Object

Document Element: Policy P15 Open Space, Sport and Recreation**Respondent:** Home Builders Federation (Mr Mark Behrendt, Local Plans Manager SE and E) [7316]**Summary:**

Lack of clarity within supporting text and policy with regard to what is required in terms of indoor sports facilities. Table 6.4 does not provide any reference to development thresholds nor hectares per 1,000 population. The requirements appear to be general standards for all communities rather than relating to specific development. Unclear to a decision maker or applicant as to what is required in terms of built sport and recreation facilities. Provision of on-site built sport and recreation facilities will only be relevant in very few circumstances with improvements in provision largely being provided by the Council using the Community Infrastructure Levy or other financial contributions.

Full text:

See attachment.

Change suggested by respondent:

Recommend that reference to the provision of indoor facilities is removed from this policy. If onsite facilities are required, this should be agreed with the site promoter and set out in the site allocation.

Document Element: Policy P15 Open Space, Sport and Recreation**Respondent:** Metis Homes [1602]**Agent:** Nova Planning (Mr Patrick Barry, Director) [1195]**Summary:**

Policy lacks clarity in terms of thresholds for provision of built facilities. Requirements set on generic basis with paragraph 6.85 referencing Open Space, Sport and Recreation Study (2018) as relevant evidence. Paragraph 6.96 refers to future area-based policies in the subsequent Allocations DPD and SPD. Evidence out-of-date. Policy will apply to all residential development and logically be dealt with through CIL for smaller development where on-site provision impractical. Lack of evidence supporting policy means request for contributions would fail CIL Reg 122 and Paragraph 57 of NPPF. Outdated generic policy approach alongside area based approach clearly inconsistent. No threshold for built facilities whilst policy requires provision. Unclear what is required in terms of built sport and recreation facilities.

Document Element: Policy P15 Open Space, Sport and Recreation**Respondent:** Natural England (Luke Hasler, Senior Advisor) [8189]**Summary:**

Natural England supports this policy which includes provision to improve the GI network and protect existing by ensuring no adverse impacts on biodiversity, heritage assets or the integrity of the GI network (NPPF para 179)

Full text:

Summary of advice

While we have raised some queries and recommended some further modifications to certain policies we do not find the Plan unsound on any grounds relating to our remit.

Natural England has reviewed the Proposed Submission Local Plan and accompanying appendices together with the Habitats Regulations Assessment (HRA) and Sustainability Appraisal (SA). Our detailed comments on the policies and site allocations are provided as follows:

- Annex 1 - Chapter 2 – Vision and Strategic Objectives
- Annex 2 - Chapter 4 – Climate Change and the Natural Environment
- Annex 3 - Chapter 5 (Housing) and Chapter 6 – (Place-making, Health and Well-being)
- Annex 4 - Chapter 7 (Employment and Economy) and Chapter 8 (Transport and Accessibility)

- Annex 5 - Chapter 10 – Strategic and Area Based Policies

Please note that we have not provided comments on all policies but those which have most influence on environmental issues. Natural England has no comment to make on the policies not covered in this response. Other than confirming that we have referred to it when considering our advice on specific policies and site allocations Natural England has no general comments to make on the SA.

Unfortunately due to unforeseen resourcing issues while we have reviewed the associated HRA we are not in a position to provide detailed comment on it as part of this response. We will rectify this as soon as possible and can confirm that we have seen nothing in it that raises any major concerns.

The Plan has many positive aspects including standalone policies on Green Infrastructure (GI) and wildlife corridors and an incredibly extensive suite of natural environment policies more generally.

We are hugely appreciative of the opportunity that we were given to work with you on shaping key policies post-Regulation 18. However, we believe that the plan needs to go further in its recognition of coastal squeeze as a key issue for the district, should include policy hooks for the forthcoming Local Nature Recovery Strategy (LNRS) and make up to date references to both the Environment Act (2021) and the Environmental Improvement Plan (EIP, 2023). Given how recent the publication of the EIP is we would be happy to discuss with your authority how this could best be achieved but we believe given the wealth of natural capital within Chichester District it is vitally important that this latest iteration of the Local Plan is set in its full policy and legislative context.

We have suggested a significant number of amendments and additions to both policies and supporting text throughout the Plan. In our view these could all be taken forward as minor modifications but if they were all acted upon they would leave the Plan much stronger and more coherent in delivering for the natural environment, one of the three central tenets of genuinely sustainable development as set out in the National Planning Policy Framework (NPPF 2021, paragraph 8c).

Document Element: Policy P16 Health and Well-being**Respondent:** National Highways (Mr Marius Pieters, Spatial Planning Manager) [8127]**Summary:**

[National Highways letter dated 24/07/23 confirmed representation should be categorised as Comment - Supporting measures to reduce demand.] National Highways support proposals that are safe and connected to existing and future routes that are of the same standard of infrastructure, or better, to enable cycling and walking for local trips to reduce impacts on the A27. This is an important measure to reduce demand on the A27.

Full text:

We have reviewed the publicly available Local Plan documents and provided comments in the attached letter, in relation to the transport implications of the plan for the safety and operation of the SRN.

Our comments include issues to resolve, comments, requests for further information and recommendations. A brief summary of our main comments are:

- the reliance on the delivery of the A27 Chichester bypass improvements project.
- the requirements for new, additional, and adapted processes and assessments, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments.
- collaborative working between agencies in combination with a robust monitor and manage policy.

We hope our comments assist.

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders. We look forward to continuing to participate in future consultations and discussions.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Background

National Highways has been appointed by the Secretary of State for Transport as strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the strategic road network (SRN).

National Highways is responsible for operating, maintaining, and improving the Strategic Road Network (SRN) i.e., the Trunk Road and Motorway Network in England, as laid down in Department for Transport (DfT) Circular 01/2022 (Strategic Road Network and the delivery of sustainable development).

The SRN is a critical national asset and as such we work to ensure that it operates and is managed in the public interest, both in respect of current activities and needs as well as in providing effective stewardship of its long-term operation and integrity.

Our responses to Local Plan consultations are guided by relevant policy and guidance including the National Planning Policy Framework (2021) (NPPF):

- Transport issues should be considered from the earliest stages of plan-making and development proposals so that the potential impact of development on transport networks can be addressed (para 104).
- The planning system should actively manage patterns of growth such that significant development is focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. (para 105).
- Planning policies should be prepared with the active involvement of highways authorities and other transport infrastructure providers so that strategies and investments for supporting sustainable transport and development patterns are aligned. (para 106).
- In terms of identifying the necessity of transport infrastructure, NPPF confirms that development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe. (para 111).
- Planning policies and decisions should support development that makes efficient use of land, taking into account the availability and capacity of infrastructure and services – both existing and proposed – as well as their potential for further improvement and the scope to promote sustainable travel modes that limit future car use. (para 124).

In relation to the tests of soundness set out at paragraph 35 of the NPPF, in the context of transport, these are interpreted as meaning:

- a) Positively prepared - has the transport strategy been prepared with the active involvement of the highway authorities, other transport infrastructure providers and operators and neighbouring councils?
- b) Justified – Is the transport strategy based on a robust evidence base prepared with the agreement in partnership, or with the support of the highway authorities?
- c) Effective – Does the transport strategy and policy satisfy the transport needs of the plan and is it deliverable at a pace which provides for and accommodates the proposed progress and implementation of the plan?
- d) Consistent with national policy – Does the transport strategy support the economic, social, and environmental objectives of the Plan and the NPPF/NPPG?

We will be concerned with proposals that have the potential to impact on the safe and efficient operation of the SRN; in this case, the A27 trunk road (Chichester Bypass and its junctions) which is the main access route in the Chichester area. We have particular interest in any allocation, policy or proposals which could have implications for the A27 and the wider SRN network. We are interested as to whether there would be any adverse road safety or operational implications for the SRN. The latter would include a material increase in queueing or delay or reduction in journey time reliability during the construction or operation of the development set out in the plan.

National Highways is a key delivery partner for sustainable development promoted through the plan-led system, and as a statutory consultee we have a duty to cooperate with local authorities to support the preparation and implementation of development plan documents.

In accordance with national planning and transport policy and our operating licence, we are entirely neutral on the principle of development as it is for the local planning authority to determine whether development should be allocated or permitted; albeit it must comply with national policy on locating development in locations that are or can be made sustainable. Therefore, while always seeking early and fulsome engagement with local plans and/or developers, we will simply be assessing the transport and related implications of plans or proposals and agreeing any necessary transport improvements and relevant development management policy.

In progressing Local Plans, we will seek to agree the following:

- Assessment tools and methodology
- Baseline Assessment i.e., to demonstrate that the assessment tool accurately reflects current transport conditions
- Comparator case assessment i.e., to forecast the transport conditions that would occur in the absence of the plan
- Forecast modelling i.e., to forecast the transport conditions that would arise with the plan in place, this will include an assessment at the end of the Plan period; and, if required, at full build out if that occurs after the end of the Plan period
- Outputs and outcomes of modelling, demonstrating, as appropriate, what transport infrastructure is necessary to support the plan o It should be noted that a suite of transport modelling tools may be required. This includes strategic modelling covering an area at least one major junction beyond the district boundary, localised network modelling where several links/junctions are close together and/or individual junction modelling
 - o A DMRB (Design Manual for Roads and Bridges) compliancy assessment may also be required for certain highway features, such as
 - o Merge/Diverge assessment at Grade separated junctions, link capacity assessments, and others.
- The design of any necessary transport infrastructure, to an extent suitable for establishing deliverability during the plan period at the time that it becomes necessary for the purpose of ensuring that unacceptable road safety impacts or severe operational impacts do not arise as a result of development. This may be to at least General Arrangement design

stage or preliminary design stage. Whichever degree of detail is agreed, the products must be in full compliance with the DMRB.

- Industry standard transport intervention costings.
- The delivery/funding mechanisms for necessary transport interventions. It should not be assumed that National Highways will have any responsibility to identify or deliver necessary transport interventions.
- If considered appropriate, a "Monitor & Manage" (M&M) framework, aimed at managing the pace of development in line with the pace of funding and delivery of necessary highway interventions in a manner which responds to the realworld impacts of development may be agreed for inclusion in the plan subject to the adequacy of risk control measures included therein. This can include the move from a 'predict & provide' style of delivery to 'a vision & validate' style.
 - o Any M&M framework must be based on a "worst case scenario" whereby necessary mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. It must be translated into development management plan policy and policy relating to development allocations.

Further detail on the above can be provided by National Highways.

While ideally all the above should be agreed prior to the Submission of the Local Plan for examination, we recognise that this is not always possible. However, all parties should work towards all matters being agreed and reflected in a Statement of Common Ground (SoCG) by the start of the Local Plan Examination at the latest. Ideally the SoCG between the Council and National Highways would be prepared well in advance of plan submission in order to guide resource input and to track progress towards final agreement on all relevant matters starting from the earliest plan iterations until the final version is agreed.

It is acknowledged that Government policy places much emphasis on housing delivery as a means for ensuring economic growth and addressing the current national shortage of housing. The NPPF is very clear that: "Strategic policy-making authorities should establish a housing requirement figure for their whole area, which shows the extent to which their identified housing need (and any needs that cannot be met within neighbouring areas) can be met over the plan period."

However, new DfT C1/22 and the NPPF are equally clear that any development, including housing delivery, must be tempered by the requirement to ensure that the associated transport demand can be accommodated without unacceptable impacts on the safety of the SRN or severe impacts on the operation of the SRN including reliability and congestion. Therefore, as necessary and appropriate, any plan and/or development must be accompanied by suitable mitigation in the right places at the right time, that is to the required design standards and is deliverable in terms of land availability, constructability and funding.

We would also draw your attention to the then Highways England document 'The Strategic Road Network, Planning for the Future: A guide to working with National Highways on planning matters' (September 2015). This document sets out how National Highways intends to work with local planning authorities and developers to support the preparation of sound documents which enable the delivery of sustainable development. https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_t_data/file/461023/N150227_-_Highways_England_Planning_Document_FINAL-lo.pdf

Responses to Local Plan consultations are also guided by National Planning Policy Framework (NPPF) revised on 20 July 2021 which sets out the government's planning policies for England and how these are expected to be applied.

Updated Circular (01/2022)

It should be noted that since the start of the Local Plan consultation process, on the 23 December 2022, the Department for Transport released a new circular on the 'Strategic road network and the delivery of sustainable development' (Circular 01/2022), which replaces all of the policies in Circular 02/2013 of the same name. These representations take account of the new circular and the requirements in terms of the Local Plan evidence base and process.

We request that the Local Plan is prepared in line with all aspects of the new circular. Particularly, the principles of sustainable development (paragraphs 11 to 17), new connections and capacity enhancements (paragraphs 18 to 25), and engagement with plan-making (paragraphs 26 to 38).

Regulation 18 submission

In our Regulation 18 submission we noted several matters including:

- The need to mitigate the adverse impacts of strategic development traffic to the A27 Chichester Bypass and its junctions at Portfield Roundabout, Bognor Road Roundabout, Whyke Roundabout, Stockbridge Roundabout and Fishbourne Roundabout and Oving junction.
- The need to identify a mechanism to calculate contributions towards the delivery of the previously agreed Local Plan A27 improvements
- The need to confirm the number of dwellings needed within the plan period
- The need to establish National Highways acceptance of the traffic model reference and future case scenarios
- The need to confirm costs, viability, and funding associated with mitigating the safety and congestion impacts of the development included within the plan.

Local Plan context

This Local Plan (Chichester Local Plan 2021 – 2039), prepared by the Local Planning Authority (LPA) Chichester District Council, sets out the vision for future development in the district and will be used to help decide on planning applications and other planning related decisions including shaping infrastructure investments.

The draft sets out how the district should be developed over the next 18-years to 2039 including for the full Plan period (1 April 2021 to 31 March 2039) the total supply of

- 10,359 dwellings

- 114,652 net additional sqm new floorspace

Minus the completions this is equivalent to around 530 dwellings and 6,150 sqm of floorspace a year.

National Highways Representations

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders.

We have undertaken a review of the Chichester Local Plan 2021-2039 proposed submission version and accompanying evidence documents, our comments are set out in the tables below (following pages). [see table within attachment]

Summary

We have reviewed the publicly available Local Plan documents and provided comments above in relation to the transport implications of the plan for the safety and operation of the SRN. We understand that other technical information is available, but this was not presented as part of this consultation.

Chichester, and the A27, are already heavily congested, infrastructure in the existing Local Plan remains undelivered and the growth set out in the new Plan will further increase travel demand.

As presented, satisfying the transport needs of the plan is clearly reliant on the delivery of the A27 Chichester bypass improvements project. The A27 Chichester bypass improvements project is one of 32 pipeline schemes being considered for possible inclusion in National Highways third Road Investment Strategy (RIS3) covering 1 April 2025 to 31 March 2030.

On 9 March 2023 the UK Transport Secretary ensured record funding would be invested in the country's transport network, sustainably driving growth across the country while managing the pressures of inflation. The announcement cited the A27 Arundel Bypass as being deferred from RIS2 to RIS 3 (covering 2025-2030). The transport secretary also identified a number of challenges to the delivery of the road investment strategy and cited the benefit of allowing extra time to ensure schemes are better planned and efficient schemes can be deployed more effectively.

At present, there is no commitment by DfT to carry out the A27 Chichester bypass improvements project. Until the A27 Chichester bypass improvements project is published in the RIS3, consented and a decision to invest is made it cannot be assumed to be a committed project.

We note that the Plan does not address any uncertainty of delivery of the A27 Chichester bypass improvements project and we strongly recommend that there is either no reliance placed on RIS3 to realise capacity for growth in the Plan or that contingency measures are included to cover the eventuality that RIS3 funding is not forthcoming within the plan period. It is not clear that the potential impact of development on transport networks can be addressed in the absence of the A27 Chichester bypass improvements project.

Achieving net zero, reducing emissions reduction, acting on climate, and supporting thousands of new homes and new employment developments will be problematic with existing processes. New, additional, and adapted processes and assessments will likely be required, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments. We acknowledge that change is complex, expensive, and time-consuming, especially for smaller district level Councils. But the hard work will deliver benefits for the Council and residents in the longer-term.

National Highways seeks to continue working with the Council and WSCC to progress coordinated and deliverable packages of interim mitigation measures and alternative transport solutions while a long-term strategic solution is considered by government. This must however be in combination with a robust monitor and manage policy that appropriately manages the risk of unacceptable road impacts resulting from new housing and other development over the Plan period.

We have been in discussion with Chichester District Council regarding their proposed Monitor and Manage Strategy. At present, we do not consider the current strategy to be robust and we seek further information and detail especially on who, when and when monitoring and management will be undertaken. Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas. Any M&M framework must be based on a "worst case scenario" whereby necessary transport mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. The M&M framework must set out that the alternative to mitigation not being delivered is that development does not proceed where that development would give rise to unacceptable road safety risk or severe cumulative impacts on the road network in the absence of that mitigation. The M&M framework must be translated into development management plan policy and policy relating to development allocations.

As we have reiterated throughout our comments, we welcome the opportunity to work with you to address these

outstanding matters and we will continue to liaise over submitted Transport Assessment, Travel Plan policy and Monitor and Manage Policy to help to work towards a viable plan.

We hope our comments assist.

We look forward to continuing to participate in future consultations and discussions. Please do continue to consult us as the Plan progresses so that we can remain aware of, and comment as required on, its contents.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Document Element: Policy P16 Health and Well-being**Respondent:** Natural England (Luke Hasler, Senior Advisor) [8189]**Summary:**

Natural England supports this policy which includes promotion of multi-functional GI and active travel networks (NPPF para 92).

Full text:

Summary of advice

While we have raised some queries and recommended some further modifications to certain policies we do not find the Plan unsound on any grounds relating to our remit.

Natural England has reviewed the Proposed Submission Local Plan and accompanying appendices together with the Habitats Regulations Assessment (HRA) and Sustainability Appraisal (SA). Our detailed comments on the policies and site allocations are provided as follows:

- Annex 1 - Chapter 2 – Vision and Strategic Objectives
- Annex 2 - Chapter 4 – Climate Change and the Natural Environment
- Annex 3 - Chapter 5 (Housing) and Chapter 6 – (Place-making, Health and Well-being)
- Annex 4 - Chapter 7 (Employment and Economy) and Chapter 8 (Transport and Accessibility)

- Annex 5 - Chapter 10 – Strategic and Area Based Policies

Please note that we have not provided comments on all policies but those which have most influence on environmental issues. Natural England has no comment to make on the policies not covered in this response. Other than confirming that we have referred to it when considering our advice on specific policies and site allocations Natural England has no general comments to make on the SA.

Unfortunately due to unforeseen resourcing issues while we have reviewed the associated HRA we are not in a position to provide detailed comment on it as part of this response. We will rectify this as soon as possible and can confirm that we have seen nothing in it that raises any major concerns.

The Plan has many positive aspects including standalone policies on Green Infrastructure (GI) and wildlife corridors and an incredibly extensive suite of natural environment policies more generally.

We are hugely appreciative of the opportunity that we were given to work with you on shaping key policies post-Regulation 18. However, we believe that the plan needs to go further in its recognition of coastal squeeze as a key issue for the district, should include policy hooks for the forthcoming Local Nature Recovery Strategy (LNRS) and make up to date references to both the Environment Act (2021) and the Environmental Improvement Plan (EIP, 2023). Given how recent the publication of the EIP is we would be happy to discuss with your authority how this could best be achieved but we believe given the wealth of natural capital within Chichester District it is vitally important that this latest iteration of the Local Plan is set in its full policy and legislative context.

We have suggested a significant number of amendments and additions to both policies and supporting text throughout the Plan. In our view these could all be taken forward as minor modifications but if they were all acted upon they would leave the Plan much stronger and more coherent in delivering for the natural environment, one of the three central tenets of genuinely sustainable development as set out in the National Planning Policy Framework (NPPF 2021, paragraph 8c).

Document Element: Policy P17 New and Existing Local and Community Facilities including Local Shops**Respondent:** National Highways (Mr Marius Pieters, Spatial Planning Manager) [8127]**Summary:**

[National Highways letter dated 24/07/23 confirmed representation should be categorised as Issues to resolve.] We can't assume that only housing and employment sites generate trips. Every trip has an origin and a destination. Furthermore, trip attractors and diversions to key destinations need to be considered.

Community Facilities such as medical centres, social classes in community run facilities, community childcare venues e.g., creche/toddler groups and libraries are busy in the am and pm peak and the offpeak. Realistically people are typically unlikely to walk or cycle to a medical appointment or to a childcare group.

We seek further information on how the Council intends to assess how new or improved community facilities will demonstrate they have no adverse traffic generation effects.

Full text:

We have reviewed the publicly available Local Plan documents and provided comments in the attached letter, in relation to the transport implications of the plan for the safety and operation of the SRN.

Our comments include issues to resolve, comments, requests for further information and recommendations. A brief summary of our main comments are:

- the reliance on the delivery of the A27 Chichester bypass improvements project.
- the requirements for new, additional, and adapted processes and assessments, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments.
- collaborative working between agencies in combination with a robust monitor and manage policy.

We hope our comments assist.

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders. We look forward to continuing to participate in future consultations and discussions.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Background

National Highways has been appointed by the Secretary of State for Transport as strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the strategic road network (SRN).

National Highways is responsible for operating, maintaining, and improving the Strategic Road Network (SRN) i.e., the Trunk Road and Motorway Network in England, as laid down in Department for Transport (DfT) Circular 01/2022 (Strategic Road Network and the delivery of sustainable development).

The SRN is a critical national asset and as such we work to ensure that it operates and is managed in the public interest, both in respect of current activities and needs as well as in providing effective stewardship of its long-term operation and integrity.

Our responses to Local Plan consultations are guided by relevant policy and guidance including the National Planning Policy Framework (2021) (NPPF):

- Transport issues should be considered from the earliest stages of plan-making and development proposals so that the potential impact of development on transport networks can be addressed (para 104).
- The planning system should actively manage patterns of growth such that significant development is focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. (para 105).
- Planning policies should be prepared with the active involvement of highways authorities and other transport infrastructure providers so that strategies and investments for supporting sustainable transport and development patterns are aligned. (para 106).
- In terms of identifying the necessity of transport infrastructure, NPPF confirms that development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe. (para 111).
- Planning policies and decisions should support development that makes efficient use of land, taking into account the availability and capacity of infrastructure and services – both existing and proposed – as well as their potential for further improvement and the scope to promote sustainable travel modes that limit future car use. (para 124).

In relation to the tests of soundness set out at paragraph 35 of the NPPF, in the context of transport, these are interpreted as meaning:

- a) Positively prepared - has the transport strategy been prepared with the active involvement of the highway authorities, other transport infrastructure providers and operators and neighbouring councils?
- b) Justified – Is the transport strategy based on a robust evidence base prepared with the agreement in partnership, or with the support of the highway authorities?
- c) Effective – Does the transport strategy and policy satisfy the transport needs of the plan and is it deliverable at a pace which provides for and accommodates the proposed progress and implementation of the plan?
- d) Consistent with national policy – Does the transport strategy support the economic, social, and environmental objectives of the Plan and the NPPF/NPPG?

We will be concerned with proposals that have the potential to impact on the safe and efficient operation of the SRN; in this case, the A27 trunk road (Chichester Bypass and its junctions) which is the main access route in the Chichester area. We have particular interest in any allocation, policy or proposals which could have implications for the A27 and the wider SRN network. We are interested as to whether there would be any adverse road safety or operational implications for the SRN. The latter would include a material increase in queueing or delay or reduction in journey time reliability during the construction or operation of the development set out in the plan.

National Highways is a key delivery partner for sustainable development promoted through the plan-led system, and as a statutory consultee we have a duty to cooperate with local authorities to support the preparation and implementation of development plan documents.

In accordance with national planning and transport policy and our operating licence, we are entirely neutral on the principle of development as it is for the local planning authority to determine whether development should be allocated or permitted; albeit it must comply with national policy on locating development in locations that are or can be made sustainable. Therefore, while always seeking early and fulsome engagement with local plans and/or developers, we will simply be assessing the transport and related implications of plans or proposals and agreeing any necessary transport improvements and relevant development management policy.

In progressing Local Plans, we will seek to agree the following:

- Assessment tools and methodology
- Baseline Assessment i.e., to demonstrate that the assessment tool accurately reflects current transport conditions
- Comparator case assessment i.e., to forecast the transport conditions that would occur in the absence of the plan
- Forecast modelling i.e., to forecast the transport conditions that would arise with the plan in place, this will include an assessment at the end of the Plan period; and, if required, at full build out if that occurs after the end of the Plan period
- Outputs and outcomes of modelling, demonstrating, as appropriate, what transport infrastructure is necessary to support the plan o It should be noted that a suite of transport modelling tools may be required. This includes strategic modelling covering an area at least one major junction beyond the district boundary, localised network modelling where several links/junctions are close together and/or individual junction modelling
 - o A DMRB (Design Manual for Roads and Bridges) compliancy assessment may also be required for certain highway features, such as
 - o Merge/Diverge assessment at Grade separated junctions, link capacity assessments, and others.
- The design of any necessary transport infrastructure, to an extent suitable for establishing deliverability during the plan period at the time that it becomes necessary for the purpose of ensuring that unacceptable road safety impacts or severe operational impacts do not arise as a result of development. This may be to at least General Arrangement design stage or preliminary design stage. Whichever degree of detail is agreed, the products must be in full compliance with the DMRB.
- Industry standard transport intervention costings.
- The delivery/funding mechanisms for necessary transport interventions. It should not be assumed that National Highways will have any responsibility to identify or deliver necessary transport interventions.
- If considered appropriate, a "Monitor & Manage" (M&M) framework, aimed at managing the pace of development in line with the pace of funding and delivery of necessary highway interventions in a manner which responds to the realworld impacts of development may be agreed for inclusion in the plan subject to the adequacy of risk control measures included therein. This can include the move from a 'predict & provide' style of delivery to 'a vision & validate' style. o Any M&M framework must be based on a "worst case scenario" whereby necessary mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. It must be translated into development management plan policy and policy relating to development allocations.

Further detail on the above can be provided by National Highways.

While ideally all the above should be agreed prior to the Submission of the Local Plan for examination, we recognise that this is not always possible. However, all parties should work towards all matters being agreed and reflected in a Statement of Common Ground (SoCG) by the start of the Local Plan Examination at the latest. Ideally the SoCG between the Council and National Highways would be prepared well in advance of plan submission in order to guide resource input and to track progress towards final agreement on all relevant matters starting from the earliest plan iterations until the final version is agreed.

It is acknowledged that Government policy places much emphasis on housing delivery as a means for ensuring economic growth and addressing the current national shortage of housing. The NPPF is very clear that: "Strategic policy-making authorities should establish a housing requirement figure for their whole area, which shows the extent to which their identified housing need (and any needs that cannot be met within neighbouring areas) can be met over the plan period."

However, new DfT C1/22 and the NPPF are equally clear that any development, including housing delivery, must be tempered by the requirement to ensure that the associated transport demand can be accommodated without unacceptable impacts on the safety of the SRN or severe impacts on the operation of the SRN including reliability and congestion. Therefore, as necessary and appropriate, any plan and/or development must be accompanied by suitable mitigation in the right places at the right time, that is to the required design standards and is deliverable in terms of land availability, constructability and funding.

We would also draw your attention to the then Highways England document 'The Strategic Road Network, Planning for the Future: A guide to working with National Highways on planning matters' (September 2015). This document sets out how National Highways intends to work with local planning authorities and developers to support the preparation of sound documents which enable the delivery of

sustainable development. https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/461023/N150227_-_Highways_England_Planning_Document_FINAL-lo.pdf

Responses to Local Plan consultations are also guided by National Planning Policy Framework (NPPF) revised on 20 July 2021 which sets out the government's planning policies for England and how these are expected to be applied.

Updated Circular (01/2022)

It should be noted that since the start of the Local Plan consultation process, on the 23 December 2022, the Department for Transport released a new circular on the 'Strategic road network and the delivery of sustainable development' (Circular 01/2022), which replaces all of the policies in Circular 02/2013 of the same name. These representations take account of the new circular and the requirements in terms of the Local Plan evidence base and process.

We request that the Local Plan is prepared in line with all aspects of the new circular. Particularly, the principles of sustainable development (paragraphs 11 to 17), new connections and capacity enhancements (paragraphs 18 to 25), and engagement with plan-making (paragraphs 26 to 38).

Regulation 18 submission

In our Regulation 18 submission we noted several matters including:

- The need to mitigate the adverse impacts of strategic development traffic to the A27 Chichester Bypass and its junctions at Portfield Roundabout, Bognor Road Roundabout, Whyke Roundabout, Stockbridge Roundabout and Fishbourne Roundabout and Oving junction.
- The need to identify a mechanism to calculate contributions towards the delivery of the previously agreed Local Plan A27 improvements
- The need to confirm the number of dwellings needed within the plan period
- The need to establish National Highways acceptance of the traffic model reference and future case scenarios
- The need to confirm costs, viability, and funding associated with mitigating the safety and congestion impacts of the development included within the plan.

Local Plan context

This Local Plan (Chichester Local Plan 2021 – 2039), prepared by the Local Planning Authority (LPA) Chichester District Council, sets out the vision for future development in the district and will be used to help decide on planning applications and other planning related decisions including shaping infrastructure investments.

The draft sets out how the district should be developed over the next 18-years to 2039 including for the full Plan period (1 April 2021 to 31 March 2039) the total supply of

- 10,359 dwellings
- 114,652 net additional sqm new floorspace

Minus the completions this is equivalent to around 530 dwellings and 6,150 sqm of floorspace a year.

National Highways Representations

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders.

We have undertaken a review of the Chichester Local Plan 2021-2039 proposed submission version and accompanying evidence documents, our comments are set out in the tables below (following pages). [see table within attachment]

Summary

We have reviewed the publicly available Local Plan documents and provided comments above in relation to the transport implications of the plan for the safety and operation of the SRN. We understand that other technical information is available, but this was not presented as part of this consultation.

Chichester, and the A27, are already heavily congested, infrastructure in the existing Local Plan remains undelivered and the growth set out in the new Plan will further increase travel demand.

As presented, satisfying the transport needs of the plan is clearly reliant on the delivery of the A27 Chichester bypass improvements project. The A27 Chichester bypass improvements project is one of 32 pipeline schemes being considered for possible inclusion in National Highways third Road Investment Strategy (RIS3) covering 1 April 2025 to 31 March 2030.

On 9 March 2023 the UK Transport Secretary ensured record funding would be invested in the country's transport network, sustainably driving growth across the country while managing the pressures of inflation. The announcement cited the A27 Arundel Bypass as being deferred from RIS2 to RIS 3 (covering 2025-2030). The transport secretary also identified a number of challenges to the delivery of the road investment strategy and cited the benefit of allowing extra time to ensure schemes are better planned and efficient schemes can be deployed more effectively.

At present, there is no commitment by DfT to carry out the A27 Chichester bypass improvements project. Until the A27 Chichester bypass improvements project is published in the RIS3, consented and a decision to invest is made it cannot be assumed to be a committed project.

We note that the Plan does not address any uncertainty of delivery of the A27 Chichester bypass improvements project and we strongly recommend that there is either no reliance placed on RIS3 to realise capacity for growth in the Plan or that contingency measures are included to cover the eventuality that RIS3 funding is not forthcoming within the plan

period. It is not clear that the potential impact of development on transport networks can be addressed in the absence of the A27 Chichester bypass improvements project.

Achieving net zero, reducing emissions reduction, acting on climate, and supporting thousands of new homes and new employment developments will be problematic with existing processes. New, additional, and adapted processes and assessments will likely be required, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments. We acknowledge that change is complex, expensive, and time-consuming, especially for smaller district level Councils. But the hard work will deliver benefits for the Council and residents in the longer-term.

National Highways seeks to continue working with the Council and WSCC to progress coordinated and deliverable packages of interim mitigation measures and alternative transport solutions while a long-term strategic solution is considered by government. This must however be in combination with a robust monitor and manage policy that appropriately manages the risk of unacceptable road impacts resulting from new housing and other development over the Plan period.

We have been in discussion with Chichester District Council regarding their proposed Monitor and Manage Strategy. At present, we do not consider the current strategy to be robust and we seek further information and detail especially on who, when and when monitoring and management will be undertaken. Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas. Any M&M framework must be based on a "worst case scenario" whereby necessary transport mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. The M&M framework must set out that the alternative to mitigation not being delivered is that development does not proceed where that development would give rise to unacceptable road safety risk or severe cumulative impacts on the road network in the absence of that mitigation. The M&M framework must be translated into development management plan policy and policy relating to development allocations.

As we have reiterated throughout our comments, we welcome the opportunity to work with you to address these outstanding matters and we will continue to liaise over submitted Transport Assessment, Travel Plan policy and Monitor and Manage Policy to help to work towards a viable plan.

We hope our comments assist.

We look forward to continuing to participate in future consultations and discussions. Please do continue to consult us as the Plan progresses so that we can remain aware of, and comment as required on, its contents.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Respondent: David Ball [7141]

Summary:

The Proposed Strategic Site Allocation for Land South of Chichester is contrary to the wording under Chapter 7 Policy E2 which sets out the criteria for permitting development. Allocation of this site will lead to a material increase in noise, will materially adversely effect visual amenity to neighbouring residential properties, will generate unacceptable levels of traffic movements, adversely affect soil water adour and air pollution to neighbouring residential properties .

The plan fails to address other more suitable sites within the plan area and other options explored.

Full text:

The Proposed Strategic Site Alloacation for Land South of Chichester is contrary to the wording under Chapter 7 Policy E2 which sets out the criteria for permitting development. Allocation of this site will lead to a material increase in noise, will materially adversely effect visual amenity to neighbouring residential properties, will generate unacceptable levels of traffic movements, adversely affect soil water adour and air pollution to neighbouring residential properties .

The plan fails to address other more suitable sites within the plan area and other options explored.

Change suggested by respondent:

Remove the allocation of this site from the plan

Document Element: Background, 7.1**Respondent:** Kingsbridge Estates Limited & Landlink Estates Limited [8084]**Agent:** Savills (Mr William Price, Planner) [7783]**Summary:**

Conflict with policy NPPF Para 81: Fails to adequately achieve conditions in which businesses can invest, expand and adapt due to limitations of Policies E3, E4 and para 7.28 and 7.29.

Full text:

The Coast to Capital Local Economic Partnership (LEP) acknowledge the specific and important contribution of horticulture to the economy of CDC. In accordance with Savills representations in respect policy E4 and the supporting text, the council's approach to restraint of the draft LP on development that is functionally linked to the horticultural industry within or close to the designated HDAs will suppress the productivity and prosperity of the industry and thereby its significant contribution the wider local economy.

The 2020 HEDNA predicates future growth of the horticultural sector on past planning consents and developments, which does not fully account for the demand for functionally linked activities as CDC have not been granting consents for these.

The 2022 HEDNA [para 80] identifies that Chichester's industrial market is severely undersupplied. However the HEDNA does not adequately assess the scale of suppressed demand and make allowance for it in industrial allocations. Whilst the LP seeks to provide office, factory and warehouse space (110k to 117k sqm), the likely insufficient supply and competition in the market will mean that there is no certainty that this space would be available and/or sufficient to meet the immediate and future needs of the horticultural/food production industry, constraining overall growth in the sector.

Savills SREBR report (attached) identifies that the constraint on co-locating functionally-linked forms of development at Runcton HDA will have a negative impact on the strength, diversity of the CDC economy.

The restrictions of policies of E3 and E4 with regard to the range of uses permissible in the HDAs means that the opportunity to maximise carbon reductions by co-locating associated functions of the food chain is lost - refer to para 4.4.2 of Savills SREB report.

Change suggested by respondent:

Reference to 'ancillary' with regard to the HDAs in relevant policies and supporting text should be modified to 'functionally linked' and include explanatory text clarifying that 'functionally linked' uses can include a range of activities including: food-related distribution; food manufacturing linked to the HDAs food preparation; on-site renewable energy to serve on-site activities; and R&D.

Document Element: Background, 7.1

Respondent: The Goodwood Estates Company Limited [7922]

Agent: HMPC Ltd (Mr Haydn Morris) [112]

Summary:

The role of Goodwood Estate businesses in transcending many business sectors should be reflected through the Plan and suitable provision for its sustainability made through Plan policies.

Its value and role in the economic vitality of the District should be acknowledged and protected

Full text:

Goodwood does not sit easily within the Plan's definition (and therefore policy provision) of tourism and hospitality as set out in Chapter 7: Employment and Economy. It is a hybrid situation attracting elements of many sectors of the Employment and Economy Chapter, and we request this position is more visibly acknowledged and provided for through the Plan.

There are references within Chapter 10 (policies A9 and A16) but this is focussed on the Goodwood Airfield and Motor Circuit.

The majority of the Goodwood Estate is within the National Park rather than CDC and it is understandable policy should focus on the airfield and circuit. However, it is important the Plan acknowledges and makes provision for the inter-connection of the airfield and motor circuit with the rest of the Estate, and the significant benefits of a "combined Goodwood" to Chichester District and the region.

The Estate welcomes a continuing dialogue with the planning authority to ensure the local plan is an appropriate vehicle to support and enhance the Estate through future years.

Representations we make to earlier parts of the Plan illustrate the economic contribution made by the Estate to the District and this should be reflected in Chapter 7.

Change suggested by respondent:

The role of Goodwood Estate businesses in transcending many business sectors should be reflected through the Plan and suitable provision for its sustainability made through Plan policies.

Object

Document Element: Policy E1 Meeting Employment Land Needs**Respondent:** Drayton Investments Limited [8111]**Agent:** Drayton Investments Limited (Mr Ben Christian, Associate Town Planner) [8113]

Summary:

Plan unsound in respect of employment land provision:

- Existing permissions unlikely to be forthcoming.
- Allocations carried over not delivered since allocated in DPD Site Allocation 2019 or previous Local Plan 2015.
- Policy A20 - significant site constraints including A27 works.

Provision should be achieved through allocation of more, smaller, sites improving chances of delivery/meet immediate market demand (HEDNA [April 2022] and Flude Market Report [July 2022] - specific need for starter units highlighted). Land North of Drayton Waterside A259 Eastbound Merston Oving (22/02202/FUL) could meet demand for employment floorspace, provide starter units and not result in harmful impact to countryside which Policy A20 would create, due to scale.

Full text:

These representations are specifically centred around Chapter 7: Employment and Economy – ‘Meeting Business and Employment Needs’ with particular focus on Policy E1, Map 10.10 and reliance on Chapter 10 Policy A20 (Land to the South of Bognor Road).

These representations are made in the light of a live planning application (22/02202/FUL) for Land North Of Drayton Waterside. The proposed development consists of the erection of employment space [flexible Class B2 (general industry), B8 (storage / distribution), Trade Counter, E(d) (indoor sport / recreation) and Class E(g) (office, research and development, light industry) uses], with associated parking and landscaping. The employment space is provided over 33 units totalling 5,706 sq. m.

These representations will also look in detail at the Countryside policy and compare the proposed single new site (Land to the South of Bognor Road) with a site which is currently subject to a pending planning application (22/02202/FUL) for land which is geographically comparable with the proposed single site only without the implementation issues listed in the proposed Local Plan, as well as being deliverable, achievable and focused on the market requirements for smaller units.

These representations bring into question the ‘tests of soundness’. In particular, the question as to whether it is ‘sound’ on the basis of being ‘positively prepared’, ‘justified’ and ‘effective’ in respect to employment land provision.

These representations seek to highlight that Chapter 7 has not been positively prepared, in so far as it does not provide [1.] “a strategy which, as a minimum, seeks to meet the area’s objectively assessed needs” see the details set out in the accompanying Flude Property Consultants Report together with the details set out below.

It is also considered that Chapter 7 is not justified as the employment strategy is [2.] is inappropriate as it relies on a single new site, with multiple issues some of which are in conflict with other parts of the local plan, plus the site does not appear to have been included in the previous Local Plan consultations.

Chapter 7 is also not justified with respect to its provisions do not [3.] take into account reasonable alternatives. And that the provision for a single site not previously seen in any Regulation 18 consultation, is not [4.] based on proportionate evidence.

With respect to whether Chapter 7 is effective is questionable in terms of soundness given that the proposed allocation highlights a number of issues with the site set out in more detail below.

It is considered on the basis of the other factors highlighted in these representations and the accompanying Flude Report that the proposed employment land provision is not ‘Consistent with national policy’ as the proposed provision does not enable the delivery of sustainable development. It is considered that the proposed plans are contrary to the NPPF paragraph 16a, 16b, 16c, 16d and paragraph 20a.

With respect of general employment allocations and provisions in Chichester there are a number of areas of concern raised below and in the accompanying Flude Property Consultants Report which looks in detail at the Chichester property market.

It is also relevant to note that the Flude Report (dated July 2022) not only assesses the supply and demand in the local market for employment land, it objectively assesses the most recent evidence set out by the Local Planning Authority within the April 2022 Chichester Housing and Economic Development Needs Assessment (HEDNA).

Both the HEDNA and Flude Report independently advise that there is a lack of suitable employment space supply in Chichester, particularly for starter units between 750 and 2000 sq. ft.

The Policy E1 table sets out a number of floorspace calculations. None of which are identified by their Use Class.

Land West of Chichester

This site is a reallocation of the current Local Plan Policy 15. The new policy is Policy A6. The original allocation was adopted in 2015 and this therefore raises concerns in respect of deliverability of the proposed employment floorspace. Notwithstanding the concerns around deliverability, the uses identified in the ‘submission local plan’ Policy A6 states: “6 hectares of employment land (suitable for E(g)(i)/(ii) Business uses)” and therefore none of the suggested 22,000m² allocation equates to light industrial, general industrial or storage and distribution (i.e. it does not include E(g)(iii), B2 or B8) and therefore does not meet any need for industrial or storage and distribution.

Kingsham Road - DPD Allocation

This site the current DPD allocation (Policy CC5). The allocation was adopted in 2019 and this therefore raises concerns in respect of deliverability of the proposed employment floorspace.

Kingsham Road is a DPD allocation for 7,200m² is for office use, and therefore does not meet any need for industrial or storage and distribution.

Land South of Bognor Road

The Land South of Bognor Road, the single proposed new allocation, not previously set out in the previous Local Plan consultations is looked at in greater detail in the following section of these representations.

Planning Permissions to Date

Chichester Council Planning Policy team have kindly provided a copy of the employment planning permissions to date which make up the 53,655 figure within the employment floorspace Policy E1. From a review of these sites it is apparent that a large number are for specific end users (e.g. Rolls Royce) or for change of use and not for the open market which will not meet the employment floorspace demand locally, particularly for starter units for SME's.

Summary

In summary, Policy E1 is heavily reliant on adding up floor spaces which either may not occur or are not for an employment use which meets the needs for industrial use or storage and distribution use needs.

There are several fundamental issues with the proposed site allocation known as Land to South of Bognor Road (Policy A20), these include:

- The site is new to the Local Plan production process in respect of entering in at Regulation 19 and has therefore not been through any of the previous rounds of consultation.
- The he land is Grade 1 agricultural land which is (a) in active use, (b) forms part of wider farmland which is proposed to be separated from the farm buildings therefore potentially limiting the effectiveness of the remainder of the farmland, (c) it conflicts with other parts of the local plan which promote protection of the best agricultural land and food production. (details below)
- There are several site constraints to delivery to the allocation (details below).
- The Policy also seeks to provide plots for Gypsy and Travelling Showpeople the allocations do not require to be part of the same site however they have been placed under the same site policy which implies that the provision for both types of use are in short supply and that the way in which the Local Plan has been produced seeks to address the Gypsy and Traveller sites shortfall on the same allocation as part of the solitary site for employment.
- The size of the site in terms with respect to Natural England's Guide to assessing development proposals on agricultural land (2021).

The Land South of Bognor Road site is both grade 1 agricultural land (the best value) and in active food production. Development on this site would raise conflict with other Local Plan approaches and policies as follows.

The proposed Local Plan at Paragraph 4.8 states that: The council will seek to protect the best and most versatile agricultural land from large scale, inappropriate or unsustainable non-agricultural development proposals that are not in accordance with the Development Plan. For proposals not in accordance with the Development Plan, that will result in the loss or likely cumulative loss of 20 hectares or more of best and most versatile agricultural land, the council will consult with Natural England and have regard to "Natural England's Guide to assessing development proposals on agricultural land (2021)" and any subsequent guidance.

It is noteworthy to mention that the site is 19.5ha and, as with neighbouring land, is owned by West Sussex County Council (WSCC). The outline of the site allocation is odd and appears to sever the remainder of the WSCC land to the south from the WSCC owned land. This both impacts the opportunity to farm the remaining land and raises the question of whether there is an approach to avoid Natural England's 20ha threshold and therefore is the current site area a salami slice of an extended future land promotion.

Land south of Bognor Road - Policy A20 – Site Constraints impacting Delivery

Flood Risk

Policy A20 supporting text paragraph 10.87 outlines that parts of the site are at risk of surface and ground water flooding which would need careful management.

Landscape Impact

The large scale of the site will create a landscape impact that could be considered harmful to the current landscape character and separation between the main conurbation of Chichester and the built form around the Bognor Road/Drayton Lane roundabout. This is further discussed in the Countryside policy assessment below.

Highways

To facilitate development of Policy A20 the supporting text paragraph 10.87 identifies the need for realignment of Vinnetrov Road and works to the Bognor Road roundabout as part of a package of A27 improvements. It is understood that Highways England have pulled funding for these improvements and that they are to be delivered through a tariff on

strategic sites. Therefore, the delivery of this site is reliant on the delivery of other strategic sites and raises concerns around timescales and deliverability.

A planning application (22/02202/FUL) for the construction of business park with associated parking and landscaping is currently pending determination for land north of Drayton Waterside A259 Eastbound Merston Oving. The application is pending further highway research but is supported by no objections from all other consultees including support from the economic development officer and the Oving Parish Council.

The Economic Development Officer comment on the Planning Application is as follows:

'The application site sits directly adjacent to a current business site and will provide units of the size and use class type that are highly sought after in the district. B2 and B8 uses are especially sought after and the amount of available space in this area has dropped from 316,000 sqft in 2017 to 97,500 sqft in 2022 (Source: SHW Industrial Focus 2022) which is a drop of almost 70% in five years.'

Both the HEDNA (April 2022) and Flude Report (July 2022) independently advise that there is a lack of suitable employment space supply in Chichester, particularly for starter units between 750 and 2000 sqft. The proposed development at Drayton Waterside provides this type of employment space and given the current planning application status could provide this floorspace immediately.

In the Housing and Employment Land Availability Assessment (HELAA) 2021, Drayton Waterside and the proposed allocation, Land to the South of Bognor Road, are both considered 'developable' but it is noteworthy to mention that Drayton Waterside (HELAA ID HOV00011) is considered to be able to come forward sooner than the land South of Bognor Road (HELAA ID HNM0017a).

Development in the Countryside Policy (Policy NE10)

Following review of the Drayton Waterside site above a key consideration is its location within the countryside – draft Local Plan Policy NE10. These representations do not directly object to this policy or its wording but some text is included to comment on how the Drayton Waterside site is better aligned with the countryside policy than the proposed land south of Bognor Road allocation (Policy A20).

The first consideration is paragraph 4.51 within the supporting text to Policy NE10 which outlines the role and value of the countryside and why it should be considered for protection subject to a planning balance. These points of consideration are as follows:

1. The countryside is important for food production.

- The land south of Bognor Road is currently farmed and is large enough to support food production. The land south of Bognor Road is also Grade 1 agricultural land.
- The Drayton Waterside site however is too small to support viable food production and is enclosed by uses which are not within agricultural use and as such could not form part of an adjacent agricultural use unlike the Policy A20 site.

2. Countryside is important for landscape character.

- Both sites are not located in either the South Downs National Park or Areas of Outstanding Natural Beauty which cover a large part of the Chichester district.
- The Drayton Waterside site sits adjacent to existing built form currently used for employment use and is partly a brownfield site. The site is also smaller than the Bognor Road South and whilst providing 5,706 sq m compared to the 28,000 sq m provided by the land south of Bognor Road, it should be the Council's priority to look for delivering employment on multiple smaller sites which combined have a lesser landscape impact than that of a single large site.

3. Countryside is important for recreation:

- This role for countryside in respect of both sites is not necessarily relevant but it is noteworthy to mention that the Drayton Waterside site is private land and therefore not open to the public.

4. Countryside is important for biodiversity.

- Whilst the policy requirement for the delivery of the land south of Bognor Road would include a biodiversity enhancement this is yet to be evidenced as no application has been submitted for this site.
- The Drayton Waterside site, by contrast, has a live planning application and a Biodiversity Net Gains Assessment has been undertaken, and demonstrates that proposed development would result in calculated net gain of +12.73% Habitat Units and net gain of +13.45% Hedgerow Units. The Drayton Waterside site therefore demonstrates a substantial increase in biodiversity.

5. Countryside is important for stopping an urbanizing impact.

- The large scale of the land south of Bognor Road would create a noticeable urbanizing impact and whilst it is closer to the main conurbation of Chichester it would remove the separation between the current built form around the roundabout with Drayton Lane and Bognor Road whereas the Drayton Waterside site would neatly fit in within that existing built form and not diminish the gap between Chichester and this existing built form.

The wording of Policy NE10 outlines that sustainable development in the countryside would be permitted if the following considerations were achieved:

- There are sustainable transport links.
- The scale and design is appropriate to the location and not harmful to the rural setting.
- The proposed development preserves and enhances key countryside landscape features and does not impact any

designations (Areas of Outstanding Natural Beauty or the South Downs National Park).

- The proposed development relates to an existing group of buildings.
- The proposed development does not prejudice countryside operations e.g., farming.

The Drayton Waterside site is considered to align with the requirements in this policy by:

- having strong sustainable transport links along the Bognor Road, to Chichester, including cycle routes and bus stops.
- The proposed development is of a scale where it would not harm the rural setting due to its relationship with an existing building group and being a relatively small site particularly when compared to the land south of Bognor Road.
- The proposed development is not considered to impact any designations or key features within the current countryside make up in this location and would not impact the current farming operations in the locality.

SUMMARY

The Chichester Draft Local Plan is considered to be unsound in the respect of employment land provision as it is heavily reliant on the sites which have strong valid delivery concerns. This includes:

- Existing permissions that are not likely to be forthcoming.
- Allocations carried over from previous Local Plan documents which have not been delivered since they were allocated in the Development Plan Document Site Allocation in 2019 or worse the previous Local Plan in 2015.
- One new large strategic site allocation (Land South of Bognor Road – Policy A20) that has significant site constraints including works to the A27 where funding has recently been withdrawn by National Highways / Secretary of State for Transport.

Employment land provision should be achieved through the allocation of more, smaller, sites to improve the chances of delivery and to meet market demand which is immediate (as evidenced by the Housing and Economic Development Needs Assessment [April 2022] and the accompanying Flude Market Report [July 2022]).

The market demand set out by the Local Plan evidence base and the Flude Market Report highlights that, whilst there is an employment floorspace need generally, there is a specific need for starter units between 750 and 2000 sqft.

Application reference 22/02202/FUL for the Construction of Business Park with associated parking and landscaping at Land North Of Drayton Waterside A259 Eastbound Merston Oving is considered to be a perfect example of a site that could meet the current market demand for employment floorspace, providing starter units, and not result in a harmful impact to the countryside which Land to the South of Bognor Road (Policy allocation A20) would create due to the scale of the strategic allocation.

Drayton Investments Limited strongly implore Chichester Planning Policy team to reconsider the proposed Local Plan employment floorspace provision and allocate more, smaller, sites which, such as Land North of Drayton Waterside, can achieve immediate delivery of employment market floorspace demand.

Change suggested by respondent:

Drayton Investments Limited strongly implore Chichester Planning Policy team to reconsider proposed Local Plan employment floorspace provision and allocate more, smaller, sites which, such as Land North of Drayton Waterside, can achieve immediate delivery of employment market floorspace demand.

Document Element: Policy E1 Meeting Employment Land Needs**Respondent:** Kingsbridge Estates Limited & Landlink Estates Limited [8084]**Agent:** Savills (Mr William Price, Planner) [7783]**Summary:**

Soundness test not fully met. There is insufficient industrial land allocated which in combination with a need for a more flexible approach to functionally linked uses on HDAs means there is not sufficient land for HDA functionally linked uses.

Full text:

The centrality of the horticultural industry to providing sustainable economic growth within the Chichester District and the wider south of England is not acknowledged within Policy E1. This is contrary to the Council's evidence base, with the 2020 HEDNA stating that the Local Plan will need to ensure that 'the District's horticultural industry remains nationally and internationally competitive' for the duration of the Local Plan period.

The lack of connectivity between the provision of employment land under Policy E1 and the needs of the horticulture industry for well-located land for functionally-linked employment purposes will have the effect of suppressing the ability of the horticulture industry to meet its potential.

Change suggested by respondent:

The importance of the horticultural industry should be recognised within policy E1 to inform the provision of land for functionally-linked employment uses in the right locations.

Document Element: Policy E1 Meeting Employment Land Needs**Respondent:** Wates Developments (Mr Paul Thomas, Senior Land and Planning Manager) [7779]

Summary:

- The DTC process has not dealt adequately with employment issues
- Identified housing needs are not being met, leading to a suppression in the amount of employment floorspace being provided
- No mention of logistics sector
- Council is taking a pessimistic view on employment growth, should not rely on Covid affected data to dictate strategy for whole plan period. 2020 HEDNA figures to be preferred with 15% uplift so not reliant on SDNPA
- 2022 HEDNA identifies extreme undersupply due to low levels of delivery
- Additional sites should be allocated

Full text:**Introduction and Site Details**

Established in 1897, the Wates Group is one of the leading privately-owned construction, residential development, and property services businesses in the UK.

Everything we do is guided by our purpose of working together to inspire better ways of creating the places, communities, and businesses of tomorrow. Now in its fourth generation of family ownership, the Wates Group is committed to the long-term sustainability of the built environment.

Wates is promoting land at Badgers Farm, Hunston for commercial development. The site itself is currently used for equestrian purposes and extends to approximately 9 acres and is located at the northern end of the village, with good links to the A27. A site location plan is enclosed within these representations [TO BE EMAILED SEPERATELY]

The site is located within close proximity to Chichester and is easily accessible by foot, bicycle and public transport. There are no constraints in bringing forward the site for development and Wates consider that the site should be allocated for commercial development in the Chichester Local Plan 2021-2039.

Duty to Co-operate

Whilst we note the Council have held ongoing discussions with key stakeholders and neighbouring Local Planning Authorities, it is noted that substantial reliance on demonstrating that the Duty to Cooperate (DTC) has been met appears reliant on several Statements of Common Ground (SOCGs) which are yet to be agreed and details are thin on the ground.

We do not wish to raise issues with the legal compliance with respect to the DTC, the lack of agreed outcomes as part of this process does cause issues with respect to the Local Plan (LP) being effective and positively prepared.

Employment is a key driver for the success of any Local Plan and yet, other than being part of a sub-Regional partnership, there is virtually no mention of this issue in the Council's DTC Statement. Where employment issues are mentioned, the meetings referred to with neighbouring authorities took place some time ago and these can't purport to reflect the most up to date position.

No doubt the Council will argue that SOCGs will be signed in due course (which will provide more detail) and will be before a Local Plan Inspector for their consideration. It is our view that, in order for the LP to be effective, this information should be available at this Regulation 19 stage.

Positively Prepared

The LP cannot be said to be positively prepared because it will not meet the Council's identified housing needs. This has knock on implications for the consideration of the employment floorspace need over the plan period, because there is a direct relationship between the number of new homes being provided and associated growth scenarios which are being considered in relation to understanding future employment floorspace needs.

The LP is also reliant on the South Downs National Park Authority (SDNPA) agreeing to meet 15% of the Council's employment needs (paragraph 12.64 of HEDNA, April 2022). In our view, given the Statutory Duties the SDNPA are under, this is an entirely unrealistic assumption to make. There is no mention of this issue in relation to the DTC Statement the Council have produced, which suggests no formal agreement is in place between the two Authorities.

Justified

We consider that the Council is taking an unduly pessimistic approach to future employment growth and the associated economic benefits this can bring to the District. In particular, the Council seem heavily reliant on the April 2022 update to the HEDNA. The data associated with this document naturally takes into account the economic impacts of Covid.

In our view, reliance on this data is not appropriate, given it was clearly a unique event with significant global impacts. It should not be relied upon for a LP which looks forward for a substantial period of time, because it downplays the need for employment floorspace.

We consider it more appropriate for reliance to be placed upon the 2020 HEDNA, which identified a need for 25.6 hectares of employment land, rather than the 23 hectares identified in the 2022 HEDNA update.

It is noted that, in January 2019, the Council identified a need for 27.7ha of employment land (Background Paper: Economic Development and Employment).

In addition, 15% should be added to these figures discussed above to ensure the Council are not reliant on SDNPA to deliver their employment needs.

Effective

As discussed above, we do not believe that effective joint cross-boundary working has taken place.

The Local Plan, as it currently stands, will not be effective in delivering the employment needs of the District.

Given that the 2022 HEDNA update repeatedly identifies that there is an 'extreme undersupply' (paragraphs 80, 83, 10.67, 10.74), with paragraph 10.110 noting that this is due to both strong recent demand and low levels of delivery - delivering the employment needs for the District should be of paramount importance to the Council.

Furthermore, we do not believe that the employment sites identified in the LP will necessarily be deliverable; specifically, the proposed new allocation A20. The Council acknowledge that there are deliverability issues because the site is anticipated to come forward in the latter part of the LP period.

This because the northern end of the site will play a key role in delivering any improvements to the Strategic Road Network (SRN) which are needed in the future. It is not clear to what extent this site is reliant on any improvements in the SRN in order to come forward.

Upgrades to the SRN in and around Chichester have a long and troubled history, to the extent that previously a local consensus could not be achieved which resulted in a funding package on offer to help facilitate the necessary improvements being withdrawn.

It is our view that in the absence of the necessary certainty in this regard, site A20 should not be identified for development.

Compliance with National Policy

Both the LP and its associated evidence base are completely silent on the logistics industry, contrary to National Planning Guidance.

Paragraph 031 (Reference ID: 2a-031-20190722) of the Planning Practice Guidance (PPG) specifically identifies that "The logistics industry plays a critical role in enabling an efficient, sustainable and effective supply of goods for consumers and businesses, as well as contributing to local employment opportunities, and has distinct locational requirements that need to be considered in formulating planning policies (separately from those relating to general industrial land)."

The PPG expects active engagement with logistics developers and occupiers to understand their needs, alongside analysis of market signals and economic data. This should then inform the needs with respect to the logistics industry and LPAs should then go on to identify how this need can be met.

In April 2022 the ONS published a report entitled "The rise of the UK warehouse and the golden logistics triangle" which identifies that the number of premises used for B8 storage and distribution uses has almost doubled in the last decade, with this rise accelerating in the last two years due to Brexit and the COVID-19 pandemic.

The chart below [TO BE EMAILED SEPERATELY] shows "Transport and Storage" to be the fastest growing industry group (both recent and long term) nationally, with an 88% increase from 2011-2021 and a 21% increase from 2019-2021.

This is supported by the June 2022 report by Frontier Economics "The Impact of Logistics Sites in the UK" which highlights in Chapter 2 that logistics has been the fastest growing sector across the UK in terms of jobs since 2012 (Table 3 p.27).

The Council's reliance solely on employment projections fundamentally underestimates the performance of the logistics sector, and using those as the only base for determining land requirements, will always lead to a misunderstanding of sector needs and therefore land allocations that will not fully address needs.

Change suggested by respondent:

Wates considers that the LP, in its current form, is unsound because it is not; positively prepared, justified, effective or consistent with national policy.

In addition, we have concerns about the way in which the Council have approached the DTC, specifically with respect to employment land issues.

Wates request that the Council review their evidence base and ensure it is updated to deal specifically with the needs of the logistics sector.

The Council's own evidence base points to an extreme undersupply of industrial floorspace. Wates believes that the Council should be looking at employment land in a more positive and proactive way and that more employment land needs to be allocated in order to ensure the LP is sound and the associated economic benefits associated with this can be realised.

Land at Badger Farm should be allocated for commercial development as it is an unconstrained site with good links to the Strategic Road Network and which can be delivered in a short timescale, contrary to the majority of the sites the Council are currently relying on to meet their employment needs.

Document Element: Existing Employment Sites, 7.17**Respondent:** Premier Marinas Limited [7988]**Agent:** CBRE Limited (Mr Andy Pearce, Senior Planner) [7980]**Summary:**

Fundamentally disagrees with supporting text cross-referencing with the Chichester Harbour Conservancy Management Plan, which is not a statutory Development Plan Document, and associated impact of increased scrutiny of marketing.

Considers supporting text should recognise the relevance of complementary uses which support to economic viability of marinas.

Full text:

Premier understands and supports the need to protect employment land for the wider viability and economic success of the district. Indeed the objectives of maintaining "a flexible supply of employment land and premises" and the retention of "suitable employment sites and encouraging their refurbishment, upgrading and intensification to meet modern business needs" are supported by Premier.

Premier would however stress the importance of recognising leisure and community uses in employment areas which is not currently acknowledged. Diversification for leisure uses is particularly relevant to waterside locations, as set out below in respect to Policy NE11, relating to suitable development at the Coastal area.

Supporting paragraph (7.17) states:

"Given the limited opportunities for employment uses with direct access to the coast, and reflecting the Chichester Harbour Conservancy Management Plan's planning principles, particular scrutiny will be given to the marketing evidence for marine related employment sites with the aim of preserving these uses".

The Chichester Harbour Conservancy Management Plan is not a statutory Development Plan Document, and nor is it considered to be a robust policy approach. Indeed, Premier made representations to a number of elements in this Plan through the consultation period (see appended to these representations). Fundamentally, this Plan should not be cross-referenced as it is not in compliance with national policy, and therefore is not a sound policy basis.

The definition of 'marine-related employment sites' could be interpreted so as to prevent the flexibility that is promoted by much of the supporting text to Policy E2 and which is required in a changing marine industry. Interpreted too narrowly, this paragraph will have the opposite effect to that intended. Lengthy marketing periods risk leaving a property empty and creating no employment when a change of use would create employment and further economic benefits.

Paragraph 7.17 should recognise the relevance of complimentary uses which support the economic viability of marinas. These include not only leisure and tourism and but also other uses to be able to "accommodate needs not anticipated in the plan, allow for new and flexible working practices (such as live-work accommodation), and to enable a rapid response to changes in economic circumstances" as per paragraph 81 of the NPPF.

Paragraph 83 of the NPPF requires that "Planning policies and decisions should recognise and address the specific locational requirements of different sectors". Chichester Marina can also be argued to form part of the rural economy, and the NPPF (paragraph 84) supports "the development of and diversification of... land-based rural businesses... sustainable rural tourism and leisure developments which respect the character of the countryside".

The policy supporting text wording for paragraph 7.17 should therefore be amended to "marine related and supporting and ancillary uses" in recognition of this, and in accordance with the NPPF, Policy NE11 and paragraph 7.17 of the Plan. Dealing with the Policy text, Premier considers that it is only appropriate for changes from employment to residential use to require demonstration that properties are no longer suitable for employment uses. Changes of use which retain or enhance employment should be encouraged as this will provide employment sites with the flexibility they require to respond to market changes and prevent loss of employment.

In the interest of diversifying employment uses and making the policy more effective in accordance with paragraph 35© of the NPPF, the policy should therefore be amended accordingly:

"Existing employment sites will be retained to safeguard their contribution to the local economy. Changes of use which retain or increase employment will be supported. Employment uses other than those in use classes E(g), B2 or B8 which require planning permission, will be permitted on existing employment sites provided they are of a similar character in terms of providing jobs, the skills they require and their contribution to long-term economic growth. Where the proposed alternative use is a main town centre use, the sequential test set out in national policy must be met.

Where planning permission is required for alternative non-employment uses on land or floorspace currently in or last used for employment generating uses, it must be demonstrated (in terms of the evidence requirements in Appendix C) that the site is no longer required and is unlikely to be re-used or redeveloped for employment uses to meet future demand".

Change suggested by respondent:

The policy supporting text wording for paragraph 7.17 should therefore be amended to "marine related and supporting and ancillary uses" in recognition of this, and in accordance with the NPPF, Policy NE11 and paragraph 7.17 of the Plan.

Summary:

Support in principle

Full text:

Premier understands and supports the need to protect employment land for the wider viability and economic success of the district. Indeed the objectives of maintaining “a flexible supply of employment land and premises” and the retention of “suitable employment sites and encouraging their refurbishment, upgrading and intensification to meet modern business needs” are supported by Premier.

Premier would however stress the importance of recognising leisure and community uses in employment areas which is not currently acknowledged. Diversification for leisure uses is particularly relevant to waterside locations, as set out below in respect to Policy NE11, relating to suitable development at the Coastal area.

Supporting paragraph (7.17) states:

“Given the limited opportunities for employment uses with direct access to the coast, and reflecting the Chichester Harbour Conservancy Management Plan’s planning principles, particular scrutiny will be given to the marketing evidence for marine related employment sites with the aim of preserving these uses”.

The Chichester Harbour Conservancy Management Plan is not a statutory Development Plan Document, and nor is it considered to be a robust policy approach. Indeed, Premier made representations to a number of elements in this Plan through the consultation period (see appended to these representations). Fundamentally, this Plan should not be cross-referenced as it is not in compliance with national policy, and therefore is not a sound policy basis.

The definition of ‘marine-related employment sites’ could be interpreted so as to prevent the flexibility that is promoted by much of the supporting text to Policy E2 and which is required in a changing marine industry. Interpreted too narrowly, this paragraph will have the opposite effect to that intended. Lengthy marketing periods risk leaving a property empty and creating no employment when a change of use would create employment and further economic benefits.

Paragraph 7.17 should recognise the relevance of complimentary uses which support the economic viability of marinas. These include not only leisure and tourism and but also other uses to be able to “accommodate needs not anticipated in the plan, allow for new and flexible working practices (such as live-work accommodation), and to enable a rapid response to changes in economic circumstances” as per paragraph 81 of the NPPF.

Paragraph 83 of the NPPF requires that “Planning policies and decisions should recognise and address the specific locational requirements of different sectors”. Chichester Marina can also be argued to form part of the rural economy, and the NPPF (paragraph 84) supports “the development of and diversification of... land-based rural businesses... sustainable rural tourism and leisure developments which respect the character of the countryside”.

The policy supporting text wording for paragraph 7.17 should therefore be amended to “marine related and supporting and ancillary uses” in recognition of this, and in accordance with the NPPF, Policy NE11 and paragraph 7.17 of the Plan. Dealing with the Policy text, Premier considers that it is only appropriate for changes from employment to residential use to require demonstration that properties are no longer suitable for employment uses. Changes of use which retain or enhance employment should be encouraged as this will provide employment sites with the flexibility they require to respond to market changes and prevent loss of employment.

In the interest of diversifying employment uses and making the policy more effective in accordance with paragraph 35© of the NPPF, the policy should therefore be amended accordingly:

“Existing employment sites will be retained to safeguard their contribution to the local economy. Changes of use which retain or increase employment will be supported. Employment uses other than those in use classes E(g), B2 or B8 which require planning permission, will be permitted on existing employment sites provided they are of a similar character in terms of providing jobs, the skills they require and their contribution to long-term economic growth. Where the proposed alternative use is a main town centre use, the sequential test set out in national policy must be met.

Where planning permission is required for alternative non-employment uses on land or floorspace currently in or last used for employment generating uses, it must be demonstrated (in terms of the evidence requirements in Appendix C) that the site is no longer required and is unlikely to be re-used or redeveloped for employment uses to meet future demand”.

[National Highways letter dated 24/07/23 confirmed representation should be categorised as Comment - Seeking further information.] We seek further information on how the Council will assess and determine 'would not generate unacceptable levels of traffic movement' and how this will be monitored and managed if unacceptable levels of traffic are generated.

We seek further information on how the Council will monitor and manage the cumulative traffic generated from multi occupancy start-up and move-on businesses

Full text:

We have reviewed the publicly available Local Plan documents and provided comments in the attached letter, in relation to the transport implications of the plan for the safety and operation of the SRN.

Our comments include issues to resolve, comments, requests for further information and recommendations. A brief summary of our main comments are:

- the reliance on the delivery of the A27 Chichester bypass improvements project.

- the requirements for new, additional, and adapted processes and assessments, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments.
- collaborative working between agencies in combination with a robust monitor and manage policy.

We hope our comments assist.

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders. We look forward to continuing to participate in future consultations and discussions.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Background

National Highways has been appointed by the Secretary of State for Transport as strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the strategic road network (SRN).

National Highways is responsible for operating, maintaining, and improving the Strategic Road Network (SRN) i.e., the Trunk Road and Motorway Network in England, as laid down in Department for Transport (DfT) Circular 01/2022 (Strategic Road Network and the delivery of sustainable development).

The SRN is a critical national asset and as such we work to ensure that it operates and is managed in the public interest, both in respect of current activities and needs as well as in providing effective stewardship of its long-term operation and integrity.

Our responses to Local Plan consultations are guided by relevant policy and guidance including the National Planning Policy Framework (2021) (NPPF):

- Transport issues should be considered from the earliest stages of plan-making and development proposals so that the potential impact of development on transport networks can be addressed (para 104).
- The planning system should actively manage patterns of growth such that significant development is focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. (para 105).
- Planning policies should be prepared with the active involvement of highways authorities and other transport infrastructure providers so that strategies and investments for supporting sustainable transport and development patterns are aligned. (para 106).
- In terms of identifying the necessity of transport infrastructure, NPPF confirms that development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe. (para 111).
- Planning policies and decisions should support development that makes efficient use of land, taking into account the availability and capacity of infrastructure and services – both existing and proposed – as well as their potential for further improvement and the scope to promote sustainable travel modes that limit future car use. (para 124).

In relation to the tests of soundness set out at paragraph 35 of the NPPF, in the context of transport, these are interpreted as meaning:

- Positively prepared - has the transport strategy been prepared with the active involvement of the highway authorities, other transport infrastructure providers and operators and neighbouring councils?
- Justified – Is the transport strategy based on a robust evidence base prepared with the agreement in partnership, or with the support of the highway authorities?
- Effective – Does the transport strategy and policy satisfy the transport needs of the plan and is it deliverable at a pace which provides for and accommodates the proposed progress and implementation of the plan?
- Consistent with national policy – Does the transport strategy support the economic, social, and environmental objectives of the Plan and the NPPF/NPPG?

We will be concerned with proposals that have the potential to impact on the safe and efficient operation of the SRN; in this case, the A27 trunk road (Chichester Bypass and its junctions) which is the main access route in the Chichester area. We have particular interest in any allocation, policy or proposals which could have implications for the A27 and the wider SRN network. We are interested as to whether there would be any adverse road safety or operational implications for the SRN. The latter would include a material increase in queueing or delay or reduction in journey time reliability during the construction or operation of the development set out in the plan.

National Highways is a key delivery partner for sustainable development promoted through the plan-led system, and as a statutory consultee we have a duty to cooperate with local authorities to support the preparation and implementation of development plan documents.

In accordance with national planning and transport policy and our operating licence, we are entirely neutral on the principle of development as it is for the local planning authority to determine whether development should be allocated or permitted; albeit it must comply with national policy on locating development in locations that are or can be made sustainable. Therefore, while always seeking early and fulsome engagement with local plans and/or developers, we will simply be assessing the transport and related implications of plans or proposals and agreeing any necessary transport improvements and relevant development management policy.

In progressing Local Plans, we will seek to agree the following:

- Assessment tools and methodology
- Baseline Assessment i.e., to demonstrate that the assessment tool accurately reflects current transport conditions
- Comparator case assessment i.e., to forecast the transport conditions that would occur in the absence of the plan
- Forecast modelling i.e., to forecast the transport conditions that would arise with the plan in place, this will include an assessment at the end of the Plan period; and, if required, at full build out if that occurs after the end of the Plan period
- Outputs and outcomes of modelling, demonstrating, as appropriate, what transport infrastructure is necessary to support the plan o It should be noted that a suite of transport modelling tools may be required. This includes strategic modelling covering an area at least one major junction beyond the district boundary, localised network modelling where several links/junctions are close together and/or individual junction modelling
 - o A DMRB (Design Manual for Roads and Bridges) compliancy assessment may also be required for certain highway features, such as Merge/Diverge assessment at Grade separated junctions, link capacity assessments, and others.
- The design of any necessary transport infrastructure, to an extent suitable for establishing deliverability during the plan period at the time that it becomes necessary for the purpose of ensuring that unacceptable road safety impacts or severe operational impacts do not arise as a result of development. This may be to at least General Arrangement design stage or preliminary design stage. Whichever degree of detail is agreed, the products must be in full compliance with the DMRB.
- Industry standard transport intervention costings.
- The delivery/funding mechanisms for necessary transport interventions. It should not be assumed that National Highways will have any responsibility to identify or deliver necessary transport interventions.
- If considered appropriate, a "Monitor & Manage" (M&M) framework, aimed at managing the pace of development in line with the pace of funding and delivery of necessary highway interventions in a manner which responds to the realworld impacts of development may be agreed for inclusion in the plan subject to the adequacy of risk control measures included therein. This can include the move from a 'predict & provide' style of delivery to 'a vision & validate' style. o Any M&M framework must be based on a "worst case scenario" whereby necessary mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. It must be translated into development management plan policy and policy relating to development allocations.

Further detail on the above can be provided by National Highways.

While ideally all the above should be agreed prior to the Submission of the Local Plan for examination, we recognise that this is not always possible. However, all parties should work towards all matters being agreed and reflected in a Statement of Common Ground (SoCG) by the start of the Local Plan Examination at the latest. Ideally the SoCG between the Council and National Highways would be prepared well in advance of plan submission in order to guide resource input and to track progress towards final agreement on all relevant matters starting from the earliest plan iterations until the final version is agreed.

It is acknowledged that Government policy places much emphasis on housing delivery as a means for ensuring economic growth and addressing the current national shortage of housing. The NPPF is very clear that: "Strategic policy-making authorities should establish a housing requirement figure for their whole area, which shows the extent to which their identified housing need (and any needs that cannot be met within neighbouring areas) can be met over the plan period."

However, new DfT C1/22 and the NPPF are equally clear that any development, including housing delivery, must be tempered by the requirement to ensure that the associated transport demand can be accommodated without unacceptable impacts on the safety of the SRN or severe impacts on the operation of the SRN including reliability and congestion. Therefore, as necessary and appropriate, any plan and/or development must be accompanied by suitable mitigation in the right places at the right time, that is to the required design standards and is deliverable in terms of land availability, constructability and funding.

We would also draw your attention to the then Highways England document 'The Strategic Road Network, Planning for the Future: A guide to working with National Highways on planning matters' (September 2015). This document sets out how National Highways intends to work with local planning authorities and developers to support the preparation of sound documents which enable the delivery of sustainable development. https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_t_data/file/461023/N150227_-_Highways_England_Planning_Document_FINAL-lo.pdf

Responses to Local Plan consultations are also guided by National Planning Policy Framework (NPPF) revised on 20 July 2021 which sets out the government's planning policies for England and how these are expected to be applied.

Updated Circular (01/2022)

It should be noted that since the start of the Local Plan consultation process, on the 23 December 2022, the Department for Transport released a new circular on the 'Strategic road network and the delivery of sustainable development' (Circular 01/2022), which replaces all of the policies in Circular 02/2013 of the same name. These representations take account of the new circular and the requirements in terms of the Local Plan evidence base and process.

We request that the Local Plan is prepared in line with all aspects of the new circular. Particularly, the principles of sustainable development (paragraphs 11 to 17), new connections and capacity enhancements (paragraphs 18 to 25), and engagement with plan-making (paragraphs 26 to 38).

Regulation 18 submission

In our Regulation 18 submission we noted several matters including:

- The need to mitigate the adverse impacts of strategic development traffic to the A27 Chichester Bypass and its junctions at Portfield Roundabout, Bognor Road Roundabout, Whyke Roundabout, Stockbridge Roundabout and Fishbourne Roundabout and Oving junction.
- The need to identify a mechanism to calculate contributions towards the delivery of the previously agreed Local Plan A27 improvements
- The need to confirm the number of dwellings needed within the plan period
- The need to establish National Highways acceptance of the traffic model reference and future case scenarios
- The need to confirm costs, viability, and funding associated with mitigating the safety and congestion impacts of the development included within the plan.

Local Plan context

This Local Plan (Chichester Local Plan 2021 – 2039), prepared by the Local Planning Authority (LPA) Chichester District Council, sets out the vision for future development in the district and will be used to help decide on planning applications and other planning related decisions including shaping infrastructure investments.

The draft sets out how the district should be developed over the next 18-years to 2039 including for the full Plan period (1 April 2021 to 31 March 2039) the total supply of

- 10,359 dwellings

- 114,652 net additional sqm new floorspace

Minus the completions this is equivalent to around 530 dwellings and 6,150 sqm of floorspace a year.

National Highways Representations

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders.

We have undertaken a review of the Chichester Local Plan 2021-2039 proposed submission version and accompanying evidence documents, our comments are set out in the tables below (following pages). [see table within attachment]

Summary

We have reviewed the publicly available Local Plan documents and provided comments above in relation to the transport implications of the plan for the safety and operation of the SRN. We understand that other technical information is available, but this was not presented as part of this consultation.

Chichester, and the A27, are already heavily congested, infrastructure in the existing Local Plan remains undelivered and the growth set out in the new Plan will further increase travel demand.

As presented, satisfying the transport needs of the plan is clearly reliant on the delivery of the A27 Chichester bypass improvements project. The A27 Chichester bypass improvements project is one of 32 pipeline schemes being considered for possible inclusion in National Highways third Road Investment Strategy (RIS3) covering 1 April 2025 to 31 March 2030.

On 9 March 2023 the UK Transport Secretary ensured record funding would be invested in the country's transport network, sustainably driving growth across the country while managing the pressures of inflation. The announcement cited the A27 Arundel Bypass as being deferred from RIS2 to RIS 3 (covering 2025-2030). The transport secretary also identified a number of challenges to the delivery of the road investment strategy and cited the benefit of allowing extra time to ensure schemes are better planned and efficient schemes can be deployed more effectively.

At present, there is no commitment by DfT to carry out the A27 Chichester bypass improvements project. Until the A27 Chichester bypass improvements project is published in the RIS3, consented and a decision to invest is made it cannot be assumed to be a committed project.

We note that the Plan does not address any uncertainty of delivery of the A27 Chichester bypass improvements project and we strongly recommend that there is either no reliance placed on RIS3 to realise capacity for growth in the Plan or that contingency measures are included to cover the eventuality that RIS3 funding is not forthcoming within the plan period. It is not clear that the potential impact of development on transport networks can be addressed in the absence of the A27 Chichester bypass improvements project.

Achieving net zero, reducing emissions reduction, acting on climate, and supporting thousands of new homes and new

employment developments will be problematic with existing processes. New, additional, and adapted processes and assessments will likely be required, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments. We acknowledge that change is complex, expensive, and time-consuming, especially for smaller district level Councils. But the hard work will deliver benefits for the Council and residents in the longer-term.

National Highways seeks to continue working with the Council and WSCC to progress coordinated and deliverable packages of interim mitigation measures and alternative transport solutions while a long-term strategic solution is considered by government. This must however be in combination with a robust monitor and manage policy that appropriately manages the risk of unacceptable road impacts resulting from new housing and other development over the Plan period.

We have been in discussion with Chichester District Council regarding their proposed Monitor and Manage Strategy. At present, we do not consider the current strategy to be robust and we seek further information and detail especially on who, when and when monitoring and management will be undertaken. Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas. Any M&M framework must be based on a "worst case scenario" whereby necessary transport mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. The M&M framework must set out that the alternative to mitigation not being delivered is that development does not proceed where that development would give rise to unacceptable road safety risk or severe cumulative impacts on the road network in the absence of that mitigation. The M&M framework must be translated into development management plan policy and policy relating to development allocations.

As we have reiterated throughout our comments, we welcome the opportunity to work with you to address these outstanding matters and we will continue to liaise over submitted Transport Assessment, Travel Plan policy and Monitor and Manage Policy to help to work towards a viable plan.

We hope our comments assist.

We look forward to continuing to participate in future consultations and discussions. Please do continue to consult us as the Plan progresses so that we can remain aware of, and comment as required on, its contents.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Change suggested by respondent:

Seek further information on how the council will monitor and manage cumulative traffic.

4633

Object

Document Element: Policy E2 Employment Development

Respondent: Premier Marinas Limited [7988]

Agent: CBRE Limited (Mr Andy Pearce, Senior Planner) [7980]

Summary:

In the interest of diversifying employment uses and making the policy more effective in accordance with paragraph 35(c) of the NPPF, the policy should be amended.

Concern that narrow interpretation of policy could result in long marketing periods impacting employment prospects, when change of use could increase employment.

In the interests of diversifying employment uses, considers that policy to require demonstration that properties are no longer suitable only appropriate for changes from employment to residential use.

Full text:

Premier understands and supports the need to protect employment land for the wider viability and economic success of the district. Indeed the objectives of maintaining “a flexible supply of employment land and premises” and the retention of “suitable employment sites and encouraging their refurbishment, upgrading and intensification to meet modern business needs” are supported by Premier.

Premier would however stress the importance of recognising leisure and community uses in employment areas which is not currently acknowledged. Diversification for leisure uses is particularly relevant to waterside locations, as set out below in respect to Policy NE11, relating to suitable development at the Coastal area.

Supporting paragraph (7.17) states:

“Given the limited opportunities for employment uses with direct access to the coast, and reflecting the Chichester Harbour Conservancy Management Plan’s planning principles, particular scrutiny will be given to the marketing evidence for marine related employment sites with the aim of preserving these uses”.

The Chichester Harbour Conservancy Management Plan is not a statutory Development Plan Document, and nor is it considered to be a robust policy approach. Indeed, Premier made representations to a number of elements in this Plan through the consultation period (see appended to these representations). Fundamentally, this Plan should not be cross-referenced as it is not in compliance with national policy, and therefore is not a sound policy basis.

The definition of ‘marine-related employment sites’ could be interpreted so as to prevent the flexibility that is promoted by much of the supporting text to Policy E2 and which is required in a changing marine industry. Interpreted too narrowly, this paragraph will have the opposite effect to that intended. Lengthy marketing periods risk leaving a property empty and creating no employment when a change of use would create employment and further economic benefits.

Paragraph 7.17 should recognise the relevance of complimentary uses which support the economic viability of marinas. These include not only leisure and tourism and but also other uses to be able to “accommodate needs not anticipated in the plan, allow for new and flexible working practices (such as live-work accommodation), and to enable a rapid response to changes in economic circumstances” as per paragraph 81 of the NPPF.

Paragraph 83 of the NPPF requires that “Planning policies and decisions should recognise and address the specific locational requirements of different sectors”. Chichester Marina can also be argued to form part of the rural economy, and the NPPF (paragraph 84) supports “the development of and diversification of... land-based rural businesses... sustainable rural tourism and leisure developments which respect the character of the countryside”.

The policy supporting text wording for paragraph 7.17 should therefore be amended to “marine related and supporting and ancillary uses” in recognition of this, and in accordance with the NPPF, Policy NE11 and paragraph 7.17 of the Plan. Dealing with the Policy text, Premier considers that it is only appropriate for changes from employment to residential use to require demonstration that properties are no longer suitable for employment uses. Changes of use which retain or enhance employment should be encouraged as this will provide employment sites with the flexibility they require to respond to market changes and prevent loss of employment.

In the interest of diversifying employment uses and making the policy more effective in accordance with paragraph 35© of the NPPF, the policy should therefore be amended accordingly:

“Existing employment sites will be retained to safeguard their contribution to the local economy. Changes of use which retain or increase employment will be supported. Employment uses other than those in use classes E(g), B2 or B8 which require planning permission, will be permitted on existing employment sites provided they are of a similar character in terms of providing jobs, the skills they require and their contribution to long-term economic growth. Where the proposed alternative use is a main town centre use, the sequential test set out in national policy must be met.

Where planning permission is required for alternative non-employment uses on land or floorspace currently in or last used for employment generating uses, it must be demonstrated (in terms of the evidence requirements in Appendix C) that the site is no longer required and is unlikely to be re-used or redeveloped for employment uses to meet future demand”.

Change suggested by respondent:

Respondent: Kingsbridge Estates Limited & Landlink Estates Limited [8084]

Agent: Savills (Mr William Price, Planner) [7783]

Summary:

The proposed expansion of HDAs is welcome. However the council's current approach to restrictions on co-location of functionally linked businesses and activities within the food park/cluster is impacting on business competitiveness and efficiency.

Full text:

The horticultural policy has remained largely static since over many years and has failed to acknowledge changing working and production trends within the industry.

Whilst the Council's tradition of supporting the horticultural industry, to the extent that it has and proposes to do in the draft Local Plan, is welcomed, it should be acknowledged that the restrictive policies that have been in place to date have directly obstructed growth in the industry by constraining the ability of the HDAs to accommodate ancillary and functionally-linked land uses that are now essential to realise the growth potential of the food cluster.

The draft Local Plan currently fails to allow for the functionally linked and associated development required to support and maintain the competitiveness of a world-class horticultural cluster.

See Section 4 of the Savills SREBR for further detail.

Change suggested by respondent:

Modify paragraph to acknowledge that the development requirements of the horticultural industry have evolved over time and these need to be accommodated going forward.

To this end, more flexibility is needed in the current CDC Local Plan - Horticultural Policy to meet the needs of the Horticultural sector.

Change suggested by respondent:

Over the coming years, more provision of space for nurseries, high-tech glasshouses, packhouses and reservoirs will be required; however, there will also be an increased need for ancillary development, such as: Vertical Farming Projects, Research & Development Facilities, Alternative Energy Centres, Logistics and Distribution Centres, Engineering and Technical Support Facilities.

The West Sussex Coastal Plain, with its exceptionally high winter light levels and all year round beneficial climate, is the preferred location for horticultural production in the UK.

The Horticultural Industry, concentrated around Chichester and Bognor Regis, generates annual turnover that exceeds £1billion pounds and employs more than 10,000 full time equivalent staff.

Object

Document Element: Background, 7.21**Respondent:** Mr Matthew Rees [7841]**Summary:**

Not sound because there is increased food security risk in the UK, and unmet demand for 20ha of horticultural land in Tangmere, which may be addressed through a reduction in housebuilding plans in Tangmere and an emphasis on horticulture. There may also be opportunities for viticulture but there is no reference in the local plan to this growing sector of the economy which occupies at least two similar sites to the land to the west of Tangmere.

Full text:

There is much to commend in this document and the supporting technical documents that accompany it, and I have listed in the appendix to this letter 26 such paragraphs and policies. I am happy for my support to be registered against these sections of your consultation document. There is also much upon which I must represent a concern, so I attach representations relating to 22 paragraphs or policies.

I am happy to participate in a hearing session, and I would flag at this stage that the common theme that links all of these representations is the need to safeguard the natural and built environment in and around Saxon Meadow, Tangmere from the risks of unsustainable development, I consider that the independent examiner should focus their review on the aspects of the local plan that relate to this matter.

Appendix 1: list of policies that I support

1. P14, 1.23, 1.24: Duty to cooperate
2. P24, para 2.30 "the council declared a climate emergency in July 2019"
3. P24, para 2.32 – "all proposal for new development should be considered in the context of a climate emergencV"
4. P30: Objective 2: natural environment: "development will achieve net gains in biodiversity"
5. P43, 4.1 "National policy promotes increasing energy efficiency, the minimisation of energy consumption and the development of renewable energy sources"
6. P43, 4.3: "Some renewable energy projects provide significant opportunities to enhance biodiversitV"
7. P53, Policy NE5: Biodiversity and Biodiversity Net Gain
8. P62, Para 4.42: Hedgerows and some types of woodlands are identified as a priority habitat

- 9, P62, Policy NE8: Proposals should have a minimum buffer zone of 15 metres from the boundary of ancient woodland or veteran trees to avoid root damage (known as the root protection area)
10. P68, Policy NE10: Criteria for Development in the Countryside - Does not prejudice viable agricultural operations or other viable uses
11. P80, Para 4.91: There are serious concerns about the impact of flooding, both in respect of current properties at risk but also the long-term management of the area.
12. 4.92: any development in the plan area must therefore have regard to flood and erosion risk.
13. 4.94: built development can lead to increased surface water run-off; therefore, new development should include SuDS to help cope with intense rainfall events
14. P81, Para 4.96: Environment Agency consent is required for any works within 16 m of tidal waters and 8m of fluvial watercourses in line with the Environmental Permitting Regulations 2016. This strip is required for access. The policy includes a setback requirement to ensure this access strip is not obstructed.
15. P80, 4.92, Any development in the plan area must therefore have regard to flood and erosion risk, now and in the future, by way of location and specific measures, such as additional flood alleviation, which will protect people, properties and vulnerable habitats from flooding. Recent changes to national guidance highlight the importance of considering flood risk from all sources, and this is particularly significant for the plan area as large parts of it are at risk from groundwater flooding, which needs to be recognised in development decisions alongside the well-established risks in relation to tidal, fluvial and surface water flooding. Appropriate mapping of all sources of flood risks is still evolving, and is likely to develop further over the plan period
16. P93, Policy NE20 Pollution: Development proposals must be designed to protect, and where possible, improve upon the amenities of existing and future residents, occupiers of buildings and the environment generally. Development proposals will need to address the criteria contained in, but not limited to, the policies concerning water quality; flood risk and water management; nutrient mitigation; lighting; air quality; noise; and contaminated land. Where development is likely to generate significant adverse impacts by reason of pollution, the council will require that the impacts are minimised and/or mitigated to an acceptable level within appropriate local/national standards, guidance, legislation and/or objectives.
- 17, P94, 4.127, Light pollution caused by excessive brightness can lead to annoyance, disturbance and impact wildlife, notably nocturnal animals. The design of lighting schemes should be carefully considered in development proposals to prevent light spillage and glare.
18. P94, 4.128, Dark skies are important for the conservation of natural habitats, cultural heritage and astronomy. The plan area includes three 'Dark Sky Discovery Site' designations, all located within the Chichester Harbour AONB; Eames Farm on Thorney Island, Maybush Copse in Chidham; and north of the John Q Davis footpath in West Itchenor. Development within or directly impacting these areas will be subject to particular scrutiny in terms of their impact on dark skies. The entire SDNPA area is also declared as an International Dark Sky Reserve. Development directly impacting this area will be subject to similar scrutiny.
19. P96, Policy NE22 Air Quality
20. P97, Policy NE-23 Noise
21. P142, Para 6.29, Amenity: Private space, shared space and the design quality and construction of communal spaces all contribute to amenity
22. P155-6, Policy P11: Conservation Areas "protecting the setting (including views into and out of the area)"
- 23, P55, Para 4.26 - The council is under a legal duty to protect designated habitats, by ensuring that new development does not have an adverse impact on important areas of nature conservation, and by requiring mitigation to negate the harm caused.
24. P58, Para 4.33 The council is under a legal duty to protect their designated bird populations and supporting habitats
25. P95, Para 4.129 The council has a duty to review and assess air quality within the district
26. P301, Conservation Area: An area of special architectural or historic interest, designated under the Planning (Listed Buildings & Conservation Areas) Act 1990. There is a statutory duty to preserve or enhance the character, appearance, or setting of these areas.

Change suggested by respondent:

Amend the plan as follows:

7.21 The southern part of the plan area accommodates a horticultural industry which has taken advantage of the comparatively high light levels experienced in the area to become nationally and internationally competitive, The council has a long-standing track record in supporting this industry through the designation of four Horticultural Development Areas (HDAs) around Tangmere, Runcton, Sidlesham and Almodington and will publish a map of these areas. It will perform a new evaluation of the economic, social and environmental benefits of meeting the unmet demand for 20 ha horticultural land in Tangmere and will perform a consultation on the potential economic, environmental and social benefits of expanding production of English Sparkling Wine on the land to the west of Tangmere.

Document Element: Background, 7.21

Respondent: West Sussex Growers' Association (Mr John Hall, Executive Member & Consultant) [7857]

Summary:

The Government has tasked Growers to grow more home grown produce, increase productivity, reduce food miles and the UK's reliance on imported food. There is also an increasing need for space to grow plants, shrubs and trees. These aims can be achieved; however, the Horticultural and Food Industries need Local Planning Policies to be in place that enables sustainable development. To this end, more flexibility is needed in the current CDC Local Plan - Horticultural Policy to meet the needs of the Horticultural sector.

Over the coming years, more provision of space for nurseries, high-tech glasshouses, packhouses and reservoirs will be required; however, there will also be an increased need for ancillary development, such as: Vertical Farming Projects, Research & Development Facilities, Alternative Energy Centres, Logistics and Distribution Centres, Engineering and Technical Support Facilities.

The West Sussex Coastal Plain, with its exceptionally high winter light levels and all year round beneficial climate, is the preferred location for horticultural production in the UK.

The Horticultural Industry, concentrated around Chichester and Bognor Regis, generates annual turnover that exceeds £1billion pounds and employs more than 10,000 full time equivalent staff.

Object

Document Element: Background, 7.24**Respondent:** Kingsbridge Estates Limited & Landlink Estates Limited [8084]**Agent:** Savills (Mr William Price, Planner) [7783]**Summary:**

The proposed allowance for increased horticulture related development outside the HDAs is welcome. However the council's current approach to restrictions on co-location of functionally linked businesses and activities within the HDAs is impacting on business competitiveness and efficiency. A more flexible approach could benefit horticulture outside the HDAs as well as in them.

Full text:

The Council's recognition that existing horticultural HDAs will be insufficient to deliver the quantum of development expected during the local plan period is welcomed.

The implied requirement that land within the HDA should be used first (in advance of 'other' land') to accommodate all forms of new horticultural development, albeit with caveats, does lack a progressive planned approach to the delivery of the range of development and infrastructure necessary, in the right locations, to realise the potential of the industry.

The Council's approach to HDAs correctly acknowledges the hierarchy of HDAs with Runcton HDA a focus for large scale horticultural development. The terms of the policy imply that all of the allocated land in all four HDAs would need to have been saturated before development outside any one of the HDAs would be permissible. This would fail to acknowledge the specific locational needs of the operations and businesses occupying each of the HDAs and should be amended.

The requirement for development to demonstrate why it cannot be accommodated within the HDAs fails to take into consideration that the plan itself expects that approximately two-thirds of horticultural development across the Local Plan period will need to come forward outside of HDAs. Accordingly, the Council should plan positively for this growth by taking a sequential approach to horticultural development that includes provision for associated and functionally-linked development in the right way.

Associated and functionally linked development would include elements such as R&D, storage and distribution, linked office development and processing of the food produced in the area. This could generally be focused in the HDAs.

This in turn may require that the core "growing" elements of the Chichester Food Cluster are delivered in proximity to, but outside of, HDAs. It is notable however that horticultural greenhouses are a core feature of Chichester coastal plain and therefore development of this type is likely to be deliverable without undue landscape harm. Additionally, prioritising the siting of associated development within the HDAs will encourage benefits associated with agglomeration and colocation. Please see Savills SREBR for more details

Change suggested by respondent:

Reference to 'ancillary' with regard to the HDAs in relevant policies and supporting text should be modified to 'functionally linked' and include explanatory text clarifying that 'functionally linked' uses can include a range of activities including: food-related distribution; food manufacturing linked to the HDAs food preparation; on-site renewable energy to serve on-site activities; and R&D.

Document Element: Policy E3 Addressing Horticultural Needs**Respondent:** Church Commissioners for England [1858]**Agent:** Lichfields (Tara Johnston, Planner) [7506]**Summary:**

CCE supports draft Policy E3 which confirms that "approximately 137 hectares of land is also needed outside of HDAs to meet anticipated horticultural and ancillary development land need for the plan period."

CE has significant landholdings which could assist the Council in addressing the insufficient availability within the current HDAs. The CCE sites which are considered suitable for horticulture development are listed below and location plans for each of the sites can be found in Appendices 9-13.

- Somerley Farm, NE East Wittering, PO20 7JB
- Fisher Farm, South Mundham, PO20 1ND
- Church & Haise Farm, Sidlesham
- Cowdry Farm, Birdham
- Groves Farm, nr Merston, PO20 2DX / Colworth Manor Farm PO20 2DU

Full text:

We write in response to the above consultation on behalf of our client, the Church Commissioners for England (CCE). CCE owns a large amount of land in the area largely to the south, west and east of Chichester.

We welcome the opportunity to further engage with the Local Plan process. Whilst we support some aspects of the Local Plan, we consider that some changes are likely to be necessary to ensure that the Plan can be found sound.

By way of background, CCE submitted several sites for consideration as part of the Housing Economic Land Availability Assessment (HELAA) in 2021. These sites were previously promoted as part of the Preferred Approach Local Plan Regulation 18 Consultation in 2019.

As part of these representations, we take the opportunity to re-promote a number of CCE's sites, which could assist the Council in delivering much needed housing for the district. CCE has updated its technical work and provide Vision Documents in relation to its landholdings in Southbourne, Oving, and Hunston Parishes to demonstrate how additional housing can be delivered. These Vision Documents are enclosed.

We consider this and other aspects of the emerging Local Plan below.

Chapter 2: Vision & Strategic Objectives

The Local Plan Vision details a positive approach to supporting sustainable development in the context of the climate emergency. CCE welcomes the Vision for Chichester, particularly the importance placed on the delivery of new homes in 'Objective 3' and the delivery of new infrastructure to support the new development in 'Objective 7'.

Chapter 3: Spatial Strategy and Settlement Hierarchy

The Spatial Strategy builds on the previous Local Plan by focussing growth on Chichester city as the main sub-regional centre. Outside Chichester city and its closest settlements, development will focus on the two settlement hubs within the east-west corridor at Tangmere and Southbourne. This approach is supported by CCE.

Policy S1 Spatial Development Strategy

Draft Policy S1 (Spatial Development Strategy) identifies the broad approach to providing sustainable development in the plan area, which includes ensuring that new residential development is distributed in line with the settlement hierarchy, with a greater proportion of development in the larger and more sustainable settlements. We support this strategy, with particular support for development at the settlement hubs of Southbourne (Policy A13) and Tangmere (Policy A14). We also support that provision is made for extant Site Allocations and the Tangmere strategic site remains allocated under draft Policy A14.

Policy A14 continues to allocate Land West of Tangmere for 1,300 dwellings. CCE questions the Council's decision to not amend the existing settlement boundary of Tangmere to include the land subject to the allocation. Without amending the settlement boundary, the future growth of Tangmere may be hindered. As such, the settlement boundary of Tangmere should be amended to include the allocated site to ensure that the plan is justified.

Draft Policy S1 also refers to development in service villages such as Bosham, Hambrook and Loxwood. Hunston is excluded from the Spatial Strategy but is identified as a Service Village within the Settlement Hierarchy in draft Policy SP2 (Settlement Hierarchy). The draft Local Plan suggests that the allocation of homes in Hunston has been removed as a result of growth in the Manhood Peninsula. CCE acknowledges that the overall housing numbers across the district have been reduced as a result of local constraints but reiterate that their landholding in Hunston remains a suitable site for housing should the Council need to identify more land for housing. This is discussed further below.

Policy S2 Settlement Hierarchy

As stated in paragraph 3.31 of the draft local plan, 'The NPPF encourages housing delivery where it will enhance or maintain the vitality of rural communities'. Paragraph 79 of the NPPF (2021) states that 'To promote sustainable development in rural areas, housing should be located where it will enhance or maintain the vitality of rural communities. Planning policies should identify opportunities for villages to grow and thrive, especially where this will support local services. Where there are groups of smaller settlements, development in one village may support services in a village nearby'.

CCE owns substantial land holdings in South Mundham, which is in close proximity to North Mundham/Runcton which is defined as a Service Village. As such, whilst South Mundham does not contain any services, development in the hamlet would enable sustainable growth to support facilities in North Mundham and Runcton. To ensure that the draft plan is consistent with national policy, South Mundham should be considered as part of North Mundham as a Service Village when considering the future pairing/grouping of some settlements where the facilities and services could be shared to capitalise on the close connections some settlements have.

Development outside the settlements listed in the hierarchy in SP2 is restricted to proposals which require a countryside location or meet an essential local rural local need or supports rural diversification in accordance with Policy NE10. To this end, CCE has smaller land holdings in Tangmere, Oving, South Mundham, Birdham, Chidham and Sidlesham, which may be suitable for conversion for residential use or via windfall housing. Location plans for each of the sites can be found in Appendices 1-8.

Chapter 4: Climate Change and the Natural Environment

Policy NE4 Strategic Wildlife Corridors

The East of City strategic wildlife corridor has been relocated to the eastern side of proposed Site Allocation A8 (Land to the East of Chichester). The relocation of this wildlife corridor follows additional evidence that shows that the commuting route for Barbastelle Bats is along Drayton Lane.

CCE owns land to the east of Drayton Lane (immediately adjacent to the wildlife corridor and to the east of draft allocation A8) and surrounding the village of Oving. Its land has been identified in the HELAA (2021) as being developable, including site HOV0017 (Drayton Lane). The land east of Drayton Lane is sustainably located being close to Chichester and its amenities. The site provides an opportunity to sensitively and sustainably provide additional homes for the District. In accordance with Draft Policy NE4, the proposals for the Land East of Drayton Lane will not have an adverse impact on the integrity and function of the wildlife corridor and will not undermine the connectivity and ecological value of the corridor. This Vision Document will be shared under separate cover.

The eastern edge of the relocated wildlife corridor encroaches into CCE land. Any proposal on this land would be required to take the statutory protection for bats and other protected species into consideration and managed as part of a sensitive masterplan for development and on this basis, it is considered unnecessary to extend the wildlife corridor to encroach into the CCE site.

It is also considered that the detail of policy NE4 goes beyond the purpose of the policy, which should be to safeguard wildlife rich habitats and wider ecological networks. The policy is clear that development should only be permitted where it would not create an adverse effect upon the ecological value, function, integrity and connectivity of the corridors. It does not resist development in principle. This therefore makes redundant policy text 1, which seeks to introduce a

sequential test for preferable sites outside of a wildlife corridor. It is considered that this test conflicts with the underlying purpose of the policy, which is to safeguard wildlife corridors from harmful impacts that cannot be mitigated, and should therefore be deleted.

Policy NE7 Development and Disturbance of Birds

CCE is broadly supportive of Policy NE7. However, they would like to note that the situation regarding the national guidance on nutrient neutrality is still evolving and therefore, this policy is only relevant to current legislation. Policy NE7 may therefore not be relevant throughout the entirety of the plan period. As such, CCE considers that it is necessary in this instance to ensure that an appropriate reference to changing legislation is included within the policy to prevent it from becoming out of date and would also ensure that the policy remains effective once adopted.

Policy NE10 The Countryside

CCE is supportive of the inclusion of a policy referencing the conversion of existing buildings in the countryside, however, we believe that Policy NE10 is not consistent with national policy. Policy NE10 criteria B states that proposals for the conversion of buildings in the countryside will be permitted where 'it has been demonstrated that economic and community uses have been considered before residential, with residential uses only permitted if economic and community uses are shown to be inappropriate and unviable'. This policy is not in accordance with Paragraph 152 of the NPPF (2021) which states that the reuse of existing resources should be encouraged, including 'the conversion of existing buildings'. Under paragraph 152, there is no prerequisite to adopt a sequential approach, or to give preference to other uses. As such, criteria B should be omitted from Policy NE10. Reference to criteria B should also be removed from criteria C.

Chapter 5: Housing

Policy H1 Meeting Housing Needs

The Preferred Approach Local Plan was based on meeting the identified objectively assessed housing needs of the plan area of 638 dwellings per annum. However, due to constraints, particularly the capacity of the A27, the Submission Version of the Local Plan has planned for a housing requirement below the need derived from the standard method. The Plan proposes to deliver 535 dpa in the southern plan area and a further 40 dpa in the northern plan area, a total supply of 10,350 dwellings over the plan period from 2021 – 2039 (575 dpa).

The Planning Inspectorate has previously asked the Council to determine what level of housing could be achieved based on deliverable improvements to the A27 and to consider whether the full housing needs could be met another way. It is acknowledged that the Council has carried out the additional work required and the local constraints have resulted in a proposed lower housing requirement.

The NPPF (2021) confirms that to determine the minimum number of homes needed, strategic policies should be informed by a local housing need assessment, conducted using the standard method in national planning guidance – unless exceptional circumstances justify an alternative approach (para. 61). CCE acknowledges that that housing numbers have been reduced as a result of local constraints and it will be down to the Inspector to determine whether the Council's exceptional circumstances justify this. Should the Planning Inspector find that the Council requires additional land to meet the housing need using the standard method, CCE's land at Southbourne, Oving, Drayton Land and Hunston are suitable, available and developable for housing. In addition, CCE's rural development sites could also contribute to meeting the housing need.

Policy H2 Strategic Allocations

Draft Policy H2 confirms that the Tangmere Strategic Development Location is carried forward from the 2015 Local Plan and this is supported by CCE. Strong support is also given for the Broad Location of Development in Southbourne (Policy A13) for up to 1,050 dwellings.

Policy H5 Housing Mix

Draft Policy H5 confirms that the housing mix for a development will be based on the most up to date HEDNA to address identified local needs and market demands. We suggest that the Council considers a range of criteria, including site characteristics, when determining the housing mix for individual sites and this should be reflected in wording of Policy H5.

Policy H7 Rural and First Homes Exception Sites

Draft Policy H7 relates to rural and first homes exception sites. CCE is supportive of the principle of the inclusion of a rural exceptions policy. However, we have concerns over criteria contained within the policy which limits the amount of development that can be delivered under it.

The NPPF (2021) at paragraph 78 states that planning policies and decisions should be responsive to local

circumstances and support housing development that reflect local needs. Furthermore it also states that 'local planning authorities should support opportunities to bring forward rural exception sites that will provide affordable housing to meet identified local needs'.

The key aspect of the policy is to enable the delivery of rural exception sites which would address an identified local need. Within the policy, there is no limit on the amount of development that can be delivered and therefore, it is considered that if Policy H7 is limited to a maximum of 30 dwellings it could serve to hinder development (especially on slightly larger sites), which would otherwise be sustainable. As such, we consider that the amount of development should not be limited and rather should be dictated on a site and need specific basis. CCE considers that for Policy H7 to be positively prepared and in accordance with National Policy, criteria 2 should be removed.

In addition, criteria 6 states that proposals for affordable housing on rural exception sites will only be supported where 'the site is located adjacent or as close as possible to the existing settlement boundary and does not result in scattered or isolated development in rural areas'. The NPPF (2021) does not specify the location of rural exception sites. As such, to be consistent with national policy, criteria 6 should also be omitted.

Furthermore, Policy H7 states that 'applications for first homes exception sites that propose the inclusion of a small proportion of market housing will be expected to provide robust evidence...'. However, in the policy there is no allowance for the provision of market housing on rural exception sites in addition to first homes exception sites. As a result of this, the requirements of the policy are again not consistent with national policy. Paragraph 78 of the NPPF (2021) is supportive of 'some market housing' where it would facilitate the delivery of rural exception sites. As such, CCE considers that Policy H7 should be amended as follows:

'Applications for rural and first homes exceptions sites that propose the inclusion of a small proportion of market housing will be expected to provide robust evidence that the site would be unviable without such housing being included'.

Policy H8 Specialist Accommodation

Draft Policy H8 confirms that all housing sites over 200 units, including those allocated in this plan, will be required to provide specialist accommodation for older people with a support or care component. We request that this policy is amended to add 'where appropriate and viable', acknowledging that viability and site-specific factors need to be taken into consideration.

Chapter 6: Place-making

Policy P3 Density

We support the objective of Draft Policy P3 (Density) to make the most efficient use of land and follow a design led approach to achieve the optimum density for a site. The Policy does not prescribe an appropriate density for the District and this is supported. However, we consider that reference should be made to the fact that density may vary depending upon site specific circumstances and could be higher where transport links and access to services is good.

Chapter 7: Employment and Economy

Policy E3 and E4 Horticultural Development

Chapter 7 of the draft Local Plan confirms that 67 hectares of land is identified to meet the future horticultural land need within four Horticultural Development Areas (HDAs) over the plan period. It is confirmed that an additional 137 hectares of horticultural land is also forecast to be required outside of HDAs to meet future need.

CCE has significant landholdings which could assist the Council in addressing the insufficient availability within the current HDAs. The CCE sites which are considered suitable for horticulture development are listed below and location plans for each of the sites can be found in Appendices 9-13.

- Somerley Farm, NE East Wittering, PO20 7JB
- Fisher Farm, South Mundham, PO20 1ND
- Church & Haise Farm, Sidlesham
- Cowdry Farm, Birdham
- Groves Farm, nr Merston, PO20 2DX / Colworth Manor Farm PO20 2DU.

CCE supports draft Policy E3 which confirms that "approximately 137 hectares of land is also needed outside of HDAs to meet anticipated horticultural and ancillary development land need for the plan period." Support is also given for draft Policy E4 in relation to land outside HDAs. This Policy confirms that proposals for horticultural development can come forward outside the HDAs, subject to a set of criteria. We would welcome continued discussion with the Council on how these sites could help meet the districts horticultural needs in the future.

Chapter 10: Strategic and Area Based Policies

CCE supports Chichester District Council's proposal to allocate additional land for housing at

Southbourne and to maintain the existing allocation at Tangmere. We also consider that CCE's land at Hunston and Oving could assist the Council in meeting its housing needs, should additional housing be required. We consider these opportunities in turn below.

Policy A13 Southbourne Broad Location for Development

CCE supports draft Policy A13 and the allocation of a Broad Location for Development in Southbourne for a mixed-use form of development including 1,050 dwellings.

CCE has significant landholdings around Southbourne which is suitable, available and developable. The land to the north and west of Southbourne measures 70ha and is wholly within CCE's control. The land adjoins the existing settlement and provides an opportunity for a sustainable extension to Southbourne with the potential to deliver c. 1,200 homes for the village, as well as employment, community uses and a significant amount of new public space and green open space. A new Vision Document is enclosed which explains one way in which this opportunity could be realised. Importantly, it is considered that there are no technical impediments that would prevent development from coming forward on this site.

This site has been promoted throughout the Southbourne Neighbourhood Plan process, most recently in the December 2022 consultation. The new Vision Document demonstrates that the CCE site presents the opportunity to provide a comprehensive development that would contain strategic housing growth, significant areas of green infrastructure and open space in a sustainable location. The key access strategy for the site is to provide two new access points from the south A259 Main Road and the east Stein Road. These access points would connect to a spine road which would form a continuous vehicle route around the north-western edge of Southbourne.

The site almost entirely comprises a Secondary Support Area under the Solent Waders and Brent Goose Strategy (SWBGS), which aims to protect the network of non-designated terrestrial wader and brent goose sites that support the Solent Special Protection Areas (SPA) from land take and recreational pressure associated with new development. Due to the designation of the site, discussion was undertaken with the Hampshire and Isle of Wight Wildlife Trust with a view to determine a suitable approach for the scheme and an appropriate survey effort to establish the use of the site by designated birds. As a result of these discussions, wintering bird surveys are taking place. The aim of these surveys is to explore opportunities for mitigation for this SWBGS support area such that development within the red line can proceed without adverse impacts to the bird populations noted within this strategy. Following the survey, the results and approach will be presented to Natural England for further discussion.

In relation to viability, we note that Policy A13 sets several policy objectives for development at Southbourne. The NPPF (2021) notes that where there are up-to-date policies which have set out the contributions expected from development, planning applications that comply with them should be assumed to be viable (para. 58). With this in mind the policy objectives outlined within Policy A13 will require viability testing to be undertaken to ensure a policy compliant scheme is both viable and deliverable. This is necessary to ensure that the policy is sound.

The Policy suggests that employment opportunities are required to be delivered as part of the allocation but there is no specific reference to the amount of use required. CCE supports this proposed approach as it is sufficiently flexible to enable an amount of employment land to be proposed in response to market conditions at the appropriate time and this will help to support delivery of the allocation.

The scale of development proposed has been reduced from 1,250 to 1,050 dwellings to reflect the proportionate reduction in housing numbers across the parishes in the east west corridor as a consequence of the limit on numbers in the southern plan area. If the Inspector finds that additional housing is required, the Vision Document submitted demonstrates that the CCE site in Southbourne could deliver c. 1,200 homes and so could increase housing without needing to identify additional land for development elsewhere.

To summarise, the site could accommodate approximately 1,200 homes which could be delivered on a phased basis early in the plan period. There are no overriding physical or technical constraints that would act as an impediment to development. There is also a clear access arrangement proposed.

Policy A14 Land West of Tangmere

CCE supports that Policy A14 is carried forward into this Local Plan to facilitate the delivery of a residential-led development of at least 1,300 dwellings.

Additional sites

Hunston

CCE further promotes land (15.31ha) located east of the B2145 Selsey Road in Hunston for 240 new homes. The land is deliverable and is fully within CCE's control. The site is highly accessible, located within a maximum of 5-6 minutes walking distance to Selsey Road, where several bus routes connect the village to Chichester.

CCE notes that the Council assessed the HELAA site (ref. HHN0016) as 'developable'. A Vision Document has previously

been prepared and submitted to demonstrate the commitment to it being brought forward for residential development within the plan period. This document is enclosed.

To address the Council's concerns in relation to flooding, following publication of the Chichester Strategic Flood Risk Assessment (SFRA), we have prepared an updated Flood Risk Scoping Study which provides an overview of flood risk constraints across the site from a range of sources. Various mitigation measures are recommended in line with recommendations of the Chichester SFRA and prevailing local and national guidance and best practice. With these measures in place, it is likely that the flood risk could be managed effectively in accordance with the requirements of the NPPF. Detailed data has also been requested from the Environment Agency, which will feed into further technical work that is being carried out.

Should the Inspector conclude that additional housing is required, CCE considers that their site is the most appropriate and sustainable location for development in Hunston. The site provides an opportunity to sensitively and sustainably extend the existing village boundary to provide additional homes to meet an identified housing need.

Land East of Drayton Lane

CCE owns land to the east of Drayton Lane which is bound by Tangmere Road to the north and crosses Oving Road and the railway line to the south. The site is c.1km from the centre of Chichester and comprises 49ha. The site was assessed in the HELAA 2021 as developable 'HOV0017'. A Vision Document has been prepared and was presented to the Council in 2022. This includes a detailed analysis of the site and its surroundings and provided justification as to why the site is suitable for development. This technical review of the site concludes there are no technical impediments to development.

The Vision Document demonstrates how the proposals for the land east of Drayton Lane could be developed as an extension to the draft allocation A8 (Land to the east of Chichester) for up to 700 new homes. The land east of Drayton Lane is fully within the CCE's control, is available for development now and is deliverable with some development achievable within the first five years of the plan period. It represents an opportunity to provide new homes, facilities and significant community benefits, through a sensitively designed development that integrates into the surrounding landscape.

The Vision for this site is a landscape and ecology led masterplan which would celebrate the rich wildlife characters of the different surrounding landscapes and uses the connection between countryside and community to generate its character and identity. The Vision Document demonstrates that this is a suitable location for development.

Should the Inspector conclude that additional housing is required, CCE considers that the land east of Drayton Lane would form a natural extension to allocation A8 and is an appropriate and sustainable location for new development.

Appendix C Additional Guidance

Appendix C provides additional guidance on evidence which needs to be submitted in support of certain planning applications related mainly to development in the countryside. As mentioned in the comments above provided in response to Policy NE10, there is no prerequisite contained within the NPPF (2021) that requires an applicant to demonstrate that previous uses were proven unviable prior to the conversion of a building in the countryside to residential use. As such, to be in accordance with national policy, reference to Policy NE10 should be omitted from Appendix C.

Conclusion

CCE welcomes the opportunity to comment on the Local Plan and is keen to continue to engage with the Council, especially in relation to the Broad Location for Development in Southbourne. CCE is supportive of the Council's aspirations in the Local Plan. However, the changes set out above are considered likely to be necessary to ensure the plan is sound.

CCE is a considerable landowner in Chichester with land largely to the south, west and east of Chichester which could assist the Council in meeting their housing and development needs throughout the plan period.

Document Element: Policy E3 Addressing Horticultural Needs**Respondent:** Ms Lindsay Davey [7844]**Summary:**

I do not find the Local Plan [sound] ref Policy E3 as the proposed housing development to the west of Tangmere is to be built on vital, multi-use horticultural land.

The Local Plan indicates that 67ha are deemed as required for the Tangmere and Runction area and so far only 47ha have been identified this leaving an unmet demand of 20ha.

At this time of concern for climate change, carbon footprint and national food security it is not sound to be developing valuable horticultural agricultural land for housing development.

Full text:

See representation

Change suggested by respondent:

I consider modification to the Local plan in regards to horticultural need versus housing development size and extent necessary. To review and reassess the plan so to make more horticultural land non-housing and look at alternative brownfield sites in the area.

Document Element: Policy E3 Addressing Horticultural Needs**Respondent:** Kingsbridge Estates Limited & Landlink Estates Limited [8084]**Agent:** Savills (Mr William Price, Planner) [7783]**Summary:**

The proposed expansion of HDAs is welcome. However the council's current approach to restrictions on co-location of functionally linked businesses and activities within the food park/cluster is impacting on business competitiveness and efficiency.

Full text:

Policy E3 does not adequately take into consideration the need to deliver associated and functionally linked development to support the continued growth and competitiveness of the Chichester Food Cluster located at Runcton HDA.

The current HDA policy is identified by stakeholders in the 2018 HEDNA and the attached Savills SREBR Report as a barrier to growth due to the failure to support functionally associated uses. The importance of associated uses to the cluster is also acknowledged within The Council's evidence base and other key Government and Industry publications.

The plan should pursue a more positive and proactive wording of the HDA policy in order to allow for a greater breadth of associated uses within the Runcton HDA. The proposed wording of the policy does not provide sufficient certainty to investors and businesses (both established within Ructon HDA or looking to locate within it) that the Council will support the functionally associated uses that are necessary to foster and maintain the growth and competitiveness of a world-class food cluster.

The Local Plan therefore conflicts with paragraph 81 of the NPPF in its entirety which states:

Planning policies and decisions should help create the conditions in which businesses can invest, expand and adapt. Significant weight should be placed on the need to support economic growth and productivity, taking into account both local business needs and wider opportunities for development. The approach taken should allow each area to build on its strengths, counter any weaknesses and address the challenges of the future. This is particularly important where Britain can be a global leader in driving innovation 42, and in areas with high levels of productivity, which should be able to capitalise on their performance and potential.

Change suggested by respondent:

Reference to 'ancillary' in the first paragraph of the policy should be expanded/include explanatory text clarifying that functionally linked uses can include a range of activities including: food-related distribution; food manufacturing linked to the HDAs food preparation; on-site renewable energy to serve on-site activities; and R&D.

Document Element: Policy E3 Addressing Horticultural Needs**Respondent:** Natural England (Luke Hasler, Senior Advisor) [8189]**Summary:**

Looking at the plan's interactive policies map there appears to be both a partial overlap between the existing Runcton Horticultural Development Area (HDA) and a significant overlap between this HDA's proposed extension and one of the strategic wildlife corridors set out under Policy NE4. We would advise that protection and enhancement of the wildlife corridor should take priority as if an inappropriate horticultural development was permitted within the Runcton HDA extension this could result in functional severance of the corridor.

Full text:**Summary of advice**

While we have raised some queries and recommended some further modifications to certain policies we do not find the Plan unsound on any grounds relating to our remit.

Natural England has reviewed the Proposed Submission Local Plan and accompanying appendices together with the Habitats Regulations Assessment (HRA) and Sustainability Appraisal (SA). Our detailed comments on the policies and site allocations are provided as follows:

- Annex 1 - Chapter 2 – Vision and Strategic Objectives
- Annex 2 - Chapter 4 – Climate Change and the Natural Environment
- Annex 3 - Chapter 5 (Housing) and Chapter 6 – (Place-making, Health and Well-being)
- Annex 4 - Chapter 7 (Employment and Economy) and Chapter 8 (Transport and Accessibility)

- Annex 5 - Chapter 10 – Strategic and Area Based Policies

Please note that we have not provided comments on all policies but those which have most influence on environmental issues. Natural England has no comment to make on the policies not covered in this response. Other than confirming that we have referred to it when considering our advice on specific policies and site allocations Natural England has no general comments to make on the SA.

Unfortunately due to unforeseen resourcing issues while we have reviewed the associated HRA we are not in a position to provide detailed comment on it as part of this response. We will rectify this as soon as possible and can confirm that we have seen nothing in it that raises any major concerns.

The Plan has many positive aspects including standalone policies on Green Infrastructure (GI) and wildlife corridors and an incredibly extensive suite of natural environment policies more generally.

We are hugely appreciative of the opportunity that we were given to work with you on shaping key policies post-Regulation 18. However, we believe that the plan needs to go further in its recognition of coastal squeeze as a key issue for the district, should include policy hooks for the forthcoming Local Nature Recovery Strategy (LNRS) and make up to date references to both the Environment Act (2021) and the Environmental Improvement Plan (EIP, 2023). Given how recent the publication of the EIP is we would be happy to discuss with your authority how this could best be achieved but we believe given the wealth of natural capital within Chichester District it is vitally important that this latest iteration of the Local Plan is set in its full policy and legislative context.

We have suggested a significant number of amendments and additions to both policies and supporting text throughout the Plan. In our view these could all be taken forward as minor modifications but if they were all acted upon they would leave the Plan much stronger and more coherent in delivering for the natural environment, one of the three central tenets of genuinely sustainable development as set out in the National Planning Policy Framework (NPPF 2021, paragraph 8c).

See attachment for representations on paragraphs/policies.

Change suggested by respondent:

We note that this issue appears to be partially addressed by Requirement 9 of Policy E4 but believe that the supporting text to either E3 or E4 should specifically acknowledge this overlap and potentially provide a further steer to potential developers as to how the two plan designations will interact.

Document Element: Policy E3 Addressing Horticultural Needs**Respondent:** Sussex Wildlife Trust (Laura Brook) [7654]**Summary:**

Having looked at the information presented in the consultation, this policy appears to propose an extension to the Runcton Horticultural Development Needs on top of the East of the City Wildlife Corridor. Neither Policy E3 addressing Horticultural Need, nor indeed Policy N4 Strategic Wildlife Corridors, seem to address how these two policies have the opportunity to interact positively for the benefit of biodiversity. We would suggest that this policy more clearly reflects that it overlays a Wildlife Corridor and as such must recognise the requirements of policy NE 4 Strategic Wildlife Corridors when proceeding.

Document Element: Policy E3 Addressing Horticultural Needs**Respondent:** West Sussex County Council [1416]**Agent:** Henry Adams LLP (Peter Cleveland, Head of Planning) [6827]**Summary:**

Object to allocation of land at Tangmere Apron for horticultural development. Unsuitable for horticultural use due to land being hardstanding; proximity to dwellings; light spill from potential horticultural development; considered developable for employment/residential uses.

Full text:

This representation is made on behalf of our client, West Sussex County Council who wish to raise objection to the continued allocation of land within their ownership for horticultural development under Policy E3 of the draft Local Plan. The site is edged in red on the attached plan (dated 06-02-2014).

Site

The site is situated to the South of the main settlement of Tangmere and relates to an open area of brownfield land previously used as the apron for RAF Tangmere airfield. As a result of this previous use, the site comprises a large flat area of concrete. Most recently, the site has been rented out by our client to the NHS, who used it as a COVID testing centre.

The site borders residential development along its Northern boundary, which also provide a number of opportunities for access. Extensive areas of greenhouses are located to the East of the site, and the fields to the South of the site are in agricultural in use. The site has no planning constraints, other than being outside of the Settlement Policy Boundary and partly covered by the Horticultural Development Area (HDA).

Policy E3 Assessment

Policy E3 of the draft Local Plan sets out that there is a need to support the growth of horticultural industry within the plan area, which requires 204ha of additional land over the plan period. It sets out that large scale horticultural development will be focussed within the HDAs at Tangmere and Runcton.

We are of the view that the site is wholly unsuitable for horticultural use, as a result of it being hardstanding, but principally due to its proximity to residential properties and the only likely suitable use being for additional greenhouses. The significant light spill from such a use would harmful to neighbouring amenity and would not therefore be a suitable use of the land. When viewed within the Agricultural Land Classification maps, the site can be seen to be classified as 'Other land primarily in a non-agricultural use'.

The site was submitted within the most recent HELAA, and has been considered developable for employment uses, and potentially developable for residential uses. Should the housing requirement for Tangmere increase, we ask Chichester District Council to consider allocating Land at Tangmere Apron for housing, as in accordance with the NPPF, brownfield sites should be considered ahead of greenfield. At present, it represents an area of under-utilised brownfield land, which will not find functional purpose in agricultural / horticultural use due to its concrete top and proximity to residential properties. The site represents a greater opportunity for allocation in alternate uses. Part of the site is already outside of the HDA. The site adjoins the adopted settlement policy boundary to its North, and therefore it is clear it relates well to the existing settlement.

In visual terms, the site is unsightly, and untidy, which is incongruous in comparison to the residential uses directly adjacent to the Northern boundary of the site, and the open, undeveloped nature of the land to the South of the site. Potential development of the site provides opportunity to provide a softer transition between the hard settlement edge and open countryside, through a landscape led development at the site. This could significantly soften the edge of the settlement, where currently it is abrupt and stark when viewed from the south.

We therefore ask that Chichester District Council consider removing the Horticultural Development Area (HDA) designation currently affecting part of the site for the reasons set out above. The site adjoins the settlement policy boundary to the majority of its Northern boundary, and can be considered as an area of brownfield land. Therefore, in line with the NPPF, its development should be considered ahead of greenfield land. Further, the site is currently of a poor visual quality, and any development would provide the opportunity to enhance and soften the edge of the settlement.

Change suggested by respondent:

Consider allocating Land at Tangmere Apron for housing should housing requirement for Tangmere increase.

Document Element: Background, 7.28**Respondent:** Kingsbridge Estates Limited & Landlink Estates Limited [8084]**Agent:** Savills (Mr William Price, Planner) [7783]**Summary:**

Fails to acknowledge critical need to accommodate functionally linked activities within the HDA. Plan is not positively prepared as it fails to take into account HEDNA evidence, government publications and other industry publications.

Full text:

The word 'ancillary' has proven, over the lifetime of the current adopted local plan, to be restrictive on the ability of the food production businesses at Runcton HDA to undertake beneficial development that would facilitate growth, competitiveness and market-responsiveness. The evolution of the sector, and the expectation of the onward consumer, is increasingly dependent upon co-location of the functions of food production.

The wording of paragraph 7.28 does not take into consideration the need to deliver associated and functionally linked development to support the continued growth and competitiveness of the Chichester Food Cluster located at Runcton HDA.

The current HDA policy is acknowledged within the 2018 HEDNA and the attached Savills SREBR Report as a barrier to growth due to the failure to support functionally associated uses. The importance of associated uses to the cluster is also acknowledged within the Council's evidence base and other key Government and Industry publications.

Accordingly the Plan should incorporate a more positive and proactive wording of the HDA policy in order to allow for a greater breadth of associated uses within the Runcton HDA. The proposed wording of the policy does not provide sufficient certainty to investors and businesses (both established within Runcton HDA or looking to locate within it) that the Council will support the functionally associated uses that are necessary to foster and maintain the growth and competitiveness of a world-class food cluster.

The Local Plan therefore conflicts with paragraph 81 of the NPPF in its entirety which states:

Planning policies and decisions should help create the conditions in which businesses can invest, expand and adapt. Significant weight should be placed on the need to support economic growth and productivity, taking into account both local business needs and wider opportunities for development. The approach taken should allow each area to build on its strengths, counter any weaknesses and address the challenges of the future. This is particularly important where Britain can be a global leader in driving innovation 42, and in areas with high levels of productivity, which should be able to capitalise on their performance and potential.

Change suggested by respondent:

Reference to 'ancillary' in the first paragraph of the policy should be replaced with 'functionally linked' and include explanatory text clarifying that functionally linked uses can include a range of activities including: food-related distribution; food manufacturing linked to the HDAs food preparation; on-site renewable energy to serve on-site activities; and R&D.

Object

Document Element: Background, 7.29**Respondent:** Kingsbridge Estates Limited & Landlink Estates Limited [8084]**Agent:** Savills (Mr William Price, Planner) [7783]**Summary:**

LP restricts functionally linked activities to the detriment of the growth and prosperity of the sector.

Needs to be adapted to allow functionally linked uses to co-locate in the interests of efficiency, delivery and sustainability

Full text:

Para 11.66 of the 2018 HEDNA sets out the manner in which the document was informed by consultation with stakeholder. It says:

As part of our examination of the horticultural industry in Chichester we have approached most of the major employers seeking their views on the key drivers affecting the horticulture industry both nationally and locally and how these are expected to influence the future requirements of the industry within Chichester.

Para 11.78 of the 2018 HEDNA says:

Around half of the respondents believed that the industry would have grown at a much faster rate if it wasn't for the restrictive planning issues placed on them by local government. They believed this went against government policy which aims towards greater food security and reduced food miles. It also goes against the commercial demands of the industry driven by supermarkets who want more production of every type of food.

The current HDA policy is acknowledged as a barrier to growth due to the failure to support functionally associated uses including food processing and associated logistics etc. The importance of uses that are functionally linked to food production (a food cluster) is also acknowledged within The Council's evidence base (2020 HEDNA) and other key Government and Industry publications.

Accordingly, the Plan should pursue a more positive and proactive wording of the HDA policy in order to allow for a greater breadth of functionally-linked uses within the Runcton HDA. The proposed wording of the policy does not provide sufficient certainty to investors and businesses (both established within Runcton HDA or looking to locate within it) that The Council will support the functionally associated uses that are necessary to foster and maintain the growth and competitiveness of a world-class food cluster (refer to Savills SREBR).

The Local Plan therefore conflicts with paragraph 81 of the NPPF in its entirety which states:

Planning policies and decisions should help create the conditions in which businesses can invest, expand and adapt. Significant weight should be placed on the need to support economic growth and productivity, taking into account both local business needs and wider opportunities for development. The approach taken should allow each area to build on its strengths, counter any weaknesses and address the challenges of the future. This is particularly important where Britain can be a global leader in driving innovation 42, and in areas with high levels of productivity, which should be able to capitalise on their performance and potential.

Refer to Savills SREBR para 4.2.9 in which the need for flexibility and co-location of functionally related development is explained.

Change suggested by respondent:

Reference to 'ancillary' with regard to the HDAs in relevant policies and supporting text should be modified to 'functionally linked' and include explanatory text clarifying that 'functionally linked' uses can include a range of activities including: food-related distribution; food manufacturing linked to the HDAs food preparation; on-site renewable energy to serve on-site activities; and R&D.

Document Element: Background, 7.31**Respondent:** Kingsbridge Estates Limited & Landlink Estates Limited [8084]**Agent:** Savills (Mr William Price, Planner) [7783]**Summary:**

Is not positively prepared as it fails to take into account HEDNA evidence, government publications and other industry publications. The requirement for development to demonstrate why it cannot be accommodated within the HDAs fails to take into consideration that the plan itself expects that approximately two-thirds of horticultural development across the Local Plan period will need to come forward outside of HDAs. Accordingly, the Council should plan positively for this growth by taking a sequential approach to horticultural development that includes provision for associated and functionally-linked development in the right way.

Full text:

The Council's recognition that existing horticultural HDAs will be insufficient to deliver the quantum of development expected during the local plan period is welcomed.

The requirement that land within the HDA should be used first (in advance of 'other' land) to accommodate all forms of new horticultural development, albeit with caveats, does lack a progressive planned approach to the delivery of the range of development and infrastructure necessary, in the right locations, to realise the potential of the industry.

The Council's approach to HDAs correctly acknowledges the hierarchy of HDAs with Runcton HDA a focus for large scale horticultural development. The terms of the policy imply that all of the allocated land in all four HDAs would need to have been saturated before development outside any one of the HDAs would be permissible. This would fail to acknowledge the specific locational needs of the operations and businesses occupying each of the HDAs and should be amended.

The requirement for development to demonstrate why it cannot be accommodated within the HDAs fails to take into consideration that the plan itself expects that approximately two-thirds of horticultural development across the Local Plan period will need to come forward outside of HDAs. Accordingly, the Council should plan positively for this growth by taking a sequential approach to horticultural development that includes provision for associated and functionally-linked development in the right way.

Associated and functionally linked development would include elements such as R&D, storage and distribution, linked office development and processing of the food produced in the area.

Document Element: Policy E4 Horticultural Development**Respondent:** Church Commissioners for England [1858]**Agent:** Lichfields (Tara Johnston, Planner) [7506]**Summary:**

This Policy confirms that proposals for horticultural development can come forward outside the HDAs, subject to a set of criteria. We would welcome continued discussion with the Council on how these [listed CCE] sites could help meet the district's horticultural needs in the future.

Full text:

We write in response to the above consultation on behalf of our client, the Church Commissioners for England (CCE). CCE owns a large amount of land in the area largely to the south, west and east of Chichester.

We welcome the opportunity to further engage with the Local Plan process. Whilst we support some aspects of the Local Plan, we consider that some changes are likely to be necessary to ensure that the Plan can be found sound.

By way of background, CCE submitted several sites for consideration as part of the Housing Economic Land Availability Assessment (HELAA) in 2021. These sites were previously promoted as part of the Preferred Approach Local Plan Regulation 18 Consultation in 2019.

As part of these representations, we take the opportunity to re-promote a number of CCE's sites, which could assist the Council in delivering much needed housing for the district. CCE has updated its technical work and provide Vision Documents in relation to its landholdings in Southbourne, Oving, and Hunston Parishes to demonstrate how additional housing can be delivered. These Vision Documents are enclosed.

We consider this and other aspects of the emerging Local Plan below.

Chapter 2: Vision & Strategic Objectives

The Local Plan Vision details a positive approach to supporting sustainable development in the context of the climate emergency. CCE welcomes the Vision for Chichester, particularly the importance placed on the delivery of new homes in 'Objective 3' and the delivery of new infrastructure to support the new development in 'Objective 7'.

Chapter 3: Spatial Strategy and Settlement Hierarchy

The Spatial Strategy builds on the previous Local Plan by focussing growth on Chichester city as the main sub-regional centre. Outside Chichester city and its closest settlements, development will focus on the two settlement hubs within the east-west corridor at Tangmere and Southbourne. This approach is supported by CCE.

Policy S1 Spatial Development Strategy

Draft Policy S1 (Spatial Development Strategy) identifies the broad approach to providing sustainable development in the plan area, which includes ensuring that new residential development is distributed in line with the settlement hierarchy, with a greater proportion of development in the larger and more sustainable settlements. We support this strategy, with particular support for development at the settlement hubs of Southbourne (Policy A13) and Tangmere (Policy A14). We also support that provision is made for extant Site Allocations and the Tangmere strategic site remains allocated under draft Policy A14.

Policy A14 continues to allocate Land West of Tangmere for 1,300 dwellings. CCE questions the Council's decision to not amend the existing settlement boundary of Tangmere to include the land subject to the allocation. Without amending the settlement boundary, the future growth of Tangmere may be hindered. As such, the settlement boundary of Tangmere should be amended to include the allocated site to ensure that the plan is justified.

Draft Policy S1 also refers to development in service villages such as Bosham, Hambrook and Loxwood. Hunston is excluded from the Spatial Strategy but is identified as a Service Village within the Settlement Hierarchy in draft Policy SP2 (Settlement Hierarchy). The draft Local Plan suggests that the allocation of homes in Hunston has been removed as a result of growth in the Manhood Peninsula. CCE acknowledges that the overall housing numbers across the district have been reduced as a result of local constraints but reiterate that their landholding in Hunston remains a suitable site for housing should the Council need to identify more land for housing. This is discussed further below.

Policy S2 Settlement Hierarchy

As stated in paragraph 3.31 of the draft local plan, 'The NPPF encourages housing delivery where it will enhance or maintain the vitality of rural communities'. Paragraph 79 of the NPPF (2021) states that 'To promote sustainable development in rural areas, housing should be located where it will enhance or maintain the vitality of rural communities. Planning policies should identify opportunities for villages to grow and thrive, especially where this will support local services. Where there are groups of smaller settlements, development in one village may support services in a village nearby'.

CCE owns substantial land holdings in South Mundham, which is in close proximity to North Mundham/Runcton which is defined as a Service Village. As such, whilst South Mundham does not contain any services, development in the hamlet would enable sustainable growth to support facilities in North Mundham and Runcton. To ensure that the draft plan is consistent with national policy, South Mundham should be considered as part of North Mundham as a Service Village when considering the future pairing/grouping of some settlements where the facilities and services could be shared to capitalise on the close connections some settlements have.

Development outside the settlements listed in the hierarchy in SP2 is restricted to proposals which require a countryside location or meet an essential local rural local need or supports rural diversification in accordance with Policy NE10. To this end, CCE has smaller land holdings in Tangmere, Oving, South Mundham, Birdham, Chidham and Sidlesham, which may be suitable for conversion for residential use or via windfall housing. Location plans for each of the sites can be found in Appendices 1-8.

Chapter 4: Climate Change and the Natural Environment

Policy NE4 Strategic Wildlife Corridors

The East of City strategic wildlife corridor has been relocated to the eastern side of proposed Site Allocation A8 (Land to the East of Chichester). The relocation of this wildlife corridor follows additional evidence that shows that the commuting route for Barbastelle Bats is along Drayton Lane.

CCE owns land to the east of Drayton Lane (immediately adjacent to the wildlife corridor and to the east of draft allocation A8) and surrounding the village of Oving. Its land has been identified in the HELAA (2021) as being developable, including site HOV0017 (Drayton Lane). The land east of Drayton Lane is sustainably located being close to Chichester and its amenities. The site provides an opportunity to sensitively and sustainably provide additional homes for the District. In accordance with Draft Policy NE4, the proposals for the Land East of Drayton Lane will not have an adverse impact on the integrity and function of the wildlife corridor and will not undermine the connectivity and ecological value of the corridor. This Vision Document will be shared under separate cover.

The eastern edge of the relocated wildlife corridor encroaches into CCE land. Any proposal on this land would be required to take the statutory protection for bats and other protected species into consideration and managed as part of a sensitive masterplan for development and on this basis, it is considered unnecessary to extend the wildlife corridor to encroach into the CCE site.

It is also considered that the detail of policy NE4 goes beyond the purpose of the policy, which should be to safeguard wildlife rich habitats and wider ecological networks. The policy is clear that development should only be permitted where it would not create an adverse effect upon the ecological value, function, integrity and connectivity of the corridors. It does not resist development in principle. This therefore makes redundant policy text 1, which seeks to introduce a sequential test for preferable sites outside of a wildlife corridor. It is considered that this test conflicts with the underlying purpose of the policy, which is to safeguard wildlife corridors from harmful impacts that cannot be mitigated, and should therefore be deleted.

Policy NE7 Development and Disturbance of Birds

CCE is broadly supportive of Policy NE7. However, they would like to note that the situation regarding the national guidance on nutrient neutrality is still evolving and therefore, this policy is only relevant to current legislation. Policy NE7 may therefore not be relevant throughout the entirety of the plan period. As such, CCE considers that it is necessary in this instance to ensure that an appropriate reference to changing legislation is included within the policy to prevent it

from becoming out of date and would also ensure that the policy remains effective once adopted.

Policy NE10 The Countryside

CCE is supportive of the inclusion of a policy referencing the conversion of existing buildings in the countryside, however, we believe that Policy NE10 is not consistent with national policy. Policy NE10 criteria B states that proposals for the conversion of buildings in the countryside will be permitted where 'it has been demonstrated that economic and community uses have been considered before residential, with residential uses only permitted if economic and community uses are shown to be inappropriate and unviable'. This policy is not in accordance with Paragraph 152 of the NPPF (2021) which states that the reuse of existing resources should be encouraged, including 'the conversion of existing buildings'. Under paragraph 152, there is no prerequisite to adopt a sequential approach, or to give preference to other uses. As such, criteria B should be omitted from Policy NE10. Reference to criteria B should also be removed from criteria C.

Chapter 5: Housing

Policy H1 Meeting Housing Needs

The Preferred Approach Local Plan was based on meeting the identified objectively assessed housing needs of the plan area of 638 dwellings per annum. However, due to constraints, particularly the capacity of the A27, the Submission Version of the Local Plan has planned for a housing requirement below the need derived from the standard method. The Plan proposes to deliver 535 dpa in the southern plan area and a further 40 dpa in the northern plan area, a total supply of 10,350 dwellings over the plan period from 2021 – 2039 (575 dpa).

The Planning Inspectorate has previously asked the Council to determine what level of housing could be achieved based on deliverable improvements to the A27 and to consider whether the full housing needs could be met another way. It is acknowledged that the Council has carried out the additional work required and the local constraints have resulted in a proposed lower housing requirement.

The NPPF (2021) confirms that to determine the minimum number of homes needed, strategic policies should be informed by a local housing need assessment, conducted using the standard method in national planning guidance – unless exceptional circumstances justify an alternative approach (para. 61). CCE acknowledges that that housing numbers have been reduced as a result of local constraints and it will be down to the Inspector to determine whether the Council's exceptional circumstances justify this. Should the Planning Inspector find that the Council requires additional land to meet the housing need using the standard method, CCE's land at Southbourne, Oving, Drayton Land and Hunston are suitable, available and developable for housing. In addition, CCE's rural development sites could also contribute to meeting the housing need.

Policy H2 Strategic Allocations

Draft Policy H2 confirms that the Tangmere Strategic Development Location is carried forward from the 2015 Local Plan and this is supported by CCE. Strong support is also given for the Broad Location of Development in Southbourne (Policy A13) for up to 1,050 dwellings.

Policy H5 Housing Mix

Draft Policy H5 confirms that the housing mix for a development will be based on the most up to date HEDNA to address identified local needs and market demands. We suggest that the Council considers a range of criteria, including site characteristics, when determining the housing mix for individual sites and this should be reflected in wording of Policy H5.

Policy H7 Rural and First Homes Exception Sites

Draft Policy H7 relates to rural and first homes exception sites. CCE is supportive of the principle of the inclusion of a rural exceptions policy. However, we have concerns over criteria contained within the policy which limits the amount of development that can be delivered under it.

The NPPF (2021) at paragraph 78 states that planning policies and decisions should be responsive to local circumstances and support housing development that reflect local needs. Furthermore it also states that 'local planning authorities should support opportunities to bring forward rural exception sites that will provide affordable housing to meet identified local needs'.

The key aspect of the policy is to enable the delivery of rural exception sites which would address an identified local need. Within the policy, there is no limit on the amount of development that can be delivered and therefore, it is considered that if Policy H7 is limited to a maximum of 30 dwellings it could serve to hinder development (especially on slightly larger sites), which would otherwise be sustainable. As such, we consider that the amount of development should not be limited and rather should be dictated on a site and need specific basis. CCE considers that for Policy H7 to be positively prepared and in accordance with National Policy, criteria 2 should be removed.

In addition, criteria 6 states that proposals for affordable housing on rural exception sites will only be supported where 'the site is located adjacent or as close as possible to the existing settlement boundary and does not result in scattered or isolated development in rural areas'. The NPPF (2021) does not specify the location of rural exception sites. As such, to be consistent with national policy, criteria 6 should also be omitted.

Furthermore, Policy H7 states that 'applications for first homes exception sites that propose the inclusion of a small proportion of market housing will be expected to provide robust evidence...'. However, in the policy there is no allowance for the provision of market housing on rural exception sites in addition to first homes exception sites. As a result of this, the requirements of the policy are again not consistent with national policy. Paragraph 78 of the NPPF (2021) is supportive of 'some market housing' where it would facilitate the delivery of rural exception sites. As such, CCE considers that Policy H7 should be amended as follows:

'Applications for rural and first homes exceptions sites that propose the inclusion of a small proportion of market housing will be expected to provide robust evidence that the site would be unviable without such housing being included'.

Policy H8 Specialist Accommodation

Draft Policy H8 confirms that all housing sites over 200 units, including those allocated in this plan, will be required to provide specialist accommodation for older people with a support or care component. We request that this policy is amended to add 'where appropriate and viable', acknowledging that viability and site-specific factors need to be taken into consideration.

Chapter 6: Place-making

Policy P3 Density

We support the objective of Draft Policy P3 (Density) to make the most efficient use of land and follow a design led approach to achieve the optimum density for a site. The Policy does not prescribe an appropriate density for the District and this is supported. However, we consider that reference should be made to the fact that density may vary depending upon site specific circumstances and could be higher where transport links and access to services is good.

Chapter 7: Employment and Economy

Policy E3 and E4 Horticultural Development

Chapter 7 of the draft Local Plan confirms that 67 hectares of land is identified to meet the future horticultural land need within four Horticultural Development Areas (HDAs) over the plan period. It is confirmed that an additional 137 hectares of horticultural land is also forecast to be required outside of HDAs to meet future need.

CCE has significant landholdings which could assist the Council in addressing the insufficient availability within the current HDAs. The CCE sites which are considered suitable for horticulture development are listed below and location plans for each of the sites can be found in Appendices 9-13.

- Somerley Farm, NE East Wittering, PO20 7JB
- Fisher Farm, South Mundham, PO20 1ND
- Church & Haise Farm, Sidlesham
- Cowdry Farm, Birdham
- Groves Farm, nr Merston, PO20 2DX / Colworth Manor Farm PO20 2DU.

CCE supports draft Policy E3 which confirms that "approximately 137 hectares of land is also needed outside of HDAs to meet anticipated horticultural and ancillary development land need for the plan period." Support is also given for draft Policy E4 in relation to land outside HDAs. This Policy confirms that proposals for horticultural development can come forward outside the HDAs, subject to a set of criteria. We would welcome continued discussion with the Council on how these sites could help meet the districts horticultural needs in the future.

Chapter 10: Strategic and Area Based Policies

CCE supports Chichester District Council's proposal to allocate additional land for housing at Southbourne and to maintain the existing allocation at Tangmere. We also consider that CCE's land at Hunston and Oving could assist the Council in meeting its housing needs, should additional housing be required. We consider these opportunities in turn below.

Policy A13 Southbourne Broad Location for Development

CCE supports draft Policy A13 and the allocation of a Broad Location for Development in Southbourne for a mixed-use form of development including 1,050 dwellings.

CCE has significant landholdings around Southbourne which is suitable, available and developable. The land to the north

and west of Southbourne measures 70ha and is wholly within CCE's control. The land adjoins the existing settlement and provides an opportunity for a sustainable extension to Southbourne with the potential to deliver c. 1,200 homes for the village, as well as employment, community uses and a significant amount of new public space and green open space. A new Vision Document is enclosed which explains one way in which this opportunity could be realised. Importantly, it is considered that there are no technical impediments that would prevent development from coming forward on this site.

