are going to be materially and strategically improved to meet the predicted growth and shift to a significantly ageing population. There is presently insufficient capacity to supply services and to have adequate people and environmentally friendly connectivity, as a direct result of decades of neglect towards investing in infrastructure and services to meet the needs of the District’s population. We are led to believe that developers through increased levies in order to gain permission to build will fulfil this need, but all that this will result in is an uncoordinated, dysfunctional mess completely lacking in any future-proof master planning approach. We contend that this will do nothing for the quality of life of Chichester District residents and it will create a vacuum whereby few if indeed any can be held accountable or indeed found liable for shortcomings in the future.
3. The Local Plan as written does not state how it will go about addressing the need to create affordable homes. The District Council’s record on this matter since the last made plan has been inadequate and now the creation of affordable homes has become urgent as political/economic/social factors drive an ever increasing rate of change within the District.
4. Flood risks assessments used in forming the Plan are out of date (last completed in 2018) and any decision to allocate sites is contrary to Environment Agency policy. Additionally, since March 2021 Natural England established a position in relationship to ‘Hold the Line’ vs. ‘Managed Retreat’ in environmentally sensitive areas, of which the Chichester Harbour AONB is a significant example. CDC have failed to set out an appropriate policy within the proposed Local Plan that addresses this requirement.
5. The A27 needs significant investment in order to yield significant benefits for those travelling through the East-West corridor; this is unfunded. Essential improvements to the A27 are key to the success of any Local Plan particularly as the city’s ambitions are to expand significantly in the next two decades. But any ambitions will fall flat if the A27 is not improved before such plans are implemented.. The A259 is an increasingly dangerous so-called ‘resilient road’ with a significant increase in accidents and fatalities in recent years. In 2011, the BBC named the road as the “most crash prone A road” in the UK. There is nothing in the Local Plan that addresses this issue. There is no capacity within the strategic road network serving our district to accommodate the increase in housing planned, and the Local Plan does not guarantee it.
6. There is insufficient wastewater treatment capacity in the District to support the current houses let alone more. The tankering of wastewater from recent developments that Southern Water has not been able to connect to their network and in recent months the required emergency use of tankers to pump out overflowing sewers within our City/District reflects the gross weakness of short-termism dominated thinking at its worst and is an indictment of how broken our water system is. The provision of wastewater treatment is absolutely critical and essential to the well-being of all our residents and the long-term safety of our built environment. The abdication by those in authority, whether that be nationally, regionally or locally, is causing serious harm to the people to whom those in power owe a duty of care and their lack of urgency in dealing properly with this issue is seriously jeopardizing the environment in which we and all wildlife co-exist.
7. Settlement Boundaries should be left to the determination of Parish Councils to make and nobody else. The proposed policy outlined in the Local Plan to allow development on plots of land adjacent to existing settlement boundaries is ill-conceived and will lead to coalescence which is in contradiction of Policy NE3.
8. All the sites allocated in the Strategic Area Based Policies appear to be in the majority of cases Greenfield Sites. The plan makes little, if any reference to the development of Brownfield sites. In fact, there is not a Policy that relates to this source of land within the Local Plan as proposed. Whilst in the 2021 HELAA Report sites identified as being suitable for development in the District as being Brownfield sites were predicted to yield over 4000 new dwellings. Why would our Local Plan not seek to develop these sites ahead of Greenfield sites?
9. The Local Plan does not define the minimum size that a wildlife corridor should be in width. What does close proximity to a wildlife corridor mean? How can you have a policy (NE 4) that suggests you can have development within a wildlife corridor? These exceptions need to have clear measures and accountability for providing evidence of no adverse impact on the wildlife corridor where a development is proposed. Our view is quite clear. Wildlife and indeed nature in the UK is under serious and in the case of far too many species, potentially terminal threat. Natural England has suggested that a Wildlife Corridor should not be less than 100metres wide. The proposed Wildlife Corridors agreed to by CDC must be enlarged and fully protected from any development. This is essential and urgent for those Wildlife Corridors which allow wildlife to achieve essential connectivity between the Chichester Harbour AONB and the South Downs National Park.

10. Biodiversity Policy NE5 - This is an absolute nonsense. If biodiversity is going to be harmed there should be no ability to mitigate or for developers to be able to buy their way out of this situation. This mindset is exactly why we are seeing a significant decline in biodiversity in the District which should be a rich in biodiversity area and why the World Economic Forum Report (2023) cites the UK as one of the worst countries in the world for destroying its biodiversity.

11. In many cases as set out in the Policies the strategic requirements lack being SMART in nature – particularly the M Measurable. These need to be explicit and clear: “you get what you measure”.

12. 65% of the perimeter of the District of Chichester south of the SDNP is coastal in nature. The remainder being land-facing. Policy NE11 does not sufficiently address the impact of building property in close proximity to the area surrounding the harbour, something acknowledged by the Harbour Conservancy in a published report in 2018 reflecting upon how surrounding the harbour with housing was detrimental to its long-term health. And here we are 5 years on and all of the organizations that CDC are saying that they are working in collaboration with, to remedy the decline in the harbour’s condition, are failing to implement the actions necessary in a reasonable timescale. CDC are following when they should be actually taking the lead on the issue. Being followers rather than leaders makes it easy to abdicate responsibility. There must be full and transparent accountability.

13. The very significant space constraints for the plan area must be taken into account. The standard methodology need no longer apply where there are exceptional circumstances and we are certain that our District should be treated as a special case because of the developable land area is severely reduced by the South Downs National Park (SDNP) to the north and the unique marine AONB of Chichester Harbour to the south. A target of 535dpa is way too high. This number should be reduced to reflect the fact that only 30% of the area can be developed and much of that is rural/semi-rural land which provides essential connectivity for wildlife via a number of wildlife corridors running between the SDNP and the AONB. Excessive housebuilding will do irretrievable damage to the environment and lead to a significant deterioration in quality of life for all who reside within the East / West corridor.

14. Many of the sites identified in the Strategic & Area Based Policies could result in Grade 1 ^ 2 farmland being built upon. The UK is not self-sufficient in our food security. It is short-sighted to expect the world to return to what we have come to expect. Our good quality agricultural land should not all be covered with non-environmentally friendly designed homes.

Document Element: Objective 7: Strategic Infrastructure

Respondent: National Highways (Mr Marius Pieters, Spatial Planning Manager) [8127]

Summary:

[National Highways letter dated 24/07/23 confirmed representation should be categorised as Comment - Support.] Objective 7: (Strategic Infrastructure) “A sustainable and integrated transport system will be achieved through improvements to walking and cycling networks and links to accessible public transport. Highway improvements will be delivered to mitigate congestion, including measures to mitigate potential impacts on the A27 through a monitor and manage process” and “Infrastructure requirements will be kept under review through the Infrastructure Delivery and Business Plans and development will be phased to align with provision of essential infrastructure”. This objective will help to reduce demand and reliance on the A27 especially in peak periods.

Full text:

We have reviewed the publicly available Local Plan documents and provided comments in the attached letter, in relation to the transport implications of the plan for the safety and operation of the SRN.

Our comments include issues to resolve, comments, requests for further information and recommendations. A brief summary of our main comments are:

- the reliance on the delivery of the A27 Chichester bypass improvements project.
- the requirements for new, additional, and adapted processes and assessments, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments.
- collaborative working between agencies in combination with a robust monitor and manage policy.

We hope our comments assist.

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders. We look forward to continuing to participate in future consultations and discussions.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through

all the transport related matters and agree how to progress any required evidence gathering or other work.

Background

National Highways has been appointed by the Secretary of State for Transport as strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the strategic road network (SRN).

National Highways is responsible for operating, maintaining, and improving the Strategic Road Network (SRN) i.e., the Trunk Road and Motorway Network in England, as laid down in Department for Transport (DfT) Circular 01/2022 (Strategic Road Network and the delivery of sustainable development).

The SRN is a critical national asset and as such we work to ensure that it operates and is managed in the public interest, both in respect of current activities and needs as well as in providing effective stewardship of its long-term operation and integrity.

Our responses to Local Plan consultations are guided by relevant policy and guidance including the National Planning Policy Framework (2021) (NPPF):

- Transport issues should be considered from the earliest stages of plan-making and development proposals so that the potential impact of development on transport networks can be addressed (para 104).
- The planning system should actively manage patterns of growth such that significant development is focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. (para 105).
- Planning policies should be prepared with the active involvement of highways authorities and other transport infrastructure providers so that strategies and investments for supporting sustainable transport and development patterns are aligned. (para 106).
- In terms of identifying the necessity of transport infrastructure, NPPF confirms that development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe. (para 111).
- Planning policies and decisions should support development that makes efficient use of land, taking into account the availability and capacity of infrastructure and services – both existing and proposed – as well as their potential for further improvement and the scope to promote sustainable travel modes that limit future car use. (para 124).

In relation to the tests of soundness set out at paragraph 35 of the NPPF, in the context of transport, these are interpreted as meaning:

- a) Positively prepared - has the transport strategy been prepared with the active involvement of the highway authorities, other transport infrastructure providers and operators and neighbouring councils?
- b) Justified – Is the transport strategy based on a robust evidence base prepared with the agreement in partnership, or with the support of the highway authorities?
- c) Effective – Does the transport strategy and policy satisfy the transport needs of the plan and is it deliverable at a pace which provides for and accommodates the proposed progress and implementation of the plan?
- d) Consistent with national policy – Does the transport strategy support the economic, social, and environmental objectives of the Plan and the NPPF/NPPG?

We will be concerned with proposals that have the potential to impact on the safe and efficient operation of the SRN; in this case, the A27 trunk road (Chichester Bypass and its junctions) which is the main access route in the Chichester area. We have particular interest in any allocation, policy or proposals which could have implications for the A27 and the wider SRN network. We are interested as to whether there would be any adverse road safety or operational implications for the SRN. The latter would include a material increase in queueing or delay or reduction in journey time reliability during the construction or operation of the development set out in the plan.

National Highways is a key delivery partner for sustainable development promoted through the plan-led system, and as a statutory consultee we have a duty to cooperate with local authorities to support the preparation and implementation of development plan documents.

In accordance with national planning and transport policy and our operating licence, we are entirely neutral on the principle of development as it is for the local planning authority to determine whether development should be allocated or permitted; albeit it must comply with national policy on locating development in locations that are or can be made sustainable. Therefore, while always seeking early and fulsome engagement with local plans and/or developers, we will simply be assessing the transport and related implications of plans or proposals and agreeing any necessary transport improvements and relevant development management policy.

In progressing Local Plans, we will seek to agree the following:

- Assessment tools and methodology
- Baseline Assessment i.e., to demonstrate that the assessment tool accurately reflects current transport conditions
- Comparator case assessment i.e., to forecast the transport conditions that would occur in the absence of the plan
- Forecast modelling i.e., to forecast the transport conditions that would arise with the plan in place, this will include an assessment at the end of the Plan period; and, if required, at full build out if that occurs after the end of the Plan period
- Outputs and outcomes of modelling, demonstrating, as appropriate, what transport infrastructure is necessary to support the plan o It should be noted that a suite of transport modelling tools may be required. This includes strategic modelling covering an area at least one major junction beyond the district boundary, localised network modelling where several links/junctions are close together and/or individual junction modelling
 - o A DMRB (Design Manual for Roads and Bridges) compliancy assessment may also be required for certain highway features, such as Merge/Diverge assessment at Grade separated junctions, link capacity assessments, and others.
- The design of any necessary transport infrastructure, to an extent suitable for establishing deliverability during the plan period at the time that it becomes necessary for the purpose of ensuring that unacceptable road safety impacts or severe operational impacts do not arise as a result of development. This may be to at least General Arrangement design stage or preliminary design stage. Whichever degree of detail is agreed, the products must be in full compliance with the DMRB.
- Industry standard transport intervention costings.
- The delivery/funding mechanisms for necessary transport interventions. It should not be assumed that National Highways will have any responsibility to identify or deliver necessary transport interventions.
- If considered appropriate, a "Monitor & Manage" (M&M) framework, aimed at managing the pace of development in line with the pace of funding and delivery of necessary highway interventions in a manner which responds to the realworld impacts of development may be agreed for inclusion in the plan subject to the adequacy of risk control measures included therein. This can include the move from a 'predict & provide' style of delivery to 'a vision & validate' style. o Any M&M framework must be based on a "worst case scenario" whereby necessary mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. It must be translated into development management plan policy and policy relating to development allocations.

Further detail on the above can be provided by National Highways.

While ideally all the above should be agreed prior to the Submission of the Local Plan for examination, we recognise that this is not always possible. However, all parties should work towards all matters being agreed and reflected in a Statement of Common Ground (SoCG) by the start of the Local Plan Examination at the latest. Ideally the SoCG between the Council and National Highways would be prepared well in advance of plan submission in order to guide resource input and to track progress towards final agreement on all relevant matters starting from the earliest plan iterations until the final version is agreed.

It is acknowledged that Government policy places much emphasis on housing delivery as a means for ensuring economic growth and addressing the current national shortage of housing. The NPPF is very clear that: "Strategic policy-making authorities should establish a housing requirement figure for their whole area, which shows the extent to which their identified housing need (and any needs that cannot be met within neighbouring areas) can be met over the plan period."

However, new DfT C1/22 and the NPPF are equally clear that any development, including housing delivery, must be tempered by the requirement to ensure that the associated transport demand can be accommodated without unacceptable impacts on the safety of the SRN or severe impacts on the operation of the SRN including reliability and congestion. Therefore, as necessary and appropriate, any plan and/or development must be accompanied by suitable mitigation in the right places at the right time, that is to the required design standards and is deliverable in terms of land availability, constructability and funding.

We would also draw your attention to the then Highways England document 'The Strategic Road Network, Planning for the Future: A guide to working with National Highways on planning matters' (September 2015). This document sets out how National Highways intends to work with local planning authorities and developers to support the preparation of sound documents which enable the delivery of sustainable development. https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_t_data/file/461023/N150227_-_Highways_England_Planning_Document_FINAL-lo.pdf

Responses to Local Plan consultations are also guided by National Planning Policy Framework (NPPF) revised on 20 July 2021 which sets out the government's planning policies for England and how these are expected to be applied.

Updated Circular (01/2022)

It should be noted that since the start of the Local Plan consultation process, on the 23 December 2022, the Department for Transport released a new circular on the 'Strategic road network and the delivery of sustainable development' (Circular 01/2022), which replaces all of the policies in Circular 02/2013 of the same name. These representations take account of the new circular and the requirements in terms of the Local Plan evidence base and process.

We request that the Local Plan is prepared in line with all aspects of the new circular. Particularly, the principles of sustainable development (paragraphs 11 to 17), new connections and capacity enhancements (paragraphs 18 to 25), and engagement with plan-making (paragraphs 26 to 38).

Regulation 18 submission

In our Regulation 18 submission we noted several matters including:

- The need to mitigate the adverse impacts of strategic development traffic to the A27 Chichester Bypass and its junctions at Portfield Roundabout, Bognor Road Roundabout, Whyke Roundabout, Stockbridge Roundabout and Fishbourne Roundabout and Oving junction.
- The need to identify a mechanism to calculate contributions towards the delivery of the previously agreed Local Plan A27 improvements
- The need to confirm the number of dwellings needed within the plan period
- The need to establish National Highways acceptance of the traffic model reference and future case scenarios
- The need to confirm costs, viability, and funding associated with mitigating the safety and congestion impacts of the development included within the plan.

Local Plan context

This Local Plan (Chichester Local Plan 2021 – 2039), prepared by the Local Planning Authority (LPA) Chichester District Council, sets out the vision for future development in the district and will be used to help decide on planning applications and other planning related decisions including shaping infrastructure investments.

The draft sets out how the district should be developed over the next 18-years to 2039 including for the full Plan period (1 April 2021 to 31 March 2039) the total supply of

- 10,359 dwellings
- 114,652 net additional sqm new floorspace

Minus the completions this is equivalent to around 530 dwellings and 6,150 sqm of floorspace a year.

National Highways Representations

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders.

We have undertaken a review of the Chichester Local Plan 2021-2039 proposed submission version and accompanying evidence documents, our comments are set out in the tables below (following pages). [see table within attachment]

Summary

We have reviewed the publicly available Local Plan documents and provided comments above in relation to the transport implications of the plan for the safety and operation of the SRN. We understand that other technical information is available, but this was not presented as part of this consultation.

Chichester, and the A27, are already heavily congested, infrastructure in the existing Local Plan remains undelivered and the growth set out in the new Plan will further increase travel demand.

As presented, satisfying the transport needs of the plan is clearly reliant on the delivery of the A27 Chichester bypass improvements project. The A27 Chichester bypass improvements project is one of 32 pipeline schemes being considered for possible inclusion in National Highways third Road Investment Strategy (RIS3) covering 1 April 2025 to 31 March 2030.

On 9 March 2023 the UK Transport Secretary ensured record funding would be invested in the country's transport network, sustainably driving growth across the country while managing the pressures of inflation. The announcement cited the A27 Arundel Bypass as being deferred from RIS2 to RIS 3 (covering 2025-2030). The transport secretary also identified a number of challenges to the delivery of the road investment strategy and cited the benefit of allowing extra time to ensure schemes are better planned and efficient schemes can be deployed more effectively.

At present, there is no commitment by DfT to carry out the A27 Chichester bypass improvements project. Until the A27 Chichester bypass improvements project is published in the RIS3, consented and a decision to invest is made it cannot be assumed to be a committed project.

We note that the Plan does not address any uncertainty of delivery of the A27 Chichester bypass improvements project and we strongly recommend that there is either no reliance placed on RIS3 to realise capacity for growth in the Plan or that contingency measures are included to cover the eventuality that RIS3 funding is not forthcoming within the plan period. It is not clear that the potential impact of development on transport networks can be addressed in the absence of the A27 Chichester bypass improvements project.

Achieving net zero, reducing emissions reduction, acting on climate, and supporting thousands of new homes and new employment developments will be problematic with existing processes. New, additional, and adapted processes and assessments will likely be required, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments. We acknowledge that change is complex, expensive, and time-consuming, especially for smaller district level Councils. But the hard work will deliver benefits for the Council and residents in the longer-term.

National Highways seeks to continue working with the Council and WSCC to progress coordinated and deliverable packages of interim mitigation measures and alternative transport solutions while a long-term strategic solution is considered by government. This must however be in combination with a robust monitor and manage policy that

appropriately manages the risk of unacceptable road impacts resulting from new housing and other development over the Plan period.

We have been in discussion with Chichester District Council regarding their proposed Monitor and Manage Strategy. At present, we do not consider the current strategy to be robust and we seek further information and detail especially on who, when and when monitoring and management will be undertaken. Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas. Any M&M framework must be based on a "worst case scenario" whereby necessary transport mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. The M&M framework must set out that the alternative to mitigation not being delivered is that development does not proceed where that development would give rise to unacceptable road safety risk or severe cumulative impacts on the road network in the absence of that mitigation. The M&M framework must be translated into development management plan policy and policy relating to development allocations.

As we have reiterated throughout our comments, we welcome the opportunity to work with you to address these outstanding matters and we will continue to liaise over submitted Transport Assessment, Travel Plan policy and Monitor and Manage Policy to help to work towards a viable plan.

We hope our comments assist.

We look forward to continuing to participate in future consultations and discussions. Please do continue to consult us as the Plan progresses so that we can remain aware of, and comment as required on, its contents.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Object

Document Element: Objective 7: Strategic Infrastructure

Respondent: Natural England (Luke Hasler, Senior Advisor) [8189]

Summary:

Natural England maintains its advice, provided both as part of the Regulation 18 statutory consultation in 2019 and through subsequent, non-statutory consultations during 2021 and 2022. This has still not been addressed in the following areas [changes to plan refer]

Full text:**Summary of advice**

While we have raised some queries and recommended some further modifications to certain policies we do not find the Plan unsound on any grounds relating to our remit.

Natural England has reviewed the Proposed Submission Local Plan and accompanying appendices together with the Habitats Regulations Assessment (HRA) and Sustainability Appraisal (SA). Our detailed comments on the policies and site allocations are provided as follows:

- Annex 1 - Chapter 2 – Vision and Strategic Objectives
- Annex 2 - Chapter 4 – Climate Change and the Natural Environment
- Annex 3 - Chapter 5 (Housing) and Chapter 6 – (Place-making, Health and Well-being)
- Annex 4 - Chapter 7 (Employment and Economy) and Chapter 8 (Transport and Accessibility)

- Annex 5 - Chapter 10 – Strategic and Area Based Policies

Please note that we have not provided comments on all policies but those which have most influence on environmental issues. Natural England has no comment to make on the policies not covered in this response. Other than confirming that we have referred to it when considering our advice on specific policies and site allocations Natural England has no general comments to make on the SA.

Unfortunately due to unforeseen resourcing issues while we have reviewed the associated HRA we are not in a position to provide detailed comment on it as part of this response. We will rectify this as soon as possible and can confirm that we have seen nothing in it that raises any major concerns.

The Plan has many positive aspects including standalone policies on Green Infrastructure (GI) and wildlife corridors and an incredibly extensive suite of natural environment policies more generally.

We are hugely appreciative of the opportunity that we were given to work with you on shaping key policies post-Regulation 18. However, we believe that the plan needs to go further in its recognition of coastal squeeze as a key issue for the district, should include policy hooks for the forthcoming Local Nature Recovery Strategy (LNRS) and make up to date references to both the Environment Act (2021) and the Environmental Improvement Plan (EIP, 2023). Given how recent the publication of the EIP is we would be happy to discuss with your authority how this could best be achieved but we believe given the wealth of natural capital within Chichester District it is vitally important that this latest iteration of the Local Plan is set in its full policy and legislative context.

We have suggested a significant number of amendments and additions to both policies and supporting text throughout the Plan. In our view these could all be taken forward as minor modifications but if they were all acted upon they would leave the Plan much stronger and more coherent in delivering for the natural environment, one of the three central tenets of genuinely sustainable development as set out in the National Planning Policy Framework (NPPF 2021, paragraph 8c).

See attachment for representations on paragraphs/policies.

Change suggested by respondent:

Natural England advise the inclusion of the phrase “and that nature-based solutions are incorporated into new development”, as this will provide multifunctional benefits such as managing surface water and grey waste, contributing to biodiversity and proving natural cooling from the effects of climate change.

Object

Document Element: Objective 7: Strategic Infrastructure**Respondent:** Mr Matthew Rees [7841]**Summary:**

Strategic objective 7 is not sound because it fails to consider the infrastructure investment requirements of existing residents before new development is allowed. This was already noted in the 2015 plan, so needs to be retained. There are longstanding recognised issues with high ground water levels, regular flooding of carriage ways and fields which will be exacerbated to unacceptable levels if development proceeds without first addressing the issue. There are other substantial concerns about the availability of a sufficient supply of fresh water for drinking and household requirements, and I do not have any confidence that this local plan is addressing the matter. The proposed concentration of 13% of all housebuilding for Chichester in a single site with existing issues is not credible without a clear objective to upgrade the infrastructure first. I do not have confidence in the way in which CDC is stating the objective or its ability to influence the infrastructure partners, and am concerned that it has become so frustrated internally regarding a housebuilding agenda that it has lost sight of the critical pre-conditions. If this is not addressed, the residents of Saxon Meadow are at clear risk of waste water ingress into their properties, of ponding / flooding from high rainfall that cannot soak away, and from shortages of drinking water and/or low pressure issues. This will also ruin the gardens at Saxon Meadow in periods of low rainfall, as it is more likely that there will be restrictions on water consumption.

Full text:

There is much to commend in this document and the supporting technical documents that accompany it, and I have listed in the appendix to this letter 26 such paragraphs and policies. I am happy for my support to be registered against these sections of your consultation document. There is also much upon which I must represent a concern, so I attach representations relating to 22 paragraphs or policies.

I am happy to participate in a hearing session, and I would flag at this stage that the common theme that links all of these representations is the need to safeguard the natural and built environment in and around Saxon Meadow, Tangmere from the risks of unsustainable development, I consider that the independent examiner should focus their review on the aspects of the local plan that relate to this matter.

Appendix 1: list of policies that I support

1. P14, 1.23, 1.24: Duty to cooperate
2. P24, para 2.30 "the council declared a climate emergency in July 2019"
3. P24, para 2.32 – "all proposal for new development should be considered in the context of a climate emergencV"
4. P30: Objective 2: natural environment: "development will achieve net gains in biodiversity"
5. P43, 4.1 "National policy promotes increasing energy efficiency, the minimisation of energy consumption and the development of renewable energy sources"
6. P43, 4.3: "Some renewable energy projects provide significant opportunities to enhance biodiversitV"
7. P53, Policy NE5: Biodiversity and Biodiversity Net Gain
8. P62, Para 4.42: Hedgerows and some types of woodlands are identified as a priority habitat
9. P62, Policy NE8: Proposals should have a minimum buffer zone of 15 metres from the boundary of ancient woodland or veteran trees to avoid rood damage (known as the root protection area)
10. P68, Policy NE10: Criteria for Development in the Countryside - Does not prejudice viable agricultural operations or other viable uses
11. P80, Para 4.91: There are serious concerns about the impact of flooding, both in respect of current properties at risk but also the long-term management of the area.
12. 4.92: any development in the plan area must therefore have regard to flood and erosion risk.
13. 4.94: built development can lead to increased surface water run-off; therefore, new development should include SuDS to help cope with intense rainfall events
14. P81, Para 4.96: Environment Agency consent is required for any works within 16 m of tidal waters and 8m of fluvial watercourses in line with the Environmental Permitting Regulations 2016. This strip is required for access. The policy includes a setback requirement to ensure this access strip is not obstructed.
15. P80, 4.92, Any development in the plan area must therefore have regard to flood and erosion risk, now and in the future, by way of location and specific measures, such as additional flood alleviation, which will protect people, properties and vulnerable habitats from flooding. Recent changes to national guidance highlight the importance of considering flood risk from all sources, and this is particularly significant for the plan area as large parts of it are at risk from groundwater flooding, which needs to be recognised in development decisions alongside the well-established risks in relation to tidal, fluvial and surface water flooding. Appropriate mapping of all sources of flood risks is still evolving, and is likely to develop further over the plan period
16. P93, Policy NE20 Pollution: Development proposals must be designed to protect, and where possible, improve upon the amenities of existing and future residents, occupiers of buildings and the environment generally. Development proposals will need to address the criteria contained in, but not limited to, the policies concerning water quality; flood risk and water management; nutrient mitigation; lighting; air quality; noise; and contaminated land. Where development is likely to generate significant adverse impacts by reason of pollution, the council will require that the impacts are minimised and/or mitigated to an acceptable level within appropriate local/national standards, guidance, legislation and/or objectives.
17. P94, 4.127, Light pollution caused by excessive brightness can lead to annoyance, disturbance and impact wildlife, notably nocturnal animals. The design of lighting schemes should be carefully considered in development proposals to

prevent light spillage and glare.

18. P94, 4.128, Dark skies are important for the conservation of natural habitats, cultural heritage and astronomy. The plan area includes three 'Dark Sky Discovery Site' designations, all located within the Chichester Harbour AONB; Eames Farm on Thorney Island, Maybush Copse in Chidham, and north of the John Q Davis footpath in West Itchenor.

Development within or directly impacting these areas will be subject to particular scrutiny in terms of their impact on dark skies. The entire SDNPA area is also declared as an International Dark Sky Reserve. Development directly impacting this area will be subject to similar scrutiny.

19. P96, Policy NE22 Air Quality

20. P97, Policy NE-23 Noise

21. P142, Para 6.29, Amenity: Private space, shared space and the design quality and construction of communal spaces all contribute to amenity

22. P155-6, Policy P11:Conservation Areas "protecting the setting (including views into and out of the area)"

23. P55, Para 4.26 - The council is under a legal duty to protect designated habitats, by ensuring that new development does not have an adverse impact on important areas of nature conservation, and by requiring mitigation to negate the harm caused.

24. P58, Para 4.33 The council is under a legal duty to protect their designated bird populations and supporting habitats

25. P95, Para 4.129 The council has a duty to review and assess air quality within the district

26. P301, Conservation Area: An area of special architectural or historic interest, designated under the Planning (Listed Buildings & Conservation Areas) Act 1990. There is a statutory duty to preserve or enhance the character, appearance, or setting of these areas.

Change suggested by respondent:

Amend as follows:

- To work with infrastructure providers to ensure the timely delivery of key infrastructure to ensure that the needs of existing residents are met, and provide for all of the infrastructure requirements of existing dwellings prior to considering any new development, and then after that, to support delivery of new development.

- New development will be supported by sufficient provision of infrastructure to enable the sustainable delivery of the development strategy for the plan area.

- Key infrastructure to support the Local Plan will include improvements to transport, open space and green infrastructure, education, health, water supply and removal, telecommunications, flood risk and coastal change management and the provision of minerals and energy first for existing and then for new developments only if it can be demonstrated that there is resilience in the infrastructure to accommodate growth.

- A sustainable and integrated transport system will be achieved through improvements to walking and cycling networks and links to accessible public transport, including new train stop to serve any development that is located in Tangmere, using the existing railway between Barnham and Chichester to place a new station stop in Oving. Highway improvements will be delivered to mitigate congestion, including measures to mitigate potential impacts on the A27 through a predict and provide process.

- Sewerage undertakers will need to work with regulators to deliver improvements in wastewater infrastructure to support existing and new development and to ensure adverse environmental impacts are avoided in domestic properties, businesses on internationally designated habitats.

- Development proposals will be considered only after it can be demonstrated that there is a sustainable source of fresh water supply to meet the needs of existing requirement for the foreseeable future, and taking climate change into account. Improvements to water efficiency, conservation and storage capacity will be made. Infrastructure requirements will be kept under review through the Infrastructure Delivery and Business Plans and development will be phased to align with provision of essential infrastructure.

Object

Document Element: Objective 7: Strategic Infrastructure**Respondent:** The Goodwood Estates Company Limited [7922]**Agent:** HMPC Ltd (Mr Haydn Morris) [112]**Summary:**

Greater emphasis must be placed through development and site-specific policies to ensure essential infrastructure is provided 'up front' before first occupation, and other infrastructure needs provided before the development is completed or the developer has meaningfully left the site.

Past developments have failed to achieve improvements to the A27 and its junctions, and the proximity of some has constrained future opportunities for improvement. The developments, particularly volume housebuilding have added to, rather than mitigated congestion, by following a blinkered, site-centric attitude to meeting housing numbers without responsibility for infrastructure impacts.

The principal causes of A27 congestion are local traffic movements from and to an inadequate local highway network, made worse by poorly integrated new developments, and conflicted priorities between through and crossing traffic. The solution is not as many local people believe to replace the A27 completely with a very costly new "by-pas" of limited economic or environmental benefit to the city and district. Past by-pass proposals have failed to correctly assess the true economic cost of options promoted, or the cost and benefits of tackling the issues at a local level of on-line improvements and co-ordinated improvements in the local highway network; the latter in part being hampered by differing responsibilities (National and local – the limits of which are guarded religiously) and a failure to engage appropriately and positively to solve a common problem.

Neither the local plan nor its strategies should be based on any A27 by-pass premise and should not make provision for any A27 by-pass proposal.

Object

Document Element: Objective 7: Strategic Infrastructure**Respondent:** Mr simon urry [7840]**Summary:**

This Objective highlights/prioritises the mitigation of impacts on the A27, implying that other areas will be developed with a weaker view on any detrimental effects and development along the A27 will be delayed. The A27 is struggling to cope and needs work whatever other development happens. The A27 corridor should be seen as an opportunity for a joined up approach to a major infrastructure and housing plan.

Our local water and sewerage systems also struggle and whilst fixing them would allow for more housing it would be a huge expense for relatively small return when compared to the A27 corridor.

This Objective highlights/prioritises the mitigation of impacts on the A27, implying that other areas will be developed with a weaker view on any detrimental effects and development along the A27 will be delayed. The A27 is struggling to cope and needs work whatever other development happens. The A27 corridor should be seen as an opportunity for a joined up approach to a major infrastructure and housing plan.

Our local water and sewerage systems also struggle and whilst fixing them would allow for more housing it would be a huge expense for relatively small return when compared to the A27 corridor.

Change suggested by respondent:

The plan should be biased towards improvements and development along the A27 and away from inefficient piecemeal building, with each location requiring its own expensive infrastructure upgrades.

Document Element: Objective 7: Strategic Infrastructure

Respondent: Wisborough Green Parish Council (Mrs Louise Davies, Parish Clerk) [1064]

Summary:

Support – WGPC supports this approach but questions how it could be applied to Wisborough Green. WGPC has concerns that the claims made will be neither addressed nor achieved in Wisborough Green:

- Public or sustainable transport
- Education places
- Healthcare provision
- Water supply
- Wastewater treatment capacity
-

Within the plan it states that Loxwood, Plaistow and Ifold and Wisborough Green are served by the Loxwood WTW. Kirdford is served by the Kirdford WTW. This is incorrect. Wisborough Green has its own WTW.

Document Element: Sustainable development, 3.1**Respondent:** Deerhyde Limited [7657]**Agent:** Vail Williams LLP (David Ramsay, Partner) [8134]**Summary:**

Plan in conflict with NPPF definition of sustainable development as referred to in paragraph 3.1, as not allocating sites on the Manhood Peninsula, particularly settlement hubs, means the plan fails to deliver 'sufficient supply of homes and facilitating a variety of sites to come forward where needed' as required by the NPPF.

Full text:

I am pleased to attach our representations in response to the Chichester Local Plan Regulation 19 consultation. These representations are submitted on behalf of our clients Deerhyde Ltd. owners of land in Selsey and located in the area for a significant number of years.

The submitted documents include the following:

- Representations statement
- Plans showing the potential road widening of Golf Links Lane and Paddock Lane, Selsey
- Development potential of sites for residential development at Golf Links Lane and Old Farm Road, Selsey taking account of flood zones 2 and 3 (2 plans 15-085 SK03 and SK04)
- Plans showing access options to Golf Links Lane site
- Plan showing tracking analysis for low-loaders
- Junction analysis
- Submission form

As detailed in the attached, after careful consideration we have concluded that the housing strategy for Chichester is flawed in principle as it fails to allocate sufficient sites in outside Chichester City (or adjacent to) to allow the remainder of the District to continue to provide houses for local people in areas where they are most needed.

In addition, our clients have put forward a suggestion for an infrastructure improvement to Selsey – namely the widening of Golf Links Lane and Paddocks Lane to accommodate delivery of caravans / other HGV / LGVs but also to provide a wider carriageway which could potentially incorporate a pavement / footpath cycleway to aid safer conveyance of pedestrians and vehicles in the area. Adding in a safer highway solution would also encourage car users to walk or cycle for local trips rather than risking congestion in the car. It would have the added benefit of diverting caravan park traffic travelling from the north into the caravan parks earlier and thus relieving congestion of Selsey High Street.

Introduction

1.1. Vail Williams LLP has been instructed by Deerhyde Ltd to submit representations to the Chichester Local Plan 2021-2039: Proposed Submission (Regulation 19) document.

1.2. As per the Website, these comments seek to address the three questions namely:

1. Is it legally compliant?
2. Is it sound?
3. Does it comply with the duty to cooperate?

1.3. These representations are largely focussed on the provision of housing and ensuring that a satisfactory access (both vehicular and pedestrian) can be maintained and enhanced, particularly in Selsey.

1.4. These representations reflect the fact that our client, Deerhyde Ltd, owns a significant amount of land in the Selsey area, an interest which was acquired in 1986 but with family ownership going back many years before then.

1.5. Our clients have identified a potential opportunity to facilitate highway improvements within Selsey which would be to the benefit of both residents and tourists using the holiday parks and other attractions alike. This would particularly be of benefit given the Council's acknowledgement that the B2145 through Selsey is the busiest B road in the country. These representations bring into question the 'tests of soundness'. In particular regarding the questions as to whether it is 'sound' on the basis of whether it has been 'positively prepared', whether it is 'justified' and 'effective' in respect of the areas of concern raised with respect to employment land provisions.

1.6. As set out at Paragraph 35 of the NPPF local plans are required to be 'sound'. Plans are considered sound when the following applies:

- a) Positively prepared – providing a strategy which, as a minimum, seeks to meet the area's objectively assessed needs¹; and is informed by agreements with other authorities, so that unmet need from neighbouring areas is accommodated where it is practical to do so and is consistent with achieving sustainable development;
- b) Justified – an appropriate strategy², taking into account the reasonable alternatives³, and based on proportionate evidence⁴;
- c) Effective – deliverable over the plan period⁵, and based on effective joint working on crossboundary strategic matters that have been dealt with rather than deferred, as evidenced by the statement of common ground; and
- d) Consistent with national policy – enabling the delivery of sustainable development in accordance with the policies in this Framework and other statements of national planning policy, where relevant.⁶

1.7. These representations seek to highlight that Chapter 5 (Housing) has not been positively prepared, in so far as it does not provide [1.] "a strategy which, as a minimum, seeks to meet the area's objectively assessed needs".

1.8. It is also considered that Chapter 5 is not justified as the housing strategy is [2.] is inappropriate as it relies on a number of large strategic sites, with multiple issues some of which are in conflict with other parts of the local plan.

1.9. Chapter 5 is also not justified with respect to its provisions do not [3.] take into account reasonable alternative sites.