This site has been promoted throughout the Southbourne Neighbourhood Plan process, most recently in the December 2022 consultation. The new Vision Document demonstrates that the CCE site presents the opportunity to provide a comprehensive development that would contain strategic housing growth, significant areas of green infrastructure and open space in a sustainable location. The key access strategy for the site is to provide two new access points from the south A259 Main Road and the east Stein Road. These access points would connect to a spine road which would form a continuous vehicle route around the north-western edge of Southbourne.

The site almost entirely comprises a Secondary Support Area under the Solent Waders and Brent Goose Strategy (SWBGS), which aims to protect the network of non-designated terrestrial wader and brent goose sites that support the Solent Special Protection Areas (SPA) from land take and recreational pressure associated with new development. Due to the designation of the site, discussion was undertaken with the Hampshire and Isle of Wight Wildlife Trust with a view to determine a suitable approach for the scheme and an appropriate survey effort to establish the use of the site by designated birds. As a result of these discussions, wintering bird surveys are taking place. The aim of these surveys is to explore opportunities for mitigation for this SWBGS support area such that development within the red line can proceed without adverse impacts to the bird populations noted within this strategy. Following the survey, the results and approach will be presented to Natural England for further discussion.

In relation to viability, we note that Policy A13 sets several policy objectives for development at Southbourne. The NPPF (2021) notes that where there are up-to-date policies which have set out the contributions expected from development, planning applications that comply with them should be assumed to be viable (para. 58). With this in mind the policy objectives outlined within Policy A13 will require viability testing to be undertaken to ensure a policy compliant scheme is both viable and deliverable. This is necessary to ensure that the policy is sound.

The Policy suggests that employment opportunities are required to be delivered as part of the allocation but there is no specific reference to the amount of use required. CCE supports this proposed approach as it is sufficiently flexible to enable an amount of employment land to be proposed in response to market conditions at the appropriate time and this will help to support delivery of the allocation.

The scale of development proposed has been reduced from 1,250 to 1,050 dwellings to reflect the proportionate reduction in housing numbers across the parishes in the east west corridor as a consequence of the limit on numbers in the southern plan area. If the Inspector finds that additional housing is required, the Vision Document submitted demonstrates that the CCE site in Southbourne could deliver c. 1,200 homes and so could increase housing without needing to identify additional land for development elsewhere.

To summarise, the site could accommodate approximately 1,200 homes which could be delivered on a phased basis early in the plan period. There are no overriding physical or technical constraints that would act as an impediment to development. There is also a clear access arrangement proposed.

Policy A14 Land West of Tangmere

CCE supports that Policy A14 is carried forward into this Local Plan to facilitate the delivery of a residential-led development of at least 1,300 dwellings.

Additional sites

Hunston

CCE further promotes land (15.31ha) located east of the B2145 Selsey Road in Hunston for 240 new homes. The land is deliverable and is fully within CCE's control. The site is highly accessible, located within a maximum of 5-6 minutes walking distance to Selsey Road, where several bus routes connect the village to Chichester.

CCE notes that the Council assessed the HELAA site (ref. HHN0016) as 'developable'. A Vision Document has previously been prepared and submitted to demonstrate the commitment to it being brought forward for residential development within the plan period. This document is enclosed.

To address the Council's concerns in relation to flooding, following publication of the Chichester Strategic Flood Risk Assessment (SFRA), we have prepared an updated Flood Risk Scoping Study which provides an overview of flood risk constraints across the site from a range of sources. Various mitigation measures are recommended in line with recommendations of the Chichester SFRA and prevailing local and national guidance and best practice. With these measures in place, it is likely that the flood risk could be managed effectively in accordance with the requirements of the NPPF. Detailed data has also been requested from the Environment Agency, which will feed into further technical work that is being carried out.

Should the Inspector conclude that additional housing is required, CCE considers that their site is the most appropriate and sustainable location for development in Hunston. The site provides an opportunity to sensitively and sustainably extend the existing village boundary to provide additional homes to meet an identified housing need.

Land East of Drayton Lane

CCE owns land to the east of Drayton Lane which is bound by Tangmere Road to the north and crosses Oving Road and the railway line to the south. The site is c.1km from the centre of Chichester and comprises 49ha. The site was assessed in the HELAA 2021 as developable 'HOV0017'. A Vision Document has been prepared and was presented to the Council in 2022. This includes a detailed analysis of the site and its surroundings and provided justification as to why the site is suitable for development. This technical review of the site concludes there are no technical impediments to development.

The Vision Document demonstrates how the proposals for the land east of Drayton Lane could be developed as an extension to the draft allocation A8 (Land to the east of Chichester) for up to 700 new homes. The land east of Drayton Lane is fully within the CCE's control, is available for development now and is deliverable with some development achievable within the first five years of the plan period. It represents an opportunity to provide new homes, facilities and significant community benefits, through a sensitively designed development that integrates into the surrounding landscape.

The Vision for this site is a landscape and ecology led masterplan which would celebrate the rich wildlife characters of the different surrounding landscapes and uses the connection between countryside and community to generate its character and identity. The Vision Document demonstrates that this is a suitable location for development.

Should the Inspector conclude that additional housing is required, CCE considers that the land east of Drayton Lane would form a natural extension to allocation A8 and is an appropriate and sustainable location for new development.

Appendix C Additional Guidance

Appendix C provides additional guidance on evidence which needs to be submitted in support of certain planning applications related mainly to development in the countryside. As mentioned in the comments above provided in response to Policy NE10, there is no prerequisite contained within the NPPF (2021) that requires an applicant to demonstrate that previous uses were proven unviable prior to the conversion of a building in the countryside to residential use. As such, to be in accordance with national policy, reference to Policy NE10 should be omitted from Appendix C.

Conclusion

CCE welcomes the opportunity to comment on the Local Plan and is keen to continue to engage with the Council, especially in relation to the Broad Location for Development in Southbourne. CCE is supportive of the Council's aspirations in the Local Plan. However, the changes set out above are considered likely to be necessary to ensure the plan is sound.

CCE is a considerable landowner in Chichester with land largely to the south, west and east of Chichester which could assist the Council in meeting their housing and development needs throughout the plan period.

Object

Document Element: Policy E4 Horticultural Development**Respondent:** Kingsbridge Estates Limited & Landlink Estates Limited [8084]**Agent:** Savills (Mr William Price, Planner) [7783]**Summary:**

Policy obstructs essential co-location of functionally linked development within HDAs that will perpetuate obstruction to growth of the industry.

Policy implies that all of the allocated land in all four HDAs would need to have been saturated before development outside any one of the HDAs would be permissible. This would fail to acknowledge the specific locational needs of the operations and businesses occupying each of the HDAs and should be amended.

Criterion 5 conflicts with purpose of HDAs at Runcton and Tangmere to accommodate and consolidate development at scale.

Full text:

The Council's recognition that existing horticultural HDA's will be insufficient to deliver the quantum of development expected during the local plan period is welcomed and supported by evidence in the 2020 HEDNA and the attached Savills SREBR

However, the restrictive nature of the existing HDA policy is identified by stakeholders within the 2018 HEDNA (para 11.78) as having been a barrier to growth, whilst the importance of associated uses to the cluster is also acknowledged within The Council's evidence base and other key Government and Industry publications. Landlink and Kingsbridge have identified in earlier representations that the restrictive terms of the current HDA policy have obstructed their ability to develop the function and productivity of the Food Park.

The Local Plan therefore conflicts with paragraph 81 of the NPPF in its entirety which states:

Planning policies and decisions should help create the conditions in which businesses can invest, expand and adapt. Significant weight should be placed on the need to support economic growth and productivity, taking into account both local business needs and wider opportunities for development. The approach taken should allow each area to build on its strengths, counter any weaknesses and address the challenges of the future. This is particularly important where Britain can be a global leader in driving innovation 42 , and in areas with high levels of productivity, which should be able to capitalise on their performance and potential.

Key failings of the soundness of the draft policy are:

A: The limitation that development should be new horticultural and ancillary development, which is defined at paragraph 7.29 of the draft plan, will perpetuate the obstruction to the realisation of growth which has occurred in recent years as a result of the restriction of uses within the HDA by the terms of the policy. The evidence base demonstrates a clear requirement for and clear economic benefits of co-location of food production, food processing and associated technology and logistics businesses to be able to fulfil market expectation, contemporary food business requirements, and to realise the effective resilience of food supply in the UK.

The evidence base for growth demand for non-horticultural business space relies upon visible past development from the approval and implementation of planning permissions. It fails to acknowledge the demands for business space that

have not been realised specifically because they are obstructed by the adopted planning policy.

The main operators and businesses at Runcton HDA have been clear in representations over a number of years that the performance of the horticulture industry locally is constrained by the inability to modernise and co-locate functionally linked businesses and land uses at HDAs or in close proximity.

The effect of constraining the delivery of the business space needed to support the food and horticulture industry diminishes the viability and competitiveness of the industry on a national and international stage. The Savills SREBR identifies comparable evidence of the make up and productivity of a food cluster in the East of England (Lincolnshire) where the benefits of co-location are being realised.

The adoption of a policy which continues to obstruct the realisation of a modernised food cluster in CDC for the life of the emerging plan would severely damage the prospects and productivity of the food industry in the District.

B: The requirement that land within the HDA should be used first (in advance of 'other' land') to accommodate all forms of new horticultural development, albeit with caveats, does lack a progressive planned approach to the delivery of the range of development and infrastructure necessary, in the right locations, to realise the potential of the industry.

The Council's approach to HDAs correctly acknowledges the hierarchy of HDAs with Runcton HDA a focus for large scale horticultural development. The terms of the policy imply that all of the allocated land in all four HDAs would need to have been saturated before development outside any one of the HDAs would be permissible. This would fail to acknowledge the specific locational needs of the operations and businesses occupying each of the HDAs and should be amended.

C: The requirement for development to demonstrate why it cannot be accommodated within the HDAs fails to take into consideration that the plan itself expects that approximately two-thirds of horticultural development across the Local Plan period will need to come forward outside of HDAs. Accordingly, the Council should plan positively for this growth by taking a sequential approach to horticultural development that includes provision for associated and functionally-linked development in the right way.

Associated and functionally linked development would include elements such as R&D, storage and distribution, linked office development and processing of the food produced in the area.

D: Criterion 5 seeks to preserve the rural character of the surrounding areas. However, the purpose of the HDAs designations at Runcton and Tangmere is specifically to accommodate and consolidate development at scale.

Developments previously granted consent at Runcton HDA have already created a general urbanised character. It is suggested that the Runcton HDA should therefore be the focus for associated horticultural development – a horticultural/food cluster or hub. By consolidating development in this form, the aim of preserving the amenity of the surrounding countryside may be better realised. This in turn may require that the core "growing" elements of the Runcton HDA are delivered in proximity to, but outside of, the HDA, and the land within the HDA focussing on the more intensive features of food production and functionally linked activity. Evidence shows that prioritising the siting of functionally-linked development within The Runcton HDA will encourage benefits associated with agglomeration and colocation. Please see attached Savills SREBR for more details.

Horticultural greenhouses are a core feature of Chichester coastal plain and therefore development of this type is likely to be deliverable without undue landscape harm.

Change suggested by respondent:

A: Reference to 'ancillary' should be expanded/include explanatory text clarifying that functionally linked uses can include a range of activities including: food-related distribution; food manufacturing linked to the HDAs food preparation; on-site renewable energy to serve on-site activities; and R&D.

B and C: Adjust the terms of the policy so that rational and effective location of horticultural and ancillary development outside the HDAs is not obstructed if alternative space remains within any of the designated HDA.

D: Modify the terms of criterion 5 to acknowledge that making most effective use of the designated HDAs for their intended purpose may have some landscape impacts, which should be accommodated here in order to protect the character of the wider undesignated landscape.

Document Element: Policy E4 Horticultural Development

Respondent: National Highways (Mr Marius Pieters, Spatial Planning Manager) [8127]

Summary:

[National Highways letter dated 24/07/23 confirmed representation should be categorised as Comment - Supporting collaborative working.] National Highways welcomes the opportunity to work with you on large, and smaller scale, horticultural developments particularly heavy goods vehicles access onto the A27 and accommodating vehicle movements on the SRN without detriment to highway safety.

The Future of Freight Plan sets out that a joined-up approach between the planning system, local authorities and industry can safeguard and prioritise the land needed for freight and logistics sector uses and their specific requirements.

Impacts arising from such developments and the funding of transport infrastructure modifications should be fully assessed at the planning application stage.

Full text:

We have reviewed the publicly available Local Plan documents and provided comments in the attached letter, in relation to the transport implications of the plan for the safety and operation of the SRN.

Our comments include issues to resolve, comments, requests for further information and recommendations. A brief summary of our main comments are:

- the reliance on the delivery of the A27 Chichester bypass improvements project.
- the requirements for new, additional, and adapted processes and assessments, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments.
- collaborative working between agencies in combination with a robust monitor and manage policy.

We hope our comments assist.

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSSCC) and we will continue to work with the Council and other key stakeholders. We look forward to continuing to participate in future consultations and discussions.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Background

National Highways has been appointed by the Secretary of State for Transport as strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the strategic road network (SRN).

National Highways is responsible for operating, maintaining, and improving the Strategic Road Network (SRN) i.e., the Trunk Road and Motorway Network in England, as laid down in Department for Transport (DfT) Circular 01/2022 (Strategic Road Network and the delivery of sustainable development).

The SRN is a critical national asset and as such we work to ensure that it operates and is managed in the public interest, both in respect of current activities and needs as well as in providing effective stewardship of its long-term operation and integrity.

Our responses to Local Plan consultations are guided by relevant policy and guidance including the National Planning Policy Framework (2021) (NPPF):

- Transport issues should be considered from the earliest stages of plan-making and development proposals so that the potential impact of development on transport networks can be addressed (para 104).
- The planning system should actively manage patterns of growth such that significant development is focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. (para 105).
- Planning policies should be prepared with the active involvement of highways authorities and other transport infrastructure providers so that strategies and investments for supporting sustainable transport and development patterns are aligned. (para 106).
- In terms of identifying the necessity of transport infrastructure, NPPF confirms that development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe. (para 111).
- Planning policies and decisions should support development that makes efficient use of land, taking into account the availability and capacity of infrastructure and services – both existing and proposed – as well as their potential for further improvement and the scope to promote sustainable travel modes that limit future car use. (para 124).

In relation to the tests of soundness set out at paragraph 35 of the NPPF, in the context of transport, these are interpreted as meaning:

- a) Positively prepared - has the transport strategy been prepared with the active involvement of the highway authorities, other transport infrastructure providers and operators and neighbouring councils?
- b) Justified – Is the transport strategy based on a robust evidence base prepared with the agreement in partnership, or with the support of the highway authorities?
- c) Effective – Does the transport strategy and policy satisfy the transport needs of the plan and is it deliverable at a pace which provides for and accommodates the proposed progress and implementation of the plan?
- d) Consistent with national policy – Does the transport strategy support the economic, social, and environmental objectives of the Plan and the NPPF/NPPG?

We will be concerned with proposals that have the potential to impact on the safe and efficient operation of the SRN; in this case, the A27 trunk road (Chichester Bypass and its junctions) which is the main access route in the Chichester area. We have particular interest in any allocation, policy or proposals which could have implications for the A27 and the wider SRN network. We are interested as to whether there would be any adverse road safety or operational implications for the SRN. The latter would include a material increase in queueing or delay or reduction in journey time reliability during the construction or operation of the development set out in the plan.

National Highways is a key delivery partner for sustainable development promoted through the plan-led system, and as a statutory consultee we have a duty to cooperate with local authorities to support the preparation and implementation of development plan documents.

In accordance with national planning and transport policy and our operating licence, we are entirely neutral on the principle of development as it is for the local planning authority to determine whether development should be allocated or permitted; albeit it must comply with national policy on locating development in locations that are or can be made sustainable. Therefore, while always seeking early and fulsome engagement with local plans and/or developers, we will simply be assessing the transport and related implications of plans or proposals and agreeing any necessary transport improvements and relevant development management policy.

In progressing Local Plans, we will seek to agree the following:

- Assessment tools and methodology
- Baseline Assessment i.e., to demonstrate that the assessment tool accurately reflects current transport conditions
- Comparator case assessment i.e., to forecast the transport conditions that would occur in the absence of the plan
- Forecast modelling i.e., to forecast the transport conditions that would arise with the plan in place, this will include an assessment at the end of the Plan period; and, if required, at full build out if that occurs after the end of the Plan period
- Outputs and outcomes of modelling, demonstrating, as appropriate, what transport infrastructure is necessary to support the plan o It should be noted that a suite of transport modelling tools may be required. This includes strategic modelling covering an area at least one major junction beyond the district boundary, localised network modelling where several links/junctions are close together and/or individual junction modelling
- o A DMRB (Design Manual for Roads and Bridges) compliancy assessment may also be required for certain highway features, such as Merge/Diverge assessment at Grade separated junctions, link capacity assessments, and others.
- The design of any necessary transport infrastructure, to an extent suitable for establishing deliverability during the plan period at the time that it becomes necessary for the purpose of ensuring that unacceptable road safety impacts or severe operational impacts do not arise as a result of development. This may be to at least General Arrangement design stage or preliminary design stage. Whichever degree of detail is agreed, the products must be in full compliance with the DMRB.
- Industry standard transport intervention costings.
- The delivery/funding mechanisms for necessary transport interventions. It should not be assumed that National Highways will have any responsibility to identify or deliver necessary transport interventions.
- If considered appropriate, a “Monitor & Manage” (M&M) framework, aimed at managing the pace of development in line with the pace of funding and delivery of necessary highway interventions in a manner which responds to the realworld impacts of development may be agreed for inclusion in the plan subject to the adequacy of risk control measures included therein. This can include the move from a ‘predict & provide’ style of delivery to ‘a vision & validate’ style. o Any M&M framework must be based on a “worst case scenario” whereby necessary mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. It must be translated into development management plan policy and policy relating to development allocations.

Further detail on the above can be provided by National Highways.

While ideally all the above should be agreed prior to the Submission of the Local Plan for examination, we recognise that this is not always possible. However, all parties should work towards all matters being agreed and reflected in a Statement of Common Ground (SoCG) by the start of the Local Plan Examination at the latest. Ideally the SoCG between the Council and National Highways would be prepared well in advance of plan submission in order to guide resource input and to track progress towards final agreement on all relevant matters starting from the earliest plan iterations until the final version is agreed.

It is acknowledged that Government policy places much emphasis on housing delivery as a means for ensuring

economic growth and addressing the current national shortage of housing. The NPPF is very clear that: "Strategic policy-making authorities should establish a housing requirement figure for their whole area, which shows the extent to which their identified housing need (and any needs that cannot be met within neighbouring areas) can be met over the plan period."

However, new DfT C1/22 and the NPPF are equally clear that any development, including housing delivery, must be tempered by the requirement to ensure that the associated transport demand can be accommodated without unacceptable impacts on the safety of the SRN or severe impacts on the operation of the SRN including reliability and congestion. Therefore, as necessary and appropriate, any plan and/or development must be accompanied by suitable mitigation in the right places at the right time, that is to the required design standards and is deliverable in terms of land availability, constructability and funding.

We would also draw your attention to the then Highways England document 'The Strategic Road Network, Planning for the Future: A guide to working with National Highways on planning matters' (September 2015). This document sets out how National Highways intends to work with local planning authorities and developers to support the preparation of sound documents which enable the delivery of sustainable development. https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_t_data/file/461023/N150227_-_Highways_England_Planning_Document_FINAL-lo.pdf

Responses to Local Plan consultations are also guided by National Planning Policy Framework (NPPF) revised on 20 July 2021 which sets out the government's planning policies for England and how these are expected to be applied.

Updated Circular (01/2022)

It should be noted that since the start of the Local Plan consultation process, on the 23 December 2022, the Department for Transport released a new circular on the 'Strategic road network and the delivery of sustainable development' (Circular 01/2022), which replaces all of the policies in Circular 02/2013 of the same name. These representations take account of the new circular and the requirements in terms of the Local Plan evidence base and process.

We request that the Local Plan is prepared in line with all aspects of the new circular. Particularly, the principles of sustainable development (paragraphs 11 to 17), new connections and capacity enhancements (paragraphs 18 to 25), and engagement with plan-making (paragraphs 26 to 38).

Regulation 18 submission

In our Regulation 18 submission we noted several matters including:

- The need to mitigate the adverse impacts of strategic development traffic to the A27 Chichester Bypass and its junctions at Portfield Roundabout, Bognor Road Roundabout, Whyke Roundabout, Stockbridge Roundabout and Fishbourne Roundabout and Oving junction.
- The need to identify a mechanism to calculate contributions towards the delivery of the previously agreed Local Plan A27 improvements
- The need to confirm the number of dwellings needed within the plan period
- The need to establish National Highways acceptance of the traffic model reference and future case scenarios
- The need to confirm costs, viability, and funding associated with mitigating the safety and congestion impacts of the development included within the plan.

Local Plan context

This Local Plan (Chichester Local Plan 2021 – 2039), prepared by the Local Planning Authority (LPA) Chichester District Council, sets out the vision for future development in the district and will be used to help decide on planning applications and other planning related decisions including shaping infrastructure investments.

The draft sets out how the district should be developed over the next 18-years to 2039 including for the full Plan period (1 April 2021 to 31 March 2039) the total supply of

- 10,359 dwellings

- 114,652 net additional sqm new floorspace

Minus the completions this is equivalent to around 530 dwellings and 6,150 sqm of floorspace a year.

National Highways Representations

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders.

We have undertaken a review of the Chichester Local Plan 2021-2039 proposed submission version and accompanying evidence documents, our comments are set out in the tables below (following pages). [see table within attachment]

Summary

We have reviewed the publicly available Local Plan documents and provided comments above in relation to the transport implications of the plan for the safety and operation of the SRN. We understand that other technical information is available, but this was not presented as part of this consultation.

Chichester, and the A27, are already heavily congested, infrastructure in the existing Local Plan remains undelivered and

the growth set out in the new Plan will further increase travel demand.

As presented, satisfying the transport needs of the plan is clearly reliant on the delivery of the A27 Chichester bypass improvements project. The A27 Chichester bypass improvements project is one of 32 pipeline schemes being considered for possible inclusion in National Highways third Road Investment Strategy (RIS3) covering 1 April 2025 to 31 March 2030.

On 9 March 2023 the UK Transport Secretary ensured record funding would be invested in the country's transport network, sustainably driving growth across the country while managing the pressures of inflation. The announcement cited the A27 Arundel Bypass as being deferred from RIS2 to RIS 3 (covering 2025-2030). The transport secretary also identified a number of challenges to the delivery of the road investment strategy and cited the benefit of allowing extra time to ensure schemes are better planned and efficient schemes can be deployed more effectively.

At present, there is no commitment by DfT to carry out the A27 Chichester bypass improvements project. Until the A27 Chichester bypass improvements project is published in the RIS3, consented and a decision to invest is made it cannot be assumed to be a committed project.

We note that the Plan does not address any uncertainty of delivery of the A27 Chichester bypass improvements project and we strongly recommend that there is either no reliance placed on RIS3 to realise capacity for growth in the Plan or that contingency measures are included to cover the eventuality that RIS3 funding is not forthcoming within the plan period. It is not clear that the potential impact of development on transport networks can be addressed in the absence of the A27 Chichester bypass improvements project.

Achieving net zero, reducing emissions reduction, acting on climate, and supporting thousands of new homes and new employment developments will be problematic with existing processes. New, additional, and adapted processes and assessments will likely be required, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments. We acknowledge that change is complex, expensive, and time-consuming, especially for smaller district level Councils. But the hard work will deliver benefits for the Council and residents in the longer-term.

National Highways seeks to continue working with the Council and WSCC to progress coordinated and deliverable packages of interim mitigation measures and alternative transport solutions while a long-term strategic solution is considered by government. This must however be in combination with a robust monitor and manage policy that appropriately manages the risk of unacceptable road impacts resulting from new housing and other development over the Plan period.

We have been in discussion with Chichester District Council regarding their proposed Monitor and Manage Strategy. At present, we do not consider the current strategy to be robust and we seek further information and detail especially on who, when and when monitoring and management will be undertaken. Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas. Any M&M framework must be based on a "worst case scenario" whereby necessary transport mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. The M&M framework must set out that the alternative to mitigation not being delivered is that development does not proceed where that development would give rise to unacceptable road safety risk or severe cumulative impacts on the road network in the absence of that mitigation. The M&M framework must be translated into development management plan policy and policy relating to development allocations.

As we have reiterated throughout our comments, we welcome the opportunity to work with you to address these outstanding matters and we will continue to liaise over submitted Transport Assessment, Travel Plan policy and Monitor and Manage Policy to help to work towards a viable plan.

We hope our comments assist.

We look forward to continuing to participate in future consultations and discussions. Please do continue to consult us as the Plan progresses so that we can remain aware of, and comment as required on, its contents.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Summary of advice

While we have raised some queries and recommended some further modifications to certain policies we do not find the Plan unsound on any grounds relating to our remit.

Natural England has reviewed the Proposed Submission Local Plan and accompanying appendices together with the Habitats Regulations Assessment (HRA) and Sustainability Appraisal (SA). Our detailed comments on the policies and site allocations are provided as follows:

- Annex 1 - Chapter 2 – Vision and Strategic Objectives
- Annex 2 - Chapter 4 – Climate Change and the Natural Environment
- Annex 3 - Chapter 5 (Housing) and Chapter 6 – (Place-making, Health and Well-being)
- Annex 4 - Chapter 7 (Employment and Economy) and Chapter 8 (Transport and Accessibility)
- Annex 5 - Chapter 10 – Strategic and Area Based Policies

Please note that we have not provided comments on all policies but those which have most influence on environmental issues. Natural England has no comment to make on the policies not covered in this response. Other than confirming that we have referred to it when considering our advice on specific policies and site allocations Natural England has no general comments to make on the SA.

Unfortunately due to unforeseen resourcing issues while we have reviewed the associated HRA we are not in a position to provide detailed comment on it as part of this response. We will rectify this as soon as possible and can confirm that we have seen nothing in it that raises any major concerns.

The Plan has many positive aspects including standalone policies on Green Infrastructure (GI) and wildlife corridors and an incredibly extensive suite of natural environment policies more generally.

We are hugely appreciative of the opportunity that we were given to work with you on shaping key policies post-Regulation 18. However, we believe that the plan needs to go further in its recognition of coastal squeeze as a key issue for the district, should include policy hooks for the forthcoming Local Nature Recovery Strategy (LNRS) and make up to date references to both the Environment Act (2021) and the Environmental Improvement Plan (EIP, 2023). Given how recent the publication of the EIP is we would be happy to discuss with your authority how this could best be achieved but we believe given the wealth of natural capital within Chichester District it is vitally important that this latest iteration of the Local Plan is set in its full policy and legislative context.

We have suggested a significant number of amendments and additions to both policies and supporting text throughout the Plan. In our view these could all be taken forward as minor modifications but if they were all acted upon they would leave the Plan much stronger and more coherent in delivering for the natural environment, one of the three central tenets of genuinely sustainable development as set out in the National Planning Policy Framework (NPPF 2021, paragraph 8c).

See attachment for representations on paragraphs/policies.

Document Element: Policy E4 Horticultural Development**Respondent:** West Sussex Growers' Association (Mr John Hall, Executive Member & Consultant) [7857]**Summary:**

The policy should be more flexible to meet the needs of the horticultural sector. Over the coming years, more provision of space for nurseries, high-tech glasshouses, packhouses and reservoirs will be required; however, there will also be an increased need for ancillary development, such as: Vertical Farming Projects, Research & Development Facilities, Alternative Energy Centres, Logistics and Distribution Centres, Engineering and Technical Support Facilities.

Full text:

The Government has tasked Growers to grow more home grown produce, increase productivity, reduce food miles and the UK's reliance on imported food. There is also an increasing need for space to grow plants, shrubs and trees. These aims can be achieved; however, the Horticultural and Food Industries need Local Planning Policies to be in place that enables sustainable development. To this end, more flexibility is needed in the current CDC Local Plan - Horticultural Policy to meet the needs of the Horticultural sector.

Change suggested by respondent:

Make the policy more flexible.

Document Element: Policy E5 Retail Strategy and New Development**Respondent:** Brookhouse Group [1680]**Agent:** Savills UK (Mr Matthew Sobic) [100]**Summary:**

This consultation statement is submitted by Brookhouse Group Limited and provides a formal consultation response to the Chichester Local Plan 2021 – 2039 Proposed Submission Regulation 19 consultation. It follows earlier representations submitted in relation to the emerging Local Plan in relation to a site known as land at Barnfield Drive shown on at Drawing Reference 7054-P701-A – ‘Site Development Plan’.

The site is allocated in the adopted Chichester Local Plan: Key Policies 2014 – 2029 (July 2015) (the ‘Local Plan: Key Policies’) for retail and business land uses. It is also designated for those uses in the adopted Sites in Chichester City North Development Brief (January 2012).

The land is owned by the Council, who have a development agreement with Brookhouse Group Limited to deliver development on the site.

However, as part of the emerging Local Plan, the Local Planning Authority intends to deallocate the site from its existing allocation for retail and business uses. No justification has been provided for the deallocation of the site, although discussions with the Planning Policy team has confirmed that it envisages that there will be a development that takes place on the site.

Given that long-standing position by the Local Planning Authority to support retail development on the site, there has therefore been no justification provided to remove the site allocation for the site and place a barrier to the delivery of the development of the final phase of development, which has had long-standing support from the Local Planning Authority. The Local Planning Authority is aware that the applicant will shortly be progressing a planning application for retail development at the site, consistent with the site’s existing allocation for retail purposes.

The Council has prepared an evidence base to support the Local Plan that indicates that in the City, there will be a comparison goods and convenience goods need of 6,100 sq. m (gross) by 2039; which is the end of the emerging Local Plan period. Emerging Policy E5 indicates that that need will be met through the reoccupation of existing floorspace, but doesn’t provide any evidence as to how that would be the case and whether that floorspace is even appropriate to meet modern retail use needs.

Full text:

This consultation statement is submitted by Brookhouse Group Limited and provides a formal consultation response to the Chichester Local Plan 2021 – 2039 Proposed Submission Regulation 19 consultation. It follows earlier representations submitted in relation to the emerging Local Plan in relation to a site known as land at Barnfield Drive shown on at Drawing Reference 7054-P701-A – ‘Site Development Plan’ appended to this e-mail (the ‘site’).

The site is allocated in the adopted Chichester Local Plan: Key Policies 2014 – 2029 (July 2015) (the ‘Local Plan: Key Policies’) for retail and business land uses. It is also designated for those uses in the adopted Sites in Chichester City North Development Brief (January 2012).

A summary of the site characteristics are provided as follows:

1. Located within the settlement boundary and urban area of Chichester, surrounded on all sides by existing development.
2. Previously developed or 'brownfield' land. The site was formerly a gravel extraction operation and has subsequently been landfilled.
3. Free from the presence of environmental, historic or infrastructural constraints.
4. Sustainably located, intimately situated within existing communities, adjacent to allocated growth areas, and well served by a variety of modes of transport, including public transport and cycle routes.
5. Allocated for development in the adopted Local Plan: Key Policies, by virtue of the Sites in Chichester City North Development Brief, adopted by the Council in 2012 as noted above.
6. Part of a wider regeneration site which has benefited from significant support from the Local Planning Authority and has been hugely successful in delivering 15,000 sq. m of new development at Barnfield Drive.

The land is owned by the Council, who have a development agreement with Brookhouse Group Limited to deliver development on the site.

However, as part of the emerging Local Plan, the Local Planning Authority intends to deallocate the site from its existing allocation for retail and business uses. No justification has been provided for the deallocation of the site, although discussions with the Planning Policy team has confirmed that it envisages that there will be a development that takes place on the site.

The Local Planning Authority has a long-standing position of supporting planning applications for retail development at the site and surrounding area and has granted planning permission to Brookhouse for retail uses on a number of parcels of land surrounding the site, including the Homebase, Home Bargains, Iceland Food Warehouse, Halfords, Aldi (the now completed phase one) and Lidl uses that form the boundaries of the site between Barnfield Drive and Westhampnett Road and have been developed by Brookhouse Group Limited as part of its development agreement with the Council for developing the site and its surrounding. As the Local Planning Authority is aware, outline planning permission was granted for retail development on this specific site under Reference CC/13/03775/OUT on 26 January 2016; this was phase two of the wider development. Subject to market conditions, the only element of this phase of retail development that was able to be delivered pursuant to that permission was the Lidl store, which was always intended to be the first element of development on the parcel of land that the site forms part of, with the site itself being the final phase of the 'Barnfield Drive' retail development area that forms part of the development agreement with the Council and the final phase that has always been envisaged by the Local Planning Authority to be delivered for retail development.

Given that long-standing position by the Local Planning Authority to support retail development on the site, there has therefore been no justification provided to remove the site allocation for the site and place a barrier to the delivery of the development of the final phase of development, which has had long-standing support from the Local Planning Authority. The Local Planning Authority is aware that the applicant will shortly be progressing a planning application for retail development at the site, consistent with the site's existing allocation for retail purposes.

The Council has prepared an evidence base to support the Local Plan that indicates that in the City, there will be a comparison goods and convenience goods need of 6,100 sq. m (gross) by 2039; which is the end of the emerging Local Plan period. Emerging Policy E5 indicates that that need will be met through the reoccupation of existing floorspace, but doesn't provide any evidence as to how that would be the case and whether that floorspace is even appropriate to meet modern retail use needs. Further, the Council's evidence in the Chichester Retail and Main Town Centre Uses Study Update Report published on 23 March 2022 identifies a need of 3,700 sq. m (gross) of food and beverage floorspace, which itself could ensure the reoccupation of vacant floorspace. It follows that there is no empirical evidence that the need for additional retail floorspace would be met through existing town centre units and it may very well be the case that the vacant units may be occupied for alternative town centre uses, principally within Use Class E, as is the current trend for the reoccupation of vacant units in centres.

It follows that the site still presents the opportunity to meet latent need for retail floorspace in the City, consistent with the vision for the site in the adopted development plan, the Development Brief and the Local Planning Authority and Council's long-standing objective to see the site developed for retail purpose consistent also with the numerous planning permissions that have been granted for the development of the site and surrounding area for retail purposes. The site, as mentioned above, would be the completion of the final phase of development of the area for retail purposes as envisaged by the Local Planning Authority in its long-standing land-use planning strategy that dates back almost 20 years since the Homebase was developed, but for at least ten years since the Development Brief was issued earmarking the site and wider immediate area as a location that is suitable for retail development.

Paragraph 35 of the National Planning Policy Framework requires Local Plans to be positively prepared, justified, effective and consistent with national policy. Whilst it is the case that the Local Planning Authority has an evidence base setting out a need for additional retail floorspace, the emerging Local Plan is not positively prepared, justified or effective in terms of how that need will be met – there is no clear evidence that a nebulous view that the need could be met through the reoccupation of vacant floorspace is either justified or effective; particularly as vacant floorspace is a characteristic of that space being a failed retail outlet, and nor is it a positively prepared strategy to meet modern retail requirements.

Conversely, by maintaining the allocation of the site for retail purposes will ensure that the emerging Local Plan is

positively prepared, justified and effective in terms of meeting that need as:

1. It provides a location where there is market demand to meet that need, as evidenced by the forthcoming application for retail development on the site that will meet modern retail requirements, and the long-standing position of the Local Planning Authority to support retail development in that area through the grant of numerous planning permissions, including permission on the site. The allocation of the site will therefore meet the requirements for the emerging Local Plan to be positively prepared to meet objectively assessed needs.
2. It is justified and positively prepared as it will ensure that the completion of the development in that area for retail purposes through the development of the last parcel of land that has long been earmarked for retail development in the area, including through the support of applications to develop the site for retail purposes.
3. Given the market demand for retail development on the site, such an allocation is effective in meeting the need for additional retail floorspace in Chichester. Such an allocation will also represent positive preparation to meet the identified need.

Against that background, we request the continued allocation of the site for retail purposes for the reasons outlined above and we further request a meeting to discuss matters further.

Document Element: Policy E5 Retail Strategy and New Development

Respondent: National Highways (Mr Marius Pieters, Spatial Planning Manager) [8127]

Summary:

[National Highways letter dated 24/07/23 confirmed representation should be categorised as Comment - Seeking further information on approach and monitoring.] National Highways support retail development and expansion within the existing areas and re-occupation of vacant floorspace. This support NPPF (para 86) stating that planning policies and decisions should support the role that town centres play at the heart of local communities, by taking a positive approach to their growth, management, and adaptation.

We seek further information on how servicing and customer traffic will be safely and conveniently accommodated by the surrounding road network will be monitored and if not safely and conveniently accommodated how the impacts will be managed and mitigated especially traffic generated in peak periods, for example weekends and Christmas.

Full text:

We have reviewed the publicly available Local Plan documents and provided comments in the attached letter, in relation to the transport implications of the plan for the safety and operation of the SRN.

Our comments include issues to resolve, comments, requests for further information and recommendations. A brief summary of our main comments are:

- the reliance on the delivery of the A27 Chichester bypass improvements project.
- the requirements for new, additional, and adapted processes and assessments, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments.
- collaborative working between agencies in combination with a robust monitor and manage policy.

We hope our comments assist.

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSSCC) and we will continue to work with the Council and other key stakeholders. We look forward to continuing to participate in future consultations and discussions.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Background

National Highways has been appointed by the Secretary of State for Transport as strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the strategic road network (SRN).

National Highways is responsible for operating, maintaining, and improving the Strategic Road Network (SRN) i.e., the Trunk Road and Motorway Network in England, as laid down in Department for Transport (DfT) Circular 01/2022 (Strategic Road Network and the delivery of sustainable development).

The SRN is a critical national asset and as such we work to ensure that it operates and is managed in the public interest, both in respect of current activities and needs as well as in providing effective stewardship of its long-term operation and integrity.

Our responses to Local Plan consultations are guided by relevant policy and guidance including the National Planning Policy Framework (2021) (NPPF):

- Transport issues should be considered from the earliest stages of plan-making and development proposals so that the potential impact of development on transport networks can be addressed (para 104).
- The planning system should actively manage patterns of growth such that significant development is focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. (para 105).
- Planning policies should be prepared with the active involvement of highways authorities and other transport infrastructure providers so that strategies and investments for supporting sustainable transport and development patterns are aligned. (para 106).
- In terms of identifying the necessity of transport infrastructure, NPPF confirms that development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe. (para 111).
- Planning policies and decisions should support development that makes efficient use of land, taking into account the availability and capacity of infrastructure and services – both existing and proposed – as well as their potential for further improvement and the scope to promote sustainable travel modes that limit future car use. (para 124).

In relation to the tests of soundness set out at paragraph 35 of the NPPF, in the context of transport, these are interpreted as meaning:

- a) Positively prepared - has the transport strategy been prepared with the active involvement of the highway authorities, other transport infrastructure providers and operators and neighbouring councils?
- b) Justified – Is the transport strategy based on a robust evidence base prepared with the agreement in partnership, or with the support of the highway authorities?
- c) Effective – Does the transport strategy and policy satisfy the transport needs of the plan and is it deliverable at a pace which provides for and accommodates the proposed progress and implementation of the plan?
- d) Consistent with national policy – Does the transport strategy support the economic, social, and environmental objectives of the Plan and the NPPF/NPPG?

We will be concerned with proposals that have the potential to impact on the safe and efficient operation of the SRN; in this case, the A27 trunk road (Chichester Bypass and its junctions) which is the main access route in the Chichester area. We have particular interest in any allocation, policy or proposals which could have implications for the A27 and the wider SRN network. We are interested as to whether there would be any adverse road safety or operational implications for the SRN. The latter would include a material increase in queueing or delay or reduction in journey time reliability during the construction or operation of the development set out in the plan.

National Highways is a key delivery partner for sustainable development promoted through the plan-led system, and as a statutory consultee we have a duty to cooperate with local authorities to support the preparation and implementation of development plan documents.

In accordance with national planning and transport policy and our operating licence, we are entirely neutral on the principle of development as it is for the local planning authority to determine whether development should be allocated or permitted; albeit it must comply with national policy on locating development in locations that are or can be made sustainable. Therefore, while always seeking early and fulsome engagement with local plans and/or developers, we will simply be assessing the transport and related implications of plans or proposals and agreeing any necessary transport improvements and relevant development management policy.

In progressing Local Plans, we will seek to agree the following:

- Assessment tools and methodology
- Baseline Assessment i.e., to demonstrate that the assessment tool accurately reflects current transport conditions
- Comparator case assessment i.e., to forecast the transport conditions that would occur in the absence of the plan
- Forecast modelling i.e., to forecast the transport conditions that would arise with the plan in place, this will include an assessment at the end of the Plan period; and, if required, at full build out if that occurs after the end of the Plan period
- Outputs and outcomes of modelling, demonstrating, as appropriate, what transport infrastructure is necessary to support the plan o It should be noted that a suite of transport modelling tools may be required. This includes strategic modelling covering an area at least one major junction beyond the district boundary, localised network modelling where several links/junctions are close together and/or individual junction modelling
 - o A DMRB (Design Manual for Roads and Bridges) compliancy assessment may also be required for certain highway features, such as
 - o Merge/Diverge assessment at Grade separated junctions, link capacity assessments, and others.
- The design of any necessary transport infrastructure, to an extent suitable for establishing deliverability during the plan period at the time that it becomes necessary for the purpose of ensuring that unacceptable road safety impacts or

severe operational impacts do not arise as a result of development. This may be to at least General Arrangement design stage or preliminary design stage. Whichever degree of detail is agreed, the products must be in full compliance with the DMRB.

- Industry standard transport intervention costings.
- The delivery/funding mechanisms for necessary transport interventions. It should not be assumed that National Highways will have any responsibility to identify or deliver necessary transport interventions.
- If considered appropriate, a "Monitor & Manage" (M&M) framework, aimed at managing the pace of development in line with the pace of funding and delivery of necessary highway interventions in a manner which responds to the realworld impacts of development may be agreed for inclusion in the plan subject to the adequacy of risk control measures included therein. This can include the move from a 'predict & provide' style of delivery to 'a vision & validate' style. o Any M&M framework must be based on a "worst case scenario" whereby necessary mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. It must be translated into development management plan policy and policy relating to development allocations.

Further detail on the above can be provided by National Highways.

While ideally all the above should be agreed prior to the Submission of the Local Plan for examination, we recognise that this is not always possible. However, all parties should work towards all matters being agreed and reflected in a Statement of Common Ground (SoCG) by the start of the Local Plan Examination at the latest. Ideally the SoCG between the Council and National Highways would be prepared well in advance of plan submission in order to guide resource input and to track progress towards final agreement on all relevant matters starting from the earliest plan iterations until the final version is agreed.

It is acknowledged that Government policy places much emphasis on housing delivery as a means for ensuring economic growth and addressing the current national shortage of housing. The NPPF is very clear that: "Strategic policy-making authorities should establish a housing requirement figure for their whole area, which shows the extent to which their identified housing need (and any needs that cannot be met within neighbouring areas) can be met over the plan period."

However, new DfT C1/22 and the NPPF are equally clear that any development, including housing delivery, must be tempered by the requirement to ensure that the associated transport demand can be accommodated without unacceptable impacts on the safety of the SRN or severe impacts on the operation of the SRN including reliability and congestion. Therefore, as necessary and appropriate, any plan and/or development must be accompanied by suitable mitigation in the right places at the right time, that is to the required design standards and is deliverable in terms of land availability, constructability and funding.

We would also draw your attention to the then Highways England document 'The Strategic Road Network, Planning for the Future: A guide to working with National Highways on planning matters' (September 2015). This document sets out how National Highways intends to work with local planning authorities and developers to support the preparation of sound documents which enable the delivery of sustainable development. https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_t_data/file/461023/N150227_-_Highways_England_Planning_Document_FINAL-lo.pdf

Responses to Local Plan consultations are also guided by National Planning Policy Framework (NPPF) revised on 20 July 2021 which sets out the government's planning policies for England and how these are expected to be applied.

Updated Circular (01/2022)

It should be noted that since the start of the Local Plan consultation process, on the 23 December 2022, the Department for Transport released a new circular on the 'Strategic road network and the delivery of sustainable development' (Circular 01/2022), which replaces all of the policies in Circular 02/2013 of the same name. These representations take account of the new circular and the requirements in terms of the Local Plan evidence base and process.

We request that the Local Plan is prepared in line with all aspects of the new circular. Particularly, the principles of sustainable development (paragraphs 11 to 17), new connections and capacity enhancements (paragraphs 18 to 25), and engagement with plan-making (paragraphs 26 to 38).

Regulation 18 submission

In our Regulation 18 submission we noted several matters including:

- The need to mitigate the adverse impacts of strategic development traffic to the A27 Chichester Bypass and its junctions at Portfield Roundabout, Bognor Road Roundabout, Whyke Roundabout, Stockbridge Roundabout and Fishbourne Roundabout and Oving junction.
- The need to identify a mechanism to calculate contributions towards the delivery of the previously agreed Local Plan A27 improvements
- The need to confirm the number of dwellings needed within the plan period
- The need to establish National Highways acceptance of the traffic model reference and future case scenarios
- The need to confirm costs, viability, and funding associated with mitigating the safety and congestion impacts of the

development included within the plan.

Local Plan context

This Local Plan (Chichester Local Plan 2021 – 2039), prepared by the Local Planning Authority (LPA) Chichester District Council, sets out the vision for future development in the district and will be used to help decide on planning applications and other planning related decisions including shaping infrastructure investments.

The draft sets out how the district should be developed over the next 18-years to 2039 including for the full Plan period (1 April 2021 to 31 March 2039) the total supply of

- 10,359 dwellings

- 114,652 net additional sqm new floorspace

Minus the completions this is equivalent to around 530 dwellings and 6,150 sqm of floorspace a year.

National Highways Representations

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders.

We have undertaken a review of the Chichester Local Plan 2021-2039 proposed submission version and accompanying evidence documents, our comments are set out in the tables below (following pages). [see table within attachment]

Summary

We have reviewed the publicly available Local Plan documents and provided comments above in relation to the transport implications of the plan for the safety and operation of the SRN. We understand that other technical information is available, but this was not presented as part of this consultation.

Chichester, and the A27, are already heavily congested, infrastructure in the existing Local Plan remains undelivered and the growth set out in the new Plan will further increase travel demand.

As presented, satisfying the transport needs of the plan is clearly reliant on the delivery of the A27 Chichester bypass improvements project. The A27 Chichester bypass improvements project is one of 32 pipeline schemes being considered for possible inclusion in National Highways third Road Investment Strategy (RIS3) covering 1 April 2025 to 31 March 2030.

On 9 March 2023 the UK Transport Secretary ensured record funding would be invested in the country's transport network, sustainably driving growth across the country while managing the pressures of inflation. The announcement cited the A27 Arundel Bypass as being deferred from RIS2 to RIS 3 (covering 2025-2030). The transport secretary also identified a number of challenges to the delivery of the road investment strategy and cited the benefit of allowing extra time to ensure schemes are better planned and efficient schemes can be deployed more effectively.

At present, there is no commitment by DfT to carry out the A27 Chichester bypass improvements project. Until the A27 Chichester bypass improvements project is published in the RIS3, consented and a decision to invest is made it cannot be assumed to be a committed project.

We note that the Plan does not address any uncertainty of delivery of the A27 Chichester bypass improvements project and we strongly recommend that there is either no reliance placed on RIS3 to realise capacity for growth in the Plan or that contingency measures are included to cover the eventuality that RIS3 funding is not forthcoming within the plan period. It is not clear that the potential impact of development on transport networks can be addressed in the absence of the A27 Chichester bypass improvements project.

Achieving net zero, reducing emissions reduction, acting on climate, and supporting thousands of new homes and new employment developments will be problematic with existing processes. New, additional, and adapted processes and assessments will likely be required, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments. We acknowledge that change is complex, expensive, and time-consuming, especially for smaller district level Councils. But the hard work will deliver benefits for the Council and residents in the longer-term.

National Highways seeks to continue working with the Council and WSCC to progress coordinated and deliverable packages of interim mitigation measures and alternative transport solutions while a long-term strategic solution is considered by government. This must however be in combination with a robust monitor and manage policy that appropriately manages the risk of unacceptable road impacts resulting from new housing and other development over the Plan period.

We have been in discussion with Chichester District Council regarding their proposed Monitor and Manage Strategy. At present, we do not consider the current strategy to be robust and we seek further information and detail especially on who, when and when monitoring and management will be undertaken. Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas. Any M&M framework must be based on a "worst case scenario" whereby necessary transport mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. The M&M framework must set out that the alternative to mitigation not being delivered is that development does not proceed where that development would give rise to unacceptable road safety risk or severe cumulative impacts on the road network in the absence of that mitigation. The M&M framework must be translated into development management plan policy and policy relating to development allocations.

As we have reiterated throughout our comments, we welcome the opportunity to work with you to address these outstanding matters and we will continue to liaise over submitted Transport Assessment, Travel Plan policy and Monitor and Manage Policy to help to work towards a viable plan.

We hope our comments assist.

We look forward to continuing to participate in future consultations and discussions. Please do continue to consult us as the Plan progresses so that we can remain aware of, and comment as required on, its contents.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Document Element: Policy E6 Chichester City Centre**Respondent:** Mayday! Action Group (John Garrett) [7163]**Summary:**

Full of laudable aspirations and objectives. However, the Chichester Vision document dates back to 2017 and requires a very rapid 2023 update.

Much has changed in people's lives since 2017. Our view is that any Vision has to be the product of a competitive tendering process and there has to be a substantial budget allocated to this process.

We are not aware of any visionary architects, landscape and environmental planners being in full-time employment of CDC. If they are there, why do we not hear from them?

Chichester should be the jewel in this part of West Sussex's crown but it is increasingly a tarnished jewel.

City centres will need to become safe places for more people to live – and the accommodation will not be large, terraced or detached homes, but tastefully designed apartments.

There will be a need to establish a much better system of volume parking. Have underground car parks been considered?

Has ground floor parking with accommodation above been adequately used?

The Vision for Chichester 2023 should be the TOP PRIORITY for the newly elected District Council.

Full text:

Executive Summary

The Local Plan as written lacks ambition and vision, and will be detrimental to the landscape within which the district lies. It is a plan borne out of a need to produce a legal document which will satisfy the regulatory authorities. In terms of Urban Planning it fails "To meet the needs of the present without compromising the ability of future generations to meet their own needs" (NPPF).

The development that will consequentially arise from the deployment of such a made Local Plan is not sustainable. It will adversely affect the Character, Amenity and Safety of the built environment, throughout our district.

In particular, the Local Plan is inadequate for the needs of the people in the district both at present and in the future because –

1. It has been written in advance of the District having a properly formed and agreed Climate Emergency Action Plan. It is inconceivable that such a key document will not shape our Local Plan. It is this Action Plan that is needed first in order to provide the long-term strategic view as to how and what the District will look like in the future; this, in turn, will help form and shape the policies outlined in any prospective, Local Plan. The Plan as proposed is moribund, as a result of "cart before the horse" thinking.

2. The Local Plan as written does not adequately address how infrastructure, transport and services are going to be materially and strategically improved to meet the predicted growth and shift to a significantly ageing population. There is presently insufficient capacity to supply services and to have adequate people and environmentally friendly connectivity, as a direct result of decades of neglect towards investing in infrastructure and services to meet the needs of the District's population. We are led to believe that developers through increased levies in order to gain permission to build will fulfil this need, but all that this will result in is an uncoordinated, dysfunctional mess completely lacking in any future-proof master planning approach. We contend that this will do nothing for the quality of life of Chichester District residents and it will create a vacuum whereby few if indeed any can be held accountable or indeed found liable for shortcomings in the future.

3. The Local Plan as written does not state how it will go about addressing the need to create affordable homes. The District Council's record on this matter since the last made plan has been inadequate and now the creation of affordable homes has become urgent as political/economic/social factors drive an ever increasing rate of change within the District.
4. Flood risks assessments used in forming the Plan are out of date (last completed in 2018) and any decision to allocate sites is contrary to Environment Agency policy. Additionally, since March 2021 Natural England established a position in relationship to 'Hold the Line' vs. 'Managed Retreat' in environmentally sensitive areas, of which the Chichester Harbour AONB is a significant example. CDC have failed to set out an appropriate policy within the proposed Local Plan that addresses this requirement.
5. The A27 needs significant investment in order to yield significant benefits for those travelling through the East-West corridor; this is unfunded. Essential improvements to the A27 are key to the success of any Local Plan particularly as the city's ambitions are to expand significantly in the next two decades. But any ambitions will fall flat if the A27 is not improved before such plans are implemented.. The A259 is an increasingly dangerous so-called 'resilient road' with a significant increase in accidents and fatalities in recent years. In 2011, the BBC named the road as the "most crash prone A road" in the UK. There is nothing in the Local Plan that addresses this issue. There is no capacity within the strategic road network serving our district to accommodate the increase in housing planned, and the Local Plan does not guarantee it.
6. There is insufficient wastewater treatment capacity in the District to support the current houses let alone more. The tankering of wastewater from recent developments that Southern Water has not been able to connect to their network and in recent months the required emergency use of tankers to pump out overflowing sewers within our City/District reflects the gross weakness of short-termism dominated thinking at its worst and is an indictment of how broken our water system is. The provision of wastewater treatment is absolutely critical and essential to the well-being of all our residents and the long-term safety of our built environment. The abdication by those in authority, whether that be nationally, regionally or locally, is causing serious harm to the people to whom those in power owe a duty of care and their lack of urgency in dealing properly with this issue is seriously jeopardizing the environment in which we and all wildlife co-exist.
7. Settlement Boundaries should be left to the determination of Parish Councils to make and nobody else. The proposed policy outlined in the Local Plan to allow development on plots of land adjacent to existing settlement boundaries is ill-conceived and will lead to coalescence which is in contradiction of Policy NE3.
8. All the sites allocated in the Strategic Area Based Policies appear to be in the majority of cases Greenfield Sites. The plan makes little, if any reference to the development of Brownfield sites. In fact, there is not a Policy that relates to this source of land within the Local Plan as proposed. Whilst in the 2021 HELAA Report sites identified as being suitable for development in the District as being Brownfield sites were predicted to yield over 4000 new dwellings. Why would our Local Plan not seek to develop these sites ahead of Greenfield sites?
9. The Local Plan does not define the minimum size that a wildlife corridor should be in width. What does close proximity to a wildlife corridor mean? How can you have a policy (NE 4) that suggests you can have development within a wildlife corridor? These exceptions need to have clear measures and accountability for providing evidence of no adverse impact on the wildlife corridor where a development is proposed. Our view is quite clear. Wildlife and indeed nature in the UK is under serious and in the case of far too many species, potentially terminal threat. Natural England has suggested that a Wildlife Corridor should not be less than 100metres wide. The proposed Wildlife Corridors agreed to by CDC must be enlarged and fully protected from any development. This is essential and urgent for those Wildlife Corridors which allow wildlife to achieve essential connectivity between the Chichester Harbour AONB and the South Downs National Park.
10. Biodiversity Policy NE5 - This is an absolute nonsense. If biodiversity is going to be harmed there should be no ability to mitigate or for developers to be able to buy their way out of this situation. This mindset is exactly why we are seeing a significant decline in biodiversity in the District which should be a rich in biodiversity area and why the World Economic Forum Report (2023) cites the UK as one of the worst countries in the world for destroying its biodiversity.
11. In many cases as set out in the Policies the strategic requirements lack being SMART in nature – particularly the M Measurable. These need to be explicit and clear: "you get what you measure".
12. 65% of the perimeter of the District of Chichester south of the SDNP is coastal in nature. The remainder being land-facing. Policy NE11 does not sufficiently address the impact of building property in close proximity to the area surrounding the harbour, something acknowledged by the Harbour Conservancy in a published report in 2018 reflecting upon how surrounding the harbour with housing was detrimental to it long-term health. And here we are 5 years on and all of the organizations that CDC are saying that they are working in collaboration with, to remedy the decline in the harbour's condition, are failing to implement the actions necessary in a reasonable timescale. CDC are following when they should be actually taking the lead on the issue. Being followers rather than leaders makes it easy to abdicate responsibility. There must be full and transparent accountability.
13. The very significant space constraints for the plan area must be taken into account. The standard methodology need

no longer apply where there are exceptional circumstances and we are certain that our District should be treated as a special case because of the developable land area is severely reduced by the South Downs National Park (SDNP) to the north and the unique marine AONB of Chichester Harbour to the south. A target of 535dpa is way too high. This number should be reduced to reflect the fact that only 30% of the area can be developed and much of that is rural/semi-rural land which provides essential connectivity for wildlife via a number of wildlife corridors running between the SDNP and the AONB. Excessive housebuilding will do irretrievable damage to the environment and lead to a significant deterioration in quality of life for all who reside within the East / West corridor.

14. Many of the sites identified in the Strategic & Area Based Policies could result in Grade 1 ^ 2 farmland being built upon. The UK is not self-sufficient in our food security. It is short-sighted to expect the world to return to what we have come to expect. Our good quality agricultural land should not all be covered with non-environmentally friendly designed homes.

Document Element: Policy E8 Built Tourist and Leisure Development**Respondent:** Mayday! Action Group (John Garrett) [7163]**Summary:**

It is true that our district has a great deal to offer but there are massive holes in the fabric. Infrastructure – roads, rail, bus, entertainment venue(s), hotel and other accommodation – all are lacking and are not up to the level of need or expectation of all ages of our demographic population. There is no surprise that AirBnB has so successfully penetrated the tourism sector. We do not yet know what will become of the former Army & Navy store but we have to hope and pray that the new use will be inspirational and not solely retail.

Full text:

Executive Summary

The Local Plan as written lacks ambition and vision, and will be detrimental to the landscape within which the district lies. It is a plan borne out of a need to produce a legal document which will satisfy the regulatory authorities. In terms of Urban Planning it fails "To meet the needs of the present without compromising the ability of future generations to meet their own needs" (NPPF).

The development that will consequentially arise from the deployment of such a made Local Plan is not sustainable. It will adversely affect the Character, Amenity and Safety of the built environment, throughout our district.

In particular, the Local Plan is inadequate for the needs of the people in the district both at present and in the future because –

1. It has been written in advance of the District having a properly formed and agreed Climate Emergency Action Plan. It

is inconceivable that such a key document will not shape our Local Plan. It is this Action Plan that is needed first in order to provide the long-term strategic view as to how and what the District will look like in the future; this, in turn, will help form and shape the policies outlined in any prospective, Local Plan. The Plan as proposed is moribund, as a result of "cart before the horse" thinking.

2. The Local Plan as written does not adequately address how infrastructure, transport and services are going to be materially and strategically improved to meet the predicted growth and shift to a significantly ageing population. There is presently insufficient capacity to supply services and to have adequate people and environmentally friendly connectivity, as a direct result of decades of neglect towards investing in infrastructure and services to meet the needs of the District's population. We are led to believe that developers through increased levies in order to gain permission to build will fulfil this need, but all that this will result in is an uncoordinated, dysfunctional mess completely lacking in any future-proof master planning approach. We contend that this will do nothing for the quality of life of Chichester District residents and it will create a vacuum whereby few if indeed any can be held accountable or indeed found liable for shortcomings in the future.

3. The Local Plan as written does not state how it will go about addressing the need to create affordable homes. The District Council's record on this matter since the last made plan has been inadequate and now the creation of affordable homes has become urgent as political/economic/social factors drive an ever increasing rate of change within the District.

4. Flood risks assessments used in forming the Plan are out of date (last completed in 2018) and any decision to allocate sites is contrary to Environment Agency policy. Additionally, since March 2021 Natural England established a position in relationship to 'Hold the Line' vs. 'Managed Retreat' in environmentally sensitive areas, of which the Chichester Harbour AONB is a significant example. CDC have failed to set out an appropriate policy within the proposed Local Plan that addresses this requirement.

5. The A27 needs significant investment in order to yield significant benefits for those travelling through the East-West corridor; this is unfunded. Essential improvements to the A27 are key to the success of any Local Plan particularly as the city's ambitions are to expand significantly in the next two decades. But any ambitions will fall flat if the A27 is not improved before such plans are implemented.. The A259 is an increasingly dangerous so-called 'resilient road' with a significant increase in accidents and fatalities in recent years. In 2011, the BBC named the road as the "most crash prone A road" in the UK. There is nothing in the Local Plan that addresses this issue. There is no capacity within the strategic road network serving our district to accommodate the increase in housing planned, and the Local Plan does not guarantee it.

6. There is insufficient wastewater treatment capacity in the District to support the current houses let alone more. The tankering of wastewater from recent developments that Southern Water has not been able to connect to their network and in recent months the required emergency use of tankers to pump out overflowing sewers within our City/District reflects the gross weakness of short-termism dominated thinking at its worst and is an indictment of how broken our water system is. The provision of wastewater treatment is absolutely critical and essential to the well-being of all our residents and the long-term safety of our built environment. The abdication by those in authority, whether that be nationally, regionally or locally, is causing serious harm to the people to whom those in power owe a duty of care and their lack of urgency in dealing properly with this issue is seriously jeopardizing the environment in which we and all wildlife co-exist.

7. Settlement Boundaries should be left to the determination of Parish Councils to make and nobody else. The proposed policy outlined in the Local Plan to allow development on plots of land adjacent to existing settlement boundaries is ill-conceived and will lead to coalescence which is in contradiction of Policy NE3.

8. All the sites allocated in the Strategic Area Based Policies appear to be in the majority of cases Greenfield Sites. The plan makes little, if any reference to the development of Brownfield sites. In fact, there is not a Policy that relates to this source of land within the Local Plan as proposed. Whilst in the 2021 HELAA Report sites identified as being suitable for development in the District as being Brownfield sites were predicted to yield over 4000 new dwellings. Why would our Local Plan not seek to develop these sites ahead of Greenfield sites?

9. The Local Plan does not define the minimum size that a wildlife corridor should be in width. What does close proximity to a wildlife corridor mean? How can you have a policy (NE 4) that suggests you can have development within a wildlife corridor? These exceptions need to have clear measures and accountability for providing evidence of no adverse impact on the wildlife corridor where a development is proposed. Our view is quite clear. Wildlife and indeed nature in the UK is under serious and in the case of far too many species, potentially terminal threat. Natural England has suggested that a Wildlife Corridor should not be less than 100metres wide. The proposed Wildlife Corridors agreed to by CDC must be enlarged and fully protected from any development. This is essential and urgent for those Wildlife Corridors which allow wildlife to achieve essential connectivity between the Chichester Harbour AONB and the South Downs National Park.

10. Biodiversity Policy NE5 - This is an absolute nonsense. If biodiversity is going to be harmed there should be no ability to mitigate or for developers to be able to buy their way out of this situation. This mindset is exactly why we are seeing a significant decline in biodiversity in the District which should be a rich in biodiversity area and why the World Economic Forum Report (2023) cites the UK as one of the worst countries in the world for destroying its biodiversity.

11. In many cases as set out in the Policies the strategic requirements lack being SMART in nature – particularly the M Measurable. These need to be explicit and clear: “you get what you measure”.

12. 65% of the perimeter of the District of Chichester south of the SDNP is coastal in nature. The remainder being land-facing. Policy NE11 does not sufficiently address the impact of building property in close proximity to the area surrounding the harbour, something acknowledged by the Harbour Conservancy in a published report in 2018 reflecting upon how surrounding the harbour with housing was detrimental to its long-term health. And here we are 5 years on and all of the organizations that CDC are saying that they are working in collaboration with, to remedy the decline in the harbour’s condition, are failing to implement the actions necessary in a reasonable timescale. CDC are following when they should be actually taking the lead on the issue. Being followers rather than leaders makes it easy to abdicate responsibility. There must be full and transparent accountability.

13. The very significant space constraints for the plan area must be taken into account. The standard methodology need no longer apply where there are exceptional circumstances and we are certain that our District should be treated as a special case because of the developable land area is severely reduced by the South Downs National Park (SDNP) to the north and the unique marine AONB of Chichester Harbour to the south. A target of 535dpa is way too high. This number should be reduced to reflect the fact that only 30% of the area can be developed and much of that is rural/semi-rural land which provides essential connectivity for wildlife via a number of wildlife corridors running between the SDNP and the AONB. Excessive housebuilding will do irretrievable damage to the environment and lead to a significant deterioration in quality of life for all who reside within the East / West corridor.

14. Many of the sites identified in the Strategic & Area Based Policies could result in Grade 1 ^ 2 farmland being built upon. The UK is not self-sufficient in our food security. It is short-sighted to expect the world to return to what we have come to expect. Our good quality agricultural land should not all be covered with non-environmentally friendly designed homes.

Document Element: Policy E8 Built Tourist and Leisure Development

Respondent: Natural England (Luke Hasler, Senior Advisor) [8189]

Summary:

Natural England strongly supports the inclusion of both criterion 2. (applicable to all new tourist and leisure development) and the final policy paragraph which requires proposals for tourist accommodation to contribute to the relevant access management strategies to mitigate recreational disturbance to the coastal SPAs in accordance with policies NE6 and NE7.

Full text:**Summary of advice**

While we have raised some queries and recommended some further modifications to certain policies we do not find the Plan unsound on any grounds relating to our remit.

Natural England has reviewed the Proposed Submission Local Plan and accompanying appendices together with the Habitats Regulations Assessment (HRA) and Sustainability Appraisal (SA). Our detailed comments on the policies and site allocations are provided as follows:

- Annex 1 - Chapter 2 – Vision and Strategic Objectives
- Annex 2 - Chapter 4 – Climate Change and the Natural Environment
- Annex 3 - Chapter 5 (Housing) and Chapter 6 – (Place-making, Health and Well-being)
- Annex 4 - Chapter 7 (Employment and Economy) and Chapter 8 (Transport and Accessibility)

- Annex 5 - Chapter 10 – Strategic and Area Based Policies

Please note that we have not provided comments on all policies but those which have most influence on environmental issues. Natural England has no comment to make on the policies not covered in this response. Other than confirming that we have referred to it when considering our advice on specific policies and site allocations Natural England has no general comments to make on the SA.

Unfortunately due to unforeseen resourcing issues while we have reviewed the associated HRA we are not in a position to provide detailed comment on it as part of this response. We will rectify this as soon as possible and can confirm that we have seen nothing in it that raises any major concerns.

The Plan has many positive aspects including standalone policies on Green Infrastructure (GI) and wildlife corridors and an incredibly extensive suite of natural environment policies more generally.

We are hugely appreciative of the opportunity that we were given to work with you on shaping key policies post-Regulation 18. However, we believe that the plan needs to go further in its recognition of coastal squeeze as a key issue for the district, should include policy hooks for the forthcoming Local Nature Recovery Strategy (LNRS) and make up to date references to both the Environment Act (2021) and the Environmental Improvement Plan (EIP, 2023). Given how recent the publication of the EIP is we would be happy to discuss with your authority how this could best be achieved but we believe given the wealth of natural capital within Chichester District it is vitally important that this latest iteration of the Local Plan is set in its full policy and legislative context.

We have suggested a significant number of amendments and additions to both policies and supporting text throughout the Plan. In our view these could all be taken forward as minor modifications but if they were all acted upon they would leave the Plan much stronger and more coherent in delivering for the natural environment, one of the three central tenets of genuinely sustainable development as set out in the National Planning Policy Framework (NPPF 2021, paragraph 8c).

RECEIVED LATE: The Local Plan is weak on impacts especially from the largest concentration of caravans at Selsey on Medmerry.

Full text:

Thank you for the opportunity to comment on the Draft Chichester District Local Plan 2021-39. We would suggest that there has been insufficient public consultation to date. We commented on the draft Local Plan for 2015, on the Preferred Options in 2019 and there have been many changes in Government policy and commitments since then to include Climate Change, Net Zero and commitments made at COP 26 and 27 to include reducing methane emissions etc. With regards to this consultation we recognise the importance of a plan-led system and support Chichester District Council's (CDC) desire to produce a comprehensive Local Plan. CPRE Sussex wishes to contribute to policies concerning landscape, rural areas, communities, environment and wildlife drawing on evidence and local knowledge.

CONTEXT

1. Examining the previous government consultation which closed on March 2nd, ie the Levelling-up and Regeneration Bill including some aspects of the National Planning Policy Framework, NPPF, there are some issues which would impact on this Local Plan and need consideration.

1.1 That consultation included important changes to the way in which the 5 year housing land supply is calculated, and the timetable for making Local Plans. They are of significance to local councils, especially those with Neighbourhood Plans. Some measures will take effect almost immediately through an update to the existing NPPF in Spring 2023. Others will follow later in the year or in 2024. Surely such consultations should be better phased to make plan development more logical and access to consultations easier?

2. Communities: Our group welcomed the overall shift in emphasis towards communities. Mind you, while the word is used 121 times in the Prospectus it does not appear in the draft NPPF! We would expect much more emphasis on the importance of communities in any forthcoming consultations. Earlier and more effective engagement with communities could help to lead to a less confrontational planning system with an emphasis on active participation.

3 Time required – a lot of time is needed to understand and implement such policies and a searchable on-line version would be very helpful; and, consideration also needs to be extended to those people in the community who are not computerised.

4 We take the word "sufficient" with regard to housing numbers to be equivalent to that which is "needed" and the current Standard Method does not establish that figure. Our MP, the Rt Hon Andrew Griffith, Arundel and South Downs, referred to the approach to developing housing numbers as a mutant algorithm.

4.1 Specifically, the changes to housing targets, to make them 'advisory', are welcome. However, we should remind you that the Government continues to insist on using out-of-date projections (2014). The current ONS population estimates are 1 million less people in the population than allowed for in the figures used to so that the reliance on the 2014 figures is completely out of date. The emphasis should always be on using current up to date evidenceand to use those out-of-date figures produces the wrong results and does not conform with the need to use up to date information. In addition, this would require an immediate change to the guidance to insist (as previously) on the most up-to-date projections.

4.2 We also recommended a review of the Standard Method, which does not make housing affordable and simply supports developers to build market homes where they want to. The graph above illustrates the gap between projection and current population figure provided by the Community Planning Association.

4.3 Local Planning Authorities, LPAs, were also given an opportunity to put forward alternatives to the Standard Method and to name the specific constraints faced. Our contribution to that consultation referred to the:

- Reduction of land available to the CDC given the creation of the South Downs National Park, SDNP
- English Channel
- SDNP itself
- Range of internationally important designated sites
- Rare species and habitats
- River flood plains
- Water neutrality in part of the District
- Nutrient neutrality in the Solent
- Sea Level Rise

- Inadequate infrastructure – roads/lanes and local transport; sewage treatment; community facilities such as medical centres, shops; and

4.4 There have already been large housing commitments, loosely put on "flat green land" around Chichester and now CDC is eyeing the "empty" north of the District with allocations being made for Loxwood and an increase in the number of houses being sought in Wisborough Green. Such land supports wildlife which often may not be under recorded as it is private land. Areas in both of those Parishes has been "cleared" of biological interest but the BNG established a baseline of 2020 and google maps can show the state of the environment at that date. The commitment to safeguarding biodiversity needs to be pursued carefully and consistently.

COMMENTS ON THE CDC LOCAL PLAN 2021-2039 REG19 proposed submission comments: the comments cite the para and/or Chapter number

5. At this phase in the local plan process the scope of the invited representations is limited to whether the Plan that has been produced is:

a) legally compliant (i.e., whether it meets the legal requirements); and
 b) sound (i.e., whether it has been positively prepared, is justified, is effective and is consistent with national policy) and I would ADD whether it is forward thinking enough as it is planned to last until 2039.

5.1 The plan area is split in to three areas, each with different characteristics, landscapes and access to services:

- a) • The East-West Corridor, running across the width of the plan area, is varied in landscape with the inclusion of both larger settlements (including the city) and rural villages. It has the best transport connections and access to facilities in the plan area with the A27 and railway running through-out.
- b) The Manhood Peninsula* MP, located in the south of the plan area, jutting out into the English Channel, is rich in coastal landscapes with the majority of the area covered by environmental designations. It also includes some of the plan area's larger settlements which rely heavily on limited road accessibility to the north towards Chichester city.
- c) The North of the Plan Area is primarily rural in character with diverse landscapes, rich cultural and heritage assets and a number of dispersed settlements, some of which are relatively isolated and served by narrow lanes with limited public transport

*NB The population on the MP is dispersed in a rural landscape and equals that of Chichester. The description for the North section could just as easily have been used for the MP.

Chapter 2 and Local Plan Vision

These Objectives will need to underlie every aspect of the document.

5.2 P 23: Para 2.25 Replace the word "site" by "area" and insert forming part of a diverse set of wetlands (Ditches, Rifes, Ponds, Saline lagoons and a small section of Canal). Info: The Medmerry site is no longer the largest eg having been overtaken in area by the Steart Marshes, Somerset.

5.3 Include mention of rare habitats and species and the role of Selsey Bill in facilitating arrivals and departures of bats, butterflies and birds. That's its USP,

6.1 P 25 Local Plan Vision and Strategic Objectives p 30 Objective 1: CLIMATE CHANGE

This section does not reflect the urgency of the issue nor the vulnerability of parts of Sussex. Many scientists are pointing to Sea Level Rise, SLR, speeding up and some of them cite a 10 year window in which to act ie so that before this Local Plan has run its course, areas on the coast including the coastal plain and the Manhood Peninsula could well be adversely affected. This would have an immediate impact on housing, facilities and transport links and could lead to the local population having to move.

6.2 Actions related to this particular objective need to be included in all the following objectives. The south of the District is very vulnerable and the rest of the District will experience very intensive rainfall, water shortages (NE/EA 2013 report) and hot summers.

6.2 Policies need to include not building on areas below 5m high Water Level. The CDC Climate Change officer should host meetings to consider potential plans for putting houses on stilts, moving people to land safe from flooding and re-directing roads, cycle ways and footpaths to facilitate future access.

6.3 Evidence: See the Surging Seas and NASA websites for prediction of Sea Level Rise. Need to include reference to the UK Climate Resilience Programme jointly led by UK Research and Innovation, UKRI, and the Met Office which was set up to fund research "to help understand how to quantify the risks from climate change and build climate resilience for the UK, This research should produce "usable outputs" to "directly support decision-making" by government, local authorities, communities and other stakeholders

6.3.1 Every area of UK society will feel the effects of climate change and, as global emissions continue to rise, pre-paring for life in a warmer world is crucial. Findings were discussed last week by the UK ranging from assessments of elderly people overheating in care homes through to building community-run water storage.

6.3.2 Every area of UK society will feel the effects of climate change and, as global emissions continue to rise, preparing for life in a warmer world is crucial.

6.2.2.i In early March, UKTI and Met office researchers involved with the programme gathered to present and discuss their findings. They ranged from assessments of elderly people overheating in care homes through to building community-run water storage. These items and website need to be referenced in the evidence section.

6.3.3 The key points are intended to help businesses and policymakers adapt to climate change.

6.3.4 Many focused on "climate services" defined as involving the "production, translation, transfer and use of climate knowledge and information in climate-informed decision making".

6.3.5 Climate services could be an important tool for adaptation because they can provide people with the relevant information to prepare for climate change.

6.3.6 Representatives from the Met Office laid out their recommendations for a UK National Framework for Climate Services. And said they wanted to provide a "driving force" for the nation's climate services community and help ensure that "adaptation action actually does get done".

6.4.7 UK 'SSPs'

"Shared socioeconomic pathways" (SSPs) are tools used by researchers to explore how society will change in the future. This can help them to answer important questions about climate change. As there were no UK-specific versions of SSPs available to complement the UKCP18 climate projections

Ref: The importance of Adaptive Resilience Solutions in the Face of Climate Threats.

Recommendation: This report needs to be drawn on and form part of the evidence base.

7.1 Objective 2: NATURAL ENVIRONMENT Work with site managers of the Designated Sites and NGOs in the wider environment. This objective is vitally important and welcome and its importance needs to be reflected in all parts of the plan to include Wildlife Corridors, Biodiversity Net Gain and the Nature Recovery Network.

Sir David Attenborough

"It may sound frightening, but the scientific evidence is that if we have not taken dramatic action within the next decade, we could face irreversible damage to the natural world and the collapse of our societies."

7.1.1 The emergency concerning Biodiversity also needs to be communicated.

Para 2.32: Agree – this (climate emergency) is the most urgent issue facing us all together with the Biodiversity Emergency (declared by IPBWS, 2019).

7.1.2 Info: The ESPACE project European Spatial Planning: Adapting to Climate Events (ESPACE) was a four-year project funded by the European Commission's north-west Europe INTERREG IIIB programme and the ODPM. It produced a Climate Action Plan for the Manhood Peninsula in 2008 and not much action has followed to implement this. Perhaps it needs dusting off and re-visiting and including within the Local Plan?

7.2 Add policy:

PROPOSED Ecosystem Services Policy

7.2.1 CPRE Sussex considers that the Chichester Local Plan 2021 - 2039 should include a policy specifically for Ecosystem Services for the following reasons:

1. NPPF para 174. Planning policies and decisions should contribute to and enhance the natural and local environment by:

- a) protecting and enhancing valued landscapes, sites of biodiversity or geological value and soils (in a manner commensurate with their statutory status or identified quality in the development plan);
- b) recognising the intrinsic character and beauty of the countryside, and the wider benefits from natural capital and ecosystem services – including the economic and other benefits of the best and most versatile agricultural land, and of trees and woodland

7.2.2 'Natural capital refers to the elements of nature that produce value to people –whether directly or indirectly. Our natural capital 'assets' are the stocks of renewable and non-renewable natural capital such as our soils, freshwater, farmland, forests, atmosphere, oceans, ecological processes and the natural processes that underpin them. The flows of ecosystem services and benefits that our natural capital provides can be very obvious such as food, fuel, clean air, clean water, and opportunities for recreation. Others are much less visible, such as climate regulation, flood defences provided by natural vegetation, the billions of tonnes of carbon stored by peatlands and other habitats and the pollination of crops by insects'. (Sussex Local Nature Partnership <http://sussexlnp.org.uk/natural-capital/>)

7.3 Accordingly, we propose an Ecosystem Services policy (an adaptation of South Downs Park Authority's Core Policy SD2: Ecosystem Services'), be added as follows:

1. Development proposals will be permitted where they have an overall positive impact on the ability of the natural environment to contribute goods and services. This will be achieved by means of high-quality design, and by delivering all opportunities to:

- a) Sustainably manage land and water environments;
- b) Protect and provide more, better and joined up natural habitats;
- c) Conserve water resources and improve water quality;
- d) Manage and mitigate the risk of flooding;
- e) Improve the District's resilience to, and mitigation of, climate change;
- f) Increase the ability to store carbon through the retention of existing woodland, new planting or other means;
- g) Conserve and enhance soils, use soils sustainably and protect the best and most versatile agricultural land;
- h) Support the sustainable production and use of food, forestry and raw materials;
- i) Reduce levels of pollution;
- j) Improve opportunities for peoples' health and wellbeing; and
- k) Provide opportunities for access to the natural and cultural resources which contribute to the District's special qualities.

2. The Environment Act 2021 will require the production of a Nature Recovery Network and more locally a Local Nature Recovery Strategy. The Strategic Wildlife Corridors in Chichester District will be integral components of that local network. The importance of local networks in Nature Recovery Networks is highlighted in NPPG

7.3.4 Policy NE 4 Strategic Wildlife Corridors

CPRE Sussex supports this policy, Strategic Wildlife Corridors as part of the Local Plan process, conform with section 179 of the NPPF 2021 which is well-evidenced. However, CPRE Sussex wishes to question the size of the corridors ie the width/

Information provided in the 2021 consultation appears to demonstrate that these areas have been downsized such as those put alongside the East of the City Corridor, it appears that there has been a narrowing of the Strategic Wildlife Corridor around the location of the proposed allocations of A8, Chapter 10: Strategic and Area Based Allocations Land East of Chichester and potential A7, Land at Shopwyke. The Corridor to the East of Chichester was proposed for connectivity and functional links to the area for the rare and European Protected Species of Barbastelle Bats. It is shown on CDC technical consultation documents as a bat network

This does not conform with the Natural Environment & Rural Communities Act, NERC, 2006 and Section 40 subsection 3a as it would destroy a habitat over which the Barbastelle Bat has been recorded, a Section 41 species. And it is the DUTY of the Local Authority to safeguard these species. There should be NO recreational use in the buffer zones.

8. Green Infrastructure: p 160 and Policy P 14 d Submission (Regulation 19)

8.1 Local Green Space

6.82. The NPPF includes the concept of Local Green Space designation. This is a discretionary designation and sites may be identified and included in either local or neighbourhood plans. The designation should only be used as defined by the criteria in the NPPF where the land is not extensive, is local in character and reasonably close to the community; and, where it is demonstrably special, for example because of its beauty, historic significance, recreational value (including as a playing field), tranquillity or richness of its wildlife. Any areas which fall outside a neighbourhood plan area and where such designation is sought, will be considered by the subsequent Site Allocations DPD that will cover the remainder of the plan area. Policies for managing development within a Local Green Space should be consistent with those for Green Belts.

8.2 Parishes should be encouraged to look into such areas to be included in Neighbourhood Plans.

9. Renewable Energy: General policy

9.1 Housing p 103:

CPRE Sussex considers that the Chichester Local Plan should include a policy requiring all new-build homes to be equipped and sold with solar PV panels, roof or wall mounted.

9.2 Although the Chichester District Local Plan, at Para 6.15, states that 'Design proposals should respond to the opportunities a site presents to make best use of solar gain where this can be achieved without compromising good urban design or creating issues of overheating', there is no requirement in any of the plan's policies for new-build homes to be equipped and sold with roof or wall mounted solar PV.

9.3 Note that West Sussex County Council has advised in their Solar Together initiative that "By generating electricity from the sun, you could reduce your annual carbon emissions by approximately one tonne each year and help West Sussex to become carbon neutral".

Note, too: <https://solartogether.co.uk/westsussex/blog/best-ways-to-increase-solar-self-consumption>

9.4 "According to the University of Oxford findings, UK households with solar PV self-consume 45% of their own solar generation on average and reduce annual electricity demand from the grid by 24%. With additional adjustments, this reduction of 24% can be increased to over 35%".

9.5 New-build homes in Chichester District should therefore be equipped with solar PV panels. We question the statement in Para 6.15 that 'solar gain' could create 'issues of overheating'. Surely this can be prevented by good design?

9.6 There are additional opportunities for solar installations on school roofs (Brighton Sustainable Energy Co-op has many examples), car parks, industrial buildings et al.

10.0 Renewable Energy: Specific location Wisborough Green 75 additional houses. Unacceptable – see CDC Capacity Study sub sections 166+167. Limitations – Ancient woodland; wildlife – rare habitats and species, river floodplain; Water neutrality; HRA with reference to the Mens Ancient Woodland and presence of European Protected Species, Barbastelle Bats flight paths and foraging across the parish. See Natural England report Site Improvement Report and reports by Frank Greenway, 2008 et al.

10.1 See Page 84: In the north of the plan area, properties within Southern Water's Sussex North Water Resource Zone are supplied with water from a groundwater abstraction at Pulborough which is currently subject to environmental investigations to ensure there is no adverse impact on environmentally designated sites in the Arun Valley. This may impact on the available supply and alternative sources may need to be considered by Southern Water. Natural England published a position statement in September 2021 requiring developments within the Sussex North Supply Zone to be water neutral – this means that the use of water in the supply area after the development is the same or lower than before. A Water Neutrality Strategy had been prepared jointly with other affected authorities. Natural England's Position Statement sets out an interim approach based on minimising water use in new builds and offsetting the water that is used

10.2 Water consumption target. It is noted that both Portsmouth Water and Southern Water have targets to reduce water consumption to 100 litres per person per day (lppd) by 2040, a lower figure than the current most stringent Building Regulation target of 110 lppd and not that level which could be required for water neutrality.

10.3 The Local Plan is weak on impacts especially from the largest concentration of caravans at Selsey on Medmerry.

10.4 There is no wildlife corridor running east to west along the Manhood Peninsula ie Pagham to East Head and this undermines the importance of a positive barrier zone to protect the habitat. CDC have used the corridors for this barrier purpose possibly more than as a pathway throughout other parts of the plan.

10.5 Nutrient neutrality exclusion of a large area of the Peninsula from the protection zone is illogical as the same conditions exhibited in Chichester harbour (in the zone) exist at Pagham.

10.6 There is a 'tool' - "nutrient budget calculator March, 2022 version" – which gives an "n" factor for instance to discharges from WWTW. There is no direct mention of its use at Chichester harbour and as the data on Pagham Harbour has yet to be made public, the role of Sidlesham WWTW has not been referred to. The "N" factor would probably be more restrictive on outflows from WWTW than the total discharge permits – and shows a lack of coordinated approach between the Environment Agency and Natural England.

10.7 There are two reports due to be published this month - the West Sussex Coast and Gt Brighton Board and Southern Water overall plan for drainage and waste water - the timing of the LP – is thus unable to take these two influential inputs into account and may have implications for the 'Soundness' of the plan as it moves forward.

10.8 No mention is included of Sidlesham WSTW which is operating at and beyond capacity resulting in new housing on the Manhood Peninsula dealing with waste water in gardens, in houses etc.

Pages 87 and 88: Paras 4.112 and 4.113 are contradictory.

Appendix F Monitoring Framework

Early in 2020 attended a Public Inquiry representing the Manhood Wildlife and Heritage Group and presented evidence about an application at Easton Farm where the implementation of an application had not been followed up, which had expanded like Topsy and which potentially could damage the Medmerry coastal realignment site with its runoff. CDC had not been on watch possibly through lack of staff and/or a lack of enforcement staff. The site had grown without permission. This section requires a firm commitment to monitoring and reporting back, not just a paper one.

Thank you for your attention.

Document Element: Policy E9 Caravan and Camping Sites**Respondent:** Mayday! Action Group (John Garrett) [7163]**Summary:**

This is an important sector for tourism. Glamping is the most modern development and should surely be encouraged within the District in appropriate locations.

Water supply issues and the need for a region-wide water supply study will need to be seen as a top priority. Water for drinking etc. is a finite supply item and tourism inevitably loads the strain on our water supply network, particularly, if as is widely predicted global temperatures will rise much faster than predicted.

Quality of sites and their services is critical.

Full text:

Executive Summary

The Local Plan as written lacks ambition and vision, and will be detrimental to the landscape within which the district lies. It is a plan borne out of a need to produce a legal document which will satisfy the regulatory authorities. In terms of Urban Planning it fails "To meet the needs of the present without compromising the ability of future generations to meet their own needs" (NPPF).

The development that will consequentially arise from the deployment of such a made Local Plan is not sustainable. It will adversely affect the Character, Amenity and Safety of the built environment, throughout our district.

In particular, the Local Plan is inadequate for the needs of the people in the district both at present and in the future because –

1. It has been written in advance of the District having a properly formed and agreed Climate Emergency Action Plan. It is inconceivable that such a key document will not shape our Local Plan. It is this Action Plan that is needed first in order to provide the long-term strategic view as to how and what the District will look like in the future; this, in turn, will help form and shape the policies outlined in any prospective, Local Plan. The Plan as proposed is moribund, as a result of "cart before the horse" thinking.
2. The Local Plan as written does not adequately address how infrastructure, transport and services are going to be materially and strategically improved to meet the predicted growth and shift to a significantly ageing population. There is presently insufficient capacity to supply services and to have adequate people and environmentally friendly connectivity, as a direct result of decades of neglect towards investing in infrastructure and services to meet the needs of the District's population. We are led to believe that developers through increased levies in order to gain permission to build will fulfil this need, but all that this will result in is an uncoordinated, dysfunctional mess completely lacking in any future-proof master planning approach. We contend that this will do nothing for the quality of life of Chichester District residents and it will create a vacuum whereby few if indeed any can be held accountable or indeed found liable for shortcomings in the future.
3. The Local Plan as written does not state how it will go about addressing the need to create affordable homes. The District Council's record on this matter since the last made plan has been inadequate and now the creation of affordable homes has become urgent as political/economic/social factors drive an ever increasing rate of change within the District.
4. Flood risks assessments used in forming the Plan are out of date (last completed in 2018) and any decision to allocate sites is contrary to Environment Agency policy. Additionally, since March 2021 Natural England established a position in relationship to 'Hold the Line' vs. 'Managed Retreat' in environmentally sensitive areas, of which the Chichester Harbour AONB is a significant example. CDC have failed to set out an appropriate policy within the proposed Local Plan that addresses this requirement.
5. The A27 needs significant investment in order to yield significant benefits for those travelling through the East-West corridor; this is unfunded. Essential improvements to the A27 are key to the success of any Local Plan particularly as the city's ambitions are to expand significantly in the next two decades. But any ambitions will fall flat if the A27 is not improved before such plans are implemented.. The A259 is an increasingly dangerous so-called 'resilient road' with a significant increase in accidents and fatalities in recent years. In 2011, the BBC named the road as the "most crash prone A road" in the UK. There is nothing in the Local Plan that addresses this issue. There is no capacity within the strategic road network serving our district to accommodate the increase in housing planned, and the Local Plan does not guarantee it.
6. There is insufficient wastewater treatment capacity in the District to support the current houses let alone more. The tankering of wastewater from recent developments that Southern Water has not been able to connect to their network and in recent months the required emergency use of tankers to pump out overflowing sewers within our City/District reflects the gross weakness of short-termism dominated thinking at its worst and is an indictment of how broken our water system is. The provision of wastewater treatment is absolutely critical and essential to the well-being of all our residents and the long-term safety of our built environment. The abdication by those in authority, whether that be nationally, regionally or locally, is causing serious harm to the people to whom those in power owe a duty of care and their lack of urgency in dealing properly with this issue is seriously jeopardizing the environment in which we and all wildlife co-exist.
7. Settlement Boundaries should be left to the determination of Parish Councils to make and nobody else. The proposed policy outlined in the Local Plan to allow development on plots of land adjacent to existing settlement boundaries is ill-conceived and will lead to coalescence which is in contradiction of Policy NE3.
8. All the sites allocated in the Strategic Area Based Policies appear to be in the majority of cases Greenfield Sites. The plan makes little, if any reference to the development of Brownfield sites. In fact, there is not a Policy that relates to this source of land within the Local Plan as proposed. Whilst in the 2021 HELAA Report sites identified as being suitable for development in the District as being Brownfield sites were predicted to yield over 4000 new dwellings. Why would our Local Plan not seek to develop these sites ahead of Greenfield sites?

9. The Local Plan does not define the minimum size that a wildlife corridor should be in width. What does close proximity to a wildlife corridor mean? How can you have a policy (NE 4) that suggests you can have development within a wildlife corridor? These exceptions need to have clear measures and accountability for providing evidence of no adverse impact on the wildlife corridor where a development is proposed. Our view is quite clear. Wildlife and indeed nature in the UK is under serious and in the case of far too many species, potentially terminal threat. Natural England has suggested that a Wildlife Corridor should not be less than 100metres wide. The proposed Wildlife Corridors agreed to by CDC must be enlarged and fully protected from any development. This is essential and urgent for those Wildlife Corridors which allow wildlife to achieve essential connectivity between the Chichester Harbour AONB and the South Downs National Park.

10. Biodiversity Policy NE5 - This is an absolute nonsense. If biodiversity is going to be harmed there should be no ability to mitigate or for developers to be able to buy their way out of this situation. This mindset is exactly why we are seeing a significant decline in biodiversity in the District which should be a rich in biodiversity area and why the World Economic Forum Report (2023) cites the UK as one of the worst countries in the world for destroying its biodiversity.

11. In many cases as set out in the Policies the strategic requirements lack being SMART in nature – particularly the M Measurable. These need to be explicit and clear: “you get what you measure”.

12. 65% of the perimeter of the District of Chichester south of the SDNP is coastal in nature. The remainder being land-facing. Policy NE11 does not sufficiently address the impact of building property in close proximity to the area surrounding the harbour, something acknowledged by the Harbour Conservancy in a published report in 2018 reflecting upon how surrounding the harbour with housing was detrimental to its long-term health. And here we are 5 years on and all of the organizations that CDC are saying that they are working in collaboration with, to remedy the decline in the harbour’s condition, are failing to implement the actions necessary in a reasonable timescale. CDC are following when they should be actually taking the lead on the issue. Being followers rather than leaders makes it easy to abdicate responsibility. There must be full and transparent accountability.

13. The very significant space constraints for the plan area must be taken into account. The standard methodology need no longer apply where there are exceptional circumstances and we are certain that our District should be treated as a special case because of the developable land area is severely reduced by the South Downs National Park (SDNP) to the north and the unique marine AONB of Chichester Harbour to the south. A target of 535dpa is way too high. This number should be reduced to reflect the fact that only 30% of the area can be developed and much of that is rural/semi-rural land which provides essential connectivity for wildlife via a number of wildlife corridors running between the SDNP and the AONB. Excessive housebuilding will do irretrievable damage to the environment and lead to a significant deterioration in quality of life for all who reside within the East / West corridor.

14. Many of the sites identified in the Strategic & Area Based Policies could result in Grade 1 ^ 2 farmland being built upon. The UK is not self-sufficient in our food security. It is short-sighted to expect the world to return to what we have come to expect. Our good quality agricultural land should not all be covered with non-environmentally friendly designed homes.

5308

Support

Document Element: Policy E9 Caravan and Camping Sites

Respondent: National Highways (Mr Marius Pieters, Spatial Planning Manager) [8127]

Summary:

[National Highways letter dated 24/07/23 confirmed representation should be categorised as Comment - Supporting measures to reduce demand.] We support the development proposals for new caravan and camping sites that provide for winter storage of touring caravans/other forms of touring units, because this helps to reduce the number of large and towing vehicles on the SRN.

Full text:

We have reviewed the publicly available Local Plan documents and provided comments in the attached letter, in relation to the transport implications of the plan for the safety and operation of the SRN.

Our comments include issues to resolve, comments, requests for further information and recommendations. A brief summary of our main comments are:

- the reliance on the delivery of the A27 Chichester bypass improvements project.

- the requirements for new, additional, and adapted processes and assessments, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments.

- collaborative working between agencies in combination with a robust monitor and manage policy.

We hope our comments assist.

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders. We look forward to continuing to participate in future consultations and discussions.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Background

National Highways has been appointed by the Secretary of State for Transport as strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the strategic road network (SRN).

National Highways is responsible for operating, maintaining, and improving the Strategic Road Network (SRN) i.e., the Trunk Road and Motorway Network in England, as laid down in Department for Transport (DfT) Circular 01/2022 (Strategic Road Network and the delivery of sustainable development).

The SRN is a critical national asset and as such we work to ensure that it operates and is managed in the public interest, both in respect of current activities and needs as well as in providing effective stewardship of its long-term operation and integrity.

Our responses to Local Plan consultations are guided by relevant policy and guidance including the National Planning Policy Framework (2021) (NPPF):

- Transport issues should be considered from the earliest stages of plan-making and development proposals so that the potential impact of development on transport networks can be addressed (para 104).
- The planning system should actively manage patterns of growth such that significant development is focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. (para 105).
- Planning policies should be prepared with the active involvement of highways authorities and other transport infrastructure providers so that strategies and investments for supporting sustainable transport and development patterns are aligned. (para 106).
- In terms of identifying the necessity of transport infrastructure, NPPF confirms that development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe. (para 111).
- Planning policies and decisions should support development that makes efficient use of land, taking into account the availability and capacity of infrastructure and services – both existing and proposed – as well as their potential for further improvement and the scope to promote sustainable travel modes that limit future car use. (para 124).

In relation to the tests of soundness set out at paragraph 35 of the NPPF, in the context of transport, these are interpreted as meaning:

- a) Positively prepared - has the transport strategy been prepared with the active involvement of the highway authorities, other transport infrastructure providers and operators and neighbouring councils?
- b) Justified – Is the transport strategy based on a robust evidence base prepared with the agreement in partnership, or with the support of the highway authorities?
- c) Effective – Does the transport strategy and policy satisfy the transport needs of the plan and is it deliverable at a pace which provides for and accommodates the proposed progress and implementation of the plan?
- d) Consistent with national policy – Does the transport strategy support the economic, social, and environmental objectives of the Plan and the NPPF/NPPG?

We will be concerned with proposals that have the potential to impact on the safe and efficient operation of the SRN; in this case, the A27 trunk road (Chichester Bypass and its junctions) which is the main access route in the Chichester area. We have particular interest in any allocation, policy or proposals which could have implications for the A27 and the wider SRN network. We are interested as to whether there would be any adverse road safety or operational implications for the SRN. The latter would include a material increase in queueing or delay or reduction in journey time reliability during the construction or operation of the development set out in the plan.

National Highways is a key delivery partner for sustainable development promoted through the plan-led system, and as a statutory consultee we have a duty to cooperate with local authorities to support the preparation and implementation of development plan documents.

In accordance with national planning and transport policy and our operating licence, we are entirely neutral on the

principle of development as it is for the local planning authority to determine whether development should be allocated or permitted; albeit it must comply with national policy on locating development in locations that are or can be made sustainable. Therefore, while always seeking early and fulsome engagement with local plans and/or developers, we will simply be assessing the transport and related implications of plans or proposals and agreeing any necessary transport improvements and relevant development management policy.

In progressing Local Plans, we will seek to agree the following:

- Assessment tools and methodology
- Baseline Assessment i.e., to demonstrate that the assessment tool accurately reflects current transport conditions
- Comparator case assessment i.e., to forecast the transport conditions that would occur in the absence of the plan
- Forecast modelling i.e., to forecast the transport conditions that would arise with the plan in place, this will include an assessment at the end of the Plan period; and, if required, at full build out if that occurs after the end of the Plan period
- Outputs and outcomes of modelling, demonstrating, as appropriate, what transport infrastructure is necessary to support the plan o It should be noted that a suite of transport modelling tools may be required. This includes strategic modelling covering an area at least one major junction beyond the district boundary, localised network modelling where several links/junctions are close together and/or individual junction modelling
 - o A DMRB (Design Manual for Roads and Bridges) compliancy assessment may also be required for certain highway features, such as
 - o Merge/Diverge assessment at Grade separated junctions, link capacity assessments, and others.
- The design of any necessary transport infrastructure, to an extent suitable for establishing deliverability during the plan period at the time that it becomes necessary for the purpose of ensuring that unacceptable road safety impacts or severe operational impacts do not arise as a result of development. This may be to at least General Arrangement design stage or preliminary design stage. Whichever degree of detail is agreed, the products must be in full compliance with the DMRB.
- Industry standard transport intervention costings.
- The delivery/funding mechanisms for necessary transport interventions. It should not be assumed that National Highways will have any responsibility to identify or deliver necessary transport interventions.
- If considered appropriate, a "Monitor & Manage" (M&M) framework, aimed at managing the pace of development in line with the pace of funding and delivery of necessary highway interventions in a manner which responds to the realworld impacts of development may be agreed for inclusion in the plan subject to the adequacy of risk control measures included therein. This can include the move from a 'predict & provide' style of delivery to 'a vision & validate' style. o Any M&M framework must be based on a "worst case scenario" whereby necessary mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. It must be translated into development management plan policy and policy relating to development allocations.

Further detail on the above can be provided by National Highways.

While ideally all the above should be agreed prior to the Submission of the Local Plan for examination, we recognise that this is not always possible. However, all parties should work towards all matters being agreed and reflected in a Statement of Common Ground (SoCG) by the start of the Local Plan Examination at the latest. Ideally the SoCG between the Council and National Highways would be prepared well in advance of plan submission in order to guide resource input and to track progress towards final agreement on all relevant matters starting from the earliest plan iterations until the final version is agreed.

It is acknowledged that Government policy places much emphasis on housing delivery as a means for ensuring economic growth and addressing the current national shortage of housing. The NPPF is very clear that: "Strategic policy-making authorities should establish a housing requirement figure for their whole area, which shows the extent to which their identified housing need (and any needs that cannot be met within neighbouring areas) can be met over the plan period."

However, new DfT C1/22 and the NPPF are equally clear that any development, including housing delivery, must be tempered by the requirement to ensure that the associated transport demand can be accommodated without unacceptable impacts on the safety of the SRN or severe impacts on the operation of the SRN including reliability and congestion. Therefore, as necessary and appropriate, any plan and/or development must be accompanied by suitable mitigation in the right places at the right time, that is to the required design standards and is deliverable in terms of land availability, constructability and funding.

We would also draw your attention to the then Highways England document 'The Strategic Road Network, Planning for the Future: A guide to working with National Highways on planning matters' (September 2015). This document sets out how National Highways intends to work with local planning authorities and developers to support the preparation of sound documents which enable the delivery of sustainable development. https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_t_data/file/461023/N150227_-_Highways_England_Planning_Document_FINAL-lo.pdf

Responses to Local Plan consultations are also guided by National Planning Policy Framework (NPPF) revised on 20 July 2021 which sets out the government's planning policies for England and how these are expected to be applied.

Updated Circular (01/2022)

It should be noted that since the start of the Local Plan consultation process, on the 23 December 2022, the Department for Transport released a new circular on the 'Strategic road network and the delivery of sustainable development' (Circular 01/2022), which replaces all of the policies in Circular 02/2013 of the same name. These representations take account of the new circular and the requirements in terms of the Local Plan evidence base and process.

We request that the Local Plan is prepared in line with all aspects of the new circular. Particularly, the principles of sustainable development (paragraphs 11 to 17), new connections and capacity enhancements (paragraphs 18 to 25), and engagement with plan-making (paragraphs 26 to 38).

Regulation 18 submission

In our Regulation 18 submission we noted several matters including:

- The need to mitigate the adverse impacts of strategic development traffic to the A27 Chichester Bypass and its junctions at Portfield Roundabout, Bognor Road Roundabout, Whyke Roundabout, Stockbridge Roundabout and Fishbourne Roundabout and Oving junction.
- The need to identify a mechanism to calculate contributions towards the delivery of the previously agreed Local Plan A27 improvements
- The need to confirm the number of dwellings needed within the plan period
- The need to establish National Highways acceptance of the traffic model reference and future case scenarios
- The need to confirm costs, viability, and funding associated with mitigating the safety and congestion impacts of the development included within the plan.

Local Plan context

This Local Plan (Chichester Local Plan 2021 – 2039), prepared by the Local Planning Authority (LPA) Chichester District Council, sets out the vision for future development in the district and will be used to help decide on planning applications and other planning related decisions including shaping infrastructure investments.

The draft sets out how the district should be developed over the next 18-years to 2039 including for the full Plan period (1 April 2021 to 31 March 2039) the total supply of

- 10,359 dwellings
- 114,652 net additional sqm new floorspace

Minus the completions this is equivalent to around 530 dwellings and 6,150 sqm of floorspace a year.

National Highways Representations

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders.

We have undertaken a review of the Chichester Local Plan 2021-2039 proposed submission version and accompanying evidence documents, our comments are set out in the tables below (following pages). [see table within attachment]

Summary

We have reviewed the publicly available Local Plan documents and provided comments above in relation to the transport implications of the plan for the safety and operation of the SRN. We understand that other technical information is available, but this was not presented as part of this consultation.

Chichester, and the A27, are already heavily congested, infrastructure in the existing Local Plan remains undelivered and the growth set out in the new Plan will further increase travel demand.

As presented, satisfying the transport needs of the plan is clearly reliant on the delivery of the A27 Chichester bypass improvements project. The A27 Chichester bypass improvements project is one of 32 pipeline schemes being considered for possible inclusion in National Highways third Road Investment Strategy (RIS3) covering 1 April 2025 to 31 March 2030.

On 9 March 2023 the UK Transport Secretary ensured record funding would be invested in the country's transport network, sustainably driving growth across the country while managing the pressures of inflation. The announcement cited the A27 Arundel Bypass as being deferred from RIS2 to RIS 3 (covering 2025-2030). The transport secretary also identified a number of challenges to the delivery of the road investment strategy and cited the benefit of allowing extra time to ensure schemes are better planned and efficient schemes can be deployed more effectively.

At present, there is no commitment by DfT to carry out the A27 Chichester bypass improvements project. Until the A27 Chichester bypass improvements project is published in the RIS3, consented and a decision to invest is made it cannot be assumed to be a committed project.

We note that the Plan does not address any uncertainty of delivery of the A27 Chichester bypass improvements project and we strongly recommend that there is either no reliance placed on RIS3 to realise capacity for growth in the Plan or that contingency measures are included to cover the eventuality that RIS3 funding is not forthcoming within the plan period. It is not clear that the potential impact of development on transport networks can be addressed in the absence of the A27 Chichester bypass improvements project.

Achieving net zero, reducing emissions reduction, acting on climate, and supporting thousands of new homes and new employment developments will be problematic with existing processes. New, additional, and adapted processes and assessments will likely be required, especially in assessing Transport Assessments, mandating Travel Plans and

monitoring traffic associated with new developments. We acknowledge that change is complex, expensive, and time-consuming, especially for smaller district level Councils. But the hard work will deliver benefits for the Council and residents in the longer-term.

National Highways seeks to continue working with the Council and WSCC to progress coordinated and deliverable packages of interim mitigation measures and alternative transport solutions while a long-term strategic solution is considered by government. This must however be in combination with a robust monitor and manage policy that appropriately manages the risk of unacceptable road impacts resulting from new housing and other development over the Plan period.

We have been in discussion with Chichester District Council regarding their proposed Monitor and Manage Strategy. At present, we do not consider the current strategy to be robust and we seek further information and detail especially on who, when and when monitoring and management will be undertaken. Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas. Any M&M framework must be based on a "worst case scenario" whereby necessary transport mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. The M&M framework must set out that the alternative to mitigation not being delivered is that development does not proceed where that development would give rise to unacceptable road safety risk or severe cumulative impacts on the road network in the absence of that mitigation. The M&M framework must be translated into development management plan policy and policy relating to development allocations.

As we have reiterated throughout our comments, we welcome the opportunity to work with you to address these outstanding matters and we will continue to liaise over submitted Transport Assessment, Travel Plan policy and Monitor and Manage Policy to help to work towards a viable plan.

We hope our comments assist.

We look forward to continuing to participate in future consultations and discussions. Please do continue to consult us as the Plan progresses so that we can remain aware of, and comment as required on, its contents.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Object

Document Element: Policy E9 Caravan and Camping Sites

Respondent: Natural England (Luke Hasler, Senior Advisor) [8189]

Summary:

We maintain the advice given in our response dated 12th November 2021, that Requirement 9 (relating to designated sites and protected landscapes) should apply to all new caravan and camping sites and intensification/alterations to existing sites and should be strengthened and brought in line with the wording used in Policy E8

Full text:**Summary of advice**

While we have raised some queries and recommended some further modifications to certain policies we do not find the Plan unsound on any grounds relating to our remit.

Natural England has reviewed the Proposed Submission Local Plan and accompanying appendices together with the Habitats Regulations Assessment (HRA) and Sustainability Appraisal (SA). Our detailed comments on the policies and site allocations are provided as follows:

- Annex 1 - Chapter 2 – Vision and Strategic Objectives
- Annex 2 - Chapter 4 – Climate Change and the Natural Environment
- Annex 3 - Chapter 5 (Housing) and Chapter 6 – (Place-making, Health and Well-being)
- Annex 4 - Chapter 7 (Employment and Economy) and Chapter 8 (Transport and

Accessibility)

- Annex 5 - Chapter 10 – Strategic and Area Based Policies

Please note that we have not provided comments on all policies but those which have most influence on environmental issues. Natural England has no comment to make on the policies not covered in this response. Other than confirming that we have referred to it when considering our advice on specific policies and site allocations Natural England has no general comments to make on the SA.

Unfortunately due to unforeseen resourcing issues while we have reviewed the associated HRA we are not in a position to provide detailed comment on it as part of this response. We will rectify this as soon as possible and can confirm that we have seen nothing in it that raises any major concerns.

The Plan has many positive aspects including standalone policies on Green Infrastructure (GI) and wildlife corridors and an incredibly extensive suite of natural environment policies more generally.

We are hugely appreciative of the opportunity that we were given to work with you on shaping key policies post-Regulation 18. However, we believe that the plan needs to go further in its recognition of coastal squeeze as a key issue for the district, should include policy hooks for the forthcoming Local Nature Recovery Strategy (LNRS) and make up to date references to both the Environment Act (2021) and the Environmental Improvement Plan (EIP, 2023). Given how recent the publication of the EIP is we would be happy to discuss with your authority how this could best be achieved but we believe given the wealth of natural capital within Chichester District it is vitally important that this latest iteration of the Local Plan is set in its full policy and legislative context.

We have suggested a significant number of amendments and additions to both policies and supporting text throughout the Plan. In our view these could all be taken forward as minor modifications but if they were all acted upon they would leave the Plan much stronger and more coherent in delivering for the natural environment, one of the three central tenets of genuinely sustainable development as set out in the National Planning Policy Framework (NPPF 2021, paragraph 8c).

See attachment for representations on paragraphs/policies.

Change suggested by respondent:

Proposed wording in relation to all such development:

It is located so as not compromise the essential features of nationally designated areas of landscape, historic environment or nature conservation protection, including impacts from visitors or users of the facility, particularly in relation to the potential for increased recreational pressures on Chichester Harbour, Pagham Harbour, Medmerry Compensatory Habitat and other designated sites.

Document Element: Policy E9 Caravan and Camping Sites**Respondent:** John Newman [8169]**Summary:**

I agree with Policy E9 and would stress that relevant provision is very important. I am well aware, for instance, that there were several years when this was the only way I could seriously consider tourism, and I am sure that there will be many who are faced with the same situation. This may well be an issue where CDC needs to be careful not excessively to listen to the NIMBies.

Document Element: Policy E10 Equestrian Development**Respondent:** Mayday! Action Group (John Garrett) [7163]**Summary:**

It is of deep concern to the residents of Chidham & Hambrook that CDC Planning has not applied the good intentions stated in Policy E10 when it comes to the proposal to develop the Willowbrook Riding School and Stables located at the north of our Parish.

To access this site, the developers will have to create a two vehicle wide bridge over the unique Ham Brook chalk stream. Only 2 of the proposed dwellings will actually be located in Hambrook BUT all the new homes will only be accessed via roads within the parish. The site for development lies extremely proximate to the connective Wildlife Corridor linking the harbour AONB with the SDNP. Our view is that the planning application should have been refused at the outset for these and many other reasons.

Equestrian activity is of great benefit to both fully fit and severely disabled people of all ages. It is a great community asset and Willowbrook should not be lost to greed.

Executive Summary

The Local Plan as written lacks ambition and vision, and will be detrimental to the landscape within which the district lies. It is a plan borne out of a need to produce a legal document which will satisfy the regulatory authorities. In terms of Urban Planning it fails "To meet the needs of the present without compromising the ability of future generations to meet their own needs" (NPPF).

The development that will consequentially arise from the deployment of such a made Local Plan is not sustainable. It will adversely affect the Character, Amenity and Safety of the built environment, throughout our district.

In particular, the Local Plan is inadequate for the needs of the people in the district both at present and in the future because –

1. It has been written in advance of the District having a properly formed and agreed Climate Emergency Action Plan. It is inconceivable that such a key document will not shape our Local Plan. It is this Action Plan that is needed first in order to provide the long-term strategic view as to how and what the District will look like in the future; this, in turn, will help form and shape the policies outlined in any prospective, Local Plan. The Plan as proposed is moribund, as a result of “cart before the horse” thinking.
2. The Local Plan as written does not adequately address how infrastructure, transport and services are going to be materially and strategically improved to meet the predicted growth and shift to a significantly ageing population. There is presently insufficient capacity to supply services and to have adequate people and environmentally friendly connectivity, as a direct result of decades of neglect towards investing in infrastructure and services to meet the needs of the District’s population. We are led to believe that developers through increased levies in order to gain permission to build will fulfil this need, but all that this will result in is an uncoordinated, dysfunctional mess completely lacking in any future-proof master planning approach. We contend that this will do nothing for the quality of life of Chichester District residents and it will create a vacuum whereby few if indeed any can be held accountable or indeed found liable for shortcomings in the future.
3. The Local Plan as written does not state how it will go about addressing the need to create affordable homes. The District Council’s record on this matter since the last made plan has been inadequate and now the creation of affordable homes has become urgent as political/economic/social factors drive an ever increasing rate of change within the District.
4. Flood risks assessments used in forming the Plan are out of date (last completed in 2018) and any decision to allocate sites is contrary to Environment Agency policy. Additionally, since March 2021 Natural England established a position in relationship to ‘Hold the Line’ vs. ‘Managed Retreat’ in environmentally sensitive areas, of which the Chichester Harbour AONB is a significant example. CDC have failed to set out an appropriate policy within the proposed Local Plan that addresses this requirement.
5. The A27 needs significant investment in order to yield significant benefits for those travelling through the East-West corridor; this is unfunded. Essential improvements to the A27 are key to the success of any Local Plan particularly as the city’s ambitions are to expand significantly in the next two decades. But any ambitions will fall flat if the A27 is not improved before such plans are implemented.. The A259 is an increasingly dangerous so-called ‘resilient road’ with a significant increase in accidents and fatalities in recent years. In 2011, the BBC named the road as the “most crash prone A road” in the UK. There is nothing in the Local Plan that addresses this issue. There is no capacity within the strategic road network serving our district to accommodate the increase in housing planned, and the Local Plan does not guarantee it.
6. There is insufficient wastewater treatment capacity in the District to support the current houses let alone more. The tankering of wastewater from recent developments that Southern Water has not been able to connect to their network and in recent months the required emergency use of tankers to pump out overflowing sewers within our City/District reflects the gross weakness of short-termism dominated thinking at its worst and is an indictment of how broken our water system is. The provision of wastewater treatment is absolutely critical and essential to the well-being of all our residents and the long-term safety of our built environment. The abdication by those in authority, whether that be nationally, regionally or locally, is causing serious harm to the people to whom those in power owe a duty of care and their lack of urgency in dealing properly with this issue is seriously jeopardizing the environment in which we and all wildlife co-exist.
7. Settlement Boundaries should be left to the determination of Parish Councils to make and nobody else. The proposed policy outlined in the Local Plan to allow development on plots of land adjacent to existing settlement boundaries is ill-conceived and will lead to coalescence which is in contradiction of Policy NE3.
8. All the sites allocated in the Strategic Area Based Policies appear to be in the majority of cases Greenfield Sites. The plan makes little, if any reference to the development of Brownfield sites. In fact, there is not a Policy that relates to this source of land within the Local Plan as proposed. Whilst in the 2021 HELAA Report sites identified as being suitable for development in the District as being Brownfield sites were predicted to yield over 4000 new dwellings. Why would our Local Plan not seek to develop these sites ahead of Greenfield sites?
9. The Local Plan does not define the minimum size that a wildlife corridor should be in width. What does close proximity to a wildlife corridor mean? How can you have a policy (NE 4) that suggests you can have development within a wildlife corridor? These exceptions need to have clear measures and accountability for providing evidence of no adverse impact on the wildlife corridor where a development is proposed. Our view is quite clear. Wildlife and indeed nature in the UK is under serious and in the case of far too many species, potentially terminal threat. Natural England has suggested that a Wildlife Corridor should not be less than 100metres wide. The proposed Wildlife Corridors agreed to by CDC must be

enlarged and fully protected from any development. This is essential and urgent for those Wildlife Corridors which allow wildlife to achieve essential connectivity between the Chichester Harbour AONB and the South Downs National Park.

10. Biodiversity Policy NE5 - This is an absolute nonsense. If biodiversity is going to be harmed there should be no ability to mitigate or for developers to be able to buy their way out of this situation. This mindset is exactly why we are seeing a significant decline in biodiversity in the District which should be a rich in biodiversity area and why the World Economic Forum Report (2023) cites the UK as one of the worst countries in the world for destroying its biodiversity.

11. In many cases as set out in the Policies the strategic requirements lack being SMART in nature – particularly the M Measurable. These need to be explicit and clear: “you get what you measure”.

12. 65% of the perimeter of the District of Chichester south of the SDNP is coastal in nature. The remainder being land-facing. Policy NE11 does not sufficiently address the impact of building property in close proximity to the area surrounding the harbour, something acknowledged by the Harbour Conservancy in a published report in 2018 reflecting upon how surrounding the harbour with housing was detrimental to its long-term health. And here we are 5 years on and all of the organizations that CDC are saying that they are working in collaboration with, to remedy the decline in the harbour's condition, are failing to implement the actions necessary in a reasonable timescale. CDC are following when they should be actually taking the lead on the issue. Being followers rather than leaders makes it easy to abdicate responsibility. There must be full and transparent accountability.

13. The very significant space constraints for the plan area must be taken into account. The standard methodology need no longer apply where there are exceptional circumstances and we are certain that our District should be treated as a special case because of the developable land area is severely reduced by the South Downs National Park (SDNP) to the north and the unique marine AONB of Chichester Harbour to the south. A target of 535dpa is way too high. This number should be reduced to reflect the fact that only 30% of the area can be developed and much of that is rural/semi-rural land which provides essential connectivity for wildlife via a number of wildlife corridors running between the SDNP and the AONB. Excessive housebuilding will do irretrievable damage to the environment and lead to a significant deterioration in quality of life for all who reside within the East / West corridor.

14. Many of the sites identified in the Strategic & Area Based Policies could result in Grade 1 ^ 2 farmland being built upon. The UK is not self-sufficient in our food security. It is short-sighted to expect the world to return to what we have come to expect. Our good quality agricultural land should not all be covered with non-environmentally friendly designed homes.

Document Element: Policy E10 Equestrian Development

Respondent: Natural England (Luke Hasler, Senior Advisor) [8189]

Summary:

Following our advice given in November 2021 we are pleased to note the inclusion of an additional policy requirement (9) relating to consideration of biodiversity impacts and the provision of biodiversity net gain.

Full text:**Summary of advice**

While we have raised some queries and recommended some further modifications to certain policies we do not find the Plan unsound on any grounds relating to our remit.

Natural England has reviewed the Proposed Submission Local Plan and accompanying appendices together with the Habitats Regulations Assessment (HRA) and Sustainability Appraisal (SA). Our detailed comments on the policies and site allocations are provided as follows:

- Annex 1 - Chapter 2 – Vision and Strategic Objectives
- Annex 2 - Chapter 4 – Climate Change and the Natural Environment
- Annex 3 - Chapter 5 (Housing) and Chapter 6 – (Place-making, Health and Well-being)
- Annex 4 - Chapter 7 (Employment and Economy) and Chapter 8 (Transport and Accessibility)

- Annex 5 - Chapter 10 – Strategic and Area Based Policies

Please note that we have not provided comments on all policies but those which have most influence on environmental issues. Natural England has no comment to make on the policies not covered in this response. Other than confirming that we have referred to it when considering our advice on specific policies and site allocations Natural England has no general comments to make on the SA.

Unfortunately due to unforeseen resourcing issues while we have reviewed the associated HRA we are not in a position to provide detailed comment on it as part of this response. We will rectify this as soon as possible and can confirm that we have seen nothing in it that raises any major concerns.

The Plan has many positive aspects including standalone policies on Green Infrastructure (GI) and wildlife corridors and an incredibly extensive suite of natural environment policies more generally.

We are hugely appreciative of the opportunity that we were given to work with you on shaping key policies post-Regulation 18. However, we believe that the plan needs to go further in its recognition of coastal squeeze as a key issue for the district, should include policy hooks for the forthcoming Local Nature Recovery Strategy (LNRS) and make up to date references to both the Environment Act (2021) and the Environmental Improvement Plan (EIP, 2023). Given how recent the publication of the EIP is we would be happy to discuss with your authority how this could best be achieved but we believe given the wealth of natural capital within Chichester District it is vitally important that this latest iteration of the Local Plan is set in its full policy and legislative context.

We have suggested a significant number of amendments and additions to both policies and supporting text throughout the Plan. In our view these could all be taken forward as minor modifications but if they were all acted upon they would leave the Plan much stronger and more coherent in delivering for the natural environment, one of the three central tenets of genuinely sustainable development as set out in the National Planning Policy Framework (NPPF 2021, paragraph 8c).

Respondent: Mayday! Action Group (John Garrett) [7163]

Summary:

To be attractive to businesses, residents and economically essential tourists, efficient, affordable, smooth-running and frequent rail and bus services are absolutely essential.

Regrettably our plan area is not well served by rail or bus services – but this is as much a national as it is a local issue.

We would not agree with the suggestion that we have adequate cycle and pedestrian routes. There has been a stop/start process on dedicated cycle routes along the A259 between Fishbourne and the Havant Borough border. It is a fact that seems not to be willingly acknowledged that the A259, whilst categorised as a 'resilient road' (because it is the only viable alternative which exists to take the traffic from the A27 when that vital transport artery – dual carriage road – is out of action (which is not an infrequent occurrence)

We would contend that in parts the A259 is too narrow to allow for separate pedestrian and cycle routes. It is very clearly dangerous to have cyclists riding at 20+mph on the same route as pedestrians of all ages and very often mothers with buggies.

Document Element: Background, 8.1

Respondent: The Goodwood Estates Company Limited [7922]

Agent: HMPC Ltd (Mr Haydn Morris) [112]

Summary:

Chapter 8 should make reference to the role of aviation in transportation. The NPPF (paragraph 106f) requires local planning policies to: “recognise the importance of maintaining a national network of general aviation airfields, and their need to adapt and change over time – taking into account their economic value in serving business, leisure, training and emergency service needs, and the Government’s General Aviation Strategy.”

Full text:

Chapter 8 should make reference to the role of aviation in transportation. The NPPF (paragraph 106f) requires local planning policies to: “recognise the importance of maintaining a national network of general aviation airfields, and their need to adapt and change over time – taking into account their economic value in serving business, leisure, training and emergency service needs, and the Government’s General Aviation Strategy.” The plan does not make such references and is therefore not compliant with the NPPF and consequently is unsound.

Goodwood Aerodrome is a general aviation airfield.

Moreover, the plan should make provision for how aviation is likely to change in the future, with technological advances, not only in terms of being more accessible to the public for sport and recreation, but also the impact of STEM activities and their important role in future aviation and the advance of drone and similar technologies. Goodwood Airfield is closely and actively engaged with developers of such technology and this is likely to become an increasing sector of the Estate’s business.

General aviation airfields, such as Goodwood, frequently have sufficient land available for new aviation-related facilities (unlike constrained commercial airfields) and provide a major infrastructure resource. Unfortunately, this benefit is often overlooked in planning policies, and many airfields are subjected to threats of redevelopment – for reasons of viability fuelled by a high demand for housing land- and increasing resistance to developments supporting aerodrome business (such as potential noise and disturbance to adjoining residential areas)

Local political reaction to activities at many general aviation airfields has led to the introduction of restrictive planning policies, many related to noise and disturbance and a fear of expansion. Goodwood airfield is no exception, but it has worked with the local community over many years to reach an operational position that provides a balance between continued operation and protection of local amenities. Unfortunately in recent years, particularly as a result of an ill-founded strategic development allocation in the previous local plan, that operational balance is coming under further strain and cannot be further adjusted.

A position is fast approaching where operations at the airfield and motor circuit could be compromised unacceptably by the encroachment of new development, in particular housing development. This was ably demonstrated by the speculative housing proposal north of Madgwick Lane to which both the Estate and planning authority objected for reason, amongst many others, potential noise disturbance, safety concerns and operational constraints which contributed to an unacceptable ‘agent of change’ situation.

The proposal was subject to public inquiry and a finely balanced decision was granted in favour of development by the inspector for reason of the benefits of new housing outweighing the potential harm to Goodwood operations, on grounds that the (unproven) mitigation offered by the developer will be both provided and be effective, and we suggest, a misunderstanding of the true impacts of existing operations.

The Estate will continue to oppose the development for sound planning reasons that the mitigation offered and based on inaccurate evidence, will be inadequate and ineffective in addressing the concerns raise by the Estate and planning authority.

Change suggested by respondent:

Chapter 8 should make reference to the role of aviation in transportation. The NPPF (paragraph 106f) requires local planning policies to: “recognise the importance of maintaining a national network of general aviation airfields, and their need to adapt and change over time – taking into account their economic value in serving business, leisure, training and emergency service needs, and the Government’s General Aviation Strategy.”

Respondent: West Sussex County Council (Tracey Flitcroft, Principal Planning Officer) [8119]

Summary:

Insufficient evidence to demonstrate key infrastructure (i.e. Terminus Road Diversion) will be deliverable; Package of sustainable transport infrastructure and measures not yet sufficiently well-developed to demonstrate it is deliverable as part of monitor and manage process; Insufficient evidence to demonstrate capacity of transport network can accommodate scale of development proposed as part of Southbourne BLD. See attached for reasons for issues, why soundness of Plan affected and suggested changes to remedy issues.

Full text:

The comments included below from WSCC are Holding Objections. We will continue to work with Chichester District Council and as further work is completed will consider if objections can be withdrawn.

Transport Overview

The County Council has worked with Chichester District Council to develop the Chichester Local Plan and its supporting evidence base and will continue to do so. Although the overall direction of the Local Plan is supported, from a highways and transport perspective, there are three key issues remaining that need to be addressed in order to demonstrate that the Plan is sound:

1. There is insufficient evidence to demonstrate that key infrastructure (i.e. Terminus Road Diversion) will be deliverable;
2. The package of sustainable transport infrastructure and measures is not yet sufficiently well-developed to demonstrate that it is deliverable as part of the monitor and manage process; and
3. There is insufficient evidence to demonstrate that the capacity of the transport network can accommodate the scale of development proposed as part of the Southbourne Broad Location for Development.

The following sections explain; a) the reasons for these issues; b) why they affect the soundness of the Local Plan; and, c) what changes should be made to the Local Plan to remedy the issues.

Deliverability of Key Infrastructure

The recommended transport mitigation strategy, as assessed using the Chichester Area Transport Model for 2039 has been demonstrated to be capable in-principle to prevent the development from resulting in severe residual cumulative impacts on the highways and transport network. However, there are significant risks to deliverability of junction mitigation measures, which have required further work to be undertaken on developing a short to medium term strategy based on phased prioritisation of infrastructure and sustainable transport improvements, to be governed under a monitor and manage approach.

There are three locations where new highway alignments are proposed outside of existing highways boundaries. Two of these may include significant earthworks or structures to be delivered, being Stockbridge Link Road and Terminus Road diversion. The cost of the mitigation strategy exceeds the likely value of developer contributions and additional funding has not yet been secured.

At the Regulation 18 consultation stage in December 2018 to January 2019 the County Council identified delivery risks with the Stockbridge Link Road and Terminus Road Diversion schemes due to the earthworks likely to be required and to confirm the extent of land take required for both schemes. The County Council stated that feasibility work would need to be undertaken for these improvements prior to Plan submission to confirm that the schemes are deliverable. A brief for such a feasibility study was agreed in 2019, but to date, this work has not been commissioned. It is the County Council's view that Stockbridge Link Road (SLR) should be disregarded as a potential part of a long-term transport mitigation strategy for 2039 and beyond until such time as it can be demonstrated that the scheme is deliverable. Paragraph 8.14 of the Local Plan acknowledges that the SLR is not deliverable as part of the Local Plan mitigation package.

The Terminus Road Diversion is still identified as part of the highest priority in the Local Plan mitigation package (i.e. A27 Fishbourne Junction) which is expected to be delivered once sufficient funding is collected. The County Council considers that in the absence of this feasibility work, the deliverability of the Terminus Road Diversion cannot be confirmed. In particular, given the recent impacts of inflation in the construction industry, this work will need to robustly estimate the costs and confirm delivery arrangements. In the absence of this feasibility work, there is currently insufficient evidence to confirm that the Local Plan complies with Paragraphs 11 and 106 of the NPPF as key infrastructure does not appear to be deliverable.

In order to remedy this issue regarding the Terminus Road Diversion, the County Council requests that feasibility work is undertaken prior to the examination to confirm deliverability of the proposed Terminus Road Diversion.

Sustainable Transport Infrastructure & Measures

The transport study modelling for end of Plan period also includes some proposed highways mitigation schemes within Chichester City. The County Council has previously requested that these be replaced by sustainable transport improvements to comply with the West Sussex Transport Plan 2022-2036. However, only limited modification has been made to these proposed schemes, with a suggestion in text at paragraph 7.3.2 of the main transport study that the costs for these schemes can be reallocated to sustainable transport improvements which are not specified. Although this does help to explain how sustainable transport infrastructure schemes and measures can be at least partially funded, it is rare that schemes will be fully funded using developer contributions. Furthermore, funding is not the only issue that needs to be overcome to secure delivery of these schemes and measures.

The Infrastructure Delivery Plan (IDP) lists the proposed mitigation measures and in some cases provides information on the rationale, phasing, cost, funding and delivery arrangements. However, there are still many gaps in the information, probably because schemes are currently at an early conceptual stage. The County Council's experience is that it is unlikely that schemes will be fully funded using developer contributions (because doing so would not be compliant with the CIL regulations) so delivery of these schemes will be partially dependent on securing funding from central Government or other sources. The IDP currently fails to identify the scheme-specific requirements for additional funding and the overall scale of additional funding required.

The County Council considers the level of information currently available on the sustainable transport package to be insufficient to demonstrate deliverability of a credible and coordinated sustainable transport package of improved infrastructure and services. Therefore, there is insufficient evidence to confirm that the Local Plan complies with Paragraphs 11 and 106 of the NPPF.

In order to remedy this issue, the County Council requests that further technical work is undertaken to develop the schemes and measures in the sustainable transport package prior to the examination. In particular, this should focus on the following schemes and measures and some cases, this will build on work that has already taken place:

1. St. Paul's & Parklands cycle routes
2. Improving existing public transport services towards Madgwick Lane
3. Provision of improved bus services for the village serving the development areas of Southbourne Parish
4. Improving cycling connectivity to link the built-out areas of Shopwhyke Lakes with Tangmere and Oving etc

As not all the severely impacted A27 junctions have a reasonable prospect of being physically improved in the Plan period, more investigation into potential public transport enhancements is also required, particularly to strengthen routes that cross the bypass. This may require further amendments to the IDP.

This work should aim to identify options for sustainable transport schemes that can be a priority for investment, provide information to enable safeguarding of routes (e.g. cycle routes) from development and provide a basis for applications for third party funding to support their delivery. The relative priority of such measures would need to be considered under the monitor and manage approach by the proposed Traffic and Infrastructure Management Group for implementation in addition to the proposed improvement at the A27/A259 Fishbourne junction.

To address this issue and support delivery of the sustainable transport package, the County Council also recommends the following minor amendments to Policy T1: Transport Infrastructure:

At bullet point .7 change "other small-scale junction improvements" to read "other sustainable transport and safety focused improvements, including at junctions" and change "These will increase road capacity, reduce traffic congestion, improve safety and air quality, and improve access to Chichester city from surrounding areas" to "These will increase road capacity on strategic roads, and on both strategic and local roads reduce traffic congestion, improve safety and air quality, and improve access to Chichester city from surrounding areas notably by encouraging and prioritising sustainable modes."

Southbourne Broad Location for Development

The scale of development that can be accommodated at the Southbourne Broad Location will be, at least partially, dependent on the capacity of the transport network to accommodate the associated traffic movements. As the Broad Location spans the railway line, many of these traffic movements would need to cross the railway line. The County Council is concerned that there is currently insufficient capacity of the existing level crossings, notably at Stein Road, to accommodate the additional traffic movements. This could mean that the cumulative impact of development on the traffic network is severe, which is not consistent with Paragraph 111 of the NPPF.

The transport evidence base does not yet provide sufficient assurance that the proposed scale of development can be accommodated. This is because the base level of traffic flow has not been compared to local traffic counts, either in the initial validation of the strategic model or through a new count which the County Council has previously requested, and the assumptions about level crossing downtimes have not been validated against observed data. The County Council is concerned that the assessment of capacity of the local road network to accommodate the quantum of dwellings proposed for the Broad Location may be overoptimistic by underestimating existing flow levels and the duration of level crossing downtime. As a consequence, the proposed quantum may not be deliverable without unacceptable impacts to the conditions on Stein Road and to the level of traffic seeking to use rural lanes to the north of the village to avoid the level crossing.

In order to remedy this issue, the County Council requests that either additional transport evidence is provided prior to the examination to demonstrate that the proposed scale of development is deliverable, or that Policy A13 is changed to remove the proposed scale of development until such evidence is provided.

The following comments from education, minerals and waste, Adults Services and Health, highways & transport and public rights of way, do not affect the soundness of the Plan. However, Chichester District Council should take these into account and, where possible, make minor amendments to the Local Plan and/or evidence base studies before submission of the Local Plan for examination. Officers are happy to meet and discuss any of these comments, and proposed minor amendments to address these comments, ahead of submission:

1) Education

Land West of Chichester

Previous comments have been made requesting that the policy refers to 'Phase 2 should include expansion of the primary school for the further 1FE of teaching accommodation with nursery and SEND provision'. While it is recognised

that reference is made to this in the IDP this is a supporting document to the Local Plan and should not be solely relied on. It is requested that paragraph 10.19 is amended to read: 'a local centre with retail, community and employment uses (minimum of approximately 2500 sqm E(g)(i) Use Class), two form entry (2FE) primary school and one form entry (1FE) teaching accommodation with nursery and SEND, informal and formal open space (including a country park), allotments, ...'

This should also be included in the 3rd bullet point of Policy A6 or the wording of the policy should be drafted to reflect more recent policy requirements i.e. Provide for infrastructure and community facilities in accordance with the most recent Infrastructure Delivery Plan.

There are some inconsistencies with the wording of the strategic policies, not every policy includes the criterion 'Provide for infrastructure and community facilities in accordance with the most recent Infrastructure Delivery Plan.' While this may be due to some policies being carried through from the adopted local plan it is inconsistent.

Policy A8 Land East of Chichester

As an education authority WSCC do not request 1FE schools in line with government guidance. As per our earlier comments and discussions we requested a 2 FE primary school for the site.

3rd bullet point of Policy A8 should be amended to read: 'A neighbourhood centre incorporating local shops, a community centre, flexible space for employment/ small-scale leisure uses and a one-form (expandable to two-form) two form entry primary school with provision for early years/ childcare and special educational needs and disability...'

2) Minerals and Waste

The references to safeguarding minerals is inconsistent and it is suggested that the wording in the email sent to CDC (attached) in relation to Policy AL3 should be used in the policies for the other sites for consistency. Reference to safeguarding minerals and waste infrastructure should also be included in some other policies as previously indicated:

- Policy A2 – needs to include reference to safeguarding minerals and waste infrastructure.
- Policy A7 – needs to include reference to safeguarding waste infrastructure.
- Policy A15 (Loxwood) – needs to include reference to minerals safeguarding as within the clay MSA.
- Policy A21 – needs to include reference to minerals safeguarding.

Also, the reference to the safeguarding guidance needs to be checked to ensure that it is worded correctly as 'Minerals and Waste Safeguarding Guidance'.

3) Older Person Housing

It is noted that the plan refers to older person housing as specialist housing. WSCC strategy supports the provision of 'extra care housing' while this might be similar development it enables younger people to access the accommodation for whatever medical reason i.e. MS, strokes rather than limiting it to a certain age group. Officers are happy to meet and discuss this further.

4) Highways and Transport

Public Transport Priority Infrastructure

The Public Transport section of the main transport study report starting at paragraph 6.2.7 requires revisiting. There is reference to "an expansion of the bus priority lane system within Chichester City Centre" which does not match the existing bus provision in the City which does not provide bus priority lanes on street. It does have restrictions on motor traffic in the adjoining parts of South Street and West Street which provide for bus and cycle only access in both directions of travel plus access for essential goods vehicle loading in the westbound direction only. In addition, the suggestion in the following paragraph for "a time-based system where certain routes are restricted to public transport only during specific times" is not evidenced or developed and as such considered unlikely to be practical and enforceable at most locations used by bus routes in the City. More developed proposals for additional bus priority, improvements to bus passenger facilities or testing of specific locations for bus-only access would be welcomed as part of developing a costed sustainable transport mitigation package.

Park and Ride

The discussion of possible park and ride facilities for the City at paragraphs 6.2.9 to 6.2.16 of the main transport study should also acknowledge. An important part of making park and ride well used by motorists is increasing the price of city centre parking to provide a financial incentive to take up significantly cheaper park and ride charges for parking and travel. However, if park and ride sites are not provided accessible to all major approach routes to the city, such a charging strategy would not be seen to be equitable, whereas only a single site is proposed in the District Council's emerging parking strategy and the report acknowledges at 6.2.11 that "locations for potential park and ride sites are also deemed to be limited". The bullet at 6.2.15 "Cost of schemes compared to benefit are likely to be initially lower than

highway schemes” may have been incorrectly worded given that this is listed as an issue rather than a benefit. The text may have been intended to say that the ratio of benefit to cost for park and ride schemes may be lower than for conventional highway schemes?

A286 New Park Road / A286 St Pancras Road (Junction 7)

This junction scheme includes pedestrian crossing facilities which are welcomed and also includes a length of advisory cycle lane starting in the middle of the junction for cyclists remaining on St Pancras. However, the approach to the junction on St Pancras from Eastgate Square remains intimidating to cyclists, so further measures would need to be added to make the layout cycle-friendly or the cycle facility is likely to be of limited benefit. This could include decreasing traffic speeds. Until this is done the conclusion at 8.4.4 of the main transport study; “The mitigation scheme includes improvements for pedestrians and cyclists which will lead to increased use of active travel modes and reduce the need for physical mitigation here” is only supported for pedestrians, not for cyclists.

A259 Via Ravenna / A259 Cathedral Way Roundabout (Junction 8)

It is stated at 7.3.8 of the main transport study that “the mitigation may be required to avoid queuing back towards the A27, as well as for capacity issues”. In light of this potential safety issue for the previous junction on Cathedral Way and for the A27 Fishbourne junction, the proposal at 7.3.6 that the scheme delivery should be tied to the monitor and manage regime to see if and when it is required is accepted. This is different to the approach for other junctions in the City because of the potential safety issue. This monitoring approach would be likely to follow after the A259 Cathedral Way / Fishbourne Road East / Terminus Road (as diverted) (Junction 10) improvement, which is to be brought forward as an integral part of the A27 Fishbourne roundabout mitigation scheme, but may allow for increased eastbound flows on Cathedral Way.

A286 Northgate Gyratory

An additional mitigation scheme is proposed at paragraph 7.3.134 of the main transport study for the A286 Northgate Gyratory along its southern arm from Oaklands Way to Orchard Street. The proposal to add traffic signals is welcomed in concept as it can help to control traffic speeds making the junction more friendly for cyclists and pedestrians. However, the layout shown at figure 7-8 does not maximise the opportunity to improve convenience and safety for pedestrians by providing a priority link to reach the central island, which contains employment space and the fire station, nor to assist crossing the exit towards Orchard Street. The scheme would benefit from further development to prioritise active travel movements and should also be fitted with transponders for bus priority.

Fishbourne Road West / Appledram Lane South (Junction 11)

At paragraphs 7.4.1 to 7.4.2 of the main transport study, the junction of Fishbourne Road West / Appledram Lane South (Junction 11) is considered. The proposal to mitigate impacts at this junction through delivery of the Stockbridge Link Road scheme is not considered deliverable, so the approach at this location requires re-thinking. The County Council would not support measures to increase capacity for through traffic on Appledram Lane South, the approach should be to reduce severance and improve safety and comfort for active travel on Appledram Lane by reducing vehicle speeds and as far as possible volume. This should consider the needs of pedestrians and cyclists both for local access and for users of the Salterns Way leisure cycling route.

TEMPro Background Traffic Growth Comparisons

At section 10.2 of the main transport study a comparison is made of the TEMPro 7.2 growth rates used in the study for external traffic with new TEMPro 8.0 growth rates since released by the Department for Transport, which notes that the TEMPro 8.0 rates are significantly lower, if these rates were used then the level of transport impacts could be lower. Unfortunately, a number of highways authorities in the Transport for the South East (TfSE) area including the County Council and Hampshire County Council have concerns that the planning assumptions used in TEMPro v8 core growth scenario underestimate the numbers of additional households forecasted compared to targets in adopted Local Plans for delivering new dwellings. TfSE are currently raising these collective concerns with DfT with a view to obtaining an early update to TEMPro 8 planning assumptions. Although for the purposes of this study TEMPro is not applied to trips produced in Chichester District, from the County Council’s analysis TEMPro v8 core underestimates the increase in households per year in Arun District by over 50% and in Horsham District by 30% when compared with adopted development plans. On this basis it may be useful to instead compare TEMPro 7.2 with TEMPro 8.0 high growth scenario.

North of District Spatial Scenarios Testing

For the Northern Spatial Scenarios Test provided as an appendix to the main transport study, this had not been updated for the final preferred spatial strategy or in light of the County Council’s previous comments on the March 2022 issue to the District Council. The spatial strategy now is similar but not identical to the Scenario 4: Significant Growth 1 option in the reported tests, totalling 370 dwellings across the four northern parishes, compared to 410 in the test. In both cases the largest allocation is at Loxwood; 220 dwellings were proposed in the Scenario 4 as compared to 200 in this test. Some other tests proposed higher numbers.

The testing in the northern part of the district had used the same trip generation rates per dwelling as in the South of the District, but the County Council considers that in practice private motor vehicle trip generation per dwelling is likely to be higher due to the rural nature of the area, including a lack of local facilities and shops within walking distance of development, a very low level of public transport services and lack of surfaced cycle routes.

The level of development proposed is not at the level capable of delivering transformative transport improvements to match the trip making patterns around Chichester and the A259 corridor to Bosham and Southbourne. This may be offset in part by the lower total amount of development compared to the tested scenario 4. Nonetheless, it would be helpful to

adjust the scenario for the spatial strategy now proposed and to provide information on additional traffic movements per peak hour from these parishes using the A272 at junctions at Wisborough Green and reaching the A272/A29 junction at Billingshurst and the A272/A283 junction at the north of Petworth.

Neutral Month and Summer Month Comparison Technical Note

The Neutral Month and Summer Month Comparison Technical Note in the main transport study treats July as a neutral month rather than a summer month. Paragraph 1.3.1 states "The flows were analysed by looking at traffic data for August 2019 this being considered to represent summer traffic. This was compared against traffic data from the neutral months of June, July, September and October also from 2019." The County Council does not accept this methodology as school summer holidays start part way through July and education traffic is also affected by the formal exam period, whilst there is typically a high level of seasonal leisure traffic including summer outdoor events in this month. It is acceptable to use August alone as the summer comparator month. However, July traffic should be removed from the neutral months analysis and should be substituted with May traffic data from the same year of 2019, provided that sufficient data is available from that month.

5) Public Rights of Way (PRoW)

It is a positive step to see PRoW acknowledged as valued by communities and as part of the area's green infrastructure. Whilst Policy P14 (Green Infrastructure) states that development proposals should not be detrimental to the network of public rights of way and bridleways (please note bridleways are Public Rights of Way), a more proactively positive approach that seeks enhancements to the network as mitigation, would be welcomed. The improvement, upgrading of existing PRoW and creation of new PRoW where possible, to allow for a greater number of users to access the network would be beneficial. This is somewhat addressed in Policy T1 which refers only to routes identified in the Local Transport Plan, Local Cycling and Walking Infrastructure Plan (LCWIP) and the Infrastructure Delivery Plan. Opportunities to these, should not be limited if they arise elsewhere.

It is surprising to see there is no mention of PRoW within Chapter 8 under Active Travel – Walking and Cycling. The PRoW network provides extensive walking and cycling opportunities, often off-road, and important links between places and non-PRoW routes.

Change suggested by respondent:

In order to remedy this issue regarding the Terminus Road Diversion, the County Council requests that feasibility work is undertaken prior to the examination to confirm deliverability of the proposed Terminus Road Diversion.

Respondent: Mr Michael Wright [7848]

Summary:

In recent years the local public transport has failed to adequately support the strategic transport network. For example the local bus services have declined in terms of routes, service hours and frequency. Several bus services now do not run after 6pm and do not even reach the Chichester train station. For many school, working and commuting people local public transport is now near useless. Your plan should address this.

The emphasis on private car use is misguided, for local transport.

I agree with this paragraph. We all know the problems of the Chichester by-pass only too well. I in fact cycled to Bognor and back this morning –the queue of cars on the A259 aiming for the roundabout connection with the A27 stretched back beyond Brick Kiln Farm while I was cycling both ways, and this is not unusual. If I am driving back from Bognor, I always turn right at the Drayton roundabout and come home via Shopwhyke Lakes - much easier! If I have been to Sainsbury's, I will often return either via Bradshaw Road or via Lavant, and I am well aware that I am not the only "rat" using these alternatives, which must annoy some people considerably. But at least one thing the authorities have got right is the new traffic lights south of the Drayton roundabout, which makes the journey for a cyclist so much safer - thank you.

The Chi A27 bypass is well over capacity today, before CDC build another ? 15000 houses and Arun build another 15000. Spending millions on tinkering with the junctions at enormous cost will be futile. It would be better to put the money towards the ONLY sensible solution, a nothern bypass.

Full text:

With the A27 and all approach roads in the vicinity of Chichester at near standstill both ways for many hours each day, it is ridiculous to suggest that it is near its design capacity. I am appalled that you are considering tinkering with roundabouts on the Chi bypass at the cost of many tens of millions. There are few vaguely intelligent people who don't understand that the ONLY way to overcome the worst problem facing residents of Chichester and all residential areas south of it is to build a new bypass to the NORTH., overcoming any resistance from a very small proportion of local residents/property owners.

It would be very much more sensible to ringfence the funds porposed and offer them uo to Highways England for that nothern bypass.

The proposed housing developments in thr Chi district area are horrendous. I wonder if the equally horrendouse plans for Arun. which are a fait accompli have been factored into the dreadful congestion that exists today.

Transport Assessment validity of the data used:

The CATM model has been validated and calibrated using 2014 counts. Using 2014 data means that significant changes such as the opening of Chichester Free School immediately next to the A27 Whyke roundabout, with over 1000 pupils and over 140 staff may not have been considered.

This data is now 9 years old and conclusions drawn on this basis may be therefore unsound.

Full text:

Transport Assessment validity of the data used:

The CATM model has been validated and calibrated using 2014 counts. Using 2014 data means that significant changes such as the opening of Chichester Free School immediately next to the A27 Whyke roundabout, with over 1000 pupils and over 140 staff may not have been considered.

This data is now 9 years old.

The Transport Assessment states that "it should be noted that even prior to adding in the Local Plan development, all the junctions on the A27 Chichester bypass are over capacity in one or both modelled peak hours. With the exception of Portfield Roundabout, the junctions are also shown to be over or very near capacity in the base year model (2014) before any additional background or Local Plan traffic is added, highlighting the fact that it is not just the Local Plan or committed Chichester development which leads to this situation."

Whilst only 28% of traffic growth can be linked to committed and proposed Local Plan developments, if the mitigation measures only apply to Fishbourne and Bognor roundabouts, then the problem with over capacity still remains.

Therefore, the plan is not effectively mitigating the impact of the addition growth and is adding further demands on capacity which is already exceeded, therefore the housing number should be challenged further.

Change suggested by respondent:

The projected house building target needs to be reduced and traffic calming measures on local roads increased.

Summary:

The road network is very clearly at capacity already. Journey times, particularly at peak times, are much longer in 2023 than they were and must be attributed to the numbers of new homes built in recent years both along the A259 and to the East of Chichester.