1.10. It is considered on the basis of the other factors highlighted in these representations and the proposed housing land provision is not 'consistent with national policy' as the proposed provision does not enable the delivery of sustainable development in accordance with the policies in this Framework and other statements of national planning policy, where relevant. It is considered that the proposed plans are contrary to the NPPF paragraph 16a, 16b, 16c, 16d and paragraph 20a

2 Local Plan Representations

2.1. Having reviewed the draft Local Plan we would make the following comments:

2.2. Paragraph 3.1 asserts the Government's encouragement for local planning authorities to ensure sustainable development is at the forefront when considering planning applications and that the National Planning Policy Framework (NPPF) defines sustainable development as "meeting the needs of the present without compromising the ability of future generations to meet their own needs". Paragraph 3.5 goes on to advise the range of factors as are informed the spatial strategy which underpins the local plan which, inter alia, "the pattern of need and demand for housing and employment across the area", "infrastructure capacity and constraints, in particular related to waste water treatment, roads and transport", "the availability of potential housing types, their deliverability and phasing" and this needs to take place whilst being mindful of the environmental constraints taking a sequential approach to avoiding flood risk areas, protect the environmental designations, landscape quality, the historic environment and settlement character.

2.3. The principles outlined above are supported as these are the key facets of good planning and plan making. However it falls to local authorities to ensure that the sustainable approach includes providing a sufficient supply of homes and facilitating a variety of sites to come forward where needed, and that the needs of groups within specific housing requirements are addressed and that land with permission is developed without unnecessary delay. (Paragraph 65). Paragraph 66 states that within the overall requirement [for housing] strategic policies should also set out a housing requirement for designated neighbourhood areas which reflects the overall strategy for the pattern and scale of development and any relevant allocations.

2.4. Paragraph 67 goes on, where it is not possible to provide a requirement figure for a neighbourhood area, the local planning authority should provide an indicative figure, if requested to do so by the neighbourhood planning body. This figure should take account of factors such as the latest evidence of local housing need, the population of the neighbourhood area and the most recently available planning strategy of the local planning authority.

2.5. Paragraph 68 asserts that strategic policy making authorities should have a clear understanding of the land available in their area through the preparation of a Strategic Housing Land Availability Assessment (SHLAA). From this, planning policies should identify a sufficient supply and mix of sites, taking into account their availability, suitability and locally economic viability.

2.6. Further guidance states (Paragraph 69) that small and medium sized sites can make an important [my emphasis] contribution to meeting the housing requirements of an area, and are often built-out relatively quickly. To promote the development of a good mix of sites the local planning authority should identify sites of small and medium size and support the development of windfall sites through their promises and decisions giving great weight to the benefits of using suitable sites within existing settlements for homes.

2.7. Neighbourhood planning groups should also give particular consideration to the opportunities for allocating small and medium-sized sites suitable for housing in their area. Paragraph 71 goes on: where an allowance is to be made for windfall sites as part of anticipated supply, there should be compelling evidence that they will provide a reliable source of supply. Any allowance should be realistic having regard to the SHLAA, historic windfall delivery rate and expected future trends.

2.8. Whilst it is noted that the delivery of large scale sites can result in the delivery of large numbers of new homes, it is apparent that such developments take considerable time to work their way through the planning system to an approval and even then are only at outline stage. The delivery of new homes is therefore reliant on the Councils to efficiently determine reserved matters applications and, thereafter, discharge of conditions, to allow a swift implementation of planning applications and a timely start on site for the delivery of housing.

2.9. The inclusion of small and medium sites (ie. not reliant on strategic sites) within the housing mix are invaluable in delivering housing quicker and potentially in places, perhaps outside the main settlements, which would allow new housing to be accessible to all which is one of the key facets of the NPPF.

2.10. This approach would assist with maintaining delivery of housing where existing allocations are either stalled or progressing slowly through the planning system or have simply been delayed in coming forward for perhaps other commercial reasons.

2.11. The plan is largely predicated on strategic sites, as detailed at Policy H2 which would provide 7,195 houses. This is a significant reliance on the strategic sites to deliver 75% of the overall housing target and much of them are predicated on the works to the A27 being completed in order to make them acceptable.

2.12. It should be noted that the above housing provision is predicated on the ability to identify mitigation for the impacts on the European environmental designations (including nutrient neutrality), addressing highway implications and negotiating the planning system.

The Manhood Peninsula

2.13. The preferred approached version of the Local Plan does include moderate growth for the settlement hubs of Selsey (250 dwellings) and East Wittering (350) and the service village of Hunston (200). However, since then several planning permissions have contributed to the moderate levels of growth on the Manhood Peninsula which the Council says has accounted for these housing numbers. The plan does not therefore include any strategic allocations on the Manhood Peninsula in recognition of this recently permitted growth and the ongoing constraints the area faces, save for 50 dwellings to come forward at North Mundham.

2.14. This approach is not considered sound as a reason to prevent development of any scale on the Manhood Peninsula (particularly Selsey) for the plan period. As detailed above, it is essential that the plan allocates land across its settlement hierarchy in order to maintain a sustainable and deliverable approach to development and to assist the continuing evolution and economic viability of settlements which rely heavily on tourism and also on new development to maintain the supply of homes to provide options for all sectors of the local community to be able to live on the Peninsula should they so wish.

2.15. It is noted that at Policy S2 (settlement hierarchy), Selsey is listed as a "settlement hub" which is the second tier of settlement under Chichester city. Whilst this hierarchy, particularly in connection with Selsey is supported it is therefore surprising not to see more housing sites allocated within and around Selsey.

2.16. Given the potential number of environmental constraints on the Manhood Peninsula it is unlikely that sites of any excessive size would come forward and large numbers of dwellings would not necessarily result once the sites had taken account of their environmental constraints. That said, and as reflected above, sites of a size proportionate to their

location but below “strategic” size can have an important part to play in the delivery of sufficient housing numbers in the right location at the right time in accordance with the NPPF.

Housing

2.17. Policy H1 (meeting housing needs) sets out the housing requirement for the full plan period of 1 April 2021 to 31 March 2039 as 10,350 dwellings. This allocates 963 dwellings to the Manhood Peninsula and a windfall (small site allowance) allocation of 657 dwellings for the whole district. There are no strategic locations/allocations on the Manhood Peninsula under Policy H2 which is considered unsound, particularly given the position that Selsey holds in the settlement hierarchy. Furthermore, under Policy H3 (non-strategic parish housing requirements 2021-2039) Selsey has been allocated zero housing. Again, this is considered unsound as it prevents sustainable development and access to new houses for all settlements across the district.

2.18. An overreliance on consented sites coming forward to provide future housing is considered unsound as, in this case, it effectively prevents any further development on the Peninsula and in Selsey in particular.

Transport

2.19. Policy T1 (transport infrastructure) is specifically aimed at ensuring that integrated transport measures will be developed to mitigate the impact of planned development on the highway network, improve highway safety and air quality, promote more sustainable travel patterns and encourage increased use of sustainable motor travel, such as public transport, cycling and walking.

2.20. The council will work with National Highways, WSCC, other transport and service providers and developers to provide a better integrated transport network and improve accessibility to key services and facilities. The policy lists seven ways in which the key objectives of reducing the need to travel by car, enabling access to sustainable means of travel, including public transport, walking and cycling; managing travel demands; and mitigating the impacts of travelling by car can be achieved.

2.21. Whilst it is not intended to go through all of these in this document it is noted that all parties are expected to support the four objectives by working with relevant providers to improve accessibility to key services and facilities which would be relevant to Selsey (see below).

2.22. The policy is also aimed at planning to achieve a timely delivery of transport infrastructure on the A27 and elsewhere on the network which is needed to support new housing, employment and other development identified in this plan. The phasing of delivery of new development to align with provision of new transport infrastructure such as improvements to the A27 and elsewhere on the highway network, will be key to managing impacts on the highway. This is yet another impediment to the delivery of a strategic allocations and larger scale development which would, by their very nature, generate a higher highway impact on the transport network than carefully planned smaller developments which could satisfy a much more localised need and be cause less impact on the strategic road network. The tariff proposals outlined at paragraph 8.20 only covers part of West of Chichester and Tangmere SDLs and not the other strategic sites outlined at Policy H2.

2.23. Critically it is also understood that Highways England has pulled funding for the improvements to the Bognor Road roundabout as part of a package of A27 improvements. On this basis it is unclear how further funding would be secured at this time.

2.24. The lack of soundness to the approach of significant reliance on strategic sites, due to the current lack of capacity of the A27, is evident in the text that accompanies the policy which states that opportunities to secure funding to implement this package of improvements will be maximised by working proactively with Government agencies, other public sector organisations and private investors. Developer contributions from new development will also be sought. It is clear that smaller scale developments which would have a significantly lesser impact on the highway network could deliver housing quicker and with fewer constraints to implementation. It is for these reasons that smaller sites should be allocated, particularly in the Manhood Peninsula, for development.

2.25. The content of Policy T2 (transport development) is largely supported and considered sound save for the fact that it does not seem to cover the improvement of local transport routes, particularly those that would assist in improving the circulation of traffic around smaller settlements. The policy should be amended to specifically relate to local transport improvements which are locally important to aid traffic circulation and reduce congestion.

Neighbourhood Plan

2.26. The Selsey Neighbourhood Plan does not seek to allocate any sites or residential development, instead relying on those which were allocated in the previous local plan and, in particular, developments at Park Farm/Middle Field and Drift Field totalling 249 houses. It is assumed that this existing commitment accommodates the neighbourhood plan of 150 houses which is the justification for not allocating of residential development in the neighbourhood plan. However, this is short sighted as the neighbourhood plan runs to 2029 and, although development sites are largely controversial within

smaller communities there is a lack of recognition of the requirement to provide new houses for existing and future residents (including descendants of current residents) in order to maintain the vitality and viability of the settlement outside of the tourist season where it is recognised that the local population will swell.

2.27. These points add further weight to the considered lack of soundness to the housing policies in the local plan which fail to recognise the need for smaller allocations within the Manhood Peninsula, particularly Selsey.

3 Local Infrastructure Provision

Selsey Road Improvements

3.1. Our clients wish to put forward a potential highway improvement scheme for Selsey which has come about given their extensive historic knowledge of the town and experience of significant congestion along Selsey High Street as a result of an over-reliance of this route by traffic using the caravan parks. It would be a common sense alternative route (to using High Street) which will alleviate congestion along Selsey High Street/School Lane/Paddock Lane/Warners Lane, particularly during the summer months.

3.2. The local plan focusses its attention on the need to improve the strategic highway network but this proposal would provide a significant benefit at a local level in Selsey. As per the attached plan, our clients propose to widen Golf Links Lane from its junction with the B2145 Chichester Road to its junction with Paddock Lane, then widen Paddock Lane and make it up to adoptable standard to enable delivery of holiday traffic to the point where it meets the north eastern corner of White Horse Caravan Park, from which point the road has been made up to carry holiday traffic. At the moment, the northern section of Paddock Lane is just a rough track which is not suitable for ordinary road traffic. It is envisaged that, in conjunction with the owner of the largest caravan parks, Warner's Lane will also be improved. It is currently a tarmac road in poor condition with no footways and one section is too narrow to allow two vehicles to pass each other. This is not satisfactory for the major access route to the largest caravan parks.

3.3. Golf Links Lane is currently a single track, tarmac road which is in poor condition. It is two-way but much of it is too narrow to allow two vehicles to pass each other. It serves Northcommon Farm, a small housing development on the northern side, Selsey Golf Club and Selsey Country Club (which comprises c.300 holiday chalets and an associated licensed club). If it were to be made up to adoptable standard to the point where it meets Paddock Lane, it would improve access for existing users but, importantly, it would also create a more direct access route (in conjunction with Paddock Lane) for traffic associated with thousands of holiday caravans as well as a touring caravan park.

3.4. Given that a large proportion of holiday traffic and other tourist industry-related traffic (HGVs carrying food and drink, caravan transporters, tractor/trailer transport and public transport) use the route along High Street/School Lane/Paddock Lane/Warners Lane it is considered that this could be diverted from the B2145 Chichester Road further north than Selsey High Street, thus taking traffic away from the congested High Street. An easier, more direct route to the major caravan parks would be an attractive alternative.

3.5. The mechanism to deliver such a proposal is not yet the subject of formal agreement. A large proportion of the land required to widen the roads is within the ownership of Deerhyde Limited (our clients) and the owner of the major caravan parks. The latter has been very supportive of the proposal verbally. A short section of land is not in any specific ownership but our clients have long-standing rights over its use, which can be traced back to 1830. Our clients are serious about facilitating these highway improvements, including the use of their land, which will inevitably have a significant financial impact upon them.

Potential Residential Development Sites

3.6. In order to mitigate the financial impact including both the loss of their land and the implementation of the proposed highway improvements our clients would like to promote two sites for residential development, namely land north of Golf Links Lane (13.5 acres/5.46 hectares) and land west of Old Farm Road for residential development. Whilst the north western corner of the site is located within Flood Zones 2 and 3 it is considered that the developable area of the site would be approximately 4 hectares and could therefore deliver approximately 120 to 140 dwellings. This includes retaining the existing boundary screening along the south eastern boundary and avoiding Flood Zones 2 and 3. An indicative plan is attached to this statement.

3.7. Thawscroft Ltd, an associated company, also owns land west of Old Farm Road, Selsey (2.8ha / 6.9 acres) which taking account of the flood risk constraints along its western boundary could accommodate approximately 50 dwellings. An indicative plan is attached to this statement.

3.8. Having reviewed the planning history of the site it is noted that a planning application (under the name of Thawscroft Limited) was made in December 2016, refused in June 2017 and the appeal was dismissed on 11 June 2018.

3.9. The reasons for refusal related to the following:

1. Site is located outside the defined settlement boundary for Selsey.

2. When the planning officer was giving evidence, he stated that he knew of an alternative site at lower risk of flooding but he would not identify it. After the appeal, an area of land north of Park Lane was identified for 250 houses. The land in question becomes waterlogged in the winter and is highly prone to surface water flooding. It is also only about 250m from Pagham Harbour, a site of major ecological importance with a significant level of protection afforded to it. The planning officer said the real issue with our appeal was one of numbers so it seemed curious to me that a site with a much larger number (250) was identified soon afterwards. Also, the land south of Park Lane (similarly prone to surface water flooding) was in the numbers for 2015/20 but in fact could not be started until 2021 so the planning inspector was misled. I believe that was crucial to the outcome. Landlink have proposed land west of the "Wave" roundabout (opposite Asda). This may be as an alternative for the land north of Park Lane. Neither parcel would be a good fit in the settlement policy area, whereas the land to the west of Old Farm Road would be, a fact acknowledged by planning officers in the past.

3. We did in fact offer to provide contributions towards improving the A27 so that reason for refusal was withdrawn prior to the appeal being heard.

4. As far as I can recall, the Council was content with our proposals in these matters at the time the appeal was heard. The criticism was that the need to avoid Flood Zones 2 and 3 created a narrow site which meant that the layout was said to be cramped. It could be that, with a smaller number of houses, MH Architects could provide an improved layout. Maybe this is reflected in the plan to which Vail Williams refer in paragraph 3.13.

3.10. It is considered that, as detailed above, given the Council's approach to an over-reliance on large strategic sites to fulfil its housing need and the lack of sites identified for development on the Manhood Peninsula (and in Selsey in particular) during the plan period this site could be proven to be an appropriate location for development as a "windfall site" to help maintain housing supply whilst the strategic sites are in the planning system.

3.11. It is considered the dwellings on the site could be laid out to avoid the Flood Zones 2 and 3 and therefore be at considerably less flood risk than the proposal which was dismissed at appeal. This is set out in the enclosed plan. This would overcome reason for refusal 2.

3.12. Reasons for refusal 3 and 4 would be overcome through the agreement of under Section 106 of the Town & Country Planning Act to provide contributions towards the improvement to the A27 on a proportionate basis to the size of the site and the number of dwellings and also the relevant number of affordable housing units required by policy (or justified as part of a viability exercise). Other matters such as the management of the landscaping, open space, buffers and drainage infrastructure could also be secured by the Section 106 agreement.

3.13. We commend the above highways solution and subsequent development sites to officers in consideration of the draft Local Plan.

4 Conclusions

4.1. It is clear that whilst the overarching strategy of the location of the majority of development in the largest urban settlement of Chichester or adjacent to it is sound the lack of allocation of significant housing numbers to those areas outside Chichester is unsound. This would mean that the vast majority of the district would attract very little housing over the planning period to 2039 thus ensuring that existing settlements would not evolve and would potentially shrink as existing residents and descendants of residents migrate to the Chichester or its strategic urban extensions.

4.2. Outside Chichester, the strategic proposals for Southbourne and Tangmere are similarly isolated. The Manhood Peninsula is particularly lacking in the provision of additional housing sites during the plan period with the justification provided that, for Selsey in particular, recent planning permissions which are being built or have been completed would accommodate all of the housing need going forward for the plan period.

4.3. This approach is flawed for two main reasons (making the Local Plan unsound):

1. The over-reliance on strategic allocations which themselves are constrained by the capacity issues on the A27 and environmental issues such as nitrate neutrality (and any future water neutrality issues which migrate south from the north of Chichester) and the usual impacts on the European sites could mean that these sites are slower in being delivered with little in the way of alternatives allowed for in the local plan.

2. The failure to acknowledge any future development potential of note within the Manhood Peninsula and in particular Selsey will constrain the continued vitality and viability of the settlements within the Manhood Peninsula, particularly following the pandemic when the service sectors are struggling. Taking into account that Selsey in particular but other settlements along the coast within the Manhood Peninsula are reliant on seasonal tourist activity, additional residents are relied upon outside these times in order to provide income for those businesses which may struggle to survive outside the holiday seasons. An effective block on development would significantly reduce the potential future viability of these settlements outside the tourist season.

4.4. The emphasis on the stated urban-focussed housing strategy encourages neighbourhood planning groups/parish and town councils to maintain an opposition to the relevant rather than a proactive policy framework to direct

appropriate development within their areas.

4.5. Our clients have detailed above one way which their land could be used in conjunction with others to facilitate a local infrastructure improvement to assist traffic circulation and access in and around Selsey itself which would need to be funded by future residential development and we commend this proposal to you for further consideration.

4.6. We trust that officers will take these representations into account and we look forward to receiving confirmation that the representations have been duly made.

Document Element: Sustainable development, 3.3

Respondent: Chichester Harbour Conservancy (Dr Richard Austin, AONB Manager) [796]

Summary:

"New development must achieve sustainable development principles and must not adversely affect the character, quality, amenity or safety of the built environment, wherever it occurs." The Council cannot achieve sustainable development and deliver Policy A11. The proposed A11 will adversely affect the character, quality, and amenity of Bosham and Chichester Harbour AONB. The text in Section 3.3 is inconsistent with Policy A11.

Document Element: Sustainable development, 3.4**Respondent:** The Goodwood Estates Company Limited [7922]**Agent:** HMPC Ltd (Mr Haydn Morris) [112]**Summary:**

The Plan should require developers of unallocated sites to demonstrate that their housing is proposed specifically to meet the needs of a local demand for people living and working within the district to reduce the potential for increased potential through generic speculative development.

Policy must require new (and in particular speculative) housing proposals to move beyond the simple and transient benefit of providing additional housing, upon which the case for most speculative developers rely, and make a true, measurable and meaningful contribution to the community.

The plan must be more robust in its resistance to further generic estate development, requiring such proposals to present true and demonstrable evidence:

- it can make appropriate provision for future residents,
- it is truly sustainable in all aspects of the term, and
- makes a positive and measurable contribution to the district in terms of economics, infrastructure and general well-being.

Full text:

We support generally the work the planning authority has undertaken in co-operation with neighbouring authorities, but consider weaknesses remain in the sustainable distribution of housing and other development needs that reduces the need for commuting and unnecessary travel.

The plan should explain in greater detail the findings of co-operative working with neighbouring authorities to achieve a more sustainable spatial strategy, that provides a "joined up" spatial vision and does not follow a 'silo-mentality' of providing only for district needs.

The growth of suburbia, beloved by volume housebuilders, and exacerbated by the Government's unduly simplistic approach to meeting local housing need quickly, serves only to exacerbate many of the problems the local plan seeks to address.

Evidence of co-operative working and a step-change from 'more of the same' in terms of housing provision, will make the Plan more sound. It is essential if the plan area is to be protected from inappropriate speculative housing promoted solely on grounds of housing numbers.

The ability of neighbouring authorities, including the National Park, to provide for appropriate, further growth, including that generated within Chichester District but using employment and service opportunities beyond district boundaries, should be explained and reflected in policies and allocations.

Change suggested by respondent:

The Plan should require developers of unallocated sites to demonstrate that their housing is proposed specifically to meet the needs of a local demand for people living and working within the district to reduce the potential for increased potential through generic speculative development.

Policy must require new (and in particular speculative) housing proposals to move beyond the simple and transient benefit of providing additional housing, upon which the case for most speculative developers rely, and make a true, measurable and meaningful contribution to the community.

The plan must be more robust in its resistance to further generic estate development, requiring such proposals to present true and demonstrable evidence:

Document Element: Spatial strategy, 3.5**Respondent:** Elizabeth Lawrence Ltd (Mrs Elizabeth Lawrence, Planner) [906]**Summary:**

Provide local developers and experts the time to review the new climate change map and for discussion re funding the A27 roundabout at Stockbridge to be completed.

Full text:

The spatial strategy is premature as there are on-going talks regarding the upgrading of the A27 through developer contributions and no opportunity has been given to developers and local experts to test the recently published climate change flood risk map.

Until this has been done a strategic layout which best reflects the Council's objectives cannot be decided upon. To achieve a more sustainable district more reliance should be placed on East Wittering and Selsey to may them more sustainable and less reliant on Chichester. This would reduce traffic along the A27. Enlarging small settlements along the West/east corridor will place more pressure on the A27 and Chichester.

Change suggested by respondent:

The spatial strategy needs to be placed on hold until the above is achieved.

Document Element: Spatial strategy, 3.5**Respondent:** Sussex Wildlife Trust (Laura Brook) [7654]**Summary:**

Plan should seek to demonstrate how delivery of Nature Recovery Network and more localised Local Nature Recovery Strategies are going to be incorporated in the spatial element of identifying allocations for development, consistent with s179 of NPPF 2021. Planning for nature's recovery will be vital to support ambitions of plan. In relation to Objective 2: Natural Environment, it will be vital for the spatial element of the Plan to consider how this is achieved through its own actions and also policy hooks. This will enable the emerging Local Nature Recovery Strategy to work effectively with the Local Plan and be a key driver for nature's recovery over the lifetime of the plan (NPPG Paragraph: 010). SWT is supportive of CDC already taking progressive action with the identification and inclusion of Strategic Wildlife Corridors, consistent with section 179 of NPPF 2021.

Full text:

See attached representation.

Change suggested by respondent:

SWT wants this section of the draft plan to demonstrate more clearly how the spatial strategy is enabling nature's recovery. The plan should seek to demonstrate how the delivery of the Nature Recovery Network and the more localised Local Nature Recovery Strategies are going to be incorporated in the spatial element of identifying allocations for development. This would be consistent with section 179 of the National Planning Policy Framework (NPPF) 2021.

4984

Object

Document Element: Spatial strategy, 3.10**Respondent:** Kingsbridge Estates Limited & Landlink Estates Limited [8084]**Agent:** Savills (Mr William Price, Planner) [7783]**Summary:**

The Local Plan is not positively prepared as it does not fully take into account the acknowledged and unacknowledged need of the horticultural industry to develop functionally linked development in proximity to existing horticultural operations.

Full text:

Chichester has a highly constrained commercial property market that has an extremely low vacancy rates, along with generally high rents. This is recognised within the Council's evidence base, with the 2022 HEDNA describing the district's commercial property market as 'extremely undersupplied'. It is not considered that the employment allocations proposed within the Local Plan will address this substantial unmet need and indeed a number of the employment land allocations are not preferentially sited relative to the Runcton HDA.

This undersupply of commercial property, taking account of the allocation and the trajectory of delivery and availability of premises at Land south of Bognor Road, is likely to continue to have a significant impact upon the ability of the Chichester food cluster to meet the industry's requirement for functionally linked commercial premises that are necessary to maintain competitiveness. This requirement for functionally linked operations such as R&D, storage and distribution and office space is detailed in a number of industry reports.

Change suggested by respondent:

In order to remedy the undersupply of commercial property within the district, and ensure that the Chichester food cluster continues to provide economic growth and job creation, The Council should allow for the siting of functionally linked developments within the Runcton HDA. This is currently prohibited by the wording of draft Policy E4 which only allows for ancillary developments rather than the suite of development uses required to support a world class food cluster. This would provide investors and businesses with the certainty required to continue to invest within the Chichester District. Furthermore, the colocation of such developments would provide a range of benefits associated with agglomeration including reduced costs, reduced greenhouse gas emissions and increased innovation arising from knowledge spillovers.

4102

Object

Document Element: Spatial strategy, 3.14

Respondent: Mr Matthew Rees [7841]

Summary:

Not legally compliant because it is incompatible with the Sustainability Assessment, P90, which warned of the risk of "over-development". 1,300 homes is not compatible with the neighbourhood plan for 1,000 homes. Tangmere Parish Council stated that there were 1,156 dwellings in the village so it is unjustified to increase housing by in excess of 100% in one village. Not sound to consider a 30% increase from 1,000 to 1,300 new dwellings because this represents an over-development through an excessive concentration in a single location to absorb 13%, or 1 in 8 new homes for the entire Chichester District, and represents an existential threat to Saxon Meadow. CDC's 2015 local plan (para 12.58) and it incompatible with the post examination Tangmere Neighbourhood plan (para 1.5)

Full text:

There is much to commend in this document and the supporting technical documents that accompany it, and I have listed in the appendix to this letter 26 such paragraphs and policies. I am happy for my support to be registered against these sections of your consultation document. There is also much upon which I must represent a concern, so I attach representations relating to 22 paragraphs or policies.

I am happy to participate in a hearing session, and I would flag at this stage that the common theme that links all of these representations is the need to safeguard the natural and built environment in and around Saxon Meadow, Tangmere from the risks of unsustainable development, I consider that the independent examiner should focus their review on the aspects of the local plan that relate to this matter.

Appendix 1: list of policies that I support

1. P14, 1.23, 1.24: Duty to cooperate
2. P24, para 2.30 "the council declared a climate emergency in July 2019"
3. P24, para 2.32 – "all proposal for new development should be considered in the context of a climate emergencV"
4. P30: Objective 2: natural environment: "development will achieve net gains in biodiversity"
5. P43, 4.1 "National policy promotes increasing energy efficiency, the minimisation of energy consumption and the development of renewable energy sources"
6. P43, 4.3: "Some renewable energy projects provide significant opportunities to enhance biodiversitV"
7. P53, Policy NE5: Biodiversity and Biodiversity Net Gain
8. P62, Para 4.42: Hedgerows and some types of woodlands are identified as a priority habitat
9. P62, Policy NE8: Proposals should have a minimum buffer zone of 15 metres from the boundary of ancient woodland or veteran trees to avoid rood damage (known as the root protection area)
10. P68, Policy NE10: Criteria for Development in the Countryside - Does not prejudice viable agricultural operations or other viable uses
11. P80, Para 4.91: There are serious concerns about the impact of flooding, both in respect of current properties at risk but also the long-term management of the area.
12. 4.92: any development in the plan area must therefore have regard to flood and erosion risk.
13. 4.94: built development can lead to increased surface water run-off; therefore, new development should include SuDS to help cope with intense rainfall events
14. P81, Para 4.96: Environment Agency consent is required for any works within 16 m of tidal waters and 8m of fluvial watercourses in line with the Environmental Permitting Regulations 2016. This strip is required for access. The policy includes a setback requirement to ensure this access strip is not obstructed.
15. P80, 4.92, Any development in the plan area must therefore have regard to flood and erosion risk, now and in the future, by way of location and specific measures, such as additional flood alleviation, which will protect people, properties and vulnerable habitats from flooding. Recent changes to national guidance highlight the importance of considering flood risk from all sources, and this is particularly significant for the plan area as large parts of it are at risk from groundwater flooding, which needs to be recognised in development decisions alongside the well-established risks in relation to tidal, fluvial and surface water flooding. Appropriate mapping of all sources of flood risks is still evolving, and is likely to develop further over the plan period
16. P93, Policy NE20 Pollution: Development proposals must be designed to protect, and where possible, improve upon the amenities of existing and future residents, occupiers of buildings and the environment generally. Development proposals will need to address the criteria contained in, but not limited to, the policies concerning water quality; flood risk and water management; nutrient mitigation; lighting; air quality; noise; and contaminated land. Where development is likely to generate significant adverse impacts by reason of pollution, the council will require that the impacts are minimised and/or mitigated to an acceptable level within appropriate local/national standards, guidance, legislation and/or objectives.
17. P94, 4.127, Light pollution caused by excessive brightness can lead to annoyance, disturbance and impact wildlife, notably nocturnal animals. The design of lighting schemes should be carefully considered in development proposals to prevent light spillage and glare.
18. P94, 4.128, Dark skies are important for the conservation of natural habitats, cultural heritage and astronomy. The plan area includes three 'Dark Sky Discovery Site' designations, all located within the Chichester Harbour AONB; Eames Farm on Thorney Island, Maybush Copse in Chidham; and north of the John Q Davis footpath in West Itchenor. Development within or directly impacting these areas will be subject to particular scrutiny in terms of their impact on dark skies. The entire SDNPA area is also declared as an International Dark Sky Reserve. Development directly impacting this area will be subject to similar scrutiny.
19. P96, Policy NE22 Air Quality

20. P97, Policy NE-23 Noise
21. P142, Para 6.29, Amenity: Private space, shared space and the design quality and construction of communal spaces all contribute to amenity
22. P155-6, Policy P11:Conservation Areas "protecting the setting (including views into and out of the area)"
23. P55, Para 4.26 - The council is under a legal duty to protect designated habitats, by ensuring that new development does not have an adverse impact on important areas of nature conservation, and by requiring mitigation to negate the harm caused.
24. P58, Para 4.33 The council is under a legal duty to protect their designated bird populations and supporting habitats
25. P95, Para 4.129 The council has a duty to review and assess air quality within the district
26. P301, Conservation Area: An area of special architectural or historic interest, designated under the Planning (Listed Buildings & Conservation Areas) Act 1990. There is a statutory duty to preserve or enhance the character, appearance, or setting of these areas.

Change suggested by respondent:

Amend the plan as follows

3.14 Outside Chichester city and its closest settlements, development will focus on the two settlement hubs (see Policy S2) within the east-west corridor at Tangmere and Southbourne. New development will consider whether and how the role of these settlement hubs as centres providing a range of dwellings, workplaces, social and community facilities provides economic, social and environmental benefits over and above the retention of land for agriculture, or to address unmet demand for viticulture or horticulture. Retail development of an appropriate scale will be supported to promote the vitality and viability and enhance provision at Southbourne and Tangmere centres

Then go on to say ...the supporting structure includes a new primary school and community facilities.

This is a complete whitewashing of the infrastructure and facilities required to even build 1000 dwelling let alone a further 300.

Change suggested by respondent:

This should be corrected and the additional 300 dwellings removed due to complete lack of justification regarding the supporting infrastructure.

The statement that Tangmere has a good range of local facilities should be removed and replaced by the original assertion that it currently lacks the amenities and services normally associated with a settlement of its size.

Support

Document Element: Spatial strategy, 3.20**Respondent:** Manhope (Mr Carey Mackinnon) [8125]**Summary:**

Chichester District Council has, quite rightly in our opinion, placed no demands for further large developments in the WMP apart from windfall sites. In our opinion even these should NOT be approved until the caveats shown in our Conclusion are implemented.

Full text:

Manhope is a local interest group and represents more than 500 residents and users of the Western part of the Manhood Peninsula (WMP); the part of the district at greatest risk from climate, travel and infrastructure challenges.

Our sole purpose is to protect the unique character of the Western Manhood Peninsula by opposing inappropriate and unsustainable large building developments before the necessary infrastructure is actually in place.

We are not sufficiently au fait with the policies to be able to use the clause by clause "speech bubble" approach to comment. Therefore, our response is by way of email as suggested by our MP, Gillian Keegan in her letter to residents in

February this year.

We understand that only three topics are open for comment in respect of the proposed Local Plan submission.

1. Is the submission legally compliant?
2. Is the submission 'sound'?
3. Does the submission comply with the Duty to Cooperate?

We are not qualified to comment on either 1. or 2. so these comments will address the question of whether the proposed submission is sound.

Chichester District Council has, quite rightly in our opinion, placed no demands for further large developments in the WMP apart from windfall sites. In our opinion even these should NOT be approved until the caveats shown in our Conclusion are implemented.

The following subjects have been well aired so we will not dwell on them in great detail but will summarise them as follows.

Transport.

The transport network serving the CDC area is already unable to cope at peak times and groaning at most other times. The A27 frequently gets headline recognition and from a strategic national point of view rightly so. The various arguments are again well rehearsed elsewhere especially from other local interest groups such as MPAG, SOSCA and the Harbour Trust and we support their submissions in this respect.

It is sufficient for us to say that if it was recognised that mitigating measures were required to cater for the huge increase in developments then it follows that the absence of such mitigation should halt completely such development. That is just pure logic.

Everyone who lives, works, uses or visits the WMP knows that having left behind the A27 they have not left behind the traffic problems. The obverse has become the "new norm" with the most minor hold up, such as refuse lorry, slow moving device or minor road works causing substantial delays and queues sometimes up to eighty vehicles long

The system whereby WSCC highways review the impact of planning applications is dysfunctional.

This is evidenced by WSCC highways department being unable to provide accurate feedback to the LPA as to the ACCUMULATIVE impact of very large developments.

The modelling simply does not allow it and there is no scope for actual local experience or common sense. In not one case of over twenty applications for ten or more houses have they even flagged a cautionary note about this accumulative impact.

For example many - actually most - accidents are not reported so the West Sussex Accident Location Map so this source often used by planners and developers to demonstrate how safe our local roads are, is dangerously misleading. Many life changing injuries have been sustained and known about by local people in the WMP but virtually none of these appear in "formal records"

Flooding.

Because of the low lying and vulnerable southern part of the district the findings and implications of the CDC Level 1 Interim Strategic Flood Risk Assessment (December 2022) need to be fully understood by parishes, councillors and local residents before comments of any real value can be made. We asked five elected or formally appointed local representatives and not one felt they had a full grasp of the SFRA's implications and only one had a fair understanding.

We do know that the risk of significant flooding has increased. We also know that even before the SFRA was published the West Sussex County Council Lead Local Flood Authority gave a thumbs down to two of the large applications B 21/01830/OUT in Birdham and EWB22/02214/FULEIA.

CDC have recognised that the Manhood Peninsula has specific challenges including flood risk hence the zero requirement for housing in the WMP. In this respect we think the submission is probably just sound enough and hope that this approach filters through to decisions for applications yet to be determined.

However, to be certain of real soundness the work needs to be completed BEFORE implementation. Please see our notes under "Conclusion" Sewage.

There can be no doubt that this subject must impact whether the submission is sound or not. The arguments are complex and lengthy but two basic simple facts remain.

1. The main sewage plant for the Manhood Peninsula is Southern Waters Siddlesham WWTW. This plant is a couple of metres AOD and yet planners, the EA and developers argue as to whether four or five meters is an appropriate floor level

on new developments. Hardly a sound approach when the treatment works will have been inundated well before even a three metre threshold will have been reached. One example of these discussions can be seen at E 22/03125/OUT for 100 houses

2. Southern Water have a policy of deploying large road tankers when heavy rain is forecast to standby local sewage points as there is a high risk of the system being overwhelmed. Frequently the drivers have to stay in their cabs all night.

Yet Southern Water are obliged to advise the LPA that they can deal with the additional load from huge new developments. Neither CDC nor the Inspector can solve the sewerage infrastructure issues but the above facts raise serious doubt as to the soundness of the submission. Please see our further notes under "Conclusion"

Conclusion.

Manhope recognise the real imperative of having a local plan in place and is appalled that the system has resulted in a colossal amount of work for the LPA and yet still a disastrous delay in getting this in place let alone full and proper consultation with parishes and local people. Further delay in the submission of the local plan is therefore wholly unacceptable so our uncomfortable is that the submission, whilst barely sound, is as sound as it can be and should go forward BUT with some very clear caveats. Our suggestion for these are shown below.

A. No new developments of ten or more dwellings shall be commenced until suitable mitigating road improvements to the A27 are in place.

B. No new developments of five or more dwellings shall be approved by the LPA until the following reports, work and maps have been completed and due consultation has taken place with residents & parishes, (in line with the latest government approach to restoring local democracy).

a. Environment Agency flood maps based on the Interim SFRA (December 2022) have been completed.

b. Sewage infrastructure work as yet unknown in Southern Waters upcoming Asset Management Period to be in place before any development of 5 or more dwellings are approved.

c. Full and proper engagement with NHS as to practical limits on health demands as a result of new housing developments especially on the Manhood Peninsula. NHS's advice was ignored by CDC and a planning inspector for a 70 house development (WW/20/02491/OUT) so they have not responded to further consultation requests. Vis EWB 22/02235/OUT and EWB 22/02214. This cannot be allowed to happen again.

C. Insert a policy in the submission that CDC planning reserve the right to apply their discretion in planning decisions when consultees provide advice that is contrary to public and parish experience. ie Where formally submitted local and Parish advice given in their written response to planning applications is not aligned to other consultees then take the Parishes advice. To avoid using this discretion is not consistent with exercising a duty of care.

D. A policy written in the final submission to assemble a consortium of stakeholders to conduct a full survey as to the condition of Pagham Harbour. The scope would cover impacts on marine and land-based environments from chemical, micro plastic and sewage contamination of the harbour and it's immediate coastline. Stakeholders would include Natural England, Environment Agency, CDC, Southern Water and the R.S.P.B. It is highly likely that Pagham Harbour is traveling a parallel downward path as Chichester Harbour in terms of condition but no stakeholders are paying this anything like the attention it deserves.

Manhope Response to Local Plan Submission - <https://chichester.oc2.uk/a/shv>

5282

Support

Document Element: Spatial strategy, 3.20

Respondent: National Highways (Mr Marius Pieters, Spatial Planning Manager) [8127]

Summary:

[National Highways letter dated 24/07/23 confirmed representation should be categorised as Comment - Support.] We support that the Plan does not include any strategic allocations on the Manhood because all traffic from the peninsular ultimately joins or crosses the A27. The A27 is also the main route for tourism traffic to Bognor Regis. We will continue to work with WSCC on this highway matter.

Full text:

We have reviewed the publicly available Local Plan documents and provided comments in the attached letter, in relation to the transport implications of the plan for the safety and operation of the SRN.

Our comments include issues to resolve, comments, requests for further information and recommendations. A brief summary of our main comments are:

- the reliance on the delivery of the A27 Chichester bypass improvements project.
- the requirements for new, additional, and adapted processes and assessments, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments.
- collaborative working between agencies in combination with a robust monitor and manage policy.

We hope our comments assist.

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders. We look forward to continuing to participate in future consultations and discussions.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Background

National Highways has been appointed by the Secretary of State for Transport as strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the strategic road network (SRN).

National Highways is responsible for operating, maintaining, and improving the Strategic Road Network (SRN) i.e., the Trunk Road and Motorway Network in England, as laid down in Department for Transport (DfT) Circular 01/2022 (Strategic Road Network and the delivery of sustainable development).

The SRN is a critical national asset and as such we work to ensure that it operates and is managed in the public interest, both in respect of current activities and needs as well as in providing effective stewardship of its long-term operation and integrity.

Our responses to Local Plan consultations are guided by relevant policy and guidance including the National Planning Policy Framework (2021) (NPPF):

- Transport issues should be considered from the earliest stages of plan-making and development proposals so that the potential impact of development on transport networks can be addressed (para 104).
- The planning system should actively manage patterns of growth such that significant development is focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. (para 105).
- Planning policies should be prepared with the active involvement of highways authorities and other transport infrastructure providers so that strategies and investments for supporting sustainable transport and development patterns are aligned. (para 106).
- In terms of identifying the necessity of transport infrastructure, NPPF confirms that development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe. (para 111).
- Planning policies and decisions should support development that makes efficient use of land, taking into account the availability and capacity of infrastructure and services – both existing and proposed – as well as their potential for further improvement and the scope to promote sustainable travel modes that limit future car use. (para 124).

In relation to the tests of soundness set out at paragraph 35 of the NPPF, in the context of transport, these are interpreted as meaning:

- a) Positively prepared - has the transport strategy been prepared with the active involvement of the highway authorities, other transport infrastructure providers and operators and neighbouring councils?
- b) Justified – Is the transport strategy based on a robust evidence base prepared with the agreement in partnership, or with the support of the highway authorities?
- c) Effective – Does the transport strategy and policy satisfy the transport needs of the plan and is it deliverable at a pace which provides for and accommodates the proposed progress and implementation of the plan?
- d) Consistent with national policy – Does the transport strategy support the economic, social, and environmental objectives of the Plan and the NPPF/NPPG?

We will be concerned with proposals that have the potential to impact on the safe and efficient operation of the SRN; in this case, the A27 trunk road (Chichester Bypass and its junctions) which is the main access route in the Chichester area. We have particular interest in any allocation, policy or proposals which could have implications for the A27 and the wider SRN network. We are interested as to whether there would be any adverse road safety or operational implications for the SRN. The latter would include a material increase in queueing or delay or reduction in journey time reliability during the construction or operation of the development set out in the plan.

National Highways is a key delivery partner for sustainable development promoted through the plan-led system, and as a statutory consultee we have a duty to cooperate with local authorities to support the preparation and implementation of development plan documents.

In accordance with national planning and transport policy and our operating licence, we are entirely neutral on the principle of development as it is for the local planning authority to determine whether development should be allocated or permitted; albeit it must comply with national policy on locating development in locations that are or can be made sustainable. Therefore, while always seeking early and fulsome engagement with local plans and/or developers, we will simply be assessing the transport and related implications of plans or proposals and agreeing any necessary transport improvements and relevant development management policy.

In progressing Local Plans, we will seek to agree the following:

- Assessment tools and methodology
- Baseline Assessment i.e., to demonstrate that the assessment tool accurately reflects current transport conditions
- Comparator case assessment i.e., to forecast the transport conditions that would occur in the absence of the plan
- Forecast modelling i.e., to forecast the transport conditions that would arise with the plan in place, this will include an assessment at the end of the Plan period; and, if required, at full build out if that occurs after the end of the Plan period
- Outputs and outcomes of modelling, demonstrating, as appropriate, what transport infrastructure is necessary to support the plan o It should be noted that a suite of transport modelling tools may be required. This includes strategic modelling covering an area at least one major junction beyond the district boundary, localised network modelling where several links/junctions are close together and/or individual junction modelling
 - o A DMRB (Design Manual for Roads and Bridges) compliancy assessment may also be required for certain highway features, such as
 - o Merge/Diverge assessment at Grade separated junctions, link capacity assessments, and others.
- The design of any necessary transport infrastructure, to an extent suitable for establishing deliverability during the plan period at the time that it becomes necessary for the purpose of ensuring that unacceptable road safety impacts or severe operational impacts do not arise as a result of development. This may be to at least General Arrangement design stage or preliminary design stage. Whichever degree of detail is agreed, the products must be in full compliance with the DMRB.
- Industry standard transport intervention costings.
- The delivery/funding mechanisms for necessary transport interventions. It should not be assumed that National Highways will have any responsibility to identify or deliver necessary transport interventions.
- If considered appropriate, a "Monitor & Manage" (M&M) framework, aimed at managing the pace of development in line with the pace of funding and delivery of necessary highway interventions in a manner which responds to the realworld impacts of development may be agreed for inclusion in the plan subject to the adequacy of risk control measures included therein. This can include the move from a 'predict & provide' style of delivery to 'a vision & validate' style. o Any M&M framework must be based on a "worst case scenario" whereby necessary mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. It must be translated into development management plan policy and policy relating to development allocations.

Further detail on the above can be provided by National Highways.

While ideally all the above should be agreed prior to the Submission of the Local Plan for examination, we recognise that this is not always possible. However, all parties should work towards all matters being agreed and reflected in a Statement of Common Ground (SoCG) by the start of the Local Plan Examination at the latest. Ideally the SoCG between the Council and National Highways would be prepared well in advance of plan submission in order to guide resource input and to track progress towards final agreement on all relevant matters starting from the earliest plan iterations until the final version is agreed.

It is acknowledged that Government policy places much emphasis on housing delivery as a means for ensuring economic growth and addressing the current national shortage of housing. The NPPF is very clear that: "Strategic policy-making authorities should establish a housing requirement figure for their whole area, which shows the extent to which their identified housing need (and any needs that cannot be met within neighbouring areas) can be met over the plan period."

However, new DfT C1/22 and the NPPF are equally clear that any development, including housing delivery, must be tempered by the requirement to ensure that the associated transport demand can be accommodated without unacceptable impacts on the safety of the SRN or severe impacts on the operation of the SRN including reliability and congestion. Therefore, as necessary and appropriate, any plan and/or development must be accompanied by suitable mitigation in the right places at the right time, that is to the required design standards and is deliverable in terms of land availability, constructability and funding.

We would also draw your attention to the then Highways England document 'The Strategic Road Network, Planning for the Future: A guide to working with National Highways on planning matters' (September 2015). This document sets out how National Highways intends to work with local planning authorities and developers to support the preparation of sound documents which enable the delivery of

sustainable development. https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/461023/N150227_-_Highways_England_Planning_Document_FINAL-lo.pdf

Responses to Local Plan consultations are also guided by National Planning Policy Framework (NPPF) revised on 20 July 2021 which sets out the government's planning policies for England and how these are expected to be applied.

Updated Circular (01/2022)

It should be noted that since the start of the Local Plan consultation process, on the 23 December 2022, the Department for Transport released a new circular on the 'Strategic road network and the delivery of sustainable development' (Circular 01/2022), which replaces all of the policies in Circular 02/2013 of the same name. These representations take account of the new circular and the requirements in terms of the Local Plan evidence base and process.

We request that the Local Plan is prepared in line with all aspects of the new circular. Particularly, the principles of sustainable development (paragraphs 11 to 17), new connections and capacity enhancements (paragraphs 18 to 25), and engagement with plan-making (paragraphs 26 to 38).

Regulation 18 submission

In our Regulation 18 submission we noted several matters including:

- The need to mitigate the adverse impacts of strategic development traffic to the A27 Chichester Bypass and its junctions at Portfield Roundabout, Bognor Road Roundabout, Whyke Roundabout, Stockbridge Roundabout and Fishbourne Roundabout and Oving junction.
- The need to identify a mechanism to calculate contributions towards the delivery of the previously agreed Local Plan A27 improvements
- The need to confirm the number of dwellings needed within the plan period
- The need to establish National Highways acceptance of the traffic model reference and future case scenarios
- The need to confirm costs, viability, and funding associated with mitigating the safety and congestion impacts of the development included within the plan.

Local Plan context

This Local Plan (Chichester Local Plan 2021 – 2039), prepared by the Local Planning Authority (LPA) Chichester District Council, sets out the vision for future development in the district and will be used to help decide on planning applications and other planning related decisions including shaping infrastructure investments.

The draft sets out how the district should be developed over the next 18-years to 2039 including for the full Plan period (1 April 2021 to 31 March 2039) the total supply of

- 10,359 dwellings
- 114,652 net additional sqm new floorspace

Minus the completions this is equivalent to around 530 dwellings and 6,150 sqm of floorspace a year.

National Highways Representations

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders.

We have undertaken a review of the Chichester Local Plan 2021-2039 proposed submission version and accompanying evidence documents, our comments are set out in the tables below (following pages). [see table within attachment]

Summary

We have reviewed the publicly available Local Plan documents and provided comments above in relation to the transport implications of the plan for the safety and operation of the SRN. We understand that other technical information is available, but this was not presented as part of this consultation.

Chichester, and the A27, are already heavily congested, infrastructure in the existing Local Plan remains undelivered and the growth set out in the new Plan will further increase travel demand.

As presented, satisfying the transport needs of the plan is clearly reliant on the delivery of the A27 Chichester bypass improvements project. The A27 Chichester bypass improvements project is one of 32 pipeline schemes being considered for possible inclusion in National Highways third Road Investment Strategy (RIS3) covering 1 April 2025 to 31 March 2030.

On 9 March 2023 the UK Transport Secretary ensured record funding would be invested in the country's transport network, sustainably driving growth across the country while managing the pressures of inflation. The announcement cited the A27 Arundel Bypass as being deferred from RIS2 to RIS 3 (covering 2025-2030). The transport secretary also identified a number of challenges to the delivery of the road investment strategy and cited the benefit of allowing extra time to ensure schemes are better planned and efficient schemes can be deployed more effectively.

At present, there is no commitment by DfT to carry out the A27 Chichester bypass improvements project. Until the A27 Chichester bypass improvements project is published in the RIS3, consented and a decision to invest is made it cannot be assumed to be a committed project.

We note that the Plan does not address any uncertainty of delivery of the A27 Chichester bypass improvements project and we strongly recommend that there is either no reliance placed on RIS3 to realise capacity for growth in the Plan or that contingency measures are included to cover the eventuality that RIS3 funding is not forthcoming within the plan

period. It is not clear that the potential impact of development on transport networks can be addressed in the absence of the A27 Chichester bypass improvements project.

Achieving net zero, reducing emissions reduction, acting on climate, and supporting thousands of new homes and new employment developments will be problematic with existing processes. New, additional, and adapted processes and assessments will likely be required, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments. We acknowledge that change is complex, expensive, and time-consuming, especially for smaller district level Councils. But the hard work will deliver benefits for the Council and residents in the longer-term.

National Highways seeks to continue working with the Council and WSCC to progress coordinated and deliverable packages of interim mitigation measures and alternative transport solutions while a long-term strategic solution is considered by government. This must however be in combination with a robust monitor and manage policy that appropriately manages the risk of unacceptable road impacts resulting from new housing and other development over the Plan period.

We have been in discussion with Chichester District Council regarding their proposed Monitor and Manage Strategy. At present, we do not consider the current strategy to be robust and we seek further information and detail especially on who, when and when monitoring and management will be undertaken. Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas. Any M&M framework must be based on a "worst case scenario" whereby necessary transport mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. The M&M framework must set out that the alternative to mitigation not being delivered is that development does not proceed where that development would give rise to unacceptable road safety risk or severe cumulative impacts on the road network in the absence of that mitigation. The M&M framework must be translated into development management plan policy and policy relating to development allocations.

As we have reiterated throughout our comments, we welcome the opportunity to work with you to address these outstanding matters and we will continue to liaise over submitted Transport Assessment, Travel Plan policy and Monitor and Manage Policy to help to work towards a viable plan.

We hope our comments assist.

We look forward to continuing to participate in future consultations and discussions. Please do continue to consult us as the Plan progresses so that we can remain aware of, and comment as required on, its contents.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Justification provided by CDC for the selected Spatial Strategy in relation to the North of the Plan Area (NAP) is difficult to follow and it fails to effectively justify CDC's decision to look to Kirdford for additional housing. It states that "Conserving the rural character of the area, with its high quality landscape and environment is a key objective" yet this is not the actual Strategic Objective of the Local Plan, therefore what exactly is the Local Plan referring to here? Do not see where there is an "identified need" set out in evidence for additional housing need in Kirdford.

Document Element: Spatial strategy, 3.25**Respondent:** National Highways (Mr Marius Pieters, Spatial Planning Manager) [8127]**Summary:**

[National Highways letter dated 24/07/23 confirmed representation should be categorised as Comment - Seeking to understand impacts.] We acknowledge that the Plan has ruled out high growth in Kirdford, Wisborough Green and Plaistow and Ifold, but seek to understand the impacts and mitigation measures associated with the A27.

Full text:

We have reviewed the publicly available Local Plan documents and provided comments in the attached letter, in relation to the transport implications of the plan for the safety and operation of the SRN.

Our comments include issues to resolve, comments, requests for further information and recommendations. A brief summary of our main comments are:

- the reliance on the delivery of the A27 Chichester bypass improvements project.
- the requirements for new, additional, and adapted processes and assessments, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments.
- collaborative working between agencies in combination with a robust monitor and manage policy.

We hope our comments assist.

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders. We look forward to continuing to participate in future consultations and discussions. Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Background

National Highways has been appointed by the Secretary of State for Transport as strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the strategic road network (SRN).

National Highways is responsible for operating, maintaining, and improving the Strategic Road Network (SRN) i.e., the Trunk Road and Motorway Network in England, as laid down in Department for Transport (DfT) Circular 01/2022 (Strategic Road Network and the delivery of sustainable development).

The SRN is a critical national asset and as such we work to ensure that it operates and is managed in the public interest, both in respect of current activities and needs as well as in providing effective stewardship of its long-term operation and integrity.

Our responses to Local Plan consultations are guided by relevant policy and guidance including the National Planning Policy Framework (2021) (NPPF):

- Transport issues should be considered from the earliest stages of plan-making and development proposals so that the potential impact of development on transport networks can be addressed (para 104).
- The planning system should actively manage patterns of growth such that significant development is focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. (para 105).
- Planning policies should be prepared with the active involvement of highways authorities and other transport infrastructure providers so that strategies and investments for supporting sustainable transport and development patterns are aligned. (para 106).
- In terms of identifying the necessity of transport infrastructure, NPPF confirms that development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe. (para 111).
- Planning policies and decisions should support development that makes efficient use of land, taking into account the availability and capacity of infrastructure and services – both existing and proposed – as well as their potential for further improvement and the scope to promote sustainable travel modes that limit future car use. (para 124).

In relation to the tests of soundness set out at paragraph 35 of the NPPF, in the context of transport, these are interpreted as meaning:

- a) Positively prepared - has the transport strategy been prepared with the active involvement of the highway authorities, other transport infrastructure providers and operators and neighbouring councils?

- b) Justified – Is the transport strategy based on a robust evidence base prepared with the agreement in partnership, or with the support of the highway authorities?
- c) Effective – Does the transport strategy and policy satisfy the transport needs of the plan and is it deliverable at a pace which provides for and accommodates the proposed progress and implementation of the plan?
- d) Consistent with national policy – Does the transport strategy support the economic, social, and environmental objectives of the Plan and the NPPF/NPPG?

We will be concerned with proposals that have the potential to impact on the safe and efficient operation of the SRN; in this case, the A27 trunk road (Chichester Bypass and its junctions) which is the main access route in the Chichester area. We have particular interest in any allocation, policy or proposals which could have implications for the A27 and the wider SRN network. We are interested as to whether there would be any adverse road safety or operational implications for the SRN. The latter would include a material increase in queueing or delay or reduction in journey time reliability during the construction or operation of the development set out in the plan.

National Highways is a key delivery partner for sustainable development promoted through the plan-led system, and as a statutory consultee we have a duty to cooperate with local authorities to support the preparation and implementation of development plan documents.

In accordance with national planning and transport policy and our operating licence, we are entirely neutral on the principle of development as it is for the local planning authority to determine whether development should be allocated or permitted; albeit it must comply with national policy on locating development in locations that are or can be made sustainable. Therefore, while always seeking early and fulsome engagement with local plans and/or developers, we will simply be assessing the transport and related implications of plans or proposals and agreeing any necessary transport improvements and relevant development management policy.

In progressing Local Plans, we will seek to agree the following:

- Assessment tools and methodology
- Baseline Assessment i.e., to demonstrate that the assessment tool accurately reflects current transport conditions
- Comparator case assessment i.e., to forecast the transport conditions that would occur in the absence of the plan
- Forecast modelling i.e., to forecast the transport conditions that would arise with the plan in place, this will include an assessment at the end of the Plan period; and, if required, at full build out if that occurs after the end of the Plan period
- Outputs and outcomes of modelling, demonstrating, as appropriate, what transport infrastructure is necessary to support the plan o It should be noted that a suite of transport modelling tools may be required. This includes strategic modelling covering an area at least one major junction beyond the district boundary, localised network modelling where several links/junctions are close together and/or individual junction modelling
 - o A DMRB (Design Manual for Roads and Bridges) compliancy assessment may also be required for certain highway features, such as Merge/Diverge assessment at Grade separated junctions, link capacity assessments, and others.
- The design of any necessary transport infrastructure, to an extent suitable for establishing deliverability during the plan period at the time that it becomes necessary for the purpose of ensuring that unacceptable road safety impacts or severe operational impacts do not arise as a result of development. This may be to at least General Arrangement design stage or preliminary design stage. Whichever degree of detail is agreed, the products must be in full compliance with the DMRB.
- Industry standard transport intervention costings.
- The delivery/funding mechanisms for necessary transport interventions. It should not be assumed that National Highways will have any responsibility to identify or deliver necessary transport interventions.
- If considered appropriate, a “Monitor & Manage” (M&M) framework, aimed at managing the pace of development in line with the pace of funding and delivery of necessary highway interventions in a manner which responds to the realworld impacts of development may be agreed for inclusion in the plan subject to the adequacy of risk control measures included therein. This can include the move from a ‘predict & provide’ style of delivery to ‘a vision & validate’ style. o Any M&M framework must be based on a “worst case scenario” whereby necessary mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. It must be translated into development management plan policy and policy relating to development allocations.

Further detail on the above can be provided by National Highways.

While ideally all the above should be agreed prior to the Submission of the Local Plan for examination, we recognise that this is not always possible. However, all parties should work towards all matters being agreed and reflected in a Statement of Common Ground (SoCG) by the start of the Local Plan Examination at the latest. Ideally the SoCG between the Council and National Highways would be prepared well in advance of plan submission in order to guide resource input and to track progress towards final agreement on all relevant matters starting from the earliest plan iterations until the final version is agreed.

It is acknowledged that Government policy places much emphasis on housing delivery as a means for ensuring economic growth and addressing the current national shortage of housing. The NPPF is very clear that:
 “Strategic policy-making authorities should establish a housing requirement figure for their whole area, which shows the extent to which their identified housing need (and any needs that cannot be met within neighbouring areas) can be met over the plan period.”

However, new DfT C1/22 and the NPPF are equally clear that any development, including housing delivery, must be tempered by the requirement to ensure that the associated transport demand can be accommodated without unacceptable impacts on the safety of the SRN or severe impacts on the operation of the SRN including reliability and congestion. Therefore, as necessary and appropriate, any plan and/or development must be accompanied by suitable mitigation in the right places at the right time, that is to the required design standards and is deliverable in terms of land availability, constructability and funding.

We would also draw your attention to the then Highways England document ‘The Strategic Road Network, Planning for the Future: A guide to working with National Highways on planning matters’ (September 2015). This document sets out how National Highways intends to work with local planning authorities and developers to support the preparation of sound documents which enable the delivery of sustainable development.
https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/461023/N150227_-_Highways_England_Planning_Document_FINAL-lo.pdf

Responses to Local Plan consultations are also guided by National Planning Policy Framework (NPPF) revised on 20 July 2021 which sets out the government’s planning policies for England and how these are expected to be applied.

Updated Circular (01/2022)

It should be noted that since the start of the Local Plan consultation process, on the 23 December 2022, the Department for Transport released a new circular on the ‘Strategic road network and the delivery of sustainable development’ (Circular 01/2022), which replaces all of the policies in Circular 02/2013 of the same name. These representations take account of the new circular and the requirements in terms of the Local Plan evidence base and process.

We request that the Local Plan is prepared in line with all aspects of the new circular. Particularly, the principles of sustainable development (paragraphs 11 to 17), new connections and capacity enhancements (paragraphs 18 to 25), and engagement with plan-making (paragraphs 26 to 38).

Regulation 18 submission

In our Regulation 18 submission we noted several matters including:

- The need to mitigate the adverse impacts of strategic development traffic to the A27 Chichester Bypass and its junctions at Portfield Roundabout, Bognor Road Roundabout, Whyke Roundabout, Stockbridge Roundabout and Fishbourne Roundabout and Oving junction.
- The need to identify a mechanism to calculate contributions towards the delivery of the previously agreed Local Plan A27 improvements
- The need to confirm the number of dwellings needed within the plan period
- The need to establish National Highways acceptance of the traffic model reference and future case scenarios
- The need to confirm costs, viability, and funding associated with mitigating the safety and congestion impacts of the development included within the plan.

Local Plan context

This Local Plan (Chichester Local Plan 2021 – 2039), prepared by the Local Planning Authority (LPA) Chichester District Council, sets out the vision for future development in the district and will be used to help decide on planning applications and other planning related decisions including shaping infrastructure investments.

The draft sets out how the district should be developed over the next 18-years to 2039 including for the full Plan period (1 April 2021 to 31 March 2039) the total supply of

- 10,359 dwellings

- 114,652 net additional sqm new floorspace

Minus the completions this is equivalent to around 530 dwellings and 6,150 sqm of floorspace a year.

National Highways Representations

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders.

We have undertaken a review of the Chichester Local Plan 2021-2039 proposed submission version and accompanying evidence documents, our comments are set out in the tables below (following pages). [see table within attachment]

Summary

We have reviewed the publicly available Local Plan documents and provided comments above in relation to the transport implications of the plan for the safety and operation of the SRN. We understand that other technical information is available, but this was not presented as part of this consultation. Chichester, and the A27, are already heavily congested, infrastructure in the existing Local Plan remains undelivered and the growth set out in the new Plan will further increase travel demand.

As presented, satisfying the transport needs of the plan is clearly reliant on the delivery of the A27 Chichester bypass improvements project. The A27 Chichester bypass improvements project is one of 32 pipeline schemes being considered for possible inclusion in National Highways third Road Investment Strategy (RIS3) covering 1 April 2025 to 31 March 2030.

On 9 March 2023 the UK Transport Secretary ensured record funding would be invested in the country's transport network, sustainably driving growth across the country while managing the pressures of inflation. The announcement cited the A27 Arundel Bypass as being deferred from RIS2 to RIS 3 (covering 2025-2030). The transport secretary also identified a number of challenges to the delivery of the road investment strategy and cited the benefit of allowing extra time to ensure schemes are better planned and efficient schemes can be deployed more effectively.

At present, there is no commitment by DfT to carry out the A27 Chichester bypass improvements project. Until the A27 Chichester bypass improvements project is published in the RIS3, consented and a decision to invest is made it cannot be assumed to be a committed project.

We note that the Plan does not address any uncertainty of delivery of the A27 Chichester bypass improvements project and we strongly recommend that there is either no reliance placed on RIS3 to realise capacity for growth in the Plan or that contingency measures are included to cover the eventuality that RIS3 funding is not forthcoming within the plan period. It is not clear that the potential impact of development on transport networks can be addressed in the absence of the A27 Chichester bypass improvements project.

Achieving net zero, reducing emissions reduction, acting on climate, and supporting thousands of new homes and new employment developments will be problematic with existing processes. New, additional, and adapted processes and assessments will likely be required, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments. We acknowledge that change is complex, expensive, and time-consuming, especially for smaller district level Councils. But the hard work will deliver benefits for the Council and residents in the longer-term.

National Highways seeks to continue working with the Council and WSCC to progress coordinated and deliverable packages of interim mitigation measures and alternative transport solutions while a long-term strategic solution is considered by government. This must however be in combination with a robust monitor and manage policy that appropriately manages the risk of unacceptable road impacts resulting from new housing and other development over the Plan period.

We have been in discussion with Chichester District Council regarding their proposed Monitor and Manage Strategy. At present, we do not consider the current strategy to be robust and we seek further information and detail especially on who, when and when monitoring and management will be undertaken. Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas. Any M&M framework must be based on a "worst case scenario" whereby necessary transport mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. The M&M framework must set out that the alternative to mitigation not being delivered is that development does not proceed where that development would give rise to unacceptable road safety risk or severe cumulative impacts on the road network in the absence of that mitigation. The M&M framework must be translated into development management plan policy and policy relating to development allocations.

As we have reiterated throughout our comments, we welcome the opportunity to work with you to address these outstanding matters and we will continue to liaise over submitted Transport Assessment, Travel Plan policy and Monitor and Manage Policy to help to work towards a viable plan.

We hope our comments assist.

We look forward to continuing to participate in future consultations and discussions. Please do continue to consult us as the Plan progresses so that we can remain aware of, and comment as required on, its contents.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Document Element: Spatial strategy, 3.27**Respondent:** Metis Homes [1602]**Agent:** Nova Planning (Mr Patrick Barry, Director) [1195]**Summary:**

Distribution of housing to Northern Plan Area (Loxwood) is based on flawed assumptions regarding capacity of the A27. These locations are not well served by existing facilities and amenities and are sequentially less sustainable than locations in the Southern Plan Area, where A27 capacity is being presented as only relevant constraint to increased/additional allocations. This is unnecessary given additional capacity in the A27 as outlined at paragraphs 5.6.5 and 11.2.3 of the report. For this reason, Spatial Strategy is not properly 'justified' and consequently the draft Plan is unsound.

Object

Document Element: Policy S1 Spatial Development Strategy**Respondent:** Libby Alexander [7023]**Summary:**

Plan is considered unsound on basis that:

- AONBs and natural environment insufficiently protected;
- Insufficient consideration of threat of climate change and mitigations;
- Unrealistic housing targets;
- Lack of challenge of water companies regarding sewage discharges;
- Inadequate transport infrastructure

Full text:

The Conservative Government manifestoes have consistently mentioned the importance of protecting our protected areas. Repeated at the UK hosted Cop 26.

This is blatantly being ignored as our much protected AONB is downgraded and continues to cause concern. The protected Medmerry and Pagham nature reserves are also under huge stress.

The Government's NPPF mentions many times the need for 'sustainability'.

There is nothing 'sustainable' when local plans ignore the threat of climate change by continuing :

- To build along our threatened coastline.
- To build next to other developments thus causing flooding where none occurred before
- To build without solar panels nor electric car charge points.
- To build on green rich agricultural land.
- To build on known flood plains.

The policy to protect and enhance the natural environment has been overlooked and not acted upon as a result:

- Our chalk rivers are being over abstracted.
- Our wetlands and mudflats are being poisoned at an alarming rate
- Our wildlife numbers of most species are declining

Delivering suitable, well designed, energy efficient affordable housing has not, and will not be achieved until CDC accept their responsibilities.

- The housing numbers have not been sufficiently challenged.
- The number of affordable housing is not concomitant with the number of developments
- The lack of pressure on developers to produce other than uniform developments
- The lack of density and sensitivity to the cultural heritage that is Chichester.

Why should communities have any confidence in your statement of ensuring the timely delivery of key infrastructure when we have no decisions over:

- The lack of challenge to water companies over their constant discharging of raw sewage
- The growing congestion along the A259 as a result of all the developments
- The daily hazards of using Fishbourne roundabout
- The levels of air pollution at the A27 roundabouts
- The lack of decision over separating local road users from the strategic A27
- The levels of traffic to and from what is a dead end on the A286
- The granting of planning permission to the Whitehouse Farm development when a southern exit is still not decided.

There is very little to inspire confidence in the present make up of the CDC that they appreciate the need for countryside protection as an essential factor to maintaining a healthy natural environment for the benefit of us all or an understanding of what is required for nature protection. Neither is there any conviction that CDC have any sensitivity or comprehension of what the Government's mantra on building back beautiful really entails.

Depressingly the only conclusion is that the Local Plan is UNSOUND and all housing should be temporarily halted until such matters are in hand most especially the immoral and illegal continuous discharges of raw sewage into our AONB.

Document Element: Policy S1 Spatial Development Strategy**Respondent:** Mrs Georgina Armour Glasius [7925]**Summary:**

The plan doesn't go far enough in addressing the climate crisis / threats to the local environment. There's a lack of detail regarding properly adequate walking and cycling provision to prevent us from building anything but car-dependent enclaves. This strategy won't prevent coastal squeeze. Along the A259, we are losing prime-grade fields / the sense of separate villages. Large tracts of rural Sussex will become a long line of urban sprawl. Our harbour will continue to be damaged by development. The 'solution' to tanker away the sewage from developments without facing up to sewage pollution is ludicrous.

Change suggested by respondent:

We shouldn't build on greens spaces just because they are 'desirable' places to live. Use brownfield sites or convert office blocks into flats.

New housing should be dispersed throughout an area not in large chunks just because it's advantageous for developers to build large-scale developments.

Object

Document Element: Policy S1 Spatial Development Strategy**Respondent:** Artemis Land and Agriculture Limited [7943]**Agent:** Mr Jack Allenby [7942]**Summary:**

The Council's emerging Local Plan is unsound as proposed Policy S1, Spatial Development Strategy focuses most future growth in the south of Chichester district in an area that is highly constrained in planning terms, with only a moderate amount of growth proposed in the North of the Plan Area which is objectively and comparatively less-constrained.

The Council's evidence base demonstrates that additional housing could be delivered in the comparatively less-constrained North of the Plan Area, including at Crouchlands Farm, so the proposed policy is not positively prepared, and nor is it appropriately justified.

Full text:**A. SUMMARY AND CONCLUSION**

1. The Council's emerging Local Plan is unsound as:

- proposed Policy S1, Spatial Development Strategy (Appendix LPD1, page 38-39), focuses most future growth in the south of Chichester district in an area that is highly constrained in planning terms, with only a moderate amount of growth proposed in the North of the Plan Area which is objectively and comparatively less-constrained;
- proposed Policy H1, Meeting Housing Needs (Appendix LPD1, page 100), sets out a total housing supply of 10,359 homes for the plan period of 1 April 2021 to 31 March 2039, equivalent to 575 homes per year (an already capped figure due to highway constraints in the south). This is a shortfall of 1,134 homes for the plan period, or 63 homes per year, against the Council's minimum local housing need as calculated by the Government's standard housing method and set out in the Council's Housing and Economic Development Needs Assessment (Appendix LPD2, page 42);
- the Council proposes a similar spatial strategy and shortfall in supply of housing against its full housing need to that for the previous (adopted) Local Plan (Appendix LPD3, pages 40 – 41, and 49). This has resulted in the Council being unable to demonstrate a five year housing land supply and manage proposals for speculative development, reflected in some 87% of new housing coming from windfall sites (Appendix LPD4, page 12), so is proven to be unsound;
- despite the historic and proposed shortfall in its housing supply, the Council presents insufficient evidence to demonstrate that the impacts of meeting more of the local housing need would significantly and demonstrably outweigh the benefits when assessed against the policies in the National Planning Policy Framework (2021), taken as a whole;
- the Council's Sustainability Appraisal (Appendix LPD5, page 26) assesses growth scenarios in the North of the Plan Area. A growth scenario including Crouchlands Farm for 1,114 homes (or 62 per year) is found to be most sustainable (Appendix LPD5, page 34) but is discounted without clear and robust reasoning, and a blended growth scenario for 720 homes (or 40 per year) is proposed in the Local Plan (Appendix LPD5, page 40). It is wholly unclear how the Council has arrived at its decision;
- the Water Neutrality Mitigation Strategy (Appendix LPD6, page VI) and Emerging policy NE17 (Appendix LPD1, page 89) allows for 1,796 homes in the North of the Plan Area, of which scenarios 1a and 2a, including Crouchlands Farm, are less than. Water Neutrality is therefore not a constraint when considering a higher level of development in the North of the Plan Area; and
- Crouchlands Farm was also assessed in the Council's Housing and Economic Land Availability Assessment (Appendix LPD7, page 134) as being suitable, achievable and available for rural enterprise-led development / residential mix of up to 600 homes (HELAA ID HPI009).

2. The emerging Local Plan, therefore, is unsound due to it not being positively prepared by the Council in proposing a shortfall of housing supply against its minimum local housing need, where there are no exceptional circumstances to justify this, as well as there being evidence to support additional sites for housing, including at Crouchlands Farm. There is no coherent basis for the Council not taking forward Crouchlands Farm to increase future housing supply given the shortfall.

3. As a result, the Council should be asked to allocate more sites to help bridge the gap in the extent of its housing shortfall and Crouchlands Farm should be considered the obvious first choice given the deliverability of Rickman's Green Village, as demonstrated by the Council's evidence base (Appendix LPD5, page 34, and Appendix LPD7, page 134).

4. In addition, a wealth of technical work has been undertaken to prepare and submit three planning applications for Rickman's Green Village (Chichester District Council reference 22/01735/FULEIA, 22/03114/FULEIA, and 22/03131/OUTEIA) that are currently awaiting determination. These applications further demonstrate the suitability of Crouchlands Farm as a highly sustainable site, capable of delivering up to 600 homes alongside a primary school (or other suitable community facility), village hub with farm shop, cookery school, glamping and retail and commercial units, and open space provision, such that it should be allocated in the emerging Local Plan.

5. Artemis, or a representative thereof, therefore wishes to participate in the future hearing sessions for the emerging Local Plan. It is considered that as Crouchlands Farm is the only specific alternative considered in the Sustainability Appraisal, it merits its own hearing session.

B. EMERGING LOCAL PLAN ANALYSIS

Introduction

6. This representation has been prepared by DLBP Ltd, on behalf of Artemis Land and Agriculture Limited ("Artemis"), to object to the soundness of the Chichester Local Plan 2021-2039: Proposed Submission ("the emerging Local Plan") prepared by Chichester District Council ("the Council") for public consultation between 3 February to 17 March 2023 under Regulation 19 of the Town and Country Planning (Local Planning) (England) Regulations 2012.

7. Artemis is the owner and operator of Crouchlands Farm, Rickman's Lane, Plaistow, Billingshurst, West Sussex RH14 0LE, a 197 hectare livestock farm in the north of Chichester district partly proposed as the site of a new settlement, known as Rickman's Green Village.

8. The representation is based on the adopted National Planning Policy Framework (2021). There is a draft version currently being consulted on, but even if approved as drafted, it will not apply to a Local Plan that has reached Regulation 19 at this point. Therefore, the draft policies are not referred to.

9. In the interests of conciseness, the appendices list is not exhaustive. For example, only a selection of the planning applications documents, or executive summaries of these, have been included. The planning applications are available on Chichester District Council's website (planning refs 22/01735/FULEIA, PS/22/03114/FULEIA and 22/03131/OUTEIA), or a full suite of documents can be provided upon request.

Spatial Strategy

10. Proposed Policy S1, Spatial Development Strategy (Appendix LPD1, page 38 – 39), is unsound.

11. Proposed Policy S1 builds on the spatial strategy of the previous (adopted) Local Plan (Appendix LPD3, page 40 – 41) by focusing growth in the south of the District on sites in and around Chichester city, and the east-west corridor. The south of the district, however, is known to be highly constrained in planning-terms. Key constraints identified by the Council are the (lack of) capacity of the A27, flood risk, and the need to protect environmental designations, landscape quality, the historic environment and settlement character (Appendix LPD1, paragraph 3.5).

12. Due to the constraints in the south, in particular capacity issues of the A27, the Council proposes a moderate level of growth in the North of the Plan Area.

13. Previous advice from the Planning Inspectorate (Appendix LPD8, page 4) concluded that the Council should reassess its adopted spatial strategy and distribution of development in other parts of the District to establish whether the housing need could be met in another way. The emerging Local Plan, however, does not reassess the distribution of development sufficiently.

14. Proposed Policy S1 is unsound as the Council's evidence base demonstrates that additional housing could be delivered in the comparatively less-constrained North of the Plan Area, including at Crouchlands Farm, so the proposed policy is not positively prepared, and nor is it appropriately justified. This is expanded upon further below.

North of the Plan Area

15. Proposed Policies A15, Loxwood (Appendix LPD1, page 260) and H3, Non-Strategic Parish Housing Requirements 2021 – 2039 (Appendix LPD1, page 103) are also unsound.

16. The emerging Local Plan proposes one allocation for housing in the North of the Plan Area, Policy A15, Loxwood, for a minimum of 220 homes to come forward over the plan period, all through the neighbourhood plan process.