It cannot be a valid justification to build thousands more houses to raise additional CIL money from developers to provide essential road improvements WHICH SHOULD BE IN PLACE BEFORE ANY FURTHER BUILDING IS APPROVED. Cart before the horse thinking.

Full text:**Executive Summary**

The Local Plan as written lacks ambition and vision, and will be detrimental to the landscape within which the district lies. It is a plan borne out of a need to produce a legal document which will satisfy the regulatory authorities. In terms of Urban Planning it fails "To meet the needs of the present without compromising the ability of future generations to meet their own needs" (NPPF).

The development that will consequentially arise from the deployment of such a made Local Plan is not sustainable. It will adversely affect the Character, Amenity and Safety of the built environment, throughout our district.

In particular, the Local Plan is inadequate for the needs of the people in the district both at present and in the future because –

1. It has been written in advance of the District having a properly formed and agreed Climate Emergency Action Plan. It is inconceivable that such a key document will not shape our Local Plan. It is this Action Plan that is needed first in order to provide the long-term strategic view as to how and what the District will look like in the future; this, in turn, will help form and shape the policies outlined in any prospective, Local Plan. The Plan as proposed is moribund, as a result of "cart before the horse" thinking.
2. The Local Plan as written does not adequately address how infrastructure, transport and services are going to be materially and strategically improved to meet the predicted growth and shift to a significantly ageing population. There is presently insufficient capacity to supply services and to have adequate people and environmentally friendly connectivity, as a direct result of decades of neglect towards investing in infrastructure and services to meet the needs of the District's population. We are led to believe that developers through increased levies in order to gain permission to build will fulfil this need, but all that this will result in is an uncoordinated, dysfunctional mess completely lacking in any future-proof master planning approach. We contend that this will do nothing for the quality of life of Chichester District residents and it will create a vacuum whereby few if indeed any can be held accountable or indeed found liable for shortcomings in the future.
3. The Local Plan as written does not state how it will go about addressing the need to create affordable homes. The District Council's record on this matter since the last made plan has been inadequate and now the creation of affordable homes has become urgent as political/economic/social factors drive an ever increasing rate of change within the District.
4. Flood risks assessments used in forming the Plan are out of date (last completed in 2018) and any decision to allocate sites is contrary to Environment Agency policy. Additionally, since March 2021 Natural England established a position in relationship to 'Hold the Line' vs. 'Managed Retreat' in environmentally sensitive areas, of which the Chichester Harbour AONB is a significant example. CDC have failed to set out an appropriate policy within the proposed Local Plan that addresses this requirement.
5. The A27 needs significant investment in order to yield significant benefits for those travelling through the East-West corridor; this is unfunded. Essential improvements to the A27 are key to the success of any Local Plan particularly as the city's ambitions are to expand significantly in the next two decades. But any ambitions will fall flat if the A27 is not improved before such plans are implemented.. The A259 is an increasingly dangerous so-called 'resilient road' with a significant increase in accidents and fatalities in recent years. In 2011, the BBC named the road as the "most crash prone A road" in the UK. There is nothing in the Local Plan that addresses this issue. There is no capacity within the strategic road network serving our district to accommodate the increase in housing planned, and the Local Plan does not guarantee it.
6. There is insufficient wastewater treatment capacity in the District to support the current houses let alone more. The tankering of wastewater from recent developments that Southern Water has not been able to connect to their network and in recent months the required emergency use of tankers to pump out overflowing sewers within our City/District reflects the gross weakness of short-termism dominated thinking at its worst and is an indictment of how broken our water system is. The provision of wastewater treatment is absolutely critical and essential to the well-being of all our residents and the long-term safety of our built environment. The abdication by those in authority, whether that be nationally, regionally or locally, is causing serious harm to the people to whom those in power owe a duty of care and their lack of urgency in dealing properly with this issue is seriously jeopardizing the environment in which we and all wildlife co-exist.

7. Settlement Boundaries should be left to the determination of Parish Councils to make and nobody else. The proposed policy outlined in the Local Plan to allow development on plots of land adjacent to existing settlement boundaries is ill-conceived and will lead to coalescence which is in contradiction of Policy NE3.

8. All the sites allocated in the Strategic Area Based Policies appear to be in the majority of cases Greenfield Sites. The plan makes little, if any reference to the development of Brownfield sites. In fact, there is not a Policy that relates to this source of land within the Local Plan as proposed. Whilst in the 2021 HELAA Report sites identified as being suitable for development in the District as being Brownfield sites were predicted to yield over 4000 new dwellings. Why would our Local Plan not seek to develop these sites ahead of Greenfield sites?

9. The Local Plan does not define the minimum size that a wildlife corridor should be in width. What does close proximity to a wildlife corridor mean? How can you have a policy (NE 4) that suggests you can have development within a wildlife corridor? These exceptions need to have clear measures and accountability for providing evidence of no adverse impact on the wildlife corridor where a development is proposed. Our view is quite clear. Wildlife and indeed nature in the UK is under serious and in the case of far too many species, potentially terminal threat. Natural England has suggested that a Wildlife Corridor should not be less than 100metres wide. The proposed Wildlife Corridors agreed to by CDC must be enlarged and fully protected from any development. This is essential and urgent for those Wildlife Corridors which allow wildlife to achieve essential connectivity between the Chichester Harbour AONB and the South Downs National Park.

10. Biodiversity Policy NE5 - This is an absolute nonsense. If biodiversity is going to be harmed there should be no ability to mitigate or for developers to be able to buy their way out of this situation. This mindset is exactly why we are seeing a significant decline in biodiversity in the District which should be a rich in biodiversity area and why the World Economic Forum Report (2023) cites the UK as one of the worst countries in the world for destroying its biodiversity.

11. In many cases as set out in the Policies the strategic requirements lack being SMART in nature – particularly the M Measurable. These need to be explicit and clear: “you get what you measure”.

12. 65% of the perimeter of the District of Chichester south of the SDNP is coastal in nature. The remainder being land-facing. Policy NE11 does not sufficiently address the impact of building property in close proximity to the area surrounding the harbour, something acknowledged by the Harbour Conservancy in a published report in 2018 reflecting upon how surrounding the harbour with housing was detrimental to its long-term health. And here we are 5 years on and all of the organizations that CDC are saying that they are working in collaboration with, to remedy the decline in the harbour’s condition, are failing to implement the actions necessary in a reasonable timescale. CDC are following when they should be actually taking the lead on the issue. Being followers rather than leaders makes it easy to abdicate responsibility. There must be full and transparent accountability.

13. The very significant space constraints for the plan area must be taken into account. The standard methodology need no longer apply where there are exceptional circumstances and we are certain that our District should be treated as a special case because of the developable land area is severely reduced by the South Downs National Park (SDNP) to the north and the unique marine AONB of Chichester Harbour to the south. A target of 535dpa is way too high. This number should be reduced to reflect the fact that only 30% of the area can be developed and much of that is rural/semi-rural land which provides essential connectivity for wildlife via a number of wildlife corridors running between the SDNP and the AONB. Excessive housebuilding will do irretrievable damage to the environment and lead to a significant deterioration in quality of life for all who reside within the East / West corridor.

14. Many of the sites identified in the Strategic & Area Based Policies could result in Grade 1 ^ 2 farmland being built upon. The UK is not self-sufficient in our food security. It is short-sighted to expect the world to return to what we have come to expect. Our good quality agricultural land should not all be covered with non-environmentally friendly designed homes.

Object

Document Element: Background, 8.4

Respondent: National Highways (Mr Marius Pieters, Spatial Planning Manager) [8127]

Summary:

[National Highways letter dated 24/07/23 confirmed representation should be categorised as Comment - Seeking further information/Matter to be addressed]. Local Plan evidence - Chichester Transport Study (Local Plan Review Transport Assessment) - January 2023

Chapter 6 Mitigation considerations, whilst favourable, are unlikely to mitigate impacts on the A27 and its junctions.

Estimated construction costs will have fluctuated considerably, and should be subject to future detailed review.

The recommended Monitor and Manage approach does not provide details, actions or recommendations to enable review of the mitigation requirements. Proposed methodology (Appendix B) does not include monitoring individual developments, or the manage approach.

Seek clarity on how the Plan will address conclusions of the The District Wide Collision Review and Seasonal Impact Report, particularly for A27-related matters.

Full text:

We have reviewed the publicly available Local Plan documents and provided comments in the attached letter, in relation to the transport implications of the plan for the safety and operation of the SRN.

Our comments include issues to resolve, comments, requests for further information and recommendations. A brief summary of our main comments are:

- the reliance on the delivery of the A27 Chichester bypass improvements project.
- the requirements for new, additional, and adapted processes and assessments, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments.
- collaborative working between agencies in combination with a robust monitor and manage policy.

We hope our comments assist.

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders. We look forward to continuing to participate in future consultations and discussions.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Background

National Highways has been appointed by the Secretary of State for Transport as strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the strategic road network (SRN).

National Highways is responsible for operating, maintaining, and improving the Strategic Road Network (SRN) i.e., the Trunk Road and Motorway Network in England, as laid down in Department for Transport (DfT) Circular 01/2022 (Strategic Road Network and the delivery of sustainable development).

The SRN is a critical national asset and as such we work to ensure that it operates and is managed in the public interest, both in respect of current activities and needs as well as in providing effective stewardship of its long-term operation and integrity.

Our responses to Local Plan consultations are guided by relevant policy and guidance including the National Planning Policy Framework (2021) (NPPF):

- Transport issues should be considered from the earliest stages of plan-making and development proposals so that the potential impact of development on transport networks can be addressed (para 104).
- The planning system should actively manage patterns of growth such that significant development is focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. (para 105).
- Planning policies should be prepared with the active involvement of highways authorities and other transport infrastructure providers so that strategies and investments for supporting sustainable transport and development patterns are aligned. (para 106).
- In terms of identifying the necessity of transport infrastructure, NPPF confirms that development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe. (para 111).
- Planning policies and decisions should support development that makes efficient use of land, taking into account the availability and capacity of infrastructure and services – both existing and proposed – as well as their potential for further improvement and the scope to promote sustainable travel modes that limit future car use. (para 124).

In relation to the tests of soundness set out at paragraph 35 of the NPPF, in the context of transport, these are

interpreted as meaning:

- a) Positively prepared - has the transport strategy been prepared with the active involvement of the highway authorities, other transport infrastructure providers and operators and neighbouring councils?
- b) Justified – Is the transport strategy based on a robust evidence base prepared with the agreement in partnership, or with the support of the highway authorities?
- c) Effective – Does the transport strategy and policy satisfy the transport needs of the plan and is it deliverable at a pace which provides for and accommodates the proposed progress and implementation of the plan?
- d) Consistent with national policy – Does the transport strategy support the economic, social, and environmental objectives of the Plan and the NPPF/NPPG?

We will be concerned with proposals that have the potential to impact on the safe and efficient operation of the SRN; in this case, the A27 trunk road (Chichester Bypass and its junctions) which is the main access route in the Chichester area. We have particular interest in any allocation, policy or proposals which could have implications for the A27 and the wider SRN network. We are interested as to whether there would be any adverse road safety or operational implications for the SRN. The latter would include a material increase in queueing or delay or reduction in journey time reliability during the construction or operation of the development set out in the plan.

National Highways is a key delivery partner for sustainable development promoted through the plan-led system, and as a statutory consultee we have a duty to cooperate with local authorities to support the preparation and implementation of development plan documents.

In accordance with national planning and transport policy and our operating licence, we are entirely neutral on the principle of development as it is for the local planning authority to determine whether development should be allocated or permitted; albeit it must comply with national policy on locating development in locations that are or can be made sustainable. Therefore, while always seeking early and fulsome engagement with local plans and/or developers, we will simply be assessing the transport and related implications of plans or proposals and agreeing any necessary transport improvements and relevant development management policy.

In progressing Local Plans, we will seek to agree the following:

- Assessment tools and methodology
- Baseline Assessment i.e., to demonstrate that the assessment tool accurately reflects current transport conditions
- Comparator case assessment i.e., to forecast the transport conditions that would occur in the absence of the plan
- Forecast modelling i.e., to forecast the transport conditions that would arise with the plan in place, this will include an assessment at the end of the Plan period; and, if required, at full build out if that occurs after the end of the Plan period
- Outputs and outcomes of modelling, demonstrating, as appropriate, what transport infrastructure is necessary to support the plan o It should be noted that a suite of transport modelling tools may be required. This includes strategic modelling covering an area at least one major junction beyond the district boundary, localised network modelling where several links/junctions are close together and/or individual junction modelling
- o A DMRB (Design Manual for Roads and Bridges) compliancy assessment may also be required for certain highway features, such as
 - Merge/Diverge assessment at Grade separated junctions, link capacity assessments, and others.
- The design of any necessary transport infrastructure, to an extent suitable for establishing deliverability during the plan period at the time that it becomes necessary for the purpose of ensuring that unacceptable road safety impacts or severe operational impacts do not arise as a result of development. This may be to at least General Arrangement design stage or preliminary design stage. Whichever degree of detail is agreed, the products must be in full compliance with the DMRB.
- Industry standard transport intervention costings.
- The delivery/funding mechanisms for necessary transport interventions. It should not be assumed that National Highways will have any responsibility to identify or deliver necessary transport interventions.
- If considered appropriate, a “Monitor & Manage” (M&M) framework, aimed at managing the pace of development in line with the pace of funding and delivery of necessary highway interventions in a manner which responds to the realworld impacts of development may be agreed for inclusion in the plan subject to the adequacy of risk control measures included therein. This can include the move from a ‘predict & provide’ style of delivery to ‘a vision & validate’ style. o Any M&M framework must be based on a “worst case scenario” whereby necessary mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. It must be translated into development management plan policy and policy relating to development allocations.

Further detail on the above can be provided by National Highways.

While ideally all the above should be agreed prior to the Submission of the Local Plan for examination, we recognise that this is not always possible. However, all parties should work towards all matters being agreed and reflected in a Statement of Common Ground (SoCG) by the start of the Local Plan Examination at the latest. Ideally the SoCG between the Council and National Highways would be prepared well in advance of plan submission in order to guide resource input and to track progress towards final agreement on all relevant matters starting from the earliest plan iterations until the final version is agreed.

It is acknowledged that Government policy places much emphasis on housing delivery as a means for ensuring economic growth and addressing the current national shortage of housing. The NPPF is very clear that: "Strategic policy-making authorities should establish a housing requirement figure for their whole area, which shows the extent to which their identified housing need (and any needs that cannot be met within neighbouring areas) can be met over the plan period."

However, new DfT C1/22 and the NPPF are equally clear that any development, including housing delivery, must be tempered by the requirement to ensure that the associated transport demand can be accommodated without unacceptable impacts on the safety of the SRN or severe impacts on the operation of the SRN including reliability and congestion. Therefore, as necessary and appropriate, any plan and/or development must be accompanied by suitable mitigation in the right places at the right time, that is to the required design standards and is deliverable in terms of land availability, constructability and funding.

We would also draw your attention to the then Highways England document 'The Strategic Road Network, Planning for the Future: A guide to working with National Highways on planning matters' (September 2015). This document sets out how National Highways intends to work with local planning authorities and developers to support the preparation of sound documents which enable the delivery of sustainable development. https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_t_data/file/461023/N150227_-_Highways_England_Planning_Document_FINAL-lo.pdf

Responses to Local Plan consultations are also guided by National Planning Policy Framework (NPPF) revised on 20 July 2021 which sets out the government's planning policies for England and how these are expected to be applied.

Updated Circular (01/2022)

It should be noted that since the start of the Local Plan consultation process, on the 23 December 2022, the Department for Transport released a new circular on the 'Strategic road network and the delivery of sustainable development' (Circular 01/2022), which replaces all of the policies in Circular 02/2013 of the same name. These representations take account of the new circular and the requirements in terms of the Local Plan evidence base and process.

We request that the Local Plan is prepared in line with all aspects of the new circular. Particularly, the principles of sustainable development (paragraphs 11 to 17), new connections and capacity enhancements (paragraphs 18 to 25), and engagement with plan-making (paragraphs 26 to 38).

Regulation 18 submission

In our Regulation 18 submission we noted several matters including:

- The need to mitigate the adverse impacts of strategic development traffic to the A27 Chichester Bypass and its junctions at Portfield Roundabout, Bognor Road Roundabout, Whyke Roundabout, Stockbridge Roundabout and Fishbourne Roundabout and Oving junction.
- The need to identify a mechanism to calculate contributions towards the delivery of the previously agreed Local Plan A27 improvements
- The need to confirm the number of dwellings needed within the plan period
- The need to establish National Highways acceptance of the traffic model reference and future case scenarios
- The need to confirm costs, viability, and funding associated with mitigating the safety and congestion impacts of the development included within the plan.

Local Plan context

This Local Plan (Chichester Local Plan 2021 – 2039), prepared by the Local Planning Authority (LPA) Chichester District Council, sets out the vision for future development in the district and will be used to help decide on planning applications and other planning related decisions including shaping infrastructure investments.

The draft sets out how the district should be developed over the next 18-years to 2039 including for the full Plan period (1 April 2021 to 31 March 2039) the total supply of

- 10,359 dwellings

- 114,652 net additional sqm new floorspace

Minus the completions this is equivalent to around 530 dwellings and 6,150 sqm of floorspace a year.

National Highways Representations

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders.

We have undertaken a review of the Chichester Local Plan 2021-2039 proposed submission version and accompanying evidence documents, our comments are set out in the tables below (following pages). [see table within attachment]

Summary

We have reviewed the publicly available Local Plan documents and provided comments above in relation to the transport implications of the plan for the safety and operation of the SRN. We understand that other technical information is

available, but this was not presented as part of this consultation.

Chichester, and the A27, are already heavily congested, infrastructure in the existing Local Plan remains undelivered and the growth set out in the new Plan will further increase travel demand.

As presented, satisfying the transport needs of the plan is clearly reliant on the delivery of the A27 Chichester bypass improvements project. The A27 Chichester bypass improvements project is one of 32 pipeline schemes being considered for possible inclusion in National Highways third Road Investment Strategy (RIS3) covering 1 April 2025 to 31 March 2030.

On 9 March 2023 the UK Transport Secretary ensured record funding would be invested in the country's transport network, sustainably driving growth across the country while managing the pressures of inflation. The announcement cited the A27 Arundel Bypass as being deferred from RIS2 to RIS 3 (covering 2025-2030). The transport secretary also identified a number of challenges to the delivery of the road investment strategy and cited the benefit of allowing extra time to ensure schemes are better planned and efficient schemes can be deployed more effectively.

At present, there is no commitment by DfT to carry out the A27 Chichester bypass improvements project. Until the A27 Chichester bypass improvements project is published in the RIS3, consented and a decision to invest is made it cannot be assumed to be a committed project.

We note that the Plan does not address any uncertainty of delivery of the A27 Chichester bypass improvements project and we strongly recommend that there is either no reliance placed on RIS3 to realise capacity for growth in the Plan or that contingency measures are included to cover the eventuality that RIS3 funding is not forthcoming within the plan period. It is not clear that the potential impact of development on transport networks can be addressed in the absence of the A27 Chichester bypass improvements project.

Achieving net zero, reducing emissions reduction, acting on climate, and supporting thousands of new homes and new employment developments will be problematic with existing processes. New, additional, and adapted processes and assessments will likely be required, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments. We acknowledge that change is complex, expensive, and time-consuming, especially for smaller district level Councils. But the hard work will deliver benefits for the Council and residents in the longer-term.

National Highways seeks to continue working with the Council and WSCC to progress coordinated and deliverable packages of interim mitigation measures and alternative transport solutions while a long-term strategic solution is considered by government. This must however be in combination with a robust monitor and manage policy that appropriately manages the risk of unacceptable road impacts resulting from new housing and other development over the Plan period.

We have been in discussion with Chichester District Council regarding their proposed Monitor and Manage Strategy. At present, we do not consider the current strategy to be robust and we seek further information and detail especially on who, when and when monitoring and management will be undertaken. Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas. Any M&M framework must be based on a "worst case scenario" whereby necessary transport mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. The M&M framework must set out that the alternative to mitigation not being delivered is that development does not proceed where that development would give rise to unacceptable road safety risk or severe cumulative impacts on the road network in the absence of that mitigation. The M&M framework must be translated into development management plan policy and policy relating to development allocations.

As we have reiterated throughout our comments, we welcome the opportunity to work with you to address these outstanding matters and we will continue to liaise over submitted Transport Assessment, Travel Plan policy and Monitor and Manage Policy to help to work towards a viable plan.

We hope our comments assist.

We look forward to continuing to participate in future consultations and discussions. Please do continue to consult us as the Plan progresses so that we can remain aware of, and comment as required on, its contents.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Agent: David Lock Associates (Rukaiya Umaru, Senior Planner/Surveyor) [8016]

Summary:

Table 2.2 of the Chichester Transport Study outlines the development quanta for each site allocation assumed for the transport modelling work. This shows that only 7ha of the total 10ha R-RMC expansion site is included. This is not entirely consistent with the approach for other sites. Paragraph 1.4.2 states that the quanta of development is based on the Council's best estimate at the time. Similarly, the Infrastructure Delivery Plan (IDP) applies 7ha to the R-RMC expansion site.

It would be helpful to either update the two documents for consistency or provide additional supporting commentary to explain the discrepancy in approach.

Full text:

The supporting Chichester Transport Study: Local Plan Review Transport Assessment (Stantec, January 2023) provides a strategic view of the cumulative impacts of development proposed through the draft Local Plan. Table 2.2 outlines the development quanta for each site allocation assumed for the transport modelling work. This shows that only 7ha of the total 10ha R-RMC Goodwood expansion site is included in the model. This is not entirely consistent with the approach for other sites.

Paragraph 1.4.2 states that the quanta of development and other assumptions are based on the Council's best estimate at the time the stage commenced, and that capacity for development may change as a result of the evolving evidence base. Similarly, the supporting Infrastructure Delivery Plan (IDP) applies 7ha to the R-RMC Goodwood expansion site.

It would be helpful to either update the two documents for consistency or provide additional supporting commentary to explain the discrepancy in approach.

Object

Document Element: Background, 8.4**Respondent:** South Downs National Park Authority (Clare Tester, Planning Policy Manager) [8124]**Summary:**

We would highlight that the transport assessment carried out to inform the South Downs Local Plan indicated a potential severe impact on the Petersfield Road / Bepton Road / Rumbolds Hill junction in Midhurst of additional development in the town, in the context of junctions already becoming overcapacity due to background traffic growth, for example, arising from strategic development in neighbouring planning authorities. Rumbolds Hill in Midhurst is also a designated Air Quality Management Area which came into force in January 2020.

It is noted from the Transport Assessment that there is expected to be some increase in traffic on the A286 towards Midhurst, although it is not clear from the study how this will impact the relevant junctions in Midhurst, including the designated Rumbolds Hill AQMA. SDNPA may seek further assurance that such potential impacts have been looked at, and appropriate mitigation sought.

Full text:

The comments included below from WSCC are Holding Objections. We will continue to work with Chichester District Council and as further work is completed will consider if objections can be withdrawn.

Transport Overview

The County Council has worked with Chichester District Council to develop the Chichester Local Plan and its supporting evidence base and will continue to do so. Although the overall direction of the Local Plan is supported, from a highways and transport perspective, there are three key issues remaining that need to be addressed in order to demonstrate that the Plan is sound:

1. There is insufficient evidence to demonstrate that key infrastructure (i.e. Terminus Road Diversion) will be deliverable;
 2. The package of sustainable transport infrastructure and measures is not yet sufficiently well-developed to demonstrate that it is deliverable as part of the monitor and manage process; and
 3. There is insufficient evidence to demonstrate that the capacity of the transport network can accommodate the scale of development proposed as part of the Southbourne Broad Location for Development.
- The following sections explain; a) the reasons for these issues; b) why they affect the soundness of the Local Plan; and, c) what changes should be made to the Local Plan to remedy the issues.

Deliverability of Key Infrastructure

The recommended transport mitigation strategy, as assessed using the Chichester Area Transport Model for 2039 has been demonstrated to be capable in-principle to prevent the development from resulting in severe residual cumulative impacts on the highways and transport network. However, there are significant risks to deliverability of junction mitigation measures, which have required further work to be undertaken on developing a short to medium term strategy based on phased prioritisation of infrastructure and sustainable transport improvements, to be governed under a monitor and manage approach.

There are three locations where new highway alignments are proposed outside of existing highways boundaries. Two of these may include significant earthworks or structures to be delivered, being Stockbridge Link Road and Terminus Road diversion. The cost of the mitigation strategy exceeds the likely value of developer contributions and additional funding has not yet been secured.

At the Regulation 18 consultation stage in December 2018 to January 2019 the County Council identified delivery risks with the Stockbridge Link Road and Terminus Road Diversion schemes due to the earthworks likely to be required and to confirm the extent of land take required for both schemes. The County Council stated that feasibility work would need to be undertaken for these improvements prior to Plan submission to confirm that the schemes are deliverable. A brief for such a feasibility study was agreed in 2019, but to date, this work has not been commissioned. It is the County Council's view that Stockbridge Link Road (SLR) should be disregarded as a potential part of a long-term transport mitigation strategy for 2039 and beyond until such time as it can be demonstrated that the scheme is deliverable. Paragraph 8.14 of the Local Plan acknowledges that the SLR is not deliverable as part of the Local Plan mitigation package.

The Terminus Road Diversion is still identified as part of the highest priority in the Local Plan mitigation package (i.e. A27 Fishbourne Junction) which is expected to be delivered once sufficient funding is collected. The County Council considers that in the absence of this feasibility work, the deliverability of the Terminus Road Diversion cannot be confirmed. In particular, given the recent impacts of inflation in the construction industry, this work will need to robustly estimate the costs and confirm delivery arrangements. In the absence of this feasibility work, there is currently insufficient evidence to confirm that the Local Plan complies with Paragraphs 11 and 106 of the NPPF as key infrastructure does not appear to be deliverable.

In order to remedy this issue regarding the Terminus Road Diversion, the County Council requests that feasibility work is undertaken prior to the examination to confirm deliverability of the proposed Terminus Road Diversion.

Sustainable Transport Infrastructure & Measures

The transport study modelling for end of Plan period also includes some proposed highways mitigation schemes within Chichester City. The County Council has previously requested that these be replaced by sustainable transport improvements to comply with the West Sussex Transport Plan 2022-2036. However, only limited modification has been made to these proposed schemes, with a suggestion in text at paragraph 7.3.2 of the main transport study that the costs for these schemes can be reallocated to sustainable transport improvements which are not specified. Although this does help to explain how sustainable transport infrastructure schemes and measures can be at least partially funded, it is rare that schemes will be fully funded using developer contributions. Furthermore, funding is not the only issue that needs to be overcome to secure delivery of these schemes and measures.

The Infrastructure Delivery Plan (IDP) lists the proposed mitigation measures and in some cases provides information on the rationale, phasing, cost, funding and delivery arrangements. However, there are still many gaps in the information, probably because schemes are currently at an early conceptual stage. The County Council's experience is that it is unlikely that schemes will be fully funded using developer contributions (because doing so would not be compliant with the CIL regulations) so delivery of these schemes will be partially dependent on securing funding from central Government or other sources. The IDP currently fails to identify the scheme-specific requirements for additional funding and the overall scale of additional funding required.

The County Council considers the level of information currently available on the sustainable transport package to be insufficient to demonstrate deliverability of a credible and coordinated sustainable transport package of improved infrastructure and services. Therefore, there is insufficient evidence to confirm that the Local Plan complies with Paragraphs 11 and 106 of the NPPF.

In order to remedy this issue, the County Council requests that further technical work is undertaken to develop the schemes and measures in the sustainable transport package prior to the examination. In particular, this should focus on the following schemes and measures and some cases, this will build on work that has already taken place:

1. St. Paul's & Parklands cycle routes
2. Improving existing public transport services towards Madgwick Lane
3. Provision of improved bus services for the village serving the development areas of Southbourne Parish
4. Improving cycling connectivity to link the built-out areas of Shopwhyke Lakes with Tangmere and Oving etc

As not all the severely impacted A27 junctions have a reasonable prospect of being physically improved in the Plan period, more investigation into potential public transport enhancements is also required, particularly to strengthen routes that cross the bypass. This may require further amendments to the IDP.

This work should aim to identify options for sustainable transport schemes that can be a priority for investment, provide information to enable safeguarding of routes (e.g. cycle routes) from development and provide a basis for applications for third party funding to support their delivery. The relative priority of such measures would need to be considered under the monitor and manage approach by the proposed Traffic and Infrastructure Management Group for implementation in addition to the proposed improvement at the A27/A259 Fishbourne junction.

To address this issue and support delivery of the sustainable transport package, the County Council also recommends the following minor amendments to Policy T1: Transport Infrastructure:

At bullet point .7 change "other small-scale junction improvements" to read "other sustainable transport and safety focused improvements, including at junctions" and change "These will increase road capacity, reduce traffic congestion,

improve safety and air quality, and improve access to Chichester city from surrounding areas” to “These will increase road capacity on strategic roads, and on both strategic and local roads reduce traffic congestion, improve safety and air quality, and improve access to Chichester city from surrounding areas notably by encouraging and prioritising sustainable modes.”

Southbourne Broad Location for Development

The scale of development that can be accommodated at the Southbourne Broad Location will be, at least partially, dependent on the capacity of the transport network to accommodate the associated traffic movements. As the Broad Location spans the railway line, many of these traffic movements would need to cross the railway line. The County Council is concerned that there is currently insufficient capacity of the existing level crossings, notably at Stein Road, to accommodate the additional traffic movements. This could mean that the cumulative impact of development on the traffic network is severe, which is not consistent with Paragraph 111 of the NPPF.

The transport evidence base does not yet provide sufficient assurance that the proposed scale of development can be accommodated. This is because the base level of traffic flow has not been compared to local traffic counts, either in the initial validation of the strategic model or through a new count which the County Council has previously requested, and the assumptions about level crossing downtimes have not been validated against observed data. The County Council is concerned that the assessment of capacity of the local road network to accommodate the quantum of dwellings proposed for the Broad Location may be overoptimistic by underestimating existing flow levels and the duration of level crossing downtime. As a consequence, the proposed quantum may not be deliverable without unacceptable impacts to the conditions on Stein Road and to the level of traffic seeking to use rural lanes to the north of the village to avoid the level crossing.

In order to remedy this issue, the County Council requests that either additional transport evidence is provided prior to the examination to demonstrate that the proposed scale of development is deliverable, or that Policy A13 is changed to remove the proposed scale of development until such evidence is provided.

The following comments from education, minerals and waste, Adults Services and Health, highways & transport and public rights of way, do not affect the soundness of the Plan. However, Chichester District Council should take these into account and, where possible, make minor amendments to the Local Plan and/or evidence base studies before submission of the Local Plan for examination. Officers are happy to meet and discuss any of these comments, and proposed minor amendments to address these comments, ahead of submission:

1) Education

Land West of Chichester

Previous comments have been made requesting that the policy refers to ‘Phase 2 should include expansion of the primary school for the further 1FE of teaching accommodation with nursery and SEND provision’. While it is recognised that reference is made to this in the IDP this is a supporting document to the Local Plan and should not be solely relied on. It is requested that paragraph 10.19 is amended to read: ‘a local centre with retail, community and employment uses (minimum of approximately 2500 sqm E(g)(i) Use Class), two form entry (2FE) primary school and one form entry (1FE) teaching accommodation with nursery and SEND, informal and formal open space (including a country park), allotments, ...’

This should also be included in the 3rd bullet point of Policy A6 or the wording of the policy should be drafted to reflect more recent policy requirements i.e. Provide for infrastructure and community facilities in accordance with the most recent Infrastructure Delivery Plan.

There are some inconsistencies with the wording of the strategic policies, not every policy includes the criterion ‘Provide for infrastructure and community facilities in accordance with the most recent Infrastructure Delivery Plan.’ While this may be due to some policies being carried through from the adopted local plan it is inconsistent.

Policy A8 Land East of Chichester

As an education authority WSCC do not request 1FE schools in line with government guidance. As per our earlier comments and discussions we requested a 2 FE primary school for the site.

3rd bullet point of Policy A8 should be amended to read: ‘A neighbourhood centre incorporating local shops, a community centre, flexible space for employment/ small-scale leisure uses and a one-form (expandable to two-form) two form entry primary school with provision for early years/ childcare and special educational needs and disability...’

2) Minerals and Waste

The references to safeguarding minerals is inconsistent and it is suggested that the wording in the email sent to CDC (attached) in relation to Policy AL3 should be used in the policies for the other sites for consistency. Reference to safeguarding minerals and waste infrastructure should also be included in some other policies as previously indicated:

- Policy A2 – needs to include reference to safeguarding minerals and waste infrastructure.
- Policy A7 – needs to include reference to safeguarding waste infrastructure.
- Policy A15 (Loxwood) – needs to include reference to minerals safeguarding as within the clay MSA.
- Policy A21 – needs to include reference to minerals safeguarding.

Also, the reference to the safeguarding guidance needs to be checked to ensure that it is worded correctly as 'Minerals and Waste Safeguarding Guidance'.

3) Older Person Housing

It is noted that the plan refers to older person housing as specialist housing. WSCC strategy supports the provision of 'extra care housing' while this might be similar development it enables younger people to access the accommodation for whatever medical reason i.e. MS, strokes rather than limiting it to a certain age group. Officers are happy to meet and discuss this further.

4) Highways and Transport

Public Transport Priority Infrastructure

The Public Transport section of the main transport study report starting at paragraph 6.2.7 requires revisiting. There is reference to "an expansion of the bus priority lane system within Chichester City Centre" which does not match the existing bus provision in the City which does not provide bus priority lanes on street. It does have restrictions on motor traffic in the adjoining parts of South Street and West Street which provide for bus and cycle only access in both directions of travel plus access for essential goods vehicle loading in the westbound direction only. In addition, the suggestion in the following paragraph for "a time-based system where certain routes are restricted to public transport only during specific times" is not evidenced or developed and as such considered unlikely to be practical and enforceable at most locations used by bus routes in the City. More developed proposals for additional bus priority, improvements to bus passenger facilities or testing of specific locations for bus-only access would be welcomed as part of developing a costed sustainable transport mitigation package.

Park and Ride

The discussion of possible park and ride facilities for the City at paragraphs 6.2.9 to 6.2.16 of the main transport study should also acknowledge. An important part of making park and ride well used by motorists is increasing the price of city centre parking to provide a financial incentive to take up significantly cheaper park and ride charges for parking and travel. However, if park and ride sites are not provided accessible to all major approach routes to the city, such a charging strategy would not be seen to be equitable, whereas only a single site is proposed in the District Council's emerging parking strategy and the report acknowledges at 6.2.11 that "locations for potential park and ride sites are also deemed to be limited". The bullet at 6.2.15 "Cost of schemes compared to benefit are likely to be initially lower than highway schemes" may have been incorrectly worded given that this is listed as an issue rather than a benefit. The text may have been intended to say that the ratio of benefit to cost for park and ride schemes may be lower than for conventional highway schemes?

A286 New Park Road / A286 St Pancras Road (Junction 7)

This junction scheme includes pedestrian crossing facilities which are welcomed and also includes a length of advisory cycle lane starting in the middle of the junction for cyclists remaining on St Pancras. However, the approach to the junction on St Pancras from Eastgate Square remains intimidating to cyclists, so further measures would need to be added to make the layout cycle-friendly or the cycle facility is likely to be of limited benefit. This could include decreasing traffic speeds. Until this is done the conclusion at 8.4.4 of the main transport study; "The mitigation scheme includes improvements for pedestrians and cyclists which will lead to increased use of active travel modes and reduce the need for physical mitigation here" is only supported for pedestrians, not for cyclists.

A259 Via Ravenna / A259 Cathedral Way Roundabout (Junction 8)

It is stated at 7.3.8 of the main transport study that "the mitigation may be required to avoid queuing back towards the A27, as well as for capacity issues". In light of this potential safety issue for the previous junction on Cathedral Way and for the A27 Fishbourne junction, the proposal at 7.3.6 that the scheme delivery should be tied to the monitor and manage regime to see if and when it is required is accepted. This is different to the approach for other junctions in the City because of the potential safety issue. This monitoring approach would be likely to follow after the A259 Cathedral Way / Fishbourne Road East / Terminus Road (as diverted) (Junction 10) improvement, which is to be brought forward as an integral part of the A27 Fishbourne roundabout mitigation scheme, but may allow for increased eastbound flows on Cathedral Way.

A286 Northgate Gyratory

An additional mitigation scheme is proposed at paragraph 7.3.134 of the main transport study for the A286 Northgate Gyratory along its southern arm from Oaklands Way to Orchard Street. The proposal to add traffic signals is welcomed in concept as it can help to control traffic speeds making the junction more friendly for cyclists and pedestrians. However, the layout shown at figure 7-8 does not maximise the opportunity to improve convenience and safety for pedestrians by

providing a priority link to reach the central island, which contains employment space and the fire station, nor to assist crossing the exit towards Orchard Street. The scheme would benefit from further development to prioritise active travel movements and should also be fitted with transponders for bus priority.

Fishbourne Road West / Appledram Lane South (Junction 11)

At paragraphs 7.4.1 to 7.4.2 of the main transport study, the junction of Fishbourne Road West / Appledram Lane South (Junction 11) is considered. The proposal to mitigate impacts at this junction through delivery of the Stockbridge Link Road scheme is not considered deliverable, so the approach at this location requires re-thinking. The County Council would not support measures to increase capacity for through traffic on Appledram Lane South, the approach should be to reduce severance and improve safety and comfort for active travel on Appledram Lane by reducing vehicle speeds and as far as possible volume. This should consider the needs of pedestrians and cyclists both for local access and for users of the Salterns Way leisure cycling route.

TEMPro Background Traffic Growth Comparisons

At section 10.2 of the main transport study a comparison is made of the TEMPro 7.2 growth rates used in the study for external traffic with new TEMPro 8.0 growth rates since released by the Department for Transport, which notes that the TEMPro 8.0 rates are significantly lower, if these rates were used then the level of transport impacts could be lower. Unfortunately, a number of highways authorities in the Transport for the South East (TfSE) area including the County Council and Hampshire County Council have concerns that the planning assumptions used in TEMPro v8 core growth scenario underestimate the numbers of additional households forecasted compared to targets in adopted Local Plans for delivering new dwellings. TfSE are currently raising these collective concerns with DfT with a view to obtaining an early update to TEMPro 8 planning assumptions. Although for the purposes of this study TEMPro is not applied to trips produced in Chichester District, from the County Council's analysis TEMPro v8 core underestimates the increase in households per year in Arun District by over 50% and in Horsham District by 30% when compared with adopted development plans. On this basis it may be useful to instead compare TEMPro 7.2 with TEMPro 8.0 high growth scenario.

North of District Spatial Scenarios Testing

For the Northern Spatial Scenarios Test provided as an appendix to the main transport study, this had not been updated for the final preferred spatial strategy or in light of the County Council's previous comments on the March 2022 issue to the District Council. The spatial strategy now is similar but not identical to the Scenario 4: Significant Growth 1 option in the reported tests, totalling 370 dwellings across the four northern parishes, compared to 410 in the test. In both cases the largest allocation is at Loxwood; 220 dwellings were proposed in the Scenario 4 as compared to 200 in this test. Some other tests proposed higher numbers.

The testing in the northern part of the district had used the same trip generation rates per dwelling as in the South of the District, but the County Council considers that in practice private motor vehicle trip generation per dwelling is likely to be higher due to the rural nature of the area, including a lack of local facilities and shops within walking distance of development, a very low level of public transport services and lack of surfaced cycle routes.

The level of development proposed is not at the level capable of delivering transformative transport improvements to match the trip making patterns around Chichester and the A259 corridor to Bosham and Southbourne. This may be offset in part by the lower total amount of development compared to the tested scenario 4. Nonetheless, it would be helpful to adjust the scenario for the spatial strategy now proposed and to provide information on additional traffic movements per peak hour from these parishes using the A272 at junctions at Wisborough Green and reaching the A272/A29 junction at Billingshurst and the A272/A283 junction at the north of Petworth.

Neutral Month and Summer Month Comparison Technical Note

The Neutral Month and Summer Month Comparison Technical Note in the main transport study treats July as a neutral month rather than a summer month. Paragraph 1.3.1 states "The flows were analysed by looking at traffic data for August 2019 this being considered to represent summer traffic. This was compared against traffic data from the neutral months of June, July, September and October also from 2019." The County Council does not accept this methodology as school summer holidays start part way through July and education traffic is also affected by the formal exam period, whilst there is typically a high level of seasonal leisure traffic including summer outdoor events in this month. It is acceptable to use August alone as the summer comparator month. However, July traffic should be removed from the neutral months analysis and should be substituted with May traffic data from the same year of 2019, provided that sufficient data is available from that month.

5) Public Rights of Way (PRoW)

It is a positive step to see PRoW acknowledged as valued by communities and as part of the area's green infrastructure. Whilst Policy P14 (Green Infrastructure) states that development proposals should not be detrimental to the network of public rights of way and bridleways (please note bridleways are Public Rights of Way), a more proactively positive approach that seeks enhancements to the network as mitigation, would be welcomed. The improvement, upgrading of existing PRoW and creation of new PRoW where possible, to allow for a greater number of users to access the network would be beneficial. This is somewhat addressed in Policy T1 which refers only to routes identified in the Local Transport Plan, Local Cycling and Walking Infrastructure Plan (LCWIP) and the Infrastructure Delivery Plan. Opportunities to these, should not be limited if they arise elsewhere.

It is surprising to see there is no mention of PRoW within Chapter 8 under Active Travel – Walking and Cycling. The PRoW network provides extensive walking and cycling opportunities, often off-road, and important links between places and non-PRoW routes.

Respondent: Mrs Clare Gordon-Pullar [7010]

Summary:

Chichester residents have already rejected Highways Agency proposals for the A27 which included building a new link road to the Fishbourne roundabout / making changes to roundabouts. This consultation refers to proposed changes but with no description so consultees are not able to make representations. A left turn at the Stockbridge roundabout is used to justify the new relief road as traffic couldn't cross the A27. It forces traffic to travel to the nearest roundabout to turn round to return in the opposite direction and causing congestion at roundabouts and roads. It will turn residential streets into rat runs.

This "kicks the can down the road". RIS3 funding remains most uncertain as RIS2 funding was rejected by CDC/WSCC and the A27 at Chichester remains a pipeline project.

Evidence that all funding avenues have been explored to enable a holistic solution for A27 junction improvements to be implemented is unclear. In particular is there funding available via the Major Roads Network package? This is presumably available for the A259 Bognor Road junction? Before CDC/ WSCC jeopardised access to MRN funds by removing the A286 south on unproven grounds this would have facilitated the required Stockbridge Link Road .

Document Element: Background, 8.5

Respondent: The Bosham Association (Mr Richard Pratt, Joint Chair) [7835]

Summary:

The local plan cannot guarantee any major road improvements to mitigate congestion and building housing on the scale proposed in the local plan is guaranteed to exacerbate the congestion and pollution levels in the Chichester District. Currently every major junction is well over capacity at peak times and has been since the last local plan was produced in 2014. The roads are becoming unusable and adding 10000 houses to the district with no mitigation is against the wishes of the residents who have made Chichester District Council aware of the problem.

The roads are becoming unusable and adding 10000 houses to the district with no mitigation is against the wishes of the residents who have made Chichester District Council aware of the problem.

Change suggested by respondent:

There should be a moratorium on building in the area until there is a definitive plan for upgrading the strategic road network. Policy A11 and Policy A12 should be removed from the plan because most of this traffic will access the strategic road network via the Fishbourne Roundabout which is the most heavily congested and the roundabout identified in the Chichester District Council Local Plan Transport Assessment as being the most in need of measures to improve congestion delays.

4271

Object

Document Element: Background, 8.5**Respondent:** The Goodwood Estates Company Limited [7922]**Agent:** HMPC Ltd (Mr Haydn Morris) [112]**Summary:**

Issues arising from inadequacies of the A27 and its local and national importance are acknowledged. Proposals to improve connectivity to and upgrading of that route are supported. Route improvement through the Government's RIS3 programme is to be welcomed. It is not for the local plan to make proposal for this national route but it can examine and make proposals for the local network connecting to it. Failure to invest in the local road network gives rise to many examples of movement restriction and capacity limitations, that in turn are manifest in added congestion on and around the existing A27.

While options for improvements to the A27 are not a matter for this local plan, undoubtedly comment will be raised about by-pass options and requests for the consequential safeguarding of land to facilitate construction. The planning authority will be well aware of the Estate's objection to any proposal for an A27 northern by-pass, a consequence which will result in the loss of the Goodwood Motor Circuit and airfield, with serious and direct adverse impacts for other Goodwood business sectors, and with it, loss of a significant and irreplaceable quantum of Goodwood income to the significant detriment to the district and regional economy. References to the A27 in the plan as published are acceptable. However, should it seek to accommodate A27 by-pass options it will be unsound.

Document Element: Background, 8.6**Respondent:** Mayday! Action Group (John Garrett) [7163]

Summary:

This paragraph is frankly nonsensical. Most of the areas designated for significant percentage increases in numbers of residences per parish under this Draft Local Plan are NOT SUSTAINABLE LOCATIONS.

Due to the lack of frequent, affordable rail and bus services, the only means of efficient transport will be the car. And we will not be all buying electric cars for some years to come when the unit price has dropped to more affordable levels and sufficient rapid-charging stations are located throughout the UK – we are light years behind our European neighbours.

Full text:**Executive Summary**

The Local Plan as written lacks ambition and vision, and will be detrimental to the landscape within which the district lies. It is a plan borne out of a need to produce a legal document which will satisfy the regulatory authorities. In terms of Urban Planning it fails “To meet the needs of the present without compromising the ability of future generations to meet their own needs” (NPPF).

The development that will consequentially arise from the deployment of such a made Local Plan is not sustainable. It will adversely affect the Character, Amenity and Safety of the built environment, throughout our district.

In particular, the Local Plan is inadequate for the needs of the people in the district both at present and in the future because –

1. It has been written in advance of the District having a properly formed and agreed Climate Emergency Action Plan. It is inconceivable that such a key document will not shape our Local Plan. It is this Action Plan that is needed first in order to provide the long-term strategic view as to how and what the District will look like in the future; this, in turn, will help form and shape the policies outlined in any prospective, Local Plan. The Plan as proposed is moribund, as a result of “cart before the horse” thinking.
2. The Local Plan as written does not adequately address how infrastructure, transport and services are going to be materially and strategically improved to meet the predicted growth and shift to a significantly ageing population. There is presently insufficient capacity to supply services and to have adequate people and environmentally friendly connectivity, as a direct result of decades of neglect towards investing in infrastructure and services to meet the needs of the District’s population. We are led to believe that developers through increased levies in order to gain permission to build will fulfil this need, but all that this will result in is an uncoordinated, dysfunctional mess completely lacking in any future-proof master planning approach. We contend that this will do nothing for the quality of life of Chichester District residents and it will create a vacuum whereby few if indeed any can be held accountable or indeed found liable for shortcomings in the future.
3. The Local Plan as written does not state how it will go about addressing the need to create affordable homes. The District Council’s record on this matter since the last made plan has been inadequate and now the creation of affordable homes has become urgent as political/economic/social factors drive an ever increasing rate of change within the District.
4. Flood risks assessments used in forming the Plan are out of date (last completed in 2018) and any decision to allocate sites is contrary to Environment Agency policy. Additionally, since March 2021 Natural England established a position in relationship to ‘Hold the Line’ vs. ‘Managed Retreat’ in environmentally sensitive areas, of which the Chichester Harbour AONB is a significant example. CDC have failed to set out an appropriate policy within the proposed Local Plan that addresses this requirement.
5. The A27 needs significant investment in order to yield significant benefits for those travelling through the East-West corridor; this is unfunded. Essential improvements to the A27 are key to the success of any Local Plan particularly as the city’s ambitions are to expand significantly in the next two decades. But any ambitions will fall flat if the A27 is not improved before such plans are implemented.. The A259 is an increasingly dangerous so-called ‘resilient road’ with a significant increase in accidents and fatalities in recent years. In 2011, the BBC named the road as the “most crash prone A road” in the UK. There is nothing in the Local Plan that addresses this issue. There is no capacity within the strategic road network serving our district to accommodate the increase in housing planned, and the Local Plan does not guarantee it.
6. There is insufficient wastewater treatment capacity in the District to support the current houses let alone more. The tankering of wastewater from recent developments that Southern Water has not been able to connect to their network and in recent months the required emergency use of tankers to pump out overflowing sewers within our City/District reflects the gross weakness of short-termism dominated thinking at its worst and is an indictment of how broken our water system is. The provision of wastewater treatment is absolutely critical and essential to the well-being of all our residents and the long-term safety of our built environment. The abdication by those in authority, whether that be nationally, regionally or locally, is causing serious harm to the people to whom those in power owe a duty of care and their lack of urgency in dealing properly with this issue is seriously jeopardizing the environment in which we and all wildlife co-exist.
7. Settlement Boundaries should be left to the determination of Parish Councils to make and nobody else. The proposed

policy outlined in the Local Plan to allow development on plots of land adjacent to existing settlement boundaries is ill-conceived and will lead to coalescence which is in contradiction of Policy NE3.

8. All the sites allocated in the Strategic Area Based Policies appear to be in the majority of cases Greenfield Sites. The plan makes little, if any reference to the development of Brownfield sites. In fact, there is not a Policy that relates to this source of land within the Local Plan as proposed. Whilst in the 2021 HELAA Report sites identified as being suitable for development in the District as being Brownfield sites were predicted to yield over 4000 new dwellings. Why would our Local Plan not seek to develop these sites ahead of Greenfield sites?

9. The Local Plan does not define the minimum size that a wildlife corridor should be in width. What does close proximity to a wildlife corridor mean? How can you have a policy (NE 4) that suggests you can have development within a wildlife corridor? These exceptions need to have clear measures and accountability for providing evidence of no adverse impact on the wildlife corridor where a development is proposed. Our view is quite clear. Wildlife and indeed nature in the UK is under serious and in the case of far too many species, potentially terminal threat. Natural England has suggested that a Wildlife Corridor should not be less than 100metres wide. The proposed Wildlife Corridors agreed to by CDC must be enlarged and fully protected from any development. This is essential and urgent for those Wildlife Corridors which allow wildlife to achieve essential connectivity between the Chichester Harbour AONB and the South Downs National Park.

10. Biodiversity Policy NE5 - This is an absolute nonsense. If biodiversity is going to be harmed there should be no ability to mitigate or for developers to be able to buy their way out of this situation. This mindset is exactly why we are seeing a significant decline in biodiversity in the District which should be a rich in biodiversity area and why the World Economic Forum Report (2023) cites the UK as one of the worst countries in the world for destroying its biodiversity.

11. In many cases as set out in the Policies the strategic requirements lack being SMART in nature – particularly the M Measurable. These need to be explicit and clear: “you get what you measure”.

12. 65% of the perimeter of the District of Chichester south of the SDNP is coastal in nature. The remainder being land-facing. Policy NE11 does not sufficiently address the impact of building property in close proximity to the area surrounding the harbour, something acknowledged by the Harbour Conservancy in a published report in 2018 reflecting upon how surrounding the harbour with housing was detrimental to its long-term health. And here we are 5 years on and all of the organizations that CDC are saying that they are working in collaboration with, to remedy the decline in the harbour's condition, are failing to implement the actions necessary in a reasonable timescale. CDC are following when they should be actually taking the lead on the issue. Being followers rather than leaders makes it easy to abdicate responsibility. There must be full and transparent accountability.

13. The very significant space constraints for the plan area must be taken into account. The standard methodology need no longer apply where there are exceptional circumstances and we are certain that our District should be treated as a special case because of the developable land area is severely reduced by the South Downs National Park (SDNP) to the north and the unique marine AONB of Chichester Harbour to the south. A target of 535dpa is way too high. This number should be reduced to reflect the fact that only 30% of the area can be developed and much of that is rural/semi-rural land which provides essential connectivity for wildlife via a number of wildlife corridors running between the SDNP and the AONB. Excessive housebuilding will do irretrievable damage to the environment and lead to a significant deterioration in quality of life for all who reside within the East / West corridor.

14. Many of the sites identified in the Strategic & Area Based Policies could result in Grade 1 ^ 2 farmland being built upon. The UK is not self-sufficient in our food security. It is short-sighted to expect the world to return to what we have come to expect. Our good quality agricultural land should not all be covered with non-environmentally friendly designed homes.

Change suggested by respondent:

We suggest much greater focus on Chichester City – their allocation is a mere 270 homes in the next 18 years. That is less than a service village (with MINIMAL SERVICES) with a high percentage of elderly residents and transport solutions which offer no workable alternative to the private car. Put more homes in locations where walking and cycling and buses can offer a workable solution.

Para 8.8 contains wishful thinking targets which, with 2000 new homes planned along the West of Chichester corridor will never be achieved.

Walking along the A259 with cyclists sharing the footway is unsafe. Public transport options offer zero solution as already commented.

Point 3 highlighted above: WHAT DOES THIS MEAN? HOW will people's travel be managed?

Point 4: There is no possible mitigation for the polluting emissions from non-electric cars. None. So this is just a meaningless and unachievable objective.

This may explain why in para 8.9 4 objectives are reduced to 3?

Executive Summary

The Local Plan as written lacks ambition and vision, and will be detrimental to the landscape within which the district lies. It is a plan borne out of a need to produce a legal document which will satisfy the regulatory authorities. In terms of Urban Planning it fails "To meet the needs of the present without compromising the ability of future generations to meet their own needs" (NPPF).

The development that will consequentially arise from the deployment of such a made Local Plan is not sustainable. It will adversely affect the Character, Amenity and Safety of the built environment, throughout our district.

In particular, the Local Plan is inadequate for the needs of the people in the district both at present and in the future because –

1. It has been written in advance of the District having a properly formed and agreed Climate Emergency Action Plan. It is inconceivable that such a key document will not shape our Local Plan. It is this Action Plan that is needed first in order to provide the long-term strategic view as to how and what the District will look like in the future; this, in turn, will help form and shape the policies outlined in any prospective, Local Plan. The Plan as proposed is moribund, as a result of "cart before the horse" thinking.

2. The Local Plan as written does not adequately address how infrastructure, transport and services are going to be materially and strategically improved to meet the predicted growth and shift to a significantly ageing population. There is presently insufficient capacity to supply services and to have adequate people and environmentally friendly connectivity, as a direct result of decades of neglect towards investing in infrastructure and services to meet the needs of the District's population. We are led to believe that developers through increased levies in order to gain permission to build will fulfil this need, but all that this will result in is an uncoordinated, dysfunctional mess completely lacking in any future-proof master planning approach. We contend that this will do nothing for the quality of life of Chichester District residents and it will create a vacuum whereby few if indeed any can be held accountable or indeed found liable for shortcomings in the future.

3. The Local Plan as written does not state how it will go about addressing the need to create affordable homes. The District Council's record on this matter since the last made plan has been inadequate and now the creation of affordable homes has become urgent as political/economic/social factors drive an ever increasing rate of change within the District.
4. Flood risks assessments used in forming the Plan are out of date (last completed in 2018) and any decision to allocate sites is contrary to Environment Agency policy. Additionally, since March 2021 Natural England established a position in relationship to 'Hold the Line' vs. 'Managed Retreat' in environmentally sensitive areas, of which the Chichester Harbour AONB is a significant example. CDC have failed to set out an appropriate policy within the proposed Local Plan that addresses this requirement.
5. The A27 needs significant investment in order to yield significant benefits for those travelling through the East-West corridor; this is unfunded. Essential improvements to the A27 are key to the success of any Local Plan particularly as the city's ambitions are to expand significantly in the next two decades. But any ambitions will fall flat if the A27 is not improved before such plans are implemented.. The A259 is an increasingly dangerous so-called 'resilient road' with a significant increase in accidents and fatalities in recent years. In 2011, the BBC named the road as the "most crash prone A road" in the UK. There is nothing in the Local Plan that addresses this issue. There is no capacity within the strategic road network serving our district to accommodate the increase in housing planned, and the Local Plan does not guarantee it.
6. There is insufficient wastewater treatment capacity in the District to support the current houses let alone more. The tankering of wastewater from recent developments that Southern Water has not been able to connect to their network and in recent months the required emergency use of tankers to pump out overflowing sewers within our City/District reflects the gross weakness of short-termism dominated thinking at its worst and is an indictment of how broken our water system is. The provision of wastewater treatment is absolutely critical and essential to the well-being of all our residents and the long-term safety of our built environment. The abdication by those in authority, whether that be nationally, regionally or locally, is causing serious harm to the people to whom those in power owe a duty of care and their lack of urgency in dealing properly with this issue is seriously jeopardizing the environment in which we and all wildlife co-exist.
7. Settlement Boundaries should be left to the determination of Parish Councils to make and nobody else. The proposed policy outlined in the Local Plan to allow development on plots of land adjacent to existing settlement boundaries is ill-conceived and will lead to coalescence which is in contradiction of Policy NE3.
8. All the sites allocated in the Strategic Area Based Policies appear to be in the majority of cases Greenfield Sites. The plan makes little, if any reference to the development of Brownfield sites. In fact, there is not a Policy that relates to this source of land within the Local Plan as proposed. Whilst in the 2021 HELAA Report sites identified as being suitable for development in the District as being Brownfield sites were predicted to yield over 4000 new dwellings. Why would our Local Plan not seek to develop these sites ahead of Greenfield sites?
9. The Local Plan does not define the minimum size that a wildlife corridor should be in width. What does close proximity to a wildlife corridor mean? How can you have a policy (NE 4) that suggests you can have development within a wildlife corridor? These exceptions need to have clear measures and accountability for providing evidence of no adverse impact on the wildlife corridor where a development is proposed. Our view is quite clear. Wildlife and indeed nature in the UK is under serious and in the case of far too many species, potentially terminal threat. Natural England has suggested that a Wildlife Corridor should not be less than 100metres wide. The proposed Wildlife Corridors agreed to by CDC must be enlarged and fully protected from any development. This is essential and urgent for those Wildlife Corridors which allow wildlife to achieve essential connectivity between the Chichester Harbour AONB and the South Downs National Park.
10. Biodiversity Policy NE5 - This is an absolute nonsense. If biodiversity is going to be harmed there should be no ability to mitigate or for developers to be able to buy their way out of this situation. This mindset is exactly why we are seeing a significant decline in biodiversity in the District which should be a rich in biodiversity area and why the World Economic Forum Report (2023) cites the UK as one of the worst countries in the world for destroying its biodiversity.
11. In many cases as set out in the Policies the strategic requirements lack being SMART in nature – particularly the M Measurable. These need to be explicit and clear: "you get what you measure".
12. 65% of the perimeter of the District of Chichester south of the SDNP is coastal in nature. The remainder being land-facing. Policy NE11 does not sufficiently address the impact of building property in close proximity to the area surrounding the harbour, something acknowledged by the Harbour Conservancy in a published report in 2018 reflecting upon how surrounding the harbour with housing was detrimental to it long-term health. Document Element: Background, 8.8

Respondent: GoVia Thameslink Railway (Nigel Searle) [8197]

Summary:

8.8 Increasing road capacity is not key to supporting growth, as increasing road capacity generates additional traffic that creates increased congestion in existing communities that stifles economic activity in those communities and tends to move economic activity away from local businesses out of town to locations that are good for road based activity fuelling a vicious circle.

The opening sentence of 8.8 is not compatible with Chichester District Council's declared Climate Emergency or the rest of 8.8 which is the key to the long-term future of Chichester and the rest of the coastal plain for future generations.

It is critical that the mindset changes from a presumption of car use calling active travel and public transport alternatives to the car to a presumption of everyone requiring access with a hierarchy starting with access without transport, followed by walking, cycling and public transport and a presumption that if access only possible by bottom of the hierarchy motor transport the development is unsustainable and should not go ahead.

Object

Document Element: Background, 8.10**Respondent:** Mrs Gabrielle Abbott [7919]**Summary:****Monitor and Manage' :**

Is not justified given the already identified short-term need for A27 junction improvements

Is not justified given the lack of evidence from participation of the local community

Is not effective given the improvements identified are likely not to be deliverable during plan period through lack of funding

Full text:

These comments relate to the adoption of the proposed 'monitor and manage' approach referred to in this paragraph.

As acknowledged in Paras 8.2, 8.3 and 8.4 of this Plan road congestion around the junctions of the A27 bypass is already a major concern for residents and business in the area. We are told in para 8.4 that in many parts of the area the road network is operating at or close to designated capacity.

The currently adopted Local Plan for the period 2014 – 2029 (paras 8.3 and 8.7) acknowledges this and envisages a package of improvements to upgrade six junctions on the A27 Chichester Bypass to mitigate the impacts of development.

The West Sussex Transport Plan (2022-2036) likewise acknowledges the need for significant improvements to the A27 to support this new local plan citing (inter alia) congestion on the A27 and A259 during peak periods (not limited to AM and PM peak hours) and rat-running on residential and rural routes to avoid congestion on the A27. (Transport Plan Paragraph 7.54)

A27 junction mitigation issues are listed as a short -term priority (2022 – 2027) for the Chichester area (Transport Plan Paragraph 7.63).

Not justified – not an appropriate strategy:

Given that capacity on the road network is already at or approaching full capacity how can allowing further development under a 'monitor and manage' approach be justified? Further monitoring is not required to tell us about problems which are already widely acknowledged.

Not justified – lack of evidence gathered from local community:

This policy was not included in the 2108 Local Plan Public Consultation nor has it been publicised prior to its inclusion in this Plan. Evidence has not been gathered from the local community.

Not effective – improvements likely not deliverable during plan period through lack of funding:

There is no clear strategy set out to fund improvements identified by 'monitor and manage' so as to make this strategy deliverable (see comments on para 8.11 below).

Such an approach will exacerbate an already unacceptable situation which is damaging to the health and prosperity of the area.

Change suggested by respondent:

A development/transport strategy needs to be formulated which provides a pathway to ensuring that requisite road improvements to address existing problems and accommodate new development can actually be funded and delivered within an appropriate timescale. This is the stated objective of para 8.6 of this plan which is then negated by this and other provisions in this Chapter.

Document Element: Background, 8.10**Respondent:** Mayday! Action Group (John Garrett) [7163]**Summary:**

The 'monitor and manage' approach appears here for the first time. Absolutely no explanation as to how this approach will work and be an improvement upon 'predict and provide'.

It is very clear to everyone that the through traffic issue created by a dual carriageway road with too many dangerous roundabouts must be and indeed is an impediment to all future growth of both Chichester City and the entire district of the plan area. The fact is that it is more often quicker to go through the city centre than use the by-pass: "the by-pass that doesn't".

We have a pitifully painful and slow approach to major road infrastructure projects. Car ownership shows no sign of diminishing – indeed because of the magnetic attraction of Goodwood, we would suspect that the level of car ownership in this area is well above average.

Executive Summary

The Local Plan as written lacks ambition and vision, and will be detrimental to the landscape within which the district

lies. It is a plan borne out of a need to produce a legal document which will satisfy the regulatory authorities. In terms of Urban Planning it fails "To meet the needs of the present without compromising the ability of future generations to meet their own needs" (NPPF).

The development that will consequentially arise from the deployment of such a made Local Plan is not sustainable. It will adversely affect the Character, Amenity and Safety of the built environment, throughout our district.

In particular, the Local Plan is inadequate for the needs of the people in the district both at present and in the future because –

1. It has been written in advance of the District having a properly formed and agreed Climate Emergency Action Plan. It is inconceivable that such a key document will not shape our Local Plan. It is this Action Plan that is needed first in order to provide the long-term strategic view as to how and what the District will look like in the future; this, in turn, will help form and shape the policies outlined in any prospective, Local Plan. The Plan as proposed is moribund, as a result of "cart before the horse" thinking.
2. The Local Plan as written does not adequately address how infrastructure, transport and services are going to be materially and strategically improved to meet the predicted growth and shift to a significantly ageing population. There is presently insufficient capacity to supply services and to have adequate people and environmentally friendly connectivity, as a direct result of decades of neglect towards investing in infrastructure and services to meet the needs of the District's population. We are led to believe that developers through increased levies in order to gain permission to build will fulfil this need, but all that this will result in is an uncoordinated, dysfunctional mess completely lacking in any future-proof master planning approach. We contend that this will do nothing for the quality of life of Chichester District residents and it will create a vacuum whereby few if indeed any can be held accountable or indeed found liable for shortcomings in the future.
3. The Local Plan as written does not state how it will go about addressing the need to create affordable homes. The District Council's record on this matter since the last made plan has been inadequate and now the creation of affordable homes has become urgent as political/economic/social factors drive an ever increasing rate of change within the District.
4. Flood risks assessments used in forming the Plan are out of date (last completed in 2018) and any decision to allocate sites is contrary to Environment Agency policy. Additionally, since March 2021 Natural England established a position in relationship to 'Hold the Line' vs. 'Managed Retreat' in environmentally sensitive areas, of which the Chichester Harbour AONB is a significant example. CDC have failed to set out an appropriate policy within the proposed Local Plan that addresses this requirement.
5. The A27 needs significant investment in order to yield significant benefits for those travelling through the East-West corridor; this is unfunded. Essential improvements to the A27 are key to the success of any Local Plan particularly as the city's ambitions are to expand significantly in the next two decades. But any ambitions will fall flat if the A27 is not improved before such plans are implemented.. The A259 is an increasingly dangerous so-called 'resilient road' with a significant increase in accidents and fatalities in recent years. In 2011, the BBC named the road as the "most crash prone A road" in the UK. There is nothing in the Local Plan that addresses this issue. There is no capacity within the strategic road network serving our district to accommodate the increase in housing planned, and the Local Plan does not guarantee it.
6. There is insufficient wastewater treatment capacity in the District to support the current houses let alone more. The tankering of wastewater from recent developments that Southern Water has not been able to connect to their network and in recent months the required emergency use of tankers to pump out overflowing sewers within our City/District reflects the gross weakness of short-termism dominated thinking at its worst and is an indictment of how broken our water system is. The provision of wastewater treatment is absolutely critical and essential to the well-being of all our residents and the long-term safety of our built environment. The abdication by those in authority, whether that be nationally, regionally or locally, is causing serious harm to the people to whom those in power owe a duty of care and their lack of urgency in dealing properly with this issue is seriously jeopardizing the environment in which we and all wildlife co-exist.
7. Settlement Boundaries should be left to the determination of Parish Councils to make and nobody else. The proposed policy outlined in the Local Plan to allow development on plots of land adjacent to existing settlement boundaries is ill-conceived and will lead to coalescence which is in contradiction of Policy NE3.
8. All the sites allocated in the Strategic Area Based Policies appear to be in the majority of cases Greenfield Sites. The plan makes little, if any reference to the development of Brownfield sites. In fact, there is not a Policy that relates to this source of land within the Local Plan as proposed. Whilst in the 2021 HELAA Report sites identified as being suitable for development in the District as being Brownfield sites were predicted to yield over 4000 new dwellings. Why would our Local Plan not seek to develop these sites ahead of Greenfield sites?
9. The Local Plan does not define the minimum size that a wildlife corridor should be in width. What does close proximity to a wildlife corridor mean? How can you have a policy (NE 4) that suggests you can have development within a wildlife

corridor? These exceptions need to have clear measures and accountability for providing evidence of no adverse impact on the wildlife corridor where a development is proposed. Our view is quite clear. Wildlife and indeed nature in the UK is under serious and in the case of far too many species, potentially terminal threat. Natural England has suggested that a Wildlife Corridor should not be less than 100metres wide. The proposed Wildlife Corridors agreed to by CDC must be enlarged and fully protected from any development. This is essential and urgent for those Wildlife Corridors which allow wildlife to achieve essential connectivity between the Chichester Harbour AONB and the South Downs National Park.

10. Biodiversity Policy NE5 - This is an absolute nonsense. If biodiversity is going to be harmed there should be no ability to mitigate or for developers to be able to buy their way out of this situation. This mindset is exactly why we are seeing a significant decline in biodiversity in the District which should be a rich in biodiversity area and why the World Economic Forum Report (2023) cites the UK as one of the worst countries in the world for destroying its biodiversity.

11. In many cases as set out in the Policies the strategic requirements lack being SMART in nature – particularly the M Measurable. These need to be explicit and clear: “you get what you measure”.

12. 65% of the perimeter of the District of Chichester south of the SDNP is coastal in nature. The remainder being land-facing. Policy NE11 does not sufficiently address the impact of building property in close proximity to the area surrounding the harbour, something acknowledged by the Harbour Conservancy in a published report in 2018 reflecting upon how surrounding the harbour with housing was detrimental to its long-term health. And here we are 5 years on and all of the organizations that CDC are saying that they are working in collaboration with, to remedy the decline in the harbour's condition, are failing to implement the actions necessary in a reasonable timescale. CDC are following when they should be actually taking the lead on the issue. Being followers rather than leaders makes it easy to abdicate responsibility. There must be full and transparent accountability.

13. The very significant space constraints for the plan area must be taken into account. The standard methodology need no longer apply where there are exceptional circumstances and we are certain that our District should be treated as a special case because of the developable land area is severely reduced by the South Downs National Park (SDNP) to the north and the unique marine AONB of Chichester Harbour to the south. A target of 535dpa is way too high. This number should be reduced to reflect the fact that only 30% of the area can be developed and much of that is rural/semi-rural land which provides essential connectivity for wildlife via a number of wildlife corridors running between the SDNP and the AONB. Excessive housebuilding will do irretrievable damage to the environment and lead to a significant deterioration in quality of life for all who reside within the East / West corridor.

14. Many of the sites identified in the Strategic & Area Based Policies could result in Grade 1 ^ 2 farmland being built upon. The UK is not self-sufficient in our food security. It is short-sighted to expect the world to return to what we have come to expect. Our good quality agricultural land should not all be covered with non-environmentally friendly designed homes.

Change suggested by respondent:

We find it hard to believe that no funding can be found to ensure the A27 infrastructure gets the improvements it must have BEFORE MORE NEW HOMES ARE BUILT.

Document Element: Background, 8.10

Respondent: Metis Homes [1602]

Agent: Nova Planning (Mr Patrick Barry, Director) [1195]

Summary:

Traffic modelling undertaken in Transport Study uses base year of 2014 - pre-dates COVID pandemic and significant changes in work-travel patterns in subsequent years. Likely to result in significant over-estimation of traffic flows, acknowledged in report itself. Trip generation based on generic per dwelling basis without regard to sustainability/accessibility merits of locations within district. Acceptable for generic 'predict and provide' approach but mitigation based on bespoke 'monitor and manage' approach. Once it became apparent that mitigation required for 'predict and provide' approach could not be viably mitigated, new assessment should have been undertaken to look at specific characteristics of traffic generation within various locations within Southern Plan Area and the interrelationship with specific junctions on A27 - would have provided more accurate account of trip generation to define more targeted strategy for A27 junction improvements and other measures.

Document Element: Background, 8.11

Respondent: Mrs Gabrielle Abbott [7919]

Summary:

Conditionality of delivery of improvements on monitor and manage and funding:
is not justified given the already identified short-term need for A27 junction improvements
Is not effective given the improvements identified are likely not to be deliverable during plan period through lack of funding

Full text:

The limited A27 junction improvements now proposed in this paragraph are stated to be subject to 'ongoing monitor and manage processes and funding'.

Not justified – not an appropriate strategy

Not effective – improvements likely not deliverable during plan period through lack of funding

In relation to the adoption of a 'monitor and manage' approach for problems which already exist and will inevitably be exacerbated by new development please see my comments on paragraph 8.10 above.

As to funding it is made clear in paragraph 8.12 that the whole cost of these works cannot be funded by developer contributions alone and no additional funding sources have been identified. Paragraph 8.21 indicates that the full amount of developer contributions will not in any event be received until all new dwellings provided for in the south of the plan area in the period up to 2039 have been supplied.

On the National Highways website page relating to the A27 Chichester Bypass it is stated that this section of the A27 'continues to suffer from high accident rates, daily congestion and excessive queuing at most of the junctions along this 5km stretch of road. With traffic due to increase by 24% by 2035 this situation will consistently worsen if there is no intervention'

Given that the requirement for these A27 junction improvements has already been recognised as an immediate need and will inevitably be exacerbated by future development conditionality on 'monitor and manage processes' and 'funding' does not provide an appropriate basis on which to proceed with further development.

<https://nationalhighways.co.uk/our-roads/pipeline-of-possible-future-schemes/a27-chichester-bypass/>

Change suggested by respondent:

A revised development/transport strategy needs to be articulated which will provide a pathway to ensuring that requisite road improvements to address existing problems and accommodate new development can actually be funded and delivered within an appropriate timescale.

Object

Document Element: Background, 8.11**Respondent:** Mr Andrew Gould [7824]**Summary:**

If all the funding from housing development is going towards the upgrade of Fishbourne and Bognor roundabouts, about 45 million pounds as an upper estimate, and no funding of a similar magnitude is going towards low car neighbourhoods, cycle lanes and active travel, this policy is inconsistent with the rest of the local plan and therefore unsound

Full text:

If all the funding from housing development is going towards the upgrade of Fishbourne and Bognor roundabouts, about 45 million pounds as an upper estimate, and no funding of a similar magnitude is going towards low car neighbourhoods, cycle lanes and active travel, this policy is inconsistent with the rest of the local plan and therefore unsound

Change suggested by respondent:

50 percent of the CIL money, section 106 and other money raised from housing developers will be allocated to cycle lanes, low traffic neighbourhoods and measures that promote low emission travel. This may mean that schemes that are essential to improving car travel on the A27 will need to be delayed or scrapped

4599

Object

Document Element: Background, 8.12**Respondent:** Mrs Gabrielle Abbott [7919]**Summary:**

Monitor and manage:

Is not justified given the already identified short-term need for A27 junction improvements

Is not justified given the lack of evidence of participation of the local community

Is not effective given the improvements identified are likely not to be deliverable during plan period through lack of funding

Full text:

Not justified – not an appropriate strategy

Not justified – lack of participation of local community

In relation to the adoption of a 'monitor and manage' approach for problems which already exist and will inevitably be exacerbated by new development please see my comments on paragraph 8.10 above. Please also see the comments in that paragraph with regard to this change in policy and lack of evidence of participation of local community

Not effective – transport infrastructure improvements are not likely to be deliverable during plan period through lack of funding

The reason given for this approach is stated to be that the full cost of these works cannot be funded from existing funding sources. However proceeding with new development with no deliverable plan to provide the requisite highways improvements (before or after development) presents a very high level of risk to residents and business and the general prosperity of the area.

The plan provides no strategy as to how this risk can be managed so as provide a realistic way forward. Paragraph 8.5 of the Plan refers to the possible National Highways A27 improvement scheme which may or may not be confirmed. If this scheme does not proceed within the requisite timeframe what then? This issue is not addressed at all in the plan.

Change suggested by respondent:

A revised development/transport strategy needs to be articulated which will provide a pathway to ensuring that requisite road improvements to address existing problems and accommodate new development can actually be funded and delivered within an appropriate timescale.

5565

Object

Document Element: Background, 8.12**Respondent:** Mr Gary Axon [8150]**Summary:**

This policy is not sound because the A27 is already at breaking point and tailbacks are an everyday occurrence - not just at peak times. The proposed scale of the development and the consequent increase in number of vehicles (possibly more than one car per household) will exasperate this. There has not been sufficient investment to cater for the existing traffic operation let alone the additional burden this proposed building will place on it. We have no alternative other than the 55 bus (a good service - but will not be able to cater for the additional volume of people). There is no rail option either.

Full text:

See representation

Change suggested by respondent:

A significant reduction in the scale of development or more the development to a more appropriate site (e.g. use brownfield sites not green belt or good arable farmland). Reduction will help to minimise the increase in pollution, air quality will be negatively impacted and noise will affect a recognised conservation area around the old Saxon church - so use more appropriate sites to build homes.

4443

Object

Document Element: Background, 8.12**Respondent:** Mrs A Cobby [5712]**Summary:**

Traffic on the A27 particularly at the Portfield Roundabout is already at high density, not just in rush hour times. Gridlocks occur on a daily basis as radio traffic reports will confirm. Exiting over the A27 at Meadow Way is dangerous due to volume and speed of traffic. Closure of Oving Road lights has further added to the problem for Tangmere residents driving into Chichester.

The proposed new number of houses could add over 1,500 cars to the area crating further gridlock on the A27 and increasing traffic to village road.

A solution would be to provide a rail stop at Tangmere, improve bus routes and add cycle paths.

Full text:

See representations

Change suggested by respondent:

- 1) Reduce number of houses which equates to less cars on already busy roads
- 2) Upgrade infrastructure i.e. improve bus routes, provide cycle paths, construct railway station.

4128

Object

Document Element: Background, 8.12**Respondent:** Mr Matthew Rees [7841]**Summary:**

Not legally compliant because it is incompatible with the NPPF and has been acknowledged by the council's sustainability appraisal to be at risk of challenge. This is an unsound sticking plaster policy that does not provide necessary strategic infrastructure in a timely way given that the sustainability assessment stated (p33) "there is a clear and significant concern with higher growth scenarios, given the risk of an objection from National Highways on the grounds that the proposed monitor and manage' could be insufficient to avoid severe traffic congestion on the A27" It is not reasonable in light of policy A14, given that the number of new cars on the A27 would be equivalent to a queue stretching all the way from Westhamptnett to Fontwell (Calculation: 1,300 homes, 1.3 cars per household, each 4.3m long).

Full text:

There is much to commend in this document and the supporting technical documents that accompany it, and I have listed in the appendix to this letter 26 such paragraphs and policies. I am happy for my support to be registered against these sections of your consultation document. There is also much upon which I must represent a concern, so I attach

representations relating to 22 paragraphs or policies.

I am happy to participate in a hearing session, and I would flag at this stage that the common theme that links all of these representations is the need to safeguard the natural and built environment in and around Saxon Meadow, Tangmere from the risks of unsustainable development, I consider that the independent examiner should focus their review on the aspects of the local plan that relate to this matter.

Appendix 1: list of policies that I support

1. P14, 1.23, 1.24: Duty to cooperate
2. P24, para 2.30 "the council declared a climate emergency in July 2019"
3. P24, para 2.32 – "all proposal for new development should be considered in the context of a climate emergencV"
4. P30: Objective 2: natural environment: "development will achieve net gains in biodiversity"
5. P43, 4.1 "National policy promotes increasing energy efficiency, the minimisation of energy consumption and the development of renewable energy sources"
6. P43, 4.3: "Some renewable energy projects provide significant opportunities to enhance biodiversitV"
7. P53, Policy NE5: Biodiversity and Biodiversity Net Gain
8. P62, Para 4.42: Hedgerows and some types of woodlands are identified as a priority habitat
- 9, P62, Policy NE8: Proposals should have a minimum buffer zone of 15 metres from the boundary of ancient woodland or veteran trees to avoid rood damage (known as the root protection area)
10. P68, Policy NE10: Criteria for Development in the Countryside - Does not prejudice viable agricultural operations or other viable uses
11. P80, Para 4.91: There are serious concerns about the impact of flooding, both in respect of current properties at risk but also the long-term management of the area.
12. 4.92: any development in the plan area must therefore have regard to flood and erosion risk.
13. 4.94: built development can lead to increased surface water run-off; therefore, new development should include SuDS to help cope with intense rainfall events
14. P81, Para 4.96: Environment Agency consent is required for any works within 16 m of tidal waters and 8m of fluvial watercourses in line with the Environmental Permitting Regulations 2016. This strip is required for access. The policy includes a setback requirement to ensure this access strip is not obstructed.
15. P80, 4.92, Any development in the plan area must therefore have regard to flood and erosion risk, now and in the future, by way of location and specific measures, such as additional flood alleviation, which will protect people, properties and vulnerable habitats from flooding. Recent changes to national guidance highlight the importance of considering flood risk from all sources, and this is particularly significant for the plan area as large parts of it are at risk from groundwater flooding, which needs to be recognised in development decisions alongside the well-established risks in relation to tidal, fluvial and surface water flooding. Appropriate mapping of all sources of flood risks is still evolving, and is likely to develop further over the plan period
16. P93, Policy NE20 Pollution: Development proposals must be designed to protect, and where possible, improve upon the amenities of existing and future residents, occupiers of buildings and the environment generally. Development proposals will need to address the criteria contained in, but not limited to, the policies concerning water quality; flood risk and water management; nutrient mitigation; lighting; air quality; noise; and contaminated land. Where development is likely to generate significant adverse impacts by reason of pollution, the council will require that the impacts are minimised and/or mitigated to an acceptable level within appropriate local/national standards, guidance, legislation and/or objectives.
- 17, P94, 4.127, Light pollution caused by excessive brightness can lead to annoyance, disturbance and impact wildlife, notably nocturnal animals. The design of lighting schemes should be carefully considered in development proposals to prevent light spillage and glare.
18. P94, 4.128, Dark skies are important for the conservation of natural habitats, cultural heritage and astronomy. The plan area includes three 'Dark Sky Discovery Site' designations, all located within the Chichester Harbour AONB; Eames Farm on Thorney Island, Maybush Copse in Chidham; and north of the John Q Davis footpath in West Itchenor. Development within or directly impacting these areas will be subject to particular scrutiny in terms of their impact on dark skies. The entire SDNPA area is also declared as an International Dark Sky Reserve. Development directly impacting this area will be subject to similar scrutiny.
19. P96, Policy NE22 Air Quality
20. P97, Policy NE-23 Noise
21. P142, Para 6.29, Amenity: Private space, shared space and the design quality and construction of communal spaces all contribute to amenity
22. P155-6, Policy P11:Conservation Areas "protecting the setting (including views into and out of the area)"
- 23, P55, Para 4.26 - The council is under a legal duty to protect designated habitats, by ensuring that new development does not have an adverse impact on important areas of nature conservation, and by requiring mitigation to negate the harm caused.
24. P58, Para 4.33 The council is under a legal duty to protect their designated bird populations and supporting habitats
25. P95, Para 4.129 The council has a duty to review and assess air quality within the district
26. P301, Conservation Area: An area of special architectural or historic interest, designated under the Planning (Listed Buildings & Conservation Areas) Act 1990. There is a statutory duty to preserve or enhance the character, appearance, or setting of these areas.

Change suggested by respondent:

The plan should be amended as follows:

8.12 The sustainability appraisal stated that capacity on the A27 is a major issue and there is a need to minimise A27 traffic as far as possible (para 5.2.23-5.2.24). It also stated that there is a clear and significant concern with higher growth scenarios, given the risk of an objection from National Highways on the grounds that the proposed 'monitor and manage' strategy could be insufficient to avoid severe traffic congestion on the A27. In order to avoid this objection the council will retain its existing approach to 'predict and provide' which forecasts the predicted growth in traffic and provides mitigation based on the forecast growth and will enhance this by identifying a package of potential highway improvements (including enhanced walking, cycling and public transport) which alongside schemes identified through the development management process, may be implemented. Given the significant increase in road congestion that would be created by building new homes in Tangmere before the introduction of necessary strategic infrastructure (e.g. a rail stop serving Tangmere and Oving) and significant investment to relieve congestion on the A27 which would be required to meet the NPPF requirements for sustainable development. Therefore the masterplan for the land to the west of Tangmere will be suspended until approvals and funding sources have been identified from public expenditure and developer contributions to provide this infrastructure in line with policy T1. Fishbourne Roundabout with the Terminus Road Link is estimated at between E9.5 and E12.9 million, and Bognor Road Roundabout with the Vinnetrow Road Link is estimated at between E19.4 and E30.4 million.

Document Element: Background, 8.14**Respondent:** Mayday! Action Group (John Garrett) [7163]**Summary:**

This paragraph is an admission of the fact that the A27, due to contents of this Draft Local Plan, will not be able to cope. Honesty is to be appreciated but your district residents do not deserve to be the victims of this impossible situation. Minor roads and country lanes are already used by those who cannot have their journey times delayed. The 10,350 homes target must be reduced very significantly. Residents of the Shopwyke development cannot get out of their development at peak times to access the A27. The same will be the case for all the developments due to pouring impatient vehicles on to the A259 if 2,000 homes are built during the plan period. A serious rethink is needed to come up with more options.

Full text:

Executive Summary

The Local Plan as written lacks ambition and vision, and will be detrimental to the landscape within which the district lies. It is a plan borne out of a need to produce a legal document which will satisfy the regulatory authorities. In terms of Urban Planning it fails "To meet the needs of the present without compromising the ability of future generations to meet their own needs" (NPPF).

The development that will consequentially arise from the deployment of such a made Local Plan is not sustainable. It will adversely affect the Character, Amenity and Safety of the built environment, throughout our district.

In particular, the Local Plan is inadequate for the needs of the people in the district both at present and in the future because –

1. It has been written in advance of the District having a properly formed and agreed Climate Emergency Action Plan. It is inconceivable that such a key document will not shape our Local Plan. It is this Action Plan that is needed first in order to provide the long-term strategic view as to how and what the District will look like in the future; this, in turn, will help form and shape the policies outlined in any prospective, Local Plan. The Plan as proposed is moribund, as a result of "cart before the horse" thinking.

2. The Local Plan as written does not adequately address how infrastructure, transport and services are going to be

materially and strategically improved to meet the predicted growth and shift to a significantly ageing population. There is presently insufficient capacity to supply services and to have adequate people and environmentally friendly connectivity, as a direct result of decades of neglect towards investing in infrastructure and services to meet the needs of the District's population. We are led to believe that developers through increased levies in order to gain permission to build will fulfil this need, but all that this will result in is an uncoordinated, dysfunctional mess completely lacking in any future-proof master planning approach. We contend that this will do nothing for the quality of life of Chichester District residents and it will create a vacuum whereby few if indeed any can be held accountable or indeed found liable for shortcomings in the future.

3. The Local Plan as written does not state how it will go about addressing the need to create affordable homes. The District Council's record on this matter since the last made plan has been inadequate and now the creation of affordable homes has become urgent as political/economic/social factors drive an ever increasing rate of change within the District.

4. Flood risks assessments used in forming the Plan are out of date (last completed in 2018) and any decision to allocate sites is contrary to Environment Agency policy. Additionally, since March 2021 Natural England established a position in relationship to 'Hold the Line' vs. 'Managed Retreat' in environmentally sensitive areas, of which the Chichester Harbour AONB is a significant example. CDC have failed to set out an appropriate policy within the proposed Local Plan that addresses this requirement.

5. The A27 needs significant investment in order to yield significant benefits for those travelling through the East-West corridor; this is unfunded. Essential improvements to the A27 are key to the success of any Local Plan particularly as the city's ambitions are to expand significantly in the next two decades. But any ambitions will fall flat if the A27 is not improved before such plans are implemented.. The A259 is an increasingly dangerous so-called 'resilient road' with a significant increase in accidents and fatalities in recent years. In 2011, the BBC named the road as the "most crash prone A road" in the UK. There is nothing in the Local Plan that addresses this issue. There is no capacity within the strategic road network serving our district to accommodate the increase in housing planned, and the Local Plan does not guarantee it.

6. There is insufficient wastewater treatment capacity in the District to support the current houses let alone more. The tankering of wastewater from recent developments that Southern Water has not been able to connect to their network and in recent months the required emergency use of tankers to pump out overflowing sewers within our City/District reflects the gross weakness of short-termism dominated thinking at its worst and is an indictment of how broken our water system is. The provision of wastewater treatment is absolutely critical and essential to the well-being of all our residents and the long-term safety of our built environment. The abdication by those in authority, whether that be nationally, regionally or locally, is causing serious harm to the people to whom those in power owe a duty of care and their lack of urgency in dealing properly with this issue is seriously jeopardizing the environment in which we and all wildlife co-exist.

7. Settlement Boundaries should be left to the determination of Parish Councils to make and nobody else. The proposed policy outlined in the Local Plan to allow development on plots of land adjacent to existing settlement boundaries is ill-conceived and will lead to coalescence which is in contradiction of Policy NE3.

8. All the sites allocated in the Strategic Area Based Policies appear to be in the majority of cases Greenfield Sites. The plan makes little, if any reference to the development of Brownfield sites. In fact, there is not a Policy that relates to this source of land within the Local Plan as proposed. Whilst in the 2021 HELAA Report sites identified as being suitable for development in the District as being Brownfield sites were predicted to yield over 4000 new dwellings. Why would our Local Plan not seek to develop these sites ahead of Greenfield sites?

9. The Local Plan does not define the minimum size that a wildlife corridor should be in width. What does close proximity to a wildlife corridor mean? How can you have a policy (NE 4) that suggests you can have development within a wildlife corridor? These exceptions need to have clear measures and accountability for providing evidence of no adverse impact on the wildlife corridor where a development is proposed. Our view is quite clear. Wildlife and indeed nature in the UK is under serious and in the case of far too many species, potentially terminal threat. Natural England has suggested that a Wildlife Corridor should not be less than 100metres wide. The proposed Wildlife Corridors agreed to by CDC must be enlarged and fully protected from any development. This is essential and urgent for those Wildlife Corridors which allow wildlife to achieve essential connectivity between the Chichester Harbour AONB and the South Downs National Park.

10. Biodiversity Policy NE5 - This is an absolute nonsense. If biodiversity is going to be harmed there should be no ability to mitigate or for developers to be able to buy their way out of this situation. This mindset is exactly why we are seeing a significant decline in biodiversity in the District which should be a rich in biodiversity area and why the World Economic Forum Report (2023) cites the UK as one of the worst countries in the world for destroying its biodiversity.

11. In many cases as set out in the Policies the strategic requirements lack being SMART in nature – particularly the M Measurable. These need to be explicit and clear: "you get what you measure".

12. 65% of the perimeter of the District of Chichester south of the SDNP is coastal in nature. The remainder being land-facing. Policy NE11 does not sufficiently address the impact of building property in close proximity to the area

surrounding the harbour, something acknowledged by the Harbour Conservancy in a published report in 2018 reflecting upon how surrounding the harbour with housing was detrimental to its long-term health. And here we are 5 years on and all of the organizations that CDC are saying that they are working in collaboration with, to remedy the decline in the harbour's condition, are failing to implement the actions necessary in a reasonable timescale. CDC are following when they should be actually taking the lead on the issue. Being followers rather than leaders makes it easy to abdicate responsibility. There must be full and transparent accountability.

13. The very significant space constraints for the plan area must be taken into account. The standard methodology need no longer apply where there are exceptional circumstances and we are certain that our District should be treated as a special case because of the developable land area is severely reduced by the South Downs National Park (SDNP) to the north and the unique marine AONB of Chichester Harbour to the south. A target of 535dpa is way too high. This number should be reduced to reflect the fact that only 30% of the area can be developed and much of that is rural/semi-rural land which provides essential connectivity for wildlife via a number of wildlife corridors running between the SDNP and the AONB. Excessive housebuilding will do irretrievable damage to the environment and lead to a significant deterioration in quality of life for all who reside within the East / West corridor.

14. Many of the sites identified in the Strategic & Area Based Policies could result in Grade 1 ^ 2 farmland being built upon. The UK is not self-sufficient in our food security. It is short-sighted to expect the world to return to what we have come to expect. Our good quality agricultural land should not all be covered with non-environmentally friendly designed homes.

4131

Object

Document Element: Background, 8.17

Respondent: Mr Matthew Rees [7841]

Summary:

Not sound because fails to evaluate sustainability appraisal (p89) statement: "important high level concern is the lack of a train station at Tangmere", and not legally compliant because TI contains no assessment of whether a train station between Barnham and Chichester could support sustainable development and provide necessary strategic infrastructure in a timely way. May be non-compliant with Duty to Cooperate as the statement of compliance indicates a failure to take reasonable steps to engage with ORR (p52), which is not justified and the Infrastructure Delivery Plan excludes any consideration of a rail station, so there is a lack of evidence proportionate to the issue.

Full text:

There is much to commend in this document and the supporting technical documents that accompany it, and I have listed in the appendix to this letter 26 such paragraphs and policies. I am happy for my support to be registered against these sections of your consultation document. There is also much upon which I must represent a concern, so I attach representations relating to 22 paragraphs or policies.

I am happy to participate in a hearing session, and I would flag at this stage that the common theme that links all of these representations is the need to safeguard the natural and built environment in and around Saxon Meadow, Tangmere from the risks of unsustainable development, I consider that the independent examiner should focus their review on the aspects of the local plan that relate to this matter.

Appendix 1: list of policies that I support

1. P14, 1.23, 1.24: Duty to cooperate
2. P24, para 2.30 "the council declared a climate emergency in July 2019"
3. P24, para 2.32 – "all proposal for new development should be considered in the context of a climate emergencV"
4. P30: Objective 2: natural environment: "development will achieve net gains in biodiversity"
5. P43, 4.1 "National policy promotes increasing energy efficiency, the minimisation of energy consumption and the development of renewable energy sources"
6. P43, 4.3: "Some renewable energy projects provide significant opportunities to enhance biodiversitV"
7. P53, Policy NE5: Biodiversity and Biodiversity Net Gain
8. P62, Para 4.42: Hedgerows and some types of woodlands are identified as a priority habitat
9. P62, Policy NE8: Proposals should have a minimum buffer zone of 15 metres from the boundary of ancient woodland or veteran trees to avoid rood damage (known as the root protection area)
10. P68, Policy NE10: Criteria for Development in the Countryside - Does not prejudice viable agricultural operations or other viable uses
11. P80, Para 4.91: There are serious concerns about the impact of flooding, both in respect of current properties at risk but also the long-term management of the area.
12. 4.92: any development in the plan area must therefore have regard to flood and erosion risk.
13. 4.94: built development can lead to increased surface water run-off; therefore, new development should include SuDS to help cope with intense rainfall events
14. P81, Para 4.96: Environment Agency consent is required for any works within 16 m of tidal waters and 8m of fluvial watercourses in line with the Environmental Permitting Regulations 2016. This strip is required for access. The policy includes a setback requirement to ensure this access strip is not obstructed.
15. P80, 4.92, Any development in the plan area must therefore have regard to flood and erosion risk, now and in the future, by way of location and specific measures, such as additional flood alleviation, which will protect people, properties and vulnerable habitats from flooding. Recent changes to national guidance highlight the importance of

considering flood risk from all sources, and this is particularly significant for the plan area as large parts of it are at risk from groundwater flooding, which needs to be recognised in development decisions alongside the well-established risks in relation to tidal, fluvial and surface water flooding. Appropriate mapping of all sources of flood risks is still evolving, and is likely to develop further over the plan period

16. P93, Policy NE20 Pollution: Development proposals must be designed to protect, and where possible, improve upon the amenities of existing and future residents, occupiers of buildings and the environment generally. Development proposals will need to address the criteria contained in, but not limited to, the policies concerning water quality; flood risk and water management; nutrient mitigation; lighting; air quality; noise; and contaminated land. Where development is likely to generate significant adverse impacts by reason of pollution, the council will require that the impacts are minimised and/or mitigated to an acceptable level within appropriate local/national standards, guidance, legislation and/or objectives.

17. P94, 4.127, Light pollution caused by excessive brightness can lead to annoyance, disturbance and impact wildlife, notably nocturnal animals. The design of lighting schemes should be carefully considered in development proposals to prevent light spillage and glare.

18. P94, 4.128, Dark skies are important for the conservation of natural habitats, cultural heritage and astronomy. The plan area includes three 'Dark Sky Discovery Site' designations, all located within the Chichester Harbour AONB; Eames Farm on Thorney Island, Maybush Copse in Chidham; and north of the John Q Davis footpath in West Itchenor. Development within or directly impacting these areas will be subject to particular scrutiny in terms of their impact on dark skies. The entire SDNPA area is also declared as an International Dark Sky Reserve. Development directly impacting this area will be subject to similar scrutiny.

19. P96, Policy NE22 Air Quality

20. P97, Policy NE-23 Noise

21. P142, Para 6.29, Amenity: Private space, shared space and the design quality and construction of communal spaces all contribute to amenity

22. P155-6, Policy P11: Conservation Areas "protecting the setting (including views into and out of the area)"

23. P55, Para 4.26 - The council is under a legal duty to protect designated habitats, by ensuring that new development does not have an adverse impact on important areas of nature conservation, and by requiring mitigation to negate the harm caused.

24. P58, Para 4.33 The council is under a legal duty to protect their designated bird populations and supporting habitats

25. P95, Para 4.129 The council has a duty to review and assess air quality within the district

26. P301, Conservation Area: An area of special architectural or historic interest, designated under the Planning (Listed Buildings & Conservation Areas) Act 1990. There is a statutory duty to preserve or enhance the character, appearance, or setting of these areas.

Change suggested by respondent:

Amend the plan as follows:

8.17 To redress the lack of response from the ORR in February 2019 and lack of any evidence of any other engagement (as noted in the Duty to Cooperate statement of compliance, page 52) the Council will make renewed efforts to engage with the ORR, Network Rail and train operators with the aim of gaining a firm commitment for the reinstatement of the train stop between Tangmere and Oving on the existing line. The council will work with these organisations and local stakeholders to facilitate improvements to the accessibility of railway stations and provision of new station stops and other strategic infrastructure to be available on a predict and provide basis. The council also works closely with bus operators to improve their services in and through the plan area.

Tangmere Station – site option 1 (preferred): Woodhorn Lane, access from Oving road. This is located approximately 1800m from the museum, with the benefit of adjacent land on both sides of the line and an existing level crossing. The site to the north of the track could repurposed for bus interchange, secure bike storage and bus station. Site access could be improved for pedestrian / cycle via a cost effective access to the disused airfield perimeter near the junction between Woodhorn Lane and Church Lane Oving.

Tangmere Station – site option 2: adjacent to Chichester Flood Relief Channel, access via Oving Road. This site has the benefit of existing structures at the side of the line and a disused agricultural property which could be reused for station facilities. This site also has space on both sides of the line. Train passing through the site shows that there is plenty of space for a full length station for services at this site.

Object

Document Element: Policy T1: Transport Infrastructure**Respondent:** Arun District Council (Planning Policy Team, Team Leader) [7587]**Summary:**

Arun District Council is concerned that Chichester District Council's Regulation 19 Local Plan Policy T1 Transport Infrastructure is not effective and should account for the cross boundary mitigation contributions and remove the uncertainty over how cross boundary contributions towards schemes such as Bognor Road and Whyke road roundabouts will be pooled to other A27 mitigation solutions such that there are no adverse implications for delivering committed developments in Arun (e.g. West of Bersted, Pagham North and South).

Full text:

Arun District Council (ADC) is concerned that the proposed Policy T1 Transport Infrastructure is not effective or justified. Subject to ongoing Duty to Cooperate discussions with Chichester District Council (CDC), ADC hopes to resolve these matters with a view to securing a Statement of Common Ground and subsequent withdrawal of these objections before the plan is submitted:-

- The infrastructure constrained approach delivering only the two scheme improvements on the A27 at Fishbourne and Bognor roundabouts (delivering reduced housing numbers), and the potential cross boundary impact with additional mitigation scheme costs and uplift from ADC planned and committed development (e.g. West of Bersted) - uncertainty over ADC developments (i.e. West of Bersted, Pagham North and South) and their contributions towards A27 mitigation improvements e.g. A27 Whyke Road Roundabout;
- The strategy is silent about cross boundary future growth assumptions (e.g. Arun) that may assist with A27 capacity. This may cap A27 capacity and ADC's future plan making and developments unviable because of the need for additional improvements;
- A259 safety schemes in Arun at Comet Corner and Oystercatcher are accommodated in Chichester's infrastructure constrained development strategy approach up to 2039 without significant adverse impact and need for cross boundary mitigation. However, Arun would also wish to see this demonstrated for any additional development scale above the infrastructure constrained approach (575 dwelling per annum) to Chichester's full housing requirement over the plan period to 2039 and whether any cross boundary mitigation provision would be needed within this policy.

Change suggested by respondent:

Chichester District Council's Regulation 19 Local Plan Policy T1 Transport Infrastructure should account for the cross boundary mitigation contributions and remove the uncertainty over how cross boundary contributions towards schemes such as Bognor Road and Whyke road roundabouts will be pooled to other A27 mitigation solutions, such that there are no adverse implications for delivering committed developments in Arun (e.g. West of Bersted, Pagham North and South). The policy or supporting text (e.g. paragraph 8.11) should also clarify whether any additional housing achieved via the monitor and manage approach above 575 dwellings per annum will safeguard against potential adverse cross boundary implications (e.g. on the A259 at Oystercatcher and Comet corner junctions in Arun) and how necessary mitigations would be phased/triggered with additional housing.

Object

Document Element: Policy T1: Transport Infrastructure**Respondent:** Beechcroft Developments Limited [8188]**Agent:** Genesis Town Planning Ltd (Mr Jeremy Farrelly, Director of Planning) [7504]**Summary:**

Object on grounds that proposed "monitor and manage" approach as opposed to "plan, monitor and manage" approach inherently acknowledges that Council is failing to plan to address infrastructure or housing needs; approach not consistent with national policy and will actively constrain delivery of infrastructure and housing needed; modelling data provided in Chichester Capacity Study does not provide justification for how figure of 535 dpa was arrived at, SATURN modelling shows that 700 dpa could be accommodated; requested financial contributions are for improvements on the SRN which is the responsibility of National Highways, funding received from the Department of Transport; method by which financial contributions have been calculated is flawed.

Full text:

See attachments.

Change suggested by respondent:

Adopt a "plan, monitor and manage" approach which plans to meet housing needs in full through committing to delivery of infrastructure improvements and if necessary, phasing housing requirement towards end of plan period with progress towards infrastructure funding being monitored and delivery of sites being managed such that they will only be brought forward providing appropriate infrastructure improvements to A27 as is necessary to support each development, is provided. Chichester Capacity Study needs to be updated and use latest traffic growth modelling (Ver 8.0 SATURN modelling) to establish capacity of roundabout junction improvements and extent of funding required to carry out necessary improvements. Take into account other types of use for financial contributions in addition to residential.

Document Element: Policy T1: Transport Infrastructure**Respondent:** Bellway Homes (Wessex) Ltd [1573]**Agent:** Chapman Lily Planning (Mr Brett Spiller, Planning Consultancy Director) [8132]**Summary:**

Not clear how developments are to mitigate impacts of travel by car, albeit assumed that encouragement for car sharing (through travel plans) and electric vehicles (through the provision of charging points) are two means. Agree there is need for new transport infrastructure to come forward alongside new development but consider phasing of development of sites that serve to minimise impacts upon the A27 (notably Southern Gateway) need not be impaired owing to City Centre location and proximity to travel interchanges. Concur it is beholden upon strategic development to promote delivery of sustainable forms of travel and deliver new transport infrastructure, must be proportionate to potential effects of development.

Object

Document Element: Policy T1: Transport Infrastructure**Respondent:** Bosham Parish Council (Parish Clerk, Clerk/RFO) [749]**Summary:**

Over capacity at the Fishbourne roundabout was identified in 2014, there has been a massive increase in housing west of Chichester between 2014 and 2023 but no improvement to the roundabouts have been implemented to date. There is no guarantee that funding to improve the A27 or Fishbourne roundabout will be available within the timescale of the Plan. Congestion has been a problem since 2014 and this strategy does not offer a solution. There is a clear omission here that funding is not available to facilitate the improvements required to address the current and worsening congestion caused by future development.

Full text:

Over capacity at the Fishbourne roundabout was identified in 2014, there has been a massive increase in housing west of Chichester between 2014 and 2023 but no improvement to the roundabouts have been implemented to date. There is a clear omission here that funding is not available to facilitate the improvements required to address the current and worsening congestion caused by future development.

Change suggested by respondent:

Public transport is not in the control of CDC and therefore it is not possible to guarantee improved and expanded services. The proposed the £7,728 charge per unit towards infrastructure is yet to be confirmed as legally compliant. Thus an even greater reduction in housing numbers to the Chichester area is required.

Object

Document Element: Policy T1: Transport Infrastructure**Respondent:** Mr Edward Bowring [7811]**Summary:**

The A259 in Fishbourne is already at capacity, with tailbacks from A27 roundabout to the village at rush hour. The road simply can not take any extra traffic as it currently is. The A259 and Clay lane road surfaces are not maintained well enough for the current flow, let alone for the planned new development from Chichester to Southbourne. Our homes on the A259 already shake from passing large vehicles, especially when the A27 is shut. Trying to cross the A259 as a pedestrian with children is already dangerous enough.

Full text:

The A259 in Fishbourne is already at capacity, with tailbacks from A27 roundabout to the village at rush hour. The road simply can not take any extra traffic as it currently is. The A259 and Clay lane road surfaces are not maintained well enough for the current flow, let alone for the planned new development from Chichester to Southbourne. Our homes on the A259 already shake from passing large vehicles, especially when the A27 is shut. Trying to cross the A259 as a pedestrian with children is already dangerous enough.

Change suggested by respondent:

Only allow a number of new homes in line with what the current road network can handle and protect Chichester harbour AONB and wild life corridors from further pollution. For the roads to be better maintained before any new major development is permitted. To install 20mph zones for A259 villages and more pedestrian road crossings so people can cross safely. Consider alternative routes to the A259 when the A27 is closed.

Document Element: Policy T1: Transport Infrastructure**Respondent:** Chidham and Hambrook Parish Council (Parish Clerk, Clerk) [7830]**Summary:**

The locations and level of housing will not minimise the need to travel by car. The A27 improvements need to be in place before the housing before it becomes impossible to travel and the climate change targets are breached. Public transport requires increased capacity, infrastructure and frequency which will need considerable investment. Is this going to be provided by Southern Rail and Stagecoach? Where is the collaboration? The West Sussex Bus Plan does not address how this will happen. There is too heavy a reliance on developer contributions for all aspects of travel, including local networks and active travel.

4463

Object

Document Element: Policy T1: Transport Infrastructure

Respondent: Ms Lindsay Davey [7844]

Summary:

I consider this policy not to be sound. The A27, its junctions and surrounding/connecting roads are already congested and will become more so with the proposed increase in the population and hence car owners/users.

The plan gives no defined or confirmed road infrastructure development nor funding/investment to enable action to reduce the detrimental impact of the proposed massive increase in populus in Tangmere and its surrounding area.

To 'monitor and manage' is not appropriate to deal with the predicted issue of congestion.

Air pollution and noise pollution will increase.

Tangmere is the largest planned high order settlement hubs (13% of total Local Plan housing - see p284 housing trajectory) and has no close proximity rail station., unlike proposed developments at Southbourne, Nutbourne and Fishbourne.

Full text:

See representation

Change suggested by respondent:

The 'monitor and manage' strategy needs to be removed and become 'predict and provide' the emphasis being on the 'provide' being secured, which would assist in easing the predicted road congestion issues.

A railway station needs to be developed and built for the Tangmere area to improve easy access to rail travel for the increased population and this encourage alternative travel used.

To reduce the massive number of proposed new housing units to be built in and around the Tangmere area where there are already severe known traffic congestion issues, particularly at junctions and roundabouts that feed in and out and around Chichester and its surrounding.

Document Element: Policy T1: Transport Infrastructure**Respondent:** Deerhyde Limited [7657]**Agent:** Vail Williams LLP (David Ramsay, Partner) [8134]**Summary:**

The phasing of delivery of new development to align with provision of new transport infrastructure such as improvements to the A27 and elsewhere on the highway network, will be key to managing impacts on the highway. This is yet another impediment to the delivery of a strategic allocations and larger scale development which would, by their very nature, generate a higher highway impact on the transport network than carefully planned smaller developments which could satisfy a much more localised need and be cause less impact on the strategic road network.

The lack of soundness to the approach of significant reliance on strategic sites, due to the current lack of capacity of the A27, is evident in the text that accompanies the policy which states that opportunities to secure funding to implement this package of improvements will be maximised by working proactively with Government agencies, other public sector organisations and private investors. Developer contributions from new development will also be sought. It is clear that smaller scale developments which would have a significantly lesser impact on the highway network could deliver housing quicker and with fewer constraints to implementation. It is for these reasons that smaller sites should be allocated, particularly in the Manhood Peninsula, for development.

Full text:

I am pleased to attach our representations in response to the Chichester Local Plan Regulation 19 consultation. These representations are submitted on behalf of our clients Deerhyde Ltd. owners of land in Selsey and located in the area for a significant number of years.

The submitted documents include the following:

- Representations statement
- Plans showing the potential road widening of Golf Links Lane and Paddock Lane, Selsey

- Development potential of sites for residential development at Golf Links Lane and Old Farm Road, Selsey taking account of flood zones 2 and 3 (2 plans 15-085 SK03 and SK04)
- Plans showing access options to Golf Links Lane site
- Plan showing tracking analysis for low-loaders
- Junction analysis
- Submission form

As detailed in the attached, after careful consideration we have concluded that the housing strategy for Chichester is flawed in principle as it fails to allocate sufficient sites in outside Chichester City (or adjacent to) to allow the remainder of the District to continue to provide houses for local people in areas where they are most needed.

In addition, our clients have put forward a suggestion for an infrastructure improvement to Selsey – namely the widening of Golf Links Lane and Paddocks Lane to accommodate delivery of caravans / other HGV / LGVs but also to provide a wider carriageway which could potentially incorporate a pavement / footpath cycleway to aid safer conveyance of pedestrians and vehicles in the area. Adding in a safer highway solution would also encourage car users to walk or cycle for local trips rather than risking congestion in the car. It would have the added benefit of diverting caravan park traffic travelling from the north into the caravan parks earlier and thus relieving congestion of Selsey High Street.

Introduction

1.1. Vail Williams LLP has been instructed by Deerhyde Ltd to submit representations to the Chichester Local Plan 2021-2039: Proposed Submission (Regulation 19) document.

1.2. As per the Website, these comments seek to address the three questions namely:

1. Is it legally compliant?
2. Is it sound?
3. Does it comply with the duty to cooperate?

1.3. These representations are largely focussed on the provision of housing and ensuring that a satisfactory access (both vehicular and pedestrian) can be maintained and enhanced, particularly in Selsey.

1.4. These representations reflect the fact that our client, Deerhyde Ltd, owns a significant amount of land in the Selsey area, an interest which was acquired in 1986 but with family ownership going back many years before then.

1.5. Our clients have identified a potential opportunity to facilitate highway improvements within Selsey which would be to the benefit of both residents and tourists using the holiday parks and other attractions alike. This would particularly be of benefit given the Council's acknowledgement that the B2145 through Selsey is the busiest B road in the country. These representations bring into question the 'tests of soundness'. In particular regarding the questions as to whether it is 'sound' on the basis of whether it has been 'positively prepared', whether it is 'justified' and 'effective' in respect of the areas of concern raised with respect to employment land provisions.

1.6. As set out at Paragraph 35 of the NPPF local plans are required to be 'sound'. Plans are considered sound when the following applies:

- a) Positively prepared – providing a strategy which, as a minimum, seeks to meet the area's objectively assessed needs¹; and is informed by agreements with other authorities, so that unmet need from neighbouring areas is accommodated where it is practical to do so and is consistent with achieving sustainable development;
- b) Justified – an appropriate strategy², taking into account the reasonable alternatives³, and based on proportionate evidence⁴;
- c) Effective – deliverable over the plan period⁵, and based on effective joint working on crossboundary strategic matters that have been dealt with rather than deferred, as evidenced by the statement of common ground; and
- d) Consistent with national policy – enabling the delivery of sustainable development in accordance with the policies in this Framework and other statements of national planning policy, where relevant.⁶

1.7. These representations seek to highlight that Chapter 5 (Housing) has not been positively prepared, in so far as it does not provide [1.] "a strategy which, as a minimum, seeks to meet the area's objectively assessed needs".

1.8. It is also considered that Chapter 5 is not justified as the housing strategy is [2.] is inappropriate as it relies on a number of large strategic sites, with multiple issues some of which are in conflict with other parts of the local plan.

1.9. Chapter 5 is also not justified with respect to its provisions do not [3.] take into account reasonable alternative sites.

1.10. It is considered on the basis of the other factors highlighted in these representations and the proposed housing land provision is not 'consistent with national policy' as the proposed provision does not enable the delivery of sustainable development in accordance with the policies in this Framework and other statements of national planning policy, where relevant. It is considered that the proposed plans are contrary to the NPPF paragraph 16a, 16b, 16c, 16d and paragraph 20a

2 Local Plan Representations

2.1. Having reviewed the draft Local Plan we would make the following comments:

2.2. Paragraph 3.1 asserts the Government's encouragement for local planning authorities to ensure sustainable

development is at the forefront when considering planning applications and that the National Planning Policy Framework (NPPF) defines sustainable development as “meeting the needs of the present without compromising the ability of future generations to meet their own needs”. Paragraph 3.5 goes on to advise the range of factors as are informed the spatial strategy which underpins the local plan which, inter alia, “the pattern of need and demand for housing and employment across the area”, “infrastructure capacity and constraints, in particular related to waste water treatment, roads and transport”, “the availability of potential housing types, their deliverability and phasing” and this needs to take place whilst being mindful of the environmental constraints taking a sequential approach to avoiding flood risk areas, protect the environmental designations, landscape quality, the historic environment and settlement character.

2.3. The principles outlined above are supported as these are the key facets of good planning and plan making. However it falls to local authorities to ensure that the sustainable approach includes providing a sufficient supply of homes and facilitating a variety of sites to come forward where needed, and that the needs of groups within specific housing requirements are addressed and that land with permission is developed without unnecessary delay. (Paragraph 65). Paragraph 66 states that within the overall requirement [for housing] strategic policies should also set out a housing requirement for designated neighbourhood areas which reflects the overall strategy for the pattern and scale of development and any relevant allocations.

2.4. Paragraph 67 goes on, where it is not possible to provide a requirement figure for a neighbourhood area, the local planning authority should provide an indicative figure, if requested to do so by the neighbourhood planning body. This figure should take account of factors such as the latest evidence of local housing need, the population of the neighbourhood area and the most recently available planning strategy of the local planning authority.

2.5. Paragraph 68 asserts that strategic policy making authorities should have a clear understanding of the land available in their area through the preparation of a Strategic Housing Land Availability Assessment (SHLAA). From this, planning policies should identify a sufficient supply and mix of sites, taking into account their availability, suitability and locally economic viability.

2.6. Further guidance states (Paragraph 69) that small and medium sized sites can make an important [my emphasis] contribution to meeting the housing requirements of an area, and are often built-out relatively quickly. To promote the development of a good mix of sites the local planning authority should identify sites of small and medium size and support the development of windfall sites through their promises and decisions giving great weight to the benefits of using suitable sites within existing settlements for homes.

2.7. Neighbourhood planning groups should also give particular consideration to the opportunities for allocating small and medium-sized sites suitable for housing in their area. Paragraph 71 goes on: where an allowance is to be made for windfall sites as part of anticipated supply, there should be compelling evidence that they will provide a reliable source of supply. Any allowance should be realistic having regard to the SHLAA, historic windfall delivery rate and expected future trends.

2.8. Whilst it is noted that the delivery of large scale sites can result in the delivery of large numbers of new homes, it is apparent that such developments take considerable time to work their way through the planning system to an approval and even then are only at outline stage. The delivery of new homes is therefore reliant on the Councils to efficiently determine reserved matters applications and, thereafter, discharge of conditions, to allow a swift implementation of planning applications and a timely start on site for the delivery of housing.

2.9. The inclusion of small and medium sites (ie. not reliant on strategic sites) within the housing mix are invaluable in delivering housing quicker and potentially in places, perhaps outside the main settlements, which would allow new housing to be accessible to all which is one of the key facets of the NPPF.

2.10. This approach would assist with maintaining delivery of housing where existing allocations are either stalled or progressing slowly through the planning system or have simply been delayed in coming forward for perhaps other commercial reasons.

2.11. The plan is largely predicated on strategic sites, as detailed at Policy H2 which would provide 7,195 houses. This is a significant reliance on the strategic sites to deliver 75% of the overall housing target and much of them are predicated on the works to the A27 being completed in order to make them acceptable.

2.12. It should be noted that the above housing provision is predicated on the ability to identify mitigation for the impacts on the European environmental designations (including nutrient neutrality), addressing highway implications and negotiating the planning system.

The Manhood Peninsula

2.13. The preferred approached version of the Local Plan does include moderate growth for the settlement hubs of Selsey (250 dwellings) and East Wittering (350) and the service village of Hunston (200). However, since then several planning permissions have contributed to the moderate levels of growth on the Manhood Peninsula which the Council says has accounted for these housing numbers. The plan does not therefore include any strategic allocations on the Manhood Peninsula in recognition of this recently permitted growth and the ongoing constraints the area faces, save for

50 dwellings to come forward at North Mundham.

2.14. This approach is not considered sound as a reason to prevent development of any scale on the Manhood Peninsula (particularly Selsey) for the plan period. As detailed above, it is essential that the plan allocates land across its settlement hierarchy in order to maintain a sustainable and deliverable approach to development and to assist the continuing evolution and economic viability of settlements which rely heavily on tourism and also on new development to maintain the supply of homes to provide options for all sectors of the local community to be able to live on the Peninsula should they so wish.

2.15. It is noted that at Policy S2 (settlement hierarchy), Selsey is listed as a "settlement hub" which is the second tier of settlement under Chichester city. Whilst this hierarchy, particularly in connection with Selsey is supported it is therefore surprising not to see more housing sites allocated within and around Selsey.

2.16. Given the potential number of environmental constraints on the Manhood Peninsula it is unlikely that sites of any excessive size would come forward and large numbers of dwellings would not necessarily result once the sites had taken account of their environmental constraints. That said, and as reflected above, sites of a size proportionate to their location but below "strategic" size can have an important part to play in the delivery of sufficient housing numbers in the right location at the right time in accordance with the NPPF.

Housing

2.17. Policy H1 (meeting housing needs) sets out the housing requirement for the full plan period of 1 April 2021 to 31 March 2039 as 10,350 dwellings. This allocates 963 dwellings to the Manhood Peninsula and a windfall (small site allowance) allocation of 657 dwellings for the whole district. There are no strategic locations/allocations on the Manhood Peninsula under Policy H2 which is considered unsound, particularly given the position that Selsey holds in the settlement hierarchy. Furthermore, under Policy H3 (non-strategic parish housing requirements 2021-2039) Selsey has been allocated zero housing. Again, this is considered unsound as it prevents sustainable development and access to new houses for all settlements across the district.

2.18. An overreliance on consented sites coming forward to provide future housing is considered unsound as, in this case, it effectively prevents any further development on the Peninsula and in Selsey in particular.

Transport

2.19. Policy T1 (transport infrastructure) is specifically aimed at ensuring that integrated transport measures will be developed to mitigate the impact of planned development on the highway network, improve highway safety and air quality, promote more sustainable travel patterns and encourage increased use of sustainable motor travel, such as public transport, cycling and walking.

2.20. The council will work with National Highways, WSCC, other transport and service providers and developers to provide a better integrated transport network and improve accessibility to key services and facilities. The policy lists seven ways in which the key objectives of reducing the need to travel by car, enabling access to sustainable means of travel, including public transport, walking and cycling; managing travel demands; and mitigating the impacts of travelling by car can be achieved.

2.21. Whilst it is not intended to go through all of these in this document it is noted that all parties are expected to support the four objectives by working with relevant providers to improve accessibility to key services and facilities which would be relevant to Selsey (see below).

2.22. The policy is also aimed at planning to achieve a timely delivery of transport infrastructure on the A27 and elsewhere on the network which is needed to support new housing, employment and other development identified in this plan. The phasing of delivery of new development to align with provision of new transport infrastructure such as improvements to the A27 and elsewhere on the highway network, will be key to managing impacts on the highway. This is yet another impediment to the delivery of a strategic allocations and larger scale development which would, by their very nature, generate a higher highway impact on the transport network than carefully planned smaller developments which could satisfy a much more localised need and be cause less impact on the strategic road network. The tariff proposals outlined at paragraph 8.20 only covers part of West of Chichester and Tangmere SDLs and not the other strategic sites outlined at Policy H2.

2.23. Critically it is also understood that Highways England has pulled funding for the improvements to the Bognor Road roundabout as part of a package of A27 improvements. On this basis it is unclear how further funding would be secured at this time.

2.24. The lack of soundness to the approach of significant reliance on strategic sites, due to the current lack of capacity of the A27, is evident in the text that accompanies the policy which states that opportunities to secure funding to implement this package of improvements will be maximised by working proactively with Government agencies, other public sector organisations and private investors. Developer contributions from new development will also be sought. It

is clear that smaller scale developments which would have a significantly lesser impact on the highway network could deliver housing quicker and with fewer constraints to implementation. It is for these reasons that smaller sites should be allocated, particularly in the Manhood Peninsula, for development.

2.25. The content of Policy T2 (transport development) is largely supported and considered sound save for the fact that it does not seem to cover the improvement of local transport routes, particularly those that would assist in improving the circulation of traffic around smaller settlements. The policy should be amended to specifically relate to local transport improvements which are locally important to aid traffic circulation and reduce congestion.

Neighbourhood Plan

2.26. The Selsey Neighbourhood Plan does not seek to allocate any sites or residential development, instead relying on those which were allocated in the previous local plan and, in particular, developments at Park Farm/Middle Field and Drift Field totalling 249 houses. It is assumed that this existing commitment accommodates the neighbourhood plan of 150 houses which is the justification for not allocating of residential development in the neighbourhood plan. However, this is short sighted as the neighbourhood plan runs to 2029 and, although development sites are largely controversial within smaller communities there is a lack of recognition of the requirement to provide new houses for existing and future residents (including descendants of current residents) in order to maintain the vitality and viability of the settlement outside of the tourist season where it is recognised that the local population will swell.

2.27. These points add further weight to the considered lack of soundness to the housing policies in the local plan which fail to recognise the need for smaller allocations within the Manhood Peninsula, particularly Selsey.

3 Local Infrastructure Provision

Selsey Road Improvements

3.1. Our clients wish to put forward a potential highway improvement scheme for Selsey which has come about given their extensive historic knowledge of the town and experience of significant congestion along Selsey High Street as a result of an over-reliance of this route by traffic using the caravan parks. It would be a common sense alternative route (to using High Street) which will alleviate congestion along Selsey High Street/School Lane/Paddock Lane/Warners Lane, particularly during the summer months.

3.2. The local plan focusses its attention on the need to improve the strategic highway network but this proposal would provide a significant benefit at a local level in Selsey. As per the attached plan, our clients propose to widen Golf Links Lane from its junction with the B2145 Chichester Road to its junction with Paddock Lane, then widen Paddock Lane and make it up to adoptable standard to enable delivery of holiday traffic to the point where it meets the north eastern corner of White Horse Caravan Park, from which point the road has been made up to carry holiday traffic. At the moment, the northern section of Paddock Lane is just a rough track which is not suitable for ordinary road traffic. It is envisaged that, in conjunction with the owner of the largest caravan parks, Warner's Lane will also be improved. It is currently a tarmac road in poor condition with no footways and one section is too narrow to allow two vehicles to pass each other. This is not satisfactory for the major access route to the largest caravan parks.

3.3. Golf Links Lane is currently a single track, tarmac road which is in poor condition. It is two-way but much of it is too narrow to allow two vehicles to pass each other. It serves Northcommon Farm, a small housing development on the northern side, Selsey Golf Club and Selsey Country Club (which comprises c.300 holiday chalets and an associated licensed club). If it were to be made up to adoptable standard to the point where it meets Paddock Lane, it would improve access for existing users but, importantly, it would also create a more direct access route (in conjunction with Paddock Lane) for traffic associated with thousands of holiday caravans as well as a touring caravan park.

3.4. Given that a large proportion of holiday traffic and other tourist industry-related traffic (HGVs carrying food and drink, caravan transporters, tractor/trailer transport and public transport) use the route along High Street/School Lane/Paddock Lane/Warners Lane it is considered that this could be diverted from the B2145 Chichester Road further north than Selsey High Street, thus taking traffic away from the congested High Street. An easier, more direct route to the major caravan parks would be an attractive alternative.

3.5. The mechanism to deliver such a proposal is not yet the subject of formal agreement. A large proportion of the land required to widen the roads is within the ownership of Deerhyde Limited (our clients) and the owner of the major caravan parks. The latter has been very supportive of the proposal verbally. A short section of land is not in any specific ownership but our clients have long-standing rights over its use, which can be traced back to 1830. Our clients are serious about facilitating these highway improvements, including the use of their land, which will inevitably have a significant financial impact upon them.

Potential Residential Development Sites

3.6. In order to mitigate the financial impact including both the loss of their land and the implementation of the proposed highway improvements our clients would like to promote two sites for residential development, namely land north of Golf Links Lane (13.5 acres/5.46 hectares) and land west of Old Farm Road for residential development. Whilst the north

western corner of the site is located within Flood Zones 2 and 3 it is considered that the developable area of the site would be approximately 4 hectares and could therefore deliver approximately 120 to 140 dwellings. This includes retaining the existing boundary screening along the south eastern boundary and avoiding Flood Zones 2 and 3. An indicative plan is attached to this statement.

3.7. Thawscroft Ltd, an associated company, also owns land west of Old Farm Road, Selsey (2.8ha / 6.9 acres) which taking account of the flood risk constraints along its western boundary could accommodate approximately 50 dwellings. An indicative plan is attached to this statement.

3.8. Having reviewed the planning history of the site it is noted that a planning application (under the name of Thawscroft Limited) was made in December 2016, refused in June 2017 and the appeal was dismissed on 11 June 2018.

3.9. The reasons for refusal related to the following:

1. Site is located outside the defined settlement boundary for Selsey.

2. When the planning officer was giving evidence, he stated that he knew of an alternative site at lower risk of flooding but he would not identify it. After the appeal, an area of land north of Park Lane was identified for 250 houses. The land in question becomes waterlogged in the winter and is highly prone to surface water flooding. It is also only about 250m from Pagham Harbour, a site of major ecological importance with a significant level of protection afforded to it. The planning officer said the real issue with our appeal was one of numbers so it seemed curious to me that a site with a much larger number (250) was identified soon afterwards. Also, the land south of Park Lane (similarly prone to surface water flooding) was in the numbers for 2015/20 but in fact could not be started until 2021 so the planning inspector was misled. I believe that was crucial to the outcome. Landlink have proposed land west of the "Wave" roundabout (opposite Asda). This may be as an alternative for the land north of Park Lane. Neither parcel would be a good fit in the settlement policy area, whereas the land to the west of Old Farm Road would be, a fact acknowledged by planning officers in the past.

3. We did in fact offer to provide contributions towards improving the A27 so that reason for refusal was withdrawn prior to the appeal being heard.

4. As far as I can recall, the Council was content with our proposals in these matters at the time the appeal was heard. The criticism was that the need to avoid Flood Zones 2 and 3 created a narrow site which meant that the layout was said to be cramped. It could be that, with a smaller number of houses, MH Architects could provide an improved layout. Maybe this is reflected in the plan to which Vail Williams refer in paragraph 3.13.

3.10. It is considered that, as detailed above, given the Council's approach to an over-reliance on large strategic sites to fulfil its housing need and the lack of sites identified for development on the Manhood Peninsula (and in Selsey in particular) during the plan period this site could be proven to be an appropriate location for development as a "windfall site" to help maintain housing supply whilst the strategic sites are in the planning system.

3.11. It is considered the dwellings on the site could be laid out to avoid the Flood Zones 2 and 3 and therefore be at considerably less flood risk than the proposal which was dismissed at appeal. This is set out in the enclosed plan. This would overcome reason for refusal 2.

3.12. Reasons for refusal 3 and 4 would be overcome through the agreement of under Section 106 of the Town & Country Planning Act to provide contributions towards the improvement to the A27 on a proportionate basis to the size of the site and the number of dwellings and also the relevant number of affordable housing units required by policy (or justified as part of a viability exercise). Other matters such as the management of the landscaping, open space, buffers and drainage infrastructure could also be secured by the Section 106 agreement.

3.13. We commend the above highways solution and subsequent development sites to officers in consideration of the draft Local Plan.

4 Conclusions

4.1. It is clear that whilst the overarching strategy of the location of the majority of development in the largest urban settlement of Chichester or adjacent to it is sound the lack of allocation of significant housing numbers to those areas outside Chichester is unsound. This would mean that the vast majority of the district would attract very little housing over the planning period to 2039 thus ensuring that existing settlements would not evolve and would potentially shrink as existing residents and descendants of residents migrate to the Chichester or its strategic urban extensions.

4.2. Outside Chichester, the strategic proposals for Southbourne and Tangmere are similarly isolated. The Manhood Peninsula is particularly lacking in the provision of additional housing sites during the plan period with the justification provided that, for Selsey in particular, recent planning permissions which are being built or have been completed would accommodate all of the housing need going forward for the plan period.

4.3. This approach is flawed for two main reasons (making the Local Plan unsound):

1. The over-reliance on strategic allocations which themselves are constrained by the capacity issues on the A27 and environmental issues such as nitrate neutrality (and any future water neutrality issues which migrate south from the north of Chichester) and the usual impacts on the European sites could mean that these sites are slower in being delivered with little in the way of alternatives allowed for in the local plan.
2. The failure to acknowledge any future development potential of note within the Manhood Peninsula and in particular Selsey will constrain the continued vitality and viability of the settlements within the Manhood Peninsula, particularly following the pandemic when the service sectors are struggling. Taking into account that Selsey in particular but other settlements along the coast within the Manhood Peninsula are reliant on seasonal tourist activity, additional residents are relied upon outside these times in order to provide income for those businesses which may struggle to survive outside the holiday seasons. An effective block on development would significantly reduce the potential future viability of these settlements outside the tourist season.
- 4.4. The emphasis on the stated urban-focussed housing strategy encourages neighbourhood planning groups/parish and town councils to maintain an opposition to the relevant rather than a proactive policy framework to direct appropriate development within their areas.
- 4.5. Our clients have detailed above one way which their land could be used in conjunction with others to facilitate a local infrastructure improvement to assist traffic circulation and access in and around Selsey itself which would need to be funded by future residential development and we commend this proposal to you for further consideration.
- 4.6. We trust that officers will take these representations into account and we look forward to receiving confirmation that the representations have been duly made.

Representations to the Chichester Local Plan - March 2023 - Deerhyde Ltd -

<https://chichester.oc2.uk/a/spd>**5022****Object****Document Element:** Policy T1: Transport Infrastructure**Respondent:** Domusea [1816]**Agent:** Smith Simmons Partners (Paul White) [7650]**Summary:**

The policy objectives to ensure new development is well located and designed to avoid or minimise the need for travel and encourage the use of sustainable modes of travel as an alternative to the private car are supported. However, the proposed contribution of £7.7k per dwelling towards A27 highway improvements applies to new housing across the district even in the NE part of the district where impacts from development on the A27 will be less than developments in the south of the district.

In any event it is unclear how the contributions are justified when the responsibility for trunk road infrastructure improvements rests with National Highways.

The proposed contribution in T1 is therefore questioned and in our view, flawed. The level of contribution set out in the policy and the principle of a contribution will therefore require further testing at the forthcoming Examination.

Full text:

The 'tests of soundness' for Local Plan preparation are set out in paragraph 35 of the July 2021 NPPF. They require the 2021-39 Local Plan to have been:

- Positively prepared – providing a strategy which, as a minimum, seeks to meet the area's objectively assessed needs; and is informed by agreements with other authorities, so that unmet need from neighbouring areas is accommodated where it is practical to do so and is consistent with achieving sustainable development;

- Justified – an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence;
- Effective – deliverable over the plan period, and based on effective joint working on cross-boundary strategic matters that have been dealt with rather than deferred, as evidenced by the statement of common ground; and
- Consistent with national policy – enabling the delivery of sustainable development in accordance with the policies in this Framework.

Local Plan reviews are a legal requirement every 5 years in accordance with Regulation 10A of the 2012 Town and Country Planning (Local Planning) (England) Regulations. The Regulation 19 Plan is not legally compliant as it has not been reviewed within 5 years of the last Plan adopted in July 2015. It is also disappointing that the failure of the current Regulation 19 Local Plan to meet objectively assessed need (OAN) of 638 dpa outside the national park has not been properly evidenced in any up to date statement of common ground with neighbouring authorities with regards to the 'duty to cooperate'.

At this stage we believe the Plan as drafted therefore fails the positively prepared, effective, and consistent with national planning policy tests.

Duty to Cooperate

The 2014-2029 Local Plan adopted in 2015 does not meet the full objectively assessed housing needs for the area. But it did recognise that future proposals to improve the capacity of the A27 and wastewater treatment works could facilitate additional housing growth. For this reason, it committed the Council to a review of the Plan within five years to ensure that housing needs could be met. That undertaking to review within 5 years was not met.

In 2021 the Council invited an advisory visit from PINS to advise on how the present Local Plan should be prepared. The inspector advised that if the Plan was prepared which did not meet the full housing needs of the area, it would have to show that it had followed the duty to co-operate with neighbouring authorities in maximising the effectiveness of plan preparation.

The inspector said the Duty to Cooperate was therefore critical in the preparation of the Local Plan Review. At the time of the meeting, the council said discussions with neighbouring authorities had been carried out on the basis that the Local Plan Review would meet the full objectively assessed housing needs (OAN) for the area. However if this was not the case, the inspector said evidence of constructive, active, and on-going engagement to determine whether or not development needs could be met elsewhere would need to be shown. Importantly, the inspector said, 1) 'a failure to meet the Duty to Cooperate cannot be remedied during the examination process because it applies to the preparation of the Plan, which ends upon submission', and 2) local planning authorities should make every effort to secure the necessary cooperation on strategic cross boundary matters before submitting plans for examination.

The Duty to Cooperate Statement of Compliance (January 2023) forms part of the evidence base for the Submission Local Plan. In the event, the Local Plan excluding the national park only provides for 575 dpa against an OAN of 638 dpa. However this under provision against need has not been justified anywhere in discussions with neighbouring authorities before the Plan was submitted. Appendix 1 of the Statement of Compliance lists those authorities that were consulted during the earlier Regulation 18 Preferred Approach consultation. Appendix 2 lists those authorities where Statements of Common Ground have been agreed with Chichester DC for the Regulation Submission 19 Plan. No statements have produced or agreed. Therefore as it stands the under provision of housing against OAN in the Plan has not been justified. The failure to meet the duty to cooperate cannot be remedied because it has already ended with the Submission Plan. The plan therefore fails the positively prepared and justified tests. It also fails to comply with national policy in the NPPF paragraph 24-27 which advises on the duty to cooperate approach.

Local Plan Policies

The remainder of these comments deal with the proposed Settlement Hierarchy - policy S2, policy H1 – Meeting Housing Need, Non-Strategic Housing Sites – Policy H3 and T1 Transport Infrastructure.

Policy S2 – Settlement Hierarchy

The Settlement Hierarchy background paper prepared for the Regulation 18 draft Local Plan provides the justification for the hierarchy in Policy S2 of the Regulation 19 Local Plan. We agree that Plaistow & Ifold has been properly identified as a service village in the settlement hierarchy.

Policy H1 – Meeting Housing Needs

The identified housing need has been informed by the 2022 Housing and Economic Development Needs Assessment (HEDNA). It explains that based on the standard methodology, since the last HEDNA in 2020, the district wide housing need has increased from 746 dpa to 763 dpa (621 dpa in the Plan Area to 638 dpa) with the balance to be found in the national park. The proposed 638 dpa for the area of the district outside the national park is the figure that will be tested at the forthcoming Examination.

We have already explained why the failure of the Council to plan for the 638 dpa in the Regulation 19 Local Plan has not

been justified in connection with the duty to cooperate and no evidence has been presented in any statement of common ground with neighbouring authorities to show how development needs could be met elsewhere.

We note from policy H1 that the components of housing supply include outstanding housing commitments without planning permission from the 2015 adopted Local Plan, the Site Allocations DPD, and 'made' Neighbourhood Plans. However, it is unclear how the above housing supply components have been calculated and how they have translated into the strategic and non-strategic allocations in policies H2 and H3.

In the case of Plaistow and Ifold, the last adopted 2015 Local Plan identified the settlement with an allocation of 10 dwellings. The subsequent Site Allocation DPD identified land north of Little Springfield Farm for 10 no. units. A Neighbourhood Plan for Plaistow and Ifold was produced but was withdrawn and no site allocations were confirmed. The allocated site north of Little Springfield Farm remains undeveloped.

With specific reference to Plaistow & Ifold we would therefore query whether 1) the existing housing commitments without planning permission in the 2015 Local Plan and the Site Allocations DPD have been double counted, and 2) whether the non-implementation of the 10 units from the 2015 Local Plan have been ring fenced to count against the new proposed allocation of 25 dwellings at the settlement? In which case, we would question why a further 15 dwellings are only proposed at a service village in the hierarchy compared to other service villages in the NE part of the district which are proposed for higher levels of development (Loxwood 220 dwellings, Kirdford 50 dwellings and Wisborough Green 75 dwellings).

If the 25 dwelling allocation at Plaistow & Ifold is intended to be additional to the 10 units identified in the last 2015 Local Plan, then the allocation should be increased to 35 dwellings as a minimum to reflect the non-implementation of the 2015 allocation.

Policy H3 – Non-Strategic Parish Allocations

Policy H3 identifies non-strategic parish allocations. We have explained above our queries with the 25 dwelling allocation to Plaistow & Ifold, whether it has allowed for the non-implementation of the 10 units in the last 2015 Plan and why it compares so unfavourably with much higher levels of development for the other service villages in the NE part of the district.

We would also query why the options outlined in the PINS advisory visit of 2021 have not been more thoroughly tested for increased housing provision in the north part of the district to increase the supply of housing to meet OAN. There is no updated Settlement Hierarchy background paper, and the revised housing distribution has not been justified anywhere in the evidence base for the Regulation 19 Local Plan.

Policy T1 – Transport Infrastructure

The policy objectives to ensure new development is well located and designed to avoid or minimise the need for travel and encourage the use of sustainable modes of travel as an alternative to the private car are supported. However, the proposed contribution of £7.7k per dwelling towards A27 highway improvements applies to new housing across the district even in the NE part of the district where impacts from development on the A27 will be less than developments in the south of the district.

In any event it is unclear how the contributions are justified when the responsibility for trunk road infrastructure improvements rests with National Highways.

The proposed contribution in T1 is therefore questioned and in our view, flawed. The level of contribution set out in the policy and the principle of a contribution will therefore require further testing at the forthcoming Examination.

Change suggested by respondent:

The proposed per dwelling contribution to improvements to the A27 infrastructure has not been properly justified when the responsibility for trunk road infrastructure rests with National Highways. The policy requires further testing at the forthcoming Examination.

REPRESENTATION TO THE PLANNING POLICY TEAM RE THE LOCAL PLAN MARCH 2023

Our interests in reading the Local Plan 2023 are namely:

The INFRASTRUCTURE NEEDED TO SUSTAIN SUBSTANTIAL DEVELOPMENT

YOU SAY: To work with infrastructure providers to ensure the timely delivery of key infrastructure to support delivery of new development. New development will be supported by sufficient provision of infrastructure to enable the sustainable delivery of the development strategy for the plan area.

Key infrastructure to support the Local Plan will include improvements to transport, open space and green infrastructure, education, health, water supply and removal, telecommunications, flood risk and coastal change management and the provision of minerals and energy Page 33

CAN YOU ACHIEVE THIS?

ROADS - already suffering with surface damage and from too high density of traffic

YOU SAY: A sustainable and integrated transport system will be achieved through improvements to walking and cycling networks and links to accessible public transport. Highway improvements will be delivered to mitigate congestion, including measures to mitigate potential impacts on the A27 through a monitor and manage process.

Page 33 CAN YOU ACHIEVE THIS?

MANAGEMENT OF SEWAGE TREATMENT AND DISPOSAL

YOU SAY: Sewerage undertakers will need to work with regulators to deliver improvements in wastewater infrastructure to support new development and to ensure adverse environmental impacts are avoided on internationally designated habitats. Improvements to water efficiency, conservation and storage capacity will be made.

Page 33 CAN YOU ACHIEVE THIS?

THE IMPACT SUBSTANTIAL DEVELOPMENT WILL HAVE ON OUR UNIQUE AND PRECIOUS ENVIRONMENT. INCREASING LIGHT POLLUTION.

YOU SAY: 12. Protect and enhance the existing biodiversity and important ecological corridor linking Chichester Harbour and the South Downs National Park.

Any development will need to: /

- a. Provide multifunctional green infrastructure both across the site and linking development to the surrounding countryside and Chichester city;
- b. Provide mitigation for any loss of watercourse habitat resulting from culverting for highway provision in the development;
- c. Provide buffer zones to sensitive habitats such as ancient woodland; Page 223

CAN YOU ACHIEVE THIS?

We applaud the words written down on efforts regarded as essential for the conservation of the AONBs and SSSIs of the Harbour. We applaud the efforts to maintain the wonderful view of the Cathedral from various aspects of the City. But we have little faith of these foreseen problems being effectively dealt with.

If the stretch of the A259 from Southbourne (which is classified as a Settlement Hub) to Fishbourne, where we already experience serious impact in congestion and noise, is going to be allocated several thousand new houses by 2030, I cannot imagine how the road will be able to start coping with that increased density of traffic. Another several thousand x 1.5 average vehicles per house will be using this already regularly gridlocked road.

We would implore that you actually managed to achieve what you are setting out with this wordy document but we have little faith, in fact, do not believe, that our environment and the precious habitats and lives of our wonderful local flora and fauna will be enhanced or even upheld in the process and we therefore believe that this Local Plan is unsound.

Document Element: Policy T1: Transport Infrastructure**Respondent:** Hampshire County Council (Emily Howbrook, Head of Spatial Planning) [8161]**Summary:**

Not engaged in discussions on scope of transport studies. Insufficient evidence to substantiate conclusion in transport study of negligible impact on A27 Havant Bypass roundabout and A3(M)/A27 junction. No mention of cross-boundary impact on A259/other Hampshire routes. Insufficient evidence of scale of impact on local highway network in Hampshire. Studies don't state how highway impact of proposed Southbourne settlement hub was assessed, whether this included assessment of A259 corridor into Hampshire. No mitigation proposed on Hampshire highway network. Chem route ends at Hampshire boundary, fails to consider continuation of cycle route along A259 into Hampshire, connecting with cycle routes in Havant LCWIP, providing key cross-boundary sustainable transport route.

Full text:

Thank you for consulting Hampshire County Council on the Chichester District Council Local Plan. The County Council in its capacity as a neighbouring highway authority has focussed this response on the potential implications of the cross-boundary transport issues associated with the Chichester local plan spatial development strategy, and the potential impact on the Hampshire local highway network and wider Solent area.

Transport evidence base

The transport evidence is provided by two studies; the Strategic Development Options and Sustainable Transport Measures (December 2018) which looked at three local plan scenarios, followed by the Chichester Transport Study (Jan 2023) which assessed one local plan spatial scenario. Hampshire County Council was not engaged in discussions on the scope of either of the transport studies. The studies assessed the impact of local plan development allocations on the highway network within Chichester district and in the neighbouring Hampshire districts. They looked at the highway impact on the A27 and A3 trunk roads in Hampshire, but as these roads are part of the Strategic Road Network, they are the responsibility of National Highways.

The main cross boundary route is the A259 which runs from the A27 Warblington junction in Hampshire eastwards though Emsworth towards Brighton. The A259 section in Hampshire is the responsibility of Hampshire County Council, but neither of the transport studies give an assessment of the highway impact on the section of the A259 within Hampshire. Instead, the conclusion of the Transport study (2018) states that for Hampshire there is a negligible impact on the operation of the A27 Havant Bypass roundabout and the A3(M)/A27 junction and that the majority of traffic projected within Hampshire was identified to travel east west and north south along the A3(M) and the A27. Hampshire County Council does not consider that the studies give sufficient evidence to substantiate this conclusion. The subsequent Transport study (2023) then concludes that with mitigation in place within Chichester district the impacts of the emerging local plan development on network performance in Hampshire are likely to be comparable to the baseline scenario. There is no mention or indication of the cross-boundary impact on the A259 or other routes in Hampshire.

Hampshire County Council assert that there is insufficient evidence to provide a full understanding of the scale of impact on the local highway network in Hampshire, or to say definitively that there is not a severe impact on the A259 in Hampshire. The County Council would therefore support a dialogue with Chichester District to discuss the cross-boundary transport issues specifically those associated with the A259 route within Hampshire.

Proposed Southbourne settlement hub (policy A13)

The local plan proposes a new settlement hub of 1,050 dwellings (policy A13) located in Southbourne along the A259 and just east of the Hampshire boundary. To travel westwards from Southbourne to the A27 Warblington junction in Hampshire the only direct route is along the A259 which crosses into Hampshire. The transport studies do not state how the highway impact of the proposed Southbourne settlement hub was assessed and whether this included an assessment of the A259 corridor into Hampshire.

It is the County Council's view that the transport evidence does not, at this stage, provide an adequate consideration of the impact on the local highway network in Hampshire, and specifically on the A259.

The Southbourne settlement hub will require its own Transport Assessment at the planning application stage in order to fully identify the local and cross-boundary impacts on the A259 route which crosses into Hampshire.

Masterplanning of the Southbourne settlement hub would also be beneficial to prevent high levels of car dependency and to ensure that the site has connections to public transport and that the new facilities and services can be accessed by walking and cycling trips both by the new residents and those from the adjacent residential areas. A closer attention to masterplanning of new sites for high quality neighbourhoods and for the needs of all road users to be assessed using a Road User Utility Framework are key policy components of Hampshire's emerging Local Transport Plan 4.

Transport mitigation

The proposed mitigation in the transport studies focuses on highway capacity improvements along the A27 corridor within Chichester district. There is no mitigation proposed on the Hampshire highway network.

In addition to highway capacity mitigation, several options for sustainable transport mitigation were considered for the medium to long term. A proposal for a strategic cycle route from Chichester to Emsworth (the 'Chem route') along the A259 is included in the Chichester IDP and West Sussex LTP. The County Council recognise that there is potential for this scheme to provide a high-quality cycle corridor for walking and cycling trips and to serve the proposed Southbourne settlement hub. However, the Chem route as presented ends at the Hampshire boundary and fails to consider the continuation of the cycle route along the A259 into Hampshire. Continuing the Chem route into Hampshire would connect with the cycle routes in the Havant LCWIP and provide a key cross-boundary sustainable transport route and links to key destinations in Hampshire.

Change suggested by respondent:

The County Council would support a dialogue with Chichester District to discuss the cross-boundary transport issues specifically those associated with the A259 route within Hampshire.

Continuing the Chem route into Hampshire would connect with the cycle routes in the Havant LCWIP and provide a key cross-boundary sustainable transport route and links to key destinations in Hampshire.

Document Element: Policy T1: Transport Infrastructure**Respondent:** Kingsbridge Estates Limited & Landlink Estates Limited [8084]**Agent:** Savills (Mr William Price, Planner) [7783]**Summary:**

Policy T1 conflicts with the wording of policy E4 of the Local Plan which allows for horticultural development and ancillary development only. This policy wording would seek to require associated development, to be located within settlement boundary areas or other established employment sites. The siting of associated functions within these locations would increase the number of vehicular journeys associated with the industry.

Full text:

Conflict with restrictions of policy E4 and associated text.

The Council's desire to ensure that new development is well located and designed to avoid and minimise the need for travel is supported as stated within Policy T1. Minimising transport movements on the A27 corridor is particularly critical given the acknowledged constraints of the corridor (ref. policy T1)

This is in direct conflict with the wording of policy E4 of the Local Plan which allows for horticultural development and ancillary development only. This policy wording would seek to require associated development, such as office space and storage and distribution uses, to be located within settlement boundary areas or other established employment sites. The siting of associated functions within these locations would increase the number of vehicular journeys associated with the industry.

It is therefore suggested that Policy E4 of the local plan allows for development associated with the horticultural industry to come forward within HDA designations in order to comply with the objectives of Policy T1 of the Local Plan and in the interests of minimising congestion.

Change suggested by respondent:

It is therefore suggested that Policy E4 of the local plan allows for development associated with the horticultural industry to come forward within HDA designations in order to comply with the objectives of Policy T1 of the Local Plan and in the interests of minimising congestion and vehicular movements.

Document Element: Policy T1: Transport Infrastructure**Respondent:** Manhood Peninsular Action Group (Mrs Joan Foster, Chairman) [7874]**Summary:**

Current proposals will do nothing to improve the traffic flow on the A27

Full text:

Contributions to the two A27 roundabouts for the uncommitted housing, 3351, about 40% of total, is assessed at £7,728 per house at current prices. This is 4 times higher than current level of £1,803. Nowhere does there appear to be an assessment as to whether this is viable for the land developers and house buyers. Viability is a key test with regard to deliverability but the Plan is silent on this key issue. So, is the plan deliverable? Does it further price first-time buyers out of the market. Chichester has already one of the highest Ratio of Affordability in Sussex .

Change suggested by respondent:

Relying on developers contributions to resolve the issues of over capacity on the A27 is totally inadequate..It will not help local traffic and through traffic will suffer further delays of a much long duration.

There needs to be substantial investment from Highways England to provide more capacity and reduce the accidents occurring on this road.

Object

Document Element: Policy T1: Transport Infrastructure**Respondent:** Manhope (Mr Carey Mackinnon) [8125]**Summary:**

It is sufficient for us to say that if it was recognised that mitigating measures were required to cater for the huge increase in developments then it follows that the absence of such mitigation should halt completely such development. That is just pure logic.

Everyone who lives, works, uses or visits the WMP knows that having left behind the A27 they have not left behind the traffic problems. The obverse has become the "new norm" with the most minor hold up, such as refuse lorry, slow moving device or minor road works causing substantial delays and queues sometimes up to eighty vehicles long. The system whereby WSCC highways review the impact of planning applications is dysfunctional.

This is evidenced by WSCC highways department being unable to provide accurate feedback to the LPA as to the ACCUMULATIVE impact of very large developments. The modelling simply does not allow it and there is no scope for actual local experience or common sense. In not one case of over twenty applications for ten or more houses have they even flagged a cautionary note about this accumulative impact.

Full text:

Manhope is a local interest group and represents more than 500 residents and users of the Western part of the Manhood Peninsula (WMP); the part of the district at greatest risk from climate, travel and infrastructure challenges.

Our sole purpose is to protect the unique character of the Western Manhood Peninsula by opposing inappropriate and unsustainable large building developments before the necessary infrastructure is actually in place.

We are not sufficiently au fait with the policies to be able to use the clause by clause "speech bubble" approach to comment. Therefore, our response is by way of email as suggested by our MP, Gillian Keegan in her letter to residents in February this year.

We understand that only three topics are open for comment in respect of the proposed Local Plan submission.

1. Is the submission legally compliant?
2. Is the submission 'sound'?
3. Does the submission comply with the Duty to Cooperate?

We are not qualified to comment on either 1. or 2. so these comments will address the question of whether the proposed submission is sound.

Chichester District Council has, quite rightly in our opinion, placed no demands for further large developments in the WMP apart from windfall sites. In our opinion even these should NOT be approved until the caveats shown in our

Conclusion are implemented.

The following subjects have been well aired so we will not dwell on them in great detail but will summarise them as follows.

Transport.

The transport network serving the CDC area is already unable to cope at peak times and groaning at most other times. The A27 frequently gets headline recognition and from a strategic national point of view rightly so. The various arguments are again well rehearsed elsewhere especially from other local interest groups such as MPAG, SOSCA and the Harbour Trust and we support their submissions in this respect.

It is sufficient for us to say that if it was recognised that mitigating measures were required to cater for the huge increase in developments then it follows that the absence of such mitigation should halt completely such development. That is just pure logic.

Everyone who lives, works, uses or visits the WMP knows that having left behind the A27 they have not left behind the traffic problems. The obverse has become the "new norm" with the most minor hold up, such as refuse lorry, slow moving device or minor road works causing substantial delays and queues sometimes up to eighty vehicles long

The system whereby WSCC highways review the impact of planning applications is dysfunctional.

This is evidenced by WSCC highways department being unable to provide accurate feedback to the LPA as to the ACCUMULATIVE impact of very large developments.

The modelling simply does not allow it and there is no scope for actual local experience or common sense. In not one case of over twenty applications for ten or more houses have they even flagged a cautionary note about this accumulative impact.

For example many - actually most - accidents are not reported so the West Sussex Accident Location Map so this source often used by planners and developers to demonstrate how safe our local roads are, is dangerously misleading. Many life changing injuries have been sustained and known about by local people in the WMP but virtually none of these appear in "formal records"

Flooding.

Because of the low lying and vulnerable southern part of the district the findings and implications of the CDC Level 1 Interim Strategic Flood Risk Assessment (December 2022) need to be fully understood by parishes, councillors and local residents before comments of any real value can be made. We asked five elected or formally appointed local representatives and not one felt they had a full grasp of the SFRA's implications and only one had a fair understanding.

We do know that the risk of significant flooding has increased. We also know that even before the SFRA was published the West Sussex County Council Lead Local Flood Authority gave a thumbs down to two of the large applications B 21/01830/OUT in Birdham and EWB22/02214/FULEIA.

CDC have recognised that the Manhood Peninsula has specific challenges including flood risk hence the zero requirement for housing in the WMP. In this respect we think the submission is probably just sound enough and hope that this approach filters through to decisions for applications yet to be determined.

However, to be certain of real soundness the work needs to be completed BEFORE implementation. Please see our notes under "Conclusion" Sewage.

There can be no doubt that this subject must impact whether the submission is sound or not. The arguments are complex and lengthy but two basic simple facts remain.

1. The main sewage plant for the Manhood Peninsula is Southern Waters Siddlesham WWTW. This plant is a couple of metres AOD and yet planners, the EA and developers argue as to whether four or five meters is an appropriate floor level on new developments. Hardly a sound approach when the treatment works will have been inundated well before even a three metre threshold will have been reached. One example of these discussions can be seen at E 22/03125/OUT for 100 houses

2. Southern Water have a policy of deploying large road tankers when heavy rain is forecast to standby local sewage points as there is a high risk of the system being overwhelmed. Frequently the drivers have to stay in their cabs all night.

Yet Southern Water are obliged to advise the LPA that they can deal with the additional load from huge new developments. Neither CDC nor the Inspector can solve the sewerage infrastructure issues but the above facts raise serious doubt as to the soundness of the submission. Please see our further notes under "Conclusion"

Conclusion.

Manhope recognise the real imperative of having a local plan in place and is appalled that the system has resulted in a colossal amount of work for the LPA and yet still a disastrous delay in getting this in place let alone full and proper consultation with parishes and local people. Further delay in the submission of the local plan is therefore wholly unacceptable so our uncomfortable is that the submission, whilst barely sound, is as sound as it can be and should go forward BUT with some very clear caveats. Our suggestion for these are shown below.

A. No new developments of ten or more dwellings shall be commenced until suitable mitigating road improvements to the A27 are in place.

B. No new developments of five or more dwellings shall be approved by the LPA until the following reports, work and maps have been completed and due consultation has taken place with residents & parishes, (in line with the latest government approach to restoring local democracy).

a. Environment Agency flood maps based on the Interim SFRA (December 2022) have been completed.

b. Sewage infrastructure work as yet unknown in Southern Waters upcoming Asset Management Period to be in place before any development of 5 or more dwellings are approved.

c. Full and proper engagement with NHS as to practical limits on health demands as a result of new housing developments especially on the Manhood Peninsula. NHS's advice was ignored by CDC and a planning inspector for a 70 house development (WW/20/02491/OUT) so they have not responded to further consultation requests. Vis EWB 22/02235/OUT and EWB 22/02214. This cannot be allowed to happen again.

C. Insert a policy in the submission that CDC planning reserve the right to apply their discretion in planning decisions when consultees provide advice that is contrary to public and parish experience. If Where formally submitted local and Parish advice given in their written response to planning applications is not aligned to other consultees then take the Parishes advice. To avoid using this discretion is not consistent with exercising a duty of care.

D. A policy written in the final submission to assemble a consortium of stakeholders to conduct a full survey as to the condition of Pagham Harbour. The scope would cover impacts on marine and land-based environments from chemical, micro plastic and sewage contamination of the harbour and it's immediate coastline. Stakeholders would include Natural England, Environment Agency, CDC, Southern Water and the R.S.P.B. It is highly likely that Pagham Harbour is traveling a parallel downward path as Chichester Harbour in terms of condition but no stakeholders are paying this anything like the attention it deserves.

Change suggested by respondent:

No new developments of ten or more dwellings shall be commenced until suitable mitigating road improvements to the A27 are in place.

Manhope Response to Local Plan Submission - <https://chichester.oc2.uk/a/shv>

5476

Object

Document Element: Policy T1: Transport Infrastructure

Respondent: Mayday! Action Group (John Garrett) [7163]

Summary:

For all the reasons already cited, this Policy is not only unsound it should have been sorted before the Local Plan was put out for consultation.

The locations and numbers of new homes proposed will not reduce the need to travel by car. In fact, the opposite. The A27 improvements must be in place before all these new homes. Public transport requires increased capacity, frequency, improved infrastructure and obviously substantial investment. How and when will Southern and Stagecoach deliver this? The West Sussex Bus Plan does not, we believe, deal with this issue. As a community, we should not be reliant upon developer contributions to make our everyday lives work. Developers build houses. They have no regard for anything else other than the profit they achieve once homes have been built.

Full text:

Executive Summary

The Local Plan as written lacks ambition and vision, and will be detrimental to the landscape within which the district lies. It is a plan borne out of a need to produce a legal document which will satisfy the regulatory authorities. In terms of Urban Planning it fails "To meet the needs of the present without compromising the ability of future generations to meet their own needs" (NPPF).

The development that will consequentially arise from the deployment of such a made Local Plan is not sustainable. It will adversely affect the Character, Amenity and Safety of the built environment, throughout our district.

In particular, the Local Plan is inadequate for the needs of the people in the district both at present and in the future because –

1. It has been written in advance of the District having a properly formed and agreed Climate Emergency Action Plan. It is inconceivable that such a key document will not shape our Local Plan. It is this Action Plan that is needed first in order to provide the long-term strategic view as to how and what the District will look like in the future; this, in turn, will help form and shape the policies outlined in any prospective, Local Plan. The Plan as proposed is moribund, as a result of “cart before the horse” thinking.
2. The Local Plan as written does not adequately address how infrastructure, transport and services are going to be materially and strategically improved to meet the predicted growth and shift to a significantly ageing population. There is presently insufficient capacity to supply services and to have adequate people and environmentally friendly connectivity, as a direct result of decades of neglect towards investing in infrastructure and services to meet the needs of the District’s population. We are led to believe that developers through increased levies in order to gain permission to build will fulfil this need, but all that this will result in is an uncoordinated, dysfunctional mess completely lacking in any future-proof master planning approach. We contend that this will do nothing for the quality of life of Chichester District residents and it will create a vacuum whereby few if indeed any can be held accountable or indeed found liable for shortcomings in the future.
3. The Local Plan as written does not state how it will go about addressing the need to create affordable homes. The District Council’s record on this matter since the last made plan has been inadequate and now the creation of affordable homes has become urgent as political/economic/social factors drive an ever increasing rate of change within the District.
4. Flood risks assessments used in forming the Plan are out of date (last completed in 2018) and any decision to allocate sites is contrary to Environment Agency policy. Additionally, since March 2021 Natural England established a position in relationship to ‘Hold the Line’ vs. ‘Managed Retreat’ in environmentally sensitive areas, of which the Chichester Harbour AONB is a significant example. CDC have failed to set out an appropriate policy within the proposed Local Plan that addresses this requirement.
5. The A27 needs significant investment in order to yield significant benefits for those travelling through the East-West corridor; this is unfunded. Essential improvements to the A27 are key to the success of any Local Plan particularly as the city’s ambitions are to expand significantly in the next two decades. But any ambitions will fall flat if the A27 is not improved before such plans are implemented.. The A259 is an increasingly dangerous so-called ‘resilient road’ with a significant increase in accidents and fatalities in recent years. In 2011, the BBC named the road as the “most crash prone A road” in the UK. There is nothing in the Local Plan that addresses this issue. There is no capacity within the strategic road network serving our district to accommodate the increase in housing planned, and the Local Plan does not guarantee it.
6. There is insufficient wastewater treatment capacity in the District to support the current houses let alone more. The tankering of wastewater from recent developments that Southern Water has not been able to connect to their network and in recent months the required emergency use of tankers to pump out overflowing sewers within our City/District reflects the gross weakness of short-termism dominated thinking at its worst and is an indictment of how broken our water system is. The provision of wastewater treatment is absolutely critical and essential to the well-being of all our residents and the long-term safety of our built environment. The abdication by those in authority, whether that be nationally, regionally or locally, is causing serious harm to the people to whom those in power owe a duty of care and their lack of urgency in dealing properly with this issue is seriously jeopardizing the environment in which we and all wildlife co-exist.
7. Settlement Boundaries should be left to the determination of Parish Councils to make and nobody else. The proposed policy outlined in the Local Plan to allow development on plots of land adjacent to existing settlement boundaries is ill-conceived and will lead to coalescence which is in contradiction of Policy NE3.
8. All the sites allocated in the Strategic Area Based Policies appear to be in the majority of cases Greenfield Sites. The plan makes little, if any reference to the development of Brownfield sites. In fact, there is not a Policy that relates to this source of land within the Local Plan as proposed. Whilst in the 2021 HELAA Report sites identified as being suitable for development in the District as being Brownfield sites were predicted to yield over 4000 new dwellings. Why would our Local Plan not seek to develop these sites ahead of Greenfield sites?
9. The Local Plan does not define the minimum size that a wildlife corridor should be in width. What does close proximity to a wildlife corridor mean? How can you have a policy (NE 4) that suggests you can have development within a wildlife corridor? These exceptions need to have clear measures and accountability for providing evidence of no adverse impact on the wildlife corridor where a development is proposed. Our view is quite clear. Wildlife and indeed nature in the UK is under serious and in the case of far too many species, potentially terminal threat. Natural England has suggested that a Wildlife Corridor should not be less than 100metres wide. The proposed Wildlife Corridors agreed to by CDC must be enlarged and fully protected from any development. This is essential and urgent for those Wildlife Corridors which allow wildlife to achieve essential connectivity between the Chichester Harbour AONB and the South Downs National Park.

10. Biodiversity Policy NE5 - This is an absolute nonsense. If biodiversity is going to be harmed there should be no ability to mitigate or for developers to be able to buy their way out of this situation. This mindset is exactly why we are seeing a significant decline in biodiversity in the District which should be a rich in biodiversity area and why the World Economic Forum Report (2023) cites the UK as one of the worst countries in the world for destroying its biodiversity.

11. In many cases as set out in the Policies the strategic requirements lack being SMART in nature – particularly the M Measurable. These need to be explicit and clear: “you get what you measure”.

12. 65% of the perimeter of the District of Chichester south of the SDNP is coastal in nature. The remainder being land-facing. Policy NE11 does not sufficiently address the impact of building property in close proximity to the area surrounding the harbour, something acknowledged by the Harbour Conservancy in a published report in 2018 reflecting upon how surrounding the harbour with housing was detrimental to its long-term health. And here we are 5 years on and all of the organizations that CDC are saying that they are working in collaboration with, to remedy the decline in the harbour’s condition, are failing to implement the actions necessary in a reasonable timescale. CDC are following when they should be actually taking the lead on the issue. Being followers rather than leaders makes it easy to abdicate responsibility. There must be full and transparent accountability.

13. The very significant space constraints for the plan area must be taken into account. The standard methodology need no longer apply where there are exceptional circumstances and we are certain that our District should be treated as a special case because of the developable land area is severely reduced by the South Downs National Park (SDNP) to the north and the unique marine AONB of Chichester Harbour to the south. A target of 535dpa is way too high. This number should be reduced to reflect the fact that only 30% of the area can be developed and much of that is rural/semi-rural land which provides essential connectivity for wildlife via a number of wildlife corridors running between the SDNP and the AONB. Excessive housebuilding will do irretrievable damage to the environment and lead to a significant deterioration in quality of life for all who reside within the East / West corridor.

14. Many of the sites identified in the Strategic & Area Based Policies could result in Grade 1 ^ 2 farmland being built upon. The UK is not self-sufficient in our food security. It is short-sighted to expect the world to return to what we have come to expect. Our good quality agricultural land should not all be covered with non-environmentally friendly designed homes.

Object

Document Element: Policy T1: Transport Infrastructure**Respondent:** Metis Homes [1602]**Agent:** Nova Planning (Mr Patrick Barry, Director) [1195]**Summary:**

Planned mitigation schemes at Fishbourne and Bognor roundabouts are to be funded exclusively by residential development despite allocation at 'Land South of Bognor Road'. Consequently, contributions being sought for residential development would fail CIL Regulation 122 tests for not being "fairly and reasonably related in scale and kind to the development". Transport Study confirms planned mitigation could accommodate further 2,970 dwellings in South which would reduce per dwelling contribution. At best, cost of mitigation could be reduced in the interests of viability and affordable housing delivery. At worst, cost of mitigation would fail CIL Regulation 122 tests for not being "fairly and reasonably related in scale and kind to the development". Strategy focusses on mitigating two junctions on A27 as priorities but applies generic cost to all sites within South. Clearly, impact on junctions will vary for sites within South in terms of location (access to alternative transport) and existing context (greenfield or brownfield) - generic approach to contributions not "fairly and reasonably related in scale and kind to the development". See further Technical Note attached.

Object

Document Element: Policy T1: Transport Infrastructure**Respondent:** National Highways (Mr Marius Pieters, Spatial Planning Manager) [8127]

Summary:

[National Highways letter dated 24/07/23 confirmed representation should be categorised as Issues to resolve]

A27 improvements are necessary to increase capacity to accommodate current traffic levels, committed development and development allocated in the current local plan. The proposed Local Plan allocations will further exacerbate current issues.

Consent for the A27 Chichester bypass improvements project cannot be assumed. The potential use of Compulsory Purchase powers to deliver the scheme should be addressed.

National Highways will continue working with CDC and WSCC to progress interim mitigation measures and alternative transport measures while a long-term strategic solution is considered. This must be in combination with a robust monitor and manage policy/strategy.

The monitor and manage approach must address risk of unacceptable road safety impacts. At present, we do not consider the current strategy to be robust and we seek further information and detail especially on who, when and when monitoring and management will be undertaken.

There is insufficient evidence that funding, partners, and relevant processes are in place to enable the delivery of infrastructure. Nor is there a realistic prospect that longer term investment can be secured within the timescales required.

We seek clarity on the role and remit of the TIMG.

The Plan does not appropriately acknowledge that all housing and employment development generates demand which may create additional SRN impacts; it unclear how developments will mitigate their own impacts.

Sustainable transport initiatives to supplement highway improvements are not evidenced in the Plan and so assumptions and assessment cannot be made.

National Highways seeks:

a. evidence that Council and WSCC have:

- an understanding of current and future pressures and constraints in the transport system;
- identified when and where there is spare capacity;
- strategies to redistribute demand to where there is spare capacity

b. the application of robust strategies, policies, and initiatives to;

- manage travel demand more enduringly;
- mitigate the impact of additional traffic generation;
- ease recurring congestion;
- better deal with planned or unplanned special events and tourism seasons;
- support delivery of normal operations.

c. to understand;

- what initiatives would be most appropriate for proposed developments;
- when and where initiatives would be delivered;
- how they would be funded;
- who would ultimately be responsible for the delivery of initiatives.

Full text:

We have reviewed the publicly available Local Plan documents and provided comments in the attached letter, in relation to the transport implications of the plan for the safety and operation of the SRN.

Our comments include issues to resolve, comments, requests for further information and recommendations. A brief summary of our main comments are:

- the reliance on the delivery of the A27 Chichester bypass improvements project.
- the requirements for new, additional, and adapted processes and assessments, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments.
- collaborative working between agencies in combination with a robust monitor and manage policy.

We hope our comments assist.

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders. We look forward to continuing to participate in future consultations and discussions.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Background

National Highways has been appointed by the Secretary of State for Transport as strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the strategic road network (SRN).

National Highways is responsible for operating, maintaining, and improving the Strategic Road Network (SRN) i.e., the Trunk Road and Motorway Network in England, as laid down in Department for Transport (DfT) Circular 01/2022 (Strategic Road Network and the delivery of sustainable development).

The SRN is a critical national asset and as such we work to ensure that it operates and is managed in the public interest, both in respect of current activities and needs as well as in providing effective stewardship of its long-term operation and integrity.

Our responses to Local Plan consultations are guided by relevant policy and guidance including the National Planning Policy Framework (2021) (NPPF):

- Transport issues should be considered from the earliest stages of plan-making and development proposals so that the potential impact of development on transport networks can be addressed (para 104).
- The planning system should actively manage patterns of growth such that significant development is focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. (para 105).
- Planning policies should be prepared with the active involvement of highways authorities and other transport infrastructure providers so that strategies and investments for supporting sustainable transport and development patterns are aligned. (para 106).
- In terms of identifying the necessity of transport infrastructure, NPPF confirms that development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe. (para 111).
- Planning policies and decisions should support development that makes efficient use of land, taking into account the availability and capacity of infrastructure and services – both existing and proposed – as well as their potential for further improvement and the scope to promote sustainable travel modes that limit future car use. (para 124).

In relation to the tests of soundness set out at paragraph 35 of the NPPF, in the context of transport, these are interpreted as meaning:

- a) Positively prepared - has the transport strategy been prepared with the active involvement of the highway authorities, other transport infrastructure providers and operators and neighbouring councils?
- b) Justified – Is the transport strategy based on a robust evidence base prepared with the agreement in partnership, or with the support of the highway authorities?
- c) Effective – Does the transport strategy and policy satisfy the transport needs of the plan and is it deliverable at a pace which provides for and accommodates the proposed progress and implementation of the plan?
- d) Consistent with national policy – Does the transport strategy support the economic, social, and environmental objectives of the Plan and the NPPF/NPPG?

We will be concerned with proposals that have the potential to impact on the safe and efficient operation of the SRN; in this case, the A27 trunk road (Chichester Bypass and its junctions) which is the main access route in the Chichester area. We have particular interest in any allocation, policy or proposals which could have implications for the A27 and the wider SRN network. We are interested as to whether there would be any adverse road safety or operational implications for the SRN. The latter would include a material increase in queueing or delay or reduction in journey time reliability during the construction or operation of the development set out in the plan.

National Highways is a key delivery partner for sustainable development promoted through the plan-led system, and as a statutory consultee we have a duty to cooperate with local authorities to support the preparation and implementation of development plan documents.

In accordance with national planning and transport policy and our operating licence, we are entirely neutral on the principle of development as it is for the local planning authority to determine whether development should be allocated or permitted; albeit it must comply with national policy on locating development in locations that are or can be made sustainable. Therefore, while always seeking early and fulsome engagement with local plans and/or developers, we will simply be assessing the transport and related implications of plans or proposals and agreeing any necessary transport improvements and relevant development management policy.

In progressing Local Plans, we will seek to agree the following:

- Assessment tools and methodology
- Baseline Assessment i.e., to demonstrate that the assessment tool accurately reflects current transport conditions
- Comparator case assessment i.e., to forecast the transport conditions that would occur in the absence of the plan

- Forecast modelling i.e., to forecast the transport conditions that would arise with the plan in place, this will include an assessment at the end of the Plan period; and, if required, at full build out if that occurs after the end of the Plan period
- Outputs and outcomes of modelling, demonstrating, as appropriate, what transport infrastructure is necessary to support the plan o It should be noted that a suite of transport modelling tools may be required. This includes strategic modelling covering an area at least one major junction beyond the district boundary, localised network modelling where several links/junctions are close together and/or individual junction modelling
 - o A DMRB (Design Manual for Roads and Bridges) compliancy assessment may also be required for certain highway features, such as
 - Merge/Diverge assessment at Grade separated junctions, link capacity assessments, and others.
- The design of any necessary transport infrastructure, to an extent suitable for establishing deliverability during the plan period at the time that it becomes necessary for the purpose of ensuring that unacceptable road safety impacts or severe operational impacts do not arise as a result of development. This may be to at least General Arrangement design stage or preliminary design stage. Whichever degree of detail is agreed, the products must be in full compliance with the DMRB.
- Industry standard transport intervention costings.
- The delivery/funding mechanisms for necessary transport interventions. It should not be assumed that National Highways will have any responsibility to identify or deliver necessary transport interventions.
- If considered appropriate, a "Monitor & Manage" (M&M) framework, aimed at managing the pace of development in line with the pace of funding and delivery of necessary highway interventions in a manner which responds to the realworld impacts of development may be agreed for inclusion in the plan subject to the adequacy of risk control measures included therein. This can include the move from a 'predict & provide' style of delivery to 'a vision & validate' style. o Any M&M framework must be based on a "worst case scenario" whereby necessary mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. It must be translated into development management plan policy and policy relating to development allocations.

Further detail on the above can be provided by National Highways.

While ideally all the above should be agreed prior to the Submission of the Local Plan for examination, we recognise that this is not always possible. However, all parties should work towards all matters being agreed and reflected in a Statement of Common Ground (SoCG) by the start of the Local Plan Examination at the latest. Ideally the SoCG between the Council and National Highways would be prepared well in advance of plan submission in order to guide resource input and to track progress towards final agreement on all relevant matters starting from the earliest plan iterations until the final version is agreed.

It is acknowledged that Government policy places much emphasis on housing delivery as a means for ensuring economic growth and addressing the current national shortage of housing. The NPPF is very clear that: "Strategic policy-making authorities should establish a housing requirement figure for their whole area, which shows the extent to which their identified housing need (and any needs that cannot be met within neighbouring areas) can be met over the plan period."

However, new DfT C1/22 and the NPPF are equally clear that any development, including housing delivery, must be tempered by the requirement to ensure that the associated transport demand can be accommodated without unacceptable impacts on the safety of the SRN or severe impacts on the operation of the SRN including reliability and congestion. Therefore, as necessary and appropriate, any plan and/or development must be accompanied by suitable mitigation in the right places at the right time, that is to the required design standards and is deliverable in terms of land availability, constructability and funding.

We would also draw your attention to the then Highways England document 'The Strategic Road Network, Planning for the Future: A guide to working with National Highways on planning matters' (September 2015). This document sets out how National Highways intends to work with local planning authorities and developers to support the preparation of sound documents which enable the delivery of sustainable development. https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_t_data/file/461023/N150227_-_Highways_England_Planning_Document_FINAL-Io.pdf

Responses to Local Plan consultations are also guided by National Planning Policy Framework (NPPF) revised on 20 July 2021 which sets out the government's planning policies for England and how these are expected to be applied.

Updated Circular (01/2022)

It should be noted that since the start of the Local Plan consultation process, on the 23 December 2022, the Department for Transport released a new circular on the 'Strategic road network and the delivery of sustainable development' (Circular 01/2022), which replaces all of the policies in Circular 02/2013 of the same name. These representations take account of the new circular and the requirements in terms of the Local Plan evidence base and process.

We request that the Local Plan is prepared in line with all aspects of the new circular. Particularly, the principles of sustainable development (paragraphs 11 to 17), new connections and capacity enhancements (paragraphs 18 to 25), and engagement with plan-making (paragraphs 26 to 38).

Regulation 18 submission

In our Regulation 18 submission we noted several matters including:

- The need to mitigate the adverse impacts of strategic development traffic to the A27 Chichester Bypass and its junctions at Portfield Roundabout, Bognor Road Roundabout, Whyke Roundabout, Stockbridge Roundabout and Fishbourne Roundabout and Oving junction.
- The need to identify a mechanism to calculate contributions towards the delivery of the previously agreed Local Plan A27 improvements
- The need to confirm the number of dwellings needed within the plan period
- The need to establish National Highways acceptance of the traffic model reference and future case scenarios
- The need to confirm costs, viability, and funding associated with mitigating the safety and congestion impacts of the development included within the plan.

Local Plan context

This Local Plan (Chichester Local Plan 2021 – 2039), prepared by the Local Planning Authority (LPA) Chichester District Council, sets out the vision for future development in the district and will be used to help decide on planning applications and other planning related decisions including shaping infrastructure investments.

The draft sets out how the district should be developed over the next 18-years to 2039 including for the full Plan period (1 April 2021 to 31 March 2039) the total supply of

- 10,359 dwellings

- 114,652 net additional sqm new floorspace

Minus the completions this is equivalent to around 530 dwellings and 6,150 sqm of floorspace a year.

National Highways Representations

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders.

We have undertaken a review of the Chichester Local Plan 2021-2039 proposed submission version and accompanying evidence documents, our comments are set out in the tables below (following pages). [see table within attachment]

Summary

We have reviewed the publicly available Local Plan documents and provided comments above in relation to the transport implications of the plan for the safety and operation of the SRN. We understand that other technical information is available, but this was not presented as part of this consultation.

Chichester, and the A27, are already heavily congested, infrastructure in the existing Local Plan remains undelivered and the growth set out in the new Plan will further increase travel demand.

As presented, satisfying the transport needs of the plan is clearly reliant on the delivery of the A27 Chichester bypass improvements project. The A27 Chichester bypass improvements project is one of 32 pipeline schemes being considered for possible inclusion in National Highways third Road Investment Strategy (RIS3) covering 1 April 2025 to 31 March 2030.

On 9 March 2023 the UK Transport Secretary ensured record funding would be invested in the country's transport network, sustainably driving growth across the country while managing the pressures of inflation. The announcement cited the A27 Arundel Bypass as being deferred from RIS2 to RIS 3 (covering 2025-2030). The transport secretary also identified a number of challenges to the delivery of the road investment strategy and cited the benefit of allowing extra time to ensure schemes are better planned and efficient schemes can be deployed more effectively.

At present, there is no commitment by DfT to carry out the A27 Chichester bypass improvements project. Until the A27 Chichester bypass improvements project is published in the RIS3, consented and a decision to invest is made it cannot be assumed to be a committed project.

We note that the Plan does not address any uncertainty of delivery of the A27 Chichester bypass improvements project and we strongly recommend that there is either no reliance placed on RIS3 to realise capacity for growth in the Plan or that contingency measures are included to cover the eventuality that RIS3 funding is not forthcoming within the plan period. It is not clear that the potential impact of development on transport networks can be addressed in the absence of the A27 Chichester bypass improvements project.

Achieving net zero, reducing emissions reduction, acting on climate, and supporting thousands of new homes and new employment developments will be problematic with existing processes. New, additional, and adapted processes and assessments will likely be required, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments. We acknowledge that change is complex, expensive, and time-consuming, especially for smaller district level Councils. But the hard work will deliver benefits for the Council and residents in the longer-term.

National Highways seeks to continue working with the Council and WSCC to progress coordinated and deliverable packages of interim mitigation measures and alternative transport solutions while a long-term strategic solution is considered by government. This must however be in combination with a robust monitor and manage policy that appropriately manages the risk of unacceptable road impacts resulting from new housing and other development over the Plan period.

We have been in discussion with Chichester District Council regarding their proposed Monitor and Manage Strategy. At

present, we do not consider the current strategy to be robust and we seek further information and detail especially on who, when and when monitoring and management will be undertaken. Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas. Any M&M framework must be based on a "worst case scenario" whereby necessary transport mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. The M&M framework must set out that the alternative to mitigation not being delivered is that development does not proceed where that development would give rise to unacceptable road safety risk or severe cumulative impacts on the road network in the absence of that mitigation. The M&M framework must be translated into development management plan policy and policy relating to development allocations.

As we have reiterated throughout our comments, we welcome the opportunity to work with you to address these outstanding matters and we will continue to liaise over submitted Transport Assessment, Travel Plan policy and Monitor and Manage Policy to help to work towards a viable plan.

We hope our comments assist.

We look forward to continuing to participate in future consultations and discussions. Please do continue to consult us as the Plan progresses so that we can remain aware of, and comment as required on, its contents.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Change suggested by respondent:

Recommends that a Travel Demand Management approach should be evident to:

- remove journeys using alternative or different ways to travel (re-mode);
- retime journeys to avoid peak or seasonal demands (re-time);
- reroute journeys to less congested roads (reroute);
- reduce the need to travel and unnecessary [journeys] (reduce).

Written representation - <https://chichester.oc2.uk/a/t6d>

5862

Support

Document Element: Policy T1: Transport Infrastructure

Respondent: Natural England (Luke Hasler, Senior Advisor) [8189]

Summary:

Natural England welcomes the extensive references across this policy (and policies T2 and T3) to reductions in car use, increased provision of sustainable transport choices and increased opportunities for active travel.

Full text:**Summary of advice**

While we have raised some queries and recommended some further modifications to certain policies we do not find the Plan unsound on any grounds relating to our remit.

Natural England has reviewed the Proposed Submission Local Plan and accompanying appendices together with the Habitats Regulations Assessment (HRA) and Sustainability Appraisal (SA). Our detailed comments on the policies and site allocations are provided as follows:

- Annex 1 - Chapter 2 – Vision and Strategic Objectives
- Annex 2 - Chapter 4 – Climate Change and the Natural Environment
- Annex 3 - Chapter 5 (Housing) and Chapter 6 – (Place-making, Health and Well-being)
- Annex 4 - Chapter 7 (Employment and Economy) and Chapter 8 (Transport and Accessibility)

- Annex 5 - Chapter 10 – Strategic and Area Based Policies

Please note that we have not provided comments on all policies but those which have most influence on environmental issues. Natural England has no comment to make on the policies not covered in this response. Other than confirming that we have referred to it when considering our advice on specific policies and site allocations Natural England has no general comments to make on the SA.

Unfortunately due to unforeseen resourcing issues while we have reviewed the associated HRA we are not in a position to provide detailed comment on it as part of this response. We will rectify this as soon as possible and can confirm that we have seen nothing in it that raises any major concerns.

The Plan has many positive aspects including standalone policies on Green Infrastructure (GI) and wildlife corridors and an incredibly extensive suite of natural environment policies more generally.

We are hugely appreciative of the opportunity that we were given to work with you on shaping key policies post-Regulation 18. However, we believe that the plan needs to go further in its recognition of coastal squeeze as a key issue for the district, should include policy hooks for the forthcoming Local Nature Recovery Strategy (LNRS) and make up to date references to both the Environment Act (2021) and the Environmental Improvement Plan (EIP, 2023). Given how recent the publication of the EIP is we would be happy to discuss with your authority how this could best be achieved but we believe given the wealth of natural capital within Chichester District it is vitally important that this latest iteration of the Local Plan is set in its full policy and legislative context.

We have suggested a significant number of amendments and additions to both policies and supporting text throughout the Plan. In our view these could all be taken forward as minor modifications but if they were all acted upon they would leave the Plan much stronger and more coherent in delivering for the natural environment, one of the three central tenets of genuinely sustainable development as set out in the National Planning Policy Framework (NPPF 2021, paragraph 8c).

See attachment for representations on paragraphs/policies.

Object

Document Element: Policy T1: Transport Infrastructure

Respondent: Network Rail (Sam Bhatti, Graduate Surveyor) [8048]

Summary:

Accessibility should be built into new development in the form of active travel networks, which will enhance permeability in people's transitions between areas.

Development requiring additional road capacity should not go ahead, except as a last resort.

Full text:

Thank you for consulting Network Rail on the above consultation, I can confirm we wish to make the following comments.

Network Rail is the statutory undertaker for maintaining and operating railway infrastructure of England, Scotland, and Wales. As statutory undertaker, Network Rail is under license from the Department for Transport (DfT) and Transport Scotland (TS) and regulated by the Office of Rail and Road (ORR) to maintain and enhance the operational railway and its assets, ensuring the provision of a safe operational railway.

Having been in consultation with the train operating company, Southeastern Rail, of particular interest to Network Rail is the need to integrate active travel infrastructure and promote First and Last Mile principles. In addition, the impact of development on train stations and existing level crossings.

First and Last Mile Considerations

We encourage the Council to consider not only the impact of development on the railway itself, but also on the first and last mile element of passengers' journeys. This factors in access to and from the railway, as well as how other transport modes are integrated and how well communities are connected.

Failure to integrate this represents an issue for rail travel as people who start journeys by car will likely continue to drive rather than stop to change to the train, as the cost and time of parking and train tickets offer no benefit to them.

Developing access to the railway using first and last mile principles has several benefits, including:

- Aligning with local and national policy to reduce carbon emissions and meet netzero targets, by encouraging more active modes of transport such as walking and cycling
- Providing a seamless journey experience where various modes of transport are integrated, including bus and rail services
- Providing an accessible and inclusive offering of transport modes to both local residents and visitors
- Improving connections between communities which may not be as well-served by public transport

While infrastructure and transport services may be identified as areas for improvement, there may be other, smaller scale enhancements that can be made such as better provision of information or additional cycle racks. Network Rail's Planning team welcome further discussions with the council to gain a better understanding of how we can work together to improve access to the railway and integrate first and last mile thinking into the scheme plans, taking into account the various component parts of passengers' journeys and wider plans for the local area.

Policy T3 Active Travel – this has the broad support of Network Rail but should be strengthened to reflect walking/cycling as the first choice for local journeys; and for longer journeys part of an integrated bus/train transport chain that allows people to continue seamlessly.

Network Rail will support planning schemes within active travel distance of railway stations that provide continuous, direct and safe pedestrian/cycle routes that will serve rail passengers. Pedestrian routes should be prioritised over vehicles, meaning all schemes should be designed so that vehicles wait for walkers/cyclists, not the other way around.

Transport Infrastructure

Accessibility should be built into new development in the form of active travel networks, which will enhance permeability in people's transitions between areas. Development requiring additional road capacity should not go ahead, except as a last resort.

Policy T1 – in general this is supported. References to a 'coordinated package of infrastructure improvements' along the A27 should be replaced with a 'coordinated package of active travel and public transport improvements infrastructure', as this is more specific in emphasising that car transport should be minimised as much as possible.

Policies T2 and I1 – in general these are supported in the sense they promote seamless and continuous active travel arrangement and minimise car use. However, references should be made to the concept of 15–20-minute neighbourhoods that provide a wide range of services within this walk time. The provision of amenities and leisure facilities within a 15-minute walk should be a cornerstone idea that drives mid to long term infrastructure goals for Chichester. Owing to the considerable amount of development anticipated by the Council, there is ample opportunity for local businesses and retailers to provide services within these local neighbourhoods.

Railway Station Considerations

As a public funded company, Network Rail has responsibilities to spend public funds efficiently which consequently means we do not have the funds available to mitigate the impact of third-party development on railway stations. Where a significant amount of rail trips are generated by a third-party development, Network Rail expect that the development provides a contribution to mitigate the addition usage, ensuring that the rail network can continue to operate effectively. The contributions will encourage greater use of public transport by enhancing the rail experience for passengers.

The Local Plan has proposed site allocations across the district, for this reason the resulting increase to the use of stations should be recognized and mitigated against so that rail travel remains an attractive mode of transport. Failure to upgrade stations will result in less rail passengers which is counter productive to the Council's goals of a thriving public transport system.

Southbourne and Fishbourne Stations - Network Rail have concerns about the impact of future development on Southbourne and Fishbourne stations. As the stations themselves are small-sized, large-scale accessibility improvements would be potentially difficult. As a result, the provision of cycle parking facilities at both stations should be considered as crucial by the Council to ensure the station environment continues to modernize and encourage passenger use. This also ensures the stations integrate with proposed cycle/pedestrian routes across the area.

Level Crossing Considerations

As part of Network Rail's license to operate and manage Britain's railway infrastructure, Network Rail have the legal duty to protect rail passengers, the public, the railway workforce, and to reduce risk at our level crossings so far as is reasonably practicable.

Improving Level Crossing safety is therefore one of Network Rail's key priorities.

Closing level crossings is the only way to fully eradicate the risk. However, it is not always possible or practicable to immediately close all level crossings. Aside from financial and practical constraints, user convenience still needs to be a key consideration. A broad range of targeted interventions and initiatives are therefore needed to manage safety at crossings which remain open.

Any new development would need to provide an assessment of the impact on any nearby Level Crossings and in some cases, planning obligations may be required to mitigate the impacts on it.

Policy A13 Southbourne Broad Location for Development - Several strategic sites have been identified across the district, with a significant amount west of Chichester which require reconsideration. Policy A13, which proposes 1050 new homes, will result in significant upturns in use of the Penny Lane and Church crossings, which are currently public footpath crossings and have high risk factors. Large-scale development could therefore warrant closure or installation of a footbridge. The Council should be aware of this as these projects are costly and would require requisite funding.

Network Rail are in the process of completing a risk assessment on the affected crossings. However, for context we recently reviewed the Copse level crossing (located approximately 1.9km eastwards from Penny Lane) which resulted in a 300% use increase from a 112home development (Planning Application SB/22/01283/FULEIA).

Change suggested by respondent:

References to a 'coordinated package of infrastructure improvements' along the A27 should be replaced with a 'coordinated package of active travel and public transport improvements infrastructure', as this is more specific in emphasising that car transport should be minimised as much as possible.

Respondent: Network Rail (Sam Bhatti, Graduate Surveyor) [8048]

Summary:

In general, this is supported.

Full text:

Thank you for consulting Network Rail on the above consultation, I can confirm we wish to make the following comments.

Network Rail is the statutory undertaker for maintaining and operating railway infrastructure of England, Scotland, and Wales. As statutory undertaker, Network Rail is under license from the Department for Transport (DfT) and Transport Scotland (TS) and regulated by the Office of Rail and Road (ORR) to maintain and enhance the operational railway and its assets, ensuring the provision of a safe operational railway.

Having been in consultation with the train operating company, Southeastern Rail, of particular interest to Network Rail is the need to integrate active travel infrastructure and promote First and Last Mile principles. In addition, the impact of development on train stations and existing level crossings.

First and Last Mile Considerations

We encourage the Council to consider not only the impact of development on the railway itself, but also on the first and last mile element of passengers' journeys. This factors in access to and from the railway, as well as how other transport modes are integrated and how well communities are connected.

Failure to integrate this represents an issue for rail travel as people who start journeys by car will likely continue to drive rather than stop to change to the train, as the cost and time of parking and train tickets offer no benefit to them.

Developing access to the railway using first and last mile principles has several benefits, including:

- Aligning with local and national policy to reduce carbon emissions and meet netzero targets, by encouraging more

active modes of transport such as walking and cycling

- Providing a seamless journey experience where various modes of transport are integrated, including bus and rail services
- Providing an accessible and inclusive offering of transport modes to both local residents and visitors
- Improving connections between communities which may not be as well-served by public transport

While infrastructure and transport services may be identified as areas for improvement, there may be other, smaller scale enhancements that can be made such as better provision of information or additional cycle racks. Network Rail's Planning team welcome further discussions with the council to gain a better understanding of how we can work together to improve access to the railway and integrate first and last mile thinking into the scheme plans, taking into account the various component parts of passengers' journeys and wider plans for the local area.

Policy T3 Active Travel – this has the broad support of Network Rail but should be strengthened to reflect walking/cycling as the first choice for local journeys; and for longer journeys part of an integrated bus/train transport chain that allows people to continue seamlessly.

Network Rail will support planning schemes within active travel distance of railway stations that provide continuous, direct and safe pedestrian/cycle routes that will serve rail passengers. Pedestrian routes should be prioritised over vehicles, meaning all schemes should be designed so that vehicles wait for walkers/cyclists, not the other way around.

Transport Infrastructure

Accessibility should be built into new development in the form of active travel networks, which will enhance permeability in people's transitions between areas. Development requiring additional road capacity should not go ahead, except as a last resort.

Policy T1 – in general this is supported. References to a 'coordinated package of infrastructure improvements' along the A27 should be replaced with a 'coordinated package of active travel and public transport improvements infrastructure', as this is more specific in emphasising that car transport should be minimised as much as possible.

Policies T2 and I1 – in general these are supported in the sense they promote seamless and continuous active travel arrangement and minimise car use. However, references should be made to the concept of 15–20-minute neighbourhoods that provide a wide range of services within this walk time. The provision of amenities and leisure facilities within a 15-minute walk should be a cornerstone idea that drives mid to long term infrastructure goals for Chichester. Owing to the considerable amount of development anticipated by the Council, there is ample opportunity for local businesses and retailers to provide services within these local neighbourhoods.

Railway Station Considerations

As a public funded company, Network Rail has responsibilities to spend public funds efficiently which consequently means we do not have the funds available to mitigate the impact of third-party development on railway stations. Where a significant amount of rail trips are generated by a third-party development, Network Rail expect that the development provides a contribution to mitigate the addition usage, ensuring that the rail network can continue to operate effectively. The contributions will encourage greater use of public transport by enhancing the rail experience for passengers.

The Local Plan has proposed site allocations across the district, for this reason the resulting increase to the use of stations should be recognized and mitigated against so that rail travel remains an attractive mode of transport. Failure to upgrade stations will result in less rail passengers which is counter productive to the Council's goals of a thriving public transport system.

Southbourne and Fishbourne Stations - Network Rail have concerns about the impact of future development on Southbourne and Fishbourne stations. As the stations themselves are small-sized, large-scale accessibility improvements would be potentially difficult. As a result, the provision of cycle parking facilities at both stations should be considered as crucial by the Council to ensure the station environment continues to modernize and encourage passenger use. This also ensures the stations integrate with proposed cycle/pedestrian routes across the area.

Level Crossing Considerations

As part of Network Rail's license to operate and manage Britain's railway infrastructure, Network Rail have the legal duty to protect rail passengers, the public, the railway workforce, and to reduce risk at our level crossings so far as is reasonably practicable.

Improving Level Crossing safety is therefore one of Network Rail's key priorities.

Closing level crossings is the only way to fully eradicate the risk. However, it is not always possible or practicable to immediately close all level crossings. Aside from financial and practical constraints, user convenience still needs to be a key consideration. A broad range of targeted interventions and initiatives are therefore needed to manage safety at crossings which remain open.

Any new development would need to provide an assessment of the impact on any nearby Level Crossings and in some cases, planning obligations may be required to mitigate the impacts on it.

Policy A13 Southbourne Broad Location for Development - Several strategic sites have been identified across the district, with a significant amount west of Chichester which require reconsideration. Policy A13, which proposes 1050 new homes, will result in significant upturns in use of the Penny Lane and Church crossings, which are currently public footpath crossings and have high risk factors. Large-scale development could therefore warrant closure or installation of a footbridge. The Council should be aware of this as these projects are costly and would require requisite funding.

Network Rail are in the process of completing a risk assessment on the affected crossings. However, for context we recently reviewed the Copse level crossing (located approximately 1.9km eastwards from Penny Lane) which resulted in a 300% use increase from a 112home development (Planning Application SB/22/01283/FULEIA).

Object

Document Element: Policy T1: Transport Infrastructure**Respondent:** Mr Matthew Rees [7841]**Summary:**

Not sound because there is a lack of strategic investment for transport infrastructure. The plan fails to evaluate the important concern that was contained in the sustainability appraisal (p89) statement: "important high level concern is the lack of a train station at Tangmere", and the plan is not legally compliant because TI contains no assessment of whether a train station between Barnham and Chichester could support sustainable development and provide necessary strategic infrastructure in a timely way.

The Infrastructure Delivery Plan excludes any consideration of a rail station, so there is a lack of evidence proportionate to the issue.

The plan is not compliant with Duty to Cooperate as the statement of compliance indicates a failure to take reasonable steps to engage with ORR since February 2019 and no response at that date (p52), which is not justified given the importance of the matter

Not sound because there was once a station stop on the line between Barnham and Chichester and there are several potentially suitable sites within a short distance of Tangmere which could be considered.

Full text:

There is much to commend in this document and the supporting technical documents that accompany it, and I have listed in the appendix to this letter 26 such paragraphs and policies. I am happy for my support to be registered against these sections of your consultation document. There is also much upon which I must represent a concern, so I attach representations relating to 22 paragraphs or policies.

I am happy to participate in a hearing session, and I would flag at this stage that the common theme that links all of these representations is the need to safeguard the natural and built environment in and around Saxon Meadow, Tangmere from the risks of unsustainable development, I consider that the independent examiner should focus their review on the aspects of the local plan that relate to this matter.

Appendix 1: list of policies that I support

1. P14, 1.23, 1.24: Duty to cooperate
2. P24, para 2.30 "the council declared a climate emergency in July 2019"
3. P24, para 2.32 – "all proposal for new development should be considered in the context of a climate emergency"
4. P30: Objective 2: natural environment: "development will achieve net gains in biodiversity"
5. P43, 4.1 "National policy promotes increasing energy efficiency, the minimisation of energy consumption and the development of renewable energy sources"
6. P43, 4.3: "Some renewable energy projects provide significant opportunities to enhance biodiversity"
7. P53, Policy NE5: Biodiversity and Biodiversity Net Gain
8. P62, Para 4.42: Hedgerows and some types of woodlands are identified as a priority habitat
9. P62, Policy NE8: Proposals should have a minimum buffer zone of 15 metres from the boundary of ancient woodland or veteran trees to avoid root damage (known as the root protection area)
10. P68, Policy NE10: Criteria for Development in the Countryside - Does not prejudice viable agricultural operations or other viable uses
11. P80, Para 4.91: There are serious concerns about the impact of flooding, both in respect of current properties at risk but also the long-term management of the area.
12. 4.92: any development in the plan area must therefore have regard to flood and erosion risk.
13. 4.94: built development can lead to increased surface water run-off; therefore, new development should include SuDS to help cope with intense rainfall events
14. P81, Para 4.96: Environment Agency consent is required for any works within 16 m of tidal waters and 8m of fluvial watercourses in line with the Environmental Permitting Regulations 2016. This strip is required for access. The policy includes a setback requirement to ensure this access strip is not obstructed.
15. P80, 4.92, Any development in the plan area must therefore have regard to flood and erosion risk, now and in the future, by way of location and specific measures, such as additional flood alleviation, which will protect people, properties and vulnerable habitats from flooding. Recent changes to national guidance highlight the importance of considering flood risk from all sources, and this is particularly significant for the plan area as large parts of it are at risk from groundwater flooding, which needs to be recognised in development decisions alongside the well-established risks in relation to tidal, fluvial and surface water flooding. Appropriate mapping of all sources of flood risks is still evolving, and is likely to develop further over the plan period
16. P93, Policy NE20 Pollution: Development proposals must be designed to protect, and where possible, improve upon the amenities of existing and future residents, occupiers of buildings and the environment generally. Development proposals will need to address the criteria contained in, but not limited to, the policies concerning water quality; flood risk and water management; nutrient mitigation; lighting; air quality; noise; and contaminated land. Where development is likely to generate significant adverse impacts by reason of pollution, the council will require that the impacts are minimised and/or mitigated to an acceptable level within appropriate local/national standards, guidance, legislation and/or objectives.
17. P94, 4.127, Light pollution caused by excessive brightness can lead to annoyance, disturbance and impact wildlife, notably nocturnal animals. The design of lighting schemes should be carefully considered in development proposals to prevent light spillage and glare.
18. P94, 4.128, Dark skies are important for the conservation of natural habitats, cultural heritage and astronomy. The plan area includes three 'Dark Sky Discovery Site' designations, all located within the Chichester Harbour AONB; Eames Farm on Thorney Island, Maybush Copse in Chidham; and north of the John Q Davis footpath in West Itchenor. Development within or directly impacting these areas will be subject to particular scrutiny in terms of their impact on dark skies. The entire SDNPA area is also declared as an International Dark Sky Reserve. Development directly impacting this area will be subject to similar scrutiny.
19. P96, Policy NE22 Air Quality
20. P97, Policy NE-23 Noise
21. P142, Para 6.29, Amenity: Private space, shared space and the design quality and construction of communal spaces all contribute to amenity
22. P155-6, Policy P11: Conservation Areas "protecting the setting (including views into and out of the area)"
23. P55, Para 4.26 - The council is under a legal duty to protect designated habitats, by ensuring that new development does not have an adverse impact on important areas of nature conservation, and by requiring mitigation to negate the harm caused.
24. P58, Para 4.33 The council is under a legal duty to protect their designated bird populations and supporting habitats
25. P95, Para 4.129 The council has a duty to review and assess air quality within the district
26. P301, Conservation Area: An area of special architectural or historic interest, designated under the Planning (Listed Buildings & Conservation Areas) Act 1990. There is a statutory duty to preserve or enhance the character, appearance, or setting of these areas.

Change suggested by respondent:

Amend the plan as follows:

Policy T1: Transport Infrastructure

Integrated transport measures will be developed to mitigate the impact of planned development on the highways network, improve highway safety and air quality, promote more sustainable travel patterns and encourage increased use of sustainable modes of travel, such as public transport, cycling and walking. The council will work with Network Rail, ORR, Southern Railways, National Highways, West Sussex County Council, other transport and service providers (including through the Traffic and Infrastructure

Management Group) and developers to provide a better integrated transport network and to improve accessibility to key services and facilities including new train stops on existing lines (e.g. for Tangmere). All development is expected to demonstrate how it will support four key objectives to create an integrated transport network which will alleviate pressure on the road network, improve highway safety, encourage sustainable travel behaviours and help improve air quality, by:

- Avoiding or reducing the need to travel by car for journeys short and long;
- Enabling access to sustainable means of travel, including public transport, walking and cycling;
- Managing travel demand; and
- Mitigating the impacts of travel by car.
- Providing new station stops on existing train lines when large development is planned (e.g. Policy A14)

Document Element: Policy T1: Transport Infrastructure**Respondent:** Seaward Properties Ltd [7119]**Agent:** Smith Simmons Partners (Paul White) [7650]**Summary:**

The policy objectives to ensure new development is well located and designed to avoid or minimise the need for travel and encourage the use of sustainable modes of travel as an alternative to the private car are supported. However, contributing to a multi modal shift away from the use of the private car will take traffic off the A27 and yet this hasn't been recognised in the policy. We therefore object to the funding arrangements for A27 improvements based on the proposed per dwelling contribution. In any event it is unclear how the contributions are justified anyway when the responsibility for trunk road infrastructure rests with National Highways.

As noted in the viability assessment forming part of the local plan evidence base, the cumulative impact of the contribution alongside other policy requirements concerning water neutrality, nitrate neutrality, biodiversity net gain, solent recreation mitigation and CIL will impact on the overall viability of a development and could result in the loss of affordable housing. This is another reason why the proposed contribution in T1 is questioned and in our view, flawed.

Full text:

See attached representation.

Change suggested by respondent:

The proposed per dwelling contribution to improvements to the A27 infrastructure has not been properly justified when the responsibility for trunk road infrastructure rests with National Highways. The policy should be deleted.

Document Element: Policy T1: Transport Infrastructure**Respondent:** GoVia Thameslink Railway (Nigel Searle) [8197]**Summary:**

Change wording to criterion 3, 4, 5 & 7.

Full text:

See attached.

Change suggested by respondent:

3. need to change the wording, the mindset needs to move away from “alternative to the car”

Better wording “Targeting investment to provide local access with a focus on active travel as the obvious way for people to access their needs walking and cycle routes and networks complying with LTN1/20 with Highway Code Hierarchy of Road User built into the design to ensure it is obvious active travel users have priority. Active travel will be integral to new development while Local Walking and Cycling Infrastructure Plan and Local Transport Plan shall inform priority for investment in existing settlements ensuring continuous direct routes to bus stops and railway stations where what needs to be accessed is not available locally.”

4. “Planning to achieve timely delivery of access infrastructure to ensure active travel and public transport are the obvious modes of access when first occupied to ensure car-based habits that are difficult to subsequently change to not become entrenched.” It is important to stop increasing road capacity as that just generates traffic that congests existing communities stifling local economies and makes existing road journeys worse.

5. “Phase delivery of new development to align with development of the rail network as outlined in the West Sussex Connectivity Modular Plan and GTR strategy for West Coastway to be consulted later in 2023”

7. Change the wording to “Delivering a coordinated package of infrastructure improvements to provide public transport priority and eliminate severance of active travel routes to junctions on the A27 Chichester bypass along with active travel and public transport priority within the city and elsewhere to drive modal shift to local access, active travel and public transport to facilitate real reductions of motor vehicle use. These will, reduce traffic congestion, improve safety and air quality, and improve access to Chichester city from surrounding areas without increasing road capacity.”

“Opportunities to secure funding to implement this package of improvements (in relation to criterion 7)”, change to criterion 3 and 7, and only referencing criterion 7 if that is changed as described above.

Object

Document Element: Policy T1: Transport Infrastructure**Respondent:** Stagecoach South (Rob Vince) [8141]**Summary:**

Stagecoach does not see that a suitable proportionate and up-to-date basis exists to properly and appropriately address the transport issues in the plan area.

The 2023 Transport Study does not perform this role adequately but, contrary to the explanatory memorandum, is a scheme intended only to facilitate car-borne movements through some of the key junctions. There is no evidence that an holistic integrated and strategic approach to transport mitigations has been prepared. Certainly Stagecoach has not been involved in any of the discussion about appropriate transport measures in support of the plan, including the Transport Study 2023, contrary to the expectations set out in NPPF at paragraph 16 and 106.

Notwithstanding out fundamental concerns about the transport evidence case and mitigations strategy, Policy T1 reflects a weak and ineffective approach, that seeks to try and define a strategy post-adoption.

Contrary even to the explanatory memorandum for the policy, which seeks to maximise the contribution of sustainable modes, the policy is phased in such a way that it gives basis for previous “predict and provide” solutions to facilitate and support current levels of car dependency – already shown to be undeliverable and unaffordable – will nevertheless be the first rather than the last resort. There is no commitment to seek to maximise the contribution made by sustainable modes to meeting mobility needs. Nor is there any recognition that current chronic congestion and lack of network resilience jeopardises the ongoing attractiveness and long-term sustainability of the current public transport offer.

Full text:

Chichester District Local Plan 2039 – Pre-Submission (Regulation 19) Consultation

1. Introductory Comments

Stagecoach South is the main commercial public transport operator across Chichester District. The Company has headquarters in the city, which is also the principal public transport hub for the District and it's rather wider travel-to-work area encompassing much of the Arun District. Our services extend throughout and beyond the District boundaries, as far as Littlehampton, Midhurst, Havant and Portsmouth. The vast majority of services operate on a commercial basis – that is to say, sustained by passenger use and fare revenue, including concessionary reimbursement.

While the role of the railway is significant in much of the District, especially the east-west Coastway line, yet bus services account for more boardings locally than the railway, with Chichester depot services carrying over 3.5m passengers each year.

Unlike bus services in other parts of the country, the local network has recovered strongly after the pandemic with fare-paying passenger numbers over 95% of 2019 levels, albeit with concession patronage somewhat lower. This has helped secure not only a stable but growing bus network even during this period of rapidly rising operational costs, avoiding the need for the service contractions seen in other regions. Indeed, during the second quarter of 2023 Stagecoach will invest £5.5m in brand-new vehicles for high-profile coastal Service 700 – one of the largest vehicle investments for Stagecoach Group this year.

Our services are therefore critical to existing and future local connectivity. As the Plan acknowledges, mobility demands do not respect planning authority boundaries. The role of our services is especially high to settlements in the broad A27 corridor, within the District and beyond. This includes major settlements in Arun District such as Pagham and suburban Bognor Regis, where bus is the only mass public transport option. As the Council is well aware, there is an even higher level and rate of committed development envisaged in these locations in the Arun District Local Plan than in Chichester.

It is already evident to the planning authorities, West Sussex County Council and National Highways, as proprietor of the A27 Trunk Road, that accommodating growing mobility demands across Chichester District and especially around Chichester itself, is becoming increasingly challenging to the point of being seriously problematic.

Stagecoach has a particular interest in this Plan arising from:

- The already clear and highly deleterious impact of congestion affecting our operations and their reliability and attractiveness to the public. The effects of these on the approaches to Chichester, and around the A27 bypass are especially severe. If public transport is to retain its existing role – even before the needs of any meaningful growth both in Chichester and neighbouring authorities is considered, are considered – the Council and the Highways Authority need to arrive at clearly-defined measures to protect buses from chronic delay and the damaging impacts arising from the lack of bus network resilience and customer journey times.
- In connection with the above, the need to properly consider the predictable impacts of committed development in Arun District on the transport network and in particular the operation of bus services. The duty to cooperate on cross-border strategic matters is not limited merely to accommodating housing requirements.
- The fact that our entire business premises and operational base at Chichester is the subject of allocation for redevelopment within the Plan period. Specifically, this includes our Head Office, the Bus Station as the operational hub of the network and the key interchange for passenger journeys – including those that involve the railway – and the bus depot required to support the entire operation. Notwithstanding many years of discussions, there is as yet no agreed deliverable strategy to replace these facilities either in the Draft Plan or elsewhere.

Stagecoach broadly supports the vision and priorities of the draft plan. In most respects, Stagecoach supports strongly the spatial strategy and the identified site allocations that flow from it, and the evidence.

However, it has serious concerns about the soundness of the plan as proposed for submission, for important regards outlined in this response. These are made in the light of requirements set by the National Planning Policy Framework (NPPF), in particular at paragraphs 15 and 16; 35, 105-109 inclusive and having due regard to the need for allocations to satisfy 110-112 inclusive in due course as development permission is sought; and paragraph 174.

Paragraph 16c) of NPPF makes plain that strategic plans and policies should “be shaped by early, proportionate and effective engagement between plan-makers and communities, local organisations, businesses, infrastructure providers and operators and statutory consultees” (our emphasis). This makes plain that collaborative and ongoing involvement of public transport operators is both necessary, and separate and in addition to the engagement with statutory consultees. This has not taken place.

Para 1.25 of the draft plan states that “the council has engaged constructively, actively and on an ongoing basis with other local authorities and organisations to address key strategic matters.” Despite the requirements in NPPF and contrary to the statement made, Stagecoach has not been approached or involved in a meaningful, collaborative or ongoing way in the preparation of the Plan.

Our main concerns centre around the fact that the plan strategy is neither backed by sufficient transport evidence. Even more importantly, the plan relies on a wholly car-based transport mitigation strategy despite policy stating that this is not the case, and the track record of the existing Local Plan, based on a very similar strategy, that has failed to bring forward

meaningful mitigations to date to prevent traffic conditions substantially worsening. There is no support in policy for the achievement of the Strategic Objectives in the Plan. Nor is there definition of any measures in the 2023 Transport Study to make provision for sustainable transport infrastructure or services – much less materially improve them.

Finally, to the extent that updated transport evidence has been provided in the form of the 2023 Chichester Transport Study, arising from updated traffic modelling, it does not support the contention that highways capacity constraints on and around the A27 justify not meeting the objectively-assessed development needs of the area, as the draft plan contends.

2. Vision and Strategic Objectives

2.1. Issues and Opportunities

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant, proportionate and up to date evidence

Stagecoach recognises the important role of the West Sussex and Greater Brighton Strategic Planning Board which agreed a Local Strategic Statement (LSS2) in early 2016 to identify spatial planning issues across the wider area. This established strategic priorities and policies to guide longer term strategic growth in a coordinated and well considered matter. This institutional framework and the purpose of the LSS is a highly significant one and is at the heart of efforts to properly fulfil the statutory Duty to Co-operate, including with regard to strategic infrastructure issues, as NPPF requires.

Given the long period of time elapsed since the 2018 Reg 18 consultation and the already very clear constraints on strategic infrastructure capacity, it is of great concern to Stagecoach that the LSS2 has not been updated to reflect emerging issues in the intervening period. A review and update of the LSS2 has only just commenced. This includes a study of projected housing and employment needs, transport impact, infrastructure and spatial options to deliver the required development in the period after 2030. This Chichester District draft plan covers a period extending to 2039 – therefore well beyond 2030 and the nominal currency of LSS2.

However, infrastructure needs are pressing today. Stagecoach is presented with severe highway operational problems on a near-daily basis. During the winter of 2022-23 we have, for example, seen key road links impacted for many weeks by acute disruption arising from flood events. Unpredictable, but seemingly more-frequent, exogenous events expose a lack of resilience in the highway network around Chichester and its travel-to-work area. However, serious, chronic, unpredictable delay has been normalised over recent years, with peak-time congestion having quickly returned after the pandemic. The existing development strategy has failed to bring forward measures having any impact on this to date, and key commitments – notably at west of Chichester Phase 2 and at Tangmere – have yet to commence to further aggravate the issue.

We have no confidence in the transport mitigations proposed in the existing Local Plan and LSS2 being sufficiently effective, even if deliverable at all. Indeed, the existing adopted Local Plan does little more than make vague speculations about the sustainable transport measures that might be achievable. The draft local plan review is no different. It has no ambitions at all for sustainable modes and thus, makes no meaningful provision to meet them.

This is especially relevant in light of the fact that the approach to resolving issues on the A27 around Chichester that were anticipated in 2015-16 have fallen away. LSS2 is thus currently inadequate to act as a part of an up-to-date, proportionate, and relevant evidence base for the Plan.

An update of a traffic model lies at the heart of a 2023 Chichester Transport Study. This talks no account of the existing role of non-car modes, nor can it do so. It is unable to properly evaluate the nature of problems or solutions that involve public transport, or for that matter, other sustainable modes.

Therefore, we consider that the combination of committed and additional development needs that must be accommodated over the whole plan period between 2022 and 2039, in both the Chichester and Arun Districts, require a “first principles” review. This must be based on a refreshed transport evidence baseline of no earlier than 2022 – given that the effects of COVID distort 2020-22 – and the transport infrastructure and service requirements to sustainably support those needs.

Key issues – including substantial changes with regards to transport issues and challenges, as well as potential solutions – thus do not form part of the evidence base that steers this plan. Given long term changes in travel patterns, and mode share that took place during COVID, as well as a local and national policy context that seeks to radically reduce and then eliminate transport-related carbon emissions, this is especially problematic.

The specific problems of congestion and network resilience that are evident on the A27 and the approaches to Chichester remain a set of especially difficult problems that disproportionately affect the efficiency, reliability and attractiveness of the bus network, that evidently demand larger-scale strategic responses involving multiple stakeholders, including bus operators.

Where the effects of development on the national Strategic Roads Network (SRN) are concerned, the approach of National Highways to addressing and responding to the mobility needs of development has now substantially changed following the promulgation of the DfT Written Ministerial Statement LTN01/22. This makes it clear that adding highways capacity is no longer the first or only strategy that should be pursued, but one subordinate this to maximising the potential of non-car modes and sustainable travel.

“Effective and ongoing collaboration” on transport matters has not led to solutions being agreed and published for public scrutiny as part of the plan evidence base. Whatever the approach to modelling and “highways improvements” that may be agreed or pending agreement with the County Highways Authority and National Highways, Stagecoach is neither participant or sighted. This is despite the clear requirements set out in NPPF Para 106 b) that “Planning policies should ... be prepared with the active involvement of local highways authorities, other transport infrastructure providers and operators and neighbouring councils, so that strategies and investments for supporting sustainable transport and development patterns are aligned.” (our emphasis).

We therefore consider that the Council has failed to comply with the requirements of NPPF paragraph 25 and 26 that “relevant bodies” are involved in plan-making, especially with regard to addressing the needs for infrastructure. Public transport services and the infrastructure that supports its operation and use clearly fall within matters relevant to plan-making. This is explicit in NPPF Chapter 9 and indeed within the plan itself – for example reference to public transport and sustainable modes in the Vision for the plan.

It should be stressed that the Regulation 18 “Preferred Approach” consultation took place in December 2018 – over 4 years ago and prior to COVID, based on LSS2. The inordinate length of time that has elapsed between the Regulation 18 and Regulation 19 stages greatly challenges the LSS2 and other parts of the evidence base, especially as the pause straddles the COVID epidemic. That would include the transport modelling baseline, and key assumptions in any traffic modelling that took place prior to mid-2022, which is a point at which a reasonable “new normal” post-COVID might be considered to have become established. In that period, Arun District has also adopted its own Local Plan development strategy that accommodates an unprecedented quantum of development immediately east and south-east of the District Boundary – creating additional substantial transport impacts directly affecting the A27 and multiple major approaches to Chichester crossing it.

The established mechanism to fulfil the Duty to Co-operate has thus not operated effectively.

The Plan is not founded on a relevant, proportionate and up-to date evidence base and is thus inadequately justified.

2.2. Spatial Portrait

The spatial portrait is generally succinct and accurate. However, it makes no mention of road-based public transport, the role of the City as a public transport hub, or the range of bus services that provide local connectivity (Section 2.4 and 2.5). The complete concentration of post-16 education in the City itself as just one example of the peculiarities of transport demands in the area, is not highlighted, though this has a profound influence on peak time travel demands affecting the most congested parts of the highway network. Among other things, the role of bus services in supporting the educational system of the plan area is very great indeed.

The potential role of bus in addressing the already-severe transport problems of the plan area and beyond seems entirely overlooked. The spatial portrait is thus clearly inadequate and incomplete.

2.3. Strategic Objectives

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Chapter 9 of NPPF and paragraphs 104 and 105 in particular require that plans should:

“Transport issues should be considered from the earliest stages of plan-making and development proposals, so that:

- a) the potential impacts of development on transport networks can be addressed;
- b) opportunities from existing or proposed transport infrastructure, and changing transport technology and usage, are realised – for example in relation to the scale, location or density of development that can be accommodated;
- c) opportunities to promote walking, cycling and public transport use are identified and pursued;
- d) the environmental impacts of traffic and transport infrastructure can be identified, assessed and taken into account – including appropriate opportunities for avoiding and mitigating any adverse effects, and for net environmental gains;...

...The planning system should actively manage patterns of growth in support of these objectives. Significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. This can help to reduce congestion and emissions, and improve air quality and public health...”

The Strategic Objectives do not conform with NPPF in these foundational requirements adequately, to transparently steer the plan strategy. They should therefore be amended to read:

"Plan to provide local infrastructure to support new development and seek opportunities to address existing identifiable infrastructure problems deficits, such as in particular those relating to the A27 and its junctions and wastewater treatment."

Paragraph 2.36 states, in the context of the Climate Emergency and the National Trajectory to "Net Zero" that "The council will enable the delivery of infrastructure, jobs, accessible local services and housing for future generations while protecting, conserving and enhancing the historic and natural environment."
Naturally, we support this intent.

However, there is no acknowledgement of the role current patterns of transport use contribute to carbon emissions, nor that substantial mode shift is necessary to address sustainably an acute lack of capacity on the local network and the SRN, especially around Chichester. This is especially concerning as the basic conceptual link is not made between the fact that the greatest such problems lie on the A27 corridor and around Chichester, while these are also at the same time present many of the most sustainable locations for development, and where the opportunities to secure much greater use of sustainable modes also exists.

Strategic Objective 7 "Strategic Infrastructure" includes the following statement:

"To work with infrastructure providers to ensure the timely delivery of key infrastructure to support delivery of new development. New development will be supported by sufficient provision of infrastructure to enable the sustainable delivery of the development strategy for the plan area. Key infrastructure to support the Local Plan will include improvements to transport, ...

A sustainable and integrated transport system will be achieved through improvements to walking and cycling networks and links to accessible public transport. Highway improvements will be delivered to mitigate congestion, including measures to mitigate potential impacts on the A27 through a monitor and manage process."

The latest transport evidence in the Chichester Transport Study makes no pretence to define much less to deliver a "sustainable or integrated" transport system. It is wholly devoted to sustaining current levels of car use across the District, to and through Chichester area.

It is no more than the lightest of touches to the approach taken to supporting the adopted Local Plan, an approach that is already almost 10 years beyond the date of its gestation but has yet to deliver any significant capacity improvement schemes, much less any measures that sustain even current levels of public transport journey times and reliability in the face of increasing congestion – much less any betterment.

Of the six key junctions on the A27 around Chichester, recognised to require significant mitigation given they are saturated for extended periods, five accommodate regular bus services - indeed frequent ones at least every 20 minutes in several cases. The sixth at Oving Road, relates directly to a key corridor where bus services are needed to support strategic growth currently being delivered at Shopwhyke, as well as substantial further growth West of Tangmere (proposed allocation A14) and "East of Chichester" (A8), south of Shopwhyke Road.

As stated at p12 of the Study Summary "The modelling shows that all the junctions on the A27 Chichester bypass are well over capacity, even before adding in the Local Plan development and with the exception of Portfield Roundabout are actually shown to be over capacity in the base model year (2014) in one or both peaks". This much has indeed been evident for years from delay and periodic even more severe disruption arising to Stagecoach services from the lack of network resilience.

The reassignment of through and local traffic through Chichester to avoid the A27 bypass is an especially serious issue for bus services that penetrate the city. This is leading to consequential saturation of a range of junctions used by buses. Rising delay and unpredictable running times are at the root of our decision to sever the long-established Portsmouth to Littlehampton service in 2023, which will in future no longer run across Chichester, but terminate to provide additional dwell time to mitigate the impacts of congestion.

While this congestion affects all road users including businesses and freight traffic, the effect on scheduled bus services is greatly higher, as such services cannot reassign route to 'beat the queue'. Traffic congestion often encourages greater car use for this reason, in tandem that people are happier to sit for extended periods in their own vehicle on a seamless door-to-door journey than wait at the roadside for a delayed bus making slower progress in lengthy queues.

As the Study admits at para. 1.3.2 "Although, there have been works at the Portfield Roundabout in this timeline, no other mitigation schemes have been completed along the A27 corridor, as such the mitigation schemes defined in this report will also be required to consider the development from this plan period."

In other words, in the 8 years since the current Local Plan was adopted in 2015, there has been minimal progress is delivering the traffic mitigations. There is no clarity at all when any such mitigations will be brought forward. It is hardly surprising then, that traffic conditions have deteriorated. The "predict and provide" transport strategy supporting the current plan has failed.

Despite this, the Draft Local Plan Review proposed to “double down” on exactly this strategy. It represents, like the rest of the evidence base, a “rolling forward” of the current car-based strategy by 9 years, with the lightest of touches to attempt to accommodate car trip demands from a relatively modest additional development quantum.

Nevertheless, the Study requires a global 5% reduction in trip demands arising from unspecified “credible” (paragraph 4.1.2) sustainable transport and travel planning measures. It is unclear why use of non-car modes will see disproportionate growth when no measures are in place to make them more attractive. This 5% increase in use translates to a doubling in the modal share of bus services. There is no evidence nationally, anywhere, that simple ignorance of alternatives to the car is the main barrier to uptake.

The outputs of the 2023 Chichester Area Traffic (SATURN) model are set out at Table 5.1 (am peak) and 5.2 (pm peak) without mitigation. These betray just how seriously compromised the whole network around Chichester is, and will be in future, even with implementation of a mitigation package to increase traffic capacity that is understood to cost between £92m and £164m – and which the Study and the draft plan acknowledge cannot be delivered through developer funding sources alone. Unspecified external funding presumably from HM Treasury through DfT is required.

Even if this provided and the schemes are delivered, Tables 8.1 and 8.2 indicate these will provide minimal relief. The final columns suggest key junctions, including Portfield, Fishbourne Road and Cathedral Way East will remain at well over 100% ratio of flow to capacity (90% is considered the point at which saturation is approached, with the onset of increasing delay above that figure). RFCs in tables 8.1 and 8.2 are some of the highest we have ever seen in a local transport evidence base for a post-mitigation scenario. While the serious potential risk of reassignment across Chichester City is greatly reduced, which is important and welcome given its impact on bus services, Tables 8.1 and 8.2 show the extent of post-mitigation saturation is also egregious, covering a very large number of key links and junctions.

On every measure and criterion, then, including cost deliverability and effectiveness, the revised Transport Strategy falls well short of evidence to suggest the transport impacts of the plan can be properly addressed by this means.

Despite the repeated statements about sustainable modes throughout the draft plan and Chichester Transport Study, only 2 paragraphs at Section 6.2 within the Study are devoted to public transport:

“6.2.7 The funds generated from the parking management schemes, local/nation funding schemes and developer contributions could also be utilised to fund potential public transport enhancements within the city centre including an expansion of the bus priority lane system within Chichester City Centre. This could reduce reliance on the car in the longer term towards sustainable public transport. A park and ride scheme could be incorporated within a bus priority lane network in the future depending on the uptake and successfulness of early bus priority trials.

6.2.8 Chichester City centre has a constrained existing public highway network. Therefore, any proposed dedicated public transport or light transit corridors that could be implemented would be at the expense of existing highway. This could be managed through a time-based system where certain routes are restricted to public transport only during specific times. E.g., peak hours.”

There is some very high-level consideration of Park and Ride following this section. None can be considered a serious practical evaluation of consolidating car-borne trips onto bus services, including existing ones, for example local mobility hubs, more frequent bus corridors, delivery of specific bus priorities.

None of the discussion of alternatives to “predicting and providing” for unconstrained traffic growth is rooted in a deliverable evidence base, or proper evaluation of options and specific projects.

To take just one aspect of the few specifics that can be picked out, a workplace parking levy is hypothesised. This would apply only to “offices”, in Chichester city centre (para 6.2.3), without consideration given as to how this could be practically achieved or even that a meaningful amount of office based employment would qualify. Much less is any consideration given to how far focusing a strategy only on office-based workers would actually deliver a particularly significant effect, apart from to create a strong incentive to relocate offices out of the city centre to places out of reach by public transport.

Looking at the Chichester Transport Study 2023 and the draft plan together, there is insufficient evidence that the traffic capacity increase proposed in the 2023 Transport Study is any more affordable or technically deliverable, or likely to be sufficiently effective, than those in the past strategy. The evidence more strongly points to the fact that no highway improvements are identifiable or economically deliverable to meet even short term increases in demand for car-borne mobility on most of the network around Chichester.

There are no published strategies or schemes clearly supporting the contention that the objective of improving sustainable modes is technically achievable or deliverable either. The plan makes generalised assertions that such strategies will be devised and implemented only after serious problems emerge from a shortfall in the car-borne transport strategy.

The reference to “monitor and manage” is undefined and unsubstantiated. There are no outcomes stated, no mechanisms specified and no timescales for action.

Our experience today is that network conditions have reached unacceptable and prejudicial levels of severe unpredictable delay. The saturation of the network is already evident well outside the traditional peaks on key sections of highway and at key junctions. External shocks such as the effects of severe weather are becoming more common, leading to delays so extreme as to justify the description of “gridlock”. The plan does not identify a strategy to effectively address this, in particular by consolidating passenger car trips onto more efficient public transport vehicles. This is unacceptable to Stagecoach.

2.4. Local Plan Vision

Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the broad approach in Plan Vision and in particular that by 2039, the Plan will support and enable greater use of sustainable modes. However, there is no link made between reducing the use of private cars, and the need for a step change in the use of sustainable modes. Without a published transport evidence base it is impossible to establish a suitable sustainable transport strategy to support both carbon reduction and alleviation of the problems arising from acute congestion. Even on a very crude basis, to achieve a meaning mode shift on key approaches to the A27 Chichester Bypass will require more than 20% of existing peak car-borne journeys to transfer to other modes. A 10 percentage point transfer to bus (about half this shift) would imply more than doubling peak hour bus passenger boardings.

The Vision is nothing more than an aspiration, that needs to more definitively aim at key outcomes, for the plan to be effective. The Vision should thus be altered to read:

“Get about easily, safely and conveniently with less reliance on private cars –making the greatest possible use of the rail and enhanced bus network, and with more opportunities for active travel including walking and cycling; to materially reduce dependence on private car use.”

Underpinning the Plan’s spatial strategy, the Vision section goes into more specific detail about key localities in the Plan area.

Regarding Chichester, Paragraph 2.39 states: “The emphasis will be upon consolidating and enhancing the role of Chichester city as the plan area’s main centre, whilst also developing the role of key settlements to its east and west. The focus will be upon creating communities with good access to a range of employment opportunities and affordable housing for young people and families to balance the ageing population.”

This is clearly the appropriate focus for meeting the District’s development needs in a sustainable manner. The city and key settlements to the east and west, are those places already able to make use of relevant public transport services, both rail and bus. Especially within and near the City, walking and cycling can credibly present highly relevant choices. This emphasis clear can be expected to address the requirements of sustainable development set out in NPPF and their local application set out in the Plans Strategic Objectives.

However, this needs a robust transport strategy, to avoid a further concentration of development and its traffic impacts occurring on or near some of the most chronically congested parts of the highway network. To date, the absence of intervention has strangled the bus network through further marked deterioration in traffic conditions. This by consequence increases the risk of bus delay or cancellation, lengthens journey time and reduces customer confidence in bus as an attractive alternative mode of travel.

In April 2023, Stagecoach is making significant timetables changes to improve operational resilience in and around Chichester. The biggest such change is the severance of the Portsmouth to Littlehampton section of service 700, at Chichester, with buses operating independently to the east and to the west and ending cross-city links. This is planned to reduce the probability of delay but at the cost of additional vehicle resource (circa £200,000 per annum) which could be better spent providing new or enhanced services. We anticipate a small loss of custom as a direct consequence of the change, but have little choice other than to take negative action so as to fulfil our statutory punctuality obligations.

If the Strategic Objectives of the Plan and its Vision are to be achieved, in the way required by NPPF paragraphs 104-105, a properly-evidenced transport mitigation strategy needs to create the conditions where bus journeys are more reliable than car journeys and thus mobility demand switches as far as can be realistically achieved away from car use, to bus use and other more sustainable modes.

Beyond Chichester, the Plan Vision focuses on key localities beyond to the east and west.

To the west of Chichester a focus on growth at Southbourne is justified at paragraph 2.43: “...the aim is to take advantage of the village’s good transport links and existing facilities to deliver significant new residential-led development within the broad location for development which will further enhance local facilities and offer opportunities to reinforce and supplement existing public transport, including bus routes.”

We agree this is a very significant opportunity. However, if the requirements of NPPF paragraphs 104-105 are to be met,

this demands that effective bus priority is delivered on the A259 corridor, especially eastbound at Fishbourne and westbound approaching Emsworth. Without such measures, the growth committed and planned will serve only to further undermine bus journey time and decrease punctuality on the existing 700 service, entirely contrary to the aims of the Vision.

The emphasis on the A259 corridor served by Stagecoach 700 west of Chichester is reinforced at paragraph 2.45 stating that “Between Chichester and Southbourne, the Plan provides for more moderate levels of growth within the parishes of Fishbourne, Bosham and Chidham & Hambrook, ... with opportunities to support and expand existing facilities and for increased use of public transport options”. We strongly support the principle, but the Plan must follow through with specific public transport priority measures that facilitate rather than prejudice such an outcome.

East of Chichester the focus is at Tangmere, where the existing allocation for about 1000 dwellings is being uplifted by 300. Paragraph 2.44 justifies this among other things recognising the scope for “...improved and additional bus services and cycleways will provide better connections to Chichester city and east to Barnham and the ‘Five Villages’ area in Arun District.” We unequivocally endorse this conclusion. Realising a “game-changing” level of bus service quality, reliability and frequency east of the city, also serving committed and planned development north and south of Oving Road at Shopwhyke, is equally essential, given that all SRN links and junctions are approaching equal saturation.

The National Bus Strategy has given new focus on partnership with West Sussex County Council to discuss and deliver a significant new bus service between Chichester, Shopwhyke, Tangmere, Eastergate and Barnham, supporting committed development and acting as an initial phase of what ought to be a more ambitious longer-term strategy to support growth beyond 2025 in both Chichester and Arun Districts. For these improved bus services to be both deliverable and effective, robust bus prioritisation is unavoidable. No such measures are proposed in the Plan or its evidence base and we therefore suggest inclusion of plans to facilitate safe and efficient bus operation between Tangmere and Nyton/Eastergate, ideally avoiding the need to join A27 through-traffic entirely.

We welcome the clear recognition that these localities identified for growth, benefit from existing relevant public transport services. The Vision also sets an expectation that bus services in particular should be “enhanced” and “reinforced”.

We entirely agree that these opportunities exist, across the broad strategy and strategic allocation proposed by the draft Local Plan. Securing them will be crucial to achieving national and local policy objectives, including the Strategic Objectives. However, to our continuing very great dismay, the Plan goes no further to defining how this will be achieved. As such the Vision is not demonstrable achievable or deliverable.

Accordingly the Plan cannot be considered effective, in the sense of NPPF.

Remedying this, demands specific measures to protect bus services from congestion in the following corridors:

- A259 East of Emsworth
- A259 Fishbourne
- A 259 Via Ravenna/Cathedral Way
- A286 Stockbridge Road north and south of A27
- B2145 Whyke Road/Hunston Road
- A259 Bognor Road, east and west of A27 and extending to the District Boundary
- B2144 Oving Road/Shopwhyke Road east and west of the A27
- A 285 Westhampnett Road/Portfield Way/Stane Street, potentially involving a mode filter at the west end of Stane Street

These must be defined to a sufficient level of detail to assess their effectiveness and deliverability, including costs.

This would then allow West Sussex County Council and Local Transport and Highways Authority, ourselves as the principal bus operator, and where appropriate other organisations that would be directly tasked with delivering the mitigation package, to agree service levels and standards necessary to deliver specified outcomes, including journey times, frequencies, capacity and hours of operation on the network, and also in respect of the strategic allocations and Strategic Locations for Growth.

The agreed mitigations strategy should be set out in an up-to-date Infrastructure Delivery Plan backed by clear funding commitments, including a funding strategy to justify necessary developer contributions.

Where necessary to support evidence of effectiveness and deliverability, clear statements of support, which might include Statements of Common Ground between the LPA, LTA, National Highways and Stagecoach, could be provided.

3. Spatial Strategy

Stagecoach Supports

Stagecoach well recognises the constraints outlined in the explanatory narrative at the start of Chapter 3.

In particular we strongly endorse that strategy in that it reflects that the best opportunities to meet housing and employment development requirements sustainably clearly exist in and close to Chichester and on the key east-west

movement corridor where – subject to effective measures being delivered to make these modes more attractive, efficient and relevant – sustainable modes can credibly provide for a much higher proportion of movement demands, mitigating most effectively the potential traffic impacts of development.

We agree that the Manhood Peninsula suffers serious environmental constraints, but, added to these, public transport and other sustainable modes cannot provide such attractive alternatives, and significant further development risks merely reinforcing already high levels of car use, aggravated by the carbon impacts of the distances involved – something the plan does very little to evaluate, and makes no reference to.

We endorse the conclusion in paragraph 3.24 that significant development in the part of the District north of the National Park is inappropriate. The rationale is principally on landscape and visual character. This exposes a fundamentally biased approach to plan making that has consistently underplays transport accessibility and carbon issues. In fact, the lack of local services and the extended distances that need to be travelled to fully participate in society in this area, with no realistic prospect of public transport offering relevant choices, ought to rule such a strategy out of play on a far less aesthetic and interpretational basis.

3.1. Policy S1 Spatial Development Strategy

Stagecoach Supports

The Spatial Strategy flows clearly and logically from the Spatial Portrait, and the opportunities and constraints identifiable across the Plan area. It represents a logical and justified continuation of the existing Local Plan strategy. In particular the spatial strategy maximises the potential for sustainable modes to contribute to meeting a much higher proportion of all the District's mobility and accessibility needs.

3.2. Policy S2 Settlement Hierarchy

Stagecoach Supports

The settlement hierarchy clearly reflects the service endowment and potential self-containment of the settlements in the District. In particular, the second tier of settlement hubs includes secondary schools, which are major peak trip generating uses. Service villages, in the main, also benefit from bus services running at least hourly, which can be expected to provide for a degree of mobility for the higher number of trip purposes that cannot be satisfied by walking or cycling within the immediate locality. Thus, a level of development to meet local needs in this tier is relatively sustainable.

There is a quite broad range of settlements in this category. We have concerns that, north of the National Park, the Service Villages have no realistic public transport choice. These include Plaistow/Ifold, Kirdford, Loxwood, and Wisborough Green. Such as exists is typically a 1/bus per day off-peak shoppers service offering up to 90 minutes in Horsham or Guildford and as such any development here even to meet local needs requires each adult to own a car. This contrasts strongly with Service Villages to the south of the National Park, which are greatly more sustainable.

4. Climate Change and the Natural Environment

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This section of the plan is extensive and wide ranging, as should be expected.

However, remarkably, there is no acknowledgement whatever of the role of transport in mitigating climate change or its effects, not of the importance of sustainable movement and access being facilitated across the plan area in addressing anthropogenic impacts on the natural world at a more local level.

This exposes very clearly a troubling level of indifference to transport matters in the production of the Plan, which, while nationally quite common, is neither appropriate nor acceptable. The mitigation of transport impacts is not merely a matter speaking to the social and economic aspects of sustainable development. It is crucial to address the causes and effects of climate change that arise from transport, and personal mobility.

This is now well understood and at the centre of national policy, including the National Decarbonisation Strategy for Transport (July 2021) which at Section 5 commits the government to aligning land use planning and transport strategy much more tightly and effectively to mitigate the carbon emissions associated with the current dependence on cars, and the mode mix; but also to reduce travel distances, both increasing the potential relevance and effectiveness of all sustainable modes, and reducing average journey lengths for residual motorised journeys of all kinds.

National statistics show that well over a third of all domestic carbon emissions arise from land-based transport and of these, the vast majority arise from trips of over 10km – outside the range of large scale use of cycling. In fact, the potential of the plan to materially support carbon emissions reduction from within the plan area lies more in the realm of transport than any other policy theme – including emissions mitigation from buildings, which is in any event an aspatial matter and covered by nationally-binding building regulations. By 2025 something like 40% of all the emissions within the plan-area will be transport related.

There is no evidence supplied to support the plan that addresses the transport carbon impacts of the spatial

development strategy in a clear manner.

There is no evidence supplied that sets out the effects of potential worsening of congestion on air quality within the plan area, arising entirely from the excess of passenger car movement demands over available and credibly deliverable highway capacity. This is despite the evidence set out and acknowledged in the explanatory memorandum at paragraph 4.130:

"4.130. The council's Air Quality Action Plan and the West Sussex Transport Plan 2022-2036 both refer to the air quality issues faced by Chichester. There is currently one Air Quality Management Area (AQMA) in the plan area, located at St Pancras, Chichester. AQMAs are designated where air quality exceeds, or is likely to exceed, national air quality standards and objectives. Development within or impacting these areas, or that likely to cause the declaration of any further AQMAs, will be subject to an air quality assessment by the applicant."

This is a retroactive approach – it is not "planning", based on evidence.

We are well aware that air quality issues in and of themselves can render allocated sites to be undeliverable: a good example is in the Vale of White Horse, Oxfordshire, where strategic allocations on the A338 and A420 corridors have been held up for years by air quality issues at Marcham and Frilford, in large measure because agreed transport interventions were considered inadequate or undeliverable a very short time after the Plan was examined and adopted.

There is no evidence that shows how the development strategy can effectively mitigate these impacts as well as the further potential impacts that arise from the development strategy. This is exasperating, as there is clear evidence that could be drawn upon to show that that very substantial opportunities exist to:

- Speed buses up and make them more reliable by the delivery of bus priority on most of the key main corridors. Most of these even today operate relatively frequently
- Improve service frequencies and extend hours of operation.
- Secure significant background mode shift to bus as a result, damping pressure on key links and junctions, by consolidating demands on direct more reliable and more frequent bus services.

The spatial development strategy as submitted is in fact, likely to well conform to such additional evidence.

The allocations require substantial additional transport related work and evidence to demonstrate that the opportunities for sustainable transport have been identified and taken up as required by NPPF paragraphs 104-105.

With regards to specific policy, Policy NE22 should be modified to read:

"Development proposals will be permitted where it can be demonstrated that all the following criteria have been addressed:

1. Development is located and designed to minimise traffic generation and congestion through access to by maximising the relevance and attractiveness of sustainable transport modes, including maximising provision of specific demonstrably effective measures to make pedestrian and cycle and public transport routes and networks more direct, more safe, faster and more reliable;..."

5. Housing

5.1. Policy H1 Meeting Housing Needs

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

The presumption of the planning system is that local planning authorities should seek to meet their objectively assessed development requirements in full. These needs are assessed by a defined Standard Methodology set out in Planning Practice Guidance and elsewhere, that has explicit regard to ensuring that the economic and social effects associated with housing are properly provided for, to avoid exacerbating serious problems that arise from inadequate housing supply.

As a significant local service provider and employer, Stagecoach is concerned that existing issues with housing availability and affordable housing supply are not exacerbated. This has a direct bearing on staff recruitment and retention. It also has an indirect bearing on our cost base.

The existing problems with housing affordability have developed over many decades of undersupply. It should be emphasised that the significant boost to the supply of housing that has been sought by governments over the last 15 years, has only begun to take effect relatively recently in this District. Tackling the problem will require years of consistent attention.

Stagecoach notes that the Council is no longer proposing to meet its identified housing needs in full. Rather than 638/annum the Council is allocating a total that implies an annual delivery rate of 535/annum.

While a number of matters evidently present challenges to the Council in identifying a sustainable development strategy. Paragraph 5.2 indicates that "constraints, particularly the capacity of the A27 has led to the council planning for a

housing requirement below the need derived from the standard method..." The blame for being unable to meet housing requirements is thus laid squarely at the door of transport infrastructure and systems.

This conclusion in no way follows from the evidence in the Chichester Transport Study. This, rather, makes the statement that when a higher annualised quantum of 700 dwellings per annum was tested, in the majority of cases the traffic capacity improvement package would perform little differently. To quote the Study:

"5.6.3 The network performance outputs analysed comprising V/C%, Delays (seconds) and Queues (PCU's) suggest that generally the proposed SRN mitigation identified for the Core Scenario, can accommodate in the most part, additional increase in development to 700dpa."

Whether the rest of the local road network is similarly protected is moot.

Irrespective of these results, even if the contention made in the draft plan were true, unlike many other constraints, this is amenable to a suitable effective strategy to address the constraints identified being collaboratively conceived. This is what NPPF expects, as set out in paragraphs 104-106.

Where the A27 is concerned, as part of the SRN, National Highways is now working to a substantially revised approach than that in force at the time to current Local Plan was prepared, or LSS2, or reflected in the Chichester Transport Study. This is set out in DfT WMS 01/22. This document is the policy of the Secretary of State for Transport in relation to the SRN which should be read in conjunction with the National Planning Policy Framework (NPPF). It replaces the policies in the Department for Transport Circular 02/2013 of the same title.

It makes plain that to accommodate additional demands arising from development, National Highways (NHC) expects to meet the requirements of its statutory license in a substantially different manner. With respect to development NHC LTN 01/22 continues to address the tensions between national policy for the environment and carbon mitigation, the ongoing need to substantially boost the supply of housing as well as maintain national economic competitiveness and protect the safety of the public. However, in future, the approach will be to seek first to maximise the impact of demand management measures (reducing the need to travel), and then to accommodate residual additional demands first through maximising the use of sustainable modes, rather than accommodating assumptions about current levels of car dependency and use.

LTN 01/22 much more closely and explicitly aligns with the language of NPPF Chapter 9 paragraphs 104-106. Paragraph 12 states: "New development should be facilitating a reduction in the need to travel by private car and focused on locations that are or can be made sustainable.... Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas." (our emphasis).

It continues at paragraph 13: "where developments are located, how they are designed and how well delivery and public transport services are integrated has a huge impact on people's mode of travel for short journeys. The company will therefore expect strategic policy-making authorities and community groups responsible for preparing local and neighbourhood plans to only promote development at locations that are or can be made sustainable [footnote 8] and where opportunities to maximise walking, wheeling, cycling, public transport and shared travel have been identified." (again, our emphasis)

Stagecoach readily confirms that the draft Plan development strategy conforms well to the first limb of this expectation, in terms of the location of development.

Stagecoach considers that the plan and its evidence base conforms poorly to the second in that the specific opportunities to maximise walking, cycling wheeling and public transport are not clearly identified, and defined, and proven to be effective and deliverable.

The current mitigation strategy for the A27 Chichester area, supporting the adopted Local Plan and for which proportionate developer contributions have and continue to be sought, reflects now-superseded DfT Circular 02/2013. As a direct result, it failed completely to identify any significant effective bus priority measures, despite the fact that frequent services already exist on the key corridor concerned, and that one bus journey can remove, fully seated between 72 and 80 single occupancy car journeys from congested links and across key junctions on the A27. Rather, it sought to implement targeted measures to increase the throughflow of general traffic.

We recognise the realisation that this approach, which was already reliant on some tenuous logic, is simply not technically viable, especially where further development needs are anticipated.

National Highways will now pursue an approach with the planning system that "includes moving away from transport planning based on predicting future demand to provide capacity ('predict and provide') to planning that sets an outcome communities want to achieve and provides the transport solutions to deliver those outcomes (vision-led approaches including 'vision and validate,' 'decide and provide' or 'monitor and manage'). The company will support local authorities in achieving this aim through its engagement with their plan-making and decision-taking stages." (paragraph 15).

Paragraph 23 is at the fulcrum of assessing and defining transport mitigations to accommodate growth on and near the SRN "Capacity enhancements such as modifications to existing junctions or road widening to facilitate development should be determined on a case-by-case basis. The general principle should be accepted where proposals would include measures to improve community connectivity and public transport accessibility, and this will be weighed against any negative safety, traffic flow, environmental and deliverability considerations, impacts on the permeability and attractiveness of local walking, wheeling and cycling routes, and alternative options to manage down the traffic impact of planned development or improve the local road network as a first preference." (our emphasis).

However, no material work has been done that seeks to identify if a bold robustly conceived and suitable judiciously-prepared strategy that seeks to consolidate flows on already densely travelled corridor onto improved bus services, driving mode shift through insulating these services preferentially from already serious queuing. This would be likely to have very substantial impacts on all the key junctions on the A27, and potentially, on the A27 itself. The need for an integrated approach between Shoreham and Emsworth within West Sussex paying particular regard to development requirements in both Arun and Chichester Districts naturally lies at the heart of this, and we would expect to be picked up by the LSS3 Review among other things.

However, the locus of the problems and its causes and effects are obviously well enough known to start work on defining solutions within the plan area today. We would expect that this work will be essential if National Highways are to support the Plan, especially now given the terms of Circular 01/2022.

Such work could and should start from a "policy off" position: in other words that the Plan should fully accommodate its needs unless it can be proved that a mitigation strategy for the A27 that is compliant with DfT WMS 01/2022 cannot credibly accommodate resulting capacity demands without unacceptable impacts on the safety and efficient operation of the SRN.

This evidence does not exist. In fact the Chichester Transport Strategy 2023, on which the Council solely relies as its transport evidence base, indicates the opposite at para 5.6.3. This is the case before meaningful measures to secure damping of traffic demands through mode reassignment are even considered.

The exception to this is Portfield and Oving Road, which are among the most problematic areas after mitigation even at the Council's chosen 535 dwelling/annum scenario (para 5.6.4.-5). The costly capacity mitigation simply cannot deliver enough benefit. It is admitted that WSCC has indicated that it would prefer a solution that places greater reliance on sustainable modes damping car-borne demand. This is entirely the strategy required by NHC to follow LTN 01/22, of course. Despite the fact that "predict and provide has "run out of road" no attempt has been made to examine what such a solution set credibly could look like. This is unsatisfactory and deeply troubling.

At paragraph 5.4 the draft plan points back again at the West Sussex and Greater Brighton Strategic Planning Board and the future work that has been commissioned, but has barely begun, to update the Local Strategic Statement. This work is to inform the preparation of plans that have horizons beyond the end date of the current LSS in 2030 and properly to meet the Duty to Cooperate. As we said in our response to section 1 of the Plan we fully endorse the conclusion that this is the right mechanism to look at these issues. However, the mechanism has not been effectively applied to the production of this plan. Therefore, the specific evidence that capacity on the A27 in and of itself supports accommodating a lower housing requirement does not exist.

The Plan thus does not conform to NPPF, is not adequately justified and is not effective.

The Plan does not properly meet the statutory Duty to Cooperate.

We will return to this matter in specific representations to Section 7 of the draft plan.

5.2. Policy H2 Strategic Locations/Allocations 2021-2039

Stagecoach Supports

Policy H1 makes plain that the plan, as far as it identifies locations for development has done so in locations that conform with its spatial strategy. All of the strategic allocations to a greater or lesser extent offer clear opportunities to make use of sustainable modes, by virtue of their location. That is not to say that the opportunities to take up these opportunities, and maximise the role of sustainable modes, has been identified, defined and translated properly into the rest of the plan policy suite or Infrastructure Delivery Plan.

As our remaining representations make clear, we support the locations thus far identified as being those that offer the best opportunities to reduce the need to travel, reduce travel distances, and create high quality attractive sustainable travel choices, for both existing residents as well as new ones.

However, the transport impacts of the allocation will individually and cumulatively likely to lead to increasingly severe impacts on the transport network, and on bus services.

Perversely, because these opportunities are not properly identified and secured through the plan and its supporting transport strategy, the opportunities presented by the allocations to secure a substantially more sustainable and lower

carbon pattern of movement will not only risk being squandered but may aggravate the wider problems.

5.3. Policy H3 Non-strategic Parish Housing Requirements

Stagecoach Supports

The approach is consistent with the plan's spatial strategy. It generally avoids a dispersal of development to locations likely to be highly car dependent. There is a clear focus on meeting housing needs in the far north-east of the District at the largest and most sustainable settlements, such as Loxwood, Kirdford and Wisborough Green. However, it must be pointed out that public transport availability in this area, provided by the County Council through services it procures, is minimal. These settlements in practice require each adult and child of secondary school age to have access to motorised transport to fully participate in society. This might justify significant measures to secure a boost in the frequency of bus services between Guildford and Billingshurst, passing through these settlements.

Otherwise, existing commitments in the plan area already make provision to meet for local needs. To the degree that there is an unmet local requirement for affordable housing of a small scale – for example to support the rural economy – this could be met through neighbourhood plans or through Rural Exception Sites.

6. Place-making, Health and Wellbeing

6.1. Policy P1 Design principles

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

NPPF requires that proposals should consider transport issues from the earliest possible stage. Designing to properly facilitate safe and efficient access, focusing first on sustainable modes, should be at the heart of development design.

Too often it is still an afterthought, notwithstanding this.

Policy P1 must include an additional statement to be compliant and effective with NPPF paragraph 104-105 and 112 a):

“Development will be designed to make access and movement using walking, cycling and public transport the natural first choice, and demonstrate through the Design and Access Statement how such modes are afforded the most direct, safe, reliable and efficient routes within to and from the proposals, especially when compared with car use.”

6.2. Policy P4 Layout and Access

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

A number of proposals in the plan involve large-scale development. It is essential that where appropriate buses can access and circulate efficiently through development at a suitably early stage. There is no acknowledgement of this anywhere in the policy, contrary to NPPF paragraph 112.

Large-scale development which buses cannot access in an efficient or timely manner, or at all, strongly contributes to high levels of car-dependency. Evidence for this is referred to among other places, in DfT Circular 01/2022. To be compliant with NPPF and properly pursue its strategic Objectives, Policy P4 needs to be modified to address this point: “1. Provide safe, direct and attractive conditions for inclusive access, egress and active travel between all locations and providing as good direct high quality links to integrated public transport, and where appropriate efficient access and circulation to bus services, unimpeded by excessive parking, at a suitably early point in the development phasing;

7. Transport and Accessibility

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

The issues related to transport are fundamental to the soundness of the Plan. In particular, the constraints presented by the capacity on the A27 around Chichester and its key junctions, are the paramount reasons why the Council does not consider it can meet its objectively-assessed development needs in full. Thus, the transport issues and potential solutions available and what these mean for the ability of development needs to be accommodated, are matters that go to the heart of the soundness of the Plan.

Paragraph 8.3 sets out the approach taken to date succinctly:

“Increasing the capacity of the road network is key to supporting growth in the Local Plan. However, there is also a need to reduce demand for road transport to achieve net zero in greenhouse gas emissions by 2050 as highlighted in the council's Climate Emergency Action Plan and Strategic Objective 1. In aiming to achieve the ambitions of the action plan, all development is expected to demonstrate how it will support four key objectives to create an integrated transport network which will alleviate pressure on the road network, improve highway safety, encourage sustainable travel

behaviours and help reduce transport related impact on air quality, by:

1. Avoiding or reducing the need to travel by car;
2. Enabling access to sustainable means of travel, including public transport, walking and cycling;
3. Managing travel demand; and
4. Mitigating the impacts of travel by car."

However, this approach is unambitious and "lightweight" as it assumes, as does the existing Chichester Transport Strategy on which the current adopted plan relies, that the focus of investment should be, wholly, in highways capacity improvement.

Sustainable modes explicitly are expected to play a greater role to "alleviate pressure" on the local road network, as part of this strategy. To emphasise: to avoid exacerbating congestion, the strategy will have to both remove a significant proportion of existing demands from the network on multiple key approaches to Chichester; and then ensure that travel demands from committed and further new development allocated in the plan does not simply replace these journeys, or, worse, create even greater demands.

This will demand very significant behaviour change. Only by making sustainable modes substantially more attractive, both absolutely, and relative to the same journey made by car, can this be expected to occur. However, the explanatory memorandum as well as the wider policy suite and IDP, well expresses a fundamental unwillingness to taking specific, defined measures to achieve this reduction in car use and material promotion of sustainable modes. It makes plain that sustainable modes, including bus services, will offer a lesser role to which "access will be provided".

Such a vague and weakly defined mechanism will have no effect, at all, on current behaviour and car dependency if the relevance of those choices as a credible alternative to car use, is not substantially boosted. This includes a 5% reduction in trip demand assumed by the Traffic Model at the heart of the Chichester Transport Study 2023.

For this reason. the transport strategy behind the current adopted plan is demonstrably ineffective, as the updated model makes plain. It has not yet been delivered and is yet unclear when or (in the absence of committed funding) even if it can be. It is ineffective to "roll forward" this strategy to support a higher level of planned growth.

We note that a scheme for addressing congestion on the A27 at Chichester has been included in Roads Investment Period 3 (2025-2030) – well within the horizon of this Plan. However, recent history provides compelling evidence that off-line improvement to the north is not politically supported and arguably even technically or economically deliverable. It is not funded, nor at this stage can it be hypothesised if an economically deliverable scheme is achievable sufficient to warrant the necessary investment.

An on-line improvement of the A27, including junction improvements, is likely to favour longer distance east-west though movements, which are of greater significance to the national economy, at the expense of local movements crossing the SRN- a conundrum that largely sums up the dilemma that is faced by NHC and the County as Highways and Transport Authority. It is one that is played out in many places, but rarely is the tension so stark as at Chichester.

Every local route crossing the A27 at grade around Chichester accommodates a regular bus service - or shortly will do (Oving Road area is expected to follow in 2023, though bus services are likely to not use the modified crossroads but to use the left-in-left-out facilities provided as part of the Shopwhyke Lakes development). The impact of these issues on the entire bus operation are serious and increasingly severe.

By the same token, boosting the relevance and reliability of each of these services substantially consolidating as much demand as possible onto a much smaller number of vehicles, is clearly a strategy that ought to support the effective capacity of each of these junctions being greatly augmented, at the same time as reducing equally substantially, the energy- and carbon intensity of mobility in the plan area. Addressing the A27 should not be considered some kind of "zero-sum" game.

Furthermore, the approach of National Highways in its dealings with development and the planning system now reflect a substantial change in Government Policy set out in DfT Circular 01/2022, which we separately cover in these representations, that entirely aligns with an approach that seeks to appropriately invest in more active and rational management of scarce highways capacity, on both the SRN and local roads.

For environmental, economic and social reasons – including public health, the issues presented by the A27 and its interface with local roads around Chichester stands out, nationally, as an example of where the approach taken to accommodating and mitigating development impacts needs to make a clear break with previous "predict and provide" approaches to meet forecast unconstrained car use as LTN 02/2022 makes clear as a principle. Policy in the West Sussex LTP to 2036 itself makes plain that "shared mobility" – including bus services – must play a much greater role in this area.

The existing Chichester Area Transport Strategy is focused on justifying capital contributions from committed development to fund highways capacity improvement – with nothing included to make bus services more attractive, or

importantly more reliable. Indeed this “cars first” approach is so costly, that there is already accepted by WSCC to be insufficient land value remaining to be captured to put into substantial improvements for public transport. That much is very evident, and transparent, from paragraph 8.12 and 8.14, where south of Chichester “This (one) package of works (of several improvements needed) would be between £57.23 and £82.79 million to deliver in full and would not be capable of being funded by development contributions alone.” This assumes the scheme is otherwise deliverable, which on the evidence in the public domain for some time, has been considered challengeable.

The draft Local Plan and a modestly updated infrastructure package that flows from the 2023 Chichester Transport Study, pursues exactly the same approach.

This strategy is also even more ineffective having regard to the roll forward of the Plan to 2039. It cannot deliver the key Strategic Objectives of the Plan; and in particular this is explicitly recognised by the Council in the failure of the draft Plan to accommodate the OAN in full.

It is also obsolete, as it does not align, from first principles, with national policy (including the National Decarbonisation Strategy for Transport) and DfT Circular 01/22; nor the Council’s own declared Climate Emergency.

As a result, draft Policies T1 and T2 are both unsound, as we will separately explain.

Owing to the lack of evidence about the implications of this for adjoining authorities – especially Adur District – in the absence of the review of the Local Strategic Statement – this has implications for fulfilling the Statutory Duty to Co-operate.

The absence of any meaningfully comprehensive refresh of the transport evidence base means that there are no meaningful schemes of any kind, defined in the plan or its IDP, to indicate either what level of growth can be accommodated, by delivering a change in travel behaviour. This would be aimed to secure a sufficient effective increase in junction throughput (measured in terms of person trips as opposed to passenger car unit movements (PCUs). Such evidence would propose measure to achieve that outcome and assess the efficacy and costs of such improvements, across all modes.

Paragraphs 8.10-8.13 inclusive indicate that the Council “has moved away from ‘predict and provide’” and invites the reader to conclude this has translated into a programme of interventions that can be funded to deliver specific, credibly predictable outcomes. Such a programme should be clear in paragraph 8.11. and the IDP. There is no such clarity and this conclusion would be false.

It would also be evident in the language of the Chichester Transport Study 2023 and its refreshed proposals. Only the most token of lip service is paid to the matter. It is a plainly car-focused, predict and provide methodology to support a “predict and provide” strategy. In fact, it is a brazenly car-focused approach, to the exclusion of all else.

The statements in the Plan regarding any other approach, read properly, offer nothing more than a vague commitment to look post-adoption, and implementation, at unspecified measures, based on problems that may arise in future that will be decided by a committee: the Traffic and Infrastructure Management Group (TIMG). This does not yet exist and is obviously an attempt to posit a mechanism that retroactively will cover for the lack of serious multi-party engagement to address the existing and future issues. Such a group should, in our view, also include the public transport operators, not least if the requirements of NPPF Para 106c) are to be satisfied, and the strategy and measures to be adopted are material to supporting the Local Plan, as of course the purpose of the TIMG has as its core *raison d’être*.

The approach proposed by the draft plan is plainly ineffective and unsound in justifying the draft Plan.

It is more widely unacceptable to Stagecoach. The issues are severe today and well-known, already serving to jeopardise the delivery of buses relied on by existing residents, much less attract new ones.

We also consider that HM Planning Inspectorate are likely to be quite resistant to accepting this aspect of the plan’s transport strategy, nor will it be appropriate for the Council, West Sussex County Council, or National Highways, to define such measures after the submission of the Plan during the Examination process. The Examination in Public of a local plan has no purpose to improve plans, or remedy deficiencies clearly evident prior to submission.

The examination of the West of England Joint Strategic Plan in 2019, and the Uttlesford Local Plan in 2021, among several others, demonstrates especially clearly that the Planning System and the Examination process is not amenable to post-hoc retrofitting of transport evidence and strategies to support a development strategy.

7.1. Transport Evidence Base

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Most of Stagecoach's serious concerns about the soundness of the plan arise from the fact that it has been prepared in advance of any up-to-date transport evidence and suitably robust transport mitigation strategy being advanced to support it. In essence, the Council has rolled forward the existing plan by 9 years, adding some additional sources of housing supply, while still relying implicitly on a transport evidence base that was prepared 10 years ago.

This led to the formulation at that time of what can only be described as an attempt to develop an effective car-based mitigation strategy, creating capacity for general traffic added to accommodate unconstrained additional demands on an already over-taxed highways network – the Chichester Area Transport Strategy. Despite language in support of sustainable modes, no deliverable measures were identified to support either the extension of the bus network to serve allocated sites, and much less to create a vital improvement to the quality and reliability of public transport services. This approach reflected the approach set out in DfT Ministerial Circular 02/2013 "Development and the Strategic Highways Network", applicable since the A27, which is the focus of the most severe difficulties, forms part of the national Strategic Roads Network.

This approach has proven ineffective even before substantial elements of housing land supply in the current plan come forward – in particular West of Chichester and West of Tangmere.

In addition, Circular 02/2013 has now been replaced by a new Ministerial Statement of 23/12/2022, DfT Circular 01/2022.

On both counts the transport evidence base and strategy needs to be properly revisited and established to provide effective mitigation for the plan, including current commitments that are being rolled forward.

The language of the current Ministerial Circular 01/2022 offers a highly condensed synoptic view of the proper approach to addressing transport matters in the planning system notwithstanding that it is directly concerned with the Strategic Roads Network. Videlicet:

"31. The NPPF expects local plans and spatial development strategies to be underpinned by a clear and transparent evidence base which informs the authority's preferred approach to land use and strategic transport options, and the formulation of policies and allocations that will be subject to public consultation. The company will expect this process to explore all options to reduce a reliance on the SRN for local journeys including a reduction in the need to travel and integrating land use considerations with the need to maximise opportunities for walking, wheeling, cycling, public transport and shared travel.

32. The Transport Decarbonisation Plan indicates that carbon emissions from car and van use is the largest component of the United Kingdom's total transport emissions. While action is being taken to decarbonise transport such that all new cars and vans will be fully zero emission at the tailpipe from 2035, the proposed location of growth in current plan periods and whether new developments would be genuinely sustainable remain important factors in demonstrating that a local authority area is on a pathway to net zero by 2050 and therefore compliant with the requirements of the Climate Change Act 2008.

33. Alongside this, the local authority should identify the key issues within their study area regarding transport provision and accessibility, setting out how the plan or strategy can address these key issues in consultation with (National Highways, and other transport stakeholders identified in NPPF paragraph 106b). It is the responsibility of the local authority undertaking its strategic policy-making function to present a robust transport evidence base in support of its plan or strategy. The company can review measures that would help to avoid or significantly reduce the need for additional infrastructure on the SRN where development can be delivered through identified improvements to the local transport network, to include infrastructure that promotes walking, wheeling, cycling, public transport and shared travel. A robust evidence base will be required, including demand forecasting models, which inform analysis of alternatives by accounting for the effects of possible mitigation scenarios that shift demand into less carbon-intensive forms of travel." (our emphasis)

Within the text quoted above, references to National Highways and "the Company" can quite legitimately be extended, given the statements in NPPF paragraph 16, 25, 26 and 106b, to include all the relevant transport infrastructure and service providers in the plan area. Circular 01/2022 also has the weight of secondary legislation as a Written Ministerial Statement and thus should be considered to be highly material.

To date there has been little attempt to explore, to the degree necessary, strategies that conform to Circular 01/2022. It is thus not possible to conclude, as the Council has done, that the issues on the A27 that present a constraint to development, are insuperable.

In line with comments made elsewhere in the response to this pre-submission draft, the Plan thus requires substantial further work to be undertaken with key stakeholders to establish a suitably effective and demonstrably deliverable transport mitigation strategy, to sustainably meet the District's identifiable development needs and where apparent and appropriate, also ensure that wider cross boundary strategic issues are appropriately addressed, in conformity inter alia, with the Duty to Cooperate, NPPF paragraph 16 and 104-111 inclusive, and DfT Circular 01/2022 and to ensure the Plan's own Strategic Objectives can be met.

7.2. Policy T1 Transport infrastructure

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

As described in comments elsewhere, Stagecoach does not see that a suitable proportionate and up-to-date basis exists to properly and appropriately address the transport issues in the plan area.

The 2023 Transport Study does not perform this role adequately but, contrary to the explanatory memorandum, is a scheme intended only to facilitate car-borne movements through some of the key junctions. There is no evidence that an holistic integrated and strategic approach to transport mitigations has been prepared. Certainly Stagecoach has not been involved in any of the discussion about appropriate transport measures in support of the plan, including the Transport Study 2023, contrary to the expectations set out in NPPF at paragraph 16 and 106.

Notwithstanding out fundamental concerns about the transport evidence case and mitigations strategy, Policy T1 reflects a weak and ineffective approach, that seeks to try and define a strategy post-adoption.

Contrary even to the explanatory memorandum for the policy, which seeks to maximise the contribution of sustainable modes, the policy is phased in such a way that it gives basis for previous “predict and provide” solutions to facilitate and support current levels of car dependency – already shown to be undeliverable and unaffordable – will nevertheless be the first rather than the last resort. There is no commitment to seek to maximise the contribution made by sustainable modes to meeting mobility needs. Nor is there any recognition that current chronic congestion and lack of network resilience jeopardises the ongoing attractiveness and long- term sustainability of the current public transport offer.

To be effective and create alignment with national policy, and also provide for an up-to-date transport evidence base and strategy to be adduced, Policy T1 should be modified to read:

“Integrated transport measures will be developed to mitigate the impact of planned development on the highways network, improve highway safety and air quality, promote more sustainable travel patterns and through providing in the first instance, new and improved infrastructure and services that will be credible effective in maximising the encourage increased use of sustainable modes of travel, such as public transport, cycling and walking.

To achieve this, the council will work with National Highways, West Sussex County Council, other transport and service providers (including through the Traffic and Infrastructure Management Group) and developers to provide a better integrated transport network and to improve accessibility to key services and facilities...

All parties, including applicants, are expected to support these objectives by:

1. Ensuring that new development is well located and designed to avoid or minimise the need for travel, encourages maximises the use of sustainable modes of travel as an a credible alternative to the private car and directly provides or contributes towards new or improved transport infrastructure;
2. Working with relevant transport infrastructure and service providers to improve accessibility to key services and facilities with primary emphasis on sustainable modes, and to ensure that new facilities are easily accessible by sustainable modes of travel;
3. Targeting investment to provide local travel options as an that represent a clearly credible alternative to the car use, focusing on the delivery of improved integrated bus and train services, and improved pedestrian and cycling networks, including the public rights of way network, based on the routes and projects identified in the Local Transport Plan, West Sussex Bus Service Improvement Plan, Local Cycling and Walking Infrastructure Plan (LCWIP) and the Infrastructure Delivery Plan;
4. Planning to achieve the timely delivery of transport infrastructure on and approaching the A27 and elsewhere on the network, needed to support new housing, employment and other development identified in this plan;
5. Phasing the delivery of new development to align with and where possible facilitate the provision of new and improved transport infrastructure and services and the outcomes of monitoring travel demand on the network, including that arising from areas immediately adjoining the plan area. It may also be Where necessary to achieve this alignment proactively phase development will be phased to take into account the monitoring and effectiveness of travel plans demands on the network and to ensure that measures are implemented to support the highest possible level of encourage sustainable travel behaviour.;
6. Using demand management measures, such as travel plans, to manage robust methodologies to assess travel demand and minimise the need for new or improved transport infrastructure as part of the monitor and manage process.
7. Delivering a coordinated package of infrastructure improvements at and approaching to junctions on the A27

Chichester Bypass along with other small-scale junction improvements interventions within the city and elsewhere, as identified through the monitor and manage process. These will increase road capacity, reduce traffic congestion, improve safety and air quality, and improve access to Chichester city from surrounding areas, first by maximising the contribution of sustainable modes to meeting mobility demands, then, and only as evidenced by robust modelling and option testing, providing increased highway capacity for general traffic.

..."

7.3. Policy T2 Transport and Development

Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Section 1 b) of T2 will be ineffective as, absent measures to ensure buses can run reliably and efficiently, improved bus services will not be possible, in support of the plan's own stated broad approach to transport mitigation, as well as wider local and national policy.

The draft policy does not require improvements to the quality of services such that sustainable choices will be materially more attractive than car use for many local journeys. Without this the Plan's Strategic Objectives cannot be fulfilled and the objectives of the Plan and this policy, read in its own terms, will not be realised, where reduction in private car use is concerned. It is thus ineffective.

Absent measures to make bus services more reliable and more efficient, by insulating them from chronic congestion as far as possible, still further operating resource and therefore costs, will be needed to just to reliably run existing service frequencies, and capacity, as vehicle productivity continues to be more and more adversely affected by chronic delay. This will be further aggravated by increasing incidence of severe unpredictable service breakdown arising from incidents of diverse kinds on the network, especially on or around the A27, including that arising from more regular severe weather events. Longer journey times can only be expected to lead to relative disadvantage of bus services compared to personal car use, entirely contrary to the objectives of national and local policy, including Policy T1. It can also expect to lead to a dampening effect not on car use, but on bus patronage, threatening the ongoing viability of bus services across the plan area.

Section 1 b) of T2 should be modified to read:

"b) Maximise opportunities for the use of sustainable travel modes through provision of direct and efficient access both to either the existing networks or and through providing such new infrastructure or public transport services, as can be credibly expected to reduce reliance on the private car and work towards achieving net zero in greenhouse gas emissions by 2050;"

Section 1 d) of T2 will be ineffective as the location of development is fixed by this plan. We commend the fact that all the strategic allocations are or will be served by regular bus services.

However, the use of public transport services, where available, depends on the relevance and reliability of these services. Furthermore, provision of services without them generating sufficient patronage to support their long-term operation also threatens the sustainability of the plan and its supporting transport strategy. This is especially true of new services such as those intended to serve West of Chichester and Tangmere and East of Chichester Strategic Allocations.

This can only be assured by the plan being supported by specific measures to ensure buses can operate efficiently and reliably on the existing and projected services intended to serve the developments concerned, and also at the same time secure behavioural change from existing development.

To be sound and effective, the policy T2 1 d.) should be changed to read:

"d) Ensure major development is located to proposals and the supporting mitigation measures enable the use delivery of high-quality, reliable and effective public transport to present the most relevant possible choice to access local services and facilities including employment, leisure and education facilities";

The Policy T2 makes no provision for buses, where necessary, to enter and make efficient and safe progress through major development sites. The plan is thus out of conformity with NPPF paragraphs 104-106. It makes no provision to ensure that penetration of bus services is achieved at a suitably early point in the development trajectory, undermining the achievement of the goals of the Plan and this specific policy. As a good example, West of Chichester Phase 1, currently under construction, cannot be served by buses as a strategy to effect interim bus penetration was never made.

Policy T2 1 f.) should therefore be amended to read:

f) Ensure that the layout and design of the site development proposals provides effective penetration of the site by sustainable modes, at all points in the development build-out, including public transport where appropriate; and sufficient space for all vehicles to manoeuvre without compromising the safety of pedestrians and cyclists, the efficiency of bus services, or the ability to provide an appropriate level of landscaping across the site"

Policy T2 3.) regarding Travel Planning depends entirely on its effectiveness on the quality and relative attractiveness of

sustainable alternatives over car use. In the absence of efficient frequent, reliable and direct public transport services (or similarly, high quality facilities for active travel, Travel Plans will continue to be the entirely ineffective “tick box” exercises that they generally are today, evidenced by much lower levels of public transport use in most new developments than it seen in nearby established neighbourhoods, as demonstrated broadly by Census data in 2011, 2011 and 2021.

For this policy to be effective an up-to date transport evidence base and strategy, underpinning a series of specified interventions to promote the relevance and effectiveness of all sustainable does including public transport in particular, needs to be put in place.

8. Chapter 9 Infrastructure – Policy I1 Infrastructure provision

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Policy I1 could not expect to be effective without a clear understanding of the effectiveness and costs of a defined series of measures that are laid out in this Plan and its IDP, to mitigate the transport impacts of the development strategy.

Where the Chichester Transport Study is concerned the only meaningful work has focused on the definition and delivery of a range of highways capacity schemes mainly on the A27 around Chichester.

As we have discussed elsewhere the effectiveness of these schemes is insufficient as set out at Tables 8.1 and 8.2 of the Chichester Transport Study 2023. The plan itself admits that the deliverability of this package cannot be afforded by developer contributions alone.

The Chichester Transport Study 2023 does not attempt provide a realistic assessment of costs to deliver these schemes, despite the fact that they have been under evaluation for many years. Nor does it offer any assurance that the schemes are technically achievable. Rather, it states the opposite:

“9.2.3 No investigation has been carried out into specific land ownership details, or into the location details or cost of moving statutory undertakers and utility apparatus within the areas of the scheme. No design assessments were carried out at this stage to ascertain the deliverability of the proposals except where any Health and Safety concerns were raised.”

Thus on the grounds of effectiveness, deliverability and affordability, the measures on which the Plan relies must at the very least be considered to involve an exceptionally high level of risk. Since Policy I1 is founded on these assumptions, it cannot be considered effective.

As we set out elsewhere, the Plan has been advanced on the basis that if any additional sustainable transport measures are required, these mitigations should be retroactively considered and defined after adoption of the Plan. In the light of the doubts that are apparent of both the deliverability, affordability and effectiveness of the Chichester Transport strategy this is especially unsatisfactory even if existing baseline conditions were reasonably acceptable.

However, the Chichester Transport Study 2023, as did its predecessors, makes plain that that existing problems are acute, and can rightly be considered “severe” in the sense of NPPF paragraph 111. Waiting to define deliverable affordable alternatives is an entirely inappropriate approach to the local plan transport mitigation strategy. Such an approach also makes it impossible to consider prior to adoption how far the transport impacts of the plan can be cost-effectively mitigated by alternative means, or whether they are deliverable having regard to technical achievability, land control, development viability, or any combination of the above. Thus, the plan cannot be considered justified, or effective.

Given the mutual dependence of development strategies in Chichester and Arun in particular on these measures this should be seen as crucial of the fulfilment of the Duty to Cooperate.

The remedy for this is ultimately to put in place a suitable transport mitigation strategy following a strategic appraisal of options through review of the LSS. This then must be supplemented by more detailed development specific and localised scheme definition, including, where necessary, bus priority and other measures to support the substantial promotion of the attractiveness of public transport in key bus corridors over private car use. This would then be reflected by costed proposals in the IDP.

Leaving these fundamental weaknesses to one side, even if such a strategy and mitigation package were defined, there is no mention of public transport in the policy even though it is clearly a key part of the policy environment and mitigation strategy for the plan as expressed in the explanatory memorandum for I1, but also at Policies T1 and T2. I1 thus does not effectively support the realisation of the intent of Policies T1 and T2.

Policy I1 iii) should therefore be modified to read:

“(iii) Safeguard the requirements of infrastructure providers, having regard to requirements within and where appropriate across the boundaries of the plan area, including but not limited to:

...

- Highways including specific measures to accommodate improved active travel and public transport level of service and cycle lanes, and...”

At limb v) the Policy expects developers to meet the “in perpetuity costs of operating and maintaining infrastructure”. This shackles development management decisions to developers assuming what are infinite costs – given that “in perpetuity”, read properly, can only mean “without any limit in time”. This means that it is impossible to meet the statutory tests on developer obligations set out in the Community Infrastructure Levy Regulations 2010 (as amended) at Regulation 122, also repeated in NPPF. This policy cannot be lawfully implemented and it is thus ineffective.

In the absence of an up-to-date transport mitigation strategy that is fit for purpose, at the point the Plan is examined these costs of any additional infrastructure are not known in any case. The strategy and its costs, including its affordability and deliverability, are crucial to assessing if the Plan is sound.

Subject to an appropriate defined transport mitigation strategy being arrived at, to be sound, the Policy I1 v) should be modified as follows:

(v) To consider and meet as appropriate the in-perpetuity delivery costs of infrastructure and, where appropriate, improved services, to the point where its long-term operational sustainability is credibly assured from mainstream sources. Where adoption is not envisaged by local authorities, that must include arrangements for its future ongoing management and maintenance;

9. Strategic and Area Based Policies

9.1. Policy A1 City Centre Development Principles

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Chichester City centre is rightly identified at 10.2 and 10.4 as the commercial and service hub of the District. It is also acknowledged to be the most accessible place in the District by sustainable modes, public transport in particular.

Boosting the vitality of the city centre is something that Stagecoach strongly supports. Irrespective, the enhancement of the commercial and cultural life of the District in the place where these opportunities can be accessed broadly by sustainable modes, is one that has long been at the heart of national planning policy for town centres, reflected in the “town centre first” approach to locating major trip generating uses.

Paragraph 10.5 exposes an unbalanced and unsound preoccupation with aesthetic matters in its approach to the town centre, and far too little to ensuring that the central place function is enhanced through protecting and enhancing the quality of public transport access.

The city is relatively small but at the heart of an extensive hinterland, and thus the role of bus in supporting sustainable access to and enhanced city centre venue is one that needs appropriate recognition and emphasis. It is important to note that a dominant number of key service and facilities such as the General Hospital are relatively close to the city centre. This directly contributes to driving travel demand into the city, causing congestion. Most importantly, it also makes the task of mitigation simpler, given the impact a suite of active and sustainable measures can have within the same close proximity.

Policy A1 does not provide this. As such, achieving the strategic objectives of the plan is seriously threatened, and the plan is thus not effective.

The Plan needs to ensure that the approach to city centre regeneration maintains and enhances public transport access, interchange and inter-modal connectivity. It also needs to ensure that bus service stopping and interchange facilities are able to address increases in future demand, anticipated by the clear intent expressed elsewhere in the Plan that public transport should be meeting a greater proportion of mobility needs, in a growing district. Achieving this demands an ambitious approach to the location, quality and capacity of bus stop and interchange.

We have been in discussions with the District Council about this, alongside West Sussex County Council, for a very considerable period. Stagecoach has always been keen to help facilitate the Council’s aspirations for the city centre, and we continue to hold this intention. However, this cannot be at the expense of a material diminishing of the convenience and fitness-for-purpose of bus stop infrastructure and interchange. Stagecoach has significant concerns that current proposals to remove the bus station and have all bus services operate from the street kerbside, on an inner distributor road with similar or reduced net stop capacity, fall short of promoting attractive, convenient bus access to the central

area as a destination.

For the longer term and where the objectives of the draft plan are concerned looking ahead to 2039, they clearly fall short of enhancing the convenience and attractiveness of public transport use. Much less do they make sufficient provision for a material increase in bus frequency, connectivity, and interchange convenience, on which the draft plan explicitly relies. It is vital that the District Council is clear in policy about its objectives for public transport in the city centre. These objectives must also carry sufficient weight when held in tension with other aspirations for the centre and the constraints on achieving them.

For the Plan to be sound, properly effective and compliant with NPPF, the approach to the City centre cannot ignore its role in the provision of sustainable transport service and connectivity.

Policy A1 should therefore be modified to properly reflect this crucial function, on which the vitality of the city centre must increasingly depend if unacceptable impacts on congestion, air quality and amenity are not to arise. This is still more crucial if wider aspirations to secure a more sustainable society and mitigate carbon are to be achieved.

"...This will include provision for development and proposals that:

- Support and strengthen the vitality and viability of the city centre and its role as a shopping/visitor destination, employment centre, public transport hub and a place to live;
- Support and promote facilitate improved access to the city and with increased emphasis on sustainable modes of travel, with particular regard to enhancing the public transport interchange role of the city centre area, in accordance with the transport strategy for the city and..."

9.2. Policy A3 Southern Gateway Development principles Chichester Bus Station, Bus Depot and Basin Road Car Park Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

There has been aspiration to redevelop the bus station and nearby bus depot from many years. Stagecoach has been engaged with detailed discussion with the District Council on this matter over a very extended period. We confirm that these discussions have reached a relatively mature stage, however at the time of writing are not concluded.

Stagecoach recognises and supports in principle the Council's wider aspirations for the "Southern Gateway", and this has governed our approach to the Council to date. We continue to have no "in principle" objection to relocating our administrative, engineering, operational and customer service facilities.

Leaving our proprietary interests entirely to one side, it remains vital that in so doing, the effectiveness, attractiveness and convenience of these facilities is not compromised, as we have outlined in our representations to Policy A1, if wider national and local transport policy, and the local plan strategy itself, are to be effectively achieved.

The depot is crucial infrastructure to support the safe, reliable and legally-compliant operation of Stagecoach bus services over a very extensive area covering the entirety of the District and beyond. Without securing equivalent facilities, that are fit-for-purpose, many of our services would have to cease.

If buses are to provide a greater and more attractive level of service (still more so if they are to be electrified) larger, more capable depot facilities, and city centre bus interchange facilities will be necessary.

Notwithstanding that the bus station and depot sites are leased from the District Council, these leases terminate well beyond the end of the plan period.

Finding suitable sites for a replacement bus depot in Chichester, in common with all similar localities especially in southern England, is extremely challenging. As a sui generis use, bus depots do not automatically benefit from policy support on land allocated for employment uses. Most bus depots benefit from being legacy assets established under very different economic conditions. That is the case here. The value of a depot site for redevelopment net of demolition and remediation costs, rarely approximates to that able to sustain the acquisition of land in a tight wider employment land market, and the construction of suitable new facilities.

Furthermore, the costs of operating bus services are sensitive to the parasitic costs of vehicle and staff hours and mileage associated with "dead running" to a remote depot location from the operational network. Here, the existing depot site is ideal, and any replacement will unavoidable add ongoing operational costs to the operation that cannot be directly recovered.

We confirm that a replacement depot site has been identified and has in principle been agreed, subject to overcoming issues with the disposition of existing and future structures on the site. However, the site is recognised as not capable of accommodating meaningful operational expansion. This is just one of the most important foundational reasons why a positive transformation of bus productivity needs to be achieved, across the plan area and beyond, to support delivery of greater bus mileage and frequencies with the same level of operational resource. At the time of writing, we are not fully

convinced that the proposals for the relocation will be sufficiently fit-for-purpose in the event the above is not achieved. Thus, we must raise a concern that the bus depot site might not be available during the plan period. While there is a strong probability it will be, the certainty surrounding the availability of the site, especially within the first 5 years of the plan, needs to be made transparent.

9.3. Policy A4 Southern Gateway - Chichester Bus Station, Bus Depot and Basin Road Car Park Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Regarding the removal of the bus station, without equivalent replacement, Stagecoach has significant concerns. Pressures and conflicts at the current bus station site have been gradually rising for several years, arising from increasing use and the need for additional scheduled vehicle layover periods to reduce the risks of accumulated late running from traffic congestion. Peak passenger volumes have recovered strongly on several routes, however passenger accumulations resulting from more frequent delays and disruption have added substantial further pressure on limited space.

Under current plans, buses and bus passengers will be displaced to bus stops at new locations outside the city centre, along Avenue de Chartres. This road was always intended to be a relatively high-speed traffic route, outside the historic core of the city. The city centre has evolved in the subsequent years to reinforce already strong natural severance, with the highway lying beyond the city walls and the green space along the Lavant. It is a traffic dominated, un surveilled and unattractive environment, reflecting the intended function of the road as an efficient movement corridor for high traffic volume, and nothing more. Avenue de Chartres is relatively close to the rail station and pedestrian connectivity can be provided at broadly equivalent distance to the current bus station, but again it is un surveilled and currently unpleasant, lacking natural legibility or any sense of prominence.

We understand kerbside capacity on Avenue de Chartres will be strained even to accommodate current levels of service, with no expansion possible. There is therefore a strong probability that to accommodate more frequencies and key new routes, such as West of Tangmere, East of Chichester and West of Chichester allocations, additional future bus stops must occupy a different location. This makes interchange between routes and rail services substantially challenging and less attractive.

The emerging arrangements risk marginalising public transport and public transport users substantially. This strongly undermines achievement of the wider plan objectives and delivery of a significantly greater role for public transport. If substantial public transport growth is to be accommodated in a growing city and hinterland, as the draft plan anticipates, then a more ambitious strategic approach must be taken. This should plan for additional and improved facilities to accommodate all services predicted to be required, whilst enhancing the passenger experience to ensure meaningful and attractive modal choice.

There is therefore a need for the plan to evidence how these issues will be appropriately resolved, having regard to a suitably ambitious approach that properly supports clear objectives to boost the relevance of public transport. The current policy is weak, un specific and indifferent to achieving the strategic objectives of the plan, including a transport strategy in support of the plan, and as such it is ineffective.

Policy A3 should therefore be modified to read:

- “ ...
- Be designed to encourage and facilitate substantial increase in the use of active travel and public transport to, from and through the city centre.
- ...”

In line with the commentary above Policy A4 should also be modified to read:

3. Enhance the public interchange function of the immediate area, the public realm, particularly connections to the railway station and the city centre via South Street, Southgate and Basin Road for pedestrians, cyclists and public transport users, and to National Cycle Route 2 and Route 88 which run close by. Suitable replacement bus stops and layover facilities should be provided to replace those at the bus station in line with reflecting the objectives of the West Sussex Bus Service Improvement Plan, and to facilitate growth to meet the requirements of the plan's development strategy. Routes and crossings should reflect pedestrian desire lines, and public art should be incorporated to create a sense of place;

4. Enhance the public realm, in support of this and wider objectives, incorporating public art and other measures to create a strong and attractive sense of place.

...(renumber remaining points)

9.4. Policy A6 Land West of Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework

- is not effective

This is an existing Local Plan allocation. The public transport strategy for the site depends on the delivery of the second phase which Stagecoach notes is the subject of several applications now awaiting review and determination by the Council.

The site represents a compact form of development adjoining the city, as the most sustainable settlement, meeting housing needs close to where they arise, and affording very good opportunities for the use of sustainable modes, especially walking and cycling.

It is vital that a bus service is delivered to serve the site at the earliest potential. This was anticipated to be at the start of Phase 2 and will require the early delivery of the entire length of the spine road between the Old Broyle Road and Westgate and making it available for bus services.

It is not clear if the costs of pump-priming the service mentioned in the draft policy are anticipated to be met by the developer. Without such funding, the service will not be deliverable as years of losses will never credibly be covered from future profit. It is likely that the current wording will be interpreted by the developer as meaning that they have no such obligation binding upon them. Not does policy set out any specification for this service, thus its costs and the basis for securing developer contributions does not exist.

As such any wider transport strategy, that seeks to secure a greater role for the use of public transport, and the aspiration for this allocation cannot demonstrably be met. The policy is ineffective.

Policy A6 should be modified to read:

“ ...

10. Make provision to accommodate and secure delivery of for regular bus services linking running through the site to Chichester city centre operating at least every 30 minutes Monday-Saturday, and new and improved cycle and pedestrian routes linking the site with the city,

...”

9.5. Policy A7 Land at Shopwhyke

Stagecoach Supports

This is an existing Local Plan allocation, largely built-out, that benefits from an existing set of permissions.

The public transport strategy for the site depends on the delivery of effective bus priority at Oving Crossroads. The current recently implemented scheme, undertaken by National Highways, makes no provision for effective bus priority and needs considerable re-evaluation.

The site represents a compact form of development adjoining the city, as the most sustainable settlement, meeting housing needs close to where they arise, and affording very good opportunities for the use of sustainable modes, especially walking and cycling. It lies on a new bus corridor that will shortly be put in place, running to Tangmere via Shopwhyke. The allocation is being significantly consolidated by further development in the immediate vicinity which strongly supports the potential for this new service.

As we explain in our representations for East of Chichester proposed allocation A8, and West of Tangmere Allocation A14, a clear corridor strategy to effect bus priority is needed, that should be delivered in support of that further growth, and that at Tangmere SDL. However this allocation is a near complete commitment and there is no scope through policy regarding this land to effect this outcome.

It is notable that Point 6) of policy A7 makes mention of a bus service. This language reflects the currently adopted Local Plan policy and has underpinned the existing permissions. The failure of any bus service to be delivered demonstrates from first principles that this Policy has been entirely ineffective. It is important that lessons are learned from this in the Local Plan Review.

9.6. Policy A8 Land East of Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This proposed allocation lies next to unallocated land that is already consented as a departure from the adopted development plan, with 143 units near completion south of Oving Road (20/02471/FUL). Additional land, also unallocated but similarly consented, has now commenced north of Oving Road (88 units under 21/02197/FUL). This and the allocation site consolidates earlier development at Shopwhyke brought forward under the current Local Plan, and allocated again as draft policy A7.

Development at Shopwhyke was brought forward on the basis of a premise that the developer would provide or somehow arrange a bus service, that was reflected in the policies of the current Local Plan. This was secured by an

unenforceable condition. No bus service has been provided, as there was inadequate clarity regarding the basis on which the costs of establishing such a service would be met by the developer, and the expectations of policy on the developer. The site does however lie on a logical new bus corridor between Chichester and West of Tangmere along the Oving Road.

In addition, an expectation that modifications to the Oving Crossroads would effect bus advantage have proven false – the arrangements put buses into a similar or longer queue than if they use the route available to general traffic to and from the A27.

Stagecoach strongly supports the principle of bringing this land forward. However, the soundness of the site depends on deliverability of a regular, reliable and direct bus service along the Oving Road, taking advantage of effective bus priority.

Given the failure of existing policy in the adopted Local Plan covering the proposed A7 allocation to deliver a bus service, it is of great concern that there is no draft policy to adequately address the issue. The policy is out of conformity with NPPF paragraph 104-105 in that sustainable modes do not offer realistic choices, much less an attractive one, and as such also does not secure the objectives of national policy nor of the plan itself.

Currently the proposed allocation is not served at all by public transport. Policy needs to ensure there is a policy basis to secure contributions to deliver such a service, which may well take the form of a proportionate contribution to deliver a new service or enhance provision that is put in place between Chichester along the Shopwhyke Road to west of Tangmere.

To become sound Policy A8 must be modified to read:

“ ...
12. Provide for improved high quality connectivity by sustainable travel modes and focused in particular on a corridor between Chichester city centre and Tangmere along Shopwhyke Road, including new improved cycle and pedestrian routes, and a frequent bus service including linkages with Chichester taking advantage of effective bus priority measures on Oving Road at the A27;
...”

9.7. Policy A9 Land at Westhampnett/North East Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This land is already allocated and consented as part of the existing 2016 Local Plan. All reserved matters are determined.

The site lies on service 55 between Chichester, Westhampnett and Tangmere. This established service benefits from additional demand from the development at Phase 1. Phase 2 which is currently well underway, does not benefit directly from bus services. However it is a compact and logical form of development where walking and cycling to local facilities and employment is a credible option.

The existing allocation rolls forward policies in the 2015 Local Plan. In so doing it is possible to see which have been effective.

Point 9. regarding bus service and routing has not been effective. In particular the potential for a bus only link between the site and Graylingwell has not been established as policy anticipated. Given congestion around the Portfield area acutely affects public transport this, or alternative methods to secure bus priority over private car use, a clear and unequivocal policy steer is required.

The lack of an up-to-date transport evidence base is ultimately at the root of these issues. Arguably the policy and allocation can only be made sound once this refreshed evidence base in place.

However, it is possible that the allocation could be made sound by modification of Policy A9 as follows:

“ ...
9. Make provision for regular, direct and reliable bus services linking the site with Chichester city centre, and new and improved safe and convenient cycle and pedestrian routes linking the site with Chichester city, the South Downs National Park and other strategic developments to the east of Chichester city including Tangmere. These objectives could include exploring the potential for a bus only route require a deliverable scheme to afford bus priority through Portfield, and potentially linking the development with the Graylingwell area through use of a modal filter;
...”

9.8. Policy A10 Land at Maudlin Farm

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing public transport route. It is relatively close to the city and very near substantial centres of employment and services that can be reached by active travel modes, helping damp the demand for car use. It is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services at Portfield and over a wider area. In fact, the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A10 should accordingly be modified to read:

“ ...

5. Provide safe and suitable access points for all users, including a main vehicle access from Old Arundel Road and, subject to further assessment, a secondary vehicle access from Dairy Lane. The development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes;

...”

9.9. Policy A11 Bosham – Land at Highgrove Farm

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Bosham Station. It is relatively close to the city and very near substantial centres of employment and services that can be reached by public transport and cycling, offering strong potential to materially damp the demand for car use.

There are serious risks that development in the A259 corridor west of Chichester could place further demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular to bus services.

Nevertheless, given the potential to effect bus priority on the approaches to Fishbourne Roundabout, it is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A11 should accordingly be modified to read:

“ ...

8. Provide safe and suitable access points for all users, including a main vehicle access from the A259. The development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys crossing the A27 at Fishbourne;

9.10. Policy A12 Chidham and Hambrook

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high

quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Nutbourne Station. Substantial centres of employment and services that can be reached by public transport and cycling, offering strong potential to materially damp the demand for car use.

There are serious risks that development in the A259 corridor west of Chichester could place further demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular to bus services.

Nevertheless, given the potential to effect bus priority on the approaches to Fishbourne Roundabout, it is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A12 should accordingly be modified to read:

"...

7. Development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys along the A259, crossing the A27 at Fishbourne and where necessary on the approaches to Emsworth;

8. Facilitate improved sustainable travel modes, and new improved cycle and pedestrian routes, including linkages with Chichester city and settlement along the East/West Corridor;

9.11. Policy A13 Southbourne Broad Location for Development

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach agrees unequivocally that Southbourne is a location that could accommodate growth on a strategic scale. It has a substantial range of service available within the settlement, including secondary education. It is well connected by bus and rail service to key destinations, including Chichester, lying to the east and west.

This is one of the few locations identified for growth that represents substantial additional development in a new location to the strategy in the existing Local Plan adopted in 2015. Thus, the transport impacts of development on the substantial scale envisaged at Southbourne are not covered or accommodated by the Chichester Area Transport Strategy that lies behind the existing plan. This demands, from first principles, that substantial further transport mitigation measures are required.

We recognise and endorse fully that the intent of the draft plan for Southbourne as a Broad Location for Development on a strategic scale, includes "Maximising the potential for sustainable travel links through improved public transport, including consideration of opportunities to reduce community severance caused by the railway line as well as the inclusion of cycling and pedestrian routes." (our emphasis).

The existing railway station at Southbourne is served regularly, however, it is not within the power of this plan to improve rail services. It is, however, well within the scope of action of the Local Planning and Highways Authority to work with bus operators to achieve a step change in the journey time, reliability, frequency and connectivity of bus services, and in particular the major corridor operated as service 700 by Stagecoach along the A259 between Havant and Chichester through Southbourne.

Notwithstanding the clear potential for sustainable connectivity in the western A259 corridor, there are very serious risks that development in the A259 corridor west of Chichester will place further significant car-borne demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular bus services, having the opposite effect to that intended: longer, less reliable and less frequent bus services, leading to a spiral of slowly declining use.