17. Proposed Policy H3 sets out non-strategic targets for 25 new homes to be delivered over the plan period in Plaistow and Ifold Parish, 50 in Kirdford Parish, and 75 in Wisborough Green, all through neighbourhood plans (of which Plaistow and Ifold does not even have a draft Neighbourhood Plan) or subsequent development plans (which have not even begun preparation yet).

18. It is clear, when looking at the District's population data alone that the North of the Plan area should, proportionately, take on more housing. This is because:

- the population for the entire District (excluding the South Downs National Park area) is 89,982, which comprises 8,396 in the North of the Plan Area and 81,586 in the remaining south of the District;
- the emerging Local Plan proposes 10,359 homes over the Plan period, comprising 370 in the North of the Plan Area and 9,989 in the remaining south of the District;
- if the proposed housing was to be distributed evenly across the District, one home should be allocated per 11.5 people. An even distribution would therefore result in 966 homes in the North of the Plan Area;
- however, the Local Plan only proposes 370 homes in the North of the Plan Area. This is a shortfall of 596 homes against what should be provided (966 homes) if it were to be evenly distributed, which equates to a 161% shortfall.

19. Proposed Policies S1, H3 and A15 should be found unsound due to there being evidence (set out in the Council's own evidence base and within this representation) demonstrating that additional housing could be delivered in the North of the Plan Area to meet future needs, particularly in the parish of Plaistow and Ifold at Crouchlands Farm.

20. Furthermore, proposed Policies S1, H3 and A15 are unsound as they are not justified or effective, but are overly reliant on the delivery of additional homes in the North of the Plan Area on sites allocated in neighbourhood plans for the respective parishes when there is no evidence to demonstrate that any sites are likely to be allocated, nor even that neighbourhood plans will be prepared by each of the parishes in the plan period. For example, proposed Policy H3 seeks to deliver 25 new homes in Plaistow and Ifold parish, however work to prepare its neighbourhood plan has ceased indefinitely.

Sustainability Appraisal

21. The Council's Sustainability Appraisal (Appendix LPD5, page 34) considered the following six growth scenarios to determine the number of homes to be delivered across the four parishes (Kirdford, Loxwood, Plaistow and Ifold, Wisborough Green) in the North of the Plan Area:

- i) 1, lower growth of only the four parishes providing 514 homes (29 homes per year);
- ii) 1a, lower growth of the four parishes plus Crouchlands Farm, providing 1,114 homes (62 homes per year);
- iii) 2, higher growth of only the four parishes, providing 1,139 homes (63 homes per year);
- iv) 2a, higher growth of the four parishes plus Crouchlands Farm, providing 1,514 homes (84 homes per year);
- v) 3, highest growth of only the four parishes, providing 1,964 homes (109 homes per year); and
- vi) 3a, highest growth of the four parishes plus Crouchlands Farm, providing 2,564 homes (143 homes per year).

22. The Council's Sustainability Appraisal concluded that the Council is supportive of a blend of Scenarios 1 and 2 (Appendix LPD5, page 40).

23. To reflect this, proposed Policy H3 Non-Strategic Parish Housing Requirements 2021 – 2039 (Appendix LPD1, page 103) therefore seeks:

- i) lower growth at Kirdford (50 homes) and Plaistow and Ifold (25 homes) on unallocated sites; and
- ii) higher growth at Loxwood and Wisborough Green through a combination of one allocated site for 220 homes (proposed Policy A15) and other unallocated sites (75 homes).

24. However, Figure 1 of the Council's Sustainability Appraisal (Appendix LPD5, page 34), above, very clearly shows that scenario 1a (lower growth of only the four parishes plus Crouchlands Farm) scores the best overall i.e., is the most sustainable option. This is due to scenario 1a scoring highest in regard to the site's accessibility, communities and health, lack of heritage constraints relative to the other scenarios, as well as lack of landscape constraints relative to the other scenarios.

25. With regards to the analysis of the remaining criteria:

- Air Quality and Environmental Quality; Biodiversity; Land, Soils and Resources – whilst we appreciate the information may not be available for the 'other areas' accounted for in each growth scenario, the scoring does not reflect the information within the three planning applications at Crouchlands Farm (e.g. Ecological Impact Assessments (Appendices RGV17 and RGV18), Air Quality Assessments (Appendix RGV8 – RGV10), Environmental Impact Assessments (Appendices RGV21 and RGV22), Agricultural Land Classification Assessment (Appendix RGV7), Land Quality Assessments (Appendices RGV26 and RGV27, etc));
- Housing – the scoring for this category is inconsistent with the other criterion, as it does not exclude option 3a from the ranking. For example, Scenario 1a should therefore score 4, rather than 5, if based purely on the quantity of homes. But page 4 of the Sustainability Appraisal (Appendix LPD5) confirms that the objective is to (our emphasis): "deliver suitable, well designed, energy efficient and affordable housing to meet local needs, in safe and accessible neighbourhoods with mixed and balanced communities". In the absence of supporting evidence on the qualitative elements of this objective, other than at Crouchlands Farm, the method of scoring this criteria is unsound as it does not meet the full objective. When considering the high-quality design of homes at Crouchlands, it is clear that scenarios 1a and 2a should in fact score higher; and
- Economy, employment – the Sustainability Assessment fails to acknowledge the economic benefits proposed at Crouchlands Farm, which will have a significant economic benefit for Chichester District Council and the wider area. This is demonstrated in the Economic Impact Assessment submitted with planning application (Appendix RGV19). A second Economic and Social Value Impact Assessment as also been submitted which considers the scenarios of the whole of the proposal (Appendix RGV20), but we wholly appreciate that the Council did not have access to this at the time of preparing the Sustainability Appraisal.

26. There is a clear disconnect between the scoring of the scenarios, how each scenario and Crouchlands Farm has been assessed by the plan-maker, and how the conclusion to proceed with a blend of scenarios 1 and 2 has been made. Page 34 of the Sustainability Appraisal (Appendix LPD5) clearly states that it "is undertaken without any assumptions regarding the degree of importance, or 'weight', that should be assigned to each of the topics in the 'planning balance'. It is only the Council, as the decision-making authority, that is in a position to arrive at an overall conclusion on the best performing growth scenario on balance". One must therefore assume that the Council has assigned more importance and weight to certain criteria of the scoring. But there is a clear lack of explanation of this weighting exercise, so the results of the testing is not justified.

27. The Council's reasoning for supporting a blend of scenarios 1 and 2 at section 7.3 of the Sustainability Appraisal (Appendix LPD5, page 40) is therefore wholly unclear, not justified, and is unsound.

28. In summary, the Council's position is that:

- the government's standard housing methodology determines an objectively assessed need of 638 dwellings per annum, or 11,484 over the plan period (which is a capped figure at 40% above the 'baseline' need figure);
- the figure is then capped further to the plan area as a whole to 575 dwellings per annum, because:
- capacity constraints associated with the A27 in the south of the plan area results in a resolution that there is capacity for no more than 535 homes per year in the south (i.e. a further capping of its proposed supply);
- this means that 103 homes per year need to be made up in the North of the Plan Area, or 1,854 homes over the plan period;
- a growth scenario (1a) including Crouchlands Farm for 1,114 homes (or 62 per year) is found to be most the sustainable option in the Sustainability Appraisal when considering the score of figure 1 above (Appendix LPD6, page 34) but is discounted without clear and robust reasoning;
- the Council thus proposes only 40 homes per year in the North of the Plan Area due to 'wide ranging planning reasons'.

29. This is wholly unsubstantiated as it means that there is a shortfall of 63 homes per year, or 1,134 homes over the plan period. Also:

- the Sustainability Appraisal (Appendix LPD5, page 16) sets out that water neutrality has implications for the growth quantum in the North of the Plan Area, so this area cannot accommodate the full 63 homes per year (which is already a capped figure);
- but the Water Neutrality Mitigation Strategy (Appendix LPD6, page 15, table 3.1), and the Sustainability Appraisal (Appendix LPD5, page 16), both confirm that the North of the Plan Area can accommodate 1,796 homes (circa 100 homes per year);
- and even if a suitably precautionary approach is taken (considering fewer homes, by 5% or 10%), 5% fewer homes would equate to 1,706 homes, and 10% fewer homes would equate to 1,616 homes;
- therefore, even with the highest buffer (10%) applied, 1,616 homes could be accommodated in the North of the Plan Area over the plan period (circa 90 homes per year). This means that almost the entirety of the actual shortfall (1,854 homes) could be reached in the North of the Plan Area.

30. We accept that the 1,854 homes required to be made up in the North of the Plan Area cannot be accommodated, due to water neutrality constraints and so scenarios 3 and 3a are discounted.

31. However, scenarios 1 (514 total homes), 1a (1,114 total homes), 2 (1,139 total homes), and 2a (1,514 total homes) would all be below the most precautionary approach taken to water neutrality constraint. Taking the highest growth scenario 2a (with Crouchlands Farm), there would still be headroom of 102 homes in terms of the Water Neutrality Mitigation Strategy.

32. Therefore, water neutrality cannot be the determining constraint for discounting scenarios 1a or 2a from the Sustainability Appraisal (Appendix LPD5).

33. Therefore, there is very limited explanation about what the "wide ranging planning reasons" are, and how the resulting shortfall has been reduced

from 103 homes per year to 40 homes per year in the North of the Plan Area. Three examples are referenced (with our comments in bold):

- the rurality of the area – whilst we appreciate and wholly recognise this is a designated Rural Area under Section 157 of the Housing Act 1985, so are many of the sites in the south of the plan area that already have, and are planned to, accommodate significant growth. But other than this, a large part of the North of the Plan Area, including Crouchlands Farm, is unconstrained – it is not in the Green Belt, an Area of Outstanding Natural Beauty, a Special Area of Conservation, a Site of Special Scientific Interest, or other constraints. This is accepted by the Council at page 34 of the Sustainability Appraisal (Appendix LPD5);
- the entire area falls within a constrained water resource zone – this is not a constraint. The Council's own proposed Policy NE17 contradicts this reasoning, as clearly sets out how developers can provide evidence that new development will be water neutral. In addition, Natural England's Mitigation Strategy (Appendix LPD6, page V - XI) identifies the area as having capacity for 1,784 homes, and growth scenarios 1, 1a, 2 and 2a would all allow for headroom when considered against this (see paragraphs 28 – 32 above); and
- transport-related barriers to growth, whereby Waverley Borough and Horsham District have raised concern – as set out in Section C below, the planning applications at Crouchlands Farm contain a wealth of transport assessments and evidence that there are suitable, reasonable, and proportionate ways of mitigating this. Horsham District and Waverley Borough Councils and have not raised objection to the planning applications, either on transport or any other grounds (Appendices RGV40 and RGV41, respectively). Paragraph 5.2.33 of the Sustainability Appraisal (Appendix LPD5) accepts that the strategic growth options, i.e. Crouchlands Farm, have merit in transport terms.

34. Further details of the Council's assessment of Crouchlands Farm in the Sustainability Appraisal (Appendix LPD5) are set out in Section C of this representation, alongside our response to each of the points raised by the Council.

40 homes per year

35. A meeting was held between the Council and an Advisory Inspector in October 2022 (Appendix LPD9). This precedes the publication of the Sustainability Appraisal (Appendix LPD5), the growth scenario testing, and the Water Neutrality Mitigation Strategy (Appendix LPD6), which have since concluded that development of up to 1,796 homes can be sustainably achieved in the North of the Plan Area over the plan period. The Sustainability Appraisal (Appendix LPD5) excluded scenario 3a on the basis of this being exceeded (page 26).

36. Nevertheless, paragraph 5 of the Advisory Inspector's notes (Appendix LPD9) states "[...] the Council consider[s] a housing requirement below the need derived from the standard method (some 535 dwellings per annum (dpa) in the southern plan area and the potential for a further 40 dpa in the northern plan area compared to 638 dpa)". And paragraph 9 lists a number of potentially constraining factors (e.g. limited public transport, limited facilities, water neutrality etc), which the Advisory Inspector states (our emphasis): "appear to support the Council's position that a maximum of 600-700 homes could be delivered over the Plan period (or around 40 dpa)."

37. However, it is unclear what evidence informed the figure of 40 homes per year in the Advisory Inspector's note, particularly as:

- none of the scenarios in the Sustainability Appraisal specifically tested a 40 homes per year scenario; and
- the Water Neutrality Mitigation Strategy, restricting development in the North of the Plan Area to 1,796 homes was not published until December 2022.

38. It is also unclear how the proposed figure of 40 homes per year is reached as a blend of scenarios 1 and 2. For example, when calculating the completions (54), commitments (198), windfall (62) figures at table 5.5, plus the 220 homes at Loxwood, 25 homes at Plaistow and Ifold, 50 homes at Kirdford, and 75 homes at Wisborough Green, the total amounts to 684 homes over the plan period, or 38 homes per year.

39. Despite this, the Emerging Local Plan (Appendix LPD1, pages 99 and 100) sets out a figure of 40 homes per year over the plan period (679 homes in total), accounting for completions, commitments as of December 2022, windfall, allocation at Loxwood, and non-strategic allocations at Kirdford, Plaistow and Ifold, and Wisborough Green. This is contrary to the results of the Sustainability Appraisal.

40. In a previous meeting with the Advisory Inspector regarding water neutrality (September 2022, Appendix LPD10), the Inspector confirms that, prior to submission of a plan (our emphasis added):

"the Inspectorate can only provide advice based on national planning policy and guidance, along with our own personal experience. While it is possible to explore issues in advisory meetings it is not possible to say definitively that the approaches taken will lead to a sound plan. That's because ultimately each plan will be considered by an Inspector who has been appointed to carry out an independent examination. In doing so they will consider all the evidence to justify the plan, the representations and what was discussed at the hearing sessions."

41. It is therefore not sufficient reasoning for the Council to submit the Emerging Local Plan, using a blend of scenarios 1 and 2 that happen to match a 40 homes per year figure in the North of the Plan Area, on the basis of the Advisory Inspector's commentary in October 2022 (Appendix LPD9), which preceded the issuing of the Water Neutrality Mitigation Study (Appendix LPD6) and the Sustainability Appraisal (Appendix LPD5). One can assume there has been no examination of evidence by the Advisory Inspector, just commentary based on the Council's own - unsound - narrative.

42. For the above reasons, the Council has therefore not positively prepared or justified the reasons for limiting growth in the North of the Plan Area to 40 homes per year.

Development Plan Infrastructure Panel

43. The Sustainability Appraisal (and commentary at the Special Cabinet and Full Council meetings held on 23 and 24 January 2023) makes references to conversations held and decisions made by the Development Plan Infrastructure Panel. A Freedom of Information request was submitted to request the minutes of these meetings, and the response was that the meetings are confidential and so the minutes would need to be heavily redacted.

44. The transparency of this is in question. While the meetings may not be 'public' in the sense that the public can attend and watch, the meetings relate to a document that is in the public domain and subject to public consultation, and so there should be transparency into how the decisions and conclusions have been made and justified.

45. In light of the above, proposed Policies S1, H1, and H3 are unsound for not being positively prepared or justified, directing insufficient growth in the North of the Plan Area where there is evidence to support the allocation of additional housing in a more-sustainable way, by including Crouchlands Farm.

Housing Need

Shortfall of supply

46. Proposed Policy H1, Meeting Housing Needs (Appendix LPD1, page 100), is unsound.

47. Paragraph 61 of the National Planning Policy Framework (2021) sets out that "to determine the minimum number of homes needed, strategic policies should be informed by a local housing need assessment, conducted using the standard method in national planning guidance – unless exceptional circumstances justify an alternative approach".

48. The Council's Housing and Economic Development Needs Assessment (Appendix LPD2, page 42) identifies a housing need of 763 homes per year based on the Government's standard method. That figure comprises 125 homes per year for the part of the district in the South Downs National Park and 638 homes per year for the remainder of the district (the plan area). This equates to a total requirement for 11,484 new homes for the plan period of 1 April 2021 to 31 March 2039.

49. Proposed Policy H1, however, sets out the total housing supply of 10,359 homes for the plan period, which equates to 575 homes per year. This is a shortfall in supply of 1,134 homes, or 63 homes per year, against the minimum local housing need as calculated by the Government's standard method.

50. The Council attempts to justify the proposed shortfall in housing supply due to key constraints in the south (the A27, flood risk, environmental designations) and the north of the district. In the north, the Council identifies key constraints to be the protection of environmental designations, landscape quality, historic environment and settlement character, and water neutrality (Appendix LPD1, paragraph 3.5).

51. We note that this was echoed by the Planning Inspectorate in a Local Plan Advisory Meeting, held on 5 October 2022, who found that: "The northern area is not constrained by the capacity of the A27 but has its own issues. As a predominantly rural area with limited facilities and public transport, it is not an obvious location for significant development. There are also landscape and historic environment constraints. It is also affected by water neutrality requirements and the potential for capacity issues on the wider highway network. These factors appear to support the Council's position that a maximum of 600-700 homes could be delivered over the Plan period (or around 40 dpa)". (Appendix LPD9, paragraph 9).

52. However, that advice was issued prior to the Council's Sustainability Appraisal (Appendix LPD5) and Water Neutrality Mitigation Strategy (Appendix LPD6) being published, which have since concluded that development of up to 1,796 homes in the North of the Plan Area over the plan period can be sustainably achieved.

53. The Council makes no justification that not meeting its housing need in full would significantly and demonstrably outweigh the benefits of meeting the majority of the shortfall of need in the North of the Plan Area, when assessed against the policies in the National Planning Policy Framework (2021) taken as a whole. The Council entirely overlooks the fact that its objectively assessed housing requirement is not being met. The only reason the Council makes for not meeting its housing need in the North of the Plan Area is set out in a Cabinet Report, dated 23 January 2023, which states: In the north of the Plan area, previously, given it is less sustainable compared to Chichester and the east-west corridor, the Local Plan has only provided for only limited growth, focused on enabling these communities to continue to sustain local facilities and contribute towards meeting locally generated housing needs, and support for the rural economy, in line with the settlement hierarchy. However, due to the constraint of the A27 in the south of the plan area (see housing section at para 5.34 onwards below), it is considered that this Plan should provide for a moderate level of growth in the north to help to make up the overall shortfall of dwellings, in order to demonstrate that 'no stone has been left unturned' in identifying housing supply.

High levels of growth were considered at Loxwood, Kirdford, Wisborough Green and Plaistow and Ifold, but ruled out due to the need to conserve the rural character of the area and its high quality landscape and to minimise the impact on the historic environment. The spatial strategy therefore includes growth at Kirdford (50 dwellings), Wisborough Green (75 dwellings) and Plaistow and Ifold (25 dwellings). Loxwood is the least constrained settlement in the north of the plan area, and benefits from the most services and facilities, including healthcare. Therefore, a moderate amount of growth is appropriate for Loxwood of 220 dwellings, to come forward through the neighbourhood planning process.

The SA of the northern options considered 3 scenarios (plus each scenario with the addition of a potential new settlement at Crouchlands), for low, higher and highest growth. The highest growth scenarios perform poorly and therefore the Local Plan reflects a combination of the low and higher growth scenarios tested, which takes into account the constraints of each settlement and the need to avoid cross boundary traffic and education impacts. A new settlement at Crouchlands has been ruled out as it is not of a sufficient size to be a sustainable new settlement in a rural location and because of the negative impact on the landscape and intrinsic rural character of the area and poor sustainable transport links. (Appendix LPD11, paragraphs 5.19 – 5.21).

54. The Council fails to make a case that the impacts of meeting this need would outweigh the harm caused by not meeting the full housing need, or indeed that impacts of even getting closer to meeting this need would demonstrably outweigh the harm of not meeting housing need.

55. On the contrary, there is evidence to demonstrate that housing supply could be higher by at least 600 homes through the allocation of Crouchlands Farm as a site considered to be suitable, achievable and available by the Council's Housing and Economic Land Availability Assessment (Appendix LPD7, page 134). The allocation of Crouchlands Farm would be acceptable in water neutrality terms, with both Scenarios 1a and 2a of the Sustainability Appraisal (Appendix LPD5, page 34) delivering new homes below the maximum figure set out in the Water Neutrality Mitigation Report (Appendix LPD6, page VI). Furthermore, there are no heritage and landscape constraints associated with Crouchlands Farm.

56. In addition, the information supporting the applications for Rickman's Green Village further demonstrate Crouchlands Farm as a highly sustainable site, capable of delivering up to 600 homes alongside a village hub with farm shop, retail and commercial units, office and flexible working space, and open space provision (as well as provision for a primary school or other suitable community facility).

57. Proposed Policy H1 is therefore unsound on the basis that it is not positively prepared or justifiable when accounting for all reasonable alternatives. Historic under-delivery

58. The previous (adopted) Local Plan (Appendix LPD3, page 49) did not provide a sufficient supply of housing to meet the Council's full housing need at the time of adoption, which is the same approach proposed by the Council for Policy H1.

59. Many of the sites allocated for housing in the previous (adopted) Local Plan on sites in the south of the District have not been delivered, as demonstrated by Appendix 2, Table E of the Council's Five Year Housing Land Supply Position Statement (Appendix LPD12). This confirms that four sites allocated by the Council previously, with a combined projected supply of 2,210 homes, have not been started, and do not even benefit from planning permission. We understand that none of those sites has come forward due to impediments resulting from site ownership, which raises questions around the approach taken by the Council in allocating sites for housing in the south in the past, which Policy S1 proposes to use again.

60. The Council's failing to meet its housing supply historically has also resulted in it now being unable to demonstrate a five year housing land supply and so unable to effectively manage proposals for speculative housing developments. This is reflected in a significant proportion – some 87% – of new housing coming from windfall sites (Appendix LPD4, page 12).

61. In addition, the Council introduced a new Interim Position Statement for Housing (Appendix LPD13) which set out a spatial strategy to allow new development adjacent to settlement boundaries as a way of significantly boosting housing supply (Criterion 1). The Council has not carried this strategy forward into the emerging Local Plan. This is despite the Planning Inspectorate recommending this in a recent appeal decision (Appendix LPD14), stating that the application of Criteria 1 suggested "the Council's [adopted] spatial strategy may be out of date, as a more permissive approach appears necessary to maintain a five-year housing land supply." (paragraph 25).

62. Proposed Policies S1 and H1 are therefore unsound as they follow the same approach of the previous (adopted) Local Plan, which has proven to be ineffective and unsustainable, contrary to national policy, and the recommendations of the Planning Inspectorate.

Longer Term Growth Requirements

63. The emerging Local Plan as originally published (Appendix LPD15), prior to the meetings of the Council's Cabinet and Full Council on 23 and 24

January 2023, respectively, set out “some reservations about whether it will be appropriate in the longer term to continue to rely on existing sources of supply (e.g., urban extensions and urban intensification) indefinitely given the potential for ongoing increased levels of housing needs” (paragraph 5.11).

64. In doing so, it identified that a new settlement of 2,000 – 3,000 dwellings to accommodate potential longer-term growth needs beyond the Plan period (i.e. 2039 onwards) will need to be explored.

65. At the meeting of the Council’s Cabinet, a proposed amendment was agreed to remove the above wording and instead insert: “Beyond the Plan period additional planned provision for housing will be required. During the course of preparing this Plan, it has become apparent that it may not be appropriate in the longer term to continue to rely completely on sources of supply such as urban extensions and urban intensification” [...]

“In order to be in a position to update this Local Plan within the next five years the Council will need to consider future population and household growth. At the same time, the requirement for sufficient homes to house a local workforce without relying on excessive in-commuting to the District’s workplaces will need to be considered. The continual evolution of National Planning Policy also presents challenges as in what national, regional, sub-regional and plan area strategic planning context any future reviews of this plan may be undertaken.” (Appendix LPD1, paragraphs 5.11 – 5.12).

66. Reference is then made to the need to work “bilaterally with neighbouring authorities in seeking to find cross boundary strategic solutions to future growth requirements” (Appendix LPD1, paragraph 5.13).

67. The emerging Local Plan (Appendix LPD1, paragraph 5.14) continues to recognise a need to facilitate the identification of possible new development sites specifically within the Chichester plan area, however solutions to meet that need are not explored fully.

68. The Council states that it would consider sites that (with our commentary in bold):

- i) are of a sufficient scale to support potential long-term development needs arising and support the provision of key infrastructure and community facilities – Rickman’s Green Village is of a scale similar to surrounding villages, and will provide all necessary key infrastructure as well as community facilities such as a potential primary school (or other suitable community facility), sports pitches, and shops;
- ii) are comprehensively planned in consultation with existing communities and key stakeholders – significant public engagement has been undertaken, including two in-person public consultation events, and pre-application discussions with West Sussex County Council (on transport, and education) and Chichester District Council;
- iii) provide for a sustainable, inclusive and cohesive community promoting self-sufficiency and with high levels of sustainable transport connectivity – a new bus service connecting Rickman’s Green Village to Billingshurst is proposed, and onsite infrastructure is provided to promote self-sufficiency;
- iv) include on-site measures to avoid and mitigate any significant adverse impacts on nearby protected habitats – extensive ecology surveys and assessments have been undertaken to ensure habitats are protected. For example, 10 – 30 m buffers have been incorporated around Ancient Woodland;
- v) provide a mix of uses to meet longer term development needs and contribute towards its distinctive identity – the village hub will provide office spaces, shops, a café, leisure facilities and a potential school or other suitable community facility to meet long term needs of future residents; and
- vi) are of a layout and form that avoids coalescence with existing settlements and does not undermine their separate identity; respects the landscape character and conserves and where possible enhances the character, significance and setting of heritage assets – Rickman’s Green Village has been designed to be a new rural village that does not rely on or coalesce with other surrounding villages. The design has been landscape-led and reflects the character of nearby villages, with contemporary features. There are a number of mitigation measures in place to ensure the setting of heritage assets are protected.

69. Proposed Policies S1 and H1 are therefore unsound. The Council acknowledges that there are ways of meeting future housing need, which could include an allocation of Crouchlands Farm, but avoids deploying these now, which is not justified.

Water neutrality

70. Proposed Policies S1, Spatial Development Strategy (Appendix LPD1, page 40 – 41), H1, Meeting Housing Needs (Appendix LPD1, page 100), and H3, Non-Strategic Parish Housing Requirements 2021 – 2039 (Appendix LPD1, page 103) are unsound, and contradictory to proposed Policy NE17, Water Neutrality (Appendix LPD1, page 89)

71. The Council’s Sustainability Appraisal (Appendix LPD5), in assessing the proposed growth scenarios for the North of the Plan Area, states that water neutrality remains a “key constraint to higher growth” (page 40), despite a Mitigation Strategy (Appendix LPD6) having been agreed.

72. That Mitigation Strategy (Appendix LPD6) assumes 1,796 homes being delivered in the North of the Plan Area which the Council’s Sustainability Appraisal (Appendix LPD5, page 16) states:

“immediately serves to indicate that there is no potential to deliver the high growth target figure of 1,854 homes as the (minimum) level of growth that would be necessary in the northeast plan area, were the local plan housing requirement to be set at LHN [local housing need].”

73. Based on the above, the Council should have discounted the highest growth scenarios for the North of the Plan Area in the Sustainability Appraisal Scenarios 3 and 3a, which propose 1,964 and 2,564 homes, respectively for delivering more than 1,796 homes (Appendix LPD5, page 26). Page 26 of the Council’s Sustainability Appraisal (Appendix LPD5) states, however, “On balance, just Scenario 3a [highest growth of the four parishes plus Crouchlands Farm, providing 2,564 homes] is ruled out as unreasonable, on this basis, leaving five reasonable growth scenarios”. The Council provides no further justification for the inclusion of Scenario 3.

74. The Sustainability Appraisal (Appendix LPD5) goes on to state that whilst a Mitigation Strategy has been agreed, it “cannot be implemented until further work has been completed in order to design / set up strategic offsetting schemes. In this light, the proposed strategy of restricting growth somewhat [in the North of the Plan Area] is supported” (page 60).

75. That assessment is at odds, however, with proposed Policy NE17, Water Neutrality (Appendix LPD1, page 89), which states that “Development proposals are not required to utilise the planning authority-led offsetting scheme and may bring forward their own offsetting schemes.”.

76. The Council, therefore, seeks to use water neutrality to limit future growth in the North of the Plan Area, despite proposed Policy NE17 facilitating appropriate development from coming forward, such as that proposed at Crouchlands Farm. Proposed Policies S1, H1 and H3 are unsound for not being positively prepared or justified.

C. CROUCHLANDS FARM

77. Our analysis of the Council’s emerging Local Plan shows that it cannot be found sound as the Council proposes a shortfall of supply against its minimum local housing need where there are no exceptional circumstances to justify this, as well as there being evidence to support additional sites for housing.

78. As a result, the Council should be asked to allocate more sites to help bridge the gap in the extent of its housing shortfall and Crouchlands Farm should be considered the obvious first choice given the deliverability of Rickman’s Green Village, as demonstrated by the Council’s evidence base (Appendix LPD5, page 34, and Appendix LPD7.5, page 134), and the evidence presented below.

Document Element: Policy S1 Spatial Development Strategy**Respondent:** Arun District Council (Planning Policy Team, Team Leader) [7587]**Summary:**

The Development Strategy is not positively prepared or justified because it leaves a significant level of unmet need unresolved and may have cross boundary A27 capacity and development viability implications for planned and committed development in Arun as well as for ADC's future plan making. Chichester District Council's Regulation 19 Local Plan development strategy should account for the cross boundary contributions and positive steps to secure phased development needs allied to infrastructure to address its unmet need (including via the West Sussex and Greater Brighton Strategic Planning Board i.e. Local Strategic Statement - LSS3 update) as far as possible.

Full text:

Arun District Council (ADC) is concerned that the proposed Development Strategy is not positively prepared or justified. Subject to ongoing Duty to Cooperate discussions with Chichester District Council (CDC), ADC hopes to resolve these matters with a view to securing a Statement of Common Ground and subsequent withdrawal of these objections before the plan is submitted:-

- Level of unmet need for the plan period beyond 2026 is unresolved with potentially significant cross boundary implications;
- The infrastructure constrained approach delivering only the two scheme improvements on the A27 at Fishbourne and Bognor roundabouts (delivering reduced housing numbers), and the potential cross boundary impact with additional mitigation scheme costs and uplift from ADC planned and committed development (e.g. West of Bersted)
- uncertainty over ADC developments (i.e. West of Bersted, Pagham North and South) and their contributions towards A27 mitigation improvements e.g. A27 Whyke Road Roundabout
- The strategy is silent about cross boundary future growth assumptions (e.g. Arun) that may assist with A27 capacity. This may cap A27 capacity and ADC's future plan making and developments unviable because of the need for additional improvements

Change suggested by respondent:

Chichester District Council's Regulation 19 Local Plan development strategy should account for the cross boundary contributions and positive steps to secure phased development needs allied to infrastructure to address its unmet need (including via the West Sussex and Greater Brighton Strategic Planning Board i.e. Local Strategic Statement - LSS3 update) as far as possible.

Document Element: Policy S1 Spatial Development Strategy

Respondent: Beechcroft Developments Limited [8188]

Agent: Genesis Town Planning Ltd (Mr Jeremy Farrelly, Director of Planning) [7504]

Summary:

An increased dwelling requirement could be accommodated without the need to significantly alter the proposed spatial strategy. Additional development could be accommodated at less constrained Service Villages in northern parts of Manhood Peninsula. Not all of Manhood Peninsula is affected by challenges. Hunston is relatively unconstrained compared to other parts of Manhood Peninsula. Hunston has good accessibility to road network. Additional development at Hunston would be consistent with Policy T1. Hunston has been, and continues to be, a sustainable location for new development. Previous work on emerging Local Plan and now withdrawn Neighbourhood Plan demonstrate that it is capable of delivering at least 200 homes during Plan period. Site promoted at Land at Hunston Village Dairy.

Full text:

Object

Document Element: Policy S1 Spatial Development Strategy**Respondent:** Mr & Mrs Bell [7354]**Agent:** Henry Adams LLP (Mr Chris Locke, Planning and Development Assistant) [7352]**Summary:**

The conclusion in paragraph 5.6.5 and 11.2.3 of the Transport Study appears to be that 700 dpa could be accommodated (in the southern plan area) by the mitigation proposed for the 535 dpa, with some additional (as yet undesigned and not costed), mitigation works beyond those highlighted for the Bognor and Fishbourne roundabouts.

It is therefore our view that the figure of 535 should be seen as an absolute minimum and other land should be considered to be allocated.

Full text:

These representations are made on behalf of our client, the Bell Family who wish make representations to the Chichester Local Plan 2021 – 2039 Proposed Submission Regulation 19 Version.

Background

Our clients own approximately 37.8 acres of farmland to the west of Stoney Meadow which is edged red at Appendix 1. The land has been promoted at all relevant opportunities to Chichester District Council and North Mundham Parish Council but they wish to confirm to Chichester District Council and the Inspector that the land is available for development should they consider North Mundham as an area for growth.

Site suitability

The North Mundham Settlement Policy Boundary is being amended to now include the development at Oakdene Gardens and Stoney Meadow to the east. As mentioned, Henry Adams have promoted the land on behalf of the landowners at all opportunities and the most recent HELAA suggested that the land is developable for 225 units under ref. HNM0019 subject to further detail relating to access, drainage, landscape and archaeology.

The site is split into 3 distinct sections by tree belts, which enables phasing of the land should the whole of it not be developed. There is also defined landscape boundaries on all sides, restricting views into the site. The land has no significant natural constraints other than being in the Chichester and Pagham Harbours SPA buffer zones. To the east of the site on School Lane is a Grade II Listed Building and to the north east is an area of woodland, covered by a Tree Preservation Order (Local Planning Authority reference 70/00730/TPO).

Policy S1 & H1

Policy S1 of the Draft Local Plan sets out the spatial development strategy for the District and how the Council will achieve sustainable growth over the plan period. Policy H1 sets out the housing target in response to the strategy. Both policies have been informed by the Sustainability Appraisal (SA) dated January 2023 and the Plan objectives, which are set out at paragraph 2.5.2 of the SA and the Council's HEDNA (April 2022).

The Local Plan then goes on to constrain housing numbers due to an alleged capacity concern along the A27 strategic road network. The Council therefore result in a constrained housing figure by virtue of the standard method 'steps' and also due to infrastructure capacity.

In terms of the influence of the A27, this is the key matter that constrains growth within the southern part of the District. This is based on the Transport Study (2023) concludes that the road network cannot accommodate an annual housing figure of more than 535 dpa. This is a fundamental point and one that our clients do not agree and believe there is capacity to accommodate at least the local housing need within the highway network, alongside potential improvements identified for the following reason.

The Transport Study (January 2023) is the key document on which the Council rely upon to constrain their housing figure to 535 dpa. On review of this document, it is clear that the Council's consultants undertook a sensitivity analysis as to whether the core scenario that supports the 535 dpa position in the local plan could accommodate a higher level of growth. The conclusion in paragraph 5.6.5 and 11.2.3 of the Transport Study appears to be that 700 dpa could be accommodated (in the southern plan area) by the mitigation proposed for the 535 dpa, with some additional (as yet undesigned and not costed), mitigation works beyond those highlighted for the Bognor and Fishbourne roundabouts. It is therefore our view that the figure of 535 should be seen as an absolute minimum and other land should be considered to be allocated.

Change suggested by respondent:

Allocate additional land.

Site submission - Land to the West of Stoney Meadow, North Mundham. 225 dwellings.

Support

Document Element: Policy S1 Spatial Development Strategy**Respondent:** Bellway Homes (Wessex) Ltd [1573]**Agent:** Chapman Lily Planning (Mr Brett Spiller, Planning Consultancy Director) [8132]**Summary:**

Support intent of Policy S1 and wording but for one minor clarification (see below). Focus on Chichester City is appropriate and welcome. Wide dispersal of allocations is testimony to Council's relentless exploration of opportunities throughout plan area. Following minor amendments the section titled 'Spatial Strategy' has been positive prepared, is fully justified, effective and consistent with the NPPF. As set out in monitoring section, distribution of new homes throughout plan area throughout duration of plan period will need to be assessed in line with development strategy and kept under review, so that if delivery departs from the spatial strategy, interventions can be made.

Full text:

See attachment.

Change suggested by respondent:

Bellway respectfully suggest that point 7 of draft Policy S1 requires clarification – as 'the above' is a little ambiguous and it is unclear whether this relates to the entire policy or the non-strategic provision. This requires clarification.

Legally compliant: Yes**Sound:** Yes**Comply with duty:** Yes**Attachments:** Written representation letter - <https://chichester.oc2.uk/a/sqt>

4085

Object

Document Element: Policy S1 Spatial Development Strategy**Respondent:** Berkeley Strategic Group (Mr Charlie Rollet-Manus) [7916]**Summary:**

Berkeley considers that there is greater capacity to deliver housing at Chichester City than is identified in the draft plan, on sites, such as Lawrence Farm, which are consistent with the spatial strategy having been identified as being free from constraints which prevent their development.

Full text:

Berkeley supports focussing the majority of growth at the sub-regional centre of Chichester City, with the majority of strategic allocations (both extant and new) proposed within or adjacent to the city. Policy S1 refers to a total of six allocations around Chichester City, which could deliver 4,080 homes.

Berkeley objects to the level of growth proposed at Chichester City as it fails to adequately reflect the suitability and capacity of the city to accommodate growth.

Whilst it has been acknowledged that Chichester City is the most appropriate location for development, Berkeley believes that there are additional sites at the city that can come forward in the plan period as they are not subject to the constraints which have been identified as restricting the ability of the District to meet its housing need in full. Berkeley therefore objects to this policy.

Change suggested by respondent:

Berkeley believe that additional housing sites should be allocated at Chichester City to better reflect the Spatial Strategy and more fully meet the identified housing need.