These risks, while very serious, look credibly likely to be entirely mitigated subject to carefully conceived and robust

specified actions on the local highway network. It is perplexing to us that this potential still has not been identified, as part of a comprehensive "first principles" review of the transport evidence base. In particular given the former trunk status of the A259, there is evident potential to effect bus priority on the A259, including on the approaches to Fishbourne Roundabout.

With appropriate measures, including but not limited to this, to substantially boost the relevance and attractiveness of sustainable travel choices, strategic development at Southbourne could well be made highly sustainable.

In the absence of a refreshed transport strategy and transport evidence base, the draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact, the only reference that is made in Policy is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A12 should accordingly be modified to read:

"...Development should be comprehensively masterplanned to achieve a high-quality design and layout that integrates well with the surrounding built and natural environments to enable a high degree of connectivity with them, particularly for pedestrians and cyclists, and provides good the highest possible quality of access to facilities and sustainable forms of improved public transport services.

...

4. Provide a suitable means of access to the site(s), and securing secure necessary off-site transport infrastructure and service improvements (including highways in particular to the A259 corridor between Emsworth and Chichester) in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development) to promote sustainable transport options prioritising delivery of high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes;

..."

9.12. Policy A14 Land West of Tangmere

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach strongly supports the principle of intensifying the level of development at the Strategic Development Location already identified and allocated West of Tangmere in the existing Local Plan. This serves to consolidate development at a location where effective and attractive public transport choices could be provided. It also conforms closely with the principle expressed in NPPF that the best possible use should be made of land on sites that are judged to be sustainable, or potentially sustainable locations for development.

It must be stressed that the current policy suite for the SDL has to date not brought forward development in this location. We recognise that a Master Plan has been adopted by the Council, and that a planning application (20/02893/OUT) for the full larger quantum of 1300 dwellings proposed in the draft plan has received a resolution to grant by the Council.

However, we are not aware that a sustainable transport strategy has been finalised.

Land West of Tangmere is not served by any existing regular bus services. Rather, an entirely new bus service corridor is anticipated to operate in the near term from Chichester through Tangmere and beyond towards Barnham. This would serve proposed allocations A7, A8 and West of Tangmere (A14) included in the draft Plan.

This is reflected in the language of the explanatory memorandum to Policy A14 at paragraph 10.65:

"Opportunities, in partnership with relevant authorities, to provide improved sustainable public transport routes linking the village with Chichester city, to improve cycle routes to the city, and better transport links to Barnham rail station and the 'Five Villages' area in Arun District; and.."

Initiating this service will be costly and will in large measure be funded not by developer contributions, but by DfT monies awarded through the West Sussex Bus Service Improvement Plan. It is crucial this service is both sustainable in the longer term without revenue support, and that the success of the service can be built on by scalable frequency improvements as strategic development comes forward in both Chichester District, and proposed allocations A7 A8 and A14, and in Arun District, in particular at Barnham, Eastergate and Westergate (BEW).

This demands measures to effect safe, direct and swift operation of the service especially within the city centre, where it approaches and crosses the A27 at Oving crossroads and on the eastern fringes of the District east and west of Tangmere. Without these measures, bus journey time and reliability will be severely compromised and the impact of

this service to dampen car trip demands will be very substantially compromised. No such measures are proposed in the draft plan or its evidence base.

Changes to Oving Crossroads have recently taken place which, amongst other intentions, ostensibly provide bus advantage between Chichester and Shopwhyke. The junction in its current form does not offer material gain in bus journey time, as movements involve a less-direct route towards the city over an increased operating distance, much of which involves passage through heavily congested sections of the A27 and Westhampnett Road. A refreshed transport strategy supporting plan-led growth must revisit this area to secure an effective solution which offers bus customers the fastest and most reliable trip-time to and from the city.

In addition, the extension of public transport connectivity towards BEW and Barnham, including key links to secondary education and a logical railhead for journeys beyond towards Brighton and London as provided at Barnham Station, needs to facilitate bus priority between Tangmere and Nyton – whether using the A27, or preferably avoiding it altogether. There are significant safety concerns associated with the at-grade uncontrolled right-hand A27 exit onto the B2233 Nyton Road at Crockerhill Turn. This movement is also prone to extreme delay owing to the conflict with approaching westbound traffic on the A27, travelling at speed, which has priority. Our concerns with this junction in its current form can be expected to worsen with the increased traffic volumes predicted from new residential developments to the west of the city.

A solution providing a suitable short length of highway available only to sustainable modes, between Tangmere and Easthampnett, could provide a very effective solution to this. This would be deliverable within the scope of the separate proposed allocation at A19 Chichester Business Park, Tangmere. We comment on this separately.

Howsoever effected, a reliable direct and delay-free bus corridor between Barnham, BEW, Tangmere and Chichester could expect to secure very substantial elevation of the relative attractiveness of public transport over car use on the entire corridor and serve to effectively damp growth-related demands on this section of the A27. West of Tangmere, in the longer term, there is evident scope for the route corridor to operate as two branches – one via Shopwhyke and one via Westhampnett, effectively serving all the strategic developments proposed in the plan and transforming wider public transport connectivity to key employment destinations and services within and east of Chichester.

However, in common with all the other proposed allocations, the plan proposes no specific measures to provide, much less improve public transport or other sustainable modes to the site. This leaves the draft plan out of conformity with NPPF, especially paragraphs 104-106. The plan is inadequately evidenced and to the degree that public transport measures are identified and emergent, their successful implementation in the near and longer term will be jeopardised without clear measures to provide a safe as well as efficient bus route towards BEW and the Five Village area within Arun. The Duty to Cooperate is not effectively met and effective cross boundary collaboration on these strategic issues through the review of LSS is not demonstrated, despite the current version which identifies the issues.

To be made sound the LSS Review and a subsequent urgent review of the transport evidence base and strategy needs to take place. The strategic issues are especially critical east of Chichester, in our view.

Notwithstanding this foundational deficiency, to be made sound, Policy A14 should be modified to read:

“...

8. Subject to detailed transport assessment, provide primary road access to the site from the slip-road roundabout at the A27/A285 junction to the west of Tangmere providing a spine road link with secondary access from Tangmere Road. Development will be required to provide or fund mitigation for potential off-site traffic impacts through a package of measures in conformity with Policy T1 (Transport Infrastructure) and T2 (Transport and Development) and DfT Circular 01/2022 that maximise the relevance and use of sustainable travel modes, in particular bus services;

9. Make provision for improved sustainable travel modes between Tangmere and Chichester city, in partnership with relevant authorities, including improved direct, seamless safe and reliable and additional bus and cycle routes linking Tangmere with Chichester city, Shopwhyke and Westhampnett. In conjunction with measures in support of Allocation A19, Opportunities should also be explored contributions shall also be sought for providing improving high quality cycling and bus service transport links with the 'Five Villages' area and Barnham rail station in Arun District; and...”

10. Concluding comments

Stagecoach recognises its role as a key stakeholder in the plan, as well as a local employer and corporate citizen. We recognise the primacy of the plan-led system as the mechanism intended to resolve complex challenges, including the proper alignment of transport and spatial planning, which as the National Decarbonisation Strategy for Transport among other policies makes clear, has never been more vital.

In making our representations, we emphasise that we are entirely supportive of the Local Planning Authority and the relevant Highways and Transport Authorities, in their efforts to properly manage the amount and pattern of development to secure vital policy objectives. We recognise that balancing delivery of assessed development needs with a wide variety of other constraints is a very difficult task.

The transport issues faced by the plan are recognised in the draft plan as being serious and long-standing. We believe that there are ways to arrive at a suitable transport mitigation strategy that has regard to wider strategic issues and resolves existing problems in a much more effective way than those pursued to date.

We support the spatial strategy of the plan as it evidently provides the basis to secure the necessary step change in the quality and use of sustainable transport modes, as it explicitly seeks to do. However thus far, there has been insufficient work done to define the measures that will credibly secure these outcomes.

Stagecoach therefore urges the authorities to draw us into the necessary effective ongoing collaborations that is expected by NPPF paragraph 16 and 106; and DfT Circular 01/022, to do this work, prior to, rather than after the submission of the draft plan. We look forward to being approached to initiate this dialogue at the earliest opportunity.

Change suggested by respondent:

To be effective and create alignment with national policy, and also provide for an up-to-date transport evidence base and strategy to be adduced, Policy T1 should be modified to read:

"Integrated transport measures will be developed to mitigate the impact of planned development on the highways network, improve highway safety and air quality, promote more sustainable travel patterns through providing in the first instance, new and improved infrastructure and services that will be credible effective in maximising the use of sustainable modes of travel, such as public transport, cycling and walking.

To achieve this, the council will work with National Highways, West Sussex County Council, other transport and service providers (including through the Traffic and Infrastructure Management Group) and developers to provide a better integrated transport network and to improve accessibility to key services and facilities...

All parties, including applicants, are expected to support these objectives by:

1. Ensuring that new development is well located and designed to avoid or minimise the need for travel, maximises the use of sustainable modes of travel as a credible alternative to the private car and directly provides or contributes towards new or improved transport infrastructure;
 2. Working with relevant transport infrastructure and service providers to improve accessibility to key services and facilities with primary emphasis on sustainable modes, and to ensure that new facilities are easily accessible by sustainable modes of travel;
 3. Targeting investment to provide local travel options that represent a clearly credible alternative to car use, focusing on the delivery of improved integrated bus and train services, and improved pedestrian and cycling networks, including the public rights of way network, based on the routes and projects identified in the Local Transport Plan, West Sussex Bus Service Improvement Plan, Local Cycling and Walking Infrastructure Plan (LCWIP) and the Infrastructure Delivery Plan;
 4. Planning to achieve the timely delivery of transport infrastructure on and approaching the A27 and elsewhere on the network, needed to support new housing, employment and other development identified in this plan;
 5. Phasing the delivery of new development to align with and where possible facilitate the provision of new and improved transport infrastructure and services and the outcomes of monitoring travel demand on the network, including that arising from areas immediately adjoining the plan area. Where necessary to achieve this alignment proactively phase development will be phased to take into account the monitoring of travel demands on the network and to ensure that measures are implemented to support the highest possible level of sustainable travel behaviour.;
 6. Using robust methodologies to assess travel demand and minimise the need for new or improved transport infrastructure as part of the monitor and manage process.
 7. Delivering a coordinated package of infrastructure improvements at and approaching junctions on the A27 Chichester Bypass along with other interventions within the city and elsewhere, as identified through the monitor and manage process. These will reduce traffic congestion, improve safety and air quality, and improve access to Chichester city from surrounding areas, first by maximising the contribution of sustainable modes to meeting mobility demands, then, and only as evidenced by robust modelling and option testing, providing increased highway capacity for general traffic.

5949

Object

Document Element: Policy T1: Transport Infrastructure**Respondent:** The Chichester Society (Mr Peter Evans, Chairman) [8021]**Summary:**

Public transport: Developments along the East-West Corridor should have good linear transport options with easy links to the primary road network, frequent bus services and rail stations. These are all available west of Chichester if a Southbourne road link is created onto the A27.

East of Chichester there will be a good direct link to the grade separated interchange at the A27/A285 west of Tangmere. However, there are no rail stations. The only frequent bus service runs to Tangmere with an irregular service to Arundel via Oving and Barnham. The sporadic new developments around Barnham seem only linked by bus to Bognor.

There seems no evidence of the Duty to Co-operate between Chichester and Arun District Councils. And none of the recent greenfield developments in either district have been accompanied by new or improved bus services.

Full text:

See attached representation.

Change suggested by respondent:

What is needed are: (1) a fast and frequent bus service between Chichester and Barnham station, via a new bus link from Tangmere to the B2233, and (2) extending the 55 service from Tangmere as a circular route back to the city via Shopwyke Lakes and the proposed East of Chichester SDL.

Objection to policy - should be moratorium on housebuilding until A27 road infrastructure upgrades are guaranteed and carried out.

Full text:

I am emailing as a member of the public who has been invited to make comments on the proposed new Chichester District Council Local Plan.

Firstly, I have been invited to comment on whether the plan is legally compliant. With this in mind, I would question whether it is. I am aware that there is legislation which is designed to protect Chichester Harbour, namely, I believe, the Chichester Harbour Conservancy Act 1971. This legislation gives the Harbour Conservancy a duty to conserve, maintain and improve the harbour. In the proposed local plan it states:

"4.120. In February 2018 the Chichester Harbour designated Site of Special Scientific Interest (SSSI) was downgraded from 'Unfavourable – recovering' to 'Unfavourable – no change'. Further assessment during 2019/20 found that more than 3000ha of the intertidal parts of Chichester Harbour were now 'Unfavourable – declining'. A specific policy is therefore required to address this issue. Nitrates finding their way into the Harbour (from a variety of sources) cause algal growth which is harmful to wildlife. Although the proportion of total nitrogen originating from new development is very small, it is important that this source is addressed whilst other measures, such as catchment management, are undertaken to reduce other inputs and recover wildlife."

Concerning nitrate mitigation, I note that the South Downs National Park Authority (SDNPA) are not able to guarantee any further land to offset nitrates and this will impact the number of houses which can be built in the area. The SDNPA has made this clear in the letter they have submitted in consultation regarding Policy A11 (attached). There are, I believe, several proposed sites in the local plan which will need to be able to show they have nutrient neutrality and at present, they cannot do this. With this in mind, I suggest that it would be wrong to propose the site referred to in Policy A11 and any other sites where this matter applies.

In addition to the issue of nitrates, there is also the issue of water pollution which is blighting the harbour. Building over 10,000 new houses in the district is going to exacerbate both nitrate and wastewater pollution. A study by Chichester Clean Harbours Partnership (attached) shows that at five sites which were tested within Chichester Harbour, all failed tests for E.coli and Feral Streptococci levels which suggests water quality in the harbour is being impacted by the constant outflows of sewage which are happening across the thirteen outlets which Southern Water control and discharge directly into the harbour. Last year's data shows that Southern Water spent over 19% of the year releasing untreated sewage into the Chichester Harbour waters. This is evidence that Southern Water is either unable or unwilling to cope with treating the wastewater generated by the housing in the district so to propose 10,000 further houses with no guaranteed upgrades to the wastewater treatment seems ludicrous and a dereliction of the statutory legislation designed

to protect the harbour. For these reasons I would question whether the plan can be judged as legally compliant. The second area I have been invited to consider is whether the proposed plan is 'sound'. To this, I would suggest that there are so many contradictions between what the plan proposes and what is found in the National Planning Policy Framework (NPPF), other consultation documentation and the plan itself that I believe the plan cannot be found to be sound. As an example two examples referred to above:

Allowing building to go ahead on land without being able to guarantee nitrate offset brings the plan into conflict with itself. (Policies NE12, NE13, NE19)

To allow building to go ahead which is guaranteed to increase sewage outflow into the harbour brings the plan into conflict with itself. (Policies NE12, NE13, NE16, NE17)

The focus of most of the plan seems to be on providing housing. However, the NPPF makes it clear that house building needs to be sustainable and include infrastructure in order to meet the economic objective and that there is an environmental objective to be considered both of which I do not believe this plan is meeting.

The proposed local plan does not include any guaranteed upgrades to the strategic road network but does refer to the fact that the congestion on the roads is a major concern for the residents of the Chichester District. (Proposed Local Plan Point 8.3) I am aware that the strategic road network is an issue outside of the Council's control but again, to propose adding 10,000 plus housing to the area when they are aware of the serious congestion problem seems nonsensical, especially now in the light of the government removing mandatory house building targets.

The main issue the Chichester District seems to have is that within the boundary, there is a large percentage of land which is protected from development as SDNP and AONB land. What this plan seems to be doing is trying to cram 90% of the original government-proposed allocation of housing into 23% of the land in the district. It stands to reason that this will have a detrimental impact on the road network. In addition, Chichester District Council are aware that the major junctions on the A27 have been operating at capacity since the last local plan was written and in their transport assessment published in January 2023, they have made reference to the major junctions now all operating well over capacity (CDC Local Plan Transport Assessment 2039 Point 11.2.1) and have made reference to the fact that there has been no mitigation which was proposed in the previous local plan to most of the junctions (CDC Local Plan Transport Assessment 2039 Point 1.3.2). Therefore building more housing without guaranteed upgrades to the road network would seem both unfair to the residents and businesses who are already suffering the daily challenge of congestion and unethical in the light of the plan which contains several policies referring to minimising the climate crisis, reducing pollution and only allowing development which does not exacerbate congestion and road use. Once again this brings the plan into conflict with itself because the additional congestion is going to impact both pollution in general and air pollution specifically (Policies NE20, NE22)

The NPPF suggests that there is a presumption in favour of sustainable development but I would argue that trying to fit too many houses into a small, already over-congested area, is not sustainable and does nothing to enhance the lives of people who already live in the area. Of the three objectives in the NPPF (economic, social and environmental) this plan only seems to address the social objective of providing more housing. It does not address the economic objective because of the strain building 10,000 further houses will create on already weak infrastructure. More importantly, it does nothing to address the environmental objective because it will increase pollution and exacerbate problems with the sewage network and the road network which already exist.

In conclusion, with reference to whether the plan is sound, I do not believe it can be judged as sound because, aside from contradicting itself and not fulfilling the objectives outlined in the NPPF as I have highlighted above, the plan is not taking into account local people's wishes. There have been several action groups set up and demonstrations against further building in the area on the large-scale proposed here. Neighbourhood Plans have been completely disregarded and people in the area have genuine concerns about the impact of pollution on the harbour, the relentless building with no additional infrastructure and the detrimental impact of building on farmland and the implications for biodiversity and agricultural security as well as coalescence of our villages and strain on already overburdened resources such as doctors, schools and village shops.

I can speak concerning Policy A11 because this directly affects where I live but I will also try to highlight below other policies where I know the proposed sites conflict with what is in the neighbourhood plan and conflict with statements in the local plan.

Our neighbourhood plan has been ignored and the site proposed was the site deemed least suitable for development and conflicts with the statements in the local plan in the following ways:

- 1) The site is greenfield land and there is brownfield land available capable of being used for smaller-scale development (Burns Shipyard). This would appear to be the case with most of the proposed sites being greenfield land. (Policies A6, A10, A11, A12 A13 and A14). The NPPF states that where possible preference should be given to using brownfield land for development before allowing development on Greenfield or agricultural land.
- 2) The site is wholly outside of the Bosham settlement boundary which in the plan would define this as the countryside. The local plan states in Chapter 3, that development in the countryside should be 'restricted' to what is essential and meets the proposed needs as defined by policy NE10. The site chosen does not meet the criteria set in policy NE10 and proposing the site, therefore, puts it into contradiction with the plan.
- 3) The site proposed for Policy A11 is grade 1 and 2 productive agricultural land. The local plan states that it will seek to protect the best and most versatile agricultural land from large-scale, inappropriate or unsustainable non-agricultural development proposals that are not in accordance with the Development Plan. (Local Plan Point 4.8) However for the sites A1, A12 and A14 this does not seem to be the case. In the case of some of the land proposed from Policy A14, I believe the land has been compulsorily purchased from farmers. A large majority of the land proposed for development in the local plan is viable and productive agricultural land.
- 4) The site's overflow wastewater discharges from the Bosham outlet into the Bosham channel. This outlet has been the most compromised in 2022 and has discharged for the largest amount of hours out of all 13 outlets

that discharge into Chichester Harbour.

5) The site proposed for Policy A11 has no proposed primary school provision. The local village school is at capacity and is unable to be expanded on its current site because there is no land available. Instead, the children from this proposed development will be expected to go to school outside of the village and this will inevitably lead to more cars on the roads as the proposed schools with places are not accessible by public transport or within walking/cycling distance. Again, this is a theme common to Policy A12.

6) The site proposed in Policy A11 suggests that the land is likely to suffer from groundwater and surface runoff flooding. The likelihood of flooding is greatest along the western boundary of the site which abuts the existing development of Brooks Lane. Brooks Lane already suffers periods of flooding. The NPPF says that new development should not increase the likelihood of flooding at existing developments.

7) The vehicle access to the A259 is via one vehicle access point only, which is likely to exacerbate air pollution at peak times with cars idling to access the A259.

8) The proposed additions to the village will be a fourth community hall, which there is no desire or need for and no end-user has been identified to maintain, allotments which were specifically proposed at the initial consultation and rejected as the least popular choice of an additional community facility and a mini football pitch which has been hastily added and squeezed onto the site of inadequate size and with inadequate parking provision to make it a usable asset.

For all of these reasons, I believe that the proposed local plan cannot be judged to be sound. There were several hundred objections to Policy A11 and I believe there would be true for most of the sites proposed. Our local neighbourhood plans have not been taken into account when producing this plan and this is against what is stated in the NPPF which suggests that Neighbourhood Plans give communities the power to develop a shared vision for their area. (NPPF Point 29)

The last area I have been invited to consider is if the proposed local plan meets the duty to co-operate. In this respect, I feel that the duty to co-operate seems to have been viewed as more a 'duty to consult' Whilst there has arguably been consultation between appropriate bodies and other local authorities, I do not believe the plan reflects the advice that has been given. Again, coming back to Policy A11 as an example the SDNPA, Chichester Harbour Conservancy, Southern Water and National Highways have all raised reservations about the proposed scale of development and the impact it will have on the Bosham area and local infrastructure. However, the reservations have not been heeded and the proposed development is still much the same as it was at the outset. Again, local plans have been ignored and local voices have not been heard. Whilst I am aware that the duty to co-operate is not a duty to agree, if every aspect of a consultation is ignored, I would argue this can hardly equate to co-operation.

In conclusion, I understand the importance of having a local plan and I understand the constraints that Chichester District Council is under due to the available land infrastructure constraints it faces which are largely outside of its control. However, because of the above, and that they have now been given the freedom to deviate from mandatory government house building targets, I would ask you to pay scrutiny to the number of houses in the proposed plan and recommend to Chichester District Council that they need to go back and rewrite the plan to reduce house building to a sustainable level of 23.5% of the government proposed allocation to reflect the percentage of land which is available in the district for development. I also recommend that there be a moratorium on further development in the district until the issues of water pollution by nitrates and sewage can be addressed and until there are the mitigation measures proposed in the transport assessment to allow for further house building.

Change suggested by respondent:

A moratorium on house building until wastewater and A27 road infrastructure upgrades are guaranteed and carried out.

Document Element: Policy T1: Transport Infrastructure

Respondent: Wates Developments and Seaward Properties [8052]

Agent: Barton Willmore now Stantec (Mr Oli Haydon) [8051]

Summary:

We consider that a shift instead towards 'vision and validate' would be more aspirational for the plan. This approach will allow our Consortium to best envisage the place that Chichester District wants to create at Southbourne, and to target sustainable transport measures, alongside a carefully planned new community, that minimises travel needs and provides genuine sustainable options for movement.

Full text:

We acknowledge the emerging plan's shift away from 'predict and provide' approach to recommending mitigation based on forecast growth, to an approach of 'monitor and manage', based on identifying a package of potential highway improvements which alongside schemes identified through the development management process, may be implemented following a monitoring process that will monitor the actual demand on the network and the requirement for the schemes.

We consider that a shift instead towards 'vision and validate' would be more aspirational for the plan. This approach will allow our Consortium to best envisage the place that Chichester District wants to create at Southbourne, and to target sustainable transport measures, alongside a carefully planned new community, that minimises travel needs and provides genuine sustainable options for movement. Such an approach needs to reimagine the hierarchy of transport users, prioritising pedestrians first, followed by cyclists, public transport, specialist service vehicles and finally other motor traffic. The scheme should prioritise support and encouragement for sustainable travel in line with this new hierarchy whilst now linking transport intrinsically with masterplanning, carbon reduction, air quality, health and lifestyle and biodiversity, instead of seeing it as a standalone consideration. We would therefore recommend Chichester District encourage ambitious developers to explore the 'vision and validate' approach within draft Policy T1

The land east of Southbourne will deliver a comprehensive development that also secures benefits for the existing community, including:

Delivery of a significant portion of the Green Ring, in both a central location and also an enhanced, longer walking route around the edge of the allocation. This has the benefit of creating a meaningful gap between settlements that is focused on the delivery of environmental enhancements and a wildlife corridor, whilst also offering alternative longer route for walking/recreation, reducing pressure on the Chichester Harbour SPA.

A connected integrated community that delivers sustainable transport improvements and alternatives for the whole of Southbourne.

A focus on connectivity through the green ring and connecting green corridors that focus movement on walking and cycling, rather than vehicular travel.

A central community hub that can deliver a new 2FE primary school, a community building, small scale retail and an enterprise hub to support homeworking, shared office space and start-ups.

With regards to the proposed S106 contribution per dwelling of £7,728 to act as A27 mitigation, we are concerned that this is not justified (see attached note from i-Transport). Furthermore, the imposition of CIL on the scheme at Southbourne would reduce the level of control over the above package of infrastructure improvements and sustainable movement provision associated with the development. With a contribution made to Chichester District in place of direct involvement of the consortium in the improvements to the village infrastructure, there is a risk that the enhancements that form a key element of the proposal may be delayed or fail to be delivered in a timescale that would best benefit the residents of the village.

Considering the above, we recommend that the BLD at Southbourne be CIL-exempt to catalyse the delivery of the infrastructure associated with the scheme and avoid the village's infrastructure funding being stagnated within a larger and district-wide funding mechanism.

Change suggested by respondent:

We recommend that the BLD at Southbourne be CIL-exempt to catalyse the delivery of the infrastructure associated with the scheme and avoid the village's infrastructure funding being stagnated within a larger and district-wide funding mechanism.

Document Element: Policy T1: Transport Infrastructure

Respondent: West Sussex County Council (Tracey Flitcroft, Principal Planning Officer) [8119]

Summary:

WSCC previously requested proposed highways mitigation schemes within Chichester City be replaced by sustainable transport improvements to comply with West Sussex Transport Plan 2022-2036. Limited modification made to proposed schemes. Suggestion at paragraph 7.3.2 (transport study) that costs for schemes be reallocated to sustainable transport improvements which are not specified - helps to explain how sustainable transport infrastructure schemes/measures can be partially funded. Rare schemes will be fully funded using developer contributions. Funding not only issue to be overcome to secure delivery of schemes and measures. Still gaps in information, consider unlikely schemes will be fully funded using developer contributions, delivery of schemes will be partially dependent on securing funding from central Government or other sources. IDP fails to identify scheme-specific requirements for additional funding/overall scale of additional funding required. Level of information on sustainable transport package insufficient to demonstrate deliverability of credible and coordinated sustainable transport package of improved infrastructure and services. Insufficient evidence to be compliant with Paragraphs 11 and 106 of NPPF.

Full text:

The comments included below from WSCC are Holding Objections. We will continue to work with Chichester District Council and as further work is completed will consider if objections can be withdrawn.

Transport Overview

The County Council has worked with Chichester District Council to develop the Chichester Local Plan and its supporting evidence base and will continue to do so. Although the overall direction of the Local Plan is supported, from a highways and transport perspective, there are three key issues remaining that need to be addressed in order to demonstrate that the Plan is sound:

1. There is insufficient evidence to demonstrate that key infrastructure (i.e. Terminus Road Diversion) will be deliverable;
2. The package of sustainable transport infrastructure and measures is not yet sufficiently well-developed to demonstrate that it is deliverable as part of the monitor and manage process; and
3. There is insufficient evidence to demonstrate that the capacity of the transport network can accommodate the scale of development proposed as part of the Southbourne Broad Location for Development.

The following sections explain; a) the reasons for these issues; b) why they affect the soundness of the Local Plan; and, c) what changes should be made to the Local Plan to remedy the issues.

Deliverability of Key Infrastructure

The recommended transport mitigation strategy, as assessed using the Chichester Area Transport Model for 2039 has been demonstrated to be capable in-principle to prevent the development from resulting in severe residual cumulative impacts on the highways and transport network. However, there are significant risks to deliverability of junction mitigation measures, which have required further work to be undertaken on developing a short to medium term strategy based on phased prioritisation of infrastructure and sustainable transport improvements, to be governed under a monitor and manage approach.

There are three locations where new highway alignments are proposed outside of existing highways boundaries. Two of these may include significant earthworks or structures to be delivered, being Stockbridge Link Road and Terminus Road diversion. The cost of the mitigation strategy exceeds the likely value of developer contributions and additional funding has not yet been secured.

At the Regulation 18 consultation stage in December 2018 to January 2019 the County Council identified delivery risks with the Stockbridge Link Road and Terminus Road Diversion schemes due to the earthworks likely to be required and to confirm the extent of land take required for both schemes. The County Council stated that feasibility work would need to be undertaken for these improvements prior to Plan submission to confirm that the schemes are deliverable. A brief for such a feasibility study was agreed in 2019, but to date, this work has not been commissioned. It is the County Council's view that Stockbridge Link Road (SLR) should be disregarded as a potential part of a long-term transport mitigation strategy for 2039 and beyond until such time as it can be demonstrated that the scheme is deliverable. Paragraph 8.14 of the Local Plan acknowledges that the SLR is not deliverable as part of the Local Plan mitigation package.

The Terminus Road Diversion is still identified as part of the highest priority in the Local Plan mitigation package (i.e. A27 Fishbourne Junction) which is expected to be delivered once sufficient funding is collected. The County Council considers that in the absence of this feasibility work, the deliverability of the Terminus Road Diversion cannot be confirmed. In particular, given the recent impacts of inflation in the construction industry, this work will need to robustly estimate the costs and confirm delivery arrangements. In the absence of this feasibility work, there is currently insufficient evidence to confirm that the Local Plan complies with Paragraphs 11 and 106 of the NPPF as key infrastructure does not appear to be deliverable.

In order to remedy this issue regarding the Terminus Road Diversion, the County Council requests that feasibility work is undertaken prior to the examination to confirm deliverability of the proposed Terminus Road Diversion.

Sustainable Transport Infrastructure & Measures

The transport study modelling for end of Plan period also includes some proposed highways mitigation schemes within Chichester City. The County Council has previously requested that these be replaced by sustainable transport

improvements to comply with the West Sussex Transport Plan 2022-2036. However, only limited modification has been made to these proposed schemes, with a suggestion in text at paragraph 7.3.2 of the main transport study that the costs for these schemes can be reallocated to sustainable transport improvements which are not specified. Although this does help to explain how sustainable transport infrastructure schemes and measures can be at least partially funded, it is rare that schemes will be fully funded using developer contributions. Furthermore, funding is not the only issue that needs to be overcome to secure delivery of these schemes and measures.

The Infrastructure Delivery Plan (IDP) lists the proposed mitigation measures and in some cases provides information on the rationale, phasing, cost, funding and delivery arrangements. However, there are still many gaps in the information, probably because schemes are currently at an early conceptual stage. The County Council's experience is that it is unlikely that schemes will be fully funded using developer contributions (because doing so would not be compliant with the CIL regulations) so delivery of these schemes will be partially dependent on securing funding from central Government or other sources. The IDP currently fails to identify the scheme-specific requirements for additional funding and the overall scale of additional funding required.

The County Council considers the level of information currently available on the sustainable transport package to be insufficient to demonstrate deliverability of a credible and coordinated sustainable transport package of improved infrastructure and services. Therefore, there is insufficient evidence to confirm that the Local Plan complies with Paragraphs 11 and 106 of the NPPF.

In order to remedy this issue, the County Council requests that further technical work is undertaken to develop the schemes and measures in the sustainable transport package prior to the examination. In particular, this should focus on the following schemes and measures and some cases, this will build on work that has already taken place:

1. St. Paul's & Parklands cycle routes
2. Improving existing public transport services towards Madgwick Lane
3. Provision of improved bus services for the village serving the development areas of Southbourne Parish
4. Improving cycling connectivity to link the built-out areas of Shopwhyke Lakes with Tangmere and Oving etc

As not all the severely impacted A27 junctions have a reasonable prospect of being physically improved in the Plan period, more investigation into potential public transport enhancements is also required, particularly to strengthen routes that cross the bypass. This may require further amendments to the IDP.

This work should aim to identify options for sustainable transport schemes that can be a priority for investment, provide information to enable safeguarding of routes (e.g. cycle routes) from development and provide a basis for applications for third party funding to support their delivery. The relative priority of such measures would need to be considered under the monitor and manage approach by the proposed Traffic and Infrastructure Management Group for implementation in addition to the proposed improvement at the A27/A259 Fishbourne junction.

To address this issue and support delivery of the sustainable transport package, the County Council also recommends the following minor amendments to Policy T1: Transport Infrastructure:

At bullet point .7 change "other small-scale junction improvements" to read "other sustainable transport and safety focused improvements, including at junctions" and change "These will increase road capacity, reduce traffic congestion, improve safety and air quality, and improve access to Chichester city from surrounding areas" to "These will increase road capacity on strategic roads, and on both strategic and local roads reduce traffic congestion, improve safety and air quality, and improve access to Chichester city from surrounding areas notably by encouraging and prioritising sustainable modes."

Southbourne Broad Location for Development

The scale of development that can be accommodated at the Southbourne Broad Location will be, at least partially, dependent on the capacity of the transport network to accommodate the associated traffic movements. As the Broad Location spans the railway line, many of these traffic movements would need to cross the railway line. The County Council is concerned that there is currently insufficient capacity of the existing level crossings, notably at Stein Road, to accommodate the additional traffic movements. This could mean that the cumulative impact of development on the traffic network is severe, which is not consistent with Paragraph 111 of the NPPF.

The transport evidence base does not yet provide sufficient assurance that the proposed scale of development can be accommodated. This is because the base level of traffic flow has not been compared to local traffic counts, either in the initial validation of the strategic model or through a new count which the County Council has previously requested, and the assumptions about level crossing downtimes have not been validated against observed data. The County Council is concerned that the assessment of capacity of the local road network to accommodate the quantum of dwellings proposed for the Broad Location may be overoptimistic by underestimating existing flow levels and the duration of level crossing downtime. As a consequence, the proposed quantum may not be deliverable without unacceptable impacts to the conditions on Stein Road and to the level of traffic seeking to use rural lanes to the north of the village to avoid the level crossing.

In order to remedy this issue, the County Council requests that either additional transport evidence is provided prior to the

examination to demonstrate that the proposed scale of development is deliverable, or that Policy A13 is changed to remove the proposed scale of development until such evidence is provided.

The following comments from education, minerals and waste, Adults Services and Health, highways & transport and public rights of way, do not affect the soundness of the Plan. However, Chichester District Council should take these into account and, where possible, make minor amendments to the Local Plan and/or evidence base studies before submission of the Local Plan for examination. Officers are happy to meet and discuss any of these comments, and proposed minor amendments to address these comments, ahead of submission:

1) Education

Land West of Chichester

Previous comments have been made requesting that the policy refers to 'Phase 2 should include expansion of the primary school for the further 1FE of teaching accommodation with nursery and SEND provision'. While it is recognised that reference is made to this in the IDP this is a supporting document to the Local Plan and should not be solely relied on. It is requested that paragraph 10.19 is amended to read: 'a local centre with retail, community and employment uses (minimum of approximately 2500 sqm E(g)(i) Use Class), two form entry (2FE) primary school and one form entry (1FE) teaching accommodation with nursery and SEND, informal and formal open space (including a country park), allotments, ...'

This should also be included in the 3rd bullet point of Policy A6 or the wording of the policy should be drafted to reflect more recent policy requirements i.e. Provide for infrastructure and community facilities in accordance with the most recent Infrastructure Delivery Plan.

There are some inconsistencies with the wording of the strategic policies, not every policy includes the criterion 'Provide for infrastructure and community facilities in accordance with the most recent Infrastructure Delivery Plan.' While this may be due to some policies being carried through from the adopted local plan it is inconsistent.

Policy A8 Land East of Chichester

As an education authority WSCC do not request 1FE schools in line with government guidance. As per our earlier comments and discussions we requested a 2 FE primary school for the site.

3rd bullet point of Policy A8 should be amended to read: 'A neighbourhood centre incorporating local shops, a community centre, flexible space for employment/ small-scale leisure uses and a one-form (expandable to two-form) two form entry primary school with provision for early years/ childcare and special educational needs and disability...'

2) Minerals and Waste

The references to safeguarding minerals is inconsistent and it is suggested that the wording in the email sent to CDC (attached) in relation to Policy AL3 should be used in the policies for the other sites for consistency. Reference to safeguarding minerals and waste infrastructure should also be included in some other policies as previously indicated:

- Policy A2 – needs to include reference to safeguarding minerals and waste infrastructure.
- Policy A7 – needs to include reference to safeguarding waste infrastructure.
- Policy A15 (Loxwood) – needs to include reference to minerals safeguarding as within the clay MSA.
- Policy A21 – needs to include reference to minerals safeguarding.

Also, the reference to the safeguarding guidance needs to be checked to ensure that it is worded correctly as 'Minerals and Waste Safeguarding Guidance'.

3) Older Person Housing

It is noted that the plan refers to older person housing as specialist housing. WSCC strategy supports the provision of 'extra care housing' while this might be similar development it enables younger people to access the accommodation for whatever medical reason i.e. MS, strokes rather than limiting it to a certain age group. Officers are happy to meet and discuss this further.

4) Highways and Transport

Public Transport Priority Infrastructure

The Public Transport section of the main transport study report starting at paragraph 6.2.7 requires revisiting. There is reference to "an expansion of the bus priority lane system within Chichester City Centre" which does not match the existing bus provision in the City which does not provide bus priority lanes on street. It does have restrictions on motor traffic in the adjoining parts of South Street and West Street which provide for bus and cycle only access in both directions of travel plus access for essential goods vehicle loading in the westbound direction only. In addition, the

suggestion in the following paragraph for “a time-based system where certain routes are restricted to public transport only during specific times” is not evidenced or developed and as such considered unlikely to be practical and enforceable at most locations used by bus routes in the City. More developed proposals for additional bus priority, improvements to bus passenger facilities or testing of specific locations for bus-only access would be welcomed as part of developing a costed sustainable transport mitigation package.

Park and Ride

The discussion of possible park and ride facilities for the City at paragraphs 6.2.9 to 6.2.16 of the main transport study should also acknowledge. An important part of making park and ride well used by motorists is increasing the price of city centre parking to provide a financial incentive to take up significantly cheaper park and ride charges for parking and travel. However, if park and ride sites are not provided accessible to all major approach routes to the city, such a charging strategy would not be seen to be equitable, whereas only a single site is proposed in the District Council's emerging parking strategy and the report acknowledges at 6.2.11 that “locations for potential park and ride sites are also deemed to be limited”. The bullet at 6.2.15 “Cost of schemes compared to benefit are likely to be initially lower than highway schemes” may have been incorrectly worded given that this is listed as an issue rather than a benefit. The text may have been intended to say that the ratio of benefit to cost for park and ride schemes may be lower than for conventional highway schemes?

A286 New Park Road / A286 St Pancras Road (Junction 7)

This junction scheme includes pedestrian crossing facilities which are welcomed and also includes a length of advisory cycle lane starting in the middle of the junction for cyclists remaining on St Pancras. However, the approach to the junction on St Pancras from Eastgate Square remains intimidating to cyclists, so further measures would need to be added to make the layout cycle-friendly or the cycle facility is likely to be of limited benefit. This could include decreasing traffic speeds. Until this is done the conclusion at 8.4.4 of the main transport study; “The mitigation scheme includes improvements for pedestrians and cyclists which will lead to increased use of active travel modes and reduce the need for physical mitigation here” is only supported for pedestrians, not for cyclists.

A259 Via Ravenna / A259 Cathedral Way Roundabout (Junction 8)

It is stated at 7.3.8 of the main transport study that “the mitigation may be required to avoid queuing back towards the A27, as well as for capacity issues”. In light of this potential safety issue for the previous junction on Cathedral Way and for the A27 Fishbourne junction, the proposal at 7.3.6 that the scheme delivery should be tied to the monitor and manage regime to see if and when it is required is accepted. This is different to the approach for other junctions in the City because of the potential safety issue. This monitoring approach would be likely to follow after the A259 Cathedral Way / Fishbourne Road East / Terminus Road (as diverted) (Junction 10) improvement, which is to be brought forward as an integral part of the A27 Fishbourne roundabout mitigation scheme, but may allow for increased eastbound flows on Cathedral Way.

A286 Northgate Gyratory

An additional mitigation scheme is proposed at paragraph 7.3.134 of the main transport study for the A286 Northgate Gyratory along its southern arm from Oaklands Way to Orchard Street. The proposal to add traffic signals is welcomed in concept as it can help to control traffic speeds making the junction more friendly for cyclists and pedestrians. However, the layout shown at figure 7-8 does not maximise the opportunity to improve convenience and safety for pedestrians by providing a priority link to reach the central island, which contains employment space and the fire station, nor to assist crossing the exit towards Orchard Street. The scheme would benefit from further development to prioritise active travel movements and should also be fitted with transponders for bus priority.

Fishbourne Road West / Appledram Lane South (Junction 11)

At paragraphs 7.4.1 to 7.4.2 of the main transport study, the junction of Fishbourne Road West / Appledram Lane South (Junction 11) is considered. The proposal to mitigate impacts at this junction through delivery of the Stockbridge Link Road scheme is not considered deliverable, so the approach at this location requires re-thinking. The County Council would not support measures to increase capacity for through traffic on Appledram Lane South, the approach should be to reduce severance and improve safety and comfort for active travel on Appledram Lane by reducing vehicle speeds and as far as possible volume. This should consider the needs of pedestrians and cyclists both for local access and for users of the Salterns Way leisure cycling route.

TEMPro Background Traffic Growth Comparisons

At section 10.2 of the main transport study a comparison is made of the TEMPro 7.2 growth rates used in the study for external traffic with new TEMPro 8.0 growth rates since released by the Department for Transport, which notes that the TEMPro 8.0 rates are significantly lower, if these rates were used then the level of transport impacts could be lower. Unfortunately, a number of highways authorities in the Transport for the South East (TfSE) area including the County Council and Hampshire County Council have concerns that the planning assumptions used in TEMPro v8 core growth scenario underestimate the numbers of additional households forecasted compared to targets in adopted Local Plans for delivering new dwellings. TfSE are currently raising these collective concerns with DfT with a view to obtaining an early update to TEMPro 8 planning assumptions. Although for the purposes of this study TEMPro is not applied to trips produced in Chichester District, from the County Council's analysis TEMPro v8 core underestimates the increase in households per year in Arun District by over 50% and in Horsham District by 30% when compared with adopted development plans. On this basis it may be useful to instead compare TEMPro 7.2 with TEMPro 8.0 high growth scenario.

North of District Spatial Scenarios Testing

For the Northern Spatial Scenarios Test provided as an appendix to the main transport study, this had not been updated for the final preferred spatial strategy or in light of the County Council's previous comments on the March 2022 issue to the District Council. The spatial strategy now is similar but not identical to the Scenario 4: Significant Growth 1 option in the reported tests, totalling 370 dwellings across the four northern parishes, compared to 410 in the test. In both cases the largest allocation is at Loxwood; 220 dwellings were proposed in the Scenario 4 as compared to 200 in this test. Some other tests proposed higher numbers.

The testing in the northern part of the district had used the same trip generation rates per dwelling as in the South of the District, but the County Council considers that in practice private motor vehicle trip generation per dwelling is likely to be higher due to the rural nature of the area, including a lack of local facilities and shops within walking distance of development, a very low level of public transport services and lack of surfaced cycle routes.

The level of development proposed is not at the level capable of delivering transformative transport improvements to match the trip making patterns around Chichester and the A259 corridor to Bosham and Southbourne. This may be offset in part by the lower total amount of development compared to the tested scenario 4. Nonetheless, it would be helpful to adjust the scenario for the spatial strategy now proposed and to provide information on additional traffic movements per peak hour from these parishes using the A272 at junctions at Wisborough Green and reaching the A272/A29 junction at Billingshurst and the A272/A283 junction at the north of Petworth.

Neutral Month and Summer Month Comparison Technical Note

The Neutral Month and Summer Month Comparison Technical Note in the main transport study treats July as a neutral month rather than a summer month. Paragraph 1.3.1 states "The flows were analysed by looking at traffic data for August 2019 this being considered to represent summer traffic. This was compared against traffic data from the neutral months of June, July, September and October also from 2019." The County Council does not accept this methodology as school summer holidays start part way through July and education traffic is also affected by the formal exam period, whilst there is typically a high level of seasonal leisure traffic including summer outdoor events in this month. It is acceptable to use August alone as the summer comparator month. However, July traffic should be removed from the neutral months analysis and should be substituted with May traffic data from the same year of 2019, provided that sufficient data is available from that month.

5) Public Rights of Way (PRoW)

It is a positive step to see PRoW acknowledged as valued by communities and as part of the area's green infrastructure. Whilst Policy P14 (Green Infrastructure) states that development proposals should not be detrimental to the network of public rights of way and bridleways (please note bridleways are Public Rights of Way), a more proactively positive approach that seeks enhancements to the network as mitigation, would be welcomed. The improvement, upgrading of existing PRoW and creation of new PRoW where possible, to allow for a greater number of users to access the network would be beneficial. This is somewhat addressed in Policy T1 which refers only to routes identified in the Local Transport Plan, Local Cycling and Walking Infrastructure Plan (LCWIP) and the Infrastructure Delivery Plan. Opportunities to these, should not be limited if they arise elsewhere.

It is surprising to see there is no mention of PRoW within Chapter 8 under Active Travel – Walking and Cycling. The PRoW network provides extensive walking and cycling opportunities, often off-road, and important links between places and non-PRoW routes.

Change suggested by respondent:

Request further technical work is undertaken to develop schemes and measures in sustainable transport package prior to the examination. Focus on:

1. St. Paul's & Parklands cycle routes
2. Improving existing public transport services towards Madgwick Lane
3. Provision of improved bus services for village serving development areas of Southbourne Parish
4. Improving cycling connectivity to link built-out areas of Shopwhyke Lakes with Tangmere and Oving etc

As not all severely impacted A27 junctions have a reasonable prospect of being physically improved in Plan period, more investigation into potential public transport enhancements also required, particularly to strengthen routes that cross bypass. May require further amendments to the IDP.

Work should aim to identify options for sustainable transport schemes that can be a priority for investment, provide information to enable safeguarding of routes (e.g. cycle routes) from development and provide a basis for applications for third party funding to support their delivery. The relative priority of such measures would need to be considered under the monitor and manage approach by the proposed Traffic and Infrastructure Management Group for implementation in addition to the proposed improvement at the A27/A259 Fishbourne junction.

To address this issue and support delivery of the sustainable transport package, the County Council also recommends the following minor amendments to Policy T1: Transport Infrastructure:

At bullet point .7 change "other small-scale junction improvements" to read "other sustainable transport and safety focused improvements, including at junctions" and change "These will increase road capacity, reduce traffic congestion, improve safety and air quality, and improve access to Chichester city from surrounding areas" to "These will increase road capacity on strategic roads, and on both strategic and local roads reduce traffic congestion, improve safety and air quality, and improve access to Chichester city from surrounding areas notably by encouraging and prioritising sustainable modes."

The comments included below from WSCC are Holding Objections. We will continue to work with Chichester District Council and as further work is completed will consider if objections can be withdrawn.

Transport Overview

The County Council has worked with Chichester District Council to develop the Chichester Local Plan and its supporting evidence base and will continue to do so. Although the overall direction of the Local Plan is supported, from a highways and transport perspective, there are three key issues remaining that need to be addressed in order to demonstrate that the Plan is sound:

1. There is insufficient evidence to demonstrate that key infrastructure (i.e. Terminus Road Diversion) will be deliverable;
2. The package of sustainable transport infrastructure and measures is not yet sufficiently well-developed to demonstrate that it is deliverable as part of the monitor and manage process; and
3. There is insufficient evidence to demonstrate that the capacity of the transport network can accommodate the scale of development proposed as part of the Southbourne Broad Location for Development.

The following sections explain; a) the reasons for these issues; b) why they affect the soundness of the Local Plan; and, c) what changes should be made to the Local Plan to remedy the issues.

Deliverability of Key Infrastructure

The recommended transport mitigation strategy, as assessed using the Chichester Area Transport Model for 2039 has been demonstrated to be capable in-principle to prevent the development from resulting in severe residual cumulative impacts on the highways and transport network. However, there are significant risks to deliverability of junction mitigation measures, which have required further work to be undertaken on developing a short to medium term strategy based on phased prioritisation of infrastructure and sustainable transport improvements, to be governed under a monitor and manage approach.

There are three locations where new highway alignments are proposed outside of existing highways boundaries. Two of these may include significant earthworks or structures to be delivered, being Stockbridge Link Road and Terminus Road diversion. The cost of the mitigation strategy exceeds the likely value of developer contributions and additional funding has not yet been secured.

At the Regulation 18 consultation stage in December 2018 to January 2019 the County Council identified delivery risks with the Stockbridge Link Road and Terminus Road Diversion schemes due to the earthworks likely to be required and to confirm the extent of land take required for both schemes. The County Council stated that feasibility work would need to be undertaken for these improvements prior to Plan submission to confirm that the schemes are deliverable. A brief for such a feasibility study was agreed in 2019, but to date, this work has not been commissioned. It is the County Council's view that Stockbridge Link Road (SLR) should be disregarded as a potential part of a long-term transport mitigation strategy for 2039 and beyond until such time as it can be demonstrated that the scheme is deliverable. Paragraph 8.14 of the Local Plan acknowledges that the SLR is not deliverable as part of the Local Plan mitigation package.

The Terminus Road Diversion is still identified as part of the highest priority in the Local Plan mitigation package (i.e. A27 Fishbourne Junction) which is expected to be delivered once sufficient funding is collected. The County Council considers that in the absence of this feasibility work, the deliverability of the Terminus Road Diversion cannot be confirmed. In particular, given the recent impacts of inflation in the construction industry, this work will need to robustly estimate the costs and confirm delivery arrangements. In the absence of this feasibility work, there is currently insufficient evidence to confirm that the Local Plan complies with Paragraphs 11 and 106 of the NPPF as key infrastructure does not appear to be deliverable.

In order to remedy this issue regarding the Terminus Road Diversion, the County Council requests that feasibility work is undertaken prior to the examination to confirm deliverability of the proposed Terminus Road Diversion.

Sustainable Transport Infrastructure & Measures

The transport study modelling for end of Plan period also includes some proposed highways mitigation schemes within Chichester City. The County Council has previously requested that these be replaced by sustainable transport improvements to comply with the West Sussex Transport Plan 2022-2036. However, only limited modification has been made to these proposed schemes, with a suggestion in text at paragraph 7.3.2 of the main transport study that the costs for these schemes can be reallocated to sustainable transport improvements which are not specified. Although this does help to explain how sustainable transport infrastructure schemes and measures can be at least partially funded, it is rare that schemes will be fully funded using developer contributions. Furthermore, funding is not the only issue that needs to be overcome to secure delivery of these schemes and measures.

The Infrastructure Delivery Plan (IDP) lists the proposed mitigation measures and in some cases provides information on the rationale, phasing, cost, funding and delivery arrangements. However, there are still many gaps in the information, probably because schemes are currently at an early conceptual stage. The County Council's experience is that it is unlikely that schemes will be fully funded using developer contributions (because doing so would not be compliant with the CIL regulations) so delivery of these schemes will be partially dependent on securing funding from central Government or other sources. The IDP currently fails to identify the scheme-specific requirements for additional funding and the overall scale of additional funding required.

The County Council considers the level of information currently available on the sustainable transport package to be insufficient to demonstrate deliverability of a credible and coordinated sustainable transport package of improved infrastructure and services. Therefore, there is insufficient evidence to confirm that the Local Plan complies with Paragraphs 11 and 106 of the NPPF.

In order to remedy this issue, the County Council requests that further technical work is undertaken to develop the schemes and measures in the sustainable transport package prior to the examination. In particular, this should focus on the following schemes and measures and some cases, this will build on work that has already taken place:

1. St. Paul's & Parklands cycle routes
2. Improving existing public transport services towards Madgwick Lane
3. Provision of improved bus services for the village serving the development areas of Southbourne Parish
4. Improving cycling connectivity to link the built-out areas of Shopwhyke Lakes with Tangmere and Oving etc

As not all the severely impacted A27 junctions have a reasonable prospect of being physically improved in the Plan period, more investigation into potential public transport enhancements is also required, particularly to strengthen routes

that cross the bypass. This may require further amendments to the IDP.

This work should aim to identify options for sustainable transport schemes that can be a priority for investment, provide information to enable safeguarding of routes (e.g. cycle routes) from development and provide a basis for applications for third party funding to support their delivery. The relative priority of such measures would need to be considered under the monitor and manage approach by the proposed Traffic and Infrastructure Management Group for implementation in addition to the proposed improvement at the A27/A259 Fishbourne junction.

To address this issue and support delivery of the sustainable transport package, the County Council also recommends the following minor amendments to Policy T1: Transport Infrastructure:

At bullet point .7 change "other small-scale junction improvements" to read "other sustainable transport and safety focused improvements, including at junctions" and change "These will increase road capacity, reduce traffic congestion, improve safety and air quality, and improve access to Chichester city from surrounding areas" to "These will increase road capacity on strategic roads, and on both strategic and local roads reduce traffic congestion, improve safety and air quality, and improve access to Chichester city from surrounding areas notably by encouraging and prioritising sustainable modes."

Southbourne Broad Location for Development

The scale of development that can be accommodated at the Southbourne Broad Location will be, at least partially, dependent on the capacity of the transport network to accommodate the associated traffic movements. As the Broad Location spans the railway line, many of these traffic movements would need to cross the railway line. The County Council is concerned that there is currently insufficient capacity of the existing level crossings, notably at Stein Road, to accommodate the additional traffic movements. This could mean that the cumulative impact of development on the traffic network is severe, which is not consistent with Paragraph 111 of the NPPF.

The transport evidence base does not yet provide sufficient assurance that the proposed scale of development can be accommodated. This is because the base level of traffic flow has not been compared to local traffic counts, either in the initial validation of the strategic model or through a new count which the County Council has previously requested, and the assumptions about level crossing downtimes have not been validated against observed data. The County Council is concerned that the assessment of capacity of the local road network to accommodate the quantum of dwellings proposed for the Broad Location may be overoptimistic by underestimating existing flow levels and the duration of level crossing downtime. As a consequence, the proposed quantum may not be deliverable without unacceptable impacts to the conditions on Stein Road and to the level of traffic seeking to use rural lanes to the north of the village to avoid the level crossing.

In order to remedy this issue, the County Council requests that either additional transport evidence is provided prior to the examination to demonstrate that the proposed scale of development is deliverable, or that Policy A13 is changed to remove the proposed scale of development until such evidence is provided.

The following comments from education, minerals and waste, Adults Services and Health, highways & transport and public rights of way, do not affect the soundness of the Plan. However, Chichester District Council should take these into account and, where possible, make minor amendments to the Local Plan and/or evidence base studies before submission of the Local Plan for examination. Officers are happy to meet and discuss any of these comments, and proposed minor amendments to address these comments, ahead of submission:

1) Education

Land West of Chichester

Previous comments have been made requesting that the policy refers to 'Phase 2 should include expansion of the primary school for the further 1FE of teaching accommodation with nursery and SEND provision'. While it is recognised that reference is made to this in the IDP this is a supporting document to the Local Plan and should not be solely relied on. It is requested that paragraph 10.19 is amended to read: 'a local centre with retail, community and employment uses (minimum of approximately 2500 sqm E(g)(i) Use Class), two form entry (2FE) primary school and one form entry (1FE) teaching accommodation with nursery and SEND, informal and formal open space (including a country park), allotments, ...'

This should also be included in the 3rd bullet point of Policy A6 or the wording of the policy should be drafted to reflect more recent policy requirements i.e. Provide for infrastructure and community facilities in accordance with the most recent Infrastructure Delivery Plan.

There are some inconsistencies with the wording of the strategic policies, not every policy includes the criterion 'Provide for infrastructure and community facilities in accordance with the most recent Infrastructure Delivery Plan.' While this may be due to some policies being carried through from the adopted local plan it is inconsistent.

Policy A8 Land East of Chichester

As an education authority WSCC do not request 1FE schools in line with government guidance. As per our earlier comments and discussions we requested a 2 FE primary school for the site.

3rd bullet point of Policy A8 should be amended to read: 'A neighbourhood centre incorporating local shops, a community centre, flexible space for employment/ small-scale leisure uses and a one-form (expandable to two-form) two form entry primary school with provision for early years/ childcare and special educational needs and disability...'

2) Minerals and Waste

The references to safeguarding minerals is inconsistent and it is suggested that the wording in the email sent to CDC (attached) in relation to Policy AL3 should be used in the policies for the other sites for consistency. Reference to safeguarding minerals and waste infrastructure should also be included in some other policies as previously indicated:

- Policy A2 – needs to include reference to safeguarding minerals and waste infrastructure.
- Policy A7 – needs to include reference to safeguarding waste infrastructure.
- Policy A15 (Loxwood) – needs to include reference to minerals safeguarding as within the clay MSA.
- Policy A21 – needs to include reference to minerals safeguarding.

Also, the reference to the safeguarding guidance needs to be checked to ensure that it is worded correctly as 'Minerals and Waste Safeguarding Guidance'.

3) Older Person Housing

It is noted that the plan refers to older person housing as specialist housing. WSCC strategy supports the provision of 'extra care housing' while this might be similar development it enables younger people to access the accommodation for whatever medical reason i.e. MS, strokes rather than limiting it to a certain age group. Officers are happy to meet and discuss this further.

4) Highways and Transport

Public Transport Priority Infrastructure

The Public Transport section of the main transport study report starting at paragraph 6.2.7 requires revisiting. There is reference to "an expansion of the bus priority lane system within Chichester City Centre" which does not match the existing bus provision in the City which does not provide bus priority lanes on street. It does have restrictions on motor traffic in the adjoining parts of South Street and West Street which provide for bus and cycle only access in both directions of travel plus access for essential goods vehicle loading in the westbound direction only. In addition, the suggestion in the following paragraph for "a time-based system where certain routes are restricted to public transport only during specific times" is not evidenced or developed and as such considered unlikely to be practical and enforceable at most locations used by bus routes in the City. More developed proposals for additional bus priority, improvements to bus passenger facilities or testing of specific locations for bus-only access would be welcomed as part of developing a costed sustainable transport mitigation package.

Park and Ride

The discussion of possible park and ride facilities for the City at paragraphs 6.2.9 to 6.2.16 of the main transport study should also acknowledge. An important part of making park and ride well used by motorists is increasing the price of city centre parking to provide a financial incentive to take up significantly cheaper park and ride charges for parking and travel. However, if park and ride sites are not provided accessible to all major approach routes to the city, such a charging strategy would not be seen to be equitable, whereas only a single site is proposed in the District Council's emerging parking strategy and the report acknowledges at 6.2.11 that "locations for potential park and ride sites are also deemed to be limited". The bullet at 6.2.15 "Cost of schemes compared to benefit are likely to be initially lower than highway schemes" may have been incorrectly worded given that this is listed as an issue rather than a benefit. The text may have been intended to say that the ratio of benefit to cost for park and ride schemes may be lower than for conventional highway schemes?

A286 New Park Road / A286 St Pancras Road (Junction 7)

This junction scheme includes pedestrian crossing facilities which are welcomed and also includes a length of advisory cycle lane starting in the middle of the junction for cyclists remaining on St Pancras. However, the approach to the junction on St Pancras from Eastgate Square remains intimidating to cyclists, so further measures would need to be added to make the layout cycle-friendly or the cycle facility is likely to be of limited benefit. This could include decreasing traffic speeds. Until this is done the conclusion at 8.4.4 of the main transport study; "The mitigation scheme includes improvements for pedestrians and cyclists which will lead to increased use of active travel modes and reduce the need for physical mitigation here" is only supported for pedestrians, not for cyclists.

A259 Via Ravenna / A259 Cathedral Way Roundabout (Junction 8)

It is stated at 7.3.8 of the main transport study that "the mitigation may be required to avoid queuing back towards the

A27, as well as for capacity issues". In light of this potential safety issue for the previous junction on Cathedral Way and for the A27 Fishbourne junction, the proposal at 7.3.6 that the scheme delivery should be tied to the monitor and manage regime to see if and when it is required is accepted. This is different to the approach for other junctions in the City because of the potential safety issue. This monitoring approach would be likely to follow after the A259 Cathedral Way / Fishbourne Road East / Terminus Road (as diverted) (Junction 10) improvement, which is to be brought forward as an integral part of the A27 Fishbourne roundabout mitigation scheme, but may allow for increased eastbound flows on Cathedral Way.

A286 Northgate Gyratory

An additional mitigation scheme is proposed at paragraph 7.3.134 of the main transport study for the A286 Northgate Gyratory along its southern arm from Oaklands Way to Orchard Street. The proposal to add traffic signals is welcomed in concept as it can help to control traffic speeds making the junction more friendly for cyclists and pedestrians. However, the layout shown at figure 7-8 does not maximise the opportunity to improve convenience and safety for pedestrians by providing a priority link to reach the central island, which contains employment space and the fire station, nor to assist crossing the exit towards Orchard Street. The scheme would benefit from further development to prioritise active travel movements and should also be fitted with transponders for bus priority.

Fishbourne Road West / Appledram Lane South (Junction 11)

At paragraphs 7.4.1 to 7.4.2 of the main transport study, the junction of Fishbourne Road West / Appledram Lane South (Junction 11) is considered. The proposal to mitigate impacts at this junction through delivery of the Stockbridge Link Road scheme is not considered deliverable, so the approach at this location requires re-thinking. The County Council would not support measures to increase capacity for through traffic on Appledram Lane South, the approach should be to reduce severance and improve safety and comfort for active travel on Appledram Lane by reducing vehicle speeds and as far as possible volume. This should consider the needs of pedestrians and cyclists both for local access and for users of the Salterns Way leisure cycling route.

TEMPro Background Traffic Growth Comparisons

At section 10.2 of the main transport study a comparison is made of the TEMPro 7.2 growth rates used in the study for external traffic with new TEMPro 8.0 growth rates since released by the Department for Transport, which notes that the TEMPro 8.0 rates are significantly lower, if these rates were used then the level of transport impacts could be lower. Unfortunately, a number of highways authorities in the Transport for the South East (TfSE) area including the County Council and Hampshire County Council have concerns that the planning assumptions used in TEMPro v8 core growth scenario underestimate the numbers of additional households forecasted compared to targets in adopted Local Plans for delivering new dwellings. TfSE are currently raising these collective concerns with DfT with a view to obtaining an early update to TEMPro 8 planning assumptions. Although for the purposes of this study TEMPro is not applied to trips produced in Chichester District, from the County Council's analysis TEMPro v8 core underestimates the increase in households per year in Arun District by over 50% and in Horsham District by 30% when compared with adopted development plans. On this basis it may be useful to instead compare TEMPro 7.2 with TEMPro 8.0 high growth scenario.

North of District Spatial Scenarios Testing

For the Northern Spatial Scenarios Test provided as an appendix to the main transport study, this had not been updated for the final preferred spatial strategy or in light of the County Council's previous comments on the March 2022 issue to the District Council. The spatial strategy now is similar but not identical to the Scenario 4: Significant Growth 1 option in the reported tests, totalling 370 dwellings across the four northern parishes, compared to 410 in the test. In both cases the largest allocation is at Loxwood; 220 dwellings were proposed in the Scenario 4 as compared to 200 in this test. Some other tests proposed higher numbers.

The testing in the northern part of the district had used the same trip generation rates per dwelling as in the South of the District, but the County Council considers that in practice private motor vehicle trip generation per dwelling is likely to be higher due to the rural nature of the area, including a lack of local facilities and shops within walking distance of development, a very low level of public transport services and lack of surfaced cycle routes.

The level of development proposed is not at the level capable of delivering transformative transport improvements to match the trip making patterns around Chichester and the A259 corridor to Bosham and Southbourne. This may be offset in part by the lower total amount of development compared to the tested scenario 4. Nonetheless, it would be helpful to adjust the scenario for the spatial strategy now proposed and to provide information on additional traffic movements per peak hour from these parishes using the A272 at junctions at Wisborough Green and reaching the A272/A29 junction at Billingshurst and the A272/A283 junction at the north of Petworth.

Neutral Month and Summer Month Comparison Technical Note

The Neutral Month and Summer Month Comparison Technical Note in the main transport study treats July as a neutral month rather than a summer month. Paragraph 1.3.1 states "The flows were analysed by looking at traffic data for August 2019 this being considered to represent summer traffic. This was compared against traffic data from the neutral months of June, July, September and October also from 2019." The County Council does not accept this methodology as school summer holidays start part way through July and education traffic is also affected by the formal exam period, whilst there is typically a high level of seasonal leisure traffic including summer outdoor events in this month. It is acceptable to use August alone as the summer comparator month. However, July traffic should be removed from the neutral months analysis and should be substituted with May traffic data from the same year of 2019, provided that sufficient data is available from that month.

5) Public Rights of Way (PRoW)

It is a positive step to see PRoW acknowledged as valued by communities and as part of the area's green infrastructure. Whilst Policy P14 (Green Infrastructure) states that development proposals should not be detrimental to the network of public rights of way and bridleways (please note bridleways are Public Rights of Way), a more proactively positive approach that seeks enhancements to the network as mitigation, would be welcomed. The improvement, upgrading of existing PRoW and creation of new PRoW where possible, to allow for a greater number of users to access the network would be beneficial. This is somewhat addressed in Policy T1 which refers only to routes identified in the Local Transport Plan, Local Cycling and Walking Infrastructure Plan (LCWIP) and the Infrastructure Delivery Plan. Opportunities to these, should not be limited if they arise elsewhere.

It is surprising to see there is no mention of PRoW within Chapter 8 under Active Travel – Walking and Cycling. The PRoW network provides extensive walking and cycling opportunities, often off-road, and important links between places and non-PRoW routes.

Object

Document Element: Policy T1: Transport Infrastructure

Respondent: Mr Roger Weymouth [7888]

Summary:

Objection - no new roads proposed or traffic congestion mitigation. Object to proposed junction improvements. See full submission.

Full text:

I have read the plan, all of it, and the biggest thought that comes into my mind is that there appears to be very little promised...

What appears to be guaranteed/promised

Ten thousand odd dwellings squeezed into approximately 20% of the available land space.

What is not guaranteed/promised

No new roads or traffic congestion mitigation. The roads around Chichester and the surrounding areas are at capacity already and have been for some time, (Transport assessment Jan 2023) with the exception of the Covid lockdown period. My business involves engineers driving to visit customers in and around this area and a considerable amount of the working day is wasted in traffic congestion. At not an inconsiderable cost. For example, one of my engineers lives in Bognor Regis and what was a 35-minute journey to work - in Bosham - now takes 60 minutes. 60 minutes. More frequent flooding and closures of roads exacerbate this and the new Free school sited on Hunston Road, has compounded the misery. Of course, these delays that everyone experiences only compound the pollution issue as well. This can only get worse with the additional promised housing in the area. Working in and around the area will be chaos.

No new sewage infrastructure is guaranteed for the foreseeable future.

Chichester Harbour and the streets of Bosham are regularly filled with sewage that overflows whenever there is rain.

According to Southern Waters' own Beach Boy App data, there are regular non-stop discharges of Sewage into Chichester Harbour. There is nothing in the plan to stop this and Southern Water themselves say that they don't have the capacity to deal with the wastewater at present, let alone with another Ten Thousand houses built in the medium term.

All the E.Cioli levels in the Harbour are already above acceptable levels as advised by the Environment Agency. Table enclosed - figures supplied by the Clean Harbour Partnership.

Attached is the document that explains this testing

No doctor surgeries

None planned

No new schools for the majority of these new housing developments

So despite the positive language of the Plan, there are no plans to provide any new schools for that area, except for the Tangmere proposed development. So in the absence of such plans, I have to ask where in the area are. I don't know about the availability of school places around the area except for Bosham and Chidham where there are none.

General observations

There don't appear to be many proposed developments for this housing on Brownfield sites. All the major developments in the area appear to be on Grade 1 and 2 agricultural land. Some of which, i.e. Highgrove Farm, which is outside the settlement boundary, appears against National Planning Policy Guidance and local opinion.

So in conclusion, this Plan appears to be solely a cash-generating exercise by Chichester District Council, with income derived from Section 106/CIL levies and forecasted Council Tax receipts, which gives no apparent regard, or only Lip Service, to the quality of life and areas of natural beauty for the existing residents and proposed new residents. It is not a really well thought out plan, not joined up at all with the needs and requirements of the local and separate Utilities and

Government agencies such as Transport.

I am not against new housing generally. I'm sure there is a need for future generations and increased population in the County, But this cannot be allowed without all the other facilities that should come along with new housing. This Plan does not plan for that. If there is no funding available to upgrade these facilities, then I can't see how it is sensible to allow more new housing on this scale.

Yours sincerely Roger Weymouth

Dear all (Sent local councillors, responses removed)

I've looked at some possible "road improvements" notably one just outside Tesco which looks like there will be a possibility of multiway lights and a new junction but removing an existing one coming onto the roundabout from the industrial site. Just makes me wonder how much busier this junction will be if they feel the need to re-do the junction. I cannot see how a traffic light system will

improve anything and this strikes me as a case of trying to polish a turd. There will just be too much traffic because of ill-thought-out planning and too many new houses but minus the traffic network improvements required. I also read somewhere that a model or

something shows that if there are no improvements to this area, it will result in a 29-minute wait time at the Tesco roundabout for traffic coming from Bosham way at AM and PM peak times. 29 minutes! Are the planners trying to destroy the quality of life around these parts?

I do not hold much hope for real improvements to the road network, if, after any housing gets the go-ahead in this plan. I quote a paragraph from the Chichester District Council Duty to Co-operate Statement (May 2014). Item 3.10 it states "The Highways Agency is confident that the works on the A27 Chichester Bypass required to support development set out in the Local Plan can be delivered.

The Stantec Chichester District Council Local Plan Transport Assessment (Jan 2023) states:

- "The adopted Chichester Local Plan (LP) 2014-2029, included a set of mitigation measures at the 6 principal junctions along the A27 corridor. Although there have been works at the Portfield Roundabout in this timeline, no other mitigation schemes have been completed along the A27 corridor, as such the mitigation schemes defined in this report will also be required to consider the development from this plan period."

So it seems that all this was promised back then and then shelved and the road network is now pretty much unusable on a daily basis, despite the promises of the Highways Agency. So we have a situation where we all try and bypass the Bypass

I would have thought that any new developments, roadworks etc are meant to be progress, or progressive. Not regressive to the local community and those of us who work in the area.

Perhaps there needs to be a moratorium on all new housing in the district until guaranteed measures are in place to improve the road network. This is not guaranteed in the plan. (Point 8.5)

Change suggested by respondent:

A moratorium on house building in the district until there are guarantees for suitable infrastructure upgrades to the A27 junctions and wastewater treatment.

Not justified – not an appropriate strategy

It is inequitable that the West of Chichester Development SDL Phase 2 and Tangmere SDL (which have yet to be granted planning permission) are to make lower contributions per dwelling than all other housing developments where the per dwelling contribution is to be calculated by using the prescribed formula.

Not justified – not an appropriate strategy

It is inequitable that the West of Chichester Development SDL Phase 2 and Tangmere SDL (which have yet to be granted planning permission) are to make lower contributions per dwelling than all other housing developments where the per dwelling contribution is to be calculated by using the prescribed formula.

Change suggested by respondent:

The same formula will should apply to all developments without planning permission as at November 2022

Document Element: A27 Mitigation contributions**Respondent:** Arun District Council (Planning Policy Team, Team Leader) [7587]**Summary:**

Arun District Council is concerned that Chichester District Council's Regulation 19 'A27 Mitigation contributions' is not effective and should account for the cross boundary mitigation contributions and remove the uncertainty over how cross boundary contributions towards schemes such as Bognor Road and Whyke road roundabouts will be pooled to other A27 mitigation solutions such that there are no adverse implications for delivering committed developments in Arun and the viability of developments.

Full text:

Arun District Council is concerned that Chichester District Council's Regulation 19 A27 Mitigation contributions is not effective. Subject to ongoing Duty to Cooperate discussions with Chichester District Council (CDC), ADC hopes to resolve these matters with a view to securing a Statement of Common Ground and subsequent withdrawal of these objections before the plan is submitted. The Policy Table A27 mitigation contributions should account for the cross boundary mitigation contributions and remove the uncertainty over how cross boundary contributions towards schemes such as Bognor Road and Whyke road roundabouts will be pooled to other A27 mitigation solutions such that there are no adverse implications for delivering committed developments in Arun and viability of developments (e.g. West of Bersted, Pagham North and South) and in particular:-

- The A27/A257 Bognor Road Roundabout (West of Bersted £12m)
- A27 Whyke Road roundabout (West of Bersted £2.073m; Pagham South £0.395m; Pagham North £0.493m)
- A27/B2233 Nyton road (Barnham Eastergate/Westergate £0.327)

Change suggested by respondent:

The policy table should be updated and modified to reflect the additional cross boundary contributions and how collectively what further phased A27 mitigation improvements can be achieved to ensure that there are no adverse implications for delivering committed developments in Arun and the viability of developments.

Document Element: A27 Mitigation contributions**Respondent:** Gladman Developments Ltd (Mr Rob Wilding, Senior Planner) [7816]**Summary:**

The Council's latest Transport Study published in January 2023 has identified that all other housing development which comes forward which is not allocated will have to pay a levy of £7,728 per dwelling which is a substantial increase per dwelling from the £1,402 per dwelling levy set out in the Planning Obligations and Affordable Housing SPD (2016) towards improvements to the Fishbourne Roundabout and the Bognor Road Roundabout. Gladman have concerns that this significant increase in the levy from the Planning Obligations and Affordable Housing SPD is going to make some speculative applications for small and medium housing sites unviable. For Gladman's scheme at land off Main Road, Birdham, a residential scheme for up to 150 dwellings, this would equate to a financial contribution of £1,159,200 (£7,728 x 150 dwellings).

Document Element: A27 Mitigation contributions**Respondent:** Mayday! Action Group (John Garrett) [7163]**Summary:**

The A27 needs significant investment in order to yield significant benefits for those travelling through the East-West corridor; this is unfunded. Essential improvements to the A27 are key to the success of any Local Plan particularly as the city's ambitions are to expand significantly in the next two decades. But any ambitions will fall flat if the A27 is not improved before such plans are implemented.. The A259 is an increasingly dangerous so-called 'resilient road' with a significant increase in accidents and fatalities in recent years. In 2011, the BBC named the road as the "most crash prone A road" in the UK. There is nothing in the Local Plan that addresses this issue. There is no capacity within the strategic road network serving our district to accommodate the increase in housing planned, and the Local Plan does not guarantee it.

Full text:

Executive Summary

The Local Plan as written lacks ambition and vision, and will be detrimental to the landscape within which the district lies. It is a plan borne out of a need to produce a legal document which will satisfy the regulatory authorities. In terms of Urban Planning it fails "To meet the needs of the present without compromising the ability of future generations to meet their own needs" (NPPF).

The development that will consequentially arise from the deployment of such a made Local Plan is not sustainable. It will adversely affect the Character, Amenity and Safety of the built environment, throughout our district.

In particular, the Local Plan is inadequate for the needs of the people in the district both at present and in the future because –

1. It has been written in advance of the District having a properly formed and agreed Climate Emergency Action Plan. It is inconceivable that such a key document will not shape our Local Plan. It is this Action Plan that is needed first in order to provide the long-term strategic view as to how and what the District will look like in the future; this, in turn, will help form and shape the policies outlined in any prospective, Local Plan. The Plan as proposed is moribund, as a result of "cart before the horse" thinking.

2. The Local Plan as written does not adequately address how infrastructure, transport and services are going to be materially and strategically improved to meet the predicted growth and shift to a significantly ageing population. There is presently insufficient capacity to supply services and to have adequate people and environmentally friendly connectivity, as a direct result of decades of neglect towards investing in infrastructure and services to meet the needs of the

District's population. We are led to believe that developers through increased levies in order to gain permission to build will fulfil this need, but all that this will result in is an uncoordinated, dysfunctional mess completely lacking in any future-proof master planning approach. We contend that this will do nothing for the quality of life of Chichester District residents and it will create a vacuum whereby few if indeed any can be held accountable or indeed found liable for shortcomings in the future.

3. The Local Plan as written does not state how it will go about addressing the need to create affordable homes. The District Council's record on this matter since the last made plan has been inadequate and now the creation of affordable homes has become urgent as political/economic/social factors drive an ever increasing rate of change within the District.

4. Flood risks assessments used in forming the Plan are out of date (last completed in 2018) and any decision to allocate sites is contrary to Environment Agency policy. Additionally, since March 2021 Natural England established a position in relationship to 'Hold the Line' vs. 'Managed Retreat' in environmentally sensitive areas, of which the Chichester Harbour AONB is a significant example. CDC have failed to set out an appropriate policy within the proposed Local Plan that addresses this requirement.

5. The A27 needs significant investment in order to yield significant benefits for those travelling through the East-West corridor; this is unfunded. Essential improvements to the A27 are key to the success of any Local Plan particularly as the city's ambitions are to expand significantly in the next two decades. But any ambitions will fall flat if the A27 is not improved before such plans are implemented.. The A259 is an increasingly dangerous so-called 'resilient road' with a significant increase in accidents and fatalities in recent years. In 2011, the BBC named the road as the "most crash prone A road" in the UK. There is nothing in the Local Plan that addresses this issue. There is no capacity within the strategic road network serving our district to accommodate the increase in housing planned, and the Local Plan does not guarantee it.

6. There is insufficient wastewater treatment capacity in the District to support the current houses let alone more. The tankering of wastewater from recent developments that Southern Water has not been able to connect to their network and in recent months the required emergency use of tankers to pump out overflowing sewers within our City/District reflects the gross weakness of short-termism dominated thinking at its worst and is an indictment of how broken our water system is. The provision of wastewater treatment is absolutely critical and essential to the well-being of all our residents and the long-term safety of our built environment. The abdication by those in authority, whether that be nationally, regionally or locally, is causing serious harm to the people to whom those in power owe a duty of care and their lack of urgency in dealing properly with this issue is seriously jeopardizing the environment in which we and all wildlife co-exist.

7. Settlement Boundaries should be left to the determination of Parish Councils to make and nobody else. The proposed policy outlined in the Local Plan to allow development on plots of land adjacent to existing settlement boundaries is ill-conceived and will lead to coalescence which is in contradiction of Policy NE3.

8. All the sites allocated in the Strategic Area Based Policies appear to be in the majority of cases Greenfield Sites. The plan makes little, if any reference to the development of Brownfield sites. In fact, there is not a Policy that relates to this source of land within the Local Plan as proposed. Whilst in the 2021 HELAA Report sites identified as being suitable for development in the District as being Brownfield sites were predicted to yield over 4000 new dwellings. Why would our Local Plan not seek to develop these sites ahead of Greenfield sites?

9. The Local Plan does not define the minimum size that a wildlife corridor should be in width. What does close proximity to a wildlife corridor mean? How can you have a policy (NE 4) that suggests you can have development within a wildlife corridor? These exceptions need to have clear measures and accountability for providing evidence of no adverse impact on the wildlife corridor where a development is proposed. Our view is quite clear. Wildlife and indeed nature in the UK is under serious and in the case of far too many species, potentially terminal threat. Natural England has suggested that a Wildlife Corridor should not be less than 100metres wide. The proposed Wildlife Corridors agreed to by CDC must be enlarged and fully protected from any development. This is essential and urgent for those Wildlife Corridors which allow wildlife to achieve essential connectivity between the Chichester Harbour AONB and the South Downs National Park.

10. Biodiversity Policy NE5 - This is an absolute nonsense. If biodiversity is going to be harmed there should be no ability to mitigate or for developers to be able to buy their way out of this situation. This mindset is exactly why we are seeing a significant decline in biodiversity in the District which should be a rich in biodiversity area and why the World Economic Forum Report (2023) cites the UK as one of the worst countries in the world for destroying its biodiversity.

11. In many cases as set out in the Policies the strategic requirements lack being SMART in nature – particularly the M Measurable. These need to be explicit and clear: "you get what you measure".

12. 65% of the perimeter of the District of Chichester south of the SDNP is coastal in nature. The remainder being land-facing. Policy NE11 does not sufficiently address the impact of building property in close proximity to the area surrounding the harbour, something acknowledged by the Harbour Conservancy in a published report in 2018 reflecting upon how surrounding the harbour with housing was detrimental to its long-term health. And here we are 5 years on and all of the organizations that CDC are saying that they are working in collaboration with, to remedy the decline in the

harbour's condition, are failing to implement the actions necessary in a reasonable timescale. CDC are following when they should be actually taking the lead on the issue. Being followers rather than leaders makes it easy to abdicate responsibility. There must be full and transparent accountability.

13. The very significant space constraints for the plan area must be taken into account. The standard methodology need no longer apply where there are exceptional circumstances and we are certain that our District should be treated as a special case because of the developable land area is severely reduced by the South Downs National Park (SDNP) to the north and the unique marine AONB of Chichester Harbour to the south. A target of 535dpa is way too high. This number should be reduced to reflect the fact that only 30% of the area can be developed and much of that is rural/semi-rural land which provides essential connectivity for wildlife via a number of wildlife corridors running between the SDNP and the AONB. Excessive housebuilding will do irretrievable damage to the environment and lead to a significant deterioration in quality of life for all who reside within the East / West corridor.

14. Many of the sites identified in the Strategic & Area Based Policies could result in Grade 1 ^ 2 farmland being built upon. The UK is not self-sufficient in our food security. It is short-sighted to expect the world to return to what we have come to expect. Our good quality agricultural land should not all be covered with non-environmentally friendly designed homes.

Object

Document Element: A27 Mitigation contributions

Respondent: National Highways (Mr Marius Pieters, Spatial Planning Manager) [8127]

Summary:

[National Highways letter dated 24/07/23 confirmed representation should be categorised as Comment - Recommendations made]

Developer contributions require updating to reflect increased costs (inflation, materials) and to ensure calculation methods reflect proposed strategic development;

Proposed developments are at various stages of realisation; it is unclear if growth will be controlled in pace with the availability of funding and the delivery of necessary transport intervention;

There is no one single development that is large enough to provide developer contributions to fund the required mitigations and so a change in direction will be required;

All new housing and employment development increases the traffic on the local and strategic highway networks; Consideration should be given to collecting contributions from smaller developments (including 10 or fewer dwellings), not just strategic allocations.

Full text:

We have reviewed the publicly available Local Plan documents and provided comments in the attached letter, in relation to the transport implications of the plan for the safety and operation of the SRN.

Our comments include issues to resolve, comments, requests for further information and recommendations. A brief summary of our main comments are:

- the reliance on the delivery of the A27 Chichester bypass improvements project.
- the requirements for new, additional, and adapted processes and assessments, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments.
- collaborative working between agencies in combination with a robust monitor and manage policy.

We hope our comments assist.

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSSCC) and we will continue to work with the Council and other key stakeholders. We look forward to continuing to participate in future consultations and discussions.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Background

National Highways has been appointed by the Secretary of State for Transport as strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the strategic road network (SRN).

National Highways is responsible for operating, maintaining, and improving the Strategic Road Network (SRN) i.e., the Trunk Road and Motorway Network in England, as laid down in Department for Transport (DfT) Circular 01/2022 (Strategic Road Network and the delivery of sustainable development).

The SRN is a critical national asset and as such we work to ensure that it operates and is managed in the public interest, both in respect of current activities and needs as well as in providing effective stewardship of its long-term operation and integrity.

Our responses to Local Plan consultations are guided by relevant policy and guidance including the National Planning Policy Framework (2021) (NPPF):

- Transport issues should be considered from the earliest stages of plan-making and development proposals so that the potential impact of development on transport networks can be addressed (para 104).
- The planning system should actively manage patterns of growth such that significant development is focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. (para 105).
- Planning policies should be prepared with the active involvement of highways authorities and other transport infrastructure providers so that strategies and investments for supporting sustainable transport and development patterns are aligned. (para 106).
- In terms of identifying the necessity of transport infrastructure, NPPF confirms that development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe. (para 111).
- Planning policies and decisions should support development that makes efficient use of land, taking into account the availability and capacity of infrastructure and services – both existing and proposed – as well as their potential for further improvement and the scope to promote sustainable travel modes that limit future car use. (para 124).

In relation to the tests of soundness set out at paragraph 35 of the NPPF, in the context of transport, these are interpreted as meaning:

- a) Positively prepared - has the transport strategy been prepared with the active involvement of the highway authorities, other transport infrastructure providers and operators and neighbouring councils?
- b) Justified – Is the transport strategy based on a robust evidence base prepared with the agreement in partnership, or with the support of the highway authorities?
- c) Effective – Does the transport strategy and policy satisfy the transport needs of the plan and is it deliverable at a pace which provides for and accommodates the proposed progress and implementation of the plan?
- d) Consistent with national policy – Does the transport strategy support the economic, social, and environmental objectives of the Plan and the NPPF/NPPG?

We will be concerned with proposals that have the potential to impact on the safe and efficient operation of the SRN; in this case, the A27 trunk road (Chichester Bypass and its junctions) which is the main access route in the Chichester area. We have particular interest in any allocation, policy or proposals which could have implications for the A27 and the wider SRN network. We are interested as to whether there would be any adverse road safety or operational implications for the SRN. The latter would include a material increase in queueing or delay or reduction in journey time reliability during the construction or operation of the development set out in the plan.

National Highways is a key delivery partner for sustainable development promoted through the plan-led system, and as a statutory consultee we have a duty to cooperate with local authorities to support the preparation and implementation of development plan documents.

In accordance with national planning and transport policy and our operating licence, we are entirely neutral on the principle of development as it is for the local planning authority to determine whether development should be allocated or permitted; albeit it must comply with national policy on locating development in locations that are or can be made sustainable. Therefore, while always seeking early and fulsome engagement with local plans and/or developers, we will simply be assessing the transport and related implications of plans or proposals and agreeing any necessary transport improvements and relevant development management policy.

In progressing Local Plans, we will seek to agree the following:

- Assessment tools and methodology
- Baseline Assessment i.e., to demonstrate that the assessment tool accurately reflects current transport conditions
- Comparator case assessment i.e., to forecast the transport conditions that would occur in the absence of the plan
- Forecast modelling i.e., to forecast the transport conditions that would arise with the plan in place, this will include an assessment at the end of the Plan period; and, if required, at full build out if that occurs after the end of the Plan period
- Outputs and outcomes of modelling, demonstrating, as appropriate, what transport infrastructure is necessary to

support the plan o It should be noted that a suite of transport modelling tools may be required. This includes strategic modelling covering an area at least one major junction beyond the district boundary, localised network modelling where several links/junctions are close together and/or individual junction modelling

o A DMRB (Design Manual for Roads and Bridges) compliancy assessment may also be required for certain highway features, such as

Merge/Diverge assessment at Grade separated junctions, link capacity assessments, and others.

- The design of any necessary transport infrastructure, to an extent suitable for establishing deliverability during the plan period at the time that it becomes necessary for the purpose of ensuring that unacceptable road safety impacts or severe operational impacts do not arise as a result of development. This may be to at least General Arrangement design stage or preliminary design stage. Whichever degree of detail is agreed, the products must be in full compliance with the DMRB.

- Industry standard transport intervention costings.

- The delivery/funding mechanisms for necessary transport interventions. It should not be assumed that National Highways will have any responsibility to identify or deliver necessary transport interventions.

- If considered appropriate, a "Monitor & Manage" (M&M) framework, aimed at managing the pace of development in line with the pace of funding and delivery of necessary highway interventions in a manner which responds to the realworld impacts of development may be agreed for inclusion in the plan subject to the adequacy of risk control measures included therein. This can include the move from a 'predict & provide' style of delivery to 'a vision & validate' style. o Any M&M framework must be based on a "worst case scenario" whereby necessary mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. It must be translated into development management plan policy and policy relating to development allocations.

Further detail on the above can be provided by National Highways.

While ideally all the above should be agreed prior to the Submission of the Local Plan for examination, we recognise that this is not always possible. However, all parties should work towards all matters being agreed and reflected in a Statement of Common Ground (SoCG) by the start of the Local Plan Examination at the latest. Ideally the SoCG between the Council and National Highways would be prepared well in advance of plan submission in order to guide resource input and to track progress towards final agreement on all relevant matters starting from the earliest plan iterations until the final version is agreed.

It is acknowledged that Government policy places much emphasis on housing delivery as a means for ensuring economic growth and addressing the current national shortage of housing. The NPPF is very clear that:

"Strategic policy-making authorities should establish a housing requirement figure for their whole area, which shows the extent to which their identified housing need (and any needs that cannot be met within neighbouring areas) can be met over the plan period."

However, new DfT C1/22 and the NPPF are equally clear that any development, including housing delivery, must be tempered by the requirement to ensure that the associated transport demand can be accommodated without unacceptable impacts on the safety of the SRN or severe impacts on the operation of the SRN including reliability and congestion. Therefore, as necessary and appropriate, any plan and/or development must be accompanied by suitable mitigation in the right places at the right time, that is to the required design standards and is deliverable in terms of land availability, constructability and funding.

We would also draw your attention to the then Highways England document 'The Strategic Road Network, Planning for the Future: A guide to working with National Highways on planning matters' (September 2015). This document sets out how National Highways intends to work with local planning authorities and developers to support the preparation of sound documents which enable the delivery of sustainable development. https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_t_data/file/461023/N150227_-_Highways_England_Planning_Document_FINAL-lo.pdf

Responses to Local Plan consultations are also guided by National Planning Policy Framework (NPPF) revised on 20 July 2021 which sets out the government's planning policies for England and how these are expected to be applied.

Updated Circular (01/2022)

It should be noted that since the start of the Local Plan consultation process, on the 23 December 2022, the Department for Transport released a new circular on the 'Strategic road network and the delivery of sustainable development' (Circular 01/2022), which replaces all of the policies in Circular 02/2013 of the same name. These representations take account of the new circular and the requirements in terms of the Local Plan evidence base and process.

We request that the Local Plan is prepared in line with all aspects of the new circular. Particularly, the principles of sustainable development (paragraphs 11 to 17), new connections and capacity enhancements (paragraphs 18 to 25), and engagement with plan-making (paragraphs 26 to 38).

Regulation 18 submission

In our Regulation 18 submission we noted several matters including:

- The need to mitigate the adverse impacts of strategic development traffic to the A27 Chichester Bypass and its junctions at Portfield Roundabout, Bognor Road Roundabout, Whyke Roundabout, Stockbridge Roundabout and Fishbourne Roundabout and Oving junction.
- The need to identify a mechanism to calculate contributions towards the delivery of the previously agreed Local Plan A27 improvements
- The need to confirm the number of dwellings needed within the plan period
- The need to establish National Highways acceptance of the traffic model reference and future case scenarios
- The need to confirm costs, viability, and funding associated with mitigating the safety and congestion impacts of the development included within the plan.

Local Plan context

This Local Plan (Chichester Local Plan 2021 – 2039), prepared by the Local Planning Authority (LPA) Chichester District Council, sets out the vision for future development in the district and will be used to help decide on planning applications and other planning related decisions including shaping infrastructure investments.

The draft sets out how the district should be developed over the next 18-years to 2039 including for the full Plan period (1 April 2021 to 31 March 2039) the total supply of

- 10,359 dwellings

- 114,652 net additional sqm new floorspace

Minus the completions this is equivalent to around 530 dwellings and 6,150 sqm of floorspace a year.

National Highways Representations

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders.

We have undertaken a review of the Chichester Local Plan 2021-2039 proposed submission version and accompanying evidence documents, our comments are set out in the tables below (following pages). [see table within attachment]

Summary

We have reviewed the publicly available Local Plan documents and provided comments above in relation to the transport implications of the plan for the safety and operation of the SRN. We understand that other technical information is available, but this was not presented as part of this consultation.

Chichester, and the A27, are already heavily congested, infrastructure in the existing Local Plan remains undelivered and the growth set out in the new Plan will further increase travel demand.

As presented, satisfying the transport needs of the plan is clearly reliant on the delivery of the A27 Chichester bypass improvements project. The A27 Chichester bypass improvements project is one of 32 pipeline schemes being considered for possible inclusion in National Highways third Road Investment Strategy (RIS3) covering 1 April 2025 to 31 March 2030.

On 9 March 2023 the UK Transport Secretary ensured record funding would be invested in the country's transport network, sustainably driving growth across the country while managing the pressures of inflation. The announcement cited the A27 Arundel Bypass as being deferred from RIS2 to RIS 3 (covering 2025-2030). The transport secretary also identified a number of challenges to the delivery of the road investment strategy and cited the benefit of allowing extra time to ensure schemes are better planned and efficient schemes can be deployed more effectively.

At present, there is no commitment by DfT to carry out the A27 Chichester bypass improvements project. Until the A27 Chichester bypass improvements project is published in the RIS3, consented and a decision to invest is made it cannot be assumed to be a committed project.

We note that the Plan does not address any uncertainty of delivery of the A27 Chichester bypass improvements project and we strongly recommend that there is either no reliance placed on RIS3 to realise capacity for growth in the Plan or that contingency measures are included to cover the eventuality that RIS3 funding is not forthcoming within the plan period. It is not clear that the potential impact of development on transport networks can be addressed in the absence of the A27 Chichester bypass improvements project.

Achieving net zero, reducing emissions reduction, acting on climate, and supporting thousands of new homes and new employment developments will be problematic with existing processes. New, additional, and adapted processes and assessments will likely be required, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments. We acknowledge that change is complex, expensive, and time-consuming, especially for smaller district level Councils. But the hard work will deliver benefits for the Council and residents in the longer-term.

National Highways seeks to continue working with the Council and WSCC to progress coordinated and deliverable packages of interim mitigation measures and alternative transport solutions while a long-term strategic solution is considered by government. This must however be in combination with a robust monitor and manage policy that appropriately manages the risk of unacceptable road impacts resulting from new housing and other development over the Plan period.

We have been in discussion with Chichester District Council regarding their proposed Monitor and Manage Strategy. At present, we do not consider the current strategy to be robust and we seek further information and detail especially on who, when and when monitoring and management will be undertaken. Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when

planning for growth in all local authority areas. Any M&M framework must be based on a “worst case scenario” whereby necessary transport mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. The M&M framework must set out that the alternative to mitigation not being delivered is that development does not proceed where that development would give rise to unacceptable road safety risk or severe cumulative impacts on the road network in the absence of that mitigation. The M&M framework must be translated into development management plan policy and policy relating to development allocations.

As we have reiterated throughout our comments, we welcome the opportunity to work with you to address these outstanding matters and we will continue to liaise over submitted Transport Assessment, Travel Plan policy and Monitor and Manage Policy to help to work towards a viable plan.

We hope our comments assist.

We look forward to continuing to participate in future consultations and discussions. Please do continue to consult us as the Plan progresses so that we can remain aware of, and comment as required on, its contents.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Change suggested by respondent:

National Highways recommends that as a priority the Council:

- reviews the 'Planning Obligations & Affordable Housing Supplementary Planning Document' (SPD) which came into effect from February 2016 to reflect the proposed development in the Plan and the likely additional costs of construction associated with mitigation measures on the A27;
- considers the methodology to calculate contributions in relation to current day costs;
- reviews process to enable collection of contributions from all sites, including from smaller developers;
- increases the rate per dwelling so that the required infrastructure can be delivered and cost of monitoring is included.

We acknowledge the work that has been done, and is being done, and we seek to continue to work with the Council, but we do seek information on the longer-term measures.

National Highways recommend:

- establishing what/which contributions could realistically come forward from developments;
- identifying what mitigation measures could reasonably be delivered from:
 - a) existing contributions;
 - b) expected contributions:
- understanding the overall deficit
- preparing a business case for any identified shortfalls

Document Element: A27 Mitigation contributions, 8.21**Respondent:** Jennifer Asser [6438]**Agent:** Genesis Town Planning Ltd (Mr Jeremy Farrelly, Director of Planning) [7504]**Summary:**

Developer contributions sought for improvements to these two roundabout junctions are from residential development and exclude contributions from retail development. Inconsistent with CDC's adopted CIL charging schedule. No reason or justification for omitting contributions from retail developments has been given. Chichester Transport Study (2023) comments that forecast growth is likely to be lower than currently predicted within transport model, and mitigation identified "may not be required in the future". Given this uncertainty, SATURN modelling outputs cannot be relied upon to determine nature of any improvements that may or may not be required at these junctions. As such, mitigation identified may not actually be required in the future. Requested per dwelling contribution set out in paragraph 8.21 of Plan does not meet tests set out in CIL regulations and is therefore inconsistent with national policy.

Full text:

See representations

Change suggested by respondent:

Requested per dwelling contribution set out in paragraph 8.21 of Plan needs to be clarified and based on actual works/detailed costings for these junction improvements unknown at present. Financial contribution sought should be related to likely impact that development will have on junctions. Developments on fringes of southern part of plan area less likely to generate traffic at these junctions and any financial contributions should reflect this.

Existing housing allocations in made Neighbourhood Plans should not be required to pay financial contributions towards the improvement works at these two A27 junctions as already planned and in the system.

There needs to be a specific plan for provision of clearly-defined cycle routes. I cannot find one in the documents. I have a specific issue - next point.

Full text:

There needs to be a specific plan for provision of clearly-defined cycle routes. I cannot find one in the documents. I have a specific issue - next point.

Change suggested by respondent:

The cycle route between Selsey and Chichester is inadequate. The link from Selsey to the Ferry only exists in the form of a substantial diversion via the caravan site and the Medmerry perimeter track, past the waste water treatment plant, to the Ferry. The route from the Ferry onwards involves a near-useless track alongside Pagham Harbour. It is too narrow for safe mixing of cyclists and pedestrians. Much of the route beyond that point involves some complex navigation along tracks and unclassified roads. In view of the fact the cycling along the B2145 is both risky and highly problematic for other road users (and especially emergency vehicles), it's time that specific plans were incorporated in the Plan for each such key cycle route in the CDC area.

Document Element: Policy T2 Transport and Development**Respondent:** Chidham and Hambrook Parish Council (Parish Clerk, Clerk) [7830]**Summary:**

We are concerned that the increase in housing will cause significant traffic problems through over capacity both on the A27 and other parts of the road network BEFORE any improvements can be made. The necessary road network improvements are totally dependent on developer contributions. This is a risky strategy.

There is not enough in the plan to provide new infrastructure or public transport services or reducing reliance on private cars. Too many houses are located in areas where cars will be used on a daily basis for education, employment, recreation and everyday facilities.

Document Element: Policy T2 Transport and Development**Respondent:** Countryside Properties [7291]**Agent:** Turley (Mr Ryan Johnson, Director) [7887]**Summary:**

(1)(i) should be expressed as preference of council, not binary requirement -may be subject to design considerations on site-by-site basis. Term 'accessing' is ambiguous, could refer to other modes of transport. Point 2. mentions adoption of a specific threshold of impact which is not defined for either Transport Statements or Assessments. Further clarification required. In 3. Should also be recognised that monitoring would offer an opportunity for Travel Plan targets to be reviewed regularly to ensure they remain relevant or can respond to exogenous factors/external influences. Conditions at time of production of Travel Plan may change in the future.

Full text:

See attachment.

Change suggested by respondent:

Suggest at (1)(a) Council consider replacing 'reduce' by 'minimise', as to 'reduce' implies that this should be from a specific baseline, when in fact sustainable developments will be designed to include this objective at the outset.

(1)(i) Use wording 'delivery access and servicing'.

(1)(j), suggest that 'Provide' is replaced by 'Provide or contribute towards' to provide flexibility for development to jointly fund specific mitigation measures.

Consider adding the following bullet:

"3. d) appoint a Travel Plan Co-ordinator whose role will be to oversee the implementation of the Travel Plan and use the outcome of monitoring to review its targets to ensure continued relevance".

Document Element: Policy T2 Transport and Development**Respondent:** Deerhyde Limited [7657]**Agent:** Vail Williams LLP (David Ramsay, Partner) [8134]

Summary:

The content of Policy T2 (transport development) is largely supported and considered sound save for the fact that it does not seem to cover the improvement of local transport routes, particularly those that would assist in improving the circulation of traffic around smaller settlements.

Full text:

I am pleased to attach our representations in response to the Chichester Local Plan Regulation 19 consultation. These representations are submitted on behalf of our clients Deerhyde Ltd. owners of land in Selsey and located in the area for a significant number of years.

The submitted documents include the following:

- Representations statement
- Plans showing the potential road widening of Golf Links Lane and Paddock Lane, Selsey
- Development potential of sites for residential development at Golf Links Lane and Old Farm Road, Selsey taking account of flood zones 2 and 3 (2 plans 15-085 SK03 and SK04)
- Plans showing access options to Golf Links Lane site
- Plan showing tracking analysis for low-loaders
- Junction analysis
- Submission form

As detailed in the attached, after careful consideration we have concluded that the housing strategy for Chichester is flawed in principle as it fails to allocate sufficient sites in outside Chichester City (or adjacent to) to allow the remainder of the District to continue to provide houses for local people in areas where they are most needed.

In addition, our clients have put forward a suggestion for an infrastructure improvement to Selsey – namely the widening of Golf Links Lane and Paddocks Lane to accommodate delivery of caravans / other HGV / LGVs but also to provide a wider carriageway which could potentially incorporate a pavement / footpath cycleway to aid safer conveyance of pedestrians and vehicles in the area. Adding in a safer highway solution would also encourage car users to walk or cycle for local trips rather than risking congestion in the car. It would have the added benefit of diverting caravan park traffic travelling from the north into the caravan parks earlier and thus relieving congestion of Selsey High Street.

Introduction

1.1. Vail Williams LLP has been instructed by Deerhyde Ltd to submit representations to the Chichester Local Plan 2021-2039: Proposed Submission (Regulation 19) document.

1.2. As per the Website, these comments seek to address the three questions namely:

1. Is it legally compliant?
2. Is it sound?
3. Does it comply with the duty to cooperate?

1.3. These representations are largely focussed on the provision of housing and ensuring that a satisfactory access (both vehicular and pedestrian) can be maintained and enhanced, particularly in Selsey.

1.4. These representations reflect the fact that our client, Deerhyde Ltd, owns a significant amount of land in the Selsey area, an interest which was acquired in 1986 but with family ownership going back many years before then.

1.5. Our clients have identified a potential opportunity to facilitate highway improvements within Selsey which would be to the benefit of both residents and tourists using the holiday parks and other attractions alike. This would particularly be of benefit given the Council's acknowledgement that the B2145 through Selsey is the busiest B road in the country. These representations bring into question the 'tests of soundness'. In particular regarding the questions as to whether it is 'sound' on the basis of whether it has been 'positively prepared', whether it is 'justified' and 'effective' in respect of the areas of concern raised with respect to employment land provisions.

1.6. As set out at Paragraph 35 of the NPPF local plans are required to be 'sound'. Plans are considered sound when the following applies:

- a) Positively prepared – providing a strategy which, as a minimum, seeks to meet the area's objectively assessed needs¹; and is informed by agreements with other authorities, so that unmet need from neighbouring areas is accommodated where it is practical to do so and is consistent with achieving sustainable development;
- b) Justified – an appropriate strategy², taking into account the reasonable alternatives³, and based on proportionate evidence⁴;
- c) Effective – deliverable over the plan period⁵, and based on effective joint working on crossboundary strategic matters that have been dealt with rather than deferred, as evidenced by the statement of common ground; and
- d) Consistent with national policy – enabling the delivery of sustainable development in accordance with the policies in this Framework and other statements of national planning policy, where relevant.⁶

1.7. These representations seek to highlight that Chapter 5 (Housing) has not been positively prepared, in so far as it does not provide [1.] "a strategy which, as a minimum, seeks to meet the area's objectively assessed needs".

1.8. It is also considered that Chapter 5 is not justified as the housing strategy is [2.] is inappropriate as it relies on a number of large strategic sites, with multiple issues some of which are in conflict with other parts of the local plan.

1.9. Chapter 5 is also not justified with respect to its provisions do not [3.] take into account reasonable alternative sites.

1.10. It is considered on the basis of the other factors highlighted in these representations and the proposed housing land provision is not 'consistent with national policy' as the proposed provision does not enable the delivery of sustainable development in accordance with the policies in this Framework and other statements of national planning policy, where relevant. It is considered that the proposed plans are contrary to the NPPF paragraph 16a, 16b, 16c, 16d and paragraph 20a

2 Local Plan Representations

2.1. Having reviewed the draft Local Plan we would make the following comments:

2.2. Paragraph 3.1 asserts the Government's encouragement for local planning authorities to ensure sustainable development is at the forefront when considering planning applications and that the National Planning Policy Framework (NPPF) defines sustainable development as "meeting the needs of the present without compromising the ability of future generations to meet their own needs". Paragraph 3.5 goes on to advise the range of factors as are informed the spatial strategy which underpins the local plan which, inter alia, "the pattern of need and demand for housing and employment across the area", "infrastructure capacity and constraints, in particular related to waste water treatment, roads and transport", "the availability of potential housing types, their deliverability and phasing" and this needs to take place whilst being mindful of the environmental constraints taking a sequential approach to avoiding flood risk areas, protect the environmental designations, landscape quality, the historic environment and settlement character.

2.3. The principles outlined above are supported as these are the key facets of good planning and plan making. However it falls to local authorities to ensure that the sustainable approach includes providing a sufficient supply of homes and facilitating a variety of sites to come forward where needed, and that the needs of groups within specific housing requirements are addressed and that land with permission is developed without unnecessary delay. (Paragraph 65). Paragraph 66 states that within the overall requirement [for housing] strategic policies should also set out a housing requirement for designated neighbourhood areas which reflects the overall strategy for the pattern and scale of development and any relevant allocations.

2.4. Paragraph 67 goes on, where it is not possible to provide a requirement figure for a neighbourhood area, the local planning authority should provide an indicative figure, if requested to do so by the neighbourhood planning body. This figure should take account of factors such as the latest evidence of local housing need, the population of the neighbourhood area and the most recently available planning strategy of the local planning authority.

2.5. Paragraph 68 asserts that strategic policy making authorities should have a clear understanding of the land available in their area through the preparation of a Strategic Housing Land Availability Assessment (SHLAA). From this, planning policies should identify a sufficient supply and mix of sites, taking into account their availability, suitability and locally economic viability.

2.6. Further guidance states (Paragraph 69) that small and medium sized sites can make an important [my emphasis] contribution to meeting the housing requirements of an area, and are often built-out relatively quickly. To promote the development of a good mix of sites the local planning authority should identify sites of small and medium size and support the development of windfall sites through their promises and decisions giving great weight to the benefits of using suitable sites within existing settlements for homes.

2.7. Neighbourhood planning groups should also give particular consideration to the opportunities for allocating small and medium-sized sites suitable for housing in their area. Paragraph 71 goes on: where an allowance is to be made for windfall sites as part of anticipated supply, there should be compelling evidence that they will provide a reliable source of supply. Any allowance should be realistic having regard to the SHLAA, historic windfall delivery rate and expected future trends.

2.8. Whilst it is noted that the delivery of large scale sites can result in the delivery of large numbers of new homes, it is apparent that such developments take considerable time to work their way through the planning system to an approval and even then are only at outline stage. The delivery of new homes is therefore reliant on the Councils to efficiently determine reserved matters applications and, thereafter, discharge of conditions, to allow a swift implementation of planning applications and a timely start on site for the delivery of housing.

2.9. The inclusion of small and medium sites (ie. not reliant on strategic sites) within the housing mix are invaluable in delivering housing quicker and potentially in places, perhaps outside the main settlements, which would allow new housing to be accessible to all which is one of the key facets of the NPPF.

2.10. This approach would assist with maintaining delivery of housing where existing allocations are either stalled or progressing slowly through the planning system or have simply been delayed in coming forward for perhaps other commercial reasons.

2.11. The plan is largely predicated on strategic sites, as detailed at Policy H2 which would provide 7,195 houses. This is a significant reliance on the strategic sites to deliver 75% of the overall housing target and much of them are predicated on the works to the A27 being completed in order to make them acceptable.

2.12. It should be noted that the above housing provision is predicated on the ability to identify mitigation for the impacts on the European environmental designations (including nutrient neutrality), addressing highway implications and negotiating the planning system.

The Manhood Peninsula

2.13. The preferred approached version of the Local Plan does include moderate growth for the settlement hubs of Selsey (250 dwellings) and East Wittering (350) and the service village of Hunston (200). However, since then several planning permissions have contributed to the moderate levels of growth on the Manhood Peninsula which the Council says has accounted for these housing numbers. The plan does not therefore include any strategic allocations on the Manhood Peninsula in recognition of this recently permitted growth and the ongoing constraints the area faces, save for 50 dwellings to come forward at North Mundham.

2.14. This approach is not considered sound as a reason to prevent development of any scale on the Manhood Peninsula (particularly Selsey) for the plan period. As detailed above, it is essential that the plan allocates land across its settlement hierarchy in order to maintain a sustainable and deliverable approach to development and to assist the continuing evolution and economic viability of settlements which rely heavily on tourism and also on new development to maintain the supply of homes to provide options for all sectors of the local community to be able to live on the Peninsula should they so wish.

2.15. It is noted that at Policy S2 (settlement hierarchy), Selsey is listed as a "settlement hub" which is the second tier of settlement under Chichester city. Whilst this hierarchy, particularly in connection with Selsey is supported it is therefore surprising not to see more housing sites allocated within and around Selsey.

2.16. Given the potential number of environmental constraints on the Manhood Peninsula it is unlikely that sites of any excessive size would come forward and large numbers of dwellings would not necessarily result once the sites had taken account of their environmental constraints. That said, and as reflected above, sites of a size proportionate to their location but below "strategic" size can have an important part to play in the delivery of sufficient housing numbers in the right location at the right time in accordance with the NPPF.

Housing

2.17. Policy H1 (meeting housing needs) sets out the housing requirement for the full plan period of 1 April 2021 to 31 March 2039 as 10,350 dwellings. This allocates 963 dwellings to the Manhood Peninsula and a windfall (small site allowance) allocation of 657 dwellings for the whole district. There are no strategic locations/allocations on the Manhood Peninsula under Policy H2 which is considered unsound, particularly given the position that Selsey holds in the settlement hierarchy. Furthermore, under Policy H3 (non-strategic parish housing requirements 2021-2039) Selsey has been allocated zero housing. Again, this is considered unsound as it prevents sustainable development and access to new houses for all settlements across the district.

2.18. An overreliance on consented sites coming forward to provide future housing is considered unsound as, in this case, it effectively prevents any further development on the Peninsula and in Selsey in particular.

Transport

2.19. Policy T1 (transport infrastructure) is specifically aimed at ensuring that integrated transport measures will be developed to mitigate the impact of planned development on the highway network, improve highway safety and air quality, promote more sustainable travel patterns and encourage increased use of sustainable motor travel, such as public transport, cycling and walking.

2.20. The council will work with National Highways, WSCC, other transport and service providers and developers to provide a better integrated transport network and improve accessibility to key services and facilities. The policy lists seven ways in which the key objectives of reducing the need to travel by car, enabling access to sustainable means of travel, including public transport, walking and cycling; managing travel demands; and mitigating the impacts of travelling by car can be achieved.

2.21. Whilst it is not intended to go through all of these in this document it is noted that all parties are expected to support the four objectives by working with relevant providers to improve accessibility to key services and facilities which would be relevant to Selsey (see below).

2.22. The policy is also aimed at planning to achieve a timely delivery of transport infrastructure on the A27 and elsewhere on the network which is needed to support new housing, employment and other development identified in this plan. The phasing of delivery of new development to align with provision of new transport infrastructure such as improvements to the A27 and elsewhere on the highway network, will be key to managing impacts on the highway. This is yet another impediment to the delivery of a strategic allocations and larger scale development which would, by their very nature, generate a higher highway impact on the transport network than carefully planned smaller developments which could satisfy a much more localised need and be cause less impact on the strategic road network. The tariff proposals

outlined at paragraph 8.20 only covers part of West of Chichester and Tangmere SDLs and not the other strategic sites outlined at Policy H2.

2.23. Critically it is also understood that Highways England has pulled funding for the improvements to the Bognor Road roundabout as part of a package of A27 improvements. On this basis it is unclear how further funding would be secured at this time.

2.24. The lack of soundness to the approach of significant reliance on strategic sites, due to the current lack of capacity of the A27, is evident in the text that accompanies the policy which states that opportunities to secure funding to implement this package of improvements will be maximised by working proactively with Government agencies, other public sector organisations and private investors. Developer contributions from new development will also be sought. It is clear that smaller scale developments which would have a significantly lesser impact on the highway network could deliver housing quicker and with fewer constraints to implementation. It is for these reasons that smaller sites should be allocated, particularly in the Manhood Peninsula, for development.

2.25. The content of Policy T2 (transport development) is largely supported and considered sound save for the fact that it does not seem to cover the improvement of local transport routes, particularly those that would assist in improving the circulation of traffic around smaller settlements. The policy should be amended to specifically relate to local transport improvements which are locally important to aid traffic circulation and reduce congestion.

Neighbourhood Plan

2.26. The Selsey Neighbourhood Plan does not seek to allocate any sites or residential development, instead relying on those which were allocated in the previous local plan and, in particular, developments at Park Farm/Middle Field and Drift Field totalling 249 houses. It is assumed that this existing commitment accommodates the neighbourhood plan of 150 houses which is the justification for not allocating of residential development in the neighbourhood plan. However, this is short sighted as the neighbourhood plan runs to 2029 and, although development sites are largely controversial within smaller communities there is a lack of recognition of the requirement to provide new houses for existing and future residents (including descendants of current residents) in order to maintain the vitality and viability of the settlement outside of the tourist season where it is recognised that the local population will swell.

2.27. These points add further weight to the considered lack of soundness to the housing policies in the local plan which fail to recognise the need for smaller allocations within the Manhood Peninsula, particularly Selsey.

3 Local Infrastructure Provision

Selsey Road Improvements

3.1. Our clients wish to put forward a potential highway improvement scheme for Selsey which has come about given their extensive historic knowledge of the town and experience of significant congestion along Selsey High Street as a result of an over-reliance of this route by traffic using the caravan parks. It would be a common sense alternative route (to using High Street) which will alleviate congestion along Selsey High Street/School Lane/Paddock Lane/Warners Lane, particularly during the summer months.

3.2. The local plan focusses its attention on the need to improve the strategic highway network but this proposal would provide a significant benefit at a local level in Selsey. As per the attached plan, our clients propose to widen Golf Links Lane from its junction with the B2145 Chichester Road to its junction with Paddock Lane, then widen Paddock Lane and make it up to adoptable standard to enable delivery of holiday traffic to the point where it meets the north eastern corner of White Horse Caravan Park, from which point the road has been made up to carry holiday traffic. At the moment, the northern section of Paddock Lane is just a rough track which is not suitable for ordinary road traffic. It is envisaged that, in conjunction with the owner of the largest caravan parks, Warner's Lane will also be improved. It is currently a tarmac road in poor condition with no footways and one section is too narrow to allow two vehicles to pass each other. This is not satisfactory for the major access route to the largest caravan parks.

3.3. Golf Links Lane is currently a single track, tarmac road which is in poor condition. It is two-way but much of it is too narrow to allow two vehicles to pass each other. It serves Northcommon Farm, a small housing development on the northern side, Selsey Golf Club and Selsey Country Club (which comprises c.300 holiday chalets and an associated licensed club). If it were to be made up to adoptable standard to the point where it meets Paddock Lane, it would improve access for existing users but, importantly, it would also create a more direct access route (in conjunction with Paddock Lane) for traffic associated with thousands of holiday caravans as well as a touring caravan park.

3.4. Given that a large proportion of holiday traffic and other tourist industry-related traffic (HGVs carrying food and drink, caravan transporters, tractor/trailer transport and public transport) use the route along High Street/School Lane/Paddock Lane/Warners Lane it is considered that this could be diverted from the B2145 Chichester Road further north than Selsey High Street, thus taking traffic away from the congested High Street. An easier, more direct route to the major caravan parks would be an attractive alternative.

3.5. The mechanism to deliver such a proposal is not yet the subject of formal agreement. A large proportion of the land

required to widen the roads is within the ownership of Deerhyde Limited (our clients) and the owner of the major caravan parks. The latter has been very supportive of the proposal verbally. A short section of land is not in any specific ownership but our clients have long-standing rights over its use, which can be traced back to 1830. Our clients are serious about facilitating these highway improvements, including the use of their land, which will inevitably have a significant financial impact upon them.

Potential Residential Development Sites

3.6. In order to mitigate the financial impact including both the loss of their land and the implementation of the proposed highway improvements our clients would like to promote two sites for residential development, namely land north of Golf Links Lane (13.5 acres/5.46 hectares) and land west of Old Farm Road for residential development. Whilst the north western corner of the site is located within Flood Zones 2 and 3 it is considered that the developable area of the site would be approximately 4 hectares and could therefore deliver approximately 120 to 140 dwellings. This includes retaining the existing boundary screening along the south eastern boundary and avoiding Flood Zones 2 and 3. An indicative plan is attached to this statement.

3.7. Thawscroft Ltd, an associated company, also owns land west of Old Farm Road, Selsey (2.8ha / 6.9 acres) which taking account of the flood risk constraints along its western boundary could accommodate approximately 50 dwellings. An indicative plan is attached to this statement.

3.8. Having reviewed the planning history of the site it is noted that a planning application (under the name of Thawscroft Limited) was made in December 2016, refused in June 2017 and the appeal was dismissed on 11 June 2018.

3.9. The reasons for refusal related to the following:

1. Site is located outside the defined settlement boundary for Selsey.
 2. When the planning officer was giving evidence, he stated that he knew of an alternative site at lower risk of flooding but he would not identify it. After the appeal, an area of land north of Park Lane was identified for 250 houses. The land in question becomes waterlogged in the winter and is highly prone to surface water flooding. It is also only about 250m from Pagham Harbour, a site of major ecological importance with a significant level of protection afforded to it. The planning officer said the real issue with our appeal was one of numbers so it seemed curious to me that a site with a much larger number (250) was identified soon afterwards. Also, the land south of Park Lane (similarly prone to surface water flooding) was in the numbers for 2015/20 but in fact could not be started until 2021 so the planning inspector was misled. I believe that was crucial to the outcome. Landlink have proposed land west of the "Wave" roundabout (opposite Asda). This may be as an alternative for the land north of Park Lane. Neither parcel would be a good fit in the settlement policy area, whereas the land to the west of Old Farm Road would be, a fact acknowledged by planning officers in the past.
 3. We did in fact offer to provide contributions towards improving the A27 so that reason for refusal was withdrawn prior to the appeal being heard.
 4. As far as I can recall, the Council was content with our proposals in these matters at the time the appeal was heard. The criticism was that the need to avoid Flood Zones 2 and 3 created a narrow site which meant that the layout was said to be cramped. It could be that, with a smaller number of houses, MH Architects could provide an improved layout. Maybe this is reflected in the plan to which Vail Williams refer in paragraph 3.13.
- 3.10. It is considered that, as detailed above, given the Council's approach to an over-reliance on large strategic sites to fulfil its housing need and the lack of sites identified for development on the Manhood Peninsula (and in Selsey in particular) during the plan period this site could be proven to be an appropriate location for development as a "windfall site" to help maintain housing supply whilst the strategic sites are in the planning system.
- 3.11. It is considered the dwellings on the site could be laid out to avoid the Flood Zones 2 and 3 and therefore be at considerably less flood risk than the proposal which was dismissed at appeal. This is set out in the enclosed plan. This would overcome reason for refusal 2.
- 3.12. Reasons for refusal 3 and 4 would be overcome through the agreement of under Section 106 of the Town & Country Planning Act to provide contributions towards the improvement to the A27 on a proportionate basis to the size of the site and the number of dwellings and also the relevant number of affordable housing units required by policy (or justified as part of a viability exercise). Other matters such as the management of the landscaping, open space, buffers and drainage infrastructure could also be secured by the Section 106 agreement.
- 3.13. We commend the above highways solution and subsequent development sites to officers in consideration of the draft Local Plan.

4 Conclusions

4.1. It is clear that whilst the overarching strategy of the location of the majority of development in the largest urban

settlement of Chichester or adjacent to it is sound the lack of allocation of significant housing numbers to those areas outside Chichester is unsound. This would mean that the vast majority of the district would attract very little housing over the planning period to 2039 thus ensuring that existing settlements would not evolve and would potentially shrink as existing residents and descendants of residents migrate to the Chichester or its strategic urban extensions.

4.2. Outside Chichester, the strategic proposals for Southbourne and Tangmere are similarly isolated. The Manhood Peninsula is particularly lacking in the provision of additional housing sites during the plan period with the justification provided that, for Selsey in particular, recent planning permissions which are being built or have been completed would accommodate all of the housing need going forward for the plan period.

4.3. This approach is flawed for two main reasons (making the Local Plan unsound):

1. The over-reliance on strategic allocations which themselves are constrained by the capacity issues on the A27 and environmental issues such as nitrate neutrality (and any future water neutrality issues which migrate south from the north of Chichester) and the usual impacts on the European sites could mean that these sites are slower in being delivered with little in the way of alternatives allowed for in the local plan.

2. The failure to acknowledge any future development potential of note within the Manhood Peninsula and in particular Selsey will constrain the continued vitality and viability of the settlements within the Manhood Peninsula, particularly following the pandemic when the service sectors are struggling. Taking into account that Selsey in particular but other settlements along the coast within the Manhood Peninsula are reliant on seasonal tourist activity, additional residents are relied upon outside these times in order to provide income for those businesses which may struggle to survive outside the holiday seasons. An effective block on development would significantly reduce the potential future viability of these settlements outside the tourist season.

4.4. The emphasis on the stated urban-focussed housing strategy encourages neighbourhood planning groups/parish and town councils to maintain an opposition to the relevant rather than a proactive policy framework to direct appropriate development within their areas.

4.5. Our clients have detailed above one way which their land could be used in conjunction with others to facilitate a local infrastructure improvement to assist traffic circulation and access in and around Selsey itself which would need to be funded by future residential development and we commend this proposal to you for further consideration.

4.6. We trust that officers will take these representations into account and we look forward to receiving confirmation that the representations have been duly made.

Change suggested by respondent:

The policy should be amended to specifically relate to local transport improvements which are locally important to aid traffic circulation and reduce congestion.

Document Element: Policy T2 Transport and Development**Respondent:** Mr James Jewell [6721]**Summary:**

A policy to mitigate the adverse consequences in Loxwood of failing to provide a commutable bus service whilst still building additional housing leads to attempting to control the car when it is the only means of transport available to residents. The substantial developments planned by Waverley will seriously congest the A281 and the junction with it at Alfold for Loxwood residents for whom this is the main transport link for employment shopping and leisure.

Full text:

I recognise the predominant concerns regarding the A27 and urban areas and that mine is a local focus on the North and particularly Loxwood. Travel from this village is primarily towards and through Waverley District for employment, shopping and leisure and access to the A281 is crucial. Waverley has extensive housing development planned that will add significantly to traffic on the A281 with increased difficulty of access to it and longer travel times along it. If a daily commutable bus service does not exist then policies to manage, ie discourage, car use are seriously disadvantageous to a population dependent on it. To permit the planned additional housing without recognising this issue is a nonsense. To require a significant proportion of those to be social housing is also ridiculous as these occupants will be leased able to afford cars. Social Housing also reduces the CIL contribution which in the circumstances is sorely needed to help cope with issues like these. If the new houses are to the south of this village they will add substantially to the traffic flow through the high street.

Change suggested by respondent:

To make any additional housing in Loxwood conditional on a commutable bus service.

Object

Document Element: Policy T2 Transport and Development**Respondent:** Mayday! Action Group (John Garrett) [7163]**Summary:**

Traffic issues are already significant in the plan area. The proposed East West corridor new homes numbers are going to cause many more traffic problems and much more frequent congestion BEFORE any recognised as essential improvements will be delivered. Being massively dependent on developer contributions is a strategy fraught with risk. The highlighted phrases in the T2 objectives reveal a distinct lack of local knowledge.

Full text:

Executive Summary

The Local Plan as written lacks ambition and vision, and will be detrimental to the landscape within which the district lies. It is a plan borne out of a need to produce a legal document which will satisfy the regulatory authorities. In terms of Urban Planning it fails "To meet the needs of the present without compromising the ability of future generations to meet their own needs" (NPPF).

The development that will consequentially arise from the deployment of such a made Local Plan is not sustainable. It will adversely affect the Character, Amenity and Safety of the built environment, throughout our district.

In particular, the Local Plan is inadequate for the needs of the people in the district both at present and in the future because –

1. It has been written in advance of the District having a properly formed and agreed Climate Emergency Action Plan. It is inconceivable that such a key document will not shape our Local Plan. It is this Action Plan that is needed first in order to provide the long-term strategic view as to how and what the District will look like in the future; this, in turn, will help form and shape the policies outlined in any prospective, Local Plan. The Plan as proposed is moribund, as a result of "cart before the horse" thinking.

2. The Local Plan as written does not adequately address how infrastructure, transport and services are going to be materially and strategically improved to meet the predicted growth and shift to a significantly ageing population. There is presently insufficient capacity to supply services and to have adequate people and environmentally friendly connectivity, as a direct result of decades of neglect towards investing in infrastructure and services to meet the needs of the District's population. We are led to believe that developers through increased levies in order to gain permission to build will fulfil this need, but all that this will result in is an uncoordinated, dysfunctional mess completely lacking in any future-proof master planning approach. We contend that this will do nothing for the quality of life of Chichester District

residents and it will create a vacuum whereby few if indeed any can be held accountable or indeed found liable for shortcomings in the future.

3. The Local Plan as written does not state how it will go about addressing the need to create affordable homes. The District Council's record on this matter since the last made plan has been inadequate and now the creation of affordable homes has become urgent as political/economic/social factors drive an ever increasing rate of change within the District.
4. Flood risks assessments used in forming the Plan are out of date (last completed in 2018) and any decision to allocate sites is contrary to Environment Agency policy. Additionally, since March 2021 Natural England established a position in relationship to 'Hold the Line' vs. 'Managed Retreat' in environmentally sensitive areas, of which the Chichester Harbour AONB is a significant example. CDC have failed to set out an appropriate policy within the proposed Local Plan that addresses this requirement.
5. The A27 needs significant investment in order to yield significant benefits for those travelling through the East-West corridor; this is unfunded. Essential improvements to the A27 are key to the success of any Local Plan particularly as the city's ambitions are to expand significantly in the next two decades. But any ambitions will fall flat if the A27 is not improved before such plans are implemented.. The A259 is an increasingly dangerous so-called 'resilient road' with a significant increase in accidents and fatalities in recent years. In 2011, the BBC named the road as the "most crash prone A road" in the UK. There is nothing in the Local Plan that addresses this issue. There is no capacity within the strategic road network serving our district to accommodate the increase in housing planned, and the Local Plan does not guarantee it.
6. There is insufficient wastewater treatment capacity in the District to support the current houses let alone more. The tankering of wastewater from recent developments that Southern Water has not been able to connect to their network and in recent months the required emergency use of tankers to pump out overflowing sewers within our City/District reflects the gross weakness of short-termism dominated thinking at its worst and is an indictment of how broken our water system is. The provision of wastewater treatment is absolutely critical and essential to the well-being of all our residents and the long-term safety of our built environment. The abdication by those in authority, whether that be nationally, regionally or locally, is causing serious harm to the people to whom those in power owe a duty of care and their lack of urgency in dealing properly with this issue is seriously jeopardizing the environment in which we and all wildlife co-exist.
7. Settlement Boundaries should be left to the determination of Parish Councils to make and nobody else. The proposed policy outlined in the Local Plan to allow development on plots of land adjacent to existing settlement boundaries is ill-conceived and will lead to coalescence which is in contradiction of Policy NE3.
8. All the sites allocated in the Strategic Area Based Policies appear to be in the majority of cases Greenfield Sites. The plan makes little, if any reference to the development of Brownfield sites. In fact, there is not a Policy that relates to this source of land within the Local Plan as proposed. Whilst in the 2021 HELAA Report sites identified as being suitable for development in the District as being Brownfield sites were predicted to yield over 4000 new dwellings. Why would our Local Plan not seek to develop these sites ahead of Greenfield sites?
9. The Local Plan does not define the minimum size that a wildlife corridor should be in width. What does close proximity to a wildlife corridor mean? How can you have a policy (NE 4) that suggests you can have development within a wildlife corridor? These exceptions need to have clear measures and accountability for providing evidence of no adverse impact on the wildlife corridor where a development is proposed. Our view is quite clear. Wildlife and indeed nature in the UK is under serious and in the case of far too many species, potentially terminal threat. Natural England has suggested that a Wildlife Corridor should not be less than 100metres wide. The proposed Wildlife Corridors agreed to by CDC must be enlarged and fully protected from any development. This is essential and urgent for those Wildlife Corridors which allow wildlife to achieve essential connectivity between the Chichester Harbour AONB and the South Downs National Park.
10. Biodiversity Policy NE5 - This is an absolute nonsense. If biodiversity is going to be harmed there should be no ability to mitigate or for developers to be able to buy their way out of this situation. This mindset is exactly why we are seeing a significant decline in biodiversity in the District which should be a rich in biodiversity area and why the World Economic Forum Report (2023) cites the UK as one of the worst countries in the world for destroying its biodiversity.
11. In many cases as set out in the Policies the strategic requirements lack being SMART in nature – particularly the M Measurable. These need to be explicit and clear: "you get what you measure".
12. 65% of the perimeter of the District of Chichester south of the SDNP is coastal in nature. The remainder being land-facing. Policy NE11 does not sufficiently address the impact of building property in close proximity to the area surrounding the harbour, something acknowledged by the Harbour Conservancy in a published report in 2018 reflecting upon how surrounding the harbour with housing was detrimental to it long-term health. And here we are 5 years on and all of the organizations that CDC are saying that they are working in collaboration with, to remedy the decline in the harbour's condition, are failing to implement the actions necessary in a reasonable timescale. CDC are following when they should be actually taking the lead on the issue. Being followers rather than leaders makes it easy to abdicate responsibility. There must be full and transparent accountability.

13. The very significant space constraints for the plan area must be taken into account. The standard methodology need no longer apply where there are exceptional circumstances and we are certain that our District should be treated as a special case because of the developable land area is severely reduced by the South Downs National Park (SDNP) to the north and the unique marine AONB of Chichester Harbour to the south. A target of 535dpa is way too high. This number should be reduced to reflect the fact that only 30% of the area can be developed and much of that is rural/semi-rural land which provides essential connectivity for wildlife via a number of wildlife corridors running between the SDNP and the AONB. Excessive housebuilding will do irretrievable damage to the environment and lead to a significant deterioration in quality of life for all who reside within the East / West corridor.

14. Many of the sites identified in the Strategic & Area Based Policies could result in Grade 1 ^ 2 farmland being built upon. The UK is not self-sufficient in our food security. It is short-sighted to expect the world to return to what we have come to expect. Our good quality agricultural land should not all be covered with non-environmentally friendly designed homes.

Draft LP Mayday Submission Final - <https://chichester.oc2.uk/a/skf>

5312

Object

Document Element: Policy T2 Transport and Development

Respondent: National Highways (Mr Marius Pieters, Spatial Planning Manager) [8127]

Summary:

[National Highways letter dated 24/07/23 confirmed representation should be categorised as Matters to be addressed] Whilst the need to increase capacity of the transport network and reduce demand is agreed, improving road traffic capacity should not be the focus.

Existing Transport Assessment and Travel Plan processes are robust but unlikely to be sufficient to achieve net zero commitments and proposed housing and employment developments. It is recommended that all new developments generating significant demand deliver a Travel Plan, that is legally binding and site specific

Addressing issues with Travels Plans, such as varying quality, inadequate targets and complex monitoring arrangements, with insufficient guidance, skills and resources to manage, is critical to a 'monitor and manage' approach.

Plans will require coordination across the area, with the approach including enforcement with financial penalties.

Full text:

We have reviewed the publicly available Local Plan documents and provided comments in the attached letter, in relation to the transport implications of the plan for the safety and operation of the SRN.

Our comments include issues to resolve, comments, requests for further information and recommendations. A brief summary of our main comments are:

- the reliance on the delivery of the A27 Chichester bypass improvements project.
- the requirements for new, additional, and adapted processes and assessments, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments.
- collaborative working between agencies in combination with a robust monitor and manage policy.

We hope our comments assist.

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders. We look forward to continuing to participate in future consultations and discussions.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Background

National Highways has been appointed by the Secretary of State for Transport as strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the strategic road network (SRN).

National Highways is responsible for operating, maintaining, and improving the Strategic Road Network (SRN) i.e., the Trunk Road and Motorway Network in England, as laid down in Department for Transport (DfT) Circular 01/2022 (Strategic Road Network and the delivery of sustainable development).

The SRN is a critical national asset and as such we work to ensure that it operates and is managed in the public interest, both in respect of current activities and needs as well as in providing effective stewardship of its long-term operation and integrity.

Our responses to Local Plan consultations are guided by relevant policy and guidance including the National Planning Policy Framework (2021) (NPPF):

- Transport issues should be considered from the earliest stages of plan-making and development proposals so that the potential impact of development on transport networks can be addressed (para 104).
- The planning system should actively manage patterns of growth such that significant development is focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. (para 105).
- Planning policies should be prepared with the active involvement of highways authorities and other transport infrastructure providers so that strategies and investments for supporting sustainable transport and development patterns are aligned. (para 106).
- In terms of identifying the necessity of transport infrastructure, NPPF confirms that development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe. (para 111).
- Planning policies and decisions should support development that makes efficient use of land, taking into account the availability and capacity of infrastructure and services – both existing and proposed – as well as their potential for further improvement and the scope to promote sustainable travel modes that limit future car use. (para 124).

In relation to the tests of soundness set out at paragraph 35 of the NPPF, in the context of transport, these are interpreted as meaning:

- a) Positively prepared - has the transport strategy been prepared with the active involvement of the highway authorities, other transport infrastructure providers and operators and neighbouring councils?
- b) Justified – Is the transport strategy based on a robust evidence base prepared with the agreement in partnership, or with the support of the highway authorities?
- c) Effective – Does the transport strategy and policy satisfy the transport needs of the plan and is it deliverable at a pace which provides for and accommodates the proposed progress and implementation of the plan?
- d) Consistent with national policy – Does the transport strategy support the economic, social, and environmental objectives of the Plan and the NPPF/NPPG?

We will be concerned with proposals that have the potential to impact on the safe and efficient operation of the SRN; in this case, the A27 trunk road (Chichester Bypass and its junctions) which is the main access route in the Chichester area. We have particular interest in any allocation, policy or proposals which could have implications for the A27 and the wider SRN network. We are interested as to whether there would be any adverse road safety or operational implications for the SRN. The latter would include a material increase in queueing or delay or reduction in journey time reliability during the construction or operation of the development set out in the plan.

National Highways is a key delivery partner for sustainable development promoted through the plan-led system, and as a statutory consultee we have a duty to cooperate with local authorities to support the preparation and implementation of development plan documents.

In accordance with national planning and transport policy and our operating licence, we are entirely neutral on the principle of development as it is for the local planning authority to determine whether development should be allocated or permitted; albeit it must comply with national policy on locating development in locations that are or can be made sustainable. Therefore, while always seeking early and fulsome engagement with local plans and/or developers, we will simply be assessing the transport and related implications of plans or proposals and agreeing any necessary transport improvements and relevant development management policy.

In progressing Local Plans, we will seek to agree the following:

- Assessment tools and methodology
- Baseline Assessment i.e., to demonstrate that the assessment tool accurately reflects current transport conditions
- Comparator case assessment i.e., to forecast the transport conditions that would occur in the absence of the plan
- Forecast modelling i.e., to forecast the transport conditions that would arise with the plan in place, this will include an assessment at the end of the Plan period; and, if required, at full build out if that occurs after the end of the Plan period
- Outputs and outcomes of modelling, demonstrating, as appropriate, what transport infrastructure is necessary to support the plan o It should be noted that a suite of transport modelling tools may be required. This includes strategic modelling covering an area at least one major junction beyond the district boundary, localised network modelling where several links/junctions are close together and/or individual junction modelling
- o A DMRB (Design Manual for Roads and Bridges) compliancy assessment may also be required for certain highway features, such as

Merge/Diverge assessment at Grade separated junctions, link capacity assessments, and others.

- The design of any necessary transport infrastructure, to an extent suitable for establishing deliverability during the plan period at the time that it becomes necessary for the purpose of ensuring that unacceptable road safety impacts or severe operational impacts do not arise as a result of development. This may be to at least General Arrangement design stage or preliminary design stage. Whichever degree of detail is agreed, the products must be in full compliance with the DMRB.
- Industry standard transport intervention costings.
- The delivery/funding mechanisms for necessary transport interventions. It should not be assumed that National Highways will have any responsibility to identify or deliver necessary transport interventions.
- If considered appropriate, a "Monitor & Manage" (M&M) framework, aimed at managing the pace of development in line with the pace of funding and delivery of necessary highway interventions in a manner which responds to the realworld impacts of development may be agreed for inclusion in the plan subject to the adequacy of risk control measures included therein. This can include the move from a 'predict & provide' style of delivery to 'a vision & validate' style. o Any M&M framework must be based on a "worst case scenario" whereby necessary mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. It must be translated into development management plan policy and policy relating to development allocations.

Further detail on the above can be provided by National Highways.

While ideally all the above should be agreed prior to the Submission of the Local Plan for examination, we recognise that this is not always possible. However, all parties should work towards all matters being agreed and reflected in a Statement of Common Ground (SoCG) by the start of the Local Plan Examination at the latest. Ideally the SoCG between the Council and National Highways would be prepared well in advance of plan submission in order to guide resource input and to track progress towards final agreement on all relevant matters starting from the earliest plan iterations until the final version is agreed.

It is acknowledged that Government policy places much emphasis on housing delivery as a means for ensuring economic growth and addressing the current national shortage of housing. The NPPF is very clear that: "Strategic policy-making authorities should establish a housing requirement figure for their whole area, which shows the extent to which their identified housing need (and any needs that cannot be met within neighbouring areas) can be met over the plan period."

However, new DfT C1/22 and the NPPF are equally clear that any development, including housing delivery, must be tempered by the requirement to ensure that the associated transport demand can be accommodated without unacceptable impacts on the safety of the SRN or severe impacts on the operation of the SRN including reliability and congestion. Therefore, as necessary and appropriate, any plan and/or development must be accompanied by suitable mitigation in the right places at the right time, that is to the required design standards and is deliverable in terms of land availability, constructability and funding.

We would also draw your attention to the then Highways England document 'The Strategic Road Network, Planning for the Future: A guide to working with National Highways on planning matters' (September 2015). This document sets out how National Highways intends to work with local planning authorities and developers to support the preparation of sound documents which enable the delivery of sustainable development. https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_t_data/file/461023/N150227_-_Highways_England_Planning_Document_FINAL-lo.pdf

Responses to Local Plan consultations are also guided by National Planning Policy Framework (NPPF) revised on 20 July 2021 which sets out the government's planning policies for England and how these are expected to be applied.

Updated Circular (01/2022)

It should be noted that since the start of the Local Plan consultation process, on the 23 December 2022, the Department for Transport released a new circular on the 'Strategic road network and the delivery of sustainable development' (Circular 01/2022), which replaces all of the policies in Circular 02/2013 of the same name. These representations take account of the new circular and the requirements in terms of the Local Plan evidence base and process.

We request that the Local Plan is prepared in line with all aspects of the new circular. Particularly, the principles of sustainable development (paragraphs 11 to 17), new connections and capacity enhancements (paragraphs 18 to 25), and engagement with plan-making (paragraphs 26 to 38).

Regulation 18 submission

In our Regulation 18 submission we noted several matters including:

- The need to mitigate the adverse impacts of strategic development traffic to the A27 Chichester Bypass and its junctions at Portfield Roundabout, Bognor Road Roundabout, Whyke Roundabout, Stockbridge Roundabout and Fishbourne Roundabout and Oving junction.
- The need to identify a mechanism to calculate contributions towards the delivery of the previously agreed Local Plan A27 improvements

- The need to confirm the number of dwellings needed within the plan period
- The need to establish National Highways acceptance of the traffic model reference and future case scenarios
- The need to confirm costs, viability, and funding associated with mitigating the safety and congestion impacts of the development included within the plan.

Local Plan context

This Local Plan (Chichester Local Plan 2021 – 2039), prepared by the Local Planning Authority (LPA) Chichester District Council, sets out the vision for future development in the district and will be used to help decide on planning applications and other planning related decisions including shaping infrastructure investments.

The draft sets out how the district should be developed over the next 18-years to 2039 including for the full Plan period (1 April 2021 to 31 March 2039) the total supply of

- 10,359 dwellings

- 114,652 net additional sqm new floorspace

Minus the completions this is equivalent to around 530 dwellings and 6,150 sqm of floorspace a year.

National Highways Representations

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders.

We have undertaken a review of the Chichester Local Plan 2021-2039 proposed submission version and accompanying evidence documents, our comments are set out in the tables below (following pages). [see table within attachment]

Summary

We have reviewed the publicly available Local Plan documents and provided comments above in relation to the transport implications of the plan for the safety and operation of the SRN. We understand that other technical information is available, but this was not presented as part of this consultation.

Chichester, and the A27, are already heavily congested, infrastructure in the existing Local Plan remains undelivered and the growth set out in the new Plan will further increase travel demand.

As presented, satisfying the transport needs of the plan is clearly reliant on the delivery of the A27 Chichester bypass improvements project. The A27 Chichester bypass improvements project is one of 32 pipeline schemes being considered for possible inclusion in National Highways third Road Investment Strategy (RIS3) covering 1 April 2025 to 31 March 2030.

On 9 March 2023 the UK Transport Secretary ensured record funding would be invested in the country's transport network, sustainably driving growth across the country while managing the pressures of inflation. The announcement cited the A27 Arundel Bypass as being deferred from RIS2 to RIS 3 (covering 2025-2030). The transport secretary also identified a number of challenges to the delivery of the road investment strategy and cited the benefit of allowing extra time to ensure schemes are better planned and efficient schemes can be deployed more effectively.

At present, there is no commitment by DfT to carry out the A27 Chichester bypass improvements project. Until the A27 Chichester bypass improvements project is published in the RIS3, consented and a decision to invest is made it cannot be assumed to be a committed project.

We note that the Plan does not address any uncertainty of delivery of the A27 Chichester bypass improvements project and we strongly recommend that there is either no reliance placed on RIS3 to realise capacity for growth in the Plan or that contingency measures are included to cover the eventuality that RIS3 funding is not forthcoming within the plan period. It is not clear that the potential impact of development on transport networks can be addressed in the absence of the A27 Chichester bypass improvements project.

Achieving net zero, reducing emissions reduction, acting on climate, and supporting thousands of new homes and new employment developments will be problematic with existing processes. New, additional, and adapted processes and assessments will likely be required, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments. We acknowledge that change is complex, expensive, and time-consuming, especially for smaller district level Councils. But the hard work will deliver benefits for the Council and residents in the longer-term.

National Highways seeks to continue working with the Council and WSCC to progress coordinated and deliverable packages of interim mitigation measures and alternative transport solutions while a long-term strategic solution is considered by government. This must however be in combination with a robust monitor and manage policy that appropriately manages the risk of unacceptable road impacts resulting from new housing and other development over the Plan period.

We have been in discussion with Chichester District Council regarding their proposed Monitor and Manage Strategy. At present, we do not consider the current strategy to be robust and we seek further information and detail especially on who, when and when monitoring and management will be undertaken. Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas. Any M&M framework must be based on a "worst case scenario" whereby necessary transport mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. The M&M framework must set out that the alternative to mitigation not being

delivered is that development does not proceed where that development would give rise to unacceptable road safety risk or severe cumulative impacts on the road network in the absence of that mitigation. The M&M framework must be translated into development management plan policy and policy relating to development allocations.

As we have reiterated throughout our comments, we welcome the opportunity to work with you to address these outstanding matters and we will continue to liaise over submitted Transport Assessment, Travel Plan policy and Monitor and Manage Policy to help to work towards a viable plan.

We hope our comments assist.

We look forward to continuing to participate in future consultations and discussions. Please do continue to consult us as the Plan progresses so that we can remain aware of, and comment as required on, its contents.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Change suggested by respondent:

Recommend:

- Developing a process to understand what is required to support developments. For example, evidence how each residential and industrial site is related to the infrastructure network using robust data, tested scenarios and appropriate planning assumptions.
- Applications are supported by a robust Transport Assessment to show individual and cumulative effects will not unacceptably impact on the safe operation of the A27 or severely impact congestion.
- Due to the proximity to the A27 we would support the requirement for all developments to submit Travel Plans of a standard acceptable to the Highway Authorities (WSCC and National Highways).
- As appropriate, National Highways would seek to be part of pre-planning scoping meetings or consultations to ensure that necessary highway and transport mitigation measures are properly considered;
- In all cases, use of planning conditions is recommended.

Management measures (supported by enforcement) should include:

- Phasing – delivery of new developments to align with the provision of new transport infrastructure and the outcomes of monitoring travel demand;
- Trigger points - agreed for milestones for each phase of each development;
- Monitoring – at each trigger point and annually at each site;
- Review to identify if further action and/or enforcement is required.
- Remedial action.

Support

Document Element: Policy T2 Transport and Development

Respondent: Natural England (Luke Hasler, Senior Advisor) [8189]

Summary:

Natural England welcomes the extensive references across this policy (and policies T2 and T3) to reductions in car use, increased provision of sustainable transport choices and increased opportunities for active travel.

Full text:**Summary of advice**

While we have raised some queries and recommended some further modifications to certain policies we do not find the Plan unsound on any grounds relating to our remit.

Natural England has reviewed the Proposed Submission Local Plan and accompanying appendices together with the Habitats Regulations Assessment (HRA) and Sustainability Appraisal (SA). Our detailed comments on the policies and site allocations are provided as follows:

- Annex 1 - Chapter 2 – Vision and Strategic Objectives
- Annex 2 - Chapter 4 – Climate Change and the Natural Environment
- Annex 3 - Chapter 5 (Housing) and Chapter 6 – (Place-making, Health and Well-being)
- Annex 4 - Chapter 7 (Employment and Economy) and Chapter 8 (Transport and Accessibility)

- Annex 5 - Chapter 10 – Strategic and Area Based Policies

Please note that we have not provided comments on all policies but those which have most influence on environmental issues. Natural England has no comment to make on the policies not covered in this response. Other than confirming that we have referred to it when considering our advice on specific policies and site allocations Natural England has no general comments to make on the SA.

Unfortunately due to unforeseen resourcing issues while we have reviewed the associated HRA we are not in a position to provide detailed comment on it as part of this response. We will rectify this as soon as possible and can confirm that we have seen nothing in it that raises any major concerns.

The Plan has many positive aspects including standalone policies on Green Infrastructure (GI) and wildlife corridors and an incredibly extensive suite of natural environment policies more generally.