Object

Document Element: Policy S1 Spatial Development Strategy**Respondent:** Chichester Grain Ltd [7394]**Agent:** Henry Adams LLP (Peter Cleveland, Head of Planning) [6827]**Summary:**

Conclusion in paragraphs 5.6.5 and 11.2.3 of Transport Study appears to be that 700 dpa could be accommodated (in southern plan area) by mitigation proposed for 535 dpa scenario plus some additional mitigation at Portfield roundabout. Council do not appear to have considered that increased housing requirement could assist with funding necessary highway improvements, this should be further reviewed in order to aim to meet minimum of 638 dpa. Council have failed to provide sufficient justification for not meeting housing need in full and have not suitably considered unmet need from adjoining authorities. Site proposed.

Full text:

1 Introduction

1.1 This representation provides a response to the Regulation 19: Local Plan Consultation on behalf of our client Chichester Grain. The submission covers the general principles of the Local Plan but has a focus on Land at Chichester Grain Stores, Hambrook, Southbourne. The land is shown on the attached plan HA Appendix 1: Site Location Plan, and hereafter referred to as 'the site'.

1.2 This representation will provide a written responses in relation to the Regulation 19 Local Plan Consultation which directly relate to the promotion of our client's land for future development.

2 Comments on Specific Questions/Tests

2.1 In response to the national planning legislation, this Regulation 19 Local Plan Consultation invites comments on three specific questions and is the final consultation phase before the Regulation 19 version of the Local Plan is submitted for Examination.

2.2 This representation will respond on these specific questions and then highlight how our client's site could help fulfil the full housing requirement for the District. This could be through an allocation within the Local Plan or at least through the allocation of numbers to the Parish, who in turn would select sites through a Neighbourhood Plan allocation.

Is the plan 'sound'?

2.3 Paragraph 35 of the National Planning Policy Framework defines the tests for soundness which requires the plan to be positively prepared, justified, effective and consistent with National Policy. These matters will now be considered in further detail in relation to the current consultation on the Regulation 19 version of the Local Plan.

Is the plan positively prepared and justified?

2.4 Policy S1: Spatial Strategy, sets out the spatial development strategy for the District and how the Council will achieve sustainable growth over the

plan period. Policy H1: Meeting Housing Needs sets out the housing target in response to the strategy. Both policies have been informed by the Sustainability Appraisal (SA) dated January 2023 and the Plan objectives, which are set out at paragraph 2.5.2 of the SA and the Council's HEDNA (April 2022).

5

2.5 The SA discusses the potential growth scenarios and confirms two points:

- (i) Standard method housing figure for Chichester (excluding South Downs National Park) is 638 dwellings per annum, or 11,484 in total over the Plan period; and
- (ii) The above figure is capped at 40% above the baseline need and that the uncapped figure is significantly higher than this at 884 dwellings per annum (dpa).

2.6 Of particular note is that point ii. seeks to cap the overall housing increase by no more than 40% above the previously adopted LP housing figure of 435 dpa. It should be noted here that the 435 dpa figure within the 2015 Local Plan was below the identified need of 505 dpa. This reduced housing figure was accepted on the basis of an early review, but this early review did not take place.

2.7 Policy H1 identifies the need for the Plan to make provision for at least 10,350 dwellings within the plan figure, amounting to 575 dpa. This is lower than both the standard method figure of 638 dpa and the previously consulted Preferred Approach figure of 650 dpa which accommodated some unmet need from the South Downs National Park Authority.

2.8 This draft Local Plan seeks to constrain housing numbers due to an alleged capacity concern along the A27 strategic road network and constraints on Waste Water Treatment Works. The Council therefore arrive at a constrained housing figure by virtue of the standard method 'steps' and also due to infrastructure capacity.

2.9 The Transport Study (January 2023) is the key document on which the Council rely to constrain their housing figure to 535 dpa. On review of this document, it is clear that the Council's consultants undertook a sensitivity analysis as to whether the core scenario that supports the 535 dpa position in the local plan could accommodate a higher level of growth. The conclusion in paragraph 5.6.5 and 11.2.3 of the Transport Study notes that 700 dpa could be accommodated (in the southern plan area) by the mitigation proposed for the 535 dpa, with some additional (as yet undesigned and not costed), mitigation works.

2.10 Accordingly, the Council's own evidence base has undertaken the assessment and concluded that a higher growth figure could be accommodated on the A27, subject to appropriate improvement works. Given the testing of the higher growth figure in the Transport Study, the exceptional circumstances to constrain growth, as set out at paragraph 60 on the NPPF, do not appear to exist and the Plan could be considered unsound on this point alone.

2.11 As a result of the above, the SA does not consider a scenario where the Council would meet its local housing need, nor a scenario where it exceeds its local housing need. This is

6

of relevance given that the previous Local Plan underprovided against the OAN, and when considering the scale of development expected for adjoining authorities, including the highly constrained SDNP. 2.12 Given that it is not accepted that the A27 capacity matters present a ceiling in terms of housing delivery, it is not accepted that the Plan and associated SA demonstrate that reasonable alternatives have been considered. The plan is not therefore positively prepared, nor is the approach to housing figures justified.

Effective?

2.13 On the basis of the 535 dpa figure, it is considered that the selected areas for growth and figures are deliverable over the Plan period, however, as set out above, the plan area could accommodate a greater level of growth.

2.14 One further concern is that the Plan relies on the delivery of Neighbourhood Plan and/or Small Site Allocations DPD. In terms of delivery, Policy H3: Non-Strategic Housing Policy Requirements 2021-2039, states the following:

If draft neighbourhood plans making provision for at least the minimum housing numbers of the relevant area have not made demonstrable progress the council will allocate sites for development within a development plan document in order to meet the requirements of this Local Plan.

2.15 The above does not provide any clear timetable for commencement of a DPD and thus is not considered to be an effective approach to housing delivery.

Is the plan consistent with National Policy?

2.16 On the basis of the comments above, the approach to selected sites for allocation based on the 535 dpa figure is considered to be consistent, however, due to the lack of evidence to demonstrate that the 535 dpa figure should be capped due to the A27 capacity points raised, the draft Plan does not appear to meet the exceptional circumstances allowed for at paragraph 61 of the NPPF to justify the alternative approach. The Plan as proposed is therefore inconsistent with NPPF when read as a whole.

3 Duty to Cooperate

3.1 Paragraph 24 of the NPPF outlines the need for co-operation between local planning authorities on strategic matters that cross administrative boundaries.

3.2 The draft Plan does not address any need requirements in relation to unmet housing need of neighbouring authorities. Nor does it contain evidence to suggest that these matters have been discussed with the adjoining Authorities.

7

3.3 The housing figures presented do not account for unmet need from the South Downs National Park Authority. Whilst a Statement of Common Ground has been referred to, it has not been published and therefore it is not possible to determine whether the decision not to make any provision for the National Park is sound.

3.4 Further, Arun District Council has confirmed that it will be objecting to the Plan as currently proposed on the basis that it has a significant housing need. This is likely to be further influenced by Chichester not meeting its own needs, a repeat of the 2015 situation which resulted in Arun having to address some of this within its 2018 Local Plan.

3.5 If the Plan is to proceed on the basis of providing 575dpa as per Policy H1, this will amount to a shortfall of 1,100 dwellings over the plan period. Without any Statements of Common Ground, it is unclear as to how this shortfall will be addressed.

4 The Site and its suitability

4.1 Our client's site is well placed to accommodate any additional numbers required and offers a distinctively different scale of development to that proposed in the single large site allocation. It can also be delivered, whilst protecting this part of Southbourne, but also Hambrook to which is more readily relates.

4.2 The development of this land would provide a number of benefits;

- ☑ The development would include a mix of high-quality homes, including affordable to meet the varying needs of the community;
- ☑ The site is well-connected to local services and facilities, within walking distance of the post office, train station and employment;
- ☑ It would support the viability of local services and facilities;
- ☑ The site is not subject to any environmental designations or constraints and its development would not impact the South Downs National Park or Chichester Harbour AONB;
- ☑ Retention of existing boundary treatments alongside the provision of additional landscape features and open space will ensure net biodiversity gain and greater access to public open space;
- ☑ Retention of the trees and mature boundary hedgerows, particularly on the frontage to Priors Leaze Lane will retain the rural setting;
- ☑ The site is not constrained and does not rely upon significant infrastructure improvements in respect of delivery. It will ensure that where required, contributions will be made to ensure sufficient capacity is maintained for local facilities.

8

5 Other Policy Considerations

5.1 Policy NE4 Strategic Wildlife Corridor – object Policy NE4 states that 'Development proposals within strategic wildlife corridors will only be granted where it can be demonstrated that:

- 1. There are no sequentially preferable sites available outside the wildlife corridor; and
- 2. The development will not have an adverse impact on the integrity and function of the wildlife corridor and protects and enhances its features and habitats.'

5.2 We are of the view that our clients land has development potential and could be well placed to assist in the delivery of additional housing number

required within the draft Local Plan and are of the view that the blanket wildlife corridor is quite extensive and should be reduced in size.

Representations were also submitted to this effect to the Southbourne Neighbourhood Plan Regulation 16 Consultation.

5.3 We acknowledge the importance of the protection of wildlife generally, and the local eco-systems, however, this submission is supported by an Ecological survey which confirms that our site should not be covered by a Wildlife Corridor to the extent currently proposed. The Wildlife Corridor should be reduced to the immediate site and not as currently proposed under Policy NE4.

5.4 The land at Chichester Grain lies adjacent to the Ham Brook Chalk Stream. The draft Local Plan introduces a Wildlife Corridor along this section of stream. It is our view that the proposed extent of the wildlife corridor is excessive and should be reduced. It is also our view that the wildlife corridor could accommodate a break to provide a means of access to our client's site, without harming the purposes of the corridor.

5.5 The recommendations of the report are to reduce the scale of the wildlife corridor and also ensure policy flexibility to allow access through these areas and appropriate requirements to enhance and mitigate against any proposed development.

5.6 In terms of the details of the site, habitats present within the site area are of low ecological value. It is noted that there are sites with intrinsic nature conservation value within the area, however, there are suitable mitigation and compensation methods which could protect these habitats.

5.7 The mitigation methods that could be proposed to remove any significant harm to ecological value of the land (which is low as existing), comprise:

- 9
- ☒ Provision for CEMP for any proposed development;
- ☒ Retained habitats on site borders should be enhanced;
- ☒ Provision for an ecologically sensitive lighting scheme;
- ☒ Use of bird boxes within any proposed development; and
- ☒ Inclusion of Hedgehog Highways.

5.8 As shown, the land at Chichester Grain is of low ecological value, and should not be included, to the extent currently proposed, as a wildlife corridor within Policy NE4. The Council is further applying yet another restrictive 'additional layer of planning restraint' in a District which is already highly constrained by for example, AONB, National Park, numerous ecological designations, Local Nature Reserves/National Nature Reserves, Water Neutrality and Nutrient Neutrality.

5.9 Furthermore, we have set out mitigation methods which could be applied to any forthcoming application or allocation of the land, which would enhance the ecological value of the site, and protect the intrinsic value of the sites within the locality.

6 Conclusion

6.1 Whilst we understand the approach the Council has taken in terms of the selection of sites to meet the 535 dpa figures, this is significantly lower than the standard method figure of 638 and previously consulted figure of 650 dpa. The conclusion in paragraph 5.6.5 and 11.2.3 of the Transport Study appears to be that 700 dpa could be accommodated (in the southern plan area) by the mitigation proposed for the 535 dpa scenario plus some additional mitigation at the Portfield roundabout.

6.2 The Council do not appear to have considered that the increased housing requirement could assist with funding the necessary highway improvements and thus this should be further reviewed by the Council in order to aim to meet the minimum of 638 dpa.

6.3 The Council have failed to provide sufficient justification for not meeting its housing need in full and have not suitably considered unmet need from adjoining authorities. The latter is particularly relevant given constraints of the National Park.

6.4 Policy NE4 introduces wildlife corridors, which could be accepted however, the supporting policy maps should be amended and the wording of the policy updated to reflect flexibility to allow appropriate breaks in the corridor for those areas that are of low ecological value, such as our Client's land.

Change suggested by respondent:

Reconsider housing figures and consider proposed site to accommodate additional housing number.

Document Element: Policy S1 Spatial Development Strategy**Respondent:** Chichester Harbour Trust (Nicky Horter, Trust Administrator) [7286]**Summary:**

The Plan promotes an over-reliance on developing the east-west corridor, with unsustainable levels of development between Chichester and Havant. Combined with the Havant Borough strategic site at Southleigh (2,100 homes) this leads to a delivery of 5,300 new houses in the narrow corridor between Chichester Harbour AONB/SSSI and the South Downs National Park. The ecological and landscape implications of this over-development are huge; both for biodiversity and for local communities.

The Plan promotes an over-reliance on developing the east-west corridor, with unsustainable levels of development between Chichester and Havant. Combined with the Havant Borough strategic site at Southleigh (2,100 homes) this leads to a delivery of 5,300 new houses in the narrow corridor between Chichester Harbour AONB/SSSI and the South Downs National Park. The ecological and landscape implications of this over-development are huge; both for biodiversity and for local communities. Just some of the impacts include inadequate waste water infrastructure; lack of transport infrastructure; inadequate community facilities including schools and doctors services. Potential ramifications are increased congestion, light and noise pollution; waste water discharges; recreational disturbance, to name just a few.

The additional burden of this increased population will further compound and render irreversible the ecological decline of Chichester Harbour SSSI. As a general comment, the plan in this area is overly reliant on the delivery of green-field sites, raising important concerns over sustainability; agricultural production, food security, groundwater and surface water drainage and flooding.

Change suggested by respondent:

A significant reduction in the housing allocation in the east-west corridor is required.

Document Element: Policy S1 Spatial Development Strategy**Respondent:** Chichester Harbour Trust (Nicky Horter, Trust Administrator) [7286]**Summary:**

Whilst we welcome this policy [NE12] for development management, it should be noted that the delivery of the Plan is overly reliant on development in the countryside through the spatial strategy. Of the 3,225 homes proposed between Chichester and Southbourne, overwhelmingly they will be built on greenfield sites. We would hope to see much greater focus on delivery of brownfield sites and urban locations.

Support

Document Element: Policy S1 Spatial Development Strategy**Respondent:** Church Commissioners for England [1858]**Agent:** Lichfields (Tara Johnston, Planner) [7506]

Summary:

We support this strategy, with particular support for development at the settlement hubs of Southbourne (Policy A13) and Tangmere (Policy A14). We also support that provision is made for extant Site Allocations and the Tangmere strategic site remains allocated under draft Policy A14.

Full text:

We write in response to the above consultation on behalf of our client, the Church Commissioners for England (CCE). CCE owns a large amount of land in the area largely to the south, west and east of Chichester.

We welcome the opportunity to further engage with the Local Plan process. Whilst we support some aspects of the Local Plan, we consider that some changes are likely to be necessary to ensure that the Plan can be found sound.

By way of background, CCE submitted several sites for consideration as part of the Housing Economic Land Availability Assessment (HELAA) in 2021. These sites were previously promoted as part of the Preferred Approach Local Plan Regulation 18 Consultation in 2019.

As part of these representations, we take the opportunity to re-promote a number of CCE's sites, which could assist the Council in delivering much needed housing for the district. CCE has updated its technical work and provide Vision Documents in relation to its landholdings in Southbourne, Oving, and Hunston Parishes to demonstrate how additional housing can be delivered. These Vision Documents are enclosed.

We consider this and other aspects of the emerging Local Plan below.

Chapter 2: Vision & Strategic Objectives

The Local Plan Vision details a positive approach to supporting sustainable development in the context of the climate emergency. CCE welcomes the Vision for Chichester, particularly the importance placed on the delivery of new homes in 'Objective 3' and the delivery of new infrastructure to support the new development in 'Objective 7'.

Chapter 3: Spatial Strategy and Settlement Hierarchy

The Spatial Strategy builds on the previous Local Plan by focussing growth on Chichester city as the main sub-regional centre. Outside Chichester city and its closest settlements, development will focus on the two settlement hubs within the east-west corridor at Tangmere and Southbourne. This approach is supported by CCE.

Policy S1 Spatial Development Strategy

Draft Policy S1 (Spatial Development Strategy) identifies the broad approach to providing sustainable development in the plan area, which includes ensuring that new residential development is distributed in line with the settlement hierarchy, with a greater proportion of development in the larger and more sustainable settlements. We support this strategy, with particular support for development at the settlement hubs of Southbourne (Policy A13) and Tangmere (Policy A14). We also support that provision is made for extant Site Allocations and the Tangmere strategic site remains allocated under draft Policy A14.

Policy A14 continues to allocate Land West of Tangmere for 1,300 dwellings. CCE questions the Council's decision to not amend the existing settlement boundary of Tangmere to include the land subject to the allocation. Without amending the settlement boundary, the future growth of Tangmere may be hindered. As such, the settlement boundary of Tangmere should be amended to include the allocated site to ensure that the plan is justified.

Draft Policy S1 also refers to development in service villages such as Bosham, Hambrook and Loxwood.

Hunston is excluded from the Spatial Strategy but is identified as a Service Village within the Settlement Hierarchy in draft Policy SP2 (Settlement Hierarchy). The draft Local Plan suggests that the allocation of homes in Hunston has been removed as a result of growth in the Manhood Peninsula. CCE acknowledges that the overall housing numbers across the district have been reduced as a result of local constraints but reiterates that their landholding in Hunston remains a suitable site for housing should the Council need to identify more land for housing. This is discussed further below.

Policy S2 Settlement Hierarchy

As stated in paragraph 3.31 of the draft local plan, 'The NPPF encourages housing delivery where it will enhance or maintain the vitality of rural communities'. Paragraph 79 of the NPPF (2021) states that 'To promote sustainable development in rural areas, housing should be located where it will enhance or maintain the vitality of rural communities. Planning policies should identify opportunities for villages to grow and thrive, especially where this will support local services. Where there are groups of smaller settlements, development in one village may support services in a village nearby'.

CCE owns substantial land holdings in South Mundham, which is in close proximity to North Mundham/Runcton which is defined as a Service Village. As such, whilst South Mundham does not contain any services, development in the hamlet would enable sustainable growth to support facilities in North Mundham and Runcton. To ensure that the draft plan is consistent with national policy, South Mundham should be considered as part of North Mundham as a Service Village when considering the future pairing/grouping of some settlements where the facilities and services could be shared to capitalise on the close connections some settlements have.

Development outside the settlements listed in the hierarchy in SP2 is restricted to proposals which require a countryside location or meet an essential local rural local need or supports rural diversification in accordance with Policy NE10. To this end, CCE has smaller land holdings in Tangmere, Oving, South Mundham, Birdham, Chidham and Sidlesham, which may be suitable for conversion for residential use or via windfall housing. Location plans for each of the sites can be found in Appendices 1-8.

Chapter 4: Climate Change and the Natural Environment**Policy NE4 Strategic Wildlife Corridors**

The East of City strategic wildlife corridor has been relocated to the eastern side of proposed Site Allocation A8 (Land to the East of Chichester). The relocation of this wildlife corridor follows additional evidence that shows that the commuting route for Barbastelle Bats is along Drayton Lane.

CCE owns land to the east of Drayton Lane (immediately adjacent to the wildlife corridor and to the east of draft allocation A8) and surrounding the village of Oving. Its land has been identified in the HELAA (2021) as being developable, including site HOV0017 (Drayton Lane). The land east of Drayton Lane is sustainably located being close to Chichester and its amenities. The site provides an opportunity to sensitively and sustainably provide additional homes for the District. In accordance with Draft Policy NE4, the proposals for the Land East of Drayton Lane will not have an adverse impact on the integrity and function of the wildlife corridor and will not undermine the connectivity and ecological value of the corridor. This Vision Document will be shared under separate cover.

The eastern edge of the relocated wildlife corridor encroaches into CCE land. Any proposal on this land would be required to take the statutory protection for bats and other protected species into consideration and managed as part of a sensitive masterplan for development and on this basis, it is considered unnecessary to extend the wildlife corridor to encroach into the CCE site.

It is also considered that the detail of policy NE4 goes beyond the purpose of the policy, which should be to safeguard wildlife rich habitats and wider ecological networks. The policy is clear that development should only be permitted where it would not create an adverse effect upon the ecological

value, function, integrity and connectivity of the corridors. It does not resist development in principle. This therefore makes redundant policy text 1, which seeks to introduce a sequential test for preferable sites outside of a wildlife corridor. It is considered that this test conflicts with the underlying purpose of the policy, which is to safeguard wildlife corridors from harmful impacts that cannot be mitigated, and should therefore be deleted.

Policy NE7 Development and Disturbance of Birds

CCE is broadly supportive of Policy NE7. However, they would like to note that the situation regarding the national guidance on nutrient neutrality is still evolving and therefore, this policy is only relevant to current legislation. Policy NE7 may therefore not be relevant throughout the entirety of the plan period. As such, CCE considers that it is necessary in this instance to ensure that an appropriate reference to changing legislation is included within the policy to prevent it from becoming out of date and would also ensure that the policy remains effective once adopted.

Policy NE10 The Countryside

CCE is supportive of the inclusion of a policy referencing the conversion of existing buildings in the countryside, however, we believe that Policy NE10 is not consistent with national policy. Policy NE10 criteria B states that proposals for the conversion of buildings in the countryside will be permitted where 'it has been demonstrated that economic and community uses have been considered before residential, with residential uses only permitted if economic and community uses are shown to be inappropriate and unviable'. This policy is not in accordance with Paragraph 152 of the NPPF (2021) which states that the reuse of existing resources should be encouraged, including 'the conversion of existing buildings'. Under paragraph 152, there is no prerequisite to adopt a sequential approach, or to give preference to other uses. As such, criteria B should be omitted from Policy NE10. Reference to criteria B should also be removed from criteria C.

Chapter 5: Housing

Policy H1 Meeting Housing Needs

The Preferred Approach Local Plan was based on meeting the identified objectively assessed housing needs of the plan area of 638 dwellings per annum. However, due to constraints, particularly the capacity of the A27, the Submission Version of the Local Plan has planned for a housing requirement below the need derived from the standard method. The Plan proposes to deliver 535 dpa in the southern plan area and a further 40 dpa in the northern plan area, a total supply of 10,350 dwellings over the plan period from 2021 – 2039 (575 dpa).

The Planning Inspectorate has previously asked the Council to determine what level of housing could be achieved based on deliverable improvements to the A27 and to consider whether the full housing needs could be met another way. It is acknowledged that the Council has carried out the additional work required and the local constraints have resulted in a proposed lower housing requirement.

The NPPF (2021) confirms that to determine the minimum number of homes needed, strategic policies should be informed by a local housing need assessment, conducted using the standard method in national planning guidance – unless exceptional circumstances justify an alternative approach (para. 61). CCE acknowledges that that housing numbers have been reduced as a result of local constraints and it will be down to the Inspector to determine whether the Council's exceptional circumstances justify this. Should the Planning Inspector find that the Council requires additional land to meet the housing need using the standard method, CCE's land at Southbourne, Oving, Drayton Land and Hunston are suitable, available and developable for housing. In addition, CCE's rural development sites could also contribute to meeting the housing need.

Policy H2 Strategic Allocations

Draft Policy H2 confirms that the Tangmere Strategic Development Location is carried forward from the 2015 Local Plan and this is supported by CCE. Strong support is also given for the Broad Location of Development in Southbourne (Policy A13) for up to 1,050 dwellings.

Policy H5 Housing Mix

Draft Policy H5 confirms that the housing mix for a development will be based on the most up to date HEDNA to address identified local needs and market demands. We suggest that the Council considers a range of criteria, including site characteristics, when determining the housing mix for individual sites and this should be reflected in wording of Policy H5.

Policy H7 Rural and First Homes Exception Sites

Draft Policy H7 relates to rural and first homes exception sites. CCE is supportive of the principle of the inclusion of a rural exceptions policy. However, we have concerns over criteria contained within the policy which limits the amount of development that can be delivered under it.

The NPPF (2021) at paragraph 78 states that planning policies and decisions should be responsive to local circumstances and support housing development that reflect local needs. Furthermore it also states that 'local planning authorities should support opportunities to bring forward rural exception sites that will provide affordable housing to meet identified local needs'.

The key aspect of the policy is to enable the delivery of rural exception sites which would address an identified local need. Within the policy, there is no limit on the amount of development that can be delivered and therefore, it is considered that if Policy H7 is limited to a maximum of 30 dwellings it could serve to hinder development (especially on slightly larger sites), which would otherwise be sustainable. As such, we consider that the amount of development should not be limited and rather should be dictated on a site and need specific basis. CCE considers that for Policy H7 to be positively prepared and in accordance with National Policy, criteria 2 should be removed.

In addition, criteria 6 states that proposals for affordable housing on rural exception sites will only be supported where 'the site is located adjacent or as close as possible to the existing settlement boundary and does not result in scattered or isolated development in rural areas'. The NPPF (2021) does not specify the location of rural exception sites. As such, to be consistent with national policy, criteria 6 should also be omitted.

Furthermore, Policy H7 states that 'applications for first homes exception sites that propose the inclusion of a small proportion of market housing will be expected to provide robust evidence...'.

However, in the policy there is no allowance for the provision of market housing on rural exception sites in addition to first homes exception sites. As a result of this, the requirements of the policy are again not consistent with national policy. Paragraph 78 of the NPPF (2021) is supportive of 'some market housing' where it would facilitate the delivery of rural exception sites. As such, CCE considers that Policy H7 should be amended as follows:

'Applications for rural and first homes exceptions sites that propose the inclusion of a small proportion of market housing will be expected to provide robust evidence that the site would be unviable without such housing being included'.

Policy H8 Specialist Accommodation

Draft Policy H8 confirms that all housing sites over 200 units, including those allocated in this plan, will be required to provide specialist accommodation for older people with a support or care component. We request that this policy is amended to add 'where appropriate and viable', acknowledging that viability and site-specific factors need to be taken into consideration.

Chapter 6: Place-making

Policy P3 Density

We support the objective of Draft Policy P3 (Density) to make the most efficient use of land and follow a design led approach to achieve the optimum density for a site. The Policy does not prescribe an appropriate density for the District and this is supported. However, we consider that reference should be made to the fact that density may vary depending upon site specific circumstances and could be higher where transport links and access to services is good.

Chapter 7: Employment and Economy

Policy E3 and E4 Horticultural Development

Chapter 7 of the draft Local Plan confirms that 67 hectares of land is identified to meet the future horticultural land need within four Horticultural Development Areas (HDAs) over the plan period. It is confirmed that an additional 137 hectares of horticultural land is also forecast to be required outside of HDAs to meet future need.

CCE has significant landholdings which could assist the Council in addressing the insufficient availability within the current HDAs. The CCE sites which are considered suitable for horticulture development are listed below and location plans for each of the sites can be found in Appendices 9-13.

- Somerley Farm, NE East Wittering, PO20 7JB
- Fisher Farm, South Mundham, PO20 1ND
- Church & Haise Farm, Sidlesham
- Cowdry Farm, Birdham
- Groves Farm, nr Merston, PO20 2DX / Colworth Manor Farm PO20 2DU.

CCE supports draft Policy E3 which confirms that “approximately 137 hectares of land is also needed outside of HDAs to meet anticipated horticultural and ancillary development land need for the plan period.” Support is also given for draft Policy E4 in relation to land outside HDAs. This Policy confirms that proposals for horticultural development can come forward outside the HDAs, subject to a set of criteria. We would welcome continued discussion with the Council on how these sites could help meet the districts horticultural needs in the future.

Chapter 10: Strategic and Area Based Policies

CCE supports Chichester District Council’s proposal to allocate additional land for housing at Southbourne and to maintain the existing allocation at Tangmere. We also consider that CCE’s land at Hunston and Oving could assist the Council in meeting its housing needs, should additional housing be required. We consider these opportunities in turn below.

Policy A13 Southbourne Broad Location for Development

CCE supports draft Policy A13 and the allocation of a Broad Location for Development in Southbourne for a mixed-use form of development including 1,050 dwellings.

CCE has significant landholdings around Southbourne which is suitable, available and developable. The land to the north and west of Southbourne measures 70ha and is wholly within CCE’s control. The land adjoins the existing settlement and provides an opportunity for a sustainable extension to Southbourne with the potential to deliver c. 1,200 homes for the village, as well as employment, community uses and a significant amount of new public space and green open space. A new Vision Document is enclosed which explains one way in which this opportunity could be realised. Importantly, it is considered that there are no technical impediments that would prevent development from coming forward on this site.

This site has been promoted throughout the Southbourne Neighbourhood Plan process, most recently in the December 2022 consultation. The new Vision Document demonstrates that the CCE site presents the opportunity to provide a comprehensive development that would contain strategic housing growth, significant areas of green infrastructure and open space in a sustainable location. The key access strategy for the site is to provide two new access points from the south A259 Main Road and the east Stein Road. These access points would connect to a spine road which would form a continuous vehicle route around the north-western edge of Southbourne.

The site almost entirely comprises a Secondary Support Area under the Solent Waders and Brent Goose Strategy (SWBGS), which aims to protect the network of non-designated terrestrial wader and brent goose sites that support the Solent Special Protection Areas (SPA) from land take and recreational pressure associated with new development. Due to the designation of the site, discussion was undertaken with the Hampshire and Isle of Wight Wildlife Trust with a view to determine a suitable approach for the scheme and an appropriate survey effort to establish the use of the site by designated birds. As a result of these discussions, wintering bird surveys are taking place. The aim of these surveys is to explore opportunities for mitigation for this SWBGS support area such that development within the red line can proceed without adverse impacts to the bird populations noted within this strategy. Following the survey, the results and approach will be presented to Natural England for further discussion.

In relation to viability, we note that Policy A13 sets several policy objectives for development at Southbourne. The NPPF (2021) notes that where there are up-to-date policies which have set out the contributions expected from development, planning applications that comply with them should be assumed to be viable (para. 58). With this in mind the policy objectives outlined within Policy A13 will require viability testing to be undertaken to ensure a policy compliant scheme is both viable and deliverable. This is necessary to ensure that the policy is sound.

The Policy suggests that employment opportunities are required to be delivered as part of the allocation but there is no specific reference to the amount of use required. CCE supports this proposed approach as it is sufficiently flexible to enable an amount of employment land to be proposed in response to market conditions at the appropriate time and this will help to support delivery of the allocation.

The scale of development proposed has been reduced from 1,250 to 1,050 dwellings to reflect the proportionate reduction in housing numbers across the parishes in the east west corridor as a consequence of the limit on numbers in the southern plan area. If the Inspector finds that additional housing is required, the Vision Document submitted demonstrates that the CCE site in Southbourne could deliver c. 1,200 homes and so could increase housing without needing to identify additional land for development elsewhere.

To summarise, the site could accommodate approximately 1,200 homes which could be delivered on a phased basis early in the plan period. There are no overriding physical or technical constraints that would act as an impediment to development. There is also a clear access arrangement proposed.

Policy A14 Land West of Tangmere

CCE supports that Policy A14 is carried forward into this Local Plan to facilitate the delivery of a residential-led development of at least 1,300 dwellings.

Additional sites

Hunston

CCE further promotes land (15.31ha) located east of the B2145 Selsey Road in Hunston for 240 new homes. The land is deliverable and is fully within CCE's control. The site is highly accessible, located within a maximum of 5-6 minutes walking distance to Selsey Road, where several bus routes connect the village to Chichester.

CCE notes that the Council assessed the HELAA site (ref. HHN0016) as 'developable'. A Vision Document has previously been prepared and submitted to demonstrate the commitment to it being brought forward for residential development within the plan period. This document is enclosed.

To address the Council's concerns in relation to flooding, following publication of the Chichester Strategic Flood Risk Assessment (SFRA), we have prepared an updated Flood Risk Scoping Study which provides an overview of flood risk constraints across the site from a range of sources. Various mitigation measures are recommended in line with recommendations of the Chichester SFRA and prevailing local and national guidance and best practice. With these measures in place, it is likely that the flood risk could be managed effectively in accordance with the requirements of the NPPF. Detailed data has also been requested from the Environment Agency, which will feed into further technical work that is being carried out.

Should the Inspector conclude that additional housing is required, CCE considers that their site is the most appropriate and sustainable location for development in Hunston. The site provides an opportunity to sensitively and sustainably extend the existing village boundary to provide additional homes to meet an identified housing need.

Land East of Drayton Lane

CCE owns land to the east of Drayton Lane which is bound by Tangmere Road to the north and crosses Oving Road and the railway line to the south. The site is c.1km from the centre of Chichester and comprises 49ha. The site was assessed in the HELAA 2021 as developable 'HOV0017'. A Vision Document has been prepared and was presented to the Council in 2022. This includes a detailed analysis of the site and its surroundings and provided justification as to why the site is suitable for development. This technical review of the site concludes there are no technical impediments to development.

The Vision Document demonstrates how the proposals for the land east of Drayton Lane could be developed as an extension to the draft allocation A8 (Land to the east of Chichester) for up to 700 new homes. The land east of Drayton Lane is fully within the CCE's control, is available for development now and is deliverable with some development achievable within the first five years of the plan period. It represents an opportunity to provide new homes, facilities and significant community benefits, through a sensitively designed development that integrates into the surrounding landscape.

The Vision for this site is a landscape and ecology led masterplan which would celebrate the rich wildlife characters of the different surrounding landscapes and uses the connection between countryside and community to generate its character and identity. The Vision Document demonstrates that this is a suitable location for development.

Should the Inspector conclude that additional housing is required, CCE considers that the land east of Drayton Lane would form a natural extension to allocation A8 and is an appropriate and sustainable location for new development.

Appendix C Additional Guidance

Appendix C provides additional guidance on evidence which needs to be submitted in support of certain planning applications related mainly to development in the countryside. As mentioned in the comments above provided in response to Policy NE10, there is no prerequisite contained within the NPPF (2021) that requires an applicant to demonstrate that previous uses were proven unviable prior to the conversion of a building in the countryside to residential use. As such, to be in accordance with national policy, reference to Policy NE10 should be omitted from Appendix C.

Conclusion

CCE welcomes the opportunity to comment on the Local Plan and is keen to continue to engage with the Council, especially in relation to the Broad Location for Development in Southbourne. CCE is supportive of the Council's aspirations in the Local Plan. However, the changes set out above are considered likely to be necessary to ensure the plan is sound.

CCE is a considerable landowner in Chichester with land largely to the south, west and east of Chichester which could assist the Council in meeting their housing and development needs throughout the plan period.

1 Introduction

1.1 This representation provides a response to the Regulation 19: Local Plan Consultation in relation to the land at Headfoldswood Farm, Loxwood, RH14 0SX, as shown on the attached Masterplan Promotional Document, and hereon referred to as the site.

1.2 This representation will provide a written responses in relation the questions in the Regulation 19 Local Plan Consultation which directly relate to the promotion of our client's land for future development.

2 Comments on Specific Questions/Tests

2.1 In response to the national planning legislation, this Regulation 19 Local Plan Consultation invites comments on three specific questions, and is the final consultation phase, before the Regulation 19 version of the Local Plan is submitted for examination.

2.2 This representation will respond on these specific questions, and then highlight how our client's site could help fulfil the full housing requirement for the District to be delivered through an appropriate strategic allocation policy within the Council's Local Plan or through an Supplementary Planning Document (SPD).

Is the plan 'sound'?

2.3 Paragraph 35 of the National Planning Policy Framework defines the tests for soundness which requires the plan to be positively prepared, justified, effective and consistent with National Policy. These matters will now be considered in further detail in relation to the current consultation on the Regulation 19 version of the Local Plan.

Is the plan positively prepared and justified?

2.4 Policy S1 of the Draft Local Plan sets out the spatial development strategy for the District and how the Council will achieve sustainable growth over the plan period and Policy H1 sets out the housing target in response to the strategy. Both policies have been informed by the Sustainability Appraisal (SA) dated January 2023 and the Plan objectives, which are set out at paragraph 2.5.2 of the SA and the Council's HEDNA (April 2022).

2.5 The SA then goes on to discuss the potential growth scenarios and confirms two points:

- Standard method housing figure for Chichester (excluding SDNP) is 638 dwellings per annum, or 11,484 in total over the Plan period
- The above figure is capped at 40% above the baseline need and that the uncapped figure is significantly higher than this at 884 dwellings per annum (dpa)

2.6 Of particular note is that point ii. above seeks to cap the overall housing increase by no more than 40% above the previously adopted LP housing figure of 435 dpa. The Local Plan then goes on to constrain housing numbers due to an alleged capacity concern along the A27 strategic road network. The Council therefore result in a constrained housing figure by virtue of the standard method 'steps' and also due to infrastructure capacity. It should be noted that the 435 dpa figure within the 2015 Local Plan was similarly constrained and an early review was the only basis for accepting this reduced housing figure. This early review did not take place.

2.7 In terms of the influence of the A27, this is the key matter that constrains growth within the southern part of the District. This is based on the evidence base documents that state that the road network cannot accommodate an annual housing figure of more than 535 dpa. This is a fundamental point and one that we do not agree and believe there is capacity to accommodate at least the local housing need within the highway network, alongside potential improvements identified for the following reason.

2.8 The Transport Study (January 2023) is the key document on which the Council rely upon to constrain their housing figure to 535 dpa. On review of this document, it is clear that the Council's consultants undertook a sensitivity analysis as to whether the core scenario that supports the 535 dpa position in the local plan could accommodate a higher level of growth. The conclusion in paragraph 5.6.5 and 11.2.3 of the Transport Study appears to be that 700 dpa could be accommodated (in the southern plan area) by the mitigation proposed for the 535 dpa core test, with some additional, and as yet undesigned and not costed, mitigation works beyond those highlighted for the Bognor and Fishbourne roundabouts.

2.9 Accordingly, the Council's own evidence base has undertaken the assessment and concluded that a higher growth figure could be accommodated on the A27, subject to appropriate improvement works. Given the testing of the higher growth figure, which appears to accommodate the higher growth figure, the exceptional circumstances to constrain growth, as set out at paragraph 60 on the NPPF do not exist and the Plan could be considered unsound on this point alone.

2.10 As a result of the above, the SA does not consider a scenario where the Council would meet its local housing need, nor a scenario where it exceeds its local housing need, which is of relevance given the scale of development expected for adjoining authorities, including the highly constrained SDNP.

2.11 It should also be noted that the draft Plan does not therefore address any need in relation to unmet need of neighbouring authorities and it does not contain evidence to suggest that these matters have been discussed with the adjoining Authorities. Notably, Arun District Council have confirmed that they will be objecting to the Plan and currently proposed on the basis that they have a significant housing need themselves. This is likely to be further influenced by unmet need from Chichester, who again are seeking to constrain housing requirements, which was the case in 2015 and the subsequent knock on from that was for Arun to address some of that need in their 2018 Local Plan.

2.12 Given that we do not accept that the A27 capacity matters present a ceiling in terms of housing delivery (based on the Council's Transport Study comments and that of its own consultants), it is not accepted that the Plan and associated SA demonstrates reasonable alternatives have been considered and it is not therefore positively prepared, nor is their approach to housing figures justified.

Effective?

2.13 On the basis of the 535 dpa figure, it is considered that the selected areas for growth and figures are deliverable over the Plan period, however, as set out above, the plan area could accommodate a greater level of growth.

2.14 It should also be noted that the Plan relies on the delivery of Neighbourhood Plan and / or small site allocations DPD. This is set out under Policy H3 in the draft document. This states the following in terms of delivery:

If draft neighbourhood plans making provision for at least the minimum housing numbers of the relevant area have not made demonstrable progress the council will allocate sites for development within a development plan document in order to meet the requirements of this Local Plan.

2.15 The above is not precise and does not provide any clear timetable for delivery within the Plan period. Whilst the strategy in the comments above could be effective, the Local Plan needs to give a clear timescale for completion of the supplementary Development Plan documents in order to give a clear timescale for this to be completed.

Is the plan consistent with National Policy?

2.16 On the basis of the comments above, the approach to selected sites for allocation based on the 535 dpa figure is considered to be consistent. However, due to the lack of evidence to demonstrate this, the 535 dpa figure should be capped. Given the A27 capacity points raised, the draft Plan does not appear to meet the exceptional circumstances allowed for at paragraph 61 of the NPPF to justify their alternative approach. The Plan as proposed is therefore inconsistent with NPPF when read as a whole.

3 Development in Loxwood

3.1 Our client's land is located to the west of the village of Loxwood, which is situated to the northeast of the District. The High Street (B2133) runs through the village, connecting the A281 and A272. For a detailed context appraisal of the site and masterplan vision, please see attached the Masterplan Promotional Document. The site was submitted for the Council's call for sites in February 2019 and is included in Council's latest HELAA.

3.2 The Draft Local Plan defines Loxwood as a service village with local facilities and services, these include an infant and junior school, as well as a medical practice, a local shop and community facilities, including a village hall. The village has been identified in the Local Plan as a suitable location for a higher level of growth as it has suitable HELAA sites which could come forward through the Neighbourhood Plan process.

3.3 It is agreed that a strategic expansion to the west of Loxwood is the best option for growth in the north-eastern area of the District as there are fewer constraints within Loxwood in comparison to other villages within the north-eastern area of the District.

3.4 Policy A15 of the Draft Local Plan states that land will be allocated within the revised Loxwood Plan for a minimum of 220 dwellings and supporting facilities and infrastructure. This is based on a downwards adjustment scenario for Loxwood, but it should be noted this figure is closer to the lower growth scenario of 200 dwellings.

3.5 The Council acknowledges in the SA that the highest growth scenario of 1.650 homes could be justified but there are concerns regarding the deliverability of homes due to the potential scale of allocations to meet the higher growth figure which in turn could affect the Council's ability to deliver the housing within the five year period. However, the Plan currently seeks

to allocate reasonably sized housing allocations on a number of small-scale housing sites which by this logic could equally affect the Council's ability to meet the Council's five year housing supply. It is recommended that the middle, higher growth scenario of at least 825 homes is sought, which would allow for meaningful growth in order to meet the needs generated by the new community, such as the identified primary school. The higher housing figure would also provide the benefit of more affordable housing provision for the north-eastern area of the District.

3.6 Loxwood Parish Council have produced a revised Draft Neighbourhood Plan which seeks to allocate 126 dwellings plus 17 carried forward from the Made Loxwood Neighbourhood Plan, providing a total of 143 dwellings. The Draft Neighbourhood Plan was submitted to the Council under Regulation 14 in December 2020. It is noted in response to the Reg 19 Local Plan consultation, that Loxwood Parish Council will be objecting to policy A15 and the increased housing numbers of 220 dwellings on sustainability grounds, with specific reference to water neutrality. The recent Parish Council meeting notes also indicate that there is currently little appetite to undergo another Neighbourhood Plan review, which will likely require additional resource and

cost.
3.7 There is concern that relying on the Neighbourhood Plan to allocate specific sites in Loxwood, will result in unnecessary delay to delivery of housing in this area given the points raised above. Policy A15 is not therefore considered precise and does not provide any clear timetable for delivery in housing within Loxwood within the Plan period. It is therefore recommended that the allocation of housing sites in Loxwood should be based on a higher growth scenario of at least 825 homes which should be delivered either through a Local Plan policy allocation or within an SPD, with a clear timetable of when the SPD will be produced by the Council.

Water Neutrality

3.8 One of the constraints of the north-east of the District is the requirement for all new development to meet water neutrality, to ensure that any new development does not impact further on the habitat site comprising the Arun Valley Special Area of Conservation (SAC) or the Arun Valley Special Protection Area (SPA) & Ramsar site, in terms of groundwater abstraction within the Sussex North Water Supply Zone. It is anticipated that further advice and a mitigation strategy will be created by the Council and its partners to demonstrate how developments can achieve water neutrality. However, at present applicants are required to provide a water neutrality strategy to demonstrate how the development can achieve water neutrality.

3.9 To provide the Council with reassurance that the site is deliverable despite this constraint, our client has commissioned an initial water strategy based on a development of approximately 250 dwellings which includes provision for offsetting. The initial strategy indicates that water neutrality could be achieved for development on the site through water efficient fixtures and fittings, reuse of harvested water through greywater recycling for flushing toilets and offsetting through water efficiency upgrades on an educational facility located within the Sussex North Water Supply Zone. It would therefore appear on the basis of the work undertaken to date, that it would be possible for future development on this site to achieve water neutrality.

4. General Policy requirements

Policy H11 Meeting Gypsies, Travellers and Travelling Showpeoples' Needs - object

4.1 The above policy sets out a requirement for 124 pitches across the Plan period, which is to be provided for by allocation of pitches on strategic allocation sites proposing 200+ homes.

4.2 Whilst we understand that there may be a district wide need, we understand that the underlying rationale underpinning this strategic approach is that insufficient sites came forward as part of the Council's Call for Sites process. However, whilst this tells us about availability of sites, it doesn't dictate the appropriateness of locations for gypsy traveller provision. It should also be noted that the proposed allocations would not accommodate the overall need and there is no clear quantifiable policy requirement to deliver this need. Accordingly, the approach is not considered to be robust.

4.3 What is clear is that plots are currently available in other areas of the district that have not been taken up by the Council for allocation (namely HELAA ref. HBI0028).

4.4 From our understanding there appears to be a clear absence of information regarding the requirements for pitch provision in localities and the site specific needs that are required to be met. We have not yet seen any evidence from the Council in respect of engagement with the gypsy traveller community in respect of a desire to be located on suburban residential sites – which we consider would contradict with the typical locations of gypsy traveller pitches which are located on rural sites on the periphery of rural settlements.

4.5 Due to the scale and form of the site and specific access names (larger HGVs for static homes and touring caravans) it makes it very difficult to design and suitable means of access that does not appear overly engineered, within a residential housing estate. No consideration appears to have been given to how this can be accommodated within such a site.

4.6 At this time, we consider it would not be appropriate to include such provision until further evidence has been provided on suitability of the approach, need in this specific location and suitability as part of housing allocation of this scale, with a single point of access.

4.7 On the basis of the above, we object to the proposed policy requirement.

5. Conclusion

5.1 Our client's land is ideally placed to be able to fulfil the sustainable expansion to the west of Loxwood and the much needed, identified housing within the north-eastern plan area. The site measures 57.334 hectares and can be considered as a strategic housing site, west of Loxwood, that would deliver a higher growth of housing within this village and would appear to be able to meet water neutrality requirements. This would also support the viability of the services and facilities in the northern villages. This could include a sustainable addition to the existing village of Loxwood, result in significant enhancements to its existing services and facilities, improved links along, and connectivity to the Wey & Arun Canal and provision of at least 825 homes.

Change suggested by respondent:

Object on grounds that higher level of growth could be accommodated. Plan does not address unmet need of neighbouring authorities. Allocation in Loxwood should be based on higher growth scenario.

Legally compliant: No

Sound: No

Comply with duty: No

Attachments: Written Representation - <https://chichester.oc2.uk/a/sfb>

Masterplan promotion document - <https://chichester.oc2.uk/a/sfc>

5725

Object

Document Element: Policy S1 Spatial Development Strategy

Respondent: Dandara Southern Limited [8180]

Agent: Henry Adams LLP (Mrs Rebecca Tier, Senior Planner) [8116]

Summary:

- Do not accept that A27 capacity matters present a ceiling in terms of housing delivery;
- Do not accept that the Plan and associated SA demonstrates reasonable alternatives being considered;
- Plan therefore not positively prepared nor approach to housing figures justified;
- Plan does not appear to meet the exceptional circumstances allowed for within NPPF to justify alternative approach;
- Plan as proposed is therefore inconsistent with NPPF when read as a whole.

1 Introduction

1.1 This representation provides a response to the Regulation 19: Local Plan Consultation in relation to the land at Flat Farm, Hambrook, PO18 8FT, as shown on the attached plan HA Appendix 1: Site Location Plan, and hereon referred to as the site.

1.2 This representation will provide a written responses in relation the questions in the Regulation 19 Local Plan Consultation which directly relate to the promotion of our client's land for future development.

2 Comments on Specific Questions/Tests

2.1 In response to the national planning legislation, this Regulation 19 Local Plan Consultation invites comments on three specific questions, and is the final consultation phase, before the Regulation 19 version of the Local Plan is submitted for examination.

2.2 This representation will respond on these specific questions, and then highlight how our client's site could help fulfil the full housing requirement for the District through an appropriate allocation within the Council's Local Plan, or through an allocation of numbers to the Hambrook Parish as set out in policy A12 of the Draft Local Plan, who in turn would select sites through a Neighbourhood Plan allocation.

Is the plan 'sound'?

2.3 Paragraph 35 of the National Planning Policy Framework defines the tests for soundness which requires the plan to be positively prepared, justified, effective and consistent with National Policy. These matters will now be considered in further detail in relation to the current consultation on the Regulation 19 version of the Local Plan.

Is the plan positively prepared and justified?

2.4 Policy S1 of the Draft Local Plan sets out the spatial development strategy for the District and how the Council will achieve sustainable growth over the plan period and Policy H1 sets out the housing target in response to the strategy. Both policies have been informed by the Sustainability Appraisal (SA) dated January 2023 and the Plan objectives, which are set out at paragraph 2.5.2 of the SA and the Council's HEDNA (April 2022).

2.5 The SA then goes on to discuss the potential growth scenarios and confirms two points:

- Standard method housing figure for Chichester (excluding SDNP) is 638 dwellings per annum, or 11,484 in total over the Plan period
- The above figure is capped at 40% above the baseline need and that the uncapped figure is significantly higher than this at 884 dwellings per annum (dpa)

2.6 Of particular note is that point ii. above seeks to cap the overall housing increase by no more than 40% above the previously adopted LP housing figure of 435 dpa. The Local Plan then goes on to constrain housing numbers due to an alleged capacity concern along the A27 strategic road network. The Council therefore result in a constrained housing figure by virtue of the standard method 'steps' and also due to infrastructure capacity. It should be noted that the 435 dpa figure within the 2015 Local Plan was similarly constrained and an early review was the only basis for accepting this reduced housing figure. This early review did not take place.

2.7 In terms of the influence of the A27, this is the key matter that constrains growth within the southern part of the District. This is based on the evidence base documents that state that the road network cannot accommodate an annual housing figure of more than 535 dpa. This is a fundamental point and one that we do not agree and believe there is capacity to accommodate at least the local housing need within the highway network, alongside potential improvements identified for the following reason.

2.8 The Transport Study (January 2023) is the key document on which the Council rely upon to constrain their housing figure to 535 dpa. On review of this document, it is clear that the Council's consultants undertook a sensitivity analysis as to whether the core scenario that supports the 535 dpa position in the local plan could accommodate a higher level of growth. The conclusion in paragraph 5.6.5 and 11.2.3 of the Transport Study appears to be that 700 dpa could be accommodated (in the southern plan area) by the mitigation proposed for the 535 dpa core test, with some additional, and as yet undesigned and not costed, mitigation works beyond those highlighted for the Bognor and Fishbourne roundabouts.

2.9 Accordingly, the Council's own evidence base has undertaken the assessment and concluded that a higher growth figure could be accommodated on the A27, subject to appropriate improvement works. Given the testing of the higher growth figure, which appears to accommodate the higher growth figure, the exceptional circumstances to constrain growth, as set out at paragraph 60 on the NPPF do not exist and the Plan could be considered unsound on this point alone.

2.10 As a result of the above, the SA does not consider a scenario where the Council would meet its local housing need, nor a scenario where it exceeds its local housing need, which is of relevance given scale of development expected for adjoining authorities, including the highly constrained SDNP.

2.11 It should also be noted that the draft Plan does not therefore address any need in relation to unmet need of neighbouring authorities and it does not contain evidence to suggest that these matters have been discussed with the adjoining Authorities. Notably, Arun District Council have confirmed that they will be objecting to the Plan and currently proposed on the basis that they have a significant housing need themselves. This is likely to be further influenced by unmet need from Chichester, who again are seeking to constrain housing requirements, which was the case in 2015 and the subsequent knock on from that was for Arun to address some of that need in their 2018 Local Plan.

2.12 Given that we do not accept that the A27 capacity matters present a ceiling in terms of housing delivery (based on the Council's Transport Study comments and that of its own consultants), it is not accepted that the Plan and associated SA demonstrates reasonable alternatives have been considered and it is not therefore positively prepared, nor is their approach to housing figures justified.

Effective?

2.13 On the basis of the 535 dpa figure, it is considered that the selected areas for growth and figures are deliverable over the Plan period, however, as set out above, the plan area could accommodate a greater level of growth.

2.14 It should also be noted that the plan does rely on the delivery of Neighbourhood Plan and / or small site allocations DPD. This is set out under Policy H3 in the draft document. This states the following in terms of delivery:

If draft neighbourhood plans making provision for at least the minimum housing numbers of the relevant area have not made demonstrable progress the council will allocate sites for development within a development plan document in order to meet the requirements of this Local Plan.

2.15 The above is not precise and does provide any clear timetable for delivery within the Plan period. Whilst my comments are noted above that the Plan could be effective, the Local Plan needs to give a clear timescale for completion of the supplementary Development Plan documents in order to give a clear timescale for this to be completed.

Is the plan consistent with National Policy?

2.16 On the basis of the comments above, the approach to selected sites for allocation based on the 535 dpa figure is considered to be consistent, however, due to the lack of evidence to demonstrate that the 535 dpa figure should be capped due to the A27 capacity points raised, the draft Plan does not appear to meet the exceptional circumstances allowed for at paragraph 61 of the NPPF to justify their alternative approach. The Plan as proposed is therefore inconsistent with NPPF when read as a whole.

3 Development in Chidham, Hambrook & Nutbourne

3.1 Our client's site is located within the village of Nutbourne and comprises an area of land of 1.3 hectares adjacent to the existing residential development along Broad Road. The site is currently located outside, but directly to the east of the settlement boundary of Nutbourne.

3.2 The Local Plan provides for a moderate level of growth within the parishes of Fishbourne, Chidham & Hambrook and Bosham, known as service villages, where it is acknowledged that there is good / excellent potential to bring forward development with opportunities to support and expand existing facilities and for increased use of public transport options.

3.3 Policy A12 relates to the strategic Chidham and Hambrook allocation and confirms that land will be allocated for development in the revised Chidham and Hambrook Neighbourhood Plan for a minimum of 300 dwellings and supporting facilities and infrastructure.

3.4 The Parish of Nutbourne and Hambrook is a logical position for the strategic expansion of 300 dwellings, given its sustainable transportation links and lack of constraints in comparison to other locations within the southern area of the District. The evidence documents which have informed the Plan also support the quantum of development put forward in the policy allocation.

3.5 As our client's land could deliver up to 40 dwellings, it would be an appropriately sized site, adjacent to the existing settlement boundary of Nutbourne, which would not compromise the spatial development of Nutbourne or Hambrook to the north. We will therefore be looking to promote our client's site with Chidham & Hambrook Parish Council through a Neighbourhood Plan allocation, and will be recommending to the Parish they allocate a number of small to medium sites to meet the Local Plan policy requirement of 300 dwellings. This development strategy will ensure the integrity and current linear spatial pattern of the service villages are maintained.

3.6 Our client's land is ideally situated adjacent to existing residential development which surrounds the site to the north, south and west. This includes the recent development at Hambrook Place and the linear form of dwellings along Broad Road to the west, Hambrook Holiday & Caravan Park to the north and further residential development accessed from Broad Road to the south. The site would not extend further to the east than the built form of development located to the north and south and would not therefore encroach on the wider field pattern to the east. The impact on the wider rural landscape to the east would therefore be limited and the views looking towards the South Downs from the A259 would not be harmed.

3.7 The site sits outside and to the south of the Green Corridor shown in the Interim Version of the Chidham & Hambrook Neighbourhood Plan Strategy published October 2021. The development of this site would not therefore impact on the integrity of the Green Corridor or the gap between the settlement boundaries of Hambrook and Nutbourne as shown in the Neighbourhood Plan Strategy.

The Current Appeal

3.8 In addition to the promotion of the site for allocation within the next iteration of the Neighbourhood Plan, the Council will be aware that this site is also currently subject to a pending appeal relating to planning application 20/03378/OUT. This application seeks outline planning permission for thirty dwellings with access, associated works, including the provision of swales.

3.9 The pending planning appeal follows a previous outline application, 20/00412/OUT for an entry level housing scheme of thirty-five affordable dwellings which was dismissed at appeal on 14 January 2022. The main reason for dismissing this appeal was the proposed development was considered to give rise to adverse effects on the integrity of the local Habitats sites. Whilst the Inspector considered adequate mitigation measures in respect of nutrient neutrality had been provided by the Appellant, an appropriate mechanism for securing these measures for the duration of the development had not been provided with any adequate degree of certainty. It should be noted that no other concerns were raised by the Inspector in relation to the suitability of this site for the development.

3.10 The Council have raised two concerns in relation to the current pending appeal for thirty dwellings on the site. The Council raise concern with future occupiers of the discounted market housing (DMS) not being able to obtain mortgages due to properties proximity to electricity pylons which would lead to properties being occupied on a social rented basis. In this scenario, the Council consider in combination with the adjacent social rented scheme, this would result in an unacceptably high concentration of mono tenure properties.

3.11 The Chidham & Hambrook Neighbourhood Plan Strategy also notes the presence of pylons and overhead power lines along the northern edge of Nutbourne and the limitations this might cause to development in relation to the guidance published by National Grid (Design Guidelines for Development near Pylons and High Voltage Overhead Power Lines).

3.12 Taking into account the Inspector's comments on this point in relation to the previous appeal for 35 no. affordable residential dwellings, it should be noted that the Inspector previously considered that the Appellant's evidence demonstrated that there were lenders willing to offer mortgages for DMS properties.

3.13 It should also be noted that as this forms an outline planning application with all matters reserved except for access, the layout of affordable housing is not a matter to be considered under this outline appeal scheme. Nine affordable units would also not lead to an intensive cluster of affordable housing as they have frontages onto different roads.

3.14 The second issue raised by the Council in relation to the appeal could be overcome through the provision of a s106 agreement to provide an appropriate mechanism to secure the mitigation measures relating to nutrient neutrality.

3.15 As the Council have raised no concerns in relation to the principle of residential development on the site with regard to the current planning appeal, the use of the site for residential development is generally considered to be acceptable. This could be delivered through a successful outcome on the current appeal, through a future allocation within the Neighbourhood Plan or via an SPD prepared by the Council.

Object

Document Element: Policy S1 Spatial Development Strategy

Respondent: DG Phillips (Bosham) Ltd and Phillips Build Ltd [1743]

Agent: Genesis Town Planning Ltd (Kris Mitra, Managing Director) [6993]

Summary:

An increased dwelling requirement (as suggested in the context of Policy H1 above) could be accommodated without the need to significantly alter the proposed spatial strategy of the Reg 19 Plan.

In addition to Chichester city and the east-west corridor being the primary focus of growth, additional development could be accommodated through the re-appraisal of the settlement boundaries, particularly those around Chichester City to include the site subject of these representations.

Full text:

1 INTRODUCTION

1.1 These representations are to the Chichester Local Plan 2021-2039: Proposed Submission (Regulation 19) Consultation (hereafter referred to as the "Reg 19 Plan"). These representations have been prepared by Genesis Town Planning, on behalf of D G Phillips (Bosham) Ltd and Phillips Build Ltd as owners of the site comprising approximately 9ha of agricultural land north of Brandy Hole Lane and to the west of Plainwood Close, Chichester.

1.2 The representations also include at Appendix 1 a plan indicating the proposed amendment to the settlement boundary and the inclusion of the site as a suitable housing allocation for up to 300 dwellings. Such an allocation is proposed to address the Council's failure to adequately deliver sufficient housing through the Reg 19 Plan. The site is suitable, available and deliverable and complies with the sustainability objectives set out in the Reg 19 Plan and national policy and ensures that sites, adjacent to the primary settlement of Chichester, are appropriately considered as suitable sites to accommodate further housing.

1.3 These representations, in addition to seeking the inclusion of the site as a housing allocation and an amendment to the settlement policy boundary, also seeks to remove the proposed inclusion of the site within a strategic wildlife corridor. The inclusion of the land in such a corridor has no bearing on the characteristics of the site, its agricultural form, the fact that it is separated from the wildlife corridor to the south by Brandy Hole Lane and extensive housing development. This is an illogically thought through designation, which has paid no regard to the site character or its location and has been deliberately imposed to prevent housing development coming forward on the site. There is no wildlife, ecological or environmental features on the site, with the exception of boundary trees and vegetation, that would justify such a designation washing over the site and neighbouring land, which includes a former landfill site and a solar farm.

1.4 Accompanying these representations are the appropriate representation forms in respect of Settlement Map SB1, Map NE4b, Policy S1 and paragraph 3.7, policy H1, and Policy NE4. These forms are to be read in conjunction with this submission.

2 LEGAL COMPLIANCE

2.1 One of the requirements for the preparation of a Local Plan as set in the Planning and Compulsory Purchase Act 2004 and the Town and Country Planning (Local Planning) (England) Regulations 2012, (as amended) is the publication of a Sustainability Appraisal (SA) that shows how the SA has been carried out, the information that is used as part of the process and what the outcomes were. The SA is a tool for assessing how the plan, when judged against other reasonable options will help achieve environmental, economic and social objectives.

2.2 The SA suggests that there is little or no argument for setting a housing requirement above the minimum local housing need of the 638 dwellings per annum (dpa) as set by the standard method (763dpa minus 125dpa for South Downs National Park area). This approach is contrary to paragraph 11a) of the National Planning Policy Framework (NPPF) in that it requires all plans to promote a sustainable pattern of development that seeks to meet the development needs of their area.

2.3 It is noted that paragraph 11b) confirms that strategic policies should, as a minimum, provide for objectively assessed needs for housing and other uses, as well as any needs that cannot be met within neighbouring areas unless this is demonstrated to be unsustainable. The background evidence base for the Reg 19 Plan does not clearly demonstrate the reasons for restricting the overall scale, type and distribution of development in the plan area or that the adverse impacts of doing so would significantly and demonstrably outweigh the benefits.

2.4 It is noted that the standard method requirement of 638dpa for the plan area is arrived at by removing 125dpa for the part of the district that falls within the South Downs National Park. The lack of any meaningful assessment for providing sufficient housing to meet the standard method figure is a significant error. Without such an assessment, the SA disregards the possibility of providing for sustainable development at the outset and does not therefore accord with the regulatory requirements referred to above.

2.5 Table 5.3 of the SA identifies a range of development scenarios with dwelling requirements for the plan area ranging from 567dpa to 606dpa. These figures result in a shortfall of between 32dpa and 71dpa when compared to the standard method requirement of 638 dpa. As neither of these figures is significantly above the standard method figure, it is not unreasonable to expect the SA to also test a housing requirement/scenario of 638dpa, so that it reflects the confirmed minimum housing need of the plan area. This would be a reasonable alternative and should be tested. Only when this has been carried will it be possible to fully understand the likely implications of meeting housing needs in full. In doing this, the Plan will then comply with the Legal and Procedural Requirements.

3 SOUNDNESS

3.1 As set in paragraph 35 of the NPPF when local plans and spatial development strategies are examined they should be prepared in accordance with legal and procedural requirements to ensure that they are sound. It goes on to state that:

"Plans are sound if they are:

- a) Positively prepared – providing a strategy which, as minimum, seeks to meet the area's objectively assessed needs; and is informed by agreements with other authorities, so that unmet need from neighbouring areas is accommodated where it is practical to do so and is consistent with achieving sustainable development;
- b) Justified – an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence;
- c) Effective – deliverable over the plan period, and based on effective joint working on crossboundary strategic matters that have been dealt with rather than deferred, as evidenced by the statement of common ground; and
- d) Consistent with national policy – enabling the delivery of sustainable development in accordance with the policies in this Framework and other statements of national planning policy, where relevant."

3.2 As set out above, the Reg 19 Plan does not provide a strategy that seeks to meet the area's objectively assessed housing need, and the SA does not test all the reasonable alternatives. On this basis the plan has not been positively prepared and is not justified. As a result it is contrary to paragraphs 35a) and 35b) of the NPPF.

3.3 In addition to this, there is no clear evidence of effective and on-going working with neighbouring authorities as part of the statutory duty to cooperate. The SoCG should be made publicly available throughout the plan making process to provide transparency. Based on paragraph 1.25 of the Reg 19 Plan this requirement has not been carried out. This confirms that a SoCG is currently being prepared and will be made available for review on the council's website. As a result, the SoCG should have been made available on the LPA's website at the time the Reg 19 Plan was published for consultation. This does not appear to have been the case, which means that this part of the plan making process does not meet the requirements set out in paragraphs 27 and 35c) of the NPPF. As such the effectiveness test has not been complied with in full. The lack of a fully detailed SoCG on the Duty to Cooperate is particularly important in Chichester District as there is a substantial unmet need for housing arising in neighbouring authorities and other nearby authorities across the same sub-region. As yet the evidence base of the Reg19 Plan does not explain or demonstrate how the unmet housing need will be met.

3.4 This is an important omission as it does not accord with the procedural requirements. Until the outcome of this process is known and fully understood it is difficult to know if or how the strategy in the Reg 19 Plan is appropriate or needs modification.

4 COMMENTS ON THE REG 19 DRAFT PLAN

Policy H1 – Meeting Housing Needs

4.1 No exceptional circumstances exist in Chichester District to justify an alternative approach that deviates from the standard method figure of 763dpa. Taking account of the South Downs National Park requirement of 125dpa results in a minimum need of 638dpa for Chichester District.

4.2 Furthermore, the housing needs of particular groups are not reflected in the current standard method requirement of 638dpa. These include the following groups:

- Students – which creates a need for an additional 29dpa;
- people who require affordable housing- which generates a need of 433 affordable pa (based on this figure and the thresholds set out in draft Policy H4: Affordable Housing it would be necessary to deliver 1,083 homes per annum to meet affordable housing need in full); and
- the unmet housing needs of neighbouring authorities and/or authorities in the same subregion, which at best are between 10,141 and 10,620 homes.

4.3 When the needs of students are added to the standard method figure the minimum need dwelling requirement would be 666dpa or 11,988 dwellings over the 18-year plan period 2021-2039.

4.4 When the full affordable need of 1,083 dpa is factored in this results in a need for at least 19,494 dwellings over the plan period.

4.5 In addition to the above figures, there is also an unmet need for over 10,000 homes in related authorities over the plan period.

4.6 Based on the above there is clearly a need for significantly more homes than is suggested by the minimum standard method figure.

Infrastructure Capacity

4.7 Whilst it is noted that there are long-standing highway capacity issues on the A27 Chichester Bypass and more intermittent capacity problems with Wastewater Treatment facilities in the southern part of the district, these could be resolved if the emerging Reg 19 Plan made provisions to improve their capacity through proper long-term planning.

4.8 This approach is supported by paragraph 22 of the NPPF which confirms that plan-making should respond to long-term infrastructure requirements; and by paragraph 059 Ref ID 61-059 of the Planning Practice Guidance (PPG) which requires local planning authorities and policies that set out infrastructure deficiencies and how these will be addressed.

4.9 Existing capacity problems on the A27 are referred to throughout the Reg 19 Plan and its evidence base. Paragraph 5.2.11 of the SA refers to the southern plan area (i.e. the east-west corridor and Manhood Peninsula) as being highly constrained by capacity on the A27 and to detailed discussions with National Highways and West Sussex County Council (WSCC) over the course of 2019-2022 that led to a resolution that there is capacity for no more than 535dpa in this area. The background evidence does not, however, make it clear as to how the 535dpa figure was arrived at or the implications/infrastructure improvements that would be required to accommodate a higher dwelling provision in this part of the plan area.

4.10 It is important to note the “Chichester Transport Study - Local Plan Review Transport Assessment” (January 2023) prepared by Stantec is mainly focused on testing a single Local Plan spatial scenario for the period to 2039. Section 5.6 confirms that in addition to testing the 535 dpa in the south of the plan area that a sensitivity test for the delivery of 700 dpa in this part of the plan area was also carried out. Paragraph 5.6.1 confirms that higher levels of Local Plan development would enable higher levels of developer contributions to be raised towards funding the required Local Plan mitigation; and paragraph 5.6.3 comments that generally the proposed Strategic Road Network (SRN) mitigation can accommodate, in the most part, additional increase in development to 700dpa. This is reiterated in paragraph 5.6.5 where it concludes “that in the main, the 70dpa (southern plan area) demands can generally be accommodated by the mitigation proposed for the 535dpa core test although at the Portfield roundabout and Oving junction, capacity issues get worse with the 700dpa demands, with additional mitigation being required”.

4.11 Paragraph 8.5 of the Reg 19 Plan comments that in 2021 National Highways confirmed that the A27 Chichester By-Pass major improvement scheme is included in the Road Investment Strategy Pipeline for the period 2025-30 (RIS3), but at this stage funding is not guaranteed. This situation is not uncommon as are many infrastructure projects which are considered necessary to support the emerging Local Plan. This is demonstrated by Table 3 of the Infrastructure Delivery Plan (January 2023). The fact that the funding has not yet been secured towards certain types of infrastructure, such as healthcare, should not be used as a reason to constrain the level of housing proposed in the emerging Local Plan. This approach also applies to transport infrastructure.

4.12 The approach of the Reg 19 Plan to impose limits on the amount of development over the Plan period because of existing infrastructure capacity issues is inconsistent with the objectives of national policy and could undermine the prospects of securing the funding necessary to improve infrastructure capacity. The approach of the emerging plan is therefore negative worded as it has the effect of constraining the level of housing below the minimum level needed and does not accord with the PPG or the objectives of national policy. A better, and more positive approach would be to plan for the necessary infrastructure, which in turn will maximise the prospects of securing the required infrastructure instead of deferring it.

4.13 The emerging Local Plan advocates a “monitor and manage” approach such that the funding for the necessary improvements to the A27 will be monitored, which itself will jeopardise that funding, and if the funding is secured then presumably the corresponding level of housing will be released to address some of the housing need. Instead of this approach, the emerging plan should pursue a “plan, monitor and manage” approach to meeting housing needs in full by committing to the delivery of the infrastructure improvements and if necessary, phasing the housing requirements towards the end of the plan period.

The Proposed Housing Requirement

4.14 These submissions confirm that the housing needs of the plan area will not be met by the proposed 10,350 dwelling requirement set out in Policy H1 of the Reg 19 Plan.

4.15 According to the standard method the minimum housing need is 11,484 dwellings (638 x 18). When the growth of the student population (28dpa) is factored in the minimum housing need increases to 11,988 homes, and when the full affordable housing needs (433 dpa) are taken into account the overall need increases to at least 19,485 dwellings. Finally, there is a need for excess of 10,000 more homes to address the unmet needs of the sub-region.

Suggested Modification

4.16 Based on the above it is clear that the Policy H1 requirement needs to be reconsidered and increased. This can be achieved if the Local Plan seeks to address infrastructure requirements including the capacity constraints on the A27 as required by paragraph 22 of NPPF.

4.17 In setting a revised housing requirement, the District Council must take into account the needs of particular groups (i.e., students and persons in need of affordable homes) and complete the Duty to Cooperate process by preparing a SoCG in respect of the unmet needs of the sub-region and then consider how/whether the Local Plan can provide for some of these unmet needs. In addition, the Reg 19 Plan should seek to allocate the land the subject of these representations for up to 300 dwellings to make up the shortfall identified.

Policy S1 - Spatial Development Strategy

4.18 Chapter 3 and Policy S1 of the Reg 19 Plan sets out the spatial strategy of the emerging plan.

These seek to disperse development across the plan area by:

1. Focusing the majority of planned sustainable growth at Chichester city and within the eastwest corridor;

2. Reinforcing the role of the Manhood Peninsula as home to existing communities, tourism and agricultural enterprise; and
 3. Where opportunities arise, supporting the villages and rural communities in the North of the Plan Area.

4.19 An increased dwelling requirement (as suggested in the context of Policy H1 above) could be accommodated without the need to significantly alter the proposed spatial strategy of the Reg 19 Plan.

4.20 In addition to Chichester city and the east-west corridor being the primary focus of growth, additional development could be accommodated through the re-appraisal of the settlement boundaries, particularly those around Chichester City to include the site subject of these representations.

4.21 In this respect the inclusion of additional land would make a significant contribution towards the delivery of the required housing need for Chichester, providing a flexible approach to housing delivery in a sustainable, planned and progressive way.

Suggested Modification

4.22 The inclusion of land to the north of Brandy Hole Lane and west of Plainwood Close, as set out in Appendix 1 to these submissions, should be secured through an amendment to the settlement boundary on Plan SB1. Further, the site should be allocated as a suitable housing site for up to 300 dwelling units to meet the required housing need for the district.

4.23 In support of this approach the Council undertook an assessment of the site's suitability for development as part of the HELAA process in 2021. A copy of the HELAA Assessment and associated plan is contained at Appendices 2 and 3. This confirms that the site is in agricultural/ pasture use and is suitable for development subject to consideration of matters such as access, landscape and trees. The assessment goes on to confirm that there are no known constraints that would make the development unachievable in principle.

Policy NE4

4.24 Despite the above assessment, the subject site has been included within proposed Policy NE4 of the Reg 19 Plan as a Wildlife Corridor to function in conjunction with the designation of the land to the west of the strategic allocation which lies to the south of Brandy Hole Lane and the B2178. The site the subject of these representations is fundamentally distinct in character from the wooded areas to the south of the B2178 and to the west of the strategic allocation. These comprise compartmentalised fields and clusters of woodland which frame the field boundaries. In contrast, the subject site comprises agricultural land with a modest treed boundary and is largely open in character, but visually contained. The remainder of the proposed Wildlife Corridor in this location comprises open agricultural fields with limited landscape boundaries, the former landfill site at Hunters Race and the solar farm to the north. None of these areas possess the qualities of the land further to the south to justify being designated a Wildlife Corridor. Such a designation has been imposed merely as a tool to prevent further development of what would otherwise be deemed suitable land for housing.

Suggested Modification

4.25 The proposed Wildlife Corridor to the north of Brandy Hole Lane should be deleted from the Reg 19 Plan and removed from the settlement map NE4b. Furthermore, Policy NE4 requires any development within the designated Wildlife Corridor to be subject to a sequential test which places a significantly higher bar than that set out within the NPPF. The does not comprise a designated landscape, and proposed Policy NE4 fails to identify any special qualities that apply to the designated area in this location.

Change suggested by respondent:

The inclusion of land to the north of Brandy Hole Lane and west of Plainwood Close, as set out in Appendix 1 to these submissions, should be secured through an amendment to the settlement boundary on Plan SB1.

Object

Document Element: Policy S1 Spatial Development Strategy

Respondent: Elivia Homes [7817]

Agent: Genesis Town Planning Ltd (Mr Jeremy Farrelly, Director of Planning) [7504]

Summary:

An increased dwelling requirement (as suggested in the context of Policy H1 above) could be accommodated without the need to significantly alter the proposed spatial strategy of the Reg 19 Plan.

In addition to Chichester city and the east-west corridor being the primary focus of growth, additional development could be accommodated through the re-appraisal of the settlement boundaries, particularly those around Chichester City.

In this respect the inclusion of additional land would make a significant contribution towards the delivery of the required housing need for Chichester,

Full text:

1.1 These representations to the Chichester Local Plan 2021-2039: Proposed Submission (Regulation 19) Consultation (hereafter referred to as the "Reg 19 Plan") have been prepared by Genesis Town Planning, on behalf of Elivia Homes Southern Ltd.