We are hugely appreciative of the opportunity that we were given to work with you on shaping key policies post-Regulation 18. However, we believe that the plan needs to go further in its recognition of coastal squeeze as a key issue for the district, should include policy hooks for the forthcoming Local Nature Recovery Strategy (LNRS) and make up to date references to both the Environment Act (2021) and the Environmental Improvement Plan (EIP, 2023). Given how recent the publication of the EIP is we would be happy to discuss with your authority how this could best be achieved but we believe given the wealth of natural capital within Chichester District it is vitally important that this latest iteration of the Local Plan is set in its full policy and legislative context.

We have suggested a significant number of amendments and additions to both policies and supporting text throughout the Plan. In our view these could all be taken forward as minor modifications but if they were all acted upon they would leave the Plan much stronger and more coherent in delivering for the natural environment, one of the three central tenets of genuinely sustainable development as set out in the National Planning Policy Framework (NPPF 2021, paragraph 8c).

420345 - Chichester Local Plan - Reg 19.pdf - <https://chichester.oc2.uk/a/sp9>

5961

Object

Document Element: Policy T2 Transport and Development

Respondent: Network Rail (Sam Bhatti, Graduate Surveyor) [8048]

Summary:

References should be made to the concept of 15–20-minute neighbourhoods that provide a wide range of services within this walk time. The provision of amenities and leisure facilities within a 15-minute walk should be a cornerstone idea that drives mid to long term infrastructure goals for Chichester. Owing to the considerable amount of development anticipated by the Council, there is ample opportunity for local businesses and retailers to provide services within these local neighbourhoods.

Full text:

Thank you for consulting Network Rail on the above consultation, I can confirm we wish to make the following comments.

Network Rail is the statutory undertaker for maintaining and operating railway infrastructure of England, Scotland, and Wales. As statutory undertaker, Network Rail is under license from the Department for Transport (DfT) and Transport Scotland (TS) and regulated by the Office of Rail and Road (ORR) to maintain and enhance the operational railway and its assets, ensuring the provision of a safe operational railway.

Having been in consultation with the train operating company, Southeastern Rail, of particular interest to Network Rail is the need to integrate active travel infrastructure and promote First and Last Mile principles. In addition, the impact of

development on train stations and existing level crossings.

First and Last Mile Considerations

We encourage the Council to consider not only the impact of development on the railway itself, but also on the first and last mile element of passengers' journeys. This factors in access to and from the railway, as well as how other transport modes are integrated and how well communities are connected.

Failure to integrate this represents an issue for rail travel as people who start journeys by car will likely continue to drive rather than stop to change to the train, as the cost and time of parking and train tickets offer no benefit to them.

Developing access to the railway using first and last mile principles has several benefits, including:

- Aligning with local and national policy to reduce carbon emissions and meet netzero targets, by encouraging more active modes of transport such as walking and cycling
- Providing a seamless journey experience where various modes of transport are integrated, including bus and rail services
- Providing an accessible and inclusive offering of transport modes to both local residents and visitors
- Improving connections between communities which may not be as well-served by public transport

While infrastructure and transport services may be identified as areas for improvement, there may be other, smaller scale enhancements that can be made such as better provision of information or additional cycle racks. Network Rail's Planning team welcome further discussions with the council to gain a better understanding of how we can work together to improve access to the railway and integrate first and last mile thinking into the scheme plans, taking into account the various component parts of passengers' journeys and wider plans for the local area.

Policy T3 Active Travel – this has the broad support of Network Rail but should be strengthened to reflect walking/cycling as the first choice for local journeys; and for longer journeys part of an integrated bus/train transport chain that allows people to continue seamlessly.

Network Rail will support planning schemes within active travel distance of railway stations that provide continuous, direct and safe pedestrian/cycle routes that will serve rail passengers. Pedestrian routes should be prioritised over vehicles, meaning all schemes should be designed so that vehicles wait for walkers/cyclists, not the other way around.

Transport Infrastructure

Accessibility should be built into new development in the form of active travel networks, which will enhance permeability in people's transitions between areas. Development requiring additional road capacity should not go ahead, except as a last resort.

Policy T1 – in general this is supported. References to a 'coordinated package of infrastructure improvements' along the A27 should be replaced with a 'coordinated package of active travel and public transport improvements infrastructure', as this is more specific in emphasising that car transport should be minimised as much as possible.

Policies T2 and I1 – in general these are supported in the sense they promote seamless and continuous active travel arrangement and minimise car use. However, references should be made to the concept of 15–20-minute neighbourhoods that provide a wide range of services within this walk time. The provision of amenities and leisure facilities within a 15-minute walk should be a cornerstone idea that drives mid to long term infrastructure goals for Chichester. Owing to the considerable amount of development anticipated by the Council, there is ample opportunity for local businesses and retailers to provide services within these local neighbourhoods.

Railway Station Considerations

As a public funded company, Network Rail has responsibilities to spend public funds efficiently which consequently means we do not have the funds available to mitigate the impact of third-party development on railway stations. Where a significant amount of rail trips are generated by a third-party development, Network Rail expect that the development provides a contribution to mitigate the addition usage, ensuring that the rail network can continue to operate effectively. The contributions will encourage greater use of public transport by enhancing the rail experience for passengers.

The Local Plan has proposed site allocations across the district, for this reason the resulting increase to the use of stations should be recognized and mitigated against so that rail travel remains an attractive mode of transport. Failure to upgrade stations will result in less rail passengers which is counter productive to the Council's goals of a thriving public transport system.

Southbourne and Fishbourne Stations - Network Rail have concerns about the impact of future development on Southbourne and Fishbourne stations. As the stations themselves are small-sized, large-scale accessibility improvements would be potentially difficult. As a result, the provision of cycle parking facilities at both stations should be considered as crucial by the Council to ensure the station environment continues to modernize and encourage passenger

use. This also ensures the stations integrate with proposed cycle/pedestrian routes across the area.

Level Crossing Considerations

As part of Network Rail's license to operate and manage Britain's railway infrastructure, Network Rail have the legal duty to protect rail passengers, the public, the railway workforce, and to reduce risk at our level crossings so far as is reasonably practicable.

Improving Level Crossing safety is therefore one of Network Rail's key priorities.

Closing level crossings is the only way to fully eradicate the risk. However, it is not always possible or practicable to immediately close all level crossings. Aside from financial and practical constraints, user convenience still needs to be a key consideration. A broad range of targeted interventions and initiatives are therefore needed to manage safety at crossings which remain open.

Any new development would need to provide an assessment of the impact on any nearby Level Crossings and in some cases, planning obligations may be required to mitigate the impacts on it.

Policy A13 Southbourne Broad Location for Development - Several strategic sites have been identified across the district, with a significant amount west of Chichester which require reconsideration. Policy A13, which proposes 1050 new homes, will result in significant upturns in use of the Penny Lane and Church crossings, which are currently public footpath crossings and have high risk factors. Large-scale development could therefore warrant closure or installation of a footbridge. The Council should be aware of this as these projects are costly and would require requisite funding.

Network Rail are in the process of completing a risk assessment on the affected crossings. However, for context we recently reviewed the Copse level crossing (located approximately 1.9km eastwards from Penny Lane) which resulted in a 300% use increase from a 112home development (Planning Application SB/22/01283/FULEIA).

1a Strongly support, it is critical that all development is designed "to avoid and/or reduce the need to travel by car and incorporate measures..... that decrease traffic speeds and flows.

1b Strongly support,

1c This needs to be stronger than promoting active travel. Active travel infrastructure must not just be incorporated, but must be the core of the access within the development and between the development and places people need to access, especially bus stops and railway stations. The active travel routes must be direct, and we must understand by coherent, that these must be continuous, because as soon as an active travel route is interrupted by a road people, especially parents consider them not safe which increases car use. The design must be for the motor vehicle to give way before crossing the active travel route not the other way around.

1d Strongly support

1e Must be strengthened to say "Provide safe access to the highway for all users with Hierarchy of Road User built into the design, retrospectively if necessary"

1f Focus must be based on space for Active travel, into which vehicles require space to manoeuvre without compromising safety of people in the street walking, cycling or children playing.

Support the landscaping parts of 1f

1g Policy T4 and West Sussex County Council Guidance needs changing to facilitate modal shift to active travel and public transport, people should pay the economic price for parking space.

Chichester District Council local plan.docx - <https://chichester.oc2.uk/a/spx>

5591

Object

Document Element: Policy T2 Transport and Development**Respondent:** Stagecoach South (Rob Vince) [8141]

Summary:

Section 1 b) of T2 will be ineffective as, absent measures to ensure buses can run reliably and efficiently, improved bus services will not be possible, in support of the plan's own stated broad approach to transport mitigation, as well as wider local and national policy.

The draft policy does not require improvements to the quality of services such that sustainable choices will be materially more attractive than car use for many local journeys. Without this the Plan's Strategic Objectives cannot be fulfilled and the objectives of the Plan and this policy, read in its own terms, will not be realised, where reduction in private car use is concerned. It is thus ineffective.

Absent measures to make bus services more reliable and more efficient, by insulating them from chronic congestion as far as possible, still further operating resource and therefore costs, will be needed to just to reliably run existing service frequencies, and capacity, as vehicle productivity continues to be more and more adversely affected by chronic delay. This will be further aggravated by increasing incidence of severe unpredictable service breakdown arising from incidents of diverse kinds on the network, especially on or around the A27, including that arising from more regular severe weather events. Longer journey times can only be expected to lead to relative disadvantage of bus services compared to personal car use, entirely contrary to the objectives of national and local policy, including Policy T1. It can also expect to lead to a dampening effect not on car use, but on bus patronage, threatening the ongoing viability of bus services across the plan area.

Full text:

Chichester District Local Plan 2039 – Pre-Submission (Regulation 19) Consultation

1. Introductory Comments

Stagecoach South is the main commercial public transport operator across Chichester District. The Company has headquarters in the city, which is also the principal public transport hub for the District and it's rather wider travel-to-work area encompassing much of the Arun District. Our services extend throughout and beyond the District boundaries, as far as Littlehampton, Midhurst, Havant and Portsmouth. The vast majority of services operate on a commercial basis – that is to say, sustained by passenger use and fare revenue, including concessionary reimbursement.

While the role of the railway is significant in much of the District, especially the east-west Coastway line, yet bus services account for more boardings locally than the railway, with Chichester depot services carrying over 3.5m passengers each year.

Unlike bus services in other parts of the country, the local network has recovered strongly after the pandemic with fare-paying passenger numbers over 95% of 2019 levels, albeit with concession patronage somewhat lower. This has helped secure not only a stable but growing bus network even during this period of rapidly rising operational costs, avoiding the need for the service contractions seen in other regions. Indeed, during the second quarter of 2023 Stagecoach will invest £5.5m in brand-new vehicles for high-profile coastal Service 700 – one of the largest vehicle investments for Stagecoach Group this year.

Our services are therefore critical to existing and future local connectivity. As the Plan acknowledges, mobility demands do not respect planning authority boundaries. The role of our services is especially high to settlements in the broad A27 corridor, within the District and beyond. This includes major settlements in Arun District such as Pagham and suburban Bognor Regis, where bus is the only mass public transport option. As the Council is well aware, there is an even higher level and rate of committed development envisaged in these locations in the Arun District Local Plan than in Chichester.

It is already evident to the planning authorities, West Sussex County Council and National Highways, as proprietor of the A27 Trunk Road, that accommodating growing mobility demands across Chichester District and especially around Chichester itself, is becoming increasingly challenging to the point of being seriously problematic.

Stagecoach has a particular interest in this Plan arising from:

- The already clear and highly deleterious impact of congestion affecting our operations and their reliability and attractiveness to the public. The effects of these on the approaches to Chichester, and around the A27 bypass are especially severe. If public transport is to retain its existing role – even before the needs of any meaningful growth both in Chichester and neighbouring authorities is considered, are considered – the Council and the Highways Authority need to arrive at clearly-defined measures to protect buses from chronic delay and the damaging impacts arising from the lack of bus network resilience and customer journey times.
- In connection with the above, the need to properly consider the predictable impacts of committed development in Arun District on the transport network and in particular the operation of bus services. The duty to cooperate on cross-border strategic matters is not limited merely to accommodating housing requirements.
- The fact that our entire business premises and operational base at Chichester is the subject of allocation for redevelopment within the Plan period. Specifically, this includes our Head Office, the Bus Station as the operational hub of the network and the key interchange for passenger journeys – including those that involve the railway – and the bus depot required to support the entire operation. Notwithstanding many years of discussions, there is as yet no agreed deliverable strategy to replace these facilities either in the Draft Plan or elsewhere.

Stagecoach broadly supports the vision and priorities of the draft plan. In most respects, Stagecoach supports strongly

the spatial strategy and the identified site allocations that flow from it, and the evidence.

However, it has serious concerns about the soundness of the plan as proposed for submission, for important regards outlined in this response. These are made in the light of requirements set by the National Planning Policy Framework (NPPF), in particular at paragraphs 15 and 16; 35, 105-109 inclusive and having due regard to the need for allocations to satisfy 110-112 inclusive in due course as development permission is sought; and paragraph 174.

Paragraph 16c) of NPPF makes plain that strategic plans and policies should “be shaped by early, proportionate and effective engagement between plan-makers and communities, local organisations, businesses, infrastructure providers and operators and statutory consultees” (our emphasis). This makes plain that collaborative and ongoing involvement of public transport operators is both necessary, and separate and in addition to the engagement with statutory consultees. This has not taken place.

Para 1.25 of the draft plan states that “the council has engaged constructively, actively and on an ongoing basis with other local authorities and organisations to address key strategic matters.” Despite the requirements in NPPF and contrary to the statement made, Stagecoach has not been approached or involved in a meaningful, collaborative or ongoing way in the preparation of the Plan.

Our main concerns centre around the fact that the plan strategy is neither backed by sufficient transport evidence. Even more importantly, the plan relies on a wholly car-based transport mitigation strategy despite policy stating that this is not the case, and the track record of the existing Local Plan, based on a very similar strategy, that has failed to bring forward meaningful mitigations to date to prevent traffic conditions substantially worsening. There is no support in policy for the achievement of the Strategic Objectives in the Plan. Nor is there definition of any measures in the 2023 Transport Study to make provision for sustainable transport infrastructure or services – much less materially improve them.

Finally, to the extent that updated transport evidence has been provided in the form of the 2023 Chichester Transport Study, arising from updated traffic modelling, it does not support the contention that highways capacity constraints on and around the A27 justify not meeting the objectively-assessed development needs of the area, as the draft plan contends.

2. Vision and Strategic Objectives

2.1. Issues and Opportunities

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant, proportionate and up to date evidence

Stagecoach recognises the important role of the West Sussex and Greater Brighton Strategic Planning Board which agreed a Local Strategic Statement (LSS2) in early 2016 to identify spatial planning issues across the wider area. This established strategic priorities and policies to guide longer term strategic growth in a coordinated and well considered matter. This institutional framework and the purpose of the LSS is a highly significant one and is at the heart of efforts to properly fulfil the statutory Duty to Co-operate, including with regard to strategic infrastructure issues, as NPPF requires.

Given the long period of time elapsed since the 2018 Reg 18 consultation and the already very clear constraints on strategic infrastructure capacity, it is of great concern to Stagecoach that the LSS2 has not been updated to reflect emerging issues in the intervening period. A review and update of the LSS2 has only just commenced. This includes a study of projected housing and employment needs, transport impact, infrastructure and spatial options to deliver the required development in the period after 2030. This Chichester District draft plan covers a period extending to 2039 – therefore well beyond 2030 and the nominal currency of LSS2.

However, infrastructure needs are pressing today. Stagecoach is presented with severe highway operational problems on a near-daily basis. During the winter of 2022-23 we have, for example, seen key road links impacted for many weeks by acute disruption arising from flood events. Unpredictable, but seemingly more-frequent, exogenous events expose a lack of resilience in the highway network around Chichester and its travel-to-work area. However, serious, chronic, unpredictable delay has been normalised over recent years, with peak-time congestion having quickly returned after the pandemic. The existing development strategy has failed to bring forward measures having any impact on this to date, and key commitments – notably at west of Chichester Phase 2 and at Tangmere – have yet to commence to further aggravate the issue.

We have no confidence in the transport mitigations proposed in the existing Local Plan and LSS2 being sufficiently effective, even if deliverable at all. Indeed, the existing adopted Local Plan does little more than make vague speculations about the sustainable transport measures that might be achievable. The draft local plan review is no different. It has no ambitions at all for sustainable modes and thus, makes no meaningful provision to meet them.

This is especially relevant in light of the fact that the approach to resolving issues on the A27 around Chichester that were anticipated in 2015-16 have fallen away. LSS2 is thus currently inadequate to act as a part of an up-to-date, proportionate, and relevant evidence base for the Plan.

An update of a traffic model lies at the heart of a 2023 Chichester Transport Study. This talks no account of the existing role of non-car modes, nor can it do so. It is unable to properly evaluate the nature of problems or solutions that involve public transport, or for that matter, other sustainable modes.

Therefore, we consider that the combination of committed and additional development needs that must be accommodated over the whole plan period between 2022 and 2039, in both the Chichester and Arun Districts, require a “first principles” review. This must be based on a refreshed transport evidence baseline of no earlier than 2022 – given that the effects of COVID distort 2020-22 – and the transport infrastructure and service requirements to sustainably support those needs.

Key issues – including substantial changes with regards to transport issues and challenges, as well as potential solutions – thus do not form part of the evidence base that steers this plan. Given long term changes in travel patterns, and mode share that took place during COVID, as well as a local and national policy context that seeks to radically reduce and then eliminate transport-related carbon emissions, this is especially problematic.

The specific problems of congestion and network resilience that are evident on the A27 and the approaches to Chichester remain a set of especially difficult problems that disproportionately affect the efficiency, reliability and attractiveness of the bus network, that evidently demand larger-scale strategic responses involving multiple stakeholders, including bus operators.

Where the effects of development on the national Strategic Roads Network (SRN) are concerned, the approach of National Highways to addressing and responding to the mobility needs of development has now substantially changed following the promulgation of the DfT Written Ministerial Statement LTN01/22. This makes it clear that adding highways capacity is no longer the first or only strategy that should be pursued, but one subordinate this to maximising the potential of non-car modes and sustainable travel.

“Effective and ongoing collaboration” on transport matters has not led to solutions being agreed and published for public scrutiny as part of the plan evidence base. Whatever the approach to modelling and “highways improvements” that may be agreed or pending agreement with the County Highways Authority and National Highways, Stagecoach is neither participant or sighted. This is despite the clear requirements set out in NPPF Para 106 b) that “Planning policies should ... be prepared with the active involvement of local highways authorities, other transport infrastructure providers and operators and neighbouring councils, so that strategies and investments for supporting sustainable transport and development patterns are aligned.” (our emphasis).

We therefore consider that the Council has failed to comply with the requirements of NPPF paragraph 25 and 26 that “relevant bodies” are involved in plan-making, especially with regard to addressing the needs for infrastructure. Public transport services and the infrastructure that supports its operation and use clearly fall within matters relevant to plan-making. This is explicit in NPPF Chapter 9 and indeed within the plan itself – for example reference to public transport and sustainable modes in the Vision for the plan.

It should be stressed that the Regulation 18 “Preferred Approach” consultation took place in December 2018 – over 4 years ago and prior to COVID, based on LSS2. The inordinate length of time that has elapsed between the Regulation 18 and Regulation 19 stages greatly challenges the LSS2 and other parts of the evidence base, especially as the pause straddles the COVID epidemic. That would include the transport modelling baseline, and key assumptions in any traffic modelling that took place prior to mid-2022, which is a point at which a reasonable “new normal” post-COVID might be considered to have become established. In that period, Arun District has also adopted its own Local Plan development strategy that accommodates an unprecedented quantum of development immediately east and south-east of the District Boundary – creating additional substantial transport impacts directly affecting the A27 and multiple major approaches to Chichester crossing it.

The established mechanism to fulfil the Duty to Co-operate has thus not operated effectively. The Plan is not founded on a relevant, proportionate and up-to date evidence base and is thus inadequately justified.

2.2. Spatial Portrait

The spatial portrait is generally succinct and accurate. However, it makes no mention of road-based public transport, the role of the City as a public transport hub, or the range of bus services that provide local connectivity (Section 2.4 and 2.5). The complete concentration of post-16 education in the City itself as just one example of the peculiarities of transport demands in the area, is not highlighted, though this has a profound influence on peak time travel demands affecting the most congested parts of the highway network. Among other things, the role of bus services in supporting the educational system of the plan area is very great indeed.

The potential role of bus in addressing the already-severe transport problems of the plan area and beyond seems entirely overlooked. The spatial portrait is thus clearly inadequate and incomplete.

2.3. Strategic Objectives

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Chapter 9 of NPPF and paragraphs 104 and 105 in particular require that plans should:

“Transport issues should be considered from the earliest stages of plan-making and development proposals, so that:

- a) the potential impacts of development on transport networks can be addressed;
 - b) opportunities from existing or proposed transport infrastructure, and changing transport technology and usage, are realised – for example in relation to the scale, location or density of development that can be accommodated;
 - c) opportunities to promote walking, cycling and public transport use are identified and pursued;
 - d) the environmental impacts of traffic and transport infrastructure can be identified, assessed and taken into account – including appropriate opportunities for avoiding and mitigating any adverse effects, and for net environmental gains;...
- ...The planning system should actively manage patterns of growth in support of these objectives. Significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. This can help to reduce congestion and emissions, and improve air quality and public health...”

The Strategic Objectives do not conform with NPPF in these foundational requirements adequately, to transparently steer the plan strategy. They should therefore be amended to read:

“Plan to provide local infrastructure to support new development and seek opportunities to address existing identifiable infrastructure problems deficits, such as in particular those relating to the A27 and its junctions and wastewater treatment.”

Paragraph 2.36 states, in the context of the Climate Emergency and the National Trajectory to “Net Zero” that “The council will enable the delivery of infrastructure, jobs, accessible local services and housing for future generations while protecting, conserving and enhancing the historic and natural environment.”

Naturally, we support this intent.

However, there is no acknowledgement of the role current patterns of transport use contribute to carbon emissions, nor that substantial mode shift is necessary to address sustainably an acute lack of capacity on the local network and the SRN, especially around Chichester. This is especially concerning as the basic conceptual link is not made between the fact that the greatest such problems lie on the A27 corridor and around Chichester, while these are also at the same time present many of the most sustainable locations for development, and where the opportunities to secure much greater use of sustainable modes also exists.

Strategic Objective 7 “Strategic Infrastructure” includes the following statement:

“To work with infrastructure providers to ensure the timely delivery of key infrastructure to support delivery of new development. New development will be supported by sufficient provision of infrastructure to enable the sustainable delivery of the development strategy for the plan area. Key infrastructure to support the Local Plan will include improvements to transport, ...

A sustainable and integrated transport system will be achieved through improvements to walking and cycling networks and links to accessible public transport. Highway improvements will be delivered to mitigate congestion, including measures to mitigate potential impacts on the A27 through a monitor and manage process.”

The latest transport evidence in the Chichester Transport Study makes no pretence to define much less to deliver a “sustainable or integrated” transport system. It is wholly devoted to sustaining current levels of car use across the District, to and through Chichester area.

It is no more than the lightest of touches to the approach taken to supporting the adopted Local Plan, an approach that is already almost 10 years beyond the date of its gestation but has yet to deliver any significant capacity improvement schemes, much less any measures that sustain even current levels of public transport journey times and reliability in the face of increasing congestion – much less any betterment.

Of the six key junctions on the A27 around Chichester, recognised to require significant mitigation given they are saturated for extended periods, five accommodate regular bus services - indeed frequent ones at least every 20 minutes in several cases. The sixth at Oving Road, relates directly to a key corridor where bus services are needed to support strategic growth currently being delivered at Shopwhyke, as well as substantial further growth West of Tangmere (proposed allocation A14) and “East of Chichester” (A8), south of Shopwhyke Road.

As stated at p12 of the Study Summary “The modelling shows that all the junctions on the A27 Chichester bypass are well over capacity, even before adding in the Local Plan development and with the exception of Portfield Roundabout are actually shown to be over capacity in the base model year (2014) in one or both peaks”. This much has indeed been evident for years from delay and periodic even more severe disruption arising to Stagecoach services from the lack of network resilience.

The reassignment of through and local traffic through Chichester to avoid the A27 bypass is an especially serious issue for bus services that penetrate the city. This is leading to consequential saturation of a range of junctions used by buses. Rising delay and unpredictable running times are at the root of our decision to sever the long-established Portsmouth to Littlehampton service in 2023, which will in future no longer run across Chichester, but terminate to provide additional dwell time to mitigate the impacts of congestion.

While this congestion affects all road users including businesses and freight traffic, the effect on scheduled bus services is greatly higher, as such services cannot reassign route to 'beat the queue'. Traffic congestion often encourages greater car use for this reason, in tandem that people are happier to sit for extended periods in their own vehicle on a seamless door-to-door journey than wait at the roadside for a delayed bus making slower progress in lengthy queues.

As the Study admits at para. 1.3.2 "Although, there have been works at the Portfield Roundabout in this timeline, no other mitigation schemes have been completed along the A27 corridor, as such the mitigation schemes defined in this report will also be required to consider the development from this plan period."

In other words, in the 8 years since the current Local Plan was adopted in 2015, there has been minimal progress in delivering the traffic mitigations. There is no clarity at all when any such mitigations will be brought forward. It is hardly surprising then, that traffic conditions have deteriorated. The "predict and provide" transport strategy supporting the current plan has failed.

Despite this, the Draft Local Plan Review proposed to "double down" on exactly this strategy. It represents, like the rest of the evidence base, a "rolling forward" of the current car-based strategy by 9 years, with the lightest of touches to attempt to accommodate car trip demands from a relatively modest additional development quantum.

Nevertheless, the Study requires a global 5% reduction in trip demands arising from unspecified "credible" (paragraph 4.1.2) sustainable transport and travel planning measures. It is unclear why use of non-car modes will see disproportionate growth when no measures are in place to make them more attractive. This 5% increase in use translates to a doubling in the modal share of bus services. There is no evidence nationally, anywhere, that simple ignorance of alternatives to the car is the main barrier to uptake.

The outputs of the 2023 Chichester Area Traffic (SATURN) model are set out at Table 5.1 (am peak) and 5.2 (pm peak) without mitigation. These betray just how seriously compromised the whole network around Chichester is, and will be in future, even with implementation of a mitigation package to increase traffic capacity that is understood to cost between £92m and £164m – and which the Study and the draft plan acknowledge cannot be delivered through developer funding sources alone. Unspecified external funding presumably from HM Treasury through DfT is required.

Even if this provided and the schemes are delivered, Tables 8.1 and 8.2 indicate these will provide minimal relief. The final columns suggest key junctions, including Portfield, Fishbourne Road and Cathedral Way East will remain at well over 100% ratio of flow to capacity (90% is considered the point at which saturation is approached, with the onset of increasing delay above that figure). RFCs in tables 8.1 and 8.2 are some of the highest we have ever seen in a local transport evidence base for a post-mitigation scenario. While the serious potential risk of reassignment across Chichester City is greatly reduced, which is important and welcome given its impact on bus services, Tables 8.1 and 8.2 show the extent of post-mitigation saturation is also egregious, covering a very large number of key links and junctions.

On every measure and criterion, then, including cost deliverability and effectiveness, the revised Transport Strategy falls well short of evidence to suggest the transport impacts of the plan can be properly addressed by this means.

Despite the repeated statements about sustainable modes throughout the draft plan and Chichester Transport Study, only 2 paragraphs at Section 6.2 within the Study are devoted to public transport:

"6.2.7 The funds generated from the parking management schemes, local/nation funding schemes and developer contributions could also be utilised to fund potential public transport enhancements within the city centre including an expansion of the bus priority lane system within Chichester City Centre. This could reduce reliance on the car in the longer term towards sustainable public transport. A park and ride scheme could be incorporated within a bus priority lane network in the future depending on the uptake and successfulness of early bus priority trials.

6.2.8 Chichester City centre has a constrained existing public highway network. Therefore, any proposed dedicated public transport or light transit corridors that could be implemented would be at the expense of existing highway. This could be managed through a time-based system where certain routes are restricted to public transport only during specific times. E.g., peak hours."

There is some very high-level consideration of Park and Ride following this section. None can be considered a serious practical evaluation of consolidating car-borne trips onto bus services, including existing ones, for example local mobility hubs, more frequent bus corridors, delivery of specific bus priorities.

None of the discussion of alternatives to "predicting and providing" for unconstrained traffic growth is rooted in a deliverable evidence base, or proper evaluation of options and specific projects.

To take just one aspect of the few specifics that can be picked out, a workplace parking levy is hypothesised. This would apply only to “offices”, in Chichester city centre (para 6.2.3), without consideration given as to how this could be practically achieved or even that a meaningful amount of office based employment would qualify. Much less is any consideration given to how far focusing a strategy only on office-based workers would actually deliver a particularly significant effect, apart from to create a strong incentive to relocate offices out of the city centre to places out of reach by public transport.

Looking at the Chichester Transport Study 2023 and the draft plan together, there is insufficient evidence that the traffic capacity increase proposed in the 2023 Transport Study is any more affordable or technically deliverable, or likely to be sufficiently effective, than those in the past strategy. The evidence more strongly points to the fact that no highway improvements are identifiable or economically deliverable to meet even short term increases in demand for car-borne mobility on most of the network around Chichester.

There are no published strategies or schemes clearly supporting the contention that the objective of improving sustainable modes is technically achievable or deliverable either. The plan makes generalised assertions that such strategies will be devised and implemented only after serious problems emerge from a shortfall in the car-borne transport strategy.

The reference to “monitor and manage” is undefined and unsubstantiated. There are no outcomes stated, no mechanisms specified and no timescales for action.

Our experience today is that network conditions have reached unacceptable and prejudicial levels of severe unpredictable delay. The saturation of the network is already evident well outside the traditional peaks on key sections of highway and at key junctions. External shocks such as the effects of severe weather are becoming more common, leading to delays so extreme as to justify the description of “gridlock”. The plan does not identify a strategy to effectively address this, in particular by consolidating passenger car trips onto more efficient public transport vehicles. This is unacceptable to Stagecoach.

2.4. Local Plan Vision

Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the broad approach in Plan Vision and in particular that by 2039, the Plan will support and enable greater use of sustainable modes. However, there is no link made between reducing the use of private cars, and the need for a step change in the use of sustainable modes. Without a published transport evidence base it is impossible to establish a suitable sustainable transport strategy to support both carbon reduction and alleviation of the problems arising from acute congestion. Even on a very crude basis, to achieve a meaning mode shift on key approaches to the A27 Chichester Bypass will require more than 20% of existing peak car-borne journeys to transfer to other modes. A 10 percentage point transfer to bus (about half this shift) would imply more than doubling peak hour bus passenger boardings.

The Vision is nothing more than an aspiration, that needs to more definitively aim at key outcomes, for the plan to be effective. The Vision should thus be altered to read:

“Get about easily, safely and conveniently with less reliance on private cars –making the greatest possible use of the rail and enhanced bus network, and with more opportunities for active travel including walking and cycling; to materially reduce dependence on private car use.”

Underpinning the Plan’s spatial strategy, the Vision section goes into more specific detail about key localities in the Plan area.

Regarding Chichester, Paragraph 2.39 states: “The emphasis will be upon consolidating and enhancing the role of Chichester city as the plan area’s main centre, whilst also developing the role of key settlements to its east and west. The focus will be upon creating communities with good access to a range of employment opportunities and affordable housing for young people and families to balance the ageing population.”

This is clearly the appropriate focus for meeting the District’s development needs in a sustainable manner. The city and key settlements to the east and west, are those places already able to make use of relevant public transport services, both rail and bus. Especially within and near the City, walking and cycling can credibly present highly relevant choices. This emphasis clear can be expected to address the requirements of sustainable development set out in NPPF and their local application set out in the Plans Strategic Objectives.

However, this needs a robust transport strategy, to avoid a further concentration of development and its traffic impacts occurring on or near some of the most chronically congested parts of the highway network. To date, the absence of intervention has strangled the bus network through further marked deterioration in traffic conditions. This by consequence increases the risk of bus delay or cancellation, lengthens journey time and reduces customer confidence in bus as an attractive alternative mode of travel.

In April 2023, Stagecoach is making significant timetables changes to improve operational resilience in and around Chichester. The biggest such change is the severance of the Portsmouth to Littlehampton section of service 700, at Chichester, with buses operating independently to the east and to the west and ending cross-city links. This is planned to reduce the probability of delay but at the cost of additional vehicle resource (circa £200,000 per annum) which could be better spent providing new or enhanced services. We anticipate a small loss of custom as a direct consequence of the change, but have little choice other than to take negative action so as to fulfil our statutory punctuality obligations.

If the Strategic Objectives of the Plan and its Vision are to be achieved, in the way required by NPPF paragraphs 104-105, a properly-evidenced transport mitigation strategy needs to create the conditions where bus journeys are more reliable than car journeys and thus mobility demand switches as far as can be realistically achieved away from car use, to bus use and other more sustainable modes.

Beyond Chichester, the Plan Vision focuses on key localities beyond to the east and west.

To the west of Chichester a focus on growth at Southbourne is justified at paragraph 2.43: "...the aim is to take advantage of the village's good transport links and existing facilities to deliver significant new residential-led development within the broad location for development which will further enhance local facilities and offer opportunities to reinforce and supplement existing public transport, including bus routes."

We agree this is a very significant opportunity. However, if the requirements of NPPF paragraphs 104-105 are to be met, this demands that effective bus priority is delivered on the A259 corridor, especially eastbound at Fishbourne and westbound approaching Emsworth. Without such measures, the growth committed and planned will serve only to further undermine bus journey time and decrease punctuality on the existing 700 service, entirely contrary to the aims of the Vision.

The emphasis on the A259 corridor served by Stagecoach 700 west of Chichester is reinforced at paragraph 2.45 stating that "Between Chichester and Southbourne, the Plan provides for more moderate levels of growth within the parishes of Fishbourne, Bosham and Chidham & Hambrook, ... with opportunities to support and expand existing facilities and for increased use of public transport options". We strongly support the principle, but the Plan must follow through with specific public transport priority measures that facilitate rather than prejudice such an outcome.

East of Chichester the focus is at Tangmere, where the existing allocation for about 1000 dwellings is being uplifted by 300. Paragraph 2.44 justifies this among other things recognising the scope for "...improved and additional bus services and cycleways will provide better connections to Chichester city and east to Barnham and the 'Five Villages' area in Arun District." We unequivocally endorse this conclusion. Realising a "game-changing" level of bus service quality, reliability and frequency east of the city, also serving committed and planned development north and south of Oving Road at Shopwhyke, is equally essential, given that all SRN links and junctions are approaching equal saturation.

The National Bus Strategy has given new focus on partnership with West Sussex County Council to discuss and deliver a significant new bus service between Chichester, Shopwhyke, Tangmere, Eastergate and Barnham, supporting committed development and acting as an initial phase of what ought to be a more ambitious longer-term strategy to support growth beyond 2025 in both Chichester and Arun Districts. For these improved bus services to be both deliverable and effective, robust bus prioritisation is unavoidable. No such measures are proposed in the Plan or its evidence base and we therefore suggest inclusion of plans to facilitate safe and efficient bus operation between Tangmere and Nyton/Eastergate, ideally avoiding the need to join A27 through-traffic entirely.

We welcome the clear recognition that these localities identified for growth, benefit from existing relevant public transport services. The Vision also sets an expectation that bus services in particular should be "enhanced" and "reinforced".

We entirely agree that these opportunities exist, across the broad strategy and strategic allocation proposed by the draft Local Plan. Securing them will be crucial to achieving national and local policy objectives, including the Strategic Objectives. However, to our continuing very great dismay, the Plan goes no further to defining how this will be achieved. As such the Vision is not demonstrable achievable or deliverable.

Accordingly the Plan cannot be considered effective, in the sense of NPPF.

Remedying this, demands specific measures to protect bus services from congestion in the following corridors:

- A259 East of Emsworth
- A259 Fishbourne
- A 259 Via Ravenna/Cathedral Way
- A286 Stockbridge Road north and south of A27
- B2145 Whyke Road/Hunston Road
- A259 Bognor Road, east and west of A27 and extending to the District Boundary
- B2144 Oving Road/Shopwhyke Road east and west of the A27
- A 285 Westhampnett Road/Portfield Way/Stane Street, potentially involving a mode filter at the west end of Stane Street

These must be defined to a sufficient level of detail to assess their effectiveness and deliverability, including costs.

This would then allow West Sussex County Council and Local Transport and Highways Authority, ourselves as the principal bus operator, and where appropriate other organisations that would be directly tasked with delivering the mitigation package, to agree service levels and standards necessary to deliver specified outcomes, including journey times, frequencies, capacity and hours of operation on the network, and also in respect of the strategic allocations and Strategic Locations for Growth.

The agreed mitigations strategy should be set out in an up-to-date Infrastructure Delivery Plan backed by clear funding commitments, including a funding strategy to justify necessary developer contributions.

Where necessary to support evidence of effectiveness and deliverability, clear statements of support, which might include Statements of Common Ground between the LPA, LTA, National Highways and Stagecoach, could be provided.

3. Spatial Strategy

Stagecoach Supports

Stagecoach well recognises the constraints outlined in the explanatory narrative at the start of Chapter 3.

In particular we strongly endorse that strategy in that it reflects that the best opportunities to meet housing and employment development requirements sustainably clearly exist in and close to Chichester and on the key east-west movement corridor where – subject to effective measures being delivered to make these modes more attractive, efficient and relevant – sustainable modes can credibly provide for a much higher proportion of movement demands, mitigating most effectively the potential traffic impacts of development.

We agree that the Manhood Peninsula suffers serious environmental constraints, but, added to these, public transport and other sustainable modes cannot provide such attractive alternatives, and significant further development risks merely reinforcing already high levels of car use, aggravated by the carbon impacts of the distances involved – something the plan does very little to evaluate, and makes no reference to.

We endorse the conclusion in paragraph 3.24 that significant development in the part of the District north of the National Park is inappropriate. The rationale is principally on landscape and visual character. This exposes a fundamentally biased approach to plan making that has consistently underplays transport accessibility and carbon issues. In fact, the lack of local services and the extended distances that need to be travelled to fully participate in society in this area, with no realistic prospect of public transport offering relevant choices, ought to rule such a strategy out of play on a far less aesthetic and interpretational basis.

3.1. Policy S1 Spatial Development Strategy

Stagecoach Supports

The Spatial Strategy flows clearly and logically from the Spatial Portrait, and the opportunities and constraints identifiable across the Plan area. It represents a logical and justified continuation of the existing Local Plan strategy. In particular the spatial strategy maximises the potential for sustainable modes to contribute to meeting a much higher proportion of all the District's mobility and accessibility needs.

3.2. Policy S2 Settlement Hierarchy

Stagecoach Supports

The settlement hierarchy clearly reflects the service endowment and potential self-containment of the settlements in the District. In particular, the second tier of settlement hubs includes secondary schools, which are major peak trip generating uses. Service villages, in the main, also benefit from bus services running at least hourly, which can be expected to provide for a degree of mobility for the higher number of trip purposes that cannot be satisfied by walking or cycling within the immediate locality. Thus, a level of development to meet local needs in this tier is relatively sustainable.

There is a quite broad range of settlements in this category. We have concerns that, north of the National Park, the Service Villages have no realistic public transport choice. These include Plaistow/Ifold, Kirdford, Loxwood, and Wisborough Green. Such as exists is typically a 1/bus per day off-peak shoppers service offering up to 90 minutes in Horsham or Guildford and as such any development here even to meet local needs requires each adult to own a car. This contrasts strongly with Service Villages to the south of the National Park, which are greatly more sustainable.

4. Climate Change and the Natural Environment

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This section of the plan is extensive and wide ranging, as should be expected.

However, remarkably, there is no acknowledgement whatever of the role of transport in mitigating climate change or its effects, not of the importance of sustainable movement and access being facilitated across the plan area in addressing anthropogenic impacts on the natural world at a more local level.

This exposes very clearly a troubling level of indifference to transport matters in the production of the Plan, which, while nationally quite common, is neither appropriate nor acceptable. The mitigation of transport impacts is not merely a matter speaking to the social and economic aspects of sustainable development. It is crucial to address the causes and effects of climate change that arise from transport, and personal mobility.

This is now well understood and at the centre of national policy, including the National Decarbonisation Strategy for Transport (July 2021) which at Section 5 commits the government to aligning land use planning and transport strategy much more tightly and effectively to mitigate the carbon emissions associated with the current dependence on cars, and the mode mix; but also to reduce travel distances, both increasing the potential relevance and effectiveness of all sustainable modes, and reducing average journey lengths for residual motorised journeys of all kinds.

National statistics show that well over a third of all domestic carbon emissions arise from land-based transport and of these, the vast majority arise from trips of over 10km – outside the range of large scale use of cycling. In fact, the potential of the plan to materially support carbon emissions reduction from within the plan area lies more in the realm of transport than any other policy theme – including emissions mitigation from buildings, which is in any event an aspatial matter and covered by nationally-binding building regulations. By 2025 something like 40% of all the emissions within the plan-area will be transport related.

There is no evidence supplied to support the plan that addresses the transport carbon impacts of the spatial development strategy in a clear manner.

There is no evidence supplied that sets out the effects of potential worsening of congestion on air quality within the plan area, arising entirely from the excess of passenger car movement demands over available and credibly deliverable highway capacity. This is despite the evidence set out and acknowledged in the explanatory memorandum at paragraph 4.130:

“4.130. The council’s Air Quality Action Plan and the West Sussex Transport Plan 2022-2036 both refer to the air quality issues faced by Chichester. There is currently one Air Quality Management Area (AQMA) in the plan area, located at St Pancras, Chichester. AQMAs are designated where air quality exceeds, or is likely to exceed, national air quality standards and objectives. Development within or impacting these areas, or that likely to cause the declaration of any further AQMAs, will be subject to an air quality assessment by the applicant.”

This is a retroactive approach – it is not “planning”, based on evidence.

We are well aware that air quality issues in and of themselves can render allocated sites to be undeliverable: a good example is in the Vale of White Horse, Oxfordshire, where strategic allocations on the A338 and A420 corridors have been held up for years by air quality issues at Marcham and Frilford, in large measure because agreed transport interventions were considered inadequate or undeliverable a very short time after the Plan was examined and adopted.

There is no evidence that shows how the development strategy can effectively mitigate these impacts as well as the further potential impacts that arise from the development strategy. This is exasperating, as there is clear evidence that could be drawn upon to show that that very substantial opportunities exist to:

- Speed buses up and make them more reliable by the delivery of bus priority on most of the key main corridors. Most of these even today operate relatively frequently
- Improve service frequencies and extend hours of operation.
- Secure significant background mode shift to bus as a result, damping pressure on key links and junctions, by consolidating demands on direct more reliable and more frequent bus services.

The spatial development strategy as submitted is in fact, likely to well conform to such additional evidence.

The allocations require substantial additional transport related work and evidence to demonstrate that the opportunities for sustainable transport have been identified and taken up as required by NPPF paragraphs 104-105.

With regards to specific policy, Policy NE22 should be modified to read:

“Development proposals will be permitted where it can be demonstrated that all the following criteria have been addressed:

1. Development is located and designed to minimise traffic generation and congestion through access to by maximising the relevance and attractiveness of sustainable transport modes, including maximising provision of specific demonstrably effective measures to make pedestrian and cycle and public transport routes and networks more direct, more safe, faster and more reliable;...”

5. Housing

5.1. Policy H1 Meeting Housing Needs

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

The presumption of the planning system is that local planning authorities should seek to meet their objectively assessed development requirements in full. These needs are assessed by a defined Standard Methodology set out in Planning Practice Guidance and elsewhere, that has explicit regard to ensuring that the economic and social effects associated with housing are properly provided for, to avoid exacerbating serious problems that arise from inadequate housing supply.

As a significant local service provider and employer, Stagecoach is concerned that existing issues with housing availability and affordable housing supply are not exacerbated. This has a direct bearing on staff recruitment and retention. It also has an indirect bearing on our cost base.

The existing problems with housing affordability have developed over many decades of undersupply. It should be emphasised that the significant boost to the supply of housing that has been sought by governments over the last 15 years, has only begun to take effect relatively recently in this District. Tackling the problem will require years of consistent attention.

Stagecoach notes that the Council is no longer proposing to meet its identified housing needs in full. Rather than 638/annum the Council is allocating a total that implies an annual delivery rate of 535/annum.

While a number of matters evidently present challenges to the Council in identifying a sustainable development strategy. Paragraph 5.2 indicates that "constraints, particularly the capacity of the A27 has led to the council planning for a housing requirement below the need derived from the standard method..." The blame for being unable to meet housing requirements is thus laid squarely at the door of transport infrastructure and systems.

This conclusion in no way follows from the evidence in the Chichester Transport Study. This, rather, makes the statement that when a higher annualised quantum of 700 dwellings per annum was tested, in the majority of cases the traffic capacity improvement package would perform little differently. To quote the Study:

"5.6.3 The network performance outputs analysed comprising V/C%, Delays (seconds) and Queues (PCU's) suggest that generally the proposed SRN mitigation identified for the Core Scenario, can accommodate in the most part, additional increase in development to 700dpa."

Whether the rest of the local road network is similarly protects is moot.

Irrespective of these results, even if the contention made in the draft plan were true, unlike many other constraints, this is amenable to a suitable effective strategy to address the constraints identified being collaboratively conceived. This is what NPPF expects, as set out in paragraphs 104-106.

Where the A27 is concerned, as part of the SRN, National Highways is now working to a substantially revised approach than that in force at the time to current Local Plan was prepared, or LSS2, or reflected in the Chichester Transport Study. This is set out in DfT WMS 01/22. This document is the policy of the Secretary of State for Transport in relation to the SRN which should be read in conjunction with the National Planning Policy Framework (NPPF). It replaces the policies in the Department for Transport Circular 02/2013 of the same title.

It makes plain that to accommodate additional demands arising from development, National Highways (NHC) expects to meet the requirements of its statutory license in a substantially different manner. With respect to development NHC LTN 01/22 continues to address the tensions between national policy for the environment and carbon mitigation, the ongoing need to substantially boost the supply of housing as well as maintain national economic competitiveness and protect the safety of the public. However, in future, the approach will be to seek first to maximise the impact of demand management measures (reducing the need to travel), and then to accommodate residual additional demands first though maximising the use of sustainable modes, rather than accommodating assumptions about current levels of car dependency and use.

LTN 01/22 much more closely and explicitly aligns with the language of NPPF Chapter 9 paragraphs 104-106. Paragraph 12 states: "New development should be facilitating a reduction in the need to travel by private car and focused on locations that are or can be made sustainable.... Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas." (our emphasis).

It continues at paragraph 13: "where developments are located, how they are designed and how well delivery and public transport services are integrated has a huge impact on people's mode of travel for short journeys. The company will therefore expect strategic policy-making authorities and community groups responsible for preparing local and neighbourhood plans to only promote development at locations that are or can be made sustainable [footnote 8] and where opportunities to maximise walking, wheeling, cycling, public transport and shared travel have been identified." (again, our emphasis)

Stagecoach readily confirms that the draft Plan development strategy conforms well to the first limb of this expectation, in terms of the location of development.

Stagecoach considers that the plan and its evidence base conforms poorly to the second in that the specific opportunities to maximise walking, cycling wheeling and public transport are not clearly identified, and defined, and proven to be effective and deliverable.

The current mitigation strategy for the A27 Chichester area, supporting the adopted Local Plan and for which proportionate developer contributions have and continue to be sought, reflects now-superseded DfT Circular 02/2013. As a direct result, it failed completely to identify any significant effective bus priority measures, despite the fact that frequent services already exist on the key corridor concerned, and that one bus journey can remove, fully seated between 72 and 80 single occupancy car journeys from congested links and across key junctions on the A27. Rather, it sought to implement targeted measures to increase the throughflow of general traffic.

We recognise the realisation that this approach, which was already reliant on some tenuous logic, is simply not technically viable, especially where further development needs are anticipated.

National Highways will now pursue an approach with the planning system that “includes moving away from transport planning based on predicting future demand to provide capacity (‘predict and provide’) to planning that sets an outcome communities want to achieve and provides the transport solutions to deliver those outcomes (vision-led approaches including ‘vision and validate,’ ‘decide and provide’ or ‘monitor and manage’). The company will support local authorities in achieving this aim through its engagement with their plan-making and decision-taking stages.” (paragraph 15).

Paragraph 23 is at the fulcrum of assessing and defining transport mitigations to accommodate growth on and near the SRN “Capacity enhancements such as modifications to existing junctions or road widening to facilitate development should be determined on a case-by-case basis. The general principle should be accepted where proposals would include measures to improve community connectivity and public transport accessibility, and this will be weighed against any negative safety, traffic flow, environmental and deliverability considerations, impacts on the permeability and attractiveness of local walking, wheeling and cycling routes, and alternative options to manage down the traffic impact of planned development or improve the local road network as a first preference.” (our emphasis).

However, no material work has been done that seeks to identify if a bold robustly conceived and suitable judiciously-prepared strategy that seeks to consolidate flows on already densely travelled corridor onto improved bus services, driving mode shift through insulating these services preferentially from already serious queuing. This would be likely to have very substantial impacts on all the key junctions on the A27, and potentially, on the A27 itself. The need for an integrated approach between Shoreham and Emsworth within West Sussex paying particular regard to development requirements in both Arun and Chichester Districts naturally lies at the heart of this, and we would expect to be picked up by the LSS3 Review among other things.

However, the locus of the problems and its causes and effects are obviously well enough known to start work on defining solutions within the plan area today. We would expect that this work will be essential if National Highways are to support the Plan, especially now given the terms of Circular 01/2022.

Such work could and should start from a “policy off” position: in other words that the Plan should fully accommodate its needs unless it can be proved that a mitigation strategy for the A27 that is compliant with DfT WMS 01/2022 cannot credibly accommodate resulting capacity demands without unacceptable impacts on the safety and efficient operation of the SRN.

This evidence does not exist. In fact the Chichester Transport Strategy 2023, on which the Council solely relies as its transport evidence base, indicates the opposite at para 5.6.3. This is the case before meaningful measures to secure damping of traffic demands through mode reassignment are even considered.

The exception to this is Portfield and Oving Road, which are among the most problematic areas after mitigation even at the Council’s chosen 535 dwelling/annum scenario (para 5.6.4.-5). The costly capacity mitigation simply cannot deliver enough benefit. It is admitted that WSCC has indicated that it would prefer a solution that places greater reliance on sustainable modes damping car-borne demand. This is entirely the strategy required by NHC to follow LTN 01/22, of course. Despite the fact that “predict and provide has “run out of road” no attempt has been made to examine what such a solution set credibly could look like. This is unsatisfactory and deeply troubling.

At paragraph 5.4 the draft plan points back again at the West Sussex and Greater Brighton Strategic Planning Board and the future work that has been commissioned, but has barely begun, to update the Local Strategic Statement. This work is to inform the preparation of plans that have horizons beyond the end date of the current LSS in 2030 and properly to meet the Duty to Cooperate. As we said in our response to section 1 of the Plan we fully endorse the conclusion that this is the right mechanism to look at these issues. However, the mechanism has not been effectively applied to the production of this plan. Therefore, the specific evidence that capacity on the A27 in and of itself supports accommodating a lower housing requirement does not exist.

The Plan thus does not conform to NPPF, is not adequately justified and is not effective.

The Plan does not properly meet the statutory Duty to Cooperate.

We will return to this matter in specific representations to Section 7 of the draft plan.

5.2. Policy H2 Strategic Locations/Allocations 2021-2039

Stagecoach Supports

Policy H1 makes plain that the plan, as far as it identifies locations for development has done so in locations that conform with its spatial strategy. All of the strategic allocations to a greater or lesser extent offer clear opportunities to make use of sustainable modes, by virtue of their location. That is not to say that the opportunities to take up these opportunities, and maximise the role of sustainable modes, has been identified, defined and translated properly into the rest of the plan policy suite or Infrastructure Delivery Plan.

As our remaining representations make clear, we support the locations thus far identified as being those that offer the best opportunities to reduce the need to travel, reduce travel distances, and create high quality attractive sustainable travel choices, for both existing residents as well as new ones.

However, the transport impacts of the allocation will individually and cumulatively likely to lead to increasingly severe impacts on the transport network, and on bus services.

Perversely, because these opportunities are not properly identified and secured through the plan and its supporting transport strategy, the opportunities presented by the allocations to secure a substantially more sustainable and lower carbon pattern of movement will not only risk being squandered but may aggravate the wider problems.

5.3. Policy H3 Non-strategic Parish Housing Requirements

Stagecoach Supports

The approach is consistent with the plan's spatial strategy. It generally avoids a dispersal of development to locations likely to be highly car dependent. There is a clear focus on meeting housing needs in the far north-east of the District at the largest and most sustainable settlements, such as Loxwood, Kirdford and Wisborough Green. However, it must be pointed out that public transport availability in this area, provided by the County Council through services it procures, is minimal. These settlements in practice require each adult and child of secondary school age to have access to motorised transport to fully participate in society. This might justify significant measures to secure a boost in the frequency of bus services between Guildford and Billingshurst, passing through these settlements.

Otherwise, existing commitments in the plan area already make provision to meet for local needs. To the degree that there is an unmet local requirement for affordable housing of a small scale – for example to support the rural economy – this could be met through neighbourhood plans or through Rural Exception Sites.

6. Place-making, Health and Wellbeing

6.1. Policy P1 Design principles

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

NPPF requires that proposals should consider transport issues from the earliest possible stage. Designing to properly facilitate safe and efficient access, focusing first on sustainable modes, should be at the heart of development design. Too often it is still an afterthought, notwithstanding this.

Policy P1 must include an additional statement to be compliant and effective with NPPF paragraph 104-105 and 112 a): "Development will be designed to make access and movement using walking, cycling and public transport the natural first choice, and demonstrate through the Design and Access Statement how such modes are afforded the most direct, safe, reliable and efficient routes within to and from the proposals, especially when compared with car use."

6.2. Policy P4 Layout and Access

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

A number of proposals in the plan involve large-scale development. It is essential that where appropriate buses can access and circulate efficiently through development at a suitably early stage. There is no acknowledgement of this anywhere in the policy, contrary to NPPF paragraph 112.

Large-scale development which buses cannot access in an efficient or timely manner, or at all, strongly contributes to high levels of car-dependency. Evidence for this is referred to among other places, in DfT Circular 01/2022. To be compliant with NPPF and properly pursue its strategic Objectives, Policy P4 needs to be modified to address this point: "1. Provide safe, direct and attractive conditions for inclusive access, egress and active travel between all locations and providing as good direct high quality links to integrated public transport, and where appropriate efficient access and circulation to bus services, unimpeded by excessive parking, at a suitably early point in the development phasing;

7. Transport and Accessibility

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

The issues related to transport are fundamental to the soundness of the Plan. In particular, the constraints presented by the capacity on the A27 around Chichester and its key junctions, are the paramount reasons why the Council does not consider it can meet its objectively-assessed development needs in full. Thus, the transport issues and potential solutions available and what these mean for the ability of development needs to be accommodated, are matters that go to the heart of the soundness of the Plan.

Paragraph 8.3 sets out the approach taken to date succinctly:

“Increasing the capacity of the road network is key to supporting growth in the Local Plan. However, there is also a need to reduce demand for road transport to achieve net zero in greenhouse gas emissions by 2050 as highlighted in the council’s Climate Emergency Action Plan and Strategic Objective 1. In aiming to achieve the ambitions of the action plan, all development is expected to demonstrate how it will support four key objectives to create an integrated transport network which will alleviate pressure on the road network, improve highway safety, encourage sustainable travel behaviours and help reduce transport related impact on air quality, by:

1. Avoiding or reducing the need to travel by car;
2. Enabling access to sustainable means of travel, including public transport, walking and cycling;
3. Managing travel demand; and
4. Mitigating the impacts of travel by car.”

However, this approach is unambitious and “lightweight” as it assumes, as does the existing Chichester Transport Strategy on which the current adopted plan relies, that the focus of investment should be, wholly, in highways capacity improvement.

Sustainable modes explicitly are expected to play a greater role to “alleviate pressure” on the local road network, as part of this strategy. To emphasise: to avoid exacerbating congestion, the strategy will have to both remove a significant proportion of existing demands from the network on multiple key approaches to Chichester; and then ensure that travel demands from committed and further new development allocated in the plan does not simply replace these journeys, or, worse, create even greater demands.

This will demand very significant behaviour change. Only by making sustainable modes substantially more attractive, both absolutely, and relative to the same journey made by car, can this be expected to occur. However, the explanatory memorandum as well as the wider policy suite and IDP, well expresses a fundamental unwillingness to taking specific, defined measures to achieve this reduction in car use and material promotion of sustainable modes. It makes plain that sustainable modes, including bus services, will offer a lesser role to which “access will be provided”.

Such a vague and weakly defined mechanism will have no effect, at all, on current behaviour and car dependency if the relevance of those choices as a credible alternative to car use, is not substantially boosted. This includes a 5% reduction in trip demand assumed by the Traffic Model at the heart of the Chichester Transport Study 2023.

For this reason. the transport strategy behind the current adopted plan is demonstrably ineffective, as the updated model makes plain. It has not yet been delivered and is yet unclear when or (in the absence of committed funding) even if it can be. It is ineffective to “roll forward” this strategy to support a higher level of planned growth.

We note that a scheme for addressing congestion on the A27 at Chichester has been included in Roads Investment Period 3 (2025-2030) – well within the horizon of this Plan. However, recent history provides compelling evidence that off-line improvement to the north is not politically supported and arguably even technically or economically deliverable. It is not funded, nor at this stage can it be hypothesised if an economically deliverable scheme is achievable sufficient to warrant the necessary investment.

An on-line improvement of the A27, including junction improvements, is likely to favour longer distance east-west though movements, which are of greater significance to the national economy, at the expense of local movements crossing the SRN- a conundrum that largely sums up the dilemma that is faced by NHC and the County as Highways and Transport Authority. It is one that is played out in many places, but rarely is the tension so stark as at Chichester.

Every local route crossing the A27 at grade around Chichester accommodates a regular bus service - or shortly will do (Oving Road area is expected to follow in 2023, though bus services are likely to not use the modified crossroads but to use the left-in-left-out facilities provided as part of the Shopwhyke Lakes development). The impact of these issues on the entire bus operation are serious and increasingly severe.

By the same token, boosting the relevance and reliability of each of these services substantially consolidating as much demand as possible onto a much smaller number of vehicles, is clearly a strategy that ought to support the effective capacity of each of these junctions being greatly augmented, at the same time as reducing equally substantially, the energy- and carbon intensity of mobility in the plan area. Addressing the A27 should not be considered some kind of “zero-sum” game.

Furthermore, the approach of National Highways in its dealings with development and the planning system now reflect a substantial change in Government Policy set out in DfT Circular 01/2022, which we separately cover in these representations, that entirely aligns with an approach that seeks to appropriately invest in more active and rational management of scarce highways capacity, on both the SRN and local roads.

For environmental, economic and social reasons – including public health, the issues presented by the A27 and its interface with local roads around Chichester stands out, nationally, as an example of where the approach taken to accommodating and mitigating development impacts needs to make a clear break with previous “predict and provide” approaches to meet forecast unconstrained car use as LTN 02/2022 makes clear as a principle. Policy in the West Sussex LTP to 2036 itself makes plain that “shared mobility” – including bus services – must play a much greater role in this area.

The existing Chichester Area Transport Strategy is focused on justifying capital contributions from committed development to fund highways capacity improvement – with nothing included to make bus services more attractive, or importantly more reliable. Indeed this “cars first” approach is so costly, that there is already accepted by WSCC to be insufficient land value remaining to be captured to put into substantial improvements for public transport. That much is very evident, and transparent, from paragraph 8.12 and 8.14, where south of Chichester “This (one) package of works (of several improvements needed) would be between £57.23 and £82.79 million to deliver in full and would not be capable of being funded by development contributions alone.” This assumes the scheme is otherwise deliverable, which on the evidence in the public domain for some time, has been considered challengeable.

The draft Local Plan and a modestly updated infrastructure package that flows from the 2023 Chichester Transport Study, pursues exactly the same approach.

This strategy is also even more ineffective having regard to the roll forward of the Plan to 2039. It cannot deliver the key Strategic Objectives of the Plan; and in particular this is explicitly recognised by the Council in the failure of the draft Plan to accommodate the OAN in full.

It is also obsolete, as it does not align, from first principles, with national policy (including the National Decarbonisation Strategy for Transport) and DfT Circular 01/22; nor the Council’s own declared Climate Emergency.

As a result, draft Policies T1 and T2 are both unsound, as we will separately explain.

Owing to the lack of evidence about the implications of this for adjoining authorities – especially Adur District – in the absence of the review of the Local Strategic Statement – this has implications for fulfilling the Statutory Duty to Co-operate.

The absence of any meaningfully comprehensive refresh of the transport evidence base means that there are no meaningful schemes of any kind, defined in the plan or its IDP, to indicate either what level of growth can be accommodated, by delivering a change in travel behaviour. This would be aimed to secure a sufficient effective increase in junction throughput (measured in terms of person trips as opposed to passenger car unit movements (PCUs). Such evidence would propose measure to achieve that outcome and assess the efficacy and costs of such improvements, across all modes.

Paragraphs 8.10-8.13 inclusive indicate that the Council “has moved away from ‘predict and provide’” and invites the reader to conclude this has translated into a programme of interventions that can be funded to deliver specific, credibly predictable outcomes. Such a programme should be clear in paragraph 8.11. and the IDP. There is no such clarity and this conclusion would be false.

It would also be evident in the language of the Chichester Transport Study 2023 and its refreshed proposals. Only the most token of lip service is paid to the matter. It is a plainly car-focused, predict and provide methodology to support a “predict and provide” strategy. In fact, it is a brazenly car-focused approach, to the exclusion of all else.

The statements in the Plan regarding any other approach, read properly, offer nothing more than a vague commitment to look post-adoption, and implementation, at unspecified measures, based on problems that may arise in future that will be decided by a committee: the Traffic and Infrastructure Management Group (TIMG). This does not yet exist and is obviously an attempt to posit a mechanism that retroactively will cover for the lack of serious multi-party engagement to address the existing and future issues. Such a group should, in our view, also include the public transport operators, not least if the requirements of NPPF Para 106c) are to be satisfied, and the strategy and measures to be adopted are material to supporting the Local Plan, as of course the purpose of the TIMG has as its core *raison d’être*.

The approach proposed by the draft plan is plainly ineffective and unsound in justifying the draft Plan.

It is more widely unacceptable to Stagecoach. The issues are severe today and well-known, already serving to jeopardise the delivery of buses relied on by existing residents, much less attract new ones.

We also consider that HM Planning Inspectorate are likely to be quite resistant to accepting this aspect of the plan's transport strategy, nor will it be appropriate for the Council, West Sussex County Council, or National Highways, to define such measures after the submission of the Plan during the Examination process. The Examination in Public of a local plan has no purpose to improve plans, or remedy deficiencies clearly evident prior to submission.

The examination of the West of England Joint Strategic Plan in 2019, and the Uttlesford Local Plan in 2021, among several others, demonstrates especially clearly that the Planning System and the Examination process is not amenable to post-hoc retrofitting of transport evidence and strategies to support a development strategy.

7.1. Transport Evidence Base

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Most of Stagecoach's serious concerns about the soundness of the plan arise from the fact that it has been prepared in advance of any up-to-date transport evidence and suitably robust transport mitigation strategy being advanced to support it. In essence, the Council has rolled forward the existing plan by 9 years, adding some additional sources of housing supply, while still relying implicitly on a transport evidence base that was prepared 10 years ago.

This led to the formulation at that time of what can only be described as an attempt to develop an effective car-based mitigation strategy, creating capacity for general traffic added to accommodate unconstrained additional demands on an already over-taxed highways network – the Chichester Area Transport Strategy. Despite language in support of sustainable modes, no deliverable measures were identified to support either the extension of the bus network to serve allocated sites, and much less to create a vital improvement to the quality and reliability of public transport services. This approach reflected the approach set out in DfT Ministerial Circular 02/2013 "Development and the Strategic Highways Network", applicable since the A27, which is the focus of the most severe difficulties, forms part of the national Strategic Roads Network.

This approach has proven ineffective even before substantial elements of housing land supply in the current plan come forward – in particular West of Chichester and West of Tangmere.

In addition, Circular 02/2013 has now been replaced by a new Ministerial Statement of 23/12/2022, DfT Circular 01/2022.

On both counts the transport evidence base and strategy needs to be properly revisited and established to provide effective mitigation for the plan, including current commitments that are being rolled forward.

The language of the current Ministerial Circular 01/2022 offers a highly condensed synoptic view of the proper approach to addressing transport matters in the planning system notwithstanding that it is directly concerned with the Strategic Roads Network. Videlicet:

"31. The NPPF expects local plans and spatial development strategies to be underpinned by a clear and transparent evidence base which informs the authority's preferred approach to land use and strategic transport options, and the formulation of policies and allocations that will be subject to public consultation. The company will expect this process to explore all options to reduce a reliance on the SRN for local journeys including a reduction in the need to travel and integrating land use considerations with the need to maximise opportunities for walking, wheeling, cycling, public transport and shared travel.

32. The Transport Decarbonisation Plan indicates that carbon emissions from car and van use is the largest component of the United Kingdom's total transport emissions. While action is being taken to decarbonise transport such that all new cars and vans will be fully zero emission at the tailpipe from 2035, the proposed location of growth in current plan periods and whether new developments would be genuinely sustainable remain important factors in demonstrating that a local authority area is on a pathway to net zero by 2050 and therefore compliant with the requirements of the Climate Change Act 2008.

33. Alongside this, the local authority should identify the key issues within their study area regarding transport provision and accessibility, setting out how the plan or strategy can address these key issues in consultation with (National Highways, and other transport stakeholders identified in NPPF paragraph 106b). It is the responsibility of the local authority undertaking its strategic policy-making function to present a robust transport evidence base in support of its plan or strategy. The company can review measures that would help to avoid or significantly reduce the need for additional infrastructure on the SRN where development can be delivered through identified improvements to the local transport network, to include infrastructure that promotes walking, wheeling, cycling, public transport and shared travel. A

robust evidence base will be required, including demand forecasting models, which inform analysis of alternatives by accounting for the effects of possible mitigation scenarios that shift demand into less carbon-intensive forms of travel.” (our emphasis)

Within the text quoted above, references to National Highways and “the Company” can quite legitimately be extended, given the statements in NPPF paragraph 16, 25, 26 and 106b, to include all the relevant transport infrastructure and service providers in the plan area. Circular 01/2022 also has the weight of secondary legislation as a Written Ministerial Statement and thus should be considered to be highly material.

To date there has been little attempt to explore, to the degree necessary, strategies that conform to Circular 01/2022. It is thus not possible to conclude, as the Council has done, that the issues on the A27 that present a constraint to development, are insuperable.

In line with comments made elsewhere in the response to this pre-submission draft, the Plan thus requires substantial further work to be undertaken with key stakeholders to establish a suitably effective and demonstrably deliverable transport mitigation strategy, to sustainably meet the District’s identifiable development needs and where apparent and appropriate, also ensure that wider cross boundary strategic issues are appropriately addressed, in conformity inter alia, with the Duty to Cooperate, NPPF paragraph 16 and 104-111 inclusive, and DfT Circular 01/2022 and to ensure the Plan’s own Strategic Objectives can be met.

7.2. Policy T1 Transport infrastructure
Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

As described in comments elsewhere, Stagecoach does not see that a suitable proportionate and up-to-date basis exists to properly and appropriately address the transport issues in the plan area.

The 2023 Transport Study does not perform this role adequately but, contrary to the explanatory memorandum, is a scheme intended only to facilitate car-borne movements through some of the key junctions. There is no evidence that an holistic integrated and strategic approach to transport mitigations has been prepared. Certainly Stagecoach has not been involved in any of the discussion about appropriate transport measures in support of the plan, including the Transport Study 2023, contrary to the expectations set out in NPPF at paragraph 16 and 106.

Notwithstanding out fundamental concerns about the transport evidence case and mitigations strategy, Policy T1 reflects a weak and ineffective approach, that seeks to try and define a strategy post-adoption.

Contrary even to the explanatory memorandum for the policy, which seeks to maximise the contribution of sustainable modes, the policy is phased in such a way that it gives basis for previous “predict and provide” solutions to facilitate and support current levels of car dependency – already shown to be undeliverable and unaffordable – will nevertheless be the first rather than the last resort. There is no commitment to seek to maximise the contribution made by sustainable modes to meeting mobility needs. Nor is there any recognition that current chronic congestion and lack of network resilience jeopardises the ongoing attractiveness and long- term sustainability of the current public transport offer.

To be effective and create alignment with national policy, and also provide for an up-to-date transport evidence base and strategy to be adduced, Policy T1 should be modified to read:

“Integrated transport measures will be developed to mitigate the impact of planned development on the highways network, improve highway safety and air quality, promote more sustainable travel patterns and through providing in the first instance, new and improved infrastructure and services that will be credible effective in maximising the encourage increased use of sustainable modes of travel, such as public transport, cycling and walking.

To achieve this, the council will work with National Highways, West Sussex County Council, other transport and service providers (including through the Traffic and Infrastructure Management Group) and developers to provide a better integrated transport network and to improve accessibility to key services and facilities...

All parties, including applicants, are expected to support these objectives by:

1. Ensuring that new development is well located and designed to avoid or minimise the need for travel, encourages maximises the use of sustainable modes of travel as an a credible alternative to the private car and directly provides or contributes towards new or improved transport infrastructure;
2. Working with relevant transport infrastructure and service providers to improve accessibility to key services and facilities with primary emphasis on sustainable modes, and to ensure that new facilities are easily accessible by sustainable modes of travel;

3. Targeting investment to provide local travel options as an that represent a clearly credible alternative to the car use, focusing on the delivery of improved integrated bus and train services, and improved pedestrian and cycling networks, including the public rights of way network, based on the routes and projects identified in the Local Transport Plan, West Sussex Bus Service Improvement Plan, Local Cycling and Walking Infrastructure Plan (LCWIP) and the Infrastructure Delivery Plan;
4. Planning to achieve the timely delivery of transport infrastructure on and approaching the A27 and elsewhere on the network, needed to support new housing, employment and other development identified in this plan;
5. Phasing the delivery of new development to align with and where possible facilitate the provision of new and improved transport infrastructure and services and the outcomes of monitoring travel demand on the network, including that arising from areas immediately adjoining the plan area. It may also be Where necessary to achieve this alignment proactively phase development will be phased to take into account the monitoring and effectiveness of travel plans demands on the network and to ensure that measures are implemented to support the highest possible level of encourage sustainable travel behaviour.;
6. Using demand management measures, such as travel plans, to manage robust methodologies to assess travel demand and minimise the need for new or improved transport infrastructure as part of the monitor and manage process.
7. Delivering a coordinated package of infrastructure improvements at and approaching to junctions on the A27 Chichester Bypass along with other small-scale junction improvements interventions within the city and elsewhere, as identified through the monitor and manage process. These will increase road capacity, reduce traffic congestion, improve safety and air quality, and improve access to Chichester city from surrounding areas, first by maximising the contribution of sustainable modes to meeting mobility demands, then, and only as evidenced by robust modelling and option testing, providing increased highway capacity for general traffic.

..."

7.3. Policy T2 Transport and Development Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Section 1 b) of T2 will be ineffective as, absent measures to ensure buses can run reliably and efficiently, improved bus services will not be possible, in support of the plan's own stated broad approach to transport mitigation, as well as wider local and national policy.

The draft policy does not require improvements to the quality of services such that sustainable choices will be materially more attractive than car use for many local journeys. Without this the Plan's Strategic Objectives cannot be fulfilled and the objectives of the Plan and this policy, read in its own terms, will not be realised, where reduction in private car use is concerned. It is thus ineffective.

Absent measures to make bus services more reliable and more efficient, by insulating them from chronic congestion as far as possible, still further operating resource and therefore costs, will be needed to just to reliably run existing service frequencies, and capacity, as vehicle productivity continues to be more and more adversely affected by chronic delay. This will be further aggravated by increasing incidence of severe unpredictable service breakdown arising from incidents of diverse kinds on the network, especially on or around the A27, including that arising from more regular severe weather events. Longer journey times can only be expected to lead to relative disadvantage of bus services compared to personal car use, entirely contrary to the objectives of national and local policy, including Policy T1. It can also expect to lead to a dampening effect not on car use, but on bus patronage, threatening the ongoing viability of bus services across the plan area.

Section 1 b) of T2 should be modified to read:

"b) Maximise opportunities for the use of sustainable travel modes through provision of direct and efficient access both to either the existing networks or and through providing such new infrastructure or public transport services, as can be credibly expected to reduce reliance on the private car and work towards achieving net zero in greenhouse gas emissions by 2050;"

Section 1 d) of T2 will be ineffective as the location of development is fixed by this plan. We commend the fact that all the strategic allocations are or will be served by regular bus services.

However, the use of public transport services, where available, depends on the relevance and reliability of these services. Furthermore, provision of services without them generating sufficient patronage to support their long-term operation also threatens the sustainability of the plan and its supporting transport strategy. This is especially true of new services such as those intended to serve West of Chichester and Tangmere and East of Chichester Strategic Allocations.

This can only be assured by the plan being supported by specific measures to ensure buses can operate efficiently and reliably on the existing and projected services intended to serve the developments concerned, and also at the same time

secure behavioural change from existing development.

To be sound and effective, the policy T2 1 d.) should be changed to read:

“d) Ensure major development is located to proposals and the supporting mitigation measures enable the use delivery of high-quality, reliable and effective public transport to present the most relevant possible choice to access local services and facilities including employment, leisure and education facilities”;

The Policy T2 makes no provision for buses, where necessary, to enter and make efficient and safe progress through major development sites. The plan is thus out of conformity with NPPF paragraphs 104-106. It makes no provision to ensure that penetration of bus services is achieved at a suitably early point in the development trajectory, undermining the achievement of the goals of the Plan and this specific policy. As a good example, West of Chichester Phase 1, currently under construction, cannot be served by buses as a strategy to effect interim bus penetration was never made.

Policy T2 1 f.) should therefore be amended to read:

f) Ensure that the layout and design of the site development proposals provides effective penetration of the site by sustainable modes, at all points in the development build-out, including public transport where appropriate; and sufficient space for all vehicles to manoeuvre without compromising the safety of pedestrians and cyclists, the efficiency of bus services, or the ability to provide an appropriate level of landscaping across the site”

Policy T2 3.) regarding Travel Planning depends entirely on its effectiveness on the quality and relative attractiveness of sustainable alternatives over car use. In the absence of efficient frequent, reliable and direct public transport services (or similarly, high quality facilities for active travel, Travel Plans will continue to be the entirely ineffective “tick box” exercises that they generally are today, evidenced by much lower levels of public transport use in most new developments than it seen in nearby established neighbourhoods, as demonstrated broadly by Census data in 2011, 2011 and 2021.

For this policy to be effective an up-to date transport evidence base and strategy, underpinning a series of specified interventions to promote the relevance and effectiveness of all sustainable does including public transport in particular, needs to be put in place.

8. Chapter 9 Infrastructure – Policy I1 Infrastructure provision

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Policy I1 could not expect to be effective without a clear understanding of the effectiveness and costs of a defined series of measures that are laid out in this Plan and its IDP, to mitigate the transport impacts of the development strategy.

Where the Chichester Transport Study is concerned the only meaningful work has focused on the definition and delivery of a range of highways capacity schemes mainly on the A27 around Chichester.

As we have discussed elsewhere the effectiveness of these schemes is insufficient as set out at Tables 8.1 and 8.2 of the Chichester Transport Study 2023. The plan itself admits that the deliverability of this package cannot be afforded by developer contributions alone.

The Chichester Transport Study 2023 does not attempt provide a realistic assessment of costs to deliver these schemes, despite the fact that they have been under evaluation for many years. Nor does it offer any assurance that the schemes are technically achievable. Rather, it states the opposite:

“9.2.3 No investigation has been carried out into specific land ownership details, or into the location details or cost of moving statutory undertakers and utility apparatus within the areas of the scheme. No design assessments were carried out at this stage to ascertain the deliverability of the proposals except where any Health and Safety concerns were raised.”

Thus on the grounds of effectiveness, deliverability and affordability, the measures on which the Plan relies must at the very least be considered to involve an exceptionally high level of risk. Since Policy I1 is founded on these assumptions, it cannot be considered effective.

As we set out elsewhere, the Plan has been advanced on the basis that if any additional sustainable transport measures are required, these mitigations should be retroactively considered and defined after adoption of the Plan. In the light of the doubts that are apparent of both the deliverability, affordability and effectiveness of the Chichester Transport strategy this is especially unsatisfactory even if existing baseline conditions were reasonably acceptable.

However, the Chichester Transport Study 2023, as did its predecessors, makes plain that that existing problems are acute, and can rightly be considered “severe” in the sense of NPPF paragraph 111. Waiting to define deliverable affordable alternatives is an entirely inappropriate approach to the local plan transport mitigation strategy. Such an

approach also makes it impossible to consider prior to adoption how far the transport impacts of the plan can be cost-effectively mitigated by alternative means, or whether they are deliverable having regard to technical achievability, land control, development viability, or any combination of the above. Thus, the plan cannot be considered justified, or effective.

Given the mutual dependence of development strategies in Chichester and Arun in particular on these measures this should be seen as crucial of the fulfilment of the Duty to Cooperate.

The remedy for this is ultimately to put in place a suitable transport mitigation strategy following a strategic appraisal of options through review of the LSS. This then must be supplemented by more detailed development specific and localised scheme definition, including, where necessary, bus priority and other measures to support the substantial promotion of the attractiveness of public transport in key bus corridors over private car use. This would then be reflected by costed proposals in the IDP.

Leaving these fundamental weaknesses to one side, even if such a strategy and mitigation package were defined, there is no mention of public transport in the policy even though it is clearly a key part of the policy environment and mitigation strategy for the plan as expressed in the explanatory memorandum for I1, but also at Policies T1 and T2. I1 thus does not effectively support the realisation of the intent of Policies T1 and T2.

Policy I1 iii) should therefore be modified to read:

“(iii) Safeguard the requirements of infrastructure providers, having regard to requirements within and where appropriate across the boundaries of the plan area, including but not limited to:

...

• Highways including specific measures to accommodate improved active travel and public transport level of service and cycle lanes, and...”

At limb v) the Policy expects developers to meet the “in perpetuity costs of operating and maintaining infrastructure”. This shackles development management decisions to developers assuming what are infinite costs – given that “in perpetuity”, read properly, can only mean “without any limit in time”. This means that it is impossible to meet the statutory tests on developer obligations set out in the Community Infrastructure Levy Regulations 2010 (as amended) at Regulation 122, also repeated in NPPF. This policy cannot be lawfully implemented and it is thus ineffective.

In the absence of an up-to-date transport mitigation strategy that is fit for purpose, at the point the Plan is examined these costs of any additional infrastructure are not known in any case. The strategy and its costs, including its affordability and deliverability, are crucial to assessing if the Plan is sound.

Subject to an appropriate defined transport mitigation strategy being arrived at, to be sound, the Policy I1 v) should be modified as follows:

(v) To consider and meet as appropriate the in-perpetuity delivery costs of infrastructure and, where appropriate, improved services, to the point where its long-term operational sustainability is credibly assured from mainstream sources. Where adoption is not envisaged by local authorities, that must include arrangements for its future ongoing management and maintenance;

9. Strategic and Area Based Policies

9.1. Policy A1 City Centre Development Principles

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Chichester City centre is rightly identified at 10.2 and 10.4 as the commercial and service hub of the District. It is also acknowledged to be the most accessible place in the District by sustainable modes, public transport in particular.

Boosting the vitality of the city centre is something that Stagecoach strongly supports. Irrespective, the enhancement of the commercial and cultural life of the District in the place where these opportunities can be accessed broadly by sustainable modes, is one that has long been at the heart of national planning policy for town centres, reflected in the “town centre first” approach to locating major trip generating uses.

Paragraph 10.5 exposes an unbalanced and unsound preoccupation with aesthetic matters in its approach to the town centre, and far too little to ensuring that the central place function is enhanced through protecting and enhancing the quality of public transport access.

The city is relatively small but at the heart of an extensive hinterland, and thus the role of bus in supporting sustainable access to and enhanced city centre venue is one that needs appropriate recognition and emphasis. It is important to note

that a dominant number of key service and facilities such as the General Hospital are relatively close to the city centre. This directly contributes to driving travel demand into the city, causing congestion. Most importantly, it also makes the task of mitigation simpler, given the impact a suite of active and sustainable measures can have within the same close proximity.

Policy A1 does not provide this. As such, achieving the strategic objectives of the plan is seriously threatened, and the plan is thus not effective.

The Plan needs to ensure that the approach to city centre regeneration maintains and enhances public transport access, interchange and inter-modal connectivity. It also needs to ensure that bus service stopping and interchange facilities are able to address increases in future demand, anticipated by the clear intent expressed elsewhere in the Plan that public transport should be meeting a greater proportion of mobility needs, in a growing district. Achieving this demands an ambitious approach to the location, quality and capacity of bus stop and interchange.

We have been in discussions with the District Council about this, alongside West Sussex County Council, for a very considerable period. Stagecoach has always been keen to help facilitate the Council's aspirations for the city centre, and we continue to hold this intention. However, this cannot be at the expense of a material diminishing of the convenience and fitness-for-purpose of bus stop infrastructure and interchange. Stagecoach has significant concerns that current proposals to remove the bus station and have all bus services operate from the street kerbside, on an inner distributor road with similar of reduced net stop capacity, fall short of promoting attractive, convenient bus access to the central area as a destination.

For the longer term and where the objectives of the draft plan are concerned looking ahead to 2039, they clearly fall short of enhancing the convenience and attractiveness of public transport use. Much less do they make sufficient provision for a material increase in bus frequency, connectivity, and interchange convenience, on which the draft plan explicitly relies. It is vital that the District Council is clear in policy about its objectives for public transport in the city centre. These objectives must also carry sufficient weight when held in tension with other aspirations for the centre and the constraints on achieving them.

For the Plan to be sound, properly effective and compliant with NPPF, the approach to the City centre cannot ignore its role in the provision of sustainable transport service and connectivity.

Policy A1 should therefore be modified to properly reflect this crucial function, on which the vitality of the city centre must increasingly depend if unacceptable impacts on congestion, air quality and amenity are not to arise. This is still more crucial if wider aspirations to secure a more sustainable society and mitigate carbon are to be achieved.

"...This will include provision for development and proposals that:

- Support and strengthen the vitality and viability of the city centre and its role as a shopping/visitor destination, employment centre, public transport hub and a place to live;
- Support and promote facilitate improved access to the city and with increased emphasis on sustainable modes of travel, with particular regard to enhancing the public transport interchange role of the city centre area, in accordance with the transport strategy for the city and..."

9.2. Policy A3 Southern Gateway Development principles Chichester Bus Station, Bus Depot and Basin Road Car Park Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

There has been aspiration to redevelop the bus station and nearby bus depot from many years. Stagecoach has been engaged with detailed discussion with the District Council on this matter over a very extended period. We confirm that these discussions have reached a relatively mature stage, however at the time of writing are not concluded.

Stagecoach recognises and supports in principle the Council's wider aspirations for the "Southern Gateway", and this has governed our approach to the Council to date. We continue to have no "in principle" objection to relocating our administrative, engineering, operational and customer service facilities.

Leaving our proprietary interests entirely to one side, it remains vital that in so doing, the effectiveness, attractiveness and convenience of these facilities is not compromised, as we have outlined in our representations to Policy A1, if wider national and local transport policy, and the local plan strategy itself, are to be effectively achieved.

The depot is crucial infrastructure to support the safe, reliable and legally-compliant operation of Stagecoach bus services over a very extensive area covering the entirety of the District and beyond. Without securing equivalent facilities, that are fit-for-purpose, many of our services would have to cease.

If buses are to provide a greater and more attractive level of service (still more so if they are to be electrified) larger, more capable depot facilities, and city centre bus interchange facilities will be necessary.

Notwithstanding that the bus station and depot sites are leased from the District Council, these leases terminate well beyond the end of the plan period.

Finding suitable sites for a replacement bus depot in Chichester, in common with all similar localities especially in southern England, is extremely challenging. As a sui generis use, bus depots do not automatically benefit from policy support on land allocated for employment uses. Most bus depots benefit from being legacy assets established under very different economic conditions. That is the case here. The value of a depot site for redevelopment net of demolition and remediation costs, rarely approximates to that able to sustain the acquisition of land in a tight wider employment land market, and the construction of suitable new facilities.

Furthermore, the costs of operating bus services are sensitive to the parasitic costs of vehicle and staff hours and mileage associated with "dead running" to a remote depot location from the operational network. Here, the existing depot site is ideal, and any replacement will unavoidable add ongoing operational costs to the operation that cannot be directly recovered.

We confirm that a replacement depot site has been identified and has in principle been agreed, subject to overcoming issues with the disposition of existing and future structures on the site. However, the site is recognised as not capable of accommodating meaningful operational expansion. This is just one of the most important foundational reasons why a positive transformation of bus productivity needs to be achieved, across the plan area and beyond, to support delivery of greater bus mileage and frequencies with the same level of operational resource. At the time of writing, we are not fully convinced that the proposals for the relocation will be sufficiently fit-for-purpose in the event the above is not achieved. Thus, we must raise a concern that the bus depot site might not be available during the plan period. While there is a strong probability it will be, the certainty surrounding the availability of the site, especially within the first 5 years of the plan, needs to be made transparent.

9.3. Policy A4 Southern Gateway - Chichester Bus Station, Bus Depot and Basin Road Car Park

Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Regarding the removal of the bus station, without equivalent replacement, Stagecoach has significant concerns. Pressures and conflicts at the current bus station site have been gradually rising for several years, arising from increasing use and the need for additional scheduled vehicle layover periods to reduce the risks of accumulated late running from traffic congestion. Peak passenger volumes have recovered strongly on several routes, however passenger accumulations resulting from more frequent delays and disruption have added substantial further pressure on limited space.

Under current plans, buses and bus passengers will be displaced to bus stops at new locations outside the city centre, along Avenue de Chartres. This road was always intended to be a relatively high-speed traffic route, outside the historic core of the city. The city centre has evolved in the subsequent years to reinforce already strong natural severance, with the highway lying beyond the city walls and the green space along the Lavant. It is a traffic dominated, un surveilled and unattractive environment, reflecting the intended function of the road as an efficient movement corridor for high traffic volume, and nothing more. Avenue de Chartres is relatively close to the rail station and pedestrian connectivity can be provided at broadly equivalent distance to the current bus station, but again it is un surveilled and currently unpleasant, lacking natural legibility or any sense of prominence.

We understand kerbside capacity on Avenue de Chartres will be strained even to accommodate current levels of service, with no expansion possible. There is therefore a strong probability that to accommodate more frequencies and key new routes, such as West of Tangmere, East of Chichester and West of Chichester allocations, additional future bus stops must occupy a different location. This makes interchange between routes and rail services substantially challenging and less attractive.

The emerging arrangements risk marginalising public transport and public transport users substantially. This strongly undermines achievement of the wider plan objectives and delivery of a significantly greater role for public transport. If substantial public transport growth is to be accommodated in a growing city and hinterland, as the draft plan anticipates, then a more ambitious strategic approach must be taken. This should plan for additional and improved facilities to accommodate all services predicted to be required, whilst enhancing the passenger experience to ensure meaningful and attractive modal choice.

There is therefore a need for the plan to evidence how these issues will be appropriately resolved, having regard to a suitably ambitious approach that properly supports clear objectives to boost the relevance of public transport. The current policy is weak, un specific and indifferent to achieving the strategic objectives of the plan, including a transport strategy in support of the plan, and as such it is ineffective.

Policy A3 should therefore be modified to read:

"...

- Be designed to encourage and facilitate substantial increase in the use of active travel and public transport to, from and through the city centre.

..."

In line with the commentary above Policy A4 should also be modified to read:

3. Enhance the public interchange function of the immediate area, the public realm, particularly connections to the railway station and the city centre via South Street, Southgate and Basin Road for pedestrians, cyclists and public transport users, and to National Cycle Route 2 and Route 88 which run close by. Suitable replacement bus stops and layover facilities should be provided to replace those at the bus station in line with reflecting the objectives of the West Sussex Bus Service Improvement Plan, and to facilitate growth to meet the requirements of the plan's development strategy. Routes and crossings should reflect pedestrian desire lines, and public art should be incorporated to create a sense of place;

4. Enhance the public realm, in support of this and wider objectives, incorporating public art and other measures to create a strong and attractive sense of place.

...(renumber remaining points)

9.4. Policy A6 Land West of Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

This is an existing Local Plan allocation. The public transport strategy for the site depends on the delivery of the second phase which Stagecoach notes is the subject of several applications now awaiting review and determination by the Council.

The site represents a compact form of development adjoining the city, as the most sustainable settlement, meeting housing needs close to where they arise, and affording very good opportunities for the use of sustainable modes, especially walking and cycling.

It is vital that a bus service is delivered to serve the site at the earliest potential. This was anticipated to be at the start of Phase 2 and will require the early delivery of the entire length of the spine road between the Old Broyle Road and Westgate and making it available for bus services.

It is not clear if the costs of pump-priming the service mentioned in the draft policy are anticipated to be met by the developer. Without such funding, the service will not be deliverable as years of losses will never credibly be covered from future profit. It is likely that the current wording will be interpreted by the developer as meaning that they have no such obligation binding upon them. Not does policy set out any specification for this service, thus its costs and the basis for securing developer contributions does not exist.

As such any wider transport strategy, that seeks to secure a greater role for the use of public transport, and the aspiration for this allocation cannot demonstrably be met. The policy is ineffective.

Policy A6 should be modified to read:

..."

10. Make provision to accommodate and secure delivery of for regular bus services linking running through the site to Chichester city centre operating at least every 30 minutes Monday-Saturday, and new and improved cycle and pedestrian routes linking the site with the city,

..."

9.5. Policy A7 Land at Shopwhyke

Stagecoach Supports

This is an existing Local Plan allocation, largely built-out, that benefits from an existing set of permissions.

The public transport strategy for the site depends on the delivery of effective bus priority at Oving Crossroads. The current recently implemented scheme, undertaken by National Highways, makes no provision for effective bus priority and needs considerable re-evaluation.

The site represents a compact form of development adjoining the city, as the most sustainable settlement, meeting housing needs close to where they arise, and affording very good opportunities for the use of sustainable modes, especially walking and cycling. It lies on a new bus corridor that will shortly be put in place, running to Tangmere via Shopwhyke. The allocation is being significantly consolidated by further development in the immediate vicinity which strongly supports the potential for this new service.

As we explain in our representations for East of Chichester proposed allocation A8, and West of Tangmere Allocation A14, a clear corridor strategy to effect bus priority is needed, that should be delivered in support of that further growth, and that at Tangmere SDL. However this allocation is a near complete commitment and there is no scope through policy regarding this land to effect this outcome.

It is notable that Point 6) of policy A7 makes mention of a bus service. This language reflects the currently adopted Local Plan policy and has underpinned the existing permissions. The failure of any bus service to be delivered demonstrates from first principles that this Policy has been entirely ineffective. It is important that lessons are learned from this in the Local Plan Review.

9.6. Policy A8 Land East of Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This proposed allocation lies next to unallocated land that is already consented as a departure from the adopted development plan, with 143 units near completion south of Oving Road (20/02471/FUL). Additional land, also unallocated but similarly consented, has now commenced north of Oving Road (88 units under 21/02197/FUL). This and the allocation site consolidates earlier development at Shopwhyke brought forward under the current Local Plan, and allocated again as draft policy A7.

Development at Shopwhyke was brought forward on the basis of a premise that the developer would provide or somehow arrange a bus service, that was reflected in the policies of the current Local Plan. This was secured by an unenforceable condition. No bus service has been provided, as there was inadequate clarity regarding the basis on which the costs of establishing such a service would be met by the developer, and the expectations of policy on the developer. The site does however lie on a logical new bus corridor between Chichester and West of Tangmere along the Oving Road.

In addition, an expectation that modifications to the Oving Crossroads would effect bus advantage have proven false – the arrangements put buses into a similar or longer queue than if they use the route available to general traffic to and from the A27.

Stagecoach strongly supports the principle of bringing this land forward. However, the soundness of the site depends on deliverability of a regular, reliable and direct bus service along the Oving Road, taking advantage of effective bus priority.

Given the failure of existing policy in the adopted Local Plan covering the proposed A7 allocation to deliver a bus service, it is of great concern that there is no draft policy to adequately address the issue. The policy is out of conformity with NPPF paragraph 104-105 in that sustainable modes do not offer realistic choices, much less an attractive one, and as such also does not secure the objectives of national policy nor of the plan itself.

Currently the proposed allocation is not served at all by public transport. Policy needs to ensure there is a policy basis to secure contributions to deliver such a service, which may well take the form of a proportionate contribution to deliver a new service or enhance provision that is put in place between Chichester along the Shopwhyke Road to west of Tangmere.

To become sound Policy A8 must be modified to read:

“
...
12. Provide for improved high quality connectivity by sustainable travel modes and focused in particular on a corridor between Chichester city centre and Tangmere along Shopwhyke Road, including new improved cycle and pedestrian routes, and a frequent bus service including linkages with Chichester taking advantage of effective bus priority measures on Oving Road at the A27;
...”

9.7. Policy A9 Land at Westhampnett/North East Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This land is already allocated and consented as part of the existing 2016 Local Plan. All reserved matters are determined.

The site lies on service 55 between Chichester, Westhampnett and Tangmere. This established service benefits from additional demand from the development at Phase 1. Phase 2 which is currently well underway, does not benefit directly from bus services. However it is a compact and logical form of development where walking and cycling to local facilities and employment is a credible option.

The existing allocation rolls forward policies in the 2015 Local Plan. In so doing it is possible to see which have been effective.

Point 9. regarding bus service and routing has not been effective. In particular the potential for a bus only link between the site and Graylingwell has not been established as policy anticipated. Given congestion around the Portfield area

acutely affects public transport this, or alternative methods to secure bus priority over private car use, a clear and unequivocal policy steer is required.

The lack of an up-to-date transport evidence base is ultimately at the root of these issues. Arguably the policy and allocation can only be made sound once this refreshed evidence base is in place.

However, it is possible that the allocation could be made sound by modification of Policy A9 as follows:

“ ...

9. Make provision for regular, direct and reliable bus services linking the site with Chichester city centre, and new and improved safe and convenient cycle and pedestrian routes linking the site with Chichester city, the South Downs National Park and other strategic developments to the east of Chichester city including Tangmere. These objectives could include exploring the potential for a bus only route require a deliverable scheme to afford bus priority through Portfield, and potentially linking the development with the Graylingwell area through use of a modal filter;

...”

9.8. Policy A10 Land at Maudlin Farm

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing public transport route. It is relatively close to the city and very near substantial centres of employment and services that can be reached by active travel modes, helping damp the demand for car use. It is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services at Portfield and over a wider area. In fact, the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A10 should accordingly be modified to read:

“ ...

5. Provide safe and suitable access points for all users, including a main vehicle access from Old Arundel Road and, subject to further assessment, a secondary vehicle access from Dairy Lane. The development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes;

...”

9.9. Policy A11 Bosham – Land at Highgrove Farm

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Bosham Station. It is relatively close to the city and very near substantial centres of employment and services that can be reached by public transport and cycling, offering strong potential to materially damp the demand for car use.

There are serious risks that development in the A259 corridor west of Chichester could place further demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular to bus services.

Nevertheless, given the potential to effect bus priority on the approaches to Fishbourne Roundabout, it is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those

already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A11 should accordingly be modified to read:

"...

8. Provide safe and suitable access points for all users, including a main vehicle access from the A259. The development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys crossing the A27 at Fishbourne;

9.10. Policy A12 Chidham and Hambrook

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Nutbourne Station. Substantial centres of employment and services that can be reached by public transport and cycling, offering strong potential to materially damp the demand for car use.

There are serious risks that development in the A259 corridor west of Chichester could place further demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular to bus services.

Nevertheless, given the potential to effect bus priority on the approaches to Fishbourne Roundabout, it is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A12 should accordingly be modified to read:

"...

7. Development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys along the A259, crossing the A27 at Fishbourne and where necessary on the approaches to Emsworth;

8. Facilitate improved sustainable travel modes, and new improved cycle and pedestrian routes, including linkages with Chichester city and settlement along the East/West Corridor;

9.11. Policy A13 Southbourne Broad Location for Development

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach agrees unequivocally that Southbourne is a location that could accommodate growth on a strategic scale. It has a substantial range of service available within the settlement, including secondary education. It is well connected by bus and rail service to key destinations, including Chichester, lying to the east and west.

This is one of the few locations identified for growth that represents substantial additional development in a new location to the strategy in the existing Local Plan adopted in 2015. Thus, the transport impacts of development on the substantial scale envisaged at Southbourne are not covered or accommodated by the Chichester Area Transport Strategy that lies behind the existing plan. This demands, from first principles, that substantial further transport mitigation measures are

required.

We recognise and endorse fully that the intent of the draft plan for Southbourne as a Broad Location for Development on a strategic scale, includes “Maximising the potential for sustainable travel links through improved public transport, including consideration of opportunities to reduce community severance caused by the railway line as well as the inclusion of cycling and pedestrian routes.” (our emphasis).

The existing railway station at Southbourne is served regularly, however, it is not within the power of this plan to improve rail services. It is, however, well within the scope of action of the Local Planning and Highways Authority to work with bus operators to achieve a step change in the journey time, reliability, frequency and connectivity of bus services, and in particular the major corridor operated as service 700 by Stagecoach along the A259 between Havant and Chichester through Southbourne.

Notwithstanding the clear potential for sustainable connectivity in the western A259 corridor, there are very serious risks that development in the A259 corridor west of Chichester will place further significant car-borne demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular bus services, having the opposite effect to that intended: longer, less reliable and less frequent bus services, leading to a spiral of slowly declining use.

These risks, while very serious, look credibly likely to be entirely mitigated subject to carefully conceived and robust specified actions on the local highway network. It is perplexing to us that this potential still has not been identified, as part of a comprehensive “first principles” review of the transport evidence base. In particular given the former trunk status of the A259, there is evident potential to effect bus priority on the A259, including on the approaches to Fishbourne Roundabout.

With appropriate measures, including but not limited to this, to substantially boost the relevance and attractiveness of sustainable travel choices, strategic development at Southbourne could well be made highly sustainable.

In the absence of a refreshed transport strategy and transport evidence base, the draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact, the only reference that is made in Policy is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A12 should accordingly be modified to read:

“...Development should be comprehensively masterplanned to achieve a high-quality design and layout that integrates well with the surrounding built and natural environments to enable a high degree of connectivity with them, particularly for pedestrians and cyclists, and provides good the highest possible quality of access to facilities and sustainable forms of improved public transport services.

...

4. Provide a suitable means of access to the site(s), and securing secure necessary off-site transport infrastructure and service improvements (including highways in particular to the A259 corridor between Emsworth and Chichester) in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development) to promote sustainable transport options prioritising delivery of high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes;

...”

9.12. Policy A14 Land West of Tangmere

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach strongly supports the principle of intensifying the level of development at the Strategic Development Location already identified and allocated West of Tangmere in the existing Local Plan. This serves to consolidate development at a location where effective and attractive public transport choices could be provided. It also conforms closely with the principle expressed in NPPF that the best possible use should be made of land on sites that are judged to be sustainable, or potentially sustainable locations for development.

It must be stressed that the current policy suite for the SDL has to date not brought forward development in this location. We recognise that a Master Plan has been adopted by the Council, and that a planning application (20/02893/OUT) for the full larger quantum of 1300 dwellings proposed in the draft plan has received a resolution to grant by the Council.

However, we are not aware that a sustainable transport strategy has been finalised.

Land West of Tangmere is not served by any existing regular bus services. Rather, an entirely new bus service corridor is anticipated to operate in the near term from Chichester through Tangmere and beyond towards Barnham. This would serve proposed allocations A7, A8 and West of Tangmere (A14) included in the draft Plan.

This is reflected in the language of the explanatory memorandum to Policy A14 at paragraph 10.65:

“Opportunities, in partnership with relevant authorities, to provide improved sustainable public transport routes linking the village with Chichester city, to improve cycle routes to the city, and better transport links to Barnham rail station and the ‘Five Villages’ area in Arun District; and..”

Initiating this service will be costly and will in large measure be funded not by developer contributions, but by DfT monies awarded through the West Sussex Bus Service Improvement Plan. It is crucial this service is both sustainable in the longer term without revenue support, and that the success of the service can be built on by scalable frequency improvements as strategic development comes forward in both Chichester District, and proposed allocations A7 A8 and A14, and in Arun District, in particular at Barnham, Eastergate and Westergate (BEW).

This demands measures to effect safe, direct and swift operation of the service especially within the city centre, where it approaches and crosses the A27 at Oving crossroads and on the eastern fringes of the District east and west of Tangmere. Without these measures, bus journey time and reliability will be severely compromised and the impact of this service to damped car trip demands will be very substantially compromised. No such measures are proposed in the draft plan or its evidence base.

Changes to Oving Crossroads have recently taken place which, amongst other intentions, ostensibly provide bus advantage between Chichester and Shopwhyke. The junction in its current form does not offer material gain in bus journey time, as movements involve a less-direct route towards the city over an increased operating distance, much of which involves passage through heavily congested sections of the A27 and Westhampnett Road. A refreshed transport strategy supporting plan-led growth must revisit this area to secure an effective solution which offers bus customers the fastest and most reliable trip-time to and from the city.

In addition, the extension of public transport connectivity towards BEW and Barnham, including key links to secondary education and a logical railhead for journeys beyond towards Brighton and London as provided at Barnham Station, needs to facilitate bus priority between Tangmere and Nyton – whether using the A27, or preferably avoiding it altogether. There are significant safety concerns associated with the at-grade uncontrolled right-hand A27 exit onto the B2233 Nyton Road at Crockerhill Turn. This movement is also prone to extreme delay owing to the conflict with approaching westbound traffic on the A27, travelling at speed, which has priority. Our concerns with this junction in its current form can be expected to worsen with the increased traffic volumes predicted from new residential developments to the west of the city.

A solution providing a suitable short length of highway available only to sustainable modes, between Tangmere and Easthampnett, could provide a very effective solution to this. This would be deliverable within the scope of the separate proposed allocation at A19 Chichester Business Park, Tangmere. We comment on this separately.

Howsoever effected, a reliable direct and delay-free bus corridor between Barnham, BEW, Tangmere and Chichester could expect to secure very substantial elevation of the relative attractiveness of public transport over car use on the entire corridor and serve to effectively damp growth-related demands on this section of the A27. West of Tangmere, in the longer term, there is evident scope for the route corridor to operate as two branches – one via Shopwhyke and one via Westhampnett, effectively serving all the strategic developments proposed in the plan and transforming wider public transport connectivity to key employment destinations and services within and east of Chichester.

However, in common with all the other proposed allocations, the plan proposes no specific measures to provide, much less improve public transport or other sustainable modes to the site. This leaves the draft plan out of conformity with NPPF, especially paragraphs 104-106. The plan is inadequately evidenced and to the degree that public transport measures are identified and emergent, their successful implementation in the near and longer term will be jeopardised without clear measures to provide a safe as well as efficient bus route towards BEW and the Five Village area within Arun. The Duty to Cooperate is not effectively met and effective cross boundary collaboration on these strategic issues through the review of LSS is not demonstrated, despite the current version which identifies the issues.

To be made sound the LSS Review and a subsequent urgent review of the transport evidence base and strategy needs to take place. The strategic issues are especially critical east of Chichester, in our view.

Notwithstanding this foundational deficiency, to be made sound, Policy A14 should be modified to read:

“ ...

8. Subject to detailed transport assessment, provide primary road access to the site from the slip-road roundabout at the A27/A285 junction to the west of Tangmere providing a spine road link with secondary access from Tangmere Road. Development will be required to provide or fund mitigation for potential off-site traffic impacts through a package of measures in conformity with Policy T1 (Transport Infrastructure) and T2 (Transport and Development) and DfT Circular 01/2022 that maximise the relevance and use of sustainable travel modes, in particular bus services;

9. Make provision for improved sustainable travel modes between Tangmere and Chichester city, in partnership with relevant authorities, including improved direct, seamless safe and reliable and additional bus and cycle routes linking Tangmere with Chichester city, Shopwhyke and Westhampnett. In conjunction with measures in support of Allocation A19, Opportunities should also be explored contributions shall also be sought for providing improving high quality cycling and bus service transport links with the 'Five Villages' area and Barnham rail station in Arun District; and..."

10. Concluding comments

Stagecoach recognises its role as a key stakeholder in the plan, as well as a local employer and corporate citizen. We recognise the primacy of the plan-led system as the mechanism intended to resolve complex challenges, including the proper alignment of transport and spatial planning, which as the National Decarbonisation Strategy for Transport among other policies makes clear, has never been more vital.

In making our representations, we emphasise that we are entirely supportive of the Local Planning Authority and the relevant Highways and Transport Authorities, in their efforts to properly manage the amount and pattern of development to secure vital policy objectives. We recognise that balancing delivery of assessed development needs with a wide variety of other constraints is a very difficult task.

The transport issues faced by the plan are recognised in the draft plan as being serious and long-standing. We believe that there are ways to arrive at a suitable transport mitigation strategy that has regard to wider strategic issues and resolves existing problems in a much more effective way than those pursued to date.

We support the spatial strategy of the plan as it evidently provides the basis to secure the necessary step change in the quality and use of sustainable transport modes, as it explicitly seeks to do. However thus far, there has been insufficient work done to define the measures that will credibly secure these outcomes.

Stagecoach therefore urges the authorities to draw us into the necessary effective ongoing collaborations that is expected by NPPF paragraph 16 and 106; and DfT Circular 01/022, to do this work, prior to, rather than after the submission of the draft plan. We look forward to being approached to initiate this dialogue at the earliest opportunity.

Change suggested by respondent:

Section 1 b) of T2 should be modified to read:

"b) The use of sustainable travel modes through provision of direct and efficient access both to either the existing networks or and through providing such new infrastructure or public transport services, as can be credibly expected to reduce reliance on the private car and work towards achieving net zero in greenhouse gas emissions by 2050;"

To be sound and effective, the policy T2 1 d.) should be changed to read:

"d) Ensure major development proposals and the supporting mitigation measures enable the use delivery of high-quality, reliable and effective public transport to present the most relevant possible choice to access local services and facilities including employment, leisure and education facilities";

Policy T2 1 f.) should therefore be amended to read:

f) Ensure that the layout and design of development proposals provides effective penetration of the site by sustainable modes, at all points in the development build-out, including public transport where appropriate; and sufficient space for all vehicles to manoeuvre without compromising the safety of pedestrians and cyclists, the efficiency of bus services, or the ability to provide an appropriate level of landscaping across the site"

Support is offered to this policy and its role in encouraging sound new developments, but the Estate remains concerned that compliance is too easily claimed by developers without demonstrable evidence.

The plan should adopt a logical, common sense approach to compliance, judging accessibility and sustainability as would a 'man in the street' – the fact a development might be physically close, within reasonable walking distance of services, does not mean it will encourage people out of their cars when doing the weekly shop.

Full text:

There needs to be a specific plan for provision of clearly-defined cycle routes. I cannot find one in the documents. I have a specific issue - next point.

Change suggested by respondent:

The cycle route between Selsey and Chichester is inadequate. The link from Selsey to the Ferry only exists in the form of a substantial diversion via the caravan site and the Medmerry perimeter track, past the waste water treatment plant, to the Ferry. The route from the Ferry onwards involves a near-useless track alongside Pagham Harbour. It is too narrow for safe mixing of cyclists and pedestrians. Much of the route beyond that point involves some complex navigation along tracks and unclassified roads. In view of the fact the cycling along the B2145 is both risky and highly problematic for other road users (and especially emergency vehicles), it's time that specific plans were incorporated in the Plan for each such key cycle route in the CDC area.

Document Element: Policy T3 Active Travel - Walking and Cycling Provision**Respondent:** National Highways (Mr Marius Pieters, Spatial Planning Manager) [8127]**Summary:**

[National Highways letter dated 24/07/23 confirmed representation should be categorised as Comment - Noting proposals should maximise opportunities for non-car trips] Proposals should maximise opportunities to link with the wider network including the existing A27 pedestrian and cycle footbridges and active travel routes along/intersecting the A27 corridor and how new facilities will be funded, monitored, and maintained. This is especially important as demand increases on and for the use of the A27.

Full text:

We have reviewed the publicly available Local Plan documents and provided comments in the attached letter, in relation to the transport implications of the plan for the safety and operation of the SRN.

Our comments include issues to resolve, comments, requests for further information and recommendations. A brief summary of our main comments are:

- the reliance on the delivery of the A27 Chichester bypass improvements project.
- the requirements for new, additional, and adapted processes and assessments, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments.
- collaborative working between agencies in combination with a robust monitor and manage policy.

We hope our comments assist.

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSSCC) and we will continue to work with the Council and other key stakeholders. We look forward to continuing to participate in future consultations and discussions.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Background

National Highways has been appointed by the Secretary of State for Transport as strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the strategic road network (SRN).

National Highways is responsible for operating, maintaining, and improving the Strategic Road Network (SRN) i.e., the Trunk Road and Motorway Network in England, as laid down in Department for Transport (DfT) Circular 01/2022 (Strategic Road Network and the delivery of sustainable development).

The SRN is a critical national asset and as such we work to ensure that it operates and is managed in the public interest, both in respect of current activities and needs as well as in providing effective stewardship of its long-term operation and integrity.

Our responses to Local Plan consultations are guided by relevant policy and guidance including the National Planning Policy Framework (2021) (NPPF):

- Transport issues should be considered from the earliest stages of plan-making and development proposals so that the potential impact of development on transport networks can be addressed (para 104).
- The planning system should actively manage patterns of growth such that significant development is focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. (para 105).
- Planning policies should be prepared with the active involvement of highways authorities and other transport infrastructure providers so that strategies and investments for supporting sustainable transport and development patterns are aligned. (para 106).
- In terms of identifying the necessity of transport infrastructure, NPPF confirms that development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe. (para 111).
- Planning policies and decisions should support development that makes efficient use of land, taking into account the availability and capacity of infrastructure and services – both existing and proposed – as well as their potential for further improvement and the scope to promote sustainable travel modes that limit future car use. (para 124).

In relation to the tests of soundness set out at paragraph 35 of the NPPF, in the context of transport, these are interpreted as meaning:

- a) Positively prepared - has the transport strategy been prepared with the active involvement of the highway authorities, other transport infrastructure providers and operators and neighbouring councils?
- b) Justified – Is the transport strategy based on a robust evidence base prepared with the agreement in partnership, or with the support of the highway authorities?
- c) Effective – Does the transport strategy and policy satisfy the transport needs of the plan and is it deliverable at a pace which provides for and accommodates the proposed progress and implementation of the plan?
- d) Consistent with national policy – Does the transport strategy support the economic, social, and environmental objectives of the Plan and the NPPF/NPPG?

We will be concerned with proposals that have the potential to impact on the safe and efficient operation of the SRN; in this case, the A27 trunk road (Chichester Bypass and its junctions) which is the main access route in the Chichester area. We have particular interest in any allocation, policy or proposals which could have implications for the A27 and the wider SRN network. We are interested as to whether there would be any adverse road safety or operational implications for the SRN. The latter would include a material increase in queueing or delay or reduction in journey time reliability during the construction or operation of the development set out in the plan.

National Highways is a key delivery partner for sustainable development promoted through the plan-led system, and as a statutory consultee we have a duty to cooperate with local authorities to support the preparation and implementation of development plan documents.

In accordance with national planning and transport policy and our operating licence, we are entirely neutral on the principle of development as it is for the local planning authority to determine whether development should be allocated or permitted; albeit it must comply with national policy on locating development in locations that are or can be made sustainable. Therefore, while always seeking early and fulsome engagement with local plans and/or developers, we will simply be assessing the transport and related implications of plans or proposals and agreeing any necessary transport improvements and relevant development management policy.

In progressing Local Plans, we will seek to agree the following:

- Assessment tools and methodology
- Baseline Assessment i.e., to demonstrate that the assessment tool accurately reflects current transport conditions
- Comparator case assessment i.e., to forecast the transport conditions that would occur in the absence of the plan
- Forecast modelling i.e., to forecast the transport conditions that would arise with the plan in place, this will include an assessment at the end of the Plan period; and, if required, at full build out if that occurs after the end of the Plan period
- Outputs and outcomes of modelling, demonstrating, as appropriate, what transport infrastructure is necessary to support the plan o It should be noted that a suite of transport modelling tools may be required. This includes strategic modelling covering an area at least one major junction beyond the district boundary, localised network modelling where several links/junctions are close together and/or individual junction modelling
 - o A DMRB (Design Manual for Roads and Bridges) compliancy assessment may also be required for certain highway features, such as
 - o Merge/Diverge assessment at Grade separated junctions, link capacity assessments, and others.
- The design of any necessary transport infrastructure, to an extent suitable for establishing deliverability during the plan period at the time that it becomes necessary for the purpose of ensuring that unacceptable road safety impacts or severe operational impacts do not arise as a result of development. This may be to at least General Arrangement design stage or preliminary design stage. Whichever degree of detail is agreed, the products must be in full compliance with the DMRB.
- Industry standard transport intervention costings.

- The delivery/funding mechanisms for necessary transport interventions. It should not be assumed that National Highways will have any responsibility to identify or deliver necessary transport interventions.
- If considered appropriate, a "Monitor & Manage" (M&M) framework, aimed at managing the pace of development in line with the pace of funding and delivery of necessary highway interventions in a manner which responds to the realworld impacts of development may be agreed for inclusion in the plan subject to the adequacy of risk control measures included therein. This can include the move from a 'predict & provide' style of delivery to 'a vision & validate' style. o Any M&M framework must be based on a "worst case scenario" whereby necessary mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. It must be translated into development management plan policy and policy relating to development allocations.

Further detail on the above can be provided by National Highways.

While ideally all the above should be agreed prior to the Submission of the Local Plan for examination, we recognise that this is not always possible. However, all parties should work towards all matters being agreed and reflected in a Statement of Common Ground (SoCG) by the start of the Local Plan Examination at the latest. Ideally the SoCG between the Council and National Highways would be prepared well in advance of plan submission in order to guide resource input and to track progress towards final agreement on all relevant matters starting from the earliest plan iterations until the final version is agreed.

It is acknowledged that Government policy places much emphasis on housing delivery as a means for ensuring economic growth and addressing the current national shortage of housing. The NPPF is very clear that: "Strategic policy-making authorities should establish a housing requirement figure for their whole area, which shows the extent to which their identified housing need (and any needs that cannot be met within neighbouring areas) can be met over the plan period."

However, new DfT C1/22 and the NPPF are equally clear that any development, including housing delivery, must be tempered by the requirement to ensure that the associated transport demand can be accommodated without unacceptable impacts on the safety of the SRN or severe impacts on the operation of the SRN including reliability and congestion. Therefore, as necessary and appropriate, any plan and/or development must be accompanied by suitable mitigation in the right places at the right time, that is to the required design standards and is deliverable in terms of land availability, constructability and funding.

We would also draw your attention to the then Highways England document 'The Strategic Road Network, Planning for the Future: A guide to working with National Highways on planning matters' (September 2015). This document sets out how National Highways intends to work with local planning authorities and developers to support the preparation of sound documents which enable the delivery of sustainable development. https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_t_data/file/461023/N150227_-_Highways_England_Planning_Document_FINAL-lo.pdf

Responses to Local Plan consultations are also guided by National Planning Policy Framework (NPPF) revised on 20 July 2021 which sets out the government's planning policies for England and how these are expected to be applied.

Updated Circular (01/2022)

It should be noted that since the start of the Local Plan consultation process, on the 23 December 2022, the Department for Transport released a new circular on the 'Strategic road network and the delivery of sustainable development' (Circular 01/2022), which replaces all of the policies in Circular 02/2013 of the same name. These representations take account of the new circular and the requirements in terms of the Local Plan evidence base and process.

We request that the Local Plan is prepared in line with all aspects of the new circular. Particularly, the principles of sustainable development (paragraphs 11 to 17), new connections and capacity enhancements (paragraphs 18 to 25), and engagement with plan-making (paragraphs 26 to 38).

Regulation 18 submission

In our Regulation 18 submission we noted several matters including:

- The need to mitigate the adverse impacts of strategic development traffic to the A27 Chichester Bypass and its junctions at Portfield Roundabout, Bognor Road Roundabout, Whyke Roundabout, Stockbridge Roundabout and Fishbourne Roundabout and Oving junction.
- The need to identify a mechanism to calculate contributions towards the delivery of the previously agreed Local Plan A27 improvements
- The need to confirm the number of dwellings needed within the plan period
- The need to establish National Highways acceptance of the traffic model reference and future case scenarios
- The need to confirm costs, viability, and funding associated with mitigating the safety and congestion impacts of the development included within the plan.

Local Plan context

This Local Plan (Chichester Local Plan 2021 – 2039), prepared by the Local Planning Authority (LPA) Chichester District

Council, sets out the vision for future development in the district and will be used to help decide on planning applications and other planning related decisions including shaping infrastructure investments.

The draft sets out how the district should be developed over the next 18-years to 2039 including for the full Plan period (1 April 2021 to 31 March 2039) the total supply of

- 10,359 dwellings

- 114,652 net additional sqm new floorspace

Minus the completions this is equivalent to around 530 dwellings and 6,150 sqm of floorspace a year.

National Highways Representations

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders.

We have undertaken a review of the Chichester Local Plan 2021-2039 proposed submission version and accompanying evidence documents, our comments are set out in the tables below (following pages). [see table within attachment]

Summary

We have reviewed the publicly available Local Plan documents and provided comments above in relation to the transport implications of the plan for the safety and operation of the SRN. We understand that other technical information is available, but this was not presented as part of this consultation.

Chichester, and the A27, are already heavily congested, infrastructure in the existing Local Plan remains undelivered and the growth set out in the new Plan will further increase travel demand.

As presented, satisfying the transport needs of the plan is clearly reliant on the delivery of the A27 Chichester bypass improvements project. The A27 Chichester bypass improvements project is one of 32 pipeline schemes being considered for possible inclusion in National Highways third Road Investment Strategy (RIS3) covering 1 April 2025 to 31 March 2030.

On 9 March 2023 the UK Transport Secretary ensured record funding would be invested in the country's transport network, sustainably driving growth across the country while managing the pressures of inflation. The announcement cited the A27 Arundel Bypass as being deferred from RIS2 to RIS 3 (covering 2025-2030). The transport secretary also identified a number of challenges to the delivery of the road investment strategy and cited the benefit of allowing extra time to ensure schemes are better planned and efficient schemes can be deployed more effectively.

At present, there is no commitment by DfT to carry out the A27 Chichester bypass improvements project. Until the A27 Chichester bypass improvements project is published in the RIS3, consented and a decision to invest is made it cannot be assumed to be a committed project.

We note that the Plan does not address any uncertainty of delivery of the A27 Chichester bypass improvements project and we strongly recommend that there is either no reliance placed on RIS3 to realise capacity for growth in the Plan or that contingency measures are included to cover the eventuality that RIS3 funding is not forthcoming within the plan period. It is not clear that the potential impact of development on transport networks can be addressed in the absence of the A27 Chichester bypass improvements project.

Achieving net zero, reducing emissions reduction, acting on climate, and supporting thousands of new homes and new employment developments will be problematic with existing processes. New, additional, and adapted processes and assessments will likely be required, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments. We acknowledge that change is complex, expensive, and time-consuming, especially for smaller district level Councils. But the hard work will deliver benefits for the Council and residents in the longer-term.

National Highways seeks to continue working with the Council and WSCC to progress coordinated and deliverable packages of interim mitigation measures and alternative transport solutions while a long-term strategic solution is considered by government. This must however be in combination with a robust monitor and manage policy that appropriately manages the risk of unacceptable road impacts resulting from new housing and other development over the Plan period.

We have been in discussion with Chichester District Council regarding their proposed Monitor and Manage Strategy. At present, we do not consider the current strategy to be robust and we seek further information and detail especially on who, when and when monitoring and management will be undertaken. Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas. Any M&M framework must be based on a "worst case scenario" whereby necessary transport mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. The M&M framework must set out that the alternative to mitigation not being delivered is that development does not proceed where that development would give rise to unacceptable road safety risk or severe cumulative impacts on the road network in the absence of that mitigation. The M&M framework must be translated into development management plan policy and policy relating to development allocations.

As we have reiterated throughout our comments, we welcome the opportunity to work with you to address these outstanding matters and we will continue to liaise over submitted Transport Assessment, Travel Plan policy and Monitor and Manage Policy to help to work towards a viable plan.

We hope our comments assist.

We look forward to continuing to participate in future consultations and discussions. Please do continue to consult us as the Plan progresses so that we can remain aware of, and comment as required on, its contents.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Document Element: Policy T3 Active Travel - Walking and Cycling Provision**Respondent:** Natural England (Luke Hasler, Senior Advisor) [8189]**Summary:**

Natural England welcomes the extensive references across this policy (and policies T2 and T3) to reductions in car use, increased provision of sustainable transport choices and increased opportunities for active travel.

Full text:

Summary of advice

While we have raised some queries and recommended some further modifications to certain policies we do not find the Plan unsound on any grounds relating to our remit.

Natural England has reviewed the Proposed Submission Local Plan and accompanying appendices together with the Habitats Regulations Assessment (HRA) and Sustainability Appraisal (SA). Our detailed comments on the policies and site allocations are provided as follows:

- Annex 1 - Chapter 2 – Vision and Strategic Objectives
- Annex 2 - Chapter 4 – Climate Change and the Natural Environment
- Annex 3 - Chapter 5 (Housing) and Chapter 6 – (Place-making, Health and Well-being)
- Annex 4 - Chapter 7 (Employment and Economy) and Chapter 8 (Transport and Accessibility)
- Annex 5 - Chapter 10 – Strategic and Area Based Policies

Please note that we have not provided comments on all policies but those which have most influence on environmental issues. Natural England has no comment to make on the policies not covered in this response. Other than confirming that we have referred to it when considering our advice on specific policies and site allocations Natural England has no general comments to make on the SA.

Unfortunately due to unforeseen resourcing issues while we have reviewed the associated HRA we are not in a position to provide detailed comment on it as part of this response. We will rectify this as soon as possible and can confirm that we have seen nothing in it that raises any major concerns.

The Plan has many positive aspects including standalone policies on Green Infrastructure (GI) and wildlife corridors and an incredibly extensive suite of natural environment policies more generally.

We are hugely appreciative of the opportunity that we were given to work with you on shaping key policies post-Regulation 18. However, we believe that the plan needs to go further in its recognition of coastal squeeze as a key issue for the district, should include policy hooks for the forthcoming Local Nature Recovery Strategy (LNRS) and make up to date references to both the Environment Act (2021) and the Environmental Improvement Plan (EIP, 2023). Given how recent the publication of the EIP is we would be happy to discuss with your authority how this could best be achieved but we believe given the wealth of natural capital within Chichester District it is vitally important that this latest iteration of the Local Plan is set in its full policy and legislative context.

We have suggested a significant number of amendments and additions to both policies and supporting text throughout the Plan. In our view these could all be taken forward as minor modifications but if they were all acted upon they would leave the Plan much stronger and more coherent in delivering for the natural environment, one of the three central tenets of genuinely sustainable development as set out in the National Planning Policy Framework (NPPF 2021, paragraph 8c).

See attachment for representations on paragraphs/policies.

Document Element: Policy T3 Active Travel - Walking and Cycling Provision**Respondent:** Network Rail (Sam Bhatti, Graduate Surveyor) [8048]**Summary:**

Network Rail will support planning schemes within active travel distance of railway stations that provide continuous, direct and safe pedestrian/cycle routes that will serve rail passengers.

Pedestrian routes should be prioritised over vehicles, meaning all schemes should be designed so that vehicles wait for walkers/cyclists, not the other way around.

Full text:

Thank you for consulting Network Rail on the above consultation, I can confirm we wish to make the following comments.

Network Rail is the statutory undertaker for maintaining and operating railway infrastructure of England, Scotland, and Wales. As statutory undertaker, Network Rail is under license from the Department for Transport (DfT) and Transport Scotland (TS) and regulated by the Office of Rail and Road (ORR) to maintain and enhance the operational railway and its assets, ensuring the provision of a safe operational railway.

Having been in consultation with the train operating company, Southeastern Rail, of particular interest to Network Rail is the need to integrate active travel infrastructure and promote First and Last Mile principles. In addition, the impact of development on train stations and existing level crossings.

First and Last Mile Considerations

We encourage the Council to consider not only the impact of development on the railway itself, but also on the first and last mile element of passengers' journeys. This factors in access to and from the railway, as well as how other transport modes are integrated and how well communities are connected.

Failure to integrate this represents an issue for rail travel as people who start journeys by car will likely continue to drive rather than stop to change to the train, as the cost and time of parking and train tickets offer no benefit to them.

Developing access to the railway using first and last mile principles has several benefits, including:

- Aligning with local and national policy to reduce carbon emissions and meet netzero targets, by encouraging more active modes of transport such as walking and cycling
- Providing a seamless journey experience where various modes of transport are integrated, including bus and rail services
- Providing an accessible and inclusive offering of transport modes to both local residents and visitors
- Improving connections between communities which may not be as well-served by public transport

While infrastructure and transport services may be identified as areas for improvement, there may be other, smaller scale enhancements that can be made such as better provision of information or additional cycle racks. Network Rail's Planning team welcome further discussions with the council to gain a better understanding of how we can work together to improve access to the railway and integrate first and last mile thinking into the scheme plans, taking into account the various component parts of passengers' journeys and wider plans for the local area.

Policy T3 Active Travel – this has the broad support of Network Rail but should be strengthened to reflect walking/cycling as the first choice for local journeys; and for longer journeys part of an integrated bus/train transport chain that allows people to continue seamlessly.

Network Rail will support planning schemes within active travel distance of railway stations that provide continuous, direct and safe pedestrian/cycle routes that will serve rail passengers. Pedestrian routes should be prioritised over vehicles, meaning all schemes should be designed so that vehicles wait for walkers/cyclists, not the other way around.

Transport Infrastructure

Accessibility should be built into new development in the form of active travel networks, which will enhance permeability in people's transitions between areas. Development requiring additional road capacity should not go ahead, except as a last resort.

Policy T1 – in general this is supported. References to a 'coordinated package of infrastructure improvements' along the A27 should be replaced with a 'coordinated package of active travel and public transport improvements infrastructure', as this is more specific in emphasising that car transport should be minimised as much as possible.

Policies T2 and I1 – in general these are supported in the sense they promote seamless and continuous active travel arrangement and minimise car use. However, references should be made to the concept of 15–20-minute neighbourhoods that provide a wide range of services within this walk time. The provision of amenities and leisure facilities within a 15-minute walk should be a cornerstone idea that drives mid to long term infrastructure goals for Chichester. Owing to the considerable amount of development anticipated by the Council, there is ample opportunity for local businesses and retailers to provide services within these local neighbourhoods.

Railway Station Considerations

As a public funded company, Network Rail has responsibilities to spend public funds efficiently which consequently means we do not have the funds available to mitigate the impact of third-party development on railway stations. Where a significant amount of rail trips are generated by a third-party development, Network Rail expect that the development provides a contribution to mitigate the addition usage, ensuring that the rail network can continue to operate effectively. The contributions will encourage greater use of public transport by enhancing the rail experience for passengers.

The Local Plan has proposed site allocations across the district, for this reason the resulting increase to the use of stations should be recognized and mitigated against so that rail travel remains an attractive mode of transport. Failure to upgrade stations will result in less rail passengers which is counter productive to the Council's goals of a thriving public transport system.

Southbourne and Fishbourne Stations - Network Rail have concerns about the impact of future development on Southbourne and Fishbourne stations. As the stations themselves are small-sized, large-scale accessibility improvements would be potentially difficult. As a result, the provision of cycle parking facilities at both stations should be considered as crucial by the Council to ensure the station environment continues to modernize and encourage passenger use. This also ensures the stations integrate with proposed cycle/pedestrian routes across the area.

Level Crossing Considerations

As part of Network Rail's license to operate and manage Britain's railway infrastructure, Network Rail have the legal duty to protect rail passengers, the public, the railway workforce, and to reduce risk at our level crossings so far as is reasonably practicable.

Improving Level Crossing safety is therefore one of Network Rail's key priorities.

Closing level crossings is the only way to fully eradicate the risk. However, it is not always possible or practicable to immediately close all level crossings. Aside from financial and practical constraints, user convenience still needs to be a key consideration. A broad range of targeted interventions and initiatives are therefore needed to manage safety at crossings which remain open.

Any new development would need to provide an assessment of the impact on any nearby Level Crossings and in some cases, planning obligations may be required to mitigate the impacts on it.

Policy A13 Southbourne Broad Location for Development - Several strategic sites have been identified across the district, with a significant amount west of Chichester which require reconsideration. Policy A13, which proposes 1050 new homes, will result in significant upturns in use of the Penny Lane and Church crossings, which are currently public footpath crossings and have high risk factors. Large-scale development could therefore warrant closure or installation of a footbridge. The Council should be aware of this as these projects are costly and would require requisite funding.

Network Rail are in the process of completing a risk assessment on the affected crossings. However, for context we recently reviewed the Copse level crossing (located approximately 1.9km eastwards from Penny Lane) which resulted in a 300% use increase from a 112home development (Planning Application SB/22/01283/FULEIA).

Change suggested by respondent:

Policy should be strengthened to reflect walking/cycling as the first choice for local journeys; and for longer journeys part of an integrated bus/train transport chain that allows people to continue seamlessly.

Respondent: Network Rail (Sam Bhatti, Graduate Surveyor) [8048]

Summary:

This policy has the broad support of Network Rail.

Full text:

Thank you for consulting Network Rail on the above consultation, I can confirm we wish to make the following comments.

Network Rail is the statutory undertaker for maintaining and operating railway infrastructure of England, Scotland, and Wales. As statutory undertaker, Network Rail is under license from the Department for Transport (DfT) and Transport Scotland (TS) and regulated by the Office of Rail and Road (ORR) to maintain and enhance the operational railway and its assets, ensuring the provision of a safe operational railway.

Having been in consultation with the train operating company, Southeastern Rail, of particular interest to Network Rail is the need to integrate active travel infrastructure and promote First and Last Mile principles. In addition, the impact of development on train stations and existing level crossings.

First and Last Mile Considerations

We encourage the Council to consider not only the impact of development on the railway itself, but also on the first and

last mile element of passengers' journeys. This factors in access to and from the railway, as well as how other transport modes are integrated and how well communities are connected.

Failure to integrate this represents an issue for rail travel as people who start journeys by car will likely continue to drive rather than stop to change to the train, as the cost and time of parking and train tickets offer no benefit to them.

Developing access to the railway using first and last mile principles has several benefits, including:

- Aligning with local and national policy to reduce carbon emissions and meet netzero targets, by encouraging more active modes of transport such as walking and cycling
- Providing a seamless journey experience where various modes of transport are integrated, including bus and rail services
- Providing an accessible and inclusive offering of transport modes to both local residents and visitors
- Improving connections between communities which may not be as well-served by public transport

While infrastructure and transport services may be identified as areas for improvement, there may be other, smaller scale enhancements that can be made such as better provision of information or additional cycle racks. Network Rail's Planning team welcome further discussions with the council to gain a better understanding of how we can work together to improve access to the railway and integrate first and last mile thinking into the scheme plans, taking into account the various component parts of passengers' journeys and wider plans for the local area.

Policy T3 Active Travel – this has the broad support of Network Rail but should be strengthened to reflect walking/cycling as the first choice for local journeys; and for longer journeys part of an integrated bus/train transport chain that allows people to continue seamlessly.

Network Rail will support planning schemes within active travel distance of railway stations that provide continuous, direct and safe pedestrian/cycle routes that will serve rail passengers. Pedestrian routes should be prioritised over vehicles, meaning all schemes should be designed so that vehicles wait for walkers/cyclists, not the other way around.

Transport Infrastructure

Accessibility should be built into new development in the form of active travel networks, which will enhance permeability in people's transitions between areas. Development requiring additional road capacity should not go ahead, except as a last resort.

Policy T1 – in general this is supported. References to a 'coordinated package of infrastructure improvements' along the A27 should be replaced with a 'coordinated package of active travel and public transport improvements infrastructure', as this is more specific in emphasising that car transport should be minimised as much as possible.

Policies T2 and I1 – in general these are supported in the sense they promote seamless and continuous active travel arrangement and minimise car use. However, references should be made to the concept of 15–20-minute neighbourhoods that provide a wide range of services within this walk time. The provision of amenities and leisure facilities within a 15-minute walk should be a cornerstone idea that drives mid to long term infrastructure goals for Chichester. Owing to the considerable amount of development anticipated by the Council, there is ample opportunity for local businesses and retailers to provide services within these local neighbourhoods.

Railway Station Considerations

As a public funded company, Network Rail has responsibilities to spend public funds efficiently which consequently means we do not have the funds available to mitigate the impact of third-party development on railway stations. Where a significant amount of rail trips are generated by a third-party development, Network Rail expect that the development provides a contribution to mitigate the addition usage, ensuring that the rail network can continue to operate effectively. The contributions will encourage greater use of public transport by enhancing the rail experience for passengers.

The Local Plan has proposed site allocations across the district, for this reason the resulting increase to the use of stations should be recognized and mitigated against so that rail travel remains an attractive mode of transport. Failure to upgrade stations will result in less rail passengers which is counter productive to the Council's goals of a thriving public transport system.

Southbourne and Fishbourne Stations - Network Rail have concerns about the impact of future development on Southbourne and Fishbourne stations. As the stations themselves are small-sized, large-scale accessibility improvements would be potentially difficult. As a result, the provision of cycle parking facilities at both stations should be considered as crucial by the Council to ensure the station environment continues to modernize and encourage passenger use. This also ensures the stations integrate with proposed cycle/pedestrian routes across the area.

Level Crossing Considerations

As part of Network Rail's license to operate and manage Britain's railway infrastructure, Network Rail have the legal duty

to protect rail passengers, the public, the railway workforce, and to reduce risk at our level crossings so far as is reasonably practicable.

Improving Level Crossing safety is therefore one of Network Rail's key priorities.

Closing level crossings is the only way to fully eradicate the risk. However, it is not always possible or practicable to immediately close all level crossings. Aside from financial and practical constraints, user convenience still needs to be a key consideration. A broad range of targeted interventions and initiatives are therefore needed to manage safety at crossings which remain open.

Any new development would need to provide an assessment of the impact on any nearby Level Crossings and in some cases, planning obligations may be required to mitigate the impacts on it.

Policy A13 Southbourne Broad Location for Development - Several strategic sites have been identified across the district, with a significant amount west of Chichester which require reconsideration. Policy A13, which proposes 1050 new homes, will result in significant upturns in use of the Penny Lane and Church crossings, which are currently public footpath crossings and have high risk factors. Large-scale development could therefore warrant closure or installation of a footbridge. The Council should be aware of this as these projects are costly and would require requisite funding.

Network Rail are in the process of completing a risk assessment on the affected crossings. However, for context we recently reviewed the Copse level crossing (located approximately 1.9km eastwards from Penny Lane) which resulted in a 300% use increase from a 112home development (Planning Application SB/22/01283/FULEIA).

Document Element: Policy T3 Active Travel - Walking and Cycling Provision**Respondent:** West Sussex County Council (Tracey Flitcroft, Principal Planning Officer) [8119]**Summary:**

It is a positive step to see PRoW acknowledged as valued by communities and as part of the area's green infrastructure. Whilst Policy P14 (Green Infrastructure) states that development proposals should not be detrimental to the network of public rights of way and bridleways (please note bridleways are Public Rights of Way), a more proactively positive approach that seeks enhancements to the network as mitigation, would be welcomed. The improvement, upgrading of existing PRoW and creation of new PRoW where possible, to allow for a greater number of users to access the network would be beneficial. This is somewhat addressed in Policy T1 which refers only to routes identified in the Local Transport Plan, Local Cycling and Walking Infrastructure Plan (LCWIP) and the Infrastructure Delivery Plan. Opportunities to these, should not be limited if they arise elsewhere.

It is surprising to see there is no mention of PRoW within Chapter 8 under Active Travel – Walking and Cycling. The PRoW network provides extensive walking and cycling opportunities, often off-road, and important links between places and non-PRoW routes.

The comments included below from WSCC are Holding Objections. We will continue to work with Chichester District Council and as further work is completed will consider if objections can be withdrawn.

Transport Overview

The County Council has worked with Chichester District Council to develop the Chichester Local Plan and its supporting evidence base and will continue to do so. Although the overall direction of the Local Plan is supported, from a highways and transport perspective, there are three key issues remaining that need to be addressed in order to demonstrate that the Plan is sound:

1. There is insufficient evidence to demonstrate that key infrastructure (i.e. Terminus Road Diversion) will be deliverable;
2. The package of sustainable transport infrastructure and measures is not yet sufficiently well-developed to demonstrate that it is deliverable as part of the monitor and manage process; and
3. There is insufficient evidence to demonstrate that the capacity of the transport network can accommodate the scale of development proposed as part of the Southbourne Broad Location for Development.

The following sections explain; a) the reasons for these issues; b) why they affect the soundness of the Local Plan; and, c) what changes should be made to the Local Plan to remedy the issues.

Deliverability of Key Infrastructure

The recommended transport mitigation strategy, as assessed using the Chichester Area Transport Model for 2039 has been demonstrated to be capable in-principle to prevent the development from resulting in severe residual cumulative impacts on the highways and transport network. However, there are significant risks to deliverability of junction mitigation measures, which have required further work to be undertaken on developing a short to medium term strategy based on phased prioritisation of infrastructure and sustainable transport improvements, to be governed under a monitor and manage approach.

There are three locations where new highway alignments are proposed outside of existing highways boundaries. Two of these may include significant earthworks or structures to be delivered, being Stockbridge Link Road and Terminus Road diversion. The cost of the mitigation strategy exceeds the likely value of developer contributions and additional funding has not yet been secured.

At the Regulation 18 consultation stage in December 2018 to January 2019 the County Council identified delivery risks with the Stockbridge Link Road and Terminus Road Diversion schemes due to the earthworks likely to be required and to confirm the extent of land take required for both schemes. The County Council stated that feasibility work would need to be undertaken for these improvements prior to Plan submission to confirm that the schemes are deliverable. A brief for such a feasibility study was agreed in 2019, but to date, this work has not been commissioned. It is the County Council's view that Stockbridge Link Road (SLR) should be disregarded as a potential part of a long-term transport mitigation strategy for 2039 and beyond until such time as it can be demonstrated that the scheme is deliverable. Paragraph 8.14 of the Local Plan acknowledges that the SLR is not deliverable as part of the Local Plan mitigation package.

The Terminus Road Diversion is still identified as part of the highest priority in the Local Plan mitigation package (i.e. A27 Fishbourne Junction) which is expected to be delivered once sufficient funding is collected. The County Council considers that in the absence of this feasibility work, the deliverability of the Terminus Road Diversion cannot be confirmed. In particular, given the recent impacts of inflation in the construction industry, this work will need to robustly estimate the costs and confirm delivery arrangements. In the absence of this feasibility work, there is currently insufficient evidence to confirm that the Local Plan complies with Paragraphs 11 and 106 of the NPPF as key infrastructure does not appear to be deliverable.

In order to remedy this issue regarding the Terminus Road Diversion, the County Council requests that feasibility work is undertaken prior to the examination to confirm deliverability of the proposed Terminus Road Diversion.

Sustainable Transport Infrastructure & Measures

The transport study modelling for end of Plan period also includes some proposed highways mitigation schemes within Chichester City. The County Council has previously requested that these be replaced by sustainable transport improvements to comply with the West Sussex Transport Plan 2022-2036. However, only limited modification has been made to these proposed schemes, with a suggestion in text at paragraph 7.3.2 of the main transport study that the costs for these schemes can be reallocated to sustainable transport improvements which are not specified. Although this does help to explain how sustainable transport infrastructure schemes and measures can be at least partially funded, it is rare that schemes will be fully funded using developer contributions. Furthermore, funding is not the only issue that needs to be overcome to secure delivery of these schemes and measures.

The Infrastructure Delivery Plan (IDP) lists the proposed mitigation measures and in some cases provides information on the rationale, phasing, cost, funding and delivery arrangements. However, there are still many gaps in the information, probably because schemes are currently at an early conceptual stage. The County Council's experience is that it is unlikely that schemes will be fully funded using developer contributions (because doing so would not be compliant with the CIL regulations) so delivery of these schemes will be partially dependent on securing funding from central Government or other sources. The IDP currently fails to identify the scheme-specific requirements for additional funding and the overall scale of additional funding required.

The County Council considers the level of information currently available on the sustainable transport package to be insufficient to demonstrate deliverability of a credible and coordinated sustainable transport package of improved infrastructure and services. Therefore, there is insufficient evidence to confirm that the Local Plan complies with Paragraphs 11 and 106 of the NPPF.

In order to remedy this issue, the County Council requests that further technical work is undertaken to develop the schemes and measures in the sustainable transport package prior to the examination. In particular, this should focus on the following schemes and measures and some cases, this will build on work that has already taken place:

1. St. Paul's & Parklands cycle routes
2. Improving existing public transport services towards Madgwick Lane
3. Provision of improved bus services for the village serving the development areas of Southbourne Parish
4. Improving cycling connectivity to link the built-out areas of Shopwhyke Lakes with Tangmere and Oving etc

As not all the severely impacted A27 junctions have a reasonable prospect of being physically improved in the Plan period, more investigation into potential public transport enhancements is also required, particularly to strengthen routes that cross the bypass. This may require further amendments to the IDP.

This work should aim to identify options for sustainable transport schemes that can be a priority for investment, provide information to enable safeguarding of routes (e.g. cycle routes) from development and provide a basis for applications for third party funding to support their delivery. The relative priority of such measures would need to be considered under the monitor and manage approach by the proposed Traffic and Infrastructure Management Group for implementation in addition to the proposed improvement at the A27/A259 Fishbourne junction.

To address this issue and support delivery of the sustainable transport package, the County Council also recommends the following minor amendments to Policy T1: Transport Infrastructure:

At bullet point .7 change "other small-scale junction improvements" to read "other sustainable transport and safety focused improvements, including at junctions" and change "These will increase road capacity, reduce traffic congestion, improve safety and air quality, and improve access to Chichester city from surrounding areas" to "These will increase road capacity on strategic roads, and on both strategic and local roads reduce traffic congestion, improve safety and air quality, and improve access to Chichester city from surrounding areas notably by encouraging and prioritising sustainable modes."

Southbourne Broad Location for Development

The scale of development that can be accommodated at the Southbourne Broad Location will be, at least partially, dependent on the capacity of the transport network to accommodate the associated traffic movements. As the Broad Location spans the railway line, many of these traffic movements would need to cross the railway line. The County Council is concerned that there is currently insufficient capacity of the existing level crossings, notably at Stein Road, to accommodate the additional traffic movements. This could mean that the cumulative impact of development on the traffic network is severe, which is not consistent with Paragraph 111 of the NPPF.

The transport evidence base does not yet provide sufficient assurance that the proposed scale of development can be accommodated. This is because the base level of traffic flow has not been compared to local traffic counts, either in the initial validation of the strategic model or through a new count which the County Council has previously requested, and the assumptions about level crossing downtimes have not been validated against observed data. The County Council is concerned that the assessment of capacity of the local road network to accommodate the quantum of dwellings proposed for the Broad Location may be overoptimistic by underestimating existing flow levels and the duration of level crossing downtime. As a consequence, the proposed quantum may not be deliverable without unacceptable impacts to the conditions on Stein Road and to the level of traffic seeking to use rural lanes to the north of the village to avoid the level crossing.

In order to remedy this issue, the County Council requests that either additional transport evidence is provided prior to the examination to demonstrate that the proposed scale of development is deliverable, or that Policy A13 is changed to remove the proposed scale of development until such evidence is provided.

The following comments from education, minerals and waste, Adults Services and Health, highways & transport and public rights of way, do not affect the soundness of the Plan. However, Chichester District Council should take these into account and, where possible, make minor amendments to the Local Plan and/or evidence base studies before submission of the Local Plan for examination. Officers are happy to meet and discuss any of these comments, and proposed minor amendments to address these comments, ahead of submission:

1) Education

Land West of Chichester

Previous comments have been made requesting that the policy refers to 'Phase 2 should include expansion of the primary school for the further 1FE of teaching accommodation with nursery and SEND provision'. While it is recognised that reference is made to this in the IDP this is a supporting document to the Local Plan and should not be solely relied on. It is requested that paragraph 10.19 is amended to read: 'a local centre with retail, community and employment uses (minimum of approximately 2500 sqm E(g)(i) Use Class), two form entry (2FE) primary school and one form entry (1FE) teaching accommodation with nursery and SEND, informal and formal open space (including a country park), allotments, ...'

This should also be included in the 3rd bullet point of Policy A6 or the wording of the policy should be drafted to reflect more recent policy requirements i.e. Provide for infrastructure and community facilities in accordance with the most recent Infrastructure Delivery Plan.

There are some inconsistencies with the wording of the strategic policies, not every policy includes the criterion 'Provide for infrastructure and community facilities in accordance with the most recent Infrastructure Delivery Plan.' While this may be due to some policies being carried through from the adopted local plan it is inconsistent.

Policy A8 Land East of Chichester

As an education authority WSCC do not request 1FE schools in line with government guidance. As per our earlier comments and discussions we requested a 2 FE primary school for the site.

3rd bullet point of Policy A8 should be amended to read: 'A neighbourhood centre incorporating local shops, a community centre, flexible space for employment/ small-scale leisure uses and a one-form (expandable to two-form) two form entry primary school with provision for early years/ childcare and special educational needs and disability...'

2) Minerals and Waste

The references to safeguarding minerals is inconsistent and it is suggested that the wording in the email sent to CDC (attached) in relation to Policy AL3 should be used in the policies for the other sites for consistency. Reference to safeguarding minerals and waste infrastructure should also be included in some other policies as previously indicated:

- Policy A2 – needs to include reference to safeguarding minerals and waste infrastructure.
- Policy A7 – needs to include reference to safeguarding waste infrastructure.
- Policy A15 (Loxwood) – needs to include reference to minerals safeguarding as within the clay MSA.
- Policy A21 – needs to include reference to minerals safeguarding.

Also, the reference to the safeguarding guidance needs to be checked to ensure that it is worded correctly as 'Minerals and Waste Safeguarding Guidance'.

3) Older Person Housing

It is noted that the plan refers to older person housing as specialist housing. WSCC strategy supports the provision of 'extra care housing' while this might be similar development it enables younger people to access the accommodation for whatever medical reason i.e. MS, strokes rather than limiting it to a certain age group. Officers are happy to meet and discuss this further.