1.2 The representations also include at Appendix 1 a plan indicating the proposed settlement boundary extension at Clay Lane, which should be adopted to take account of the existing strategic allocation to the north, and the recent grant of planning permissions to the south. The inclusion of the land, which extends to approximately 2ha, is a logical extension of the boundary at this location and will provide the opportunity to deliver new housing in a way which is compatible with the character of the surrounding area. Such an approach complies with sustainability objectives and ensures that sites adjacent to the primary settlement of Chichester are appropriately considered as suitable sites to accommodate further housing.

1.3 Accompanying these representations are the appropriate representation forms in respect of Settlement Map A6a and SB1, Policy S1 and paragraph 3.7, and policy H1. These forms are to be read in conjunction with this submission.

2 LEGAL COMPLIANCE

2.1 One of the requirements for the preparation of a Local Plan as set in the Planning and Compulsory Purchase Act 2004 and the Town and Country Planning (Local Planning) (England) Regulations 2012, (as amended) is the publication of a Sustainability Appraisal (SA) that shows how the SA has been carried out, the information that is used as part of the process and what the outcomes were. The SA is a tool for assessing how the plan, when judged against other reasonable options will help achieve environmental, economic and social objectives.

2.2 The SA suggests that there is little or no argument for setting a housing requirement above the minimum local housing need of the 638 dwellings per annum (dpa) as set by the standard method (763dpa minus 125dpa for South Downs National Park area). This approach is contrary to paragraph 11a) of the National Planning Policy Framework (NPPF) in that it requires all plans to promote a sustainable pattern of development that seeks to meet

the development needs of their area.

2.3 It is noted that paragraph 11b) confirms that strategic policies should, as a minimum, provide for objectively assessed needs for housing and other uses, as well as any needs that cannot be met within neighbouring areas unless this is demonstrated to be unsustainable. The background evidence base for the Reg 19 Plan does not clearly demonstrate the reasons for restricting the overall scale, type and distribution of development in the plan area or that the adverse impacts of doing so would significantly and demonstrably outweigh the benefits.

2.4 It is noted that the standard method requirement of 638dpa for the plan area is arrived at by removing 125dpa for the part of the district that falls within the South Downs National Park. The lack of any meaningful assessment for providing sufficient housing to meet the standard method figure is a significant error. Without such an assessment, the SA disregards the possibility of providing for sustainable development at the outset and does not therefore accord with the regulatory requirements referred to above.

2.5 Table 5.3 of the SA identifies a range of development scenarios with dwelling requirements for the plan area ranging from 567dpa to 606 dpa. These figures result in a shortfall of between 32dpa and 71dpa when compared to the standard method requirement of 638 dpa. As neither of these figures is significantly above the standard method figure, it is not unreasonable to expect the SA to also test a housing requirement/scenario of 638dpa, so that it reflects the confirmed minimum housing need of the plan area. This would be a reasonable alternative and should be tested. Only when this has been carried will it be possible to fully understand the likely implications of meeting housing needs in full. In doing this, the Plan will then comply with the Legal and Procedural Requirements.

3 SOUNDNESS

3.1 As set in paragraph 35 of the NPPF when local plans and spatial development strategies are examined they should be prepared in accordance with legal and procedural requirements to ensure that they are sound. It goes on to state that:

"Plans are sound if they are:

- a) Positively prepared – providing a strategy which, as minimum, seeks to meet the area's objectively assessed needs; and is informed by agreements with other authorities, so that unmet need from neighbouring areas is accommodated where it is practical to do so and is consistent with achieving sustainable development;
- b) Justified – an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence;
- c) Effective – deliverable over the plan period, and based on effective joint working on crossboundary strategic matters that have been dealt with rather than deferred, as evidenced by the statement of common ground; and
- d) Consistent with national policy – enabling the delivery of sustainable development in accordance with the policies in this Framework and other statements of national planning policy, where relevant."

3.2 As set out above, the Reg 19 Plan does not provide a strategy that seeks to meet the area's objectively assessed housing need, and the SA does not test all the reasonable alternatives. On this basis the plan has not been positively prepared and is not justified. As a result it is contrary to paragraphs 35a) and 35b) of the NPPF.

3.3 In addition to this, there is no clear evidence of effective and on-going working with neighbouring authorities as part of the statutory duty to cooperate. The SoCG should be made publicly available throughout the plan making process to provide transparency. Based on paragraph 1.25 of the Reg 19 Plan this requirement has not been carried out. This confirms that a SoCG is currently being prepared and will be made available for review on the council's website. As a result, the SoCG should have been made available on the LPA's website at the time the Reg 19 Plan was published for consultation. This does not appear to have been the case, which means that this part of the plan making process does not meet the requirements set out in paragraphs 27 and 35c) of the NPPF. As such the effectiveness test has not been complied with in full. The lack of a fully detailed SoCG on the Duty to Cooperate is particularly important in Chichester District as there is a substantial unmet need for housing arising in neighbouring authorities and other nearby authorities across the same sub-region. As yet the evidence base of the Reg19 Plan does not explain or demonstrate how the unmet housing need will be met.

3.4 This is an important omission as it does not accord with the procedural requirements. Until the outcome of this process is known and fully understood it is difficult to know if or how the strategy in the Reg 19 Plan is appropriate or needs modification.

4 COMMENTS ON THE REG 19 DRAFT PLAN

Policy H1 – Meeting Housing Needs

4.1 No exceptional circumstances exist in Chichester District to justify an alternative approach that deviates from the standard method figure of 763dpa. Taking account of the South Downs National Park requirement of 125dpa results in a minimum need of 638dpa for Chichester District.

4.2 Furthermore, the housing needs of particular groups are not reflected in the current standard method requirement of 638dpa. These include the following groups:

- Students – which creates a need for an additional 29dpa;
- people who require affordable housing - which generates a need of 433 affordable dpa (based on this figure and the thresholds set out in draft Policy H4: Affordable Housing it would be necessary to deliver 1,083 homes per annum to meet affordable housing need in full); and
- the unmet housing needs of neighbouring authorities and/or authorities in the same subregion, which at best are between 10,141 and 10,620 homes.

4.3 When the needs of students are added to the standard method figure the minimum need dwelling requirement would be 666dpa or 11,988 dwellings over the 18-year plan period 2021-2039.

4.4 When the full affordable need of 1,083dpa is factored in this results in a need for at least 19,494 dwellings over the plan period.

4.5 In addition to the above figures, there is also an unmet need for over 10,000 homes in related authorities over the plan period.

4.6 Based on the above there is clearly a need for significantly more homes than is suggested by the minimum standard method figure.

Infrastructure Capacity

4.7 Whilst it is noted that there are long-standing highway capacity issues on the A27 Chichester Bypass and more intermittent capacity problems with Wastewater Treatment facilities in the southern part of the district, these could be resolved if the emerging Reg 19 Plan made provisions to improve their capacity through proper long-term planning.

4.8 This approach is supported by paragraph 22 of the NPPF which confirms that plan-making should respond to long-term infrastructure requirements; and by paragraph 059 Ref ID 61-059 of the Planning Practice Guidance (PPG) which requires local planning authorities and policies that set out infrastructure deficiencies and how these will be addressed.

4.9 Existing capacity problems on the A27 are referred to throughout the Reg 19 Plan and its evidence base. Paragraph 5.2.11 of the SA refers to the southern plan area (i.e. the east-west corridor and Manhood Peninsula) as being highly constrained by capacity on the A27 and to detailed discussions with National Highways and West Sussex County Council (WSCC) over the course of 2019-2022 that led to a resolution that there is capacity for no more than 535dpa in this area. The background evidence does not, however, make it clear as to how the 535dpa figure was arrived at or the implications/infrastructure improvements that would be required to accommodate a higher dwelling provision in this part of the plan area.

4.10 It is important to note the “Chichester Transport Study - Local Plan Review Transport

Assessment” (January 2023) prepared by Stantec is mainly focused on testing a single Local Plan spatial scenario for the period to 2039. Section 5.6 confirms that in addition to testing the 535 dpa in the south of the plan area that a sensitivity test for the delivery of 700 dpa in this part of the plan area was also carried out. Paragraph 5.6.1 confirms that higher levels of Local Plan development would enable higher levels of developer contributions to be raised towards funding the required Local Plan mitigation; and paragraph 5.6.3 comments that generally the proposed Strategic Road Network (SRN) mitigation can accommodate, in the most part, additional increase in development to 700 dpa. This is reiterated in paragraph 5.6.5 where it concludes “that in the main, the 700dpa (southern plan area) demands can generally be accommodated by the mitigation proposed for the 535dpa core test although at the Portfield roundabout and Oving junction, capacity issues get worse with the 700 dpa demands, with additional mitigation being required”.

4.11 Paragraph 8.5 of the Reg 19 Plan comments that in 2021 National Highways confirmed that the A27 Chichester By-Pass major improvement scheme is included in the Road Investment Strategy Pipeline for the period 2025-30 (RIS3), but at this stage funding is not guaranteed. This situation is not uncommon as are many infrastructure projects which are considered necessary to support the emerging Local Plan. This is demonstrated by Table 3 of the Infrastructure Delivery Plan (January 2023). The fact that the funding has not yet been secured towards certain types of infrastructure, such as healthcare, should not be used as a reason to constrain the level of housing proposed in the emerging Local Plan. This approach also applies to transport infrastructure.

4.12 The approach of the Reg 19 Plan to impose limits on the amount of development over the Plan period because of existing infrastructure capacity issues is inconsistent with the objectives of national policy and could undermine the prospects of securing the funding necessary to improve infrastructure capacity. The approach of the emerging plan is therefore negative worded as it has the effect of constraining the level of housing below the minimum level needed and does not accord with the PPG or the objectives of national policy. A better, and more positive approach would be to plan for the necessary infrastructure, which in turn will maximise the prospects of securing the required infrastructure instead of deferring it.

4.13 The emerging Local Plan advocates a “monitor and manage” approach such that the funding for the necessary improvements to the A27 will be monitored, which itself will jeopardise that funding, and if the funding is secured then presumably the corresponding level of housing will be released to address some of the housing need. Instead of this approach, the emerging plan should pursue a “plan, monitor and manage” approach to meeting housing needs in full by committing to the delivery of the infrastructure improvements and if necessary, phasing the housing requirements towards the end of the plan period.

The Proposed Housing Requirement

4.14 These submissions confirm that the housing needs of the plan area will not be met by the proposed 10,350 dwelling requirement set out in Policy H1 of the Reg 19 Plan.

4.15 According to the standard method the minimum housing need is 11,484 dwellings (638 x 18). When the growth of the student population (28dpa) is factored in the minimum housing need increases to 11,988 homes, and when the full affordable housing needs (433dpa) are taken into account the overall need increases to at least 19,485 dwellings. Finally, there is a need for excess of 10,000 more homes to address the unmet needs of the sub-region.

Suggested Modification

4.16 Based on the above it is clear that the Policy H1 requirement needs to be reconsidered and increased. This can be achieved if the Local Plan seeks to address infrastructure requirements including the capacity constraints on the A27 as required by paragraph 22 of NPPF.

4.17 In setting a revised housing requirement, the District Council must take into account the needs of particular groups (i.e. students and persons in need of affordable homes) and complete the Duty to Cooperate process by preparing a SoCG in respect of the unmet needs of the sub-region and then consider how/whether the Local Plan can provide for some of these unmet needs.

Policy S1 - Spatial Development Strategy

4.18 Chapter 3 and Policy S1 of the Reg 19 Plan sets out the spatial strategy of the emerging plan.

These seek to disperse development across the plan area by:

1. Focusing the majority of planned sustainable growth at Chichester city and within the eastwest corridor;
2. Reinforcing the role of the Manhood Peninsula as home to existing communities, tourism and agricultural enterprise; and
3. Where opportunities arise, supporting the villages and rural communities in the North of the Plan Area.

4.19 An increased dwelling requirement (as suggested in the context of Policy H1 above) could be accommodated without the need to significantly alter the proposed spatial strategy of the Reg 19 Plan.

4.20 In addition to Chichester city and the east-west corridor being the primary focus of growth, additional development could be accommodated through the re-appraisal of the settlement boundaries, particularly those around Chichester City.

4.21 In this respect the inclusion of additional land would make a significant contribution towards the delivery of the required housing need for Chichester, providing a flexible approach to housing delivery in a planned and progressive way.

Suggested Modification

4.22 The inclusion of land north of Clay Lane, as set out in Appendix 1 to these submissions, through an amendment to the settlement boundary on plans A6a and SB1, should comprise the area denoted in yellow.

4.23 This is a logical extension of the settlement boundary and aligns with the strategic allocation land to the west of Chichester, and the recently developed land to the south of Clay Lane. The enlarged settlement area comprises mostly commercial, and residential land (PDL) and is well contained by existing trees and vegetation to its boundaries. To the west, the site is also contained by the A27 which provides a clear defensible boundary, significantly screened by existing planting. As such, the site makes no meaningful contribution to wider open countryside, being as it is, contained by development or infrastructure features on all boundaries.

4.24 Providing a contiguous boundary to include the proposed settlement extension will not impact on the wider countryside, will result in no adverse impact on the landscape setting of the settlement of Chichester, and will ensure that a developable parcel of land makes a meaningful contribution to the district’s housing need. Being located on the edge of Chichester City and its settlement boundary and to the south of the strategic allocation suggests that the site is sustainably located and therefore appropriate to accommodate further development.

Change suggested by respondent:

The inclusion of land north of Clay Lane, as set out in Appendix 1 to these submissions, through an amendment to the settlement boundary on plans A6a and SB1, should comprise the area denoted in yellow.

This is a logical extension of the settlement boundary and aligns with the strategic allocation land to the west of Chichester, and the recently developed land to the south of Clay Lane.

Support

Document Element: Policy S1 Spatial Development Strategy

Respondent: Forestry Commission (Richard Cobb) [8202]

Summary:

Forestry Commission provides advice, does not support or object.

Ancient woodlands, veteran and ancient trees are irreplaceable habitats, and it is essential that they are considered appropriately to avoid any direct or indirect effects that could cause their loss or deterioration, in line with Government Standing Advice. Any development or plan that include these irreplaceable habitats on or near to the site should aim to deliver high standards of net gains and ecological connectivity that supports wider ecological networks, in line with good practice.

The development strategy should prioritise the protection of trees and woodlands with the highest priority being given to ancient woodland, ancient and veteran trees as individual habitats and as part of wider ecological networks.

Full text:

Please note that as a Non-Ministerial Government Department, we provide no opinion supporting or objecting to planning applications or local plans including their soundness or legal compliance.

Rather we are including advice and information that we advise the Council consider to ensure their pre-submission local plan avoids potential impacts and promote enhancements/expansion as part of the proposed local plan regarding trees and woodland, including ancient woodland. We acknowledge that the purpose of Regulation 19 consultations does not usually extend to making substantial changes which are not related to soundness so we offer our advice as helpful guidance to ensure the local plan takes every opportunity to secure the protection, enhancement and expansion of Chichester's valuable trees and woodlands to comply with planning policy, good practice and to make the most of the many benefits they provide to the environment, local economy and community.

Overall Comments

Ancient woodlands, veteran and ancient trees are irreplaceable habitats, and it is essential that they are considered appropriately to avoid any direct or indirect effects that could cause their loss or deterioration, in line with Government Standing Advice. Ancient Woodland has very high potential ecological value and should act as integral focal points, alongside other locally and nationally designated sites, as part of delivering landscape scale nature recovery.

Any development or plan that include these irreplaceable habitats on or near to the site should aim to deliver high standards of net gains and ecological connectivity that supports wider ecological networks, in line with good practice. This will also be a requirement as part of the local nature recovery strategies being driven by the Environment Act 2021 and we advise that plans should anticipate this to maximise environmental benefits to contribute to reversing the national trend of ecological decline as part of broader nature recovery networks. The Local Plan should be considered as a crucial and timely opportunity to secure significant and strategic, plan-led environmental gains due to their scope and scale, particularly given the timescales of development being influenced that coincide with UK Government commitments regarding halving emissions and protecting 30% of nature by 2030, towards a net-zero carbon and nature positive economy.

The development strategy should prioritise the protection of trees and woodlands with the highest priority being given to ancient woodland, ancient and veteran trees as individual habitats and as part of wider ecological networks.

Site Allocation comments:

Policy A7 Land at Shopwyke (Oving Parish)

Site specific considerations could recognise the existing trees, hedgerows and woodland and prioritise their protection, enhancement and expansion as part of biodiversity net gains. Acoustic screening referred to could also use trees to make the most of multi-functional benefits they bring.

Policy A8 Land East of Chichester

We welcome efforts to bolster the existing woodland and the proposed strategic wildlife corridor to the East and the enhancements that development could bring.

Policy A11 Highgrove Farm, Bosham

Bolster planting to North, South and East is welcome. This policy could be improved by requiring bolster planting to the West as well, where there appears to be an existing line of trees, making it well placed to further contribute to wider connectivity with existing and additional planting.

Policy A12 Chidham and Hambrook and Policy A13 Southbourne Broad Location for Development

We note that more detailed proposals will emerge as part of a Neighbourhood plans. We would like to highlight that this area contains some parcels of ancient woodland which is an irreplaceable and high priority habitat according to the NPPF and Government Policy (see attached Annex and below for more guidance on this). The policy could be improved by highlighting its importance and high priority as part of efforts to protect, enhance, expand and connect habitats as part of a wider ecological network and the strategic wildlife corridor. Developments within this area could contribute pockets of woodland and linear planting to help connect existing trees and woodland as part of a mosaic of habitats throughout the wildlife corridor and wider area. The requirement to ensure development does not have an adverse impact on the strategic wildlife corridor is also welcome but could be strengthened by requiring developments to significantly contribute to its enhancement, expansion and connectivity including with green infrastructure provided by development

Policy A14 Land West of Tangmere

The requirement for significant levels of green infrastructure is welcome. This policy could be strengthened by requiring development to retain and bolster existing hedgerows and trees wherever possible.

Policy A16 Goodwood Motor Circuit and Airfield and Policy A17 Development within the vicinity of Goodwood Motor Circuit and Airfield

This policy could be improved by recognising the significant amount of ancient woodland and non-ancient woodland to North of the area. We would encourage any development in the area to protect, enhance and expand the woodland in the area as part of delivering net gains.

Policy A21 Land east of Rolls Royce

This area contains areas of existing trees, hedgerow and woodland which are not currently mentioned by the policy. We would encourage any development to be sensitive to this and provide additional planting where possible.

Overarching comments

We would welcome the consideration of incorporating large and small pockets of multi-functional woodland as part of green infrastructure provision for development, particularly given the relatively low proportion of woodland found throughout the District, and the benefits this can have as 'stepping stones' between habitats as part of the Local Plan's welcome vision of strategic wildlife corridors.

We also encourage the Council to appraise the plan against the following advice to maximise the benefits from protection, enhancement and expansion of woodlands, trees and connectivity throughout the District:

Additional improvements to consider

- Tree/hedgerow removal is considered as a last resort but where it is justified, we advise that developments can aim to deliver no net deforestation to help encourage development that provides an overall environmental gain. Where trees are required to be removed, additional tree planting will be made to compensate for this loss and we would advise that additional planting should be made to help compensate for the loss of habitat in the time it takes for new trees to mature.
- Long term management and maintenance of planted trees and woodland creation to give them every chance to becoming established and where trees do fail, they are replaced
- A minimum standard for tree canopy cover for new developments (e.g. for large-scale developments) as it provides a targetable level of green infrastructure in relation to trees for the numerous ecosystem services they provide.
- Precautions should be incorporated into any woodland design and tree planting to ensure that habitat creation is established successfully and that potential impacts from deer are managed on site and in the surrounding area as appropriate. See here for further guidance that should be followed for managing impacts from deer as part of woodland creation and tree planting: <https://www.gov.uk/government/publications/woodland-creation-and-mitigating-the-impacts-of-deer/woodland-creation-and-mitigating-the-impacts-of-deer> Some good practice advice is also provided in Appendix 1 of this letter.
- We advise that any tree planting should meet the following:
 - o Trees should be healthy and good practice biosecurity should be followed to prevent the risk of spreading pests and disease, in line with Government advice: <https://www.gov.uk/government/collections/tree-pests-and-diseases>. More information on the plant healthy can be found at: Welcome to Plant Healthy - Plant Healthy
 - o Created or restored habitat should be managed in perpetuity in line with a robust management plan that follows good practice to ensure assumed benefits of created habitats are delivered in practice (see Standing Advice referred to on page 1). We recommend meeting the UK Forestry Standard to demonstrate this.
- To help mitigate climate and support local economy would urge council to develop local plan policy that makes use of locally sourced timber. This has multiple benefits as it can help store carbon within development, reduce impact from transportation, reduce embodied carbon from alternative materials and support local economies and communities.
- Where developments incorporate District Heating, consider locally and sustainably sourced wood-fuels for the benefits this can have for renewable energy and towards a local, circular economy
- Use tree planting as part of nature based solutions for managing flood risk as well as other multi-functional benefits from green infrastructure as part of any development (e.g. Trees and woodlands provide £400 million of value in flood protection)
- We encourage the Council to refine their strategy to trees and woodlands using the recently launched 'Trees and Woodland Strategy Toolkit' available here: <https://treecouncil.org.uk/what-we-do/science-and-research/tree-strategies/> to design and deliver a local tree strategy to harness the long-term benefits that trees can bring to local communities. The local plan should be developed with tree/woodlands in mind as an integral part, alongside other supplementary strategies for the environment including biodiversity, green infrastructure, nature recovery and climate change.

Key guidance regarding trees, woodland and development

Ancient woodlands, ancient trees and veteran trees are irreplaceable habitats. Paragraph 180(c) of the NPPF sets out that development resulting in the loss or deterioration of irreplaceable habitats should be refused unless there are wholly exceptional reasons and a suitable compensation strategy exists. In considering the impacts of the development on Ancient Woodland, Ancient and Veteran trees, the planning authority should consider direct and indirect impacts resulting from both construction and operational phases.

Please refer to Natural England and Forestry Commission joint Standing Advice for Ancient Woodland and Ancient and Veteran Trees, updated in January 2022. The Standing Advice can be a material consideration for planning decisions, and contains advice and guidance on assessing the effects of development, and how to avoid and mitigate impacts. It also includes an Assessment Guide which can help planners assess the impact of the proposed development on ancient woodland or ancient and veteran trees in line with the NPPF.

Existing trees should be retained wherever possible, and opportunities should be taken to incorporate trees into development. Trees and woodlands provide multiple benefits to society such as storing carbon, regulating temperatures, strengthening flood resilience and reducing noise and air pollution.[1] Paragraph 131 of the NPPF seeks to ensure new streets are tree lined, that opportunities should be taken to incorporate trees elsewhere in developments, and that existing trees are retained wherever possible. Appropriate measures should be in place to secure the long-term maintenance of newly planted trees. The Forestry Commission may be able to give further support in developing appropriate conditions in relation to woodland creation, management or mitigation.

Biodiversity Net Gain (BNG): Paragraph 174(d) of the NPPF sets out that planning (policies and) decisions should minimise impacts on and provide net

gains for biodiversity. Paragraph 180(d) encourages development design to integrate opportunities to improve biodiversity, especially where this can secure net gains for biodiversity. A requirement for most development to deliver a minimum of 10% BNG is expected to become mandatory from November 2023. The planning authority should consider the wide range of benefits trees, hedgerows and woodlands provide as part of delivering good practice biodiversity net gain requirements. Losses of irreplaceable or very high distinctiveness habitat cannot adequately be accounted for through BNG.

Document Element: Policy S1 Spatial Development Strategy

Respondent: Gleeson Land (Mr Dominick Veasey, Planning Manager) [7915]

Summary:

We support the inclusion of Hambrook and Nutbourne as a service village within the district's settlement hierarchy. However, we question the need for the inclusion of the wording 'small-scale' when referring to housing developments consistent with the indicative housing numbers set out in Policy H3. No definition is provided over what does, or does not constitute 'small-scale'. There is a risk that small-scale could be inferred as excluding 'major development' as defined within the NPPF glossary. To avoid any confusion, we therefore consider the inclusion of 'small-scale' wording is superfluous, and should be deleted.

Object

Document Element: Policy S1 Spatial Development Strategy

Respondent: Gleeson Strategic Land (Mr Peter Rawlinson, Strategic Planner) [855]

Summary:

Fishbourne has been overlooked in the settlement hierarchies in the draft Policies S1 and S2, despite being a highly sustainable location with suitable and deliverable locations for growth. Fishbourne has been identified for the non-strategic provision of only 30 homes. There is no rationale for this as Fishbourne has a comparable number of services and facilities compared to other Service Villages, and should be recognised as a 'more sustainable' location where additional strategic-scale growth can and should occur. The current approach to the Spatial Strategy is not justified, and draft Policy S1 is not considered 'sound'. Promoted site documents for Land West of Clay Lane, Fishbourne all attached.

Full text:

2.11 Chapter 3 of the draft Local Plan defines how housing and other needs will be met spatially across the District, in accordance with a defined settlement hierarchy.

2.12 Paragraphs 3.5 through 3.28 of the Draft Local Plan summarise the rationale for the proposed distribution of growth, including noting:

- That growth is required in both urban and rural areas to meeting needs;
- The focus remains on Chichester city as a main sub-regional centre and the most sustainable location;
- Outside of Chichester, development will be focused on 'settlement hubs' within the east-west corridor at Tangmere and Southbourne;
- Outside of these locations land for new development will be identified and allocated through the Local Plan or a neighbourhood plan at Service Villages where there are suitable locations to do so; and
- The Local Plan aims to continue to protect the countryside.

2.13 Draft Policy S1 (Spatial Development Strategy) broadly reflects the above, and states that "new residential and employment development is [to be] distributed in line with the settlement hierarchy, with a greater proportion of development in the larger and more sustainable settlements". The corresponding table identifies a range of 'Strategic Development Locations' which are considered to be the 'more sustainable settlements' including the service villages of Bosham, Hambrook / Nutbourne (combined) and Loxwood.

2.14 Draft Policy S2 (Settlement Hierarchy) expands this list to include a wider range of settlements where development will be delivered through site allocations as well as windfall development in accordance with other policies in the draft Plan.

2.15 Whilst we have no objection to the principle of distributing the majority of growth to the most sustainable location, subject to consideration of constraints, it is our view the Council has not sufficiently justified the rationale behind its settlement hierarchy.

2.16 This is because a key settlement, Fishbourne, has been overlooked in the settlement hierarchies set out in draft Policies S1 and S2 without good reason. Fishbourne, has not been identified as a more sustainable settlement and 'Strategic Development Location' in the table at draft Policy S1, and has instead only been identified in draft Policy S2 as a 'Service Village', and a location for the non-strategic provision of only 30 homes. This is despite Fishbourne being a highly sustainable location with suitable and deliverable locations for growth (including Gleeson's site as detailed in Section 3).

2.17 No evidence is provided which considers the sustainability of Service Centres that provides justification for Hambrook / Nutbourne, Loxwood and Bosham being elevated over Fishbourne.

2.18 From our own review, it is clear there is no rationale for this, as shown below:

Current population Sustainable transport options Existing services / facilities Draft Local Plan proposals

Fishbourne 2,666 Train Station and bus services Primary School

Medical Practice

Public Houses

Community Hall

Supermarket (Tesco Extra)

Roman Palace (inc. coffee shop) 30 homes

Hambrook / Nutbourne Hambrook: 1,908

Nutbourne: 1,962

Combined total: 3,870 Train Station (Nutbourne) and bus services Post office

Public House 300 homes

Loxwood 1,026 Bus services Primary School

Medical Practice

Post Office

Community Hall 220 homes

Bosham 1,578 Train Station and bus services Primary School

Medical Practice

Post office

Co-op shop

Churches

Public Houses 245 homes

2.19 We consider that Fishbourne should instead be recognised as a 'more sustainable' location where additional strategic-scale growth can and should occur. It has a commensurate number of services and facilities compared to other Service Villages. The proximity to Chichester compared to the other Service Centres and the multitude of employment opportunities and facilities there is also a unique strength of Fishbourne. It also benefits from a nearby Tesco Extra.

2.20 This would be consistent with the Regulation 18 Preferred Approach (December 2018) consultation which identified (through the previous version of draft Policy S1 – at that stage identified as Policy S3 Development Strategy) Fishbourne as a "larger and more sustainable settlement", alongside Bosham, Hambrook / Nutbourne and Hunston, with an allocation of a "minimum of 250 dwellings". Loxwood was not recognised as a more sustainable settlement at that time, albeit was still identified to accommodate 125 homes.

2.21 No information has been provided to justify this change in approach between the Regulation 18 and Regulation 19 consultation. We therefore consider the current approach to the Spatial Strategy is not justified and consider draft Policy S1 not "sound".

Change suggested by respondent:

Fishbourne should be recognised as a 'more sustainable' location where additional strategic-scale growth can and should occur. The housing requirement for Fishbourne should revert back to the amount set out in the Preferred Approach version of the Local Plan which was for 250 homes.

Document Element: Policy S1 Spatial Development Strategy

Respondent: Hallam Land Management Limited [1696]

Agent: LRM Planning Ltd (Miss Kate Coventry, Senior Planner) [6627]

Summary:

Policy S1 (6) outlines how non-strategic provision is made for small scale housing developments consistent with the indicative housing numbers set out in Policy H3, however this does not identify an approach to medium scale sites. Consequently, the Local Plan should allocate small and medium scale sites for residential development.

Full text:

1 Introduction

1.1 These Representations have been prepared on behalf of Hallam Land Management Limited (hereafter 'Hallam'), in response to the Chichester Local Plan Review Proposed Submission Plan consultation.

1.2 Hallam is a strategic land promotion company operating throughout England, Wales and Scotland delivering land for new employment and commercial premises, housing, including specialist elderly housing, and mixed-use developments. Hallam has been acquiring, promoting, developing and trading in land since 1990. During that time, the company has established an outstanding record in resolving complex planning and associated technical problems in order to secure planning permissions for a whole range of different land uses to facilitate the delivery of new development.

1.3 Hallam control land to the west of Southbourne, to the north of the A259 and south of the railway line. Development of this land for new housing including specialist elderly accommodation, as shown in the accompanying Vision Document, would be consistent with the established Spatial Strategy; which is rightly retained in the consultation document. Similarly, development would contribute towards meeting the future housing needs of the District within the proposed Broad Location for Development (BLD) at Southbourne.

1.4 These Representations set out our support for the BLD drawn on the key diagram to the west and east of Southbourne. However, Hallam are seeking amendments to Policies S1, H1, H2, H8 and A13 to ensure that: the overall housing needs are met across the District, including early delivery and specialist accommodation; the flexibility sought early in the Submission Plan, at Policy S2 and H1, is carried through to the strategic allocations and locations; and, the BLD is distributed to the west and east of Southbourne.

1.5 Moreover, Hallam are proposing the allocation of small and medium scale sites at Southbourne within the Local Plan, to enable early delivery of housing and infrastructure, with the land under their control a suitable site for this allocation. Should the Council not allocate these sites, then the strategic allocations/locations policies need to be updated to reflect the requirement for the delivery of small and medium scale parcels which could form part of the larger sites.

1.6 In the context of the above, it is instructive to note that Chichester District has an older population than national average, which has been predicted to increase by 42% between 2021- 2039. The increasing need for specialist accommodation should be addressed through specific allocations within the Local Plan, rather than the proposed approach of Policy H8.

1.7 Our response is focused on the following matters:

- The Spatial Strategy, settlement hierarchy and the distribution of development across the District;
- The overall amount of new housing required within the new plan period;
- The need for specialist accommodation;
- The status of Southbourne and the role and function it plays; and
- The strategic allocation proposed at Southbourne in Policy AL13.

1.8 In preparing the Local Plan Review, the Council will need to ensure that it complies with paragraph 35 of the National Planning Policy Framework (NPPF) (2021) which sets out four tests to ensure the plan is 'sound'. These are as follows:

- Positively prepared – providing a strategy which, as a minimum, seeks to meet the area's objectively assessed needs, and is informed by agreements with other authorities, so that unmet needs from neighbouring areas are accommodated where it is practical to do so and is consistent with achieving sustainable development;
- Justified – an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence;
- Effective – deliverable over the plan period, and based on effective joint working on cross- boundary strategic matters that have been dealt with rather than deferred, as evidenced by statements of common ground; and
- Consistent with national policy – enabling the delivery of sustainable development in accordance with the policies in this Framework.

1.9 We are mindful that the Government has recently published a consultation concerning potential amendments to the NPPF. Paragraph 1 of that consultation document indicates that the government is committed to "building more homes" whilst Paragraph 6 explains that the government "remains committed to delivering 300,000 homes a year by the mid-2020s".

1.10 In the proposed revisions, paragraph 1 makes clear that the NPPF provides "a framework within which locally-prepared plans can provide for sufficient housing and other development in a sustainable manner." At paragraph 60 the overall aim of a Local Plan is identified as meet[ing] as much housing need as possible with an appropriate mix of housing types to meet the needs of communities.

1.11 It is clear therefore that the potential amendments to the NPPF firmly intend that Local Plans, including this one, continue to provide a sufficient supply of housing land to meet identified needs.

2 Objectives and Spatial Strategy

Objectives of the Local Plan

2.1 The Submission Plan has identified key challenges and opportunities that influence future planning, across the three areas of the District, and how it aims to address these through planning policies and proposals.

2.2 Within the consultation document, the strategic objectives presented by the Council are structured into specific categories, ensuring housing and neighbourhood objectives are clearly set out for the plan period.

2.3 Amongst these is the objective to increase housing supply; increase provision of affordable housing; and promote the development of mixed, balanced and well-integrated communities. These are consistent with the NPPF's policy objective to significantly boost the supply of housing in paragraph 60. In this context, it is right that the Local Plan's development strategy is founded on this objective, ensuring sustainable development which responds to social, economic and environmental considerations that meets the needs of the plan area.

2.4 These objectives frame the policies and proposals for future development across the plan area to create sustainable neighbourhoods; this demonstrates, as a matter of principle, that the Local Plan intends to be positively prepared and justified, albeit there are limitations on how this is achieved in practice when the policies and proposals are considered.

2.5 The NPPF states at paragraph 22 that strategic policies should look ahead over a minimum 15 year period from the date of the Plan's adoption. The Local Plan aims to cover the period of 2021- 2039, which is 18 years. However, this plan has not been adopted yet and it is considered unlikely that this Local Plan will be adopted before 2024-25. Therefore, the Plan may not cover the required plan period of 15 years and the Council should extend the plan period to at least 2040 to ensure this requirement is met.

Policy S1: Spatial Strategy

2.6 The Spatial Strategy is accompanied by the Key Diagram (Map 3.1), identifying the distribution of development and infrastructure provision across the plan area.

2.7 The strategy aims to build on the existing Local Plan, focusing growth at Chichester city, as the main sub-regional centre, and at two settlement hubs along the east-west corridor at Tangmere and Southbourne.

2.8 Policy S1 specifically identifies the broad approach to providing sustainable development, in accordance with the Local Plan Objectives, ensuring development is focused principally along the east-west corridor. It aims to distribute development in line with the settlement hierarchy, ensuring development is located in the larger and more sustainable settlements.

2.9 This accords with paragraph 20 of the NPPF which requires strategic policies to set out an overall strategy for the pattern, scale and quality of development, and make sufficient provision for housing, infrastructure, community facilities along with policies that seek to conserve and enhance the environment.

2.10 Paragraph 105 of the NPPF states that the planning system should actively manage patterns of growth in support of these objectives. With significant development being focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes.

2.11 Paragraph 69 of the NPPF sets out how small and medium scale sites can make an important contribution to meeting the housing requirement. Part d) identifies how working with developers to encourage the sub division of large sites could help to speed up the delivery of homes.

2.12 In this context, Policy S1 (6) outlines how non-strategic provision is made for small scale housing developments consistent with the indicative housing numbers set out in Policy H3, however this does not identify an approach to medium scale sites. Consequently, the Local Plan should allocate small and medium scale sites for residential development.

2.13 Should the Local Plan not allocate these scale sites, then there should be parcels within the BLDs identified as medium scale sites for early delivery in the plan period without prejudicing the BLDs. Policy S1 should be amended to include medium scale sites and to require flexibility to the housing target. This is discussed further in respect of Policy A13.

2.14 Policy S1 (7) states that strategic allocations and locations will be made through either this emerging Local Plan, the extant Site Allocation Development Plan 2014-2019 (or subsequent Site Allocation Development Plan Document (DPD)) and through Neighbourhood Plans. Notwithstanding the allocations in the emerging Local Plan, the most appropriate future mechanism is the Site Allocations DPD, which has to meet the 'tests of soundness' rather than 'basic conditions'. This more rigorous approach to plan making is better able to address the site selection process and assessment of delivery requirements that a strategic allocation will need to demonstrate, particularly when taking account of the scale of growth proposed at Southbourne.

2.15 Lastly, the final paragraph of Policy S1 states that to ensure that the Plan's housing requirement is delivered, "the distribution of development may need to be flexibly applied, within the overall context of seeking to ensure that the majority of new housing is developed in accordance with this Strategy". The wording of this should be amended to state flexibility will be needed rather than may be needed, to ensure there is the ability to mitigate delays on allocations being brought forward by alternative proposals in order to meet the housing requirement over the plan period.

2.16 The use of the Authority Monitoring Report to control this is considered an acceptable approach, and policies A6 to A15 should reflect this requirement for flexibility. In practical terms, the LPA will need to consider performance in bringing forward and delivering large-scale development and enable alternative solutions where the required outcomes are not being achieved. This is discussed later in relation to Policy A13 specifically.