4) Highways and Transport

Public Transport Priority Infrastructure

The Public Transport section of the main transport study report starting at paragraph 6.2.7 requires revisiting. There is reference to "an expansion of the bus priority lane system within Chichester City Centre" which does not match the existing bus provision in the City which does not provide bus priority lanes on street. It does have restrictions on motor traffic in the adjoining parts of South Street and West Street which provide for bus and cycle only access in both directions of travel plus access for essential goods vehicle loading in the westbound direction only. In addition, the suggestion in the following paragraph for "a time-based system where certain routes are restricted to public transport only during specific times" is not evidenced or developed and as such considered unlikely to be practical and enforceable at most locations used by bus routes in the City. More developed proposals for additional bus priority, improvements to bus passenger facilities or testing of specific locations for bus-only access would be welcomed as part of developing a costed sustainable transport mitigation package.

Park and Ride

The discussion of possible park and ride facilities for the City at paragraphs 6.2.9 to 6.2.16 of the main transport study should also acknowledge. An important part of making park and ride well used by motorists is increasing the price of city centre parking to provide a financial incentive to take up significantly cheaper park and ride charges for parking and travel. However, if park and ride sites are not provided accessible to all major approach routes to the city, such a charging strategy would not be seen to be equitable, whereas only a single site is proposed in the District Council's emerging parking strategy and the report acknowledges at 6.2.11 that "locations for potential park and ride sites are also deemed to be limited". The bullet at 6.2.15 "Cost of schemes compared to benefit are likely to be initially lower than highway schemes" may have been incorrectly worded given that this is listed as an issue rather than a benefit. The text may have been intended to say that the ratio of benefit to cost for park and ride schemes may be lower than for conventional highway schemes?

A286 New Park Road / A286 St Pancras Road (Junction 7)

This junction scheme includes pedestrian crossing facilities which are welcomed and also includes a length of advisory cycle lane starting in the middle of the junction for cyclists remaining on St Pancras. However, the approach to the junction on St Pancras from Eastgate Square remains intimidating to cyclists, so further measures would need to be added to make the layout cycle-friendly or the cycle facility is likely to be of limited benefit. This could include decreasing traffic speeds. Until this is done the conclusion at 8.4.4 of the main transport study; "The mitigation scheme includes improvements for pedestrians and cyclists which will lead to increased use of active travel modes and reduce the need for physical mitigation here" is only supported for pedestrians, not for cyclists.

A259 Via Ravenna / A259 Cathedral Way Roundabout (Junction 8)

It is stated at 7.3.8 of the main transport study that "the mitigation may be required to avoid queuing back towards the A27, as well as for capacity issues". In light of this potential safety issue for the previous junction on Cathedral Way and for the A27 Fishbourne junction, the proposal at 7.3.6 that the scheme delivery should be tied to the monitor and manage regime to see if and when it is required is accepted. This is different to the approach for other junctions in the City because of the potential safety issue. This monitoring approach would be likely to follow after the A259 Cathedral Way / Fishbourne Road East / Terminus Road (as diverted) (Junction 10) improvement, which is to be brought forward as an integral part of the A27 Fishbourne roundabout mitigation scheme, but may allow for increased eastbound flows on Cathedral Way.

A286 Northgate Gyrotory

An additional mitigation scheme is proposed at paragraph 7.3.134 of the main transport study for the A286 Northgate Gyrotory along its southern arm from Oaklands Way to Orchard Street. The proposal to add traffic signals is welcomed in concept as it can help to control traffic speeds making the junction more friendly for cyclists and pedestrians. However, the layout shown at figure 7-8 does not maximise the opportunity to improve convenience and safety for pedestrians by providing a priority link to reach the central island, which contains employment space and the fire station, nor to assist crossing the exit towards Orchard Street. The scheme would benefit from further development to prioritise active travel movements and should also be fitted with transponders for bus priority.

Fishbourne Road West / Appledram Lane South (Junction 11)

At paragraphs 7.4.1 to 7.4.2 of the main transport study, the junction of Fishbourne Road West / Appledram Lane South (Junction 11) is considered. The proposal to mitigate impacts at this junction through delivery of the Stockbridge Link Road scheme is not considered deliverable, so the approach at this location requires re-thinking. The County Council would not support measures to increase capacity for through traffic on Appledram Lane South, the approach should be to reduce severance and improve safety and comfort for active travel on Appledram Lane by reducing vehicle speeds and as far as possible volume. This should consider the needs of pedestrians and cyclists both for local access and for users of the Salterns Way leisure cycling route.

TEMPro Background Traffic Growth Comparisons

At section 10.2 of the main transport study a comparison is made of the TEMPro 7.2 growth rates used in the study for external traffic with new TEMPro 8.0 growth rates since released by the Department for Transport, which notes that the TEMPro 8.0 rates are significantly lower, if these rates were used then the level of transport impacts could be lower. Unfortunately, a number of highways authorities in the Transport for the South East (TfSE) area including the County Council and Hampshire County Council have concerns that the planning assumptions used in TEMPro v8 core growth scenario underestimate the numbers of additional households forecasted compared to targets in adopted Local Plans for delivering new dwellings. TfSE are currently raising these collective concerns with DfT with a view to obtaining an early update to TEMPro 8 planning assumptions. Although for the purposes of this study TEMPro is not applied to trips produced in Chichester District, from the County Council's analysis TEMPro v8 core underestimates the increase in households per year in Arun District by over 50% and in Horsham District by 30% when compared with adopted development plans. On this basis it may be useful to instead compare TEMPro 7.2 with TEMPro 8.0 high growth scenario.

North of District Spatial Scenarios Testing

For the Northern Spatial Scenarios Test provided as an appendix to the main transport study, this had not been updated for the final preferred spatial strategy or in light of the County Council's previous comments on the March 2022 issue to the District Council. The spatial strategy now is similar but not identical to the Scenario 4: Significant Growth 1 option in the reported tests, totalling 370 dwellings across the four northern parishes, compared to 410 in the test. In both cases the largest allocation is at Loxwood; 220 dwellings were proposed in the Scenario 4 as compared to 200 in this test. Some other tests proposed higher numbers.

The testing in the northern part of the district had used the same trip generation rates per dwelling as in the South of the District, but the County Council considers that in practice private motor vehicle trip generation per dwelling is likely to be higher due to the rural nature of the area, including a lack of local facilities and shops within walking distance of development, a very low level of public transport services and lack of surfaced cycle routes.

The level of development proposed is not at the level capable of delivering transformative transport improvements to match the trip making patterns around Chichester and the A259 corridor to Bosham and Southbourne. This may be offset in part by the lower total amount of development compared to the tested scenario 4. Nonetheless, it would be helpful to adjust the scenario for the spatial strategy now proposed and to provide information on additional traffic movements per peak hour from these parishes using the A272 at junctions at Wisborough Green and reaching the A272/A29 junction at Billingshurst and the A272/A283 junction at the north of Petworth.

Neutral Month and Summer Month Comparison Technical Note

The Neutral Month and Summer Month Comparison Technical Note in the main transport study treats July as a neutral month rather than a summer month. Paragraph 1.3.1 states "The flows were analysed by looking at traffic data for August 2019 this being considered to represent summer traffic. This was compared against traffic data from the neutral months of June, July, September and October also from 2019." The County Council does not accept this methodology as school summer holidays start part way through July and education traffic is also affected by the formal exam period, whilst there is typically a high level of seasonal leisure traffic including summer outdoor events in this month. It is acceptable to use August alone as the summer comparator month. However, July traffic should be removed from the neutral months analysis and should be substituted with May traffic data from the same year of 2019, provided that sufficient data is available from that month.

5) Public Rights of Way (PRoW)

It is a positive step to see PRoW acknowledged as valued by communities and as part of the area's green infrastructure. Whilst Policy P14 (Green Infrastructure) states that development proposals should not be detrimental to the network of public rights of way and bridleways (please note bridleways are Public Rights of Way), a more proactively positive approach that seeks enhancements to the network as mitigation, would be welcomed. The improvement, upgrading of existing PRoW and creation of new PRoW where possible, to allow for a greater number of users to access the network would be beneficial. This is somewhat addressed in Policy T1 which refers only to routes identified in the Local Transport

Plan, Local Cycling and Walking Infrastructure Plan (LCWIP) and the Infrastructure Delivery Plan. Opportunities to these, should not be limited if they arise elsewhere.

It is surprising to see there is no mention of PRow within Chapter 8 under Active Travel – Walking and Cycling. The PRow network provides extensive walking and cycling opportunities, often off-road, and important links between places and non-PRow routes.

Respondent: Mayday! Action Group (John Garrett) [7163]

Summary:

There is a great deal of land in and around the City of Chichester which is given over to car parking, none of which is underground or located underneath other office or residential buildings. Parking in Chichester is ever more expensive but increasing prices will not drive people from their cars – BECAUSE THE CURRENT TRAIN AND BUS OPTIONS ARE TOTALLY INADEQUATE. It is cheaper to drive into Chichester and park than take the bus.

Executive Summary

The Local Plan as written lacks ambition and vision, and will be detrimental to the landscape within which the district lies. It is a plan borne out of a need to produce a legal document which will satisfy the regulatory authorities. In terms of Urban Planning it fails "To meet the needs of the present without compromising the ability of future generations to meet their own needs" (NPPF).

The development that will consequentially arise from the deployment of such a made Local Plan is not sustainable. It will adversely affect the Character, Amenity and Safety of the built environment, throughout our district.

In particular, the Local Plan is inadequate for the needs of the people in the district both at present and in the future because –

1. It has been written in advance of the District having a properly formed and agreed Climate Emergency Action Plan. It is inconceivable that such a key document will not shape our Local Plan. It is this Action Plan that is needed first in order to provide the long-term strategic view as to how and what the District will look like in the future; this, in turn, will help form and shape the policies outlined in any prospective, Local Plan. The Plan as proposed is moribund, as a result of "cart before the horse" thinking.
2. The Local Plan as written does not adequately address how infrastructure, transport and services are going to be materially and strategically improved to meet the predicted growth and shift to a significantly ageing population. There is presently insufficient capacity to supply services and to have adequate people and environmentally friendly connectivity, as a direct result of decades of neglect towards investing in infrastructure and services to meet the needs of the District's population. We are led to believe that developers through increased levies in order to gain permission to build will fulfil this need, but all that this will result in is an uncoordinated, dysfunctional mess completely lacking in any future-proof master planning approach. We contend that this will do nothing for the quality of life of Chichester District residents and it will create a vacuum whereby few if indeed any can be held accountable or indeed found liable for shortcomings in the future.
3. The Local Plan as written does not state how it will go about addressing the need to create affordable homes. The District Council's record on this matter since the last made plan has been inadequate and now the creation of affordable homes has become urgent as political/economic/social factors drive an ever increasing rate of change within the District.
4. Flood risks assessments used in forming the Plan are out of date (last completed in 2018) and any decision to allocate sites is contrary to Environment Agency policy. Additionally, since March 2021 Natural England established a position in relationship to 'Hold the Line' vs. 'Managed Retreat' in environmentally sensitive areas, of which the Chichester Harbour AONB is a significant example. CDC have failed to set out an appropriate policy within the proposed Local Plan that addresses this requirement.
5. The A27 needs significant investment in order to yield significant benefits for those travelling through the East-West corridor; this is unfunded. Essential improvements to the A27 are key to the success of any Local Plan particularly as the city's ambitions are to expand significantly in the next two decades. But any ambitions will fall flat if the A27 is not improved before such plans are implemented.. The A259 is an increasingly dangerous so-called 'resilient road' with a significant increase in accidents and fatalities in recent years. In 2011, the BBC named the road as the "most crash prone A road" in the UK. There is nothing in the Local Plan that addresses this issue. There is no capacity within the strategic road network serving our district to accommodate the increase in housing planned, and the Local Plan does not guarantee it.
6. There is insufficient wastewater treatment capacity in the District to support the current houses let alone more. The tankering of wastewater from recent developments that Southern Water has not been able to connect to their network and in recent months the required emergency use of tankers to pump out overflowing sewers within our City/District reflects the gross weakness of short-termism dominated thinking at its worst and is an indictment of how broken our water system is. The provision of wastewater treatment is absolutely critical and essential to the well-being of all our residents and the long-term safety of our built environment. The abdication by those in authority, whether that be nationally, regionally or locally, is causing serious harm to the people to whom those in power owe a duty of care and their lack of urgency in dealing properly with this issue is seriously jeopardizing the environment in which we and all wildlife co-exist.
7. Settlement Boundaries should be left to the determination of Parish Councils to make and nobody else. The proposed policy outlined in the Local Plan to allow development on plots of land adjacent to existing settlement boundaries is ill-conceived and will lead to coalescence which is in contradiction of Policy NE3.
8. All the sites allocated in the Strategic Area Based Policies appear to be in the majority of cases Greenfield Sites. The plan makes little, if any reference to the development of Brownfield sites. In fact, there is not a Policy that relates to this source of land within the Local Plan as proposed. Whilst in the 2021 HELAA Report sites identified as being suitable for development in the District as being Brownfield sites were predicted to yield over 4000 new dwellings. Why would our Local Plan not seek to develop these sites ahead of Greenfield sites?

9. The Local Plan does not define the minimum size that a wildlife corridor should be in width. What does close proximity to a wildlife corridor mean? How can you have a policy (NE 4) that suggests you can have development within a wildlife corridor? These exceptions need to have clear measures and accountability for providing evidence of no adverse impact on the wildlife corridor where a development is proposed. Our view is quite clear. Wildlife and indeed nature in the UK is under serious and in the case of far too many species, potentially terminal threat. Natural England has suggested that a Wildlife Corridor should not be less than 100metres wide. The proposed Wildlife Corridors agreed to by CDC must be enlarged and fully protected from any development. This is essential and urgent for those Wildlife Corridors which allow wildlife to achieve essential connectivity between the Chichester Harbour AONB and the South Downs National Park.

10. Biodiversity Policy NE5 - This is an absolute nonsense. If biodiversity is going to be harmed there should be no ability to mitigate or for developers to be able to buy their way out of this situation. This mindset is exactly why we are seeing a significant decline in biodiversity in the District which should be a rich in biodiversity area and why the World Economic Forum Report (2023) cites the UK as one of the worst countries in the world for destroying its biodiversity.

11. In many cases as set out in the Policies the strategic requirements lack being SMART in nature – particularly the M Measurable. These need to be explicit and clear: “you get what you measure”.

12. 65% of the perimeter of the District of Chichester south of the SDNP is coastal in nature. The remainder being land-facing. Policy NE11 does not sufficiently address the impact of building property in close proximity to the area surrounding the harbour, something acknowledged by the Harbour Conservancy in a published report in 2018 reflecting upon how surrounding the harbour with housing was detrimental to its long-term health. And here we are 5 years on and all of the organizations that CDC are saying that they are working in collaboration with, to remedy the decline in the harbour’s condition, are failing to implement the actions necessary in a reasonable timescale. CDC are following when they should be actually taking the lead on the issue. Being followers rather than leaders makes it easy to abdicate responsibility. There must be full and transparent accountability.

13. The very significant space constraints for the plan area must be taken into account. The standard methodology need no longer apply where there are exceptional circumstances and we are certain that our District should be treated as a special case because of the developable land area is severely reduced by the South Downs National Park (SDNP) to the north and the unique marine AONB of Chichester Harbour to the south. A target of 535dpa is way too high. This number should be reduced to reflect the fact that only 30% of the area can be developed and much of that is rural/semi-rural land which provides essential connectivity for wildlife via a number of wildlife corridors running between the SDNP and the AONB. Excessive housebuilding will do irretrievable damage to the environment and lead to a significant deterioration in quality of life for all who reside within the East / West corridor.

14. Many of the sites identified in the Strategic & Area Based Policies could result in Grade 1 ^ 2 farmland being built upon. The UK is not self-sufficient in our food security. It is short-sighted to expect the world to return to what we have come to expect. Our good quality agricultural land should not all be covered with non-environmentally friendly designed homes.

Change suggested by respondent:

The harsh fact is that the Vision for Chichester needs urgent and rapid revision and the ideas of those with experience in actually designing and delivering on time and on budget major big picture urban regeneration schemes has to be taken forward, urgently.

Fewer small car parks and a daily Park and Ride (using electric or hydrogen buses supplied by CDC) facility is surely envisage-able. As the take-up of electric cars develops, underground car parking for non-hydrocarbon fuelled vehicles should be envisaged.

Draft LP Mayday Submission Final - <https://chichester.oc2.uk/a/skf>

4700

Object

Document Element: Policy T4 Parking Provision

Respondent: Rolls-Royce Motor Cars Limited [8018]

Agent: David Lock Associates (Rukaiya Umaru, Senior Planner/Surveyor) [8016]

Summary:

Draft Policy T4 requires development to deliver parking in accordance with the West Sussex Parking Standards Guidance.

While the principle of this approach is recognised, it is important that the Local Plan clearly sets out that the adopted Parking Standards should be seen as a starting point for assessing parking needs in a development. R-RMC suggests that the draft policy is amended to more clearly support flexibility in individual circumstances where the adopted Parking Standards may not be the most appropriate solution.

Full text:

Rolls-Royce Motor Cars (R-RMC) supports the Council's commitment to securing adequate car and cycle parking provision from development in the district. Draft Policy T4 (Parking Provision) requires development to deliver parking in accordance with the West Sussex Parking Standards Guidance (2020) or any subsequent standards.

While the principle of this approach is recognised, it is important that the Local Plan clearly sets out that the adopted Parking Standards should be seen as a starting point for assessing parking needs in a development. It is acknowledged that the Parking Standards guidance sets out they are an "initial guide for developers (paragraph 6.3 West Sussex Guidance on Parking at New Developments September 2020) and the Local plan policy should align with this approach. It is also important that the policy retains some flexibility to account for individual circumstances and nature of operations where a different approach is more appropriate. This may include circumstances such as the delivery of the bespoke R-RMC expansion site, where parking provision for specific employment needs may differ. This would not negate the requirement to prepare and provide a Travel Plan as appropriate.

R-RMC suggests that the draft policy is amended to more clearly support flexibility in individual circumstances where the adopted Parking Standards may not be the most appropriate solution. This would make the draft policy effective and sound.

Change suggested by respondent:

Amend policy to more clearly support flexibility in individual circumstances where the adopted parking standards may not be the most appropriate solution.

Document Element: Background, 9.1**Respondent:** National Highways (Mr Marius Pieters, Spatial Planning Manager) [8127]**Summary:**

[National Highways letter dated 24/07/23 confirmed representation should be categorised as Comment - Seeking further information]. Infrastructure Delivery Plan – January 2023

As with our previous comments, National Highways therefore seeks to understand.

- the Council's strategy if developer contributions are insufficient
- the Councils' governance associated with collected contributions and their use
- how developers will be charged if additional contributions are required

Full text:

We have reviewed the publicly available Local Plan documents and provided comments in the attached letter, in relation to the transport implications of the plan for the safety and operation of the SRN.

Our comments include issues to resolve, comments, requests for further information and recommendations. A brief summary of our main comments are:

- the reliance on the delivery of the A27 Chichester bypass improvements project.
- the requirements for new, additional, and adapted processes and assessments, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments.
- collaborative working between agencies in combination with a robust monitor and manage policy.

We hope our comments assist.

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders. We look forward to continuing to participate in future consultations and discussions.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Background

National Highways has been appointed by the Secretary of State for Transport as strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the strategic road network (SRN).

National Highways is responsible for operating, maintaining, and improving the Strategic Road Network (SRN) i.e., the Trunk Road and Motorway Network in England, as laid down in Department for Transport (DfT) Circular 01/2022 (Strategic Road Network and the delivery of sustainable development).

The SRN is a critical national asset and as such we work to ensure that it operates and is managed in the public interest, both in respect of current activities and needs as well as in providing effective stewardship of its long-term operation and integrity.

Our responses to Local Plan consultations are guided by relevant policy and guidance including the National Planning Policy Framework (2021) (NPPF):

- Transport issues should be considered from the earliest stages of plan-making and development proposals so that the potential impact of development on transport networks can be addressed (para 104).

- The planning system should actively manage patterns of growth such that significant development is focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. (para 105).
- Planning policies should be prepared with the active involvement of highways authorities and other transport infrastructure providers so that strategies and investments for supporting sustainable transport and development patterns are aligned. (para 106).
- In terms of identifying the necessity of transport infrastructure, NPPF confirms that development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe. (para 111).
- Planning policies and decisions should support development that makes efficient use of land, taking into account the availability and capacity of infrastructure and services – both existing and proposed – as well as their potential for further improvement and the scope to promote sustainable travel modes that limit future car use. (para 124).

In relation to the tests of soundness set out at paragraph 35 of the NPPF, in the context of transport, these are interpreted as meaning:

- a) Positively prepared - has the transport strategy been prepared with the active involvement of the highway authorities, other transport infrastructure providers and operators and neighbouring councils?
- b) Justified – Is the transport strategy based on a robust evidence base prepared with the agreement in partnership, or with the support of the highway authorities?
- c) Effective – Does the transport strategy and policy satisfy the transport needs of the plan and is it deliverable at a pace which provides for and accommodates the proposed progress and implementation of the plan?
- d) Consistent with national policy – Does the transport strategy support the economic, social, and environmental objectives of the Plan and the NPPF/NPPG?

We will be concerned with proposals that have the potential to impact on the safe and efficient operation of the SRN; in this case, the A27 trunk road (Chichester Bypass and its junctions) which is the main access route in the Chichester area. We have particular interest in any allocation, policy or proposals which could have implications for the A27 and the wider SRN network. We are interested as to whether there would be any adverse road safety or operational implications for the SRN. The latter would include a material increase in queueing or delay or reduction in journey time reliability during the construction or operation of the development set out in the plan.

National Highways is a key delivery partner for sustainable development promoted through the plan-led system, and as a statutory consultee we have a duty to cooperate with local authorities to support the preparation and implementation of development plan documents.

In accordance with national planning and transport policy and our operating licence, we are entirely neutral on the principle of development as it is for the local planning authority to determine whether development should be allocated or permitted; albeit it must comply with national policy on locating development in locations that are or can be made sustainable. Therefore, while always seeking early and fulsome engagement with local plans and/or developers, we will simply be assessing the transport and related implications of plans or proposals and agreeing any necessary transport improvements and relevant development management policy.

In progressing Local Plans, we will seek to agree the following:

- Assessment tools and methodology
- Baseline Assessment i.e., to demonstrate that the assessment tool accurately reflects current transport conditions
- Comparator case assessment i.e., to forecast the transport conditions that would occur in the absence of the plan
- Forecast modelling i.e., to forecast the transport conditions that would arise with the plan in place, this will include an assessment at the end of the Plan period; and, if required, at full build out if that occurs after the end of the Plan period
- Outputs and outcomes of modelling, demonstrating, as appropriate, what transport infrastructure is necessary to support the plan o It should be noted that a suite of transport modelling tools may be required. This includes strategic modelling covering an area at least one major junction beyond the district boundary, localised network modelling where several links/junctions are close together and/or individual junction modelling
 - o A DMRB (Design Manual for Roads and Bridges) compliancy assessment may also be required for certain highway features, such as Merge/Diverge assessment at Grade separated junctions, link capacity assessments, and others.
- The design of any necessary transport infrastructure, to an extent suitable for establishing deliverability during the plan period at the time that it becomes necessary for the purpose of ensuring that unacceptable road safety impacts or severe operational impacts do not arise as a result of development. This may be to at least General Arrangement design stage or preliminary design stage. Whichever degree of detail is agreed, the products must be in full compliance with the DMRB.
- Industry standard transport intervention costings.
- The delivery/funding mechanisms for necessary transport interventions. It should not be assumed that National Highways will have any responsibility to identify or deliver necessary transport interventions.
- If considered appropriate, a “Monitor & Manage” (M&M) framework, aimed at managing the pace of development in line

with the pace of funding and delivery of necessary highway interventions in a manner which responds to the realworld impacts of development may be agreed for inclusion in the plan subject to the adequacy of risk control measures included therein. This can include the move from a 'predict & provide' style of delivery to 'a vision & validate' style. o Any M&M framework must be based on a "worst case scenario" whereby necessary mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. It must be translated into development management plan policy and policy relating to development allocations.

Further detail on the above can be provided by National Highways.

While ideally all the above should be agreed prior to the Submission of the Local Plan for examination, we recognise that this is not always possible. However, all parties should work towards all matters being agreed and reflected in a Statement of Common Ground (SoCG) by the start of the Local Plan Examination at the latest. Ideally the SoCG between the Council and National Highways would be prepared well in advance of plan submission in order to guide resource input and to track progress towards final agreement on all relevant matters starting from the earliest plan iterations until the final version is agreed.

It is acknowledged that Government policy places much emphasis on housing delivery as a means for ensuring economic growth and addressing the current national shortage of housing. The NPPF is very clear that: "Strategic policy-making authorities should establish a housing requirement figure for their whole area, which shows the extent to which their identified housing need (and any needs that cannot be met within neighbouring areas) can be met over the plan period."

However, new DfT C1/22 and the NPPF are equally clear that any development, including housing delivery, must be tempered by the requirement to ensure that the associated transport demand can be accommodated without unacceptable impacts on the safety of the SRN or severe impacts on the operation of the SRN including reliability and congestion. Therefore, as necessary and appropriate, any plan and/or development must be accompanied by suitable mitigation in the right places at the right time, that is to the required design standards and is deliverable in terms of land availability, constructability and funding.

We would also draw your attention to the then Highways England document 'The Strategic Road Network, Planning for the Future: A guide to working with National Highways on planning matters' (September 2015). This document sets out how National Highways intends to work with local planning authorities and developers to support the preparation of sound documents which enable the delivery of sustainable development. https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_t_data/file/461023/N150227_-_Highways_England_Planning_Document_FINAL-lo.pdf

Responses to Local Plan consultations are also guided by National Planning Policy Framework (NPPF) revised on 20 July 2021 which sets out the government's planning policies for England and how these are expected to be applied.

Updated Circular (01/2022)

It should be noted that since the start of the Local Plan consultation process, on the 23 December 2022, the Department for Transport released a new circular on the 'Strategic road network and the delivery of sustainable development' (Circular 01/2022), which replaces all of the policies in Circular 02/2013 of the same name. These representations take account of the new circular and the requirements in terms of the Local Plan evidence base and process.

We request that the Local Plan is prepared in line with all aspects of the new circular. Particularly, the principles of sustainable development (paragraphs 11 to 17), new connections and capacity enhancements (paragraphs 18 to 25), and engagement with plan-making (paragraphs 26 to 38).

Regulation 18 submission

In our Regulation 18 submission we noted several matters including:

- The need to mitigate the adverse impacts of strategic development traffic to the A27 Chichester Bypass and its junctions at Portfield Roundabout, Bognor Road Roundabout, Whyke Roundabout, Stockbridge Roundabout and Fishbourne Roundabout and Oving junction.
- The need to identify a mechanism to calculate contributions towards the delivery of the previously agreed Local Plan A27 improvements
- The need to confirm the number of dwellings needed within the plan period
- The need to establish National Highways acceptance of the traffic model reference and future case scenarios
- The need to confirm costs, viability, and funding associated with mitigating the safety and congestion impacts of the development included within the plan.

Local Plan context

This Local Plan (Chichester Local Plan 2021 – 2039), prepared by the Local Planning Authority (LPA) Chichester District Council, sets out the vision for future development in the district and will be used to help decide on planning applications and other planning related decisions including shaping infrastructure investments.

The draft sets out how the district should be developed over the next 18-years to 2039 including for the full Plan period (1 April 2021 to 31 March 2039) the total supply of

- 10,359 dwellings

- 114,652 net additional sqm new floorspace

Minus the completions this is equivalent to around 530 dwellings and 6,150 sqm of floorspace a year.

National Highways Representations

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders.

We have undertaken a review of the Chichester Local Plan 2021-2039 proposed submission version and accompanying evidence documents, our comments are set out in the tables below (following pages). [see table within attachment]

Summary

We have reviewed the publicly available Local Plan documents and provided comments above in relation to the transport implications of the plan for the safety and operation of the SRN. We understand that other technical information is available, but this was not presented as part of this consultation.

Chichester, and the A27, are already heavily congested, infrastructure in the existing Local Plan remains undelivered and the growth set out in the new Plan will further increase travel demand.

As presented, satisfying the transport needs of the plan is clearly reliant on the delivery of the A27 Chichester bypass improvements project. The A27 Chichester bypass improvements project is one of 32 pipeline schemes being considered for possible inclusion in National Highways third Road Investment Strategy (RIS3) covering 1 April 2025 to 31 March 2030.

On 9 March 2023 the UK Transport Secretary ensured record funding would be invested in the country's transport network, sustainably driving growth across the country while managing the pressures of inflation. The announcement cited the A27 Arundel Bypass as being deferred from RIS2 to RIS 3 (covering 2025-2030). The transport secretary also identified a number of challenges to the delivery of the road investment strategy and cited the benefit of allowing extra time to ensure schemes are better planned and efficient schemes can be deployed more effectively.

At present, there is no commitment by DfT to carry out the A27 Chichester bypass improvements project. Until the A27 Chichester bypass improvements project is published in the RIS3, consented and a decision to invest is made it cannot be assumed to be a committed project.

We note that the Plan does not address any uncertainty of delivery of the A27 Chichester bypass improvements project and we strongly recommend that there is either no reliance placed on RIS3 to realise capacity for growth in the Plan or that contingency measures are included to cover the eventuality that RIS3 funding is not forthcoming within the plan period. It is not clear that the potential impact of development on transport networks can be addressed in the absence of the A27 Chichester bypass improvements project.

Achieving net zero, reducing emissions reduction, acting on climate, and supporting thousands of new homes and new employment developments will be problematic with existing processes. New, additional, and adapted processes and assessments will likely be required, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments. We acknowledge that change is complex, expensive, and time-consuming, especially for smaller district level Councils. But the hard work will deliver benefits for the Council and residents in the longer-term.

National Highways seeks to continue working with the Council and WSCC to progress coordinated and deliverable packages of interim mitigation measures and alternative transport solutions while a long-term strategic solution is considered by government. This must however be in combination with a robust monitor and manage policy that appropriately manages the risk of unacceptable road impacts resulting from new housing and other development over the Plan period.

We have been in discussion with Chichester District Council regarding their proposed Monitor and Manage Strategy. At present, we do not consider the current strategy to be robust and we seek further information and detail especially on who, when and when monitoring and management will be undertaken. Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas. Any M&M framework must be based on a "worst case scenario" whereby necessary transport mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. The M&M framework must set out that the alternative to mitigation not being delivered is that development does not proceed where that development would give rise to unacceptable road safety risk or severe cumulative impacts on the road network in the absence of that mitigation. The M&M framework must be translated into development management plan policy and policy relating to development allocations.

As we have reiterated throughout our comments, we welcome the opportunity to work with you to address these outstanding matters and we will continue to liaise over submitted Transport Assessment, Travel Plan policy and Monitor and Manage Policy to help to work towards a viable plan.

We hope our comments assist.

We look forward to continuing to participate in future consultations and discussions. Please do continue to consult us as the Plan progresses so that we can remain aware of, and comment as required on, its contents.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through

all the transport related matters and agree how to progress any required evidence gathering or other work.

The plan should provide greater weight to the importance of developer contributions in the delivery of infrastructure. The plan should require contributions that go beyond the immediate infrastructure needs of the specific development, and seek contributions towards significant infrastructure deficits that exist as a result of a lack of public and private development. Contributions should be reasonable at all times, but it is not unreasonable for new developments to contribute to long-standing infrastructure deficits, which will be required and used by the future residents for whom they are providing housing.

Document Element: Background, 9.4**Respondent:** Mr Andrew Gould [7824]**Summary:**

This seems to be saying that if infrastructure can't be provided such as adequate sewage processing, a housing development can be allowed to go ahead anyhow. For example at Bosham over 700 hours of untreated sewage was discharged into Chichester Harbour in 2021. If Southern Water can't upgrade the treatment works in time 9.4 seems to be saying that a housing development could go ahead anyhow as an exception. 9.4 should be rephrased to say that there are no exceptions. If the development does not have accompanying infrastructure, it should not go ahead.

5346

Object

Document Element: Policy I1 Infrastructure Provision**Respondent:** Mr Paul Bedford [5302]**Summary:**

Time scale of the crucial improvements to infrastructure and particularly sewer and IWWTW capacity is of particular concern. SW's Drainage and Wastewater Management Plan v1May 2020 set out in very comprehensive way what needs to be achieved and indication of time scale -placing most in AMP8 the next 5 yr business cycle and OFWAT approval would be needed for the scale of expenditure that is many hundred of millions. These time scale constraints should be reflected in the phasing of any housing development that will have to utilise the network. There is no direct indication that such phasing will be actively enforced.

Full text:

These comments are confined to the three areas set out in the consultation - Legal, Soundness and Duty to Cooperate and to two documents -the draft Local Plan and the Sustainability Assessment.

Legal Status

The Legal status of the Plan is proven but because of the protracted course of the plan's preparation some stages are now dated and raise the question that they should be refreshed. This is the particular case in respect of public participation. There have also been significant changes in legislation that guides the plan's formulation that would have benefited from revised statement of legislative/legal context.

Soundness

In the SA it is stated that the key issue for the plan is the A27 and its capacity. This statement is fundamental in that it is realistically outside the scope of the local planning authorities (CDC and West Sussex CC) to have any direct control over. Unless National Highways position is changed from their previous statements on time scales and what might be included in their assessment no consideration of A27 will be made until RIS3 taking any even initial action into the next decade.

So fundamental and influential is the A27 that assessment of Local Housing Need (LHN), a key component of the whole plan, is reduced from 638 units pa to 535. This position must have an impact on the plan's 'Soundness and crucially the phasing of development.

It is worthy of note that three recent housing appeal decisions unfortunately focused primarily on the lack of a 5yr housing supply base on the 638 higher figure. More pressing were issues of sewage system capacity, coastal inundation and fluvial flooding and nutrient neutrality.

The reduction of housing requirements that the Reg19 LP now promotes is very welcomed.

The reduction on the Manhood Peninsula appears to be derived because of recent housing approvals on appeal bringing forward housing that achieves the revised target based on the 535 figure. Two points arise none of these sites are in locations that CDC indicated in documents such as the HELAA and SHELAA as positively sustainable and as all other significant Peninsula housing is dropped do these sites exceed what would have been planned totals.

The SA 'Framework' only addresses 'Water- protection of resources' this is highly appropriate given the problems experienced in the north eastern part of the district in the summer of 2022 and will become more pressing in the south. Resolution of this issue that stopped planning applications seems to be by reducing water usage at least to 110 ltr ppd or lower this is when Southern Water only hope to achieve 125ltr by 2050.

Consideration in the framework should extend to the 'Water Cycle' and particularly address the acute problems of sewage system network capacity, polluting WWTW outfalls, nutrient neutrality. These systems are already currently stressed/ completely overloaded with current levels of use without new development coming on stream and discharges of untreated sewage are a significant and growing problem to Chichester, Langston and Pagham Harbours- this situation must be set against Defra- Storm Overflow Discharge Reduction Plan's statement "Protecting the Environment-water companies shall only be permitted to discharge from a storm overflow where they can demonstrate that there is no local ecological impact". Damage to Chichester/ Langstone Harbours is documented by a damning Natural England report and by that expected for Pagham Harbour all the sites of national significance for biodiversity and protected habitats. Whilst para 5.2.34 and Box 5.1 of the SA summarise the position no direct statement of intervention is made. Reliance on a 'Statement of Common Ground' that is referred to offers no positive programme of future capital investment by Southern Water (SW) especially when set against SW's overall regional programme its cost and priorities as set out in their draft DWMP- the final version of which is due for release in March this year- does the Plan reflect this documents information that is so crucial to supporting the infrastructure need for the scale of development envisaged is challenging to the plan's 'Soundness'

Time scale of the crucial improvements to infrastructure and particularly sewer and IWWTW capacity is of particular concern. SW's Drainage and Wastewater Management Plan v1May 2020 set out in very comprehensive way what needs to be achieved and indication of time scale -placing most in AMP8 the next 5 yr business cycle and OFWAT approval would be needed for the scale of expenditure that is many hundred of millions. These time scale constraints should be reflected in the phasing of any housing development that will have to utilise the network. There is no direct indication that such

phasing will be actively enforced.

The lack of inclusion in a key background supporting document -Strategic Flood Risk Assessment (SFRA) -of the Planning Practice Guidance on Flood Risk and Coastal Change that has important bearing on issues particularly for the southern plan area and specifically mentions the importance of the phasing of development to infrastructure provision is a concern especially when it was published in August 2022. These omission again have an impact on the Plan's overall 'Soundness'.

A significant consideration in the plan that supports the need for more housing supply is the need to address affordability. The district has one of the highest ratio of median earnings to house prices of 14 times and despite substantial house building during the period 2013 -2022 the ratio has increased from 10.55. It is clear that the type of housing that has occurred and continues to be proposed in the district has done little if anything to impact on affordability and address the need for social/lower cost housing. Based on the 2011 census the district experienced 1,505 inward migration(only Brighton and Hove being higher in the West Sussex/ Gt Brighton area) - this trend has been expected to have continued and accelerated as the pandemic increased the popularity of coastal property and raised market cost of property. Just building more houses without policy intervention to prioritise social shared ownership housing will most probably prove to further increase the extent of unaffordability with the resultant consequences on workforce -especially to support the district ageing population- and supporting young people to remain in the area they have grown up in or have come to be educated. This aspect is cause concern over the Plan's 'Soundness'.

Considerable emphasis is placed on the issues of nutrient neutrality, damage to biodiversity and pollution of Chichester Harbour AONB but such emphasis is not extended to Pagham Harbour that has a similar ecological status to Chichester and suffers the same degradation issues.

Although Pagham is outside of the nutrient protection zone the factors contributing to nutrient problems are apparent feeding into Pagham. The delayed report on condition for Pagham from Natural England mirroring that for Chichester Hb gives every indication it will indicate the same levels of detriment as those in Chichester Hb. This assumption being supported by condition reports for instance for rife and ditch condition known reports. Added to these factors are known issues relating to untreated discharges from Sidlesham WWTW. The Local Plans's lack of affording Pagham similar consideration to Chichester Hb is an issue that impacts on the Local Plan's overall 'Soundness'.

Duty to cooperate

The West Sussex and Greater Brighton Strategic Planning Board (WSGBSPB) provides a context for integrated planning along the coast plain area. It is stated that this board is due to issue a review of its 2016 report next month -does the Plan address any issues that this review may raise? . Housing needs are a major feature of the area and the need to transfer unmet housing demand to adjoining authorities is characteristic feature of past policy.. The SA quite categorically states that there would be no realistic potential to meet unmet housing need above the now established LHN figure. Should the WSGBSPB's report signal the need for the district to absorb housing from other areas there may be problems as the Plan does not appear to offer any contingency or process how such pressure might be mitigated.

The highly restricted housing numbers in the South Downs National Park Local Plan and the closeness of its boundary to the 'coastal strip' are contributing factors to the area's carrying and overall capacity to support development. Further constraint is imposed by the Chichester Harbour Area of Outstanding Natural Beauty (AONB) and the geographical physical restrictions of the Manhood Peninsula creating 'coastal squeeze'.

Document Element: Policy I1 Infrastructure Provision**Respondent:** Bellway Homes (Wessex) Ltd [1573]**Agent:** Chapman Lily Planning (Mr Brett Spiller, Planning Consultancy Director) [8132]**Summary:**

Support approach of Policy I1 but there is perhaps a missed opportunity to make reference to some of the infrastructure to be covered by the IDP, particularly where funded in totality or in part via CIL. Note that a site-specific Infrastructure Plan has been prepared for Kingsham. This is welcome albeit it makes no reference to the River Lavant Flood Alleviation Scheme so it is understood that this would be a strategic matter (right and proper given the established properties at risk). Assume any and all relevant in-perpetuity costs, as described in criteria (v) have been taken into consideration in whole plan viability modelling. Similarly, trust that feasibility and costs associated with installing Gigabit-capable broadband have informed the whole plan viability modelling.

Full text:

See attachment.

Change suggested by respondent:

In the interest of clarity, River Lavant Flood Alleviation Scheme could be explicitly referenced in the supporting text at para.9.3. Would be grateful if 'commitment' to Alleviation Scheme could be drawn out in wider IDP together with an indication of programme, as well as potential upgrade works to Apuldram Waste Water Treatment Works.

Question whether development will be supported by sufficient provision of key infrastructure.

Full text:

REPRESENTATION TO THE PLANNING POLICY TEAM RE THE LOCAL PLAN MARCH 2023

Our interests in reading the Local Plan 2023 are namely:

The INFRASTRUCTURE NEEDED TO SUSTAIN SUBSTANTIAL DEVELOPMENT

YOU SAY: To work with infrastructure providers to ensure the timely delivery of key infrastructure to support delivery of new development. New development will be supported by sufficient provision of infrastructure to enable the sustainable delivery of the development strategy for the plan area.

Key infrastructure to support the Local Plan will include improvements to transport, open space and green infrastructure, education, health, water supply and removal, telecommunications, flood risk and coastal change management and the provision of minerals and energy Page 33

CAN YOU ACHIEVE THIS?

ROADS - already suffering with surface damage and from too high density of traffic

YOU SAY: A sustainable and integrated transport system will be achieved through improvements to walking and cycling networks and links to accessible public transport. Highway improvements will be delivered to mitigate congestion, including measures to mitigate potential impacts on the A27 through a monitor and manage process.

Page 33 CAN YOU ACHIEVE THIS?

MANAGEMENT OF SEWAGE TREATMENT AND DISPOSAL

YOU SAY: Sewerage undertakers will need to work with regulators to deliver improvements in wastewater infrastructure to support new development and to ensure adverse environmental impacts are avoided on internationally designated habitats. Improvements to water efficiency, conservation and storage capacity will be made.

Page 33 CAN YOU ACHIEVE THIS?

THE IMPACT SUBSTANTIAL DEVELOPMENT WILL HAVE ON OUR UNIQUE AND PRECIOUS ENVIRONMENT. INCREASING LIGHT POLLUTION.

YOU SAY: 12. Protect and enhance the existing biodiversity and important ecological corridor linking Chichester Harbour and the South Downs National Park.

Any development will need to: /

- a. Provide multifunctional green infrastructure both across the site and linking development to the surrounding countryside and Chichester city;
- b. Provide mitigation for any loss of watercourse habitat resulting from culverting for highway provision in the development;
- c. Provide buffer zones to sensitive habitats such as ancient woodland; Page 223

CAN YOU ACHIEVE THIS?

We applaud the words written down on efforts regarded as essential for the conservation of the AONBs and SSSIs of the Harbour. We applaud the efforts to maintain the wonderful view of the Cathedral from various aspects of the City. But we have little faith of these foreseen problems being effectively dealt with.

If the stretch of the A259 from Southbourne (which is classified as a Settlement Hub) to Fishbourne, where we already experience serious impact in congestion and noise, is going to be allocated several thousand new houses by 2030, I cannot imagine how the road will be able to start coping with that increased density of traffic. Another several thousand x 1.5 average vehicles per house will be using this already regularly gridlocked road.

We would implore that you actually managed to achieve what you are setting out with this wordy document but we have little faith, in fact, do not believe, that our environment and the precious habitats and lives of our wonderful local flora and fauna will be enhanced or even upheld in the process and we therefore believe that this Local Plan is unsound.

Document Element: Policy I1 Infrastructure Provision**Respondent:** Home Builders Federation (Mr Mark Behrendt, Local Plans Manager SE and E) [7316]**Summary:**

Part (iii) of the policy is unsound as it is inconsistent with national policy and is unjustified.

The policy requires all residential development to ensure new development benefits from gigabit-capable broadband infrastructure at first occupation. However, the delivery of super-fast broadband connections is often not in the gift of the developer. The HBF agrees that such infrastructure is important, however, its provision is not essential and should not be considered a barrier to the occupation of new homes as indicated in this policy. Whilst the HBF supports the Council's desire for such infrastructure it is their responsibility to work with the infrastructure provider to ensure its delivery and enable developments to be connected. Given that the type of connection required of development is also set out in Part R of the Building Regulations we consider it unnecessary to set this out in local plan policy. Paragraph relating to Fibre to the Premises should therefore be deleted.

Document Element: Policy I1 Infrastructure Provision**Respondent:** Mayday! Action Group (John Garrett) [7163]**Summary:**

This is not strong enough as all that will happen is a reoccurrence of the past whereby developers will develop make their profits and the lack of delivery of promises made will be to the detriment of the general populous and ultimately harm to the district over the long term. Clear accountability and inspection is essential.

Full text:**Executive Summary**

The Local Plan as written lacks ambition and vision, and will be detrimental to the landscape within which the district lies. It is a plan borne out of a need to produce a legal document which will satisfy the regulatory authorities. In terms of Urban Planning it fails "To meet the needs of the present without compromising the ability of future generations to meet their own needs" (NPPF).

The development that will consequentially arise from the deployment of such a made Local Plan is not sustainable. It will adversely affect the Character, Amenity and Safety of the built environment, throughout our district.

In particular, the Local Plan is inadequate for the needs of the people in the district both at present and in the future because –

1. It has been written in advance of the District having a properly formed and agreed Climate Emergency Action Plan. It is inconceivable that such a key document will not shape our Local Plan. It is this Action Plan that is needed first in order to provide the long-term strategic view as to how and what the District will look like in the future; this, in turn, will help form and shape the policies outlined in any prospective, Local Plan. The Plan as proposed is moribund, as a result of "cart before the horse" thinking.
2. The Local Plan as written does not adequately address how infrastructure, transport and services are going to be materially and strategically improved to meet the predicted growth and shift to a significantly ageing population. There is presently insufficient capacity to supply services and to have adequate people and environmentally friendly connectivity, as a direct result of decades of neglect towards investing in infrastructure and services to meet the needs of the District's population. We are led to believe that developers through increased levies in order to gain permission to build will fulfil this need, but all that this will result in is an uncoordinated, dysfunctional mess completely lacking in any future-proof master planning approach. We contend that this will do nothing for the quality of life of Chichester District residents and it will create a vacuum whereby few if indeed any can be held accountable or indeed found liable for shortcomings in the future.
3. The Local Plan as written does not state how it will go about addressing the need to create affordable homes. The District Council's record on this matter since the last made plan has been inadequate and now the creation of affordable homes has become urgent as political/economic/social factors drive an ever increasing rate of change within the District.
4. Flood risks assessments used in forming the Plan are out of date (last completed in 2018) and any decision to allocate sites is contrary to Environment Agency policy. Additionally, since March 2021 Natural England established a position in relationship to 'Hold the Line' vs. 'Managed Retreat' in environmentally sensitive areas, of which the Chichester Harbour AONB is a significant example. CDC have failed to set out an appropriate policy within the proposed Local Plan that addresses this requirement.
5. The A27 needs significant investment in order to yield significant benefits for those travelling through the East-West corridor; this is unfunded. Essential improvements to the A27 are key to the success of any Local Plan particularly as the city's ambitions are to expand significantly in the next two decades. But any ambitions will fall flat if the A27 is not improved before such plans are implemented.. The A259 is an increasingly dangerous so-called 'resilient road' with a significant increase in accidents and fatalities in recent years. In 2011, the BBC named the road as the "most crash prone A road" in the UK. There is nothing in the Local Plan that addresses this issue. There is no capacity within the strategic road network serving our district to accommodate the increase in housing planned, and the Local Plan does not guarantee it.
6. There is insufficient wastewater treatment capacity in the District to support the current houses let alone more. The tankering of wastewater from recent developments that Southern Water has not been able to connect to their network and in recent months the required emergency use of tankers to pump out overflowing sewers within our City/District reflects the gross weakness of short-termism dominated thinking at its worst and is an indictment of how broken our water system is. The provision of wastewater treatment is absolutely critical and essential to the well-being of all our residents and the long-term safety of our built environment. The abdication by those in authority, whether that be nationally, regionally or locally, is causing serious harm to the people to whom those in power owe a duty of care and their lack of urgency in dealing properly with this issue is seriously jeopardizing the environment in which we and all wildlife co-exist.
7. Settlement Boundaries should be left to the determination of Parish Councils to make and nobody else. The proposed policy outlined in the Local Plan to allow development on plots of land adjacent to existing settlement boundaries is ill-conceived and will lead to coalescence which is in contradiction of Policy NE3.
8. All the sites allocated in the Strategic Area Based Policies appear to be in the majority of cases Greenfield Sites. The plan makes little, if any reference to the development of Brownfield sites. In fact, there is not a Policy that relates to this source of land within the Local Plan as proposed. Whilst in the 2021 HELAA Report sites identified as being suitable for development in the District as being Brownfield sites were predicted to yield over 4000 new dwellings. Why would our

Local Plan not seek to develop these sites ahead of Greenfield sites?

9. The Local Plan does not define the minimum size that a wildlife corridor should be in width. What does close proximity to a wildlife corridor mean? How can you have a policy (NE 4) that suggests you can have development within a wildlife corridor? These exceptions need to have clear measures and accountability for providing evidence of no adverse impact on the wildlife corridor where a development is proposed. Our view is quite clear. Wildlife and indeed nature in the UK is under serious and in the case of far too many species, potentially terminal threat. Natural England has suggested that a Wildlife Corridor should not be less than 100metres wide. The proposed Wildlife Corridors agreed to by CDC must be enlarged and fully protected from any development. This is essential and urgent for those Wildlife Corridors which allow wildlife to achieve essential connectivity between the Chichester Harbour AONB and the South Downs National Park.

10. Biodiversity Policy NE5 - This is an absolute nonsense. If biodiversity is going to be harmed there should be no ability to mitigate or for developers to be able to buy their way out of this situation. This mindset is exactly why we are seeing a significant decline in biodiversity in the District which should be a rich in biodiversity area and why the World Economic Forum Report (2023) cites the UK as one of the worst countries in the world for destroying its biodiversity.

11. In many cases as set out in the Policies the strategic requirements lack being SMART in nature – particularly the M Measurable. These need to be explicit and clear: “you get what you measure”.

12. 65% of the perimeter of the District of Chichester south of the SDNP is coastal in nature. The remainder being land-facing. Policy NE11 does not sufficiently address the impact of building property in close proximity to the area surrounding the harbour, something acknowledged by the Harbour Conservancy in a published report in 2018 reflecting upon how surrounding the harbour with housing was detrimental to its long-term health. And here we are 5 years on and all of the organizations that CDC are saying that they are working in collaboration with, to remedy the decline in the harbour’s condition, are failing to implement the actions necessary in a reasonable timescale. CDC are following when they should be actually taking the lead on the issue. Being followers rather than leaders makes it easy to abdicate responsibility. There must be full and transparent accountability.

13. The very significant space constraints for the plan area must be taken into account. The standard methodology need no longer apply where there are exceptional circumstances and we are certain that our District should be treated as a special case because of the developable land area is severely reduced by the South Downs National Park (SDNP) to the north and the unique marine AONB of Chichester Harbour to the south. A target of 535dpa is way too high. This number should be reduced to reflect the fact that only 30% of the area can be developed and much of that is rural/semi-rural land which provides essential connectivity for wildlife via a number of wildlife corridors running between the SDNP and the AONB. Excessive housebuilding will do irretrievable damage to the environment and lead to a significant deterioration in quality of life for all who reside within the East / West corridor.

14. Many of the sites identified in the Strategic & Area Based Policies could result in Grade 1 ^ 2 farmland being built upon. The UK is not self-sufficient in our food security. It is short-sighted to expect the world to return to what we have come to expect. Our good quality agricultural land should not all be covered with non-environmentally friendly designed homes.

Change suggested by respondent:

What this policy fails to say is that if none of the above deliverables cannot be delivered ahead of or in tandem to the delivery of any housing when there is a clear need for this infrastructure in order to make the development sustainable then the DC reserves the right to reject said application. There is a desperate need to return to proper urban planning which creates capacity first ahead of demand for such services and infrastructure. If there is no capacity in the system for more housing due to infrastructure limitations, then housing development should be deferred until such times said infrastructure is in place. Build the pipes before you turn on the taps.

Object

Document Element: Policy I1 Infrastructure Provision**Respondent:** National Highways (Mr Marius Pieters, Spatial Planning Manager) [8127]**Summary:**

[National Highways letter dated 24/07/23 confirmed representation should be categorised as Comment - Seeking clarity] The Plan should evidence who will fund, be responsible for and maintain improved accessibility to necessary facilities and services by sustainable travel modes from the outset as well as on an ongoing basis and into the future.

Full text:

We have reviewed the publicly available Local Plan documents and provided comments in the attached letter, in relation to the transport implications of the plan for the safety and operation of the SRN.

Our comments include issues to resolve, comments, requests for further information and recommendations. A brief summary of our main comments are:

- the reliance on the delivery of the A27 Chichester bypass improvements project.
- the requirements for new, additional, and adapted processes and assessments, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments.
- collaborative working between agencies in combination with a robust monitor and manage policy.

We hope our comments assist.

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSSCC) and we will continue to work with the Council and other key stakeholders. We look forward to continuing to participate in future consultations and discussions.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Background

National Highways has been appointed by the Secretary of State for Transport as strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the strategic road network (SRN).

National Highways is responsible for operating, maintaining, and improving the Strategic Road Network (SRN) i.e., the Trunk Road and Motorway Network in England, as laid down in Department for Transport (DfT) Circular 01/2022 (Strategic Road Network and the delivery of sustainable development).

The SRN is a critical national asset and as such we work to ensure that it operates and is managed in the public interest,

both in respect of current activities and needs as well as in providing effective stewardship of its long-term operation and integrity.

Our responses to Local Plan consultations are guided by relevant policy and guidance including the National Planning Policy Framework (2021) (NPPF):

- Transport issues should be considered from the earliest stages of plan-making and development proposals so that the potential impact of development on transport networks can be addressed (para 104).
- The planning system should actively manage patterns of growth such that significant development is focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. (para 105).
- Planning policies should be prepared with the active involvement of highways authorities and other transport infrastructure providers so that strategies and investments for supporting sustainable transport and development patterns are aligned. (para 106).
- In terms of identifying the necessity of transport infrastructure, NPPF confirms that development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe. (para 111).
- Planning policies and decisions should support development that makes efficient use of land, taking into account the availability and capacity of infrastructure and services – both existing and proposed – as well as their potential for further improvement and the scope to promote sustainable travel modes that limit future car use. (para 124).

In relation to the tests of soundness set out at paragraph 35 of the NPPF, in the context of transport, these are interpreted as meaning:

- a) Positively prepared - has the transport strategy been prepared with the active involvement of the highway authorities, other transport infrastructure providers and operators and neighbouring councils?
- b) Justified – Is the transport strategy based on a robust evidence base prepared with the agreement in partnership, or with the support of the highway authorities?
- c) Effective – Does the transport strategy and policy satisfy the transport needs of the plan and is it deliverable at a pace which provides for and accommodates the proposed progress and implementation of the plan?
- d) Consistent with national policy – Does the transport strategy support the economic, social, and environmental objectives of the Plan and the NPPF/NPPG?

We will be concerned with proposals that have the potential to impact on the safe and efficient operation of the SRN; in this case, the A27 trunk road (Chichester Bypass and its junctions) which is the main access route in the Chichester area. We have particular interest in any allocation, policy or proposals which could have implications for the A27 and the wider SRN network. We are interested as to whether there would be any adverse road safety or operational implications for the SRN. The latter would include a material increase in queueing or delay or reduction in journey time reliability during the construction or operation of the development set out in the plan.

National Highways is a key delivery partner for sustainable development promoted through the plan-led system, and as a statutory consultee we have a duty to cooperate with local authorities to support the preparation and implementation of development plan documents.

In accordance with national planning and transport policy and our operating licence, we are entirely neutral on the principle of development as it is for the local planning authority to determine whether development should be allocated or permitted; albeit it must comply with national policy on locating development in locations that are or can be made sustainable. Therefore, while always seeking early and fulsome engagement with local plans and/or developers, we will simply be assessing the transport and related implications of plans or proposals and agreeing any necessary transport improvements and relevant development management policy.

In progressing Local Plans, we will seek to agree the following:

- Assessment tools and methodology
 - Baseline Assessment i.e., to demonstrate that the assessment tool accurately reflects current transport conditions
 - Comparator case assessment i.e., to forecast the transport conditions that would occur in the absence of the plan
 - Forecast modelling i.e., to forecast the transport conditions that would arise with the plan in place, this will include an assessment at the end of the Plan period; and, if required, at full build out if that occurs after the end of the Plan period
 - Outputs and outcomes of modelling, demonstrating, as appropriate, what transport infrastructure is necessary to support the plan
- It should be noted that a suite of transport modelling tools may be required. This includes strategic modelling covering an area at least one major junction beyond the district boundary, localised network modelling where several links/junctions are close together and/or individual junction modelling
- o A DMRB (Design Manual for Roads and Bridges) compliancy assessment may also be required for certain highway features, such as
 - o Merge/Diverge assessment at Grade separated junctions, link capacity assessments, and others.

- The design of any necessary transport infrastructure, to an extent suitable for establishing deliverability during the plan period at the time that it becomes necessary for the purpose of ensuring that unacceptable road safety impacts or severe operational impacts do not arise as a result of development. This may be to at least General Arrangement design stage or preliminary design stage. Whichever degree of detail is agreed, the products must be in full compliance with the DMRB.
- Industry standard transport intervention costings.
- The delivery/funding mechanisms for necessary transport interventions. It should not be assumed that National Highways will have any responsibility to identify or deliver necessary transport interventions.
- If considered appropriate, a "Monitor & Manage" (M&M) framework, aimed at managing the pace of development in line with the pace of funding and delivery of necessary highway interventions in a manner which responds to the realworld impacts of development may be agreed for inclusion in the plan subject to the adequacy of risk control measures included therein. This can include the move from a 'predict & provide' style of delivery to 'a vision & validate' style.
 - o Any M&M framework must be based on a "worst case scenario" whereby necessary mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. It must be translated into development management plan policy and policy relating to development allocations.

Further detail on the above can be provided by National Highways.

While ideally all the above should be agreed prior to the Submission of the Local Plan for examination, we recognise that this is not always possible. However, all parties should work towards all matters being agreed and reflected in a Statement of Common Ground (SoCG) by the start of the Local Plan Examination at the latest. Ideally the SoCG between the Council and National Highways would be prepared well in advance of plan submission in order to guide resource input and to track progress towards final agreement on all relevant matters starting from the earliest plan iterations until the final version is agreed.

It is acknowledged that Government policy places much emphasis on housing delivery as a means for ensuring economic growth and addressing the current national shortage of housing. The NPPF is very clear that: "Strategic policy-making authorities should establish a housing requirement figure for their whole area, which shows the extent to which their identified housing need (and any needs that cannot be met within neighbouring areas) can be met over the plan period."

However, new DfT C1/22 and the NPPF are equally clear that any development, including housing delivery, must be tempered by the requirement to ensure that the associated transport demand can be accommodated without unacceptable impacts on the safety of the SRN or severe impacts on the operation of the SRN including reliability and congestion. Therefore, as necessary and appropriate, any plan and/or development must be accompanied by suitable mitigation in the right places at the right time, that is to the required design standards and is deliverable in terms of land availability, constructability and funding.

We would also draw your attention to the then Highways England document 'The Strategic Road Network, Planning for the Future: A guide to working with National Highways on planning matters' (September 2015). This document sets out how National Highways intends to work with local planning authorities and developers to support the preparation of sound documents which enable the delivery of sustainable development. https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_t_data/file/461023/N150227_-_Highways_England_Planning_Document_FINAL-lo.pdf

Responses to Local Plan consultations are also guided by National Planning Policy Framework (NPPF) revised on 20 July 2021 which sets out the government's planning policies for England and how these are expected to be applied.

Updated Circular (01/2022)

It should be noted that since the start of the Local Plan consultation process, on the 23 December 2022, the Department for Transport released a new circular on the 'Strategic road network and the delivery of sustainable development' (Circular 01/2022), which replaces all of the policies in Circular 02/2013 of the same name. These representations take account of the new circular and the requirements in terms of the Local Plan evidence base and process.

We request that the Local Plan is prepared in line with all aspects of the new circular. Particularly, the principles of sustainable development (paragraphs 11 to 17), new connections and capacity enhancements (paragraphs 18 to 25), and engagement with plan-making (paragraphs 26 to 38).

Regulation 18 submission

In our Regulation 18 submission we noted several matters including:

- The need to mitigate the adverse impacts of strategic development traffic to the A27 Chichester Bypass and its junctions at Portfield Roundabout, Bognor Road Roundabout, Whyke Roundabout, Stockbridge Roundabout and Fishbourne Roundabout and Oving junction.
- The need to identify a mechanism to calculate contributions towards the delivery of the previously agreed Local Plan A27 improvements
- The need to confirm the number of dwellings needed within the plan period

- The need to establish National Highways acceptance of the traffic model reference and future case scenarios
- The need to confirm costs, viability, and funding associated with mitigating the safety and congestion impacts of the development included within the plan.

Local Plan context

This Local Plan (Chichester Local Plan 2021 – 2039), prepared by the Local Planning Authority (LPA) Chichester District Council, sets out the vision for future development in the district and will be used to help decide on planning applications and other planning related decisions including shaping infrastructure investments.

The draft sets out how the district should be developed over the next 18-years to 2039 including for the full Plan period (1 April 2021 to 31 March 2039) the total supply of

- 10,359 dwellings

- 114,652 net additional sqm new floorspace

Minus the completions this is equivalent to around 530 dwellings and 6,150 sqm of floorspace a year.

National Highways Representations

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders.

We have undertaken a review of the Chichester Local Plan 2021-2039 proposed submission version and accompanying evidence documents, our comments are set out in the tables below (following pages). [see table within attachment]

Summary

We have reviewed the publicly available Local Plan documents and provided comments above in relation to the transport implications of the plan for the safety and operation of the SRN. We understand that other technical information is available, but this was not presented as part of this consultation.

Chichester, and the A27, are already heavily congested, infrastructure in the existing Local Plan remains undelivered and the growth set out in the new Plan will further increase travel demand.

As presented, satisfying the transport needs of the plan is clearly reliant on the delivery of the A27 Chichester bypass improvements project. The A27 Chichester bypass improvements project is one of 32 pipeline schemes being considered for possible inclusion in National Highways third Road Investment Strategy (RIS3) covering 1 April 2025 to 31 March 2030.

On 9 March 2023 the UK Transport Secretary ensured record funding would be invested in the country's transport network, sustainably driving growth across the country while managing the pressures of inflation. The announcement cited the A27 Arundel Bypass as being deferred from RIS2 to RIS 3 (covering 2025-2030). The transport secretary also identified a number of challenges to the delivery of the road investment strategy and cited the benefit of allowing extra time to ensure schemes are better planned and efficient schemes can be deployed more effectively.

At present, there is no commitment by DfT to carry out the A27 Chichester bypass improvements project. Until the A27 Chichester bypass improvements project is published in the RIS3, consented and a decision to invest is made it cannot be assumed to be a committed project.

We note that the Plan does not address any uncertainty of delivery of the A27 Chichester bypass improvements project and we strongly recommend that there is either no reliance placed on RIS3 to realise capacity for growth in the Plan or that contingency measures are included to cover the eventuality that RIS3 funding is not forthcoming within the plan period. It is not clear that the potential impact of development on transport networks can be addressed in the absence of the A27 Chichester bypass improvements project.

Achieving net zero, reducing emissions reduction, acting on climate, and supporting thousands of new homes and new employment developments will be problematic with existing processes. New, additional, and adapted processes and assessments will likely be required, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments. We acknowledge that change is complex, expensive, and time-consuming, especially for smaller district level Councils. But the hard work will deliver benefits for the Council and residents in the longer-term.

National Highways seeks to continue working with the Council and WSCC to progress coordinated and deliverable packages of interim mitigation measures and alternative transport solutions while a long-term strategic solution is considered by government. This must however be in combination with a robust monitor and manage policy that appropriately manages the risk of unacceptable road impacts resulting from new housing and other development over the Plan period.

We have been in discussion with Chichester District Council regarding their proposed Monitor and Manage Strategy. At present, we do not consider the current strategy to be robust and we seek further information and detail especially on who, when and when monitoring and management will be undertaken. Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas. Any M&M framework must be based on a "worst case scenario" whereby necessary transport mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. The M&M framework must set out that the alternative to mitigation not being delivered is that development does not proceed where that development would give rise to unacceptable road safety risk

or severe cumulative impacts on the road network in the absence of that mitigation. The M&M framework must be translated into development management plan policy and policy relating to development allocations.

As we have reiterated throughout our comments, we welcome the opportunity to work with you to address these outstanding matters and we will continue to liaise over submitted Transport Assessment, Travel Plan policy and Monitor and Manage Policy to help to work towards a viable plan.

We hope our comments assist.

We look forward to continuing to participate in future consultations and discussions. Please do continue to consult us as the Plan progresses so that we can remain aware of, and comment as required on, its contents.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Document Element: Policy I1 Infrastructure Provision

Respondent: Network Rail (Sam Bhatti, Graduate Surveyor) [8048]

Summary:

References should be made to the concept of 15–20-minute neighbourhoods that provide a wide range of services within this walk time. The provision of amenities and leisure facilities within a 15-minute walk should be a cornerstone idea that drives mid to long term infrastructure goals for Chichester. Owing to the considerable amount of development anticipated by the Council, there is ample opportunity for local businesses and retailers to provide services within these local neighbourhoods.

Full text:

Thank you for consulting Network Rail on the above consultation, I can confirm we wish to make the following comments.

Network Rail is the statutory undertaker for maintaining and operating railway infrastructure of England, Scotland, and Wales. As statutory undertaker, Network Rail is under license from the Department for Transport (DfT) and Transport Scotland (TS) and regulated by the Office of Rail and Road (ORR) to maintain and enhance the operational railway and its assets, ensuring the provision of a safe operational railway.

Having been in consultation with the train operating company, Southeastern Rail, of particular interest to Network Rail is the need to integrate active travel infrastructure and promote First and Last Mile principles. In addition, the impact of development on train stations and existing level crossings.

First and Last Mile Considerations

We encourage the Council to consider not only the impact of development on the railway itself, but also on the first and last mile element of passengers' journeys. This factors in access to and from the railway, as well as how other transport modes are integrated and how well communities are connected.

Failure to integrate this represents an issue for rail travel as people who start journeys by car will likely continue to drive rather than stop to change to the train, as the cost and time of parking and train tickets offer no benefit to them.

Developing access to the railway using first and last mile principles has several benefits, including:

- Aligning with local and national policy to reduce carbon emissions and meet netzero targets, by encouraging more active modes of transport such as walking and cycling
- Providing a seamless journey experience where various modes of transport are integrated, including bus and rail services
- Providing an accessible and inclusive offering of transport modes to both local residents and visitors
- Improving connections between communities which may not be as well-served by public transport

While infrastructure and transport services may be identified as areas for improvement, there may be other, smaller scale enhancements that can be made such as better provision of information or additional cycle racks. Network Rail's Planning team welcome further discussions with the council to gain a better understanding of how we can work together to improve access to the railway and integrate first and last mile thinking into the scheme plans, taking into account the various component parts of passengers' journeys and wider plans for the local area.

Policy T3 Active Travel – this has the broad support of Network Rail but should be strengthened to reflect

walking/cycling as the first choice for local journeys; and for longer journeys part of an integrated bus/train transport chain that allows people to continue seamlessly.

Network Rail will support planning schemes within active travel distance of railway stations that provide continuous, direct and safe pedestrian/cycle routes that will serve rail passengers. Pedestrian routes should be prioritised over vehicles, meaning all schemes should be designed so that vehicles wait for walkers/cyclists, not the other way around.

Transport Infrastructure

Accessibility should be built into new development in the form of active travel networks, which will enhance permeability in people's transitions between areas. Development requiring additional road capacity should not go ahead, except as a last resort.

Policy T1 – in general this is supported. References to a 'coordinated package of infrastructure improvements' along the A27 should be replaced with a 'coordinated package of active travel and public transport improvements infrastructure', as this is more specific in emphasising that car transport should be minimised as much as possible.

Policies T2 and I1 – in general these are supported in the sense they promote seamless and continuous active travel arrangement and minimise car use. However, references should be made to the concept of 15–20-minute neighbourhoods that provide a wide range of services within this walk time. The provision of amenities and leisure facilities within a 15-minute walk should be a cornerstone idea that drives mid to long term infrastructure goals for Chichester. Owing to the considerable amount of development anticipated by the Council, there is ample opportunity for local businesses and retailers to provide services within these local neighbourhoods.

Railway Station Considerations

As a public funded company, Network Rail has responsibilities to spend public funds efficiently which consequently means we do not have the funds available to mitigate the impact of third-party development on railway stations. Where a significant amount of rail trips are generated by a third-party development, Network Rail expect that the development provides a contribution to mitigate the addition usage, ensuring that the rail network can continue to operate effectively. The contributions will encourage greater use of public transport by enhancing the rail experience for passengers.

The Local Plan has proposed site allocations across the district, for this reason the resulting increase to the use of stations should be recognized and mitigated against so that rail travel remains an attractive mode of transport. Failure to upgrade stations will result in less rail passengers which is counter productive to the Council's goals of a thriving public transport system.

Southbourne and Fishbourne Stations - Network Rail have concerns about the impact of future development on Southbourne and Fishbourne stations. As the stations themselves are small-sized, large-scale accessibility improvements would be potentially difficult. As a result, the provision of cycle parking facilities at both stations should be considered as crucial by the Council to ensure the station environment continues to modernize and encourage passenger use. This also ensures the stations integrate with proposed cycle/pedestrian routes across the area.

Level Crossing Considerations

As part of Network Rail's license to operate and manage Britain's railway infrastructure, Network Rail have the legal duty to protect rail passengers, the public, the railway workforce, and to reduce risk at our level crossings so far as is reasonably practicable.

Improving Level Crossing safety is therefore one of Network Rail's key priorities.

Closing level crossings is the only way to fully eradicate the risk. However, it is not always possible or practicable to immediately close all level crossings. Aside from financial and practical constraints, user convenience still needs to be a key consideration. A broad range of targeted interventions and initiatives are therefore needed to manage safety at crossings which remain open.

Any new development would need to provide an assessment of the impact on any nearby Level Crossings and in some cases, planning obligations may be required to mitigate the impacts on it.

Policy A13 Southbourne Broad Location for Development - Several strategic sites have been identified across the district, with a significant amount west of Chichester which require consideration. Policy A13, which proposes 1050 new homes, will result in significant upturns in use of the Penny Lane and Church crossings, which are currently public footpath crossings and have high risk factors. Large-scale development could therefore warrant closure or installation of a footbridge. The Council should be aware of this as these projects are costly and would require requisite funding.

Network Rail are in the process of completing a risk assessment on the affected crossings. However, for context we recently reviewed the Copse level crossing (located approximately 1.9km eastwards from Penny Lane) which resulted in a 300% use increase from a 112home development (Planning Application SB/22/01283/FULEIA).

Support

Document Element: Policy I1 Infrastructure Provision**Respondent:** John Newman [8169]**Summary:**

I agree with Policy 11, which I think very important. I would want national regulations to require the compulsory incorporation of solar panels into any new building, and indeed would urge CDC to require this as far as is legally possible. I have had solar panels on my house for nearly ten years now and was told that I would get my money back in seven years - I have. Were the same personal economics to apply to adding a battery, I would go for this too, but sadly they do not. I would also want to make electric vehicle charging facilities mandatory in any new garage.

This is not sound because there are too many important omissions from the policy. Not legal because it fails to address the needs of existing residents first.

Full text:

There is much to commend in this document and the supporting technical documents that accompany it, and I have listed in the appendix to this letter 26 such paragraphs and policies. I am happy for my support to be registered against these sections of your consultation document. There is also much upon which I must represent a concern, so I attach representations relating to 22 paragraphs or policies.

I am happy to participate in a hearing session, and I would flag at this stage that the common theme that links all of these representations is the need to safeguard the natural and built environment in and around Saxon Meadow, Tangmere from the risks of unsustainable development, I consider that the independent examiner should focus their review on the aspects of the local plan that relate to this matter.

Appendix 1: list of policies that I support

1. P14, 1.23, 1.24: Duty to cooperate

2. P24, para 2.30 "the council declared a climate emergency in July 2019"

3. P24, para 2.32 – "all proposal for new development should be considered in the context of a climate emergencV"

- 4, P30: Objective 2: natural environment: "development will achieve net gains in biodiversity"
5. P43, 4.1 "National policy promotes increasing energy efficiency, the minimisation of energy consumption and the development of renewable energy sources"
6. P43, 4.3: "Some renewable energy projects provide significant opportunities to enhance biodiversity"
7. P53, Policy NE5: Biodiversity and Biodiversity Net Gain
8. P62, Para 4.42: Hedgerows and some types of woodlands are identified as a priority habitat
- 9, P62, Policy NE8: Proposals should have a minimum buffer zone of 15 metres from the boundary of ancient woodland or veteran trees to avoid root damage (known as the root protection area)
10. P68, Policy NE10: Criteria for Development in the Countryside - Does not prejudice viable agricultural operations or other viable uses
11. P80, Para 4.91: There are serious concerns about the impact of flooding, both in respect of current properties at risk but also the long-term management of the area.
12. 4.92: any development in the plan area must therefore have regard to flood and erosion risk.
13. 4.94: built development can lead to increased surface water run-off; therefore, new development should include SuDS to help cope with intense rainfall events
14. P81, Para 4.96: Environment Agency consent is required for any works within 16 m of tidal waters and 8m of fluvial watercourses in line with the Environmental Permitting Regulations 2016. This strip is required for access. The policy includes a setback requirement to ensure this access strip is not obstructed.
15. P80, 4.92, Any development in the plan area must therefore have regard to flood and erosion risk, now and in the future, by way of location and specific measures, such as additional flood alleviation, which will protect people, properties and vulnerable habitats from flooding. Recent changes to national guidance highlight the importance of considering flood risk from all sources, and this is particularly significant for the plan area as large parts of it are at risk from groundwater flooding, which needs to be recognised in development decisions alongside the well-established risks in relation to tidal, fluvial and surface water flooding. Appropriate mapping of all sources of flood risks is still evolving, and is likely to develop further over the plan period
16. P93, Policy NE20 Pollution: Development proposals must be designed to protect, and where possible, improve upon the amenities of existing and future residents, occupiers of buildings and the environment generally. Development proposals will need to address the criteria contained in, but not limited to, the policies concerning water quality; flood risk and water management; nutrient mitigation; lighting; air quality; noise; and contaminated land. Where development is likely to generate significant adverse impacts by reason of pollution, the council will require that the impacts are minimised and/or mitigated to an acceptable level within appropriate local/national standards, guidance, legislation and/or objectives.
- 17, P94, 4.127, Light pollution caused by excessive brightness can lead to annoyance, disturbance and impact wildlife, notably nocturnal animals. The design of lighting schemes should be carefully considered in development proposals to prevent light spillage and glare.
18. P94, 4.128, Dark skies are important for the conservation of natural habitats, cultural heritage and astronomy. The plan area includes three 'Dark Sky Discovery Site' designations, all located within the Chichester Harbour AONB; Eames Farm on Thorney Island, Maybush Copse in Chidham; and north of the John Q Davis footpath in West Itchenor. Development within or directly impacting these areas will be subject to particular scrutiny in terms of their impact on dark skies. The entire SDNPA area is also declared as an International Dark Sky Reserve. Development directly impacting this area will be subject to similar scrutiny.
19. P96, Policy NE22 Air Quality
20. P97, Policy NE-23 Noise
21. P142, Para 6.29, Amenity: Private space, shared space and the design quality and construction of communal spaces all contribute to amenity
22. P155-6, Policy P11: Conservation Areas "protecting the setting (including views into and out of the area)"
- 23, P55, Para 4.26 - The council is under a legal duty to protect designated habitats, by ensuring that new development does not have an adverse impact on important areas of nature conservation, and by requiring mitigation to negate the harm caused.
24. P58, Para 4.33 The council is under a legal duty to protect their designated bird populations and supporting habitats
25. P95, Para 4.129 The council has a duty to review and assess air quality within the district
26. P301, Conservation Area: An area of special architectural or historic interest, designated under the Planning (Listed Buildings & Conservation Areas) Act 1990. There is a statutory duty to preserve or enhance the character, appearance, or setting of these areas.

Change suggested by respondent:

The following amendments to the plan should make it sound:

Policy II : Infrastructure provision

The council will work with partner organisations to coordinate infrastructure provision to ensure that individual and cumulative development is supported by the timely provision of adequate infrastructure, facilities, and services. The Infrastructure Delivery Plan will be used to identify the timing and nature of infrastructure requirements to support the objectives and policies of the Plan as well as the main funding mechanisms and lead agencies responsible for their delivery.

New development will be expected to provide for the on and off-site infrastructure, facilities and services required as a result of the development, and the needs to existing dwellings must be addressed first (e.g. in relation to drainage, runoff, flooding, waste water, clean drinking water, and other essential utility services and to safeguard current amenities including rights of way, parking and amenity value of communal land). Provision should be made in accordance with a phasing and implementation plan where necessary.

All such requirements will be secured by way of condition or legal agreement.

Development proposals will be permitted that:

(i) Make effective use of existing infrastructure, facilities, and services, including opportunities for co-location, sharing and multifunctional use of services and facilities; (ii) Provide for the on and off-site infrastructure, facilities and services required as a result of the development;

(iii) Safeguard the requirements of infrastructure providers, including but not limited to:

- Renewable energy;
- Gigabit-capable electronic communications networks, including wireless and full fibre cabled services;
- Electricity power lines;
- On and off street charge points for electric vehicles • High pressure gas mains; o Educational facilities; • Health facilities; o Aquifer protection areas; o Highways and cycle lanes, and
- Flood defences and SuDS infrastructure.
- Land and other local or adjacent infrastructure that housing estates may require for renewable energy solutions to replace gas boilers and generate renewable energy onsite (iv) Future-proof infrastructure provision to take account of the impacts of climate change such as flooding events from heavy rainfall, rivers and rising sea levels, increased drought, sustained and high wind speeds and extremes of temperature and water scarcity;

(v) To consider and meet as appropriate the in-perpetuity costs of infrastructure and arrangements for its future management and maintenance;

(vi) Agree a programme of delivery with the relevant infrastructure provider before development begins including coordination of financial and physical contributions;

(vii) Ensure new development benefits from gigabit-capable broadband infrastructure at the point of occupation;

(viii) Improve accessibility to necessary facilities and services by sustainable travel modes from the outset.

Document Element: Policy I1 Infrastructure Provision**Respondent:** Rydon Homes Limited [1499]**Agent:** DMH Stallard LLP (Mr Mark Walker, Planner) [7918]**Summary:**

Boxgrove Church of England (CoE) Primary School currently has capacity for just 70 pupils, 3 classes over 7 years. However, a typical 1 Form of Entry (FE) Primary School in England has a pupil capacity of 210 pupils. Boxgrove is a 1/3 FE School. The existing school site has the potential to increase its size/ pupil capacity, with the adjoining land under the ownership of West Sussex County Council (WSCC) and Boxgrove Parish Council (BPC). Policy A14, Land West of Tangmere includes a new two-form entry primary school and associated development, including provision for an early years setting and a special support centre. Further land is safeguarded to facilitate potential expansion of the two-form entry primary school to three-form entry, provide 'open space', 'green infrastructure', 'community orchard', 'playing pitches', and 'sport pavilion'. However, the same infrastructure is not being provided for in the Plan for Boxgrove Parish and we would like to see this area of the Infrastructure section re-assessed.

Education infrastructure cannot be cited as a constraint to Boxgrove Parish accommodating a higher (strategic level) of growth and this should be reflected in the Plan, with the existing Boxgrove CoE Primary School having the potential land to extend on-site and/or there being adequate capacity at the proposed 2FE Tangmere Primary School to accommodate a strategic level of growth within Boxgrove Parish.

However, the existing school site has the potential to increase its size/ pupil capacity, with the adjoining land under the ownership of West Sussex County Council (WSCC) and Boxgrove Parish Council (BPC).

Evidence shows that 1000 new homes generate circa 210 new Primary School pupils. The proposed 2FE Primary School at Tangmere Parish would accommodate circa 2,000 new pupils. The proposed Strategic Allocation for Tangmere (including the existing adopted Local Plan allocation) proposes 1,300 additional homes at Tangmere, therefore leaving a residual capacity for the proposed 2FE Primary School to accommodate an additional 700 homes within the Tangmere and surrounding Parishes. The pupil catchment map confirms that WSCC have accepted pupils to Boxgrove CoE Primary School from the Tangmere Parish and visa versa.

Document Element: Policy I1 Infrastructure Provision**Respondent:** Rydon Homes Limited [1499]**Agent:** DMH Stallard LLP (Mr Mark Walker, Planner) [7918]**Summary:**

Wastewater – Boxgrove drains to Tangmere Wastewater Treatment Works (WWTW). The evidence base submitted with Reg 19 confirms that Tangmere WWTW had (as of 01.01.22) remaining dwelling capacity for an additional 3556 new homes (with an Environment Agency discharge licence for 3,000 additional homes).

The proposed housing allocation (to include the adopted Local Plan provision) totalled an additional 1,300 new homes west of Tangmere and would leave a residual capacity of over 2,000 new homes to be accommodated at Tangmere WWTW. Wastewater infrastructure is therefore not a constraint to Boxgrove Parish accommodating a strategic level of growth (i.e circa 200 homes plus). This evidence should be reflected in the Plan.

Object

Document Element: Policy I1 Infrastructure Provision**Respondent:** Stagecoach South (Rob Vince) [8141]**Summary:**

Policy I1 could not expect to be effective without a clear understanding of the effectiveness and costs of a defined series of measures that are laid out in this Plan and its IDP, to mitigate the transport impacts of the development strategy.

Where the Chichester Transport Study is concerned the only meaningful work has focused on the definition and delivery of a range of highways capacity schemes mainly on the A27 around Chichester.

As we have discussed elsewhere the effectiveness of these schemes is insufficient as set out at Tables 8.1 and 8.2 of the Chichester Transport Study 2023. The plan itself admits that the deliverability of this package cannot be afforded by developer contributions alone.

The Chichester Transport Study 2023 does not attempt provide a realistic assessment of costs to deliver these schemes, despite the fact that they have been under evaluation for many years. Nor does it offer any assurance that the schemes are technically achievable.

Thus on the grounds of effectiveness, deliverability and affordability, the measures on which the Plan relies must at the very least be considered to involve an exceptionally high level of risk. Since Policy I1 is founded on these assumptions, it cannot be considered effective.

Full text:

Chichester District Local Plan 2039 – Pre-Submission (Regulation 19) Consultation

1. Introductory Comments

Stagecoach South is the main commercial public transport operator across Chichester District. The Company has headquarters in the city, which is also the principal public transport hub for the District and it's rather wider travel-to-work area encompassing much of the Arun District. Our services extend throughout and beyond the District boundaries, as far as Littlehampton, Midhurst, Havant and Portsmouth. The vast majority of services operate on a commercial basis – that is to say, sustained by passenger use and fare revenue, including concessionary reimbursement.

While the role of the railway is significant in much of the District, especially the east-west Coastway line, yet bus services account for more boardings locally than the railway, with Chichester depot services carrying over 3.5m passengers each year.

Unlike bus services in other parts of the country, the local network has recovered strongly after the pandemic with fare-paying passenger numbers over 95% of 2019 levels, albeit with concession patronage somewhat lower. This has helped secure not only a stable but growing bus network even during this period of rapidly rising operational costs, avoiding the need for the service contractions seen in other regions. Indeed, during the second quarter of 2023 Stagecoach will invest £5.5m in brand-new vehicles for high-profile coastal Service 700 – one of the largest vehicle investments for Stagecoach Group this year.

Our services are therefore critical to existing and future local connectivity. As the Plan acknowledges, mobility demands do not respect planning authority boundaries. The role of our services is especially high to settlements in the broad A27 corridor, within the District and beyond. This includes major settlements in Arun District such as Pagham and suburban Bognor Regis, where bus is the only mass public transport option. As the Council is well aware, there is an even higher level and rate of committed development envisaged in these locations in the Arun District Local Plan than in Chichester.

It is already evident to the planning authorities, West Sussex County Council and National Highways, as proprietor of the A27 Trunk Road, that accommodating growing mobility demands across Chichester District and especially around Chichester itself, is becoming increasingly challenging to the point of being seriously problematic.

Stagecoach has a particular interest in this Plan arising from:

- The already clear and highly deleterious impact of congestion affecting our operations and their reliability and attractiveness to the public. The effects of these on the approaches to Chichester, and around the A27 bypass are especially severe. If public transport is to retain its existing role – even before the needs of any meaningful growth both in Chichester and neighbouring authorities is considered, are considered – the Council and the Highways Authority need to arrive at clearly-defined measures to protect buses from chronic delay and the damaging impacts arising from the lack of bus network resilience and customer journey times.
- In connection with the above, the need to properly consider the predictable impacts of committed development in Arun District on the transport network and in particular the operation of bus services. The duty to cooperate on cross-border strategic matters is not limited merely to accommodating housing requirements.
- The fact that our entire business premises and operational base at Chichester is the subject of allocation for redevelopment within the Plan period. Specifically, this includes our Head Office, the Bus Station as the operational hub of the network and the key interchange for passenger journeys – including those that involve the railway – and the bus depot required to support the entire operation. Notwithstanding many years of discussions, there is as yet no agreed deliverable strategy to replace these facilities either in the Draft Plan or elsewhere.

Stagecoach broadly supports the vision and priorities of the draft plan. In most respects, Stagecoach supports strongly the spatial strategy and the identified site allocations that flow from it, and the evidence.

However, it has serious concerns about the soundness of the plan as proposed for submission, for important regards outlined in this response. These are made in the light of requirements set by the National Planning Policy Framework (NPPF), in particular at paragraphs 15 and 16; 35, 105-109 inclusive and having due regard to the need for allocations to satisfy 110-112 inclusive in due course as development permission is sought; and paragraph 174.

Paragraph 16c) of NPPF makes plain that strategic plans and policies should “be shaped by early, proportionate and effective engagement between plan-makers and communities, local organisations, businesses, infrastructure providers and operators and statutory consultees” (our emphasis). This makes plain that collaborative and ongoing involvement of public transport operators is both necessary, and separate and in addition to the engagement with statutory consultees. This has not taken place.

Para 1.25 of the draft plan states that “the council has engaged constructively, actively and on an ongoing basis with other local authorities and organisations to address key strategic matters.” Despite the requirements in NPPF and contrary to the statement made, Stagecoach has not been approached or involved in a meaningful, collaborative or ongoing way in the preparation of the Plan.

Our main concerns centre around the fact that the plan strategy is neither backed by sufficient transport evidence. Even more importantly, the plan relies on a wholly car-based transport mitigation strategy despite policy stating that this is not the case, and the track record of the existing Local Plan, based on a very similar strategy, that has failed to bring forward meaningful mitigations to date to prevent traffic conditions substantially worsening. There is no support in policy for the achievement of the Strategic Objectives in the Plan. Nor is there definition of any measures in the 2023 Transport Study to make provision for sustainable transport infrastructure or services – much less materially improve them.

Finally, to the extent that updated transport evidence has been provided in the form of the 2023 Chichester Transport Study, arising from updated traffic modelling, it does not support the contention that highways capacity constraints on and around the A27 justify not meeting the objectively-assessed development needs of the area, as the draft plan contends.

2. Vision and Strategic Objectives

2.1. Issues and Opportunities

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant, proportionate and up to date evidence

Stagecoach recognises the important role of the West Sussex and Greater Brighton Strategic Planning Board which agreed a Local Strategic Statement (LSS2) in early 2016 to identify spatial planning issues across the wider area. This

established strategic priorities and policies to guide longer term strategic growth in a coordinated and well considered matter. This institutional framework and the purpose of the LSS is a highly significant one and is at the heart of efforts to properly fulfil the statutory Duty to Co-operate, including with regard to strategic infrastructure issues, as NPPF requires.

Given the long period of time elapsed since the 2018 Reg 18 consultation and the already very clear constraints on strategic infrastructure capacity, it is of great concern to Stagecoach that the LSS2 has not been updated to reflect emerging issues in the intervening period. A review and update of the LSS2 has only just commenced. This includes a study of projected housing and employment needs, transport impact, infrastructure and spatial options to deliver the required development in the period after 2030. This Chichester District draft plan covers a period extending to 2039 – therefore well beyond 2030 and the nominal currency of LSS2.

However, infrastructure needs are pressing today. Stagecoach is presented with severe highway operational problems on a near-daily basis. During the winter of 2022-23 we have, for example, seen key road links impacted for many weeks by acute disruption arising from flood events. Unpredictable, but seemingly more-frequent, exogenous events expose a lack of resilience in the highway network around Chichester and its travel-to-work area. However, serious, chronic, unpredictable delay has been normalised over recent years, with peak-time congestion having quickly returned after the pandemic. The existing development strategy has failed to bring forward measures having any impact on this to date, and key commitments – notably at west of Chichester Phase 2 and at Tangmere – have yet to commence to further aggravate the issue.

We have no confidence in the transport mitigations proposed in the existing Local Plan and LSS2 being sufficiently effective, even if deliverable at all. Indeed, the existing adopted Local Plan does little more than make vague speculations about the sustainable transport measures that might be achievable. The draft local plan review is no different. It has no ambitions at all for sustainable modes and thus, makes no meaningful provision to meet them.

This is especially relevant in light of the fact that the approach to resolving issues on the A27 around Chichester that were anticipated in 2015-16 have fallen away. LSS2 is thus currently inadequate to act as a part of an up-to-date, proportionate, and relevant evidence base for the Plan.

An update of a traffic model lies at the heart of a 2023 Chichester Transport Study. This talks no account of the existing role of non-car modes, nor can it do so. It is unable to properly evaluate the nature of problems or solutions that involve public transport, or for that matter, other sustainable modes.

Therefore, we consider that the combination of committed and additional development needs that must be accommodated over the whole plan period between 2022 and 2039, in both the Chichester and Arun Districts, require a “first principles” review. This must be based on a refreshed transport evidence baseline of no earlier than 2022 – given that the effects of COVID distort 2020-22 – and the transport infrastructure and service requirements to sustainably support those needs.

Key issues – including substantial changes with regards to transport issues and challenges, as well as potential solutions – thus do not form part of the evidence base that steers this plan. Given long term changes in travel patterns, and mode share that took place during COVID, as well as a local and national policy context that seeks to radically reduce and then eliminate transport-related carbon emissions, this is especially problematic.

The specific problems of congestion and network resilience that are evident on the A27 and the approaches to Chichester remain a set of especially difficult problems that disproportionately affect the efficiency, reliability and attractiveness of the bus network, that evidently demand larger-scale strategic responses involving multiple stakeholders, including bus operators.

Where the effects of development on the national Strategic Roads Network (SRN) are concerned, the approach of National Highways to addressing and responding to the mobility needs of development has now substantially changed following the promulgation of the DfT Written Ministerial Statement LTN01/22. This makes it clear that adding highways capacity is no longer the first or only strategy that should be pursued, but one subordinate this to maximising the potential of non-car modes and sustainable travel.

“Effective and ongoing collaboration” on transport matters has not led to solutions being agreed and published for public scrutiny as part of the plan evidence base. Whatever the approach to modelling and “highways improvements” that may be agreed or pending agreement with the County Highways Authority and National Highways, Stagecoach is neither participant or sighted. This is despite the clear requirements set out in NPPF Para 106 b) that “Planning policies should ... be prepared with the active involvement of local highways authorities, other transport infrastructure providers and operators and neighbouring councils, so that strategies and investments for supporting sustainable transport and development patterns are aligned.” (our emphasis).

We therefore consider that the Council has failed to comply with the requirements of NPPF paragraph 25 and 26 that “relevant bodies” are involved in plan-making, especially with regard to addressing the needs for infrastructure. Public transport services and the infrastructure that supports its operation and use clearly fall within matters relevant to plan-making. This is explicit in NPPF Chapter 9 and indeed within the plan itself – for example reference to public transport and sustainable modes in the Vision for the plan.

It should be stressed that the Regulation 18 “Preferred Approach” consultation took place in December 2018 – over 4 years ago and prior to COVID, based on LSS2. The inordinate length of time that has elapsed between the Regulation 18 and Regulation 19 stages greatly challenges the LSS2 and other parts of the evidence base, especially as the pause straddles the COVID epidemic. That would include the transport modelling baseline, and key assumptions in any traffic modelling that took place prior to mid-2022, which is a point at which a reasonable “new normal” post-COVID might be considered to have become established. In that period, Arun District has also adopted its own Local Plan development strategy that accommodates an unprecedented quantum of development immediately east and south-east of the District Boundary – creating additional substantial transport impacts directly affecting the A27 and multiple major approaches to Chichester crossing it.

The established mechanism to fulfil the Duty to Co-operate has thus not operated effectively.

The Plan is not founded on a relevant, proportionate and up-to date evidence base and is thus inadequately justified.

2.2. Spatial Portrait

The spatial portrait is generally succinct and accurate. However, it makes no mention of road-based public transport, the role of the City as a public transport hub, or the range of bus services that provide local connectivity (Section 2.4 and 2.5). The complete concentration of post-16 education in the City itself as just one example of the peculiarities of transport demands in the area, is not highlighted, though this has a profound influence on peak time travel demands affecting the most congested parts of the highway network. Among other things, the role of bus services in supporting the educational system of the plan area is very great indeed.

The potential role of bus in addressing the already-severe transport problems of the plan area and beyond seems entirely overlooked. The spatial portrait is thus clearly inadequate and incomplete.

2.3. Strategic Objectives

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Chapter 9 of NPPF and paragraphs 104 and 105 in particular require that plans should:

“Transport issues should be considered from the earliest stages of plan-making and development proposals, so that:

- a) the potential impacts of development on transport networks can be addressed;
 - b) opportunities from existing or proposed transport infrastructure, and changing transport technology and usage, are realised – for example in relation to the scale, location or density of development that can be accommodated;
 - c) opportunities to promote walking, cycling and public transport use are identified and pursued;
 - d) the environmental impacts of traffic and transport infrastructure can be identified, assessed and taken into account – including appropriate opportunities for avoiding and mitigating any adverse effects, and for net environmental gains;...
- ...The planning system should actively manage patterns of growth in support of these objectives. Significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. This can help to reduce congestion and emissions, and improve air quality and public health...”

The Strategic Objectives do not conform with NPPF in these foundational requirements adequately, to transparently steer the plan strategy. They should therefore be amended to read:

“Plan to provide local infrastructure to support new development and seek opportunities to address existing identifiable infrastructure problems deficits, such as in particular those relating to the A27 and its junctions and wastewater treatment.”

Paragraph 2.36 states, in the context of the Climate Emergency and the National Trajectory to “Net Zero” that “The council will enable the delivery of infrastructure, jobs, accessible local services and housing for future generations while protecting, conserving and enhancing the historic and natural environment.”
Naturally, we support this intent.

However, there is no acknowledgement of the role current patterns of transport use contribute to carbon emissions, nor that substantial mode shift is necessary to address sustainably an acute lack of capacity on the local network and the SRN, especially around Chichester. This is especially concerning as the basic conceptual link is not made between the fact that the greatest such problems lie on the A27 corridor and around Chichester, while these are also at the same time present many of the most sustainable locations for development, and where the opportunities to secure much greater use of sustainable modes also exists.

Strategic Objective 7 “Strategic Infrastructure” includes the following statement:

“To work with infrastructure providers to ensure the timely delivery of key infrastructure to support delivery of new

development. New development will be supported by sufficient provision of infrastructure to enable the sustainable delivery of the development strategy for the plan area. Key infrastructure to support the Local Plan will include improvements to transport, ...

A sustainable and integrated transport system will be achieved through improvements to walking and cycling networks and links to accessible public transport. Highway improvements will be delivered to mitigate congestion, including measures to mitigate potential impacts on the A27 through a monitor and manage process.”

The latest transport evidence in the Chichester Transport Study makes no pretence to define much less to deliver a “sustainable or integrated” transport system. It is wholly devoted to sustaining current levels of car use across the District, to and through Chichester area.

It is no more than the lightest of touches to the approach taken to supporting the adopted Local Plan, an approach that is already almost 10 years beyond the date of its gestation but has yet to deliver any significant capacity improvement schemes, much less any measures that sustain even current levels of public transport journey times and reliability in the face of increasing congestion – much less any betterment.

Of the six key junctions on the A27 around Chichester, recognised to require significant mitigation given they are saturated for extended periods, five accommodate regular bus services - indeed frequent ones at least every 20 minutes in several cases. The sixth at Oving Road, relates directly to a key corridor where bus services are needed to support strategic growth currently being delivered at Shopwhyke, as well as substantial further growth West of Tangmere (proposed allocation A14) and “East of Chichester” (A8), south of Shopwhyke Road.

As stated at p12 of the Study Summary “The modelling shows that all the junctions on the A27 Chichester bypass are well over capacity, even before adding in the Local Plan development and with the exception of Portfield Roundabout are actually shown to be over capacity in the base model year (2014) in one or both peaks”. This much has indeed been evident for years from delay and periodic even more severe disruption arising to Stagecoach services from the lack of network resilience.

The reassignment of through and local traffic through Chichester to avoid the A27 bypass is an especially serious issue for bus services that penetrate the city. This is leading to consequential saturation of a range of junctions used by buses. Rising delay and unpredictable running times are at the root of our decision to sever the long-established Portsmouth to Littlehampton service in 2023, which will in future no longer run across Chichester, but terminate to provide additional dwell time to mitigate the impacts of congestion.

While this congestion affects all road users including businesses and freight traffic, the effect on scheduled bus services is greatly higher, as such services cannot reassign route to ‘beat the queue’. Traffic congestion often encourages greater car use for this reason, in tandem that people are happier to sit for extended periods in their own vehicle on a seamless door-to-door journey than wait at the roadside for a delayed bus making slower progress in lengthy queues.

As the Study admits at para. 1.3.2 “Although, there have been works at the Portfield Roundabout in this timeline, no other mitigation schemes have been completed along the A27 corridor, as such the mitigation schemes defined in this report will also be required to consider the development from this plan period.”

In other words, in the 8 years since the current Local Plan was adopted in 2015, there has been minimal progress in delivering the traffic mitigations. There is no clarity at all when any such mitigations will be brought forward. It is hardly surprising then, that traffic conditions have deteriorated. The “predict and provide” transport strategy supporting the current plan has failed.

Despite this, the Draft Local Plan Review proposed to “double down” on exactly this strategy. It represents, like the rest of the evidence base, a “rolling forward” of the current car-based strategy by 9 years, with the lightest of touches to attempt to accommodate car trip demands from a relatively modest additional development quantum.

Nevertheless, the Study requires a global 5% reduction in trip demands arising from unspecified “credible” (paragraph 4.1.2) sustainable transport and travel planning measures. It is unclear why use of non-car modes will see disproportionate growth when no measures are in place to make them more attractive. This 5% increase in use translates to a doubling in the modal share of bus services. There is no evidence nationally, anywhere, that simple ignorance of alternatives to the car is the main barrier to uptake.

The outputs of the 2023 Chichester Area Traffic (SATURN) model are set out at Table 5.1 (am peak) and 5.2 (pm peak) without mitigation. These betray just how seriously compromised the whole network around Chichester is, and will be in future, even with implementation of a mitigation partake to increase traffic capacity that is understood to cost between £92m and £164m – and which the Study and the draft plan acknowledge cannot be delivered through developer funding sources alone. Unspecified external funding presumably from HM Treasury through DfT is required.

Even if this provided and the schemes are delivered, Tables 8.1 and 8.2 indicate these will provide minimal relief. The final columns suggest key junctions, including Portfield, Fishbourne Road and Cathedral Way East will remain at well over 100% ratio of flow to capacity (90% is considered the point at which saturation is approached, with the onset of increasing delay above that figure). RFCs in tables 8.1 and 8.2 are some of the highest we have ever seen in a local

transport evidence base for a post-mitigation scenario. While the serious potential risk of reassignment across Chichester City is greatly reduced, which is important and welcome given its impact on bus services, Tables 8.1 and 8.2 show the extent of post-mitigation saturation is also egregious, covering a very large number of key links and junctions.

On every measure and criterion, then, including cost deliverability and effectiveness, the revised Transport Strategy falls well short of evidence to suggest the transport impacts of the plan can be properly addressed by this means.

Despite the repeated statements about sustainable modes throughout the draft plan and Chichester Transport Study, only 2 paragraphs at Section 6.2 within the Study are devoted to public transport:

“6.2.7 The funds generated from the parking management schemes, local/nation funding schemes and developer contributions could also be utilised to fund potential public transport enhancements within the city centre including an expansion of the bus priority lane system within Chichester City Centre. This could reduce reliance on the car in the longer term towards sustainable public transport. A park and ride scheme could be incorporated within a bus priority lane network in the future depending on the uptake and successfulness of early bus priority trials.

6.2.8 Chichester City centre has a constrained existing public highway network. Therefore, any proposed dedicated public transport or light transit corridors that could be implemented would be at the expense of existing highway. This could be managed through a time-based system where certain routes are restricted to public transport only during specific times. E.g., peak hours.”

There is some very high-level consideration of Park and Ride following this section. None can be considered a serious practical evaluation of consolidating car-borne trips onto bus services, including existing ones, for example local mobility hubs, more frequent bus corridors, delivery of specific bus priorities.

None of the discussion of alternatives to “predicting and providing” for unconstrained traffic growth is rooted in a deliverable evidence base, or proper evaluation of options and specific projects.

To take just one aspect of the few specifics that can be picked out, a workplace parking levy is hypothesised. This would apply only to “offices”, in Chichester city centre (para 6.2.3), without consideration given as to how this could be practically achieved or even that a meaningful amount of office based employment would qualify. Much less is any consideration given to how far focusing a strategy only on office-based workers would actually deliver a particularly significant effect, apart from to create a strong incentive to relocate offices out of the city centre to places out of reach by public transport.

Looking at the Chichester Transport Study 2023 and the draft plan together, there is insufficient evidence that the traffic capacity increase proposed in the 2023 Transport Study is any more affordable or technically deliverable, or likely to be sufficiently effective, than those in the past strategy. The evidence more strongly points to the fact that no highway improvements are identifiable or economically deliverable to meet even short term increases in demand for car-borne mobility on most of the network around Chichester.

There are no published strategies or schemes clearly supporting the contention that the objective of improving sustainable modes is technically achievable or deliverable either. The plan makes generalised assertions that such strategies will be devised and implemented only after serious problems emerge from a shortfall in the car-borne transport strategy.

The reference to “monitor and manage” is undefined and unsubstantiated. There are no outcomes stated, no mechanisms specified and no timescales for action.

Our experience today is that network conditions have reached unacceptable and prejudicial levels of severe unpredictable delay. The saturation of the network is already evident well outside the traditional peaks on key sections of highway and at key junctions. External shocks such as the effects of severe weather are becoming more common, leading to delays so extreme as to justify the description of “gridlock”. The plan does not identify a strategy to effectively address this, in particular by consolidating passenger car trips onto more efficient public transport vehicles. This is unacceptable to Stagecoach.

2.4. Local Plan Vision

Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the broad approach in Plan Vision and in particular that by 2039, the Plan will support and enable greater use of sustainable modes. However, there is no link made between reducing the use of private cars, and the need for a step change in the use of sustainable modes. Without a published transport evidence base it is impossible to establish a suitable sustainable transport strategy to support both carbon reduction and alleviation of the problems arising from acute congestion. Even on a very crude basis, to achieve a meaning mode shift on key approaches to the A27 Chichester Bypass will require more than 20% of existing peak car-borne journeys to transfer to other modes. A 10 percentage point transfer to bus (about half this shift) would imply more than doubling peak hour bus passenger

boardings.

The Vision is nothing more than an aspiration, that needs to more definitively aim at key outcomes, for the plan to be effective. The Vision should thus be altered to read:

“Get about easily, safely and conveniently with less reliance on private cars –making the greatest possible use of the rail and enhanced bus network, and with more opportunities for active travel including walking and cycling; to materially reduce dependence on private car use.”

Underpinning the Plan’s spatial strategy, the Vision section goes into more specific detail about key localities in the Plan area.

Regarding Chichester, Paragraph 2.39 states: “The emphasis will be upon consolidating and enhancing the role of Chichester city as the plan area’s main centre, whilst also developing the role of key settlements to its east and west. The focus will be upon creating communities with good access to a range of employment opportunities and affordable housing for young people and families to balance the ageing population.”

This is clearly the appropriate focus for meeting the District’s development needs in a sustainable manner. The city and key settlements to the east and west, are those places already able to make use of relevant public transport services, both rail and bus. Especially within and near the City, walking and cycling can credibly present highly relevant choices. This emphasis clear can be expected to address the requirements of sustainable development set out in NPPF and their local application set out in the Plans Strategic Objectives.

However, this needs a robust transport strategy, to avoid a further concentration of development and its traffic impacts occurring on or near some of the most chronically congested parts of the highway network. To date, the absence of intervention has strangled the bus network through further marked deterioration in traffic conditions. This by consequence increases the risk of bus delay or cancellation, lengthens journey time and reduces customer confidence in bus as an attractive alternative mode of travel.

In April 2023, Stagecoach is making significant timetables changes to improve operational resilience in and around Chichester. The biggest such change is the severance of the Portsmouth to Littlehampton section of service 700, at Chichester, with buses operating independently to the east and to the west and ending cross-city links. This is planned to reduce the probability of delay but at the cost of additional vehicle resource (circa £200,000 per annum) which could be better spent providing new or enhanced services. We anticipate a small loss of custom as a direct consequence of the change, but have little choice other than to take negative action so as to fulfil our statutory punctuality obligations.

If the Strategic Objectives of the Plan and its Vision are to be achieved, in the way required by NPPF paragraphs 104-105, a properly-evidenced transport mitigation strategy needs to create the conditions where bus journeys are more reliable than car journeys and thus mobility demand switches as far as can be realistically achieved away from car use, to bus use and other more sustainable modes.

Beyond Chichester, the Plan Vision focuses on key localities beyond to the east and west.

To the west of Chichester a focus on growth at Southbourne is justified at paragraph 2.43: “...the aim is to take advantage of the village’s good transport links and existing facilities to deliver significant new residential-led development within the broad location for development which will further enhance local facilities and offer opportunities to reinforce and supplement existing public transport, including bus routes.”

We agree this is a very significant opportunity. However, if the requirements of NPPF paragraphs 104-105 are to be met, this demands that effective bus priority is delivered on the A259 corridor, especially eastbound at Fishbourne and westbound approaching Emsworth. Without such measures, the growth committed and planned will serve only to further undermine bus journey time and decrease punctuality on the existing 700 service, entirely contrary to the aims of the Vision.

The emphasis on the A259 corridor served by Stagecoach 700 west of Chichester is reinforced at paragraph 2.45 stating that “Between Chichester and Southbourne, the Plan provides for more moderate levels of growth within the parishes of Fishbourne, Bosham and Chidham & Hambrook, ... with opportunities to support and expand existing facilities and for increased use of public transport options”. We strongly support the principle, but the Plan must follow through with specific public transport priority measures that facilitate rather than prejudice such an outcome.

East of Chichester the focus is at Tangmere, where the existing allocation for about 1000 dwellings is being uplifted by 300. Paragraph 2.44 justifies this among other things recognising the scope for “...improved and additional bus services and cycleways will provide better connections to Chichester city and east to Barnham and the ‘Five Villages’ area in Arun District.” We unequivocally endorse this conclusion. Realising a “game-changing” level of bus service quality, reliability and frequency east of the city, also serving committed and planned development north and south of Oving Road at Shopwhyke, is equally essential, given that all SRN links and junctions are approaching equal saturation.

The National Bus Strategy has given new focus on partnership with West Sussex County Council to discuss and deliver a significant new bus service between Chichester, Shopwhyke, Tangmere, Eastergate and Barnham, supporting committed development and acting as an initial phase of what ought to be a more ambitious longer-term strategy to support growth

beyond 2025 in both Chichester and Arun Districts. For these improved bus services to be both deliverable and effective, robust bus prioritisation is unavoidable. No such measures are proposed in the Plan or its evidence base and we therefore suggest inclusion of plans to facilitate safe and efficient bus operation between Tangmere and Nyton/Eastergate, ideally avoiding the need to join A27 through-traffic entirely.

We welcome the clear recognition that these localities identified for growth, benefit from existing relevant public transport services. The Vision also sets an expectation that bus services in particular should be “enhanced” and “reinforced”.

We entirely agree that these opportunities exist, across the broad strategy and strategic allocation proposed by the draft Local Plan. Securing them will be crucial to achieving national and local policy objectives, including the Strategic Objectives. However, to our continuing very great dismay, the Plan goes no further to defining how this will be achieved. As such the Vision is not demonstrable achievable or deliverable.

Accordingly the Plan cannot be considered effective, in the sense of NPPF.

Remedying this, demands specific measures to protect bus services from congestion in the following corridors:

- A259 East of Emsworth
- A259 Fishbourne
- A 259 Via Ravenna/Cathedral Way
- A286 Stockbridge Road north and south of A27
- B2145 Whyke Road/Hunston Road
- A259 Bognor Road, east and west of A27 and extending to the District Boundary
- B2144 Oving Road/Shopwhyke Road east and west of the A27
- A 285 Westhampnett Road/Portfield Way/Stane Street, potentially involving a mode filter at the west end of Stane Street

These must be defined to a sufficient level of detail to assess their effectiveness and deliverability, including costs.

This would then allow West Sussex County Council and Local Transport and Highways Authority, ourselves as the principal bus operator, and where appropriate other organisations that would be directly tasked with delivering the mitigation package, to agree service levels and standards necessary to deliver specified outcomes, including journey times, frequencies, capacity and hours of operation on the network, and also in respect of the strategic allocations and Strategic Locations for Growth.

The agreed mitigations strategy should be set out in an up-to-date Infrastructure Delivery Plan backed by clear funding commitments, including a funding strategy to justify necessary developer contributions.

Where necessary to support evidence of effectiveness and deliverability, clear statements of support, which might include Statements of Common Ground between the LPA, LTA, National Highways and Stagecoach, could be provided.

3. Spatial Strategy

Stagecoach Supports

Stagecoach well recognises the constraints outlined in the explanatory narrative at the start of Chapter 3.

In particular we strongly endorse that strategy in that it reflects that the best opportunities to meet housing and employment development requirements sustainably clearly exist in and close to Chichester and on the key east-west movement corridor where – subject to effective measures being delivered to make these modes more attractive, efficient and relevant – sustainable modes can credibly provide for a much higher proportion of movement demands, mitigating most effectively the potential traffic impacts of development.

We agree that the Manhood Peninsula suffers serious environmental constraints, but, added to these, public transport and other sustainable modes cannot provide such attractive alternatives, and significant further development risks merely reinforcing already high levels of car use, aggravated by the carbon impacts of the distances involved – something the plan does very little to evaluate, and makes no reference to.

We endorse the conclusion in paragraph 3.24 that significant development in the part of the District north of the National Park is inappropriate. The rationale is principally on landscape and visual character. This exposes a fundamentally biased approach to plan making that has consistently underplays transport accessibility and carbon issues. In fact, the lack of local services and the extended distances that need to be travelled to fully participate in society in this area, with no realistic prospect of public transport offering relevant choices, ought to rule such a strategy out of play on a far less aesthetic and interpretational basis.

3.1. Policy S1 Spatial Development Strategy

Stagecoach Supports

The Spatial Strategy flows clearly and logically from the Spatial Portrait, and the opportunities and constraints identifiable across the Plan area. It represents a logical and justified continuation of the existing Local Plan strategy. In particular the spatial strategy maximises the potential for sustainable modes to contribute to meeting a much higher

proportion of all the District's mobility and accessibility needs.

3.2. Policy S2 Settlement Hierarchy

Stagecoach Supports

The settlement hierarchy clearly reflects the service endowment and potential self-containment of the settlements in the District. In particular, the second tier of settlement hubs includes secondary schools, which are major peak trip generating uses. Service villages, in the main, also benefit from bus services running at least hourly, which can be expected to provide for a degree of mobility for the higher number of trip purposes that cannot be satisfied by walking or cycling within the immediate locality. Thus, a level of development to meet local needs in this tier is relatively sustainable.

There is a quite broad range of settlements in this category. We have concerns that, north of the National Park, the Service Villages have no realistic public transport choice. These include Plaistow/Ifold, Kirdford, Loxwood, and Wisborough Green. Such as exists is typically a 1/bus per day off-peak shoppers service offering up to 90 minutes in Horsham or Guildford and as such any development here even to meet local needs requires each adult to own a car. This contrasts strongly with Service Villages to the south of the National Park, which are greatly more sustainable.

4. Climate Change and the Natural Environment

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This section of the plan is extensive and wide ranging, as should be expected.

However, remarkably, there is no acknowledgement whatever of the role of transport in mitigating climate change or its effects, not of the importance of sustainable movement and access being facilitated across the plan area in addressing anthropogenic impacts on the natural world at a more local level.

This exposes very clearly a troubling level of indifference to transport matters in the production of the Plan, which, while nationally quite common, is neither appropriate nor acceptable. The mitigation of transport impacts is not merely a matter speaking to the social and economic aspects of sustainable development. It is crucial to address the causes and effects of climate change that arise from transport, and personal mobility.

This is now well understood and at the centre of national policy, including the National Decarbonisation Strategy for Transport (July 2021) which at Section 5 commits the government to aligning land use planning and transport strategy much more tightly and effectively to mitigate the carbon emissions associated with the current dependence on cars, and the mode mix; but also to reduce travel distances, both increasing the potential relevance and effectiveness of all sustainable modes, and reducing average journey lengths for residual motorised journeys of all kinds.

National statistics show that well over a third of all domestic carbon emissions arise from land-based transport and of these, the vast majority arise from trips of over 10km – outside the range of large scale use of cycling. In fact, the potential of the plan to materially support carbon emissions reduction from within the plan area lies more in the realm of transport than any other policy theme – including emissions mitigation from buildings, which is in any event an aspatial matter and covered by nationally-binding building regulations. By 2025 something like 40% of all the emissions within the plan-area will be transport related.

There is no evidence supplied to support the plan that addresses the transport carbon impacts of the spatial development strategy in a clear manner.

There is no evidence supplied that sets out the effects of potential worsening of congestion on air quality within the plan area, arising entirely from the excess of passenger car movement demands over available and credibly deliverable highway capacity. This is despite the evidence set out and acknowledged in the explanatory memorandum at paragraph 4.130:

"4.130. The council's Air Quality Action Plan and the West Sussex Transport Plan 2022-2036 both refer to the air quality issues faced by Chichester. There is currently one Air Quality Management Area (AQMA) in the plan area, located at St Pancras, Chichester. AQMAs are designated where air quality exceeds, or is likely to exceed, national air quality standards and objectives. Development within or impacting these areas, or that likely to cause the declaration of any further AQMAs, will be subject to an air quality assessment by the applicant."

This is a retroactive approach – it is not "planning", based on evidence.

We are well aware that air quality issues in and of themselves can render allocated sites to be undeliverable: a good example is in the Vale of White Horse, Oxfordshire, where strategic allocations on the A338 and A420 corridors have been held up for years by air quality issues at Marcham and Frilford, in large measure because agreed transport interventions were considered inadequate or undeliverable a very short time after the Plan was examined and adopted.

There is no evidence that shows how the development strategy can effectively mitigate these impacts as well as the further potential impacts that arise from the development strategy. This is exasperating, as there is clear evidence that

could be drawn upon to show that that very substantial opportunities exist to:

- Speed buses up and make them more reliable by the delivery of bus priority on most of the key main corridors. Most of these even today operate relatively frequently
- Improve service frequencies and extend hours of operation.
- Secure significant background mode shift to bus as a result, damping pressure on key links and junctions, by consolidating demands on direct more reliable and more frequent bus services.

The spatial development strategy as submitted is in fact, likely to well conform to such additional evidence.

The allocations require substantial additional transport related work and evidence to demonstrate that the opportunities for sustainable transport have been identified and taken up as required by NPPF paragraphs 104-105.

With regards to specific policy, Policy NE22 should be modified to read:

"Development proposals will be permitted where it can be demonstrated that all the following criteria have been addressed:

1. Development is located and designed to minimise traffic generation and congestion through access to by maximising the relevance and attractiveness of sustainable transport modes, including maximising provision of specific demonstrably effective measures to make pedestrian and cycle and public transport routes and networks more direct, more safe, faster and more reliable;..."

5. Housing

5.1. Policy H1 Meeting Housing Needs

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

The presumption of the planning system is that local planning authorities should seek to meet their objectively assessed development requirements in full. These needs are assessed by a defined Standard Methodology set out in Planning Practice Guidance and elsewhere, that has explicit regard to ensuring that the economic and social effects associated with housing are properly provided for, to avoid exacerbating serious problems that arise from inadequate housing supply.

As a significant local service provider and employer, Stagecoach is concerned that existing issues with housing availability and affordable housing supply are not exacerbated. This has a direct bearing on staff recruitment and retention. It also has an indirect bearing on our cost base.

The existing problems with housing affordability have developed over many decades of undersupply. It should be emphasised that the significant boost to the supply of housing that has been sought by governments over the last 15 years, has only begun to take effect relatively recently in this District. Tackling the problem will require years of consistent attention.

Stagecoach notes that the Council is no longer proposing to meet its identified housing needs in full. Rather than 638/annum the Council is allocating a total that implies an annual delivery rate of 535/annum.

While a number of matters evidently present challenges to the Council in identifying a sustainable development strategy. Paragraph 5.2 indicates that "constraints, particularly the capacity of the A27 has led to the council planning for a housing requirement below the need derived from the standard method..." The blame for being unable to meet housing requirements is thus laid squarely at the door of transport infrastructure and systems.

This conclusion in no way follows from the evidence in the Chichester Transport Study. This, rather, makes the statement that when a higher annualised quantum of 700 dwellings per annum was tested, in the majority of cases the traffic capacity improvement package would perform little differently. To quote the Study:

"5.6.3 The network performance outputs analysed comprising V/C%, Delays (seconds) and Queues (PCU's) suggest that generally the proposed SRN mitigation identified for the Core Scenario, can accommodate in the most part, additional increase in development to 700dpa."

Whether the rest of the local road network is similarly protects is moot.

Irrespective of these results, even if the contention made in the draft plan were true, unlike many other constraints, this is amenable to a suitable effective strategy to address the constraints identified being collaboratively conceived. This is what NPPF expects, as set out in paragraphs 104-106.

Where the A27 is concerned, as part of the SRN, National Highways is now working to a substantially revised approach than that in force at the time to current Local Plan was prepared, or LSS2, or reflected in the Chichester Transport Study. This is set out in DfT WMS 01/22. This document is the policy of the Secretary of State for Transport in relation to the

SRN which should be read in conjunction with the National Planning Policy Framework (NPPF). It replaces the policies in the Department for Transport Circular 02/2013 of the same title.

It makes plain that to accommodate additional demands arising from development, National Highways (NHC) expects to meet the requirements of its statutory license in a substantially different manner. With respect to development NHC LTN 01/22 continues to address the tensions between national policy for the environment and carbon mitigation, the ongoing need to substantially boost the supply of housing as well as maintain national economic competitiveness and protect the safety of the public. However, in future, the approach will be to seek first to maximise the impact of demand management measures (reducing the need to travel), and then to accommodate residual additional demands first though maximising the use of sustainable modes, rather than accommodating assumptions about current levels of car dependency and use.

LTN 01/22 much more closely and explicitly aligns with the language of NPPF Chapter 9 paragraphs 104-106. Paragraph 12 states: "New development should be facilitating a reduction in the need to travel by private car and focused on locations that are or can be made sustainable.... Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas." (our emphasis).

It continues at paragraph 13: "where developments are located, how they are designed and how well delivery and public transport services are integrated has a huge impact on people's mode of travel for short journeys. The company will therefore expect strategic policy-making authorities and community groups responsible for preparing local and neighbourhood plans to only promote development at locations that are or can be made sustainable [footnote 8] and where opportunities to maximise walking, wheeling, cycling, public transport and shared travel have been identified." (again, our emphasis)

Stagecoach readily confirms that the draft Plan development strategy conforms well to the first limb of this expectation, in terms of the location of development.

Stagecoach considers that the plan and its evidence base conforms poorly to the second in that the specific opportunities to maximise walking, cycling wheeling and public transport are not clearly identified, and defined, and proven to be effective and deliverable.

The current mitigation strategy for the A27 Chichester area, supporting the adopted Local Plan and for which proportionate developer contributions have and continue to be sought, reflects now-superseded DfT Circular 02/2013. As a direct result, it failed completely to identify any significant effective bus priority measures, despite the fact that frequent services already exist on the key corridor concerned, and that one bus journey can remove, fully seated between 72 and 80 single occupancy car journeys from congested links and across key junctions on the A27. Rather, it sought to implement targeted measures to increase the throughflow of general traffic.

We recognise the realisation that this approach, which was already reliant on some tenuous logic, is simply not technically viable, especially where further development needs are anticipated.

National Highways will now pursue an approach with the planning system that "includes moving away from transport planning based on predicting future demand to provide capacity ('predict and provide') to planning that sets an outcome communities want to achieve and provides the transport solutions to deliver those outcomes (vision-led approaches including 'vision and validate,' 'decide and provide' or 'monitor and manage'). The company will support local authorities in achieving this aim through its engagement with their plan-making and decision-taking stages." (paragraph 15).

Paragraph 23 is at the fulcrum of assessing and defining transport mitigations to accommodate growth on and near the SRN "Capacity enhancements such as modifications to existing junctions or road widening to facilitate development should be determined on a case-by-case basis. The general principle should be accepted where proposals would include measures to improve community connectivity and public transport accessibility, and this will be weighed against any negative safety, traffic flow, environmental and deliverability considerations, impacts on the permeability and attractiveness of local walking, wheeling and cycling routes, and alternative options to manage down the traffic impact of planned development or improve the local road network as a first preference." (our emphasis).

However, no material work has been done that seeks to identify if a bold robustly conceived and suitable judiciously-prepared strategy that seeks to consolidate flows on already densely travelled corridor onto improved bus services, driving mode shift through insulating these services preferentially from already serious queuing. This would be likely to have very substantial impacts on all the key junctions on the A27, and potentially, on the A27 itself. The need for an integrated approach between Shoreham and Emsworth within West Sussex paying particular regard to development requirements in both Arun and Chichester Districts naturally lies at the heart of this, and we would expect to be picked up by the LSS3 Review among other things.

However, the locus of the problems and its causes and effects are obviously well enough known to start work on defining solutions within the plan area today. We would expect that this work will be essential if National Highways are to support the Plan, especially now given the terms of Circular 01/2022.

Such work could and should start from a “policy off” position: in other words that the Plan should fully accommodate its needs unless it can be proved that a mitigation strategy for the A27 that is compliant with DfT WMS 01/2022 cannot credibly accommodate resulting capacity demands without unacceptable impacts on the safety and efficient operation of the SRN.

This evidence does not exist. In fact the Chichester Transport Strategy 2023, on which the Council solely relies as its transport evidence base, indicates the opposite at para 5.6.3. This is the case before meaningful measures to secure damping of traffic demands through mode reassignment are even considered.

The exception to this is Portfield and Oving Road, which are among the most problematic areas after mitigation even at the Council’s chosen 535 dwelling/annum scenario (para 5.6.4.-5). The costly capacity mitigation simply cannot deliver enough benefit. It is admitted that WSCC has indicated that it would prefer a solution that places greater reliance on sustainable modes damping car-borne demand. This is entirely the strategy required by NHC to follow LTN 01/22, of course. Despite the fact that “predict and provide has “run out of road” no attempt has been made to examine what such a solution set credibly could look like. This is unsatisfactory and deeply troubling.

At paragraph 5.4 the draft plan points back again at the West Sussex and Greater Brighton Strategic Planning Board and the future work that has been commissioned, but has barely begun, to update the Local Strategic Statement. This work is to inform the preparation of plans that have horizons beyond the end date of the current LSS in 2030 and properly to meet the Duty to Cooperate. As we said in our response to section 1 of the Plan we fully endorse the conclusion that this is the right mechanism to look at these issues. However, the mechanism has not been effectively applied to the production of this plan. Therefore, the specific evidence that capacity on the A27 in and of itself supports accommodating a lower housing requirement does not exist.

The Plan thus does not conform to NPPF, is not adequately justified and is not effective.

The Plan does not properly meet the statutory Duty to Cooperate.

We will return to this matter in specific representations to Section 7 of the draft plan.

5.2. Policy H2 Strategic Locations/Allocations 2021-2039

Stagecoach Supports

Policy H1 makes plain that the plan, as far as it identifies locations for development has done so in locations that conform with its spatial strategy. All of the strategic allocations to a greater or lesser extent offer clear opportunities to make use of sustainable modes, by virtue of their location. That is not to say that the opportunities to take up these opportunities, and maximise the role of sustainable modes, has been identified, defined and translated properly into the rest of the plan policy suite or Infrastructure Delivery Plan.

As our remaining representations make clear, we support the locations thus far identified as being those that offer the best opportunities to reduce the need to travel, reduce travel distances, and create high quality attractive sustainable travel choices, for both existing residents as well as new ones.

However, the transport impacts of the allocation will individually and cumulatively likely to lead to increasingly severe impacts on the transport network, and on bus services.

Perversely, because these opportunities are not properly identified and secured through the plan and its supporting transport strategy, the opportunities presented by the allocations to secure a substantially more sustainable and lower carbon pattern of movement will not only risk being squandered but may aggravate the wider problems.

5.3. Policy H3 Non-strategic Parish Housing Requirements

Stagecoach Supports

The approach is consistent with the plan’s spatial strategy. It generally avoids a dispersal of development to locations likely to be highly car dependent. There is a clear focus on meeting housing needs in the far north-east of the District at the largest and most sustainable settlements, such as Loxwood, Kirdford and Wisborough Green. However, it must be pointed out that public transport availability in this area, provided by the County Council through services it procures, is minimal. These settlements in practice require each adult and child of secondary school age to have access to motorised transport to fully participate in society. This might justify significant measures to secure a boost in the frequency of bus services between Guildford and Billingshurst, passing through these settlements.

Otherwise, existing commitments in the plan area already make provision to meet for local needs. To the degree that there is an unmet local requirement for affordable housing of a small scale – for example to support the rural economy – this could be met through neighbourhood plans or through Rural Exception Sites.

6. Place-making, Health and Wellbeing

6.1. Policy P1 Design principles

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

NPPF requires that proposals should consider transport issues from the earliest possible stage. Designing to properly facilitate safe and efficient access, focusing first on sustainable modes, should be at the heart of development design. Too often it is still an afterthought, notwithstanding this.

Policy P1 must include an additional statement to be compliant and effective with NPPF paragraph 104-105 and 112 a): "Development will be designed to make access and movement using walking, cycling and public transport the natural first choice, and demonstrate through the Design and Access Statement how such modes are afforded the most direct, safe, reliable and efficient routes within to and from the proposals, especially when compared with car use."

6.2. Policy P4 Layout and Access

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

A number of proposals in the plan involve large-scale development. It is essential that where appropriate buses can access and circulate efficiently through development at a suitably early stage. There is no acknowledgement of this anywhere in the policy, contrary to NPPF paragraph 112.

Large-scale development which buses cannot access in an efficient or timely manner, or at all, strongly contributes to high levels of car-dependency. Evidence for this is referred to among other places, in DfT Circular 01/2022. To be compliant with NPPF and properly pursue its strategic Objectives, Policy P4 needs to be modified to address this point: "1. Provide safe, direct and attractive conditions for inclusive access, egress and active travel between all locations and providing as good direct high quality links to integrated public transport, and where appropriate efficient access and circulation to bus services, unimpeded by excessive parking, at a suitably early point in the development phasing;

7. Transport and Accessibility

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

The issues related to transport are fundamental to the soundness of the Plan. In particular, the constraints presented by the capacity on the A27 around Chichester and its key junctions, are the paramount reasons why the Council does not consider it can meet its objectively-assessed development needs in full. Thus, the transport issues and potential solutions available and what these mean for the ability of development needs to be accommodated, are matters that go to the heart of the soundness of the Plan.

Paragraph 8.3 sets out the approach taken to date succinctly:

"Increasing the capacity of the road network is key to supporting growth in the Local Plan. However, there is also a need to reduce demand for road transport to achieve net zero in greenhouse gas emissions by 2050 as highlighted in the council's Climate Emergency Action Plan and Strategic Objective 1. In aiming to achieve the ambitions of the action plan, all development is expected to demonstrate how it will support four key objectives to create an integrated transport network which will alleviate pressure on the road network, improve highway safety, encourage sustainable travel behaviours and help reduce transport related impact on air quality, by:

1. Avoiding or reducing the need to travel by car;
2. Enabling access to sustainable means of travel, including public transport, walking and cycling;
3. Managing travel demand; and
4. Mitigating the impacts of travel by car."

However, this approach is unambitious and "lightweight" as it assumes, as does the existing Chichester Transport Strategy on which the current adopted plan relies, that the focus of investment should be, wholly, in highways capacity improvement.

Sustainable modes explicitly are expected to play a greater role to "alleviate pressure" on the local road network, as part of this strategy. To emphasise: to avoid exacerbating congestion, the strategy will have to both remove a significant proportion of existing demands from the network on multiple key approaches to Chichester; and then ensure that travel demands from committed and further new development allocated in the plan does not simply replace these journeys, or, worse, create even greater demands.

This will demand very significant behaviour change. Only by making sustainable modes substantially more attractive, both absolutely, and relative to the same journey made by car, can this be expected to occur. However, the explanatory

memorandum as well as the wider policy suite and IDP, well expresses a fundamental unwillingness to taking specific, defined measures to achieve this reduction in car use and material promotion of sustainable modes. It makes plain that sustainable modes, including bus services, will offer a lesser role to which "access will be provided".

Such a vague and weakly defined mechanism will have no effect, at all, on current behaviour and car dependency if the relevance of those choices as a credible alternative to car use, is not substantially boosted. This includes a 5% reduction in trip demand assumed by the Traffic Model at the heart of the Chichester Transport Study 2023.

For this reason, the transport strategy behind the current adopted plan is demonstrably ineffective, as the updated model makes plain. It has not yet been delivered and is yet unclear when or (in the absence of committed funding) even if it can be. It is ineffective to "roll forward" this strategy to support a higher level of planned growth.

We note that a scheme for addressing congestion on the A27 at Chichester has been included in Roads Investment Period 3 (2025-2030) – well within the horizon of this Plan. However, recent history provides compelling evidence that off-line improvement to the north is not politically supported and arguably even technically or economically deliverable. It is not funded, nor at this stage can it be hypothesised if an economically deliverable scheme is achievable sufficient to warrant the necessary investment.

An on-line improvement of the A27, including junction improvements, is likely to favour longer distance east-west though movements, which are of greater significance to the national economy, at the expense of local movements crossing the SRN- a conundrum that largely sums up the dilemma that is faced by NHC and the County as Highways and Transport Authority. It is one that is played out in many places, but rarely is the tension so stark as at Chichester.

Every local route crossing the A27 at grade around Chichester accommodates a regular bus service - or shortly will do (Oving Road area is expected to follow in 2023, though bus services are likely to not use the modified crossroads but to use the left-in-left-out facilities provided as part of the Shopwhyke Lakes development). The impact of these issues on the entire bus operation are serious and increasingly severe.

By the same token, boosting the relevance and reliability of each of these services substantially consolidating as much demand as possible onto a much smaller number of vehicles, is clearly a strategy that ought to support the effective capacity of each of these junctions being greatly augmented, at the same time as reducing equally substantially, the energy- and carbon intensity of mobility in the plan area. Addressing the A27 should not be considered some kind of "zero-sum" game.

Furthermore, the approach of National Highways in its dealings with development and the planning system now reflect a substantial change in Government Policy set out in DfT Circular 01/2022, which we separately cover in these representations, that entirely aligns with an approach that seeks to appropriately invest in more active and rational management of scarce highways capacity, on both the SRN and local roads.

For environmental, economic and social reasons – including public health, the issues presented by the A27 and its interface with local roads around Chichester stands out, nationally, as an example of where the approach taken to accommodating and mitigating development impacts needs to make a clear break with previous "predict and provide" approaches to meet forecast unconstrained car use as LTN 02/2022 makes clear as a principle. Policy in the West Sussex LTP to 2036 itself makes plain that "shared mobility" – including bus services – must play a much greater role in this area.

The existing Chichester Area Transport Strategy is focused on justifying capital contributions from committed development to fund highways capacity improvement – with nothing included to make bus services more attractive, or importantly more reliable. Indeed this "cars first" approach is so costly, that there is already accepted by WSCC to be insufficient land value remaining to be captured to put into substantial improvements for public transport. That much is very evident, and transparent, from paragraph 8.12 and 8.14, where south of Chichester "This (one) package of works (of several improvements needed) would be between £57.23 and £82.79 million to deliver in full and would not be capable of being funded by development contributions alone." This assumes the scheme is otherwise deliverable, which on the evidence in the public domain for some time, has been considered challengeable.

The draft Local Plan and a modestly updated infrastructure package that flows from the 2023 Chichester Transport Study, pursues exactly the same approach.

This strategy is also even more ineffective having regard to the roll forward of the Plan to 2039. It cannot deliver the key Strategic Objectives of the Plan; and in particular this is explicitly recognised by the Council in the failure of the draft Plan to accommodate the OAN in full.

It is also obsolete, as it does not align, from first principles, with national policy (including the National Decarbonisation Strategy for Transport) and DfT Circular 01/22; nor the Council's own declared Climate Emergency.

As a result, draft Policies T1 and T2 are both unsound, as we will separately explain.

Owing to the lack of evidence about the implications of this for adjoining authorities – especially Adur District – in the

absence of the review of the Local Strategic Statement – this has implications for fulfilling the Statutory Duty to Cooperate.

The absence of any meaningfully comprehensive refresh of the transport evidence base means that there are no meaningful schemes of any kind, defined in the plan or its IDP, to indicate either what level of growth can be accommodated, by delivering a change in travel behaviour. This would be aimed to secure a sufficient effective increase in junction throughput (measured in terms of person trips as opposed to passenger car unit movements (PCUs)). Such evidence would propose measure to achieve that outcome and assess the efficacy and costs of such improvements, across all modes.

Paragraphs 8.10-8.13 inclusive indicate that the Council “has moved away from ‘predict and provide’” and invites the reader to conclude this has translated into a programme of interventions that can be funded to deliver specific, credibly predictable outcomes. Such a programme should be clear in paragraph 8.11. and the IDP. There is no such clarity and this conclusion would be false.

It would also be evident in the language of the Chichester Transport Study 2023 and its refreshed proposals. Only the most token of lip service is paid to the matter. It is a plainly car-focused, predict and provide methodology to support a “predict and provide” strategy. In fact, it is a brazenly car-focused approach, to the exclusion of all else.

The statements in the Plan regarding any other approach, read properly, offer nothing more than a vague commitment to look post-adoption, and implementation, at unspecified measures, based on problems that may arise in future that will be decided by a committee: the Traffic and Infrastructure Management Group (TIMG). This does not yet exist and is obviously an attempt to posit a mechanism that retroactively will cover for the lack of serious multi-party engagement to address the existing and future issues. Such a group should, in our view, also include the public transport operators, not least if the requirements of NPPF Para 106c) are to be satisfied, and the strategy and measures to be adopted are material to supporting the Local Plan, as of course the purpose of the TIMG has as its core raison d’être.

The approach proposed by the draft plan is plainly ineffective and unsound in justifying the draft Plan.

It is more widely unacceptable to Stagecoach. The issues are severe today and well-known, already serving to jeopardise the delivery of buses relied on by existing residents, much less attract new ones.

We also consider that HM Planning Inspectorate are likely to be quite resistant to accepting this aspect of the plan’s transport strategy, nor will it be appropriate for the Council, West Sussex County Council, or National Highways, to define such measures after the submission of the Plan during the Examination process. The Examination in Public of a local plan has no purpose to improve plans, or remedy deficiencies clearly evident prior to submission.

The examination of the West of England Joint Strategic Plan in 2019, and the Uttlesford Local Plan in 2021, among several others, demonstrates especially clearly that the Planning System and the Examination process is not amenable to post-hoc retrofitting of transport evidence and strategies to support a development strategy.

7.1. Transport Evidence Base

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Most of Stagecoach’s serious concerns about the soundness of the plan arise from the fact that it has been prepared in advance of any up-to-date transport evidence and suitably robust transport mitigation strategy being advanced to support it. In essence, the Council has rolled forward the existing plan by 9 years, adding some additional sources of housing supply, while still relying implicitly on a transport evidence base that was prepared 10 years ago.

This led to the formulation at that time of what can only be described as an attempt to develop an effective car-based mitigation strategy, creating capacity for general traffic added to accommodate unconstrained additional demands on an already over-taxed highways network – the Chichester Area Transport Strategy. Despite language in support of sustainable modes, no deliverable measures were identified to support either the extension of the bus network to serve allocated sites, and much less to create a vital improvement to the quality and reliability of public transport services. This approach reflected the approach set out in DfT Ministerial Circular 02/2013 “Development and the Strategic Highways Network”, applicable since the A27, which is the focus of the most severe difficulties, forms part of the national Strategic Roads Network.

This approach has proven ineffective even before substantial elements of housing land supply in the current plan come forward – in particular West of Chichester and West of Tangmere.

In addition, Circular 02/2013 has now been replaced by a new Ministerial Statement of 23/12/2022, DfT Circular 01/2022.

On both counts the transport evidence base and strategy needs to be properly revisited and established to provide effective mitigation for the plan, including current commitments that are being rolled forward.

The language of the current Ministerial Circular 01/2022 offers a highly condensed synoptic view of the proper approach to addressing transport matters in the planning system notwithstanding that it is directly concerned with the Strategic Roads Network. Videlicet:

“31. The NPPF expects local plans and spatial development strategies to be underpinned by a clear and transparent evidence base which informs the authority’s preferred approach to land use and strategic transport options, and the formulation of policies and allocations that will be subject to public consultation. The company will expect this process to explore all options to reduce a reliance on the SRN for local journeys including a reduction in the need to travel and integrating land use considerations with the need to maximise opportunities for walking, wheeling, cycling, public transport and shared travel.

32. The Transport Decarbonisation Plan indicates that carbon emissions from car and van use is the largest component of the United Kingdom’s total transport emissions. While action is being taken to decarbonise transport such that all new cars and vans will be fully zero emission at the tailpipe from 2035, the proposed location of growth in current plan periods and whether new developments would be genuinely sustainable remain important factors in demonstrating that a local authority area is on a pathway to net zero by 2050 and therefore compliant with the requirements of the Climate Change Act 2008.

33. Alongside this, the local authority should identify the key issues within their study area regarding transport provision and accessibility, setting out how the plan or strategy can address these key issues in consultation with (National Highways, and other transport stakeholders identified in NPPF paragraph 106b). It is the responsibility of the local authority undertaking its strategic policy-making function to present a robust transport evidence base in support of its plan or strategy. The company can review measures that would help to avoid or significantly reduce the need for additional infrastructure on the SRN where development can be delivered through identified improvements to the local transport network, to include infrastructure that promotes walking, wheeling, cycling, public transport and shared travel. A robust evidence base will be required, including demand forecasting models, which inform analysis of alternatives by accounting for the effects of possible mitigation scenarios that shift demand into less carbon-intensive forms of travel.” (our emphasis)

Within the text quoted above, references to National Highways and “the Company” can quite legitimately be extended, given the statements in NPPF paragraph 16, 25, 26 and 106b, to include all the relevant transport infrastructure and service providers in the plan area. Circular 01/2022 also has the weight of secondary legislation as a Written Ministerial Statement and thus should be considered to be highly material.

To date there has been little attempt to explore, to the degree necessary, strategies that conform to Circular 01/2022. It is thus not possible to conclude, as the Council has done, that the issues on the A27 that present a constraint to development, are insuperable.

In line with comments made elsewhere in the response to this pre-submission draft, the Plan thus requires substantial further work to be undertaken with key stakeholders to establish a suitably effective and demonstrably deliverable transport mitigation strategy, to sustainably meet the District’s identifiable development needs and where apparent and appropriate, also ensure that wider cross boundary strategic issues are appropriately addressed, in conformity inter alia, with the Duty to Cooperate, NPPF paragraph 16 and 104-111 inclusive, and DfT Circular 01/2022 and to ensure the Plan’s own Strategic Objectives can be met.

7.2. Policy T1 Transport infrastructure

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

As described in comments elsewhere, Stagecoach does not see that a suitable proportionate and up-to-date basis exists to properly and appropriately address the transport issues in the plan area.

The 2023 Transport Study does not perform this role adequately but, contrary to the explanatory memorandum, is a scheme intended only to facilitate car-borne movements through some of the key junctions. There is no evidence that an holistic integrated and strategic approach to transport mitigations has been prepared. Certainly Stagecoach has not been involved in any of the discussion about appropriate transport measures in support of the plan, including the Transport Study 2023, contrary to the expectations set out in NPPF at paragraph 16 and 106.

Notwithstanding out fundamental concerns about the transport evidence case and mitigations strategy, Policy T1 reflects a weak and ineffective approach, that seeks to try and define a strategy post-adoption.

Contrary even to the explanatory memorandum for the policy, which seeks to maximise the contribution of sustainable modes, the policy is phased in such a way that it gives basis for previous “predict and provide” solutions to facilitate and

support current levels of car dependency – already shown to be undeliverable and unaffordable – will nevertheless be the first rather than the last resort. There is no commitment to seek to maximise the contribution made by sustainable modes to meeting mobility needs. Nor is there any recognition that current chronic congestion and lack of network resilience jeopardises the ongoing attractiveness and long- term sustainability of the current public transport offer.

To be effective and create alignment with national policy, and also provide for an up-to-date transport evidence base and strategy to be adduced, Policy T1 should be modified to read:

“Integrated transport measures will be developed to mitigate the impact of planned development on the highways network, improve highway safety and air quality, promote more sustainable travel patterns and through providing in the first instance, new and improved infrastructure and services that will be credible effective in maximising the encourage increased use of sustainable modes of travel, such as public transport, cycling and walking.

To achieve this, the council will work with National Highways, West Sussex County Council, other transport and service providers (including through the Traffic and Infrastructure Management Group) and developers to provide a better integrated transport network and to improve accessibility to key services and facilities...

All parties, including applicants, are expected to support these objectives by:

1. Ensuring that new development is well located and designed to avoid or minimise the need for travel, encourages maximises the use of sustainable modes of travel as an a credible alternative to the private car and directly provides or contributes towards new or improved transport infrastructure;
2. Working with relevant transport infrastructure and service providers to improve accessibility to key services and facilities with primary emphasis on sustainable modes, and to ensure that new facilities are easily accessible by sustainable modes of travel;
3. Targeting investment to provide local travel options as an that represent a clearly credible alternative to the car use, focusing on the delivery of improved integrated bus and train services, and improved pedestrian and cycling networks, including the public rights of way network, based on the routes and projects identified in the Local Transport Plan, West Sussex Bus Service Improvement Plan, Local Cycling and Walking Infrastructure Plan (LCWIP) and the Infrastructure Delivery Plan;
4. Planning to achieve the timely delivery of transport infrastructure on and approaching the A27 and elsewhere on the network, needed to support new housing, employment and other development identified in this plan;
5. Phasing the delivery of new development to align with and where possible facilitate the provision of new and improved transport infrastructure and services and the outcomes of monitoring travel demand on the network, including that arising from areas immediately adjoining the plan area. It may also be Where necessary to achieve this alignment proactively phase development will be phased to take into account the monitoring and effectiveness of travel plans demands on the network and to ensure that measures are implemented to support the highest possible level of encourage sustainable travel behaviour.;
6. Using demand management measures, such as travel plans, to manage robust methodologies to assess travel demand and minimise the need for new or improved transport infrastructure as part of the monitor and manage process.
7. Delivering a coordinated package of infrastructure improvements at and approaching to junctions on the A27 Chichester Bypass along with other small-scale junction improvements interventions within the city and elsewhere, as identified through the monitor and manage process. These will increase road capacity, reduce traffic congestion, improve safety and air quality, and improve access to Chichester city from surrounding areas, first by maximising the contribution of sustainable modes to meeting mobility demands, then, and only as evidenced by robust modelling and option testing, providing increased highway capacity for general traffic.

...”

7.3. Policy T2 Transport and Development

Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Section 1 b) of T2 will be ineffective as, absent measures to ensure buses can run reliably and efficiently, improved bus services will not be possible, in support of the plan’s own stated broad approach to transport mitigation, as well as wider local and national policy.

The draft policy does not require improvements to the quality of services such that sustainable choices will be materially more attractive than car use for many local journeys. Without this the Plan’s Strategic Objectives cannot be fulfilled and the objectives of the Plan and this policy, read in its own terms, will not be realised, where reduction in private car use is

concerned. It is thus ineffective.

Absent measures to make bus services more reliable and more efficient, by insulating them from chronic congestion as far as possible, still further operating resource and therefore costs, will be needed to just to reliably run existing service frequencies, and capacity, as vehicle productivity continues to be more and more adversely affected by chronic delay. This will be further aggravated by increasing incidence of severe unpredictable service breakdown arising from incidents of diverse kinds on the network, especially on or around the A27, including that arising from more regular severe weather events. Longer journey times can only be expected to lead to relative disadvantage of bus services compared to personal car use, entirely contrary to the objectives of national and local policy, including Policy T1. It can also expect to lead to a dampening effect not on car use, but on bus patronage, threatening the ongoing viability of bus services across the plan area.

Section 1 b) of T2 should be modified to read:

“b) Maximise opportunities for the use of sustainable travel modes through provision of direct and efficient access both to either the existing networks or and through providing such new infrastructure or public transport services, as can be credibly expected to reduce reliance on the private car and work towards achieving net zero in greenhouse gas emissions by 2050;”

Section 1 d) of T2 will be ineffective as the location of development is fixed by this plan. We commend the fact that all the strategic allocations are or will be served by regular bus services.

However, the use of public transport services, where available, depends on the relevance and reliability of these services. Furthermore, provision of services without them generating sufficient patronage to support their long-term operation also threatens the sustainability of the plan and its supporting transport strategy. This is especially true of new services such as those intended to serve West of Chichester and Tangmere and East of Chichester Strategic Allocations.

This can only be assured by the plan being supported by specific measures to ensure buses can operate efficiently and reliably on the existing and projected services intended to serve the developments concerned, and also at the same time secure behavioural change from existing development.