Policy S2: Settlement Hierarchy

2.17 The consultation document sets out a Settlement Hierarchy which is to serve as the framework for the Council to achieve its vision for the plan area, meet the scale of development required and enhance the quality of the built natural, historic, social and cultural environments, whilst sustaining the vitality of communities. This hierarchy seeks to deliver sustainable development that will support the role and function of different places within the plan area.

2.18 In this regard, Policy S2 is consistent with the NPPF acknowledging how "significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. This can help to reduce congestion and emissions, improve air quality and public health." (paragraph 105 refers). The Settlement Hierarchy ensures that new development is located in areas where residents have access to facilities and services and a range of public transport networks.

2.19 Chichester city is identified as the Sub-Regional Centre, with four Settlement Hubs being identified at East Wittering/Bracklesham; Selsey; Southbourne and Tangmere. This is a continuation of the existing spatial strategy in the Adopted Local Plan and consistent with the principle of locating new development at the most sustainable locations.

2.20 Southbourne is rightly identified as a Settlement Hub due to its range of local services and facilities, key public transport connections and employment/educational opportunities accessible via non vehicular methods of travel. The approach to Southbourne is discussed later at Section 4 and at Policy A13.

2.21 Accordingly, this strategic policy is positively prepared and justified, and is consistent with national policy promoting sustainable patterns of development.

3 Overall amount of Housing

Policy H1 Meeting Housing Needs
Housing Need

3.1 Paragraphs 60 and 61 of the NPPF state that to determine the minimum number of homes needed, strategic policies should be informed by a local housing need assessment, conducted using the standard method in national planning guidance.

3.2 Only in exceptional circumstances could an alternative approach be justified. But even then, that alternative approach will also need to reflect current and future demographic trends and market signals.

3.3 Policy H1 identifies the need for the Plan to make provision for at least 10,350 dwellings within the plan period, amounting to 575dpa.

3.4 This is lower than both a. the standard method figure of 638 dpa; and, b. the Preferred Approach figure in the previous consultation, of 650 dpa which included accommodating some unmet need arising from the South Downs National Park (SDNP) area. This shortfall will amount to over 1,100 dwellings across the plan period. Without any Statements of Common Ground being published by the Council or evidence of the shortfall being accommodated elsewhere, this remains unaddressed.

3.5 It is highly germane that the current Local Plan adopted a lower housing figure than the identified need of 505dpa, proposing instead to deliver 435dpa.

Affordability in Chichester

3.6 The affordability ratios have risen from 12.38 in 2015, when the current Local Plan was adopted, to 14.61 in 2021 for Chichester, which is significantly higher than the current 9.1 national average, increasing the need for affordable housing within Chichester.

3.7 Between the 2011 and 2021 census, the number of people ages 50 to 64 years rose by over 3,100 (an increase of 13.4%), while the number of residents between 35 and 49 years fell by approximately 1,900 (8.5% decrease).

3.8 Chichester's worsening affordability ratios and aging population, which typically occurs in line with house price increases, demonstrate the clear need to increase the housing delivery to meet current and future needs (in line with the NPPF), and maximise the potential for housing in this District. The current strategy to suppress housing provision will only exacerbate these problems.

3.9 With the Submission Plan proposing to not meet the identified need, this once again will be an issue which moves onto the next Local Plan, failing to tackle key issues across the District such as affordability and lack of housing land supply. These issues cannot simply be moved onto the next Local Plan, they should be addressed now.

Constraints for development

3.10 The lower figure of 575dpa reflects both the infrastructure constraints along the A27 and at the

Waste Water Treatment Works, but also no longer accommodating unmet need from SDNP.

3.11 The Transport Study (January 2023) assesses the capacity levels, with particular focus on the A27. Although the Council state that 535dpa is the highest level of development per year achievable, the conclusions of this latest Study state, at paragraphs 5.6.5 and 11.2.3, that development of 700 dpa could be accommodated (in the southern plan area) through the mitigation proposed in the previous scenario of 535dpa with some additional mitigation at the Portfield and Oving roundabout.

3.12 This Transport Study (2023) was published following the preparation of the Sustainability Appraisal which refers to the 2018 study, therefore the latest evidence on highways matters has not been considered within the preparation of this Local Plan.

3.13 This is fundamental to the Plan's approach – increasing the housing requirement could assist with funding those additional highway improvements, in line with the recommendations of the Transport Study at Section 9.3 to prioritise junctions to avoid delays to housing delivery. This should be further reviewed by the Council to ensure the District's need is not being understated. It is recommended the housing need figure is reviewed in line with this evidence and the need to meet the minimum of the standard method figure of 638dpa, and aim to return to the 650dpa previously proposed.

Duty to Co-Operate

3.14 Paragraph 24 of the NPPF outlines the need for co-operation between local planning authorities on strategic matters that cross administrative boundaries.

3.15 The East Hampshire Local Plan Review has identified 100dpa for the SDNP area of the District, below the identified need of 112dpa for the District's area and the overall requirement of 447dpa for the SDNP (Housing and Economic Development Needs Assessment 2017). In effect, in combination with Chichester, the National Park is needing to accommodate some 30 more dwellings per annum without any assessment as yet as to whether this can be achieved given the statutory protection that is afforded to it.

3.16 Whilst a Statement of Common Ground is referred to, it has not been published and therefore it is not possible to determine whether the decision not to make a provision for the National Park area is soundly based.

3.17 Previous evidence for the Preferred Approach demonstrated how the figure of 650dpa was achievable and necessary to help with the worsening affordability ratios across Chichester and the neighbouring authorities. Having removed provision for unmet need it is considered this plan has not been positively prepared.

Summary

3.18 Policy H1 clearly sets out how the majority of housing is to be delivered along the east-west corridor, with 535dpa in the southern plan area and 40dpa in the northern plan area. This is consistent with the Spatial Strategy and the Settlement Hierarchy, Policies S1 and S2, and the overarching objective of locating new housing at the most sustainable locations in the plan area.

3.19 By limiting the amount of housing there will be fewer schemes contributing to the required infrastructure improvements. Without developer contributions to fund wholesale upgrades to this infrastructure there is a risk of pushing the problem down the line for the next Local Plan to address, whilst problems with affordability and an aging population are further exacerbated.

3.20 All future schemes will be required to mitigate their impact on infrastructure including highways and utilities, and there is an opportunity for small to medium scale sites to be delivered in the short term whilst the larger allocations and/or the majority of the larger allocations await the upgrading of these works.

3.21 Currently, the proposal to reduce the overall housing supply for the new plan period is not supported, and the Council should review the Transport

Study with the intention of meeting the assessed level of local housing need in full. Without the identified housing requirement being met in full the problem of the younger population being unable to afford to remain in Chichester will continue, further growing the gap in workforce and an increasingly aging population.

3.22 Therefore, this policy is not positively prepared, justified or consistent with the NPPF.

Policy H2 Strategic Locations/Allocations 2021-2039

3.23 The wording of 'at least' within Policy H1 provides flexibility on the ability to achieve the minimum amount of housing considered necessary by the Council, in line with Policy S2. Although this quantum is not agreed, the approach using 'at least' is considered a sensible approach to allow the achievement rather than under delivery of much needed open and market housing.

3.24 The strategic locations/allocations set out in Policy H2 do not reflect this flexible approach. Instead, the sites are fixed as exact number of dwellings for those locations.

3.25 Paragraph 119 of the NPPF requires planning policies to promote an effective use of land in meeting the need for homes, while safeguarding and improving the environment and ensuring safe and healthy living conditions.

3.26 Policy A13 is a BLD and is fixed at 1,050 dwellings within Policy H2, this does not allow for the masterplanning approach to further assess the actual capacity and the best use of this land.

3.27 As such flexibility should be embedded into the wording of Policy H2 to ensure that the intention of Policy S2 is achieved; the housing target of at least 10,350 dwellings across the plan period (Policy H1) is met; and the land identified for development is most effectively used.

3.28 Therefore, it is suggested that Policy H2 includes the wording "at least" before the quantum of development for any strategic location or allocation. For example, Policy A13 would instead state "at least".

Policy H8 Specialist accommodation for older people and those with specialised needs

3.29 National Planning Practice Guidance for Housing for Older and Disabled People states how plan-making authorities should set clear policies to address the housing needs for groups with particular needs such as older and disabled people.

3.30 The Housing and Economic Development Needs Assessment (HEDNA) (April 2022) assesses the period between 2021-2039 for older people and those with a disability.

3.31 This concludes that there will be a 42% increase in the population above 65 years old, amounting to 67% of the total population growth.

3.32 The HEDNA sets out how the East-West Corridor has a higher percentage of over 65 year olds (24.7%) compared to both Chichester City (24.2%) and the Plan Area North area (23.4%).

3.33 The needs arising from this, amounts to between 2,131 and 2,872 additional dwellings with support or care, and a need for 429-800 additional nursing and residential care bedspaces. This equates to approximately 17-24% of all homes needing to be some form of specialist accommodation for older people.

3.34 In this context, the HEDNA makes an important recommendation that the Council allocate specific sites for housing with care to ensure the identified needs are met. In contrast Policy H8 is a criteria based policy that seeks specialist accommodation for older people on housing sites over 200 units based on evidence of local need.

3.35 As written, there is no confirmation on the quantum of specialist accommodation that this policy or other site allocations will secure and how the specific need for each application is calculated. Policy H8 fails to address the identified overall need clearly, as required by National guidance. Therefore, it is recommended the Local Plan allocates sites to deliver this type of accommodation as intended by the HEDNA.

3.36 This approach risks the land on these sites being unable to deliver both the expected market/affordable housing and the specialist accommodation on site.

3.37 The land under Hallam's control would be a suitable site for this type of accommodation, which is situated along the east-west corridor in a sustainable location on the edge of Southbourne.

4 Southbourne

4.1 Southbourne is a key area in the District, in terms of existing development, its status as a Settlement Hub and its potential to accommodate future development.

Role of Southbourne

4.2 Southbourne is identified as a Settlement Hub within Policy S2.

4.3 Southbourne is located within the east-west corridor with a range of existing facilities, good transport links, and employment opportunities both to the east and the west.

4.4 As set out in the Submission Plan, Southbourne has good access to educational facilities serving the residents, including primary schools, junior schools and secondary schools. There are a number of convenience stores and other community services and facilities such as a GP practice, pharmacy and places of worship.

4.5 The Bourne Community Leisure Centre provides local residents with access to community sports facilities. Access to public open space is also good through connections to Southbourne Recreation Ground. There is potential for more open space to be provided for local residents within the Local Plan Review and the strategic allocation proposed and this approach is embedded within our own Vision Document.

4.6 A key focus of the Sustainability Appraisal and the Submission Plan is for schemes to promote a modal shift in transportation. The strong public transport links within Southbourne to the wider surrounding area allows access to employment opportunities within the east-west corridor. Southbourne has strong public transport connections to the local and wider area, through bus and train services, to areas including: Chichester, Portsmouth, Havant, Littlehampton, Brighton, Southampton and London.

4.7 For these reasons, Southbourne is rightly designated as a Settlement Hub and is eminently suitable to serve as a BLD.

4.8 The Southbourne Level Crossing Report May 2021 analyses the options for delivering the railway crossing at Southbourne. It concludes that circa 750 dwellings can be delivered north of the railway line before triggering the requirement for a new crossing. The report highlights how sites south of the rail line are not likely to impact on the level crossing and can therefore be delivered earlier than await the railway line improvements.

4.9 Therefore, in this context it would be appropriate to allocate small and medium scale sites to the south of the railway, which is less constrained by

the capacity restriction on the railway crossing.

4.10 The land under Hallam's control is to the south of the railway line, would help facilitate a future new railway crossing to the north of the site, and would be of a medium scale to deliver housing early in the period plan.

Strategic Allocation A13

4.11 The Key Diagram appears to suggest that new development is to be located to the west and east of Southbourne, remedying the previously unsuccessful approach of focusing development only to the east. Similarly, the Key Diagram acknowledges the need for development to the south of the railway line, facilitating development north of the railway line. It is recommended the wording of the policy should be updated to reflect this diagram, as suggested below:

Provision will be made for a mixed use development within the broad location for development to the west and east of Southbourne, as shown on the Key Diagram.

4.12 Previously, the Preferred Approach consultation document set out at Policy AL13 a minimum of 1,250 dwellings at Southbourne and to be identified in the revised Southborne Neighbourhood Plan. (emphasis added)

4.13 The Submission Plan now allocates Policy A13 for 1,050 dwellings and will be established through the making of allocation(s) in the future Site Allocation DPD or the revised Southbourne NP. This strategic allocation is to act as a mixed use extension to the existing settlement.

4.14 It is acknowledged that the land north of Cooks Lane (Application number: 22/00157/REM) received Reserved Matters approval in August 2022 for 199 dwellings, with the reduction in quantum of development for the BLD reflecting this committed development. A practical effect of this is that this consent will not contribute to the wider infrastructure requirements associated with a larger scale of development.

4.15 It is disappointing to see the phrase "a minimum of" has been removed. This conflicts with the flexibility set out earlier in the consultation document, and also reduces the potential of making effective use of the land for housing that will assist in meeting the overall need of the District.

4.16 Policy A13 prescribes a number of requirements that must be met (criterion 1 – 16). These are considerations that reflect principles of place making and sustainable development and provide a sound framework for the preparation of the allocation through either mechanism.

4.17 One of these requirements states that future development "Provide[s] any required mitigation to ensure there is no adverse impact on the safety of existing or planned railway crossings." The existing Southbourne Neighbourhood Plan, at Objective 9, outlines the issues relating to the railway crossing and the plans for addressing this challenge in the future.

4.18 Related to this is the need for the provision of "suitable means of access to the site(s), securing necessary off-site improvements (including highways) ... to promote sustainable transport options."

4.19 The combination of the requirements relating to the railway crossing and the provision of a suitable means of access show the importance of accessibility to the A27, A259 and the east-west railway line, which are the principal public transport corridors for Southbourne.

4.20 Development will be well connected to Southbourne via footway and cycle connections to the east and offers the opportunity to help realise the construction of a new strategic road and bridge link over the West Coastway Rail Line through provision of land and proportionate contributions to this scheme.

4.21 Criteria 13 ensures there will be sufficient capacity within the relevant wastewater infrastructure before the delivery of development, which addresses (for Southbourne) the identified constraints for the District in relation to housing delivery.

4.22 The remaining requirements of Policy A13 cover the quality and range of development, the provision of education, community and transport facilities, provision of public open space and green infrastructure, and the impact of development on the landscape. These are each appropriate considerations for the Site Allocations DPD.

4.23 Having regard to the above, the allocation of 1,050 dwellings for Southbourne is, in part, appropriate.

4.24 However, this policy should allow for the delivery of small or medium scale parcels of land, in accordance with the NPPF at an early stage of delivery of the wider allocation to enable prompt and timely housing at Southbourne whilst infrastructure upgrades are commenced. The Local Plan should identify and allocate these smaller scale sites to ensure these can come forward early in the plan period.

4.25 A new criteria is proposed to be included in the wording of Policy A13, stating:

(17) To identify land for early delivery on small to medium scale sites which are not constrained by the need for a new railway crossing.

4.26 Therefore, the principle of a strategic allocation for mixed use housing is considered appropriate but amendments should be made to the wording of the policy to reflect the approach to flexibility, the inclusion of small and medium scale sites, and the dispersion of development to both the west and east of Southbourne.

Southbourne Neighbourhood Plan

4.27 As set out in the paragraph 10.56 of the Submission Plan, development phasing is a key issue to address through the allocation of development sites for this BLD.

4.28 Paragraph 70 of the NPPF states that "Neighbourhood planning groups should also consider the opportunities for allocating small and medium-sized sites suitable for housing in their area." Southbourne Parish Council should be aware of this when allocating the strategic sites, to ensure that there are a mix of housing sites, that could come forward sooner than the principal element of the larger strategic site.

4.29 Through the preparation of the Neighbourhood Plan, the Parish Council should take into account the allocation of smaller sites, which could come forward as part of and alongside the larger strategic site. This will ensure that there is not a delay in the provision of housing within Southbourne and the plan area.

4.30 As set out previously, the most suitable mechanism for progressing the Southbourne BLD would be the Site Allocation DPD. Whether the sites are allocated through the Site Allocations DPD or the NP, there is a requirement to identify small and medium scale site.

Land to the north of Gosden Green

4.31 The land under Hallam's control to the north of Gosden Green, should either be allocated in the Local Plan as a medium scale site or should be a key component of the BLD. The site can deliver both market/affordable residential units and specialist elderly accommodation. The site will create flexibility in achieving the housing requirement of the plan area early on in the plan period.

4.32 The accompanying Vision Document demonstrates how as an early development parcel for the wider BLD, a series of key benefits in accordance with the 13 criteria of Policy A13 will be achieved.

4.33 The Proposed Submission Plan at Policy H8 identifies the need for specialist accommodation for older people and those with specialist needs. Although not set out in the Vision Document, this site can deliver, early in the plan period, much needed specialist elderly accommodation.

4.34 Figure 3 of the Vision Document presents the scheme's ability to connect into a wider masterplan for the strategic development, as it comes forward in the future. However, at the same time has the ability to come forward at an earlier rate being physically unconstrained and a well contained parcel of land.

4.35 Figure 9 provides context on connectivity, and the modal shift this scheme aims to achieve. The ability to walk to a range of services and facilities, including the train station further demonstrates the ability for the early delivery of this parcel of the BLD.

4.36 The impact of the highways network has been assessed for both a full residential scheme and specialist elderly housing, highlighting how the residential scheme will introduce approximately 55 new vehicles to the network at peak times, resulting in less than 1 car per minute in the peak hour. Either scheme will have a negligible impact on the highway network and would have a negligible impact on A27.

4.37 The site is to the south of the railway line, as previously mentioned, and would be unconstrained by the capacity constraint of the existing railway crossing.

4.38 For these reasons, the land under Hallam's control should be allocated within the Local Plan.

5 Conclusion

5.1 These representations are submitted on behalf of Hallam Land Management Limited.

5.2 In the context of national, local and neighbourhood planning policies, the Local Plan has an important role in providing policies and proposals for residential development to meet future needs.

5.3 The proposed objectively assessed need for housing across the plan area is not agreed, and the Council should review the latest transport evidence which currently do not demonstrate how there are exception circumstances, in accordance with paragraph 62 of the NPPF. The Council should also extend the plan period to ensure it meets the requirements of a minimum of 15 years in the NPPF.

5.4 Consistent with the established strategy to focus development in the District's east-west corridor, the Broad Location for Development to Southbourne as a Settlement Hub is, as a matter of principle, a sound proposition. Importantly the Key Diagram identifies the broad location for this development to the west and east of the settlement.

5.5 As discussed, there should be flexibility embedded into all strategic allocations, in particular those which are Broad Locations for Development through the use of the wording "at least". This will ensure that the "at least" quantum of housing delivery is met and affords flexibility to all housing sites coming forward.

5.6 The responsibility for allocating additional development land to meet this requirement has been given to either the Parish Council through the preparation of a new Neighbourhood Plan or through the Council reviewing the Site Allocations DPD. It is recommended that for the larger strategic allocations and locations the Site Allocations DPD is the more suitable mechanism for identifying land given the need to ensure that proposals are sound.

5.7 Whilst the scale of development proposed is strategic in nature, it is entirely appropriate to consider how different development parcels might contribute towards that and in particular early opportunities that facilitate larger scale development later in the plan period.

5.8 To this end, land to the west of Southbourne and south of the railway line could be allocated as the first phase of the strategic site allocation, as a medium size site, so that this southern section of the new link road is built to enable access to land to the north. This will reduce the pressure placed on the centre of Southbourne, the highway capacity on the A27, and the existing railway crossing.

5.9 By allocating small to medium scale sites in the Local Plan, this will bring forward development at a quicker pace and ensure that the objectively assessed needs for housing across the plan area are met each year. These can be delivered without prejudice to the larger strategic allocations and locations.

5.10 Currently, the Submission Plan fails to address the increasing need for specialist accommodation, with Policy H8 failing to secure specific delivery of such housing, instead moving this matter into major development schemes with no mechanism for assessing need at that stage. It is recommended that the Local Plan allocates sites for specialist accommodation.

5.11 Hallam control land to the west of Southbourne, which adjoins the land at Gosden Green which has already been built. The land controlled by Hallam could be: allocated as a medium scale site within the Local Plan; included as part of the western strategic allocation of Broad Location for Development at Southbourne; or could be allocated for specialist elderly accommodation, ensuring land is readily available for development early in the plan period to address identified needs.

5.12 This would be consistent with the development strategy for the Plan and positively contribute towards meeting future development needs of the plan area.

5.13 These representations have demonstrated that in part the Submission Plan has been positively prepared and justified, however the key recommendations in these Representations should be followed to ensure the plan preparation accords with Paragraph 35 of the NPPF.

Change suggested by respondent:

Policy S1 should be amended to include and allocate small and medium scale sites and to require flexibility to the housing target.

The final paragraph of Policy S1 states that to ensure that the Plan's housing requirement is delivered, "the distribution of development may need to be flexibly applied, within the overall context of seeking to ensure that the majority of new housing is developed in accordance with this Strategy". The wording of this should be amended to state flexibility will be needed rather than may be needed, to ensure there is the ability to mitigate delays on allocations being brought forward by alternative proposals in order to meet the housing requirement over the plan period.

Object

Document Element: Policy S1 Spatial Development Strategy

Respondent: Horsham District Council (Norman Kwan, Senior Neighbourhood Planning Officer) [8126]

Summary:

Support policy in principle, but consider it is not justified as stands. Acknowledge CDC's position that it is not able to meet its entire identified local housing need of 638 dwellings per annum; welcomes that significant effort has been put into identifying development capacity in a way that reflects the principle of positive planning; support that planned growth is directed to sustainable locations where access to local services and access to transport links are easier to access than remote rural areas; acknowledge Chichester City is the most populous settlement in district as well as being most sustainable; support that growth and future development should be focussed in East-West Corridor, and in particular in or close to City; also acknowledge wider infrastructure deficiencies will need to be addressed in strategic locations before they can accommodate more growth; support continued dialogue with National Highways to support improvements to the strategic road network and note Statement of Common Ground (SoCG) will be published and updated as part of a continuous dialogue with National Highways; SoCG should transparently demonstrate why the constraints on the A27 will not allow higher growth in the East West corridor.

Full text:

Thank you for consulting Horsham District Council on the Chichester Proposed Submission Local Plan 2021-2039. We are grateful for the opportunity to be able to comment on your emerging plan. Overall, we consider that the plan has positively sought to balance the provision of future needs with other wider objectives in a manner that contributes to achieving sustainable development. I would also take the opportunity to reaffirm Horsham District Council's (HDC's) commitment to continued dialogue under the Duty to Cooperate and joint working between our two councils. We have a number of comments on the Proposed Submission Chichester Local Plan 2021 to 2039 to make on individual policies which we have set out below:

Policy S1 Spatial Development Strategy

We support this policy in principle, but consider it is not justified as stands. We note the spatial distribution in the plan period is split into three areas: East – West Corridor, the Manhood Peninsula, and North Plan area (which is the only part of Chichester district which directly adjoins Horsham district). HDC acknowledges Chichester District Council's position that it is not able to meet its entire identified local housing need of 638 dwellings per annum, given the constraints associated with the required upgrades to the strategic road network in order to facilitate growth, potential environmental constraints and wider infrastructure restrictions. It is understood that National Highways requires a cap on growth due to the limited capacity of the A27. The proposed housing supply target is therefore 575 dwellings per annum.

HDC acknowledges and welcomes that significant effort has been put into identifying development capacity in a way that reflects the principle of positive planning. Nevertheless, the NPPF and PPG set a high bar for 'leaving no stone unturned' in respect of meeting development needs. We support that planned growth is directed to sustainable locations where access to local services and access to transport links are easier to access than remote rural areas. It is acknowledged Chichester City is the most populous settlement in the district as well as being most sustainable. We support that growth and future development should be focussed in the East-West Corridor, and in particular in or close to the City, first and foremost. We also acknowledge wider infrastructure deficiencies will need to be addressed in strategic locations before they can accommodate more growth.

We support your continued dialogue with National Highways to support improvements to the strategic road network and note a Statement of Common Ground (SoCG) will be published and updated as part of a continuous dialogue with National Highways. The SoCG is important as part of the justification for a lower housing supply figure and should transparently demonstrate why the constraints on the A27 will not allow higher growth in the East West corridor, in order to evidence that maximum housing needs have been achieved in the City and East West Corridor. This evidence is needed for HDC to inform its own DtC position with Chichester District Council (CDC).

Chichester District is planning below the standard methodology housing target and has therefore asked HDC if it can accommodate some of Chichester's unmet housing need. HDC has confirmed that we are not in a position to accommodate Chichester's unmet development needs because of our own water neutrality constraint. Furthermore, the primary housing market for Horsham District is the Northern West Sussex HMA, whose development needs are substantially driven by the Gatwick sub-region, and it is this HMA that would be prioritised with respect to meeting unmet development needs.

As a partner in the Sussex North Water Neutrality grouping also impacted by this constraint, CDC jointly owns the relevant evidence, and our two authorities share an ongoing commitment to work on this as our Duty to Cooperate dialogue continues. As ever, the latest position with regards to Water Neutrality and the impact on the delivery of housing and other development needs can be set out in a Statement of Common Ground (SoCG) between our two Councils.

Policy NE16 Water Management and Water Quality

We support this policy which is clear in its encouragement of efficient use of water as part of good management framework.

Policy NE17 Water Neutrality

Water neutrality is a significant issue affecting both our districts. Horsham District Council supports this policy which is derived from the joint work undertaken by Chichester District Council, Horsham District Council and Crawley Borough Council. We look forward to continued working with CDC on the development of the implementation scheme, in order to deliver the JBA Water Neutrality Assessment study. This will ensure all new development is in conformity with the Habitat Regulations and can demonstrate water neutrality.

Policy H1 Meeting Housing Needs

As outlined earlier in this response, we acknowledge that land supply in Chichester is constrained, and that CDC meeting the full housing requirement within its administrative boundary during the plan period up to 2039 would be challenging. Horsham District is not however in a position to accommodate any of Chichester District's unmet housing need because of water neutrality and, looking forward, the need to prioritise meeting unmet needs within our primary housing market: the Northern West Sussex HMA.

Policy H2 Strategic Locations/Allocations 2021 -2039

A significant proportion of CDC's housing supply will be delivered through strategic allocations. Loxwood (220 dwellings) is identified as a strategic allocation and will come forward through the local plan process, with some allocations anticipated to be delivered through local neighbourhood plans. Given the challenges that face Neighbourhood Planning groups in the preparation and delivery of Neighbourhood Plans, (which can potentially delay the delivery of these allocations), we support the identification of strategic sites in the Local Plan, programmed for delivery earlier in the plan period.

As the delivery of strategic allocations requires significant infrastructure planning, including cross-boundary issues relating to the road network, education, healthcare and community facilities, Horsham District Council welcomes continued dialogue with the relevant stakeholders, to ensure development at strategic locations such as Loxwood are delivered in a timely manner and adhere to sustainable development principles. We have some specific concerns relating to strategic allocation policy A15: Loxwood which we have set out under that policy.

Policy H11 Meeting Gypsies, Travellers and Travelling Showpeople's Need.

We note your position and your requirement to provide a number of pitches and plots for the travelling community during plan period. We support your policy position for intensification of existing pitches. Horsham District can't at this point in time accommodate any of CDC's unmet Gypsy, Traveller and Travelling Show people requirement as we are required to first address our own shortfall, and our evidence demonstrates that this alone will be challenging.

We have a body of evidence to support our position and we will continue to share our evidence with you as our Duty to Cooperate dialogue continues over the coming months. As ever, the latest position regarding Gypsy, Traveller and Travelling Showpeople will be set out in the Duty to Cooperate Statement of Common Ground between our two Councils.

Policy A15 Loxwood

We support this policy as it will contribute to meeting Chichester District's unmet housing need, but consider it is not justified as stands and that its effectiveness could be improved. The five villages in the north of the Plan area (Kirdford, Wisborough Green, Loxwood, Ifold and Plaistow) are classified as Service Villages in the emerging Chichester Local Plan. They provide a reasonable range of basic facilities (e.g. primary school, convenience store and post office) to meet the everyday needs of local residents, or are villages that provide fewer of these facilities but that have reasonable access to them in nearby settlements. Loxwood is the strategic site identified to accommodate 220 dwellings over the plan period.

The nearby settlement of Billingshurst, in Horsham District, is considered to be the nearest main settlement to the villages identified above. Given the limited facilities available / or to be provided as part of the Loxwood allocation, it is considered that new residents are likely to be reliant at least some key facilities in Billingshurst, potentially including the GP surgery, the railway station (and rail user car park), The Weald secondary school and sixth form, the library and the retail and community facilities, including the leisure centre. Within Horsham District, there are potential proposals for strategic scale extensions to Billingshurst / new settlements relatively close to Billingshurst. Whilst no decisions have been made with respect to our local plan, housing growth delivered through our own local plan will create potential impacts on existing infrastructure which is already under significant pressure. We therefore require clear evidence that potential cumulative impacts on settlements in HDC have been considered as part of the proposed allocations. We would ask that CDC works collaboratively with HDC and other stakeholders to ensure future pressures on infrastructure in Horsham District is appropriately addressed. Consequently, we seek further clarification in Policy A15: Loxwood to emphasise the importance of collaborative working between stakeholders to mitigate against the potential cumulative impact of development.

I do hope these comments are helpful. I would like to emphasise that they are made in anticipation of further constructive dialogue between our authorities, and with an expectation that matters on which we have flagged concern can be readily addressed, and quite possibly eliminated through our Duty to Cooperate discussions. Should you require any further detail or information in regard to this response please don't hesitate to contact a member of my Strategic Planning team.

1 Introduction

1.1 This representation provides a response to the Regulation 19: Local Plan Consultation on behalf of our client Landacre (Chichester) Limited. The submission covers the general principles of the Local Plan, but has a focus on land at New Bridge Farm, Clay Lane Chichester, which is in our client's control. The land is shown on the attached context plan (land outlined in purple) included at Appendix 1 and hereon referred to as the site.

1.2 This representation will provide a written responses in relation to the Regulation 19 Local Plan Consultation which directly relate to the promotion of our client's land for future development.

2 Comments on Specific Questions/Tests

2.1 In response to the national planning legislation, this Regulation 19 Local Plan Consultation invites comments on three specific questions, and is the final consultation phase, before the Regulation 19 version of the Local Plan is submitted for Examination.

2.2 This representation will respond on these specific questions, and then highlight how our client's site could help fulfil the full housing requirement for the District. This could be through an allocation within the Council's Local Plan, or at least through an allocation of numbers to the Parish, who in turn would select sites through a Neighbourhood Plan allocation.

Is the plan 'sound'?

2.3 Paragraph 35 of the National Planning Policy Framework defines the tests for soundness which requires the plan to be positively prepared, justified, effective and consistent with National Policy. These matters will now be considered in further detail in relation to the current consultation on the Regulation 19 version of the Local Plan.

Is the plan positively prepared and justified?

2.4 Policy S1 of the Draft Local Plan sets out the spatial development strategy for the District and how the Council will achieve sustainable growth over the plan period. Policy H1 sets out the housing target in response to the strategy. Both policies have been informed by the Sustainability Appraisal (SA) dated January 2023 and the Plan objectives, which are set out at paragraph 2.5.2 of the SA and the Council's HEDNA (April 2022).

2.5 The SA then goes on to discuss the potential growth scenarios and confirms two points:

☒ Standard method housing figure for Chichester (excluding SDNP) is 638 dwellings per annum, or 11,484 in total over the Plan period

☒ The above figure is capped at 40% above the baseline need and that the uncapped figure is significantly higher than this at 884 dwellings per annum (dpa)

2.6 Of particular note is that point ii. seeks to cap the overall housing increase by no more than 40% above the previously adopted LP housing figure of 435 dpa. The Local Plan then goes on to constrain housing numbers due to an alleged capacity concern along the A27 strategic road network. The Council therefore result in a constrained housing figure by virtue of the standard method 'steps' and also due to infrastructure capacity.

2.7 It should be noted that the 435 dpa figure within the 2015 Local Plan was similarly constrained and an early review was the only basis for accepting this reduced housing figure. This early review did not take place.

2.8 In terms of the influence of the A27, this is the key matter that constrains growth within the southern part of the District. This is based on the Transport Study (2023) which concludes that the road network cannot accommodate an annual housing figure of more than 535 dpa. This is a fundamental point and one that our client do not agree and believe there is capacity to accommodate at least the local housing need within the highway network, alongside potential improvements identified for the following reason.

2.9 The Transport Study (January 2023) is the key document on which the Council rely upon to constrain their housing figure to 535 dpa. On review of this document, it is clear that the Council's consultants undertook a sensitivity analysis as to whether the core scenario that supports the 535 dpa position in the local plan could accommodate a higher level of growth. The conclusion in paragraph 5.6.5 and 11.2.3 of the Transport Study appears to be that 700 dpa could be accommodated (in the southern plan area) by the mitigation proposed for the 535 dpa, with some additional (as yet undesigned and not costed), mitigation works beyond those highlighted for the Bognor and Fishbourne roundabouts. The absence of consideration of additional improvements works appears to be a significant oversight in the preparation of the Transport Study and overall plan making.

2.10 Accordingly, the Council's own evidence base has undertaken the assessment and concluded that a higher growth figure could be accommodated on the A27, subject to appropriate improvement works. Given the testing of the higher growth figure in Transport Study, the exceptional circumstances to constrain growth, as set out at paragraph 60 on the NPPF, do not appear to exist and the Plan could be considered unsound on this point alone.

2.11 As a result of the above, the SA does not consider a scenario where the Council would meet its local housing need, nor a scenario where it exceeds its local housing need, which is of relevance given scale of development expected for adjoining authorities, including the highly constrained SDNP.

2.12 It should also be noted that the draft Plan does not therefore address any requirements in relation to unmet housing need of neighbouring authorities. Nor does it contain evidence to suggest that these matters have been discussed with the adjoining Authorities. Notably, Arun District Council have confirmed that they will be objecting to the Plan and currently proposed on the basis that they have a significant housing need themselves. This is likely to be further influenced by unmet need from Chichester, who again are seeking to constrain housing requirements, which was the case in 2015. The subsequent knock on from that was for Arun to address some of that need in their 2018 Local Plan.

2.13 Given that our client does not accept that the A27 capacity matters present a ceiling in terms of housing delivery (based on the Council's Transport Study comments and that of its own consultants), it is not accepted that the Plan and associated SA demonstrates reasonable alternatives have been considered and it is not therefore positively prepared, nor is their approach to housing figures justified.

Effective?

2.14 On the basis of the 535 dpa figure, it is considered that the selected areas for growth and figures are deliverable over the Plan period, however, as set out above, the plan area could accommodate a greater level of growth.

2.15 It should also be noted that the plan does rely on the delivery of Neighbourhood Plan and / or Small site allocations DPD. This is set out under Policy H3 in the draft document. This states the following in terms of delivery:

If draft neighbourhood plans making provision for at least the minimum housing numbers of the relevant area have not made demonstrable progress the council will allocate sites for development within a development plan document in order to meet the requirements of this Local Plan.

2.16 The above is not precise and does provide any clear timetable for delivery within the Plan period. Whilst my comments are noted above that the Plan could be effective, the Local Plan needs to give a clear timescale for completion of the supplementary Development Plan documents in order to give a clear timescale for this to be completed.

Is the plan consistent with National Policy?

2.17 On the basis of the comments above, the approach to selected sites for allocation based on the 535 dpa figure is considered to be consistent, however, due to the lack of evidence to demonstrate that the 535 dpa figure should be capped due to the A27 capacity points raised, the draft Plan does not appear to meet the exceptional circumstances allowed for at paragraph 61 of the NPPF to justify their alternative approach. The Plan as proposed is therefore inconsistent with NPPF when read as a whole.

3 Development in Chichester City

3.1 Our clients land is located within Chichester City on land north of Clay Lane. The draft Local Plan sets out that the city of Chichester is the main settlement with a population of around 29,193(4) and is the principal location for the provision of higher education and shopping facilities. The city is renowned for its cathedral, its historic heritage and university and is the largest centre of employment in the plan area. The Plan goes on to state that most new development will be well located in and around the main settlements of Chichester, together with Tangmere and Southbourne.

3.2 As would be expected, the Local Plan allocates a significant proportion of housing to the city, which includes a site specific allocation of 1,600 homes to the west of Chichester under Policy A6 (part of current Local Plan allocations), 680 homes to the east under Policy A10, 500 homes to Westhampnett and 585 homes at Shopwyke Lakes. A further allocation of housing numbers for 270 homes under Policy A2 are proposed for Chichester City to be delivered as part of a Neighbourhood Plan for the area site allocations DPD.

3.3 The proposed 270 home allocation should comprise a minimum figure, which for the reasons set out above in relation to the A27 would be feasible. It should also set out that the Council should consider a mix of both city centre and edge of city sites to ensure a mix of house types and sizes, with town centre more likely to comprise flats and edge of settlement a mix of 1-4 bedroom homes, which will include family homes.

3.4 Our position on the approach to further allocations and the need for clear timescales to ensure soundness of the Plan is set out at 2.13-2.16 above.

4 Suitability of land New Bridge Farm, Clay Lane, Chichester

4.1 The site covers an area of approximately 3.1 hectares and located to the North-East of Fishbourne. The site comprises of an open field, bordered by mature foliage and fencing. The site is reasonably flat. The frontage is on the Southern boundary of the application site, which benefits from access to Clay Lane. It could be suitable for a quantum of development between 50-70 dwellings.

4.2 Access to the site is via an existing agricultural access from Clay Lane, which adjoins the southernmost corner of the site. The potential means of access has been the subject of a formal pre-application enquiry with WSCC as highway authority. This confirmed that a suitable means of access could be achieved for circa 70 dwellings.