To be sound and effective, the policy T2 1 d.) should be changed to read:

“d) Ensure major development is located to proposals and the supporting mitigation measures enable the use delivery of high-quality, reliable and effective public transport to present the most relevant possible choice to access local services and facilities including employment, leisure and education facilities”;

The Policy T2 makes no provision for buses, where necessary, to enter and make efficient and safe progress through major development sites. The plan is thus out of conformity with NPPF paragraphs 104-106. It makes no provision to ensure that penetration of bus services is achieved at a suitably early point in the development trajectory, undermining the achievement of the goals of the Plan and this specific policy. As a good example, West of Chichester Phase 1, currently under construction, cannot be served by buses as a strategy to effect interim bus penetration was never made.

Policy T2 1 f.) should therefore be amended to read:

f) Ensure that the layout and design of the site development proposals provides effective penetration of the site by sustainable modes, at all points in the development build-out, including public transport where appropriate; and sufficient space for all vehicles to manoeuvre without compromising the safety of pedestrians and cyclists, the efficiency of bus services, or the ability to provide an appropriate level of landscaping across the site”

Policy T2 3.) regarding Travel Planning depends entirely on its effectiveness on the quality and relative attractiveness of sustainable alternatives over car use. In the absence of efficient frequent, reliable and direct public transport services (or similarly, high quality facilities for active travel, Travel Plans will continue to be the entirely ineffective “tick box” exercises that they generally are today, evidenced by much lower levels of public transport use in most new developments than it seen in nearby established neighbourhoods, as demonstrated broadly by Census data in 2011, 2011 and 2021.

For this policy to be effective an up-to date transport evidence base and strategy, underpinning a series of specified interventions to promote the relevance and effectiveness of all sustainable does including public transport in particular, needs to be put in place.

8. Chapter 9 Infrastructure – Policy I1 Infrastructure provision

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Policy I1 could not expect to be effective without a clear understanding of the effectiveness and costs of a defined series of measures that are laid out in this Plan and its IDP, to mitigate the transport impacts of the development strategy.

Where the Chichester Transport Study is concerned the only meaningful work has focused on the definition and delivery of a range of highways capacity schemes mainly on the A27 around Chichester.

As we have discussed elsewhere the effectiveness of these schemes is insufficient as set out at Tables 8.1 and 8.2 of the Chichester Transport Study 2023. The plan itself admits that the deliverability of this package cannot be afforded by developer contributions alone.

The Chichester Transport Study 2023 does not attempt provide a realistic assessment of costs to deliver these schemes, despite the fact that they have been under evaluation for many years. Nor does it offer any assurance that the schemes are technically achievable. Rather, it states the opposite:

“9.2.3 No investigation has been carried out into specific land ownership details, or into the location details or cost of moving statutory undertakers and utility apparatus within the areas of the scheme. No design assessments were carried out at this stage to ascertain the deliverability of the proposals except where any Health and Safety concerns were raised.”

Thus on the grounds of effectiveness, deliverability and affordability, the measures on which the Plan relies must at the very least be considered to involve an exceptionally high level of risk. Since Policy I1 is founded on these assumptions, it cannot be considered effective.

As we set out elsewhere, the Plan has been advanced on the basis that if any additional sustainable transport measures are required, these mitigations should be retroactively considered and defined after adoption of the Plan. In the light of the doubts that are apparent of both the deliverability, affordability and effectiveness of the Chichester Transport strategy this is especially unsatisfactory even if existing baseline conditions were reasonably acceptable.

However, the Chichester Transport Study 2023, as did its predecessors, makes plain that that existing problems are acute, and can rightly be considered “severe” in the sense of NPPF paragraph 111. Waiting to define deliverable affordable alternatives is an entirely inappropriate approach to the local plan transport mitigation strategy. Such an approach also makes it impossible to consider prior to adoption how far the transport impacts of the plan can be cost-effectively mitigated by alternative means, or whether they are deliverable having regard to technical achievability, land control, development viability, or any combination of the above. Thus, the plan cannot be considered justified, or effective.

Given the mutual dependence of development strategies in Chichester and Arun in particular on these measures this should be seen as crucial of the fulfilment of the Duty to Cooperate.

The remedy for this is ultimately to put in place a suitable transport mitigation strategy following a strategic appraisal of options through review of the LSS. This then must be supplemented by more detailed development specific and localised scheme definition, including, where necessary, bus priority and other measures to support the substantial promotion of the attractiveness of public transport in key bus corridors over private car use. This would then be reflected by costed proposals in the IDP.

Leaving these fundamental weaknesses to one side, even if such a strategy and mitigation package were defined, there is no mention of public transport in the policy even though it is clearly a key part of the policy environment and mitigation strategy for the plan as expressed in the explanatory memorandum for I1, but also at Policies T1 and T2. I1 thus does not effectively support the realisation of the intent of Policies T1 and T2.

Policy I1 iii) should therefore be modified to read:

“(iii) Safeguard the requirements of infrastructure providers, having regard to requirements within and where appropriate across the boundaries of the plan area, including but not limited to:

...

- Highways including specific measures to accommodate improved active travel and public transport level of service and cycle lanes, and...”

At limb v) the Policy expects developers to meet the “in perpetuity costs of operating and maintaining infrastructure”. This shackles development management decisions to developers assuming what are infinite costs – given that “in perpetuity”, read properly, can only mean “without any limit in time”. This means that it is impossible to meet the statutory tests on developer obligations set out in the Community Infrastructure Levy Regulations 2010 (as amended) at Regulation 122, also repeated in NPPF. This policy cannot be lawfully implemented and it is thus ineffective.

In the absence of an up-to-date transport mitigation strategy that is fit for purpose, at the point the Plan is examined these costs of any additional infrastructure are not known in any case. The strategy and its costs, including its affordability and deliverability, are crucial to assessing if the Plan is sound.

Subject to an appropriate defined transport mitigation strategy being arrived at, to be sound, the Policy I1 v) should be modified as follows:

(v) To consider and meet as appropriate the in-perpetuity delivery costs of infrastructure and, where appropriate, improved services, to the point where its long-term operational sustainability is credibly assured from mainstream sources. Where adoption is not envisaged by local authorities, that must include arrangements for its future ongoing management and maintenance;

9. Strategic and Area Based Policies

9.1. Policy A1 City Centre Development Principles

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Chichester City centre is rightly identified at 10.2 and 10.4 as the commercial and service hub of the District. It is also acknowledged to be the most accessible place in the District by sustainable modes, public transport in particular.

Boosting the vitality of the city centre is something that Stagecoach strongly supports. Irrespective, the enhancement of the commercial and cultural life of the District in the place where these opportunities can be accessed broadly by sustainable modes, is one that has long been at the heart of national planning policy for town centres, reflected in the "town centre first" approach to locating major trip generating uses.

Paragraph 10.5 exposes an unbalanced and unsound preoccupation with aesthetic matters in its approach to the town centre, and far too little to ensuring that the central place function is enhanced through protecting and enhancing the quality of public transport access.

The city is relatively small but at the heart of an extensive hinterland, and thus the role of bus in supporting sustainable access to and enhanced city centre venue is one that needs appropriate recognition and emphasis. It is important to note that a dominant number of key service and facilities such as the General Hospital are relatively close to the city centre. This directly contributes to driving travel demand into the city, causing congestion. Most importantly, it also makes the task of mitigation simpler, given the impact a suite of active and sustainable measures can have within the same close proximity.

Policy A1 does not provide this. As such, achieving the strategic objectives of the plan is seriously threatened, and the plan is thus not effective.

The Plan needs to ensure that the approach to city centre regeneration maintains and enhances public transport access, interchange and inter-modal connectivity. It also needs to ensure that bus service stopping and interchange facilities are able to address increases in future demand, anticipated by the clear intent expressed elsewhere in the Plan that public transport should be meeting a greater proportion of mobility needs, in a growing district. Achieving this demands an ambitious approach to the location, quality and capacity of bus stop and interchange.

We have been in discussions with the District Council about this, alongside West Sussex County Council, for a very considerable period. Stagecoach has always been keen to help facilitate the Council's aspirations for the city centre, and we continue to hold this intention. However, this cannot be at the expense of a material diminishing of the convenience and fitness-for-purpose of bus stop infrastructure and interchange. Stagecoach has significant concerns that current proposals to remove the bus station and have all bus services operate from the street kerbside, on an inner distributor road with similar or reduced net stop capacity, fall short of promoting attractive, convenient bus access to the central area as a destination.

For the longer term and where the objectives of the draft plan are concerned looking ahead to 2039, they clearly fall short of enhancing the convenience and attractiveness of public transport use. Much less do they make sufficient provision for a material increase in bus frequency, connectivity, and interchange convenience, on which the draft plan explicitly relies. It is vital that the District Council is clear in policy about its objectives for public transport in the city centre. These objectives must also carry sufficient weight when held in tension with other aspirations for the centre and the constraints on achieving them.

For the Plan to be sound, properly effective and compliant with NPPF, the approach to the City centre cannot ignore its role in the provision of sustainable transport service and connectivity.

Policy A1 should therefore be modified to properly reflect this crucial function, on which the vitality of the city centre must increasingly depend if unacceptable impacts on congestion, air quality and amenity are not to arise. This is still more crucial if wider aspirations to secure a more sustainable society and mitigate carbon are to be achieved.

"...This will include provision for development and proposals that:

- Support and strengthen the vitality and viability of the city centre and its role as a shopping/visitor destination, employment centre, public transport hub and a place to live;

- Support and promote facilitate improved access to the city and with increased emphasis on sustainable modes of travel, with particular regard to enhancing the public transport interchange role of the city centre area, in accordance with the transport strategy for the city and...”

9.2. Policy A3 Southern Gateway Development principles Chichester Bus Station, Bus Depot and Basin Road Car Park Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

There has been aspiration to redevelop the bus station and nearby bus depot from many years. Stagecoach has been engaged with detailed discussion with the District Council on this matter over a very extended period. We confirm that these discussions have reached a relatively mature stage, however at the time of writing are not concluded.

Stagecoach recognises and supports in principle the Council’s wider aspirations for the “Southern Gateway”, and this has governed our approach to the Council to date. We continue to have no “in principle” objection to relocating our administrative, engineering, operational and customer service facilities.

Leaving our proprietary interests entirely to one side, it remains vital that in so doing, the effectiveness, attractiveness and convenience of these facilities is not compromised, as we have outlined in our representations to Policy A1, if wider national and local transport policy, and the local plan strategy itself, are to be effectively achieved.

The depot is crucial infrastructure to support the safe, reliable and legally-compliant operation of Stagecoach bus services over a very extensive area covering the entirety of the District and beyond. Without securing equivalent facilities, that are fit-for-purpose, many of our services would have to cease.

If buses are to provide a greater and more attractive level of service (still more so if they are to be electrified) larger, more capable depot facilities, and city centre bus interchange facilities will be necessary.

Notwithstanding that the bus station and depot sites are leased from the District Council, these leases terminate well beyond the end of the plan period.

Finding suitable sites for a replacement bus depot in Chichester, in common with all similar localities especially in southern England, is extremely challenging. As a sui generis use, bus depots do not automatically benefit from policy support on land allocated for employment uses. Most bus depots benefit from being legacy assets established under very different economic conditions. That is the case here. The value of a depot site for redevelopment net of demolition and remediation costs, rarely approximates to that able to sustain the acquisition of land in a tight wider employment land market, and the construction of suitable new facilities.

Furthermore, the costs of operating bus services are sensitive to the parasitic costs of vehicle and staff hours and mileage associated with “dead running” to a remote depot location from the operational network. Here, the existing depot site is ideal, and any replacement will unavoidable add ongoing operational costs to the operation that cannot be directly recovered.

We confirm that a replacement depot site has been identified and has in principle been agreed, subject to overcoming issues with the disposition of existing and future structures on the site. However, the site is recognised as not capable of accommodating meaningful operational expansion. This is just one of the most important foundational reasons why a positive transformation of bus productivity needs to be achieved, across the plan area and beyond, to support delivery of greater bus mileage and frequencies with the same level of operational resource. At the time of writing, we are not fully convinced that the proposals for the relocation will be sufficiently fit-for-purpose in the event the above is not achieved. Thus, we must raise a concern that the bus depot site might not be available during the plan period. While there is a strong probability it will be, the certainty surrounding the availability of the site, especially within the first 5 years of the plan, needs to be made transparent.

9.3. Policy A4 Southern Gateway - Chichester Bus Station, Bus Depot and Basin Road Car Park Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Regarding the removal of the bus station, without equivalent replacement, Stagecoach has significant concerns. Pressures and conflicts at the current bus station site have been gradually rising for several years, arising from increasing use and the need for additional scheduled vehicle layover periods to reduce the risks of accumulated late running from traffic congestion. Peak passenger volumes have recovered strongly on several routes, however passenger accumulations resulting from more frequent delays and disruption have added substantial further pressure on limited space.

Under current plans, buses and bus passengers will be displaced to bus stops at new locations outside the city centre, along Avenue de Chartres. This road was always intended to be a relatively high-speed traffic route, outside the historic core of the city. The city centre has evolved in the subsequent years to reinforce already strong natural severance, with

the highway lying beyond the city walls and the green space along the Lavant. It is a traffic dominated, unsurveyed and unattractive environment, reflecting the intended function of the road as an efficient movement corridor for high traffic volume, and nothing more. Avenue de Chartres is relatively close to the rail station and pedestrian connectivity can be provided at broadly equivalent distance to the current bus station, but again it is unsurveyed and currently unpleasant, lacking natural legibility or any sense of prominence.

We understand kerbside capacity on Avenue de Chartres will be strained even to accommodate current levels of service, with no expansion possible. There is therefore a strong probability that to accommodate more frequencies and key new routes, such as West of Tangmere, East of Chichester and West of Chichester allocations, additional future bus stops must occupy a different location. This makes interchange between routes and rail services substantially challenging and less attractive.

The emerging arrangements risk marginalising public transport and public transport users substantially. This strongly undermines achievement of the wider plan objectives and delivery of a significantly greater role for public transport. If substantial public transport growth is to be accommodated in a growing city and hinterland, as the draft plan anticipates, then a more ambitious strategic approach must be taken. This should plan for additional and improved facilities to accommodate all services predicted to be required, whilst enhancing the passenger experience to ensure meaningful and attractive modal choice.

There is therefore a need for the plan to evidence how these issues will be appropriately resolved, having regard to a suitably ambitious approach that properly supports clear objectives to boost the relevance of public transport. The current policy is weak, unspecific and indifferent to achieving the strategic objectives of the plan, including a transport strategy in support of the plan, and as such it is ineffective.

Policy A3 should therefore be modified to read:

" ...

- Be designed to encourage and facilitate substantial increase in the use of active travel and public transport to, from and through the city centre.

" ...

In line with the commentary above Policy A4 should also be modified to read:

3. Enhance the public interchange function of the immediate area, the public realm, particularly connections to the railway station and the city centre via South Street, Southgate and Basin Road for pedestrians, cyclists and public transport users, and to National Cycle Route 2 and Route 88 which run close by. Suitable replacement bus stops and layover facilities should be provided to replace those at the bus station in line with reflecting the objectives of the West Sussex Bus Service Improvement Plan, and to facilitate growth to meet the requirements of the plan's development strategy. Routes and crossings should reflect pedestrian desire lines, and public art should be incorporated to create a sense of place;

4. Enhance the public realm, in support of this and wider objectives, incorporating public art and other measures to create a strong and attractive sense of place.

...(renumber remaining points)

9.4. Policy A6 Land West of Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

This is an existing Local Plan allocation. The public transport strategy for the site depends on the delivery of the second phase which Stagecoach notes is the subject of several applications now awaiting review and determination by the Council.

The site represents a compact form of development adjoining the city, as the most sustainable settlement, meeting housing needs close to where they arise, and affording very good opportunities for the use of sustainable modes, especially walking and cycling.

It is vital that a bus service is delivered to serve the site at the earliest potential. This was anticipated to be at the start of Phase 2 and will require the early delivery of the entire length of the spine road between the Old Broyle Road and Westgate and making it available for bus services.

It is not clear if the costs of pump-priming the service mentioned in the draft policy are anticipated to be met by the developer. Without such funding, the service will not be deliverable as years of losses will never credibly be covered from future profit. It is likely that the current wording will be interpreted by the developer as meaning that they have no such obligation binding upon them. Not does policy set out any specification for this service, thus its costs and the basis for securing developer contributions does not exist.

As such any wider transport strategy, that seeks to secure a greater role for the use of public transport, and the aspiration for this allocation cannot demonstrably be met. The policy is ineffective.

Policy A6 should be modified to read:

“ ...
10. Make provision to accommodate and secure delivery of for regular bus services linking running through the site to Chichester city centre operating at least every 30 minutes Monday-Saturday, and new and improved cycle and pedestrian routes linking the site with the city,
...”

9.5. Policy A7 Land at Shopwhyke

Stagecoach Supports

This is an existing Local Plan allocation, largely built-out, that benefits from an existing set of permissions.

The public transport strategy for the site depends on the delivery of effective bus priority at Oving Crossroads. The current recently implemented scheme, undertaken by National Highways, makes no provision for effective bus priority and needs considerable re-evaluation.

The site represents a compact form of development adjoining the city, as the most sustainable settlement, meeting housing needs close to where they arise, and affording very good opportunities for the use of sustainable modes, especially walking and cycling. It lies on a new bus corridor that will shortly be put in place, running to Tangmere via Shopwhyke. The allocation is being significantly consolidated by further development in the immediate vicinity which strongly supports the potential for this new service.

As we explain in our representations for East of Chichester proposed allocation A8, and West of Tangmere Allocation A14, a clear corridor strategy to effect bus priority is needed, that should be delivered in support of that further growth, and that at Tangmere SDL. However this allocation is a near complete commitment and there is no scope through policy regarding this land to effect this outcome.

It is notable that Point 6) of policy A7 makes mention of a bus service. This language reflects the currently adopted Local Plan policy and has underpinned the existing permissions. The failure of any bus service to be delivered demonstrates from first principles that this Policy has been entirely ineffective. It is important that lessons are learned from this in the Local Plan Review.

9.6. Policy A8 Land East of Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This proposed allocation lies next to unallocated land that is already consented as a departure from the adopted development plan, with 143 units near completion south of Oving Road (20/02471/FUL). Additional land, also unallocated but similarly consented, has now commenced north of Oving Road (88 units under 21/02197/FUL). This and the allocation site consolidates earlier development at Shopwhyke brought forward under the current Local Plan, and allocated again as draft policy A7.

Development at Shopwhyke was brought forward on the basis of a premise that the developer would provide or somehow arrange a bus service, that was reflected in the policies of the current Local Plan. This was secured by an unenforceable condition. No bus service has been provided, as there was inadequate clarity regarding the basis on which the costs of establishing such a service would be met by the developer, and the expectations of policy on the developer. The site does however lie on a logical new bus corridor between Chichester and West of Tangmere along the Oving Road.

In addition, an expectation that modifications to the Oving Crossroads would effect bus advantage have proven false – the arrangements put buses into a similar or longer queue than if they use the route available to general traffic to and from the A27.

Stagecoach strongly supports the principle of bringing this land forward. However, the soundness of the site depends on deliverability of a regular, reliable and direct bus service along the Oving Road, taking advantage of effective bus priority.

Given the failure of existing policy in the adopted Local Plan covering the proposed A7 allocation to deliver a bus service, it is of great concern that there is no draft policy to adequately address the issue. The policy is out of conformity with NPPF paragraph 104-105 in that sustainable modes do not offer realistic choices, much less an attractive one, and as such also does not secure the objectives of national policy nor of the plan itself.

Currently the proposed allocation is not served at all by public transport. Policy needs to ensure there is a policy basis to secure contributions to deliver such a service, which may well take the form of a proportionate contribution to deliver a new service or enhance provision that is put in place between Chichester along the Shopwhyke Road to west of

Tangmere.

To become sound Policy A8 must be modified to read:

" ...

12. Provide for improved high quality connectivity by sustainable travel modes and focused in particular on a corridor between Chichester city centre and Tangmere along Shopwhyke Road, including new improved cycle and pedestrian routes, and a frequent bus service including linkages with Chichester taking advantage of effective bus priority measures on Oving Road at the A27;

" ...

9.7. Policy A9 Land at Westhampnett/North East Chichester

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This land is already allocated and consented as part of the existing 2016 Local Plan. All reserved matters are determined.

The site lies on service 55 between Chichester, Westhampnett and Tangmere. This established service benefits from additional demand from the development at Phase 1. Phase 2 which is currently well underway, does not benefit directly from bus services. However it is a compact and logical form of development where walking and cycling to local facilities and employment is a credible option.

The existing allocation rolls forward policies in the 2015 Local Plan. In so doing it is possible to see which have been effective.

Point 9. regarding bus service and routing has not been effective. In particular the potential for a bus only link between the site and Graylingwell has not been established as policy anticipated. Given congestion around the Portfield area acutely affects public transport this, or alternative methods to secure bus priority over private car use, a clear and unequivocal policy steer is required.

The lack of an up-to-date transport evidence base is ultimately at the root of these issues. Arguably the policy and allocation can only be made sound once this refreshed evidence base in place.

However, it is possible that the allocation could be made sound by modification of Policy A9 as follows:

" ...

9. Make provision for regular, direct and reliable bus services linking the site with Chichester city centre, and new and improved safe and convenient cycle and pedestrian routes linking the site with Chichester city, the South Downs National Park and other strategic developments to the east of Chichester city including Tangmere. These objectives could include exploring the potential for a bus only route require a deliverable scheme to afford bus priority through Portfield, and potentially linking the development with the Graylingwell area through use of a modal filter;

" ...

9.8. Policy A10 Land at Maudlin Farm

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing public transport route. It is relatively close to the city and very near substantial centres of employment and services that can be reached by active travel modes, helping damp the demand for car use. It is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services at Portfield and over a wider area. In fact, the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A10 should accordingly be modified to read:

" ...

5. Provide safe and suitable access points for all users, including a main vehicle access from Old Arundel Road and, subject to further assessment, a secondary vehicle access from Dairy Lane. The development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport

and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes;

..."

9.9. Policy A11 Bosham – Land at Highgrove Farm

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Bosham Station. It is relatively close to the city and very near substantial centres of employment and services that can be reached by public transport and cycling, offering strong potential to materially damp the demand for car use.

There are serious risks that development in the A259 corridor west of Chichester could place further demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular to bus services.

Nevertheless, given the potential to effect bus priority on the approaches to Fishbourne Roundabout, it is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A11 should accordingly be modified to read:

“...

8. Provide safe and suitable access points for all users, including a main vehicle access from the A259. The development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys crossing the A27 at Fishbourne;

9.10. Policy A12 Chidham and Hambrook

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the identification of this site, which consolidates significant recent development on an existing high quality public transport route, including Stagecoach service 700 and the Coastway rail service available at Nutbourne Station. Substantial centres of employment and services that can be reached by public transport and cycling, offering strong potential to materially damp the demand for car use.

There are serious risks that development in the A259 corridor west of Chichester could place further demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular to bus services.

Nevertheless, given the potential to effect bus priority on the approaches to Fishbourne Roundabout, it is a site which, with appropriate measures to substantially boost the relevance and attractiveness of sustainable choices, could be made sustainable.

The draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact the only reference that is made is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A12 should accordingly be modified to read:

"...

7. Development should make the requisite contributions for off-site highway improvements to transport infrastructure and services, with an emphasis on maximising the attractiveness of sustainable modes, in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development), which will include promoting sustainable transport options high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes on journeys along the A259, crossing the A27 at Fishbourne and where necessary on the approaches to Emsworth;

8. Facilitate improved sustainable travel modes, and new improved cycle and pedestrian routes, including linkages with Chichester city and settlement along the East/West Corridor;

9.11. Policy A13 Southbourne Broad Location for Development

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach agrees unequivocally that Southbourne is a location that could accommodate growth on a strategic scale. It has a substantial range of service available within the settlement, including secondary education. It is well connected by bus and rail service to key destinations, including Chichester, lying to the east and west.

This is one of the few locations identified for growth that represents substantial additional development in a new location to the strategy in the existing Local Plan adopted in 2015. Thus, the transport impacts of development on the substantial scale envisaged at Southbourne are not covered or accommodated by the Chichester Area Transport Strategy that lies behind the existing plan. This demands, from first principles, that substantial further transport mitigation measures are required.

We recognise and endorse fully that the intent of the draft plan for Southbourne as a Broad Location for Development on a strategic scale, includes "Maximising the potential for sustainable travel links through improved public transport, including consideration of opportunities to reduce community severance caused by the railway line as well as the inclusion of cycling and pedestrian routes." (our emphasis).

The existing railway station at Southbourne is served regularly, however, it is not within the power of this plan to improve rail services. It is, however, well within the scope of action of the Local Planning and Highways Authority to work with bus operators to achieve a step change in the journey time, reliability, frequency and connectivity of bus services, and in particular the major corridor operated as service 700 by Stagecoach along the A259 between Havant and Chichester through Southbourne.

Notwithstanding the clear potential for sustainable connectivity in the western A259 corridor, there are very serious risks that development in the A259 corridor west of Chichester will place further significant car-borne demands on the junctions at Fishbourne and approaching Emsworth, leading to even more chronic and severe delay to travellers and in particular bus services, having the opposite effect to that intended: longer, less reliable and less frequent bus services, leading to a spiral of slowly declining use.

These risks, while very serious, look credibly likely to be entirely mitigated subject to carefully conceived and robust specified actions on the local highway network. It is perplexing to us that this potential still has not been identified, as part of a comprehensive "first principles" review of the transport evidence base. In particular given the former trunk status of the A259, there is evident potential to effect bus priority on the A259, including on the approaches to Fishbourne Roundabout.

With appropriate measures, including but not limited to this, to substantially boost the relevance and attractiveness of sustainable travel choices, strategic development at Southbourne could well be made highly sustainable.

In the absence of a refreshed transport strategy and transport evidence base, the draft policy is not sufficiently clear and robust about the measures to support the damping of car trips that will be required to support development at this location without having an unacceptable impact on traffic conditions, congestion and the reliability of bus services on the approaches to the A27 and over the wider corridor to the west. In fact, the only reference that is made in Policy is that the development should fund highways capacity improvements. These improvements, as set out in the Chichester Transport Strategy, do not accommodate growth from additional sites over and above those already allocated in the 2015 Local Plan. They do not secure any mode shift away from car use. An update of this strategy has yet to be produced. This is an unsound, inadequately evidenced approach, that will be ineffective.

Policy A12 should accordingly be modified to read:

"...Development should be comprehensively masterplanned to achieve a high-quality design and layout that integrates

well with the surrounding built and natural environments to enable a high degree of connectivity with them, particularly for pedestrians and cyclists, and provides good the highest possible quality of access to facilities and sustainable forms of improved public transport services.

...

4. Provide a suitable means of access to the site(s), and securing secure necessary off-site transport infrastructure and service improvements (including highways in particular to the A259 corridor between Emsworth and Chichester) in conformity with the Policy T1 (Transport Infrastructure) and T2 (Transport and Development) to promote sustainable transport options prioritising delivery of high quality pedestrian, cycling and public transport routes, and providing substantial peak journey time advantage for sustainable modes;

..."

9.12. Policy A14 Land West of Tangmere

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach strongly supports the principle of intensifying the level of development at the Strategic Development Location already identified and allocated West of Tangmere in the existing Local Plan. This serves to consolidate development at a location where effective and attractive public transport choices could be provided. It also conforms closely with the principle expressed in NPPF that the best possible use should be made of land on sites that are judged to be sustainable, or potentially sustainable locations for development.

It must be stressed that the current policy suite for the SDL has to date not brought forward development in this location. We recognise that a Master Plan has been adopted by the Council, and that a planning application (20/02893/OUT) for the full larger quantum of 1300 dwellings proposed in the draft plan has received a resolution to grant by the Council.

However, we are not aware that a sustainable transport strategy has been finalised.

Land West of Tangmere is not served by any existing regular bus services. Rather, an entirely new bus service corridor is anticipated to operate in the near term from Chichester through Tangmere and beyond towards Barnham. This would serve proposed allocations A7, A8 and West of Tangmere (A14) included in the draft Plan.

This is reflected in the language of the explanatory memorandum to Policy A14 at paragraph 10.65:

"Opportunities, in partnership with relevant authorities, to provide improved sustainable public transport routes linking the village with Chichester city, to improve cycle routes to the city, and better transport links to Barnham rail station and the 'Five Villages' area in Arun District; and.."

Initiating this service will be costly and will in large measure be funded not by developer contributions, but by DfT monies awarded through the West Sussex Bus Service Improvement Plan. It is crucial this service is both sustainable in the longer term without revenue support, and that the success of the service can be built on by scalable frequency improvements as strategic development comes forward in both Chichester District, and proposed allocations A7 A8 and A14, and in Arun District, in particular at Barnham, Eastergate and Westergate (BEW).

This demands measures to effect safe, direct and swift operation of the service especially within the city centre, where it approaches and crosses the A27 at Oving crossroads and on the eastern fringes of the District east and west of Tangmere. Without these measures, bus journey time and reliability will be severely compromised and the and impact of this service to damped car trip demands will be very substantially compromised. No such measures are proposed in the draft plan or its evidence base.

Changes to Oving Crossroads have recently taken place which, amongst other intentions, ostensibly provide bus advantage between Chichester and Shopwhyke. The junction in its current form does not offer material gain in bus journey time, as movements involve a less-direct route towards the city over an increased operating distance, much of which involves passage through heavily congested sections of the A27 and Westhampnett Road. A refreshed transport strategy supporting plan-led growth must revisit this area to secure an effective solution which offers bus customers the fastest and most reliable trip-time to and from the city.

In addition, the extension of public transport connectivity towards BEW and Barnham, including key links to secondary education and a logical railhead for journeys beyond towards Brighton and London as provided at Barnham Station, needs to facilitate bus priority between Tangmere and Nyton – whether using the A27, or preferably avoiding it altogether. There are significant safety concerns associated with the at-grade uncontrolled right-hand A27 exit onto the B2233 Nyton Road at Crockerhill Turn. This movement is also prone to extreme delay owing to the conflict with approaching westbound traffic on the A27, travelling at speed, which has priority. Our concerns with this junction in its current form can be expected to worsen with the increased traffic volumes predicted from new residential developments to the west of the city.

A solution providing a suitable short length of highway available only to sustainable modes, between Tangmere and

Easthampnett, could provide a very effective solution to this. This would be deliverable within the scope of the separate proposed allocation at A19 Chichester Business Park, Tangmere. We comment on this separately.

Howsoever effected, a reliable direct and delay-free bus corridor between Barnham, BEW, Tangmere and Chichester could expect to secure very substantial elevation of the relative attractiveness of public transport over car use on the entire corridor and serve to effectively damp growth-related demands on this section of the A27. West of Tangmere, in the longer term, there is evident scope for the route corridor to operate as two branches – one via Shopwhyke and one via Westhampnett, effectively serving all the strategic developments proposed in the plan and transforming wider public transport connectivity to key employment destinations and services within and east of Chichester.

However, in common with all the other proposed allocations, the plan proposes no specific measures to provide, much less improve public transport or other sustainable modes to the site. This leaves the draft plan out of conformity with NPPF, especially paragraphs 104-106. The plan is inadequately evidenced and to the degree that public transport measures are identified and emergent, their successful implementation in the near and longer term will be jeopardised without clear measures to provide a safe as well as efficient bus route towards BEW and the Five Village area within Arun. The Duty to Cooperate is not effectively met and effective cross boundary collaboration on these strategic issues through the review of LSS is not demonstrated, despite the current version which identifies the issues.

To be made sound the LSS Review and a subsequent urgent review of the transport evidence base and strategy needs to take place. The strategic issues are especially critical east of Chichester, in our view.

Notwithstanding this foundational deficiency, to be made sound, Policy A14 should be modified to read:

“... ”

8. Subject to detailed transport assessment, provide primary road access to the site from the slip-road roundabout at the A27/A285 junction to the west of Tangmere providing a spine road link with secondary access from Tangmere Road. Development will be required to provide or fund mitigation for potential off-site traffic impacts through a package of measures in conformity with Policy T1 (Transport Infrastructure) and T2 (Transport and Development) and DfT Circular 01/2022 that maximise the relevance and use of sustainable travel modes, in particular bus services;

9. Make provision for improved sustainable travel modes between Tangmere and Chichester city, in partnership with relevant authorities, including improved direct, seamless safe and reliable and additional bus and cycle routes linking Tangmere with Chichester city, Shopwhyke and Westhampnett. In conjunction with measures in support of Allocation A19, Opportunities should also be explored contributions shall also be sought for providing improving high quality cycling and bus service transport links with the 'Five Villages' area and Barnham rail station in Arun District; and...”

10. Concluding comments

Stagecoach recognises its role as a key stakeholder in the plan, as well as a local employer and corporate citizen. We recognise the primacy of the plan-led system as the mechanism intended to resolve complex challenges, including the proper alignment of transport and spatial planning, which as the National Decarbonisation Strategy for Transport among other policies makes clear, has never been more vital.

In making our representations, we emphasise that we are entirely supportive of the Local Planning Authority and the relevant Highways and Transport Authorities, in their efforts to properly manage the amount and pattern of development to secure vital policy objectives. We recognise that balancing delivery of assessed development needs with a wide variety of other constraints is a very difficult task.

The transport issues faced by the plan are recognised in the draft plan as being serious and long-standing. We believe that there are ways to arrive at a suitable transport mitigation strategy that has regard to wider strategic issues and resolves existing problems in a much more effective way than those pursued to date.

We support the spatial strategy of the plan as it evidently provides the basis to secure the necessary step change in the quality and use of sustainable transport modes, as it explicitly seeks to do. However thus far, there has been insufficient work done to define the measures that will credibly secure these outcomes.

Stagecoach therefore urges the authorities to draw us into the necessary effective ongoing collaborations that is expected by NPPF paragraph 16 and 106; and DfT Circular 01/022, to do this work, prior to, rather than after the submission of the draft plan. We look forward to being approached to initiate this dialogue at the earliest opportunity.

Change suggested by respondent:

Policy I1 iii) should therefore be modified to read:

“(iii) Safeguard the requirements of infrastructure providers, having regard to requirements within and where appropriate across the boundaries of the plan area, including but not limited to:

...

• Highways including specific measures to accommodate improved active travel and public transport level of service and...”

At limb v) the Policy expects developers to meet the “in perpetuity costs of operating and maintaining infrastructure”. This shackles development management decisions to developers assuming what are infinite costs – given that “in perpetuity”, read properly, can only mean “without any limit in time”. This means that it is impossible to meet the statutory tests on developer obligations set out in the Community Infrastructure Levy Regulations 2010 (as amended) at Regulation 122, also repeated in NPPF. This policy cannot be lawfully implemented and it is thus ineffective.

In the absence of an up-to-date transport mitigation strategy that is fit for purpose, at the point the Plan is examined these costs of any additional infrastructure are not known in any case. The strategy and its costs, including its affordability and deliverability, are crucial to assessing if the Plan is sound.

Subject to an appropriate defined transport mitigation strategy being arrived at, to be sound, the Policy I1 v) should be modified as follows:

(v) To consider and meet as appropriate the delivery costs of infrastructure and, where appropriate, improved services, to the point where its long-term operational sustainability is credibly assured from mainstream sources. Where adoption is not envisaged by local authorities, that must include arrangements for its ongoing management and maintenance;

Document Element: Chapter 10: Strategic and Area Based Policies, 10.1**Respondent:** National Highways (Mr Marius Pieters, Spatial Planning Manager) [8127]**Summary:**

[National Highways letter dated 24/07/23 confirmed representation should be categorised as Comment - Encourage approaches to support net zero, travel behaviour etc]. We are aware of the relationship between development planning and the transport network, and we are mindful of the effects that planning decisions may have on the operation of the SRN and associated junctions. We cannot cater for unconstrained traffic growth generated by new developments, and we therefore encourage: policies and proposals which incorporate measures to reduce traffic generation at source; more sustainable travel behaviour; net zero, reduce emissions and act on the climate emergency.

Full text:

We have reviewed the publicly available Local Plan documents and provided comments in the attached letter, in relation to the transport implications of the plan for the safety and operation of the SRN.

Our comments include issues to resolve, comments, requests for further information and recommendations. A brief summary of our main comments are:

- the reliance on the delivery of the A27 Chichester bypass improvements project.
- the requirements for new, additional, and adapted processes and assessments, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments.
- collaborative working between agencies in combination with a robust monitor and manage policy.

We hope our comments assist.

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders. We look forward to continuing to participate in future consultations and discussions.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Background

National Highways has been appointed by the Secretary of State for Transport as strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the strategic road network (SRN).

National Highways is responsible for operating, maintaining, and improving the Strategic Road Network (SRN) i.e., the Trunk Road and Motorway Network in England, as laid down in Department for Transport (DfT) Circular 01/2022 (Strategic Road Network and the delivery of sustainable development).

The SRN is a critical national asset and as such we work to ensure that it operates and is managed in the public interest, both in respect of current activities and needs as well as in providing effective stewardship of its long-term operation and integrity.

Our responses to Local Plan consultations are guided by relevant policy and guidance including the National Planning Policy Framework (2021) (NPPF):

- Transport issues should be considered from the earliest stages of plan-making and development proposals so that the potential impact of development on transport networks can be addressed (para 104).
- The planning system should actively manage patterns of growth such that significant development is focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. (para 105).
- Planning policies should be prepared with the active involvement of highways authorities and other transport infrastructure providers so that strategies and investments for supporting sustainable transport and development patterns are aligned. (para 106).
- In terms of identifying the necessity of transport infrastructure, NPPF confirms that development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe. (para 111).
- Planning policies and decisions should support development that makes efficient use of land, taking into account the availability and capacity of infrastructure and services – both existing and proposed – as well as their potential for further improvement and the scope to promote sustainable travel modes that limit future car use. (para 124).

In relation to the tests of soundness set out at paragraph 35 of the NPPF, in the context of transport, these are interpreted as meaning:

- a) Positively prepared - has the transport strategy been prepared with the active involvement of the highway authorities, other transport infrastructure providers and operators and neighbouring councils?
- b) Justified – Is the transport strategy based on a robust evidence base prepared with the agreement in partnership, or with the support of the highway authorities?
- c) Effective – Does the transport strategy and policy satisfy the transport needs of the plan and is it deliverable at a pace which provides for and accommodates the proposed progress and implementation of the plan?
- d) Consistent with national policy – Does the transport strategy support the economic, social, and environmental objectives of the Plan and the NPPF/NPPG?

We will be concerned with proposals that have the potential to impact on the safe and efficient operation of the SRN; in this case, the A27 trunk road (Chichester Bypass and its junctions) which is the main access route in the Chichester area. We have particular interest in any allocation, policy or proposals which could have implications for the A27 and the wider SRN network. We are interested as to whether there would be any adverse road safety or operational implications for the SRN. The latter would include a material increase in queueing or delay or reduction in journey time reliability during the construction or operation of the development set out in the plan.

National Highways is a key delivery partner for sustainable development promoted through the plan-led system, and as a statutory consultee we have a duty to cooperate with local authorities to support the preparation and implementation of development plan documents.

In accordance with national planning and transport policy and our operating licence, we are entirely neutral on the principle of development as it is for the local planning authority to determine whether development should be allocated or permitted; albeit it must comply with national policy on locating development in locations that are or can be made sustainable. Therefore, while always seeking early and fulsome engagement with local plans and/or developers, we will simply be assessing the transport and related implications of plans or proposals and agreeing any necessary transport improvements and relevant development management policy.

In progressing Local Plans, we will seek to agree the following:

- Assessment tools and methodology
- Baseline Assessment i.e., to demonstrate that the assessment tool accurately reflects current transport conditions
- Comparator case assessment i.e., to forecast the transport conditions that would occur in the absence of the plan
- Forecast modelling i.e., to forecast the transport conditions that would arise with the plan in place, this will include an assessment at the end of the Plan period; and, if required, at full build out if that occurs after the end of the Plan period
- Outputs and outcomes of modelling, demonstrating, as appropriate, what transport infrastructure is necessary to support the plan o It should be noted that a suite of transport modelling tools may be required. This includes strategic modelling covering an area at least one major junction beyond the district boundary, localised network modelling where several links/junctions are close together and/or individual junction modelling
 - o A DMRB (Design Manual for Roads and Bridges) compliancy assessment may also be required for certain highway features, such as
 - Merge/Diverge assessment at Grade separated junctions, link capacity assessments, and others.
- The design of any necessary transport infrastructure, to an extent suitable for establishing deliverability during the plan period at the time that it becomes necessary for the purpose of ensuring that unacceptable road safety impacts or severe operational impacts do not arise as a result of development. This may be to at least General Arrangement design stage or preliminary design stage. Whichever degree of detail is agreed, the products must be in full compliance with the DMRB.
- Industry standard transport intervention costings.
- The delivery/funding mechanisms for necessary transport interventions. It should not be assumed that National Highways will have any responsibility to identify or deliver necessary transport interventions.
- If considered appropriate, a "Monitor & Manage" (M&M) framework, aimed at managing the pace of development in line with the pace of funding and delivery of necessary highway interventions in a manner which responds to the realworld impacts of development may be agreed for inclusion in the plan subject to the adequacy of risk control measures included therein. This can include the move from a 'predict & provide' style of delivery to 'a vision & validate' style. o Any M&M framework must be based on a "worst case scenario" whereby necessary mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. It must be translated into development management plan policy and policy relating to development allocations.

Further detail on the above can be provided by National Highways.

While ideally all the above should be agreed prior to the Submission of the Local Plan for examination, we recognise that this is not always possible. However, all parties should work towards all matters being agreed and reflected in a Statement of Common Ground (SoCG) by the start of the Local Plan Examination at the latest. Ideally the SoCG between the Council and National Highways would be prepared well in advance of plan submission in order to guide resource input and to track progress towards final agreement on all relevant matters starting from the earliest plan iterations until the final version is agreed.

It is acknowledged that Government policy places much emphasis on housing delivery as a means for ensuring economic growth and addressing the current national shortage of housing. The NPPF is very clear that: "Strategic policy-making authorities should establish a housing requirement figure for their whole area, which shows the extent to which their identified housing need (and any needs that cannot be met within neighbouring areas) can be met over the plan period."

However, new DfT C1/22 and the NPPF are equally clear that any development, including housing delivery, must be tempered by the requirement to ensure that the associated transport demand can be accommodated without unacceptable impacts on the safety of the SRN or severe impacts on the operation of the SRN including reliability and congestion. Therefore, as necessary and appropriate, any plan and/or development must be accompanied by suitable mitigation in the right places at the right time, that is to the required design standards and is deliverable in terms of land availability, constructability and funding.

We would also draw your attention to the then Highways England document 'The Strategic Road Network, Planning for the Future: A guide to working with National Highways on planning matters' (September 2015). This document sets out how National Highways intends to work with local planning authorities and developers to support the preparation of sound documents which enable the delivery of sustainable development. https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_t_data/file/461023/N150227_-_Highways_England_Planning_Document_FINAL-lo.pdf

Responses to Local Plan consultations are also guided by National Planning Policy Framework (NPPF) revised on 20 July 2021 which sets out the government's planning policies for England and how these are expected to be applied.

Updated Circular (01/2022)

It should be noted that since the start of the Local Plan consultation process, on the 23 December 2022, the Department for Transport released a new circular on the 'Strategic road network and the delivery of sustainable development' (Circular 01/2022), which replaces all of the policies in Circular 02/2013 of the same name. These representations take account of the new circular and the requirements in terms of the Local Plan evidence base and process.

We request that the Local Plan is prepared in line with all aspects of the new circular. Particularly, the principles of sustainable development (paragraphs 11 to 17), new connections and capacity enhancements (paragraphs 18 to 25), and engagement with plan-making (paragraphs 26 to 38).

Regulation 18 submission

In our Regulation 18 submission we noted several matters including:

- The need to mitigate the adverse impacts of strategic development traffic to the A27 Chichester Bypass and its junctions at Portfield Roundabout, Bognor Road Roundabout, Whyke Roundabout, Stockbridge Roundabout and Fishbourne Roundabout and Oving junction.
- The need to identify a mechanism to calculate contributions towards the delivery of the previously agreed Local Plan A27 improvements
- The need to confirm the number of dwellings needed within the plan period
- The need to establish National Highways acceptance of the traffic model reference and future case scenarios
- The need to confirm costs, viability, and funding associated with mitigating the safety and congestion impacts of the development included within the plan.

Local Plan context

This Local Plan (Chichester Local Plan 2021 – 2039), prepared by the Local Planning Authority (LPA) Chichester District Council, sets out the vision for future development in the district and will be used to help decide on planning applications and other planning related decisions including shaping infrastructure investments.

The draft sets out how the district should be developed over the next 18-years to 2039 including for the full Plan period (1 April 2021 to 31 March 2039) the total supply of

- 10,359 dwellings

- 114,652 net additional sqm new floorspace

Minus the completions this is equivalent to around 530 dwellings and 6,150 sqm of floorspace a year.

National Highways Representations

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders.

We have undertaken a review of the Chichester Local Plan 2021-2039 proposed submission version and accompanying evidence documents, our comments are set out in the tables below (following pages). [see table within attachment]

Summary

We have reviewed the publicly available Local Plan documents and provided comments above in relation to the transport implications of the plan for the safety and operation of the SRN. We understand that other technical information is available, but this was not presented as part of this consultation.

Chichester, and the A27, are already heavily congested, infrastructure in the existing Local Plan remains undelivered and the growth set out in the new Plan will further increase travel demand.

As presented, satisfying the transport needs of the plan is clearly reliant on the delivery of the A27 Chichester bypass improvements project. The A27 Chichester bypass improvements project is one of 32 pipeline schemes being considered for possible inclusion in National Highways third Road Investment Strategy (RIS3) covering 1 April 2025 to 31 March 2030.

On 9 March 2023 the UK Transport Secretary ensured record funding would be invested in the country's transport network, sustainably driving growth across the country while managing the pressures of inflation. The announcement cited the A27 Arundel Bypass as being deferred from RIS2 to RIS 3 (covering 2025-2030). The transport secretary also identified a number of challenges to the delivery of the road investment strategy and cited the benefit of allowing extra time to ensure schemes are better planned and efficient schemes can be deployed more effectively.

At present, there is no commitment by DfT to carry out the A27 Chichester bypass improvements project. Until the A27 Chichester bypass improvements project is published in the RIS3, consented and a decision to invest is made it cannot be assumed to be a committed project.

We note that the Plan does not address any uncertainty of delivery of the A27 Chichester bypass improvements project and we strongly recommend that there is either no reliance placed on RIS3 to realise capacity for growth in the Plan or that contingency measures are included to cover the eventuality that RIS3 funding is not forthcoming within the plan period. It is not clear that the potential impact of development on transport networks can be addressed in the absence of the A27 Chichester bypass improvements project.

Achieving net zero, reducing emissions reduction, acting on climate, and supporting thousands of new homes and new employment developments will be problematic with existing processes. New, additional, and adapted processes and assessments will likely be required, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments. We acknowledge that change is complex, expensive, and time-consuming, especially for smaller district level Councils. But the hard work will deliver benefits for the Council and residents in the longer-term.

National Highways seeks to continue working with the Council and WSCC to progress coordinated and deliverable packages of interim mitigation measures and alternative transport solutions while a long-term strategic solution is considered by government. This must however be in combination with a robust monitor and manage policy that appropriately manages the risk of unacceptable road impacts resulting from new housing

and other development over the Plan period.

We have been in discussion with Chichester District Council regarding their proposed Monitor and Manage Strategy. At present, we do not consider the current strategy to be robust and we seek further information and detail especially on who, when and when monitoring and management will be undertaken. Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas. Any M&M framework must be based on a "worst case scenario" whereby necessary transport mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. The M&M framework must set out that the alternative to mitigation not being delivered is that development does not proceed where that development would give rise to unacceptable road safety risk or severe cumulative impacts on the road network in the absence of that mitigation. The M&M framework must be translated into development management plan policy and policy relating to development allocations.

As we have reiterated throughout our comments, we welcome the opportunity to work with you to address these outstanding matters and we will continue to liaise over submitted Transport Assessment, Travel Plan policy and Monitor and Manage Policy to help to work towards a viable plan.

We hope our comments assist.

We look forward to continuing to participate in future consultations and discussions. Please do continue to consult us as the Plan progresses so that we can remain aware of, and comment as required on, its contents.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Support

Document Element: Chapter 10: Strategic and Area Based Policies, 10.1

Respondent: Natural England (Luke Hasler, Senior Advisor) [8189]

Summary:

Natural England has reviewed all proposed housing and employment site allocations using our inhouse mapping system and greatly appreciate your authority sharing the shapefiles with us to make this possible. We do not object to any of the site allocations.

We note that where relevant policies include requirements relating to the natural environment (including protected sites), wildlife corridors, Biodiversity Net Gain, GI, SuDs, waste water/nutrient neutrality and protected landscape considerations and fully support this approach.

We appreciate that in a number of cases our advice on specific site allocations at the statutory Regulation 18 stage has been incorporated into these requirements.

We further note that a number of the policies A2 (Chichester City), A12 (Chidham and Hambrook), A13 (Southbourne) and A15 (Loxwood) simply allocate broad locations for development at this stage with further detail on specific sites to come via either a Neighbourhood Plan or an updated Site Allocations document. This makes it difficult to provide detailed advice on potential impacts at this stage but the policy requirements provided thus far appear reasonable.

Full text:**Summary of advice**

While we have raised some queries and recommended some further modifications to certain policies we do not find the Plan unsound on any grounds relating to our remit.

Natural England has reviewed the Proposed Submission Local Plan and accompanying appendices together with the Habitats Regulations Assessment (HRA) and Sustainability Appraisal (SA). Our detailed comments on the policies and site allocations are provided as follows:

- Annex 1 - Chapter 2 – Vision and Strategic Objectives
- Annex 2 - Chapter 4 – Climate Change and the Natural Environment
- Annex 3 - Chapter 5 (Housing) and Chapter 6 – (Place-making, Health and Well-being)
- Annex 4 - Chapter 7 (Employment and Economy) and Chapter 8 (Transport and Accessibility)

- Annex 5 - Chapter 10 – Strategic and Area Based Policies

Please note that we have not provided comments on all policies but those which have most influence on environmental issues. Natural England has no comment to make on the policies not covered in this response. Other than confirming that we have referred to it when considering our advice on specific policies and site allocations Natural England has no general comments to make on the SA.

Unfortunately due to unforeseen resourcing issues while we have reviewed the associated HRA we are not in a position to provide detailed comment on it as part of this response. We will rectify this as soon as possible and can confirm that we have seen nothing in it that raises any major concerns.

The Plan has many positive aspects including standalone policies on Green Infrastructure (GI) and wildlife corridors and an incredibly extensive suite of natural environment policies more generally.

We are hugely appreciative of the opportunity that we were given to work with you on shaping key policies post-Regulation 18. However, we believe that the plan needs to go further in its recognition of coastal squeeze as a key issue for the district, should include policy hooks for the forthcoming Local Nature Recovery Strategy (LNRS) and make up to date references to both the Environment Act (2021) and the Environmental Improvement Plan (EIP, 2023). Given how recent the publication of the EIP is we would be happy to discuss with your authority how this could best be achieved but we believe given the wealth of natural capital within Chichester District it is vitally important that this latest iteration of the Local Plan is set in its full policy and legislative context.

We have suggested a significant number of amendments and additions to both policies and supporting text throughout the Plan. In our view these could all be taken forward as minor modifications but if they were all acted upon they would leave the Plan much stronger and more coherent in delivering for the natural environment, one of the three central tenets of genuinely sustainable development as set out in the National Planning Policy Framework (NPPF 2021, paragraph 8c).

See attachment for representations on paragraphs/policies.

Object

Document Element: Chapter 10: Strategic and Area Based Policies, 10.1

Respondent: Spiby Partners Ltd [7301]

Agent: Henry Adams LLP (Peter Cleveland, Head of Planning) [6827]

Summary:

Understand approach taken in terms of selection of sites to meet 535 dpa but significantly lower than standard method figure of 638 and previously consulted figure of 650 dpa. Paragraphs 5.6.5 and 11.2.3 of Transport Study indicate 700 dpa could be accommodated (in southern plan area) by mitigation proposed for the 535 dpa scenario plus additional mitigation at the Portfield roundabout. Council have not considered increased housing requirement could assist with funding necessary highway improvements and this should be further reviewed in order to aim to meet minimum of 638 dpa. Council have failed to provide sufficient justification for not meeting its housing need in full and have not suitably considered unmet need from adjoining authorities.

Full text:**1 Introduction**

1.1 This representation provides a response to the Regulation 19: Local Plan Consultation on behalf of our client Spiby Partners. The submission covers the general principles of the Local Plan but has a focus on Land east of Foxbridge Drive and south of the B2145, Hunston. The land is shown on the attached plan HA Appendix 1: Site Location Plan, and hereafter referred to as 'the site'.

1.2 This representation will provide a written responses in relation to the Regulation 19 Local Plan Consultation which directly relate to the promotion of our client's land for future development.

2 Comments on Specific Questions/Tests

2.1 In response to the national planning legislation, this Regulation 19 Local Plan Consultation invites comments on three specific questions, and is the final consultation phase, before the Regulation 19 version of the Local Plan is submitted for Examination.

2.2 This representation will respond on these specific questions, and then highlight how our client's site could help fulfil the full housing requirement for the District. This could be through an allocation within the Local Plan or at least through the allocation of numbers to the Parish, who in turn would select sites through a Neighbourhood Plan allocation.

Is the plan 'sound'?

2.3 Paragraph 35 of the National Planning Policy Framework defines the tests for soundness which requires the plan to be positively prepared, justified, effective and consistent with National Policy. These matters will now be considered in further detail in relation to the current consultation on the Regulation 19 version of the Local Plan.

Is the plan positively prepared and justified?

2.4 Policy S1: Spatial Strategy, sets out the spatial development strategy for the District and how the Council will achieve sustainable growth over the plan period. Policy H1: Meeting Housing Needs sets out the housing target in response to the strategy. Both policies have been informed by the Sustainability Appraisal (SA) dated January 2023 and the Plan objectives, which are set out at paragraph 2.5.2 of the SA and the Council's HEDNA (April 2022).

5

2.5 The SA discusses the potential growth scenarios and confirms two points:

- (i) Standard method housing figure for Chichester (excluding South Downs National Park) is 638 dwellings per annum, or 11,484 in total over the Plan period; and
- (ii) The above figure is capped at 40% above the baseline need and that the uncapped figure is significantly higher than this at 884 dwellings per annum (dpa).

2.6 Of particular note is that point ii. seeks to cap the overall housing increase by no more than 40% above the previously adopted LP housing figure of 435 dpa. It should be noted here that the 435 dpa figure within the 2015 Local Plan was below the identified need of 505 dpa. This reduced housing figure was accepted on the basis of an early review, but this early review did not take place.

2.7 Policy H1 identifies the need for the Plan to make provision for at least 10,350 dwellings within the plan figure, amounting to 575 dpa. This is lower than both the standard method figure of 638 dpa and the previously consulted Preferred Approach figure of 650 dpa which accommodated some unmet need from the South Downs National Park Authority.

2.8 This draft Local Plan seeks to constrain housing numbers due to an alleged capacity concern along the A27 strategic road network and constraints on Waste Water Treatment Works. The Council therefore arrive at a constrained housing figure by virtue of the standard method 'steps' and also due to infrastructure capacity.

2.9 The Transport Study (January 2023) is the key document on which the Council rely to constrain their housing figure to 535 dpa. On review of this document, it is clear that the Council's consultants undertook a sensitivity analysis as to whether the core scenario that supports the 535 dpa position in the local plan could accommodate a higher level of growth. The conclusion in paragraph 5.6.5 and 11.2.3 of the Transport Study notes that 700 dpa could be accommodated (in the southern plan area) by the mitigation proposed for the 535 dpa, with some additional (as yet undesignated and not costed), mitigation works.

2.10 Accordingly, the Council's own evidence base has undertaken the assessment and concluded that a higher growth figure could be accommodated on the A27, subject to appropriate improvement works. Given the testing of the higher growth figure in the Transport Study, the exceptional circumstances to constrain growth, as set out at paragraph 60 on the NPPF, do not appear to exist and the Plan could be considered unsound on this point alone.

2.11 As a result of the above, the SA does not consider a scenario where the Council would meet its local housing need, nor a scenario where it exceeds its local housing need. This is

6

of relevance given that the previous Local Plan underprovided against the OAN, and when considering the scale of development expected for adjoining authorities, including the highly constrained SDNP.

Given that it is not accepted that the A27 capacity matters present a ceiling in terms of housing delivery, it is not accepted that the Plan and associated SA demonstrate that reasonable alternatives have been considered. The plan is not therefore positively prepared, nor is the approach to housing figures justified.

Effective?

2.12 On the basis of the 535 dpa figure, it is considered that the selected areas for growth and

figures are deliverable over the Plan period, however, as set out above, the plan area could accommodate a greater level of growth.

2.13 It should also be noted that the Plan does rely on the delivery of Neighbourhood Plan and/or Small Site Allocations DPD. This is set out under Policy H3 in the draft document.

This states the following in terms of delivery:

If draft neighbourhood plans making provision for at least the minimum housing numbers of the relevant area have not made demonstrable progress the council will allocate sites for development within a development plan document in order to meet the requirements of this Local Plan.

2.14 The above is not precise and does not provide any clear timetable for delivery within the Plan period. Whilst the comments are noted above that the Plan could be effective, the Local Plan needs to give a clear timescale for completion of the Supplementary Development Plan Documents in order to help ensure it is completed.

Is the plan consistent with National Policy?

2.15 On the basis of the comments above, the approach to selected sites for allocation based on the 535 dpa figure is considered to be consistent, however, due to the lack of evidence to demonstrate that the 535 dpa figure should be capped due to the A27 capacity points raised, the draft Plan does not appear to meet the exceptional circumstances allowed for at paragraph 61 of the NPPF to justify the alternative approach. The Plan as proposed is therefore inconsistent with NPPF when read as a whole.

3 Duty to Cooperate

3.1 Paragraph 24 of the NPPF outlines the need for co-operation between local planning authorities on strategic matters that cross administrative boundaries.

7

3.2 The draft Plan does not address any need requirements in relation to unmet housing need of neighbouring authorities. Nor does it contain evidence to suggest that these matters have been discussed with the adjoining Authorities.

3.3 The housing figures presented do not account for unmet need from the South Downs National Park Authority. Whilst a Statement of Common Ground has been referred to, it has not been published and therefore it is not possible to determine whether the decision not to make any provision for the National Park is sound.

3.4 Further, Arun District Council has confirmed that it will be objecting to the Plan as currently proposed on the basis that it has a significant housing need. This is likely to be further influenced by Chichester not meeting its own needs, a repeat of the 2015 situation which resulted in Arun having to address some of this within its 2018 Local Plan.

3.5 If the Plan is to proceed on the basis of providing 575dpa as per Policy H1, this will amount to a shortfall of 1,100 dwellings over the plan period. Without any Statements of Common Ground, it is unclear as to how this shortfall will be addressed.

4 The Site and its suitability

4.1 The Site comprises approximately 4.25 hectares of agricultural land located to the south of the B2145 and east of Foxbridge Drive. Agricultural access is taken from the B2145 which abuts the entirety of the northern boundary. The western boundary adjoins residential property Oakdene and properties at Foxbridge Drive and Farm Close. The Site is not located within or in close proximity to any land at risk of flooding, nor is it in proximity to any heritage assets.

4.2 In policy terms, the Site is located outside but adjoining the settlement boundary to the west and is otherwise unconstrained. The latest Housing Economic Land Availability Assessment (HELAA) (2021) assessed the Site positively, with potential to deliver approximately 80 dwellings in the medium term.

4.3 In terms of accessibility, the Site is sustainably located and well connected with the local footpath and cycle network. There is a surfaced path that runs along the northern boundary of the site, largely separated from the road behind a hedge. This is not a designated footpath as it forms part of the National Cycle Network Route 2 however, it is used as such as it connects into the tow path that runs along the Chichester Canal which travels north into Chichester or south towards the sea. A footpath is also located along the B2145, providing access to services within the village.

8

4.4 The Tow Path travelling into Chichester is also part of National Cycle Network Route 2 which connects directly into the heart of the city. This then connects into other cycle networks north into Kent and west towards Portsmouth and beyond.

4.5 Initial feasibility studies determine that approximately 3 hectares of the site could be suitable for residential development. The area for development would be focused around the western boundary whilst the remaining area would comprise formal and informal open space alongside additional planting and a robust landscaping strategy that will respect the Ancient Woodland at Hunston Copse whilst ensuring net biodiversity gain and green infrastructure connectivity with the biodiversity corridors that have been identified to the north and east. Creating a landscape buffer to the east will also create a clear, defensible boundary to the village.

4.6 The allocation and development of this land would provide a number of benefits to the local community;

- > The Site is well-connected to local services and facilities, within walking distance of the village facilities such as the Hunston Store and Post Office, pub, village hall, playing fields and canoe club;
 - > Para GA4.1 specifically states that traffic issues continue to cause major concerns within the parish. Being located north of the village with direct access onto the B2145 means the site would minimise additional traffic through the village;
 - > Proposals would include additional footpaths north-south to ensure connectivity away from the main road whilst linking with existing footpath 188 which runs east-west around the site;
 - > The Site is not subject to any environmental designations or constraints and is not liable to flooding;
 - > A suitable landscaping strategy would ensure net biodiversity gain and green infrastructure connectivity with existing biodiversity corridors to the north and east;
 - > A landscape buffer to the east would create a clear, defensible boundary to the north-eastern edge of the village;
 - > Provision of formal and informal open space would be of benefit to residents throughout the community and to the north of the village especially;
 - > The Site is not constrained and does not rely upon significant infrastructure improvements in respect of delivery;
 - > Development proposals would include a mix of high-quality homes, with the potential to include starter homes, bungalows suitable for the elderly and affordable housing to meet the varying needs of the community; and
- 9
- > Any future development would make contributions to local facilities and infrastructure.

5 Conclusion

5.1 Whilst we understand the approach the Council has taken in terms of the selection of sites to meet the 535 dpa figures, this is significantly lower than the standard method figure of 638 and previously consulted figure of 650 dpa. The conclusion in paragraph 5.6.5 and 11.2.3 of the Transport Study appears to be that 700 dpa could be accommodated (in the southern plan area) by the mitigation proposed for the 535 dpa scenario plus some additional mitigation at the Portfield roundabout.

5.2 The Council do not appear to have considered that the increased housing requirement could assist with funding the necessary highway improvements and thus this should be further reviewed by the Council in order to aim to meet the minimum of 638 dpa.

5.3 The Council have failed to provide sufficient justification for not meeting its housing need in full and have not suitably considered unmet need from adjoining authorities. The latter is particularly relevant given constraints of the National Park.

Full text:

Executive Summary

The Local Plan as written lacks ambition and vision, and will be detrimental to the landscape within which the district lies. It is a plan borne out of a need to produce a legal document which will satisfy the regulatory authorities. In terms of Urban Planning it fails "To meet the needs of the present without compromising the ability of future generations to meet their own needs" (NPPF).

The development that will consequentially arise from the deployment of such a made Local Plan is not sustainable. It will adversely affect the Character, Amenity and Safety of the built environment, throughout our district.

In particular, the Local Plan is inadequate for the needs of the people in the district both at present and in the future because –

1. It has been written in advance of the District having a properly formed and agreed Climate Emergency Action Plan. It is inconceivable that such a key document will not shape our Local Plan. It is this Action Plan that is needed first in order to provide the long-term strategic view as to how and what the District will look like in the future; this, in turn, will help form and shape the policies outlined in any prospective, Local Plan. The Plan as proposed is moribund, as a result of "cart before the horse" thinking.
2. The Local Plan as written does not adequately address how infrastructure, transport and services are going to be materially and strategically improved to meet the predicted growth and shift to a significantly ageing population. There is presently insufficient capacity to supply services and to have adequate people and environmentally friendly connectivity, as a direct result of decades of neglect towards investing in infrastructure and services to meet the needs of the District's population. We are led to believe that developers through increased levies in order to gain permission to build will fulfil this need, but all that this will result in is an uncoordinated, dysfunctional mess completely lacking in any future-proof master planning approach. We contend that this will do nothing for the quality of life of Chichester District residents and it will create a vacuum whereby few if indeed any can be held accountable or indeed found liable for shortcomings in the future.
3. The Local Plan as written does not state how it will go about addressing the need to create affordable homes. The District Council's record on this matter since the last made plan has been inadequate and now the creation of affordable homes has become urgent as political/economic/social factors drive an ever increasing rate of change within the District.
4. Flood risks assessments used in forming the Plan are out of date (last completed in 2018) and any decision to allocate sites is contrary to Environment Agency policy. Additionally, since March 2021 Natural England established a position in relationship to 'Hold the Line' vs. 'Managed Retreat' in environmentally sensitive areas, of which the Chichester Harbour AONB is a significant example. CDC have failed to set out an appropriate policy within the proposed Local Plan that addresses this requirement.
5. The A27 needs significant investment in order to yield significant benefits for those travelling through the East-West corridor; this is unfunded. Essential improvements to the A27 are key to the success of any Local Plan particularly as the city's ambitions are to expand significantly in the next two decades. But any ambitions will fall flat if the A27 is not improved before such plans are implemented.. The A259 is an increasingly dangerous so-called 'resilient road' with a significant increase in accidents and fatalities in recent years. In 2011, the BBC named the road as the "most crash prone A road" in the UK. There is nothing in the Local Plan that addresses this issue. There is no capacity within the strategic road network serving our district to accommodate the increase in housing planned, and the Local Plan does not guarantee it.
6. There is insufficient wastewater treatment capacity in the District to support the current houses let alone more. The tankering of wastewater from recent developments that Southern Water has not been able to connect to their network and in recent months the required emergency use of tankers to pump out overflowing sewers within our City/District reflects the gross weakness of short-termism dominated thinking at its worst and is an indictment of how broken our water system is. The provision of wastewater treatment is absolutely critical and essential to the well-being of all our residents and the long-term safety of our built environment. The abdication by those in authority, whether that be nationally, regionally or locally, is causing serious harm to the people to whom those in power owe a duty of care and their lack of urgency in dealing properly with this issue is seriously jeopardizing the environment in which we and all wildlife co-exist.

7. Settlement Boundaries should be left to the determination of Parish Councils to make and nobody else. The proposed policy outlined in the Local Plan to allow development on plots of land adjacent to existing settlement boundaries is ill-conceived and will lead to coalescence which is in contradiction of Policy NE3.

8. All the sites allocated in the Strategic Area Based Policies appear to be in the majority of cases Greenfield Sites. The plan makes little, if any reference to the development of Brownfield sites. In fact, there is not a Policy that relates to this source of land within the Local Plan as proposed. Whilst in the 2021 HELAA Report sites identified as being suitable for development in the District as being Brownfield sites were predicted to yield over 4000 new dwellings. Why would our Local Plan not seek to develop these sites ahead of Greenfield sites?

9. The Local Plan does not define the minimum size that a wildlife corridor should be in width. What does close proximity to a wildlife corridor mean? How can you have a policy (NE 4) that suggests you can have development within a wildlife corridor? These exceptions need to have clear measures and accountability for providing evidence of no adverse impact on the wildlife corridor where a development is proposed. Our view is quite clear. Wildlife and indeed nature in the UK is under serious and in the case of far too many species, potentially terminal threat. Natural England has suggested that a Wildlife Corridor should not be less than 100metres wide. The proposed Wildlife Corridors agreed to by CDC must be enlarged and fully protected from any development. This is essential and urgent for those Wildlife Corridors which allow wildlife to achieve essential connectivity between the Chichester Harbour AONB and the South Downs National Park.

10. Biodiversity Policy NE5 - This is an absolute nonsense. If biodiversity is going to be harmed there should be no ability to mitigate or for developers to be able to buy their way out of this situation. This mindset is exactly why we are seeing a significant decline in biodiversity in the District which should be a rich in biodiversity area and why the World Economic Forum Report (2023) cites the UK as one of the worst countries in the world for destroying its biodiversity.

11. In many cases as set out in the Policies the strategic requirements lack being SMART in nature – particularly the M Measurable. These need to be explicit and clear: “you get what you measure”.

12. 65% of the perimeter of the District of Chichester south of the SDNP is coastal in nature. The remainder being land-facing. Policy NE11 does not sufficiently address the impact of building property in close proximity to the area surrounding the harbour, something acknowledged by the Harbour Conservancy in a published report in 2018 reflecting upon how surrounding the harbour with housing was detrimental to its long-term health. And here we are 5 years on and all of the organizations that CDC are saying that they are working in collaboration with, to remedy the decline in the harbour’s condition, are failing to implement the actions necessary in a reasonable timescale. CDC are following when they should be actually taking the lead on the issue. Being followers rather than leaders makes it easy to abdicate responsibility. There must be full and transparent accountability.

13. The very significant space constraints for the plan area must be taken into account. The standard methodology need no longer apply where there are exceptional circumstances and we are certain that our District should be treated as a special case because of the developable land area is severely reduced by the South Downs National Park (SDNP) to the north and the unique marine AONB of Chichester Harbour to the south. A target of 535dpa is way too high. This number should be reduced to reflect the fact that only 30% of the area can be developed and much of that is rural/semi-rural land which provides essential connectivity for wildlife via a number of wildlife corridors running between the SDNP and the AONB. Excessive housebuilding will do irretrievable damage to the environment and lead to a significant deterioration in quality of life for all who reside within the East / West corridor.

14. Many of the sites identified in the Strategic & Area Based Policies could result in Grade 1 ^ 2 farmland being built upon. The UK is not self-sufficient in our food security. It is short-sighted to expect the world to return to what we have come to expect. Our good quality agricultural land should not all be covered with non-environmentally friendly designed homes.

Change suggested by respondent:

The Local Plan needs to be more ambitious than just saying that elsewhere within the city, there are a number of sites and locations which may have potential for redevelopment in the future, subject to the relocation or rationalisation of existing uses.

Draft LP Mayday Submission Final - <https://chichester.oc2.uk/a/skf>

5317

Support

Document Element: Policy A1 Chichester City Development Principles

Respondent: National Highways (Mr Marius Pieters, Spatial Planning Manager) [8127]

Summary:

[National Highways letter dated 24/07/23 [confirmed representation should be categorised as Support]. We support the preparation of supplementary planning document(s) or development plan document(s) as a framework for coordinated transport/traffic planning and identifying the required transport improvements.

Full text:

We have reviewed the publicly available Local Plan documents and provided comments in the attached letter, in relation to the transport implications of the plan for the safety and operation of the SRN.

Our comments include issues to resolve, comments, requests for further information and recommendations. A brief summary of our main comments are:

- the reliance on the delivery of the A27 Chichester bypass improvements project.
- the requirements for new, additional, and adapted processes and assessments, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments.
- collaborative working between agencies in combination with a robust monitor and manage policy.

We hope our comments assist.

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders. We look forward to continuing to participate in future consultations and discussions.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Background

National Highways has been appointed by the Secretary of State for Transport as strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the strategic road network (SRN).

National Highways is responsible for operating, maintaining, and improving the Strategic Road Network (SRN) i.e., the Trunk Road and Motorway Network in England, as laid down in Department for Transport (DfT) Circular 01/2022 (Strategic Road Network and the delivery of sustainable development).

The SRN is a critical national asset and as such we work to ensure that it operates and is managed in the public interest, both in respect of current activities and needs as well as in providing effective stewardship of its long-term operation and integrity.

Our responses to Local Plan consultations are guided by relevant policy and guidance including the National Planning Policy Framework (2021) (NPPF):

- Transport issues should be considered from the earliest stages of plan-making and development proposals so that the potential impact of development on transport networks can be addressed (para 104).
- The planning system should actively manage patterns of growth such that significant development is focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. (para 105).
- Planning policies should be prepared with the active involvement of highways authorities and other transport infrastructure providers so that strategies and investments for supporting sustainable transport and development patterns are aligned. (para 106).
- In terms of identifying the necessity of transport infrastructure, NPPF confirms that development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe. (para 111).
- Planning policies and decisions should support development that makes efficient use of land, taking into account the availability and capacity of infrastructure and services – both existing and proposed – as well as their potential for further improvement and the scope to promote sustainable travel modes that limit future car use. (para 124).

In relation to the tests of soundness set out at paragraph 35 of the NPPF, in the context of transport, these are interpreted as meaning:

- a) Positively prepared - has the transport strategy been prepared with the active involvement of the highway authorities, other transport infrastructure providers and operators and neighbouring councils?
- b) Justified – Is the transport strategy based on a robust evidence base prepared with the agreement in partnership, or with the support of the highway authorities?
- c) Effective – Does the transport strategy and policy satisfy the transport needs of the plan and is it deliverable at a pace which provides for and accommodates the proposed progress and implementation of the plan?
- d) Consistent with national policy – Does the transport strategy support the economic, social, and environmental objectives of the Plan and the NPPF/NPPG?

We will be concerned with proposals that have the potential to impact on the safe and efficient operation of the SRN; in this case, the A27 trunk road (Chichester Bypass and its junctions) which is the main access route in the Chichester area. We have particular interest in any allocation, policy or proposals which could have implications for the A27 and the wider SRN network. We are interested as to whether there would be any adverse road safety or operational implications for the SRN. The latter would include a material increase in queueing or delay or reduction in journey time reliability during the construction or operation of the development set out in the plan.

National Highways is a key delivery partner for sustainable development promoted through the plan-led system, and as a statutory consultee we have a duty to cooperate with local authorities to support the preparation and implementation of development plan documents.

In accordance with national planning and transport policy and our operating licence, we are entirely neutral on the principle of development as it is for the local planning authority to determine whether development should be allocated or permitted; albeit it must comply with national policy on locating development in locations that are or can be made sustainable. Therefore, while always seeking early and fulsome engagement with local plans and/or developers, we will simply be assessing the transport and related implications of plans or proposals and agreeing any necessary transport improvements and relevant development management policy.

In progressing Local Plans, we will seek to agree the following:

- Assessment tools and methodology
- Baseline Assessment i.e., to demonstrate that the assessment tool accurately reflects current transport conditions
- Comparator case assessment i.e., to forecast the transport conditions that would occur in the absence of the plan
- Forecast modelling i.e., to forecast the transport conditions that would arise with the plan in place, this will include an assessment at the end of the Plan period; and, if required, at full build out if that occurs after the end of the Plan period
- Outputs and outcomes of modelling, demonstrating, as appropriate, what transport infrastructure is necessary to support the plan o It should be noted that a suite of transport modelling tools may be required. This includes strategic modelling covering an area at least one major junction beyond the district boundary, localised network modelling where several links/junctions are close together and/or individual junction modelling
 - o A DMRB (Design Manual for Roads and Bridges) compliancy assessment may also be required for certain highway features, such as
 - Merge/Diverge assessment at Grade separated junctions, link capacity assessments, and others.
- The design of any necessary transport infrastructure, to an extent suitable for establishing deliverability during the plan period at the time that it becomes necessary for the purpose of ensuring that unacceptable road safety impacts or severe operational impacts do not arise as a result of development. This may be to at least General Arrangement design stage or preliminary design stage. Whichever degree of detail is agreed, the products must be in full compliance with the DMRB.
- Industry standard transport intervention costings.
- The delivery/funding mechanisms for necessary transport interventions. It should not be assumed that National Highways will have any responsibility to identify or deliver necessary transport interventions.
- If considered appropriate, a "Monitor & Manage" (M&M) framework, aimed at managing the pace of development in line with the pace of funding and delivery of necessary highway interventions in a manner which responds to the realworld impacts of development may be agreed for inclusion in the plan subject to the adequacy of risk control measures included therein. This can include the move from a 'predict & provide' style of delivery to 'a vision & validate' style. o Any M&M framework must be based on a "worst case scenario" whereby necessary mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. It must be translated into development management plan policy and policy relating to development allocations.

Further detail on the above can be provided by National Highways.

While ideally all the above should be agreed prior to the Submission of the Local Plan for examination, we recognise that this is not always possible. However, all parties should work towards all matters being agreed and reflected in a Statement of Common Ground (SoCG) by the start of the Local Plan Examination at the latest. Ideally the SoCG between the Council and National Highways would be prepared well in advance of plan submission in order to guide resource input and to track progress towards final agreement on all relevant matters starting from the earliest plan iterations until the final version is agreed.

It is acknowledged that Government policy places much emphasis on housing delivery as a means for ensuring economic growth and addressing the current national shortage of housing. The NPPF is very clear that: "Strategic policy-making authorities should establish a housing requirement figure for their whole area, which shows the extent to which their identified housing need (and any needs that cannot be met within neighbouring areas) can be met over the plan period."

However, new DfT C1/22 and the NPPF are equally clear that any development, including housing delivery, must be tempered by the requirement to ensure that the associated transport demand can be accommodated without unacceptable impacts on the safety of the SRN or severe impacts on the operation of the SRN including reliability and congestion. Therefore, as necessary and appropriate, any plan and/or development must be accompanied by suitable

mitigation in the right places at the right time, that is to the required design standards and is deliverable in terms of land availability, constructability and funding.

We would also draw your attention to the then Highways England document 'The Strategic Road Network, Planning for the Future: A guide to working with National Highways on planning matters' (September 2015). This document sets out how National Highways intends to work with local planning authorities and developers to support the preparation of sound documents which enable the delivery of sustainable development. https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/461023/N150227_-_Highways_England_Planning_Document_FINAL-lo.pdf

Responses to Local Plan consultations are also guided by National Planning Policy Framework (NPPF) revised on 20 July 2021 which sets out the government's planning policies for England and how these are expected to be applied.

Updated Circular (01/2022)

It should be noted that since the start of the Local Plan consultation process, on the 23 December 2022, the Department for Transport released a new circular on the 'Strategic road network and the delivery of sustainable development' (Circular 01/2022), which replaces all of the policies in Circular 02/2013 of the same name. These representations take account of the new circular and the requirements in terms of the Local Plan evidence base and process.

We request that the Local Plan is prepared in line with all aspects of the new circular. Particularly, the principles of sustainable development (paragraphs 11 to 17), new connections and capacity enhancements (paragraphs 18 to 25), and engagement with plan-making (paragraphs 26 to 38).

Regulation 18 submission

In our Regulation 18 submission we noted several matters including:

- The need to mitigate the adverse impacts of strategic development traffic to the A27 Chichester Bypass and its junctions at Portfield Roundabout, Bognor Road Roundabout, Whyke Roundabout, Stockbridge Roundabout and Fishbourne Roundabout and Oving junction.
- The need to identify a mechanism to calculate contributions towards the delivery of the previously agreed Local Plan A27 improvements
- The need to confirm the number of dwellings needed within the plan period
- The need to establish National Highways acceptance of the traffic model reference and future case scenarios
- The need to confirm costs, viability, and funding associated with mitigating the safety and congestion impacts of the development included within the plan.

Local Plan context

This Local Plan (Chichester Local Plan 2021 – 2039), prepared by the Local Planning Authority (LPA) Chichester District Council, sets out the vision for future development in the district and will be used to help decide on planning applications and other planning related decisions including shaping infrastructure investments.

The draft sets out how the district should be developed over the next 18-years to 2039 including for the full Plan period (1 April 2021 to 31 March 2039) the total supply of

- 10,359 dwellings

- 114,652 net additional sqm new floorspace

Minus the completions this is equivalent to around 530 dwellings and 6,150 sqm of floorspace a year.

National Highways Representations

To date National Highways have worked collaboratively with Chichester District Council (the Council) and West Sussex County Council (WSCC) and we will continue to work with the Council and other key stakeholders.

We have undertaken a review of the Chichester Local Plan 2021-2039 proposed submission version and accompanying evidence documents, our comments are set out in the tables below (following pages). [see table within attachment]

Summary

We have reviewed the publicly available Local Plan documents and provided comments above in relation to the transport implications of the plan for the safety and operation of the SRN. We understand that other technical information is available, but this was not presented as part of this consultation.

Chichester, and the A27, are already heavily congested, infrastructure in the existing Local Plan remains undelivered and the growth set out in the new Plan will further increase travel demand.

As presented, satisfying the transport needs of the plan is clearly reliant on the delivery of the A27 Chichester bypass improvements project. The A27 Chichester bypass improvements project is one of 32 pipeline schemes being considered for possible inclusion in National Highways third Road Investment Strategy (RIS3) covering 1 April 2025 to 31 March 2030.

On 9 March 2023 the UK Transport Secretary ensured record funding would be invested in the country's transport network, sustainably driving growth across the country while managing the pressures of inflation. The announcement cited the A27 Arundel Bypass as being deferred from RIS2 to RIS 3 (covering 2025-2030). The transport secretary also identified a number of challenges to the delivery of the road investment strategy and cited the benefit of allowing extra

time to ensure schemes are better planned and efficient schemes can be deployed more effectively.

At present, there is no commitment by DfT to carry out the A27 Chichester bypass improvements project. Until the A27 Chichester bypass improvements project is published in the RIS3, consented and a decision to invest is made it cannot be assumed to be a committed project.

We note that the Plan does not address any uncertainty of delivery of the A27 Chichester bypass improvements project and we strongly recommend that there is either no reliance placed on RIS3 to realise capacity for growth in the Plan or that contingency measures are included to cover the eventuality that RIS3 funding is not forthcoming within the plan period. It is not clear that the potential impact of development on transport networks can be addressed in the absence of the A27 Chichester bypass improvements project.

Achieving net zero, reducing emissions reduction, acting on climate, and supporting thousands of new homes and new employment developments will be problematic with existing processes. New, additional, and adapted processes and assessments will likely be required, especially in assessing Transport Assessments, mandating Travel Plans and monitoring traffic associated with new developments. We acknowledge that change is complex, expensive, and time-consuming, especially for smaller district level Councils. But the hard work will deliver benefits for the Council and residents in the longer-term.

National Highways seeks to continue working with the Council and WSCC to progress coordinated and deliverable packages of interim mitigation measures and alternative transport solutions while a long-term strategic solution is considered by government. This must however be in combination with a robust monitor and manage policy that appropriately manages the risk of unacceptable road impacts resulting from new housing and other development over the Plan period.

We have been in discussion with Chichester District Council regarding their proposed Monitor and Manage Strategy. At present, we do not consider the current strategy to be robust and we seek further information and detail especially on who, when and when monitoring and management will be undertaken. Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas. Any M&M framework must be based on a "worst case scenario" whereby necessary transport mitigation is understood, as well as setting out the desired alternative scenario. It must set out details of responsibility, funding and governance of the framework together with the methodology for determining the timing for any mitigation delivery while remaining clear on the fallback position where identified mitigation or desired alternatives are not ultimately achievable. The M&M framework must set out that the alternative to mitigation not being delivered is that development does not proceed where that development would give rise to unacceptable road safety risk or severe cumulative impacts on the road network in the absence of that mitigation. The M&M framework must be translated into development management plan policy and policy relating to development allocations.

As we have reiterated throughout our comments, we welcome the opportunity to work with you to address these outstanding matters and we will continue to liaise over submitted Transport Assessment, Travel Plan policy and Monitor and Manage Policy to help to work towards a viable plan.

We hope our comments assist.

We look forward to continuing to participate in future consultations and discussions. Please do continue to consult us as the Plan progresses so that we can remain aware of, and comment as required on, its contents.

Once you have had the opportunity to digest all the representations received, we would welcome a meeting to run through all the transport related matters and agree how to progress any required evidence gathering or other work.

Support, but strengthen the improved access to the city and sustainable modes of travel by revising the bullet point.

- "Support and promote improved access to the city by active travel and public transport, especially providing continuous direct walking routes between the railway station and all areas of the city centre, updating the transport strategy as necessary."

There should be another bullet point about reducing car use in the city centre

- "Move car parking spaces from city centre locations to locations further out for people to walk into the city centre, with only disabled and expensive premium parking within the city walls."

Object

Document Element: Policy A1 Chichester City Development Principles**Respondent:** Stagecoach South (Rob Vince) [8141]

Summary:

Paragraph 10.5 exposes an unbalanced and unsound preoccupation with aesthetic matters in its approach to the town centre, and far too little to ensuring that the central place function is enhanced through protecting and enhancing the quality of public transport access.

It is important to note that a dominant number of key service and facilities such as the General Hospital are relatively close to the city centre. This directly contributes to driving travel demand into the city, causing congestion. Most importantly, it also makes the task of mitigation simpler, given the impact a suite of active and sustainable measures can have within the same close proximity.

Policy A1 does not provide this. As such, achieving the strategic objectives of the plan is seriously threatened, and the plan is thus not effective.

The Plan needs to ensure that the approach to city centre regeneration maintains and enhances public transport access, interchange and inter-modal connectivity. It also needs to ensure that bus service stopping and interchange facilities are able to address increases in future demand, anticipated by the clear intent expressed elsewhere in the Plan that public transport should be meeting a greater proportion of mobility needs, in a growing district. Achieving this demands an ambitious approach to the location, quality and capacity of bus stop and interchange.

Stagecoach has significant concerns that current proposals to remove the bus station and have all bus services operate from the street kerbside, on an inner distributor road with similar or reduced net stop capacity, fall short of promoting attractive, convenient bus access to the central area as a destination.

For the longer term and where the objectives of the draft plan are concerned looking ahead to 2039, they clearly fall short of enhancing the convenience and attractiveness of public transport use. Much less do they make sufficient provision for a material increase in bus frequency, connectivity, and interchange convenience, on which the draft plan explicitly relies.

Full text:

Chichester District Local Plan 2039 – Pre-Submission (Regulation 19) Consultation

1. Introductory Comments

Stagecoach South is the main commercial public transport operator across Chichester District. The Company has headquarters in the city, which is also the principal public transport hub for the District and it's rather wider travel-to-work area encompassing much of the Arun District. Our services extend throughout and beyond the District boundaries, as far as Littlehampton, Midhurst, Havant and Portsmouth. The vast majority of services operate on a commercial basis – that is to say, sustained by passenger use and fare revenue, including concessionary reimbursement.

While the role of the railway is significant in much of the District, especially the east-west Coastway line, yet bus services account for more boardings locally than the railway, with Chichester depot services carrying over 3.5m passengers each year.

Unlike bus services in other parts of the country, the local network has recovered strongly after the pandemic with fare-paying passenger numbers over 95% of 2019 levels, albeit with concession patronage somewhat lower. This has helped secure not only a stable but growing bus network even during this period of rapidly rising operational costs, avoiding the need for the service contractions seen in other regions. Indeed, during the second quarter of 2023 Stagecoach will invest £5.5m in brand-new vehicles for high-profile coastal Service 700 – one of the largest vehicle investments for Stagecoach Group this year.

Our services are therefore critical to existing and future local connectivity. As the Plan acknowledges, mobility demands do not respect planning authority boundaries. The role of our services is especially high to settlements in the broad A27 corridor, within the District and beyond. This includes major settlements in Arun District such as Pagham and suburban Bognor Regis, where bus is the only mass public transport option. As the Council is well aware, there is an even higher level and rate of committed development envisaged in these locations in the Arun District Local Plan than in Chichester.

It is already evident to the planning authorities, West Sussex County Council and National Highways, as proprietor of the A27 Trunk Road, that accommodating growing mobility demands across Chichester District and especially around Chichester itself, is becoming increasingly challenging to the point of being seriously problematic.

Stagecoach has a particular interest in this Plan arising from:

- The already clear and highly deleterious impact of congestion affecting our operations and their reliability and attractiveness to the public. The effects of these on the approaches to Chichester, and around the A27 bypass are especially severe. If public transport is to retain its existing role – even before the needs of any meaningful growth both in Chichester and neighbouring authorities is considered, are considered – the Council and the Highways Authority need to arrive at clearly-defined measures to protect buses from chronic delay and the damaging impacts arising from the lack of bus network resilience and customer journey times.
- In connection with the above, the need to properly consider the predictable impacts of committed development in Arun District on the transport network and in particular the operation of bus services. The duty to cooperate on cross-border strategic matters is not limited merely to accommodating housing requirements.

- The fact that our entire business premises and operational base at Chichester is the subject of allocation for redevelopment within the Plan period. Specifically, this includes our Head Office, the Bus Station as the operational hub of the network and the key interchange for passenger journeys – including those that involve the railway – and the bus depot required to support the entire operation. Notwithstanding many years of discussions, there is as yet no agreed deliverable strategy to replace these facilities either in the Draft Plan or elsewhere.

Stagecoach broadly supports the vision and priorities of the draft plan. In most respects, Stagecoach supports strongly the spatial strategy and the identified site allocations that flow from it, and the evidence.

However, it has serious concerns about the soundness of the plan as proposed for submission, for important regards outlined in this response. These are made in the light of requirements set by the National Planning Policy Framework (NPPF), in particular at paragraphs 15 and 16; 35, 105-109 inclusive and having due regard to the need for allocations to satisfy 110-112 inclusive in due course as development permission is sought; and paragraph 174.

Paragraph 16c) of NPPF makes plain that strategic plans and policies should “be shaped by early, proportionate and effective engagement between plan-makers and communities, local organisations, businesses, infrastructure providers and operators and statutory consultees” (our emphasis). This makes plain that collaborative and ongoing involvement of public transport operators is both necessary, and separate and in addition to the engagement with statutory consultees. This has not taken place.

Para 1.25 of the draft plan states that “the council has engaged constructively, actively and on an ongoing basis with other local authorities and organisations to address key strategic matters.” Despite the requirements in NPPF and contrary to the statement made, Stagecoach has not been approached or involved in a meaningful, collaborative or ongoing way in the preparation of the Plan.

Our main concerns centre around the fact that the plan strategy is neither backed by sufficient transport evidence. Even more importantly, the plan relies on a wholly car-based transport mitigation strategy despite policy stating that this is not the case, and the track record of the existing Local Plan, based on a very similar strategy, that has failed to bring forward meaningful mitigations to date to prevent traffic conditions substantially worsening. There is no support in policy for the achievement of the Strategic Objectives in the Plan. Nor is there definition of any measures in the 2023 Transport Study to make provision for sustainable transport infrastructure or services – much less materially improve them.

Finally, to the extent that updated transport evidence has been provided in the form of the 2023 Chichester Transport Study, arising from updated traffic modelling, it does not support the contention that highways capacity constraints on and around the A27 justify not meeting the objectively-assessed development needs of the area, as the draft plan contends.

2. Vision and Strategic Objectives

2.1. Issues and Opportunities

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant, proportionate and up to date evidence

Stagecoach recognises the important role of the West Sussex and Greater Brighton Strategic Planning Board which agreed a Local Strategic Statement (LSS2) in early 2016 to identify spatial planning issues across the wider area. This established strategic priorities and policies to guide longer term strategic growth in a coordinated and well considered matter. This institutional framework and the purpose of the LSS is a highly significant one and is at the heart of efforts to properly fulfil the statutory Duty to Co-operate, including with regard to strategic infrastructure issues, as NPPF requires.

Given the long period of time elapsed since the 2018 Reg 18 consultation and the already very clear constraints on strategic infrastructure capacity, it is of great concern to Stagecoach that the LSS2 has not been updated to reflect emerging issues in the intervening period. A review and update of the LSS2 has only just commenced. This includes a study of projected housing and employment needs, transport impact, infrastructure and spatial options to deliver the required development in the period after 2030. This Chichester District draft plan covers a period extending to 2039 – therefore well beyond 2030 and the nominal currency of LSS2.

However, infrastructure needs are pressing today. Stagecoach is presented with severe highway operational problems on a near-daily basis. During the winter of 2022-23 we have, for example, seen key road links impacted for many weeks by acute disruption arising from flood events. Unpredictable, but seemingly more-frequent, exogenous events expose a lack of resilience in the highway network around Chichester and its travel-to-work area. However, serious, chronic, unpredictable delay has been normalised over recent years, with peak-time congestion having quickly returned after the pandemic. The existing development strategy has failed to bring forward measures having any impact on this to date, and key commitments – notably at west of Chichester Phase 2 and at Tangmere – have yet to commence to further aggravate the issue.

We have no confidence in the transport mitigations proposed in the existing Local Plan and LSS2 being sufficiently

effective, even if deliverable at all. Indeed, the existing adopted Local Plan does little more than make vague speculations about the sustainable transport measures that might be achievable. The draft local plan review is no different. It has no ambitions at all for sustainable modes and thus, makes no meaningful provision to meet them.

This is especially relevant in light of the fact that the approach to resolving issues on the A27 around Chichester that were anticipated in 2015-16 have fallen away. LSS2 is thus currently inadequate to act as a part of an up-to-date, proportionate, and relevant evidence base for the Plan.

An update of a traffic model lies at the heart of a 2023 Chichester Transport Study. This talks no account of the existing role of non-car modes, nor can it do so. It is unable to properly evaluate the nature of problems or solutions that involve public transport, or for that matter, other sustainable modes.

Therefore, we consider that the combination of committed and additional development needs that must be accommodated over the whole plan period between 2022 and 2039, in both the Chichester and Arun Districts, require a “first principles” review. This must be based on a refreshed transport evidence baseline of no earlier than 2022 – given that the effects of COVID distort 2020-22 – and the transport infrastructure and service requirements to sustainably support those needs.

Key issues – including substantial changes with regards to transport issues and challenges, as well as potential solutions – thus do not form part of the evidence base that steers this plan. Given long term changes in travel patterns, and mode share that took place during COVID, as well as a local and national policy context that seeks to radically reduce and then eliminate transport-related carbon emissions, this is especially problematic.

The specific problems of congestion and network resilience that are evident on the A27 and the approaches to Chichester remain a set of especially difficult problems that disproportionately affect the efficiency, reliability and attractiveness of the bus network, that evidently demand larger-scale strategic responses involving multiple stakeholders, including bus operators.

Where the effects of development on the national Strategic Roads Network (SRN) are concerned, the approach of National Highways to addressing and responding to the mobility needs of development has now substantially changed following the promulgation of the DfT Written Ministerial Statement LTN01/22. This makes it clear that adding highways capacity is no longer the first or only strategy that should be pursued, but one subordinate this to maximising the potential of non-car modes and sustainable travel.

“Effective and ongoing collaboration” on transport matters has not led to solutions being agreed and published for public scrutiny as part of the plan evidence base. Whatever the approach to modelling and “highways improvements” that may be agreed or pending agreement with the County Highways Authority and National Highways, Stagecoach is neither participant or sighted. This is despite the clear requirements set out in NPPF Para 106 b) that “Planning policies should ... be prepared with the active involvement of local highways authorities, other transport infrastructure providers and operators and neighbouring councils, so that strategies and investments for supporting sustainable transport and development patterns are aligned.” (our emphasis).

We therefore consider that the Council has failed to comply with the requirements of NPPF paragraph 25 and 26 that “relevant bodies” are involved in plan-making, especially with regard to addressing the needs for infrastructure. Public transport services and the infrastructure that supports its operation and use clearly fall within matters relevant to plan-making. This is explicit in NPPF Chapter 9 and indeed within the plan itself – for example reference to public transport and sustainable modes in the Vision for the plan.

It should be stressed that the Regulation 18 “Preferred Approach” consultation took place in December 2018 – over 4 years ago and prior to COVID, based on LSS2. The inordinate length of time that has elapsed between the Regulation 18 and Regulation 19 stages greatly challenges the LSS2 and other parts of the evidence base, especially as the pause straddles the COVID epidemic. That would include the transport modelling baseline, and key assumptions in any traffic modelling that took place prior to mid-2022, which is a point at which a reasonable “new normal” post-COVID might be considered to have become established. In that period, Arun District has also adopted its own Local Plan development strategy that accommodates an unprecedented quantum of development immediately east and south-east of the District Boundary – creating additional substantial transport impacts directly affecting the A27 and multiple major approaches to Chichester crossing it.

The established mechanism to fulfil the Duty to Co-operate has thus not operated effectively.

The Plan is not founded on a relevant, proportionate and up-to date evidence base and is thus inadequately justified.

2.2. Spatial Portrait

The spatial portrait is generally succinct and accurate. However, it makes no mention of road-based public transport, the role of the City as a public transport hub, or the range of bus services that provide local connectivity (Section 2.4 and 2.5). The complete concentration of post-16 education in the City itself as just one example of the peculiarities of transport demands in the area, is not highlighted, though this has a profound influence on peak time travel demands

affecting the most congested parts of the highway network. Among other things, the role of bus services in supporting the educational system of the plan area is very great indeed.

The potential role of bus in addressing the already-severe transport problems of the plan area and beyond seems entirely overlooked. The spatial portrait is thus clearly inadequate and incomplete.

2.3. Strategic Objectives

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Chapter 9 of NPPF and paragraphs 104 and 105 in particular require that plans should:

“Transport issues should be considered from the earliest stages of plan-making and development proposals, so that:

- a) the potential impacts of development on transport networks can be addressed;
 - b) opportunities from existing or proposed transport infrastructure, and changing transport technology and usage, are realised – for example in relation to the scale, location or density of development that can be accommodated;
 - c) opportunities to promote walking, cycling and public transport use are identified and pursued;
 - d) the environmental impacts of traffic and transport infrastructure can be identified, assessed and taken into account – including appropriate opportunities for avoiding and mitigating any adverse effects, and for net environmental gains;...
- ...The planning system should actively manage patterns of growth in support of these objectives. Significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. This can help to reduce congestion and emissions, and improve air quality and public health...”

The Strategic Objectives do not conform with NPPF in these foundational requirements adequately, to transparently steer the plan strategy. They should therefore be amended to read:

“Plan to provide local infrastructure to support new development and seek opportunities to address existing identifiable infrastructure problems deficits, such as in particular those relating to the A27 and its junctions and wastewater treatment.”

Paragraph 2.36 states, in the context of the Climate Emergency and the National Trajectory to “Net Zero” that “The council will enable the delivery of infrastructure, jobs, accessible local services and housing for future generations while protecting, conserving and enhancing the historic and natural environment.”
Naturally, we support this intent.

However, there is no acknowledgement of the role current patterns of transport use contribute to carbon emissions, nor that substantial mode shift is necessary to address sustainably an acute lack of capacity on the local network and the SRN, especially around Chichester. This is especially concerning as the basic conceptual link is not made between the fact that the greatest such problems lie on the A27 corridor and around Chichester, while these are also at the same time present many of the most sustainable locations for development, and where the opportunities to secure much greater use of sustainable modes also exists.

Strategic Objective 7 “Strategic Infrastructure” includes the following statement:

“To work with infrastructure providers to ensure the timely delivery of key infrastructure to support delivery of new development. New development will be supported by sufficient provision of infrastructure to enable the sustainable delivery of the development strategy for the plan area. Key infrastructure to support the Local Plan will include improvements to transport, ...

A sustainable and integrated transport system will be achieved through improvements to walking and cycling networks and links to accessible public transport. Highway improvements will be delivered to mitigate congestion, including measures to mitigate potential impacts on the A27 through a monitor and manage process.”

The latest transport evidence in the Chichester Transport Study makes no pretence to define much less to deliver a “sustainable or integrated” transport system. It is wholly devoted to sustaining current levels of car use across the District, to and through Chichester area.

It is no more than the lightest of touches to the approach taken to supporting the adopted Local Plan, an approach that is already almost 10 years beyond the date of its gestation but has yet to deliver any significant capacity improvement schemes, much less any measures that sustain even current levels of public transport journey times and reliability in the face of increasing congestion – much less any betterment.

Of the six key junctions on the A27 around Chichester, recognised to require significant mitigation given they are saturated for extended periods, five accommodate regular bus services - indeed frequent ones at least every 20 minutes in several cases. The sixth at Oving Road, relates directly to a key corridor where bus services are needed to support strategic growth currently being delivered at Shopwhyke, as well as substantial further growth West of Tangmere (proposed allocation A14) and “East of Chichester” (A8), south of Shopwhyke Road.

As stated at p12 of the Study Summary “The modelling shows that all the junctions on the A27 Chichester bypass are well over capacity, even before adding in the Local Plan development and with the exception of Portfield Roundabout are actually shown to be over capacity in the base model year (2014) in one or both peaks”. This much has indeed been evident for years from delay and periodic even more severe disruption arising to Stagecoach services from the lack of network resilience.

The reassignment of through and local traffic through Chichester to avoid the A27 bypass is an especially serious issue for bus services that penetrate the city. This is leading to consequential saturation of a range of junctions used by buses. Rising delay and unpredictable running times are at the root of our decision to sever the long-established Portsmouth to Littlehampton service in 2023, which will in future no longer run across Chichester, but terminate to provide additional dwell time to mitigate the impacts of congestion.

While this congestion affects all road users including businesses and freight traffic, the effect on scheduled bus services is greatly higher, as such services cannot reassign route to ‘beat the queue’. Traffic congestion often encourages greater car use for this reason, in tandem that people are happier to sit for extended periods in their own vehicle on a seamless door-to-door journey than wait at the roadside for a delayed bus making slower progress in lengthy queues.

As the Study admits at para. 1.3.2 “Although, there have been works at the Portfield Roundabout in this timeline, no other mitigation schemes have been completed along the A27 corridor, as such the mitigation schemes defined in this report will also be required to consider the development from this plan period.”

In other words, in the 8 years since the current Local Plan was adopted in 2015, there has been minimal progress in delivering the traffic mitigations. There is no clarity at all when any such mitigations will be brought forward. It is hardly surprising then, that traffic conditions have deteriorated. The “predict and provide” transport strategy supporting the current plan has failed.

Despite this, the Draft Local Plan Review proposed to “double down” on exactly this strategy. It represents, like the rest of the evidence base, a “rolling forward” of the current car-based strategy by 9 years, with the lightest of touches to attempt to accommodate car trip demands from a relatively modest additional development quantum.

Nevertheless, the Study requires a global 5% reduction in trip demands arising from unspecified “credible” (paragraph 4.1.2) sustainable transport and travel planning measures. It is unclear why use of non-car modes will see disproportionate growth when no measures are in place to make them more attractive. This 5% increase in use translates to a doubling in the modal share of bus services. There is no evidence nationally, anywhere, that simple ignorance of alternatives to the car is the main barrier to uptake.

The outputs of the 2023 Chichester Area Traffic (SATURN) model are set out at Table 5.1 (am peak) and 5.2 (pm peak) without mitigation. These betray just how seriously compromised the whole network around Chichester is, and will be in future, even with implementation of a mitigation package to increase traffic capacity that is understood to cost between £92m and £164m – and which the Study and the draft plan acknowledge cannot be delivered through developer funding sources alone. Unspecified external funding presumably from HM Treasury through DfT is required.

Even if this provided and the schemes are delivered, Tables 8.1 and 8.2 indicate these will provide minimal relief. The final columns suggest key junctions, including Portfield, Fishbourne Road and Cathedral Way East will remain at well over 100% ratio of flow to capacity (90% is considered the point at which saturation is approached, with the onset of increasing delay above that figure). RFCs in tables 8.1 and 8.2 are some of the highest we have ever seen in a local transport evidence base for a post-mitigation scenario. While the serious potential risk of reassignment across Chichester City is greatly reduced, which is important and welcome given its impact on bus services, Tables 8.1 and 8.2 show the extent of post-mitigation saturation is also egregious, covering a very large number of key links and junctions.

On every measure and criterion, then, including cost deliverability and effectiveness, the revised Transport Strategy falls well short of evidence to suggest the transport impacts of the plan can be properly addressed by this means.

Despite the repeated statements about sustainable modes throughout the draft plan and Chichester Transport Study, only 2 paragraphs at Section 6.2 within the Study are devoted to public transport:

“6.2.7 The funds generated from the parking management schemes, local/nation funding schemes and developer contributions could also be utilised to fund potential public transport enhancements within the city centre including an expansion of the bus priority lane system within Chichester City Centre. This could reduce reliance on the car in the longer term towards sustainable public transport. A park and ride scheme could be incorporated within a bus priority lane network in the future depending on the uptake and successfulness of early bus priority trials.

6.2.8 Chichester City centre has a constrained existing public highway network. Therefore, any proposed dedicated public transport or light transit corridors that could be implemented would be at the expense of existing highway. This could be managed through a time-based system where certain routes are restricted to public transport only during specific times. E.g., peak hours.”

There is some very high-level consideration of Park and Ride following this section. None can be considered a serious practical evaluation of consolidating car-borne trips onto bus services, including existing ones, for example local mobility hubs, more frequent bus corridors, delivery of specific bus priorities.

None of the discussion of alternatives to “predicting and providing” for unconstrained traffic growth is rooted in a deliverable evidence base, or proper evaluation of options and specific projects.

To take just one aspect of the few specifics that can be picked out, a workplace parking levy is hypothesised. This would apply only to “offices”, in Chichester city centre (para 6.2.3), without consideration given as to how this could be practically achieved or even that a meaningful amount of office based employment would qualify. Much less is any consideration given to how far focusing a strategy only on office-based workers would actually deliver a particularly significant effect, apart from to create a strong incentive to relocate offices out of the city centre to places out of reach by public transport.

Looking at the Chichester Transport Study 2023 and the draft plan together, there is insufficient evidence that the traffic capacity increase proposed in the 2023 Transport Study is any more affordable or technically deliverable, or likely to be sufficiently effective, than those in the past strategy. The evidence more strongly points to the fact that no highways improvements are identifiable or economically deliverable to meet even short term increases in demand for car-borne mobility on most of the network around Chichester.

There are no published strategies or schemes clearly supporting the contention that the objective of improving sustainable modes is technically achievable or deliverable either. The plan makes generalised assertions that such strategies will be devised and implemented only after serious problems emerge from a shortfall in the car-borne transport strategy.

The reference to “monitor and manage” is undefined and unsubstantiated. There are no outcomes stated, no mechanisms specified and no timescales for action.

Our experience today is that network conditions have reached unacceptable and prejudicial levels of severe unpredictable delay. The saturation of the network is already evident well outside the traditional peaks on key sections of highway and at key junctions. External shocks such as the effects of severe weather are becoming more common, leading to delays so extreme as to justify the description of “gridlock”. The plan does not identify a strategy to effectively address this, in particular by consolidating passenger car trips onto more efficient public transport vehicles. This is unacceptable to Stagecoach.

2.4. Local Plan Vision

Stagecoach Objects because the Plan:

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Stagecoach supports the broad approach in Plan Vision and in particular that by 2039, the Plan will support and enable greater use of sustainable modes. However, there is no link made between reducing the use of private cars, and the need for a step change in the use of sustainable modes. Without a published transport evidence base it is impossible to establish a suitable sustainable transport strategy to support both carbon reduction and alleviation of the problems arising from acute congestion. Even on a very crude basis, to achieve a meaning mode shift on key approaches to the A27 Chichester Bypass will require more than 20% of existing peak car-borne journeys to transfer to other modes. A 10 percentage point transfer to bus (about half this shift) would imply more than doubling peak hour bus passenger boardings.

The Vision is nothing more than an aspiration, that needs to more definitively aim at key outcomes, for the plan to be effective. The Vision should thus be altered to read:

“Get about easily, safely and conveniently with less reliance on private cars –making the greatest possible use of the rail and enhanced bus network, and with more opportunities for active travel including walking and cycling; to materially reduce dependence on private car use.”

Underpinning the Plan’s spatial strategy, the Vision section goes into more specific detail about key localities in the Plan area.

Regarding Chichester, Paragraph 2.39 states: “The emphasis will be upon consolidating and enhancing the role of Chichester city as the plan area’s main centre, whilst also developing the role of key settlements to its east and west. The focus will be upon creating communities with good access to a range of employment opportunities and affordable housing for young people and families to balance the ageing population.”

This is clearly the appropriate focus for meeting the District’s development needs in a sustainable manner. The city and key settlements to the east and west, are those places already able to make use of relevant public transport services, both rail and bus. Especially within and near the City, walking and cycling can credibly present highly relevant choices. This emphasis clear can be expected to address the requirements of sustainable development set out in NPPF and their local application set out in the Plans Strategic Objectives.

However, this needs a robust transport strategy, to avoid a further concentration of development and its traffic impacts occurring on or near some of the most chronically congested parts of the highway network. To date, the absence of intervention has strangled the bus network through further marked deterioration in traffic conditions. This by consequence increases the risk of bus delay or cancellation, lengthens journey time and reduces customer confidence in bus as an attractive alternative mode of travel.

In April 2023, Stagecoach is making significant timetables changes to improve operational resilience in and around Chichester. The biggest such change is the severance of the Portsmouth to Littlehampton section of service 700, at Chichester, with buses operating independently to the east and to the west and ending cross-city links. This is planned to reduce the probability of delay but at the cost of additional vehicle resource (circa £200,000 per annum) which could be better spent providing new or enhanced services. We anticipate a small loss of custom as a direct consequence of the change, but have little choice other than to take negative action so as to fulfil our statutory punctuality obligations.

If the Strategic Objectives of the Plan and its Vision are to be achieved, in the way required by NPPF paragraphs 104-105, a properly-evidenced transport mitigation strategy needs to create the conditions where bus journeys are more reliable than car journeys and thus mobility demand switches as far as can be realistically achieved away from car use, to bus use and other more sustainable modes.

Beyond Chichester, the Plan Vision focuses on key localities beyond to the east and west.

To the west of Chichester a focus on growth at Southbourne is justified at paragraph 2.43: "...the aim is to take advantage of the village's good transport links and existing facilities to deliver significant new residential-led development within the broad location for development which will further enhance local facilities and offer opportunities to reinforce and supplement existing public transport, including bus routes."

We agree this is a very significant opportunity. However, if the requirements of NPPF paragraphs 104-105 are to be met, this demands that effective bus priority is delivered on the A259 corridor, especially eastbound at Fishbourne and westbound approaching Emsworth. Without such measures, the growth committed and planned will serve only to further undermine bus journey time and decrease punctuality on the existing 700 service, entirely contrary to the aims of the Vision.

The emphasis on the A259 corridor served by Stagecoach 700 west of Chichester is reinforced at paragraph 2.45 stating that "Between Chichester and Southbourne, the Plan provides for more moderate levels of growth within the parishes of Fishbourne, Bosham and Chidham & Hambrook, ... with opportunities to support and expand existing facilities and for increased use of public transport options". We strongly support the principle, but the Plan must follow through with specific public transport priority measures that facilitate rather than prejudice such an outcome.

East of Chichester the focus is at Tangmere, where the existing allocation for about 1000 dwellings is being uplifted by 300. Paragraph 2.44 justifies this among other things recognising the scope for "...improved and additional bus services and cycleways will provide better connections to Chichester city and east to Barnham and the 'Five Villages' area in Arun District." We unequivocally endorse this conclusion. Realising a "game-changing" level of bus service quality, reliability and frequency east of the city, also serving committed and planned development north and south of Oving Road at Shopwhyke, is equally essential, given that all SRN links and junctions are approaching equal saturation.

The National Bus Strategy has given new focus on partnership with West Sussex County Council to discuss and deliver a significant new bus service between Chichester, Shopwhyke, Tangmere, Eastergate and Barnham, supporting committed development and acting as an initial phase of what ought to be a more ambitious longer-term strategy to support growth beyond 2025 in both Chichester and Arun Districts. For these improved bus services to be both deliverable and effective, robust bus prioritisation is unavoidable. No such measures are proposed in the Plan or its evidence base and we therefore suggest inclusion of plans to facilitate safe and efficient bus operation between Tangmere and Nyton/Eastergate, ideally avoiding the need to join A27 through-traffic entirely.

We welcome the clear recognition that these localities identified for growth, benefit from existing relevant public transport services. The Vision also sets an expectation that bus services in particular should be "enhanced" and "reinforced".

We entirely agree that these opportunities exist, across the broad strategy and strategic allocation proposed by the draft Local Plan. Securing them will be crucial to achieving national and local policy objectives, including the Strategic Objectives. However, to our continuing very great dismay, the Plan goes no further to defining how this will be achieved. As such the Vision is not demonstrable achievable or deliverable.

Accordingly the Plan cannot be considered effective, in the sense of NPPF.

Remedying this, demands specific measures to protect bus services from congestion in the following corridors:

- A259 East of Emsworth
- A259 Fishbourne
- A 259 Via Ravenna/Cathedral Way

- A286 Stockbridge Road north and south of A27
- B2145 Whyke Road/Hunston Road
- A259 Bognor Road, east and west of A27 and extending to the District Boundary
- B2144 Oving Road/Shopwhyke Road east and west of the A27
- A 285 Westhampnett Road/Portfield Way/Stane Street, potentially involving a mode filter at the west end of Stane Street

These must be defined to a sufficient level of detail to assess their effectiveness and deliverability, including costs.

This would then allow West Sussex County Council and Local Transport and Highways Authority, ourselves as the principal bus operator, and where appropriate other organisations that would be directly tasked with delivering the mitigation package, to agree service levels and standards necessary to deliver specified outcomes, including journey times, frequencies, capacity and hours of operation on the network, and also in respect of the strategic allocations and Strategic Locations for Growth.

The agreed mitigations strategy should be set out in an up-to-date Infrastructure Delivery Plan backed by clear funding commitments, including a funding strategy to justify necessary developer contributions.

Where necessary to support evidence of effectiveness and deliverability, clear statements of support, which might include Statements of Common Ground between the LPA, LTA, National Highways and Stagecoach, could be provided.

3. Spatial Strategy

Stagecoach Supports

Stagecoach well recognises the constraints outlined in the explanatory narrative at the start of Chapter 3.

In particular we strongly endorse that strategy in that it reflects that the best opportunities to meet housing and employment development requirements sustainably clearly exist in and close to Chichester and on the key east-west movement corridor where – subject to effective measures being delivered to make these modes more attractive, efficient and relevant – sustainable modes can credibly provide for a much higher proportion of movement demands, mitigating most effectively the potential traffic impacts of development.

We agree that the Manhood Peninsula suffers serious environmental constraints, but, added to these, public transport and other sustainable modes cannot provide such attractive alternatives, and significant further development risks merely reinforcing already high levels of car use, aggravated by the carbon impacts of the distances involved – something the plan does very little to evaluate, and makes no reference to.

We endorse the conclusion in paragraph 3.24 that significant development in the part of the District north of the National Park is inappropriate. The rationale is principally on landscape and visual character. This exposes a fundamentally biased approach to plan making that has consistently underplays transport accessibility and carbon issues. In fact, the lack of local services and the extended distances that need to be travelled to fully participate in society in this area, with no realistic prospect of public transport offering relevant choices, ought to rule such a strategy out of play on a far less aesthetic and interpretational basis.

3.1. Policy S1 Spatial Development Strategy

Stagecoach Supports

The Spatial Strategy flows clearly and logically from the Spatial Portrait, and the opportunities and constraints identifiable across the Plan area. It represents a logical and justified continuation of the existing Local Plan strategy. In particular the spatial strategy maximises the potential for sustainable modes to contribute to meeting a much higher proportion of all the District's mobility and accessibility needs.

3.2. Policy S2 Settlement Hierarchy

Stagecoach Supports

The settlement hierarchy clearly reflects the service endowment and potential self-containment of the settlements in the District. In particular, the second tier of settlement hubs includes secondary schools, which are major peak trip generating uses. Service villages, in the main, also benefit from bus services running at least hourly, which can be expected to provide for a degree of mobility for the higher number of trip purposes that cannot be satisfied by walking or cycling within the immediate locality. Thus, a level of development to meet local needs in this tier is relatively sustainable.

There is a quite broad range of settlements in this category. We have concerns that, north of the National Park, the Service Villages have no realistic public transport choice. These include Plaistow/Ifold, Kirdford, Loxwood, and Wisborough Green. Such as exists is typically a 1/bus per day off-peak shoppers service offering up to 90 minutes in Horsham or Guildford and as such any development here even to meet local needs requires each adult to own a car. This contrasts strongly with Service Villages to the south of the National Park, which are greatly more sustainable.

4. Climate Change and the Natural Environment

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework

- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

This section of the plan is extensive and wide ranging, as should be expected. However, remarkably, there is no acknowledgement whatever of the role of transport in mitigating climate change or its effects, not of the importance of sustainable movement and access being facilitated across the plan area in addressing anthropogenic impacts on the natural world at a more local level.

This exposes very clearly a troubling level of indifference to transport matters in the production of the Plan, which, while nationally quite common, is neither appropriate nor acceptable. The mitigation of transport impacts is not merely a matter speaking to the social and economic aspects of sustainable development. It is crucial to address the causes and effects of climate change that arise from transport, and personal mobility.

This is now well understood and at the centre of national policy, including the National Decarbonisation Strategy for Transport (July 2021) which at Section 5 commits the government to aligning land use planning and transport strategy much more tightly and effectively to mitigate the carbon emissions associated with the current dependence on cars, and the mode mix; but also to reduce travel distances, both increasing the potential relevance and effectiveness of all sustainable modes, and reducing average journey lengths for residual motorised journeys of all kinds.

National statistics show that well over a third of all domestic carbon emissions arise from land-based transport and of these, the vast majority arise from trips of over 10km – outside the range of large scale use of cycling. In fact, the potential of the plan to materially support carbon emissions reduction from within the plan area lies more in the realm of transport than any other policy theme – including emissions mitigation from buildings, which is in any event an aspatial matter and covered by nationally-binding building regulations. By 2025 something like 40% of all the emissions within the plan-area will be transport related.

There is no evidence supplied to support the plan that addresses the transport carbon impacts of the spatial development strategy in a clear manner.

There is no evidence supplied that sets out the effects of potential worsening of congestion on air quality within the plan area, arising entirely from the excess of passenger car movement demands over available and credibly deliverable highway capacity. This is despite the evidence set out and acknowledged in the explanatory memorandum at paragraph 4.130:

“4.130. The council’s Air Quality Action Plan and the West Sussex Transport Plan 2022-2036 both refer to the air quality issues faced by Chichester. There is currently one Air Quality Management Area (AQMA) in the plan area, located at St Pancras, Chichester. AQMAs are designated where air quality exceeds, or is likely to exceed, national air quality standards and objectives. Development within or impacting these areas, or that likely to cause the declaration of any further AQMAs, will be subject to an air quality assessment by the applicant.”

This is a retroactive approach – it is not “planning”, based on evidence.

We are well aware that air quality issues in and of themselves can render allocated sites to be undeliverable: a good example is in the Vale of White Horse, Oxfordshire, where strategic allocations on the A338 and A420 corridors have been held up for years by air quality issues at Marcham and Frilford, in large measure because agreed transport interventions were considered inadequate or undeliverable a very short time after the Plan was examined and adopted.

There is no evidence that shows how the development strategy can effectively mitigate these impacts as well as the further potential impacts that arise from the development strategy. This is exasperating, as there is clear evidence that could be drawn upon to show that that very substantial opportunities exist to:

- Speed buses up and make them more reliable by the delivery of bus priority on most of the key main corridors. Most of these even today operate relatively frequently
- Improve service frequencies and extend hours of operation.
- Secure significant background mode shift to bus as a result, damping pressure on key links and junctions, by consolidating demands on direct more reliable and more frequent bus services.

The spatial development strategy as submitted is in fact, likely to well conform to such additional evidence.

The allocations require substantial additional transport related work and evidence to demonstrate that the opportunities for sustainable transport have been identified and taken up as required by NPPF paragraphs 104-105.

With regards to specific policy, Policy NE22 should be modified to read:

“Development proposals will be permitted where it can be demonstrated that all the following criteria have been addressed:

1. Development is located and designed to minimise traffic generation and congestion through access to by maximising the relevance and attractiveness of sustainable transport modes, including maximising provision of specific demonstrably effective measures to make pedestrian and cycle and public transport routes and networks more direct, more safe, faster and more reliable;...”

5.1. Policy H1 Meeting Housing Needs

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

The presumption of the planning system is that local planning authorities should seek to meet their objectively assessed development requirements in full. These needs are assessed by a defined Standard Methodology set out in Planning Practice Guidance and elsewhere, that has explicit regard to ensuring that the economic and social effects associated with housing are properly provided for, to avoid exacerbating serious problems that arise from inadequate housing supply.

As a significant local service provider and employer, Stagecoach is concerned that existing issues with housing availability and affordable housing supply are not exacerbated. This has a direct bearing on staff recruitment and retention. It also has an indirect bearing on our cost base.

The existing problems with housing affordability have developed over many decades of undersupply. It should be emphasised that the significant boost to the supply of housing that has been sought by governments over the last 15 years, has only begun to take effect relatively recently in this District. Tackling the problem will require years of consistent attention.

Stagecoach notes that the Council is no longer proposing to meet its identified housing needs in full. Rather than 638/annum the Council is allocating a total that implies an annual delivery rate of 535/annum.

While a number of matters evidently present challenges to the Council in identifying a sustainable development strategy. Paragraph 5.2 indicates that “constraints, particularly the capacity of the A27 has led to the council planning for a housing requirement below the need derived from the standard method...” The blame for being unable to meet housing requirements is thus laid squarely at the door of transport infrastructure and systems.

This conclusion in no way follows from the evidence in the Chichester Transport Study. This, rather, makes the statement that when a higher annualised quantum of 700 dwellings per annum was tested, in the majority of cases the traffic capacity improvement package would perform little differently. To quote the Study:

“5.6.3 The network performance outputs analysed comprising V/C%, Delays (seconds) and Queues (PCU's) suggest that generally the proposed SRN mitigation identified for the Core Scenario, can accommodate in the most part, additional increase in development to 700dpa.”

Whether the rest of the local road network is similarly protects is moot.

Irrespective of these results, even if the contention made in the draft plan were true, unlike many other constraints, this is amenable to a suitable effective strategy to address the constraints identified being collaboratively conceived. This is what NPPF expects, as set out in paragraphs 104-106.

Where the A27 is concerned, as part of the SRN, National Highways is now working to a substantially revised approach than that in force at the time to current Local Plan was prepared, or LSS2, or reflected in the Chichester Transport Study. This is set out in DfT WMS 01/22. This document is the policy of the Secretary of State for Transport in relation to the SRN which should be read in conjunction with the National Planning Policy Framework (NPPF). It replaces the policies in the Department for Transport Circular 02/2013 of the same title.

It makes plain that to accommodate additional demands arising from development, National Highways (NHC) expects to meet the requirements of its statutory license in a substantially different manner. With respect to development NHC LTN 01/22 continues to address the tensions between national policy for the environment and carbon mitigation, the ongoing need to substantially boost the supply of housing as well as maintain national economic competitiveness and protect the safety of the public. However, in future, the approach will be to seek first to maximise the impact of demand management measures (reducing the need to travel), and then to accommodate residual additional demands first though maximising the use of sustainable modes, rather than accommodating assumptions about current levels of car dependency and use.

LTN 01/22 much more closely and explicitly aligns with the language of NPPF Chapter 9 paragraphs 104-106. Paragraph 12 states: “New development should be facilitating a reduction in the need to travel by private car and focused on locations that are or can be made sustainable.... Developments in the right places and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas.” (our emphasis).

It continues at paragraph 13: “where developments are located, how they are designed and how well delivery and public transport services are integrated has a huge impact on people’s mode of travel for short journeys. The company will therefore expect strategic policy-making authorities and community groups responsible for preparing local and

neighbourhood plans to only promote development at locations that are or can be made sustainable [footnote 8] and where opportunities to maximise walking, wheeling, cycling, public transport and shared travel have been identified.” (again, our emphasis)

Stagecoach readily confirms that the draft Plan development strategy conforms well to the first limb of this expectation, in terms of the location of development.

Stagecoach considers that the plan and its evidence base conforms poorly to the second in that the specific opportunities to maximise walking, cycling wheeling and public transport are not clearly identified, and defined, and proven to be effective and deliverable.

The current mitigation strategy for the A27 Chichester area, supporting the adopted Local Plan and for which proportionate developer contributions have and continue to be sought, reflects now-superseded DfT Circular 02/2013. As a direct result, it failed completely to identify any significant effective bus priority measures, despite the fact that frequent services already exist on the key corridor concerned, and that one bus journey can remove, fully seated between 72 and 80 single occupancy car journeys from congested links and across key junctions on the A27. Rather, it sought to implement targeted measures to increase the throughflow of general traffic.

We recognise the realisation that this approach, which was already reliant on some tenuous logic, is simply not technically viable, especially where further development needs are anticipated.

National Highways will now pursue an approach with the planning system that “includes moving away from transport planning based on predicting future demand to provide capacity (‘predict and provide’) to planning that sets an outcome communities want to achieve and provides the transport solutions to deliver those outcomes (vision-led approaches including ‘vision and validate,’ ‘decide and provide’ or ‘monitor and manage’). The company will support local authorities in achieving this aim through its engagement with their plan-making and decision-taking stages.” (paragraph 15).

Paragraph 23 is at the fulcrum of assessing and defining transport mitigations to accommodate growth on and near the SRN “Capacity enhancements such as modifications to existing junctions or road widening to facilitate development should be determined on a case-by-case basis. The general principle should be accepted where proposals would include measures to improve community connectivity and public transport accessibility, and this will be weighed against any negative safety, traffic flow, environmental and deliverability considerations, impacts on the permeability and attractiveness of local walking, wheeling and cycling routes, and alternative options to manage down the traffic impact of planned development or improve the local road network as a first preference.” (our emphasis).

However, no material work has been done that seeks to identify if a bold robustly conceived and suitable judiciously-prepared strategy that seeks to consolidate flows on already densely travelled corridor onto improved bus services, driving mode shift through insulating these services preferentially from already serious queuing. This would be likely to have very substantial impacts on all the key junctions on the A27, and potentially, on the A27 itself. The need for an integrated approach between Shoreham and Emsworth within West Sussex paying particular regard to development requirements in both Arun and Chichester Districts naturally lies at the heart of this, and we would expect to be picked up by the LSS3 Review among other things.

However, the locus of the problems and its causes and effects are obviously well enough known to start work on defining solutions within the plan area today. We would expect that this work will be essential if National Highways are to support the Plan, especially now given the terms of Circular 01/2022.

Such work could and should start from a “policy off” position: in other words that the Plan should fully accommodate its needs unless it can be proved that a mitigation strategy for the A27 that is compliant with DfT WMS 01/2022 cannot credibly accommodate resulting capacity demands without unacceptable impacts on the safety and efficient operation of the SRN.

This evidence does not exist. In fact the Chichester Transport Strategy 2023, on which the Council solely relies as its transport evidence base, indicates the opposite at para 5.6.3. This is the case before meaningful measures to secure damping of traffic demands through mode reassignment are even considered.

The exception to this is Portfield and Oving Road, which are among the most problematic areas after mitigation even at the Council’s chosen 535 dwelling/annum scenario (para 5.6.4.-5). The costly capacity mitigation simply cannot deliver enough benefit. It is admitted that WSCC has indicated that it would prefer a solution that places greater reliance on sustainable modes damping car-borne demand. This is entirely the strategy required by NHC to follow LTN 01/22, of course. Despite the fact that “predict and provide has “run out of road” no attempt has been made to examine what such a solution set credibly could look like. This is unsatisfactory and deeply troubling.

At paragraph 5.4 the draft plan points back again at the West Sussex and Greater Brighton Strategic Planning Board and the future work that has been commissioned, but has barely begun, to update the Local Strategic Statement. This work is to inform the preparation of plans that have horizons beyond the end date of the current LSS in 2030 and properly to meet the Duty to Cooperate. As we said in our response to section 1 of the Plan we fully endorse the conclusion that this

is the right mechanism to look at these issues. However, the mechanism has not been effectively applied to the production of this plan. Therefore, the specific evidence that capacity on the A27 in and of itself supports accommodating a lower housing requirement does not exist.

The Plan thus does not conform to NPPF, is not adequately justified and is not effective.

The Plan does not properly meet the statutory Duty to Cooperate.

We will return to this matter in specific representations to Section 7 of the draft plan.

5.2. Policy H2 Strategic Locations/Allocations 2021-2039

Stagecoach Supports

Policy H1 makes plain that the plan, as far as it identifies locations for development has done so in locations that conform with its spatial strategy. All of the strategic allocations to a greater or lesser extent offer clear opportunities to make use of sustainable modes, by virtue of their location. That is not to say that the opportunities to take up these opportunities, and maximise the role of sustainable modes, has been identified, defined and translated properly into the rest of the plan policy suite or Infrastructure Delivery Plan.

As our remaining representations make clear, we support the locations thus far identified as being those that offer the best opportunities to reduce the need to travel, reduce travel distances, and create high quality attractive sustainable travel choices, for both existing residents as well as new ones.

However, the transport impacts of the allocation will individually and cumulatively likely to lead to increasingly severe impacts on the transport network, and on bus services.

Perversely, because these opportunities are not properly identified and secured through the plan and its supporting transport strategy, the opportunities presented by the allocations to secure a substantially more sustainable and lower carbon pattern of movement will not only risk being squandered but may aggravate the wider problems.

5.3. Policy H3 Non-strategic Parish Housing Requirements

Stagecoach Supports

The approach is consistent with the plan's spatial strategy. It generally avoids a dispersal of development to locations likely to be highly car dependent. There is a clear focus on meeting housing needs in the far north-east of the District at the largest and most sustainable settlements, such as Loxwood, Kirdford and Wisborough Green. However, it must be pointed out that public transport availability in this area, provided by the County Council through services it procures, is minimal. These settlements in practice require each adult and child of secondary school age to have access to motorised transport to fully participate in society. This might justify significant measures to secure a boost in the frequency of bus services between Guildford and Billingshurst, passing through these settlements.

Otherwise, existing commitments in the plan area already make provision to meet for local needs. To the degree that there is an unmet local requirement for affordable housing of a small scale – for example to support the rural economy – this could be met through neighbourhood plans or through Rural Exception Sites.

6. Place-making, Health and Wellbeing

6.1. Policy P1 Design principles

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

NPPF requires that proposals should consider transport issues from the earliest possible stage. Designing to properly facilitate safe and efficient access, focusing first on sustainable modes, should be at the heart of development design. Too often it is still an afterthought, notwithstanding this.

Policy P1 must include an additional statement to be compliant and effective with NPPF paragraph 104-105 and 112 a): "Development will be designed to make access and movement using walking, cycling and public transport the natural first choice, and demonstrate through the Design and Access Statement how such modes are afforded the most direct, safe, reliable and efficient routes within to and from the proposals, especially when compared with car use."

6.2. Policy P4 Layout and Access

Stagecoach Objects because the Plan:

- is unsound as it does not conform to the National Planning Policy Framework
- is not effective

A number of proposals in the plan involve large-scale development. It is essential that where appropriate buses can access and circulate efficiently through development at a suitably early stage. There is no acknowledgement of this anywhere in the policy, contrary to NPPF paragraph 112.

Large-scale development which buses cannot access in an efficient or timely manner, or at all, strongly contributes to high levels of car-dependency. Evidence for this is referred to among other places, in DfT Circular 01/2022. To be compliant with NPPF and properly pursue its strategic Objectives, Policy P4 needs to be modified to address this point: "1. Provide safe, direct and attractive conditions for inclusive access, egress and active travel between all locations and providing as good direct high quality links to integrated public transport, and where appropriate efficient access and circulation to bus services, unimpeded by excessive parking, at a suitably early point in the development phasing;

7. Transport and Accessibility

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

The issues related to transport are fundamental to the soundness of the Plan. In particular, the constraints presented by the capacity on the A27 around Chichester and its key junctions, are the paramount reasons why the Council does not consider it can meet its objectively-assessed development needs in full. Thus, the transport issues and potential solutions available and what these mean for the ability of development needs to be accommodated, are matters that go to the heart of the soundness of the Plan.

Paragraph 8.3 sets out the approach taken to date succinctly:

"Increasing the capacity of the road network is key to supporting growth in the Local Plan. However, there is also a need to reduce demand for road transport to achieve net zero in greenhouse gas emissions by 2050 as highlighted in the council's Climate Emergency Action Plan and Strategic Objective 1. In aiming to achieve the ambitions of the action plan, all development is expected to demonstrate how it will support four key objectives to create an integrated transport network which will alleviate pressure on the road network, improve highway safety, encourage sustainable travel behaviours and help reduce transport related impact on air quality, by:

1. Avoiding or reducing the need to travel by car;
2. Enabling access to sustainable means of travel, including public transport, walking and cycling;
3. Managing travel demand; and
4. Mitigating the impacts of travel by car."

However, this approach is unambitious and "lightweight" as it assumes, as does the existing Chichester Transport Strategy on which the current adopted plan relies, that the focus of investment should be, wholly, in highways capacity improvement.

Sustainable modes explicitly are expected to play a greater role to "alleviate pressure" on the local road network, as part of this strategy. To emphasise: to avoid exacerbating congestion, the strategy will have to both remove a significant proportion of existing demands from the network on multiple key approaches to Chichester; and then ensure that travel demands from committed and further new development allocated in the plan does not simply replace these journeys, or, worse, create even greater demands.

This will demand very significant behaviour change. Only by making sustainable modes substantially more attractive, both absolutely, and relative to the same journey made by car, can this be expected to occur. However, the explanatory memorandum as well as the wider policy suite and IDP, well expresses a fundamental unwillingness to taking specific, defined measures to achieve this reduction in car use and material promotion of sustainable modes. It makes plain that sustainable modes, including bus services, will offer a lesser role to which "access will be provided".

Such a vague and weakly defined mechanism will have no effect, at all, on current behaviour and car dependency if the relevance of those choices as a credible alternative to car use, is not substantially boosted. This includes a 5% reduction in trip demand assumed by the Traffic Model at the heart of the Chichester Transport Study 2023.

For this reason. the transport strategy behind the current adopted plan is demonstrably ineffective, as the updated model makes plain. It has not yet been delivered and is yet unclear when or (in the absence of committed funding) even if it can be. It is ineffective to "roll forward" this strategy to support a higher level of planned growth.

We note that a scheme for addressing congestion on the A27 at Chichester has been included in Roads Investment Period 3 (2025-2030) – well within the horizon of this Plan. However, recent history provides compelling evidence that off-line improvement to the north is not politically supported and arguably even technically or economically deliverable. It is not funded, nor at this stage can it be hypothesised if an economically deliverable scheme is achievable sufficient to warrant the necessary investment.

An on-line improvement of the A27, including junction improvements, is likely to favour longer distance east-west though movements, which are of greater significance to the national economy, at the expense of local movements crossing the SRN- a conundrum that largely sums up the dilemma that is faced by NHC and the County as Highways and Transport

Authority. It is one that is played out in many places, but rarely is the tension so stark as at Chichester.

Every local route crossing the A27 at grade around Chichester accommodates a regular bus service - or shortly will do (Oving Road area is expected to follow in 2023, though bus services are likely to not use the modified crossroads but to use the left-in-left-out facilities provided as part of the Shopwhyke Lakes development). The impact of these issues on the entire bus operation are serious and increasingly severe.

By the same token, boosting the relevance and reliability of each of these services substantially consolidating as much demand as possible onto a much smaller number of vehicles, is clearly a strategy that ought to support the effective capacity of each of these junctions being greatly augmented, at the same time as reducing equally substantially, the energy- and carbon intensity of mobility in the plan area. Addressing the A27 should not be considered some kind of "zero-sum" game.

Furthermore, the approach of National Highways in its dealings with development and the planning system now reflect a substantial change in Government Policy set out in DfT Circular 01/2022, which we separately cover in these representations, that entirely aligns with an approach that seeks to appropriately invest in more active and rational management of scarce highways capacity, on both the SRN and local roads.

For environmental, economic and social reasons – including public health, the issues presented by the A27 and its interface with local roads around Chichester stands out, nationally, as an example of where the approach taken to accommodating and mitigating development impacts needs to make a clear break with previous "predict and provide" approaches to meet forecast unconstrained car use as LTN 02/2022 makes clear as a principle. Policy in the West Sussex LTP to 2036 itself makes plain that "shared mobility" – including bus services – must play a much greater role in this area.

The existing Chichester Area Transport Strategy is focused on justifying capital contributions from committed development to fund highways capacity improvement – with nothing included to make bus services more attractive, or importantly more reliable. Indeed this "cars first" approach is so costly, that there is already accepted by WSCC to be insufficient land value remaining to be captured to put into substantial improvements for public transport. That much is very evident, and transparent, from paragraph 8.12 and 8.14, where south of Chichester "This (one) package of works (of several improvements needed) would be between £57.23 and £82.79 million to deliver in full and would not be capable of being funded by development contributions alone." This assumes the scheme is otherwise deliverable, which on the evidence in the public domain for some time, has been considered challengeable.

The draft Local Plan and a modestly updated infrastructure package that flows from the 2023 Chichester Transport Study, pursues exactly the same approach.

This strategy is also even more ineffective having regard to the roll forward of the Plan to 2039. It cannot deliver the key Strategic Objectives of the Plan; and in particular this is explicitly recognised by the Council in the failure of the draft Plan to accommodate the OAN in full.

It is also obsolete, as it does not align, from first principles, with national policy (including the National Decarbonisation Strategy for Transport) and DfT Circular 01/22; nor the Council's own declared Climate Emergency.

As a result, draft Policies T1 and T2 are both unsound, as we will separately explain.

Owing to the lack of evidence about the implications of this for adjoining authorities – especially Adur District – in the absence of the review of the Local Strategic Statement – this has implications for fulfilling the Statutory Duty to Co-operate.

The absence of any meaningfully comprehensive refresh of the transport evidence base means that there are no meaningful schemes of any kind, defined in the plan or its IDP, to indicate either what level of growth can be accommodated, by delivering a change in travel behaviour. This would be aimed to secure a sufficient effective increase in junction throughput (measured in terms of person trips as opposed to passenger car unit movements (PCUs). Such evidence would propose measure to achieve that outcome and assess the efficacy and costs of such improvements, across all modes.

Paragraphs 8.10-8.13 inclusive indicate that the Council "has moved away from 'predict and provide'" and invites the reader to conclude this has translated into a programme of interventions that can be funded to deliver specific, credibly predictable outcomes. Such a programme should be clear in paragraph 8.11. and the IDP. There is no such clarity and this conclusion would be false.

It would also be evident in the language of the Chichester Transport Study 2023 and its refreshed proposals. Only the most token of lip service is paid to the matter. It is a plainly car-focused, predict and provide methodology to support a "predict and provide" strategy. In fact, it is a brazenly car-focused approach, to the exclusion of all else.

The statements in the Plan regarding any other approach, read properly, offer nothing more than a vague commitment to look post-adoption, and implementation, at unspecified measures, based on problems that may arise in future that will be

decided by a committee: the Traffic and Infrastructure Management Group (TIMG). This does not yet exist and is obviously an attempt to posit a mechanism that retroactively will cover for the lack of serious multi-party engagement to address the existing and future issues. Such a group should, in our view, also include the public transport operators, not least if the requirements of NPPF Para 106c) are to be satisfied, and the strategy and measures to be adopted are material to supporting the Local Plan, as of course the purpose of the TIMG has as its core *raison d'être*.

The approach proposed by the draft plan is plainly ineffective and unsound in justifying the draft Plan.

It is more widely unacceptable to Stagecoach. The issues are severe today and well-known, already serving to jeopardise the delivery of buses relied on by existing residents, much less attract new ones.

We also consider that HM Planning Inspectorate are likely to be quite resistant to accepting this aspect of the plan's transport strategy, nor will it be appropriate for the Council, West Sussex County Council, or National Highways, to define such measures after the submission of the Plan during the Examination process. The Examination in Public of a local plan has no purpose to improve plans, or remedy deficiencies clearly evident prior to submission.

The examination of the West of England Joint Strategic Plan in 2019, and the Uttlesford Local Plan in 2021, among several others, demonstrates especially clearly that the Planning System and the Examination process is not amenable to post-hoc retrofitting of transport evidence and strategies to support a development strategy.

7.1. Transport Evidence Base

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

Most of Stagecoach's serious concerns about the soundness of the plan arise from the fact that it has been prepared in advance of any up-to-date transport evidence and suitably robust transport mitigation strategy being advanced to support it. In essence, the Council has rolled forward the existing plan by 9 years, adding some additional sources of housing supply, while still relying implicitly on a transport evidence base that was prepared 10 years ago.

This led to the formulation at that time of what can only be described as an attempt to develop an effective car-based mitigation strategy, creating capacity for general traffic added to accommodate unconstrained additional demands on an already over-taxed highways network – the Chichester Area Transport Strategy. Despite language in support of sustainable modes, no deliverable measures were identified to support either the extension of the bus network to serve allocated sites, and much less to create a vital improvement to the quality and reliability of public transport services. This approach reflected the approach set out in DfT Ministerial Circular 02/2013 "Development and the Strategic Highways Network", applicable since the A27, which is the focus of the most severe difficulties, forms part of the national Strategic Roads Network.

This approach has proven ineffective even before substantial elements of housing land supply in the current plan come forward – in particular West of Chichester and West of Tangmere.

In addition, Circular 02/2013 has now been replaced by a new Ministerial Statement of 23/12/2022, DfT Circular 01/2022.

On both counts the transport evidence base and strategy needs to be properly revisited and established to provide effective mitigation for the plan, including current commitments that are being rolled forward.

The language of the current Ministerial Circular 01/2022 offers a highly condensed synoptic view of the proper approach to addressing transport matters in the planning system notwithstanding that it is directly concerned with the Strategic Roads Network. *Videlicet*:

"31. The NPPF expects local plans and spatial development strategies to be underpinned by a clear and transparent evidence base which informs the authority's preferred approach to land use and strategic transport options, and the formulation of policies and allocations that will be subject to public consultation. The company will expect this process to explore all options to reduce a reliance on the SRN for local journeys including a reduction in the need to travel and integrating land use considerations with the need to maximise opportunities for walking, wheeling, cycling, public transport and shared travel.

32. The Transport Decarbonisation Plan indicates that carbon emissions from car and van use is the largest component of the United Kingdom's total transport emissions. While action is being taken to decarbonise transport such that all new cars and vans will be fully zero emission at the tailpipe from 2035, the proposed location of growth in current plan periods and whether new developments would be genuinely sustainable remain important factors in demonstrating that a local authority area is on a pathway to net zero by 2050 and therefore compliant with the requirements of the Climate Change Act 2008.

33. Alongside this, the local authority should identify the key issues within their study area regarding transport provision and accessibility, setting out how the plan or strategy can address these key issues in consultation with (National Highways, and other transport stakeholders identified in NPPF paragraph 106b). It is the responsibility of the local authority undertaking its strategic policy-making function to present a robust transport evidence base in support of its plan or strategy. The company can review measures that would help to avoid or significantly reduce the need for additional infrastructure on the SRN where development can be delivered through identified improvements to the local transport network, to include infrastructure that promotes walking, wheeling, cycling, public transport and shared travel. A robust evidence base will be required, including demand forecasting models, which inform analysis of alternatives by accounting for the effects of possible mitigation scenarios that shift demand into less carbon-intensive forms of travel.” (our emphasis)

Within the text quoted above, references to National Highways and “the Company” can quite legitimately be extended, given the statements in NPPF paragraph 16, 25, 26 and 106b, to include all the relevant transport infrastructure and service providers in the plan area. Circular 01/2022 also has the weight of secondary legislation as a Written Ministerial Statement and thus should be considered to be highly material.

To date there has been little attempt to explore, to the degree necessary, strategies that conform to Circular 01/2022. It is thus not possible to conclude, as the Council has done, that the issues on the A27 that present a constraint to development, are insuperable.

In line with comments made elsewhere in the response to this pre-submission draft, the Plan thus requires substantial further work to be undertaken with key stakeholders to establish a suitably effective and demonstrably deliverable transport mitigation strategy, to sustainably meet the District’s identifiable development needs and where apparent and appropriate, also ensure that wider cross boundary strategic issues are appropriately addressed, in conformity inter alia, with the Duty to Cooperate, NPPF paragraph 16 and 104-111 inclusive, and DfT Circular 01/2022 and to ensure the Plan’s own Strategic Objectives can be met.

7.2. Policy T1 Transport infrastructure

Stagecoach Objects because the Plan:

- does not comply with the duty to cooperate
- is unsound as it does not conform to the National Planning Policy Framework
- is not effective
- is unsound because it is not based on relevant proportionate and up to date evidence

As described in comments elsewhere, Stagecoach does not see that a suitable proportionate and up-to-date basis exists to properly and appropriately address the transport issues in the plan area.

The 2023 Transport Study does not perform this role adequately but, contrary to the explanatory memorandum, is a scheme intended only to facilitate car-borne movements through some of the key junctions. There is no evidence that an holistic integrated and strategic approach to transport mitigations has been prepared. Certainly Stagecoach has not been involved in any of the discussion about appropriate transport measures in support of the plan, including the Transport Study 2023, contrary to the expectations set out in NPPF at paragraph 16 and 106.

Notwithstanding out fundamental concerns about the transport evidence case and mitigations strategy, Policy T1 reflects a weak and ineffective approach, that seeks to try and define a strategy post-adoption.

Contrary even to the explanatory memorandum for the policy, which seeks to maximise the contribution of sustainable modes, the policy is phased in such a way that it gives basis for previous “predict and provide” solutions to facilitate and support current levels of car dependency – already shown to be undeliverable and unaffordable – will nevertheless be the first rather than the last resort. There is no commitment to seek to maximise the contribution made by sustainable modes to meeting mobility needs. Nor is there any recognition that current chronic congestion and lack of network resilience jeopardises the ongoing attractiveness and long- term sustainability of the current public transport offer.

To be effective and create alignment with national policy, and also provide for an up-to-date transport evidence base and strategy to be adduced, Policy T1 should be modified to read:

“Integrated transport measures will be developed to mitigate the impact of planned development on the highways network, improve highway safety and air quality, promote more sustainable travel patterns and through providing in the first instance, new and improved infrastructure and services that will be credible effective in maximising the encourage increased use of sustainable modes of travel, such as public transport, cycling and walking.

To achieve this, the council will work with National Highways, West Sussex County Council, other transport and service providers (including through the Traffic and Infrastructure Management Group) and developers to provide a better integrated transport network and to improve accessibility to key services and facilities...

All parties, including applicants, are expected to support these objectives by:

1. Ensuring that new development is well located and designed to avoid or minimise the

need for travel, encourages maximises the use of sustainable modes of travel as an a credible alternative to the private car and directly provides or contributes towards new or improved transport infrastructure;

2. Working with relevant transport infrastructure and service providers to improve accessibility to key services and facilities with primary emphasis on sustainable modes, and to ensure that new facilities are easily accessible by sustainable modes of travel;
3. Targeting investment to provide local travel options as an that represent a clearly credible alternative to the car use, focusing on the delivery of improved integrated bus and train services, and improved pedestrian and cycling networks, including the public rights of way network, based on the routes and projects identified in the Local Transport Plan, West Sussex Bus Service Improvement Plan, Local Cycling and Walking Infrastructure Plan (LCWIP) and the Infrastructure Delivery Plan;
4. Planning to achieve the timely delivery of transport infrastructure on and approaching the A27 and elsewhere on the network, needed to support new housing, employment and other development identified in this plan;
5. Phasing the delivery of new development to align with and where possible facilitate the provision of new and improved transport infrastructure and services and the outcomes of monitoring travel demand on the network, including that arising from areas immediately adjoining the plan area. It may also be Where necessary to achieve this alignment proactively phase development will be phased to take into account the monitoring and effectiveness of travel plans demands on the network and to ensure that measures are implemented to support the highest possible level of encourage sustainable travel behaviour.;
6. Using demand management measures, such as travel plans, to manage robust methodologies to assess travel demand and minimise the need for new or improved transport infrastructure as part of the monitor and manage process.
